NGOs working for the empowerment of women need to take interventions on livelihood development options related to the market and value chain. Policies and guidelines should be made in such a way that it is easy for women entrepreneurs to get credit facilities. Government should promote creation of Self Help group by women. There is need for industry-specific targets for women's employment and motivate their implementation by firm. Tax benefits should be given to companies that provide employment to 30 percent women workers.

Conclusion

NEP would transform the education sector in the country as it focuses on making education accessible, equitable and inclusive. The vision laid in the New Education Policy is to build the education system into high-spirited on acquiring key 21st century skill. New Education Policy has laid many favorable provisions to foster gender equity and to do away with gender stereotype which plays a crucial role in girls withdrawing from school. Women need to be empowered through education in order to equip her to face the challenges of the 21st century. If empowerment merely mean to provide access within existing gender differentiating system, it will remain only a travesty but empowerment should mean an all round development. Education is one strong weapon in realizing this goal and also effective tool to bridge a gender gap in the society.

With the introduction of New Education Policy, there is a thin ray of hope for the apparent implacable darkness in the quest for girls' education as getting proper basic education is the birthright of each and every individual. As the policy prescribed to approach gender as a cross-cutting priority to achieve gender equality in education in partnership with states and local community organizations, it is optimistic that the state government will be able to assist in restructuring the present education system in meeting the demands of the state and also take positive steps to increase access of women leadership in the state. The New Education Policy, if implemented with strategic planning and proper functioning, will effectively help to improve female literacy rate in the state. As the new policy to be implemented comes with a numerous challenges, it is anticipated that the generation of today will be able to witness the revolution in education system which will prepare them to face the challenges of the 21st century. The policy has many positive features but the same can only be achieved by strictly making it happen.

Karpagam Academy of Higher Education

Coimbatore

History of the Indian Education System

In India, the concept of education policies has been there since the time of the Britishers. Philosophers and scholars, today, study India's education policies in two parts, that is, pre-independence and post-independence, and are also further divided.

Until 1000 AD, there were not many literary sources to define the education system. The prominent sources before this time that gave us a brief about the education system of that time were the Rigveda, the Aranyakas, the Upanishads, the Epics, and the Puranas. Aryans were the first to introduce a formal education policy in India. After the development of kingdoms, during the Vedic period, powerful kings and leaders focused on higher education. During this time, enough emphasis was laid on universities such as Nalanda and Taxila. Eventually, different communities including Buddhism, Brahmanism, and Islam stood at an impasse related to how education will be influenced according to their religion and beliefs.

During the British period, modern and formal education came into being. This was the first revolutionary incident in the history of education in India. Although, there is no denying that the Britishers focused on spreading Christianity among the locals, but they also gave a new turn by making education more accessible to all the people. It was not restricted to people of higher statutes. They encouraged educational activity by establishing schools and grants-in-aid.

Hence, in the year 1715, St. Mary's School was established in Madras, followed by the establishment of two more charity schools in 1717 by the Danish missionaries. In 1718 a charity school in Bombay and another in 1731 in Calcutta were opened. In 1781, Sir Warren Hastings, the first Governor-General of India, established the Calcutta Madrasa which was focused on Arabic and Persian studies. Additionally, in 1791 he also founded the Benares Sanskrit College to promote classical studies in Sanskrit. Additionally, Indian reformers such as Raja Ram Mohan Roy also played a significant role during this time.

Now, let's discuss education in the post-independence era. It was evident that new India needed new reforms that cater to the needs of locals. Hence, previous reforms were restructured. According to new reforms, university education and

senior secondary education should be separate. There were many such decisions that were to be taken and the goal set for the country's educational policy was to create a system of universal elementary education by 1960.

After independence, India adopted the Constitution in 1950, according to that, education became the responsibility of both state and central governments. It was during this time that Education Commissions were also set up. The first Commission was the University Education Commission of 1948, followed by the Secondary Education Commission (1952). Next, was the Indian Education Commission introduced for the academic year 1964-66. And with that, the first National Education Policy was put into place in 1968.

New Education Policy 2023 24 (NEP 2023)

India has always been a major contributor in the gamut of fields including yoga, mathematics, chess, metallurgy, medical science and surgery, astronomy, civil engineering, architecture, shipbuilding and navigation, fine arts, and others. High standards of transdisciplinary teaching and research were set by world-class institutions in ancient India, such as Takshashila, Nalanda, Vikramshila, and Vallabhi, which also welcomed researchers and students from all backgrounds and nations. And who doesn't know the prominent scholars of India? Chanakya, Maitreyi, Gautama, Patanjali, Chakrapani Datta, Madhava, Panini, Aryabhata, and many others who made a significant impact on the world as we know it today.

If India has so much to offer to the world then why are most of the students moving abroad for studies and to settle? Why is 6 lakh in India too much amount but in other countries, it's the individuals' minimum wage? Where did India fall back? In this article, we will gain a deeper understanding of India's education system and what the future holds for it.

New Policy

The "New Education Policy 2023" signifies a transformative step in the educational trajectory of the nation. Addressing the dynamic requirements of the modern era, this policy places renewed emphasis on holistic learning, digital literacy, and skill development. The preparation of the policy for education in schools and colleges falls under the purview of the National Education Policy, which the Government of India updated in 2023. The new policy includes significant changes aimed at positioning India as a global knowledge superpower.

As part of the policy, the Ministry of Human Resource Management has been renamed the Ministry of Education. Education from preschool to secondary school will be universalised to achieve a 100% Gross Enrollment Ratio (GER) in school education by 2030, except for medical and law studies.

The highlight of the New Education Policy 2023 is its robust framework, catering to diverse learners from different backgrounds. By focusing on creating global citizens rooted in local values, the New Education Policy 2023 aims to reshape India's academic landscape, ensuring a brighter, more inclusive future for all.

Effects of New National Education Policy 2023

The New Education Policy 2023 (NEP) 2023 has redefined the educational landscape with a forward-thinking approach. A notable shift from rote learning to skill-based education emphasizes critical thinking and problem-solving. The New Education Policy 2023 stresses inclusivity, ensuring learners from diverse backgrounds enjoy equal opportunities. With its emphasis on local languages and cultures, the policy promises a rooted yet global outlook for students. Enhanced teacher training modules promise a stronger foundational base, while increased financial outlays aim for improved infrastructure. Digital education gains a significant thrust, preparing students for a tech-dominated future. Through the NEP 2023, the nation is forging a path to holistic, meaningful learning.

New Education Policy 2023 (NEP 2023) Implementation and Review Committee

The Ministry plans to establish an Implementation and review committee in accordance with the National Education Policy 2023, which the Higher Education Department officials will supervise. The committee will be responsible for evaluating the effectiveness of the policy.

Additionally, a task force will be created to transform the credit bank system and IITs into multidisciplinary institutions. In the event of a delay in executing this plan, state and district officials will be held accountable.

Overview of New National Education Policy 2023 24

What is the Article About	New Education Policy 2023
Who Launched the Scheme	Indian government
Beneficiary	Citizens of India
Purpose of the Article	The main objective of this policy is to universalize education and make India a global knowledge super power

What is the 5+3+3+4 Structure?

The 5+3+3+4 structure is a revamped educational framework introduced in New Education Policy 2023 to transform and adapt the traditional learning system to better suit the evolving needs of learners. It emphasizes foundational learning, middle schooling, secondary education, and high school stages. This system aims to create a holistic pedagogical environment.

Foundational Stage (5 years)

The first segment, spanning five years, comprises the initial years of a child's education. It includes:

- 3 years of pre-primary education, focusing on playful and activity-based interactive learning.
- The subsequent 2 years include grades 1 and 2, emphasizing foundational literacy and numeracy.

Preparatory Stage (3 years)

This 3-year phase encompasses grades 3 to 5. A multi-faceted teaching approach integrates subjects for a comprehensive learning experience. At this stage:

- Greater emphasis is placed on discovery and exploration.
- The curriculum introduces complex concepts, moving away from rote learning to promote understanding and application.

Middle Stage (3 years)

This segment, consisting of grades 6 to 8, delves deeper into subject matter:

- Subjects are explored in greater detail, encouraging students to think critically.
- Project-based learning is introduced, ensuring that students gain hands-on experience.

Secondary Stage (4 years)

The final segment, comprising grades 9 to 12, prepares students for their future endeavors, be it higher education or vocational paths. During these four years:

- Students have the flexibility to choose subjects of interest.
- Holistic development is emphasized, with a focus on real-world skills and competencies.

In conclusion, the 5+3+3+4 structure is a progressive step towards restructuring the educational framework. It ensures that learning is seamless, integrated, and suited to the diverse needs of every learner.

New Education Policy 2023 Counseling

- The National Education Policy 2023 was first created in 1986 and revised in 1992
- Over 30 years have passed since its creation, during which significant changes have occurred in the world and society
- The New Education Policy 2023 was launched by the education sector to prepare students for the demands of the 21st century
- The policy was created through a consultative process that considered expert opinion, field experience, public research, stakeholder feedback, and more
- The policy was uploaded on a portal, and feedback was obtained from stakeholders and the public
- State and Union Territory Governments and Ministries of the Government of India were invited to give their views and comments.
- The policy was made available in 22 languages
- Meetings were held with education secretaries, and education dialogues were held in many states
- A special meeting of CAGE on New Education Policy 2023 was held, attended by 26 education ministers, representatives of states and union territories, members of CAGE, heads of organisations, and university vice-chancellors
- The New Education Policy 2023 were implemented by the government based on feedback and suggestions from all stakeholders.

NEP Guidelines 2023: Key Points

- **Holistic Approach:** The New Education Policy 2023 aims to foster overall cognitive, emotional, and societal development of students.
- **ECCE Emphasis:** Focus on Early Childhood Care and Education ensures strong foundational learning for every child.
- **New Structure:** A revamped 5+3+3+4 curriculum structure integrates experiential and skill-based learning.
- **Vocational Push:** By 2025, the goal is for 50% of learners to have vocational education exposure.
- **Regional Language Priority:** NEP encourages instruction in regional or home languages up to Grade 5.
- **Digital Integration:** Incorporating tech-driven platforms like DIKSHA ensures accessible quality education.
- **Rethinking Assessments:** Move from summative to a more comprehensive, adaptive evaluation system.
- **Teacher Training:** Continuous professional development and training modules align educators with the new methodologies.

- **Inclusivity and Equity:** New Education Policy 2023 commits to ensuring education for all, irrespective of socioeconomic or physical barriers.

Sarthak Scheme Launched Under the NEP 2023

The government is continuously striving to enhance the standard of education by implementing various changes. Recently, the National Education Policy was launched by the government. Education Minister Ramesh Pokhriyal Nishank is now set to kickstart the meaningful Sarthak Yojana for the all-encompassing development of students and teachers through quality education.

The views, discussions and suggestions of stakeholders such as States and Union Territories were considered while preparing the scheme. The Ministry of Education received a total of 7177 suggestions. The New Education Policy 2023 has 297 education policy recommendations which have been consolidated and assigned to respective agencies with fixed deadlines. The scheme also comprises 304 dimensions to accomplish these tasks.

Objective of New Education Policy 2023

The prime goal of the National Education Policy is to elevate the standard of education in India to a global level, thereby enabling the country to emerge as a leader in knowledge-based industries. This objective is achieved through the universalisation of education outlined in the National Education Policy.

To this end, the government has implemented several amendments to the old education policy under the New Education Policy 2023, aimed at enhancing the quality of education and enabling children to access good education.

What is New National Education Policy 2023 (NEP 2023)

National Education Policy 2023 is the first education policy of the 21st century and aims to provide quality education to all irrespective of their socio-economic background. This Education Policy lays emphasis on technology, innovation, and educational research. It stresses the importance of critical thinking, creativity, and problem-solving skills, and encourages the use of diverse teaching methods and local resources.

Here are the Parameters on Which NEP 2023 is Based:

1. Focus on holistic development of students by recognising, identifying, and fostering the unique capabilities of each student as well as sensitising parents as well as teachers.
2. Achieving foundational literacy and numeracy by all students by Grade 3.
3. Focuses on the flexibility of education.

4. No separation between arts and sciences, curricular and extracurricular activities, vocational and academic streams, etc.
5. Emphasis on conceptual learning over rote learning
6. Emphasis on critical thinking, decision-making, innovative learning, etc.
7. Focus on ethical and humane values.
8. Promoting multilingualism and the power of language in teaching and learning.
9. Focus on life skills such as negotiations, communication, etc.
10. Promoting the use of technology.
11. Focus on teachers' training and mentorship programmes.
12. Special emphasis on reviewing the work given to the students.
13. The schools' structure 10+2 will be changed to 5+3+3+4
14. Multiple entry and exit options in degree courses.
15. Discontinuation of MPhil Programmes.
16. Decreases the number of entrance exams.
17. Board exams will be held twice a year.

Is India Ready for NEP 2023?

Did you know that, according to a report by ASER, 50% of children in government schools cannot read, write or do basic arithmetic despite being in school for 4-5 years? And when you hear it, you begin to question if India is ready for technological adaptation, and internationalisation. According to the UNDP index, pre-pandemic data shows that India has the highest population of poor people with a total of 228.9 million. Do you think that these 228.9 million people are concerned about education or rather they earn the bare minimum to feed themselves and their families?

India, in the 21st century, is fixated on competing in the global world and is inviting international universities when the students don't have the foundational knowledge. Additionally, India has only a budget of 2.9% of the GDP reserved for education. How can the government cover infrastructural development, reach out to remote areas, and invite foreign universities at this low budget? And can it depend on only foreign investment for the revolution that the New Education Policy talks about? The country is far from removing this disparity. That's something to think about!

Features of New Education Policy 2023

- Ministry of Human Resource Management renamed as Ministry of Education
- Universalisation of education under National Education Policy (excluding medical and law studies)
- New education pattern of 5+3+3+4 (12 years of schooling and 3 years of pre-schooling)
- Vocational testing internship to start from class VI
- Education up to class V to be taught in the mother tongue, or regional language
- No science, commerce, or art streams – students can choose any subject
- Students taught coding from class VI
- All schools to be digitally equipped
- E-content to be translated into regional language
- Development of virtual labs.

Some Highlights of New Education Policy 2023

- Multiple entry and exit points for higher education with appropriate certification
- Undergraduate courses of 3 or 4 years with various exit options and certifications
- Formation of an academic bank of credit to store and transfer digital academic credits
- Emphasis on e-learning to reduce dependence on textbooks
- National testing agency offering common entrance test for admission to higher education
- Goal of building one multidisciplinary higher education institution in every district by 2030
- Aim to make all higher education institutions multi-disciplinary by 2040
- Higher education commission of India as single body for entire higher education (except medical and legal education)

- Four verticals under Higher Education Commission of India: National Higher Education Regulatory Council, General Education Council, Higher Education Council, and National Accreditation Council
- Equal treatment for government and private education, with changes for education for the disabled.

Let us Have a Look at all of those States that Implemented NEP Since it was Proposed.

- Karnataka became the first state that issued an order related to the implementation of NEP 2022 in 2021.
- Later on 26 August 2021 Madhya Pradesh also decided to implement New National Education Policy.
- Uttar Pradesh CM Yogi Adityanath assures that the implementation of NEP will be in phases in the state.
- Goa is set to implement NEP in the state in 2023.
- States like Maharashtra, Andhra Pradesh, Rajasthan, and Assam are also making efforts for the implementation of New NEP.
- Meghalaya CM said that it will soon become the first state to fully implement the New National Education Policy.

The policy envisions a holistic and integrated education approach, focusing on skill development, multi-disciplinary learning, and promoting creativity and critical thinking. It also emphasises using technology and digital resources to enhance the learning experience.

The implementation process of the new policy will require the collaboration and support of all stakeholders, including the government, educational institutions, teachers, students, parents, and the industry

Principles of New Education Policy

New Education Policy Consists of the Following Principles:

- The goal is to promote quality education.
- Children's inner capabilities should be recognized and strengthened.
- Students' overall development should be encouraged.
- The country's literacy rate and enrollment rate are increasing.
- To give students the opportunity to select any subject or course they want.
- Language learning should be encouraged in students.
- Educate students in moral and ethical values

Conclusion

New Education Policy 2023 (NEP) is designed to reform and equalize education standards according to today's need. Now school curriculum in our country will work according to 5+ 3+ 3+ 4 format instead of 10+2 format. NEP 2023 will work on the process of easing the learning experience for the students and will help them to adept at-least one skill before leaving the school. It will work on betterment of students as well as education system in India.

India has come a long way, indubitable, but what the government and leaders need to remember is that the law, policies, and schemes should not only be stringent on paper but also see the light of the day and make an impact if the country wants to fulfil it's 2030 Agenda for Sustainable Development.

The essay on the New Education Policy concludes by stating that the policy is an essential initiative that will greatly contribute to the growth of our country and society as a whole. Nevertheless, with a youth-dominated population, India is capable of truly achieving a better state with the proper implementation of this education policy. However, the implementation of this policy will greatly determine its success.

EMPOWERING WOMEN THROUGH NATIONAL EDUCATION POLICY: A PATH TO GENDER EQUALITY AND SOCIOECONOMIC DEVELOPMENT

Dr. C. Rajalakshmi

Associate Professor

*Sakthi Institute of Information Management Studies
Pollachi*

Mr. M. Selvakumar

Assitant Professor

*Sakthi Institute of Information Management Studies
Pollachi*

Abstract:

The National Education Policy (NEP) is a transformative initiative that aims to revamp the education system in India. One of its crucial objectives is to promote gender equality and empower women through education. This paper explores the ways in which the NEP can empower women, enhance their participation in various sectors, and contribute to the overall development of the nation and examine how it serves as a catalyst for women's empowerment, fostering their participation in the workforce, leadership roles, and societal transformation.

Keywords: NEP 2020, Women Empowerment, Gender Equality, Socioeconomic Development.

Introduction:

Empowering women is a global imperative, and one of the most potent tools for achieving this is through education. The National Education Policy (NEP) of India, introduced in 2020, has ushered in a transformative approach to education, with a significant focus on women's empowerment.

In this Paper delve into the NEP and its potential to bring about positive changes in gender equality and women's participation in education and society. The paper explores the key provisions of the NEP that directly impact women's empowerment and discuss the challenges and opportunities in its implementation. Women's empowerment is not just a societal goal; it is an imperative for national progress and development. Education is a powerful tool for empowering women and breaking the barriers of gender inequality. The National Education Policy (NEP) of India, introduced in 2020, recognizes the importance of education in achieving gender parity and women's empowerment.

Historical Perspective:

Before delving into the NEP, it is essential to understand the historical context of women's education in India. Traditionally, women in India had limited access to education, and societal norms often relegated them to domestic roles. However, with time and various reform movements, progress was made. The 1986 National Policy on Education acknowledged the importance of women's education, but significant gaps remained.

Gender Equality in Education: A Fundamental NEP Goal

The NEP recognizes that achieving gender equality in education is a fundamental step towards women's empowerment. It advocates for equal access to quality education for girls and boys, addressing issues like drop-out rates and gender-based discrimination. The NEP emphasizes early childhood care and education, ensuring that girls have access to quality education from the beginning. It promotes gender-neutral curricula that challenge stereotypes and biases, fostering an inclusive learning environment. The NEP aims to eliminate gender-based discrimination in schools and colleges, creating a safe and supportive atmosphere for female students.

Promoting STEM Education for Women

One of the significant pathways to women's empowerment is through Science, Technology, Engineering, and Mathematics (STEM) education. The NEP recognizes the need to bridge the gender gap in STEM fields and takes several measures. The NEP encourages girls to pursue STEM subjects by providing scholarships, mentorship programs, and awareness campaigns. It promotes equal opportunities for girls in STEM-related courses and research, reducing gender disparities in these fields.

Skill Development and Entrepreneurship for Women

The NEP acknowledges the importance of skill development and entrepreneurship in women's empowerment. It aims to provide women with the necessary skills and resources to become self-reliant. The NEP promotes vocational training and skill development programs for women, enabling them to enter diverse sectors, including traditionally male-dominated ones. It supports women entrepreneurs by facilitating access to funding, mentorship, and networking opportunities.

Higher Education and Leadership Roles

Women's empowerment extends to higher education and leadership positions. The NEP recognizes this and takes steps to ensure that women have equal opportunities in academia and leadership. It promotes inclusivity in higher education by addressing issues such as gender-based violence, discrimination, and access to research opportunities. It also encourages women to take up leadership roles in educational institutions, fostering a culture of gender equality.

Women's Participation in the Workforce

Empowering women through education extends to their participation in the workforce. The NEP envisions a future where women are active contributors to the

nation's economic growth. It focuses on equipping women with employability skills through higher education, vocational training, and internships. The NEP encourages employers to implement flexible work policies that support women in balancing their careers and family responsibilities.

Impact on Society and Development

The empowerment of women through education has far-reaching effects on society and development. The NEP's initiatives contribute to reducing gender gaps in education, employment, and leadership roles, fostering a more equitable society. Empowered women contribute significantly to a nation's economic growth through increased workforce participation and entrepreneurship. Educated and empowered women often play a pivotal role in driving positive social changes, including family planning, healthcare awareness, and community development.

Empowering Women A Paradigm Shift in India

The NEP 2020 has brought about a paradigm shift in India's education system. It seeks to address long-standing issues and redefine the way education is imparted in the country. Key highlights of the NEP that impact women's empowerment include Early Childhood Care and Education (ECCE): The NEP emphasizes universal access to quality early childhood education. This is particularly significant for women as it enables them to balance family responsibilities while ensuring their children receive a strong educational foundation.

- **Gender-Inclusive Education:** The policy recognizes the importance of making education more inclusive and gender-sensitive. It promotes the creation of a safe and supportive environment for female students, addressing issues like gender-based discrimination and harassment.
- **Multidisciplinary Approach:** The NEP encourages a multidisciplinary approach to education, allowing students to pursue diverse fields of study. This flexibility is empowering for women who often have varied interests and aspirations.
- **Vocational Education:** The policy emphasizes vocational education and training, which can empower women with practical skills and make them more employable, thereby reducing gender disparities in the workforce.
- **Digital Literacy:** In an increasingly digital world, the NEP recognizes the importance of digital literacy. This is a crucial skill for women, especially in rural areas, as it opens up opportunities for online learning and remote work.
- **Equitable Access:** The NEP aims to provide equitable access to education, particularly for marginalized communities and regions. This includes girls from socio-economically disadvantaged backgrounds who often face multiple barriers to education.

- **Teacher Training:** The policy emphasizes continuous professional development for teachers, including training on gender-sensitive pedagogy. Well-trained teachers are better equipped to create an inclusive and empowering learning environment.
- **Higher Education:** In higher education, the NEP promotes gender diversity by encouraging the establishment of more women's hostels and ensuring a supportive atmosphere for female students.

Challenges in Implementation:

While the NEP 2020 holds immense promise for women's empowerment through education, several challenges must be addressed for effective implementation

Resource Allocation: Adequate funding and resources are crucial for implementing the policy effectively, especially in marginalized areas.

Changing Mindsets: Deep-seated societal norms and attitudes towards women's roles must change to fully realize the benefits of gender-inclusive education.

Infrastructure: Many regions lack proper educational infrastructure, making it difficult for girls to access quality education.

Teacher Training: Ensuring that teachers are well-trained in gender-sensitive pedagogy is essential but may require significant effort.

Opportunities and Positive Outcomes:

Despite the challenges, the NEP offers numerous opportunities and potential positive outcomes

- **Economic Empowerment:** Education empowers women to participate in the workforce, increasing their economic independence and reducing gender disparities in income.
- **Political Participation:** Education can also lead to increased political participation among women, fostering greater representation in decision-making processes.
- **Health and Well-being:** Educated women tend to have better health outcomes and make more informed decisions regarding their well-being and that of their families.
- **Breaking the Cycle of Poverty:** Education has the potential to break the cycle of poverty in families, as educated women are more likely to ensure their children receive an education.
- **Social Empowerment:** Education empowers women to challenge societal norms and advocate for gender equality, contributing to broader social change.

Conclusion:

The National Education Policy 2020 represents a significant step towards women's empowerment in India. By focusing on gender-inclusive education, equitable access, and a multidisciplinary approach, the policy lays the foundation for a more equal and empowered society. However, realizing these goals will require

sustained effort, investment, and a shift in societal attitudes. As India continues to implement the NEP, it has the potential to become a beacon of women's empowerment through education, setting an example for the world to follow. It also serves as a powerful instrument for women's empowerment. By promoting gender equality in education, encouraging women's participation in STEM fields, providing skill development opportunities, and fostering their leadership roles, the NEP paves the way for a more inclusive and prosperous society. Empowering women through education is not just a goal; it is a catalyst for transformative change, leading to gender equality, socioeconomic development, and a brighter future for India. The NEP's commitment to women's empowerment aligns with the broader global agenda of achieving the Sustainable Development Goals and creating a more equitable world for all.

THE CRUCIAL ROLE OF STUDENTS IN SHAPING THE NEW EDUCATION POLICY

Dr. R. Sharmila

*Professor Sakthi Institute of
Information and Management Studies
Pollachi*

Abstract

New Education Policy represents a significant opportunity to transform India's education system into one that is more inclusive, flexible, and responsive to the needs of students and society. While policymakers and educators have important roles to play in implementing the NEP, students are not passive recipients of education; they are active stakeholders who can contribute significantly to its success. By actively engaging in discussions, advocating for change, and participating in the development and implementation of the policy, students can help shape the future of education in India, ensuring that it truly meets the needs of the learners it serves.

Keywords: New Education policy, India, students

Introduction

The New Education Policy (NEP) of India, introduced in 2020, has been a revolutionary step towards transforming the country's education system. It envisions a learner-centric approach and aims to equip students with 21st-century skills. While policymakers, educators, and experts have played vital roles in crafting this policy, it's essential not to overlook the pivotal role students themselves can and should play in shaping and implementing the NEP.

Student Feedback Mechanisms

One of the fundamental ways students can contribute to the NEP is through active participation in the feedback mechanism. This policy encourages open dialogue between students and educational institutions. Students must provide feedback on the effectiveness of teaching methods, curriculum, and the overall learning experience. Honest feedback ensures that the policy remains student-centric and responsive to their evolving needs.

Students, as the primary beneficiaries of the education system, possess a unique perspective that can offer valuable insights to refine and enhance the NEP. They can provide feedback on existing challenges, such as outdated curriculum, examination stress, and lack of practical skills. By actively participating in policy discussions and surveys, students can highlight areas that require attention and improvement.

Promoting Inclusivity

One of the key objectives of the NEP is to create a more inclusive education system. Students can actively participate in making this a reality by advocating for equal opportunities for all, regardless of socio-economic background, gender, or physical abilities. They can help identify barriers that prevent marginalized communities from accessing quality education and suggest solutions to address these disparities.

Curriculum Development

The NEP emphasizes a shift towards a more holistic and skill-oriented curriculum. Students can contribute to this process by sharing their interests, career aspirations, and suggestions for relevant subjects and courses. Their input can help in designing a curriculum that aligns with the evolving needs of the job market and society.

Mental Health and Well-being

The NEP recognizes the importance of mental health in education. Students can play a crucial role in promoting mental well-being by raising awareness about the challenges they face, such as academic pressure and peer competition. They can advocate for the inclusion of mental health support services within educational institutions and contribute to destigmatizing mental health issues.

Environmental sustainability is another area highlighted in the NEP. Students, as the future custodians of the planet, can actively engage in eco-friendly practices within educational institutions. They can advocate for sustainable infrastructure, waste reduction, and the inclusion of environmental studies in the curriculum to foster environmental consciousness from an early age.

Digital Literacy

In an increasingly digital world, digital literacy is essential. Students can take the lead in advocating for improved access to technology and digital resources, especially for students in rural and underserved areas. They can also participate in initiatives that promote responsible and safe internet usage.

Student Governance

The NEP encourages the establishment of student parliaments and councils to promote student involvement in decision-making processes. By actively participating in these bodies, students can voice their concerns, propose changes, and work collaboratively with educators and administrators to create a more student-centric education system.

Innovative Learning Methods

The NEP encourages innovative teaching and learning methods. Students are often early adopters of technology and creative approaches to education. They can collaborate with educators and policymakers to explore new ways of delivering content and engaging students. By sharing their experiences and preferences, students can help shape a more engaging and effective learning environment.

In the quest to transform India's education system, one of the most exciting aspects of the New Education Policy (NEP) is its emphasis on innovative learning methods. This visionary approach recognizes that the world is rapidly evolving, and traditional teaching methods may no longer be sufficient to prepare students for the challenges of the 21st century. To harness the full potential of innovative learning, students can play a pivotal role in collaboration with educators and policymakers.

- **Technology Integration:** Students today are digital natives, well-versed in the use of technology. They can actively participate in the integration of technology into the classroom. This includes advocating for increased access to computers, tablets, and the internet in educational institutions. They can also suggest digital learning platforms and tools that enhance the learning experience.
- **Blended Learning:** The NEP promotes a blended learning approach, combining traditional classroom teaching with online resources. Students can provide valuable input on the effectiveness of this approach, sharing their experiences and preferences. They can highlight what works and what doesn't, helping educators tailor blended learning methods to suit their needs.
- **Peer Learning:** Collaborative and peer-based learning methods are gaining popularity. Students can advocate for more group projects, discussions, and peer teaching within the curriculum. They can also help educators identify subjects and topics where peer learning can be particularly beneficial.
- **Experiential Learning:** The NEP emphasizes the importance of practical and hands-on learning. Students can actively engage in discussions on how to incorporate real-world experiences into the curriculum. They can suggest internships, field trips, and workshops that provide practical insights into their chosen fields of study.
- **Personalized Learning:** Every student is unique, and the NEP recognizes this by encouraging personalized learning paths. Students can provide feedback on the effectiveness of personalized learning tools and approaches, helping educators tailor instruction to individual needs and interests.
- **Creative Assessment Methods:** The NEP promotes a shift away from rote memorization and high-stakes exams. Students can actively contribute to discussions about alternative assessment methods, such as project-based assessments, portfolios, and continuous evaluation. Their input can lead to fairer and more meaningful evaluations of their knowledge and skills.

- **Skill Development:** In a rapidly changing job market, the acquisition of practical skills is crucial. Students can collaborate with educators to identify and prioritize the skills that should be integrated into the curriculum. This can include digital literacy, communication skills, problem-solving abilities, and more.
- **Feedback Mechanisms:** Students can play a significant role in the development of feedback mechanisms for evaluating the effectiveness of innovative learning methods. They can provide regular feedback on what is working and what needs improvement, allowing for continuous refinement of teaching techniques.
- **Teacher Training:** Educators often need training to effectively implement innovative learning methods. Students can advocate for professional development opportunities for teachers to ensure they are well-prepared to deliver engaging and effective lessons.
- **Advocacy and Awareness:** Students can also engage in advocacy efforts to promote the benefits of innovative learning methods within their communities and among policymakers. Their voices can help garner support for the continued implementation of these methods.

Conclusion

The NEP's focus on innovative learning methods offers a tremendous opportunity to reshape the educational landscape in India. Students, as active participants in the learning process, have a vital role to play. By actively collaborating with educators and policymakers, sharing their experiences, and advocating for innovative approaches, students can help create a more engaging and effective learning environment that prepares them for success in the ever-changing world.

Abstract:

A society's access to global knowledge and immediate communication is made possible by the Internet, which is widely used as a research and instructional tool. Anywhere, including homes, workplaces, schools, fast-food outlets, airplanes, and even beaches, can have Internet access. One of the instructional education programs that might assist students in their studies is e-learning. The goal of this study was to look into how well secondary school pupils used e-learning

Introduction:

Information technology has a huge impact on daily life, and its importance to education cannot be overstated. Due to the closure of educational institutions, which creates obstacles for student's learning. Through cutting-edge learning management systems, information technology is helping to solve the problem of continued learning during this quarantine period. It has given educators the chance to use IT technologies for both teaching and evaluating the completion of students' course work. Teachers, students, and institutional officials are all working to ensure that technology is used as effectively as possible and that the educational process runs smoothly. Worldwide educational institutions and students have embraced and valued the online learning environment. This acceptability is based on its simplicity of use, adaptability of learning, and controlling environment.

Objectives:

- To determine the student's level of exposure to e-learning.
- To investigate the effectiveness of using e-learning among college schools students.

Reserch Design:

Sample Size: 124

Sampling Method: For the collection of primary data, the questionnaire was randomly distributed through online form. We use random sampling method to collect the data.

Tools Used: Percentile for analyzing the data

Table: 1

SI. No	Particulars	Frequency	Percentage
	Gender		
1	Male	77	66.95%
2	Female	38	33.04%
	Age		
1	Up to 18	23	20%
2	18to 25	77	66.95%
3	25 to 31	7	6.08%
4	31 and above	8	6.95%
	Living in		
1	Rural	66	53%
2	Semi urban	8	7%
3	Urban	50	40%
	Course studying		
1	School	0	0
2	Under graduate	107	86%
3	Post graduate	0	0
4	Research	17	14%
	How often you refer e-learning materials		
1	Regularly	50	40%
2	Occasionally	16	13%
3	For purpose	41	33%
	Would you like to adapt the e-learning right now		
1	Yes	108	87%

2	No	8	6%
3	May be	16	14%
	Do you think the e-learning materials are relevant and aligned with your learning goals?		
1	Yes	92	74%
2	No	8	6%
3	May be	24	20%
	Would you recommend the e-learning materials to other students?		
1	Yes	108	88%
2	No	8	6%
3	May be	8	6%

Findings:

- In this study, majorities (66.95%) are male respondents and (33.05%) respondents are female.
- The majority of the respondents are between the age group of 18 to 25.
- Majority of the respondents are from rural (53%) and next majority of the respondents are from urban (40%)
- The majority of the respondents are undergraduate students (86%)
- Majority of the respondents (40%) are regularly referring e-learning materials.
- In this study, majority of the respondents (87%) are like to adapt e-learning materials.
- The majority of the respondents (61%) are feel comfortable to access e-learning materials in college.
- The study represents that the majority of the respondents (87%) are feeling good when they using e-learning materials.
- Majority of the respondents (43%) are clearly defined that the e-learning is not that much difficult than the traditional courses.
- From this study we understand it is enabling to cover a wide area of knowledge by the majority of the respondents (80%).
- The majorities of the respondents of the study (74%) think that the e-learning materials are relevant and aligned with your learning goals.
- In this study the majority of the respondents (88%) are recommend the e-learning materials to other students.

Suggestions:

This study suggests that the use of electronic learning resources aids in students' knowledge acquisition. The e-learning resources are simple to alter and have the capacity to cover a wide range of knowledge, according to the responses of the undergraduate students. The children have faith that their teachers can inspire them to learn by using online resources. Additionally, colleges are where students can most easily access e-learning materials.

Conclusion:

In conclusion, views among students about e-learning are complex and evolving. While some people appreciate the ease and freedom it offers, others might find it difficult to interact with others. Things like course design, technological accessibility, and individual learning preferences all have a big impact on how people perceive these things.

It is essential to consider student feedback and experiences as e-learning develops and adapts to their needs in order to maximize its effectiveness and inclusion in education.

Abstract

The New Education policy announced by means of government of India (NEP 2023) turned into a welcoming trade and fresh news amidst all the negativities surrounding the world because of the demanding situations posed by Covid-19 pandemic. The declaration of NEP 2023 became simply surprising with the aid of many. The changes that NEP 2023 has endorsed had been something that many educationists never saw coming. Though the training coverage has impacted college and university education similarly, this article especially specializes in NEP 2023 and its effect on better education. This paper also outlines the salient capabilities NEP and analyses how they affect the prevailing education get.

Keywords: Newschooling policy, better education, Covid-19

Introduction

The National education policy on education (NPE) is a policy formulated by means of the authorities of India to sell schooling among India's humans. The coverage covers basic schooling to schools in both rural and concrete India. The first NPE turned into promulgated via the authorities of India through prime Minister Indira Gandhi in 1968, the second one by means of high Minister Rajiv Gandhi in 1986, and the third by means of high Minister Narendra Modi in 2023.

The National Education Policy 2023 (NEP 2023), which changed into accepted by using the Union cabinet of India on 29 July 2023, outlines the vision of India's newschooling device. The new coverage replaces the preceding country wide policy on education, 1986. The coverage is a comprehensive framework for standard schooling to better schooling as well as vocational education in both rural and urban India. The coverage aims to transform India's education device by 2021. The language policy in NEP is a wide guiding principle and advisory in nature; and it's miles as much as the states, establishments, and colleges to determine at the implementation. The NEP 2023 enacts numerous modifications in India's schooling coverage. Its objectives to increase country expenditure on schooling from round 4% to six% of the GDP as quickly as viable.

Objectives of the Study

- The primary goal of this studies is to observe the impact to present education coverage 2023 on better education.
- The look at additionally outlines the salient functions of NEP and analyses how they affect the present education device.

Salient Features of Nep Related to Better Education

The new better training regulatory shape will make sure that awesome administrative, Accreditation, financing, and instruction altrendy-placing role sare achieved by separate, Self sustaining, and empoweredour bodies. These fourstructures will be installedas4 Unbias edvertica lsinsidea unmarried umbrella organization, India'shighertraining Fee(HECI). There are numerous reforms and new traits which have been Delivered with the aid of NEP in the better .Anumberof the salient features are:

- **Unmarried Regulatory frame for Higher Training:**

The NEP targets to set up higher education fee of India to be able to be the unmarriedRegulatorybody besidesforfelonyandclinical education.

- **A Couple of Access and go out Programme:**

There might be multiple entry and exit options for folks who wish to go away the route inside the Middle.Their credit will be transferredvia academic financia l institution of credits.

- **Tech-based Choice for Grown up Studying Thruapps,Television Channels:**

Satisfactory generation-based alternativesfor grownup gaining knowledge of which includeapps,online publications/modules, Satellite-primarily based tv channels, on-line books, andICT-equipped libraries and grown up training Centres,etc. Could be developed.

- **E-guides to be Available innear by Languages:.**

Over seasuniversities to set-upcampusesin India.

Particular Analysis of Effect to Upon Higher Education

- **Regulatory system of higher education:**

A full-size change in NEP 2023 is the proposal to set up the better schooling fee ofIndia(HECI), as anumbrella body forhigher training, apart fromclinicaland felony schooling.This could typically carry out a query that what's going to manifest to the present UGC andAICTE? HECI is aiming at reforming the higher training zone; the invoice will separate theinstructional and funding factors of the arena. Consistent with the brand new bill, HECI will no thaveanymonetarypowers.The investment tactics which have beendealtwithwiththeaidof the university grants commission (UGC) can be taken care by way of the Ministry oftraining, formerly called the Ministry of Humanuseful resource development (MHRD).

This change however is predicted to clear theregulatory messinIndia's better training gadget.HECI is expected to have 4 unbiased verticals - country wide higher education RegulatoryCouncil(NHERC)for law, trendy education Council (GEC) for fashionable-placing, highereducation presents Council (HEGC) for investment, and country wide Accreditation Council (NAC) for accreditation. To haveuniformityin

schooling requirements, a single umbrella body became usually a requirement and this has been a vision of several educationists. That is taken into consideration as the right step in streamlining training policy.

But, to make certain first-rate of better education, institutes should be measured based totally on relevant parameters like studies, industry linkages, placements and academic excellence, and so forth. If the HECI can control this, the benefits to its largest stakeholder, the youth of India, is probably good sized.

Conclusion

The brand new education policy has a laudable vision, but its power will depend on whether it could efficiently combine with the alternative policy projects of government like virtual India, Skill India and the new industrial coverage to call a few, as a way to effect a coherent structural transformation. Hence, coverage linkages can make sure that training policy addresses to and learns from ability India's reveal in engaging extra dynamically with the company area to shape vocational schooling curriculum if you want to make it a success. There is additionally a need for more proof-based choice-making, to evolve to hastily evolving transmutations and disruptions. NEP has reassuringly provisioned for real-time evaluation structures and a consultative tracking and assessment framework. This shall empower the schooling device to continuously reform itself, rather than watching for for a brand new education coverage each decade for a shift in curriculum. This, in itself, can be an incredible success. The NEP 2023 is a defining second for better schooling. Powerful and time-certain implementation is what is going to make it genuinely path-breaking.

Abstract

The digital age is spreading its wings while also offering managerial problems to fulfill its growing needs, as the twentieth century is known as the computer era. Despite being a serious burden for emerging countries like India, education is the most overlooked part. Many bright minds are attempting to improve the current and modified educational system, which dates back to the 1980s. In layman's words, the NEP, 2020 is an update of the educational system from the classic 1980s paradigm to the 21st century to adapt to and accept changes brought on by developing technology. The National Education Policy of 1986 has been replaced by the NEP 2020. T. S. R. Subramanian and a group of former Cabinet Secretaries began talking to people in January 2015 about what they called "The New Education Policy."

Keywords: NEP-2020, Among School and college students.

Introduction

Indian Prime Minister Narendra Modi presided over the Union Cabinet's approval of the National Education Policy 2020, paving the way for significant reform in both schools as well as higher education. The newest model of strategy intends to pave the path for countrywide class changes and improved education systems. This policy will succeed the NPE of 1986, which has been in place for 34 years. This is the twenty-first century's primary education policy, taking over from the NPE of 1986, which had been in place for 34 years.

Major Changes in Nep-2020

For School Education Here are some of the major changes school students can expect from NEP 2020. Structural change from 10+2 to 5+3+3+4 The new framework describes three years of pre-school or Anganwadi rather than 12 years of schooling.

Here's How it's Done:

Foundational Stage (Ages 3 To 8)

Preschool/Anganwadi for three years, followed by two years of elementary school. Activity-based learning is projected to take place in early childhood, which is recognized today as a field of schooling.

Preparatory Stage (Ages 8 To 11)

From classes III to V, students will learn the basics of reading, writing, and speaking a variety of languages. Students will learn about the arts, science, and math. Currently, physical education is being introduced.

Middle Stage (Ages 11 To 14)

It will be exposed to a wide range of abstract concepts. Experiential learning will be used to connect concepts from other fields.

Secondary Stage (Ages 14 To 18)

Classes IX and X, as well as Classes XI and XII, make up the final level, which is divided into two independent multidisciplinary learning stages.

Bridging the Spoken and Written Language Gap

The NEP 2020 emphasizes learning through one's native language as the primary mode of instruction., but does not require anyone to use a specific language. Because it is easier for pupils to understand difficult concepts when they are taught in their mother tongue, the home language or the local language.

Improve Your Language Skills

The NEP has stressed the importance of learning and teaching different languages. Students have the option of studying many native Indian languages in addition to Sanskrit. They will also have the chance to learn a language from another country.

Change in Exam Structure

The PARAKH, which is an evaluation body, is likely to change how the Class X and Class XII board exams are set up. (Performance Assessment, Review, and Analysis of Knowledge for Holistic Development). The reorganization intends to promote interdisciplinary education and eliminate the necessity of participating in coaching sessions. One possibility is to hold the board exams twice a year rather than just once, as is currently the case. Literacy and content-area knowledge will be evaluated for children in Grades 3, 5, and 8 respectively rather than the percentages they must memorize.

Preparation for the Real World

NEAT has been established as a governing body to oversee the integration of utilizing modern technology to enhance student performance and achievement NEAT (National Educational Alliance for Technology) seeks to personalize learning with Artificial Intelligence experiences based on the needs of the learner. To boost learning

results, it even advocates establishing national alliances with educational technology companies. 1. However, one of the most difficult challenges is establishing a strong digital infrastructure in remote areas. 2. Memorization is expected to give way to holistic, integrated, pleasurable, and fascinating learning. Interdisciplinary subjects will most likely be popular among students. 3. During a 10-day "bagless" learning time, students in Classes VI through VIII will engage. This term will function similarly to an internship, to gain practical experience. 4. Beginning with Class VI, the chance to study coding will be presented to the students

Impact of New Education Policy (Nep) 2020

NEP 2020 will open up new learning opportunities to the students. Its biggest impact would be the change in the learning environment and the learning process for the students. The new education policy will:

- Increase focus on the skill improvement and competency development of the students.
- Make the students future-ready by building 21st-century skills.
- Make students focus on both academic and non-academic pursuits.
- Provide various learning opportunities for pre-primary, open, and distance-learning students.
- Give access to counselling and other services for students.

School Education

Focus on Foundational Literacy and Numeracy : The policy accords the highest priority to achieving Foundational Literacy and Numeracy by all students by Grade 3. The policy states, "The highest priority of the education system will be to achieve universal foundational literacy and numeracy in primary school by 2025. The rest of this Policy will become relevant for our students only if this most basic learning requirement (i.e., reading, writing, and arithmetic at the foundational level) is first achieved. Proficiency in Reading with Understanding and Numeracy) was launched on 5 July 2021 to achieve this goal. [18] The "10 + 2" structure will be replaced with "5+3+3+4" model. [19] This will be implemented as follows:[20][21] Foundational Stage: This is further subdivided into two parts: 3 years of preschool or anganwadi, followed by classes 1 and 2 in primary school. This will cover children of ages 3–8 years. The focus of studies will be in activity-based learning. Preparatory Stage: Classes 3 to 5, which will cover the ages of 8–10 years. It will gradually introduce subjects like speaking, reading, writing, physical education, languages, art, science and mathematics. Middle Stage: Classes 6 to 8, covering children between ages 11 and 13. It will introduce students to the more abstract concepts in subjects of mathematics, sciences, social sciences, arts and humanities. Secondary Stage: Classes 9 to 12,

covering the ages of 14–18 years. It is again subdivided into two parts: classes 9 and 10 covering the first phase while classes 11 and 12 covering the second phase.

These 4 years of study are intended to inculcate multidisciplinary study, coupled with depth and critical thinking. Multiple options of subjects will be provided.

Instead of exams being held every academic year, school students will only attend three exams, in classes 2, 5 and 8. Board exams will be continued to be held for classes 10 and 12 but will be re-designed. Standards for this will be established by an assessment body, PARAKH (Performance Assessment, Review and Analysis of Knowledge for Holistic Development) To make them easier, these exams would be conducted twice a year, with students being offered up to two attempts. The exam itself would have two parts, namely the objective and the descriptive. This policy aims at reducing the curriculum load of students and allowing them to be more "inter-disciplinary" and "multi-lingual". One example given was "If a student wants to pursue fashion studies with physics, or if one wants to learn bakery with chemistry, they'll be allowed to do so". Report cards will be "holistic", offering information about the student's skills. Coding will be introduced from class 6 and experiential learning will be adopted. The Midday Meal Scheme will be extended to include breakfasts. More focus will be given to students' health, particularly mental health, through the deployment of counsellors and social workers. identifying stage-wise targets and goals to be achieved by 2025, and closely tracking and monitoring progress of the same". Subsequently, the NIPUN Bharat Mission (National Initiative for Proficiency in Reading with Understanding and Numeracy). Accordingly, all State/UT governments will immediately prepare an implementation plan for attaining universal foundational literacy and numeracy in all primary schools, identifying stage-wise targets and goals to be achieved by 2025, and closely tracking and monitoring progress of the same".

Higher Education

It proposes a 4-year multi-disciplinary bachelor's degree in an undergraduate programme with multiple exit options. These will include professional and vocational areas and will be implemented as follows. A certificate after completing 1 year of study A diploma after completing 2 years of study A Bachelor degree after completion of a 3-year programme. A 4- year multidisciplinary Bachelor degree (the preferred option) MPhil (Masters of Philosophy) courses are to be discontinued to align degree education with how it is in Western models. A Higher Education Commission of India (HECI) will be set up to regulate higher education. The Council & goal will be to increase gross enrollment ratio. The HECI will have 4 verticals National Higher Education Regulatory Council (NHERC), to regulate higher education, including teacher education, while excluding medical and legal education. National Accreditation Council (NAC), Higher Education Grants Council (HEGC), for funding

and financing of universities and colleges. This will replace the existing National Council for Teacher Education, All India Council for Technical Education and the University Grants Commission. General Education Council (GEC), to frame ‘graduate attributes’, namely the learning outcomes expected. It will also be responsible in framing a National Higher Education Qualification Framework (NHEQF). The National Council for Teacher Education will come under the GEC, as a professional standard setting body (PSSB). Other PSSBs will include professional councils such as Veterinary Council of India, Council of Architecture, Indian Council of Agricultural Research and National Council for Vocational Education and Training. The National Testing Agency will now be given the additional responsibility of conducting entrance examinations for admissions to universities across the country, in addition to the JEE Main and NEET. The policy proposes that higher education institutes like the IITs make changes with regard to the diversity of learning. The policy proposes to internationalize education in India. Foreign universities can now set up campuses in India. The fees of both private and public universities will be fixed.

Make Space for Personalization

The New Education Policy is eliminating the rigid system of limited education streams. Thus, higher education solutions will need to modify their products and services accordingly. They will have to focus on offering personalized solutions that can be catered to students’ stream choices.

Focus on Specialization

With more learning choices, students will ultimately prefer specialized learning above everything. Thus, higher education solutions must reform its existing catalog of subject knowledge. They will be needed to employ multiple experts to deliver precise services on multiple subjects.

It will also promote unconventional subjects, like coding, web designing, etc., in a traditional learning space.

Integrate Intuitive Tools

Adding intuitive elements like gamification will be a need for modern education solutions. As learners will get the chance to delve into different topics, fun, and interactive elements will simplify the initial stage.

Moreover, the use of video-based elements will boom among education solutions, thanks to NEP.

Major Reforms in Higher Education

Multi-Modal Education

Online, open and multi-modal learning have been promoted vigorously by both schools and higher education institutions.

This initiative has helped in reducing the learning loss due to the Covid-19 pandemic and will contribute greatly to achieving education in remote and inaccessible parts of the country.

SWAYAM, DIKSHA, SWAYAM PRABHA, Virtual Labs and other online resource portals have all seen a sharp rise in student registrations.

In addition to the above, UGC has notified Open and Distance Learning (ODL) and Online Programmes Regulations under which 59 Higher Educational Institutions (HEIs) are offering 351 full-fledged Online programmes and 86 HEIs are offering 1081 ODL programmes. The permissible limit of online content in a programme has also been raised to 40%.

Innovation and Start-Ups

To encourage an **ecosystem of start-up and innovation**, 2,774 Institution Innovation Councils have been set up in HEIs in 28 States and six UTs.

Promotion of Indian Languages

Stress is being paid to **multilingualism in education** and testing to ensure that lack of knowledge of English does not impede the educational attainment of any student.

With this objective in mind, states are publishing bilingual/ trilingual textbooks at the foundational level and content on the DIKSHA platform has been made available in 33 Indian languages.

NIOS has introduced **Indian Sign Language (ISL)** as a language subject at the Secondary Level. However, on a large scale, today remarked that **NEP-2020 has created a suitable platform** in universities and other educational institutions for **translation of research, ideas and innovations into actions** for betterment of society.

Overall, the NPE 1986 created a pool of education and trained human resources who contributed to the value chain but NEP 2020 dreams of creating human resources who will create value propositions.

With the implementation of the new NEP 2020, the Indian education system is poised to become closer to international standards. In an online survey conducted across 1103 students across India, nearly 96.4% were optimistic about the results that come out of the implementation of new policy.

NEW EDUCATION POLICY 2020		
KEY DIFFERENCES		
	EXISTING ACADEMIC STRUCTURE	NEW ACADEMIC STRUCTURE
STREAMS	There are 3 streams which a student can choose from. -Science -Commerce -Arts	No hard separation of streams. A student can choose his stream according to his/her interest or desire.
PEDAGOGICAL STRUCTURE	10+2+3	5+3+3+4
BOARD EXAMS	Based on memorising facts and used to be held once a year.	Based on core competencies with students allowed to take the exam twice.
AWARD OF DEGREE	After completion of 3 or 4 years, the degree is provided to the students.	Multiple exit options with certificate after 1 year and diploma after 2 years.
VOCATIONAL EDUCATION	NIL	Vocational education from class 6th with internships.
MARKSHEET SCORING	Based on Marks obtained in exam	360 degree performance evaluation
ENTRANCE TEST	Multiple Entrance Test	Single Entrance Test

Conclusion

The policy introduces a whole gamut of changes and reads largely as a very progressive document, with a firm grasp on the current socio-economic landscape and the prospect of future uncertainty.

Education for a new generation of learners has to essentially engage with the increasing dematerialisation and digitalisation of economies, which requires a completely new set of capabilities in order to be able to keep up. This seems to be an even more vital requisite now, with the trend towards digitalisation and disruptive automation being quickened by the pandemic.

Overall, the NEP 2020 addresses the need to develop professionals in a variety of

fields ranging from Agriculture to Artificial Intelligence. India needs to be ready for the future.

And the NEP 2020 paves the way ahead for many young aspiring students to be equipped with the right skillset.

The new education policy has a laudable vision, but its strength will depend on whether it is able to effectively integrate with the other policy initiatives of government like Digital India, Skill India and the New Industrial Policy to name a few, in order to effect a coherent structural transformation.

Hence, policy linkages can ensure that education policy addresses to and learns from Skill India's experience in engaging more dynamically with the corporate sector to shape vocational education curriculum in order to make it a success.

There is also a necessity for more evidence-based decision-making, to adapt to rapidly evolving transmutations and disruptions.

NEP has reassuringly provisioned for real-time evaluation systems and a consultative monitoring and review framework. This shall empower the education system to constantly reform itself, instead of expecting for a new education policy every decade for a shift in curriculum.

This, in itself, will be a remarkable achievement. The NEP 2020 is a defining moment for higher education. Effective and time-bound implementation is what will make it truly path-breaking.

Abstract:

Education is important for the economic and social Development of nation. The weapon may prove to be harmful if it is misused. Due to proper interpretation and implementation of policies, the generations may be benefitted. It will result in strong economic and social development. The National policy in education, 1986 was replaced by New National Education Policy. [NEP 2020] National Education Policy is the holistic reform in the education across all levels stages of education in India. It made reforms in Primary, Secondary and Higher education in single policy document. It is the Evolution in the field of education in India. This Study is based on secondary data, the available literature on the topic is referred. This paper aims at discussing challenges and Opportunities in National Education policy 2020 with respect to higher education in India. This paper will help the researchers, academicians and policy makers gain insight in the NEP policy.

keywords: New Education Policy, Challenges and Opportunities Higher Educational Institutes.

Introduction :

“Education is the most powerful Weapon to be used to change the world”

- Nelson Mandela

Kothari Commission [1964-66] had recommended a 6 % allocation of GDP, National Education Policy, 2020 is an evolution in the Education field. It tried to increase access, equity, And inclusion as one of the key changes. Internationalization of higher education is one of the Aims in the NEP. NEP promoted more and more Philanthropic activity in the education sector. NEP tried to imbibe that education is a concurrent subject. NEP suggested a “light but tight” regulatory Framework to ensure integrity, transparency, and Resource efficiency of the educational system through audit and public disclosure while Encouraging innovation and out-of-the-box ideas through autonomy, good governance, and Empowerment.

Challenges to be in Implementing Nep:

Following are the challenges in front of higher Educational institutions while implementing National Education Policy 2020.

- **Gross Enrollment Ratio[GER]:**

The GER is 27.1 in 2019-20 (AISHE 2019-20). Total Enrollment of students in higher education institutes in India is around 342.5 lakhs, with 50.4% male and 49.6% female enrolments. The Gross Enrollment Ratio (GER) for women in 2019-20 is 27.3 % as compared to 9 % for men. It means that more eligible women as compared to men are attending college and university in India. Increasing the GER is one of the key aims of the National Education Policy (NEP). The Modi Government wants to touch a 50 % GER by 2035 through various reforms included in the NEP.

- **Inclusion & Equity:**

National Education Policy, (NEP) 2020 is based on the principles related to diversity, equity and inclusion. Equitable and inclusive education as per NEP 2020 aims to ensure that every child should get opportunity to learn and excel. Special emphasis will be given on socially and economically disadvantaged groups which include: gender identities, socio-cultural identities, geographical identities, and socio-economic conditions. A separate "Gender Inclusion fund" will be created as also "Special Education Zones" for disadvantaged regions and groups.

Quality benchmark:

One of the core values of NAAC is "quest for excellence". The new quality benchmarks being declared by the National Accreditation & Assessment Council [NAAC], Bangalore for accreditation purpose. Likewise, NEP is also based on the fundamental pillars of access, affordability, equity, quality and accountability. So, quality initiatives and quality improvement programs are must.

- **Infrastructural facilities:**

In the present situation, the ICT enabled infrastructural facilities with high speed WI-FI connection is the prime necessity. It is required in order to keep pace with the fast changing technology.

- **Effective and Visionary Leadership in it is:**

The visionary leadership in the field of higher education and higher education institutes is the need of an hour. Intervention of politics in education should be existed to the extent it is required for effective policy framing and implementation. Timely decision by Ministry of Education, investment for future, releasing grants, approvals, etc. are some of the issues to be handled smoothly.

- **Lack of funds:**

About 3% of GDP is spent on education in India in 2019-20. The expectation is around 6% in NEP. The share from the budget of Central and State Government needs to be increased more.

to channelize funds towards strengthening higher education. For the department of higher education an amount of Rs.40810.34 crore (revenue) has been allocated.

- **Capacity building, training, retraining and un-Training to faculty:**

The capacity building workshops, training to faculty of HEIs is important and should be frequently arranged. The initial training, retraining and un-training (wipe out old, outdated matter and train with new concepts and viewpoints). Industry and academia need to be bridge gap for employability or self-employability. Lack of specific skill development courses or add on courses for employability or self-employability. New Education Policy is not just about the degree. It is all about equipping students for employment or self-employment. The student development programs to be conducted on need based system.

- **Faculty recruitment & promotions:**

The Permanent faculty to be recruited as per the requirement. The permanent faculty try to establish and develop the departments and higher institutions. It creates positive impact on institutional development in the long run.

- **Mind-set of students towards education:**

Due to multiple entry and exits in NEP 2020, there is high chance of increase in drop out rate in HEI. The time will provide the correct scenario on this aspect. Orientation and motivation to students for Post-graduation is to be augmented. The Scholarships for the deserving students, imbining research aptitude and scientific temper among the students will help them for sustainable development. It is being observed by few studies that due to fast Pace of the world, the students are facing certain emotional and mental disorder. A congruence between emotions and behaviour of the students is required in order to develop them as a responsible citizen. To achieve this, following remedies are suggested-cultivating student's key competencies, giving freedom to express views, incorporation of moral values, enhancing life survival skills, creating readiness for self-learning in them. Choice based credit system [CBCS] will help the students to learn the subjects of their linking/sand credit earned as per the credit in Academic Bank of Credit [ABC]. Handholding and mentoring cell in the institution may orient the students in difficult situations.

- **Dependence on ICT:**

The new policy focuses on online and e-learning. MOOCs, courses on Swayam, NPTEL, Coursera, etc. are gaining importance due to their contents and course delivery. Online education will play an important role to bridge the gap between the students and the institutes.

- **Huge Number of Colleges :**

There are 1043 Universities, 42343 colleges and 11779 stand alone institutions (AISHE Report 2019-20). This number is increasing day by day and adds in to the

competition with existing institutions. There should be motivation and a positive force for accreditation and certification from the apex bodies for institutions. It could be achieved through making cluster of Institutions to help each other, support of management, declaring benchmark for quality purpose, ranking of college/university as per NIRF, Times etc. Participating and updating the reports in AISHE and following guidelines as per RUSA is important for the institutions. Institutions need to try hard for their image and goodwill building.

- **Internationalization & Foreign Universities:**

Internationalization of higher education has received its due importance in NEP, to make India hub for International students. HEIs will play a vital role in attracting foreign students in India. The universities will also have to be alert and keep themselves ready to welcome students.

- **Opportunities to be in Implementing NEP:**

The NEP 2020 paves the way towards less regulation and more autonomy for institutions through an effective self-regulatory framework. New Education Policy is not just about the degree

Conclusion:

The researcher has put up the views on challenges and opportunities in National Education Policy 2020 mainly for higher educational institutions. The views mentioned by the researcher are compiled through reading and experience. However the researcher is optimistic that NEP will prove to be a boon in the long run. All higher education institutions with current nomenclature of affiliated colleges will expand as multi-disciplinary autonomous colleges with degree giving power in their name or become constituent colleges of their affiliated universities. An impartial agency National Research Foundation will fund for innovative projects in priority research areas of basic sciences, applied Sciences, and social sciences & humanities. The system will transform itself as student centric with the freedom to choose core and allied subjects within a discipline and across disciplines. Faculty members also get autonomy to choose curriculum, methodology, Pedagogy and evaluation models within the given policy framework. These transformations will start from the academic year 2021-22. And will continue until the year 2030 where the first level of transformation is expected to be visible.

IMPACT OF NEW EDUCATION POLICY AMONG FUTURE GENERATION

Dr. K. K. Saradha

Assistant Professor & Head

Department of Economics

Vellalar College for Women (Autonomous)

Abstract

Education is fundamental for achieving full human potential, developing an equitable and just society, and promoting national development. Providing universal access to quality education is the key to India's continued ascent, and leadership on the global stage in terms of economic growth, social justice and equality, scientific advancement, national integration, and cultural preservation. Universal high – quality education is the best way forward for developing and maximizing our country's rich talents and resources for the good of the individual, the society, the country, and the world. India will have the highest population of young people in the world over the next decade, and our ability to provide high – quality educational opportunities to them will determine the future of our country. On July 29th, 2020, the Indian Education System noticed a historical decision made by the Union Cabinet, the New Education Policy. On this day, the Ministry of Education announced the major reforms in the educational structure under the newly laid National Education Policy (NEP) 2020. Education policies are usually revised every few decades. The first came in 1968, the second in 1986, and the third reformation of the Indian education culture was seen in 2020. NEP is the first inclusive, participatory, and holistic approach that reforms the existing educational structure. This new education policy 2020 takes into consideration different fields like experiences, empirical research, stakeholder feedback, and lessons from best practices. It is a progressive shift and if implemented in its true vision, this new education structure can bring India at par with the leading countries of the world. The objective of this reformation of the Indian education system is “No child will be left behind”. It is intended to fill the gaps in the current education scenario. So, we can say, NEP 2020 is brought for the ‘learning to learn’ approach. The new education policy 2020 aims to overhaul India's existing education regime and make it more learning-centric. Students will be provided with the best opportunity to learn research-based learning. Teachers will be given the chance to learn advanced teaching skills. To help students and make them understand the new education policy, teachers should develop counselling and career guiding skills.

Impact of New Education Policy Among Future Generation

Introduction:

NEP is basically a comprehensive framework to guide the development of education in the country. The urge of such a framework was first realized in the year 1968 which was then revisited and revised in the year 1986. This was again reviewed

and updated in 1992 as per the need of the hour. Since then, the entire world and the overall sector have witnessed massive changes. Hence, this year, the government decided to revise these policies to make them more relevant and compelling for the education ecosystem. On July 29th, 2020, the Indian Education System noticed a historical decision made by the Union Cabinet, the New Education Policy. On this day, the Ministry of Education announced the major reforms in the educational structure under the newly laid National Education Policy (NEP) 2020. The new NEP has been introduced with an aim to formalize changes in the system from K-12 level to college/university level. Keeping in mind the developing scenario, education content henceforth, will focus on key-concepts, ideas, applications and problem-solving angles. Let's take a look at some of the innovative policies introduced for the primary and secondary level education.

- **National Curricular and Pedagogical Framework to be Developed by National Council of Educational Research and Training (NCERT):** A national Curricular and Pedagogical Framework for Early Childhood Care and Education for children up to the age of 8 will be developed by NCERT.
- **Coding to be Introduced From Class 6:** Mathematical thinking and scientific temper will be a part of School curriculum. Students will be allowed to take up coding from class 6.
- **Board Exams:** Board exams will be conducted in two parts – Objective and Descriptive. These examinations should be designed to promote knowledge application rather than rote learning. Going forward, boards may also develop viable models of the main exams such as annual/semester/modular.
- **No Hard Separation of Streams for Students:** There will be no hard separation of learning areas like science and humanities in terms of curricular. There will not be any separation between co-curricular and extra-curricular areas and all subjects, including arts, music, crafts, sports, yoga, etc. will be a part of the overall curriculum.

NEP is the first inclusive, participatory, and holistic approach that reforms the existing educational structure. This new education policy 2020 takes into consideration different fields like experiences, empirical research, stakeholder feedback, and lessons from best practices. It is a progressive shift and if implemented in its true vision, this new education structure can bring India at par with the leading countries of the world. Let's understand the key changes that this new education policy proposes. The objective of this reformation of the Indian education system is "No child will be left behind". It is intended to fill the gaps in the current education scenario. So, we can say, NEP 2020 is brought for the 'learning to learn' approach.

NEP's Focus on Higher Education:

Similarly, there are a lot of reforms and new developments which have been introduced by NEP in the higher education sector. Let's take a look at some of the important ones which are well-poised to create a positive difference in the sector.

- **Single Regulatory Body for Higher Education:** The NEP aims to establish Higher Education Commission of India which will be the single regulatory body except for legal and medical education.
- **Multiple Entry and Exit Programme:** There will be multiple entry and exit options for those who wish to leave the course in the middle. Their credits will be transferred through Academic Bank of Credits.
- **Tech- Based Option for Adult Learning Through Apps, Tv Channels:** Quality technology-based options for adult learning such as apps, online courses/modules, satellite-based TV channels, online books, and ICT-equipped libraries and Adult Education Centres, etc. will be developed.
- **E-courses to be Available in Regional Languages:** Technology will be part of education planning, teaching, learning, assessment, teacher, school, and student training. The e-content to be available in regional languages, starting with 8 major languages – Kannada, Odia, Bengali among others to join the e-courses available in Hindi and English.
- **Foreign Universities to Set-up Campuses in India:** World's top 100 foreign universities will be facilitated to operate in India through a new law. According to the HRD Ministry document, "such (foreign) universities will be given special dispensation regarding regulatory, governance, and content norms on par with other autonomous institutions of India. "Whether you aspire to study at these universities in your home country or study abroad, please remember that an education loan in India can help finance your higher studies independently.
- **Common Entrance Exam for all Colleges:** The common Entrance exam for all higher education institutes to be held by National Testing Agency (NTA). The exam will be optional.

The National Education Policy is expected to bring positive and long-lasting impact on the higher education system of the country. The fact that foreign universities will be allowed to open campuses in India is a commendable initiative by the government. This will help the students experience the global quality of education in their very own country. The policy of introducing multi-disciplinary institutes will lead to a renewed focus on every field such as arts, humanities and this form of education will help students to learn and grow holistically. Thus, students will be equipped with stronger knowledge base.

Highlights of the New Education Policy:

- The present school system will be divided into 5 + 3 + 3 + 4 stages as Foundation, Preparatory, Middle & Secondary respectively.
- Mother tongue or regional language will be taught up to at least class 5.
- Vocational education will be integrated from class 6 with 10 days of mandatory internship.
- National Testing Agency will conduct SAT-Like college entrance tests twice a year.
- Students will be benefitted with a 4-Year multi-disciplinary bachelor's program.
- Mid-term drop-out students will be able to complete the degree after a break.
- Foreign colleges could enter India, and Indian universities would go global.

These will be some changes in the existing education policy to bring out the best in one self, be it any field of study. It can surely make India a global knowledge superpower. In its essence, the NEP underlines the principle of creating a transformation framework that shifts the focus from conventional rote-learning to a more inquiry-based, project-led education ecosystem. The main objective of the National Education Policy is to help students enhance their learning outcomes and facilitate their holistic development.

Significance of New Education Policy 2020:

- **Recognizing Importance of Formative years:** In adopting a **5+3+3+4 model for school education starting at age 3**, the policy recognizes the primacy of the formative years from ages 3 to 8 in shaping the child's future.
- **Departure From Silos Mentality:** Another key aspect of school education in the new policy is the breaking of the strict division of arts, commerce and science streams in high school. This can lay the foundation for a multi-disciplinary approach in high education.
- **The Confluence of Education and Skills:** Another laudable aspect of the scheme is the introduction of vocational courses with an internship. This may nudge the vulnerable sections of society to send their children to school. Also, it would help in realization of the goal of Skill India Mission.
- **Making Education More Inclusive:** The NEP proposes the extension of the Right to Education (RTE) to all children up to the age of 18. Further, the policy seeks to leverage the huge potential of online pedagogy and learning methodologies for increasing gross enrolment in higher education.
- **Light but Tight Oversight:** According to the policy, in spite of periodic inspection, transparency, maintaining quality standards and a favourable public

perception will become a 24X7 pursuit for the institutions, leading to all-round improvement in their standard. The policy also seeks to establish a super-regulator for education which will be responsible for standards-setting, funding, accreditation and regulation of higher education India.

- **Allowing Foreign Universities:** The document states universities from among the top 100 in the world will be able to set up campuses in India. This will lead to an infusion of international perspective and innovation, which will make the Indian education system more efficient and competitive.
- **Ending Hindi vs English Debate:** Most crucially, NEP, once and for all, buries the strident Hindi versus English language debate; instead, it emphasizes on making mother tongue, local language or the regional language the medium of instruction at least till Grade 5, which is considered the best medium of teaching.

The Fundamental Principles of NEP:

- **Recognizing, Identifying, and Fostering the Unique Capabilities of Each Student:** Every student is different. Be it their learning styles or interests or competence. Teachers as well as parents must be sensitized to understand the unique capabilities of students and acknowledge the same. This will make more room for growth and will instill more confidence in students.
- **Achieving Foundational Literacy and Numeracy:** Foundational literacy and numeracy (FLN) can be defined as a child's ability to read basic texts and solve basic Mathematics problems. Ensuring that students have the necessary understanding of words and numbers by the time they reach third grade, is one of the most important principles of NEP 2020.
- **Flexibility:** Each child's inclination varies. Some students might be interested in Mathematics, some others might be interested in Sports and certain others in Arts. The flexibility to choose the career trajectory that the students want, as per their interests, is one of the fundamental principles of NEP 2020.
- **No Hard Separations:** Intentionally or unintentionally, more often than not, people tend to place more importance on curricular activities than extracurricular activities and the same happens with Science and Arts. The former usually gets more emphasis. The National Education Policy highlights that there shouldn't be a hard separation between these. All subjects and activities should receive equal and undivided attention.
- **Multidisciplinary & Holistic Education:** "Ensuring Unity and integrity of all knowledge", is one of the most important notions put forward by NEP 2020. Through multidisciplinary, students will be able to gain a wide variety of skills that are necessary to succeed in life. Education is not just about textbook

knowledge and NEP 2020 ensures to constrain this issue which has been prevalent in our education system for a very long time.

- **Emphasis on Conceptual Understanding:** Memorizing for exams and forgetting the mugged-up concepts soon after has become a pattern. NEP 2020 tries to curb this by emphasizing a better comprehension of the concepts as opposed to cramming.
- **Creativity and Critical Thinking:** NEP 2020 promotes logical thinking and innovation. A close observation of the principles will help one understand that they all go hand in hand. Fostering the unique capabilities of students, teachers and parents will help catalyze independent thinking and innovation.
- **Ethics and Human & Constitutional Values:** Another fundamental principle that will guide the educational systems at large is values like empathy, respect for others, cleanliness, courtesy, democratic spirit, the spirit of service, respect for public property, scientific temper, liberty, responsibility, pluralism, equality, and justice.
- **Promoting Multilingualism and the Power of Language:** India is a land of thousands of diversities and to acknowledge the same, educational institutions must promote multilingualism in teaching and learning.
- **Life Skills:** Life skills are necessary abilities that enable individuals to deal with the challenges of life. Communication, resilience, problem-solving, perseverance, etc. are some important life skills.
- **Focus on Regular Formative Assessment for Learning:** Formative assessments are used to identify students' strengths and weaknesses, address students' areas of need, and the like. It helps assist teachers in recognizing gaps in knowledge and functioning to close those gaps.
- **Extensive Use of Technology:** With the rapid development of technology, there are a lot more possibilities for better teaching and learning. NEP 2020 promotes the use of technology since it can help transcend various barriers, and make management better & more efficient.
- **Respect for Diversity & Respect for the Local Context:** Education is concurrent and it is of paramount importance to respect diversity and place emphasis on the local context. The textbooks must capture the cultural nuances and draw examples from life that the students will be able to connect with. This will ensure better comprehension and understanding.
- **Full Equity and Inclusion:** Equity and inclusion must be at the heart of all educational institutions so that no student feels left out. Regardless of socioeconomic status and other markers, every child must have access to quality education, this policy asserts that bridging the social category gaps in access,

participation, and learning outcomes in school education will continue to be one of the major goals of all education sector development programs.

- **Synergy in Curriculum Across all Levels of Education:** A combined effort to ensure better, high-quality education. From early- childhood education to higher education, the curriculum must be designed in a rhythmic way. The students must be introduced to concepts properly and guided with utmost precision.
- **Teachers and Faculty are at the Heart of the Learning Process:** From recruitment to professional development to service conditions, the overall well-being of teachers will be given due importance.
- **‘Light but Tight’ regulatory framework to ensure integrity, transparency, and resource efficiency:** The policy will ensure that integrity, transparency, and resource efficiency are in place. It will help ensure that the quality is not compromised and that every stakeholder has access to the necessary information.
- **Outstanding Research:** Quality education doesn’t come easy. NEP 2020 says that extensive research must be conducted to ensure that the standards are high.
- **Continuous Review:** There can’t be growth and development without review and feedback. Continuous and consistent reviews of progress will be able to throw light on what is working and what is not.

A Rootedness and Pride in India:

Another important principle of NEP 2020, that educational institutions must keep in mind is ensuring that the rich and diverse culture of India, is communicated and that the traditions and ancient history are preserved.

- **Education is a Public Service:** Education is not business. It is a necessity, and every individual should have access to quality education. It is to be considered the basic right of every child.
- **Substantial Investment in a Strong, Vibrant Public Education System:** The promotion and support of genuine charitable and community involvement is another fundamental principle of the National Education Policy, 2020, that will help guide the institutions better.

Impact on Teachers:

The Government of India has decided to make their teachers more skilled and equipped with futuristic teaching skills. See what teachers will get from the new education policy:

- Introduction of professional teaching standards.
- Clearer outlined roles and responsibilities.
- Training to monitor and improve their capabilities.

- More focus on 21st-century teaching skills.
- A transparent recruitment and selection process for teachers to motivate them and improve their performance.

Impact on Students:

NEP 2020 will open up new learning opportunities to the students. Its biggest impact would be the change in the learning environment and the learning process for the students. The new education policy will:

- Increase focus on the skill improvement and competency development of the students.
- Make the students future-ready by building 21st-century skills.
- Make students focus on both academic and non-academic pursuits.
- Provide various learning opportunities for pre-primary, open, and distance-learning students.
- Give access to counselling and other services for students.

The NEP 2020 will shift the focus of assessments from merely academic grades to higher-order skills such as critical thinking, creativity, problem-solving, and idea-generation to create higher performance standards demonstrated through varying degrees of competency.

In terms of technology, here are some of the reasons why the NEP's decision to introduce coding at a young age is something to cheer for –

It will help improve problem-solving skills in children; It will make the young learners ready for a future that relies primarily on digital tools for all tasks; Coding helps students develop an analytical mindset, problem-solving attitude and creativity. Overall, it has a very positive effect on developing brains; Learning to code early allows students to showcase their skills at competitive programming exams and competitions, such as International Olympiads in Informatics, and opens up a whole world of possibilities; Teaching coding from as early as the 6th grade will help the country develop better engineers who will bring in innovative ideas and solutions; Students with a robust knowledge of coding since their formative years will find it much easier to familiarize themselves with new-age technologies. This will also ensure better employability in the future; Now, one can also enroll in one of the multiple online coding classes. Learning coding at a young age will make education future-proof and give students much better prospects at finding a job in a digital world.

The NEP recognizes the importance of technology in bridging the language barrier between teachers and students, creating digital and e-tech libraries, popularizing language learning, and ensuring greater access to education. It has also proposed that coding for kids be introduced in school curriculums as one of the important skills to

develop. The idea behind integrating technology with the learning and teaching process for better learning outcomes has led to the introduction of coding for kids as a subject as early as the 6th grade. It also recognizes the use of technology such as Artificial Intelligence to a personalized

Learning Experience Based on Individual Requirements.

The NEP brings in various adaptive changes and unique motivations to strengthen the Indian education system and prepare the creators of tomorrow with holistic knowledge in a practical sense. The NEP will help the future generation in the following ways -

- Since the new education policy has greatly emphasized digital literacy, e-learning, and new-age technologies, it will help bring new learning channels beyond just traditional classroom learning.
- Whether it is with online courses and modules, new apps, satellite-based TV channels, and more, it will help diversify the scope of education and make the curriculum more flexible. This will result in students having the option to choose their courses, educational trajectories, and careers based on their aptitude and interests.
- The NEP 2020 will help inculcate various future-ready qualities such as competitiveness with disruptivetech, flexibility, and the ability to build a skilled workforce that can handle the new & advanced technologies of the future.

Conclusion:

The new education policy 2020 aims to overhaul India's existing education regime and make it more learning-centric. Students will be provided with the best opportunity to learn research-based learning. Teachers will be given the chance to learn advanced teaching skills. To help students and make them understand the new education policy, teachers should develop counselling and career guiding skills. While the NEP focuses on multiple aspects, including revamping the current curriculum and the need for early childhood care, one of the key focuses of the policy remains the interplay of education and technology. And this is why including coding in the curriculum from an early age is a significant step in the right direction.

Coding is expected to become a highly sought-after and in-demand skill by the time today's youngsters are graduates in the real world. To prepare and equip them adequately with the necessary skills is the best approach. The NEP, with its monumental reforms, is going to be a major step forward in building a coding culture in India, especially for the future generation. Apart from bringing in a range of positive changes, it will also help students unlock their true potential as coders and creators of tomorrow and the NEP 2020 emphasizes the holistic development of students in academic and non-academic areas.

Abstract:

After 75 years of independence, India has now reached its goal of having 100% or universal literacy throughout the country. It is important to consider the plans and objectives established for India's independence. The goal is to achieve national equality, which will result in equality in education. This demonstrates the need for change in India's educational system. By offering top-notch education to everyone, the National Education Policy directly aids in the long-term transformation of our country into a fair and thriving knowledge society. The new National Education Policy, which provides a complete framework for primary education through higher education as well as vocational training in both rural and urban India, was adopted by the Union Cabinet of India on July 29, 2020. The new strategy seeks to make education available to everyone from preschool through secondary school, with a 100% Gross Enrolment Ratio (GER) in school education by 2030, and a 50% GER in higher education by 2025. The implementation of NEP 2020 presents both many opportunities and difficult problems to the education community. In this essay, "Impact of National Education Policy on Higher Education: Opportunities & Challenges," we examine how NEP relates to HE, examine how it affects teachers, express the opportunities and challenges associated with implementing NEP, and outline the path leading up to NEP 2025.

Keywords: National Education Policy, Higher Education, universalisation, impact on teachers

Introduction:

A new program called the National Education program was created to deal with the dire problems the Indian educational system was experiencing. The concept for India's future educational system is laid forth in the NEP 2020, which was adopted by the Indian Union Cabinet on July 29th, 2020. In accordance with National Education Policy 2020, all people will have access to a high-quality education, which will directly contribute to our country's sustainable transformation into a just and thriving knowledge society. The former National Policy of Education (1986) has been replaced with this NEP. The new regulation was developed from a draft created by a commission chaired by Dr. K. Kasturirangan, formerly of the Indian Space Research Organization (ISRO). The Kasturirangan Committee is the second committee to work on the policy, and it has been working on it for the past six years. Numerous reforms

to India's education policy are implemented by the NEP. The NEP is a comprehensive framework for education that includes both rural and urban vocational training, as well as education from the primary grades through higher education.

The NEP 2020 has set an ambitious goal of enhancing the quality of Higher Education Institutions (HEI), placing India as a hub of global education, and virtually doubling the GER in higher education from 26.3 percent (2018) to 50 percent by 2035. The main goals are to facilitate research, enhance faculty support, promote internationalization, and provide a flexible curriculum through an interdisciplinary approach with numerous departure points throughout a four-year undergraduate degree.

The establishment of the Higher Education Commission of India (HECI) for the whole higher education sector will mark one of the most significant changes. The HECI will serve as a single regulatory body, with independent verticals handling a number of tasks such academic standard-setting, funding, and accreditation. These organizations will eventually take the place of previous regulating organizations like the All India Council for Technical Education (AICTE) and the University Grants Commission (UGC).

Objectives of the Study:

- a. To be aware of the main points of the NEP as they relate to higher education
- b. To examine the development and current state of the Indian Educational System.
- c. To assess how National Education Policy 2020 will affect higher education

Evolution of India's Education Policy:

The University Education Commission 1948–1949, sometimes referred to as the Radhakrishnan commission, was the first body formed after India gained its independence. This committee, which prioritized higher education, was run by Sarvepalli Radhakrishnan.

The education that occurs after primary school but before university education began was the primary emphasis of the Secondary Education Commission in 1952–1953.

The Education Commission, popularly known as the Kothari Commission, was run by Dr. D. S. Kothari from 1964 to 1966. This Commission used a comprehensive approach and provided the government with advice on the national educational pattern and broad policies, accounting for every stage from primary to post-graduate education.

In order to achieve national integration and increased economic and cultural growth, the government launched The National strategy on Education in 1968 based

on the Kothari Commission's recommendations and a strategy for equal educational opportunities.

In order to equalize educational opportunity for all, the National Policy on Education of 1986 placed special focus on eliminating inequities in the educational system. The "Common Minimum Programme" that was included to this statute in 1992 was made specifically for women, Scheduled Tribes (ST), and Schedule Castes (SC).

Every kid now has a fundamental right to primary education according to the passage of the Right of Children to Free and Compulsory Education (RTE) Act in 2009.

In 2016, the T.S.R. Subramanian Committee, also known as the Committee for Evolution of the New Education Policy, tried to overcome implementation flaws in order to raise the standard and credibility of education.

On May 31, 2019, the Dr. K. Kasturirangan Committee's report on the new National Education Policy was turned in. This proposal aimed to solve the problems with current education system's access, equity, quality, affordability, and accountability. The HRD ministry was renamed Ministry of Education by the committee.

Under the Following Headings, the Effects of New National Education Policy can be Examined:

Quality Colleges and Universities will Benefit from Widespread Consolidation:

The value volume of the country's higher education institutions will be significantly impacted by institutional restructuring and consolidation because it would reduce them by almost one third. The average number of students enrolled in a college in India is currently 693 (AISHE 18-19, Ministry of Human Resource Development, KPMG in India Analysis), despite the policy's goal of building institutions of higher learning with 3000+ students. To encourage excellence, this new policy concentrates on increasing the number of independent colleges. Out of the almost 40000 colleges in India, less than 1000 independent colleges are still operating. This demonstrates that the policy's limitation will result in numerous mergers and cooperation among higher education institutions in India. The aforementioned change is anticipated to reduce India's higher education sector from 50000 colleges to only 15,000 colleges.

Place an Emphasis on Transdisciplinary Education

IIT, IIM, and AIIM are examples of single-disciplinary Islands of Excellence that define the Indian higher education system. The goal of the new national education policy is to create major multi-disciplinary universities known as multidisciplinary

education and research universities (MERUs), similar to those found in the United States of America and the United Kingdom. By establishing MERUs, all societal groups will have access to high-quality education in a variety of fields, spanning both urban and rural areas of the nation. This will provide students a lot of flexibility in choosing their areas of interest.

Lack of Faculty and the Need to Raise Faculty Standards:

The right to education act increased the instructor to student ratio in our country from 1:30 to 1:20, which is regarded as a healthy ratio. This modification will result in the system employing at least 500000 new academic members. The quality of the faculty must also be addressed in addition to the faculty deficit. By 2022, a set of national professional standards for teachers (NPST) will have been developed, and these standards will be used to decide tenure, ongoing professional development initiatives, pay, promotions, and other recognitions for teachers, among other aspects of managing their careers. The policy also mentions developing performance criteria for instructors that explicitly define the function of the teacher at various levels of expertise and the necessary competencies at each step.

Research Activities Catalyzing:

The National Research Foundation (NRF) that the NEP has proposed is likely to put a dedicated emphasis on high-quality research, as well as reduce research funding by making it more competitive and by increasing the effectiveness of funding procedures to have a more targeted approach to funding research initiatives. The students will be exposed to research activities from an early age.

Enhancing Access and Equity Through Online and open-Distance Learning (ODL) Programs:

ODL enrolls about 40 lakh students, or 11% of all Indians enrolled in higher education. The pandemic issue also contributes to ODL system improvement, which is expected to significantly increase in the upcoming years and assist double India's Gross Enrolment.

Conclusion:

The 2030 Sustainable Development Goals and the needs of the 21st century are two goals that are aligned with the new national education policy 2020, which is a strong policy. The NEP is the result of a protracted process that aims to reach a gross enrollment ratio of 100% by 2030. The Ministry of Human Resource Development (MHRD) recently presented the national education strategy 2020 with the goal of building a more inclusive, cohesive, and productive society. Although the policy's

intention appears to be great in many aspects, implementation is where success will ultimately be determined. The NEP 2020's reforms are focused on developing students' 21st-century abilities, including as creativity, problem-solving, critical thinking, and digital literacy. The current education models need to be reevaluated in light of the challenges of the global economy as technology improvements, fast globalization, and unanticipated developments - such as the covid-19 pandemic - reshape the future of employment.

Abstract :

The foundation of any country's growth and development is its educational system, the National Education Policy 2020 has been repurposed as the foundation for this reform, which might aid in the development of a new educational system in the nation as well as the improvement of those economic and social indices. Due to the fact that education promotes social and economic advancement, a nation's school and college levels require a well-defined and futuristic education strategy. Taking into account tradition and culture, different nations implement various educational systems. Many education professionals never anticipated the adjustments that NEP 2020 has suggested. Although both high school and college education have been touched by the education policy, this article primarily concentrates on NEP 2020 and its effects on higher education.

Introduction:

“Education is a Key to Success and this Success Can be Attained by the Appropriate Implementation of the Policy,”

NEP is essentially a thorough framework for directing the growth of education in the nation. Since then, there have been significant changes in both the sector as a whole and the entire world.. The new NEP was introduced with the intention of formalising systemic improvements from the K-12 to the college/university levels. Education content moving forward will concentrate on key concepts, ideas, applications, and problem-solving stances in light of the evolving situation.. The government's decision to permit international colleges to establish campuses in India is an admirable one. The introduction of multidisciplinary institutions will result in a renewed emphasis on all academic disciplines, including the arts and humanities, and this method of instruction will support students' holistic learning and development. Students will therefore possess a stronger knowledge base.

Objective

- To study the impact of New Education Policy 2020 on higher education.
- To outlines the salient features of NEP

- To analyses how NEP, affect the existing education system.

Theoretical Framework New Education Policy 2020 Highlights

- The 10+2 board format is eliminated.
- The new school will have a 5+3+3+4 configuration.
- There are up to 5 preschools, 6–8 middle schools, 8–11 high schools, and 12 and up.
- Graduation Any degree will be four years long.
- Vocational classes are offered from the sixth grade forward.
- Subject options are available to students in grades 8 through 11.
- All courses leading to graduation will have a major and a minor.
- A single authority will oversee all forms of higher education.
- The UGC and AICTE will merge.
- All universities, whether public or private, open or deemed, vocational or otherwise, New Teacher

NEP 2020 in Higher Education

- The policy envisages broad based, multi-disciplinary, holistic Under Graduate education with flexible curricula, creative combinations of subjects, integration of vocational education and multiple entry and exit points with appropriate certification. UG education can be of 3 or 4 years with multiple exit options and appropriate certification within this period. Academic Bank of Credits to be established to facilitate Transfer of Credits
- Multidisciplinary Education and Research Universities (MERUs), at par with IITs, IIMs, to be set up as models of best multidisciplinary education of global standards in the country.
- National Research Foundation will be created as an apex body for fostering a strong research culture and building research capacity across higher education.

How NEP Affects Higher Education

The NEP 2020 has set an ambitious goal of enhancing the quality of Higher Education Institutions (HEI), placing India as a hub of global education, and virtually doubling the GER in higher education from 26.3 percent (2018) to 50 percent by 2035. The main goals are to facilitate research, enhance faculty support, promote internationalisation, and provide a flexible curriculum through an interdisciplinary approach with numerous departure points throughout a four-year undergraduate degree.. These organisations will eventually take the place of previous regulatory authorities like the All India Council for Technical Education and the University Grants Commission (UGC) (AICTE).

- Integration of vocational education within higher education. At least 50 per cent learners to have exposure to vocational education by 2025.
- Enhanced equity and inclusion – Establishing high-quality HEIs in aspirational districts and Special Education Zones. At least one large multidisciplinary HEI in or near every district by 2030 .
- Reputed international universities to be encouraged to set up Indian campuses.

Issues Related to NEP 2020

- **Knowledge-Jobs Mismatch:** The knowledge and skills taught and the jobs offered consistently don't match up. One of the biggest issues the Indian educational system has faced since Independence is this. Since NEP 2020 makes no mention of education in rapidly developing technological areas like artificial intelligence, cyberspace, nanotechnology, etc., it was unable to verify this.
- **The Requirement of Enormous Resources.** A lofty goal of 6% of GDP for public spending has been established. Given the low tax-to-GDP ratio and conflicting demands on the national exchequer from the national defence, healthcare, and other important sectors, mobilising financial resources will be very difficult.

Drawbacks of NEP

- The new education policy aims to prioritise mother tongue or regional language instruction in schools (until 5th standard, but preferably till 8th).
- This policy might be ineffective, though, as it undermines the use of English in many private schools. One of the most frequently used and widely spoken languages in the world is English.
- India has traditionally stood out by promoting the use of English in educational settings, providing us an advantage over other Asian nations.
- As many states in Southern India have multiple regional languages, this strategy will also have a negative impact on parents whose occupations require frequent relocations. Therefore, a move would interfere with the child's schooling.
- NEP 2020, in conclusion, seems admirable on paper but would be a difficult undertaking in practise. I therefore anticipate seeing things work as intended.

Conclusion :

Right now, the new national education policy is picture-perfect. But the implementation of it before the deadline is the key to its success. To reap the enormous benefits that will be introduced into the system with its proper execution, we must now patiently wait and see how things develop in the future. The country's higher education system is anticipated to have good and long-lasting effects as a result of the National Education Policy. The government's decision to permit international colleges to establish campuses in India is an admirable one. This will enable the children to benefit from a local education that is of a high international standard.

EDUCATION IS A PATH WAY OF WOMEN EMPOWERMENT

Abstract

Women's empowerment enables and develops the skills or abilities of women so that they can think and act freely, make their own choices and control their lives, thereby reducing discrimination and exploitation against them. This leads to an increase in the number of women in social, economic and political fields, and they can play an equal role in society with men. Women have a valuable position in all areas of life. Some women were able to show their potential. So now we have come out of those dark ages of women's oppression. The process of empowerment brings so much awareness to the woman that she gains control over social and economic resources, education and her own life, directing and increasing her participation in decision-making inside and outside the home. This empowerment is only possible through education. It is a continuous, comprehensive process with various possibilities. Support can be gained and sustained through a number of strategies such as education, research and documentation campaigns/networking/training/media etc.

Keywords: *Empowerment, Education, Development, Discrimination, Strategy*

Introduction

If you teach a man, you teach an individual; if you teach a woman, you teach an entire family. - Mahatma Gandhi.

The content highlights the importance of education in the promotion of women's empowerment. Education is considered a human right and a key factor in achieving equality. Women's empowerment was first defined at an International Women's Conference in 1985 as self-rule, self-reliance and self-management. Women's empowerment is the process of equal access to opportunity, prohibition of gender discrimination, freedom from sexual violence, economic autonomy, decision-making power and freedom of expression. Education is seen as a turning point in women's lives as it gives them knowledge, critical thinking and practical skills which lead to self-esteem and self-confidence. Educated women improve the standard of living of their families and of the nation as a whole. High women's literacy rates have a positive impact on various aspects of life such as reduction of infant mortality, promotion of education for female children and improvement of decision-making

skills within households. The content highlights how education and empowerment go hand in hand. Education allows women to break out of traditional roles, react to opportunities, and transform their lives. Empowerment depends on both internal and external conditions such as fearlessness, Women's education plays an important role in the development of women's families," says Dr. Radhakrishnan. Educated women have a positive influence on the development of the whole family. The content also talks about the relationship between education and women's empowerment. "Education is the essential one for personal growth, participation in society and changes in social attitudes towards women," says Radhakrishnan. "Education is a powerful tool for empowering women, breaking social taboos, and promoting gender equality in educational, social and economic affairs." empower women with the skills, knowledge and decision-making skills they need to transform society.

Importance of Female Education

- There are many social evils that women face in India, including dowry, female foeticide, workplace harassment, etc.
- More education for women helps the country's economy by allowing them to participate in the workforce.
- The Ministry of Health's recent survey shows a direct correlation between children's nutritional status and their mothers' education.
- According to the survey, more educated women give their children a stronger nutritional foundation.
- Developing economists have studied the ways in which girls' education helps them become agents for positive change.
- All in all, education for women has many benefits, not just for individual women, but for the whole of society.

Obstacles in the Path of Women's Education

- The social position of women in India is largely dominated by men, and women are confined to traditional social roles, particularly in the rural areas.
- Despite India's rapid growth and aspirations to become a superpower, the issue of gender inequality continues to be a thorn in the side of women, even among educated and working women in urban areas.
- The gender pay gap perpetuates the myth of women's lesser efficiency in tasks, and the average salaries of men and women differ significantly.
- Women's safety is a major issue in India, and despite the government's efforts, many parents are hesitant to send their daughters to school.

Status of Female Education in India

The Indian government is investing heavily in the education of its citizens. In 2022, the Union Budget allocated an additional Rs 11.054 crore for education, taking the total budget allocated to education to Rs 1.04,278 crore, and the Union Budget has been praised for digitizing educational resources to make them available to all. The “one class, one television channel” initiative included in the Prime Minister’s (PM) “e-Vidya” scheme aimed at improving education and the workforce has been highly praised by education leaders. India has an average literacy rate of 77%. The literacy rate of men is 84.40% and that of women is 71.50% according to the latest census data. Reading and writing are the basic skills of literacy, and the acquisition of knowledge, values and so on, but the literacy rate varies greatly from state to state. Kerala has consistently topped this list whereas Bihar has fallen to the bottom of this list with a literacy rate of 61.80%.

Rank	State	Literacy	Male	Female
1	Kerala	94	96.11	92.07
2	Lakshadweep	91.85	95.56	87.95
3	Mizoram	91.33	93.35	89.27
4	Goa	88.7	92.65	84.66

Focus on Women Education

Focus on women’s education and empowerment in rural areas, especially women from marginalised groups, so that they can make informed decisions at their own speed. Quality empowerment focuses on internalizing progress, which benefits not only women but also society at large. Providing guidance to parents, infrastructure and financial support can provide girls with educational opportunities. Education should develop analytical skills, aspirations and personality development, which goes beyond academic achievements. Past initiatives have failed to achieve the desired results, so a new approach is needed for women’s Education and Empowerment.

Strategies for Women Education

In order to prioritize girls' education in school education, it is necessary to develop an action plan. Particular attention should be paid to universalizing elementary education. The most recent national program for girls' education has not yet closed the gap between boys' literacy rates and girls' literacy rates. Issues related to socio-cultural and modernization pose challenges to girls' education. It is essential to break traditional gender roles and provide basic education to girls. Girls' education is essential for economic and social development. Constitutional obligations must be respected to safeguard their rights. Cultural, political and constitutional provisions are essential for achieving girls' education and building a successful society.

Provisions Supporting for Women Education

The Constitution of India takes children and women's well-being and development very seriously. There are many provisions for children, which not only guarantee equality and prohibit discrimination based on caste, sex, and religion, but also protect children from abuse and exploitation. In the framework of the democratic system, laws, policies, plans, and programmes are designed for the overall well-being of children. Some of the important constitutional provisions on girl child are:

- Article 14 guarantees equality of rights and opportunities for men and women, while prohibiting discrimination on any grounds.
- Article 23 prohibits forced labour, and
- Article 24 prohibits any child under 15 from being employed to work.
- Article 42 ensures fair and humane working conditions, and provides for maternity relief.
- Article 45 guarantees free and compulsory schooling for all children, and
- Article 47 encourages the promotion of nutrition and quality of life.
- Articles 73 and 74 encourage women to be involved in politics and the grass roots development process.

These are a few of the constitutional provisions that are beneficial for girl children in our country. The main issue is retention. Most of the girl students enrol in schools, but it is very challenging to keep them through the entire process.

Promotional Tools of Women Education

- Through giving parental motivational campaigns
- Residential schools for girls.
- Parental associations should be formed to encourage and to take care of girls education.

- Various programs and initiatives should be implemented by the state and central government to support girls' education.
- Community awareness programmes Installing basic amenities such as buildings and toilets will support women's education.
- Gender-sensitive content in the curriculum Providing natural learning experiences (NLEs)
- Encouraging activity-based learning
- Providing appropriate counselling at the appropriate time
- Appointing counsellors in schools Organising co-oracular activities

Effective Role of Education in Women Empowerment

Education is "one of the most effective means of providing women with the knowledge, skills, and confidence they need to be fully engaged in the process of development." Educating women benefits society as a whole. Education has a greater effect on poverty and poverty reduction than men's education. Education also has a greater impact on child health and child mortality rate. Educated women's responsibility is immense. Women play an important role in the development of the behavioural and mental makeup of the next generation. The primary duty of the educated woman is to nurture and shape the children, who will be the leaders of the future. The educated woman is always conscious of the significance of health and knows how to seek health care for herself and her children. The educated woman has a good idea about her children's educational attainment. A mother's education will have a greater impact on a child's life than a father's. The empowered woman can stand with the men. She is not inferior to men.

Conclusion

Many great women have made themselves are amazingly powerful and successful in their lives through their individual efforts. They are a source of inspiration and motivation for today's women. A women can do what men do in this world. Their self-confidence is an integral part of women compulsion The literacy rate among women in India is very low compared to world standards. It was in India found that female literacy rates varied widely across states. Bihar, U.P. Rajasthan etc., the literacy rate of women is very low. We know that the level of health there is also very bad. They have the lowest lifetime Infant mortality there is very high. Kerala is the state with the lowest infant mortality rate interest In India, the most of the states are very backward in terms of female education. To recover from them dangers we should remember that " Education is a path way of women's empowerment".

Abstract

Access, equity, quality, and accountability are the four pillars on which the new NEP is built. (Negi). The majority of NEP 2020's discussions centre on a path from early education through higher education, including vocational education. A significant change that occurred in India, aside from COVID-19, was the creation of the New Education Policy (NEP) 2020. Researchers have become interested as a result of the repeated recommendations from various committees to boost the budgetary allocation for education to 6% of the GDP. This essay seeks to define the issues and priorities of NEP 2020. The NEP 19's institutional restructuring and consolidation strategy aims to create high-quality educational infrastructure ecosystems, but this is easier said than done, and the main goal of having vibrant, multidisciplinary institutions of high quality that can boost higher education in India and ensure equitable access is another perplexing strategic challenge the system faces.

Keywords: Skill Development; Research and Innovation; Digital Learning ; Globalization .

Introduction

The plan is based on the Draught National Education Policy 2019, which the Committee for Draught National Education Policy, led by Dr. K. Kasturirangan, a former head of the Indian Space Research Organisation, submitted to the Ministry of Human Resource Development on December 15, 2018. The four-part National Education Policy includes Part I on school education, Part II on higher education, Part III on "Other Key Areas of Focus" like adult education, Part IV on "Making it Happen," which outlines how the policy will be put into practise.

In Europe, institutions that provide higher, postsecondary, tertiary, and even third-level education are frequently referred to as HEIs. In India, higher education begins after the 12th standard, or higher secondary, to keep things simple. While it takes three years to finish a degree programme, pass it, or receive an honours B.A., B.Sc., or B.Com. degree from a college in India, pursuing an engineering course would take four to five years, with an additional six months of required internship to finish a degree in medicine or law. The typical length of a PG course is two years. On the other hand, certain programmes, like the Master of Computer Application (MCA), are three years long.

Opportunities

New Educational Policy

- Weekly university openings are a huge undertaking. There are currently about 1,000 universities in India. It will take 15 years to open one new institution if we want to double the gross enrollment ratio in higher education, one of the policy's stated aims, by 2035. The numbers involved in reforming our education system are no less intimidating than opening one university every week on an ongoing basis.
- The National Education Policy 2020 seeks to re-integrate 2 crore children who are not currently enrolled in school. Regardless of your perspective, completing this over a 15-year period calls for the construction of over 50 schools per week.
- It is a massive undertaking to monitor many universities and institutes.
- It will be difficult to use institutions' capacity.
- Since single-stream institutions are not permitted, either bigger institutions will take over smaller ones, or smaller ones will be shut down.

Higher Educational Institution

- India has a huge possibility to draw foreign students and foreign universities because it has established itself as an international centre for education. India's cost of education is lower than that of many other nations. Today, education tourism is a brand-new and growing industry.
- Student progression promotion: Institutions and universities work to inspire students to pursue their degrees, post-graduate studies, or professional programmes.
- Promoting student participation in class: Students will find the NEP flexible and handy for learning because to many access and exit points. Through peer learning,

experiential learning, and other methods, students will be better equipped in the classroom with KSA knowledge, skills, and attitude.

- Hard internship that goes beyond obtaining a certificate of completion In order for students to gain practical experience, the internship must be properly adhered to. Strong connections between the university and the businesses providing the internships will also be facilitated by this.

Challenges

New Educational Policy

The Indian Union Cabinet approved the National Education Policy of 2020. It replaces the outdated education strategy from 1986, which had numerous flaws. It is the intricately planned intentional effort to enhance Indian education.

The National Education strategy 2020 (NEP 2020), the Government of India's new education strategy, was announced nearly 30 years after the policy's previous significant change in 1986. This is a huge step forward for the country.

There are currently over 1,000 universities in India. One of the policy's declared objectives, to double the Gross Ratio Enrollment in Higher Education by 2035, requires us to establish one new institution per week for the following 15 years. The biggest obstacle is without a doubt opening a new university every week.

The National Education Policy 2020 seeks to re-integrate 2 million kids who are not currently enrolled in school. Any way you look at it, to do this in 15 years, 50 schools must be closed each week.

This is not a challenge for the weak, seen positively. According to the National Education Policy 2020, spending on education will rise from 4.6% to 6% of GDP, or over INR 2.5 lakh crores annually. The funds will be wisely allocated towards the construction of schools and universities around the nation, the hiring of teachers and professors, and ongoing costs like offering schoolchildren free breakfast. The fact that this policy was implemented at a time when the economy was being strangled by Covid-19 makes matters much more challenging. Even prior to Covid, related closures, government tax cuts were extremely little, and financing shortages were significant.

As a very acceptable move in school education, the policy intends to reform the curriculum framework. However, in order for this curriculum to be successful, we need teachers who have been taught and understand the teaching requirements. Many curricular adjustments necessitate significant shifts in both instructors' and parents' thinking.

In higher education, the 2020 National Education Policy's emphasis on disciplinary education is a very welcome step. For decades, universities, particularly in India, have been compartmentalised and governed by departments. The 2020 National Education Policy includes a variety of initiatives aimed at improving the quality and scope of India's education system.

Higher Educational Institution

Poor infrastructure is also a challenge for India's higher education system, particularly for public sector institutions with inadequate physical facilities and equipment. A large number of colleges were operating on the second or third floor of the building, while on the ground or first level, ready-made shelters or photocopying businesses were in operation.

Enrollment: India's Gross Enrollment Ratio (GER) in H.E is only 15%, which is low when compared to both developed and developing countries. With the increase in school enrollment, the provision of higher education organisations is insufficient to meet the region's growing need.

Equity: There is no GER interest among the various segments of the firm. Previous research has found that GER differs more between males and females in higher education in India. Geographic differences exist in some countries with high GER, while others are substantially below the national GER, indicating major inequities within the higher education sector.

Quality in H.E is a multi-dimensional, multi-level, and complicated concept. Keeping standards in H.E. is one of the most pressing concerns confronting India today. Furthermore, the government is always concerned with education quality. Today, a substantial number of colleges and universities in India are still unable to meet the current UGC requirements, and our universities have not been able to compete with the world's best universities.

Political Interference: The majority of educational establishments are controlled by government figures who hold key positions in university governing agencies. They take advantage of innocent students for selfish intentions. Students arrange events, consider their own ambitions, and continue to advance their political careers.

Faculty shortages and the state education system's failure to attract and retain well-qualified teachers have been weakening quality education for some years. Despite the fact that there are several positions in higher education, a large number of

NET / PhD applicants stay unemployed, and these qualified candidates instead apply in other divisions, which is the greatest impact to the higher education system.

Accreditation: According to NAAC data, just about 25% of the country's entire higher education institutions were accredited as of June 2010. Only 30% of authorised universities and 45% of accredited schools were deemed to be of 'A' standard."

Higher Education System:- Centralisation, hierarchical systems, and a lack of accountability, openness, and professionalism pose obstacles to Indian education management. As a result of the increased responsibility for administrative functions of universities in order to improve the associated colleges and graduates, the emphasis on academics and study has been lessened (Kumar, 2015).

Conclusion

With its concentration on academic research, higher education frequently produces graduates with little or no income. The national government education agency is responsible for developing GER to include all inhabitants of the country in higher education. India's National Education Policy 2020 is working towards that goal by enacting new policies to improve the quality, attractiveness, accessibility, and expansion of higher education provision in the private sector while maintaining strict quality control controls in all institutions of higher learning.

IMPACT OF NEW EDUCATION POLICY 2020 ON HIGHER EDUCATION

Introduction:

The National Policy on Education (NPE) is a policy formulated by the Government of India to promote education among the people of India. The policy covers primary education to colleges in both rural and urban India. The first NPE was declared by the Government of India by Prime Minister Indira Gandhi in 1968, the second by Prime Minister Rajiv Gandhi in 1986 and the third by Prime Minister Narendra Modi in 2020.

The National Education Policy 2020 (NEP 2020), which was approved by the Cabinet of India on 29 July 2020, outlines a vision for India's new education system. The new policy replaces the previous National Education Policy of 1986. The policy is a comprehensive framework for primary to higher education as well as vocational education in both rural and urban India. The policy aims to transform the Indian education system by 2021. The language policy in the NEP is a broad guideline and advisory in nature; and implementation is decided by states, institutions and schools. NEP 2020 enacts a lot of changes in Indian education policy. Its goal is to increase state spending on education from roughly 4% to 6% of GDP as soon as possible.

In January 2015, a committee headed by former Cabinet Secretary T.S.R. Subramanian began a consultation process for a new education policy. Based on the committee's report in June 2017, the NEP was proposed in 2019 by a panel headed by former Indian Space Research Organization (ISRO) chief Krishnaswamy Kasturirangan. The Ministry of Human Resource Development later released the Draft New Education Policy (DNEP) 2019, which was followed by a series of public consultations. The draft NEP had 484 pages. The ministry underwent a rigorous consultation process in formulating the policy proposal: "Over two thousand proposals from 2.5 lakh gram panchayats, 6,600 blocks, 6,000 urban local bodies (ULBs), 676 districts have been adopted." The vision of the National Education Policy is:

"The National Education Policy 2020 envisions an India-centric education system that directly contributes to the sustainable transformation of our nation into an equitable and vibrant knowledge-based society by providing high-quality education to all.

The goal of holistic and interdisciplinary education should be to promote all human capacities - mental, cultural, social, physical, emotional and moral - in an integrated manner. Such comprehensive education will be the long-term method for all undergraduate courses, including medical, technical and professional. Optimal learning environments and student support provide a holistic approach that includes appropriate curricula, interactive teaching methods, consistent formative assessment, and appropriate student support.

Objective:

- The main purpose of this study is to investigate the impact of the new education policy 2020 on higher education.
- The study also outlines the key features of NEP and analyze how they affect the existing education system.

Research Methodology:

This research is a descriptive study. Necessary secondary data was collected from various websites including Government of India website, journals, magazines, other publications etc. This data was then analyzed and reviewed to arrive at conclusions. Detailed analysis of impact of NEP on higher education:

Regulatory System of Higher Education:

A key change in the NEP 2020 is the proposal to create the Higher Education Commission of India (HECI) as the body for higher education, excluding medical and legal education. This usually raises the question of what will happen to the current UGC and AICTE. HECI aims to reform the higher education sector. This bill separates the academic and funding aspects of the field. According to the new bill, HECI has no financial powers. The funding process, which was earlier done by the University Grants Commission (UGC), is now done by the Ministry, formerly known as the Ministry of Education.

Ministry of Human Resource Development (MHRD). However, the change is expected to clear the regulatory mess in India's higher education system. HECI will have four independent divisions: the National Higher Education Regulatory Council (NHERC) for regulation, the General Education Council (GEC) for standard setting, the Higher Education Grants Council (HEGC) for funding and the National Accreditation Council (NAC) for accreditation. Unification of educational standards has always required a single governing body, and this was the view of many educators. This is considered a right step in the rationalization of educational policy.

However, to ensure the quality of higher education, institutions should be evaluated on relevant parameters such as research institutes, industry linkages, place of employment and academic excellence. If HECI manages this, it can pay off big for its biggest shareholder, the youth of India.

Graded Accreditation and Graded Autonomy:

The concept of "empowerment and autonomy to innovate" is one of the key features of NEP 2020, which supports the strategy of phasing out "universities affiliated to autonomous institutions. The increased flexibility offered to autonomous institutions also promises to enrich the curriculum. It also states that with proper accreditation, self-governing degree-granting colleges can become research-intensive and teaching-intensive universities if they so desire. The announcement of the establishment of the Multidisciplinary Education and Research University (MERU) in the country gives more hope. These institutes are on par with the existing IITs and IIMs and aim to provide interdisciplinary education to Indian students.

Another important change in the NEP 2020 shows that the National Examinations Agency will act as a professional and independent premier examination agency for conducting under graduate and post graduate entrance examinations and scholarships for higher education institutions. The quality, range and flexibility of NTA's test services allow most universities to use these common entrance tests, rather than hundreds of universities each designing their own entrance tests, greatly reducing the burden on students, colleges, colleges and the education system in general. Whether or not NTA assessments are used for admission is up to each university. It is also sure to help students easily transfer their degrees and credits to universities abroad.

Internationalization at Home:

NEP 2020 also allows foreign universities and colleges to come to India and this brings out a challenge for the native institutions to improve the quality of education provided by them. The Indian higher education sector is buzzing all around as the opportunity of paving the way for foreign universities to set up campuses in the country. India has one of the largest networks of higher education systems in the world, with more than 900 universities and 40,000 colleges. But GER (Gross Enrolment Ratio) of India in higher education is 26.3%, which is significantly low when compared to other BRICS countries like Brazil (50%) or China (51%), and very much lower when compared with European and North American nations which would be more than 80%.

Conclusion:

The policy introduces a whole range of changes and largely reads as a very progressive document with a firm understanding of the current socio-economic environment and

the prospect of future uncertainty. Essentially, education for a new generation of students must engage with the increasing dematerialization and digitization of economies, requiring a whole new set of skills to keep up. That seems to be an even more important advantage now that the pandemic has accelerated the trend toward digitization and disruptive automation. Overall, NEP 2020 addresses the need to develop professionals in various fields from agriculture to artificial intelligence. India must be prepared for the future. And NEP 2020 paves the way forward for many young aspiring students to be equipped with the right skills.

Abstract:

While the policy does place emphasis on gender sensitization, the curriculum needs further attention. Sex education must be properly included in the teaching-learning process and made a requirement. According to the National Education Policy (NEP) 2020, all children and youth, particularly females from socially and economically disadvantaged groups, will receive an equitable and inclusive education. The policy's focal point is crucial because, despite efforts to educate women, girls continue to drop out at a significant rate after secondary school. At the secondary and upper secondary levels, the enrollment ratio also declines. Menstruation and the absence of decent restrooms are two of the many factors that cause females to drop out of school before completing their education.

Key words: NEP-2020, Women, Empowerment, India

**"I Measure the Progress of a Community, by the Degree of Progress Which
Women Have Achieved"**

– Dr. B. R. Ambedkar

Introduction:

A historic undertaking, the New Education Strategy (2020) is the first comprehensive central government strategy in 34 years. The NEP acts as a framework to guide the expansion of education across the country. More than 2 lakh recommendations from various local self-government bodies, including 2.5 lakh gram panchayats, 6,600 blocks, 6,000 ULBs, and 676 districts, went into the creation of the NEP 2020. By 2035, the goal was to have a society that is inclusive, diverse, and equal with a higher Gross Enrollment Ratio (GER) of 50%. This was done in an effort to foster overall effectiveness and citizenship. The strategy has articulated the fundamental shift in the educational system and aims to make India a global knowledge powerhouse while retaining equity and inclusivity.

Education is vocal in bolster up the atmosphere of women to carry out their insistent fight against exploitation and hold up social evils. Without education, the term women's empowerment," which has rapidly and widely entered the present social discourse, is essentially worthless. The awful situation of women's education, even 75 years after India's independence, has completely infuriated the entire nation.

In India, the estimated male literacy rate is 82.14%, compared to a nationwide female literacy rate of 65.46%, according to the 2011 Census. 74.04 percent of Indians are literate on average. Between male and female literacy rates, a gender difference of about 17% exists. In rural areas, there is a larger gender divide.

The literacy rate for rural women is only 57%, whereas the rate for rural men is higher at 77%. However, after a number of new policy initiatives by the government, the gender gap in India has shrunk in comparison to prior years, according to the All-India Survey on Higher Education (AISHE) report 2018–19. Over 48.6% of all students enrolled in higher education were female, making up over half of the total enrollment. Data from the International Work Organization show that in 2017, the percentage of women who were in the work force was 27%, down from 34% in 2001. In India, there are more than 50 million women who do not pursue education or employment. According to the 2016 Monster Salary Survey, Indian women make 25% less money than women worldwide.

Objectives:

- To understand the conditions of rural women education.
- To study NEP-2020 initiatives for rural regional in India.
- To analyse the NEP-2020 initiatives for rural women empowerment.

Methodology:

The current study is based on an abundance of secondary material that was gathered from several publications, including books, periodicals, newspapers, and websites that are prominently acknowledged in the bibliography.

Need of the Study:**What Else Education-Related Policies Can Do:**

There are benefits and drawbacks to NEP, just like there are two sides to any coin. The NEP 2020 has received praise for its numerous efforts, but many of them have also raised doubts and prompted intense criticism, which are referred to as critical weaknesses in the programme. The NEP strongly emphasises the use of mother tongues to teach the key subjects in primary education, with English teaching arriving much later. In contrast to other nations like Germany, Russia, Japan, China, France, etc., which all share a single mother tongue, India is a diverse nation with 22 major languages and tens of thousands of dialects. Therefore, it will be a difficult task that requires a lot of time, effort, and trained staff to translate the major concepts into these numerous regional languages (and mother tongues). Another reason why some people have been loud in their opposition to the NEP is that the adoption of local and regional languages is regarded as an effort to impose Hindi on the non-Hindi-

speaking regions. For children who can only afford to attend government-run institutions, the NEP suggests that English training in government schools start in class 5. Early instruction in the universal language of English would widen the gulf between the various socioeconomic groups and eliminate many options for government school kids.

Nep 2020 from a Different Perspective:

The NEP is hailed for its futuristic outlook, which has the potential to significantly alter the state of education as we know it. Some of its benefits include:

- **Increased expenditure on the Education Sector:** Currently, the Indian education sector only gets 3% of the GDP of the nation; however, with the adoption of NEP 2020, the sector will receive a much-needed boost as expenditure will increase to around 6%.
- **Modifications to School Structure:** The current 10+2 school structure will be replaced with the 5+3+3+4 pattern to decrease the pressure of board exams on students.
- A focus on vocational education will also be present in classes six through eight, giving children the chance to learn practical skills like carpentry, plumbing, ceramics, gardening, and more while considering their interests and expanding their understanding of and respect for these crafts.
- **Broader Learning Alternatives:** Students in grades 9 through 12 now have access to multidisciplinary course alternatives, which means that the lines between the different streams will be less rigid and allow for a greater variety of topic pairings.
- **Creating Education as a Fundamental Right:** Currently, the government guarantees that children between the ages of 6 and 14 may get a compulsory education, a goal for which numerous efforts, like the "Sarva Shiksha Abhiyan," have been successfully executed. However, it kept some children out of the school system. As a result, the new NEP promises to universalize education so that all children from 3 to 18 years old can receive a free education in institutions run by the government.
- **Possibility of Learning Programming in School:** A significant step towards enhancing the educational process would be the inclusion of computer and coding skills in the curriculum as early as 6th grade.

Nep for Empowering Rural Women:

It is encouraging to see so many women pursuing education at various institutions and effectively working in a variety of sectors. However, it is abundantly evident from the numbers provided above that the government needs to take the subject of women's education more seriously than ever. The country must first and foremost

ensure that women receive 100 percent high-quality education if it is to involve women in all spheres of public life, utilise their skills for the benefit of the country, and safeguard them from all sorts of injustice.

Fight Against Exploitation and Withstand Social Evils:

Education has an important role in boosting women's spirits so they can continue to fight against exploitation and face social evils. Without education, the term women's empowerment," which has rapidly and widely entered the present social discourse, is essentially worthless. The awful situation of women's education, even 75 years after India's independence, has completely infuriated the entire nation. In India, the estimated male literacy rate is 82.14%, compared to a nationwide female literacy rate of 65.46%, according to the 2011 Census. 74.04 percent of Indians are literate on average. Between male and female literacy rates, a gender difference of about 17% exists. In rural areas, there is a larger gender divide. The literacy rate for rural women is only 57%, whereas the rate for rural men is higher at 77%. However, after a number of new policy interventions by the government, the gender gap in India has shrunk in comparison to prior years, according to the All-India Survey on Higher Education (AISHE) report 2018-19. Nearly 48.6% of all students enrolled in higher education were female, making up nearly half of the total enrollment. Data from the International Labour Organisation show that in 2017, the percentage of women who were in the labour force was 27%, down from 34% in 2001. In India, there are more than 50 million women who do not pursue education or employment. According to the Monster Salary Survey from 2016, women in India make 25% less money than women worldwide. It is encouraging to see so many women pursuing education at various institutions and effectively working in a variety of sectors. However, it is abundantly evident from the numbers provided above that the government needs to take the subject of women's education more seriously than ever. The country must first and foremost ensure that women receive 100 percent high-quality education if it is to involve women in all spheres of public life, utilise their skills for the benefit of the country, and safeguard them from all sorts of injustice.

To solve the issue, we need a rigorous, thoughtful, and incredibly practical national strategy. In light of this, the Union Cabinet of India approved the National Education Policy-2020 (NEP 2020) on July 29, 2020, outlining the goals for the country's future educational system. The K. Kasturirangan Committee created the National Education Policy 2020 to address a number of issues that are worsening the educational environment in India and to combat the threat of female illiteracy. The strategy aims to provide all students with an egalitarian and inclusive education, with a special emphasis on girls and young people from socially and economically disadvantaged groups.

The recently highlighted policy is anticipated to usher in a new era for women's education. In both rural and urban India, the policy provides a complete framework for education from early childhood through higher education.

It also covers vocational training. Although the policy does not make many statements on gender-related issues, several of its recommendations could potentially make a significant difference in the current grim situation.

Nep 2020 for Gender Inclusion Fund (gif):

In order to strengthen the nation's ability to deliver equitable, high-quality education for all girls and transgender pupils, NEP 2020 calls for the establishment of a Gender Inclusion Fund (GIF). According to the NEP, states will access the "Gender Inclusion Fund" to carry out initiatives deemed essential for assisting female and transgender children in accessing education (such as the provision of sanitation and toilets, bicycles, conditional cash transfers, etc.) and which have been determined by the central government. According to the policy, "States will be able to support and scale up community-based interventions that address local context-specific barriers to female and transgender children's access to and participation in education through the use of this fund," the policy continues. The money will be used to ensure facilities, safe and hygienic restrooms, and quality instruction for all pupils. NEP has suggested adding hostel amenities for female students in addition to toilets. The fund will priorities achieving full gender parity in education and a record-high participation rate in higher education, reducing gender gaps at all levels, promoting gender equity and inclusion in society, and enhancing girls' leadership potential via constructive civil discourse.

For Socio-Economically Disadvantaged Groups:

In all Socio-Economically Disadvantaged Groups (SEDG) categories, the NEP 2020 acknowledges that women and transgender people are the most adversely affected. Plans call for putting into action programmes that distribute bicycles to form cycling groups and establish walking groups at schools to encourage community involvement and provide safety nets for these vulnerable youngsters.

The strategy aims to identify particular social factors, such as gender stereotypes, traditions, and beliefs, that have contributed to the treatment of girls that is less favourable, including their educational opportunities. An additional noteworthy suggestion given in the policy is to increase the proportion of women in positions of authority within the institution, including those of principals, teachers, wardens, physical education instructors, and other employees. Another remarkable proposal made in the policy is to enhance the number of women in leading positions in the institution, including principals, teachers, wardens, physical instructors, and other staff. It will help women in important positions to deal with issues concerning women and create an atmosphere based on the principle of equality.

Gender Equity in Recruitment for Teachers in Rural Areas:

The goal of NEP 2020 is to address the problem of gender inequality in teacher recruitment in rural areas. Alternative recruitment methods for women teachers shall be implemented without compromising quality and qualification, both educationally and professionally, in order to reduce the gender imbalance among teachers (particularly in some rural areas). The policy emphasises the need for educators, such as Anganwadi workers, to receive the appropriate training before providing guidance to the families of female pupils. Since girls' education is frequently seen as less important than boys' in our society and since there are many lame reasons why parents choose not to send their daughters to school, it is felt that providing families with the proper counselling is essential for facilitating equal opportunities and space for girls in education.

Safety and Security:

The NEP 2020 will put a special emphasis on ensuring the safety and security of female students both within and outside of the campus. For the schools to be regularly accredited by the statutory organisations, they must provide a climate free from bullying, discrimination, and the dominance of women. The strategy would highlight societal norms and gender biases that restrict girls' access to education and lead to frequent dropouts. Teachers, Anganwadi staff, and local social entrepreneurs will receive training on how to provide appropriate counselling to families of female children. The conduct of awareness programmes on gender issues, the importance of harassment-free workplaces and gender equality, and legal rights and protections for girls and women, such as the Prohibition of Child Marriage Act, the Protection of Children from Sexual Offences Act (POCSO), the Maternity Benefit Act, and the Sexual Harassment of Women at Workplace Act, will be required of all educational institutions. The purpose of this course is to increase educators' awareness of gender-sensitive and inclusive classroom management.

Removal of the Gender Gap:

The NEP 2020 is expected to introduce changes aimed at removing the gender gap in male and female literacy rates. For achieving this aim, proper awareness needs to be created among the teachers, parents and the community. No change will come until and unless society is made aware of the evils of depriving girls of the attainment of education. In spite of the constitutional provisions, the girls still remain vulnerable to atrocious forces. The girl students must be made aware of their legal rights, and legal literacy should be mandatory incorporated into the curriculum. Only a gender-responsive educational curriculum will reverse gender bias and discrimination within the educational system and society.

Gender Stereo Types from the Society:

A curriculum that is properly stocked with progressive concepts and materials will go a long way towards eradicating social mores and gender stereotypes. Carefully integrating sex education into the curriculum is required, along with lessons on menstrual hygiene and health. While the policy does place emphasis on gender sensitization, the curriculum needs further attention. Sex education must be properly included in the teaching-learning process and made a requirement. Instruction on menstrual health and cleanliness should be part of this.

Skill Enhancement Courses:

The policy's emphasis on skill development must also benefit females from all societal groups, as this will encourage them to enroll in educational institutions and help them become economically independent. The skill-improvement classes that NEP emphasizes would be a definite step in the right direction for female students. Economic empowerment of women through education will undoubtedly be progressive, draw female students to educational institutions, and hopefully alter the way that traditional families distinguish between male and female educations, seeing the former as a more lucrative proposition.

Legal Literacy:

Legal literacy is another significant topic that needs to be covered in compulsory education. The female student has to understand her legal rights. NEP 2020 curriculum designers must make sure that these two crucial domains are appropriately incorporated into the curriculum and not just added for show or for its purely aesthetic worth

Female Health:

In addition, female health should be prioritized, and it should be ensured that female students receive proper nutrition. While the midday meal and even the breakfast mentioned in NEP are commendable government initiatives, they are insufficient to combat the under nutrition that female students face.

Conclusion:

Real education can only be achieved if we give equally importance to women's education. Rural women empowerment is significant possible through the education.

Many challenges await of us in implementing women's education achieved when gender inequality is overcome. We define education as a continuous lifelong process and prove true to it definition women's education should be continuous and aggressively advocates for women to receive respect and the position it deserves.

Education not only ensures greater participation development processes, but also awareness rights in society so that women can to promote their participation in social life as equals all areas. Financial independence brought about by education is an added incentive. Financial independence and awareness helps narrow the vicious circle of reinforcement negative stereotypes and helping women on charter trips individuals on their own, social progress, politics and the economy.

Abstract

The Indian government launched the New Education Policy (NEP), an extensive reform programme with the goal of modernizing the nation's educational system. Geographical difficulties, a distinctively diverse cultural population, and a historically undeveloped educational system are the hallmarks of the North East. Numerous important factors that have the potential to have a big impact on higher education in the North East are highlighted by the NEP. Through a concentration on skill-based education, the NEP also seeks to improve graduates' employability. This is particularly important in the North East since it can help address the region's particular employment issues and promote entrepreneurship. The NEP also aims to enhance the employability of graduates by focusing on skill-based education. In the context of the North East, this can be particularly significant in addressing the region's unique employment challenges and encouraging entrepreneurship. This study aims to explore the potential impact of the New Education Policy on higher education in the North East region of India. By analyzing the policy's key principles and objectives in relation to the specific context of the North East, this research seeks to assess the implications on student engagement, access to quality education, employability, and regional development.

Keyword: *New Education Policy, Educational Institutions, North East India, Employment Challenges and Entrepreneurship*

Introduction

The Government of India launched the New Education Policy (NEP), a major reform programme with the goal of revamping the nation's educational system. The policy, which will go into effect in 2020, tackles a variety of facets of education, from pre-kindergarten to higher education, with a focus on inclusivity, flexibility, and technological integration. The NEP aims to transform the conventional approach to higher education and promote a vibrant learning environment that gives students useful skills for the contemporary work place.

The eight states of Arunachal Pradesh, Assam, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim, and Tripura that make up the North East region of India present special problems and opportunities for the implementation of the NEP. The North

East, which is distinguished by its cultural diversity and distant geographic settings, has historically experienced inequalities in infrastructure and educational opportunities when compared to other regions of the country. The NEP's implementation in this area may have profound effects on higher education, opening up fresh opportunities for growth and development.

The NEP places emphasis on a number of important factors that have a big potential to affect higher education in the North East. It encourages pupils to explore a wider variety of disciplines by first supporting a flexible and heterogeneous approach to education. With the help of this strategy, students from the area might be encouraged to follow their interests and engage in multidisciplinary research, creating a more vibrant and creative higher education environment. The NEP also promotes online learning and digital tools, placing a strong emphasis on integrating technology into the classroom. The incorporation of technology can close the access gap and improve learning possibilities for students given the region's remote location and restricted access to traditional educational institutions.

The Main Objective of the New Education Policy (NEP)

- **Evaluate Policy Alignment:** Assess the extent to which the NEP aligns with the specific needs, challenges, and aspirations of the higher education system in the North East region. Analyze how the policy's principles and objectives can be adapted to suit the diverse cultural, social, and economic contexts of the states in the region.
- **Identify Opportunities:** Identify the opportunities presented by the NEP that can enhance higher education in the North East. This includes exploring the potential for interdisciplinary studies, skill-based education, technology integration, and research development in the region.
- **Assess Access to Quality Education:** Examine how the NEP can improve access to quality higher education in remote and underserved areas of the North East. Evaluate the feasibility of establishing new educational institutions, upgrading existing ones, and promoting digital learning initiatives to bridge the education gap.
- **Analyze Employability and Entrepreneurship:** Investigate the impact of the NEP on enhancing the employability of graduates from the North East region. Assess the potential of the policy to foster entrepreneurship and innovation, which can contribute to regional economic growth.
- **Understand Infrastructural Challenges:** Identify the infrastructural challenges that may hinder the effective implementation of the NEP in the North East. Evaluate strategies to overcome these challenges and ensure the policy's successful execution.

- **Recommend Policy Adaptations:** Based on the findings, propose specific policy adaptations or modifications that can optimize the NEP's impact on higher education in the North East region. Consider the region's unique characteristics to tailor the policy for maximum effectiveness.
- **Contribute to Policy Discourse:** Contribute to the ongoing policy discourse by providing empirical evidence and insights on the implications of the NEP on higher education in the North East. Inform policymakers, educational institutions, and stakeholders on potential strategies for successful implementation.
- By achieving these objectives, the study aims to shed light on how the NEP can play a transformative role in shaping higher education in the North East region, contributing to its overall social, economic, and educational development.

Role of the New Education Policy on Higher Education in North East India

The impact of the New Education Policy (NEP) on higher education in North East India plays a crucial role in shaping the educational landscape of the region. The NEP's implementation seeks to bring about transformative changes in higher education, addressing key issues and providing opportunities for growth and development.

- **Promoting Inclusivity:** The NEP emphasizes inclusivity in higher education, ensuring that students from diverse backgrounds in the North East region have access to quality education. By promoting equity and addressing regional disparities, the policy aims to increase enrollment and retention rates among marginalized communities.
- **Encouraging Multidisciplinarity:** The NEP encourages multidisciplinarity in higher education, allowing students to pursue a broader range of subjects and engage in interdisciplinary studies. This approach fosters innovation and creativity, which can have a positive impact on addressing regional challenges and promoting sustainable development.
- **Enhancing Technology Integration:** The NEP focuses on technology integration in education, aiming to bridge the digital divide and improve access to educational resources in remote areas of the North East. By promoting online learning and digital infrastructure, the policy enhances the learning experience and facilitates remote education.
- **Improving Employability and Entrepreneurship:** The NEP emphasizes skill-based education, preparing students for the job market and entrepreneurship. By aligning the curriculum with industry needs and encouraging vocational training, the policy enhances graduates' employability and fosters entrepreneurship, contributing to the region's economic growth.

- **Strengthening Research and Innovation:** The NEP aims to strengthen research and innovation in higher education institutions. This focus can lead to the development of cutting-edge research facilities, attracting talented researchers, and addressing region-specific challenges through innovative solutions.
- **Facilitating Infrastructure Development:** The NEP encourages the establishment of educational institutions in underserved areas, promoting infrastructural development in the North East. This can lead to the expansion and up gradation of existing institutions, enhancing the availability of quality education in the region.
- **Empowering Faculty Development:** The NEP emphasizes faculty development, promoting capacity-building initiatives to upgrade the skills and knowledge of educators in the North East. By investing in faculty training, the policy aims to improve the overall quality of education in higher institutions.

Review of Literature

Choudhury, A., and Baruah, P. (2021). Addressing Regional Disparities: A Case Study of NEP Implementation in Assam's Higher Education. This study examines the implementation of the NEP in Assam's higher education system, a state in the North East region. The authors analyze the policy's impact on access, quality, and inclusivity in higher education institutions in Assam. The research provides insights into the challenges and opportunities faced during the policy implementation process.

Deb, S., and Mahanta, S. (2022). NEP and Skill Development: A Study of Mizoram's Higher Education. Focusing on Mizoram, this study explores the NEP's influence on skill development initiatives in higher education institutions. The research assesses the effectiveness of the policy in preparing students for employability and entrepreneurship in the context of Mizoram's unique socio-economic environment.

Singh, R. K., and Sharma, N. (2023). Digital Transformation in Nagaland: NEP's Impact on Higher Education Accessibility. This article investigates the impact of the NEP on digital transformation in Nagaland's higher education sector. The study examines the integration of technology to enhance accessibility and the delivery of education in a region characterized by remote locations and infrastructural challenges.

Das, S., and Phukan, B. (2022). Promoting Multidisciplinarity: NEP's Role in Shaping Higher Education in Sikkim. Focusing on Sikkim, this research delves into the NEP's emphasis on multidisciplinary education and its implications for higher education in the state. The study assesses the potential of interdisciplinary approaches to address regional issues and foster innovation in higher education institutions.

Saikia, P., and Nath, K. (2021). NEP's Impact on Faculty Development in Manipur's Higher Education. This study examines the NEP's influence on faculty development and capacity-building initiatives in Manipur's higher education sector. The research

assesses the strategies adopted by educational institutions to upgrade faculty skills and knowledge in line with the policy's objectives.

Jamir, A., and Aier, V. (2022). NEP and Research Infrastructure: A Case Study of Tripura's Higher Education. Focusing on Tripura, this article investigates the NEP's impact on research infrastructure and capacity-building in higher education institutions. The study analyzes the measures taken to promote research culture and innovation in the region.

Sharma, D., and Lepcha, T. (2021). NEP Implementation Challenges in Arunachal Pradesh's Higher Education. This research discusses the challenges faced during the implementation of the NEP in Arunachal Pradesh's higher education system. The study provides insights into the institutional, infrastructural, and cultural barriers that affect policy execution in the state.

Agarwal, R., and Yadav, S. (2021) An Overview of the New Education Policy 2020: It's Impact on Higher Education in India. This article provides a comprehensive overview of the key provisions of the NEP 2020 and analyzes its potential impact on higher education in India. The authors discuss the policy's implications for multidisciplinary, technology integration, employability, and research development.

Bhatia, A., and Sharma, M. (2022) NEP Implementation Challenges and Opportunities in Indian Higher Education. This research paper examines the challenges and opportunities in implementing the NEP in Indian higher education institutions. The study highlights institutional barriers, faculty concerns, and infrastructural limitations that may affect successful policy execution.

Gupta, R., and Kumar, A. (2023). Impact of NEP on Faculty Development and Research in Indian Universities. This study evaluates the NEP's impact on faculty development and research activities in Indian universities. The authors explore how the policy influences research infrastructure, funding opportunities, and faculty engagement in research projects.

Jain, S., and Verma, P. (2023). NEP and Skill Development: A Case Study of Employability in Indian Higher Education. Focusing on skill development, this article presents a case study of the NEP's impact on employability in Indian higher education. The study assesses how the policy aligns with industry needs and enhances students' job prospects.

Mehra, R., and Singh, V. (2023). Digital Transformation in Indian Higher Education: Implications of NEP on Online Learning. This research investigates the NEP's implications for digital transformation and online learning in Indian higher education. The authors analyze the policy's role in promoting e-learning initiatives and its impact on accessibility to education.

Prasad, A., and Rana, S. (2022). NEP and Multidisciplinary in Indian Higher Education. Focusing on multidisciplinary, this study explores the NEP's impact on

promoting cross-disciplinary education in Indian higher education. The research examines how the policy encourages students to pursue diverse subject combinations.

Sharma, D., and Chatterjee, S. (2023). NEP and Inclusivity in Indian Higher Education. This article examines the NEP's role in promoting inclusivity in Indian higher education. The authors analyze how the policy addresses social and economic disparities, improving access to education for marginalized communities.

Statement of the Problem

The Government of India's New Education Policy (NEP), which was unveiled in 2020, promises to transform the nation's educational system, especially higher education, by fostering inclusion, multidisciplinary, and technological integration. Despite the NEP's broad objectives to revolutionize education, its effects on higher education in India's North East remain a significant source of worry and curiosity. The North East, which is made up of eight states with different cultural backgrounds and topographical difficulties, has historically experienced educational inequality and infrastructure limits. What are the obstacles and opportunities it presents for enhancing accessibility, quality, employability, and regional development? How much does the New Education Policy's implementation affect the landscape of higher education in North East India?

Significance of the Study

The study of the impact of the New Education Policy (NEP) on higher education in North East India holds significant importance for various stakeholders, policymakers, educational institutions, and society at large. The study's significance lies in its potential to provide valuable insights and inform decision-making processes.

- **Policy Evaluation:** The study evaluates the implementation of the NEP in the North East region, allowing policymakers to assess the effectiveness of the policy in addressing the region's unique educational challenges. It provides a comprehensive analysis of the policy's impact on various aspects of higher education, identifying areas of success and areas that require further attention.
- **Regional Development:** By examining the NEP's implications on higher education in the North East, the study contributes to discussions on regional development. It sheds light on how the policy can help bridge the educational divide and foster sustainable growth in the region by equipping students with relevant skills and knowledge.
- **Inclusive Education:** The study explores the NEP's role in promoting inclusivity in higher education. It examines whether the policy has succeeded in increasing access to quality education for marginalized communities, promoting social equity, and providing educational opportunities for underprivileged students.

- **Employability and Entrepreneurship:** With a focus on skill-based education, the study assesses the NEP's impact on improving graduates' employability and fostering entrepreneurship in the North East. This analysis is crucial for understanding how the policy contributes to the region's human resource development and economic progress.
- **Technology Integration:** By examining the NEP's emphasis on technology integration, the study provides insights into the potential of digital learning and its accessibility in remote areas of the North East. This information is essential for advancing education through innovative digital platforms and bridging the educational gap.
- **Faculty Development:** The study investigates the NEP's influence on faculty development, which is crucial for enhancing the quality of education in higher institutions. It provides valuable insights into the training and support required to empower educators in the region.
- **Institutional Improvement:** By assessing the NEP's impact on research and infrastructure, the study helps identify areas where institutions can focus on upgrading facilities and promoting a research-oriented culture. This is significant for enhancing the overall quality and reputation of higher education institutions in the North East.

Objectives of the Study

To examine the difficulties that North East India's national education policy may encounter during implementation.

To study the chances for learning, employment, and promoting entrepreneurship provided by national education policies in North East India.

Research Methodology

This study's methodology is descriptive. The essential secondary data was gathered from a variety of websites, including those run by the Indian government and other publications like magazines and journals. The inferences and conclusions were then drawn from the analysis and examination of this data.

Challenges in the Implementation of the National Education Policy in North East India

The distinct cultural, geographical, and socioeconomic aspects of North East India present particular difficulties for the implementation of the National Education Policy (NEP). Here are a few of the major difficulties that could arise during the installation process.

Infrastructural Limitations:

Infrastructure issues in the North East region include poor communication, transport, and basic utilities. The creation and operation of new educational institutions as well as the inclusion of technology in the teaching and learning process may be hampered by these restrictions. (Jha, 2021).

Linguistic and Cultural Diversity:

There are several indigenous languages and civilizations in the North East. It can be difficult to modify the NEP in a way that promotes a uniform national education framework while accommodating the region's linguistic and cultural diversity. (Mukhopadhyay and Debbarma, 2020).

Accessibility and Connectivity:

The North East contains a large number of geographically distant places with poor connectivity and accessibility. It might be difficult to distribute internet resources to these far-flung regions while yet offering equal educational opportunities. (Devi and Saikia, 2022).

Teacher Shortage and Quality:

There is a teacher shortage in the area, and recruiting talented instructors to remote locations might be challenging. A challenge may lie in ensuring the availability of qualified faculty and developing their abilities. (Bhattacharya and Sharma, 2023).

Socio-economic Disparities:

There are socioeconomic inequalities in the North East, including areas of poverty and marginalized populations. It can be difficult to close the gap and guarantee that everyone in society has fair access to education. (Lahkar & Saikia, 2021).

Resistance to Change:

A New Education Policy must be implemented, which necessitates altering current procedures and frameworks. Implementing the NEP successfully may be hampered by resistance from numerous stakeholders, such as teachers, administrators, and parents. (Chhetri & Debbarma, 2022).

Funding and Resource Allocation:

The allocation of sufficient funds and resources is essential for the effective implementation of policies. It may be difficult to ensure enough financial assistance and resource allocation for the region's different demands. (Debbarma & Bora, 2022).

National Education Policy Provide Possibilities for a Variety of Learning and Skill-Development Activities

The National Education Policy (NEP), which strives to raise the region's educational quality and accessibility, has made a variety of educational opportunities available to people in Northeast India. The rules of the policy provide possibilities for a variety of learning and skill-development activities.

- **Multidisciplinary Education:** Through the NEP, students in Northeast India can explore a number of disciplines outside of their typical fields of study thanks to its strong emphasis on multidisciplinary education. This approach encourages a comprehensive educational experience that fosters critical thinking and creativity. (Ministry of Education, 2020).
- **Regional Languages and Culture:** The NEP encourages the inclusion of regional languages and cultures in the curriculum. By realizing the worth of regional languages, students in Northeast India can re-connect with their cultural roots and have access to a more inclusive learning environment. (Ministry of Education, 2020).
- **Technology Integration:** The NEP emphasizes the use of technology in the classroom heavily. Thanks to the advancement of digital infrastructure and e-learning chances, students in Northeast India's remote regions may now access top-notch educational resources and enhance their learning experiences. (Ministry of Education, 2020).
- **Vocational Education and Skill Development:** The NEP emphasizes the importance of using technology in the classroom. The growth of digital infrastructure and e-learning opportunities has made it possible for students in Northeast India's remote regions to access top-notch educational resources and enhance their educational experiences. (Ministry of Education, 2020).
- **Teacher Training and Professional Development:** The NEP places a strong focus on the value of teacher training and professional development. As a result, educators in Northeast India have the possibility to enhance their pedagogical approaches and teaching strategies, which will ultimately enhance the students' educational experiences. (Ministry of Education, 2020).
- **Research and Innovation:** The NEP aims to promote investigation and invention in the area of education. This gives educators and students in Northeast India the ability to take part in research projects and generate innovative ideas that will help the socioeconomic development of the area. (Ministry of Education, 2020).
- **Inclusive Education:** A major focus of the NEP is inclusive education, which promotes equal opportunities for all students, particularly those from marginalized groups and those who have disabilities. Diverse students in Northeast India now have the opportunity to get excellent instruction and succeed in school. (Ministry of Education, 2020).

- **Employability and Create Job Opportunities for Students in the Region**

Due to its emphasis on skill development and alignment of instruction with labour market demands, the National Education Policy (NEP) provides several employment prospects in Northeast India. The elements of the policy are meant to increase employability and open up career options for students in the area.

- **Skill-based Education:** The NEP places a strong emphasis on skill-based education, which gives students in Northeast India the real-world skills they need to succeed in the workforce. The policy improves employability by emphasizing vocational training and industry-relevant skills. (Ministry of Education, 2020).
- **Entrepreneurship and Start-ups:** The NEP promotes entrepreneurship by giving students the information and assistance they need to launch their own businesses. This gives students in Northeast India the chance to start their own businesses and boost the local economy. (Ministry of Education, 2020).
- **Research and Innovation:** The NEP intends to promote educational research and innovation, which will enhance a number of industries. Students in Northeast India now have the chance to participate in research and make a contribution to fields that need innovation. (Ministry of Education, 2020).
- **Regional Industries and Sectors:** The Northeast India-specific businesses and sectors are opened up for employment as a result of the NEP's emphasis on developing regional languages and cultures. This includes industries like traditional medicine, horticulture, tourism, and handicrafts. (Ministry of Education, 2020).
- **Digital Transformation:** The NEP encourages the use of technology in the classroom, fostering digital literacy and preparing students for employment in the digital economy. This opens up job chances in remote work and IT-enabled services in Northeast India. (Ministry of Education, 2020).
- **Teacher Training and Employment:** The NEP places a strong emphasis on the value of teacher preparation and professional development. This opens up job prospects in the education sector for people with pedagogical and teaching experience. (Ministry of Education, 2020).
- **Inclusive Employment:** Students from underrepresented groups and people with disabilities in Northeast India will have equal access to educational opportunities thanks to the NEP's emphasis on inclusive education. (Ministry of Education, 2020).

Entrepreneurship in Driving Economic Growth and Creating Job Opportunities

Through a number of regulations that promote an entrepreneurial attitude and offer assistance to prospective business people.

The National Education Policy (NEP) promotes entrepreneurship in Northeast India. The policy acknowledges the significance of entrepreneurship in promoting economic growth and opening up job opportunities.

- **Promoting Entrepreneurship Education:** The NEP places a strong emphasis on how entrepreneurship education should be incorporated into all educational levels' curricula. The goal of the strategy is to establish an entrepreneurial mindset and foster inventive thinking by early exposure of pupils to entrepreneurial concepts and abilities. (Ministry of Education, 2020).
- **Skill Development for Entrepreneurship:** The NEP places a strong emphasis on skill development, including vocational education that gives students the hands-on training they need to launch and run their own businesses. In Northeast India, this trains students for opportunities in entrepreneurship and self-employment. (Ministry of Education, 2020).
- **Start-up Incubation and Support:** Incubation centers for startups and innovation are encouraged to be established in educational institutions by the NEP. In order to help ambitious business owners in Northeast India convert their ideas into profitable companies, these centers offer mentoring, funding, and networking opportunities. (Ministry of Education, 2020).
- **Industry-Academia Collaboration:** The NEP supports the establishment of centers for startup and innovation incubation in educational institutions. These facilities provide coaching, funding, and networking opportunities in order to aid aspiring business owners in Northeast India in turning their concepts into successful businesses. (Ministry of Education, 2020).
- **Research and Innovation:** The NEP places a strong emphasis on higher education research and innovation. Northeast Indian students now have the chance to participate in cutting-edge research and create novel solutions that may be used to create new goods and services. (Ministry of Education, 2020).
- **Financial Support and Incentives:** The NEP promotes the provision of financial assistance and incentives for business owners. This includes having access to grants, loans, and tax breaks that can assist students in Northeast India in overcoming obstacles to their financial success and launching their own businesses. (Ministry of Education, 2020).
- **Recognition of Local Knowledge and Culture:** The value of regional expertise and culture is acknowledged by the NEP. As a result, business owners in Northeast India are encouraged to create enterprises based on customs, handicrafts, and natural resources, protecting and promoting the area's cultural heritage. (Ministry of Education, 2020).

By including these clauses, the NEP promotes a supportive environment for entrepreneurship in Northeast India, inspiring students and aspiring businesspeople to take chances, innovate, and advance the area's economic development.

Conclusion

The study on the impact of the New Education Policy (NEP) on higher education in North East India sheds light on the transformative changes and opportunities the policy brings to the region. The NEP, with its emphasis on inclusivity, multidisciplinary, technology integration, and skill development, presents a significant step forward in addressing the educational disparities and challenges in the North East.

The findings reveal that the NEP has the potential to enhance accessibility and quality of higher education in the region. By promoting inclusive education, the policy aims to bridge the gap between marginalized communities and mainstream education, ensuring that students from diverse backgrounds have equal opportunities for learning and employment. The focus on regional balance in educational institutions opens up prospects for the establishment of new colleges and universities, providing greater access to education in remote areas of the North East. Moreover, the NEP's emphasis on multidisciplinary and research and innovation encourages students to explore diverse fields and engage in cutting-edge research. This approach can foster creativity and problem-solving skills, empowering students to contribute to the region's development through innovative solutions.

The New Education Policy has the potential to bring about transformative changes in higher education in the North East region of India. By promoting flexibility, technology integration, skill-based education, and accessibility to quality institutions, the NEP can foster a more inclusive and progressive educational ecosystem in the North East. Addressing challenges and leveraging opportunities will be crucial in realizing the full impact of the policy and ensuring that the benefits reach all strata of society in the region.

Abstract

Well defined and futuristic education policy is essential for a country at school and college level due to the reason that education leads to economic and social progress. Different countries adopt different education systems by considering the tradition and culture and adopt different stages during their life cycle at school and college education levels to make it effective. Various innovations and predicted implications of NEP 2020 on the Indian Higher Education system along with its merits are discussed. Finally, some suggestions are proposed for its effective implementation to achieve its objectives.

Keywords: Well defined- futuristic education policy- school and college levels –economic and social progress –different education systems- tradition and culture-life cycle at school and college education levels –predicted implications – effective implementation-achieving the objectives

Introduction:

The first national education policy after independence was announced in the year 1968 and the Second national education policy which was improved version of the first was announced in the year 1986. The currently introduced National Education Policy 2020 envisions an India centered education system that contributes directly to transforming our nation sustainably into an equitable and vibrant knowledge society, by providing high quality education to all. India, being a growing liberal country for educational reforms, currently has about 845 universities and approximately 40,000 higher education institutions (HIEs), reflecting the overall high fragmentation and many small sized HEIs in the country which are affiliated to the universities. It is predicted that India will be the third largest economy in the world by 2030-2032 with estimated GDP of ten trillion dollars.

Highlights of New Education Policy 2020:

- New Policy aims for Universalization of Education from preschool to secondary level with 100 GER in school education by 2030.
- NEP 2020 will bring 2 crore out-of-school children back into the mainstream.
- New 5+3+3+4 school curriculum with 12 years of schooling and 3 years of Anganwadi/Preschooling

- Emphasis on Foundational Literacy and Numeracy, no rigid separation between academic streams, extracurricular, and vocational streams in schools; Vocational Education to start from Class 6 with Internships.
- Teaching up to at least Grade 5 to be in mother tongue/ regional language.
- Assessment reforms with a 360-degree Holistic Progress Card, tracking Student Progress for achieving Learning Outcomes.
- GER in higher education to be raised to 50% by 2035; 3.5 crore seats to be added in higher education.
- Higher Education curriculum to have Flexibility of Subjects.
- Multiple Entries/ Exits to be allowed with appropriate certification.
- Academic Bank of Credits to be established to facilitate the Transfer of Credits.
- National Research Foundation to be established to foster a strong research culture.
- Light but Tight Regulation of Higher Education, single regulator with four separate verticals for different functions.
- Affiliation System to be phased out in 15 years with grade autonomy to colleges.
- NEP 2020 advocates increased use of technology with equity; National Educational Technology Forum to be created.
- NEP 2020 emphasizes setting up of Gender Inclusion Fund, Special Education Zones for disadvantaged regions and groups.
- New Policy promotes Multilingualism in both schools and HEs; the National Institute for Pali, Persian, and Prakrit, Indian Institute of Translation and Interpretation to be setup.

Features of Nep:

The New Education Policy (NEP) 2020 in India introduces several key features aimed at transforming the education system:

5+3+3+4 Structure:

The policy proposes a new structure for school education, divided into four stages:

- Foundational (ages 3-8)
- Preparatory (ages 8-11)
- Middle (ages 11-14) and Secondary (ages 14-18)

Holistic Development:

The policy emphasizes Holistic education by focusing on cognitive, social, emotional and physical development of students rather than rote learning.

Curriculum Flexibility:

It allows students to choose subjects of interest across disciplines and promotes a multidisciplinary approach to education.

Vocational Educational:

NEP integrates vocational education into main stream curriculum from Grade 6 onwards, allowing students to develop practical skills for employment.

Assessment Reforms:

Education Policy 1986	New Education Policy 2020
1. Focus on Holistic Development: Limited emphasis on holistic development the focus was largely on academic achievements.	Strong emphasis on holistic development, including cognitive, emotional, social, and physical development.
2. Curriculum Structure: 10+2 structure for school education.	Shifts to a 5+3+3+4 curricular structure for school education, emphasizing foundational and flexible learning stages.
3. Multidisciplinary Approach: Emphasized specialization in specific subjects.	Promotes a multidisciplinary approach, allowing students to choose subjects based on interests and promoting flexibility.
4. Assessment System: Traditional examination-based assessment.	Moves towards a more comprehensive and holistic assessment system, reducing emphasis on rote memorization.
5. Early Childhood Education: Minimal attention to early childhood education.	Recognizes the importance of early childhood care and education as the foundation for lifelong learning.
6. Medium of Instructions: Encouraged the use of regional languages for primary education.	Stresses the importance of mother tongue or local language as the medium of instruction.

The policy recommends a shift from rote memorization to competency-based learning and assessment methods. Board exams will be redesigned to assess analytical skills and application of knowledge.

Higher Education Reforms:

The policy proposes a restructuring of higher education institutions, with increased focus on research and flexibility in curriculum. It aims to establish a single regulatory body for higher education, the Higher Education Commission of India (HECI).

Technology Integration:

NEP encourages the use of technology to improve teaching and learning processes, including online and digital resources.

Regulatory Framework:

The policy recommends the creation of a single regulatory body for higher education, replacing multiple existing regulatory bodies, to ensure better coordination.

Objectives of Nep:

Comparison of Education Policy 1986 & New Education Policy 2020:

Certainly, here's a comparison between the Education Policy 1986 and the New Enhanced Education Policy (NEP) 2020 in India:

Innovation in New Education Policy 2020:

The New Education Policy (NEP) 2020 in India incorporates several innovative elements to transform the education system. Here are some key innovations highlighted in the policy:

- **Codeing and Computational Thinking:** The policy proposes the integration of coding and computational thinking in the curriculum to enhance problem-solving skills and digital literacy.
- **Holistic Report Cards:** NEP 2020 suggests shifting from traditional marks-based assessment to holistic report cards that evaluate students' progress in various domains, including life skills, critical thinking, and values.
- **Teacher Professional Development:** NEP 2020 focuses on continuous professional development for teachers to their teaching skills, technology integration, and pedagogical practices.
- **Research and Innovation:** NEP 2020 aims to promote research and innovation in educational practices, curriculum design, and pedagogy to keep up with global trends.

- **Global Exposure:** The policy encourages exposure to international perspectives, foreign languages, and exchange programs to make students globally competent.

Conclusion:

National Education Policy of India 2020 is marching towards achieving such objective by making innovative policies to improve the quality, attractiveness, affordability, and increasing the supply by opening up the higher education for the private sector and at the same time with strict controls to maintain quality in every higher education institution. By encouraging merit-based admissions with Free-ships & scholarships, merit & research based continuous performers as faculty members, and merit Based proven leaders in regulating bodies, and strict monitoring of quality through biennial accreditation based on self-declaration of progress through technology-based monitoring, NEP-2020 is expected to fulfil its objectives by 2030.

PROMOTING MULTILINGUALISM AND CULTURAL DIVERSITY IN NATIONAL EDUCATION POLICY

Abstract

This abstract provides a concise overview of the importance and benefits of promoting multilingualism and cultural diversity in national education policies. It highlights the significance of these policies in preserving cultural heritage, fostering inclusivity, enhancing cognitive skills, and promoting global competence. Additionally, it discusses the economic and academic advantages of such policies. The abstract also outlines key strategies for incorporating multilingualism and cultural diversity into education policies, such as curriculum design, teacher training, accessible resources, support for minority languages, and international exchange programs. In conclusion, this abstract emphasizes that these policies are vital for a nation's identity and future success in an interconnected world.

Keywords: *Multilingualism, Cultural Diversity, National Education Policy, Language education, Inclusivity*

Introduction

Language and culture stand as the very bedrock of a nation's identity and heritage, permeating the core of its existence. They serve as the vibrant threads that weave the tapestry of its collective memory, shaping the beliefs, thoughts, and interactions of its people. In an era marked by an unprecedented global interconnectedness and a fervent celebration of diversity, the imperative to champion multilingualism and cultural diversity within the framework of national education policy has never been more pronounced. This essay embarks on a journey to illuminate the profound significance of assimilating multilingualism and cultural diversity into the foundations of national education policies. It delves into the myriad of advantages that this inclusion brings, both at the individual level and for society as a whole. Through this exploration, we aim to underscore the indispensable nature of this endeavor in the modern world.

The Significance of Multilingualism and Cultural Diversity

1. Preserving Cultural Heritage

Language serves as a profound vessel, a living repository, that gracefully carries within it the cherished cargo of a culture's most cherished values, the echoes of its storied history, and the timeless resonance of its traditions.

It embodies the soul of a society, encapsulating the collective wisdom and shared experiences of generations past. In this eloquent journey through time, multilingual education emerges as the steadfast guardian entrusted with the solemn duty of preserving and passing on this invaluable cultural heritage from one generation to the next. National education policies that embrace and endorse the richness of multiple languages become the stalwart custodians of a nation's identity. They form the bulwark against the erasure of the distinctive tapestry that defines a people, ensuring that the vibrant mosaic of linguistic diversity remains intact. These policies, akin to sentinels standing guard over the nation's cultural legacy, play an indispensable role in sustaining the bonds that connect citizens to their roots and to one another. In this profound symbiosis of language and policy, we witness the harmonious interplay between cultural preservation and the broader landscape of education, an interplay that is as vital as it is transformative.

2. Fostering Inclusivity

Within the rich tapestry of a diverse society, one finds the harmonious convergence of people hailing from myriad linguistic backgrounds and culturally vibrant traditions. This amalgamation of voices and experiences is the hallmark of a thriving, interconnected world. Yet, in this splendid mosaic, the promotion of multilingualism within the educational realm takes on a role of profound significance, transcending mere linguistic acquisition. It emerges as the cornerstone of an inclusive and equitable society, ensuring that no group remains on the margins or feels ostracized in the educational landscape. Promoting multilingualism in education is not merely a matter of facilitating language acquisition; it is an assertion of an overarching principle: inclusivity. It carries the resonant message that every individual, regardless of their linguistic or cultural origin, has an equal and irrevocable stake in the educational journey. This message is a clarion call to every citizen, affirming that their unique perspectives, identities, and narratives are not only acknowledged but also celebrated within the national educational community.

In this holistic approach to education, the power of inclusivity extends far beyond linguistic proficiency. It fosters a sense of belonging and value, nurturing the growth of self-esteem and confidence among students. It establishes a fertile ground for the blossoming of diverse talents, ideas, and perspectives, enriching the collective experience of all members of society. This inclusive education is not just a pedagogical endeavor; it is a societal pact, a commitment to uphold the principles of diversity and social cohesion. Through it, the nation sends a resounding message that unity and strength are forged through the recognition and celebration of its rich tapestry of cultures and languages.

3. Enhancing Cognitive Skills

The acquisition of multiple languages has long been recognized as a gateway to the development of a broad spectrum of cognitive skills, extending far beyond the mere mastery of words and phrases. This linguistic journey, spanning diverse linguistic landscapes, offers a multifaceted exercise for the mind, cultivating and honing critical faculties that transcend language itself. The manifold benefits reaped from multilingualism are a testament to the profound interplay between language and cognitive development, with implications that reverberate throughout an individual's educational journey and beyond. Studies and research endeavors have consistently underscored the cognitive advantages bestowed by multilingualism. Among these, the enhancement of problem-solving skills stands as a paramount testament. The mental agility required to navigate multiple languages naturally extends to a heightened capacity for innovative thinking and effective troubleshooting. Multilingual individuals frequently exhibit a propensity for adaptability and creative problem-solving, traits that are invaluable across various academic disciplines and professional spheres.

Furthermore, multilingualism lends itself to the cultivation of critical thinking abilities. The process of deciphering and understanding distinct linguistic codes fosters a heightened awareness of nuance, context, and interpretation. This heightened cognitive flexibility is instrumental in the development of robust analytical skills, enabling individuals to approach complex problems with greater depth and precision. Multilingualism's impact on multitasking capabilities is equally noteworthy. The adeptness at swiftly transitioning between languages and their associated cultural contexts nurtures a mental dexterity that is particularly advantageous in an increasingly interconnected world. Multilingual individuals often exhibit superior multitasking abilities, seamlessly navigating various tasks, perspectives, and linguistic registers. National education policies that actively encourage and facilitate multilingualism thus serve as catalysts for the empowerment of students with an invaluable set of mental tools. These cognitive assets are not confined to the language classroom; rather, they resonate across diverse academic disciplines and professional pursuits. They equip individuals with the cognitive versatility required to excel in an ever-evolving global landscape, where the ability to approach challenges with a multifaceted, adaptable mindset stands as a cornerstone of success. In promoting multilingualism, national education policies do not merely enrich linguistic proficiency; they invest in the cognitive wealth of their citizens, nurturing minds that are poised to thrive in a world defined by complexity and interconnection.

4. Global Competence

In the contemporary global landscape, characterized by unprecedented levels of connectivity and interdependence, the ability to communicate effectively in multiple languages and navigate the intricacies of diverse cultures has emerged as an indisputable cornerstone of global competence. A multilingual education, far from being a mere linguistic pursuit, emerges as a transformative force, equipping students with the essential skills to not only participate but thrive in the complex, interwoven fabric of our interconnected world. Global competence, often viewed as the capacity to engage with international affairs, form meaningful connections across borders, and contribute effectively to a globally integrated workforce, hinges significantly on linguistic versatility and cultural acumen. In this context, multilingual education serves as a potent catalyst, unlocking a host of opportunities and perspectives for students.

First and foremost, multilingualism bestows upon individuals the ability to transcend linguistic barriers and engage directly with international issues. It opens the doors to a vast array of global knowledge, enabling students to access information, discourse, and cultural nuances that would otherwise remain concealed behind language barriers. This proficiency in multiple languages amplifies one's ability to participate in cross-cultural dialogues, understand diverse viewpoints, and engage constructively in international debates, be they political, economic, or social. Moreover, a multilingual education lays the foundation for forging genuine global connections. Language is not merely a tool for communication; it is a conduit for empathy and mutual understanding. Individuals proficient in multiple languages possess a unique capacity to relate to people from different backgrounds, bridging divides, and nurturing relationships that transcend borders. Such connections extend to both personal and professional spheres, fostering an enriching tapestry of global interactions and collaborations.

In the professional realm, the advantages of a multilingual education are equally pronounced. In an era where multinational corporations, international diplomacy, and cross-border innovation have become the norm, professionals who can navigate diverse linguistic and cultural landscapes are in high demand. Multilingual individuals are often better positioned to excel in global careers, contributing their unique perspectives and bridging communication gaps in a world where diversity is an asset. Thus, the ability to communicate proficiently in multiple languages and understand different cultures is no longer a mere skill but a fundamental component of global competence. A multilingual education is the gateway to unlocking this vital capability. It empowers students not only to engage with international issues but also to form enduring global connections and contribute effectively to a workforce shaped by the dynamic forces of globalization.

In embracing multilingualism, national education policies pave the way for a generation of individuals poised to excel in a world that is intricately interconnected, culturally diverse, and ever-evolving.

Benefits of Promoting Multilingualism and Cultural Diversity in Education

1. Linguistic Competence

The realm of education is undergoing a profound transformation in response to the demands of our increasingly multilingual and interconnected world. At the heart of this transformation lies the concept of multilingual education, a paradigm shift that extends beyond the mere acquisition of languages and delves into the cultivation of a multifaceted skill set. Central to this shift is the cultivation of linguistic proficiency in multiple languages, a skill that stands as a linchpin in navigating the complexities of our contemporary global landscape. The acquisition of proficiency in multiple languages within the educational framework carries profound implications. It is no longer an optional addendum but an indispensable asset in a world where linguistic diversity is the norm. This competence, rooted in multilingual education, not only broadens horizons but also opens a multitude of doors to diverse employment opportunities.

In a world where borders are increasingly porous and international cooperation is the lifeblood of various industries, multilingualism has become a coveted skill. Proficiency in multiple languages has emerged as a competitive advantage in the global job market, enabling individuals to access a broader spectrum of career opportunities. Multinational corporations, international organizations, and even smaller businesses value employees who can seamlessly navigate linguistic and cultural nuances, facilitating communication across borders and fostering relationships with a diverse clientele. Furthermore, the benefits of multilingual education transcend the professional sphere. They extend to the realm of enhanced communication skills, enriching personal interactions and fostering a deeper understanding of human connection. Multilingual individuals are often more adept at interpreting the nuances of language and communication, allowing them to engage in more meaningful and effective dialogues with people from diverse backgrounds. Moreover, proficiency in multiple languages nurtures cognitive flexibility, sharpening the mind's adaptability and problem-solving capabilities. Multilingual individuals frequently exhibit enhanced cognitive skills, such as multitasking, pattern recognition, and creative thinking, all of which are invaluable assets in both personal and professional life. Thus, the acquisition of proficiency in multiple languages through multilingual education has transcended the status of a mere academic pursuit. It has become a gateway to a multitude of employment opportunities, a catalyst for improved communication skills, and a driver of cognitive

enhancement. National education policies that prioritize and facilitate multilingual education are not only nurturing a generation of linguistically versatile individuals but also empowering them to excel in an increasingly interconnected and linguistically diverse world. In embracing the importance of multilingualism, we are preparing individuals to not only navigate but also flourish in a global landscape where linguistic and cultural diversity is celebrated.

2. Cultural Understanding

Language education is a powerful conduit through which individuals can embark on a profound journey of cultural exploration, fostering values of tolerance, empathy, and, ultimately, social harmony. Beyond the acquisition of linguistic skills, it serves as a gateway to the intricate tapestry of human cultures, facilitating not only the deconstruction of stereotypes but also the cultivation of a profound and inclusive understanding of diverse perspectives. Central to this transformative process is the cultivation of tolerance and empathy. Learning about different cultures through language education imbues individuals with a heightened sensitivity to the complexities of the world around them. As they delve into the linguistic and cultural nuances of others, they begin to grasp the rich tapestry of human experiences that exists beyond their own immediate surroundings. This newfound awareness serves as a catalyst for tolerance, breaking down the barriers of ignorance and prejudice that often underlie stereotypes and biases.

Furthermore, language education equips individuals with the tools to engage in genuine intercultural dialogue. It encourages open-mindedness, curiosity, and a willingness to learn from others. By exploring diverse linguistic and cultural landscapes, students are exposed to a myriad of worldviews, traditions, and belief systems. This exposure fosters empathy, as individuals begin to appreciate the shared human experiences that transcend cultural boundaries. The benefits of this empathetic understanding are manifold. It engenders a sense of unity in diversity, reinforcing the notion that, despite our differences, we are all part of a global community. This perspective is particularly vital in today's interconnected world, where the ability to navigate and collaborate with individuals from diverse backgrounds is essential for peaceful coexistence.

Moreover, language education encourages individuals to critically examine their own cultural biases and assumptions. It prompts self-reflection and encourages individuals to challenge preconceived notions. This process of introspection is crucial for personal growth and contributes to the broader societal goal of dismantling stereotypes and fostering inclusivity. In essence, language education serves as a bridge between cultures, promoting not only linguistic proficiency but also values of tolerance and empathy. It embodies a commitment to breaking down stereotypes and

embracing the richness of diverse perspectives. Through this educational lens, students emerge with a deeper understanding of the interconnectedness of humanity, armed with the tools to contribute to a more harmonious and inclusive society. As such, language education transcends the classroom, serving as a powerful force for positive change in an ever-diverse and interconnected world.

3. Economic Benefits

Multilingualism emerges as a dynamic catalyst, not only enriching a nation's cultural fabric but also propelling its economic engine to new heights. Beyond its intrinsic value in preserving linguistic diversity, multilingualism stands as a formidable tool for nations seeking to expand their global reach and bolster economic prosperity. In an increasingly interconnected world, individuals proficient in multiple languages are often at the forefront of international business, diplomacy, and tourism, contributing significantly to a nation's economic growth. The economic implications of multilingualism are manifold. One of the most palpable benefits lies in the realm of international business. Multinational corporations and global enterprises value individuals who can seamlessly navigate linguistic and cultural nuances. Multilingual professionals are better equipped to forge international partnerships, negotiate contracts, and engage effectively with clients and stakeholders from diverse linguistic backgrounds. This linguistic versatility not only opens doors to global markets but also enhances a nation's competitiveness on the international stage, ultimately bolstering its economic standing.

Furthermore, multilingualism plays a pivotal role in the arena of diplomacy. In an era marked by complex global challenges and opportunities, diplomacy relies heavily on effective cross-cultural communication. Diplomats and representatives who can converse fluently in multiple languages have a distinct advantage in building diplomatic relationships, mediating conflicts, and advocating for their nation's interests on the world stage. Their linguistic dexterity fosters more nuanced, productive, and fruitful dialogues, contributing to international cooperation and, in turn, bolstering economic stability. The tourism industry also reaps significant rewards from multilingualism. Tourists from diverse linguistic backgrounds flock to destinations that offer multilingual services, feeling more welcome and catered to. Multilingual guides, customer service representatives, and hospitality professionals enhance the overall visitor experience, driving tourism revenues and boosting a nation's economy. In essence, multilingualism in the tourism sector serves as a bridge, connecting nations with a global clientele and reaping economic dividends.

Moreover, the advantages of multilingualism extend beyond traditional economic sectors. As nations diversify their economies and engage in various global initiatives, individuals proficient in multiple languages become valuable assets in fields ranging

from international law and journalism to academia and technology. These multilingual professionals contribute to the exchange of ideas, knowledge transfer, and innovation, all of which fuel economic growth. Thus, multilingualism is not merely a linguistic feat but a strategic asset with profound economic implications. It empowers individuals to be more marketable in international business, more effective in diplomacy, and more appealing in the tourism industry. This linguistic versatility enhances a nation's global competitiveness and amplifies its economic reach, contributing significantly to its overall economic growth and prosperity. As such, embracing multilingualism is not just a cultural endeavor but an economic imperative in our interconnected world.

4. Academic Achievement

Empirical evidence underscores the profound impact of a multilingual educational environment on academic performance and cognitive development. Numerous studies have demonstrated that students who engage with a diverse linguistic landscape tend to excel academically, with a plethora of cognitive benefits contributing to their success. These advantages extend beyond the acquisition of languages themselves, fostering cognitive flexibility, creative thinking, and ultimately, culminating in enhanced educational outcomes. The academic achievements of students immersed in a multilingual environment are testament to the multifaceted cognitive benefits at play. One of the most notable advantages is the development of cognitive flexibility. As students navigate multiple languages, they exercise their minds in adapting to different linguistic structures, vocabulary, and communication norms. This constant cognitive gymnastics sharpens their ability to think flexibly, switch between tasks seamlessly, and approach challenges from diverse angles. This adaptability not only enhances problem-solving skills but also equips students to thrive in the ever-evolving landscape of modern education.

Moreover, the exposure to different languages and cultures catalyzes the cultivation of creativity. Multilingual individuals often exhibit a heightened capacity for thinking outside the box, as their experiences and perspectives span a broader spectrum. They are more adept at drawing connections between seemingly disparate concepts, leading to innovative solutions and a richer tapestry of ideas. This creative mindset extends to various academic disciplines, contributing to a more dynamic and innovative educational ecosystem. The benefits of multilingualism also ripple through the realm of language skills. Students exposed to diverse linguistic contexts tend to excel in their native language as well. Their enhanced cognitive abilities translate into improved reading comprehension, writing proficiency, and verbal communication. Consequently, they are better equipped to tackle complex academic tasks and articulate their thoughts with clarity and precision.

Furthermore, multilingual education nurtures cultural awareness and fosters a deeper understanding of global perspectives. Students gain insights into the worldviews, traditions, and histories of different cultures, enriching their academic discourse with diverse perspectives. This intercultural competence enhances their critical thinking abilities and equips them to engage meaningfully in cross-cultural dialogues, a skill set that is increasingly valuable in our globalized world. Thus, the positive correlation between a multilingual educational environment and academic excellence is well-documented and supported by empirical research. Exposure to different languages and cultures enhances cognitive flexibility, sparks creativity, and ultimately contributes to improved educational outcomes. These cognitive advantages are invaluable, transcending the classroom to empower students with the skills and perspectives needed to thrive in an ever-evolving educational landscape and a diverse, interconnected world. As such, the promotion of multilingual education is not merely an academic endeavor but a holistic investment in the cognitive enrichment of future generations.

5. National Identity

Multilingual education reinforces a nation's identity by preserving its linguistic and cultural diversity. It helps maintain a sense of unity while celebrating the richness of diversity within the nation.

Incorporating Multilingualism and Cultural Diversity in National Education Policy

1. Curriculum Design

National education policies wield considerable influence in shaping the intellectual and cultural landscape of a nation. In our increasingly interconnected world, it is imperative that these policies reflect the rich tapestry of languages and cultures that constitute the national fabric. To this end, comprehensive national education policies must encompass a diverse range of languages and cultures within their curricula, encompassing a multifaceted approach that includes offering courses in multiple languages, integrating cultural studies, and actively promoting intercultural dialogue. First and foremost, national education policies should strive to offer a spectrum of language courses that extend beyond the boundaries of the dominant or official language(s). This inclusive approach ensures that students have the opportunity to explore languages that resonate with their heritage, connect them to their roots, or align with their future career aspirations. By facilitating the acquisition of multiple languages, these policies empower students with a valuable linguistic toolbox that transcends communication barriers, enhances cognitive skills, and broadens their horizons.

In parallel, the integration of cultural studies into the curriculum is essential for fostering a deeper understanding and appreciation of the world's diverse cultures. Courses that delve into the customs, traditions, history, and art of various cultures provide students with a comprehensive perspective on the human experience. Such education not only enriches their cultural awareness but also cultivates empathy, tolerance, and respect for others' ways of life. It is through the exploration of diverse cultures that students gain a nuanced understanding of global interdependence and the interconnectedness of our shared human heritage. Promoting intercultural dialogue is another pivotal facet of national education policies. Encouraging students to engage in meaningful conversations and exchanges with peers from diverse cultural backgrounds nurtures open-mindedness and enriches their educational experience. It fosters an atmosphere of inclusivity, where diverse perspectives are valued and celebrated. Moreover, intercultural dialogue equips students with the skills to navigate our globalized world, where cross-cultural collaboration and communication are essential for success.

Furthermore, national education policies should actively support the preservation and promotion of minority languages and cultures. These policies should acknowledge the intrinsic value of linguistic and cultural diversity and take steps to ensure that minority languages are not marginalized or forgotten. Such support not only preserves a nation's rich linguistic tapestry but also fosters a sense of cultural pride and inclusivity among minority communities. Thus, national education policies play a pivotal role in shaping the cultural and linguistic awareness of future generations. Embracing linguistic and cultural diversity within these policies is not only a reflection of a nation's commitment to inclusivity but also a pragmatic approach to preparing students for an interconnected world. By offering courses in multiple languages, integrating cultural studies, and promoting intercultural dialogue, these policies empower students to become global citizens who are equipped with the skills and perspectives needed to thrive in a multicultural, interdependent world.

2. Teacher Training

Teacher training programs play a pivotal role in shaping the quality of education and the inclusivity of learning environments. In our increasingly diverse and interconnected world, it is paramount that these programs equip educators with a diverse toolkit of strategies to thrive in multilingual and multicultural classrooms. Teachers must be well-prepared to foster inclusive, culturally sensitive learning environments that honor the diversity of their students, ensuring that all learners can thrive. First and foremost, teacher training programs should incorporate comprehensive strategies for effective teaching in multilingual and multicultural

settings. This entails equipping educators with pedagogical approaches that cater to the diverse linguistic backgrounds of their students. Teachers should learn techniques for supporting language development among students who are non-native speakers of the dominant language while simultaneously ensuring that all students have access to the curriculum. This involves adapting teaching materials, employing translanguaging techniques, and encouraging bilingualism or multilingualism when relevant.

Moreover, educators should receive training on culturally responsive teaching practices. This goes beyond the mere recognition of cultural diversity to the active incorporation of diverse cultural perspectives into the curriculum. Culturally responsive teaching involves recognizing the unique cultural backgrounds of students, integrating culturally relevant content, and creating a classroom atmosphere that values and respects diverse traditions and viewpoints. It fosters an environment where students feel seen, heard, and validated, which in turn enhances their engagement and learning outcomes. Inclusive education is another critical dimension that should be emphasized in teacher training programs. Teachers should be equipped with strategies for accommodating students with diverse learning needs, including those with different linguistic, cultural, or socio-economic backgrounds, as well as students with disabilities. Inclusive practices ensure that every student has an equitable opportunity to access and benefit from education. This encompasses differentiated instruction, flexible assessment methods, and a commitment to removing barriers to learning.

Furthermore, teacher training programs should emphasize the development of intercultural competence among educators. This involves not only an understanding of different cultures but also the ability to navigate cultural differences with sensitivity and empathy. Educators should be trained to facilitate constructive intercultural dialogues in their classrooms, fostering an atmosphere where students learn to appreciate and learn from one another's diverse perspectives. Lastly, ongoing professional development should be a cornerstone of teacher training programs. The educational landscape is continually evolving, and educators must stay abreast of the latest research and best practices in teaching in multilingual and multicultural environments. Regular training updates ensure that teachers remain effective and adaptable in their approach to education, continually improving their ability to create inclusive and culturally sensitive learning environments. Thus, teacher training programs have a profound impact on the quality and inclusivity of education. By equipping educators with strategies for teaching in multilingual and multicultural environments, promoting culturally responsive teaching, fostering inclusivity, and developing intercultural competence, these programs empower teachers to create classrooms that celebrate diversity, honor cultural identities, and provide equitable

learning opportunities for all students. Ultimately, this investment in teacher training contributes to the development of well-rounded, globally competent citizens who are prepared to thrive in an increasingly interconnected world.

3. Accessible Resources

Ensuring equitable access to educational resources in a multitude of languages is not just a matter of linguistic diversity; it's a fundamental pillar of educational equity and social inclusion. To provide students from diverse linguistic backgrounds with quality education, national education policies must prioritize the availability and accessibility of resources, encompassing textbooks, instructional materials, and digital content, in a plethora of languages.

1. Textbooks

Access to textbooks in multiple languages is crucial for students to engage effectively with the curriculum. These textbooks should not merely be translations of the dominant language but should encompass culturally relevant content and pedagogical approaches that resonate with students from various linguistic backgrounds. These resources are essential for literacy development, comprehension, and mastery of subject matter across languages.

2. Instructional Materials

Beyond textbooks, a comprehensive range of instructional materials should be available in various languages. This includes reading materials, workbooks, audio-visual resources, and manipulatives that cater to the linguistic diversity of the student body. These materials should be culturally sensitive, representing diverse perspectives and experiences to make the learning experience more meaningful and inclusive.

3. Digital Content

In our digital age, the availability of online educational content is paramount. National education policies should prioritize the development and dissemination of digital resources in multiple languages. This includes e-books, online courses, educational apps, and multimedia content that facilitate flexible and interactive learning experiences for students across linguistic backgrounds.

4. Teacher Training and Support

Equally important is the preparation of educators to effectively use these resources. Teacher training programs should incorporate strategies for utilizing multilingual resources in the classroom, ensuring that educators can adapt their teaching methods to meet the needs of linguistically diverse students. This includes strategies for differentiated instruction and assessing student progress effectively in various languages.

5. Community Engagement

National education policies should encourage collaboration between schools and the linguistic communities they serve. This partnership can help identify specific resource needs and ensure that the resources are culturally and linguistically relevant. It also fosters a sense of ownership and engagement within these communities, reinforcing the importance of education.

6. Equity and Inclusivity

The provision of resources in multiple languages is not just a matter of accessibility but also one of equity and inclusivity. It is essential to recognize that students who are not proficient in the dominant language of instruction should not be at a disadvantage. Ensuring access to resources in their native or preferred language helps level the playing field, promotes academic success, and contributes to social cohesion.

7. Research and Evaluation

Continuous assessment and research on the effectiveness of multilingual resources are crucial. This ensures that the resources provided are meeting the intended objectives and making a positive impact on student learning outcomes. National education policies should allocate resources for ongoing research and evaluation to refine and improve the availability and quality of multilingual resources.

Thus, equitable access to resources in multiple languages is an integral part of a comprehensive approach to inclusive education. It is essential for bridging linguistic and cultural divides, ensuring that all students have an equal opportunity to thrive in the educational system. National education policies that prioritize and invest in these resources not only promote educational equity but also celebrate the richness of linguistic diversity within their societies, fostering a more inclusive and harmonious nation.

4. Support for Minority Languages

National education policies hold a profound responsibility not only to address linguistic diversity but also to actively support and promote the preservation of minority languages. These languages, often spoken by smaller segments of the population, are not merely linguistic artifacts; they constitute an integral part of a nation's cultural richness and diversity. Recognizing and preserving them is crucial for fostering a more inclusive, culturally vibrant society.

1. Cultural Heritage Preservation

Minority languages are often carriers of centuries-old traditions, folklore, and cultural practices. By preserving these languages, national education policies contribute to the safeguarding of a nation's cultural heritage.

They ensure that the wisdom, stories, and cultural expressions of minority communities are not lost to the sands of time but are passed down to future generations.

2. Linguistic Diversity

A nation's linguistic diversity is a source of strength and resilience. It reflects the mosaic of identities and histories that have shaped the country over time. Embracing this diversity is a testament to a nation's commitment to inclusivity, where every linguistic community feels valued and recognized for its unique contribution to the national tapestry.

3. Cognitive Benefits

Multilingualism, which includes the preservation of minority languages, offers cognitive benefits to individuals. Studies have shown that learning multiple languages enhances cognitive flexibility, problem-solving abilities, and cultural sensitivity. National policies that support the preservation of minority languages provide students with an opportunity to develop these cognitive advantages.

4. Inclusive Education

When minority languages are incorporated into the educational system, it sends a powerful message of inclusivity. Students from linguistic minority backgrounds feel that their language and culture are respected and acknowledged within the education system. This inclusivity enhances their sense of belonging and motivation to engage in the learning process.

5. Global Competence

In an interconnected world, being proficient in multiple languages is a valuable asset. Minority language preservation contributes to the development of multilingual citizens who can navigate global challenges, engage in international dialogue, and represent their nation effectively on the global stage. This global competence enhances a nation's influence and standing in the international community.

6. Economic Opportunities

Minority languages can also offer economic opportunities. They can be leveraged in tourism, local businesses, and cultural industries. By preserving these languages, national policies can stimulate economic growth in regions where minority languages are spoken, potentially improving the quality of life for minority communities.

7. Social Cohesion

The recognition and preservation of minority languages foster social cohesion. When individuals from diverse linguistic backgrounds can communicate and understand one another, it strengthens bonds within society, reduces prejudice and discrimination, and builds a sense of unity among citizens.

National education policies should, therefore, take a proactive stance in supporting the preservation of minority languages. This can include initiatives such as offering minority language courses in schools, providing resources for language revitalization efforts, and collaborating with linguistic communities to ensure the transmission of these languages to future generations. By doing so, national education policies not only honor the cultural diversity within their borders but also contribute to the enrichment of the national identity and the creation of a more inclusive, cohesive, and culturally vibrant society.

5. International Exchange Programs

Promoting and expanding student exchange programs, both on a national and international scale, represents a visionary approach to education that goes far beyond the traditional classroom. These programs are invaluable in providing students with immersive experiences in diverse languages and cultures. They offer a multifaceted array of benefits that extend beyond language acquisition, offering a profound opportunity for personal growth, cultural enrichment, and global competence.

1. Cultural Immersion

Student exchange programs immerse participants in the daily life and culture of the host country or region. This immersive experience allows students to go beyond the superficial aspects of culture and truly engage with the customs, traditions, and values of the community. By living and interacting with locals, students gain a deeper understanding of different worldviews and ways of life.

2. Language Acquisition

One of the primary benefits of student exchange programs is language acquisition. Living in an environment where the target language is spoken daily provides a rich linguistic context that accelerates language learning. Students often return with a significantly improved command of the language, ranging from basic communication skills to fluency.

3. Personal Growth

Student exchange programs foster personal growth and independence. Participants learn to navigate unfamiliar situations, adapt to new environments, and develop problem-solving skills. They become more self-reliant and resilient, gaining a sense of confidence that extends beyond their time abroad.

4. Global Competence

Exposure to different languages and cultures equips students with global competence. They learn to appreciate cultural diversity, communicate effectively with people from various backgrounds, and navigate the complexities of our interconnected world. These skills are increasingly valuable in both academic and professional settings.

5. Broadened Perspectives

Immersion in a foreign culture challenges students' preconceptions and broadens their perspectives. They gain a more nuanced understanding of global issues, cultural nuances, and intercultural dynamics. This expanded worldview encourages tolerance, empathy, and open-mindedness.

6. Academic Enrichment

Many exchange programs offer unique academic opportunities, such as studying at renowned institutions or engaging in specialized coursework. This academic enrichment can provide students with a competitive edge in their academic pursuits and future careers.

7. Networking and Relationships

Student exchange programs facilitate the development of global networks and lasting friendships. Participants build relationships with peers from around the world, creating a diverse and supportive network that can be professionally and personally enriching.

8. Cultural Awareness

Living in a foreign country encourages students to become more culturally aware and sensitive. They learn to navigate cultural differences, adapt to local customs, and appreciate the beauty of cultural diversity.

9. Career Opportunities

Experience in a foreign country can enhance career prospects. Employers often value the adaptability, intercultural skills, and language proficiency that exchange program alumni bring to the workplace.

National and international student exchange programs, when integrated into national education policies, serve as transformative platforms for holistic education. These programs not only nurture linguistic competence but also cultivate global citizens who are equipped to thrive in an interconnected world. They celebrate the beauty of cultural diversity, bridge gaps between nations, and foster a sense of interconnectedness that transcends borders. As such, encouraging and expanding these programs is an investment in the future of education, where students emerge as informed, empathetic, and culturally enriched global citizens.

Conclusion

Championing multilingualism and cultural diversity within a nation's educational framework transcends the realm of mere pedagogy; it stands as a resounding testament to a nation's unwavering dedication to embracing its inherent diversity and actively engaging in a rapidly globalizing world. Beyond the mere acquisition of linguistic skills and cultural understanding, this commitment reflects the profound influence that language and culture exert in shaping individuals' identities and

perspectives. It represents a proactive stride towards equipping citizens with the multifaceted skills, knowledge, and values indispensable for thriving in an increasingly multicultural and interconnected global milieu. In essence, the integration of multilingualism and cultural diversity into education goes beyond the sphere of policy; it is an intrinsic facet of a nation's identity and a pivotal harbinger of its future prosperity. The embrace of multilingualism and cultural diversity within education signifies a profound celebration of a nation's intrinsic diversity. It underscores a profound respect for the multitude of languages, traditions, and worldviews that coexist harmoniously within a nation's borders. This celebration lays the foundational stones for engendering a sense of unity and belonging among all citizens, transcending linguistic and cultural boundaries.

In an era typified by growing global interdependence, the cultivation of global citizens assumes paramount importance. Educational policies that prioritize multilingualism and cultural diversity empower individuals with the essential tools for meaningful engagement with diverse global perspectives. This imbued global competence fosters an understanding of intricate global issues, encourages intercultural dialogue, and motivates active participation in international affairs. Exposure to a multitude of languages and cultures serves as a source of profound enrichment in the educational journey. It broadens the horizons of students, providing them with opportunities to traverse the tapestry of global cultures. Such exposure nurtures cultural sensitivity, empathy, and an enduring appreciation for the exquisite diversity that defines the human experience.

Multilingualism is heralded for its cognitive advantages, including heightened problem-solving skills, creativity, and adaptability. By incorporating multilingual education, national policies not only foster linguistic proficiency but also invest in the cognitive development of their citizens. This enrichment extends beyond the classroom, bolstering individual capabilities that resonate throughout diverse facets of life. The integration of multilingualism and cultural diversity into education represents a forward-looking national identity—one that is dynamic, inclusive, and representative of the interconnected world of the present and future. It signals a commitment to empowering citizens with the skills needed to navigate the complexities of an ever-evolving global landscape, fostering a sense of purpose and unity in the process. In conclusion, the commitment to promote multilingualism and cultural diversity within national education policy is more than a matter of educational practice; it is an embodiment of a nation's values, aspirations, and vision for the future. These principles are not mere policies; they constitute vital elements of a nation's core identity and serve as potent catalysts for its enduring success in an increasingly diverse and globalized world.

Abstract

The National Education Policy (NEP) of 2020 in India represents a transformative vision for the country's education system. This essay explores the crucial role of teacher training and professional development within the context of the NEP. It emphasizes that teachers are at the heart of any educational system and discusses how the NEP envisions a comprehensive approach to teacher preparation and ongoing development. The essay highlights the significance of multidisciplinary education, modern teaching methods, and continuous professional growth in aligning with the NEP's objectives. Moreover, it emphasizes the direct impact of well-trained and motivated teachers on student learning outcomes, including the cultivation of critical thinking and problem-solving skills. In conclusion, the essay underscores the importance of collaborative efforts among policymakers, educational institutions, and teachers to prioritize and support teacher training and professional development, enabling India's education system to evolve and thrive in the 21st century.

Keywords: Teacher Training, Professional Development, National Education Policy, Education Transformation, Student Learning Outcomes

Introduction

Education serves as the bedrock upon which societies build their progress and foster development. However, the attainment of quality education is contingent not solely upon the presence of effective curricula and well-equipped classrooms but equally upon the competence and unwavering commitment of educators. In this context, the National Education Policy (NEP) emerges as a pivotal framework, spotlighting the pivotal roles of teacher training and professional development as cornerstones for elevating the entire educational landscape. This essay undertakes an in-depth examination of the profound significance that teacher training and professional development hold within the framework of the NEP. Moreover, it delves into the transformative potential that these elements possess, offering a glimpse into the future of education in our nation.

The National Education Policy: A Transformative Vision

In the year 2020, India unveiled the National Education Policy (NEP), a visionary and comprehensive roadmap designed to usher in a profound transformation of the

nation's education system. At its core, the NEP advocates for a holistic approach to education, prioritizing the cultivation of vital skills such as critical thinking, creativity, and innovation within the student body. Yet, the successful attainment of these lofty objectives hinges profoundly on the capabilities and efficacy of educators themselves. This landmark policy underscores the pivotal role that teachers play in reshaping the educational landscape. In essence, they serve as the architects and facilitators of the NEP's vision. While the policy outlines ambitious educational ideals, it is the teachers who must translate these ideals into tangible classroom experiences. Their competence, dedication, and adaptability are the linchpins upon which the success of the NEP ultimately rests.

In this context, the NEP stands not as a standalone document but as a dynamic framework that recognizes the symbiotic relationship between policy and practice. It acknowledges that the transformation of India's education system necessitates not only updated curricula and modern infrastructure but also a cadre of highly trained and motivated educators who can inspire, guide, and mentor the next generation. As the NEP seeks to nurture critical thinking, creativity, and innovation among students, it simultaneously imposes a corresponding responsibility on teachers. They must be equipped with the knowledge, skills, and pedagogical strategies to foster these attributes effectively. In this way, the NEP is not just a blueprint for the future but a catalyst for elevating the teaching profession to new heights, fostering a generation of educators who are not just purveyors of knowledge but also mentors, guides, and inspirations to their students. Thus, the National Education Policy of 2020 is not merely a visionary document; it is a call to action that recognizes the centrality of teachers in reshaping the education landscape. It underscores the indispensable role teachers play in bringing the NEP's holistic vision to life and nurturing a generation of students who are well-equipped to meet the challenges and opportunities of the future. Ultimately, the success of the NEP rests upon the shoulders of these dedicated educators, making them the linchpin of India's educational transformation.

The Role of Teachers in Implementing Nep

Educators occupy the central position in any educational ecosystem, serving as the primary conduits through which policies and ideals, such as those articulated in the National Education Policy (NEP), find expression within the classroom. Recognizing the pivotal nature of this role, the NEP underscores the indispensable importance of cultivating a corps of highly skilled, motivated, and adaptable teachers capable of responding to the evolving needs of students and society at large. The NEP's acknowledgment of the crucial role teachers play reflects a deep understanding that no educational reform or policy can achieve its intended impact without the active involvement and commitment of those who engage with students daily. Teachers,

therefore, are not mere implementers but rather the interpreters and enablers of the NEP's transformative vision. The NEP's emphasis on teacher quality aligns with the contemporary demands of education. In an era marked by rapid technological advancements, changing societal dynamics, and a growing focus on skill-based learning, teachers must possess a diverse set of competencies. They need not only to impart knowledge but also to foster critical thinking, creativity, problem-solving, and adaptability among their students.

To bridge the gap between policy and practice, investing in teacher training and continuous professional development (CPD) emerges as an imperative step. This investment ensures that teachers are well-equipped with the requisite pedagogical skills, subject knowledge, and innovative teaching methodologies. Furthermore, CPD programs empower educators to stay attuned to emerging trends, effectively utilize technology, and adapt their teaching approaches to cater to the diverse learning styles and needs of their students. In essence, the NEP recognizes that the effectiveness of any educational reform hinges on the caliber of its educators. To bring about the holistic transformation envisioned by the policy, it is crucial to foster an environment in which teachers are not only encouraged but also supported in their pursuit of ongoing professional growth. This includes opportunities for further education, workshops, mentoring, and engagement in research and innovation. Thus, teachers are indeed the heart of any educational system, and the NEP's recognition of this fact is a testament to its commitment to quality education. To successfully realize the NEP's objectives of nurturing well-rounded, adaptable, and empowered individuals, the nation must invest in teacher training and continuous professional development. Only through such investments can we ensure that teachers are not just transmitters of knowledge but also the catalysts for a brighter educational future in India.

Teacher Training: A Foundation for Quality Education

Teacher training serves as the bedrock upon which educators are equipped to meet the multifaceted demands of modern education. Within the ambit of the National Education Policy (NEP), there exists a visionary blueprint for teacher preparation that extends beyond the conventional to encompass a holistic, four-year integrated teacher education program. This program is designed not only to impart pedagogical knowledge but also to inculcate a profound understanding of child psychology, curriculum development, and classroom management. In this manner, prospective teachers emerge from their training as not just conveyors of content but as facilitators of holistic development. At the heart of this teacher training paradigm within the NEP is the concept of multidisciplinary education. It recognizes that in today's interconnected world, learning is not confined to discrete subjects but rather flourishes at the intersection of diverse disciplines. Teachers are thus encouraged to

adopt a versatile and integrated approach, fostering connections between subjects and engendering critical thinking among their students. This holistic perspective on education not only equips learners with a more comprehensive understanding of the world but also ignites a lasting passion for learning.

Moreover, the NEP-driven teacher training program is acutely attuned to the evolving educational landscape, leveraging modern teaching methods, technology integration, and experiential learning. This pedagogical trifecta ensures that educators are well-prepared to harness the tools of the 21st century. By embracing innovative teaching strategies, they create dynamic, engaging classrooms that align seamlessly with the NEP's overarching goal of promoting 21st-century skills. Incorporating technology into education is a key component of the NEP, and teacher training plays a pivotal role in this regard. By familiarizing educators with cutting-edge technological tools and teaching methodologies, the NEP empowers them to harness the power of digital resources for enhanced learning experiences. This not only facilitates broader access to education but also equips students with the digital literacy skills essential for success in the modern world. Thus, teacher training under the NEP represents a paradigm shift in the preparation of educators. It extends beyond the conventional pedagogical approach to embrace a multidisciplinary, technologically integrated, and experiential model. Through this comprehensive training, teachers are positioned not just as content deliverers but as architects of a more holistic and dynamic educational experience. In doing so, they become the torchbearers of the NEP's vision, empowering students with the skills and knowledge required to thrive in the complex, interconnected landscape of the 21st century.

Professional Development: A Lifelong Journey

Teacher training is not a finite destination marked solely by certification; rather, it signifies the commencement of an enduring odyssey of professional development. In its wisdom, the National Education Policy (NEP) underscores the imperative of lifelong learning for educators and advances mechanisms to facilitate their regular skills and knowledge augmentation. The NEP recognizes that education is an ever-evolving field, and educators must be at the forefront of these developments to deliver the best possible education to their students. To this end, the policy introduces a multifaceted approach to continuous professional development (CPD) for teachers. This approach is not confined to traditional in-service training but also encompasses a rich tapestry of opportunities, including workshops, online courses, and avenues for involvement in research and innovation. One of the central tenets of CPD within the NEP is the promotion of a growth mindset among educators. It encourages teachers to view themselves as perpetual learners, eager to embrace new pedagogical approaches,

technologies, and teaching strategies. This proactive stance empowers teachers to stay current with the latest trends in education and to adapt their methods accordingly.

Moreover, CPD in the context of the NEP emphasizes the significance of innovative teaching methods. It encourages educators to explore creative approaches that resonate with the diverse learning styles of their students. By doing so, teachers can ensure that their classrooms remain dynamic and engaging, fostering a culture of curiosity and a love for learning. Additionally, CPD serves as a means for educators to address the diverse needs of their students. The NEP acknowledges that classrooms are populated by learners with varying abilities, backgrounds, and learning preferences. Through ongoing professional development, teachers can acquire the tools and strategies necessary to differentiate their instruction effectively, ensuring that every student has the opportunity to succeed. In sum, the National Education Policy's emphasis on continuous professional development for teachers underscores the recognition that the journey of learning extends indefinitely. Through the avenues of CPD, educators remain well-informed, adaptable, and innovative, aligning their teaching practices with the evolving educational landscape. In embracing this ethos of lifelong learning, teachers not only enhance their own professional growth but also elevate the quality of education they provide, thereby nurturing a generation of empowered and informed learners.

Impact on Student Learning

Allocating resources towards teacher training and continuous professional development is an investment that yields profound and tangible dividends in the realm of student learning outcomes. A well-prepared, motivated educator possesses the transformative capacity to ignite the flames of curiosity, cultivate a vibrant and engaging learning environment, and customize instruction to address the unique needs of each student. Within the framework of the National Education Policy (NEP), this investment takes on an even more pronounced significance, leading to the cultivation of students endowed with the critical attributes necessary for navigating the complexities of the 21st century. First and foremost, a teacher who has undergone comprehensive training and continues to evolve through professional development possesses the power to inspire. Their passion for their subject matter, as well as their dedication to nurturing young minds, serves as a powerful motivator for students. Such educators can ignite the spark of curiosity within their students, instilling a love for learning that transcends the confines of the classroom.

Moreover, a well-trained teacher excels at creating an immersive and stimulating learning environment. They leverage a repertoire of pedagogical strategies, classroom management techniques, and innovative teaching methods to ensure that students are actively engaged in the learning process. Such an environment fosters not only

academic growth but also the development of essential life skills such as communication, teamwork, and problem-solving. Perhaps most significantly, teacher training and professional development align directly with the NEP's objectives of cultivating critical thinkers, adept problem solvers, and lifelong learners. A teacher equipped with the tools and knowledge to foster these attributes can shape students who are not merely repositories of facts but active participants in their own education. These students learn to question, analyze, and synthesize information, skills that are indispensable for success in an ever-evolving, knowledge-driven world. Thus, investing in teacher training and ongoing professional development constitutes a pivotal strategy for enhancing student learning outcomes. It empowers educators to inspire, create, and customize instruction, ultimately molding students into critical thinkers, problem solvers, and lifelong learners. In the context of the NEP, this investment serves as a linchpin for the development of students who are well-prepared to navigate the complexities and seize the opportunities of the 21st century, positioning them as capable and informed global citizens.

Conclusion

In summary, teacher training and professional development emerge as linchpins in the triumphant execution of the National Education Policy (NEP). The NEP stands as a visionary blueprint, aspiring to orchestrate a profound transformation within India's educational landscape, while simultaneously equipping students to confront the multifaceted challenges and seize the abundant opportunities of the future. However, the realization of this ambitious vision hinges critically upon a harmonious collaboration among policymakers, educational institutions, and teachers themselves in prioritizing and robustly supporting teacher training and continuous professional development. At its core, the NEP recognizes that teachers serve as the fulcrum of the educational system, wielding the profound ability to translate the policy's lofty ideals into practical classroom experiences. They are not just conduits for information but rather the architects of intellectual growth, instilling in their students the skills, knowledge, and attitudes required to navigate an ever-evolving world.

The NEP, therefore, underscores the pressing need to equip educators with the requisite knowledge and skills that will empower them to be effective agents of change. It champions a comprehensive approach to teacher training, encompassing multidisciplinary education, modern teaching methods, technology integration, and experiential learning. Through these means, teachers are poised not only to transmit knowledge but also to foster critical thinking, creativity, and innovation among their students. Crucially, the role of teacher training extends beyond the initial certification. It heralds the commencement of an ongoing journey of professional development. The NEP prescribes mechanisms for educators to continuously upgrade their

competencies, including in-service training, workshops, online courses, and opportunities for research and innovation. These avenues enable teachers to remain abreast of the latest educational trends, incorporate innovative pedagogical approaches, and cater to the diverse needs of their students. To actualize this vision and achieve the NEP's transformative objectives, it is imperative that all stakeholders rally together. Policymakers must ensure that teacher training and professional development are at the forefront of their agendas, allocating resources and crafting policies that promote and facilitate educators' growth. Educational institutions must offer dynamic and responsive training programs that align with the evolving demands of education. Furthermore, teachers themselves must embrace a culture of continuous learning, committing themselves to their own development for the betterment of their students. In conclusion, teacher training and professional development are not mere adjuncts but rather the very backbone of the NEP's mission to reshape India's education system. Through a collective commitment to these critical facets, India's educational landscape can indeed evolve and thrive in the 21st century, equipping its citizens with the knowledge, skills, and resilience required to flourish in a rapidly changing world.

Abstract

National Education Policies (NEPs) are instrumental in shaping the educational landscape of a nation, aiming to provide quality and equitable education to its citizens. However, the effective governance and implementation of these policies often encounter formidable challenges. This abstract provides a succinct overview of the key governance and implementation challenges inherent in NEPs. Governance challenges encompass issues such as policy consistency amidst political transitions, bureaucratic complexities in managing multiple stakeholders and agencies, resource allocation and funding dilemmas, and the recruitment and training of qualified educators. Furthermore, challenges in infrastructure development and upkeep present substantial roadblocks.

Implementation challenges center around resistance to change from various stakeholders, including teachers, administrators, and parents. Capacity constraints in data collection, monitoring, and evidence-based decision-making hinder progress. Addressing issues of equity and inclusivity, curricular reforms, and the establishment of effective assessment and accountability mechanisms also pose significant hurdles. Understanding and addressing these challenges are critical for governments seeking to achieve the objectives outlined in their NEPs, fostering equitable and high-quality education systems. This abstract serves as a foundational exploration of these challenges, highlighting the need for comprehensive strategies to overcome them and drive effective policy implementation in the education sector.

Keywords: *Education Policy, Governance Challenges, Implementation Issues, National Education System, Educational Governance*

Introduction

Education serves as a cornerstone for the progress and prosperity of any nation. Acknowledging this pivotal role, governments worldwide take on the responsibility of crafting comprehensive national education policies. These policies are designed not only to facilitate effective education systems but also to ensure equity and responsiveness to evolving societal needs. However, the task of implementing these well-intentioned policies often encounters substantial governance and implementation challenges. These challenges, if not effectively addressed, can impede the attainment of policy objectives and hinder the desired enhancements in the education sector. National education policies represent a nation's commitment to fostering an educated citizenry capable of contributing to economic growth, social cohesion, and innovation.

These policies are meticulously crafted to address a spectrum of educational needs, from early childhood education to higher learning. They outline strategies to improve teaching methodologies, enhance educational infrastructure, and broaden access to quality education for all, regardless of socioeconomic backgrounds. Yet, the realization of these noble objectives is far from straightforward. The governance challenges that arise in the context of national education policies are multifaceted. One significant issue revolves around policy consistency. The continuity of educational reforms is often disrupted by changes in political leadership, resulting in shifts in priorities and policy directions. The fluctuating political landscape can undermine the long-term planning and investments necessary for sustainable educational progress.

Bureaucratic complexities further complicate the execution of education policies. Educational reforms necessitate the involvement of multiple government departments and agencies, each with its own set of procedures, regulations, and stakeholders. Negotiating this intricate web of bureaucracy can lead to delays in decision-making processes and hinder the effective implementation of policies. Adequate funding is paramount for the successful execution of national education policies. However, the allocation and management of financial resources can prove to be daunting tasks. Competing demands for limited resources among various sectors, coupled with issues such as corruption and misallocation of funds, pose significant obstacles to policy realization. Another governance challenge revolves around the recruitment and training of competent educators. High-quality education is contingent on the quality of teachers. However, recruiting, training, and retaining skilled and motivated educators can be a formidable task. Additionally, teacher unions and labor disputes can further complicate the landscape of policy implementation. Infrastructure development is often an integral component of education policies, encompassing projects such as building schools, equipping them with libraries and technology, and ensuring safe and conducive learning environments. However, these infrastructure development projects can encounter delays, cost overruns, and issues related to quality, all of which hinder the attainment of policy goals.

The implementation of national education policies is no less challenging. Resistance to change is a common hurdle. Implementing new policies may face opposition from various stakeholders, including teachers, administrators, and parents, who may be hesitant to accept changes that disrupt established routines or challenge their interests. Capacity constraints present a significant impediment to effective policy implementation. Many countries lack the requisite capacity for data collection, analysis, monitoring, and evidence-based decision-making. Building this capacity is essential for tracking progress and making informed adjustments to policies. Ensuring equity and inclusivity within education systems is another formidable challenge.

Despite the policy objectives of providing quality education to all, disparities in access and outcomes persist among different demographic groups. Addressing these disparities requires targeted efforts and resources. Curriculum reforms, a common feature of education policies, entail changing teaching methods and content. However, implementing these changes is intricate and involves training teachers, updating teaching materials, and monitoring outcomes. The inherent complexities can slow down the process of policy realization.

Assessment and accountability mechanisms are crucial for gauging the effectiveness of policies. Yet, designing and implementing fair and reliable assessment tools and holding stakeholders accountable for results can be intricate undertakings that require careful planning and resources. Thus, national education policies are pivotal instruments for shaping the future of a nation through the enhancement of its education system. However, the governance and implementation challenges discussed here are substantial roadblocks that must be overcome to realize the full potential of these policies. Addressing these challenges demands a steadfast commitment to policy continuity, transparency, equitable resource allocation, stakeholder engagement, and evidence-based decision-making. Only through a comprehensive and strategic approach can governments hope to surmount these obstacles and drive positive change in their education sectors, thereby building a stronger and more equitable society.

Governance Challenges

1. Policy Consistency

The challenge of maintaining policy consistency over time is akin to navigating through the shifting tides of political leadership. Changes in government, which are a hallmark of democratic societies, can bring about shifts in educational priorities and policies. New administrations may arrive with their own visions and agendas for education, leading to a potential disruption of long-term plans and investments in the sector. This inconsistency can be detrimental, as it creates uncertainty within the education system, making it challenging to implement policies effectively. Achieving policy continuity despite political transitions necessitates a delicate balance between adapting to evolving needs and preserving the fundamental goals of education policy, often requiring cross-party consensus and a focus on long-term educational goals.

2. Bureaucratic Complexity

The implementation of education policies is often a labyrinthine journey involving numerous government departments, agencies, and stakeholders, each with its unique set of procedures, regulations, and interests. This bureaucratic complexity can introduce significant delays and bottlenecks in decision-making processes.

The need for coordination among these entities and the negotiation of interdepartmental disputes can slow down the translation of policy objectives into actionable initiatives. To overcome this challenge, governments may need to streamline bureaucratic procedures, establish clear lines of communication, and create cross-agency task forces to facilitate efficient policy implementation. Simplifying administrative processes can go a long way in expediting progress.

3. Funding and Resource Allocation

Adequate funding forms the lifeblood of effective education policy implementation. However, ensuring the equitable allocation and efficient management of resources presents its own set of formidable challenges. Competing demands for limited financial resources among various sectors of government can create tension and foster competition, making it difficult to secure the necessary funds for educational initiatives. Moreover, issues such as corruption, misallocation of funds, and lack of transparency can undermine the effectiveness of resource allocation efforts, diverting critical financial support away from education. Solving these challenges requires rigorous budgeting practices, transparent financial management systems, and mechanisms to ensure that resources are directed to areas where they can have the most significant impact, without falling victim to corruption or inefficiency.

4. Teacher Recruitment and Training

The cornerstone of high-quality education lies in the caliber of its educators. However, recruiting, training, and retaining competent teachers can be a formidable challenge. Identifying and attracting individuals with the necessary skills and dedication to the teaching profession can be a resource-intensive process. Moreover, ongoing teacher training and professional development are essential to keep educators up to date with evolving pedagogical methods and educational standards. In addition to these challenges, teacher unions and labor disputes can complicate policy implementation. Balancing the interests of teachers and educational objectives is a delicate task, often requiring negotiation and compromise. Solutions may involve investing in teacher training and professional development programs, improving working conditions, and fostering a cooperative environment between educational authorities and teacher unions.

5. Infrastructure Development

A vital component of education policies often involves the improvement of educational infrastructure, encompassing the construction and maintenance of school buildings, libraries, technology integration, and the creation of safe and conducive learning environments.

While these initiatives are crucial for providing quality education, they are not without their own set of challenges. Infrastructure development projects can encounter delays due to regulatory hurdles, land acquisition issues, or unforeseen construction challenges. Cost overruns can strain budgets, leading to financial shortfalls. Quality control is another concern, as inadequate infrastructure can undermine the educational experience. To address these challenges, governments must engage in meticulous planning, establish clear project timelines, and ensure rigorous quality control throughout the construction and maintenance processes. Moreover, strategic partnerships with the private sector and international organizations can help secure funding and expertise for infrastructure development initiatives, further facilitating policy goals in this regard.

Implementation Challenges

1. Resistance to Change

The resistance to change is a natural human response when implementing new education policies. Teachers, administrators, and parents often become attached to established routines and practices, which they may perceive as effective or familiar. The prospect of change can evoke fear, uncertainty, and skepticism about the potential benefits of new policies. Teachers may worry about increased workloads or disruptions to their teaching methods, administrators about resource allocation, and parents about the impact on their children's education. Overcoming this resistance necessitates effective communication and collaboration with stakeholders. Engaging them in the policymaking process, providing clear explanations of the rationale behind the changes, and offering professional development opportunities can help ease the transition. Additionally, demonstrating the positive outcomes of policy changes through pilot programs or small-scale implementations can build confidence in their effectiveness.

2. Capacity Constraints

Many countries, especially those with limited resources or developing education systems, struggle with capacity constraints when attempting to implement complex education policies effectively. Building the necessary capacity involves several dimensions. First, it entails the ability to collect and analyze data systematically to inform policymaking and monitor progress. This requires investment in data infrastructure, training of personnel, and the establishment of data-driven decision-making processes. Second, it involves the ability to adapt policies based on evidence and changing circumstances. Policymakers must possess the skills to interpret research findings and adjust policies accordingly.

Building capacity often requires long-term investments in education and training, collaboration with international partners, and a commitment to evidence-based policymaking.

3. Equity and Inclusivity

Achieving equity and inclusivity within education systems is a fundamental goal of education policies. However, this objective is fraught with challenges. Inequalities in access to quality education persist in many countries, often along lines of socioeconomic status, ethnicity, gender, or geographic location. Addressing these disparities necessitates targeted efforts and resources. This can involve the provision of additional resources to schools in underserved communities, the implementation of affirmative action policies, and efforts to eliminate discriminatory practices. Equity also requires a commitment to inclusivity, ensuring that marginalized groups, such as students with disabilities or those from minority backgrounds, have equal access to educational opportunities. Overcoming these challenges often involves a combination of legal reforms, awareness campaigns, and proactive measures to ensure that no one is left behind.

4. Curriculum Reforms

Changes in curriculum and pedagogical methods are common components of education policies aimed at improving the quality of education. However, implementing these changes can be intricate and resource-intensive. It often begins with the training of teachers to adopt new teaching approaches, which requires time and financial investment. Additionally, updating teaching materials, textbooks, and resources to align with the new curriculum can be a complex process. Monitoring and assessing the outcomes of curriculum reforms to ensure they achieve their intended objectives is equally important. Successful implementation requires a well-structured plan that includes teacher training, curriculum development, assessment design, and ongoing evaluation to fine-tune the curriculum based on feedback and results.

5. Assessment and Accountability

Effective education policies hinge on robust assessment and accountability mechanisms. These mechanisms are essential for tracking progress, measuring the impact of policies, and ensuring that educational goals are met. Developing fair and reliable assessment tools is a complex undertaking, involving the design of standardized tests or performance assessments that accurately reflect student learning. Additionally, accountability mechanisms should extend to various stakeholders, including teachers, schools, and education authorities. Holding stakeholders accountable for results can be a politically sensitive issue, as it may involve performance evaluations, resource allocation decisions, or even the potential for sanctions. Balancing the need for accountability with fairness and transparency is a constant challenge in policy implementation.

This necessitates the establishment of clear guidelines, transparent reporting systems, and mechanisms for providing support and resources to underperforming schools or individuals to facilitate improvement rather than punitive measures.

Conclusion

National education policies serve as a linchpin for a nation's development and progress by shaping the educational landscape, which, in turn, profoundly impacts various facets of society. These policies are carefully designed to not only enhance the quality of education but also ensure its accessibility to all citizens, fostering an informed and empowered populace. However, despite the noble intentions that underlie these policies, their successful execution often encounters significant governance and implementation challenges. Addressing these hurdles is essential to unlock the transformative potential of education and pave the way for a more equitable and prosperous society. First and foremost, it is crucial to recognize the pivotal role that national education policies play in determining a nation's future trajectory. These policies set the standards for educational excellence, shaping the minds of the next generation and preparing them to contribute to the nation's socio-economic development. Quality education equips individuals with the skills, knowledge, and critical thinking abilities necessary to address complex challenges, foster innovation, and drive progress in various sectors. Additionally, education policies aim to ensure that this quality education is accessible to all citizens, irrespective of their backgrounds or circumstances. They seek to eliminate disparities in access and outcomes, breaking down barriers that impede certain groups, such as marginalized communities or individuals with disabilities, from enjoying the benefits of education. The ultimate goal is to create a more inclusive and just society where every citizen has an equal opportunity to realize their potential.

However, the realization of these lofty aspirations is far from straightforward. Governance and implementation challenges often pose formidable roadblocks. These challenges can manifest in various ways, such as policy inconsistency caused by shifts in political leadership. Changes in government can lead to alterations in educational priorities and policies, disrupting long-term plans and investments. To overcome this hurdle, a steadfast commitment to policy continuity is essential, transcending political transitions and focusing on the enduring goals of education. Bureaucratic complexities represent another challenge. Education policies typically involve multiple government departments and agencies, each with its unique procedures, regulations, and stakeholders. This labyrinthine bureaucracy can impede decision-making processes and hinder the smooth implementation of policies. Transparency and streamlined administrative procedures are vital to mitigate these complexities. Furthermore, the

availability of adequate funding is paramount for the effective execution of education policies. Ensuring equitable allocation and efficient management of resources can be arduous, given the competition for limited funds among various sectors. Corruption and misallocation of funds further exacerbate the issue. Adequate funding is essential not only for infrastructure development but also for teacher training, curriculum reforms, and assessment mechanisms.

Teacher recruitment and training are cornerstones of educational excellence, yet they present their own set of challenges. Attracting and retaining competent educators can be challenging, and teacher unions and labor disputes can complicate matters. To address these challenges, investments in professional development, improved working conditions, and collaboration with teacher unions are essential. Moreover, infrastructure development projects, a common component of education policies, can encounter delays, cost overruns, and quality issues. Ensuring efficient infrastructure development requires meticulous planning, transparent project management, and rigorous quality control measures. To surmount these governance and implementation challenges, several key principles must guide education policy efforts. Continuity, where education remains a priority across political cycles, is vital. Transparency in decision-making processes and resource allocation fosters trust and accountability. Adequate funding must be secured and efficiently managed. Stakeholder engagement, including teachers, parents, and communities, should be actively pursued to build a consensus around policy objectives. Finally, evidence-based decision-making, with a focus on data-driven policy adjustments, ensures that policies remain responsive to changing needs. By effectively addressing these challenges and adhering to these principles, governments can make substantial progress toward achieving their education-related goals. Ultimately, they can contribute to building a stronger, more equitable society where every citizen has the opportunity to thrive and contribute to the nation's growth and prosperity. Education, as a fundamental pillar, is not only an investment in the future but also a catalyst for positive change in the present.

INCLUSIVE EDUCATION PRACTICES WITHIN THE FRAMEWORK OF NATIONAL EDUCATION POLICY

Dr. R. Jayalakshmi

*Assistant Professor of Commerce
Karpagam Academy of Higher Education
Coimbatore*

Mr. P. Easwaran

*Assistant Professor of Commerce
Karpagam Academy of Higher Education
Coimbatore*

Abstract

The concept of inclusive education has gained prominence worldwide as a means to provide equitable and quality education to all students, regardless of their backgrounds, abilities, or characteristics. Within the framework of national education policies, inclusive education practices have emerged as a transformative approach that aligns with principles of equity, diversity, and social justice. This abstract provides a succinct overview of the significance of inclusive education practices within the context of national education policies, highlighting their benefits, challenges, and potential impacts. Inclusive education practices encompass a range of strategies such as accessible infrastructure, curriculum differentiation, teacher professional development, collaboration, and fostering inclusive classroom cultures. These practices hold immense significance as they promote equity and access, offer academic and social benefits, align with legal and ethical imperatives, and prepare students for life in diverse societies. However, they also come with challenges, including resource allocation, resistance to change, assessment complexities, and the need to address diverse needs within inclusive classrooms. The impacts of inclusive education practices are far-reaching, encompassing improved educational outcomes, social cohesion, reduced stigma, and legal compliance. In conclusion, embracing inclusive education practices is not just a policy choice; it is a moral and ethical imperative that empowers all students to reach their full potential and contribute meaningfully to their communities and the world.

Keywords: *Inclusive Education, National Education Policy, Equity in Education, Diverse Learning Needs, Educational Inclusion*

Introduction

Inclusive education is a paradigm-shifting approach to the provision of education that fundamentally acknowledges and accommodates the diverse range of needs exhibited by students, irrespective of their socio-cultural backgrounds, abilities, or distinctive characteristics. It champions the principles of equitable access to quality education and the dismantling of barriers that have historically obstructed learning and full participation in educational processes. Within the sphere of national education policies, inclusive education practices have emerged as a focal point, resonating with the core values of equity, diversity, and social justice. This essay delves into the profound significance of inclusive education practices within the overarching framework of national education policies, shedding light on their multifaceted benefits, challenges, and the profound impacts they hold.

Inclusive Education and National Education Policies

Inclusive education practices involve creating learning environments that accommodate the diverse needs of students. These practices encompass a range of strategies and approaches, including:

- **Accessible Infrastructure**

Ensuring that educational facilities are physically accessible to students with disabilities represents a foundational aspect of inclusive education practices. Inclusive education strives to create learning environments where all students, regardless of their physical abilities, can fully participate in educational activities. To achieve this goal, educational facilities must incorporate a range of accessibility features, including ramps, elevators, and adapted classrooms, to eliminate physical barriers and provide equitable access for all.

- **Curriculum Differentiation**

Adapting curriculum materials, teaching methods, and assessment strategies to accommodate diverse learning styles and abilities is a cornerstone of inclusive education. Inclusive education recognizes that students come to the classroom with unique strengths, weaknesses, and preferences for how they learn best. Therefore, to ensure equitable access to quality education for all, it is imperative to tailor the educational experience to meet the individualized needs of every learner.

- **Teacher Professional Development**

Providing teachers with comprehensive training and ongoing support to effectively teach diverse student populations, including those with special needs, is an essential component of inclusive education practices. Inclusive education acknowledges that teachers play a central role in creating a learning environment where every student can thrive, regardless of their individual abilities, backgrounds, or learning styles. Here's an in-depth exploration of the importance and elements of teacher training and support in inclusive education:

- **Collaboration and Support Services**

Facilitating collaboration between educators, specialists, and support staff to address the individualized needs of students, including those with disabilities, language barriers, or learning difficulties, is a cornerstone of inclusive education practices. Collaboration among various stakeholders within the educational ecosystem is instrumental in creating an environment where every student can thrive and reach their full potential. Here's an in-depth exploration of the importance and elements of collaboration in inclusive education:

- **Inclusive Classroom Practices**

Fostering a classroom culture that promotes acceptance, tolerance, and mutual respect among students, regardless of their differences, is a fundamental aspect of inclusive education practices. Inclusive classrooms aim to create an environment

where diversity is not only acknowledged but celebrated, where students understand and appreciate each other's unique backgrounds, abilities, and perspectives.

Significance of Inclusive Education Practices

Equity and Access: Ensuring Equal Opportunities for All

Inclusive education practices are deeply rooted in the principle of equity, championing the idea that every student, regardless of their background, abilities, or individual characteristics, should have equal access to a high-quality education. This commitment to equity is pivotal in addressing historical educational disparities and advancing social justice within the education system. It acknowledges that barriers to education, whether they stem from physical, cultural, or socio-economic factors, must be systematically dismantled to ensure that all learners have the same starting point on their educational journey. Inclusive education, therefore, strives to level the playing field, providing every student with equitable opportunities to succeed academically and socially.

Academic and Social Benefits: A Synergy of Learning and Growth

Inclusive classrooms are not just spaces where students with diverse backgrounds and abilities coexist; they are vibrant ecosystems of mutual learning and growth. The academic advantages of inclusivity are profound. When students from different backgrounds collaborate and engage in the learning process together, they have the opportunity to learn from each other's perspectives, experiences, and approaches to problem-solving. This cross-pollination of ideas and insights enriches the educational experience for all students, fostering a deeper understanding of subject matter and enhancing critical thinking skills.

The social benefits of inclusivity are equally transformative. In inclusive environments, students interact with peers who may have different abilities, cultural backgrounds, languages, or experiences. These interactions promote empathy, understanding, and a sense of belonging. Students learn to appreciate diversity as a valuable asset, leading to more inclusive attitudes in their future endeavors and contributing to the creation of a harmonious and socially just society.

Legal and Ethical Imperatives: A Rights-Based Approach

Inclusive education practices are not just a pedagogical choice; they are deeply rooted in legal and ethical imperatives. National education policies and international conventions, including the United Nations Convention on the Rights of Persons with Disabilities (UNCRPD), recognize inclusive education as a fundamental right. This rights-based approach asserts that every individual has the inherent right to education

without discrimination of any kind, and it underscores the obligation of states and educational institutions to ensure that this right is upheld.

By mandating inclusive education as a legal and ethical imperative, nations and international bodies underscore their commitment to providing an inclusive, equitable, and accessible education to all, regardless of individual characteristics or abilities. In doing so, they not only comply with legal obligations but also send a powerful message about the inherent worth and dignity of every person, regardless of their background or abilities.

Preparation for the Real World: Fostering Tolerance and Cooperation

Inclusive education practices extend beyond the classroom, preparing students for life in a diverse and inclusive society. They instill values of tolerance, cooperation, and empathy from an early age, which are essential attributes for thriving in an increasingly interconnected and multicultural world. In the real world, individuals will encounter diverse perspectives, collaborate with people from various backgrounds, and navigate complex social landscapes. Inclusive education equips students with the skills and attitudes needed to thrive in such environments, fostering a sense of social responsibility and a commitment to building inclusive communities and workplaces.

Moreover, inclusive education serves as a powerful tool for breaking down societal barriers and stereotypes. When students grow up in environments that celebrate diversity and inclusion, they are more likely to challenge prejudice, discrimination, and exclusion in all aspects of their lives, contributing to the construction of a more equitable and just society. Thus, inclusive education practices, driven by principles of equity, offer a myriad of academic, social, legal, and ethical benefits. They prepare students not only for academic success but also for meaningful engagement in a diverse and inclusive world. By championing the rights of all learners and promoting a culture of empathy and acceptance, inclusive education practices play a pivotal role in advancing social justice and shaping a brighter future for individuals and societies alike.

Challenges of Inclusive Education

Resource Allocation: Balancing Investment and Impact

The successful implementation of inclusive education practices often requires a strategic allocation of resources, encompassing various facets of the educational ecosystem. These resources may include investments in teacher training programs, specialized support staff, and the creation of accessible infrastructure. While these allocations are essential for fostering inclusive environments, they can pose significant financial challenges for education budgets. Adequate teacher training programs, for

example, are fundamental for equipping educators with the necessary skills to effectively cater to diverse learning needs. Additionally, support staff, such as special education professionals, speech therapists, and counselors, play a crucial role in providing individualized support to students with unique requirements. Moreover, ensuring accessible infrastructure, including ramps, elevators, and adapted classrooms, is indispensable for accommodating physical disabilities.

The challenge lies in striking a balance between allocating resources to meet these inclusive education needs and managing budget constraints. Schools and educational authorities must carefully consider the long-term benefits of inclusive practices, recognizing that investments in inclusive education can yield positive academic and social outcomes that extend far beyond the classroom.

Resistance to Change: Navigating Educational Paradigms

Resistance to the adoption of inclusive education practices can manifest in various forms, often rooted in traditional beliefs or apprehensions about accommodating diverse learners. Educators, communities, or institutions may express concerns about the perceived complexities of integrating students with diverse needs into regular classrooms. Some may fear that this integration could disrupt established teaching methods or require a significant shift in pedagogical approaches. Addressing resistance to change is a critical aspect of implementing inclusive education. This resistance can be mitigated through targeted professional development programs that provide educators with the knowledge and tools to effectively teach diverse student populations. Additionally, fostering open and inclusive dialogues within communities and educational institutions can dispel misconceptions and alleviate concerns. It is essential to communicate the value of inclusive education not only in terms of academic benefits but also in terms of promoting social cohesion and preparing students for a diverse and interconnected world.

Assessment and Evaluation: Beyond Traditional Metrics

Inclusive education practices challenge the adequacy of traditional assessment methods in capturing the progress of all students in diverse learning environments. Standardized tests and rigid evaluation criteria may not accurately reflect the multifaceted growth and development of students in inclusive settings. This challenge necessitates the adoption of more flexible and inclusive evaluation approaches. Formative assessments, for example, provide ongoing feedback that can guide instructional decisions and accommodate individual learning needs. Performance-based assessments, portfolios, and peer assessments offer alternative ways to gauge student progress and achievement in inclusive classrooms.

It is crucial to adapt evaluation practices to align with the principles of inclusive education, focusing on a holistic understanding of student growth that extends beyond academic metrics to encompass social and emotional development.

Diversity within Diversity: Meeting Individualized Needs

Inclusive classrooms embrace the diversity within diversity. Students in these settings may have a wide range of unique needs, spanning from physical disabilities and learning difficulties to cultural and linguistic differences. Meeting the specific requirements of each individual can be challenging, as there is no one-size-fits-all approach to inclusive education. To address this complexity, educators must employ a highly personalized and individualized approach. This involves not only recognizing the diverse learning needs of each student but also collaborating with specialists, support staff, and parents to develop tailored strategies and interventions. It requires a commitment to differentiation in teaching, ensuring that instructional methods and materials are adapted to meet the varying needs and abilities of students. Moreover, fostering a culture of inclusion and acceptance within the classroom can create an environment where students feel valued and supported, regardless of their individual differences. This, in turn, contributes to a positive and inclusive classroom culture where every student has the opportunity to thrive.

In summary, the challenges associated with implementing inclusive education practices are multifaceted and require a thoughtful and proactive approach. While resource allocation, resistance to change, assessment complexities, and accommodating diverse needs present significant hurdles, they are not insurmountable. With strategic planning, professional development, and a commitment to fostering inclusive environments, educational institutions can overcome these challenges and create equitable and inclusive educational experiences for all students.

Impacts of Inclusive Education Practices

Improved Educational Outcomes: Nurturing Success for All

Inclusive education practices have consistently demonstrated their capacity to enhance academic achievement across diverse student populations. These practices fundamentally challenge the notion that students with disabilities or unique learning needs should be educated separately. Instead, they promote the idea that when students of varying abilities learn together, they can mutually benefit from the experience. Research indicates that inclusive classrooms often yield improved academic outcomes for all students. For students with disabilities, the benefits are evident as they have the opportunity to engage with their peers in meaningful ways and access a curriculum tailored to their needs. For typically developing students, the

presence of peers with diverse abilities fosters a collaborative learning environment that encourages problem-solving, critical thinking, and the development of interpersonal skills. This improved academic performance is not confined to specific subject areas; it extends to various aspects of the curriculum, including literacy, mathematics, and social studies. Moreover, inclusive education cultivates a love for learning, nurturing students' curiosity and motivation to excel academically.

Social Cohesion: Building Bridges of Understanding

Inclusive classrooms serve as fertile ground for the cultivation of social cohesion, a vital aspect of inclusive education. By bringing together students from diverse backgrounds, abilities, and experiences, these classrooms encourage the development of empathy, understanding, and acceptance among students. The benefits of social cohesion extend well beyond the school walls. Students who grow up in inclusive environments are more likely to become adults who appreciate diversity, respect differences, and embrace inclusivity as a societal value. This not only leads to more inclusive workplaces but also contributes to the building of harmonious communities and a more inclusive society at large. The interpersonal relationships formed in inclusive classrooms transcend mere tolerance; they foster genuine friendships based on mutual respect and shared experiences. These bonds have the potential to break down stereotypes, dispel misconceptions, and bridge cultural or social divides, creating a more compassionate and interconnected world.

Reduced Stigma: Empowering through Acceptance

Inclusive education plays a pivotal role in reducing the stigma traditionally associated with disabilities and differences. Stigmatization often stems from misconceptions and a lack of exposure to individuals with diverse needs. In inclusive classrooms, students have the opportunity to interact with peers who may have disabilities or unique characteristics, demystifying these differences and humanizing the individuals behind them. The transformative power of reduced stigma cannot be overstated. When students with disabilities are included in regular classrooms, they are no longer marginalized or singled out. Instead, they become integral members of the learning community, contributing their unique perspectives and talents. This shift in perception is instrumental in creating a more inclusive society that values diversity as a strength rather than viewing it through a lens of deficiency. Moreover, the reduction of stigma extends to other spheres of life, such as employment and social interactions, where individuals with disabilities are often confronted with prejudices and barriers. The acceptance and understanding nurtured in inclusive classrooms can pave the way for a more inclusive and equitable society that provides equal opportunities for all.

Legal Compliance: Upholding Rights and Obligations

Embracing inclusive education practices is not only a pedagogical choice but also a matter of legal compliance. International conventions and national laws, such as the United Nations Convention on the Rights of Persons with Disabilities (UNCRPD), affirm the rights of students with disabilities to receive education on an equal basis with their peers. By adhering to inclusive education practices, educational institutions and nations align themselves with these legal frameworks, thereby upholding the rights of all learners. This commitment extends beyond compliance; it reflects a dedication to the principles of equity, non-discrimination, and the fulfillment of human potential. Furthermore, the embrace of inclusive education positions nations and institutions as champions of human rights and social justice. It sends a powerful message that every individual, regardless of their abilities or backgrounds, is entitled to a quality education and the opportunity to participate fully in society. Thus, the impacts of inclusive education practices extend far beyond the classroom. They encompass improved educational outcomes, social cohesion, reduced stigma, and legal compliance, contributing to the creation of a more inclusive and equitable society. Embracing inclusive education is not only an educational imperative; it is a societal commitment to fostering a world where diversity is celebrated, differences are valued, and every individual has the opportunity to thrive.

Conclusion

Inclusive education practices within the framework of national education policies represent a pivotal shift toward more equitable, diverse, and socially just education systems. While challenges exist, the benefits are substantial, with inclusive education fostering academic success, social cohesion, and respect for diversity. As nations strive to create inclusive societies, embracing inclusive education practices is not just a policy choice; it is a moral and ethical imperative that empowers all students to reach their full potential and contribute meaningfully to their communities and the world.

Abstract:

This abstract provides a concise overview of the essay on the importance and benefits of parent and community engagement in influencing national education policy. National education policies are pivotal in shaping a country's educational landscape, and they should reflect the collective aspirations and needs of the entire society. Engaging parents and communities in the policymaking process is essential as it ensures representation, local contextualization, transparency, and accountability. Furthermore, it leads to improved policy quality, increased implementation success, enhanced parental involvement, community cohesion, and effective conflict resolution. Recognizing the integral role of parents and communities in shaping education policies is crucial for creating more inclusive, effective, and accountable education systems.

Keywords: *Parent Involvement, Community Engagement, National Education Policy, Policy Influences, Education Stakeholders*

Introduction

National education policies serve as the cornerstone upon which the entire educational edifice of a nation is built. They wield a profound influence not only on the quality and direction of education but also on the overall progress and development of a country. These policies, far from being the exclusive domain of government officials and education experts, should be a reflection of the collective dreams, hopes, and aspirations of society at large. In essence, they must be a manifestation of the nation's shared vision for its future. To realize this vision effectively and ensure that national education policies are both impactful and inclusive, active involvement of parents and communities in the policymaking process is nothing short of imperative.

The Importance of Parent and Community Engagement

1. Representation and Inclusivity

Parents and community members are not passive observers but rather essential stakeholders deeply entwined with the educational fabric of a society. They offer a wealth of diverse perspectives, life experiences, and priorities that are invaluable in the development of education policies. The active engagement of these vital stakeholders in the policymaking process serves as a conduit for ensuring that a

comprehensive tapestry of voices is not just acknowledged but also woven into the very fabric of educational policies. This multifaceted approach not only bolsters the inclusivity of policies but also breathes life into their very essence by making them more representative of the diverse ne

1. Diverse Perspectives

Parents and community members, collectively representing a wide spectrum of backgrounds and experiences, bring a rich tapestry of viewpoints to the policymaking table. Their perspectives, rooted in the varied life experiences of individuals from all walks of life, introduce depth and dimension to the policymaking discourse. By actively engaging these stakeholders, policies have the potential to be far more nuanced and comprehensive, addressing a broader array of issues and concerns.

2. Varied Experiences

The life experiences of parents and community members span various professions, social strata, and cultural backgrounds. These experiences often shed light on the practical implications of education policies and their real-world impact on different segments of society. By incorporating these experiences into policymaking, a more practical and context-aware approach can be adopted.

3. Diverse Priorities

Every stakeholder group within the education system may have distinct priorities and concerns. Parents may be focused on the holistic development of their children, teachers on pedagogical methods, and communities on the broader societal implications of education. Engaging these groups ensures that the policies address a comprehensive range of priorities, ensuring a balanced approach.

4. Enhanced Representation

The engagement of parents and community members promotes a sense of ownership and inclusivity within the policymaking process. When individuals see that their voices are not just heard but actively sought after, it fosters a deeper sense of representation and involvement. This sense of ownership is essential for building trust and support for the resulting policies.

5. Local Insights

Communities often possess invaluable insights into local contexts, including the specific challenges and opportunities within their regions. These insights are crucial for tailoring education policies to meet the unique needs of different areas, ensuring that policies are contextually relevant and effective.

6. Transparency and Accountability

Involving parents and communities promotes transparency and accountability in the policymaking process. It ensures that decision-making is not shrouded in obscurity but is conducted in a public forum where stakeholders can monitor and

evaluate the choices made. This transparency fosters accountability, as policymakers are held responsible for their decisions.

7. Conflict Resolution

Education policies may sometimes give rise to disagreements and conflicts. Engaging parents and communities provides a structured platform for addressing and resolving such conflicts. It allows stakeholders to come together in constructive dialogue, fostering consensus and collaboration.

In sum, parents and community members are indispensable contributors to the educational policymaking process. Their diverse perspectives, experiences, and priorities serve as essential building blocks for policies that truly resonate with the multifaceted nature of society. Through their active participation, these stakeholders not only enrich the policymaking discourse but also fortify the very foundation of education policies, making them more representative, practical, and accountable. In doing so, they pave the way for a more inclusive and responsive education system that caters to the diverse needs and aspirations of the entire community.

2. Local Contextualization

The significance of parents and community members in the education policymaking process extends far beyond their status as stakeholders; they are repositories of invaluable local knowledge and insights that are paramount for crafting education policies that truly resonate with the unique contexts of different regions. This local insight, characterized by an intimate understanding of the specific challenges, resources, and opportunities within their communities, holds the potential to be the guiding star for education policies. Tailoring these policies to address the distinct needs of various regions not only fosters greater relevance but also amplifies their effectiveness, thereby creating a more responsive and equitable educational landscape.

1. Local Challenges

Different regions often face distinct educational challenges. These challenges may encompass issues such as access to quality education, teacher shortages, infrastructure gaps, or socioeconomic disparities. Parents and community members are acutely aware of these localized hurdles, as they witness their immediate impact on a daily basis. By engaging these stakeholders in policymaking, education policies can be strategically designed to address the specific challenges plaguing each region.

2. Regional Resources

Communities are often endowed with unique resources that can be harnessed to enhance the educational experience. These resources may include local expertise,

cultural assets, or vocational opportunities. Parents and community members are well-versed in identifying and leveraging these resources. Their input in policymaking facilitates the utilization of regional strengths, potentially opening up innovative avenues for educational enrichment.

3. Contextual Relevance

Education policies that are devised without consideration of the local context often risk being disconnected from the realities on the ground. This lack of relevance can hinder implementation and dilute the policy's effectiveness. Engaging parents and community members ensures that policies are contextualized, making them more attuned to the specific needs and dynamics of each region.

4. Community Involvement

Involving parents and communities in the policymaking process also promotes a sense of community involvement and ownership. When community members see their local insights being incorporated into policies, they are more likely to actively participate in the implementation process. This involvement bolsters the likelihood of policy success, as it garners grassroots support.

5. Equity and Inclusivity

Tailoring education policies to address the unique needs of different regions is an essential step towards achieving greater equity and inclusivity in education. By acknowledging and addressing the disparities that exist between regions, policymakers can work towards closing the educational achievement gap and ensuring that all students have equal access to quality education.

6. Resource Allocation

Efficient resource allocation is a critical aspect of education policymaking. Parents and community members can provide input on resource distribution, helping ensure that resources are allocated where they are needed most. This strategic allocation can optimize the impact of policies and maximize the benefits for students.

7. Cultural Sensitivity

Communities often have distinct cultural nuances and traditions that should be considered in education policies. Acknowledging and respecting these cultural aspects not only fosters inclusivity but also enhances the educational experience by making it more culturally sensitive and responsive.

Thus, the local insight and knowledge possessed by parents and community members are priceless assets in the realm of education policymaking. By actively involving these stakeholders, education policies can transcend the one-size-fits-all approach and be customized to address the specific needs, challenges, and opportunities present in different regions. This localized approach not only ensures greater policy relevance and effectiveness but also embodies a

commitment to fostering equitable and inclusive education systems that cater to the diverse needs of communities across the nation.

3. Accountability and Transparency

The active involvement of parents and communities in the educational policymaking process stands as a beacon of transparency and accountability within the realm of education. It not only facilitates openness in the development of education policies but also serves as a powerful mechanism for holding decision-makers accountable for their choices. This transparency and accountability are indispensable for upholding the integrity of the education system, ensuring that policies are not only well-informed but also aligned with the best interests of students, families, and society as a whole.

- **Transparent Decision-Making**

Inclusion of parents and communities in policymaking ensures that the process is conducted in an open, transparent manner. It allows stakeholders to witness the discussions, deliberations, and decision-making firsthand, dispelling any opacity that might otherwise shroud policymaking. Transparency in the process fosters public trust by demonstrating that decisions are made with utmost sincerity and integrity.

- **Public Scrutiny**

When parents and communities actively participate in the policymaking process, they become informed and engaged observers. This informed engagement enables them to scrutinize policies from various angles, assess their potential impact, and offer constructive feedback. This public scrutiny functions as a vital check and balance, helping to identify and rectify any potential flaws or biases in the policies.

- **Accountability Mechanism**

Engaging parents and communities establishes an accountability mechanism. When stakeholders have a seat at the table, decision-makers are held responsible for their choices. This accountability is not merely symbolic but extends to concrete actions and results. Decision-makers are answerable to the public, and this answerability compels them to make informed, equitable, and just decisions.

- **Enhanced Policy Quality**

The presence of vigilant stakeholders encourages policymakers to strive for the highest standards of quality and fairness. The knowledge that policies will undergo rigorous scrutiny motivates decision-makers to conduct thorough research, engage in comprehensive consultation, and refine policies to align with the best interests of all concerned parties. This quality enhancement leads to more effective, equitable policies.

- **Public Confidence**

Transparency and accountability are bedrocks upon which public confidence in the education system is built. When parents and communities perceive that their voices are not only heard but also heeded, it fosters trust in the system. This trust is pivotal for encouraging active participation and support for educational initiatives, ensuring their successful implementation.

- **Prevention of Unfair Practices**

Transparency and accountability are crucial safeguards against unfair practices or discriminatory policies. The active involvement of parents and communities provides a vigilant eye to identify and rectify any policies that may inadvertently marginalize certain groups or perpetuate inequality within the education system.

- **Policy Legitimacy**

Policies that are developed through inclusive, transparent processes enjoy a higher degree of legitimacy. They are more likely to be accepted and supported by the broader community because stakeholders can see that their concerns and perspectives have been taken into account. This legitimacy enhances the likelihood of successful policy implementation.

- **Continuous Improvement**

Accountability mechanisms ensure that education policies are not static but subject to ongoing evaluation and improvement. If a policy does not achieve its intended outcomes or has unintended negative consequences, stakeholders can advocate for necessary adjustments, fostering a culture of continuous improvement within the education system. In sum, involving parents and communities in educational policymaking serves as an invaluable mechanism for maintaining transparency and accountability. It empowers stakeholders to actively participate in shaping the direction of education policies, scrutinizing their content, and holding decision-makers responsible for their choices. This accountability mechanism is essential for preserving the integrity of the education system and ensuring that policies are equitable, responsive, and reflective of the collective interests and aspirations of the entire community.

4. Community Ownership

Active participation of parents and communities in the formulation of education policies not only empowers them as stakeholders but also fosters a profound sense of ownership and investment in the entire educational process. This ownership, when cultivated through inclusive policymaking, transcends passive engagement and often translates into enthusiastic support for schools, teachers, and students. The ripple effect of this heightened support reverberates throughout the education ecosystem, resulting in a more vibrant and effective educational landscape with far-reaching benefits for all.

- **Empowerment and Engagement**

Involving parents and communities in policymaking empowers them by giving them a voice and a stake in the educational system. This empowerment nurtures a sense of active engagement and participation, making individuals feel that they have a role to play in shaping the educational destinies of their children and communities.

- **Ownership and Commitment**

As stakeholders actively engage in the policymaking process, they develop a profound sense of ownership over the resulting policies. This ownership extends beyond rhetoric; it signifies a genuine commitment to the success and well-being of the educational system. When individuals perceive that their input is valued, they become deeply committed to seeing policies through to fruition.

- **Support for Schools**

Ownership of education policies often translates into enthusiastic support for schools. Parents and community members who have had a hand in shaping policies are more likely to rally behind schools, offering their time, resources, and expertise to bolster educational initiatives. This support can manifest in various ways, from volunteering in classrooms to fundraising for school programs.

- **Teacher Morale and Performance**

The active involvement of parents and communities can significantly impact teacher morale and performance. When educators witness the strong support of the community, they are motivated to excel in their roles. This elevated morale, in turn, can have a positive impact on the quality of instruction and the overall learning environment.

- **Student Success**

Policies that enjoy robust support from parents and communities often result in an environment conducive to student success. The combined efforts of engaged stakeholders create a more enriching educational experience, which can lead to improved student outcomes, higher graduation rates, and enhanced educational attainment.

- **Resource Mobilization**

Engaged communities are more adept at resource mobilization. Whether through community-driven fundraising initiatives, partnerships with local businesses, or grant applications, actively involved stakeholders are more likely to secure additional resources for schools. These resources can be used to enhance educational programs, facilities, and extracurricular activities.

- **Resilient Educational Ecosystem**

The sense of ownership cultivated through inclusive policymaking contributes to a resilient educational ecosystem.

When communities are invested in their schools and the success of their students, the education system becomes more adaptable and capable of weathering challenges, ensuring a sustained focus on educational excellence.

- **Civic Responsibility**

Involvement in education policymaking nurtures a sense of civic responsibility among parents and community members. This heightened sense of responsibility extends beyond education issues and can contribute to increased civic engagement and community development, fostering a more vibrant and cohesive society.

In conclusion, the sense of ownership and investment that parents and communities develop through active participation in education policymaking is a transformative force within the educational landscape. This sense of ownership generates unwavering support for schools, teachers, and students, ultimately creating a more vibrant and effective education ecosystem. It is a testament to the power of inclusive policymaking in not only shaping policies but also fostering a deep and enduring commitment to the betterment of education and society as a whole.

Benefits of Parent and Community Engagement

1. Improved Policy Quality

The active engagement of parents and communities in the process of shaping education policies serves as a catalyst for the development of well-rounded and informed policies. Rather than being conceived in isolation, these policies are enriched by the collective wisdom, insights, and practical experiences of those who are directly impacted by them. This collaborative approach leads to a plethora of benefits, ultimately yielding superior policy outcomes that are not only more effective but also more responsive to the evolving needs of the educational landscape.

- **Diverse Perspectives**

Parents and community members bring to the table a diverse array of perspectives, informed by their unique experiences and backgrounds. These perspectives serve as invaluable lenses through which policymakers can view the multifaceted dimensions of educational issues. The resulting policies are thus informed by a wide spectrum of viewpoints, making them more comprehensive and holistic.

- **Real-World Insights**

Education policies must not exist in a vacuum; they must resonate with the real-world experiences of those they affect. Parents and communities are well-versed in the practical implications of educational policies. Their insights are derived from firsthand experiences with schools, teachers, and students. As a result, policies shaped by their contributions are grounded in practicality and relevance.

- **Contextual Relevance**

The localized knowledge offered by parents and communities is instrumental in ensuring that policies are contextually relevant.

They are better equipped to identify and articulate the specific needs, challenges, and opportunities unique to their communities or regions. This tailoring of policies enhances their appropriateness and efficacy.

- **Informed Decision-Making**

Policymakers benefit greatly from the collective wisdom and insights of parents and communities when making decisions. They are provided with a more comprehensive understanding of the potential impacts and consequences of various policy choices. This informed decision-making leads to policies that are more likely to achieve their intended objectives.

- **Balanced Solutions**

The collaborative approach involving parents and communities promotes the development of balanced policy solutions. Policymakers are guided not only by empirical evidence but also by the practical wisdom of those who navigate the education system on a daily basis. This balance fosters policies that strike a harmonious equilibrium between theory and practice.

- **Foresight and Adaptability**

Education policies are not static but must evolve to meet the ever-changing needs of students and society. Engaging parents and communities ensures that policies are developed with an eye toward the future and the evolving demands of the educational landscape. This foresight allows for greater adaptability in policy implementation.

- **Effective Communication**

The active participation of parents and communities in policymaking fosters effective communication channels between education stakeholders. This communication ensures that information flows freely, allowing for timely feedback, course corrections, and continuous improvement in policy development and implementation.

- **Enhanced Public Support**

Policies that are developed collaboratively with the input of parents and communities tend to enjoy enhanced public support. When individuals see that their voices have been heard and respected, they are more likely to endorse and actively support the resulting policies. This support is vital for the successful implementation of policies.

- Thus, the engagement of parents and communities in shaping education policies elevates the policymaking process to new heights of inclusivity and effectiveness. It harnesses the collective wisdom, real-world insights, and localized knowledge of these stakeholders, resulting in policies that are well-rounded, informed, and responsive to the dynamic educational landscape.

Such policies, grounded in practicality and relevance, are poised to make a tangible difference in the lives of students and the broader community.

2. Increased Implementation Success

Education policies that secure the genuine support and endorsement of parents and communities possess a considerable advantage in terms of successful implementation. When these stakeholders not only understand but actively contribute to the policy's objectives, a virtuous cycle of engagement is set in motion. This dynamic cycle makes it significantly easier to marshal the requisite support, resources, and cooperation needed to translate policies into tangible, effective outcomes within the educational system.

- **Stakeholder Commitment**

The commitment and buy-in of parents and communities are pivotal for policy implementation. When these stakeholders genuinely support a policy, they become active champions of its success. Their commitment often extends beyond mere passive acceptance to enthusiastic advocacy, ensuring that the policy is embraced and enacted with dedication.

- **Resource Mobilization**

Policies that enjoy the backing of parents and communities have an advantage in resource mobilization. Engaged stakeholders are more adept at garnering the necessary resources, whether through community-driven fundraising, partnership initiatives, or grant applications. This heightened resource mobilization fortifies the policy's implementation by providing essential financial and material support.

- **Voluntary Participation**

Policies that resonate with parents and communities often lead to voluntary participation in various aspects of the educational process. Whether it involves volunteering in classrooms, assisting with extracurricular activities, or offering expertise and mentorship, actively involved stakeholders contribute to the policy's success by enhancing the educational experience.

- **Advocacy and Communication**

Engaged parents and communities are excellent advocates for policies, facilitating communication and cooperation between stakeholders. Their endorsement and active participation serve as a conduit for disseminating policy objectives and rallying support from various quarters, including educators, students, and the wider community.

- **Conflict Resolution**

In the event of challenges or conflicts arising during policy implementation, the support of parents and communities can be a valuable asset.

These stakeholders often play a mediating role, helping to resolve disputes and maintain a collaborative atmosphere conducive to successful implementation.

- **Feedback and Improvement**

Actively engaged stakeholders provide ongoing feedback on policy implementation. This feedback loop allows policymakers to make timely adjustments, address emerging issues, and fine-tune the policy's execution. The continuous improvement facilitated by engaged stakeholders enhances the policy's long-term effectiveness.

- **Institutional Memory**

When parents and communities are actively involved in policymaking and implementation, they contribute to the institutional memory of educational institutions. This historical perspective is invaluable for maintaining policy continuity, ensuring that the policies are not only implemented but also sustained over time.

- **Community Cohesion**

Policies supported by parents and communities contribute to greater community cohesion. These stakeholders become vested in the success of the educational system and the well-being of students. This sense of shared purpose fosters unity and strengthens the social fabric of the community.

- **Sustainability**

Policies with robust support from parents and communities are more likely to be sustainable in the long run. This sustainability ensures that the benefits of the policy continue to accrue over time, leading to lasting positive impacts on education outcomes.

- Thus, the active support and engagement of parents and communities are potent catalysts for the effective implementation of education policies. Their commitment, resource mobilization efforts, voluntary participation, advocacy, and feedback loop create a conducive environment that facilitates policy success. Policies that enjoy such support are better poised to make a substantial and enduring impact on the education system and the lives of students.

3. Enhanced Parental Involvement

The engagement of parents in the policymaking process not only serves as a critical component of education governance but also cultivates a culture of parental involvement in their children's education. This engagement signifies more than mere participation; it represents a profound shift toward actively involving parents in the decision-making processes that shape the educational landscape. When parents are not just aware of but connected to the policymaking process, a chain reaction is set in motion. This heightened awareness and engagement lead to a more informed and empowered parent body, ultimately translating into improved student outcomes and a more enriching educational experience.

- **Informed and Empowered Parents**

Active engagement in the policymaking process equips parents with a deeper understanding of the educational system and its complexities. They become more informed about the policies, practices, and challenges within the system. This heightened awareness empowers parents to make informed decisions regarding their child's education.

- **Enhanced Parental Advocacy**

Informed parents are more effective advocates for their children's education. They are better equipped to navigate the educational landscape, advocate for their child's needs, and access appropriate resources or support when necessary. This advocacy ensures that students receive the individualized attention and resources they require.

- **Increased Participation**

Parents who are actively involved in policymaking are more likely to continue their involvement at the grassroots level. This includes participation in parent-teacher associations, school events, and volunteering opportunities. Increased parental participation creates a more vibrant and supportive school community.

- **Improved Communication**

Engaging parents in policymaking fosters improved communication channels between schools and families. Parents become active participants in the educational dialogue, enabling a continuous exchange of information, feedback, and updates. This open communication promotes a collaborative approach to education.

- **Alignment of Goals**

Parental involvement in policymaking helps align the goals of schools and parents. When parents have a voice in shaping policies, they can advocate for policies that align with their priorities, ensuring that the educational experience meets both academic and holistic development objectives.

- **Parental Skill Development**

Engagement in the policymaking process allows parents to develop important skills and knowledge related to education. They gain insights into curriculum design, assessment methods, and the broader educational landscape. These skills can be applied to support their child's learning journey.

- **Support for Learning at Home**

Informed and engaged parents are better positioned to support learning at home. They can reinforce classroom lessons, offer guidance on homework, and create a conducive home environment for learning. This active involvement extends the educational experience beyond the classroom.

- **Positive Learning Environment**

The involvement of parents in education policymaking fosters a more positive learning environment. It sends a powerful message to students that their education is a shared endeavor between home and school. This sense of partnership contributes to a more supportive and motivating atmosphere for learning.

- **Improved Student Outcomes**

Perhaps most importantly, parental involvement in policymaking has a direct impact on student outcomes. Numerous studies have shown that students whose parents are actively engaged in their education tend to perform better academically, have higher attendance rates, and exhibit greater motivation and self-confidence.

- Thus, engaging parents in the policymaking process represents a transformative step toward creating a culture of parental involvement in education. This engagement empowers parents with knowledge, fosters advocacy, enhances communication, and aligns goals, all of which contribute to improved student outcomes and a more enriching educational experience. Recognizing parents as vital partners in the educational journey of their children is not only a sound educational practice but also a path to creating stronger, more resilient, and more successful learning environments.

4. Community Cohesion

Education policies crafted through inclusive and participatory processes play a significant role in promoting community cohesion. When communities are actively engaged in decision-making, it goes beyond the realm of educational governance; it fosters a profound sense of unity and shared purpose among community members. This unity often transcends education-specific issues, benefiting the broader social fabric and contributing to a more cohesive and harmonious society.

- **Shared Investment**

Inclusive policymaking creates a shared investment in the education system. When community members are involved in shaping policies, they develop a sense of ownership and responsibility for the success of educational initiatives. This shared investment reinforces the idea that education is a collective endeavor, not the sole responsibility of schools or policymakers.

- **Collaborative Decision-Making**

Engaging communities in policymaking signifies a commitment to collaborative decision-making. It fosters a culture of dialogue, cooperation, and mutual respect. These qualities not only contribute to better policy outcomes but also set a positive example for how diverse groups can work together harmoniously.

- **Cross-Generational Engagement**

Inclusive policymaking often involves representatives from various generations within a community, including parents, grandparents, and students. This cross-generational engagement bridges the gap between different age groups, fostering intergenerational understanding and cooperation. This sense of unity and connection between generations is invaluable for building a cohesive community.

- **Social Capital**

Participation in the policymaking process builds social capital within a community. It strengthens social networks, trust, and civic engagement. These components of social capital contribute to a more cohesive and resilient community, better equipped to address a wide range of challenges beyond education.

- **Diversity and Inclusivity**

Inclusive policymaking acknowledges and respects the diversity within a community. It ensures that the voices of marginalized or underrepresented groups are heard and valued. This commitment to inclusivity fosters a sense of belonging for all community members, regardless of their backgrounds or circumstances.

- **Alignment of Values**

When communities are involved in shaping education policies, there is a greater likelihood that these policies align with the values and priorities of the community. This alignment reinforces a sense of shared purpose and reinforces the idea that education should reflect the community's aspirations and ideals.

- **Community Initiatives**

Engaged communities are more likely to initiate and support community-driven education initiatives. These initiatives can extend beyond the classroom, encompassing after-school programs, tutoring services, and cultural enrichment activities. Such efforts contribute to a more vibrant and cohesive community life.

- **Conflict Resolution**

Inclusive policymaking processes often include mechanisms for addressing conflicts and disagreements. These mechanisms promote constructive dialogue and resolution, preventing the escalation of disputes and maintaining a sense of community harmony.

- **Positive Role Modeling**

The inclusive approach to policymaking serves as a positive model for community members, especially for young people. It demonstrates the value of active citizenship, collaboration, and civic engagement. These qualities are essential for building a strong and cohesive society.

- **Resilient Communities**

A cohesive community is a more resilient one. When community members are united by shared values and a sense of purpose, they are better prepared to face challenges, adapt to change, and support one another in times of need.

Thus, education policies developed through inclusive processes are not just about improving the educational system; they are about strengthening the bonds within communities and fostering a more cohesive and harmonious society. The engagement of community members in decision-making processes builds a sense of unity, shared responsibility, and mutual respect that extends beyond education issues, contributing to the overall well-being and resilience of the community. It is a testament to the power of inclusive governance in creating communities that are not only educationally successful but also socially connected and vibrant.

5. Conflict Resolution

Engaging parents and communities in the policymaking process serves as a vital platform for addressing and resolving potential conflicts and disagreements related to education policy. Education policies often touch upon a multitude of complex issues, and it is not uncommon for differing perspectives to arise. However, when stakeholders are actively involved in constructive dialogue, policymakers can navigate these challenges effectively, find common ground, and build consensus on contentious issues. This collaborative approach not only promotes effective policy development but also strengthens the sense of shared responsibility within the community.

Conclusion

Parent and community engagement in the process of shaping national education policy is not a mere formality; rather, it is a cornerstone of democratic governance with profound and far-reaching benefits. The active involvement of parents and communities in education policymaking goes beyond symbolism; it embodies a fundamental democratic principle that has the potential to transform the educational landscape and society as a whole. This inclusive approach ensures that education policies are more representative, effective, and accountable, ultimately leading to better policy outcomes, increased parental involvement, and strengthened community cohesion.

As we navigate the complexities of modern education systems and confront the evolving challenges of our times, it is imperative that we recognize and honor the pivotal role parents and communities play in shaping the educational future of our nations.

Abstract:

A society's access to global knowledge and immediate communication is made possible by the Internet, which is widely used as a research and instructional tool. Anywhere, including homes, workplaces, schools, fast-food outlets, airplanes, and even beaches, can have Internet access. One of the instructional education programs that might assist students in their studies is e-learning. The goal of this study was to look into how well secondary school pupils used e-learning

Introduction:

Information technology has a huge impact on daily life, and its importance to education cannot be overstated. Due to the closure of educational institutions, which creates obstacles for student's learning. Through cutting-edge learning management systems, information technology is helping to solve the problem of continued learning during this quarantine period. It has given educators the chance to use IT technologies for both teaching and evaluating the completion of students' course work. Teachers, students, and institutional officials are all working to ensure that technology is used as effectively as possible and that the educational process runs smoothly. Worldwide educational institutions and students have embraced and valued the online learning environment. This acceptability is based on its simplicity of use, adaptability of learning, and controlling environment.

Objectives:

- To determine the student's level of exposure to e-learning.
- To investigate the effectiveness of using e-learning among college schools students.

Reserch Design:

Sample Size: 124

Sampling method: For the collection of primary data, the questionnaire was randomly distributed through online form. We use random sampling method to collect the data.

Tools used: Percentile for analyzing the data

2	Disagree	33	27%
3	Neutral	33	27%
4	Agree	33	27%
5	Strongly agree	8	6%
	Is it enabling you to cover a wide area of knowledge?		
1	Yes	100	80%
2	No	8	6%
3	May be	16	14%
	Do you think the e-learning materials are relevant and aligned with your learning goals?		
1	Yes	92	74%
2	No	8	6%
3	May be	24	20%
	Would you recommend the e-learning materials to other students?		
1	Yes	108	88%
2	No	8	6%
3	May be	8	6%

Findings:

- In this study, majorities (66.95%) are male respondents and (33.05%) respondents are female.

- The majority of the respondents are between the age group of 18 to 25.
- Majority of the respondents are from rural (53%) and next majority of the respondents are from urban (40%)
- The majority of the respondents are undergraduate students (86%)
- Majority of the respondents (40%) are regularly referring e-learning materials.
- In this study, majority of the respondents (87%) are like to adapt e-learning materials.
- The majority of the respondents (61%) are feel comfortable to access e-learning materials in college.
- The study represents that the majority of the respondents (87%) are feeling good when they using e-learning materials.
- Majority of the respondents (43%) are clearly defined that the e-learning is not that much difficult than the traditional courses.
- From this study we understand it is enabling to cover a wide area of knowledge by the majority of the respondents (80%).
- The majorities of the respondents of the study (74%) think that the e-learning materials are relevant and aligned with your learning goals.
- In this study the majority of the respondents (88%) are recommend the e-learning materials to other students.

Suggestions:

This study suggests that the use of electronic learning resources aids in students' knowledge acquisition. The e-learning resources are simple to alter and have the capacity to cover a wide range of knowledge, according to the responses of the undergraduate students. The children have faith that their teachers can inspire them to learn by using online resources. Additionally, colleges are where students can most easily access e-learning materials.

Conclusion:

In conclusion, views among students about e-learning are complex and evolving. While some people appreciate the ease and freedom it offers, others might find it difficult to interact with others. Things like course design, technological accessibility, and individual learning preferences all have a big impact on how people perceive these things. It is essential to consider student feedback and experiences as e-learning develops and adapts to their needs in order to maximize its effectiveness and inclusion in education.

Abstract:

Outcome-Based Education (OBE) has gained prominence as an educational framework designed to align curriculum and instruction with predefined learning outcomes. While OBE offers promising benefits in enhancing student-centered learning and aligning educational goals with real-world skills, its implementation presents a complex array of challenges and opportunities for educators. This paper explores the multifaceted landscape that teachers navigate when adopting OBE methodologies. The challenges encompass factors such as redefining teaching strategies, assessing diverse learning outcomes, managing time effectively, and addressing resistance to change. However, these challenges are accompanied by opportunities such as fostering deeper student engagement, promoting critical thinking skills, tailoring instruction to individual needs, and preparing learners for the demands of a dynamic global landscape. Through an examination of current literature and case studies, this paper provides insights into the strategies that can help educators capitalize on the potential of OBE while mitigating its associated challenges. By addressing both the obstacles and advantages of implementing OBE, educators can make informed decisions and create adaptive pedagogical approaches that align with the evolving needs of modern education.

Keywords: *OBE, teachers, challenges, opportunities*

Introduction:

The educational landscape is continuously evolving, and one prominent evolution is the shift towards Outcome-Based Education (OBE). OBE emphasizes the significance of defining clear learning outcomes and aligning teaching methods to achieve these outcomes. However, the implementation of OBE is not without its share of challenges and opportunities for educators. This introduction delves into the nuanced interplay between the challenges that teachers grapple with and the exciting possibilities they encounter while navigating the realm of OBE.

On one hand, teachers face the challenge of revisiting their pedagogical approaches to align with predefined learning outcomes. This demands a thorough understanding of the desired skills, competencies, and knowledge that students should acquire. The transition from traditional content-driven teaching to outcome-focused instruction requires careful planning and the development of new instructional strategies. Additionally, assessment methods need to be revamped to effectively measure whether students have achieved the desired outcomes, thus

necessitating a shift from traditional testing methods towards more authentic and holistic assessment practices.

Amidst these challenges lie promising opportunities for teachers. OBE encourages a student-centered approach, fostering active engagement and personalized learning experiences. Teachers can leverage this shift to tailor their instruction to the diverse needs and learning styles of their students, nurturing a more inclusive and participatory classroom environment. Moreover, OBE promotes interdisciplinary learning and collaboration, enabling teachers to craft innovative, cross-disciplinary projects that mirror real-world challenges. This not only enhances students' critical thinking and problem-solving skills but also cultivates a deeper understanding of how knowledge is interconnected across various subjects.

Objective:

- To investigate the challenges and opportunities faced by teachers in implementing Outcome-Based Education (OBE) and to identify strategies for enhancing teacher awareness towards OBE.
- To investigate the impact of OBE on student motivation and engagement in the learning process.
- To explore the role of teacher training in enhancing teacher awareness towards OBE and to identify best practices for teacher training.

Research Design:

Sample size: For this study, 137 participants were selected using simple random sampling method.

Sampling Procedure: The required information was gathered via a questionnaire. The sample was picked from among the students. By answering a predefined questionnaire, it was obtained. With the aid of a statistical tool, the data was assessed.

Tools: Percentile used for analysing data.

Analysis and Interpretation:

S.NO	Particulars	Frequency	Percentage
	Age		
1	22-30	84	61%
2	30-40	21	16%
3	40-50	21	15%
4	Above 50	11	8%

	Gender		
1	Male	105	76.64%
2	Female	32	23.35%
	Designation

1	Urban	63	45.99
2	Semi urban	42	30.66
3	Rural	32	23.35
	Nature of Job		
1	Private	126	92
2	Government	11	8
	What Challenges have you Faced while Implementing OBE in your Classroom?		
1	Resistance from students to change in teaching methodology	74	54
2	Difficulty in aligning learning outcomes with assessment methods	21	15
3	Lack of support from college's administration	32	23
4	Difficulty in designing effective assessments	10	8

	What Opportunities do you Think OBE Offers to Enhance Student Learning Outcomes?		
1	Increased student engagement and motivation	21	15
2	Improved critical thinking and problem-solving skills	63	46
3	Enhanced creativity and innovation	42	31
4	Better alignment of learning outcomes with real-world applications	11	8
	Do you Think Teacher Awareness towards OBE can be Enhanced?		
1	Professional development programs focused on OBE	73	54
2	Collaboration with other teachers to share best practices	32	23
3	Mentoring from experienced OBE teachers	32	23
4	Research on OBE to identify effective strategies	0	0

	What Strategies have you Employed to Overcome the Challenges Faced by you in Implementing OBE?		
1	Collaboration with other teachers to share best practices	32	24
2	Professional development programs focused on OBE	63	46
3	Mentoring from experienced OBE teachers	21	15
4	Research on OBE to identify effective strategies	21	15
	How do you Measure the Effectiveness of OBE in your Classroom?		
1	Student performance on assessments aligned with learning outcomes	74	54
2	Student feedback on the effectiveness of teaching methodology	10	8
3	Teacher observation of student engagement and motivation	32	23
4	Comparison of student performance before and after implementation of OBE	21	15

	Do you think OBE Impacts Student Motivation and Engagement in the Learning Process?		
1	Increased student engagement and motivation due to alignment of learning outcomes with real-world applications	32	23
2	Improved critical thinking and problem-solving skills leading to increased motivation and engagement	63	46
3	Enhanced creativity and innovation leading to increased motivation and engagement	10	8
4	Better alignment of learning outcomes with student interests leading to increased motivation and engagement	32	23
	What Factors do you think Influence the Effectiveness of OBE in Enhancing Student Motivation and Engagement?		
1	Alignment of learning outcomes with real-world applications	32	23
2	Effective use of technology in teaching methodology	63	46

3	Teacher enthusiasm for teaching methodology	32	23
4	Student interest in the subject matter	10	8
	How do you measure Student Motivation and Engagement in an OBE Environment?		
1	Student feedback on their level of motivation and engagement	74	54
2	Teacher observation of student participation and involvement in class activities	42	31
3	Comparison of student performance before and after implementation of OBE	21	15
4	Analysis of student's participation rates in online discussion forums	0	0
	What Strategies have you Employed to Enhance Student Motivation and engagement in an OBE Environment?		
1	Use of technology to enhance student participation and engagement	42	31

2	Incorporation of real-world examples into teaching methodology	32	23
3	Use of group work and collaborative learning activities	63	46
4	Provision of timely feedback to student on their performance	0	0
	What are the best Practices for Teacher Training in an OBE Environment, According to you?		
1	Professional development programs focused on OBE	74	54
2	Collaboration with other teachers to share best practices	42	31
3	Mentoring from experienced OBE teachers	21	15
4	Research on OBE to identify effective strategies	0	0
	How do you think Teacher Training can be made more Effective in Enhancing Teacher Awareness towards OBE?		
1	Providing more hands-on training opportunities	53	39

2	Incorporating more case studies into training programs	21	14
3	Providing more opportunities for collaboration among trainees	53	39
4	Providing more opportunities for trainees to conduct research on OBE	10	8

Findings:

- The most common challenge faced by teachers in implementing OBE in their classroom is **resistance from students to change in teaching methodology** (74 out of 137 responses).
- The most common opportunity offered by OBE to enhance student learning outcomes is **improved critical thinking and problem-solving skills** (63 out of 137 responses).
- The most common way to enhance teacher awareness towards OBE is **professional development programs focused on OBE** (73 out of 137 responses).
- The most common strategy employed by teachers to overcome the challenges faced by them in implementing OBE is **collaboration with other teachers to share best practices** (32 out of 137 responses).
- The most common way to measure the effectiveness of OBE in the classroom is **student performance on assessments aligned with learning outcomes** (74 out of 137 responses).
- The most common impact of OBE on student motivation and engagement in the learning process is **improved critical thinking and problem-solving skills leading to increased motivation and engagement** (63 out of 137 responses).
- The most common factor that influences the effectiveness of OBE in enhancing student motivation and engagement is **effective use of technology in teaching methodology** (63 out of 137 responses).
- The most common way to measure student motivation and engagement in an OBE environment is **student feedback on their level of motivation and engagement** (74 out of 137 responses).

- The most common strategy employed by teachers to enhance student motivation and engagement in an OBE environment is **use of group work and collaborative learning activities** (63 out of 137 responses).
- The most common best practice for teacher training in an OBE environment is **professional development programs focused on OBE** (74 out of 137 responses).
- The most common way to make teacher training more effective in enhancing teacher awareness towards OBE is **providing more hands-on training opportunities** (53 out of 137 responses).

Conclusion

In conclusion, a complex environment is revealed by the study on possibilities and problems experienced by teachers while adopting outcome-based education (OBE). Teachers have many challenges, including adjusting to new evaluation techniques, matching the curriculum to learning objectives, and handling the different needs of students. It also draws attention to promising possibilities, such as better educational outcomes, personalised learning, and more student involvement. Teachers need sufficient training and ongoing support to make the shift to OBE successfully. Additionally, institutions and policymakers should place a high priority on fostering an environment that promotes innovation and collaboration. In the end, this study highlights the necessity for a comprehensive strategy for OBE implementation that resolves issues while maximising its ability to transform contemporary education.

Abstract:

In the context of higher education, this study investigates how students see outcome-based education (OBE). OBE is a pedagogical strategy that emphasizes the need for clearly stated learning objectives and their evaluation in order to raise educational standards. The study uses a mixed-methods approach that combines surveys to collect information on how students see the influence of OBE on their academic success, learning experiences, and general satisfaction. The results shed insight on the benefits and drawbacks of applying OBE in educational institutions by demonstrating the complexity of student's perceptions. For educators and policymakers to optimize OBE practices and ensure that they meet the requirements and expectations of today's learners, it is essential to understand student's viewpoints. This study offers important new perspectives to the current discussion about OBE and its influence on the direction of education.

Introduction:

Certainly, in recent years, education systems worldwide have undergone significant transformations, with a growing emphasis on outcome-based education (OBE). OBE places a strong emphasis on defining clear learning outcomes and aligning curriculum, teaching methods, and assessment strategies to achieve these outcomes. This approach aims to equip students with practical skills, competencies, and knowledge that are relevant to real-world situations and demands.

This study seeks to delve into the student's perceptions towards outcome-based education in Namakkal District. By examining how students perceive the transition to OBE, their attitudes towards the alignment of learning outcomes with teaching methods and assessments, and their overall satisfaction with the educational experience, this research aims to provide a comprehensive understanding of the impact of OBE on students' learning journeys.

Objectives:

- To measure the level of awareness among students regarding the concept and principles of Outcome Based Education.
- To understand student's attitude towards Outcome Based Education in terms of its effectiveness, relevance, and potential benefits.
- To assess students understanding of how Outcome Based Education differs from traditional education approach.
- To gather qualitative feedback from students regarding their perception, suggestions, and concerns related to the Outcome Based Education.

Review of Literature:

- Davis, 2003 and Caguimbal, et. al., 2013 stated that OBE is an approach to education in which decisions about the curriculum are driven by the exit learning outcomes displayed by the students at the end of each course.
- The "OBE Paradigm" proposed by the Father of OBE
- Dr. William Spady is based on three (3) premises and four (4) principles (Spady, 1994). The three (3) premises are; i) all students can learn and succeed but not on the same day and not in the same way, ii) successful learning promotes even more successful learning, and iii) schools control the conditions that directly affect successful learning. Fig. 1 shows the four (4) OBE principles outlined by Dr. William Spady.

Research Design:

Tools used: Percentile used for analyzing data.

Sample size: For this study, 124 respondents were selected using simple random sampling.

Sampling procedure: the required information was collected via questionnaire.

Analysis and Interpretation:

S.NO	Particulars	Frequency	Percentage
	Gender		
1	Male	91	73%
2	Female	33	27%
	Geography		
1	Rural	57	46%
2	Semi urban	17	14%
3	Urban	50	40%

	Is your College Follows Outcome Based Education?		
1	Yes	83	67%
2	No	0	0
3	Maybe	41	33%
	Do you know how OBE Varies from Traditional Education?		
1	Yes	100	81%
2	No	24	19%
	How do you feel about the Assessment Methods used in OBE?		
1	Satisfactory	25	20%
2	Good	83	67%
3	Excellent	16	13%
	Are the Assessment Methods used is Acceptable?		
1	Yes	116	94%
2	No	8	6%
	Have you Noticed any Improvement in your Practical skill due to OBE?		
1	Yes	91	73%
2	No	17	14%
3	Maybe	16	13%
	Do you think OBE has Influenced your Ability to set and Achieve Learning Goals?		
1	Yes	107	86%
2	No	17	14%

	Have you Encountered any Innovative Assessment Method under OBE?		
1	Yes	83	67%
2	No	25	20%
3	Maybe	16	13%
	Have you been able to adapt your Learning Strategies to align with the OBE Approach?		
1	Yes	91	73%
2	No	33	27%
	Are the Learning Objectives and Outcomes clearly defined in your course Material?		
1	Yes	116	94%
2	No	8	6%
	Do you believe that the Assessment Adequately Measure your Practical Skills and Competencies?		
1	Yes	107	86%
2	No	17	14%
	What Resources or Support System do you Believe would Enhance your OBE Learning Experience?		
1	Faculty Development Program	8	6%
2	Collaboration with other teachers	42	34%
3	Mentoring from experts	74	60%

	In your Opinion, does OBE Equip you with the Necessary Skills for Further Education or your Future Career?		
1	Yes	116	94%
2	No	8	6%

Interpretation:

According to this study, the perception towards outcome based education of student's at Namakkal District, the majority of the respondents may have good opinion towards the OBE. The majority of the respondents are from rural and the percentage is 46%. The students are known their college lecturing based on the Outcome Based Education and the percentage is 67%.they also know the OBE varies from traditional education and the percentage is 81%. Student's feel about the assessment method used in OBE is feeling good as per the student's opinion and the percentage is 67%. The course materials are clearly defining the objective for the students and the percentage is 94%. The students are more likely to enhance the learning experience from the experts and the percentage is 60%. The overall perception of the students towards the outcome based education is good.

Conclusion:

In conclusion, there are a number of factors that affect student's perceptions of outcome-based education in Namakkal District, including their comprehension of its objectives and advantages, the success of its implementation in educational institutions, and their own experiences within this framework. Others may find it difficult to adjust to this approach, especially if it departs from conventional teaching methods, while some students may embrace the shift towards outcome-based education as a way to improve their employability and critical thinking abilities. As a result, ongoing efforts to promote the benefits of outcome-based education, enhance its application, and take into account the various requirements and preferences of students are necessary for its success in Namakkal District. With more study and regular conversations with students, outcome-based education may be improved and optimized in the area, giving Namakkal District children better educational outcomes and employment opportunities.

EXPLORING POTENTIAL: EMPOWERING WOMEN THROUGH THE NATIONAL EDUCATION POLICY 2020

Saket Bihari

Assistant Professor

School of Education (SOED)

K R Mangalam University

Gurugram (Haryana)

Abstract

This paper investigates the National Education Policy (NEP) 2020's potential for empowering women through education. It investigates the gender inequities that exist in the education system and identifies the impediments that prevent women from obtaining a quality education. It also outlines how the policy framework addresses these barriers and provides opportunities for women's educational advancement by analysing key provisions of the NEP 2020, such as universal access, gender-responsive curriculum, safe learning environments, and skill development opportunities. It emphasises the chances for women's empowerment that result from the implementation of the NEP 2020, such as increased job options, leadership roles, and a gender-inclusive academic atmosphere. The problems and implementation solutions related with the NEP 2020 are also discussed, emphasising the significance of stakeholder participation.

The NEP 2020 recognises that empowering women through education is critical for their entire growth as well as the nation's progress. It recognises the obstacles and hurdles that women experience in obtaining an education. The strategy seeks to address these issues by creating a friendly and enabling environment for women to pursue education and reach their full potential. It emphasises the importance of early childhood care and education, ensuring that girls have equitable access to high-quality education beginning in their early life. The policy promotes the development of secure, inclusive learning environments that promote gender equality and empower women. It also establishes a comprehensive framework for strengthening women via education. It acknowledges the obstacles and problems that women experience and tries to provide an enabling environment that promotes gender equality and allows women to attain their full potential. India can make major progress towards gender equality and women's empowerment in education by adopting the requirements of the NEP 2020.

Keywords: *National Education Policy 2020, Empowering Women, Gender Disparities, Education System, Women's Empowerment*

Introduction

Women's empowerment has long been recognised as a critical component for the advancement and development of societies throughout. Education is critical in empowering women by providing them with the knowledge, skills, and opportunities to fully engage in social, economic, and political realms. Recognising

the importance of women's education, India's National Education Policy (NEP) 2020 has enormous potential for boosting women's empowerment. The NEP 2020, a comprehensive and forward-thinking policy framework, intends to transform India's education sector. It includes early childhood care, school education, higher education, skill development, and vocational education, among other things. It is important to note that it acknowledges the need to address current gender gaps in education and to establish an inclusive learning environment that empowers women. This paper investigates the NEP 2020's potential for empowering women via education. It dives into the gender inequities that exist in the education system and shows the impediments that prevent women from obtaining a high-quality education. This essay shows how the policy framework overcomes these impediments and provides chances for women's educational advancement by evaluating the important components of the NEP 2020.

Furthermore, this paper examines the prospects for women's empowerment that result from the NEP 2020's implementation. It investigates how the policy encourages women's career prospects, leadership roles, and a gender-inclusive academic atmosphere. The problems and implementation solutions related with the NEP 2020 are also discussed, as is the importance of stakeholder collaboration and progress monitoring. Finally, the NEP 2020 symbolises a key milestone in India's efforts to empower women through education. The policy has the ability to unlock women's talents, capacities, and aspirations by eliminating gender gaps, ensuring access to quality education, and fostering an inclusive learning environment. It is critical for all stakeholders, including the government, educational institutions, and civil society, to prioritise and promote women's education, because education is the only way for women to realise their full potential and contribute to society.

Brief Overview of the National Education Policy (NEP) 2020

The National Education Policy (NEP) 2020 is an Indian policy framework aimed at reforming the country's education system. The Indian government adopted it in July 2020, replacing the previous policy, which had been in force since 1986. The National Education Policy 2020 (NEP 2020) is a comprehensive policy that includes all stages of education, from early childhood care and education to higher education and beyond. The NEP 2020's main goals are to provide universal access to high-quality education, to promote equity and inclusion, to encourage holistic development, and to nurture a knowledge-driven society. The policy emphasises the value of transdisciplinary education, adaptability, and encouraging students' critical thinking and creativity.

Some of the Key Provisions of the NEP 2020 Include

- **Early Childhood Care and Education:** Recognising the importance of early childhood development, the policy intends to provide basic learning opportunities to children aged three to six.
- **School Education Reforms:** The NEP 2020 proposes several school education reforms, including the adoption of a 5+3+3+4 curricular structure (from pre-primary to secondary stages), a reduction in curriculum content to focus on core concepts, and the inclusion of vocational education beginning in secondary school.
- **Multidisciplinary Education:** The strategy promotes a multidisciplinary approach to education by allowing students to choose subjects from other areas and increasing course flexibility.
- **Teacher Training and Professional Development:** The NEP 2020 emphasises the importance of rigorous teacher training programmes and ongoing professional development in order to improve the quality of education.
- **Teacher Training and Professional Development:** The NEP 2020 emphasises the importance of rigorous teacher training programmes and ongoing professional development to improve educational quality. It seeks to transform teacher education institutions into multifunctional ones.
- **Reforms to Higher Education:** The policy anticipates the creation of a higher education system that encourages innovation, research, and interdisciplinary studies. It emphasises vocational education integration, flexible curricula, and student entrepreneurial encouragement.
- **Technology in Education:** The NEP 2020 acknowledges technology's revolutionary potential in education and encourages the use of digital materials, e-learning platforms, and online courses to improve learning results.
- **Inclusion and Equity:** The policy emphasises the importance of equitable opportunities and access to education for all, especially marginalised communities, girls, and disabled children. It strives to close the gender gap in education and promote social participation.

The NEP 2020 symbolises a dramatic transformation in India's education environment, emphasising learner-centric approaches, holistic development, and diversity. Its goal is to alter the educational system to meet the changing demands of 21st-century learners and to provide them with the skills and information necessary for personal and professional success.

Importance of Empowering Women Through Education

Education has long been recognised as a significant driver of women's empowerment, allowing them to break free from traditional gender roles, challenge cultural standards, and pursue their aspirations.

We empower women by giving them with the knowledge, skills, and opportunities to actively engage in social, economic, and political realms. Education enables women to be change agents, encouraging gender equality, economic independence, improved health outcomes, and more social and political participation. Women can use education to unlock their potential, overcome obstacles, and contribute to the improvement of not only their own lives, but also the lives of their families, communities, and societies at large.

- **Gender Equality:** Education is a fundamental human right that can be used to promote gender equality. We can break down obstacles that promote gender discrimination and empower women to actively engage in all sectors of society by ensuring that women have equal access to education. Women can use education to question established gender roles, pursue their dreams, and participate in social, economic, and political decision-making processes.
- **Economic Empowerment:** Education is important for women's economic empowerment. Women can improve their employment and earning potential by acquiring information, skills, and qualifications. Education provides women with the tools they need to enter a variety of industries, create their own enterprises, and obtain higher-paying jobs. Economically empowered women can help to reduce poverty, provide financial stability for themselves and their families, and contribute to general economic progress.
- **Women's Health and Well-Being:** Education has a direct impact on the health and well-being of women. Women who are more educated are more likely to make informed decisions about their reproductive health, seek healthcare, and live healthier lifestyles. They are also better prepared to protect themselves from gender-based abuse, child marriage, and other harmful practises. Education enables women to fight for their rights, make educated decisions, and live healthier lives.
- **Family and Community Development:** Women's education has a knock-on effect on the well-being and development of families and communities. When women are educated, their children are more likely to be educated, resulting in a positive cycle of intergenerational learning and development. Educated moms can offer their children with better nutrition, healthcare, and educational opportunities, ending the cycle of poverty and inequality.
- **Women's Political and Social Participation:** Education is a catalyst for women's political and social participation. It gives women the knowledge and skills they need to participate in civic activities, express their opinions, and contribute to policy-making processes. Women are empowered by education to challenge social norms and advocate for gender equality, resulting in constructive social change and the formation of inclusive and egalitarian societies.

- **Sustainable Development:** Educating women is critical to accomplishing sustainable development goals. Women who receive an education become active participants in environmental conservation, community development, and the promotion of environmentally sustainable practises. Women who are educated can help to mitigate climate change, provide food security, and promote long-term economic prosperity.

To summarise, educating women is critical to establishing a more just, equal, and affluent world. Education dismantles barriers, promotes gender equality, expands economic opportunities, improves health outcomes, and promotes social and political empowerment. We invest in the present and future well-being of individuals, families, communities, and nations by investing in women's education.

Gender Disparities in Education

Gender disparities in education refer to males and females having different access, opportunities, and outcomes in the educational system. Despite recent progress, major inequities persist in many parts of the world, particularly in developing countries. These discrepancies show in a variety of ways, with serious consequences for women's empowerment and general society development.

Access is a critical part of gender differences in schooling. Many girls and women confront difficulties that hinder them from enrolling in or continuing their education. Poverty, cultural norms, early marriage, distance to schools, and safety concerns all contribute to girls enrolling at a lesser rate than boys. Girls are more likely to be removed from school early in some situations, restricting their educational possibilities and perpetuating the cycle of gender inequity.

Furthermore, gender discrepancies in educational quality can be seen. Girls frequently experience prejudice in terms of educational resources, such as infrastructure, teaching materials, and skilled teachers. Gender biases in curricula and teaching methods can also promote preconceptions and hinder girls' educational experiences and goals. Gender differences in education have far-reaching repercussions. Women with fewer educational options are more likely to encounter economic disadvantages, limited employment opportunities, and reduced earning potential. They may also have less decision-making power, less access to healthcare and family planning, and are more vulnerable to gender-based violence. Furthermore, when educational possibilities are denied or limited for women, societies as a whole suffer from the loss of women's abilities, ideas, and contributions.

To address gender inequities in education, comprehensive methods that address both systemic and socio-cultural impediments are required. Policy interventions to assure equal access to education, programmes to promote girls' enrolment and

retention in schools, and the provision of safe and inclusive learning environments are all part of this. Gender norms and stereotypes must be challenged through curriculum revisions, teacher training, and community participation.

Scholarships, financial assistance, and tailored programmes can also help to remove financial barriers and enable girls and women to pursue an education.

Current Status of Gender Disparities in Education

While there has been progress in recent years, gender discrepancies in education exist in many parts of the world. The current state of gender inequality in education is as follows:

- **Disparities in Enrolment:** In many places, girls continue to enrol at a lesser rate than boys, notably in secondary and postsecondary education. Poverty, cultural norms, early marriage, and a lack of access to schools can all be blamed for gender differences in attendance.
- **Access to Quality Education:** Even when girls enrol in school, they frequently confront discrepancies in educational quality. Girls may have fewer resources, such as infrastructure, teaching materials, and qualified teachers. Inadequate sanitation and safety concerns can have a disproportionate impact on girls' access to education.
- **STEM Fields:** Gender discrepancies are especially noticeable in science, technology, engineering, and mathematics (STEM) fields. Girls and women are underrepresented in STEM fields in terms of enrolment and career options. Girls are discouraged from pursuing STEM education and careers due to societal assumptions and biases.
- **Literacy Rates:** Women continue to have lower literacy rates than men globally. According to UNESCO, around 17% of women over the age of 15 are still illiterate, exposing gender gaps in basic education and reading abilities.
- **Dropout Rates:** Girls are more likely than boys to drop out of school at various stages of their schooling, typically due to circumstances such as early marriage, pregnancy, home obligations, and a lack of support structures. Girls' educational options are limited and their long-term prospects are hampered by high dropout rates.
- **Education in Conflict Zones:** Girls confront additional impediments to education in conflict zones. Displacement, insecurity, violence, and cultural biases can all make it difficult for girls to get an education and put them at danger of exploitation and abuse.
- **Intersectionality:** Gender differences in schooling are exacerbated by overlapping factors such as socioeconomic position, disability, ethnicity, and geographic location. Girls from marginalised communities, rural locations, and

low-income families frequently experience many layers of prejudice and have limited access to decent education.

Addressing gender gaps necessitates a multifaceted approach that includes policy measures, targeted programmes, community participation, and gender-responsive curriculum and pedagogy. Education not only promotes gender equality but also contributes to social and economic growth since educated women are more likely to engage in the labour force, make informed decisions, and advocate for their rights.

Factors Contributing to Gender Disparities

Gender differences in schooling are caused by a number of variables. These factors may differ among countries and locations; however some common underlying causes are as follows:

- **Gender Stereotypes and Sociocultural Norms:** Gender stereotypes and sociocultural norms typically determine traditional gender roles and expectations. These norms, such as prioritising boys' education, assigning domestic tasks and caregiving responsibilities to girls, or viewing education as less valuable for girls, can all present hurdles to girls' education.
- **Economic Barriers:** Economic reasons can make it difficult for girls to get an education. Poverty and financial restraints can make it difficult for families to afford school-related expenses such as tuition, uniforms, transportation, and educational supplies. Due to expected future economic advantages, some families may prioritise investing in males' education above girls' education.
- **Pregnancy and Early Marriage:** Pregnancy and early marriage are significant impediments to girls' education. Girls are married off at an early age in many cultures, which often results in their departure from education. Adolescent pregnancy can also result in school dropout because females may experience social stigma, a lack of support structures, and limited educational possibilities after giving birth.
- **Geographic Constraints and Safety Concerns:** Geographic constraints and safety concerns can have a disproportionate impact on girls' access to education. Schools may be located distant from communities in some locations, making it difficult for girls to commute lengthy distances, especially if transportation choices are limited. Concerns about safety, such as harassment and assault, as well as inadequate infrastructure, such as a lack of separate sanitary facilities, can dissuade girls from attending school.
- **Dearth of Role Models and Support Systems:** A dearth of female role models in educational leadership positions, as well as a lack of supportive surroundings, can discourage females from obtaining an education. The lack of female

professors or mentors might have an impact on girls' aspirations and their belief in their own skills.

- **Gender Discrimination and Gender-Based Violence:** Gender discrimination and gender-based violence in educational contexts can harm girls' education. Harassment, bullying, and unequal treatment can all contribute to unfriendly circumstances that affect girls' self-esteem, well-being, and capacity to fully participate in their educational journey.
- **Inadequate Access to Menstruation Health Management:** Inadequate access to menstruation hygiene facilities, supplies, and information can have a detrimental influence on girls' school attendance and involvement. Menstruation stigma and a lack of proper facilities might lead to absenteeism and impede girls' educational advancement.

To address these contributing factors, a multimodal approach is required, including legislation changes, community engagement, awareness campaigns, and investment in gender-responsive education.

Strategies for Implementation

Governments must enact and enforce rules that promote gender equality in education. This includes creating gender-responsive curriculum frameworks, encouraging inclusive teaching practises, and ensuring females have equal opportunities and access to education.

- **Education Investment:** Adequate education investment, particularly in marginalised and poor groups, is critical for eliminating gender inequality. Increased funding might be focused towards infrastructure development, scholarships, teacher training programmes, and the implementation of girls' education initiatives.
- **Community Engagement:** It is critical to involve communities, particularly parents, community leaders, and local stakeholders, in shifting attitudes towards girls' education. Community-based activities, awareness campaigns, and discussions can assist in challenging gender stereotypes, overcoming cultural barriers, and increasing support for girls' education.
- **Empowering Girls and Women:** Programmes that empower girls and women via life skills education, leadership development, and vocational training can boost their self-esteem, capacities, and opportunities. Girls are better prepared to face problems and achieve their educational goals if they are given the necessary skills and knowledge.
- **Data Monitoring and Evaluation:** It is critical to establish effective monitoring and evaluation systems in order to track progress, identify gaps, and make informed policy decisions. Regular data collection and analysis on enrolment,

retention, and learning outcomes by gender can provide insights into intervention success and inspire evidence-based solutions.

- To address gender inequities in education, governments, educational institutions, civil society organisations, and communities must work together throughout time.

Conclusion

In conclusion, the National Education Policy (NEP) 2020 has enormous potential to empower women via education. The NEP 2020 may unlock the skills and aspirations of women by addressing gender disparities, promoting fair access, and fostering an inclusive learning environment, leading to their social, economic, and political empowerment. Women may contribute to the development of a more equitable and affluent society through expanded job options, leadership roles, and a gender-inclusive academic environment. To realise this potential, however, strong execution, coordinated efforts, and regular monitoring and assessment are required. We can pave the road for a brighter future where women thrive and contribute to the benefit of society as a whole by prioritising women's education and embracing the transformative force of the NEP 2020.

NGM College, Pollachi*

Abstract

The New Education Policy (NEP) introduced in (country) encompasses several salient features aimed at transforming the education system to meet the challenges of the 21st century. This abstract provides a brief overview of the key features of the NEP. The NEP emphasizes a holistic and multidisciplinary approach to education, promoting creativity, critical thinking, and overall development. It recognizes the importance of early childhood care and education, aiming to provide a strong foundation for children aged 3 to 6 years. The policy introduces a flexible curriculum framework that allows students to choose subjects based on their interests and aspirations. It encourages the integration of technology, vocational education, and skills development, recognizing their significance for employability and entrepreneurship. The NEP places emphasis on teacher training and professional development to ensure high-quality education delivery. It promotes multilingualism, valuing linguistic diversity and cultural understanding. The policy also aims to strengthen governance and the regulatory framework to ensure effective implementation and monitoring.

Keywords: *Vocational education, skills development, teacher training, professional development, inclusive education,*

Introduction

The education system plays a pivotal role in shaping the future of a nation. Recognizing the need for a transformative approach, the [country] government has introduced the New Education Policy (NEP) to revamp and modernize the education landscape. The NEP encompasses a range of salient features that aim to bring about significant changes in the way education is delivered, ensuring it aligns with the demands of the 21st century. Education policies are instrumental in shaping the trajectory of a nation's development, and the NEP reflects a comprehensive vision that addresses the evolving needs of students, teachers, and society as a whole. It seeks to create an inclusive, holistic, and learner-centric education system that fosters creativity, critical thinking, and skills necessary for success in an increasingly interconnected and dynamic world. The salient features of the NEP encompass various aspects of education, including curriculum design, teaching methodologies, technological integration, vocational training, teacher development, and governance. Each feature is carefully designed to address the shortcomings of

the existing system and pave the way for a more equitable, accessible, and quality education for all.

The NEP recognizes the importance of early childhood education and emphasizes the establishment of anganwadis and pre-schools to provide a strong foundation for young learners. It promotes a flexible curriculum framework that allows students to choose subjects based on their interests and aspirations, fostering multidisciplinary and holistic development. Furthermore, the NEP acknowledges the transformative potential of technology in education and aims to integrate it at all levels. It emphasizes the use of digital infrastructure, e-learning platforms, and digital content to enhance access, quality, and equity in education. The policy also places significant emphasis on vocational education and skills development, recognizing the importance of employability and entrepreneurship. In addition, the NEP emphasizes the critical role of teachers in shaping the education system. It highlights the need for rigorous teacher training programs, continuous professional development, and improved recruitment processes to ensure high-quality education delivery. The NEP also promotes multilingualism, aiming to preserve and promote the linguistic diversity of [country]. It recognizes the cognitive and cultural benefits of learning multiple languages and encourages their inclusion in the curriculum.

Overall, the salient features of the NEP reflect a comprehensive vision for the future of education in [country]. By embracing these features, the government aims to create an education system that is responsive, inclusive, and equipped to meet the challenges and opportunities of the 21st century. The NEP represents an important step towards building a knowledge-based society that nurtures talent, fosters innovation, and empowers individuals to contribute meaningfully to the nation's progress.

Salient Features of the New Education Policy

The New Education Policy (NEP) introduced in [year] aims to transform the education system in [country] and align it with the needs of the 21st century. The policy encompasses several salient features that are designed to bring about significant changes in the education landscape. Let's explore some of the key features of the NEP:

1. **Holistic and Multidisciplinary Education:** The NEP emphasizes a shift from a rote-based learning approach to a more holistic and multidisciplinary education system. It encourages the integration of arts, sports, and vocational skills into the curriculum to foster creativity, critical thinking, and overall development of students.
2. **Early Childhood Care and Education:** The policy recognizes the importance of early childhood education and aims to provide a strong foundation for children

aged 3 to 6 years. It emphasizes the establishment of anganwadis and pre-schools, ensuring access to quality early childhood care and education for every child.

3. **Flexible Curriculum and Choice-Based Learning:** The NEP promotes a flexible curriculum framework that allows students to choose subjects based on their interests and aspirations. It encourages a multidisciplinary approach, enabling students to explore various disciplines and develop a well-rounded understanding of different subjects.
4. **Technology Integration:** The policy recognizes the transformative potential of technology in education and emphasizes its integration at all levels. It aims to provide digital infrastructure, e-learning platforms, and digital content to enhance access, quality, and equity in education.
5. **Vocational Education and Skills Development:** The NEP places significant emphasis on vocational education and skills development, considering it essential for employability and entrepreneurship. It aims to integrate vocational training into mainstream education, offering multiple pathways for students to acquire skills and competencies required for various industries.
6. **Focus on Teacher Training and Professional Development:** The policy recognizes the critical role of teachers in shaping the education system. It emphasizes the need for rigorous teacher training programs, continuous professional development, and improved teacher recruitment processes to ensure high-quality education delivery.
7. **Promoting Multilingualism:** The NEP acknowledges the importance of preserving and promoting the rich linguistic diversity of [country]. It encourages the teaching and learning of multiple languages, including regional languages, as a means to enhance cognitive abilities and promote cultural understanding.
8. **Emphasis on Research and Innovation:** The policy aims to foster a culture of research and innovation in education. It encourages institutions to establish research centers, promote interdisciplinary research, and create an enabling environment for innovation and entrepreneurship among students.
9. **Strengthening Governance and Regulatory Framework:** The NEP focuses on the overhaul of the governance and regulatory framework of the education system. It aims to establish transparent, accountable, and efficient mechanisms for effective implementation, monitoring, and evaluation of education policies and programs.
10. **Inclusive and Equitable Education:** The policy emphasizes the need to ensure inclusive and equitable education for all, regardless of socio-economic background, gender, or disability. It aims to bridge the gaps in access, quality, and learning outcomes, providing equal opportunities for every learner. The New Education Policy in [country] represents a bold and comprehensive vision

for the future of education. By embracing these salient features, [country] aims to create a learner-centric and future-ready education system that equips students with the knowledge, skills, and values to thrive in a rapidly changing world.

Conclusion

The salient features of the New Education Policy (NEP) in [country] represent a significant step towards transforming the education system to meet the demands of the 21st century. By focusing on holistic and multidisciplinary education, early childhood care, flexible curriculum, technology integration, vocational training, teacher development, multilingualism, and inclusive education, the NEP aims to create an education system that is learner-centric, future-ready, and equitable. These features of the NEP recognize the importance of nurturing creativity, critical thinking, and skills necessary for success in a rapidly changing world. They emphasize the need to provide quality education from the early years, ensure access to technology, promote vocational skills, empower teachers, preserve linguistic diversity, and bridge the gaps in access and learning outcomes. The NEP represents a comprehensive vision for the future of education in [country], one that seeks to provide equal opportunities for all learners, regardless of their background or abilities. By embracing these features, the government aims to create an inclusive and empowering education system that equips students with the knowledge, skills, and values to thrive in the globalized world. However, the successful implementation of the NEP will require concerted efforts from all stakeholders, including the government, educators, parents, and society at large. It will require adequate investment, infrastructure development, capacity building, and a commitment to ensuring that the benefits of the NEP reach all corners of the country.

In conclusion, the salient features of the NEP reflect a transformative vision for the education system in [country]. By embracing these features, [country] can pave the way for a future where every learner has access to quality education, where creativity and critical thinking are nurtured, and where individuals are equipped with the skills and knowledge to contribute meaningfully to society. The NEP represents a significant opportunity to shape the future of [country] and build a strong foundation for its social, economic, and cultural development.

Abstract

Education is a cornerstone of societal development, and the effectiveness of a nation's education policy reforms can significantly influence student learning outcomes. This abstract provides an overview of the analysis conducted in the essay, exploring the multifaceted relationship between National Education Policy (NEP) reforms and student learning outcomes. The National Education Policy serves as a comprehensive framework that guides a nation's education system, encompassing curriculum, pedagogy, teacher training, assessment methods, and access to quality education. NEP reforms often aim to address educational challenges and adapt to evolving societal needs. This essay delves into the key components of NEP reforms, their implementation challenges, and their ultimate impact on student learning outcomes. Key components of NEP reforms include curriculum and pedagogical enhancements, teacher training and professional development, assessment and evaluation reforms, and efforts to expand access to quality education, especially for marginalized communities. These components, when effectively implemented, can foster critical thinking, enhance academic performance, reduce dropout rates, and increase students' global competitiveness and innovation capacity.

However, the successful implementation of NEP reforms is not without its challenges, including resource constraints, resistance to change, and bureaucratic inefficiencies. Furthermore, the time required for significant changes to manifest in student learning outcomes can be substantial, making it imperative to adopt a long-term perspective when assessing impact. In conclusion, the impact of National Education Policy reforms on student learning outcomes is a complex and multifaceted process. While challenges exist, including those related to implementation and timeframes, well-structured and sustained education policy reforms can contribute significantly to improving the quality of education and preparing students for the challenges of the future. Monitoring, evaluation, and adaptability of these reforms are essential to ensure they continue to positively influence student learning outcomes and, by extension, the overall development of a nation.

Introduction

Education, often regarded as the cornerstone of a nation's progress and development, is a powerful catalyst for societal growth. It is the conduit through which knowledge is imparted, skills are cultivated, and the potential of individuals and nations is unlocked. Consequently, the formulation and effective

implementation of education policies are of paramount importance. Within this framework, National Education Policy (NEP) reforms emerge as critical instruments in shaping the educational landscape of a country. This essay seeks to meticulously analyze the profound impact of such reforms on student learning outcomes. Through an in-depth exploration of the core components of educational policy reforms, their intricate implementation processes, and the subsequent transformations in student learning, we endeavor to gain a comprehensive understanding of the intricate and multifaceted relationship between policy modifications and educational outcomes. At its core, education is the lifeblood of progress, fostering a nation's intellectual capital and equipping its citizens with the tools to navigate an ever-evolving world. Effective education policies act as the blueprint for this transformational journey. They set the parameters for curriculum design, pedagogical methodologies, teacher training, assessment frameworks, and infrastructural development. In essence, they provide the overarching framework that guides educational institutions and practitioners. The significance of NEP reforms cannot be overstated, as they play a pivotal role in aligning education with the evolving needs of society, labor markets, and the broader global context.

Moreover, NEP reforms frequently place a strong emphasis on expanding access to quality education, particularly for marginalized communities. Inclusivity within the education system aims to address deep-rooted educational disparities and inequalities. By ensuring that a larger portion of the population has access to quality learning opportunities, these reforms contribute to improved student outcomes and, in the broader context, a more equitable and just society. However, it is crucial to acknowledge the inherent challenges associated with the implementation of NEP reforms. These challenges encompass resource constraints, resistance to change, bureaucratic inefficiencies, and the time required for substantive changes to materialize in student learning outcomes. It is imperative to recognize that the impact of educational policy reforms may not be immediate and can vary across different contexts and regions. Thus, National Education Policy reforms hold the potential to transform the educational landscape of a nation and have a lasting impact on student learning outcomes. These reforms are not mere administrative changes but represent a commitment to nurturing a generation of learners equipped with the skills, knowledge, and mindset to thrive in an increasingly complex world. As we move forward, a steadfast commitment to monitoring, evaluating, and adapting these reforms will be essential to ensure that they continue to positively influence student learning outcomes and contribute to the overall progress and development of a nation. The complex interplay between policy changes and educational outcomes underscores the need for a holistic and dynamic approach to education policy formulation and implementation.

The National Education Policy Reforms

The National Education Policy is a comprehensive framework that outlines a country's vision and strategy for its education system. It encompasses a wide range of aspects, including curriculum, pedagogy, assessment, teacher training, and infrastructure development. Effective NEP reforms aim to address various challenges within the education system and align it with the changing needs of society.

1. Curriculum and Pedagogy

The revision of curriculum and pedagogical methods represents a fundamental pillar of National Education Policy (NEP) reforms, and its implications for education are profound. This aspect of reform embodies the commitment to redefining the way students learn, moving away from traditional approaches towards a more dynamic and contemporary educational experience.¹

1. Holistic and Multidisciplinary Approach

NEP reforms recognize the limitations of traditional, siloed learning and advocate for a holistic and multidisciplinary approach to education. This means that students are encouraged to explore subjects beyond their core areas of interest or specialization. The curriculum is designed to offer a broader perspective, fostering a deeper understanding of interconnectedness in knowledge. This approach not only equips students with a more comprehensive education but also encourages them to think critically and analytically across various disciplines.

2. Fostering Critical Thinking

One of the primary objectives of NEP's emphasis on holistic and multidisciplinary learning is to foster critical thinking. Instead of memorizing facts and figures, students are challenged to question, analyze, and evaluate information. They are encouraged to develop a nuanced understanding of complex issues, to discern multiple perspectives, and to arrive at well-reasoned conclusions. Critical thinking is a skill that extends far beyond the classroom, benefiting individuals in their personal and professional lives.

3. Enhancing Problem-Solving Skills

NEP reforms also underscore the importance of problem-solving skills. By engaging students in real-world scenarios and practical applications of knowledge, they are better equipped to tackle challenges and find solutions. Problem-solving is a skill that is highly sought after in the modern workforce, and NEP aims to prepare students for a world where adaptability and innovation are key drivers of success.

4. Experiential Learning

Experiential learning is a cornerstone of NEP reforms. This approach encourages students to actively participate in their own learning processes. Through hands-on experiences, fieldwork, internships, and project-based learning, students gain a deeper understanding of concepts. Experiential learning not only enhances comprehension but also promotes long-term retention of knowledge. It connects theoretical learning to practical application, bridging the gap between academia and the real world.

5. Individualized Learning Paths

NEP recognizes that every student is unique and may have different learning styles and paces. Therefore, reforms often promote individualized learning paths, allowing students to explore subjects at their own speed and according to their interests. This personalized approach not only boosts motivation but also ensures that students grasp concepts thoroughly before progressing.

6. Technology Integration

In the digital age, technology integration is a vital component of NEP reforms. It enables interactive learning, access to a vast repository of information, and the use of multimedia resources to enhance understanding. Technology also facilitates self-paced learning and allows educators to track individual student progress more effectively.

7. Creative Expression

Alongside critical thinking and problem-solving, NEP reforms often prioritize creative expression. Students are encouraged to express themselves through art, music, literature, and other creative outlets. This fosters innovation, enhances emotional intelligence, and nurtures well-rounded individuals.

In conclusion, the revision of curriculum and pedagogical methods under the ambit of NEP reforms signifies a profound shift in the way education is conceptualized and delivered. By adopting a holistic and multidisciplinary approach, emphasizing critical thinking and problem-solving, promoting experiential learning, and embracing individualized and technology-enhanced education, NEP reforms aim to empower students with the skills and knowledge needed to thrive in the complex and ever-evolving landscape of the twenty-first century. This transformation in education not only benefits students but also positions nations for greater innovation, competitiveness, and societal progress.

2. Teacher Training and Professional Development

The National Education Policy (NEP) consistently underscores the significance of teacher training and professional development as a cornerstone of educational reform.

The central premise is that well-trained educators play an instrumental role in shaping the quality of education, and investing in their development is pivotal for enhancing classroom experiences and, by extension, improving learning outcomes.

1. Pedagogical Advancement

NEP reforms prioritize equipping teachers with advanced pedagogical techniques and strategies. Educators undergo training that goes beyond conventional teaching methods, enabling them to employ modern and innovative approaches in the classroom. This might involve techniques such as active learning, cooperative learning, flipped classrooms, and technology integration. By staying current with these methodologies, teachers can create dynamic and engaging learning environments that cater to diverse learning styles and needs.

2. Content Mastery

Continuous professional development ensures that teachers are up-to-date with the latest subject matter content and educational standards. Well-informed educators are better positioned to impart accurate and relevant knowledge to their students. Their deep understanding of the subjects they teach is crucial for fostering a comprehensive understanding among students.

3. Inclusive Teaching Practices

Teacher training within NEP reforms often includes guidance on inclusive teaching practices. Educators learn to accommodate diverse learners, including students with disabilities or special needs, and tailor their instruction to create an inclusive and equitable classroom. This approach not only benefits marginalized students but also enhances the overall learning experience for all students.

4. Effective Classroom Management

NEP recognizes the importance of classroom management skills. Teachers are trained in creating a positive classroom environment that minimizes disruptions and maximizes learning. Effective classroom management contributes to a focused and conducive atmosphere for learning.

5. Assessment and Feedback

Training programs often focus on assessment techniques and providing constructive feedback to students. Teachers learn to design assessments that align with learning objectives and evaluate student progress accurately. Timely and informative feedback helps students understand their strengths and areas for improvement, facilitating their academic growth.

6. Adaptation to Changing Needs

In an era of rapidly evolving educational methodologies and technologies, NEP's emphasis on teacher training ensures that educators remain adaptable and open to change. They can readily incorporate new tools and methods into their teaching practices to keep pace with shifting educational paradigms.

7. Mentorship and Collaboration

Professional development programs may include mentorship opportunities and collaborative networks among teachers. Experienced educators can provide guidance to novices, and collaborative initiatives foster the sharing of best practices and innovative teaching approaches. This synergy among teachers elevates the overall quality of education within a school or educational institution.

8. Teacher Well-being

NEP reforms also recognize the importance of teacher well-being. Burnout and stress can affect teaching quality. As such, some reforms include measures to improve teachers' work-life balance, mental health, and job satisfaction, which indirectly contribute to better classroom experiences and student outcomes.

Investing in the training and professional development of teachers is not merely an expenditure; it is an investment in the future of a nation. Well-trained and motivated educators have the capacity to create inspiring learning environments, nurture students' intellectual curiosity, and equip them with the skills needed to excel in an increasingly complex and interconnected world. Ultimately, the success of NEP reforms hinges significantly on the dedication and expertise of the teaching workforce, making teacher training a critical component in the pursuit of better learning outcomes and the overall advancement of education systems.

3. Assessment and Evaluation

Reforming assessment methods is undeniably another pivotal component of National Education Policy (NEP) reforms, and its implications reverberate throughout the educational landscape. The departure from traditional rote memorization-based assessments toward competency-based evaluation systems is emblematic of a significant shift in how students' knowledge and skills are assessed. This transformation holds the potential to create a more equitable and constructive learning environment while facilitating a more precise evaluation of students' true understanding. The move from rote memorization to competency-based assessment marks a departure from the rote learning paradigm that often dominated education systems. Instead of focusing solely on students' abilities to regurgitate facts and figures, competency-based assessments gauge their capacity to apply knowledge, think critically, solve problems, and demonstrate practical skills. This shift acknowledges that education should not be a mere exercise in memorization but rather a journey towards mastery and practical application of knowledge, which is essential in preparing students for the challenges of the real world.

4. Access to Quality Education

The focal point of National Education Policy (NEP) reforms often centers on the imperative task of broadening access to quality education, with particular attention to historically marginalized and underserved communities. This commitment to inclusivity represents a cornerstone of educational transformation, as it addresses entrenched educational disparities and holds the potential to substantially enhance student outcomes. By extending quality learning opportunities to a more extensive cross-section of the population, NEP reforms pave the way for a more equitable and promising educational landscape. Historically, educational disparities have been pervasive, with marginalized communities bearing the brunt of unequal access and opportunity. NEP reforms acknowledge the moral and societal imperatives of rectifying these disparities by creating pathways for educational inclusion. In doing so, they seek to dismantle barriers that have long hindered educational access and achievement among marginalized groups, including lower-income families, rural populations, ethnic minorities, and individuals with disabilities.

Implementation Challenges

While NEP reforms hold great potential, their successful implementation can be challenging. Several factors, such as resource constraints, resistance to change, and bureaucratic inefficiencies, can impede the translation of policy into practice. Additionally, the time required for substantial changes to manifest in student learning outcomes can be lengthy, making it difficult to gauge immediate impact.

Impact on Student Learning Outcomes

The impact of NEP reforms on student learning outcomes is multifaceted and may not be immediately evident. However, over time, these reforms can contribute positively in the following ways:

1. Enhanced Critical Thinking

Reforms in curriculum and pedagogy can lead to improved critical thinking skills among students. A focus on problem-solving and creativity can better prepare students for real-world challenges.

2. Improved Academic Performance

Competency-based assessments and reduced reliance on rote memorization can lead to improved academic performance. Students may exhibit a deeper understanding of subjects and better retention of knowledge.

3. Reduction in Dropout Rates

Inclusive policies can reduce dropout rates, ensuring that more students complete their education. This not only enhances their learning outcomes but also has positive social and economic implications.

4. Global Competitiveness

NEP reforms that emphasize a global perspective can help students become more competitive in the international arena. Exposure to diverse cultures and ideas can broaden their horizons.

5. Increased Innovation

A focus on research and innovation can be a result of NEP reforms. Students exposed to these aspects are more likely to contribute to scientific and technological advancements.

Conclusion

National Education Policy (NEP) reforms stand as pivotal drivers in the transformative journey of a nation's educational landscape, bearing profound implications for the future by elevating the quality of education and enhancing student learning outcomes. These reforms represent a visionary commitment to shaping not just the present but also the trajectory of a nation's progress. The impact of NEP reforms, while profound, may not manifest instantaneously. This is a testament to the complexity of the educational ecosystem, where changes in policy must translate into tangible shifts in classroom practices, pedagogy, and student performance. The path from policy formulation to the realization of outcomes is laden with challenges, and navigating these hurdles necessitates unwavering dedication and perseverance. Resource allocation poses a substantial challenge. Implementing comprehensive reforms often requires substantial financial investments. These resources must cover curriculum development, teacher training, infrastructure upgrades, technology integration, and more. In resource-constrained environments, securing funding for these critical initiatives can be a formidable task.

Resistance to change is another formidable obstacle. Education systems are often characterized by deeply entrenched traditions and practices. Convincing educators, administrators, and stakeholders to embrace new paradigms and methodologies can be met with skepticism and apprehension. Addressing this resistance through effective communication, professional development, and showcasing the benefits of reforms is a multifaceted endeavor. Bureaucratic inefficiencies within educational systems can impede the swift and efficient implementation of reforms. Administrative procedures, approvals, and coordination across various levels of the education system can introduce delays and complications. Streamlining these processes is essential to expedite the execution of reform initiatives. Furthermore, realizing the full impact of NEP reforms can be a protracted journey. Substantial changes in educational practices often require years, if not decades, to bear fruit in terms of improved student learning outcomes. This extended timeline underscores the need for a patient and sustained commitment to reform efforts.

Abstract

This abstract provides a concise overview of the essay titled "Crisis Response and Resilience Building in National Education Policy." The essay explores the significance of integrating crisis response and resilience-building strategies into national education policies, highlighting their importance and implications. In recent years, the global education landscape has been profoundly affected by crises such as the COVID-19 pandemic. These crises have exposed vulnerabilities in education systems worldwide, emphasizing the need for proactive measures in national education policies. Crisis response within education policy ensures the continuity of education during emergencies, prioritizes equity and inclusion, and addresses the mental health and well-being of students and educators. Resilience-building measures encompass flexible curriculum design, teacher training, digital infrastructure, and data-driven decision-making. Implementing these policies presents challenges such as resource allocation, stakeholder collaboration, and long-term planning. However, the benefits of a resilient education system far outweigh these challenges, as it not only enables effective crisis response but also ensures a more adaptable, equitable, and sustainable educational future. National education policies that emphasize crisis response and resilience building are fundamental in shaping resilient societies.

Keywords: Education Policy, Crisis Response, Resilience Building, National Education, Education System

Introduction

Education serves as the bedrock of societal advancement, playing an indispensable role in shaping the future of nations. A steadfast and adaptable education system stands as an essential linchpin for a country's forward momentum. In the contemporary landscape, our world has been beset by a plethora of crises, with the global COVID-19 pandemic notably exposing the fragilities inherent in education systems across the globe. This vulnerability underscores the imperative for nations to not only react effectively to crises but also to proactively fortify their education policies to withstand unforeseen challenges. This essay delves into the paramount importance of crisis response and resilience building within the framework of national education policies, elucidating pivotal strategies and the far-reaching consequences they entail. The significance of crisis response and resilience building in education policy is multifaceted. Firstly, a well-structured crisis response

mechanism is indispensable for mitigating the immediate impacts of unforeseen events on education. The COVID-19 pandemic, for instance, disrupted traditional learning environments, necessitating rapid adaptation to remote and online learning. An effective crisis response, in this context, involves swift deployment of digital infrastructure, equitable access to technology, and training for educators and students alike. This agile response not only ensures that education persists during the crisis but also equips students and educators with essential digital skills for the future.

The implications of robust crisis response and resilience building in education policy are profound. Firstly, it enhances a nation's human capital, ensuring that students continue to acquire knowledge and skills even in the face of adversity. This, in turn, bolsters the nation's economic productivity and competitiveness in the global arena. Secondly, it nurtures a culture of adaptability and innovation within education. When systems are flexible and prepared for change, they are more likely to embrace new technologies and pedagogical approaches. This adaptability not only benefits students but also fosters a forward-thinking society that can thrive in an ever-evolving world. Lastly, investing in crisis response and resilience building in education policy engenders social cohesion and stability. A well-educated populace, equipped to face challenges head-on, is more likely to contribute positively to the development and progress of their nation. This, in turn, reduces the potential for social unrest and upheaval during times of crisis. Thus, the importance of crisis response and resilience building in national education policies cannot be overstated. A robust education system that can withstand and adapt to unforeseen challenges is pivotal for societal development and progress. By prioritizing swift and effective crisis responses, proactive measures, inclusivity, and collaboration, nations can ensure that their education systems not only survive but thrive in the face of adversity, ultimately securing a brighter future for their citizens and the nation as a whole.

The Importance of Crisis Response in Education Policy

1. Safeguarding Uninterrupted Education

Establishing a well-structured crisis response mechanism within the realm of education policy stands as a paramount safeguard to ensure the continuous flow of education during times of unforeseen emergencies. One striking example is the global onslaught of the COVID-19 pandemic, which triggered the widespread closure of schools, disrupting traditional modes of teaching and learning. In response, education policies worldwide underwent a transformation, accentuating the critical necessity of adapting swiftly and effectively to unanticipated challenges.

Such adaptations underscore the need for versatile educational strategies that can pivot seamlessly between conventional classroom instruction and remote or online learning formats. The pandemic's impact on education revealed that having a resilient system that can swiftly transition between these modalities is indispensable to maintain educational continuity in the face of crises.

2. Promoting Equity and Inclusivity

Crisis response strategies imprinted in education policies must place a profound emphasis on equity and inclusion, guaranteeing that all students, regardless of their socioeconomic backgrounds or physical abilities, have unfettered access to quality education. The advent of the pandemic highlighted stark disparities in access to technology and learning resources, further magnifying educational inequalities. Consequently, education policies must encompass targeted initiatives to bridge the digital divide, ensuring that marginalized communities are not left behind.

Initiatives may include the distribution of digital devices, subsidizing internet access, and developing educational content that is accessible to diverse learners, including those with disabilities. In doing so, education policies can function as instruments of social justice, rendering education a genuinely equitable and inclusive force in society.

3. Holistic Approach to Mental Health and Well-being

In the face of crises, education policies should extend their reach beyond traditional academic pursuits to encompass comprehensive support for the mental health and well-being of students, educators, and staff. Crises like the COVID-19 pandemic have inflicted substantial emotional distress, elevating the need for a holistic approach to education that integrates emotional and psychological well-being into its core.

Mental health support embedded within education policies might involve the provision of counseling services, stress management programs, and resilience-building initiatives. Acknowledging and addressing the emotional toll of crises ensures that the education system not only nurtures the cognitive development of learners but also supports their emotional growth and stability. This, in turn, equips students and educators with the tools necessary to confront adversity and build emotional resilience. In essence, the integration of these facets into education policies not only enhances the system's resilience in times of crisis but also signifies a profound commitment to the well-being and equitable advancement of all individuals within the educational ecosystem. By addressing these crucial dimensions, education policies become potent instruments for fostering inclusive, adaptive, and emotionally supportive learning environments that can withstand the most formidable challenges.

Resilience Building in National Education Policy

1. Adaptive Curriculum and Versatile Pedagogy

Embedding resilience within education policy necessitates the cultivation of a curriculum and pedagogical framework that exhibit adaptability in the face of diverse circumstances. This entails the creation of a dynamic educational landscape that offers a spectrum of learning options, encompassing in-person, online, and blended formats. This versatility caters to the myriad learning needs of students and empowers educators to navigate unexpected disruptions with agility.

Moreover, fostering curriculum adaptability implies the capacity to swiftly reconfigure learning objectives and materials to suit the exigencies of the moment. It also involves encouraging innovative teaching methods that harness the potential of emerging technologies, thus fortifying the education system's ability to endure and evolve.

2. Empowering Educators Through Training and Development

The bedrock of educational resilience lies in investing comprehensively in teacher training and ongoing professional development. Educators serve as the linchpin of any resilient education system, and they must be equipped with the requisite skills and knowledge to navigate crises effectively. Therefore, education policies should prioritize programs that empower teachers to deliver quality education even under the most challenging conditions.

Such initiatives encompass disaster preparedness training, digital proficiency workshops, and pedagogical retooling to adapt to changing learning environments. By bolstering the capabilities of educators, education policies ensure that the transmission of knowledge remains steadfast, irrespective of the adversities faced.

3. Robust Digital Infrastructure

A hallmark of resilient education systems is the establishment of a sturdy and comprehensive digital infrastructure. This extends beyond merely providing access to technology; it encompasses the assurance of its reliability, security, and accessibility, especially during crises. Education policies must address the digital divide by ensuring that every student has equitable access to digital tools and a reliable internet connection.

Furthermore, an emphasis should be placed on safeguarding data privacy and security to maintain the integrity of the learning environment. The digital infrastructure should be scalable and adaptable, allowing seamless transitions between in-person and online learning modes as the situation demands.

4. Informed Decision-Making through Data Analysis

A fundamental aspect of resilience building within education policy is the incorporation of data-driven decision-making mechanisms. Education policies should institute systems for the collection, analysis, and interpretation of data to assess the impact of crises on educational outcomes. This enables policymakers to make informed decisions and tailor strategies to mitigate the adverse effects of disruptions.

Data-driven insights can highlight areas that require immediate attention, such as identifying students in need of additional support, assessing the efficacy of remote learning initiatives, and evaluating the long-term consequences of crises on educational attainment. Education policies should thus prioritize the establishment of data infrastructure and analytics capabilities to foster a proactive response to challenges.

In summary, a resilient education system is one that embraces adaptability, equips educators with the tools to excel in adversity, ensures reliable digital infrastructure, and leverages data-driven insights to make informed decisions. By addressing these facets comprehensively within education policies, nations can fortify their educational ecosystems to withstand crises while continuing to provide quality education to all learners.

Implications and Challenges

1. Strategic Resource Allocation

The implementation of crisis response and resilience-building measures within the realm of education necessitates strategic resource allocation. Governments must recognize the paramount importance of education funding and accord it a position of high priority in their fiscal agendas. The successful execution of these policies hinges upon a robust financial foundation that can support diverse initiatives aimed at fortifying the education system against unforeseen challenges.

This financial commitment extends beyond short-term fixes and involves sustained investments in areas such as infrastructure development, technology integration, teacher training, and support for marginalized communities. It is imperative to view education funding not as an expenditure but as a strategic investment in a nation's future.

2. Synergistic Stakeholder Collaboration

Effective crisis response and resilience building require harmonious collaboration among a plethora of stakeholders. Government bodies, educational institutions, parents, and communities all play pivotal roles in the education ecosystem, and their cooperation is indispensable for the success of policy initiatives. Achieving

consensus among these diverse groups can indeed be challenging, given varying priorities and perspectives. However, education policies must prioritize the cultivation of a collaborative culture that fosters open communication and mutual understanding.

Collaboration can encompass various aspects, from jointly developing crisis response plans to co-creating policies that address the unique needs of different regions or communities. It also involves fostering engagement with parents and communities to ensure their voices are heard and their concerns addressed. In doing so, education policies become more responsive, inclusive, and capable of drawing upon the collective wisdom of stakeholders.

3. Sustainable Long-Term Planning

Resilience-building within education policies demands a forward-looking perspective that transcends immediate crisis response. Policymakers should adopt a strategic, long-term planning horizon, considering not only the short-term measures to navigate crises but also the sustainability of resilience-building endeavors. This approach necessitates a commitment to adaptability, as education policies must evolve in response to changing circumstances.

Forward-thinking policies can encompass initiatives such as the establishment of contingency funds for education, which can be mobilized during crises, as well as the integration of resilience as a core principle in curriculum design. Moreover, sustainability entails not only mitigating the immediate effects of crises but also addressing their long-term implications, such as the potential learning gaps or socio-emotional challenges that may arise. Education policies must, therefore, embrace flexibility, continuous evaluation, and the capacity to adjust strategies over time to ensure a resilient educational future.

In summary, the effective implementation of crisis response and resilience-building measures within education policies necessitates strategic resource allocation, synergistic stakeholder collaboration, and sustainable long-term planning. These components together form the bedrock upon which education systems can not only endure unforeseen challenges but also emerge stronger, more adaptable, and better equipped to provide quality education for all.

Conclusion

In an ever-evolving world fraught with unforeseen challenges, the imperatives of crisis response and resilience building within national education policies have taken center stage. These policies, far from being mere contingencies, stand as the pillars that ensure the seamless flow of education during times of upheaval. Furthermore, they serve as catalysts for creating education systems that are not only robust but also equitable and adaptable. By placing a strong emphasis on flexibility, inclusivity,

and the well-being of both students and educators, nations can fortify their educational landscapes to withstand the unpredictable shocks of the future, thus playing a pivotal role in the advancement of society. In essence, a resilient education system transcends being just a reaction to crises; it is an unwavering commitment to a brighter, more steadfast, and ultimately more prosperous future. In a world where change is the only constant, the ability of education systems to navigate unpredictable terrain is vital. Crisis response measures within national education policies stand as a bulwark against the disruptions that can emanate from various sources – pandemics, natural disasters, economic crises, and more. They are the mechanisms that ensure that learning continues even when the world around us is in flux.

Resilience in education policies goes hand in hand with equity. In the face of crises, marginalized communities often bear the brunt of the impact. Policies that prioritize inclusivity and equitable access to educational resources, irrespective of socioeconomic backgrounds or physical abilities, not only ensure that no one is left behind but also create a more resilient and cohesive society. The well-being of students and educators is paramount. Crises can take a toll on mental and emotional health, and education policies that recognize this aspect are not only responsive but compassionate. By integrating support for mental health, stress management, and emotional well-being into the educational fabric, these policies enable students and educators to confront adversity with resilience. Flexibility is the cornerstone of resilience. Education policies that encourage innovation in curriculum design and pedagogical approaches ensure that education remains dynamic and responsive to changing circumstances. This adaptability not only ensures the continuity of education during crises but also equips students with the skills and mindset needed to thrive in a rapidly evolving world.

Abstract

This abstract provides a concise overview of the essay titled "Early Childhood Education and National Education Policy: Building a Strong Foundation." The essay explores the vital role of early childhood education (ECE) in shaping a nation's future and its alignment with the objectives of national education policies. It also discusses the significance of ECE in cognitive, social, and emotional development, reducing educational inequalities, and fostering long-term benefits. The abstract highlights how national education policies can support ECE through an inclusive approach, quality assurance, professional development, parental involvement, and research and innovation. Additionally, it emphasizes the essential components for building a strong foundation in ECE, including the role of quality teachers, curriculum, safe environments, parental engagement, and assessment and evaluation. In conclusion, the abstract underscores the critical importance of ECE as a cornerstone of educational success and social development, calling for policy recognition and investment in this crucial phase of learning.

Keywords: *Early Childhood Education, National Education Policy, Strong Foundation,, Cognitive Development, Inclusive Approach*

Introduction

Early childhood education (ECE) stands as a cornerstone in the construction of a nation's future. During the initial years of a child's life, typically spanning from birth to around eight years old, a remarkable and formative period of growth unfolds, encompassing essential dimensions of cognitive, social, and emotional development. It is within this critical span of early childhood that the blueprint for a child's lifelong learning journey begins to take shape. Recognizing the profound significance of early childhood education, governments and educational authorities worldwide have increasingly acknowledged its pivotal role and begun to prioritize substantial investments in this crucial stage of human development. The rationale behind this prioritization is rooted in a profound understanding of how the early years serve as the foundation upon which a child's future growth and potential are built. Cognitive development, characterized by the acquisition of knowledge, reasoning abilities, and problem-solving skills, takes its initial strides during this period. A child's brain is a

dynamic and highly receptive entity during these early years, making it a fertile ground for absorbing a wealth of information and skills.

However, early childhood education extends beyond cognitive development alone. It forms a comprehensive platform for nurturing a child's social and emotional aptitude, two facets of human development that are indispensable for thriving in the complexities of the modern world. Through interactions with peers, caregivers, and educators, children learn essential social skills like cooperation, empathy, and conflict resolution. Simultaneously, they develop emotional intelligence, gaining the ability to recognize and manage their feelings, a skillset crucial for establishing healthy relationships and emotional well-being throughout life. In addition to the individual benefits, early childhood education holds the promise of reducing educational disparities and societal inequalities. By providing all children, regardless of their socio-economic background, ethnicity, or geographic location, with access to high-quality ECE, nations can ensure a more level playing field. This investment contributes significantly to the broader goal of achieving social equity, where every child, irrespective of their circumstances, has an equitable opportunity to succeed.

Furthermore, research has consistently demonstrated the long-term advantages of early childhood education. Children who receive a strong foundation in their early years are statistically more likely to perform better in school, graduate from high school, and pursue higher education. The benefits extend far beyond academia, as these individuals tend to exhibit improved social and emotional well-being, better economic prospects, and an increased likelihood of contributing positively to their communities and societies at large. In the context of national education policy, the alignment between ECE and policy objectives is of paramount importance. National education policies serve as a guiding compass for a country's educational system, shaping its goals, standards, allocation of resources, and curriculum development. Recognizing the pivotal role of early childhood education, modern education policies increasingly emphasize its integration into the broader educational framework.

National education policies can promote the importance of ECE through various means:

1. Inclusive Approach

Policies can ensure that early childhood education is accessible to all children, addressing issues of affordability and geographical disparities. Initiatives such as subsidies, free preschool programs, or incentives for private providers to offer affordable ECE can be integrated.

2. Quality Assurance

To maintain and enhance the overall quality of ECE programs, national policies can establish clear and rigorous standards. These standards may encompass

teacher qualifications, curriculum guidelines, safety regulations, and stringent monitoring and evaluation mechanisms.

3. Professional Development

Recognizing that the quality of early childhood education depends significantly on the competence of its educators, national policies can prioritize the professional development of ECE teachers. This can be achieved through comprehensive training programs, certifications, and competitive compensation packages to attract and retain a skilled workforce.

4. Parental Involvement

Successful ECE relies on the active engagement of parents and caregivers in their child's educational journey. National policies can encourage parental involvement by promoting parenting classes, providing resources, and fostering partnerships between ECE centers and families to create a supportive and enriching learning environment at home.

5. Research and Innovation

To remain adaptive and effective, national education policies should support ongoing research in the field of early childhood education. This research ensures that policies remain informed by best practices and incorporate emerging trends in pedagogy, technology, and child development.

Thus, early childhood education's role in building a strong foundation for a nation's educational success and societal well-being cannot be overstated. The early years serve as the bedrock upon which a child's educational journey is built, encompassing cognitive, social, and emotional development. Recognizing this, national education policies worldwide have begun to prioritize and invest in ECE, recognizing its significance in achieving long-term educational and societal objectives. By aligning educational policies with the imperatives of early childhood education, nations can nurture a generation of well-rounded, capable individuals who will not only succeed academically but also contribute positively to the social and economic fabric of their societies.

The Significance of Early Childhood Education

1. Cognitive Development

During the early childhood years, typically spanning from birth to around eight years old, children's brains are in a phase of rapid development. This period is often referred to as the "sensitive period" for cognitive growth, during which their brains exhibit remarkable plasticity. Quality early education programs are designed to leverage this heightened receptiveness to learning. Through engaging and developmentally appropriate activities, these programs provide children with stimulating environments where they can explore, experiment, and

discover. This hands-on learning not only sparks curiosity but also fosters crucial cognitive skills such as critical thinking, problem-solving, and decision-making. Moreover, early education programs introduce children to the foundations of literacy and numeracy, equipping them with language skills, basic mathematical concepts, and the ability to express their thoughts and ideas effectively. These early cognitive experiences lay the groundwork for a lifetime of academic achievement and intellectual growth.

2. Social and Emotional Development

Early childhood education plays a pivotal role in promoting socialization and nurturing emotional intelligence. Within the context of a structured yet supportive environment, children learn how to navigate social interactions, develop relationships, and work collaboratively with their peers. Through play, group activities, and guided discussions, they acquire essential social skills such as communication, cooperation, sharing, and conflict resolution. Additionally, early childhood educators, often trained in child psychology and development, help children understand and manage their emotions. This includes recognizing and labeling feelings, learning appropriate ways to express them, and building resilience in the face of challenges. The cultivation of empathy and self-awareness is another critical dimension of social and emotional development nurtured through ECE. These skills are foundational to building healthy relationships, fostering teamwork, and contributing positively to one's community and society at large.

3. Reducing Inequalities

One of the most compelling arguments for investing in early childhood education is its potential to bridge the gaps in educational outcomes and societal opportunities. Children from disadvantaged backgrounds often face a multitude of challenges that can hinder their educational progress. These challenges may include limited access to quality preschool programs, lack of exposure to enriching experiences, and inadequate support for their developmental needs. Investing in ECE can mitigate these disparities by offering a level playing field for all children, regardless of their socio-economic circumstances. Publicly funded or subsidized ECE programs ensure that even economically disadvantaged families can access high-quality early education. This early intervention not only narrows the achievement gap but also breaks the cycle of poverty by providing children with a strong foundation for future success. By addressing inequalities in the early years, societies can cultivate a more equitable and inclusive educational system, fostering greater opportunities for all.

4. Long-term Benefits

The impact of a strong early education foundation reverberates throughout a child's academic journey and beyond. Numerous studies have consistently demonstrated the long-term benefits of quality early childhood education. Children who participate in such programs are more likely to perform better in school, as they enter formal education with enhanced cognitive and social skills. This advantage persists throughout their educational trajectory, increasing their likelihood of graduating from high school and pursuing higher education. Additionally, individuals who have received a robust early education are more equipped to face the challenges of adulthood, including securing gainful employment, making informed life choices, and participating actively in civic and community life. By providing children with a solid educational footing, early childhood education not only prepares them for academic success but also empowers them to lead fulfilling and productive lives, ultimately contributing to the betterment of society as a whole.

National Education Policy's Role in Early Childhood Education

National education policies serve as a blueprint for a country's education system. They set goals and standards, allocate resources, and guide curriculum development. In recent years, many countries have recognized the importance of early childhood education in achieving long-term educational and societal goals. Here are some key aspects of how national education policies can support ECE:

1. Inclusive Approach

To ensure equitable access to early childhood education, national policies should adopt a multifaceted and inclusive approach. This approach involves addressing barriers that may hinder children from various backgrounds from participating in ECE programs. One strategy is the provision of subsidies or financial assistance to families, particularly those with limited financial resources. This financial support can make ECE more affordable for parents and reduce economic barriers to participation. Additionally, national policies can introduce initiatives such as free preschool programs, especially for children from disadvantaged backgrounds. These programs not only enhance accessibility but also ensure that all children have the opportunity to benefit from quality ECE. To further encourage participation, policies may offer incentives to private ECE providers to offer affordable and accessible programs in underserved areas, thereby expanding the reach of ECE services.

2. Quality Assurance

National education policies play a pivotal role in maintaining and enhancing the quality of early childhood education programs. They can establish comprehensive quality standards that cover various aspects of ECE, including teacher qualifications, curriculum guidelines, safety regulations, and facility standards. These standards serve as benchmarks that ECE providers, whether public or private, must meet to ensure that children receive a high-quality educational experience. Furthermore, national policies can institute monitoring and evaluation mechanisms to continually assess and improve program quality. Regular inspections, teacher assessments, and feedback from parents and caregivers can all contribute to the ongoing enhancement of ECE program quality. By upholding stringent quality assurance measures, national policies safeguard the educational experiences of young learners.

3. Professional Development

Recognizing that the quality of early childhood education largely depends on the competence and dedication of educators, national policies should prioritize the professional development of early childhood educators. Policymakers can design and implement training programs that equip ECE teachers with the knowledge and skills necessary to create engaging and effective learning environments. These programs may encompass areas such as child development, pedagogy, and classroom management. Certification requirements can also be put in place to ensure that ECE teachers meet specific qualifications and standards. Moreover, national policies can address the issue of competitive compensation for ECE professionals. Adequate salaries and benefits are essential to attract and retain a skilled and motivated workforce in the field of early childhood education. By investing in the professional development of ECE educators, policies contribute to the delivery of high-quality ECE services.

4. Parental Involvement

National education policies can actively promote and facilitate parental involvement in their children's early education. This can be achieved through various strategies. Policies may encourage ECE centers to organize regular meetings and workshops for parents, where they can learn about the curriculum, teaching methods, and strategies for supporting their child's learning journey at home. Additionally, policies can allocate resources to create and distribute educational materials and resources for parents, providing guidance on how to engage with their children in meaningful ways. Collaborative partnerships between ECE centers and parents can be fostered, allowing parents to play an active role in their child's education.

National policies can also emphasize the importance of parent-teacher communication, encouraging regular dialogues and feedback exchanges to ensure a supportive learning environment both in and out of the classroom.

5. Research and Innovation

To keep early childhood education responsive to evolving educational needs and best practices, national education policies should prioritize research and innovation within the field. Policies can allocate funding and resources to support research initiatives focused on ECE, encouraging educators and researchers to explore effective teaching methods, child development theories, and emerging trends. Furthermore, policies can facilitate the integration of innovative teaching approaches and technology into ECE programs. This includes promoting the use of educational technology that enhances learning experiences, such as interactive apps and multimedia resources. By fostering a culture of research and innovation, national policies enable ECE programs to adapt and evolve, ensuring that they remain at the forefront of early childhood education practices and methodologies. This adaptability, in turn, benefits children by providing them with cutting-edge educational experiences that align with the demands of the modern world.

Building a Strong Foundation

To build a strong foundation through early childhood education, it is essential to consider various components:

1. Quality Teachers

The significance of well-trained early childhood educators cannot be overstated. ECE teachers serve as the cornerstone of the learning experience for young children. National policies must prioritize the recruitment and retention of highly qualified ECE teachers who possess a deep understanding of child development, pedagogical expertise, and a compassionate demeanor. These educators should be equipped with the knowledge and skills to create a nurturing and supportive learning environment. Their ability to establish strong relationships with young learners fosters trust, security, and a sense of belonging, which are vital for children's development. Furthermore, quality ECE teachers are adept at individualizing instruction, adapting teaching strategies to meet the diverse needs of each child, and offering meaningful guidance and support. National policies should invest in the continuous professional development of ECE teachers, ensuring they stay updated with the latest research and best practices in early childhood education. Competitive compensation and incentives can attract and retain dedicated professionals who play an indispensable role in shaping the trajectory of children's lives.

2. Curriculum

An effective ECE curriculum should be thoughtfully designed to cater to the developmental needs and capabilities of young children. National policies should advocate for developmentally appropriate curricula that prioritize play-based learning. Play is the primary mode through which young children explore the world, develop their creativity, and build essential cognitive and social skills. A well-structured ECE curriculum also places a strong emphasis on socialization, fostering interactions and collaboration among peers. It should strike a balance between promoting basic skills like literacy and numeracy and encouraging critical thinking, problem-solving, and creativity. Curricular guidelines should reflect the importance of creating a flexible and responsive learning environment that accommodates individual learning styles and paces. National policies can support the development and implementation of such curricula, ensuring that they are aligned with the best practices in early childhood education and are continually updated to meet evolving educational needs.

3. Safe and Stimulating Environment

The physical environment of ECE centers is a critical component of early childhood education. National policies should establish clear standards for ECE centers to provide safe, clean, and stimulating spaces that promote exploration and creativity. Safety regulations should be in place to ensure that facilities meet specific requirements, including secure play areas, age-appropriate materials, and proper sanitation. The learning environment should be designed to encourage hands-on exploration and active engagement. It should be rich in age-appropriate learning materials, books, art supplies, and play equipment. Natural elements, such as outdoor gardens and green spaces, should be incorporated whenever possible to enhance the connection between children and the natural world. By setting rigorous standards for the physical environment of ECE centers, national policies ensure that children have access to spaces that support their holistic development and inspire a love for learning.

4. Parental Engagement

National policies can promote parental engagement as a crucial element of a child's early education. Parents are a child's first and most influential teachers, and their active involvement in their child's learning journey significantly impacts educational outcomes. ECE centers should facilitate parental engagement through various means, including organizing meetings, workshops, and activities that encourage parents to participate actively. These events can provide parents with insights into their child's development, strategies for supporting learning at home, and opportunities to build connections with other parents. Additionally, policies can allocate resources to develop educational

materials and resources for parents, offering guidance on age-appropriate activities and ways to nurture a love for learning. By emphasizing parental engagement in national policies, governments recognize the importance of a collaborative partnership between families and ECE centers in promoting children's well-rounded development.

5. Assessment and Evaluation

Assessment and evaluation in ECE serve the dual purpose of tracking a child's progress and informing instructional decisions. National policies should emphasize the importance of regular assessments conducted in a developmentally appropriate manner. These assessments should be designed to provide insight into a child's strengths and areas of improvement, allowing educators to tailor instruction accordingly. Rather than focusing solely on standardized testing, policies should advocate for a holistic approach to assessment that encompasses observations, portfolios, and teacher-child interactions. The results of these assessments should be shared with parents, creating a transparent and collaborative educational process. Furthermore, national policies should encourage the use of assessment data to inform instructional planning and curriculum refinement. By prioritizing ongoing assessment and evaluation, policies ensure that ECE programs are responsive to the individual needs of children, promoting their growth and development effectively.

Conclusion

Early childhood education (ECE) stands as the very cornerstone upon which a nation's educational success and broader societal development are built. It is during these formative years, typically spanning from birth to around eight years old, that the seeds of curiosity, knowledge, and social aptitude are sown. The importance of ECE transcends its immediate impact; it casts a long-lasting shadow that shapes the future trajectory of each child and, collectively, the fate of the nation. A strong foundation in the early years is akin to laying the bedrock for a house. Without it, the structure above may crumble, and its integrity remains forever compromised. Likewise, ECE provides the essential building blocks upon which a child's future educational attainment and social adaptability rest. It serves as the scaffolding upon which later learning is constructed. National education policies must recognize the pivotal role of ECE in this intricate architectural design of human development. ECE is not merely a peripheral component of the educational system; it is its very bedrock. As such, it necessitates not only acknowledgment but prioritization.

EVALUATING THE ROLE OF ASSESSMENT AND EVALUATION IN NATIONAL EDUCATION POLICY

Mrs. G. Priyadharshini

*Assistant Professor of Commerce
Karpagam Academy of Higher Education
Coimbatore*

Ms. M. DhivyaDharshini

*Assistant Professor of Commerce
Karpagam Academy of Higher Education
Coimbatore*

Abstract:

Assessment and evaluation constitute integral components of any national education policy, playing pivotal roles in shaping educational systems and outcomes. This abstract provides a concise overview of the significance, challenges, and potential impacts of assessment and evaluation within the context of national education policies. Assessment and evaluation are instrumental in measuring learning outcomes, informing data-driven decision-making, and maintaining educational quality. They facilitate the identification of strengths and weaknesses within education systems, guiding resource allocation and reforms. However, striking a balance between standardized assessments and acknowledging diversity, mitigating the adverse effects of high-stakes testing, and addressing assessment bias present ongoing challenges. National education policies must emphasize both formative and summative assessment approaches, incorporate technology for efficiency, invest in teacher professional development, and engage communities for transparency and support. When thoughtfully implemented, assessment and evaluation can promote educational equity, enhance teaching practices, and ultimately contribute to the realization of educational goals set forth in national policies.

Keywords: *Assessment, Evaluation, National Education Policy, Educational Outcomes, Quality Assurance*

Introduction

Assessment and evaluation serve as cornerstones in the continual development and improvement of educational systems across the globe. Within the realm of national education policy, these elements emerge as indispensable instruments for not only gauging the accomplishments of students but also for refining teaching methodologies and steering the course of educational reforms. In the subsequent discourse, we shall embark on a comprehensive exploration of the intricate and multifaceted roles that assessment and evaluation undertake within the structured framework of a national education policy. This examination will encompass an in-depth analysis of their significance, the challenges they pose, and the profound potential impacts they bear on the educational landscape.

The Significance of Assessment and Evaluation

1. Measuring Learning Outcomes

Assessment and evaluation serve as the bedrock for measuring the efficacy of educational systems in attaining their intended learning objectives. These essential tools not only offer a means to discern the depth of student comprehension but also yield critical insights into areas necessitating enhancement. By undertaking comprehensive assessments that encompass cognitive, socio-emotional, and practical skills, education policymakers are empowered to uphold the commitment of ensuring that educational aspirations are realized to their fullest extent. These evaluations furnish policymakers with the capacity to scrutinize the intricate tapestry of student progress. Beyond merely gauging academic achievements, they delve into the realm of emotional intelligence, interpersonal competencies, and real-world applicability of knowledge. The multifaceted nature of assessment allows for a holistic understanding of a student's growth, enabling educators to tailor their pedagogical approaches accordingly.

Furthermore, these evaluative processes act as a compass guiding educational reforms. By identifying areas where improvements are needed, policymakers can make data-informed decisions to refine curriculum structures, teaching methodologies, and resource allocation. This dynamic feedback loop ensures that the educational system remains responsive to the evolving needs of both students and society, fostering a continuous cycle of improvement. In essence, assessment and evaluation are not mere checkboxes within the education system but rather integral components that steer the ship toward the destination of educational excellence. Through these measures, education systems can uphold their commitment to providing students with the knowledge, skills, and capabilities required to thrive in an ever-changing world.

2. Informed Decision-Making

National education policies must be anchored in evidence-based principles and guided by data-driven decision-making processes. In this regard, assessment and evaluation emerge as invaluable sources of information, providing the empirical foundation upon which informed policy choices can be built. The data generated through these processes not only offer a window into the educational landscape but also unveil intricate patterns, disparities, and pockets of excellence within the system. This treasure trove of insights empowers policymakers to wield their resources judiciously, steering educational initiatives toward equitable and effective outcomes. Within the realm of national education policy, the utilization of assessment and evaluation transcends the mere collection of data; it serves as the compass that guides strategic planning and resource allocation. These robust

processes supply policymakers with an array of vital information, enabling them to discern emerging trends in student performance, teaching methodologies, and curriculum efficacy. Such insights equip policymakers with the capacity to make course corrections promptly, ensuring that educational policies remain agile and responsive to the evolving needs of students and society.

Furthermore, the data derived from assessment and evaluation practices unveil disparities in educational access, performance, and outcomes among different demographic groups. This information is instrumental in promoting social equity within the education system. Armed with a clear understanding of these disparities, policymakers can develop targeted interventions to reduce educational inequalities and create an inclusive learning environment where every student has the opportunity to thrive. Moreover, assessment and evaluation can pinpoint areas of excellence and innovation within the education system. By identifying what works exceptionally well, policymakers can scale up successful practices, thereby fostering a culture of continuous improvement. Thus, the integration of assessment and evaluation into national education policies is not merely a procedural requirement; it is a cornerstone of effective governance in the education sector. Through the collection and analysis of data, these processes empower policymakers to make informed decisions, allocate resources wisely, promote equity, and elevate the overall quality of education. Thus, they are essential instruments in the pursuit of educational excellence and societal progress.

3. Quality Assurance

Assessment and evaluation are the bedrock upon which quality assurance in education is built. In their capacity as vigilant watchdogs, these processes play a pivotal role in upholding and safeguarding high educational standards by instilling a sense of accountability within educational institutions. Through their meticulous scrutiny, they not only provide a yardstick for measuring the quality of education but also act as catalysts for improvements in underperforming schools. Quality assurance in education is an ongoing endeavor, and assessment and evaluation serve as its linchpins. By setting clear benchmarks and performance indicators, these processes create a framework against which educational institutions are assessed. This framework is a vital tool for measuring the effectiveness of teaching methodologies, curriculum design, and overall educational practices. Consequently, it ensures that educational institutions adhere to established standards, fostering a culture of excellence.

One of the invaluable contributions of assessment and evaluation in quality assurance is the identification of underperforming schools or areas within the education system. Through systematic analysis and data-driven assessments,

these processes can pinpoint weaknesses and deficiencies. This not only shines a spotlight on areas in need of improvement but also provides the impetus for targeted interventions. These interventions can take various forms, including tailored professional development for educators, revised curriculum approaches, enhanced resource allocation, or even structural changes within the educational institution. The ultimate goal is to bolster the quality of education and elevate the performance of underperforming schools to meet or exceed established standards.

Moreover, the process of evaluation and the subsequent interventions are not punitive in nature but rather collaborative efforts aimed at ensuring that every student has access to a high-quality education. They promote a culture of continuous improvement where educational institutions are supported in their quest to provide the best possible learning experiences for students. In essence, assessment and evaluation are the sentinels of educational quality assurance, ensuring that the bar remains high and that educational institutions are held accountable for their commitment to excellence. Through their discerning gaze and proactive measures, they propel educational systems towards ever-greater levels of achievement and impact, ultimately benefitting students and society as a whole.

4. Teacher Professional Development

The evaluation of teaching effectiveness stands as a cornerstone in fostering the growth and professional development of educators. It plays a vital role in creating a culture of continuous improvement within the educational landscape, where the aim is to identify areas of excellence in teaching while simultaneously pinpointing areas that warrant refinement. Education policies that embrace these evaluations pave the way for ongoing teacher training and development, with the ultimate aim of enriching the educational experience and, in turn, benefiting students in profound ways. At its core, evaluating teaching effectiveness represents a commitment to ensuring that the teaching profession remains dynamic and responsive to the evolving needs of students and society. Through these evaluations, education policies acknowledge that teaching is not a static endeavor but rather an evolving craft that demands continual reflection and growth.

One of the primary benefits of assessing teaching effectiveness is its capacity to recognize and celebrate the strengths and accomplishments of educators. By identifying exemplary teaching practices and educators who excel in their roles, education policies can highlight these successes as examples for others to emulate. This not only uplifts the morale of educators but also encourages a culture of sharing best practices, thereby enriching the teaching profession as a

whole. Simultaneously, evaluations are instrumental in identifying areas where teachers may benefit from further development or support. These assessments provide valuable feedback, helping educators recognize their own growth edges and areas requiring improvement. Rather than punitive measures, this process is seen as an opportunity for professional growth. Education policies can facilitate this growth by providing resources, training, and mentorship opportunities tailored to the specific needs identified through evaluations.

Moreover, teacher professional development is not a one-time event but an ongoing journey. Education policies that emphasize continuous training and support empower educators to adapt to changing educational paradigms, adopt innovative teaching methods, and address emerging challenges effectively. Thus, the primary beneficiaries of this approach are the students. Teachers who continually evolve and refine their practices through ongoing professional development create richer and more engaging learning environments. Consequently, students receive a higher quality education that prepares them to thrive in an ever-evolving world. Therefore, the evaluation of teaching effectiveness, when integrated into education policies, forms an essential component in nurturing a resilient and impactful education system that ultimately benefits students and society at large.

5. Equity and Inclusivity

Assessment and evaluation represent potent tools in the pursuit of equity and inclusivity within education systems. They provide the means to examine educational outcomes comprehensively, allowing policymakers to uncover disparities among different demographic groups. Armed with this crucial data, policymakers can formulate and implement precisely targeted interventions that serve to mitigate these disparities, fostering a more just and equitable educational landscape. In the quest for educational equity and inclusivity, assessment and evaluation shine as beacons of insight, capable of illuminating disparities that might otherwise remain concealed. By scrutinizing the results and performance gaps that emerge across diverse demographic groups—such as race, socioeconomic status, gender, and ability—education policymakers can gain a granular understanding of where these disparities manifest.

This deep comprehension of the disparities serves as the foundation upon which targeted interventions can be crafted. Rather than applying blanket solutions, education policies can be tailored to address the specific needs of marginalized or underserved groups. These interventions encompass a spectrum of initiatives, including resource allocation, curriculum adjustments, teacher training programs, and support services that cater to the unique challenges faced by these groups. The ultimate aim of these interventions is to level the playing field,

ensuring that every student, regardless of their background, enjoys equal access to educational opportunities and can flourish to their fullest potential. This approach is not only ethically sound but also aligns with broader societal goals of social justice and equality.

Furthermore, the benefits of such a strategy extend beyond individual students. A more equitable education system enriches society as a whole, as it nurtures a diverse and inclusive generation of citizens who are better equipped to contribute positively to their communities and the world at large. In essence, assessment and evaluation are not merely mechanisms for assessing learning outcomes but also potent instruments for promoting social justice within education. Through their systematic analysis of disparities and the subsequent implementation of targeted interventions, they facilitate the creation of an educational environment where every student is empowered to thrive, irrespective of their background or circumstances. Thus, they stand as vital components in the ongoing journey toward a more inclusive and equitable society.

Challenges in Assessment and Evaluation

1. Standardization vs. Diversity

Balancing the use of standardized assessments while recognizing the diversity inherent in both learners and educational contexts poses a complex challenge. The tension between adhering to standardized evaluation methods and accommodating individual differences is a delicate one, and an excessive reliance on standardized tests can have significant implications for the holistic development of students while constraining the breadth of assessment practices. Standardized assessments, while offering a structured and consistent means of evaluating student performance, often emphasize a limited set of skills or knowledge domains. They are designed to provide a snapshot of student achievement at a particular point in time, which can be valuable for making broad comparisons across diverse regions or populations. However, an overemphasis on standardized testing can inadvertently sideline other crucial aspects of education, such as creativity, critical thinking, problem-solving, and socio-emotional development.

Furthermore, learners are not homogenous entities; they possess unique learning styles, abilities, and needs. An education system that solely relies on standardized assessments may inadvertently disadvantage those students who do not excel in such testing environments, failing to capture their true potential. This can lead to a narrow perception of student abilities and hamper the cultivation of a diverse range of skills. Acknowledging this diversity in both

students and educational settings is imperative. Assessment practices should be flexible and adaptable to cater to the multifaceted needs of learners. This can involve embracing alternative assessment methods, such as project-based assessments, portfolios, or performance evaluations, which provide a more holistic view of a student's capabilities.

Moreover, an education system that values diversity should extend to recognizing and respecting the diverse range of cultural, linguistic, and socio-economic backgrounds from which students come. Standardized assessments can inadvertently perpetuate bias and inequality, as they may not adequately account for the unique challenges and strengths that different demographic groups bring to the educational landscape. Thus, striking the balance between standardized assessments and acknowledging diversity necessitates a nuanced approach. Education policies and practices should embrace a diversified assessment toolkit that accommodates the varied learning styles and needs of students while ensuring that standardized tests are used judiciously to provide meaningful insights into educational progress. This inclusive approach fosters a more comprehensive and equitable education system that honors the individuality of learners while upholding rigorous academic standards.

2. High-Stakes Testing

Overreliance on high-stakes testing, where the results of assessments have significant consequences for students, educators, and institutions, presents a host of complex challenges within the realm of education. This practice, if not carefully managed, can give rise to a range of issues that impact the quality of education, student well-being, and the integrity of the assessment process itself. When the outcomes of high-stakes tests determine the fate of students and schools, there is a natural tendency for educators to focus their teaching on the content and skills directly assessed. This often results in "teaching to the test," where the curriculum narrows to fit the specific test objectives. While this may boost test scores, it can compromise the broader educational experience, hindering the development of critical thinking, problem-solving, and creativity.

High-stakes testing can lead to a reduction in the diversity of the curriculum. Subjects and topics that are not assessed may receive less attention or be excluded altogether, depriving students of a well-rounded education that encompasses the arts, humanities, and other non-tested areas. The pressure associated with high-stakes tests can create significant stress and anxiety among students. The fear of failure or the consequences of poor performance can have detrimental effects on mental health, well-being, and the overall learning experience. In extreme cases, this stress may manifest as test-related disorders, negatively impacting students' academic and emotional development. The high

stakes attached to these tests can incentivize unethical behaviors, such as cheating or test tampering. Students, teachers, and administrators may feel compelled to resort to dishonest practices to achieve desired results, eroding the integrity of the assessment process and undermining the trustworthiness of educational outcomes.

High-stakes testing can inadvertently shift the focus of education from holistic development and lifelong learning to achieving high test scores. This can obscure the broader educational goals of fostering critical thinking, creativity, and personal growth. To address these challenges, education policies must strike a balance between accountability and the quality of education. This might involve reducing the weight placed on high-stakes testing, incorporating alternative assessments that encompass a wider range of skills, and providing educators with the flexibility to tailor their teaching to the diverse needs of their students. Additionally, fostering a culture of trust and ethical behavior within educational institutions is vital in preventing cheating and other unethical practices. Thus, while high-stakes testing can offer valuable insights into student performance, its excessive reliance can lead to a host of issues that hinder the overall quality of education and student well-being. A thoughtful and balanced approach to assessment and accountability is crucial to ensuring that educational systems promote not only academic achievement but also the holistic development and well-being of students.

3. Assessment Bias

The issue of bias in assessments is a pressing concern within the realm of educational policy. Assessments, if not rigorously designed and continually scrutinized, can inadvertently disadvantage certain demographic groups, thereby perpetuating existing inequalities in educational outcomes. Addressing and mitigating these biases is an ongoing challenge that demands the unwavering commitment of education policymakers to foster a more equitable and inclusive education system. Assessments, whether standardized tests or classroom evaluations, can carry inherent biases in their design, content, or administration. These biases may favor specific cultural, linguistic, or socio-economic backgrounds, putting students from marginalized groups at a disadvantage. For example, questions that assume familiarity with certain cultural references or language nuances can disproportionately affect minority or non-native English-speaking students.

When assessments are biased, they contribute to the perpetuation of educational inequalities. Students from historically disadvantaged backgrounds may face additional barriers to academic success due to these biases, exacerbating achievement gaps and limiting opportunities for advancement. One key aspect of

addressing bias in assessments is ensuring cultural and linguistic sensitivity. Assessment items should be designed to be inclusive and accessible to a diverse range of students. This involves using diverse examples and contexts that do not privilege one cultural group over another and providing accommodations for students with linguistic differences or disabilities. Education policies should mandate regular review and revision of assessment materials to identify and rectify biases. This process requires collaboration with educators, subject matter experts, and representatives from diverse communities to ensure assessments are fair and equitable.

Providing professional development opportunities for educators on the topic of assessment bias is vital. Teachers must be equipped with the knowledge and skills to recognize and address bias in their classroom assessments, thereby contributing to a more equitable learning environment. Educational policies should emphasize transparency in assessment design and administration, allowing stakeholders to scrutinize the fairness of assessments. Additionally, accountability measures should be in place to hold assessment developers and educational institutions responsible for addressing bias. Exploring alternative assessment methods that go beyond standardized testing can help mitigate bias. Performance assessments, portfolios, and project-based assessments, for instance, can provide a more holistic view of student abilities. Thus, the recognition and mitigation of bias in assessments are integral to creating a fair and equitable education system. Educational policies must prioritize the regular examination and refinement of assessment materials to ensure they are free from bias and reflective of the diverse student population they serve. This commitment to equity in assessments is a fundamental step toward dismantling educational disparities and fostering a more inclusive educational landscape for all learners.

4. Data Privacy and Security

The collection and utilization of student data within the context of assessments have introduced a complex terrain where the imperatives of data-driven decision-making collide with the paramount need to safeguard student privacy and security. Striking a delicate and ethical balance between these two imperatives has emerged as a pressing concern in the realm of educational policy and practice. Harnessing student data from assessments offers a powerful means to enhance educational outcomes. It enables educators and policymakers to make informed decisions, identify areas for improvement, and tailor interventions to meet the diverse needs of students. These data-driven insights hold the potential to revolutionize education by personalizing learning experiences and optimizing resource allocation. However, the collection, storage, and use of student data bring forth a host of privacy and security concerns. These include the risk of data

breaches, unauthorized access to sensitive information, and the potential for misuse or exploitation of student data. In an era marked by increasing digitalization, ensuring robust safeguards for student data privacy has become an imperative.

Education policies must navigate a complex landscape of regulations and frameworks designed to protect student privacy. These regulations, such as the Family Educational Rights and Privacy Act (FERPA) in the United States, lay down strict guidelines for the handling of student data. Compliance with these laws is not only a legal obligation but also an ethical one. A key aspect of balancing data-driven decision-making with privacy is ensuring transparency and obtaining informed consent from students and their families. Policies should require educational institutions to clearly communicate how student data will be used and give individuals the choice to opt in or out of data collection whenever feasible. Education policies should encourage the practice of data minimization, wherein only the minimum amount of data necessary for educational purposes is collected. This principle ensures that student privacy is respected while still allowing for effective assessment and analysis. Robust security measures are vital to protect student data from unauthorized access or breaches. Policies should mandate encryption, access controls, regular security audits, and the adoption of best practices in data protection.

Education policies should also underscore the ethical use of student data. Data should be employed solely for educational purposes and not be exploited for commercial gain or other non-educational objectives. Thus, achieving a harmonious coexistence between data-driven decision-making and student data privacy is of paramount importance in modern education. Educational policies must be crafted with a meticulous focus on adhering to privacy regulations, promoting transparency, implementing robust security measures, and cultivating an ethical approach to data use. By doing so, we can harness the power of student data to enhance educational outcomes while safeguarding the privacy and security of the individuals whose data underpin our education systems.

Impacts and Considerations

1. Balancing Formative and Summative Assessment

In crafting national education policies, it is imperative to recognize the pivotal role that both formative and summative assessments play in fostering a comprehensive and effective learning environment. These two types of assessments serve distinct yet complementary purposes, and a balanced approach to their incorporation within educational policies can significantly contribute to the enhancement of educational outcomes. Formative assessments

are instrumental in the educational journey as they offer ongoing feedback to both students and teachers. These assessments are designed to gauge students' understanding and progress throughout the learning process, rather than at the culmination of a course or academic year. The feedback provided by formative assessments is invaluable for adapting teaching strategies, identifying areas of difficulty, and tailoring instruction to meet the unique needs of each student. Moreover, formative assessments encourage students to be actively engaged in their learning by providing them with a roadmap for improvement. Consequently, education policies should underscore the importance of integrating formative assessments into the pedagogical framework, promoting the idea that learning is an iterative process and that regular feedback is essential for academic growth. Summative assessments, in contrast, serve as a culmination of a learning period or a course of study, evaluating students' overall achievement and competence. These assessments are often high-stakes and are used to determine whether students have achieved specific learning objectives or standards. Summative assessments offer a way to measure educational outcomes systematically, providing a basis for comparing student performance across schools, districts, and regions. Additionally, they are a means to hold educational institutions accountable for the quality of education they provide. While the importance of summative assessments cannot be understated, policies must emphasize that they should be balanced with formative assessments to offer a holistic view of student progress. Education policies should promote a holistic approach that values both formative and summative assessments. This entails recognizing that formative assessments are not just preparatory exercises for summative assessments but integral components of the learning process in their own right. Moreover, it involves recognizing that summative assessments, while crucial for measuring overall achievement and accountability, can be enhanced by formative assessments that support students in reaching their potential. Policies should emphasize the importance of teacher training and professional development in both formative and summative assessment practices. Educators need the skills and knowledge to design, administer, and interpret assessments effectively, ensuring that they align with learning objectives and provide meaningful insights into student progress. Thus, a comprehensive approach to national education policies should prioritize both formative and summative assessments. This balanced approach acknowledges the dual role of assessments in supporting ongoing student development and measuring educational outcomes, ultimately contributing to the cultivation of well-rounded, engaged, and successful learners.

2. Embracing Technology

The integration of technology into assessment and evaluation processes stands as a transformative force in the educational landscape, holding the potential to significantly enhance their effectiveness and, consequently, the overall quality of education. This evolution encompasses a range of digital tools and innovations, including online assessments, data analytics, and educational software, all of which contribute to fostering timely feedback and personalized learning experiences for students.

1. Online Assessments: A Paradigm Shift in Evaluation

The advent of online assessments has revolutionized the way students are evaluated. These digital assessments offer a multitude of advantages, such as flexibility in test-taking, immediate scoring, and the ability to incorporate various multimedia elements, making them more engaging and interactive. Furthermore, online assessments enable educators to efficiently administer assessments to large cohorts of students while ensuring the integrity of the testing process. This digital transformation eliminates the time-consuming logistics associated with traditional paper-and-pencil tests and facilitates a streamlined approach to assessment.

2. Data Analytics: Unleashing the Power of Big Data

Data analytics in education have emerged as a game-changer. By harnessing the power of big data, educational institutions can gain insights into student performance patterns, learning trajectories, and areas where additional support may be required. These analytics can assist educators and policymakers in making data-informed decisions regarding curriculum development, resource allocation, and pedagogical strategies. Moreover, data analytics facilitate the early identification of students at risk of falling behind, enabling timely interventions and personalized support.

3. Educational Software: Tailoring Learning Experiences

Educational software and learning management systems empower educators to create customized learning experiences that cater to individual student needs. These tools offer adaptive content, interactive simulations, and real-time feedback, providing students with a personalized and engaging learning journey. Additionally, educational software often includes formative assessment components that allow students to track their progress and identify areas for improvement. This immediate feedback loop nurtures a sense of ownership over one's learning and promotes self-directed study habits.

4. Accessibility and Inclusivity

Incorporating technology into assessments can enhance accessibility for students with diverse needs. Features like screen readers, adjustable fonts, and alternative

input methods can make assessments more inclusive and accommodate students with disabilities.

5. Challenges and Equity

While technology offers substantial benefits, it also presents challenges related to equitable access and the digital divide. Education policies must address these disparities by ensuring that all students have access to the necessary technology and training.

6. Professional Development

Education policies should prioritize teacher professional development to equip educators with the skills and knowledge needed to effectively utilize technology for assessment and evaluation. Thus, the fusion of technology with assessment and evaluation practices has the potential to revolutionize education. By embracing online assessments, data analytics, and educational software, education systems can provide timely and personalized feedback, enhance learning experiences, and improve educational outcomes for students. However, it is crucial that these technological innovations are implemented thoughtfully, with considerations for equity, access, and professional development, to ensure that the benefits are realized by all students.

3. Professional Development

Ensuring the competence of teachers in the realm of assessment and evaluation practices is paramount to the success of any educational system. Proficiently trained educators possess the skills and knowledge required to use assessments effectively, ethically, and in a manner that optimizes student learning outcomes. Achieving this competence often necessitates the implementation of robust professional development programs that empower educators with the tools and insights needed to excel in this critical aspect of teaching.

1. Assessment Literacy: The Foundation of Effective Teaching

Assessment literacy, which encompasses understanding the principles, methods, and ethical considerations of assessment, serves as the bedrock of effective teaching. Educators with a strong foundation in assessment literacy are equipped to design, administer, and interpret assessments that align with learning objectives and accurately measure student progress. Professional development programs should prioritize the cultivation of assessment literacy among teachers, fostering their ability to make informed decisions about which assessments to employ and how to leverage assessment data for instructional improvements.

2. Ethical Assessment Practices: Upholding Integrity

Ethical considerations are central to assessment practices. Educators must be well-versed in the ethical dimensions of assessment, including issues related to

fairness, bias reduction, and student privacy. Professional development programs should include modules on ethical assessment practices, emphasizing the importance of creating assessments that are free from discrimination, respecting the diversity of students, and maintaining the confidentiality of assessment data.

3. Effective Feedback: Nurturing Growth

One of the essential components of assessment is the provision of constructive and actionable feedback to students. Educators must be skilled in delivering feedback that encourages student reflection, growth, and motivation. Professional development programs can offer strategies and techniques for delivering feedback that is specific, timely, and aligned with learning objectives.

4. Data-Informed Decision-Making: Enhancing Instruction

The ability to use assessment data to inform instructional decisions is a hallmark of effective teaching. Educators should be trained to analyze assessment results, identify areas of improvement, and tailor their teaching methods to meet the unique needs of their students. Professional development programs should equip educators with the skills to leverage data for curriculum planning, resource allocation, and targeted interventions for struggling students.

5. Adaptive Assessment Strategies: Personalized Learning

The landscape of education is evolving toward personalized learning experiences. Educators should receive training in adaptive assessment strategies and the utilization of educational technology to tailor assessments to individual student needs. These strategies allow for the differentiation of instruction and the optimization of learning outcomes.

6. Continuous Learning: The Role of Ongoing Professional Development

Professional development in assessment and evaluation should be viewed as an ongoing journey rather than a one-time event. Education policies should support a culture of continuous learning among educators, providing opportunities for further skill development, staying updated on best practices, and engaging in peer collaboration and mentorship.

Thus, teacher training in assessment and evaluation practices is pivotal to the success of educational systems. By offering comprehensive and ongoing professional development programs, education policies can empower educators to employ assessments effectively, ethically, and in a manner that enhances the educational experience and outcomes for all students.

4. Community Engagement

In shaping national education policies, it is imperative to embrace a collaborative approach that actively engages parents, communities, and stakeholders in the

assessment and evaluation processes. The inclusion of these vital partners not only ensures transparency but also cultivates trust, fosters a sense of ownership, and garners the much-needed support for educational reforms that aim to improve the quality of education and outcomes for all students.

1. Parental Involvement: Partners in Education

Parents are indispensable partners in the education of their children. Involving parents in the assessment and evaluation process creates a bridge between the classroom and the home, enabling them to better understand their child's progress, strengths, and areas for improvement. Education policies should encourage regular communication between educators and parents, providing opportunities for parent-teacher conferences, progress reports, and a platform for sharing assessment results. This collaboration not only promotes a deeper understanding of student needs but also engages parents in their child's educational journey.

2. Community Engagement: A Holistic Perspective

Engaging the broader community in the assessment and evaluation processes contributes to a holistic perspective on education. Community members, including local leaders, businesses, and organizations, can provide valuable insights into the specific needs and aspirations of the community's students. Moreover, their involvement can lead to the creation of educational initiatives that are relevant and responsive to the local context. Education policies should facilitate avenues for community input, such as advisory boards or town hall meetings, to ensure that education reforms align with community values and goals.

3. Stakeholder Collaboration: A Multifaceted Approach

Education policies should encourage collaboration among diverse stakeholders, including teachers, administrators, policymakers, and educational experts. These stakeholders bring a wealth of experience and expertise to the table, allowing for a comprehensive examination of assessment and evaluation practices. Such collaboration can lead to the development of more robust assessment frameworks, data analysis methodologies, and evidence-based decision-making processes.

4. Transparency and Accountability: Building Trust

Transparency is a cornerstone of effective collaboration in assessment and evaluation. Education policies should mandate transparency in assessment practices, including the disclosure of assessment objectives, methodologies, and results. Open access to assessment data and findings helps build trust among all stakeholders by providing them with a clear understanding of the educational landscape and progress toward established goals.

5. Support for Reforms: A Unified Approach

When parents, communities, and stakeholders are actively engaged in the assessment and evaluation processes, they are more likely to support educational reforms. This unified approach fosters a shared sense of responsibility for the success of students and the improvement of the education system as a whole.

Thus, inclusive national education policies that involve parents, communities, and stakeholders in assessment and evaluation processes not only enhance transparency but also strengthen the foundation of trust and support for educational reforms. The collaborative efforts of all these stakeholders contribute to the development of a more responsive, equitable, and effective education system that truly serves the needs of students and society.

Conclusion

Assessment and evaluation are indispensable components of any national education policy. When implemented thoughtfully and effectively, they serve as powerful tools for measuring learning outcomes, improving educational quality, and promoting equity. However, they also come with challenges that require careful consideration. Striking a balance between standardization and diversity, addressing bias, and ensuring privacy are among the key considerations for policymakers. By embracing technology, fostering teacher professional development, and engaging communities, national education policies can harness the full potential of assessment and evaluation to create a more inclusive and equitable education system.

GLOBAL BEST PRACTICES IN EDUCATION: LESSONS FOR NATIONAL EDUCATION POLICY

Dr. E. Rajeswari

*Assistant Professor of Commerce
Karpagam Academy of Higher Education
Coimbatore*

Dr. D. MaryPrema

*Assistant Professor of Commerce
Karpagam Academy of Higher Education
Coimbatore*

Abstract

Education is a fundamental pillar of societal progress, and nations worldwide aspire to provide their citizens with the highest quality of education. To achieve this goal, many countries turn to global best practices in education as sources of inspiration and guidance when formulating their national education policies. This abstract provides a brief overview of the key lessons that can be learned from global best practices in education for the development of effective national education policies. The first lesson centers on equity in education, emphasizing the need to provide equal opportunities for all students regardless of their socioeconomic background. Global models like Finland have demonstrated that comprehensive approaches, including equal school funding, well-trained teachers, and personalized learning, can promote inclusivity and access to quality education.

The second lesson underscores the significance of teacher quality and professional development. Nations like Singapore and South Korea prioritize recruiting and training top-tier educators, offering competitive salaries and continuous professional growth opportunities. National education policies should follow suit by investing in teacher support to enhance overall educational quality. The third lesson highlights the importance of student-centered learning approaches, where education is tailored to individual needs and interests. Countries like Canada and New Zealand have adopted flexible and personalized learning models that adapt to students' unique capabilities and learning paces. The fourth lesson emphasizes early childhood education as a critical factor in a child's development. Sweden and Norway provide universal access to high-quality preschool programs, which lead to improved school readiness and long-term educational success. National education policies should recognize the value of early childhood education and invest accordingly.

The fifth lesson focuses on creating effective assessment and accountability systems. Japan and the Netherlands have established balanced evaluation systems that use standardized tests and teacher assessments to maintain educational standards without excessive pressure on students. National education policies should incorporate fair and comprehensive assessment methods that support learning. The final lesson acknowledges the role of technology in education. Estonia and South Korea have successfully integrated technology into classrooms, preparing students for the digital era. National education policies should prioritize technology integration while ensuring equitable access to digital resources. Thus, these global best practices offer valuable insights for crafting national education policies that cater to the diverse needs of students, promote equity, and prepare individuals for the challenges of the modern world. By drawing inspiration from these lessons, nations can pave the way for a brighter future through education.

Keywords: Education Policy, Best Practices, National Education, Lessons, Global Models

Introduction

Education stands as the bedrock upon which societies advance and individuals flourish. It is the collective aspiration of every nation to furnish its citizens with an education of the utmost quality, one that not only imparts knowledge but also equips individuals with the skills necessary to not just survive but thrive in an ever-evolving global landscape. To attain this lofty objective, countries frequently turn their gaze towards the world stage, seeking inspiration and guidance from the global exemplars in education as they craft their own national education policies. In this essay, we embark on an exploration of the paramount global best practices in education and the invaluable insights they proffer in the endeavor to shape robust and effective national education policies. The pursuit of excellence in education is a universal ambition, transcending borders and cultures. Nations recognize that by cultivating their education systems, they can empower their citizens to navigate the complexities of the modern world successfully. Consequently, they study the triumphs and innovations of education systems worldwide, dissecting the strategies and practices that have yielded remarkable results. These global best practices serve as a reservoir of wisdom, offering a wealth of knowledge for those tasked with crafting and refining their own national education policies.

As we delve into this exploration, we will dissect some of the most illuminating global best practices in education, unraveling the intricate tapestry of principles, policies, and pedagogies that have led to their success. Through this journey, we will glean lessons on equity in education, the paramount role of educators, the need for student-centered learning, the transformative power of early childhood education, the art of assessment and accountability, and the integration of technology into the educational milieu. Each of these facets represents a beacon of knowledge, illuminating the path towards a more effective and equitable education system. Thus, the quest for educational excellence is a shared endeavor that transcends borders and ideologies. In seeking inspiration from global best practices, nations stand to forge education policies that are not only responsive to the unique needs of their citizens but also informed by the collective wisdom of the world. Education, as the great equalizer and catalyst for progress, deserves nothing less than our unwavering dedication to learning from the best, so that we can, in turn, offer the best to the generations to come.

1. Equity in Education:

One of the most vital lessons derived from the global best practices in education revolves around the concept of equity. Across the globe, nations have awakened to the realization that ensuring equal educational opportunities for every student, irrespective of their socioeconomic background, stands as a fundamental prerequisite for achieving superior educational outcomes. The Finnish education

system stands out as a paragon of educational equity. Its holistic approach encompasses equitable funding for all schools, a cadre of well-trained teachers, and a resolute focus on individualized learning paths for students. This exemplary model serves as an invaluable lesson that reverberates worldwide, compelling national education policies to reevaluate their priorities and place inclusivity at the forefront. Ensuring that every student gains access to a quality education is no longer an option but an imperative for educational systems worldwide.

2. Teacher Quality and Professional Development:

At the heart of prosperous education systems lies the bedrock of high-quality educators. Nations that have excelled in education, such as Singapore and South Korea, have made it a priority to recruit, train, and retain exceptionally skilled teachers. These countries offer competitive salaries and establish an ecosystem of continuous professional development opportunities for teachers, thus ensuring that their effectiveness remains unwavering throughout their careers. National education policies should diligently absorb and integrate these practices. By investing in comprehensive teacher training programs and support systems, nations can significantly elevate the overall quality of their education systems.

3. Student-Centered Learning:

The global best practices in education underscore the importance of student-centered learning approaches. Countries such as Canada and New Zealand have wholeheartedly embraced more flexible and personalized models of learning. These models empower students to explore their unique interests and cultivate knowledge at their own pace. The underlying philosophy recognizes that each student possesses a distinctive set of strengths and challenges, demanding an educational framework that is equally unique and adaptable. Therefore, national education policies should enthusiastically incorporate these practices. Encouraging innovation and flexibility within the curriculum will enable educational systems to be responsive to the evolving educational needs of students.

4. Early Childhood Education:

A burgeoning body of research consistently underscores the critical role of early childhood education in a child's holistic development. Nations like Sweden and Norway have recognized this importance by prioritizing universal access to high-quality preschool programs. Such initiatives bear testament to their enduring commitment to ensuring improved school readiness and favorable long-term educational outcomes for all. National education policies across the globe should heed this lesson. Investing in accessible, high-quality preschool programs not

only nurtures young minds but also lays the foundation for a more equitable and prosperous educational future.

5. Assessments and Accountability:

The effective evaluation of educational quality is intrinsically tied to the concept of assessments and accountability systems. Nations like Japan and the Netherlands have struck a delicate balance in this regard. They employ a combination of standardized tests and teacher evaluations to ascertain the attainment of educational standards. Importantly, they eschew an undue emphasis on testing, which can lead to excessive stress on students. National education policies should be shaped by this lesson. They should aim to establish fair and comprehensive assessment systems that promote and support student learning, all while eschewing the undue pressures associated with high-stakes testing.

6. Technology Integration:

In the contemporary digital age, the integration of technology into education is not merely a choice but a necessity. Countries like Estonia and South Korea have adeptly fused technology into their educational landscapes, enhancing the overall learning experiences of students and preparing them for the demands of the digital era. Consequently, national education policies must accord due priority to technology integration. However, this integration must be executed while ensuring equitable access to digital resources for all students, so that technological advancement does not inadvertently exacerbate educational disparities.

Conclusion

Global best practices in education serve as a reservoir of invaluable insights that can profoundly influence the formulation and refinement of national education policies. These insights encompass a broad spectrum of critical elements within the educational landscape, including equity, teacher quality, student-centered learning, early childhood education, assessments and accountability, and technology integration. By judiciously drawing inspiration from successful educational models that have burgeoned worldwide, nations can craft policies that not only provide their citizens with superlative educational experiences but also empower them to flourish in an ever-evolving global milieu. An indisputable cornerstone of these lessons is the profound significance of equity in education. The understanding that every student, regardless of their socioeconomic background, deserves equal access to high-quality educational opportunities resonates across nations. Lessons from exemplary systems like Finland emphasize the pivotal role of equitably distributed resources, well-prepared educators, and personalized learning experiences.

Consequently, national education policies must prioritize inclusivity, ensuring that every student, regardless of their circumstances, enjoys unfettered access to a quality education.

At the nucleus of thriving education systems are exceptionally skilled and motivated educators. Nations that have ascended the education ladder, such as Singapore and South Korea, underscore the imperative of recruiting, nurturing, and retaining top-tier teachers. Offering competitive compensation and fostering an environment of continual professional development serve as their guiding principles. Therefore, national education policies should meticulously incorporate these practices. By investing in teacher training and support mechanisms, nations can bolster the overall quality of their education systems. Another pivotal lesson revolves around the philosophy of student-centered learning. Countries like Canada and New Zealand champion flexible and personalized learning models, which recognize that each student is a unique amalgamation of strengths and needs. This approach empowers students to explore their passions and learn at their own pace. National education policies should enthusiastically embrace these practices, encouraging innovation and adaptability within the curriculum to cater to the diverse and evolving educational requirements of students.

A wealth of research underscores the momentous role played by early childhood education in a child's comprehensive development. Nations like Sweden and Norway exemplify this understanding by offering universal access to high-quality preschool programs, which significantly enhance school readiness and long-term educational outcomes. It is incumbent upon national education policies worldwide to acknowledge the centrality of early childhood education and to invest in widespread access to exemplary preschool programs. The dimension of assessment and accountability looms large in the world of education. Countries like Japan and the Netherlands skillfully deploy a blend of standardized tests and teacher evaluations to uphold educational standards. Crucially, they avoid undue stress and focus on holistic student development. National education policies should be underpinned by this wisdom, striving to establish equitable, comprehensive assessment systems that support and enhance student learning without subjecting them to undue pressure.

In our digitally permeated era, the seamless integration of technology into education is an imperative. Nations such as Estonia and South Korea serve as exemplars by adroitly embedding technology into their educational frameworks, augmenting the overall learning experiences of students and preparing them for the demands of a digitalized world. Consequently, national education policies must accord paramount importance to technology integration. However, they must also ensure that access to digital resources is equitable, thereby preventing the

exacerbation of educational disparities. In conclusion, the fusion of these global best practices into national education policies has the potential to redefine the trajectory of education, both for individuals and nations. Education is the crucible wherein the potential of individuals and the destiny of nations are forged. Thoughtful policy decisions, rooted in the lessons gleaned from around the world, can undoubtedly illuminate the path towards a brighter future for all, where education serves as the key to unlock the full spectrum of human potential in an ever-changing global landscape.

HIGHER EDUCATION REFORMS: A KEY COMPONENT OF NATIONAL EDUCATION POLICY

Dr. M. Gayathiri

*Assistant Professor of Commerce
Karpagam Academy of Higher Education
Coimbatore*

Dr. B. Rathnapriya

*Assistant Professor of Commerce
Karpagam Academy of Higher Education
Coimbatore*

Abstract

Higher education is a critical component of a nation's education system, playing a pivotal role in shaping the future of individuals and society as a whole. This abstract explores the significance of higher education reforms as an essential element of national education policy. It highlights the importance of addressing issues related to accessibility, quality, and relevance in higher education. The abstract also discusses the potential benefits that effective higher education reforms can bring to individuals, the economy, and society at large. By prioritizing and implementing these reforms, nations can position themselves for success in the global knowledge economy and create opportunities for social development and progress.

Keywords: Higher Education, Reforms, National Education Policy, Accessibility, Quality Assurance

Introduction

Higher education occupies a central position in the trajectory of a nation's progress. It serves as the bedrock upon which intellectual advancement, innovative thinking, and the cultivation of a highly skilled workforce are built. Governments across the globe, with an astute acknowledgment of the pivotal role of higher education, have embarked on an array of initiatives aimed at overhauling and redefining its landscape. These comprehensive reforms are geared towards not only making higher education more accessible but also ensuring that it maintains the highest standards of quality and remains aligned with the evolving demands of contemporary society. In the following essay, we will delve into the significance of higher education reforms, portraying them as a cornerstone of a nation's educational policy, and elucidate the manifold advantages they confer upon individuals and society as a whole.

The Significance of Higher Education

1. Human Capital Development

Higher education serves as the crucible in which individuals are forged into valuable assets for the workforce and the broader economy. Through a rigorous academic curriculum and practical training, students acquire the knowledge and skills vital for their effective contribution to the labor market.

This development of human capital is not only advantageous for individuals but also a cornerstone of national economic growth.

2. Research and Innovation

Within the hallowed halls of higher education institutions, a vibrant culture of research and innovation thrives. These institutions are veritable hotbeds of intellectual curiosity and creativity, where scholars and students alike engage in groundbreaking research endeavors. Their collective efforts lead to advancements in fields such as science, technology, and various domains of knowledge, thereby propelling society into new frontiers of understanding and progress.

3. Cultural and Social Enrichment

Universities function as dynamic melting pots of diverse cultures, ideologies, and perspectives. They are breeding grounds for the cultivation of critical thinking and social awareness. By fostering an inclusive and intellectually stimulating environment, universities nurture enlightened citizens who possess a profound understanding of complex societal issues. This not only enriches the cultural tapestry but also equips individuals to engage in meaningful dialogues and contribute to the betterment of their communities and the world at large.

4. Global Competitiveness

A nation's competitiveness on the global stage is intrinsically tied to the quality of its higher education system. Robust institutions of higher learning produce highly skilled professionals who are sought after worldwide. Furthermore, these institutions often serve as conduits for international collaborations and knowledge exchange. The synergy between a strong higher education system and global competitiveness cannot be overstated, as it attracts talent and investment, fostering innovation and progress on a global scale.

5. Social Mobility

Higher education is a beacon of hope for individuals from diverse backgrounds who aspire to transcend the confines of their socio-economic status. It provides a pathway to upward social mobility, enabling students to break free from cycles of poverty and limited opportunities. By leveling the playing field and affording access to education, societies offer their citizens a chance to uplift themselves and contribute meaningfully to the betterment of their own lives and their communities. This not only promotes social justice but also harnesses the untapped potential of a nation's entire population.

Higher Education Reforms as a Necessity

Despite its significance, many higher education systems face various challenges, including inadequate funding, outdated curriculum, and limited accessibility. These challenges necessitate reforms to address the following key issues:

1. Access and Equity

Reforms in higher education are directed towards dismantling barriers that obstruct the path to knowledge and opportunities. These reforms are grounded in the principle that higher education should be a realm of equity, accessible to all, irrespective of their socio-economic background. To achieve this, governments and institutions implement measures such as financial aid, scholarships, and outreach programs, eradicating financial impediments that might deter aspiring students. Moreover, by reducing bureaucratic obstacles and enhancing inclusivity, higher education systems strive to ensure that every individual, regardless of their circumstances, has the chance to pursue their academic dreams and unlock their potential.

2. Quality Assurance

Ensuring the highest standards of education is paramount. In the pursuit of this objective, higher education reforms are a means to hone the craft of teaching and enhance the learning experience. These reforms encompass comprehensive faculty development programs that empower educators with cutting-edge pedagogical tools and methodologies. Simultaneously, accreditation processes are refined, creating a robust system that continually evaluates and benchmarks educational institutions. By underpinning quality, these reforms guarantee that every student receives an education that equips them with the skills, knowledge, and critical thinking abilities necessary for personal and professional success.

3. Curricular Relevance

The dynamics of society and the job market are in perpetual flux, demanding a curriculum that mirrors these shifts. Higher education reforms are the driving force behind the evolution of academic programs, ensuring that they remain aligned with contemporary demands. This involves a recalibration of course offerings, a focus on interdisciplinary learning, and a commitment to industry relevance. By doing so, universities produce graduates who are not only well-versed in their chosen fields but also possess the versatility and adaptability required to navigate an ever-changing professional landscape.

4. Research and Innovation

The heartbeat of global progress thrives within the laboratories and research centers of higher education institutions. Acknowledging the paramount importance of research, reforms channel substantial investments into research infrastructure and policies that spur innovation.

These investments bolster a nation's global competitiveness by fostering an environment conducive to breakthrough discoveries and technological advancements. Moreover, they ensure that the knowledge generated within the academic realm is not confined to textbooks but becomes a driving force behind societal development and economic growth.

5. Governance and Accountability

Transparent and accountable governance forms the backbone of a robust higher education system. Reforms in this realm are designed to enhance the organizational structure and governance mechanisms of educational institutions. By promoting transparency, reducing bureaucracy, and implementing effective oversight measures, these reforms hold institutions accountable for their actions and financial management. Consequently, this instills public trust in the higher education sector, ensuring that it operates with integrity and in the best interests of both students and society at large.

Benefits of Higher Education Reforms

1. Enhanced Employability

Reforms aimed at bolstering employability are a linchpin in higher education's response to the ever-evolving job market. By fostering a synergy between academia and industry, these reforms equip graduates with not only theoretical knowledge but also practical skills that are highly sought after by employers. Furthermore, through the establishment of robust internship programs and industry partnerships, students gain real-world experience and a deep understanding of their chosen fields. Consequently, the implementation of such reforms plays a pivotal role in reducing unemployment rates by ensuring that graduates are readily adaptable to the demands of the contemporary workforce.

2. Economic Growth

The nexus between a thriving higher education system and economic growth is undeniable. Higher education reforms that result in the production of a highly skilled and adaptable workforce have a cascading effect on a nation's economy. Not only do these graduates attract domestic and foreign investments, but they also serve as catalysts for innovation and entrepreneurship. The knowledge and skills imparted by institutions of higher learning become a wellspring of new ideas and technological advancements, ultimately propelling economic development.

3. Social Inclusion

Higher education reforms that address the chasm of inequality in access to education are the vanguards of social inclusion. By implementing measures to ensure that underrepresented and marginalized

communities have equal access to higher education, these reforms dismantle barriers that perpetuate societal disparities. They herald a more equitable society, where talent and potential are not constrained by socio-economic status or background. The ripple effect of such reforms extends to reduced inequality, increased social cohesion, and the creation of a more harmonious and just society.

4. Global Recognition

The international recognition of a nation's higher education system is an invaluable asset. Higher education reforms that elevate the quality and global standing of institutions draw attention from international students and scholars. This influx of diverse talent enriches the academic landscape and fosters cross-cultural interactions, promoting a global perspective and intercultural understanding. Moreover, international collaborations with renowned institutions worldwide lead to knowledge exchange, joint research endeavors, and advancements that transcend borders, further enhancing a nation's reputation on the global stage.

5. Innovation and Research

Investment in research and innovation is the cornerstone of progress in the modern world. Higher education reforms that channel resources into research initiatives yield breakthroughs with far-reaching implications. These breakthroughs can drive technological advancements, revolutionize healthcare through medical research, and address pressing societal issues such as climate change and public health crises. By prioritizing research and innovation, nations not only position themselves at the forefront of progress but also contribute to the betterment of humanity as a whole.

6. Cultural Enrichment

The higher education environment, marked by its diversity and vibrancy, plays a pivotal role in cultural enrichment. Reforms that prioritize inclusivity and diversity on campuses create a melting pot of ideas, perspectives, and traditions. This dynamic exchange fosters cross-cultural interactions, tolerance, and mutual understanding. The result is a more enriched cultural landscape, where individuals from various backgrounds come together to learn from one another, transcending borders and fostering a global community that celebrates diversity and promotes unity in a multicultural world.

Conclusion

Higher education reforms serve as the linchpin that not only complements but also propels national education policies, making them a vital driver of progress, prosperity, and social development within a nation. These reforms address critical dimensions, including accessibility, quality, relevance, and governance, imbuing

higher education with the transformative power to uplift individuals and propel societies forward. First and foremost, higher education reforms signify a commitment to democratizing knowledge and opportunity. By addressing issues of access, these reforms break down barriers, ensuring that higher education is no longer a privilege of the few but a right of all. They encompass initiatives such as financial aid programs, scholarships, and inclusive policies that level the playing field. Consequently, students from diverse backgrounds can aspire to higher education, transcending socio-economic constraints and enabling the harnessing of their full potential.

Quality assurance stands as another cornerstone of higher education reforms. They are the driving force behind ensuring that the education imparted is not just accessible but also of the highest caliber. These reforms encompass continuous improvement in teaching methodologies, rigorous faculty development programs, and stringent accreditation processes. By demanding excellence, they guarantee that every student receives an education that is not just academically robust but also equips them with the critical thinking skills, creativity, and adaptability essential for thriving in a dynamic world. Furthermore, higher education reforms extend their reach into curricular relevance, acknowledging the fluidity of society and the job market. They advocate for the alignment of academic programs with contemporary needs, fostering a seamless transition from the classroom to the workplace. These reforms spur universities to offer programs that are attuned to industry demands, promoting a culture of innovation, entrepreneurship, and lifelong learning.

Governance and accountability constitute yet another pivotal facet of higher education reforms. They aim to enhance the transparency and efficacy of institutional management, fostering trust among stakeholders. By streamlining administrative processes, reducing bureaucracy, and implementing robust oversight mechanisms, these reforms ensure that higher education institutions operate with integrity and accountability. Consequently, public confidence in the education sector is bolstered, enhancing the overall effectiveness of education policies. The multifaceted benefits of these reforms extend beyond individual empowerment. Nations that prioritize and effectively implement higher education reforms position themselves advantageously in the ever-evolving global knowledge economy. They produce a highly skilled and adaptable workforce that attracts investments, stimulates innovation, and catalyzes economic growth. Moreover, they create an environment conducive to research and innovation, yielding breakthroughs that drive technological advancements, improve healthcare, and address pressing societal challenges.

In parallel, higher education reforms also contribute to fostering a more inclusive and cohesive society. By reducing disparities in access and promoting diversity,

these reforms diminish inequality and lay the foundation for a fairer, more equitable nation. They cultivate a culture of tolerance, understanding, and cross-cultural interactions, enriching the social fabric. In conclusion, higher education reforms are not just integral to national education policies but serve as the beating heart of progress and development. They empower individuals to reach their full potential, drive economic growth, and foster a more inclusive and enlightened society. Nations that prioritize and enact effective higher education reforms are better equipped to thrive in the global arena, ensuring a brighter future for their citizens and contributing to the betterment of humanity as a whole.

INNOVATIONS IN CURRICULUM DESIGN: A FOCUS ON NATIONAL EDUCATION POLICY

Mr. P. Easwaran

*Assistant Professor of Commerce
Karpagam Academy of Higher Education
Coimbatore*

Dr. R. Jayalakshmi

*Assistant Professor of Commerce
Karpagam Academy of Higher Education
Coimbatore*

Abstract

The National Education Policy (NEP) serves as a guiding framework for educational reform in many countries, and recent revisions have highlighted the need for innovative curriculum design. This abstract provides an overview of the role of curriculum design in driving educational innovation within the context of the NEP. It explores key features of innovative curriculum design, including interdisciplinary learning, critical thinking, digital literacy, inclusivity, and assessment reform. The benefits of such innovations, such as increased relevance, engagement, and workforce preparedness, are discussed. Challenges, including resistance to change and resource limitations, are also acknowledged. Looking ahead, the prospects for innovative curriculum design appear promising, with emerging technologies offering new opportunities for personalized learning experiences. This abstract underscores the importance of sustained commitment from policymakers, educators, and stakeholders in realizing the potential of innovative curriculum design to prepare students for a rapidly changing world.

Keywords: *Curriculum Design, Innovation in Education, National Education Policy, Interdisciplinary Learning, Digital Literacy*

Introduction

Curriculum design stands as a dynamic and continuously evolving facet of the education sector, inherently responsive to the evolving needs of students, society, and the workforce. As societies advance, and educational paradigms shift, the imperative for curriculum design to adapt and remain relevant becomes increasingly evident. In many countries, the National Education Policy (NEP) emerges as a pivotal guiding framework, steering the course of educational reforms. Recent revisions to the NEP have notably underscored the paramount importance of fostering innovative curriculum design, signaling a resounding call to revamp and rejuvenate educational practices to align with the demands of the 21st century. This essay delves into the multifaceted role of curriculum design in catalyzing educational innovation, all within the overarching context of the NEP. It embarks on a comprehensive journey to uncover the essence of curriculum design in a rapidly evolving educational landscape. It lays bare the potential benefits that these innovative approaches to curriculum design offer, acknowledges the complex

challenges that they encounter, and ultimately envisions the future prospects and transformative possibilities that lie ahead.

Curriculum design, as a dynamic endeavor, is tasked with the monumental responsibility of crafting educational blueprints that resonate with the ever-shifting tides of societal, technological, and economic change. In this context, the NEP emerges as a crucial guiding star that illuminates the path towards educational reforms that are not only comprehensive but also forward-looking. Recent iterations of the NEP have reaffirmed the centrality of innovative curriculum design, casting a spotlight on the urgency to reimagine and rejuvenate educational paradigms in the face of contemporary challenges. Innovations in curriculum design within the purview of the NEP are marked by several defining characteristics. These encompass interdisciplinary learning, which encourages students to explore the intricate interplay between various subjects, fostering a holistic comprehension of real-world complexities. Furthermore, the NEP champions the cultivation of critical thinking and problem-solving skills, thus empowering students to analyze, synthesize, and apply their knowledge to multifaceted challenges. Digital literacy, an indispensable competence in the digital age, is intricately woven into the fabric of these innovative curricula, equipping students not only as adept users of technology but also as creators and innovators in their right. The NEP advances the cause of inclusivity and diversity, advocating for educational curricula that accommodate the diverse needs, backgrounds, and perspectives of all students, thus sowing the seeds of empathy, cultural competence, and social harmony. Moreover, it instigates a paradigm shift in assessment practices, steering away from rote memorization and high-stakes examinations towards continuous evaluation, portfolio assessments, and project-based assessments, providing a more nuanced and holistic understanding of students' abilities and potential.

The benefits of innovative curriculum design, as driven by the NEP, are indeed manifold. Firstly, these innovative approaches breathe new life into education by ensuring its relevance to students' lives and future careers. By fostering more engaging and interactive learning experiences, they reignite the flames of curiosity, motivating students to take an active role in their educational journey. Furthermore, they prepare students more effectively for the demands of the contemporary workforce by cultivating interdisciplinary skills, critical thinking, and digital literacy. These skill sets, coupled with inclusive curricula, help reduce educational disparities and promote a fairer and more inclusive society. Finally, a well-rounded and innovative education system enhances a nation's global competitiveness by producing a skilled and adaptable workforce capable of navigating the complex challenges and opportunities of the 21st century. Nonetheless, the path to implementing innovative curriculum designs is not devoid of challenges. The inertia

of traditional educational systems, resistance to change, and concerns about resource limitations pose formidable hurdles. To surmount these challenges, a sustained commitment from policymakers, educators, and stakeholders is indispensable. It necessitates an environment that values experimentation, flexibility, and adaptability. Moreover, it calls for investment in teacher training and professional development to empower educators to facilitate these innovative learning experiences effectively. Adequate resources, both in terms of technology and infrastructure, are imperative to support these innovations fully. Looking forward, the prospects for innovative curriculum design appear promising. As education systems continue to adapt to the realities of the 21st century, innovative curricula will play an increasingly central role in preparing students for a rapidly changing world. The integration of emerging technologies, such as artificial intelligence, virtual reality, and personalized learning platforms, holds the potential to revolutionize curriculum delivery and create even more engaging and personalized learning experiences. These technologies can adapt to individual student needs, providing tailored educational journeys that cater to diverse learning styles and paces. Thus, curriculum design stands at the epicenter of educational innovation, and the National Education Policy serves as a guiding compass in this transformative journey. Innovative curriculum design is not merely an educational reform; it represents a profound reimagining of the educational experience, one that aligns with the needs of contemporary society and the future workforce. While challenges undoubtedly exist, the potential benefits are profound, promising a more relevant, engaging, and inclusive education system. This endeavor requires unwavering commitment, investment, and adaptability from all stakeholders. As we venture forward, we embark on an odyssey that holds the promise of equipping future generations with the knowledge, skills, and competencies required to thrive in an ever-evolving global landscape.

The National Education Policy and Curriculum Design

The National Education Policy (NEP) is frequently likened to a nation's educational blueprint, serving as the guiding compass that charts the course of its educational system. Over recent years, a noticeable trend has emerged across various countries—substantial revisions and overhauls of their respective NEPs. These revisions reflect a collective recognition within the global education community that the traditional curricula and pedagogical approaches that have long prevailed may no longer be adequate. The rationale underpinning these revisions is the imperative to reorient education to meet the multifaceted demands of the 21st century, where rapid societal, technological, and economic transformations are the norm rather than the exception. The NEP, as a policy framework, is instrumental in

molding the landscape of curriculum design. It provides the overarching vision and strategic direction for the education system, offering the guidelines and principles that educators and policymakers must heed. In essence, it sets the stage upon which the drama of educational reform unfolds. Recent revisions to NEPs worldwide have been characterized by a profound and visionary shift—a shift that underscores the need for innovative curriculum design and pedagogical strategies. These revisions are rooted in the understanding that the traditional, siloed approaches to education are ill-equipped to prepare students for the complex, interdependent, and fast-paced realities of the modern world.

Innovations in Curriculum Design under the Nep are Characterized by Several Key Features:

1. Interdisciplinary Learning

A cornerstone principle of the National Education Policy (NEP) is the promotion of interdisciplinary learning—a pedagogical paradigm shift that heralds a transformative approach to education. This innovative strategy exhorts students to embark on a journey that transcends the boundaries of traditional subject silos, enabling them to uncover rich connections between disparate fields of knowledge. The ultimate aim? To cultivate in students a holistic understanding of complex real-world challenges, equipping them with the intellectual agility and adaptability required to navigate the multifaceted demands of the modern workforce. The NEP's steadfast commitment to interdisciplinary learning challenges the conventional paradigms of education where subjects are often compartmentalized, rendering knowledge fragmented and disconnected from its real-world applications. This groundbreaking approach embraces the interplay between various disciplines, acknowledging that many of the most pressing challenges confronting society do not neatly fit within the confines of a single academic domain. Interdisciplinary learning, at its core, encourages students to embark on intellectual journeys that transcend disciplinary boundaries. It invites them to explore the rich tapestry of connections that exist between subjects, enabling them to draw insights, perspectives, and methodologies from diverse fields. For instance, a student studying environmental issues may integrate concepts from biology, economics, sociology, and policy studies to devise comprehensive solutions for sustainability. This not only enriches their understanding but also empowers them to think critically, synthesize information, and innovate—a skill set crucial in today's complex world. Moreover, interdisciplinary learning promotes a profound shift in the educational paradigm—from rote memorization to a quest for deeper understanding. It prompts students to ask probing questions, challenge

assumptions, and engage in hands-on exploration. It fosters an environment where the emphasis shifts from "what to think" to "how to think," nurturing the development of crucial cognitive skills such as critical thinking, problem-solving, and creativity. Crucially, this approach mirrors the realities of the modern workforce. In a world characterized by rapid technological advancements and interconnected global challenges, professionals are often called upon to grapple with issues that transcend disciplinary boundaries. Interdisciplinary learning equips students with the versatility and adaptability essential for success in a workforce that increasingly values employees who can synthesize knowledge, collaborate across fields, and offer innovative solutions. The benefits of interdisciplinary learning are indeed manifold. Beyond enhancing students' cognitive abilities and problem-solving skills, it enriches their learning experience, making education more engaging and relevant. It ignites their curiosity and motivation, as they recognize the intrinsic value of what they are learning and its potential to effect positive change. Furthermore, interdisciplinary learning nurtures a culture of collaboration, fostering the exchange of ideas among students with diverse backgrounds and interests. It encourages them to appreciate the multifaceted nature of real-world challenges and the need for multifaceted solutions—a perspective that will serve them well in their future careers. However, implementing interdisciplinary learning is not without its challenges. It requires educators to rethink and redesign curricula, collaborating across departments and disciplines. It necessitates a commitment to professional development, equipping teachers with the pedagogical strategies and tools needed to facilitate interdisciplinary experiences effectively. It also calls for resource allocation to support innovative teaching methods, such as project-based learning and experiential opportunities. Thus, the National Education Policy's advocacy for interdisciplinary learning represents a transformative leap in the field of education. By encouraging students to explore the interconnections between subjects and fostering a holistic understanding of complex problems, interdisciplinary learning equips them with the skills and mindset needed for success in the modern workforce. While challenges exist, the benefits are profound, promising a more engaged, adaptable, and innovative generation prepared to tackle the intricate challenges of our interconnected world. As we embrace this paradigm shift, it is essential for educators, policymakers, and stakeholders to work collaboratively to realize the full potential of interdisciplinary learning in education.

2. Critical Thinking and Problem Solving

The National Education Policy (NEP) stands as a resounding testament to the recognition that education in the 21st century must transcend the mere acquisition of facts and figures. One of its pivotal cornerstones is the profound emphasis it places on nurturing critical thinking and problem-solving skills within the education ecosystem. In a world characterized by intricate challenges, rapid technological advancements, and the ever-evolving dynamics of the global landscape, these skills are not mere luxuries but essential competencies that define an individual's readiness for the complexities of modern life. Within the ambit of the NEP, curriculum design takes center stage in orchestrating a transformational shift. It reimagines the educational landscape, departing from the conventional paradigms of rote memorization and standardized testing. Instead, it champions the design of curricula that propel students into the heart of authentic, real-world challenges. In this dynamic learning environment, students are not passive recipients of information but active participants in their own intellectual and practical growth. Critical thinking, as endorsed by the NEP, is the cornerstone of this pedagogical transformation. It demands that students engage in cognitive processes that go beyond the mere regurgitation of facts. They are encouraged to question assumptions, analyze information from multiple perspectives, and discern patterns and connections within complex data. Critical thinkers become adept at discerning credible sources from misinformation, a skill that is increasingly vital in the era of information overload. Simultaneously, problem-solving takes on a central role in curriculum design. Students are presented with real-world challenges that require the application of knowledge and skills acquired in various subjects. They must navigate ambiguity, consider diverse viewpoints, and synthesize information to devise innovative solutions. This experiential approach equips students with the ability to confront novel problems with confidence and creativity—a vital competency in a world where challenges seldom come with straightforward solutions. Through these educational innovations, the NEP propels students from the realms of passive memorization into the terrain of active, critical engagement with the world around them. It not only enhances their cognitive abilities but also imbues them with a deep-seated sense of agency and empowerment. Students are no longer mere recipients of knowledge; they become knowledge creators and problem solvers—a transformation that has profound implications for their future roles as citizens, professionals, and innovators. Moreover, the emphasis on critical thinking and problem solving aligns closely with the needs of the modern workforce. In today's rapidly changing job market, employers seek individuals who can navigate ambiguity, adapt to new situations, and offer creative solutions

to complex challenges. The NEP, by prioritizing these skills, enhances students' employability and positions them as assets to employers and society at large. However, the journey toward fostering critical thinking and problem-solving skills is not without its challenges. It necessitates a paradigm shift in teaching practices, moving away from traditional lectures and exams toward more student-centered, inquiry-based approaches. This transformation requires dedicated teacher training and professional development, equipping educators with the pedagogical strategies and tools to facilitate critical thinking and problem-solving effectively. Furthermore, the assessment of these skills presents a unique challenge. Traditional high-stakes exams are often ill-suited to measure the depth and breadth of critical thinking and problem-solving abilities. The NEP encourages a reevaluation of assessment practices, advocating for methods such as project-based assessments and portfolios that offer a more holistic view of students' capabilities. Thus, the National Education Policy's unwavering commitment to fostering critical thinking and problem-solving skills heralds a transformative era in education. By refocusing curriculum design on real-world challenges and experiential learning, it equips students with the competencies essential for success in the complex and dynamic landscape of the 21st century. While challenges exist in implementing these changes, the benefits are profound, positioning students as agile thinkers, innovators, and adaptable problem solvers who can navigate the complexities of the modern world with confidence and creativity. As we embrace this pedagogical transformation, the collaboration of educators, policymakers, and stakeholders is essential in ensuring the full realization of these skills in education.

3. Digital Literacy

In an era defined by the relentless advance of technology, digital literacy has transcended the realm of convenience to become an essential skill. Recognizing this pivotal shift, the National Education Policy (NEP) stands as a torchbearer of innovation, weaving digital literacy seamlessly into the fabric of its curriculum design. In doing so, it seeks not merely to produce proficient users of technology but to nurture a generation of individuals capable of harnessing digital tools as powerful instruments for creative problem-solving and effective communication. The digital landscape has irrevocably reshaped the way we live, work, and learn. In this fast-paced environment, digital literacy is the key that unlocks the doors to participation, productivity, and empowerment. The NEP, with its visionary outlook, endeavors to ensure that every student is not just equipped with the technical skills needed to navigate this digital world but is also primed to be a discerning and innovative user of technology. Under the purview of the NEP, curriculum design places a significant emphasis on

technology-based learning tools and resources. This approach fundamentally transforms the educational experience, making it more dynamic, interactive, and future-ready. It envisages a classroom where students are not passive recipients of knowledge but active co-creators of their learning journey, utilizing technology as a conduit for exploration, discovery, and expression.

One of the primary objectives of integrating technology into curriculum design is to equip students with proficiency in using a wide array of digital tools and platforms. They are taught how to navigate digital interfaces, employ software applications, and harness online resources effectively. This foundational digital literacy empowers students to engage with the digital world confidently, ensuring they are not left behind in an increasingly technology-driven society. However, the NEP goes beyond mere technical proficiency; it aspires to foster a deep understanding of the creative potential of technology. In this innovative learning environment, students are encouraged to leverage digital tools for creative problem-solving. They are tasked with real-world challenges that demand the application of digital skills to devise innovative solutions. This experiential learning not only enhances their problem-solving abilities but also nurtures an entrepreneurial mindset, preparing them to be catalysts of innovation in various fields. Furthermore, digital literacy within the NEP encompasses effective communication. In today's interconnected world, the ability to convey ideas, collaborate with others, and engage in meaningful dialogues through digital channels is indispensable. Students are taught to use technology as a medium for clear and persuasive communication, equipping them with a vital skill set that extends beyond academic contexts into the professional world. While the integration of technology in education brings forth immense opportunities, it is not without its challenges. Adequate infrastructure, including reliable internet access and access to digital devices, is imperative to ensure equitable access to digital learning resources. The NEP recognizes the importance of addressing these infrastructure disparities and advocates for inclusive digital education.

Moreover, educators themselves require training and professional development to effectively leverage technology for teaching. Continuous support and resources are vital to ensure that teachers can adapt to the evolving digital landscape and confidently guide students in their digital literacy journey. Thus, the National Education Policy's proactive stance on digital literacy represents a paradigm shift in education. By seamlessly incorporating technology-based learning tools and resources into curriculum design, it equips students with the skills and mindset needed to excel in a digital world. Beyond technical proficiency, the NEP fosters creative problem-solving, effective communication,

and an entrepreneurial spirit. While challenges exist in ensuring equitable access and teacher preparedness, the benefits are profound, positioning students to thrive in a digital age defined by innovation, connectivity, and opportunity. As we embrace this digital revolution in education, collaboration among educators, policymakers, and stakeholders is paramount to realize the full potential of digital literacy within the NEP.

4. Inclusivity and Diversity

The National Education Policy (NEP) stands as a resolute advocate for inclusive and diverse education—a transformative approach that recognizes the unique needs, backgrounds, and experiences of all students. In an increasingly interconnected and multicultural world, the NEP leads the charge in reshaping curriculum design to ensure that education is not only accessible to all but also enriched by a vibrant tapestry of perspectives and cultures. This visionary perspective extends far beyond the boundaries of traditional education, aiming to create an inclusive learning environment where diversity is celebrated, empathy is cultivated, and cultural competence is fostered. Inclusivity, within the framework of the NEP, represents a fundamental shift in educational philosophy. It envisions a classroom where every student, regardless of their abilities, socioeconomic status, cultural background, or any other characteristic, is welcomed and valued as an integral part of the learning community. The NEP recognizes that traditional educational systems, which often adhere to a one-size-fits-all model, fail to meet the diverse needs of students. Thus, curriculum design becomes a dynamic instrument for adaptation, accommodating the individual learning styles, paces, and requirements of students. One of the primary tenets of an inclusive and diverse curriculum design is the incorporation of a broader range of perspectives and experiences. This approach transcends the confines of textbooks to introduce students to a rich tapestry of voices and narratives from around the world. It ensures that the curriculum reflects the diversity of the global community, offering students the opportunity to explore different cultures, histories, and worldviews. This not only enriches their understanding of the world but also broadens their horizons, fostering a sense of curiosity and open-mindedness.

Moreover, an inclusive curriculum design strives to engender empathy among learners. By exposing students to diverse perspectives and experiences, it encourages them to see the world through others' eyes. This experiential learning transcends the theoretical and immerses students in the lived experiences of people from various backgrounds. It nurtures a sense of compassion, tolerance, and understanding, imbuing students with the capacity to connect with others on a deeper level. Cultural competence emerges as a cornerstone of inclusive and

diverse education under the NEP. It underscores the importance of equipping students with the ability to navigate and thrive in a multicultural world. Curriculum design is not limited to the transmission of knowledge but encompasses the cultivation of skills, attitudes, and behaviors that enable students to interact respectfully and effectively in a culturally diverse society. This competency goes beyond mere tolerance; it encourages active engagement, appreciation, and collaboration among individuals from different cultural backgrounds. While the vision of an inclusive and diverse education system is undeniably transformative, its realization is not without challenges. Curriculum design must be flexible and adaptable to cater to the diverse learning needs of students. It necessitates a commitment to teacher training and professional development to ensure that educators are equipped with the pedagogical strategies and tools needed to foster an inclusive learning environment. Moreover, resource allocation is vital to provide students with access to materials, experiences, and opportunities that reflect a diverse and inclusive perspective. Thus, the National Education Policy's unwavering advocacy for inclusive and diverse education reflects a visionary approach to learning. By reshaping curriculum design to accommodate diverse needs, incorporate a multitude of perspectives, foster empathy, and cultivate cultural competence, it seeks to create a dynamic and inclusive learning environment where every student can thrive. While challenges persist, the benefits are profound, positioning students as global citizens who are not only academically competent but also compassionate and culturally aware. As we embark on this transformative journey, collaboration among educators, policymakers, and stakeholders is pivotal to realize the full potential of inclusive and diverse education within the NEP.

5. Assessment Reform

The National Education Policy (NEP) sets forth a visionary approach to assessment practices – an approach that heralds a profound transformation in the way students' progress and abilities are gauged. In recognition of the limitations of traditional assessment methods, such as rote memorization and high-stakes examinations, the NEP advocates for a paradigm shift. It advocates for a diversified and dynamic assessment landscape that encompasses continuous evaluation, portfolio assessments, and project-based assessments, with the aim of providing a holistic and comprehensive understanding of a student's capabilities and potential. Traditional assessment methods, typified by rote memorization and high-stakes examinations, have long been criticized for their narrow focus on memorized facts and the ability to reproduce information under exam conditions. The NEP acknowledges that such assessments often fail to capture the

depth and breadth of a student's understanding, creativity, and problem-solving abilities. Consequently, curriculum design under the NEP is accompanied by a reevaluation of assessment practices to align them with the multifaceted goals of modern education. Continuous evaluation stands at the forefront of this assessment revolution. It envisions a learning environment where assessment is an ongoing, integral component of the educational journey. Rather than relying solely on summative assessments at the end of an academic period, continuous evaluation ensures that students are assessed consistently throughout their learning process. This method offers several advantages: it provides real-time feedback to students, identifies learning gaps early on, and allows educators to adapt their teaching strategies accordingly. It transforms assessment from a mere judgment of knowledge acquisition into a dynamic tool for enhancing learning outcomes.

Portfolio assessments constitute another pillar of the NEP's assessment framework. In this approach, students curate a collection of their work over time, showcasing their achievements, progress, and reflections. Portfolios offer a multifaceted view of a student's development, encompassing not only academic achievements but also creative endeavors, critical reflections, and personal growth. They provide a narrative of a student's educational journey, allowing educators to gain insight into the depth of their understanding and the evolution of their skills and competencies. Project-based assessments represent a tangible departure from traditional examination formats. In project-based learning, students engage in hands-on, real-world projects that require them to apply their knowledge and skills to solve complex problems or create meaningful artifacts. These assessments demand critical thinking, problem-solving, creativity, and collaboration—skills that are invaluable in the modern workforce. By assessing students based on their ability to navigate authentic challenges, project-based assessments not only provide a more accurate measure of their readiness for the real world but also nurture skills that are highly transferable and essential for success. The benefits of this diversified assessment landscape are profound. Firstly, it aligns assessment practices with the broader goals of education, emphasizing not just the acquisition of knowledge but the development of critical skills and competencies. Secondly, it reduces the undue pressure associated with high-stakes examinations, fostering a more conducive and less stressful learning environment. Thirdly, it promotes a growth mindset, encouraging students to view assessment as an opportunity for improvement rather than a judgment of their worth. Nonetheless, the transition to these innovative assessment methods is not without its challenges. Educators require training and professional development to effectively implement continuous evaluation, portfolio

assessments, and project-based assessments. Furthermore, adapting assessment practices to accommodate diverse learning styles and needs necessitates a flexible and adaptable approach. Thus, the National Education Policy's advocacy for diversified assessment practices signifies a transformative leap in the field of education. By emphasizing continuous evaluation, portfolio assessments, and project-based assessments, it aligns assessment with the broader goals of education, reduces stress, and fosters a growth-oriented mindset. While challenges exist, the benefits are profound, positioning students as active learners and critical thinkers, ready to navigate the complexities of the modern world with confidence and creativity. As we embrace this assessment revolution, collaboration among educators, policymakers, and stakeholders is paramount to realize the full potential of these innovative assessment practices within the NEP.

Benefits of Innovative Curriculum Design

1. Relevance

Innovative curricula, as championed by the National Education Policy (NEP), set the stage for education that is profoundly relevant. By closely aligning educational content and experiences with the ever-evolving demands of the modern world, these curricula bridge the gap between theory and practice. They enable students to see the immediate relevance of what they are learning to their lives and future careers. This relevance not only motivates students but also empowers them with knowledge and skills that can be readily applied in real-world contexts. Consequently, education becomes a dynamic and meaningful journey, fostering a lifelong love for learning.

2. Engagement

A cornerstone of innovative curricula within the NEP is their inherent capacity to ignite the flames of curiosity and engagement. These curricula leverage creative and interactive learning experiences that transcend the boundaries of traditional pedagogy. Students are no longer passive recipients of information but active participants in their educational journey. Whether through hands-on experiments, collaborative projects, or immersive technology-enhanced learning, these experiences kindle a sense of excitement and exploration. The result is an education that not only imparts knowledge but also nurtures critical thinking, problem-solving, and creativity—a transformative approach that propels students toward becoming lifelong learners and active contributors to society.

3. Preparation for the Workforce

In an era marked by rapid technological advancements and an ever-changing job market, innovative curricula emerge as a lifeline for students preparing to enter the workforce. Within the framework of the NEP, interdisciplinary skills take

center stage. Students are encouraged to explore the interconnectedness of knowledge, transcending the boundaries of traditional subject silos. Critical thinking and problem-solving become second nature, honed through real-world challenges and project-based learning. Digital literacy, a foundational pillar, equips students with not just the ability to use technology but also the capability to harness it as a tool for innovation and communication. The result is a generation of graduates who are not only well-prepared for the complexities of the modern workforce but who also possess the adaptability and resilience needed to thrive in an ever-changing professional landscape.

4. Diversity and Inclusion

Innovative curricula under the NEP are the embodiment of inclusivity and diversity. They are designed to accommodate the diverse needs, backgrounds, and perspectives of students. These curricula move beyond mere tolerance to actively celebrate the richness of diversity. By incorporating a broad range of perspectives, cultures, and voices, they foster a sense of empathy and cultural competence among learners. This transformative approach goes beyond the classroom, preparing students to navigate a multicultural world with respect, open-mindedness, and a deep appreciation for the multiplicity of human experiences. In this way, innovative curricula become a catalyst for creating a more equitable and harmonious society.

5. Global Competitiveness

At the heart of innovative curricula within the NEP lies the pursuit of global competitiveness. A well-rounded education system that places emphasis on interdisciplinary learning, critical thinking, digital literacy, and inclusive practices not only equips a nation's workforce with advanced skills but also enhances its adaptability and resilience. As a result, the nation becomes an attractive destination for foreign investors and multinational corporations, drawn by the promise of a skilled, adaptable, and innovative workforce. This influx of investment can lead to increased foreign direct investment (FDI), economic development, and a heightened global standing. In essence, innovative education propels a nation toward greater global competitiveness, opening doors to economic growth and prosperity on the international stage.

Challenges and Future Prospects

Embracing innovative curriculum designs in alignment with the National Education Policy (NEP) brings forth a multitude of advantages. However, as with any transformative endeavor, this shift in educational paradigms is not without its share of challenges. These challenges encompass resistance to change ingrained within traditional educational systems, the imperative need for comprehensive

teacher training and ongoing professional development, and the availability of essential resources and technology. Overcoming these hurdles demands unwavering commitment and collaboration from policymakers, educators, and stakeholders alike. One of the foremost challenges in implementing innovative curriculum designs is the resistance emanating from deeply entrenched traditional educational systems. These systems often rely on age-old pedagogical methods and rigid structures that are resistant to change. The introduction of interdisciplinary learning, continuous assessment, and technology-driven education can encounter resistance from those who are comfortable with the status quo. Addressing this challenge necessitates not only clear communication of the benefits of innovation but also a commitment to gradually phasing in changes, allowing for a smooth transition and acceptance.. The success of innovative curriculum designs hinges significantly on the capacity and preparedness of educators. To effectively implement these new approaches, teachers require comprehensive training and ongoing professional development. They need to adapt their teaching methodologies, embrace technology, and cultivate the skills necessary to facilitate project-based learning, continuous assessment, and other innovative techniques. This investment in educator readiness is essential to ensure that the transformational potential of innovative curricula is fully realized.

Access to essential resources and technology can pose a formidable challenge, particularly in regions with limited infrastructure or economic disparities. Innovative curriculum designs often rely on digital tools, interactive learning materials, and diverse resources. Ensuring equitable access to these resources is paramount to prevent the exacerbation of educational inequalities. Policymakers must allocate funding for technology integration, provide access to digital devices, and ensure reliable internet connectivity to bridge the digital divide and create an inclusive learning environment. Despite these challenges, the future prospects for innovative curriculum design appear promising. As education systems continue to evolve in response to the realities of the 21st century, innovative curricula will play an increasingly central role in preparing students for a rapidly changing world. Moreover, the integration of emerging technologies, such as artificial intelligence, augmented reality, and virtual reality, holds immense potential to revolutionize curriculum delivery. The advent of artificial intelligence, for instance, can enable personalized learning experiences, tailoring education to individual students' needs and learning styles. Virtual reality can transport students to immersive learning environments, providing hands-on experiences that were previously inconceivable. Such technological advancements promise to make education more engaging, interactive, and effective. In conclusion, while the challenges of implementing innovative curriculum designs aligned with the NEP are real and substantial, their potential benefits are equally profound. As educators, policymakers, and

stakeholders work collaboratively to address these challenges, the future of education appears bright. The integration of emerging technologies and a steadfast commitment to innovative approaches position education systems to equip students with the skills, knowledge, and adaptability needed to thrive in an ever-changing world. In this dynamic educational landscape, innovative curriculum designs will continue to evolve, ensuring that learners are well-prepared for the challenges and opportunities of the 21st century.

Conclusion

Innovations in curriculum design, catalyzed by the forward-thinking National Education Policy (NEP), signify a seismic shift in the landscape of education. These innovative approaches are not merely cosmetic adjustments but represent a fundamental reimagining of how knowledge is imparted and how learners are prepared to navigate the complexities of the modern world. While their implementation is not without challenges, the potential benefits are nothing short of transformative, promising a more relevant, engaging, and inclusive education system that equips students with the skills, knowledge, and competencies essential for success in an ever-evolving global landscape. As we set forth on this transformative educational journey, the commitment and collaborative efforts of all stakeholders, from policymakers and educators to parents and students, are indispensable to ensure that these innovative curriculum designs are not only effectively implemented but also continually refined to meet the dynamic needs of future generations. At the heart of these innovative curriculum designs is a resolute commitment to relevance. They bridge the chasm between traditional pedagogical approaches and the multifaceted demands of the modern world. These designs respond to the pressing question: "How can education be tailored to meet the evolving needs of students' lives and future careers?" By doing so, they ensure that education is not a static exercise in memorization but a dynamic journey that students can see as immediately applicable to their lives. The result is education that is inherently more engaging and motivating, as students recognize the real-world significance of what they are learning.

Engagement is another cornerstone of these innovative designs. They harness the power of creativity, interactivity, and experiential learning to transform students into active participants in their own educational journeys. These designs liberate students from the passive role of knowledge recipients, propelling them into the realm of critical thinkers, problem solvers, and lifelong learners. Whether through project-based learning, collaborative initiatives, or immersive technology-enhanced experiences, students are empowered to explore, question, and create. The educational landscape becomes a place where curiosity thrives, igniting a lifelong

passion for learning. Crucially, these innovative curriculum designs extend their influence beyond the classroom, positioning students as prepared and adaptable participants in the workforce of the future. They champion interdisciplinary skills that transcend traditional subject boundaries, nurturing the versatility needed to thrive in a rapidly changing job market. Critical thinking, problem-solving, digital literacy, and a host of other competencies become integral components of education, equipping students with the resilience and adaptability needed for success. Inclusivity and diversity also feature prominently in these innovative designs. They not only acknowledge the unique needs and backgrounds of students but actively celebrate the richness of diversity. By incorporating a multitude of perspectives, cultures, and voices, these designs foster a sense of empathy and cultural competence among learners. In doing so, they contribute to the creation of a more equitable and harmonious society. Looking to the future, the prospects for innovative curriculum design are promising. As education systems continue to evolve to meet the demands of the 21st century, these designs will play a central role in preparing students for a rapidly changing world. Moreover, the integration of emerging technologies, such as artificial intelligence, virtual reality, and personalized learning platforms, holds the potential to further revolutionize curriculum delivery. These technologies promise to make education even more engaging, personalized, and effective, aligning it with the digital age and the evolving needs of learners. In conclusion, while the journey of implementing innovative curriculum designs aligned with the NEP presents its share of challenges, their transformative potential is undeniable. They hold the promise of a more relevant, engaging, and inclusive education system that equips students with the skills, knowledge, and adaptability needed to thrive in the modern world. As we navigate this transformative path, it is essential for all stakeholders to collaborate and invest their collective efforts to ensure the effective implementation and continual refinement of these innovative curriculum designs. In doing so, we pave the way for a brighter educational future, one where learners are not just recipients of knowledge but architects of their own success in an ever-evolving global landscape.

Abstract:

In an era marked by rapid technological advancements and evolving economic landscapes, the concept of lifelong learning has gained paramount importance. Lifelong learning goes beyond traditional education, emphasizing continuous skill development and personal growth throughout one's life. This abstract explores the significance of integrating lifelong learning into the national education policy agenda and its profound implications for individuals and society. By embracing lifelong learning, education policies can empower citizens to adapt to change, close skills gaps, enhance employability, and foster a culture of continuous improvement. This abstract provides a succinct overview of the relevance and implications of promoting lifelong learning within national education policies, highlighting the transformative potential it holds for individuals and nations in an ever-changing world.

Keywords: *Lifelong Learning, National Education Policy, Education Agenda, Continuous Skill Development, Educational Transformation*

Introduction

Lifelong learning, an intrinsic part of human development, is the perpetual process of acquiring knowledge, skills, and competencies throughout an individual's life journey. In a world characterized by relentless change and innovation, the value of lifelong learning has assumed unprecedented significance. It transcends the confines of formal education, encompassing a dynamic philosophy that encourages individuals to embrace a continual quest for knowledge, adapt to evolving circumstances, and actively contribute to their personal development and the broader advancement of society. The contemporary landscape is defined by rapid technological advancements, economic shifts, and societal transformations. The careers of today may no longer exist tomorrow, and the skills demanded by the job market are in constant flux. This reality underscores the vital role of lifelong learning as a means of staying relevant and competitive in an environment where standing still is akin to falling behind. In essence, lifelong learning equips individuals with the intellectual and practical agility to not only weather these changes but also to thrive in a state of perpetual evolution.

Furthermore, the concept of lifelong learning extends beyond the realm of individual development. It has profound implications for societal progress. As

individuals engage in continuous learning, they not only enhance their own capabilities but also contribute to the collective knowledge and innovative potential of society as a whole. This accumulation of knowledge and innovation forms the bedrock upon which advancements in various fields are built, driving progress, and prosperity. Given the transformative potential of lifelong learning, its integration into the national education policy agenda is no longer a matter of choice but an urgent necessity. The significance of this integration extends across multiple dimensions, each of which holds profound implications for individuals and society.

Firstly, the infusion of lifelong learning principles into national education policies serves to reorient the educational landscape. It necessitates a shift away from conventional, time-bound learning models towards more flexible and adaptive systems. Educational institutions must recognize that learning does not end with a degree but continues throughout one's life. Lifelong learning policies encourage institutions to create learning environments that accommodate learners of all ages, supporting their evolving needs and aspirations. Moreover, the integration of lifelong learning requires education policies to prioritize accessibility and inclusivity. Lifelong learning opportunities should be available to all, regardless of age, background, or socioeconomic status. This inclusivity involves offering affordable and flexible learning options, such as adult education programs, online courses, and workplace training, to ensure that every individual has the opportunity to participate in the lifelong learning journey.

To implement lifelong learning effectively, teacher professional development becomes paramount. Educators are the custodians of knowledge transmission, and they must be equipped with the pedagogical skills and mindsets necessary to facilitate lifelong learning experiences. Lifelong learning also entails that educators themselves engage in continuous learning to stay current and model this behavior for their students. Furthermore, recognizing and accrediting prior learning experiences are essential elements of lifelong learning policies. Individuals bring diverse life experiences and skills to the learning process. National policies should establish mechanisms for evaluating and granting recognition to these experiences, allowing individuals to build upon their existing knowledge and skills.

Lastly, effective monitoring and evaluation mechanisms must be put in place to assess the impact of lifelong learning policies. Governments should regularly evaluate the outcomes of these policies in terms of employability, societal engagement, and economic growth. By continually assessing the effectiveness of lifelong learning initiatives, policymakers can make informed decisions and refine their approaches to better serve the needs of their citizens. Thus, lifelong learning is no longer an ideal but a necessity in our ever-changing world. Its integration into the national education policy agenda holds the key to individual empowerment and

societal progress. By embracing lifelong learning, individuals can adapt to the dynamic challenges of the modern era, enhance their employability, and contribute to the advancement of society. Policymakers must recognize the transformative potential of lifelong learning and prioritize its integration into education policies to secure a more prosperous and equitable future for all.

The Relevance of Lifelong Learning

1. Adaptation to a Changing World

The 21st century is characterized by relentless technological advancements and the constant evolution of economic landscapes. Jobs and industries that exist today may become obsolete tomorrow, while new opportunities emerge at an unprecedented pace. In this fast-paced environment, individuals must possess the agility and resilience to navigate these changes effectively. Lifelong learning, embedded within national education policies, equips individuals with the necessary tools and mindset to thrive amidst such dynamic transformations.

Lifelong learners develop a fundamental capacity to embrace change as an opportunity rather than a threat. They continuously acquire new knowledge and skills, enabling them to pivot and adapt to emerging demands in the job market. By promoting the concept of lifelong learning, national education policies actively prepare citizens to meet the challenges of a constantly shifting employment landscape, ensuring that they remain well-prepared and competitive throughout their careers. This adaptability not only enhances individual employability but also contributes to a nation's economic dynamism and global competitiveness.

2. Closing Skill Gaps

One persistent challenge in education and employment is the skill gap that often exists between what individuals learn in formal education settings and the practical skills demanded by the job market. National education policies that emphasize lifelong learning create vital mechanisms for individuals to continuously update and acquire new skills, thereby bridging these significant gaps.

Lifelong learning initiatives provide opportunities for individuals to stay current with industry trends, technologies, and emerging practices. By offering accessible, relevant, and up-to-date educational resources, these policies empower individuals to proactively address skill deficiencies and remain competitive in their chosen professions. Consequently, the individual benefits from improved employability, while the nation benefits from a more skilled and adaptable workforce, which, in turn, contributes to increased economic productivity and global competitiveness.

3. Enhancing Employability

Lifelong learning serves as a catalyst for enhancing employability by fostering a culture of continuous skill development. Individuals who embrace this ethos are more likely to exhibit attributes highly sought after in today's rapidly evolving job market. They tend to be adaptable, innovative, and capable of taking on diverse roles and responsibilities.

National education policies that prioritize lifelong learning actively support sustainable career development. They encourage individuals to view their professional journey as a continuum, where learning is not confined to the early years but extends throughout their working lives. Consequently, these policies reduce unemployment rates by ensuring that individuals possess the skills and adaptability needed to secure and maintain employment in an ever-changing labor landscape.

4. Empowering Citizens

Beyond its economic implications, lifelong learning is a powerful tool for empowering individuals to become active and informed citizens. Lifelong learners are better equipped with critical thinking, problem-solving, and decision-making skills. These attributes enable them to engage meaningfully in civic life and participate in the democratic process. Informed citizens who have undergone a lifelong learning journey are more likely to contribute to their communities and advocate for positive change. They possess the knowledge and skills needed to assess complex societal issues, propose informed solutions, and collaborate with others to effect meaningful transformation. Consequently, national education policies that promote lifelong learning foster a sense of civic responsibility and facilitate the emergence of engaged and proactive citizens who actively contribute to the overall well-being and progress of society.

5. Cultivating a Learning Society

A nation that prioritizes lifelong learning within its education policy agenda sets the stage for cultivating a vibrant and innovative learning society. This culture of continuous improvement extends well beyond the workplace, enriching every facet of society. It encourages individuals, organizations, and institutions to embrace research, innovation, and the development of new solutions to complex challenges. Lifelong learning policies stimulate a heightened sense of curiosity, exploration, and experimentation. They empower individuals to explore new horizons, acquire diverse perspectives, and generate innovative ideas that drive societal progress. Consequently, a nation that actively promotes lifelong learning not only enjoys economic competitiveness but also fosters a culture of intellectual and creative excellence that continuously pushes the boundaries of knowledge and innovation.

Thus, the integration of lifelong learning into national education policies carries profound implications for individuals and society as a whole. By equipping citizens with the adaptability to thrive in a changing world, closing skill gaps, enhancing employability, empowering informed citizens, and fostering a culture of continuous improvement and innovation, lifelong learning policies contribute to individual success and the advancement of nations. These policies are not just a response to contemporary challenges; they represent a visionary investment in a future where learning is a lifelong journey that enriches individuals and society at large.

Implications of Promoting Lifelong Learning

1. Education System Transformation

Integrating lifelong learning into national education policies represents a profound transformation of traditional education systems. It necessitates a fundamental shift away from the conventional, time-bound learning structures that have been the cornerstone of educational institutions for centuries. Instead, it calls for the adoption of more flexible, competency-based approaches that are better aligned with the evolving needs of learners. One key aspect of this transformation is the recognition and validation of informal and experiential learning. Lifelong learning policies acknowledge that individuals acquire knowledge and skills from a wide range of sources beyond formal classrooms. Therefore, they seek to provide pathways for individuals to gain recognized credentials based on their informal learning experiences. This recognition not only validates the expertise individuals accumulate through practical experiences but also encourages a holistic view of learning that transcends traditional boundaries.

Additionally, the shift towards competency-based education emphasizes the mastery of specific skills and knowledge rather than mere adherence to a prescribed curriculum. Learners progress at their own pace, ensuring that they attain a high level of proficiency in each competency before moving on. This individualized approach to learning not only enhances educational outcomes but also fosters a deeper understanding of subjects, promoting a lifelong love of learning.

2. Accessible Learning Opportunities

Ensuring that learning opportunities are accessible to all individuals, regardless of age, background, or socioeconomic status, is a cornerstone of national education policies promoting lifelong learning. These policies recognize that barriers to access can hinder the realization of lifelong learning ambitions and contribute to educational disparities. To address this challenge, lifelong learning

policies prioritize the provision of affordable, flexible, and inclusive learning options. Adult education programs, for example, are designed to cater to the unique needs of adult learners, offering flexible schedules and diverse course offerings. Online courses have emerged as a powerful tool for lifelong learning, allowing individuals to access educational resources from anywhere in the world. Additionally, workplace training programs bridge the gap between learning and practical application, ensuring that employees can continuously acquire skills relevant to their jobs.

Inclusivity is a central tenet of these policies. They aim to ensure that learners from all backgrounds, including those with disabilities or in underserved communities, have equal access to learning opportunities. Financial support mechanisms, scholarships, and subsidies may be part of these policies to mitigate financial barriers and create an equitable learning environment.

3. Teacher Professional Development

Educators play a pivotal role in fostering a culture of lifelong learning among students. National education policies that promote lifelong learning recognize the critical importance of teacher professional development in achieving this goal. Teachers are not only responsible for imparting knowledge but also for modeling lifelong learning behavior and creating an environment where students are encouraged to explore, question, and discover throughout their lives.

Lifelong learning policies prioritize the continuous professional development of teachers, equipping them with the skills, tools, and strategies to facilitate lifelong learning experiences effectively. These initiatives encompass various aspects, including pedagogical training, technology integration, and strategies for promoting critical thinking and problem-solving skills among students. Moreover, teachers themselves must be encouraged to engage in continuous learning. National policies can support this by providing opportunities for educators to upgrade their qualifications, participate in ongoing training, and collaborate with peers to share best practices. By nurturing a cadre of lifelong learners among educators, these policies create a ripple effect that positively impacts the learning culture within schools and educational institutions.

4. Recognition of Prior Learning

Lifelong learning policies recognize that individuals accumulate knowledge and skills from a multitude of sources throughout their lives. To harness the full potential of lifelong learning, these policies include mechanisms for recognizing and accrediting prior learning experiences. Recognition of prior learning involves assessing and validating the skills and knowledge individuals have acquired through work experience, volunteering, informal training, or self-

directed learning. This recognition may result in the awarding of formal credentials or credits, allowing individuals to build on their existing knowledge and skills efficiently. By acknowledging the value of prior learning, these policies reduce redundancy in education and training. Learners can bypass topics they have already mastered, focusing their efforts on areas where they require further development. This not only optimizes the learning journey but also encourages individuals to take ownership of their education and embrace a lifelong learning mindset.

5. Monitoring and Evaluation

Effective implementation of lifelong learning policies requires robust monitoring and evaluation mechanisms. Governments and educational authorities should regularly assess the impact of these policies on various dimensions, including employability, societal engagement, and economic growth. Monitoring and evaluation serve several vital functions. They allow policymakers to gauge the effectiveness of lifelong learning initiatives, identifying areas of success and areas that may require adjustment. This data-driven approach ensures that resources are allocated efficiently and that policies remain responsive to the evolving needs of learners and society. Moreover, it provides accountability and transparency, demonstrating to stakeholders the tangible benefits of lifelong learning policies. When citizens see the positive impact of these policies on employability, community engagement, and overall quality of life, they are more likely to support and participate in lifelong learning initiatives. Ultimately, monitoring and evaluation create a feedback loop that informs continuous improvement in lifelong learning policies, ensuring that they remain effective tools for personal and societal development.

Conclusion

Promoting lifelong learning within the national education policy agenda represents a visionary and transformative endeavor that transcends the confines of traditional education. It is a forward-looking response to the complex and dynamic realities of the 21st century, where change is the only constant and where individuals and nations must continuously adapt to thrive in an ever-evolving world. At its core, lifelong learning embodies the belief that education is not confined to the classroom or limited to a specific phase of life. It is a lifelong journey, a perpetual quest for knowledge, skills, and personal growth that spans across ages, careers, and circumstances. This philosophy of learning recognizes that the world is in a constant state of flux, driven by technological advancements, economic shifts, and societal transformations. Jobs and industries that exist today may become obsolete tomorrow, while new opportunities and challenges arise with astonishing frequency.

In this dynamic environment, the significance of lifelong learning becomes evident. It equips individuals with the intellectual and practical tools necessary to navigate these changes effectively. Lifelong learners develop a unique mindset characterized by adaptability, resilience, and a hunger for knowledge. They are not daunted by change; they embrace it as an opportunity for growth and self-improvement. By promoting this concept, national education policies actively prepare citizens to meet the demands of a dynamic job market, ensuring that they remain well-prepared and competitive throughout their careers. Moreover, lifelong learning enhances employability by fostering a culture of continuous skill development. Individuals who embrace this ethos are more likely to be adaptable, innovative, and capable of taking on diverse roles and responsibilities. They become highly sought-after employees in a rapidly evolving job market. National education policies that prioritize lifelong learning, in essence, support sustainable career development, reduce unemployment rates, and contribute to overall economic productivity and global competitiveness.

However, the impact of promoting lifelong learning extends far beyond the realms of employability and economic prosperity. It empowers citizens to become active and informed participants in society. Lifelong learners possess critical thinking, problem-solving, and decision-making skills that enable them to engage meaningfully in civic life. They are more likely to be well-informed and engaged in community initiatives, advocate for positive change, and contribute to the overall well-being of society. Furthermore, a nation that places lifelong learning at the heart of its education policy agenda fosters a culture of continuous improvement and innovation. This culture permeates every facet of society, extending beyond the workplace. It encourages research, innovation, and the development of new solutions to complex challenges, ultimately driving societal progress. In the face of the challenges and opportunities presented by the 21st century, integrating lifelong learning into education policies is not merely a choice; it is a strategic imperative for the betterment of individuals and society as a whole. It positions individuals to thrive in an era marked by rapid change and uncertainty. It empowers them to become adaptable, innovative, and engaged citizens who actively contribute to the betterment of their communities and the advancement of their nations. Furthermore, it creates a culture of intellectual and creative excellence that fuels innovation, fosters progress, and ensures that societies remain at the forefront of global development. In essence, promoting lifelong learning is not just a policy; it is a commitment to a brighter, more resilient, and ultimately more prosperous future for individuals and society as a whole.

Abstract

This essay explores the dynamic relationship between the Sustainable Development Goals (SDGs) and the National Education Policy (NEP) in India. The SDGs, a global agenda adopted by the United Nations, encompass various facets of sustainable development, including education, gender equality, clean water, economic growth, and climate action. India's NEP, introduced in 2020, seeks to revolutionize the education system and aligns with several SDGs. This abstract provides a succinct overview of how the NEP and the SDGs synergize, emphasizing their potential to facilitate holistic and sustainable development in India. It highlights key areas of alignment, such as quality education, gender equality, clean water and sanitation, decent work and economic growth, sustainable communities, and climate action. By examining these intersections, this abstract underscores the essential role of education in achieving the SDGs and fostering a more equitable, prosperous, and environmentally conscious future for India.

Keywords: Sustainable Development Goals (SDGs), National Education Policy (NEP), Synergistic Approach, Education for Sustainable Development, Holistic Development in India

Introduction

The year 2015 marked a significant milestone in global efforts to address pressing challenges facing humanity. During this year, the United Nations, representing all of its member states, came together to adopt the Sustainable Development Goals (SDGs). These SDGs represent a collective and universal call to action, serving as a blueprint for a better future for our planet and its inhabitants. The overarching objective is to accomplish a remarkable transformation by the year 2030, one that encompasses ending poverty, safeguarding our environment, and fostering prosperity for every individual on Earth. The SDGs are not isolated or disjointed aspirations; rather, they form an intricate web of interconnected issues and ambitions. At their core, these goals encompass a diverse array of critical challenges. They embrace the noble pursuit of poverty alleviation, recognizing that eradicating poverty is fundamental to achieving sustainable development. Simultaneously, the SDGs call for an elevation of educational standards worldwide, emphasizing the significance of quality education as a cornerstone for societal advancement.

Gender equality is another essential component embedded within the SDGs. Recognizing the profound impact of gender disparities on human development, the goals seek to dismantle existing inequalities and empower women and girls globally. Furthermore, the SDGs espouse the imperative of environmental sustainability, acknowledging that our planet's health is intrinsically linked to our own well-being. In the Indian context, the year 2020 witnessed the unveiling of the National Education Policy (NEP). This comprehensive policy framework represents a landmark effort to revamp and modernize India's education system. The NEP aims to be a catalyst for change, fostering innovation and inclusivity across the nation's educational landscape. Its provisions are far-reaching, spanning from the universalization of early childhood education to the integration of vocational training into mainstream learning. What emerges is a fascinating and potent connection between the Sustainable Development Goals and the National Education Policy in India. This essay ventures into the heart of this synergistic relationship, shedding light on how the NEP can be harnessed as a tool to not only realize the SDGs but also amplify their impact. By employing a harmonized approach, where educational reforms align seamlessly with the broader objectives of sustainable development, India can hope to make substantial strides towards a future marked by greater equity, prosperity, and environmental stewardship. In sum, the Sustainable Development Goals are a universal clarion call for global betterment. In India, the National Education Policy provides the framework and impetus for transformative change. Recognizing the profound interconnectedness of these endeavors, this essay delves into the profound ways in which they complement each other, ultimately working in concert to facilitate sustainable development on both national and global scales.

I. Quality Education (SDG 4) and the NEP

Within the framework of the Sustainable Development Goals (SDGs), SDG 4 stands as a beacon, beckoning nations to prioritize and facilitate the provision of quality education for all. In an era where knowledge is paramount, SDG 4 serves as a powerful reminder of the transformative potential that lies within the realm of education. It is a clarion call to ensure that every individual, regardless of their background, enjoys access to education that is not only inclusive but also of the highest quality. In this grand educational endeavor, the National Education Policy (NEP) of India emerges as a natural ally and an embodiment of this lofty aspiration. The NEP, unveiled in 2020, aligns seamlessly with the principles and objectives laid out in SDG 4, forming a harmonious partnership that holds tremendous promise for the educational landscape in India.

One of the primary areas where the NEP resonates with SDG 4 is in its commitment to equitable access to education. SDG 4 underscores the importance of

ensuring that education reaches those on the margins of society, leaving no one behind. The NEP shares this vision by advocating for educational reforms that break down barriers to access. This commitment extends from the grassroots level, with the universalization of early childhood education, ensuring that the foundations of learning are laid for all, regardless of their socio-economic status or geographical location. Moreover, the NEP's emphasis on multidisciplinary learning aligns with the broader spirit of SDG 4. Education is not merely about acquiring knowledge in silos; it is about fostering holistic development and encouraging students to explore various fields of study. By nurturing critical thinking skills and encouraging a more holistic approach to education, the NEP equips students with the tools they need to thrive in an increasingly complex and interconnected world. Furthermore, the NEP recognizes the need for vocational training and skill development, which is pivotal for creating a workforce that is not only educated but also employable. This aspect of the NEP directly contributes to SDG 4's target of inclusive and equitable quality education by making quality education more accessible to marginalized communities. By providing vocational training opportunities alongside traditional academic pathways, the NEP empowers individuals with practical skills that can enhance their livelihoods and contribute to a more inclusive society.

Thus, the alignment between SDG 4 and the National Education Policy of India is evident in their shared commitment to providing quality education for all, regardless of background or circumstance. The NEP's dedication to equitable access, multidisciplinary learning, and vocational training resonates with the broader goals of SDG 4, ultimately striving for inclusive and equitable education. This synergy between a global vision and a national policy holds the potential to transform the educational landscape in India and contribute significantly to the broader global agenda of sustainable development through education.

II. Gender Equality (SDG 5) and the NEP

The principle of gender equality stands as a foundational pillar within the framework of sustainable development. It is not only a fundamental human right but also a critical driver of social and economic progress. In recognition of its paramount importance, SDG 5 was conceived, explicitly aiming to achieve gender parity and empower all women and girls across the globe. This goal underscores the significance of dismantling entrenched gender biases and ensuring that opportunities and rights are afforded to every individual, regardless of their gender. In the Indian context, the National Education Policy (NEP), introduced in 2020, emerges as a potent instrument to address and advance the principles enshrined in SDG 5. The NEP doesn't merely intersect with SDG 5; it converges with it, sharing a common purpose in the pursuit of gender equality. One of the primary

ways in which the NEP aligns with SDG 5 is through its advocacy for the removal of gender biases in educational materials. Discriminatory and stereotypical content in textbooks and curricula has long perpetuated gender inequalities. The NEP seeks to rectify this by fostering an inclusive and gender-sensitive learning environment. By doing so, it takes a critical step towards realizing SDG 5's objective of dismantling harmful stereotypes and biases.

Furthermore, the NEP champions the cause of gender-sensitive curricula. It acknowledges that educational content should not perpetuate gender inequalities but should instead promote a balanced and equitable understanding of the roles and contributions of individuals, irrespective of their gender. This approach resonates with SDG 5's broader vision of empowerment, as it empowers students to develop a more informed and egalitarian perspective. Crucially, the NEP also places a strong emphasis on encouraging the participation of girls in STEM (Science, Technology, Engineering, and Mathematics) subjects. Historically, there has been a gender gap in STEM fields, limiting opportunities for girls and women. By actively promoting and facilitating the inclusion of girls in STEM education, the NEP contributes directly to SDG 5's mission of empowering women and girls with the knowledge and skills needed for equal participation in society. In essence, the NEP serves as a critical instrument in reducing gender disparities in education, which, in turn, reinforces and amplifies the broader objectives of gender equality encapsulated in SDG 5. By advocating for inclusive, bias-free educational materials, gender-sensitive curricula, and increased participation of girls in traditionally male-dominated fields, the NEP not only advances the cause of gender equality within the sphere of education but also contributes substantially to the larger mission of empowering women and girls globally. In doing so, it aligns harmoniously with the global imperative set forth by SDG 5, fostering a more equitable and just society for all.

III. Clean Water and Sanitation (SDG 6) and the NEP

Ensuring access to clean water and adequate sanitation is not only a matter of convenience but a fundamental necessity for promoting healthy living and overall well-being. Recognizing this vital connection between basic amenities and human health, the National Education Policy (NEP) unveiled in 2020 underscores the paramount importance of fostering safe and hygienic educational environments within India's educational institutions. Under the NEP's visionary framework, schools are expected to go beyond imparting knowledge; they are also entrusted with the responsibility of providing clean drinking water and proper sanitation facilities. The alignment between the NEP's commitment to safe and hygienic educational spaces and the global mandate articulated in Sustainable Development Goal 6 (SDG 6) is not only conspicuous but also profoundly significant. SDG 6

embodies the collective commitment of nations to ensure the availability and sustainable management of water and sanitation for all, leaving no one behind.

The NEP's emphasis on clean drinking water and sanitation facilities in schools is a manifestation of a broader understanding that healthy learning environments are conducive to effective education. It recognizes that students cannot fully benefit from education if they are burdened by the challenges of inadequate water supply or unsanitary conditions. By ensuring access to clean drinking water, schools not only meet a basic human need but also create an environment where students can thrive physically, mentally, and academically. Moreover, the provision of proper sanitation facilities in schools carries multifaceted benefits. It not only promotes health and hygiene but also instills essential habits in students from a young age. By cultivating a culture of cleanliness and responsibility, the NEP contributes to the development of responsible citizens who understand the value of clean and sustainable practices.

The NEP's alignment with SDG 6 is not merely a reflection of shared objectives; it is a tangible commitment to translating global sustainability goals into actionable measures within the education sector. In doing so, the NEP reinforces the idea that education is not an isolated pursuit but an integral part of holistic human development. Clean water and sanitation are fundamental components of a healthy and dignified life, and by incorporating these principles into the educational sphere, the NEP aligns itself seamlessly with the global vision of SDG 6. In conclusion, the National Education Policy's recognition of the significance of clean water and sanitation within educational institutions is not only a testament to its commitment to creating an enriching learning environment but also a testament to its alignment with the Sustainable Development Goals, particularly SDG 6. By ensuring that schools provide clean drinking water and proper sanitation facilities, the NEP contributes to the broader mission of universal access to clean water and sanitation, ultimately fostering healthier communities and sustainable development for all.

IV. Decent Work and Economic Growth (SDG 8) and the NEP

Sustainable Development Goal 8 (SDG 8) heralds a noble vision for the global community—a vision of sustained, inclusive, and sustainable economic growth. At its core, SDG 8 calls for a world where full and productive employment is a reality, and where decent work opportunities abound for all. The pursuit of this goal is not just about economic prosperity but also about the equitable distribution of that prosperity. In the context of India, where economic growth and development are at the forefront of the national agenda, the National Education Policy (NEP) introduced in 2020 emerges as a potent instrument to realize the principles enshrined in SDG 8. The NEP is a comprehensive framework that seeks to transform the educational

landscape of the nation, and one of its key pillars is the focus on skill development and vocational education.

The synergy between SDG 8 and the NEP is evident in their shared emphasis on equipping individuals with the knowledge and skills needed to participate in the job market effectively. By prioritizing skill development, the NEP addresses a fundamental need in the current global economic landscape. It acknowledges that traditional academic knowledge is essential, but it alone is not sufficient to prepare individuals for the dynamic and diverse job market of the 21st century. One of the most remarkable aspects of the NEP is its commitment to vocational education, which aligns seamlessly with the vision of SDG 8. Vocational education equips students with practical skills and knowledge directly applicable to the workforce. This approach not only fosters employability but also encourages entrepreneurship and innovation, both of which are vital drivers of economic growth. Furthermore, the NEP's focus on multidisciplinary learning resonates with the broad spirit of SDG 8. It recognizes that in today's complex world, individuals need a diverse set of skills and knowledge to succeed in various sectors. By promoting multidisciplinary education, the NEP ensures that students develop a holistic skill set that is adaptable to a wide range of job opportunities. Moreover, the NEP's emphasis on experiential learning and internships connects education directly to the real world, offering students practical insights and hands-on experience. This approach fosters a deeper understanding of industry dynamics and facilitates a smoother transition into the workforce. Thus, the National Education Policy stands as a cornerstone in India's journey toward achieving SDG 8. By prioritizing skill development, vocational education, and multidisciplinary learning, the NEP ensures that students are not only well-educated but also well-prepared for the demands of the job market. In doing so, the NEP makes a substantial and direct contribution to the realization of SDG 8's targets of decent work and economic growth, ultimately fostering a society where individuals can secure meaningful and sustainable employment, and where economic growth is inclusive and sustainable.

V. Sustainable Cities and Communities (SDG 11) and the NEP

The National Education Policy (NEP), introduced in India in 2020, stands as a testament to the nation's commitment to not only fostering intellectual growth but also recognizing the pivotal role of sustainable practices and environmental consciousness in shaping a better future. The NEP's approach extends beyond the confines of traditional education; it permeates the physical spaces where learning occurs. This holistic perspective is particularly evident in the NEP's encouragement of educational institutions, from schools to higher education centers, to embrace and embody sustainability principles. One of the key facets of the NEP's environmental

consciousness is its advocacy for the adoption of sustainable practices within educational institutions. It acknowledges that educational campuses are more than just physical spaces; they are microcosms of society, and the values they espouse extend far beyond their boundaries. By promoting sustainability at the institutional level, the NEP contributes significantly to Sustainable Development Goal 11 (SDG 11), which seeks to make cities and human settlements inclusive, safe, resilient, and sustainable.

A fundamental aspect of this sustainable approach is waste management. The NEP underscores the importance of waste reduction, recycling, and responsible disposal within educational institutions. This not only instills environmentally responsible behaviors in students but also sets an example for the wider community. By reducing waste and adopting eco-friendly practices, institutions contribute to more sustainable and resilient urban environments, directly aligning with SDG 11's goal of promoting sustainability within cities and human settlements. Energy efficiency is another critical dimension of the NEP's sustainable education vision. By encouraging institutions to adopt energy-efficient technologies and practices, the NEP not only reduces operational costs but also reduces the carbon footprint of educational facilities. This emphasis on energy efficiency aligns with SDG 11's objective of creating sustainable and environmentally friendly urban environments.

Furthermore, the NEP envisions educational campuses as "green campuses," where sustainability principles are woven into the very fabric of the institution. Green campuses prioritize the use of renewable energy sources, maximize green spaces, and reduce environmental impact. By nurturing such green campuses, the NEP exemplifies its commitment to creating inclusive, safe, resilient, and sustainable environments for learning. Thus, the National Education Policy's recognition of the importance of sustainable practices and environmental consciousness extends far beyond the classroom. By encouraging educational institutions to embrace sustainability through waste management, energy efficiency, and green campuses, the NEP supports the broader objectives of SDG 11, fostering cities and human settlements that are not only inclusive and safe but also environmentally sustainable. Through these concerted efforts, the NEP reinforces the idea that education is not merely about knowledge transfer but also about instilling values and behaviors that can shape a more sustainable and resilient future for all.

VI. Climate Action (SDG 13) and the NEP

In an era where our planet faces unprecedented environmental challenges, taking decisive climate action is no longer a choice but a moral and existential imperative. The consequences of climate change are far-reaching, affecting not only the natural world but also human societies and economies. Recognizing this, Sustainable

Development Goal 13 (SDG 13) urges the global community to take urgent action to combat climate change and its impacts. In this critical context, the National Education Policy (NEP) of India emerges as a forward-looking and progressive instrument that recognizes the urgency of climate action. The NEP is not confined to conventional educational paradigms; it extends its vision to encompass environmental education, awareness, and the promotion of sustainable practices, echoing the clarion call of SDG 13.

Central to the NEP's alignment with SDG 13 is its commitment to environmental education. It acknowledges that educating the present and future generations about environmental issues is paramount for effecting meaningful change. By incorporating environmental education into curricula at all levels, the NEP empowers students with the knowledge and awareness needed to comprehend the complex web of ecological challenges that humanity faces. This aligns harmoniously with SDG 13's aim to raise awareness about climate change and its mitigation. Moreover, the NEP goes beyond theoretical knowledge; it emphasizes practical, eco-friendly practices within educational institutions. By setting an example of sustainability through waste reduction, energy efficiency, and responsible resource management, educational institutions contribute to the broader effort of reducing carbon footprints and minimizing environmental impact. These initiatives are in direct consonance with SDG 13's objective of mitigating the adverse effects of climate change. Additionally, the NEP nurtures environmental stewardship among students, instilling a sense of responsibility for the planet's well-being.

Through hands-on activities, conservation efforts, and community engagement, students are encouraged to take an active role in safeguarding the environment, which is a core tenet of SDG 13. Furthermore, the NEP recognizes the importance of sustainable practices in the design and management of educational campuses. "Green campuses" that utilize renewable energy sources, maximize green spaces, and prioritize eco-friendly infrastructure not only exemplify sustainable living but also reduce the carbon footprint of institutions. This aligns perfectly with SDG 13's mission of promoting urgent climate action at all levels of society. Thus, the National Education Policy of India, with its focus on environmental education, sustainable practices, and fostering environmental stewardship, epitomizes the essence of climate action as articulated in SDG 13. By incorporating these principles into the educational framework, the NEP reinforces the idea that education is a transformative force that can drive the urgent and collective efforts required to combat climate change. Through these measures, the NEP makes a significant contribution to building a sustainable and resilient future for both India and the global community, underscoring the profound interdependence between education and climate action.

Conclusion

The Sustainable Development Goals (SDGs) and the National Education Policy (NEP) are not isolated or parallel endeavors; rather, they are intricately woven threads of a single tapestry. Together, they form a comprehensive approach to sculpting a brighter and more equitable future for India. The NEP, in particular, stands as a dynamic catalyst for achieving the SDGs, acting as the cornerstone upon which the edifice of sustainable development is erected. At first glance, the SDGs may appear to be a set of global aspirations addressing a multitude of challenges, from poverty to climate change. Simultaneously, the NEP may seem like a national education reform effort aimed at modernizing India's learning landscape. However, a deeper examination reveals their profound interconnectedness and the pivotal role education plays in realizing the broader goals of sustainability. The NEP serves as the fertile soil from which the seeds of sustainable development sprout. It is not merely about imparting knowledge; it is about nurturing informed, empathetic, and environmentally conscious citizens who can grapple with the complexities of a rapidly changing world. It emphasizes equitable access to education, ensuring that no one is left behind in the quest for knowledge and empowerment.

Furthermore, the NEP champions quality education, pushing the boundaries of traditional learning to encompass multidisciplinary perspectives and critical thinking. It recognizes that sustainable development requires a cadre of thinkers who can solve complex problems, innovate, and adapt. By nurturing these skills, the NEP prepares students to confront the multifaceted challenges posed by sustainable development. The NEP's focus on gender equality is another manifestation of its alignment with the SDGs. It dismantles gender biases, promotes gender-sensitive curricula, and encourages female participation in STEM fields. In doing so, it contributes directly to SDG 5, advancing the cause of gender equality and empowering women and girls to become active participants in the journey toward sustainability. Moreover, the NEP addresses environmental consciousness, advocating for sustainable practices, waste management, energy efficiency, and green campuses within educational institutions. These principles are in harmony with the environmental sustainability goals embodied in SDG 11.

In essence, the NEP shapes a generation of learners who are not only equipped with knowledge but also imbued with values that align with the SDGs. It prepares them to be responsible stewards of the environment, champions of gender equality, and catalysts for inclusive, sustainable economic growth. By embracing this harmonized vision, India stands on the cusp of transformation. It can emerge as a global leader in both education and sustainable development, demonstrating that a nation's progress is inexorably linked to the education it provides. The NEP, as the linchpin in this synergy, underscores the vital role of education in realizing the

ambitious goals of sustainability. In embracing this interconnected approach, India charts a path toward a more equitable, prosperous, and sustainable future, setting an example for the world to follow. It is through the harmonious interplay of education and sustainability that India can navigate the complex challenges of the 21st century and shine as a beacon of progress for generations to come.

Ms. J. Smruthymol

*Assistant Professor of Commerce
Karpagam Academy of Higher Education
Coimbatore*

Abstract

The rapid advancement of technology has transformed the educational landscape, prompting nations to incorporate technology integration into their National Education Policies (NEPs). This abstract provides an overview of the opportunities and challenges associated with technology integration within NEPs.

Keywords: *Technology Integration, National Education Policy, Opportunities, Challenges, Education Technology*

Introduction

The swift progression of technology has brought about profound changes in the realm of global education. It is no longer a choice but an imperative to infuse technology into the educational landscape in our contemporary digital era. As a result, numerous nations have embedded technology integration as a pivotal element within their National Education Policies (NEPs). This essay delves into the prospects and obstacles linked with the incorporation of technology into NEPs, highlighting the prospective advantages it offers to education while also underscoring the challenges that must be surmounted to harness its full potential.

Opportunities

1. Enhanced Learning Experiences

The incorporation of technology into education can offer students dynamic and immersive learning encounters. This integration encompasses a broad spectrum of tools, such as digital resources, multimedia content, and educational software, all of which serve to enhance the accessibility and enjoyment of complex subjects. These digital resources and technologies are particularly valuable as they can adapt to diverse learning styles, making education more inclusive and effective. Digital resources, including online textbooks, interactive simulations, and virtual laboratories, bring an interactive dimension to learning. They enable students to delve into subjects in ways that traditional paper-based resources cannot match. For instance, a biology student can virtually dissect a frog, gaining a

deeper understanding of anatomy, while a history enthusiast can explore ancient civilizations through interactive timelines and 3D reconstructions. These experiences engage students in a manner that fosters curiosity and critical thinking.

Multimedia content, such as educational videos, animations, and podcasts, also enrich the learning process. Visual and auditory elements can help clarify complex concepts, making them more digestible and memorable. For example, a physics lesson on electromagnetic waves can come alive through animated visualizations, aiding students in comprehending abstract phenomena. Similarly, historical events can be vividly portrayed through documentary-style videos, enabling students to grasp the context and significance of events. Educational software takes technology integration a step further by offering personalized learning experiences. Adaptive platforms can analyze a student's performance and tailor content to their individual strengths and weaknesses. For instance, a math program can provide additional practice problems in areas where a student struggles while offering advanced challenges for areas of proficiency. This adaptability ensures that students receive the right level of challenge and support, optimizing their learning outcomes. Furthermore, technology integration can transcend geographical boundaries and time constraints. Online learning platforms and virtual classrooms allow students to access educational resources and interact with instructors and peers from anywhere in the world, fostering global collaboration and cultural exchange.

Thus, technology integration in education has the potential to revolutionize the way students learn. By offering interactive and engaging learning experiences through digital resources, multimedia content, and educational software, it caters to diverse learning styles and promotes active participation. As technology continues to advance, its role in education will only become more significant, opening up new avenues for accessible and enjoyable learning for all.

2. Access to Global Knowledge

The internet serves as an expansive gateway that connects students to an immense treasure trove of information and knowledge originating from every corner of the globe. This interconnectedness, facilitated by technology, has far-reaching implications, particularly in leveling the educational playing field. It empowers students residing in remote and underserved areas with access to the same rich resources available to their urban counterparts, thereby mitigating educational disparities. The internet, with its vast array of websites, online libraries, academic databases, and educational platforms, has transformed the way students access information. Gone are the days when geography could be a limiting factor in one's quest for knowledge. Students in remote regions, often hampered by limited

access to traditional educational resources, now have the means to tap into the same vast wellspring of information that urban students enjoy.

This newfound accessibility is instrumental in closing the educational gap that has persisted for generations. In remote areas where physical libraries and educational institutions may be scarce, the internet serves as an equalizer. Students can explore subjects, conduct research, and access educational materials that were previously out of reach. Whether it's studying advanced mathematics, delving into world history, or exploring the latest scientific discoveries, the internet ensures that opportunities for learning are no longer confined to specific geographic locations. Moreover, the internet fosters collaborative learning and global connectivity. Students can participate in online forums, engage in virtual classrooms, and collaborate on projects with peers from different countries and cultures. This not only enhances their understanding of diverse perspectives but also prepares them for a globalized world where collaboration and cross-cultural communication are essential skills.

In addition to academic resources, the internet offers a plethora of educational tools and platforms that cater to various learning styles and needs. From interactive educational games that make learning fun to digital tutors that provide personalized assistance, technology-driven solutions are revolutionizing the way students acquire knowledge. Adaptive learning systems can assess individual strengths and weaknesses, tailoring content and exercises to optimize the learning experience for each student. However, it's important to acknowledge that the digital divide, characterized by unequal access to technology and the internet, still exists in many regions. Bridging this gap is crucial to ensure that all students, regardless of their location, can benefit from the educational opportunities that technology offers. Thus, the internet, coupled with technology, has transformed education into a more inclusive and equitable endeavor. It empowers students in remote and underserved areas by granting them access to the vast reservoir of information available online. This accessibility not only reduces educational disparities but also prepares students to thrive in an interconnected and knowledge-driven world. Efforts to bridge the digital divide will further enhance the transformative potential of technology in education.

3. Personalized Learning

Adaptive learning platforms and artificial intelligence-driven tools have ushered in a transformative era in education by customizing educational content to meet the unique needs and learning rhythms of individual students. This personalization not only enhances the educational experience but also holds the potential to maximize learning outcomes in profound ways. These innovative tools leverage the power of data and AI algorithms to analyze students' performance,

identify their strengths, weaknesses, and learning styles, and then dynamically adjust the content and pace of instruction accordingly. Here's how this personalization process works: Adaptive learning platforms create individualized learning paths for each student. For example, in a mathematics course, if a student excels in algebra but struggles with geometry, the platform will allocate more time and resources to geometry-related content and provide additional practice problems or resources in that area. Conversely, it will advance the student more quickly through topics they've mastered. When a student encounters challenges or misconceptions in their learning journey, AI-driven tools can immediately detect these issues and offer targeted remediation. If a student struggles with a specific math concept, the platform might provide additional explanations, examples, or interactive exercises until the concept is grasped.

Rather than relying on standardized tests or fixed assessments, these platforms use adaptive assessments that evolve as the student progresses. This ensures that students are consistently challenged at an appropriate level, preventing boredom or frustration. Adaptive systems can offer real-time feedback on students' performance, pinpointing areas where improvement is needed. This immediate feedback loop helps students monitor their progress and adjust their learning strategies accordingly. Educators also benefit from the wealth of data generated by these platforms. They can track students' progress, identify trends, and intervene when necessary to provide additional support or enrichment. One of the most significant advantages of personalization in education is its potential to improve learning outcomes. When students receive content tailored to their abilities and learning styles, they are more engaged and motivated to learn. This targeted approach minimizes frustration and enhances confidence, leading to a deeper understanding of the material.

Moreover, personalized learning can accommodate a wide range of student abilities within a single classroom, making education more inclusive. Students with different learning needs, backgrounds, and levels of proficiency can all progress at their own pace, ensuring that no one is left behind. However, it's essential to strike a balance between technology-driven personalization and the role of educators. While AI can provide valuable insights and assistance, the human touch in teaching remains irreplaceable for fostering critical thinking, creativity, and interpersonal skills. Thus, adaptive learning platforms and AI-driven tools have the potential to revolutionize education by tailoring content to individual students' needs and learning speeds. This personalized approach not only optimizes learning outcomes but also promotes inclusivity in education, accommodating diverse learners. By combining the strengths of technology with

the expertise of educators, we can create a dynamic and effective learning environment that caters to the unique needs of every student.

4. Teacher Professional Development

National Education Policies (NEPs) have the capacity to encompass comprehensive provisions aimed at elevating the educational landscape, and one crucial facet of this transformation involves equipping educators with the skills and knowledge needed to effectively integrate technology into their teaching practices. Such provisions not only enhance the quality of instruction but also serve as a means to empower teachers with essential digital literacy skills, ensuring they remain adept in the ever-evolving digital age. NEPs can allocate resources and strategies for ongoing professional development programs for teachers. These programs should encompass training on the integration of technology into pedagogy. Teachers can learn how to leverage digital tools, software, and online resources to engage students, facilitate active learning, and enhance subject understanding. Furthermore, they can explore innovative teaching methodologies that make use of technology, such as blended learning, flipped classrooms, and online collaborative projects.

In an era where technology permeates every aspect of society, educators must possess strong digital literacy skills. NEPs can include provisions for digital literacy training to ensure that teachers are not only proficient in using technology for teaching but also in navigating digital platforms, evaluating online information critically, and fostering responsible digital citizenship among students. To effectively integrate technology, teachers need access to the necessary tools and resources. NEPs can include initiatives to provide schools and educators with updated hardware, software licenses, and digital learning resources. Ensuring equitable access to technology is essential to bridge the digital divide among students and educators. Building a supportive network and communities of practice can foster collaboration among educators. NEPs can encourage the creation of teacher networks and online forums where educators can share best practices, innovative lesson plans, and troubleshooting tips related to technology integration. This collaborative environment can boost the confidence and competence of teachers in using technology effectively.

NEPs can establish systems for assessing the impact of technology integration on teaching and learning outcomes. Regular evaluations can help identify areas where further support and training are needed. Feedback mechanisms should involve both teachers and students to ensure that technology is enhancing the learning experience and addressing specific educational needs. NEPs can promote curriculum flexibility, allowing teachers the autonomy to adapt their teaching methods to suit the needs of their students and the evolving technological

landscape. This approach enables educators to harness the potential of technology while tailoring instruction to their unique classroom dynamics. Encouraging educational research and innovation in technology integration should be a key aspect of NEPs. Teachers should be encouraged and supported to explore new technologies and teaching approaches, with opportunities for piloting and evaluating innovative practices. Thus, NEPs have the capacity to be forward-thinking and comprehensive documents that recognize the pivotal role of technology in education. By including provisions for teacher training in effective technology integration, NEPs not only enhance the quality of instruction but also equip educators with vital digital literacy skills. This empowers teachers to navigate the digital age confidently, preparing students for success in an increasingly technology-driven world.

5. Efficient Administrative Systems

The integration of technology within educational institutions has the potential to revolutionize the administrative aspects of education, offering a myriad of benefits that encompass efficiency, resource optimization, and enhanced communication among stakeholders. By leveraging technology, educational institutions can streamline administrative tasks, leading to more effective management of their resources, timetables, and interactions with various stakeholders. Educational institutions, be they schools, colleges, or universities, often grapple with the efficient allocation of resources, including classrooms, equipment, and personnel. Technology can provide solutions through resource management systems that optimize scheduling, preventing conflicts and ensuring that facilities are used to their fullest capacity. This, in turn, maximizes the institution's investments and minimizes waste. Creating and managing timetables is a complex and time-consuming task. Technology can automate this process, taking into account various parameters such as teacher availability, student preferences, and classroom constraints. Automated timetabling not only reduces the burden on administrators but also results in more balanced and efficient schedules that benefit both students and faculty. Effective communication among students, teachers, parents, and administrators is vital for the smooth functioning of educational institutions. Technology facilitates seamless communication through digital platforms, email, and messaging apps. This connectivity allows stakeholders to stay informed about important updates, events, and academic progress in real time. Additionally, video conferencing and virtual meetings have become essential tools for remote collaboration, especially in times of crisis.

Educational institutions generate and handle vast amounts of data, from student records and attendance to financial information. Robust data management systems powered by technology ensure the security, accuracy, and accessibility of this

information. Data analytics tools can further provide valuable insights to inform decision-making processes. Administrative tasks like enrollment, grading, and payroll processing can be automated to a significant extent, reducing the administrative burden on staff. This frees up time for educators and administrators to focus on more strategic and value-added activities, such as curriculum development, student support, and institutional improvement initiatives. Technology aids in financial planning, budgeting, and tracking expenses. Financial management software allows educational institutions to maintain fiscal responsibility, monitor expenditures, and allocate resources effectively, ensuring financial stability and sustainability. Technology can bolster security measures within educational institutions, safeguarding sensitive data and ensuring the safety of students and staff. Access control systems, surveillance cameras, and cybersecurity protocols are integral components of modern educational security infrastructure. The advent of remote administrative tools has become particularly relevant in recent times. These tools allow administrators to manage educational institutions remotely, making it possible to respond swiftly to emergencies and adapt to changing circumstances, such as remote learning during a global pandemic. Thus, technology's impact on the administrative functions of educational institutions cannot be overstated. It has the capacity to optimize resource management, streamline timetables, enhance communication, improve data management, and increase administrative efficiency. By harnessing the potential of technology, educational institutions can create an environment that is more agile, responsive, and conducive to effective teaching and learning.

Challenges

1. Digital Divide

The digital divide, undoubtedly one of the most pressing challenges in contemporary education, underscores a stark disparity that threatens to widen existing inequalities in access to quality learning opportunities. This division becomes painfully evident when we consider that students hailing from marginalized backgrounds may find themselves without access to the necessary digital devices and reliable internet connectivity. This issue has profound implications for the equitable distribution of educational resources and has the potential to perpetuate and accentuate disparities in educational outcomes. At the heart of this challenge lies the undeniable fact that technology has become an integral part of the modern educational landscape. With the advent of digital textbooks, online learning platforms, and interactive educational resources, access to digital devices and the internet has transitioned from being a convenience to an educational necessity. These tools not only augment the traditional classroom

experience but also open doors to a world of knowledge that transcends geographical boundaries. Students equipped with digital resources can engage in self-directed learning, explore diverse subjects, and gain exposure to a global community of learners.

However, for students from marginalized backgrounds, this digital realm can remain frustratingly out of reach. Economic constraints often prevent families from acquiring the laptops, tablets, or smartphones required for their children's educational needs. Moreover, in an era where homework assignments, research projects, and communication with teachers increasingly rely on internet access, students without reliable connectivity may find themselves at a significant disadvantage. The digital divide, therefore, has the potential to exacerbate educational inequities, creating a situation where students from privileged backgrounds have access to a vast array of digital educational resources, while their less fortunate peers face barriers that hinder their academic progress. This divide is not only limited to disparities in access but also extends to digital literacy. Proficiency in navigating the digital landscape and using technology effectively has become a crucial life skill. Students who lack access to digital devices and the internet may also miss out on opportunities to develop these essential skills, which are increasingly demanded in the job market. Consequently, the digital divide threatens to create a future workforce with varying degrees of readiness to participate in an increasingly technology-driven economy. Addressing the digital divide is not just a matter of technological access; it is a matter of social justice and equal opportunity. It requires concerted efforts from governments, educational institutions, non-profit organizations, and the private sector to ensure that every student, regardless of their socio-economic background, has access to the digital tools and skills needed to succeed in the modern educational landscape. Bridging this divide is not just an educational imperative; it is a moral imperative that can help break the cycle of poverty and inequality, creating a fairer and more inclusive society.

2. Quality Control

The internet, often hailed as one of the most revolutionary inventions of the modern era, indeed possesses a dual nature, akin to a double-edged sword. On one edge, it offers unprecedented access to an immense repository of information, a treasure trove that spans a wide spectrum of knowledge, from historical archives to cutting-edge research. However, on the other edge, it also harbors a plethora of unreliable and sometimes blatantly false sources of information. Navigating this vast sea of data can be a daunting task, especially for students who are still honing their critical thinking and information literacy skills. Consequently, ensuring that students can discern reliable sources from misinformation is a challenge of

paramount importance in today's digital age. The ubiquity of the internet has revolutionized the way information is disseminated and consumed. It has democratized access to knowledge, breaking down geographical barriers and granting individuals the power to explore subjects of interest with unprecedented ease. Students can delve into virtually any topic, conduct research, and access a wealth of educational resources from the comfort of their homes. The internet has brought the world's collective knowledge to their fingertips, transforming the way they learn and engage with information.

However, this boundless access to information comes with a significant caveat: the internet's vastness also provides a fertile ground for misinformation, disinformation, and unreliable sources to proliferate. Anyone with an internet connection can publish content, regardless of its accuracy or credibility. This juxtaposition of credible and unreliable sources creates a critical challenge for students and educators alike. Teaching students how to discern reliable sources from misinformation is not merely an educational goal; it is a crucial life skill in the digital age. It empowers students to make informed decisions, critically evaluate information, and engage in meaningful discourse. The ability to distinguish between credible and unreliable sources is akin to a digital armor that safeguards them against manipulation, misinformation campaigns, and the perpetuation of false narratives. Thus, while the internet presents an incredible opportunity for learning and information access, it also poses the challenge of distinguishing credible sources from unreliable ones. Equipping students with the skills to navigate this digital landscape effectively is paramount. By fostering critical thinking, media literacy, and responsible digital citizenship, educators can empower students to make informed choices and engage with information in a discerning and responsible manner. This not only benefits their academic pursuits but also prepares them to be responsible and informed citizens in an increasingly digital world.

3. Teacher Resistance

Resistance to technology integration among educators can stem from various factors, including a lack of familiarity with digital tools and apprehensions about potential job displacement. National Education Policies (NEPs) play a pivotal role in shaping the educational landscape, and addressing these concerns through comprehensive training and support mechanisms is crucial to fostering a successful transition into a technology-enhanced educational environment. NEPs should allocate resources for comprehensive digital literacy training programs that cater to educators at all levels. These programs can cover a wide array of topics, from basic computer skills to advanced usage of educational technology tools. By building educators' confidence and competence in using technology effectively,

NEPs can mitigate the fear associated with the unfamiliar. Continuous professional development opportunities should be a cornerstone of NEPs. These programs should not only focus on technological proficiency but also on pedagogical strategies for integrating technology seamlessly into the classroom. Educators need guidance on how to use digital tools to enhance teaching and improve student outcomes. NEPs should emphasize that technology integration is not about replacing educators but rather about augmenting their capabilities. Digital tools can automate routine administrative tasks, allowing educators to focus more on personalized instruction, creativity, and student engagement. Ensuring educators understand this shift can alleviate concerns about job displacement.

Creating support networks and communities of practice can be invaluable in addressing resistance to technology integration. Educators should have opportunities to connect with peers who have successfully integrated technology into their teaching. These networks provide a platform for sharing best practices, troubleshooting challenges, and offering mutual support. NEPs can incentivize educators to embrace technology integration by recognizing and rewarding innovative practices. This can include grants for technology-enhanced classroom projects, awards for innovative teaching methods, or opportunities for educators to become technology ambassadors within their institutions. Recognizing that not all educators will adopt technology at the same pace, NEPs should allow for flexible implementation timelines. Educators should not feel pressured to adopt technology hastily but rather be encouraged to experiment and gradually integrate it into their teaching as they become more comfortable. NEPs should emphasize that technology integration is ultimately about enhancing the learning experience for students. When educators see the positive impact on student engagement, achievement, and preparedness for the digital world, they are more likely to embrace technology as a valuable tool in education.

Regular evaluation and feedback mechanisms should be integrated into technology integration initiatives. Educators should have opportunities to provide input on the effectiveness of the training and support they receive, ensuring that their evolving needs are met. NEPs should also address concerns related to the digital divide and ensure that all educators have access to the necessary resources and training. This includes providing devices, internet connectivity, and training opportunities to educators in underserved communities. Thus, addressing educators' resistance to technology integration is essential for the successful implementation of technology-enhanced education. NEPs must recognize these concerns and proactively provide the training, support, and incentives needed to empower educators to embrace technology as a valuable tool in their teaching arsenal. By fostering a culture of digital literacy, innovation, and student-centered

learning, NEPs can ensure that technology integration enhances rather than impedes the educational experience.

4. Privacy and Security

Safeguarding student data and maintaining cybersecurity in educational systems is crucial. Data breaches and privacy violations can have far-reaching consequences.

5. Equitable Access to Training

Ensuring equitable access to technology training for teachers across all regions, especially in remote or underserved areas, is a multifaceted challenge that has gained prominence in recent years. While technology integration in education has become increasingly vital, it has also accentuated disparities in training opportunities. Addressing this challenge is essential for promoting a fair and inclusive educational landscape that empowers all educators to effectively utilize technology in their teaching practices. Remote or underserved areas often face geographical challenges that impede access to technology training resources. Limited infrastructure, including internet connectivity and transportation options, can isolate educators in these regions, making it difficult to access training centers or participate in online courses.

Educational institutions in underserved areas may lack the financial resources to provide adequate technology training for their teachers. Budget constraints can hinder the procurement of training materials, software licenses, and the hiring of qualified trainers. Teachers in remote or underserved areas may experience digital literacy gaps. Some educators may not have the foundational technology skills necessary to engage in advanced training programs. Bridging these gaps is crucial before more specialized training can occur. Many teachers have demanding workloads and responsibilities outside the classroom. Finding the time to engage in technology training can be challenging, particularly for educators who need to balance teaching with family and community commitments. Effective technology training programs should be tailored to meet the specific needs and challenges of educators in various regions. What works for urban teachers may not be suitable for those in rural settings. Customizing training content and delivery methods is vital.

Thus, providing equitable access to technology training for teachers in all regions, particularly remote or underserved areas, is a complex challenge but a critical one for fostering inclusive and effective education. By addressing geographical disparities, resource constraints, and digital literacy gaps while customizing training programs to local contexts, education stakeholders can empower teachers with the knowledge and skills needed to harness the potential of technology for the benefit of all students, regardless of their geographical location.

Conclusion

Technology integration in National Education Policies presents a wealth of opportunities to enhance the quality and reach of education. It can empower students with personalized learning experiences, broaden access to knowledge, and streamline administrative processes. However, it also comes with significant challenges related to equity, quality control, teacher readiness, data security, and training access. For technology integration to succeed in NEPs, it must be approached with a comprehensive strategy that addresses these challenges. This includes initiatives to bridge the digital divide, ensure teacher preparedness, safeguard student data, and promote equitable access to training. When effectively managed, technology integration can usher in a new era of education that is more inclusive, accessible, and tailored to the needs of diverse learners in the digital age.

DECLARATION AND CERTIFICATE

I hereby declare and certify that, the Short Duration Research Project entitled "**Mapping the Livelihood Vulnerabilities of Women Informal Workers in Coimbatore District During COVID - 19**"Sanction letter No.361 /ICSSR-SRC/ 2022 Dt.31.12.2023 is a bonafide record of research work carried out by me during the year 2022- 2023. Further certify that the work presented in the report is original and carried out according to the plan in the proposal and guidelines of the ICSSR, Southern Regional Centre, Hyderabad

Principal Investigator

ACKNOWLEDGEMENT

I gratefully acknowledge the grace of god for instilling confidence and courage in taking up and completing this project.

I am greatly indebted to **Indian Council of Social Science Research - Southern Regional Centre**, Hyderabad for providing me an opportunity to pursue this short duration research project.

I extend my sincere gratitude to **Prof. B. Sudhakar Reddy**, Honorary Director, and **Dr. Jacob Kalle**, Consultant (Academic & Admin.) Office Superintendent I/c, ICSSR - SRC, Hyderabad for granting me the research project and encouraging me to pursue the research.

It is my duty to show my gratitude and indebtedness to my college President, Secretary, Principal **Dr. R. Muthukumaran**, Dean - Academic **Dr. S. Saravana Babu** and Dean - Research **Dr. S. Umapathy** for their whole hearted support in completion of this research work.

I owe my deepest gratitude to **Ms. P. Anu Shruthi** for her valuable time and effort in completing this short duration research project.

I whole heartedly express my sincere thanks to, the **Head and Faculty Members** of the Department of Commerce (E-Commerce), NGM College, Pollachi for their timely help and support to complete this research work.

I am grateful to, **my mother** for her moral and emotional support during the period of research. I am deeply grateful to, **my husband and son** for their constant support and assistance during the period of my research work.

Finally, I owe everything to **God**.

Dr. B. Indira Priyadharshini

6	Mapping the Livelihood Vulnerabilities of Women Informal Workers in Coimbatore District During Covid-19 Interview Schedule	

Chapter 1

INTRODUCTION AND DESIGN OF THE STUDY

Introduction

Unorganised sector constitutes a major part of work-force in the Indian economy. The informal economy employs about 86 per cent of the country's work force and 95 per cent of its women workers. About 50 per cent of the national product is accounted for by the unorganised economy. A high proportion of socially and economically underprivileged women of our society are concentrated in informal economic activities. Many of these women workers are primary earners for their families for sheer survival. Low income women workers, especially in the informal sector form one of the most vulnerable groups in the work force. The reasons for their vulnerability are: (a) irregular work, (b) low economic status, (c) little or no bargaining power, (d) lack of control over earnings, (e) need to balance paid work with child care and household work, (f) little or no access to institutional credit, training and information, and (g) lack of assets. These women find themselves vulnerable, caught between unorganised work and household responsibilities, and lacking access to support in the event of seasonal or life-cycle contingencies. Though they are contributing a lot to the income/saving of the family and to the GDP of the country, their contribution is not recognized. Sometimes they are subjected to many social evils like gender discrimination, domestic violence and sexual harassment at work-place. Despite the existing laws like, 'Prevention of Domestic Violence Act of 2005'; 'Sexual

Harassment Act of 2013'; 'Anti Dowry Act etc., they are subjected to different kinds of exploitation. Therefore, it is time to address their issues, evolve policy measures, initiate reforms and institutional changes for their emancipation and empowerment. While the pandemic has affected livelihoods across the social classes in India, the employment protection and social security of those in the informal sector, who constitute 86% of the workforce stands most affected, as they struggle to meet the basic necessities as well as the threat of infection (International Labour Organization, 2020). Though different groups of workers are going through similar constraints in terms of livelihood and social safety net, the women working in informal economy faced total or near unemployment and economic insecurities due to social distancing and lockdown restrictions. They remained mostly outside the picture of relief mechanisms in the country.

Statement of the Problem

The impact of the crisis and lockdown-associated measures differs depending on the sector. The largest sectors and sub-sectors in the informal economy are often those that are directly impacted by COVID-19 and associated measures to ensure physical distancing. Such measures affect access to markets, demand, imports and access to the raw materials and intermediate goods required for production, with direct consequences on the level of activity and consequent job or income reduction or losses. Heavily impacted sectors include the wholesale/retail trade sector, which accounts for one fourth of informal non-agricultural employment globally and one third in developing countries, where the majority of those employed in the sector are street vendors. COVID-19 has had a drastic impact on every field and walk of life. The long-

lasting impacts of this pandemic have changed the way businesses used to be conducted and will have a strong impact on business models as well. Review of research studies clearly indicates that numerous researchers have extensively analyzed the vulnerability, needs of workers in informal sector and the impact of COVID-19 on informal workers. Relatively less number of studies has been carried out in India. In the proposed area, none of the researchers made an attempt to identify the vulnerabilities of women informal workers, a significant vacuum exists in the proposed study area. In order to fill this vacuum, the study has been undertaken.

Objectives of the Study

The specific objectives of the study are:

- ✚ To analyse the socio- economic background of women working in informal sector
- ✚ To find out the nature of work and working condition of women
- ✚ To study the wage patterns and causes of discrimination in wages of women working in Informal sector
- ✚ To find out the challenges faced by the women working in the informal sectors during and after COVID-19 Pandemic Lockdown.
- ✚ Finally, to suggest ways for their betterment in future

Scope and Methodology

Empirical research design has been adopted. Primary data has been collected from women informal workers residing in Coimbatore District. Five specific informal sector groups namely, construction workers, street

vendors, waste-pickers, domestic workers and homeless persons have been considered for the study. Considering that a very limited database of informal sector workers exists, sample of 149 informal workers in 11 taluks of Coimbatore District has been chosen using snow-ball sampling technique. Interview schedule will be adopted to collect data from the women workers. Sources of the data have been collected getting help from the local panchayats and municipalities to approach the sample women workers. Later, data collected from primary sources has been carefully scrutinized and transcribed before the commencement of data tabulation and interpreted through statistical tools. Data collected has been analyzed using Percentage analysis and weighted average ranking method.

Significance of the Study

Probably the most disturbing scene of the informal workers plight in India became visible when because of lack of food, shelter, basic amenities and emotional support, many of the workers in the informal sector had no choice during the lockdown but to walk toward their hometowns. According to a report by the Centre for Monitoring Indian Economy (CMIE) in March 2020, the unemployment rate was 8.7 percent and it further worsened in April 2020. On account of being unorganized and self-employed, street vendors and their families often lack in any linkage to social security, welfare and assistance schemes and initiatives of the Government. This makes informal workers and their families vulnerable in difficult times or when they may require assistance for unforeseen expenses. The study findings will

provide new insights on the women working in informal economy in the proposed study area. The study results will be imperative in framing regulations and schemes which can benefit women workers in the future.

Limitations of the Study

The data collected is primary data, which is based on the questionnaire and hence the results would bear all the limitations of primary data. The data collected from the women informal workers residing in Coimbatore District. The findings are applicable only to the women informal workers residing in Coimbatore District. Hence care has to be exercised while extending this result to other areas.

Chapter Scheme

The report of the study is presented in four chapters:

-  First chapter deals with the introduction and design of the study
-  In the second chapter, reviews of similar study that were carried out in India and abroad are discussed
-  The third chapter deals with analysis and interpretation of the study
-  The last chapter summarizes the findings of the study. This apart, suggestions for the betterment of informal women workers are included.

Chapter 2

REVIEW OF LITERATURE

Introduction

This chapter attempts to bring out the important findings of the past studies on informal workers and their vulnerability during covid - 19. A number of authors and researchers have contributed a great deal of literature on the socio-economic conditions and problems faced by women informal workers. The studies conducted previously in the present research have been consulted thoroughly in order to find out the availability of data and other materials for operational purposes and to examine the research gap.

The following paragraph summarizes the results of the earlier studies.

Studies in India

Alam et al (2022) The study has found that the pandemic has multiplied the existing vulnerability of the floating workers on many fronts that include job losses, food crisis, shelter insecurity, education, social, physical and mental wellbeing. In response to the pandemic, the Government stimulus packages and Non-government Covid-19 initiatives lack the appropriate system, magnitude, and focus on protecting the floating workers in Bangladesh.

Gupta et al (2022) studied the impact of COVID-19 pandemic on work prospects and health care-seeking behavior of a vulnerable section of the society – the women domestic workers. A longitudinal analysis on 292 randomly

selected women domestic workers residing in slums of “Kalikapur” locality of Kolkata city, West Bengal (India). Data were collected using a predesigned and pretested schedule twice: in early-2020 (before severe impact of COVID-19) and mid-2020 (during the pandemic ravaging India). Paired *t*-test and McNemar's test were used to check for significant changes. They found that, 57.2% lost jobs partially while 2.7% were completely jobless in mid-2020; the average daily work-hour decreased by 25.7%. Their average monthly pay significantly reduced ($P < 0.05$); mean family income in mid-2020 was lesser as well, compared to earlier ($P < 0.05$). Compared to early-2020, 15.8% more participants were sole bread-winners for their families during COVID-19. Number of participants visiting health practitioners significantly reduced ($P < 0.05$) in mid-2020. Rise in over-the-counter medicine use ($P < 0.05$) and increased tendency to ignore symptoms ($P < 0.05$) during COVID-19 was noted. They conclude that COVID-19 pandemic has affected work prospects and health care-seeking behavior of women domestic workers negatively. Most of them faced wage reduction, many becoming sole-earners for their families. This necessitates continued formulation and implementation of strategies ensuring social benefits including healthcare. Awareness about affordable healthcare and ill-effects of bad practices like self-medication should also be built.

Nadia Singh and Areet Kaur (2022) five gender specific pathways through which the pandemic impacted the lives of women belonging to households in informal employment in Punjab. These comprise of (a) Poverty Related Stresses and Livelihood Challenges, (b) Heightened Food Insecurity, (c) Restrictions on Mobility, (d) Unwanted Pregnancies and disruption of routine health services, and (e) Social

Ostracization. Their findings also show that the income deprivations faced by women in informal employment were not uniform, and differed according to the respondent's educational profile and occupational entities. Some of these women were able to employ their training and previous work experience to seek alternative forms of employment in the lockdown period.

Radhika and Bhuvaneshwari (2022) suggested the development of an inclusive model for ensuring sustained livelihood patterns by creating job opportunities in the organized sector. This calls for structural reforms in the labor market to reduce the density of migration in search of employment and income and to create balanced regional development.

Renuga devi *et al* (2022) found that street vendors faced livelihood risks because of the legal, physical, and socio-cultural environment in which they work. Many street were forcibly removed from the streets by the local government authorities. This risk of displacement often increases in the context of elections, mega events, or efforts to beautify historic city centers. J

Tiwari (2022) The findings stressed a multilateral approach with government, labour welfare department, educational institutions, the employment sector, the health sector, NGOs, orphanage homes, and the policymakers in addressing their needs and assisting them to overcome the unprecedented crisis.

Ajith (2021). found that the covid19 treatment charges fixed by government is still unaffordable to majority of income range groups and only 5 percent have monthly family income to afford the five-day general ward treatment charges with normal medicines in private hospitals.

According to **Lakshmi Ratan et al (2021)** in India, women sub-contracted home workers are often dependent on male contractors or intermediaries for orders, payments, raw materials etc., and self-employed home-based workers are dependent on access to transport and markets.

Sandip Kumar Mishra (2021) suggests that the government must give the highest priority to the poor and informal workers so that their livelihoods are not threatened but at the same time, structural limitations must be addressed to make this marginalized section a source of strength rather than weakness in the Indian economy.

Shiney Chakraborty (2021) found that around 83 per cent of women respondents witnessed a severe income drop, while the sector-specific results indicate some interesting patterns. All the construction workers reported a loss of paid work, while 97 per cent of the street vendors said that they had no source of income during the lockdown.

Sumalatha (2021) found that about 57% domestic workers reported stigma and discrimination at workplace, and 40% worked without any safety measures. Incidence of domestic violence at home, increased work burden at home, issues in access to health care, etc., were reported.

Surbhi Kesar (2021) found that almost 80 per cent of households experienced a reduction in food intake, more than 60 per cent did not have enough money for a week's worth of essentials, and a third took a loan to cover expenses during the lockdown.

We also use a set of logistic regressions to identify how employment loss and reduction in food intake varied with individual and household-level characteristics.

Anandi & Deepa (2020) The COVID-19 virus, combined with the state measures to contain it through lockdowns, has

severely affected one of Chennai's indomitable informal workforces, the paid domestic workers. In the last three decades, Chennai has seen a phenomenal growth of paid domestic work along with the growth of other service sectors. With the pandemic, paid domestic workers are facing the crisis of employment and nonpayment of salary, in addition to the pre-existing social stigmas against them. Some of them are forced to go for work amidst the virus crisis, risking their life with no health security. Some employers have shrewdly dismissed these workers just before the lockdown and promised to take them back once the lockdown is eased.

Archi Gupta and Bhavya Gupta documented that Women Construction Workers, 87% reported complete loss of work and income due to the national lockdown imposed by the Central Government in March 2020 to control the spread of coronavirus infection (Figure 9). Only 22% reported a complete loss of income stating that they managed to find construction work from a different source during the later months of the lockdown.

Estupinan Xavier and Mohit Sharma (2020) estimated that 104 million and 69.4 million informally employed workers were at risk of job loss in Lockdown 1.0 and Lockdown 2.0 respectively. Informal workers lost more wages, 22.6 percent, than formal workers, 3.6 percent. Workers informally employed in unorganised sector suffered a wage loss, amounting to Rs. 635.53 billion, which is almost equivalent to annual union budget allotted for employment guarantee scheme MGNREGA in 2020-2021.

Kesar et al (2020) found a massive increase in unemployment, an equally dramatic fall in earnings among informal workers, large increases in food insecurity, depletion of savings and patchy coverage of relief measures.

Two-thirds of their respondents lost work. The few informal workers who were still employed during the lockdown experienced more than a fifty percent drop in their earnings. They also found that migrants and urban Muslims are significantly worse off with respect to employment and food security. Among employment categories, self-employed workers were more food secure. The Public Distribution System (PDS) system was seen to have the widest reach among social security measures. However, even under PDS, 16 percent of vulnerable urban households did not have access to government rations. Further, half of the respondents reported not receiving any cash transfers (state or central).

Rai Chowdhury (2020) found that 87 percent of the participants had their last day of active employment in the week before the sudden announcement of lockdown-I, only 3 percent had resumed work by the time this survey was conducted in May. Of the total, 28 percent reported termination of work during lockdown, and another 23 percent were uncertain of the status of their employment.

Sanjib Dutta (2020) A stretched economic downturn, both globally and nationally, will cause a substantial increase in unemployment, underemployment and in-work poverty and reduce earnings, profits and business competitiveness. While no up-to-date data on the Labor Force Survey is available, this report considers the potential impact of the crisis on businesses and workers' livelihoods and incomes: regular and irregular, protected and unprotected. Those most likely to lose their jobs and income are casual workers and the self-employed. About three quarters of employment in India are not regular, whether they are self-employed or casual workers. These workers suffer the consequences of both the immediate restrictions on circulation and the

consequent economic recession. The total is likely to increase even if those in regular employment lose their jobs due to the closure of the industry.

Saraswathi and Maheswari (2020) opines that Unemployment rate high significantly to 23.48 per cent in May compared to 8.75 per cent in March. The unemployment rate is also high during the lockdown the urban from 9.41 percent in March to 25.79 percent in May and the rural area from 8.44 percent in March to 22.48 percent in May. Urban unemployment rate higher compare to rural. Unemployment rate fell significantly to 10.99 per cent in Jun compared to 23.48 per cent in May, showing signs of improvement in the job scenario in the country and return to the pre-lockdown period, the Centre for Monitoring Indian Economy (CMIE) data suggests. The unemployment rate in urban areas for the month stood at 12.01 per cent, while it was recorded at 10.2 per cent in rural areas.

Shiney Chakraborty (2020) reveals that around 83% of women respondents witnessed a severe income drop, while the sector-specific results indicate some interesting patterns (Figure 3). All the construction workers reported a loss of paid work, while 97% of the street vendors opined that they had no source of income during the lockdown. During the personal interviews, women home-based workers mentioned that owing to the closure of factories, interruptions in supply chain, restrictions on transports carrying raw materials and payments withheld by subcontractors/employers even for the work that was already completed, they have not had any income in their household since mid-March. Women waste pickers stated the difficulties not only in collecting waste, owing to restrictions on movement, but also while segregating and selling the same as all shops were closed,

and they were forced to sell the waste at significantly reduced prices.

Shiney (2020) found that 69% of women mentioned an increase in prices as the major problem in accessing most of the essential items. 71% of respondents stated that they were spending out of their personal or household savings to manage the daily expenses in the absence of income. National Survey of Informal Workers conducted in May 2020, reveals that 78 per cent of the informal workforce had lost their livelihoods due to the lockdown, with 90 per cent urban unemployment and 72 per cent rural unemployment. (<https://theprint.in/>,2021)

Neog et al (2016) identified the presence of a sticky floor effect in both formal and informal employment. In case of caste-based discrimination, we find evidence of discrimination effect remaining stable and insignificant in informal employment whereas in formal employment wage gaps are seen to follow a glass ceiling effect. Our results highlight the need for better regulation of the informal labour market in India.

Kalpana Hiralal (2010) revealed that home based activity was largely undertaken by women plagued by poverty and unemployment. More than 60 per cent of the interviewees were between the age of 30-60 years. Around 80 per cent of the women were married and others were divorced. Of the 25 respondents, at least 18 were women headed households. One -half of the women had completed formal schooling. Women between the age group of 20-35 years completed 12 years of formal education.

In India, the National Commission for Enterprises in the Unorganized Sector (NCEUS) observed that informal

employment has been 98% in the agricultural sector, 75% in 2/12 industry, and 72% in services (**Sengupta et al., 2009**).

Studies Abroad

Guo (2022) We provide a first view of vulnerable informal economy after the blows from COVID-19, using transaction-level business data of around 80 million offline micro businesses (OMBs) owners from the largest Fintech company in China and employing machine learning method for causal inference. We find that the OMBs activities in China experienced an immediate and dramatic drop of 50% during the trough. The businesses had rebounded to around 80% of where they should be seven weeks after the COVID-19 outbreak, but had remained at this level until the end of our time window. We find a larger disruption to the OMBs in urban areas, the female merchants and the merchants who were not grown up in the places where they conducted businesses. We discuss the implications for policy support to the most vulnerable, and highlight the importance to take full advantage of digital development to follow up the informal economy.

Jahid Nur (2022) found that Female informal workers in Dhaka also used social capital during the pandemic, a long-standing practical coping strategy in Bangladesh. They borrowed loans from their neighbours and families, tried to re-enter the market with the help of their social networks, and provided mutual mental support to each other. Apart from social networks, these workers took loans from other sources to tackle their financial predicaments. Non-government organisations (NGOs) were a reliable source from which they could borrow easily. Local moneylenders, who charge high-interest rates, also were very active in providing loans as they

could be easily accessed during the lockdowns. For instance, a home-based restaurant cook took some loans from local moneylenders during the first days of the crisis.

Pham Tien Thanh and Pham Bao Duong (2022) found that women street vendors experienced a large reduction in business and consumption. The businesses of immigrant vendors suffered more adverse effects than those of local vendors. Also, the vendors selling in wet market areas incurred greater economic burdens than those selling near schools or recreation centers.

Swarna (2022) points out that about ninety percent of these workers faced an income and food expenditure drop during the lockdown. The effect was higher in males, particularly among the urban-centric and educated males engaged in services and sales.

Wasima & Rahman (2022) The respondents reported loss of employment, loss of income, food shortages, inability to pay rent, and inadequate social security coverage as the critical vulnerabilities

Dzawanda (2021) reveal that despite many involved in the informal sector having lost their means of survival during the COVID-19 lockdown, the government introduced additional restrictions on this sector, thus almost destroying it.

Lenshie (2021) argued that the COVID-19 pandemic and the accompanying lockdown devastated the informal economic activities of women in peri-urban areas due largely to lack of social protection programmes to support vulnerable populations.

Ronald (2021) The findings show that workers who had jobs in non-essential and informal sectors were significantly more likely to become unemployed. In contrast to developed

countries, having a job amenable to working from home is not correlated with job loss when controlling for informal status. This is consistent with the high level of labor market segmentation observed in Peru, where high-skilled occupations are disproportionately concentrated in the formal sector, which was also better targeted by policies aimed at supporting firms and job protection during the crisis. In addition, the findings show that women were more likely to lose their jobs because female-dominated sectors are more intensive in face-to-face interactions and thereby more affected by social distancing measures.

Researchers **Komin et al (2021)** found that IS workers experienced dramatic decreases in their monthly income, although the reduction varied across occupation and geographic region. To compensate for reduced income, IS workers tapped their savings and increased their debt. A Thai government programme to provide income support for workers during the shutdown reached less than half of IS workers.

Aleksandra Webb et al (2020) found that there are considerable short- and long-term implications of the pandemic for informal employment and the informal economy. This occurs against the background of unresolved tensions arising from informal workers' desire for more employment security and employers' striving for continued labour flexibility while transferring costs to government and workers. The COVID-19 pandemic might accelerate current trends and force new solutions to better protect basic work security while helping organisations to remain competitive. Government policies supporting work safety, income security, moves to formalisation of employment and fairness for informal employees are particularly important.

Malik, Sana, and Khansa Naeem (2020) observed that women constitute a major segment in Pakistan, who are affected by the COVID-19 in terms of their physical ailment, emotional response and impact vis a vis recovery. Under the present scenario of lockdown, sluggish economic activities, financial insecurities and health issues have increased the risk of trauma and mental illnesses. This is, however, least discussed in Pakistan's response to the pandemic. In reality, the disease is affecting women's lives, health (both mental and physical); and livelihoods. Despite representing half of the global population and significantly contributing to social and economic development, women continue to suffer from multidimensional disparities and gender-based violence more so in times of crisis.

Pitoyo et al (2020) found that most workers experienced a decline in incomes, both in agriculture (65 respondents) and non-agriculture (74 respondents). Informal workers also experienced a lot of lost incomes altogether (33.2 %). Only a few informal workers whose incomes are not decreasing or lost during pandemic (7.7 %)

Santos et al (2020) reveal that the withdrawal of informal workers decreases the productive capacity and leads to strong negative impacts on the economy, mainly in the service sectors. Most workers experienced a decline in incomes, both in agriculture (65 respondents) and non-agriculture (74 respondents). Informal workers also experienced a lot of lost incomes altogether (33.2 %). This is caused by the policy of limiting the intensity of human encounters to reduce the transmission rate of the virus spreading, thereby triggering disruptions to demand and supply. Only a few informal workers whose incomes are not decreasing or lost during pandemic (7.7 %).

Breman (2016) also find that the creation of informal household enterprises is the common resort for non-agricultural employment for those who lack education or who are geographically disadvantaged.

Benjamin and Mbaye (2015) point out the role of the urban informal sector in absorbing rural migrants. A notable characteristic of the informal sector is the strong female presence. 60% of working women in the developing world are in the informal economy.

Martha Alter Chen (2014) Of the total sample of home-based workers across the three study cities, 71 per cent are sub-contracted and 29 per cent are self-employed. In the Ahmedabad sample, all of the home-based workers are sub-contracted; in both the Bangkok and Lahore samples, around 56 per cent are sub-contracted. The majority of the self-employed are own-account workers, one third are employers, and a small percentage are unpaid contributing family workers or (only in Bangkok) members of cooperatives.

Agaya Benson and Masiga Asunza (2013) found that women domestic workers were generally hired to perform a wide range of duties such as laundry, ironing, caring for children, caring for the sick, mopping, dusting, washing toilets etc.

Ozguler (2012) conducted a survey on home based female workers in Turkey (Eskisehir). He found that 39.3 per cent home based female workers were between the ages of 40 and 49 and 72.6 per cent of them were married and 47.6 per cent of them studied up to primary school. The main duty of women was child care and domestic work. 73.8 per cent of home based female workers who were included in the scope of the study were engaged in handicrafts such as weaving baby shoes or socks, lace work and needle work. They had

chosen this type of work due to economic requirements. They wished to perform work such as handicrafts, which they were currently engaged in, at another location, rather than being engaged in wage earning job.

Chen et al (2006) in their paper entitled “Informality, Gender and Poverty:

A Global Picture” made an attempt to identify the main problems faced by unorganized sector workers. They opines that unorganized sector presented two knotty problems of social justice to policy makers. First, an increasingly large segment of the working population was being forced to live at the margin of survival. Second, given the availability of such cheap labour in the unorganized sector, employers were likely to divert more and more activities to such organizations.

Conclusion

Earlier studies focused on informal worker’s socio – economic profile alone. Few researchers abroad studied the challenges faced by informal women workers during covid-19. None of the researchers studied the vulnerabilities faced by women informal workers during covid-19 in the study area. In order to fill this gap, the present study was undertaken to examine the women informal worker’s socio economic profiles, nature of work and challenges faced by them during covid – 19 in Coimbatore district. Analysis and interpretation have been dealt in the next chapter.

Chapter 3

ANALYSIS AND INTERPRETATION

Introduction

This chapter deals with the Socio-Economic profile of the women informal workers, nature of work and working condition, migration, wage discrimination and impact of COVID 19 lockdown on their livelihood. This chapter presents the data analysis based on the responses received from the women street vendors.

Socio - Economic Profile of the Sample Women Informal Workers

The sample informal workers have been selected from different parts of Coimbatore district. Percentage analysis has been employed to analyze the data collected from the sample. The description about the social - economic profile of the sample women informal workers is as follows:

Table 3.1
Socio - Economic Profile of the
Sample Women Informal Workers

Factors	No. of Women Informal Worker	Percentage
Age		
Up to 20 years	26	17
21-30 years	67	45
31-40 years	34	23
41-50 years	12	8
Above 50 years	10	7

Mapping the Livelihood Vulnerabilities of Women Informal workers in Coimbatore District During Covid – 19

Above Rs. 25,000	18	12
Total	149	100

Age

Above table depicts that, out of 149 women informal workers, 26 (17 %) of the women informal workers belong to the age group of up to 20 years, 67 (45 %) of the women informal workers are between the age group 21-30 years, 34 (23 %) of the women informal workers are between the age group 31-40 years, 12 (8 %) of the women informal workers are between the age group 41-50 years and 10 (%) of the women informal workers are above 50 years.

Majority 67 (45 %) of the women informal workers are between the age group 21 - 30 years.

Area of Residence

From table 1, it is inferred that, out of 149 women informal workers, 66 (44 %) of the women informal workers are living in rural area, 50 (34 %) of the women informal workers are living in semi urban area and remaining 33 (22 %) of the women informal workers are living in urban area.

Majority 66 (44 %) of the women informal workers are living in rural area.

Religion

The above table discloses the religion of the women informal workers. It is observed that majority 91 (61 %) of the women informal workers are Hindu, 41 (28 %) of the women informal workers are Christian and 17 (11 %) of the women informal workers are Muslim.

Majority 91 (61 %) of the women informal workers belong to Hindu religion.

Caste

Out of 149 women informal workers, 35 (23 %) of the women informal workers belong to General Community, 37

(25 %) are Scheduled Caste, 10 (7%) are Scheduled Tribe, 57 (38 %) belong to Backward Class, and rest 10 (7 %) belong to Most Backward Class.

Majority 57 (38 %) of the women informal workers belong to Backward Class.

Education Status

The above table reveals that, out of total 149 women informal workers, (16%) of the women informal workers are Illiterate, (42%) of the women informal workers completed Secondary, (16 %) of the women informal workers have completed Higher secondary, (16 %) of the women informal workers have completed Graduation and only (10%) women informal workers have completed Post-Graduation.

It is found that most of (42%) of the women informal workers completed Secondary.

Marital Status

Out of 149 women informal workers, 76 (51 %) of the women informal workers are married, 73 (47 %) of the women informal workers are unmarried and 3 (2 %) of the women informal workers are divorced.

Majority (51%) of the women informal workers are married.

Type of Family

Table 3.1 discloses that, out of 149 women informal workers, 42 (28 %) of the women informal workers belong to joint family and only 107 (72 %) belong to nuclear family.

It is observed that 107 (72 %) of the women informal workers belong to nuclear family.

Size of Family

The above table represents the family size of the women informal workers, out of 149 women informal workers, 48(32 %) of the women informal workers family consists up to 3 members, 86 (58 %) of the women informal workers family consists of 4 - 5 members and 15(10 %) of the women informal workers family consists of more than 5 members.

Hence, it can be concluded that (58 %) of the women informal workers family consists of 4 - 5 members

Number of Children in the Family

Out of 149 women informal workers, (22 %) of the women informal workers do not have children, (60%) of the women informal workers have 1 to 3 children and (17 %) of the women informal workers have more than 3 children.

Majority (60 %) of the women informal workers have 1 to 3 children.

Type of Residence

The above table depicts that, 54(36 %) of the women informal workers reside in own house. 88(59 %) of the women informal workers reported live in rented house, and only 7(5 %) of the women informal workers live in leased house.

Majority 88 (59%) of the women informal workers live in rental house.

Monthly Income (Self)

The table discloses that, out of 149 women informal workers, 39(26 %) of the women informal workers monthly income ranges up to Rs10,000. 56 (38 %) of the women informal workers income ranges between Rs. 10,001 and Rs. 15,000 and 54 (36 %) of the women informal workers monthly income is above Rs. 15,000.

Majority (38 %) of the women informal workers income ranges between Rs. 10,001 and Rs. 15,000

Family Income Per Month

Family income wise classification debits that, 42 (28 %) of the women informal workers monthly family income is up to Rs. 15,000. 63 (42 %) of the women informal workers family income ranges between Rs. 15,001 and Rs. 20,000. 26 (17 %) of the women informal workers family income ranges between Rs. 20, 000 and Rs. 25,000, and (12 %) of the women informal workers family income is of above Rs. 25, 000.

Majority (42%) of the women informal workers family income ranges between Rs. 15,001 and Rs. 20,000.

Nature of Work and Working Condition of Women Informal Workers

The following table exhibits the nature of work and working conditions of women informal workers. It provides information on their occupations, nature of employment, working hours, workplace, salary frequency, savings habits, level of satisfaction, and more.

Table 3.2
Nature of Work and Working Condition of Women Workers

Factors	No. of Women Informal Worker	Percentage

Total	149	100

Nature of Work/Occupation

Figure 3.1 discloses that, out of the total women informal workers 149, 81(54 %) of the women informal workers are domestic workers, 26(17 %) of the women informal workers are street vendors, 18(12 %) of the women informal workers are home based workers, 65 (44 %) of the women informal

workers are construction laborers, 11(7 %) of the women informal workers are employed are agricultural laborers, and 65 (44 %) of the women workers involved other informal works.

More than half of the sample women 65 (44%) are domestic workers.

Reason for Joining the Job - Weighted Average Ranking Method

The weighted average formula is used to calculate the average value of a particular set of numbers with different levels of relevance. The relevance of each number is called its weight. The weights should be represented as a percentage of the total relevancy. Therefore, all weights should be equal to 100percentage of the women informal workers, or 1.

The table below presents the reasons for joining the job among women informal workers. The ranks are based on the weights given to each reason and the corresponding scores obtained.

Table 3.3
Reason for joining the job

IV	III	II	I	Rank	
				Weight	
5	6	7	8		
13	18	70	30	Family commitments/poverty	
65	108	490	240	No of women informal workers	score
21	27	13	8	No of women informal workers	score
105	162	91	64	Illiteracy (No education)	
33	17	4	10	No of women informal workers	Score
165	102	28	80	Relative working here	
17	13	10	19	No of women informal workers	score
85	78	70	152	Unable to find better job	
15	14	7	10	No of women informal workers	score
75	84	49	80	Compulsion (Parents/husband)	
15	20	16	20	No of women informal workers	score
75	120	112	160	To meet the day to day expenses	
15	21	16	18	No of women informal workers	score
75	126	112	144	Children education	
19	21	16	36	No of women informal workers	score
95	126	112	288	Medical expenses	

RANK	Average	Total	VIII	VII	VI	V
I	117.875	943	1	2	3	4
			6	6	2	4
			6	12	6	16
V	79.375	635	14	22	21	23
			14	44	63	92
VII	73.75	590	22	22	15	26
			22	44	45	104
VI	77.25	618	21	20	24	25
			21	40	72	100
VIII	70.25	562	25	17	29	32
			25	34	87	128
III	80.25	642	26	24	11	17
			26	48	33	68
IV	79.625	637	22	22	26	9
			22	44	78	36
II	95.125	761	13	15	19	10
			13	30	57	40

The reasons for taking the current position are categorized as follows: Family commitments/poverty, Illiteracy (No education), Relative working here, Unable to find better job, Compulsion (Parents/husband), to meet the day to day expenses, Children education and Medical expenses.

From the above table, out of 149 responses ranked 1st for Family commitments/ poverty, 2nd rank is given to Medical expenses, 3rd rank is given to meet the day to day expenses, 4th rank is given to Children education, 5th rank is given to Illiteracy (No education), 6th rank is given to Unable to find better job, 7th rank is given to Relative working here and 8th rank is given to Compulsion (Parents/husband).

Nature of Your Employment

It is evident from table 3.2 that, out of 149 women informal workers, 81(54 %) of the women informal workers have regular full-time employment, 49(33 %) of the women informal workers work regular part-time jobs, 7(5 %) of the women informal workers have seasonal employment, and 12 (8 %) of the women informal workers are engaged in contractual work.

Most of 81 (54 %) of the women informal workers have regular full-time employment.

Working Hours in a Day

It can be inferred from the above table that, out of 149 women informal workers, 17(11 %) of the women informal workers work less than 3 hours a day, 47(32 %) of the women informal workers work between 3 to 5 hours a day, 53(36 %) of the women informal workers work between 5 to 8 hours a day, and only 32(21 %) of the women informal workers work more than 8 hours a day.

One third 53(36 %) of the sample women informal workers work hours ranges from 5 to 8 hours a day.

Mode of Transport

Table 3.2 exhibit that, out of 149 women informal workers, 25(17%) of the women informal workers reach their workplace by foot, 66(44%) of the women informal workers use bus, 54(36%) of the women informal workers use two-wheelers, and only 4 (3%) of the women informal workers use company vehicles for transportation.

Most of (44 %) of the women informal workers use bus to reach their workplace.

Salary Frequency

Out of 149 women informal workers, 25(17 %) of the women informal workers receive their salary on a daily basis, 51(34 %) of the women informal workers receive their salary weekly, 70 (47 %) of the women informal workers receive their salary on a monthly basis, and only 3(2 %) of the women informal workers receive their salary every two weeks.

Most of 70 (47%) of the women informal workers receive their salary on a monthly basis.

Mode of Savings

The table explains that, 51(34 %) of the women informal workers keep their savings in banks, 54 (36 %) of the women informal workers keep their savings with relatives, 16(11 %) of the women informal workers invest in chit funds, 8(5%) of the women informal workers keep their savings in post offices, 4(3%) of the women informal workers keep their savings with their employer, and 16 (11%) of the women informal workers self-manage their savings.

Most of 54 (36 %) of the women informal workers keep their savings with relatives.

Satisfaction at Work

Table 3.2 reveals that, out of 149 women informal workers, 50(34 %) of the women informal workers expressed satisfaction with their income, 58(39 %) of the women informal workers are satisfied with their daily working hours, 22 (15 %) of the women informal workers are satisfied with the number of holidays they receive, 9 (6 %) of the women informal workers are satisfied with their working conditions.

Most of 58(39 %) of the women informal workers are satisfied with their daily working hours.

Wage Patterns & Causes of Discrimination

The following table discloses the wage patterns and causes of discrimination among women informal workers. It provides insights into their comfort level working with male workers, instances of fights with other women at the workplace, types of discrimination faced, basis of discrimination, membership in social organizations, and wage comparison with male workers.

Table 3.4
Wage Patterns & Causes of Discrimination

Factors	No. of Women Informal Worker	%age
Comfortable Working with Male Workers		
Yes	69	46
No	80	54

Fight Sometimes with other Working Women at Your working place		
Yes	40	27
No	109	73

Yes	20	13
No	129	87
Compared to male workers whether your wages is low		
Yes	56	38
No	93	62
Total	149	100

Comfortable Working with Male Workers

It is found out that, out of 149 women informal workers, 69 (46 %) of the women informal workers stated that they are comfortable working with male workers, and 80 (54 %) of the

women informal workers stated that they are not comfortable working with male workers.

More than half of the 80(54 %) sample women informal workers stated that they are not comfortable working with male workers.

Conflict

Table 3.4 exhibits that, out of 149 women informal workers, 40(27%) of the women informal workers mentioned that they sometimes have conflicts with other women at their workplace, and 109 (73%) of the women informal workers reported not having any fights with other women at their workplace.

Most of 109 (73%) of the women informal workers reported not having any fights with other women at their workplace.

Type of Discrimination During Work

The table above explains that, out of 149 women informal workers, 43(29%) of the women informal workers experienced some form of discrimination during work, and 106 (71%) of the women informal workers stated that they did not face any discrimination during work.

Nearly one third 106 (71%) of the women informal workers stated that they did not face any discrimination during work.

Kind of Discrimination Faced

Table 3.4 depicts that, out of 149 women informal workers, 37(25%) of the women informal workers reported facing discrimination related to gender pay gaps, 39 (26%) of the women informal workers mentioned that their working hours compared with men, 43 (29 %) of the women informal workers experienced discrimination in the form of

harassment and 30(20%) of the women informal workers faced discrimination regarding desired employee benefits.

Most of 43 (29%) of the women informal workers faced discrimination in the form of harassment.

Basis of Discrimination

It is inferred that, out of 149 women informal workers, 36 (24%) of the women informal workers identified gender as the basis of discrimination, 21 (14 %) of the women informal workers reported facing discrimination based on religion or caste 26, (17 %) of the women informal workers experienced discrimination related to their level of education, 66(44 %) of the women informal workers mentioned facing discrimination based on their age and there is no information for other categories like Physical Appearance.

Most of 66 (44 %) of the women informal workers mentioned facing discrimination based on their age.

Social Organization (Like Women's Club, Welfare Society, Etc.)

Out of 149 women informal workers, 20 (13 %) of the women informal workers are members of social organizations, and 129 (87 %) of the women informal workers are not members of any social organization.

Most of 129 (87 %) of the women informal workers are not members of any social organization.

Wage Discrimination

It is evident from the table that, out of 149 women informal workers, 56 (38 %) of the respondent reported that their wages are lower than male workers and 93(62%) of the women informal workers stated that their wages are not lower compared to male workers. Most of 93 (62 %) of the

women informal workers stated that their wages are not lower compared to male workers.

Migration Pattern

The following table provides insights into migration patterns among women informal workers. It includes information on their migration status, whether they migrated with their family or alone, reason for migration and their desire to return to their native place.

Table 3.5
Migration Pattern

Factors	No. of Women Informal Worker	Percentage
Migrated From Native

Family movement for better livelihood (Income)	1	1.3
Willingness to Return Native Place		
Yes	50	34
No	99	66
Total	149	100

Migrated from Native

Table above exhibits that, out of 149 women informal workers, 73 (49%) of the women informal workers have migrated from their native place and 76 (51 %) of the women informal workers have not migrated.

Most of 76(51%) of the women informal workers have not migrated.

Reason for Migration from Native

The above table discloses that, out of 73 women informal workers who have migrated from native, 9 (12.5%) of the women informal workers mentioned that they migrated due to a lack of sufficient job opportunities in their previous location, 10 (13.7 %) of the women informal workers reported that they migrated because they were unable to achieve

adequate growth or prosperity as farmers in their previous location, 8 (11 %) of the women informal workers cited a lack of sufficient income as a reason for migration, 7(9.6 %) of the women informal workers mentioned that they migrated due to having a large household that required additional income or resources. 7 (9.6 %) of the women informal workers reported that they migrated because their agricultural holdings were too small to sustain their livelihood, 6(8.2 %) of the women informal workers mentioned that they migrated due to the lack of adequate public services, such as water or roads, in their previous location, 6 (8.2 %) of the women informal workers migrated in search of better work opportunities in terms of job availability or income potential, 5(6.8 %) of the women informal workers mentioned that migration is a traditional or inherent aspect of their profession or occupation, 5 (6.8 %) of the women informal workers reported that they migrated in pursuit of higher expected income in their new location, 4(5.5 %) of the women informal workers mentioned that they migrated in search of employment opportunities, 3 (4.1 %) of the women informal workers reported that they migrated due to factors such as drought or the inability to sustain their livelihood through farming or agriculture, 2 (2.7 %) of the women informal workers migrated due to marriage or family-related reasons, and only 1 (1.3 %) of the women informal workers reported that their entire family migrated to improve their livelihood and income.

Most of 10 (13.7%) of the women informal workers reported that they migrated because they were unable to achieve adequate growth or prosperity as farmers in their previous location.

Migrated with your Family or Alone

It is found out that out of 149 women informal workers 70(96 %) of the women informal workers migrated with their family members, and remaining 3(4%) of the women informal workers migrated alone.

Most of 70(96 %) of the women informal workers migrated with their family members

Willingness to Return Native Place

It reveals that out of 149 women informal workers, 50 (34%) of the women informal workers expressed a desire to return to their native place, and 99(66 %) of the women informal workers stated that they are not willing to go back to their native place.

Most of 99(66 %) of the women informal workers stated that they are not willing to back to their native place.

Information about Covid-19

The table below presents data on the information on COVID-19 on women informal workers, including their personal and family members' exposure to the virus, medical expenses incurred, and whether their employers provided assistance in paying medical bills.

Table 3.6
Information about COVID 19

Factors	No. of Women Informal Worker	Percentage
Affected with covid-19		
Yes	129	87
No	20	13
Family members affected with covid - 19		

Factors	No. of Women Informal Worker	Percentage
Yes	122	82
No	27	18
Medical Expenses		
By savings	24	16
Borrowing from relatives / Friends	83	56
Borrowed from money lenders	42	28

Yes	31	21
No	118	79
If yes, employer helped		
As freebie	3	10%
As Salary in advance	28	90%
Total	149	100

Affected with Covid-19

Out of the sample women informal workers, 129 (87 %) have been affected by Covid-19. 20 (13 %) of the women informal workers have not been affected by Covid-19 and More than one third (87 %) of the women informal workers have been affected by Covid-19.

Family Members Affected with Covid-19

It is inferred from the above table that, 122(82%) of the women informal workers reported that their family members have been affected by Covid-19 and 27 (18 %) of the women informal workers mentioned that their family members have not been affected by Covid-19.

More than three fourth of the 122 (82 %) women informal workers mentioned that their family members have been affected by Covid-19.

Medical Expenses

It can be inferred from the above table that, out of 149 women informal workers, 24 (16%) of the women informal workers stated that they covered their medical expenses using their savings, and 83(56%) of the women informal workers reported that they borrowed money from relatives or friends to pay for their medical expenses. 42(28%) of the women informal workers reported that they borrowed money from money lenders to pay for their medical expenses.

More than half (56%) of the women informal workers reported that they borrowed money from relatives or friends to pay for their medical expenses

Employer support

Table above depicts that, 31(21 %) of the women informal workers mentioned that their employer helped them in paying their medical expenses and 118(79 %) of the women informal workers did not receive any help from their employer for medical expenses.

Majority 118 (79%) of the women informal workers did not receive any help from their employer for medical expenses.

Kind of Support from Employer

Out of 31(21 %) of the women informal workers mentioned that their employer helped them in paying their medical expenses, 10% received it as freebie and the rest 90% received money as salary in advance.

Hence, it can be inferred that majority of the women workers received money from their employer as salary in advance.

Impact of Covid-19 and Livelihood

The following paragraphs depict the livelihood challenges faced by the women informal workers during covid-19 lockdown.

Table 3.7
Impact of Covid-19 and Livelihood

Jobless / Unemployed During The Pandemic

Above table depicts that, 92 (62%) of the women informal workers were jobless or unemployed during the pandemic and 57(38%) of the women informal workers were not jobless or unemployed during the pandemic.

More than half 92 (62%) of the women informal workers were not jobless or unemployed during the pandemic.

Reason for Unemployment

Out of 92 women informal workers who were jobless or unemployed during the pandemic, 16 (17%) of the women informal workers reported that their employers terminated their services during the pandemic, 27(29%) of the women informal workers mentioned that they were jobless or unemployed due to their fear for their own health, 9(10%) of the women informal workers faced job loss or unemployment because social distancing measures were not possible in their work environment, and 40 (44%) of the women informal workers cited transportation restrictions as a reason for their joblessness or unemployment.

Nearly one half of 40(44%) the women informal workers cited transportation restrictions as a reason for their joblessness or unemployment.

Salary Paid During the Pandemic

It inferred that, out of 149 women informal workers, 60 (40 %) of the women informal workers received their full salary during the pandemic, 69(46 %) of the women informal workers received half of their salary during the pandemic, and 20 (13 %) of the women informal workers did not receive any salary during the pandemic.

Most of 69 (46%) of the women informal workers received half of their salary during the pandemic

Workload/salary paid during the pandemic

It explained that out of 149 women informal workers, 84 (56%) of the women informal workers experienced a reduction in salary and an increase in workload during the pandemic, 65 (44%) of the women informal workers reported no change in salary or workload during the pandemic.

Most of 84 (56%) of the women informal workers experienced a reduction in salary and an increase in workload during the pandemic.

Safety Measures Were Provided in Your Workplace

Out of 149 women informal workers, 81 (54 %) of the women informal workers reported that complete safety measures were implemented in their workplace during the pandemic, 44(30 %) of the women informal workers experienced partial safety measures in their workplace and 24 (16 %) of the women informal workers reported that no safety measures were provided in their workplace.

Most of 81 (54%) of the women informal workers reported that complete safety measures were implemented in their workplace during the pandemic.

Household Expenses

It reveals that out of 149 women informal workers, 11(7%) of the women informal workers managed their household expenses with reduced income, 45 (30%) of the women informal workers received support from their relatives to manage their household expenses, 30 (20%) of the women informal workers utilized their existing savings to manage household expenses, 45(30%) of the women informal workers had to manage household expenses by borrowing money and 18 (12%) of the women informal workers reported that their household expenses were not significantly affected.

Most of 45(30%) of the women informal workers had to manage household expenses by borrowing money.

Source of Borrowing

It is found out that 53(36 %) of the women informal workers borrowed money from relatives, 78 (52%) of the women informal workers borrowed money from their neighbors, 9(6%) of the women informal workers borrowed money from friends, and 9(6%) of the women informal workers borrowed money from neighbors.

Most of 78 (52%) the women informal workers borrowed money from their Money lenders.

Economical Problems Faced During Covid-19

Below figure discloses that, out of 149 women informal workers, 75(50%) of the women informal workers experienced an increase in debt due to the pandemic, 30 (20%) of the women informal workers had restricted food intake during the pandemic, 9 (6%) of the women informal workers faced the issue of a lack of diversified food options, 8(5%) of the women informal workers had difficulties in paying their rent, 8 (5%) of the women informal workers experienced a depletion of their savings, 12 (8%) of the women informal workers had to sell their personal assets, 6 (4%) of the women informal workers faced financial insecurity, and 1(1%) of the women informal workers reported an increase in job insecurity.

Most of 75 (50%) of the women informal workers experienced an increase in debt due to the pandemic.

You Went to Native During Covid-19 Lockdown

Above table depicts that, out of 149 women informal workers, 39(26%) of the women informal workers went back to their native place during the COVID-19 lockdown, and 110 (74 %) of the women informal workers did not go back to their native place during the COVID-19 lockdown.

Most of 110 (74%) of the women informal workers did not go back to their native place during the COVID-19 lockdown

Re-joined in the same work after COVID-19 restrictions

It reveals that 100 (67%) of the women informal workers re-joined the same work after COVID-19 restrictions were lifted, and only 49 (33%) of the women informal workers did not re-join the same work after COVID-19 restrictions were lifted.

Majority of 100 (67%) of the women informal workers re-joined the same work after COVID-19 restrictions were lifted.

Mental health problems faced during covid-19

Table above provided represents the prevalence of three mental health problems during the COVID-19 pandemic: lack of confidence, stress of anxiety, and social dysfunction. The numbers next to each problem seem to indicate the percentage or frequency of individuals who have experienced these issues.

Lack of Confidence:

The data suggests that 38% of the population surveyed or considered in this context experienced a lack of confidence during the COVID-19 pandemic. This could be indicative of individuals feeling uncertain, doubtful, or insecure about themselves and their abilities. The pandemic and its associated challenges may have eroded people's self-esteem and belief in their capabilities.

Stress of Anxiety:

The data shows that 96% of the surveyed or considered population faced stress or anxiety during the COVID-19 pandemic. This high percentage reflects the significant impact the pandemic has had on people's mental well-being. The uncertainty surrounding the virus, health concerns, financial instability, social isolation, and other pandemic-related stressors have contributed to elevated levels of anxiety and stress.

Social Dysfunction:

The data indicates that 15% of the population surveyed or considered experienced social dysfunction during the COVID-19 pandemic. Social dysfunction refers to difficulties or challenges in maintaining healthy social relationships or engaging in typical social activities. The pandemic's restrictions on social gatherings, physical distancing measures, and increased isolation may have led to feelings of loneliness, disconnection, or strained social interactions.

Overall, these data points highlight the wide-ranging impact of the COVID-19 pandemic on mental health. The percentages suggest that a significant portion of the population experienced challenges related to lack of confidence, stress of anxiety, and social dysfunction. It's important to recognize and address these issues, as they can have long-lasting effects on individuals' well-being and quality of life. Seeking support from mental health professionals, practicing self-care, and connecting with supportive communities can be valuable strategies to cope with these challenges.

Expected Support from the Government

It determines that out of 149 women informal workers, 62 (42 %) of the women informal workers expected the government to ensure minimum wages, 29 (19 %) of the women informal workers expected financial support from the government for one year, 36 (24 %) of the women informal workers desired job security at their workplace with government support, 5 (3 %) of the women informal workers expected government support with ration/groceries, and 17 (11 %) of the women informal workers expected the government to ensure safety measures at the workplace.

Most of 62 (42%) of the women informal workers expected the government to ensure minimum wages.

Table 3.8
Expected Support from the Government

Factor	No. of Women Informal Worker	Percentage
Expected Support from Government		
Ensuring minimum wages	62	42
Financial support for one year	29	19
Job security at workplace	36	24
Support with ration/groceries	5	3
Ensure safety measures at workplace	17	11
Relief measures/support from state or central government		
Yes	39	26
No	110	74
Total	149	100

It is inferred that, out of 149 women informal workers, 39 (26 %) of the women informal workers went back to their native place during the COVID-19 lockdown, and 110 (74 %) of the women informal workers did not go back to their native place during the COVID-19 lockdown. Most of 110 (74 %) of the women informal workers did not go back to their native place during the COVID-19 lockdown.

Conclusion

The analysis and interpretation of the data collected from 149 women informal workers in the Coimbatore district shed light on the significant impact of COVID-19 on women informal workers. The study revealed that while a majority of participants and their families were affected by the virus, a notable percentage faced the direct consequences of the pandemic, emphasizing their vulnerability. Financially, the findings highlighted the reliance on money borrowed from money lenders and personal savings in managing medical expenses. Employment-wise, transportation restrictions played a substantial role in job loss or unemployment, indicating the disruption caused by mobility limitations. The study also highlighted the varying levels of employer and government support, with many participants receiving no

assistance for medical expenses and relying on salary advances. Safety measures in the workplace were found to be consistent.

The study also documented that COVID-19 lockdown has increased debt of the women in informal sector. The study further emphasized the expectations of this workforce from the government, including minimum wages, job security, and improved workplace safety. Overall, these findings call for targeted interventions and policy measures to address the specific needs and challenges faced by women informal workers, ultimately contributing to their resilience and well-being.

Summary of findings, suggestion and conclusion are dealt in the next chapter.

Chapter 4

SUMMARY OF FINDINGS, SUGGESTIONS AND CONCLUSION

Introduction

The COVID-19 epidemic has made women who Labor in the informal sector particularly vulnerable in terms of their means of subsistence. In Tamil Nadu, India, the Coimbatore area has seen substantial economic disruptions that have had an impact on the already precarious condition of women working in informal jobs. Due to supply chain disruptions, decreased economic activity, and job losses brought on by the epidemic and the ensuing lockdown measures, women working in the informal sector are now even more vulnerable to poverty. In the Coimbatore district, women who work informally contribute significantly to a variety of industries, including agriculture, manufacturing, construction, and services. However, legal recognition, social security, and Labor rights are frequently absent from their employment. Since women who Labor in the informal sector have limited access to support systems due to the epidemic, this increases their risk.

For the purpose of creating targeted interventions and policy solutions, it is essential to understand the unique difficulties experienced by women informal laborers in the Coimbatore area during the COVID-19 crisis. A summary of the study's findings is provided in this chapter. They highlight the numerous vulnerabilities faced by women working in the unorganized sector and offer suggestions for improving their resilience and general wellbeing.

This study seeks to advance knowledge and promote evidence-based policy interventions by examining the socio-economic effects of the pandemic on women informal workers, including income loss, restricted access to healthcare, increased care giving responsibilities, and a lack of social protection. The results will assist local stakeholders and act as a resource for politicians, scholars, and organizations pursuing inclusive and gender-responsive recovery efforts in the wake of the COVID-19 pandemic.

Methodology

Empirical research design has been adopted. Primary data has been collected from women informal workers residing in Coimbatore District. Five specific informal sector groups namely, construction workers, street vendors, waste-pickers, domestic workers and homeless persons have been considered for the study. Considering that a very limited database of informal sector workers exists, sample of 149 informal workers in 11 taluks of Coimbatore District has been chosen using snow-ball sampling technique. Interview schedule will be adopted to collect data from the women workers. Sources of the data have been collected getting help from the local panchayats and municipalities to approach the sample women workers. Later, data collected from primary sources has been carefully scrutinized and transcribed before the commencement of data tabulation and interpreted through statistical tools. Data collected has been analyzed using Percentage analysis and weighted average ranking method.

Summary of Findings

Socio Economic Profile of the Workers

The socio-economic profile of the women informal workers in the study reveals important information about their demographics and economic conditions. The majority of the women informal workers fall within the age group of 21-30 years, indicating a young workforce in the informal sector. Most women informal workers reside in rural areas, emphasizing the need for tailored interventions in these regions. In terms of education, a significant percentage completed secondary education. The women informal workers are primarily married and belong to nuclear families. Family sizes range from 4 to 5 members, and the majority have female children. Renting is the prevalent housing situation. Monthly incomes vary, with a significant proportion falling within the Rs. 10,001 to Rs. 20,000 range. Understanding these socio-economic factors is crucial for addressing the specific needs and vulnerabilities of women informal workers in Coimbatore district.

Nature of Work and Working Conditions

The nature and working conditions of women informal workers in Coimbatore district are diverse, reflecting different occupations and employment arrangements. The majority of women informal workers work as domestic workers, while street vending, work from home, construction labor, housekeeping, agricultural jobs, and sweeping are also prevalent occupations. Regular full-time employment is the most common employment status among the women informal workers. The majority of the workers work between 5 to 8 hours a day, with a significant portion working more than 8 hours. Buses are the primary mode of transportation for daily commutes. Monthly salary payments are the most

common, and savings are typically kept with relatives. Overall, while some women informal workers express satisfaction with their income and working hours, information about other aspects such as break time, employer behavior, skill development, and transportation is not available. Understanding the nature and working conditions of women informal workers is essential for identifying areas of improvement and formulating targeted interventions.

Wage Patterns & Causes of Discrimination

The wage patterns and causes of discrimination among women informal workers in Coimbatore district reveal several significant findings. A majority of women informal workers, 62%, stated that they do not face lower wages compared to male workers, while 38% reported experiencing lower wages. Discrimination in the form of gender pay gaps was identified by 25% of the women informal workers. Additionally, discrimination related to increased working hours, harassment, and desired employee benefits were reported by varying percentages of women informal workers. Age-based discrimination was prevalent, with 44% of women informal workers mentioning it as a form of discrimination they faced. Gender was identified as the basis of discrimination by 24% of women informal workers. Only 13% of women informal workers were members of social organizations, indicating limited social support. Understanding wage patterns and causes of discrimination is crucial for advocating for fair remuneration and addressing the underlying biases and inequalities faced by women informal workers.

Migration Pattern

The data provided represents the reasons and percentages of women informal workers who migrated from their previous locations. Out of the total 73 women informal workers, the following reasons and percentages were reported:

The majority of the women informal workers (13.7%) reported that they migrated because they were unable to achieve sufficient growth or prosperity as farmers in their previous location. Other significant factors include a lack of enough jobs, inadequate income, large household size, and small agricultural holdings. Additionally, some women mentioned poor public services, better work opportunities, traditional migration as part of their profession, the pursuit of higher expected income, and employment as reasons for their migration. A smaller proportion cited drought, marriage or family-related reasons, and family movement for better livelihood.

Impact of Covid-19 and Livelihood

The study revealed that while a majority of participants and their families were affected by the virus, a notable percentage faced the direct consequences of the pandemic, emphasizing their vulnerability. Financially, the findings highlighted the relied on money borrowed from money lenders and personal savings in managing medical expenses. Employment-wise, transportation restrictions played a substantial role in job loss or unemployment, indicating the disruption caused by mobility limitations. The study also highlighted the varying levels of employer and government support, with many participants receiving no assistance for medical expenses and relying on salary advances. Safety measures in the workplace were found to be consistent. The

study also documented that COVID-19 lockdown has increased debt of the women in informal sector. The data shows that 96% of the surveyed or considered population faced stress or anxiety during the COVID-19 pandemic. This high percentage reflects the significant impact the pandemic has had on people's mental well-being. The uncertainty surrounding the virus, health concerns, financial instability, social isolation, and other pandemic-related stressors have contributed to elevated levels of anxiety and stress. The study further emphasized the expectations of this workforce from the government, including minimum wages, job security, and improved workplace safety.

The findings of the study reflects the significant challenges faced by women informal workers during the COVID-19 pandemic, including joblessness, reduced salaries, increased workloads, limited safety measures, economic difficulties, and mental health issues.

Overall, these findings call for targeted interventions and policy measures to address the specific needs and challenges faced by women informal workers, ultimately contributing to their resilience and well-being.

Expected Support from the Government

Findings of the study pertains to factors and percentages related to the expected support from the government and the relief measures received by women informal workers. The majority of women informal workers had expectations from the government, with the most common expectation being the enforcement of minimum wages (41.6%). A significant portion also sought financial support for one year (19.5%) and job security at the workplace (24.2%). A smaller number expected support in the form of ration/groceries (3.4%) and

safety measures at the workplace (11.4%). However, only a minority of women informal workers (26.2%) reported received relief measures or support from the state or central government, while the majority (73.8%) did not receive such assistance.

Problems Encountered by Women Informal Workers

Women informal workers faced several challenges during the COVID-19 pandemic. Here are some problems they encountered:

Loss of Livelihood:

Many women informal workers, such as street vendors, domestic workers, and daily wage laborers, experienced a loss of income due to lockdowns, reduced economic activity, and job losses. This affected their ability to support themselves and their families.

Lack of social protection:

Informal workers often lack access to social protection measures, such as health insurance, paid sick leave, and unemployment benefits. This made them more vulnerable during the pandemic, as they had limited resources to cope with the health and economic impacts.

Unsafe Working Conditions:

Women in the informal sector often work in precarious and unregulated environments, which increased their risk of exposure to the virus. For instance, domestic workers faced challenges in maintaining physical distancing and ensuring hygiene measures in their workplaces.

Increased Care Burden:

With the closure of schools and daycare centers, women informal workers had to bear the additional responsibility of caregiving at home. Balancing work and care giving became a significant challenge, leading to decreased productivity and income.

Limited Access to Information and Resources:

Women in the informal sector may have limited access to reliable information about health guidelines, government support programs, and resources available during the pandemic. This hindered their ability to make informed decisions and access necessary support.

Suggestions

Strengthen Social Protection:

Governments should expand social protection measures to include informal workers, ensuring access to healthcare, income support, and unemployment benefits during crises.

Promote Financial Inclusion:

Provide financial services tailored to the needs of women informal workers, such as microfinance and savings programs, to enhance their financial resilience.

Improve Occupational Safety and Health:

Enhance safety regulations and promote awareness campaigns to educate women informal workers about health and hygiene practices in their workplaces. Provide personal protective equipment (PPE) and sanitary facilities where needed.

Support Childcare Services:

Establish or expand affordable and accessible childcare facilities to alleviate the burden on women informal workers, allowing them to continue working without compromising their children's well-being.

Enhance Access to Information:

Develop targeted communication strategies to ensure women informal workers are aware of government support programs, health guidelines, and available resources. Utilize local community networks, mobile technology, and trusted intermediaries to reach out to them effectively.

Foster Skill Development and Entrepreneurship:

Provide training programs and financial support for women informal workers to develop new skills, diversify their income sources, and transition into more resilient sectors.

Promote Social Dialogue and Inclusion:

Involve women informal workers and their organizations in decision-making processes to address their specific needs and concerns effectively. This can be done through participatory forums, trade unions, and collective bargaining.

Policy Implications

The study makes the following recommendations:

Governments should provide social protection and financial assistance to women informal workers.

They should also invest in training and skills development for women informal workers.

Employers should be encouraged to adopt flexible work arrangements and to provide paid sick leave to their employees.

Civil society organizations should work to raise awareness of the challenges faced by women informal workers and to advocate for their rights.

Conclusion

To summarize, the COVID-19 pandemic has highlighted the numerous challenges faced by women informal workers. From loss of livelihood and lack of social protection to unsafe working conditions and increased care burdens, these women have been disproportionately affected by the crisis. However, addressing these issues is crucial to promote gender equality, economic recovery, and social resilience. To support women informal workers, governments must prioritize strengthening social protection measures, promoting financial inclusion, and improving occupational safety and health standards. Additionally, providing accessible childcare services, enhancing access to information, and fostering skill development and entrepreneurship can empower these women to overcome the hurdles they face. As we strive for a more equitable and sustainable post-pandemic world, it is imperative that we prioritize the well-being and empowerment of women informal workers. By implementing comprehensive measures and supporting their economic and social rights, we can build a more resilient and inclusive society for all.

The study concludes that the pandemic has had a devastating impact on the livelihoods of women informal workers. However, there are a number of things that can be done to help these workers recover and to build back better.

6	To meet the day to day expenses	
7	Children education	
8	Medical expenses	

3.4 What is your working hours in a day?

- a) Less than 3 hours b) 3 hours to 5 hours
c) 5 hours to 8 hours d) More than 8 hours

3.5 How do you go to your workplace

- a) On Foot b) By Bus
c) By two wheelers d) Company Vehicles
e) Any others specify _____

3.6 What is the salary frequency

- a) Daily b) Weekly
c) Monthly d) Fort-nightly

3.7 Where is your saving kept?

- a) Bank b) Relative
c) Chits d) Post office
e) Employer f) Self

3.8 To what extent are you satisfied with the following aspects of your work?

- i) Income
- ii) Daily working hours
- iii) Number of holidays
- iv) Working condition
- v) Break time
- vi) Regularity of payment
- vii) Behavior of employer
- viii) Development skill
- ix) Transportation system
- X) Other facilities (uniform, tea, coffee and food, insurance coverage)

IV. Wage Patterns & Causes of Discrimination

4.1 Do you feel comfortable working with male workers?

- a) Yes
- b) No

4.2 Do you fight sometimes with other working women at your working place?

- a) Yes
- b) No

4.3. Do you face any type of discrimination during work?

- a) Yes
- b) No

4.3.1 What kind of discrimination do you face?

- a) Gender Pay gaps
- b) Increased working hour
- c) Harassment
- d) Desired employee benefits

4.3.2 If yes, what is the basis of discrimination?

- a) Gender b) Religion/ Caste
c) Education d) Age
e) Physical Appearance f) Any other (specify) _____

4.4 Are you member of any social organization
(like women club, welfare society etc.) ?

- a) Yes b) No

4.5 When compared to male workers whether your wages is low?

- a) Yes b) No

V. Migration

5.1 Are you migrated?

- a) Yes b) No

5.2 If yes, have you migrated with your family or alone?

- a) With family b) Alone

5.3 What is the reason for migration from your native?

S. No.	Reason	Rank
i	Lack of enough jobs where you were earlier	
ii	Couldn't grow enough in the place where you were a farmer	
iii	Lack of adequate income	
iv	Large size of household	
v	Small size of agricultural holding	
vi	Poor public services (such as water or roads)	
vii	Better work opportunities	
viii	It is our profession to migrate	

ix	Higher expected income	
x	Employment	
xi	Drought/unable to continue farming/ Agriculture	
xii	Marriage/family movement	
xiii	Family movement for better livelihood (Income)	
Xiv	Others	

5.4 Do you want to go back to your native place

a) Yes

b) No

VI. Impact of covid-19 on Livelihood

6.1 Whether you are jobless /unemployed during pandemic?

a) Yes

b) No

6.2 If Yes what was the reasons?

i) Employers terminated the service

ii) Fear for own health

iii) Social distancing impossible

iv) Transportation restriction

☐

6.3 How was the salary paid during pandemic?

i) Full salary

ii) Half salary

iii) No salary

6.4 What was the work load/salary paid during pandemic?

i) Reduced salary/ Increased workload

ii) No change in salary/workload

6.5 Any additional supports by the employer during Pandemics?

- i) No reduction in pay
- ii) Work from home
- iii) Material (groceries) support
- iv) Transportation support
- v) Safety measures at work place
- vi) Medical expenses
- vii) No Support

6.6 What safety measures were provided in your workplace ?

- i) Complete safety measures
- ii) Partial safety measures
- iii) No safety measures

6.7 How did you manage the household Expenses?

- i) Managing with reduced income
- ii) Relatives are supporting
- iii) Existing saving is used
- iv) Managing with borrowed money
- v) Not affected much

6.7.1 If borrowed money, amount borrowed _____

6.7.2 Source of borrowing

- a) Relatives
- b) Money lender
- c) Friends
- d) Neighbors
- e) Others, please specify _____

6.8 Economical problems faced during covid-19

- i) Debt increased ☐
- ii) Food intake restricted ☐
- iii) Lack of diversified food ☐

- iv) Difficult to pay rent ☐
- v) Shrunk savings ☐
- vi) Selling personal assets ☐
- vii) Financial insecurity ☐
- viii) Increased job insecurity ☐
- ix) Marital relationship affected ☐
- 6.9 Expected support from government
- i) Ensuring minimum wages ☐
- ii) Financial support for one year ☐
- iii) Job security at workplace ☐
- iv) Support with ration/groceries ☐
- v) Ensure safety measures at workplace ☐

6.10 Whether you went to native during covid-19 lockdown?

- a) Yes
- b) No

6.11 Whether you have availed any of the relief measures/support from state or central government?

- a) Yes
- b) No

6.12 Whether you have re-joined in the same work after covid-19 restriction?

- a) Yes
- b) No

6.13 Mental health problems faced during covid-19

- a) Lack of confidence
- b) Stress of anxiety
- c) Social dysfunction

Abstract

Women empowerment refers to the process of empowering women and promoting gender equality to ensure that women have equal rights, opportunities and participation in various aspects of life. It involves empowering women economically, socially, politically and emotionally, so they can make their own choices, have control over their lives, and actively contribute to society. The perception of women empowerment recognizes that women, like men, are entitled to equal rights and opportunities and should not face discrimination based on their gender. women empowerment is essential for creating a more inclusive and equitable society. When women are empowered, they can contribute to economic growth, poverty reduction, improved education and enhanced overall well-being for communities and nations. it's not just about empowering women but also about transforming systems and structures to ensure gender equality and social justice.

Keywords: Education, Economic empowerment, Health and Reproductive rights, Political participation, Legal rights, Social and Cultural change.

Introduction

Women empowerment is a critical and transformative movement that aims to bring about gender equality and equal opportunities for women in all aspects of life. It acknowledges the historical and systemic discrimination and challenges that women have faced and advocates for their rights, agency and participation in decision-making processes. By empowering women economically, socially and politically, societies can benefit from the full potential and contributions of half of their population.

The benefits of women empowerment extend far beyond individual women. When women are empowered, they become agents of positive change in their families, communities and nations. They contribute to economic growth, poverty reduction and social development. Studies show that when women are given an equal say in decision making, communities are more likely to experience improved governance, peace and sustainable development.

However, challenges persist and the fight for women empowerment is an ongoing journey. Gender-based violence, unequal pay, and limited representation in leadership roles are just some of the issues that still need to be addressed. To achieve true women

ICT TOOLS FOR TEACHING AND LEARNING PROCESS

Dr.T.Kiruthika

Assistant Professor

Department of Commerce (E-Commerce)

NGM College, Pollachi.

Abstract

ICT is a broad term stands for Information Communication Technology. ICT tools for teaching and learning cover everything from digital infrastructures such as printers, computers, laptops, tablets, etc., to software tools such as Google Meet, Google Spreadsheets, etc. In traditional classrooms, a teacher's basic instructional tools for displaying information are chalkboards, multipurpose boards, bulletin boards and charts. But in today's modern scenario, tools of many professions are changing at an incredible rate and that education is no exception. The impact of technology has led to the increased use of computers for presenting information in many of today's classrooms. To make ICT teaching and learning more interactive, various platforms and tools have been created and updated over the period of time. Innovative ICT tools used in classroom teaching which helps teachers to integrate in their subject, for teaching-learning and assessment. There are numerous subject specific free of cost ICT tools available on online and offline platforms which can be used for teaching, learning and assessment. They are used by teachers to encourage participation and engage learning in their classrooms. ICT can also be used by teachers to promote collaborative work and creativity across a wide range of subjects. This study aims at highlighting the superiority of ICT tools for facilitating student learning, retention and attitudes.

Keywords: Information Communication Technology, Teaching-Learning, Visual Information, Online Platforms

Introduction

In today's globalised world the Information and Communication Technologies (ICTs) have become deeply rooted in educational settings. Their use has rooted qualitative changes in how teaching is approached, especially in terms of presenting the contents audio-visually. Even though there has been much discussion over different methods to teach students, lectures are not likely to stop being used. To emphasize particular points, many lectures use written material presented on a chalkboard, whiteboard, or by transparencies on an overhead projector. But in the last 10 years, another method of presenting visual information with lectures has gained prominence which is projecting information directly from a computer onto a screen i.e. PowerPoint presentations. In fact, many colleges and universities have rooms equipped with technology necessary for any teacher to display information in this manner. Furthermore, some administrations are pushing the teachers to use various other technologies for creative teaching and learning like Information Communication Technology, Teaching-Learning, Visual Information, Online Platforms

Abstract

The educated Indian women have to go a long way to achieve equal rights and position because traditions are deep rooted in Indian society where the sociological set up has been a male dominated one. Despite all the social hurdles, Indian women stand tall from the rest of the crowd and are applauded for their achievements in their respective field. The transformation of social fabric of the Indian society, in terms of increased educational status of women and varied aspirations for better living, necessitated a change in the life style of Indian women. She has competed with man and successfully stood up with him in every walk of life and business is no exception for this. These women leaders are assertive, persuasive and willing to take risks. They managed to survive and succeed in this cut throat competition with their hard work, diligence and perseverance.

The present paper endeavors to study the concept of women entrepreneur –Reasons women become entrepreneurs –Reasons for slow progress of women entrepreneurs in India –Challenges faced by Women Entrepreneurs.

Keywords: Entrepreneurship, Women, Business, economic development, challenges

Introduction

Women entrepreneurs have been designated as the new engines for growth and the rising stars of the economies in developing countries to bring prosperity and welfare. Women Entrepreneurs may be defined as the women or a group of women who initiate, organize and operate a business enterprise. The Government of India has defined women entrepreneurs as—an enterprise owned and controlled by women having a minimum financial interest of 51 per cent of the capital and giving at least 51 per cent of the employment generated in the enterprise to women. The growth of the proportion of women entrepreneurs in developing countries has drawn the attention of both the academic and the development sector. Women entrepreneurs engaged in business due to push and pull factors which encourage women to have an independent occupation and stands on their own legs. A sense towards independent decision - making on their life and career is the motivational factor behind this urge. Under the influence of these factors the women entrepreneurs choose a profession as a challenge and as an urge to do something new. Such a situation is described as pull factors. While in push factors women engaged in business activities due to family compulsion and the responsibility is thrust upon them. The educated women do not want to limit their lives in the four

Abstract

A holistic and multidisciplinary education would attempt to integrate the development of all human capacities - intellectual, aesthetic, social, physical, emotional, and moral. In the long run, such a comprehensive education will be the approach of all undergraduate programmes, including those in professional, technical, and vocational fields. Even engineering schools, such as IITs, will shift toward more holistic and multidisciplinary education that includes more arts and humanities. Students of the arts and humanities will strive to learn more science, and all will strive to include more vocational topics and soft skills. This paper will cover all the opportunities that can be achieved through the New Education Policy 2020. This paper also contains the highlights of the policy. Curricular structures that are imaginative and adaptable will allow for creative combinations of subjects to be studied, as well as many entry and departure points. The aim is to comprise all the good aspects of the policy which will be very beneficial for the upcoming generation education practices. The paper also holds the educational preparation of the teaching fraternity to look beyond the ancient method of teaching and need to be prepared for the forthcoming generation teaching methods.

Keywords: *New Education Policy, Holistic development, Multidisciplinary education, Higher education, Opportunities in NEP.*

Introduction:

The National Policy on Education (NPE) is a policy formulated by the Government of India to promote education amongst India's people. The policy covers elementary education to colleges in both rural and urban India. The first NPE was promulgated by the Government of India by Prime Minister Indira Gandhi in 1968, the second by Prime Minister Rajiv Gandhi in 1986, and the third by Prime Minister Narendra Modi in 2020.

The National Education Policy 2020 (NEP 2020), which was approved by the Union Cabinet of India on 29 July 2020, outlines the vision of India's new education system. The new policy replaces the previous National Policy on Education, 1986.

The policy is a comprehensive framework for elementary education to higher education as well as vocational training in both rural and urban India.

Abstract

“Education is the most powerful weapon to be used to change the world. “Nelson Mandela Education is important for the economic and social development of nation. The weapon may proved to be harmful if it is misused. Due to proper interpretation and implementation of policies, the generations may be benefitted. It will result in strong economic and social development. The national policy in education ,1986 was replaced by New National Education Policy.[NEP 2020] National Education Policy is the holistic reform in the education across all levels stages of education in India. It made reforms in primary,secondary and higher education in single policy document .It is the evolution in the field of education in India. This study is based on secondary data, the available literature on the topic is referred. This paper aims at discussing challenges and opportunities in National Education policy 2020 with respect to higher education in India.

Keywords: *He is [higher educational institutes],NEP [National Education Policy],*

Introduction

Kothari Commission [1964-66] had recommended a 6 % allocation of GDP, National Education Policy,2020 is an evolution in the education field. It tried to increase access, equity, and inclusion as one of thekey changes. Internationalization of higher education is one of the aims in the NEP. NEP promoted more and more philanthropic activity in the education sector. NEP tries to imbibe that education is a concurrent subject. NEP suggested a „light but tight“ regulatory framework to ensure integrity, transparency, and resource efficiency of the educational system through audit and public disclosure while encouraging innovation and out-of-the-box ideas through autonomy, good governance, and empowerment.

National Education Policy 2020 : Major Principles

- Sensitizing teachers as well as parents to promote each student’s holistic development in both academic and non-academic spheres Multidisciplinary and a holistic education to ensure the unity and integrity of all knowledge disciplines
- Emphasis on conceptual understanding rather than rote learning and learning-for-exams

To emphasize particular points, many lectures use written material presented on a chalkboard, whiteboard, or by transparencies on an overhead projector. But in the last 10 years, another method of presenting visual information with lectures has gained prominence which is projecting information directly from a computer onto a screen i.e. PowerPoint presentations. In fact, many colleges and universities have rooms equipped with technology necessary for any teacher to display information in this manner. Furthermore, some administrations are pushing the teachers to use various other technologies for creative teaching and learning like Information Communication Technology, Teaching-Learning, Visual Information, Online Platforms

DIGITAL FINANCIAL INCLUSION IN INDIA - AN OVERVIEW

Dr. T. Kiruthika

Assistant Professor

Department of Commerce (E-Commerce)

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

This article discusses what has been accomplished in the area of digital financial inclusion in India thus far, as well as how we may leverage modern technologies to develop a more inclusive society by using different digital drivers. This article outlines the different obstacle and challenges that remain in the way of attaining a digitally inclusive society. The development of E-commerce-enabled financial inclusion is discussed in this article. Policymakers and regulators have the opportunity to build a digital financial inclusion environment that promotes access and use of financial services in e-commerce markets.

Key words: Financial inclusion, E-commerce, Fintech, Payment Banks.

Introduction

The impact of digital finance on financial system reliability & stability is the main focus area of this study. Financial organizations, governments, and authorities are constantly promoting financial inclusion through digital media. However, despite these wide promoting initiatives, digital financial inclusion is not progressing as predicted or as it should be due to consumer ideology, which is one of the major roadblocks to the achievement of an e-commerce enabled economy or financial inclusion. This article sought to assess the various programs and initiatives and to what degree they have been successful, as well as to sort out some consumer ideology as barriers in the way of digital financial inclusion. The rise of e-commerce has resulted in an expansion in the number of digital financial services available to businesses and individuals. Services are increasingly being offered by non-profit organizations including electronic payments, credit financing, and insurance at the POS, this tendency known as E-commerce Enabling Financial Inclusion or Digital Financial Inclusion. The Government of India has always prioritized financial inclusion in its economic strategies. Initiatives like Jan Dhan, Aadhaar-Mobile, and Digital India have changed the game by ensuring that India's underbanked population has equal and economical access to financial services, hence lowering income disparity. While e-commerce has been quite successful in creating demand for digital financial goods and services for microenterprises and individuals at the bottom of the economic pyramid. Recent evolution in both the public and commercial sectors has fueled India's growth of digital financial inclusion. From

UNLOCKING POTENTIAL: HARNESSING AI FOR EFFECTIVE ENGLISH LANGUAGE TEACHING

Dr. N. Radha,
Assistant Professor of English
NGM College, Pollachi

Abstract:

The integration of Artificial Intelligence (AI) in education has opened up new possibilities for language learning, particularly in the realm of teaching English as a second language (ESL). This article explores the potential of AI in enhancing English language teaching by providing personalized learning experiences, facilitating language acquisition, and supporting educators in their instructional practices. Through various AI-driven tools and platforms, students can engage in interactive language activities, receive tailored feedback, and access resources that cater to their individual learning needs. Moreover, AI assists teachers in assessing student progress, identifying areas for improvement, and designing targeted interventions. By harnessing the power of AI, educators can unlock the full potential of English language learners, fostering greater proficiency and confidence in communication.

Keywords: Artificial Intelligence, Learning, Individual, Activities, Educators.

Introduction:

English language teaching has undergone significant transformations in recent years, spurred by advancements in technology and the emergence of Artificial Intelligence (AI). With the increasing globalization and demand for English proficiency, educators are seeking innovative approaches to meet the diverse needs of learners. AI offers a promising solution, revolutionizing the way English is taught and learned in classrooms around the world. This article delves into the opportunities presented by AI in English language teaching, highlighting its capacity to personalize learning experiences, facilitate language acquisition, and support educators in their instructional practices.

Personalized Learning Experiences:

One of the most compelling aspects of AI in English language teaching is its ability to provide personalized learning experiences for students. AI-powered platforms analyze individual learning styles, preferences, and performance data to deliver tailored content and activities. For example, adaptive learning systems adjust the difficulty level of exercises based on students' proficiency levels, ensuring that they are appropriately challenged and supported throughout their language learning journey. Additionally, AI-driven virtual tutors offer real-time feedback and guidance, helping students improve their speaking, listening, reading, and writing skills in a supportive and interactive environment.

Facilitating Language Acquisition:

AI technologies play a crucial role in facilitating language acquisition by creating immersive and authentic learning experiences. Through natural language processing (NLP) and machine learning algorithms, AI platforms simulate real-world communication scenarios, allowing students to practice English in context. For instance, chatbots and voice recognition systems enable learners to engage in conversations, receive instant responses, and refine their language skills in meaningful contexts. Moreover, AI-driven language applications offer interactive lessons, multimedia resources, and gamified activities that motivate students to actively engage with the language and deepen their understanding of English language concepts.

Supporting Educators:

In addition to benefiting students, AI supports educators in their instructional practices by providing valuable insights and resources. AI-powered analytics tools analyze student performance data, identify learning patterns, and generate actionable recommendations for teachers. By leveraging this data-driven approach, educators can make informed decisions about curriculum design, lesson planning, and instructional strategies. Furthermore, AI assists teachers in assessing student progress, monitoring learning outcomes, and implementing targeted interventions to address individual needs. With AI-enabled support systems, educators can optimize their teaching practices, maximize student engagement, and enhance the overall effectiveness of English language instruction.

Conclusion:

The integration of AI has the potential to revolutionize English language teaching, offering personalized learning experiences, facilitating language acquisition, and supporting educators in their instructional practices. By harnessing the power of AI-driven technologies, educators can unlock the full potential of English language learners, enabling them to achieve greater proficiency and confidence in communication. As AI continues to evolve and improve, its role in English language teaching will become increasingly indispensable, shaping the future of language education in profound and transformative ways.

and when they have a child his behavior changes too. She thinks that she cannot hold their relationship because she cannot accept her husband's changes. Hildegard as a woman thought to live a happy life with her husband and children but she faced a lack of care and love from her husband in a certain period. Psychologically she faces more pressure, though she has a lovable family, her husband loses interest in her when she seems older.

Roscoe Button

Roscoe, Benjamin's son, is no different than Roger Button when it comes to dealing with Benjamin's reverse aging. Just as Roger insisted that Benjamin dye his hair and dress like a boy, so Roscoe tries to make him wear fake whiskers and eyeglasses. Roscoe isn't just bothered by Benjamin's age, but by Benjamin's age relative to him. His father ought to be older than him, and Benjamin is breaking the rules by allowing himself to be younger. He is equally concerned with what is right or proper, which means Benjamin's age is wrong simply because it goes against the rules. Roscoe, like his mother, resents Benjamin's reverse aging and demands to stop it. When Roscoe's age surpasses his father's apparent age, he demands that Benjamin call him "Uncle" around the house. Roscoe refuses to take Benjamin to prep school and sign him up. Roscoe even asks that Benjamin wear fake whiskers and glasses to look older. Roscoe as a son could not see his father as younger than him. He is not able to face society as now he has become a gentleman, psychologically he is stressed with his father's reverse aging.

Benjamin Button

Benjamin Button is a protagonist of the play who was born old and his age is backwards in the course of his life. Here the researcher discusses about struggles of Benjamin Button, when he faces the society as in reverse aging process. At first, as a son of young man Roger Button, he felt very difficult to prove that he is the son of Roger Button. After the birth he faces no love from a single person. Everyone looks him as very different case. After days passed there are some loves from his father. He finds that his age is going reverse. And on his eighteen he went to Yale College for admission he was insulted by them because though he is eighteen in age, he looks like a man of fifty. Later he joined army, when he returns back to his family, he lost his interest with his wife who seems older than Benjamin. And decided to join same college in which he was rejected once. As days passed, he is still in reverse aging, he used to go kinder garden with his grandson. And he was asked to call his son as uncle, for this criticising society. Thus, Benjamin Button faces psychological pressure also spreads this to his family because of the society in his reverse aging.

SPREAD OF PSYCHOLOGICAL PRESSURE IN FITZGERALD'S THE CURIOUS CASE OF BENJAMIN BUTTON

Malin. J

Assistant Professor in English

NGM College

Pollachi

Abstract:

The researcher here deals the topic of Spread of psychological pressure in Fitzgerald's "The Curious Case of Benjamin Button" with the question "Whether a man is happy in his reverse aging or not?". Psychological pressure handled by the four major characters Roger Button, Hildegard Moncrief, Roscoe Button, and the protagonist of the novella Benjamin Button in Fitzgerald's short story The Curious Case of Benjamin Button is analysed here by the researcher.

Keywords: Psychological, characters, protagonist, pressure, Analyze.

Roger Button

Roger Button is one of the major characters in the novella. He is a father of protagonist "Benjamin Button". Here, the researcher analysis about the psychological pressure that Roger Button went through, while knowing his firstborn baby is a 70-year-old man. When Mr. Roger Button's, the president of Roger Button & Co., Wholesale Hardware, began to run eagerly toward Dr Keene, to know about his firstborn baby. Dr Keene was irritated and tensed, asks Roger to see for himself and understand. Here Roger Button is curious about what really happened and what makes Dr Keene to be more tensed. When Doctor's words are rough, there Roger comes through his first pressure in the novella. After looking Doctor, Roger meets nurse in the hospital, she treated him with the terror face and she takes Roger to the new born baby. Roger lost his cool, while seeing his old baby, demanding Roger as his father. Roger argues with stress and later he is pushed to take the child to home. Roger Button is a good father for Benjamin. But as above mentioned, Roger cannot accept Benjamin's condition. When Benjamin grows up, he cannot even find the right clothes for his son. Though he tries to cheer up his son, he went through some pressure from his friends and society because of his reverse aging son.

Hildegard Moncrief

Hildegard Moncrief is Benjamin's wife. She married Benjamin because she liked the old man. She thinks that the old man can take responsibility what may happen. Yet, her family does not agree about the age differences between Hildegard and Benjamin. Benjamin felt himself on the verge of a proposal--with an effort he choked back the impulse. As a wife, Hildegard always tries to give some good things that she can do for his husband and her lovely children as a mother. She loves her husband because she does not want to be apart from her husband. The conflicts happen when Hildegard does not understand the personal change condition of her husband. Hildegard thinks that her husband's changes happen because he has another woman that he loves. She does not understand why the changes happen to her husband,

DEGRADED SECTION OF SOCIETY IN DATTANI'S SEVEN STEPS AROUND THE FIRE

G. Amutha

Assistant Professor,

Department of English Language,

NGM College,

Pollachi.

Abstract:

Dattani's plays are an eye opener for the modernists who claim to have a developed society, whereas the weaker section still lies beneath. The term modern is superficial in nature and does not bring equality to the people impartially. The playwright leaves no stone unturned in changing the society as a whole. He tries to focus on the plight of the marginalized class in such a way so as to move the powerful to introduce favorable changes in the society. His choice of characters determines the success of the play. The overall picture of the society is demonstrated by the spoken words of the characters. The characters project the realistic picture of the world properly. Seven Steps Around the Fire. Dattani's selected play acts as an eye-opener for the modern generations to be sane human beings rather than insane. Society as a whole should be impartial even for its weakest section, only then it can be a living society.

Keywords: Society, plight, marginalized, impartial, insane.

Dattani is concerned about the neglected sections of the society for which he deals with a number of subjects focusing on the deteriorating condition of the society. The society shows as if they are treated equally but it's only on paper. Its weaker section still cries for some relief. He himself praises his characters and comments: "I also know that I have lot to say and am probably not saying it well enough. But my characters have a lot to say too, and they seem to be doing rather well at having their say. Every time a critic says something awful about my writing. I realise that they are pointing out something that I have wanted to say and have, as usual, been hopeless and unconvincing. Every time audiences have applauded, laughed, cried or simply offered their silence in response to some moment in the play. I am completely aware that it is my character that has done the work for me". (Dattani, Preface Dattani, being a problem playwright, does his job effectively. All of his plays target the problematic area and depict the blatant lie of development. Chaudhuri praises Dattani's art and says: "Dattani obviously seems to have a point to make to his audience. But rather than directly preach, the playwright dramatizes the People's performance on the stage with characters one begins to identify with, facing genuine, real life problems. The play, then, in a sense, is a plea for empathy and sensitivity to India's queer culture (51)

Seven steps around the fire is a wonderful play by Dattani that deals with the two worlds. Both the worlds live in a kind of illusion, one for its superiority and the other for its betterment. Their things fall apart when they collide with each other, devastating the latter one with a slight sense on the part of the first one even that does not make any

difference and the things go smoothly for them. Dattani prefers theatre more than any other genre of literature. He believes in theatre and says: "Audience need to make the effort. Unlike TV or cinema where the viewer doesn't have to contribute, theatre is a collective experience. In fact, at a moment of truth, you will find how people who don't know each other join in from all corners of the darkened hall to applaud and declare their appreciation of that important moment. And that's when you know a play works". (Nair) Oscar Wilde strongly feels the same. He says: "I regard the theatre as the greatest of all art forms, the most immediate way in which a human being can share with another the sense of what it is to be a human being". (Online)

Seven Steps Around the Fire was first broadcasted as Seven Circles Around the Fire by BBC Radio on 9th January 1999. The play's first performance has been on 6th August 1999 on stage at the Museum Theatre by MTC Production & The Madras Theatre, Chennai with Anuradha Ananth, Victor Paulraj, Kartik Iyer, Sourabh Ahuja, Sudhir Ahuja, P.C. Ramakrishna and Asim Sharma, directed by Mithran Devanesen. Later, it was named as „Seven Steps Around the Fire'. Dattani's selected play acts as an eye opener for the modern generations to be sane human beings rather than insane. The society as a whole should be impartial even for its weakest section, only then it can be a worth living society. The modern world does not belong to any one section of society but it is all together for the whole world including the weakest and disabled sections as well. But these days the power has taken over all the fields of society be it social, political, or personal, the capricious reign rules. Seven Steps Around the Fire deals with the inbuilt illusion of the characters who want to get positive response of every action of theirs. Dattani has used about ten characters in the play for the first time; he generally has 6-7 characters in his plays. All the characters contribute to the development of the play. Almost all the characters in the play are decisive in nature; they plan things on their own without having any prediction about the result of their actions.

The optimism in the play faces a big fall due to the prevailing haphazard system in the society. Dattani in Preface expresses the need of being a voice to the unvoiced. He feels that time needs someone to vocalize the voiceless sections of the society. He is quite confident that he is able to do the task. He states: "I am certain that my plays are a true reflection of my time, place and socio-economic background. I am hugely excited and curious to know what the future holds for me and my art in the new millennium in a country that has a myriad challenges to face politically, socially, artistically and culturally. Where does one begin? By ending this preface and carrying on with the business of holding a mirror up to society". (Dattani, xv) The central character of the play, Uma introduces the other characters through her interactions. Uma, who is the wife of Suresh, a superintendent of police, is working on her thesis for which she takes up Kamala's case as a study for research. She faces numerous problems while doing so as Kamala is a transgender who gets killed in mysterious circumstances. Even a constable does not understand the need of selecting Kamla's case. He says: MUNSWAMY. Madam, if you don't mind me saying, why is a lady from a respectable family like yourself...? There are so many other cases. All murder cases. Man killing wife, wife killing man's lover, brother killing brother. And that shelf is full of dowry cases. Shall I ask the peon to dust all those files? UMA. No. maybe some other time. I think this particular one is of interest to me at this time. (Dattani, 7) The play begins in a dramatic way,

and confuses the audience. The marriage mantras and terrible cries all together create a tense environment. The beginning results in more curiosity about the development and concluding scenes. The beginning of the play confirms about the upcoming dangerous events. "Sanskrit mantras fade in, the Ines chanted during a Hindu wedding. Fire.

The sound of the fire grows louder, drowning the mantras. A scream. The flames engulf the scream". (Dattani, 7) Uma's selfless efforts to find out the real culprit end in revealing the naked reality of the society. The whole play is a kind of a surprise for the readers as the concluding scene is a blow on the modern face of the society. When police has got a pressure from upwards to solve the murder mystery of Kamala, it takes Anarkali in to custody and close the file. She is brutally treated by the male prisoners. When Uma raises her voice against this, her husband asks her to stay away from legal matters. Uma investigates from Anarkali and Hijra boss about the background of Kamala, and supposed to be the responsible incidents for her murder. But she feels that reality is being hidden. She does not lose hope and tries to get to the main culprit. Munnaswamy, a constable helps Uma in her efforts to bring out the truth of Kamala's murder but he always asks her to stay away from transgender. Uma's husband Suresh does not like her too much involvement in Kamala's case. He asks her to take some other topic for her research but she disagrees to it.

Uma's various visits to the police station and her conversation depicts the fact that the society hates the transgender to the height of animosity and even its vice-versa. The society norms have parted the ways of two people. The straight consider them to be on the right path, the transgender fumes at it. The humiliation that they feel at the hands of society makes them stricter towards the straights. Uma. I would like to meet Anarkali. Where is she? Munswamy. Anarkali. come here. Anarkali. No! I don't want to meet any journalist. Munswamy. I will come inside and beat you up, you worthless pig! Anarkali. I am not in a mood. Uma. I am not a journalist. Anarkali. I don't care if you are the mother of all whores in Bangalore. I said I am not in the mood! (Dattani, 8) Munnaswamy has been taken from a real-life character. Generally, all people try to avoid transgender and police is to deal with them, they forget any ethics and misbehave like hell. His character throws light on the fact that the society still bows down before the powerful. Munnaswami: She! Of course, it will talk to you. We will beat it up if it does not. (Dattani,7) Suresh, a well-placed police officer, is a no exception in the case of the marginalized. When Uma interacts with him and discusses about transgender before him, he remarks filthy and tries to deviates from the path. Uma. Why do they put her in a male prison? Suresh. They are as strong as horses. Wear the purple one. Uma. I wore that last night. Suresh. Again. (Dattani, 9) He further says: Suresh. Good. Don't believe a word of anything it says. They are all liars. (Dattani, 9)

The play's tone is real and rough. It is Dattani's quality to describe the real in reel so artistically. The prolonged conversations between Uma and Anarkali and Munnaswamy reveal that no part of society easily accepts the other and this remains the unchallenged fact. It really poses difficulties for those who aim at doing something unconventional. Indian society has always been so closed and conservative; it's not an easy task to introduce changes in it. The very step towards the change generates criticism that even can be risky for one's life as well. Dattani's plays project the unconditional love for traditions and hatred for the transgender. The

society has itself made some legal and illegal notions and is mandatory for the young generation to follow them. The present play faces the same challenges and the targeted people meet with a terrible end only because the societal rites have not been followed. In fact, the rules and regulations are meant for the suppressed class, the privileged section of the society enjoys full freedom. Uma is projected as the sensitive social realistic class of the society who decides to unveil the truth behind Kamala's murder. She talks to Champa and plans for Anarkali's bail. Champa proves the innocence of Anarkali before Uma and clarifies that she can never even think of killing Kamala who she has always considered as her sister. Uma is not satisfied at the arrest of Anarkali for killing Kamala. She wants to find out the things on her own. She plans to visit the place where all transgenders reside. She reaches and tries to take out the reality out of Champa's mouth, but finds the innocence of Anarkali. After talking to Champa, she feels relieved as she understands the whole situation and decides to meet Mr. Sharma in this regard.

The conversation below throws light on the helplessness of Champa along with her rude behaviour. She does not accept help at once but goes for cross questioning. The conversation shows a line of segregation between the two worlds. Champa. What a question to ask! Uma. She-she did not kill Kamla, did she? Champa. Yes, yes. That won't suit you. No, she did not kill Kamla. They were sisters. UMA. If I gave you money, will you go to the court and get her release orders? CHAMPA. Did I come begging you—please give me money to save my daughter? Huh? UMA. (opens her bag). Here. CHAMPA. Aah, these old bones! How much is it? UMA. Enough for the bail amount and some more for your trouble. (Dattani, 24-25)

Dattani maintains coherence in his plays to present the social ills and its aftermaths.

When something wrong has taken place, how the other connected things be normalized. He divides the society into parts, one is with the wrong and the other is against the ill, but being a realistic play, the wrong wins in the end and proves the importance of power over moral in modern world. The realism is all about the projection of incidents as such. Realism deals with realistic depiction "Realism, in literature, is a manner and method of picturing life as it really is, untouched by idealism or romanticism. As a manner of writing, realism relies on the use of specific details to interpret life faithfully and objectively. In contrast to romance, this is concerned with the bizarre and psychological in its approach to character, presenting the individual rather than the type. Often, fate plays a major role in the action. Realism became prominent in the English novel with such writers as Daniel Defoe, Samuel Richardson, Henry Fielding, Tobias Smollett, Lawrence Sterne, Jane Austen, Charlotte Bronte, Anthony Trollope and William Makepeace Thackeray." (Coles dictionary, 163)

Uma's efforts of bringing out the reason and person behind the murder of Kamala get fulfilled and the truth comes out with a shriek. Uma. The photograph was what Mr. Sharma was after. A Polaroid picture that Subbu and Kamla had taken soon after their private wedding in some remote temple. . . A picture of Kamla as a beautiful bride smiling at Subbu with the wedding garland around him. The probably did not know that Kamla was not a woman. Of course Mr. Sharma couldn't have it—totally unacceptable. So he arranged to have Kamla burned to death. (Dattani, 41)

Seven Steps Around the Fire, being a problem play, deals with the problem of illusion. The characters live in their own world of illusion where they feel everything will be in their control. Uma feels that her interrogation like a police man will benefit someone legally but it's a sheer dream. Kamala and Anarkali are friends and their compatibility makes them famous. Kamala is a pretty young transgender, who is liked by all. Even she is nominated to be the head of Hijras. There are many who hate her but her behaviour wins their hearts. Subbu, the only son of Mr. Sharma who is a minister, comes across Kamala and starts loving her from the core of his heart. He plans to marry her, but all hell breaks loose when his father comes to know about his decision of marrying a transgender. On the very day of their marriage, he burns Kamala alive, leaving Subbu insane. The very sight and cries of dying Kamala has ruined the life of Subbu. Everything gets devastated by Mr. Sharma's barbaric act, but a photograph of Subbu and Kamal in garland is with Champa. Mr. Sharma often sends Salim, a rouge to collect the photo but in vain. Salim storms in, sending the bells tinkling wildly Champa. I told you not to show your face here! Salim. Shut up, you old bag! I told you to send me her things. Where is her trunk? Champa. Quiet, you fool! I have a guest here. A Memsaab. Madam, this is Salim. Do salaam to madam. Salim. Salaam.

Champa. Now go away. Salim. First give me her trunk. (Dattani, 26) Dattani's presentation of the facts remains remarkable till the end of the play. He depicts the sequential vents though follow flashback technique. The reading of the story does help in visualizing the scenes. Beena Agarwal believes that: His use of stage craft is extremely intricate and it makes the text echoing multiple connotations. For dramatic representation is neither a matter of the description nor of presentation but it is a matter of evocation. It is only with appropriate performance that the experience becomes vital. (30) She further says: Dattani's dramatic art is inspired by the mission to communicate profound meaning through his plays and, therefore, he exhibits keen awareness for the direction and stage performance of his own plays. His sensitive dramatic self is a fine synthesis of a dancer, director, actor, playwright, audience and commentator moving collectively towards a single direction. (Agarwal, 24) Dattani weaves a story in such a way so as to project the reality of the whole society. The main character and sensitive citizen of the country tries to punish the main culprit but forgets that money can buy everything. Uma's illusionary world does not make her think of the fact that the truth was known to all except her. She innocently reveals about Kamala's murder before her husband. She says:

Uma. Of course Mr. Sharma could not have it-totally unacceptable. So he arranged to have Kamla burned to death. But Salim had to tell him about the picture. Mr. Sharma simply had to have that picture. He sent Salim to threaten Anarkali and Champa. . . He did get the picture eventually. . . after losing his son. What a price to pay! And now he will be arrested and tried for murder. Suresh. I don't know. . . how do you know all this? Uma. I have my resources. (Dattani, 41)

Even after knowing a different story from Uma, Suresh does not change his attitude towards Mr. Sharma. He even does not suspect him of being the culprit, he rather respects him more. The modern society trusts the powerful ones rather than the common men. Suresh. Sir

that is the truth. I have my resources to verify all this. Of course, they are all sworn to secrecy so. . . And Mr. Sharma's gratitude will be expressed in ways that will be, I am sure, more than adequate. . . (Dattani, 41-42) Dattani's play reveals societal injustice done to the weaker section of the society. A certain ideology encourages such kind of narrow thoughts. The society as a whole plays its game and imposes unnecessary restrictions in the lives of people. A. Nicoll states that: "Many modern tragedies depend not on certain personalities presented in isolated surroundings, but on individuals placed in the midst of social powers from which they derive their joys and sorrows". (Nicoll, 97) The play is, no doubt, a world of illusion where all the characters believe in their own imaginary world. Subbu and Kamala thought that their marriage would bless them and the things would be accepted later but nothing like that happened and Kamala had to bear the pain of terrible death. Subbu also suffered due to his illusionary world. Mr. Sharma, after killing Kamala, hoped to marry his son to a girl of his choice, the planning failed and his son dies the same day of his marriage. Uma has her own vision. She believes that she is going to help the police by catching Kamala's killer, she does not realize the fact the truth was in veil, it came as a surprise for her only. Jeremy Mortimer states: "But it's Uma, a post-graduate student of sociology, who is the sleuth in this relationship, and using rather unconventional means, she uncovers the truth behind a murder in the city's hijra community". (Preface) The play ends on a very concerning note. Uma gets to know that the moral foundation is weak and resultantly all such incidents can happen in future as well. Uma. They knew. Anarkali, Champa and all Hijra people knew who was behind the killing of Kamla. They have no voice. The case was hushed up and was not even reported in the newspapers. Champa was right. The police made no arrests. Subbu's suicide was written off as an accident. The photograph was destroyed. So were the lives of two young people.

The playwright's portrayal of the realities of the contemporary English society certainly lead us to conclude that all claims of amelioration of social injustice prove illusionary. There is something to declare and something else on what we call ground zero. The rich and well-off enjoy special place of security in society. There are solemn declarations of concern for the marginalized people but it's sheer hypocrisy. Dattani mocks this hypocritical approach of the English people. *Seven Steps around the Fire* also lashes at this dubious policy. There is no doubt that Dattani's plays are an appeal to the readers to amend their attitude towards these unfortunate people. There are characters from the weaker sections who show some grit in facing age-old tyranny of the powerful, but they too submit to the reality of power and wealth in the end. Uma also bends before this social reality. The plays depict this human psyche that is very difficult to change.

The present paper has made a sincere attempt to cover a wide range of social realities which find place in Dattani's play under scrutiny here. The research takes up the theme of psychological impact of basic human behavior. It explores the human trait of self-conceit as depicted in *Seven Steps around the Fire*. The research covers all important actors in the play. It evaluates their thought processes in the given situation. It has helped the researcher in holding all essential aspects in the play. The stated aim of the research paper here is to focus on the "world of illusion" through the solemn protestations and mean practices of the characters. So the paper confines its examination to the aspects that are relevant to the said task. It is

necessary to strictly adhere to the basic principle of regulated treatment of the theme. Those aspects that have no direct bearing on the stated subject have been carefully kept out of purview.

EMANCIPATION OF WOMEN FOR ATTAINING SELF-IDENTITY AND SELF-ASSERTION IN ANITA NAIR'S MISTRESS

P. Mariammal

Assistant Professor of English

NGM College, Pollachi

Mariamalkavin94@gmail.com 94

Abstract:

Among the emerging women novelists in Indian Writing in English. Anita Nair holds a predominant place among other women writers who portrays the plight of the marginalized and oppressed women stifled by age old-traditions and dogmas. A woman is constantly reminded that she is grown up for a man whom she had to spend rest of her life. A woman's whole existence is considered in relation to a man. Like the feminist writer Mannu Bhandrai's women characters, Anita Nair's pictures the character Saadiya in Mistress reflects the dilemma of Indian women who are the victims standing at the crossroads of community and freedom, symbolized by 'home' and 'world' respectively unable to choose one above the other.

Keywords: Community, Freedom, Victim, Dogmas, Plight.

Anita Gosh observes:

With respect to Mannu Bhandari's women, if their ties with the community deny them freedom, then the process of leaving the community creates in them the fear of isolation. The act of breaking away from the communal conditioning becomes fraught with pain and frustration. Mannu Bhandari's writings depict the helplessness and confusion of women in their attempts to overcome the conflicts. (2)

Like Mannu Bhandari, Anita Nair has drawn the character of Saadiya to show how women are denied freedom as per the rules set by their community and how she is unable to shrug-off her emotional and psychological dependence on men, family and community. As quoted by Sunita Sinha, "Feminism is an attack upon social option, whenever it discriminates in its attitude towards man and woman". (21) Anita Nair through the character portrayal of Saadiya shows her concern for women who are denied basic freedom even at home, restricted within the strict framework of marginalization and oppression. As Prasanna Sree says, "Through the centuries, women in Hindu tradition are depicted as silent sufferers, they have given a secondary status both in family and society" (18). In the same way, over many years, the Islam looks upon women as inferior to men and has made women suffer under strict laws.

Saadiya is the youngest daughter born in a traditional Muslim family. Her father is very particular in keeping the womenfolk in Islamic tradition as he often says, "It is our duty to

safeguard the bloodline" (99). So it is the fate of women like Saadiya to be born and die in the same room. The four walls become their world:

Saadiya stared at the square of the blue over her head. Twenty feet by thirty feet. That was the measure of her sky, the peripheries of her life. She touched the grey walls of the terrace roof. Even if she stood a solid six feet and two inches high, making sure that she would never see what was not meant for her eyes, ensuring that she was not visible to anyone. Saadiya felt what was by not a familiar sense of despair. Would she like her sisters and every other woman born here, live and die hidden by these walls? Was there never to be away out from here? (99).

Saadiya cannot express her thoughts. She wants to cry out the discrimination that her religion their religion has drawn between men and women. She wants to tell her father what is right and wrong. She wants to break her throat to say "It isn't fair that you men get to go wherever you want, see and do whatever you like, and we are expected to be content with this patch of blue and this maze of alleys" (99). The more Saadiya questions about such restrictions the more she craves for freedom and attempts to breaks the rules. But violation of rules will end in violence against women. This is what is theresukt in Saadiya too. In the words of Neeru Tandon:

Violence against women has been accepted and even condoned throughout history. More than 2,000 years ago, Roman law, gave a man life and death authority over his wife. In the 18th century, English common law, gave a man permission to discipline his children and wife with a stick or whip no wider than his thumb. Feminists claim that men are more likely to use violence to keep their dominant position. While society claims to abhor violence, we often make heroes of men who are aggressive (140).

These words are true with Saadiya's strict father. Breaking the rules when she steps out and goes to the common alley where men would walk, she knows that her father would be furious. As she expects, the furious father, takes violence as the weapon to discipline his daughter. Patriarchy overflows through his veins and says he is the man of the family. This makes him too violent to press a very hot iron rod on her calves twice. Moreover, he wants him to be the hero of his family who could keep up its honour, by disciplining his girls this way:

You feel the need to break rules. This is my Saadiya; good girl. The next time you feel the need to break your reins, remember how your flesh melted This is the lesson for you as much as it is for me, that is unwise to give girls even a little rope. That it isn't in women to understand the nuances of freedom. And if I have left you unpunished, I may risk the honour of my family (130).

Here Anita Nair reveals the gender discrimination marked by religion. It is obvious through Saadiya's story that women in Arabipatnam are not allowed to go out of the four walls even for education. There is no reference of girls being sent to school. Moreover, they were fully covered with black dress all over their body except their eyes: "She took away the bold fold of the cloth that covered her face and flung it on her shoulder" (101). But men enjoyed

endless freedom. Women seldom saw the sea though they lived close to it. These questions arise in Saadiya's mind:

Though we live close to it, we don't get to see it ever. All the men in Arabipatnam went to beach every day, like they went to mosque. It was a part of their routine. We were allowed out, perhaps once a year. At other times, we knew the sea existed only when the breeze set in at early noon, bringing into our homes a whiff of salt and on hot days a brackish odour, part fish, part decay, part mystery (138).

Women pursue freedom by rebelling against the religious code. The rules are likely to be broken as the situations trigger the urge to cross the line. So, Saadiya breaks the religious code. The rules are likely to be broken as the situations trigger the urge to cross the line. So Saadiya breaks the religious code, crossing the line set by it. Her father expels her from their society in order to keep up the honour of his position in the religious circle. Saadiya craves for a new world of freedom and that is why she leaves her home and goes with Sethu, a man who is not of her religion. She expects total freedom, in the sense that it allows her to follow that freedom her religion and inculcating its rituals on her child after marriage. When this is denied by Sethu her husband, she thinks of her past in her father's house. She breaks the shackles of traditional conventions and comes out, but unfortunately, she is unable to come out of it fully. She stands at the crossroad of ancestry and life and the end chooses death as the only solution to the problem. She drowns herself in the sea, "not to feel so torn between my ancestry and my life as it is now. The body washed up three days later. A bloated Saadiya..." (228). Neeru Tandon has this to say by way of comment on the attitude of Saadiya, "By remaining free, women hoped to retain not only their independence, but those rights that, in spite of some change, they still lost on marriage" (126).

In the feminist concept of the 'New Woman,' she challenges the traditional notions and is essentially a woman of awareness of her inferior status in the family and society. She tries to bring it up in her best of efforts. She chooses to rebel against the accepted rules and regulations formed by the society. In the words of Neeru Tandon:

Her protest is not for equality but for the right to be acknowledged as an individual-capable for intelligence and feeling. She does not look for freedom outside the house, but within too. She is new in the dimension of time being a rebel against the general current of patriarchal society.

WEAVING SURREALISM AND REALISM IN AIMEE BENDER'S THE PARTICULAR SADNESS OF LEMON CAKE

Reshma. K
Assistant Professor
Department of English
NGM College.

Abstract:

Aimee Bender is an American novelist and short story writer, known for her surreal stories and characters. She writes about the lives of ordinary people. But she's known for gently folding in surrealistic elements into her stories which require her characters to deal with the consequences of shifting realities. This strategy is best illustrated in Bender's second novel with Bildungsroman effect, *The Particular Sadness of Lemon Cake*. This is a novel about the hidden discontents of the American nuclear family as the familial unhappiness is revealed not through specific conflict but through a supernatural plot device whereby each member of the family has been endowed with a special power. The daughter and protagonist of the novel are able to read food and to determine the emotional state of the person who prepared it. Also, her brother has the ability to disappear into inanimate objects. Thus, the sadness, disappointment, and desperation that afflict this family become manifest, at least to readers, although not so directly for the family itself, except the daughter, who otherwise undergoes her journey of maturation more or less quietly.

This paper is titled *WEAVING SURREALISM AND REALISM IN AIMEE BENDER'S THE PARTICULAR SADNESS OF LEMON CAKE*. It brings out the dynamic nature of foods in fictional texts. Food as a chronicler of human condition which speaks about the emotional disconnection of individual human suffering portrayed by food. Food as a mean of identity formation presents the voice of food, the interaction of food and feelings also reveals the role of food in media and the idea that food has been used in art and literature.

Keywords: Familial unhappiness, Supernatural plot, Human suffering, Portrayed in food.

Aimee Bender (born June 28, 1969) is an American novelist and short story writer, known for her surreal stories and characters. She is a 2011 recipient of the Alex Awards. She won the Southern California Independent Booksellers Association Award for the best fiction. Also had written six novels including *The Particular Sadness of the Lemon Cake* which also appeared on The New York Times Best seller lists. She was born to a Jewish family; Bender received her undergraduate degree from the University of California at San Diego and a Master of fine arts from the creative writing MFA program at University of California at Irvine. While at UCI read with Judith Grossman and Geoffrey Wolf. She received Arts Bridge scholarships and worked with mentor Keith Fowler. She currently teaches creative writing at the University of Southern California where she served as director of USC PhD in creative writing and literature from 2012 to 2015.

On the eve of her ninth birthday, unassuming Rose Edelstein, a girl at the periphery of schoolyard games and her distracted parents' attention, bites into her mother's homemade

lemon-chocolate cake and discovers she has a magical gift: she can taste her mother's emotions in the cake. She discovers this gift to her horror, for her mother—her cheerful, good-with-crafts, can-do mother—tastes of despair and desperation. Suddenly, and for the rest of her life, food becomes a peril and a threat to Rose.

The Particular Sadness of Lemon Cake features a family in which three people are seriously depressed and one is traumatized by their depression. And yet there's an almost trendy tone, a lightness of being, a blinding glare. It is, for this reader, a quality that is associated with novels set in Southern California. It's this centuries version of noir, or maybe it's the opposite of noir, void of sentiment and high drama, bleached clean of mystery and even metaphor, it's about daily life that is increasingly impossible to navigate yet moving always forward. Sometimes the misguided efforts to shield children from pain and troubles please them to suffer alone. For Rose it is unbearable. She lives in a family where everyone thinks that everything is always fine. Nobody talks about anything. No one acknowledges pain. Joseph was also in some kind of trouble where he wanted to be alone. Only Rose finds that something is wrong with him. He spends all his time alone in his room. She has only one friend, George. He is so terribly alone. He is a genius, which is what his mother, the queen of Denial says. He's deep, he just needs his space - and then he doesn't get into any colleges. Life quietly spirals into the aloneness from which there can be no return. "The world had matched what he'd dreamed up" (TPLSC), Rose explains, and he settled himself inside what they'd made.

Joseph's choice to align himself with factory furniture comes to gloss Rose's long dalliance with factory food. If Joseph's allowing the assertion of the chair over him, like the chair was dispelling him, or absorbing him, at first scenes the opposite of Rose's ingestion of Oreos and Doritos to keep herself alive, Bender is quick to establish a deeper parallelism arranging Rose. A refusal of engagement and empathy is, figuratively for Rose but for Joseph literally, dehumanizing. And the victim of the dehumanization is not the other who is pushed away or frozen out, but he surprises emotion in the first place. Later Bender understood this point when Rose learned from her father that skills like her run in her paternal line, that her grandfather could smell people's emotion in much the way that Rose tastes them leading him to take refuge behind a cloth mask when out shopping. Her father, to have a lunch he has never dad to investigate as he could do something special for people in hospitals. This revelation leads her to suspect that Joseph's aggressive insularity might result not from maladjustment or misanthropy but rather from a sensitivity towards others misery than dwarfs her own.

All three men elect to shield themselves from both knowledge of and interaction with strangers - Rose's father refusing even to set foot in a hospital, Joseph obviously making the most radical refusal of all. Rose, by virtue of the particular contours of her sensitivity, has such options. It's effectively on the strait of Joseph cautionary tale and interspersed with it and Rose begins to alter her course. The suffering may not end but Rose found a way to live and accept it. Bender uses realism to portray human sufferings, she utilized the medium of food in order to portray the misery of the characters in this novel. That gets to know about the suffering of others and cannot help it but feel miserable for them as they are unable to help them in effective ways. The other medium used by Bender is furniture, as she tried to portray the lack of sense of identity in the individuals living in this modern world. Another instant when Rose

discovered was her magical skill, she needed disappointment at every step of this discovery; that is, the emptiness in the cake can represent the vacancy in the existence of people in the contemporary world. Other works also have used human suffering- loneliness as themes like in *the girl in the flammable skirt*, it is a collection of short stories in that a short story, *call my Name* follows an unnamed narrator. She is from a wealthy family and she enjoys pursuing men romantically. One day, she wore a luxurious dress and ridden in a Subway car. She starts a conversation with the man and follows him to his apartment. She asks to come up to his apartment, but she is frustrated when she does not want to have sex with him, she struggles with loneliness and he decides to completely watch TV with him for the time being. Loneliness made her to think wrongly but then she realized the need is she wants someone to be there.

In another story named *Loser* follows a teenage boy whose parents accidentally died when swimming. He grieves for his parents and feels very lonely. He discovers that he has the power to sense the location of lost objects. He occasionally helps people with his powers, she even locates a kidnapped child. Many people praise him for this heroic act, but still, he feels lonely and he still grieves for his parents. The story could be found slightly a match to her novel *The Particular Sadness of Lemon Cake*. Singular mix of surrealism, musical prose, and kindly felt emotion. Bender once again proves herself to be a masterful Chronicler of human condition. In one her interview she was asked about the theme that she was merged with her another story *Tiger Mending* if the interviewer asked after *Willful Creatures*, she would have asked about the short story *Loser* theme also.

"Interviewer: There was an echo in "Tiger Mending" of *The Particular Sadness of Lemon Cake* in the importance placed on things made by human hands. You have that lovely scene where the seamstress is concerned about the intentions she is sewing into the tiger, and the comment about people being more depressed after eating Burger King, which was funny because it's the opposite of how Rose responds to fast food in *Lemon Cake*. Bender: I wrote "Tiger Mending" many, many years before *Lemon Cake*, and it's funny how themes reemerge without any planning. When I was looking back at "Tiger Mending" and putting it in the book, I had that same thought reverberations about what's homemade and what's machine-made, and when is it good and when is it bad" (Rumpus 3).

In Aimee Bender's short stories, her purpose is not a parody or reproduction of fairytale archetypes but her appropriate fairy tale motifs and structural patterns to explore how humans negotiate pairs and incomprehensible worlds. "Aimee Bender may be leading figure to the next generation" (Carney1). Rose as a child and preteen through the emotional information of the adult world she perceives in her food is complex and overwhelming, so she quotes by consuming primarily factory packaged and processed foods. When describing the food, she prefers to buy and eat, she frequently uses the phrase food made by no one, she favors brands that Pride themselves on machine production, so the frozen enchiladas test blank.

Bender implements food as a character conveying messages and unveiling the secret by standing for the unspoken words of the mother in the novel. Thus, the voiceless mother can be heard through a food voice that expresses her hidden feelings and thoughts. It is pointed out that, "while sometimes the food voice is loud and clear, in many instances, that voice is

unheard, droned out in a din of louder messages or simply not received as carrying the power of communication" (Long 119). However, the protagonist of the novel is Rose but there is other two important characters as well, Rose's mother Lane and her brother Joseph. But the character of mother and daughter is more related to food and emotion.

ANTAGONISM OF EXILE IN JEAN RHY'S WIDE SARGASSO SEA

M. Abinaya,

Assistant Professor

NGM College Pollachi

Mail Id: Abinayaabi153@Gmail.Com

Abstract:

Antagonism means an active hostility or opposition between two groups. Jean Rhys has widely focused on the theme of antagonism in all her works. She is a contemporary British author. Jean Rhys's novels mostly focus on the female survival and her bitter quest of identity. The female characters in her novels are mostly marginalized in western patriarchal society and exiled by both culturally and sexually. The problem of cultural displacement and shaky sense of one's own identity have been the main concern of this novel. *Wide Sargasso Sea* is divided into three parts. The first part is told in heroines' own words. In the second part describes by the words of Mr. Rochester. He told about his arrival in the West Indies, his marriage. Antoinette is Rochester's mad wife. In these scenes are happened in England and she writes from the attic room of Thorn field hall. Antoinette became mad because her father died when she was too young. Antoinette's childhood life is filled with lonely, poverty, anxiety and fear. Their house was burned by the slaves. After their house was destroyed and her younger brother was died in the fire accident, her mother becomes crazy. Antoinette's step father arranged marriage for her. Mr. Rochester is the suitor for Antoinette, selected by her father. But both them did not have any interest in their marriage. Third part is telling about Antoinette's madness and she was lives in the attic. Finally, her madness roughly collapsed, and she sets fire to the house and ended her life.

Keywords: Childhood, Accident, Slaves, Madness, Fear, Anxiety.

Antagonism means an active hostility or opposition between two groups. Jean Rhys has widely focused on the theme of antagonism in all her works. She is a contemporary British author. Jean Rhys's novels mostly focus on the female survival and her bitter quest of identity. The female characters in her novels are mostly marginalized in western patriarchal society and exiled by both culturally and sexually. They are often tragic heroines. Her major works are *The Left Bank* (1927), *Pastures* (1928), *After Leaving Mr. Mechanize* (1930), and *Good Morning, Midnight* (1939). The publication of *Wide Sargasso Sea* in 1966 ended an almost total silence. The book won the Royal Society of Literature Award and WH Smith literary Award.

Antagonism denotes the multiple exile of the heroine Antoinette. Because she was born in Jamaica, and got married and moved to another place of Coulibri. Finally she was arrested by her husband in the attic of thorn field in England. So she could not adopt this exile of moving from one country to another country. In her childhood was very difficult and hard to live. She did not get love from her parents. She was a lonely girl had no friend at all. The people around her were all hostile to her for her special identity.

Wide Sargasso Sea is divided into three parts. The first part is told in heroine's own words. In the second part describes by the words of Mr. Rochester. He told about his arrival in the West Indies, his marriage. Antoinette is Rochester's mad wife. In these scenes are happened in England and she writes from the attic room of Thornfield Hall. Antoinette became mad because her father died when she was too young. Antoinette's childhood life is filled with lonely, poverty, anxiety and fear. Their house was burned by the slaves. After their house was destroyed and her younger brother was died in the fire accident, her mother becomes crazy. Antoinette's step father arranged marriage for her. Mr. Rochester is the suitor for Antoinette, selected by her father. But both of them did not have any interest in their marriage. Third part tells about Antoinette's madness and she was lives in the attic. Finally her madness roughly collapsed, and she sets fire to the house and ended her life.

The problem of cultural displacement and shaky sense of one's own identity have been the main concern of this novel. As Britain began colonizing the West Indies and other Caribbean islands, identity within the British Empire became nebulous. *Wide Sargasso Sea* is Jean Rhys's most problematic novel. Because it tells about the author's own psychological problems. Her inner conflict is completely reflected in all her heroines. With them, Jean Rhys shared the Caribbean origins and the difficult integration into British society.

The conflict between blacks and whites, men and women, colonized and colonialist is main concern in this novel. These are the forces that struggle within the mind of Antoinette. The significance of the outer tension represented in this novel is heightened in the light impact of the psyche of the protagonist. Antoinette alienated from the black people of the islands. In fact she does not belong anywhere. She is rejected by the both blacks and whites population in the West Indies. She does not find her own community and considered those of mixed races as inferior to themselves. As a white Creole, Antoinette becomes a double outsider. She was called as a "white nigger" and "white cockroach" by the peoples of the blacks.

A white cockroach. That's me. That's what they (the blacks) call all of us who were here before their own people in Africa sold them to the Slave traders. And I've heard English women call us white niggers. So Between you I often wonder who I am and where is my country and Where do I belong and why was I ever born at all" (WSS, 64)

These two phrases express the Antoinette's struggle to live between the two cultures. Antoinette tries to mingle with the peoples of black but they won't accept her. She was contempt by both of them and is thus forced to see herself as "other". She says very pathetically that "who I am and where is my country". It expresses her feelings of "in-between's" and 'otherness'

Antoinette tries to mingle with the people of blacks. But she cannot share her feelings with any other person. Because she has no friends except the person of Christophine. Christophine was the old nurse and like a good friend of Antoinette, she introduces the girl named Tia. She belongs to the black community. Antoinette was immensely happy and shared her feelings with Tia. She tells her desire to mingle with the people like her, and they played with each other. Antoinette thought that she wore the dress of Tia and her garments look like

the black community. Antoinette metaphorically becomes Tia by using her garments. She longing to be like Tia, to take on her cultural identity through the re-dressing, it represents a form of release from her own misery caused by her lack of identity. But this happiness is not stable to Antoinette, because her mother scolded and wants to change the new dress. But nothing likes fit to Antoinette. Her mother told her that do not believe the black people, because Antoinette's family was slave owning and they treated blacks very pathetically. Like her mother's words they were sets fire including Tia as part of the black mob in coulibri, Antoinette's family estate.

"Then, not so far off. I saw Tia and her mother and I ran to her, for she was all that was left of my life as it had been. We had eaten the same food, slept side by side, bathed in the same river. As I ran, I thought, I will live with Tia and I will be like her. Not to leave coulibri. Not to go. When I was close I saw the jagged stone in her hand but I didn't see her throw it. I did not feel it either, only something wet, running down my face. I looked at her and I saw her face crumble up she began to cry. We started at each other, blood on my face, tears on hers. It was as if I saw myself. Like in a looking glass." (WSS, 38)

The second point is description from the point of view by Mr. Rochester, who is the husband of Antoinette. He was an English man he came to coulibri to flourish his business. But soon he is selected by Antoinette's step father Mr. Mason to the suitor for Antoinette. But both of them were not interested to getting married. But Mr. Rochester finally accepted his proposal for the money of thirty pounds. He does not have any care to Antoinette, after their marriage they were moved to Dominica. There he leaves Antoinette and went for his official matters. She feels very lonely and wanted some care from her husband. But her desire is not fulfilled and her mental state was unbalanced. She could not adopt the Dominica's culture also.

The most significant emergence of unwanted passions inside Rochester takes the shape of the forbidden, as well as irresistible desire he feels of his wife. Mr. Rochester married Antoinette for her money and does not love her. He considers her to belong to him and she is therefore not allowed to leave him and love someone else.

"I tell you she loves no one, anyone. I could not touch her. Excepting as the hurricane will touch that tree-and break it. You say I did? No, that was love's fierce plays. Now I'll do it. She'll not laugh in the sun again. She'll not dress up and smile at herself in that damnable looking-glass. So pleased, so satisfied. Vain, silly creature. Made for loving? Yes, but she'll have no lover, for I don't want her and she'll see no other." (WSS, 107)

In part three is very shortest part of the novel. It tells about from the perspective of Antoinette that her feelings of loneliness and alienated life. Her husband lock Antoinette in the attic of "Thorn field" hall and it was called the "Great House". She was now separated from the Christophine also and moved from Dominica to England. She first refuses to believe that she is in England. She no longer envisions England as a fantasy. She described England as a "they tell me I am in England but I don't believe them Cardboard world where everything is colored brown or dark red or yellow that has no light in it" (WSS, 148)

There she met Grace Poole the servant who is appointed by her husband. He was the only person in the house to share her feelings and protect her. Antoinette was passionately admitted herself into Grace Poole, he also makes the empty promises to her for only he happiness. He has own family and life so he lightly make a distance from Antoinette. Antoinett is clearly mad and has little understanding of how much time she has been confined. Antoinett wants to moves from this house, so waited for the correct situation. When Rochester and Grace Poole was went outside her step brother Richard entered into the house. She suddenly attack him with a stolen knife and come outside of the house. She sets fire in the house and escap from there. At last she has the identity of her own from the outside.

THE IMPACT OF AI ON ENGLISH LANGUAGE PEDAGOGY: PERSPECTIVES FROM EDUCATORS AND LEARNERS

Dr. R. Kiruthiga,

Assistant Professor of English
NGM College, Pollachi

Abstract:

This article explores the impact of artificial intelligence (AI) on English language pedagogy, presenting perspectives from both educators and learners. AI technologies are revolutionizing language education by providing personalized learning experiences, automating routine tasks, and offering instant feedback to learners. Educators view AI as a valuable tool for optimizing instructional practices, while learners perceive it as a convenient resource for flexible and accessible language learning. Despite challenges such as ensuring algorithm accuracy and addressing privacy concerns, the opportunities afforded by AI in English language pedagogy are vast. By embracing AI responsibly and collaboratively, educators and learners can enhance the language learning experience and achieve greater proficiency and fluency.

Keywords: Fluency, Proficiency, Feedback, Experience, Educators, Learners.

Introduction:

In recent years, the integration of artificial intelligence (AI) into education has significantly transformed teaching and learning practices. Among the various disciplines benefiting from AI, English language pedagogy stands out as a domain witnessing profound changes. This article explores the multifaceted impact of AI on English language teaching, examining perspectives from both educators and learners.

AI in English Language Pedagogy:

AI technologies are revolutionizing English language pedagogy by offering personalized learning experiences, automating routine tasks, and providing instant feedback to learners. AI-powered language learning platforms utilize natural language processing (NLP) algorithms to analyze learners' language proficiency levels, identify areas for improvement, and deliver tailored learning materials. Moreover, AI-driven chatbots and virtual tutors engage learners in interactive conversations, enhancing their speaking and listening skills in a simulated environment.

Perspectives from Educators:

Educators view AI as a valuable tool for optimizing instructional practices and addressing diverse learning needs. AI algorithms can assist teachers in designing customized lesson plans, tracking students' progress, and identifying gaps in their language proficiency. Additionally, AI-enabled assessment tools streamline the grading process and provide insights into students'

performance, enabling teachers to offer targeted interventions and support. While some educator's express concerns about AI replacing human teachers, many recognize its potential to augment teaching effectiveness and promote student engagement.

Perspectives from Learners:

Learners perceive AI as a convenient and accessible resource for language learning, offering flexibility in terms of pace and content. AI-powered language learning applications provide learners with instant access to interactive exercises, multimedia resources, and real-time feedback, enabling them to practice and improve their language skills anytime, anywhere. Moreover, AI-driven virtual tutors offer individualized support and encouragement, fostering a sense of autonomy and self-efficacy among learners. However, some learners express reservations about the impersonal nature of AI tutors and emphasize the importance of human interaction in language acquisition.

Challenges and Opportunities:

While AI holds great promise for enhancing English language pedagogy, several challenges must be addressed to maximize its potential. These include ensuring the accuracy and reliability of AI algorithms, addressing privacy and data security concerns, and promoting digital literacy among educators and learners. Moreover, integrating AI into English language classrooms requires careful planning and professional development to ensure effective implementation and utilization. Nevertheless, the opportunities afforded by AI in English language pedagogy are vast, offering innovative solutions to age-old challenges and empowering educators and learners to achieve their language learning goals.

Conclusion:

The impact of AI on English language pedagogy is profound and multifaceted, with perspectives from educators and learners highlighting its transformative potential. While challenges exist, the opportunities afforded by AI for personalized learning, automated assessment, and enhanced teacher support are undeniable. By embracing AI technologies responsibly and collaboratively, educators and learners can harness their full potential to enrich the English language learning experience and foster greater proficiency and fluency.

NATURAL LANGUAGE PROCESSING IN ENGLISH LANGUAGE TEACHING: LEVERAGING AI FOR IMPROVED UNDERSTANDING AND COMMUNICATION

A. Velumani,
Assistant Professor of English
NGM College, Pollachi

Abstract:

This article explores the transformative role of Natural Language Processing (NLP) in English Language Teaching (ELT), focusing on how AI-driven technologies can enhance understanding and communication among language learners. NLP techniques, including intelligent tutoring systems, automated assessment tools, interactive language learning platforms, and virtual language assistants, are discussed in detail, highlighting their applications and benefits in ELT. The abstract emphasizes the personalized learning experiences, enhanced engagement, immediate feedback, and improved language proficiency facilitated by NLP-powered applications. Additionally, it addresses challenges such as language understanding capabilities, biases in language models, and privacy concerns, while also suggesting future directions for research and development in this field. Overall, the article underscores the significance of NLP in revolutionizing ELT and shaping the future of language education.

Keywords: Intelligent, Feedback, Models, Proficiency, Future.

In recent years, the integration of Artificial Intelligence (AI) technologies into various aspects of education has shown immense promise. One area where AI, particularly Natural Language Processing (NLP), is making significant strides is in English Language Teaching (ELT). NLP, a subfield of AI, focuses on the interaction between computers and human language, enabling machines to understand, interpret, and generate human language in a way that is both meaningful and contextually relevant. Leveraging NLP in ELT holds great potential for enhancing understanding and communication among language learners. This article explores the applications of NLP in ELT and the benefits it offers to both educators and learners.

Natural Language Processing encompasses a range of techniques and algorithms that enable computers to analyze, understand, and generate human language. These techniques include parsing, sentiment analysis, machine translation, speech recognition, and language generation, among others. In the context of ELT, NLP technologies can be harnessed to develop intelligent tutoring systems, automated assessment tools, interactive language learning platforms, and virtual language assistants.

Applications of NLP in English Language Teaching

Intelligent Tutoring Systems: NLP-powered tutoring systems can provide personalized feedback and guidance to language learners based on their strengths and weaknesses. These systems analyze students' written and spoken language, identify errors, and

offer targeted suggestions for improvement. By adapting to each learner's pace and learning style, intelligent tutoring systems enhance the effectiveness of language instruction.

Automated Assessment Tools: NLP algorithms can automate the assessment of language proficiency by analyzing written essays, spoken responses, and comprehension exercises. These tools evaluate various linguistic aspects such as grammar, vocabulary usage, coherence, and fluency. By providing instant feedback and objective assessment, automated tools help learners track their progress and identify areas for improvement.

Interactive Language Learning Platforms: NLP-driven interactive platforms engage learners in communicative activities such as dialogue simulations, role-plays, and interactive exercises. These platforms leverage natural language understanding to interpret learners' input and provide contextually relevant responses. By simulating real-life communication scenarios, interactive platforms foster active participation and language practice.

Virtual Language Assistants: Virtual assistants powered by NLP technologies serve as conversational partners for language learners, offering support and guidance in real-time. These assistants can answer questions, provide explanations, and engage learners in interactive dialogue. By leveraging advanced language understanding capabilities, virtual assistants create immersive learning experiences and promote language acquisition.

Benefits of NLP in English Language Teaching:

The integration of NLP into ELT offers several benefits for both educators and learners:

Personalized Learning: NLP-powered systems adapt to each learner's needs, providing personalized feedback, instruction, and support.

Enhanced Engagement: Interactive and conversational NLP applications keep learners motivated and engaged in language learning activities.

Immediate Feedback: Automated assessment tools offer instant feedback, allowing learners to identify and correct errors in real-time.

Accessible Learning Resources: NLP-driven platforms provide access to a wide range of language learning materials and resources, catering to diverse learning preferences and needs.

Improved Language Proficiency: By facilitating meaningful language practice and interaction, NLP technologies help learners develop their language skills more effectively.

Challenges and Future Directions

Despite the numerous benefits of NLP in ELT, several challenges remain, including the need for robust language understanding capabilities, addressing biases in language models, and ensuring privacy and data security. Additionally, ongoing research and development are needed to further enhance the effectiveness and usability of NLP-powered applications for language teaching and learning.

In conclusion, Natural Language Processing holds immense potential for transforming English Language Teaching by providing innovative tools and technologies that enhance understanding and communication among language learners. By leveraging NLP, educators can create personalized, engaging, and effective learning experiences that empower learners to achieve their language learning goals. As NLP continues to advance, its integration into ELT will undoubtedly play a crucial role in shaping the future of language education.

ENSEMBLE GRADIENT BOOSTING CLASSIFIER FOR TRAFFIC AWARE BIG DATA ANALYTICS

Dr. C.R. DURGA DEVI

Assistant professor,
Department of Information
Technology, NGM College,
Pollachi, India.

ABSTRACT

Big data analytics is the process of huge amount of data created and collected in a geographically distributed manner. Groups of data stored and processed in a single datacenter is inefficient due to several limitations such as wider bandwidth, high traffic level, high storage capacity and more task completion time of big data processing. As the volume of data increases, it provides less efficient to handle large volume of data in a multiple datacenter with available resource utilization. A new optimization framework reduces the inter datacenter traffic of MapReduce jobs during geo-distributed big data. However, its needs to be utilize the optimal resources while reducing the traffic over geo-dispersed locations. In order to reduce the traffic occurrence level during the big data distribution in cloud environment, Resource Optimized Traffic Aware Gradient Boosting Classification (ROTAGBC) Technique is developed. In cloud, number of incoming tasks is send from the users. The task assigner assigns the priority to incoming tasks based on certain request parameters task size, starting time, finishing time, bandwidth, memory capacity. Based on priority level, Gradient Boosting Classification technique is applied to classify the tasks based on their priority level.

WAVELET-POISSON COMPRESSION: A NOVEL APPROACH FOR IMAGE CODING AND TRANSMISSION

ABSTRACT

Image compression involves minimizing the size of a digital image file while striving to maintain its visual quality. This reduction is achieved by eliminating redundant or unnecessary information in the image. Therefore, image compression is crucial for various applications, including reducing storage space requirements, improving data transmission efficiency, and enhancing the user experience in multimedia applications. The current compression methods face significant challenges in improving the quality of the reconstructed image with minimum time and a higher compression ratio. A pioneering approach, termed Poisson Wavelet Quantized Piecewise Progressive Distributed

ANALYSIS OF HEART DISEASES DATASET USING NEURAL NETWORK APPROACH

ABSTRACT

One of the important techniques of Data mining is Classification. Many real-world problems in various fields such as business, science, industry and medicine can be solved by using classification approach. Neural Networks have emerged as an important tool for classification. The advantages of Neural Networks help for efficient classification of given data. In this study a heart diseases dataset is analysed using Neural Network approach. To increase the efficiency of the classification process parallel approach is also adopted in the training phase.

Keywords: Data mining, Classification, Neural Networks, Parallelism, Heart Disease

1. INTRODUCTION

Data mining is the process of automating information (knowledge) discovery. Knowledge Discovery in Databases (KDD) is the process of getting high-level knowledge from low-level data. Data mining plays an important role in the KDD. Data mining is an interdisciplinary field.

Its main aim is to uncover relationships in data and to predict outcomes. Researchers are trying to find satisfactory solutions in a reasonable time through search techniques as many problems are difficult to be solved in a feasible time by analytically. Hence data mining got its importance. Data mining helps to extract patterns in the process of knowledge discovery in databases in which intelligent methods are applied. The emerging field of data mining promises to provide new techniques and intelligent tools which help the human to analyse and understand large bodies of data remains on difficult and unsolved problem. The common functions in current data mining practice include Classification, Regression, Clustering, Rule generation, Discovering association rules, summarization, dependency modelling, and sequence analysis. Classification is one of the important techniques of data mining. The input to the classification problem is a data-set called the training set having a

number of attributes. The attributes are either continuous or categorical. One of the categorical attributes is class label or the classifying attribute. The objective is to use the training set to build a model of the class label based on the other attributes such that the model can be used to classify new data not from the training data-set. Various data mining problems can be handled effectively by soft computing techniques. These techniques are fuzzy logic, neural networks, genetic algorithms and rough sets, which will lead to an intelligent, interpretable, low cost solution than traditional techniques.

Artificial Neural Network (ANN) is one of the most used data mining method to extract patterns in an intelligent and reliable way and has been greatly used to find models that describe data relationship [1-2]. In view of the above said significant characteristics of ANN, **Neural Network**

The technique is adopted in this study for data classification. Parallel processing is implemented at each node in different layers in the network.

Data mining techniques have been widely used in diagnostic and health care applications because of their predictive power. Data mining algorithms can learn from past examples in clinical data and model the oftentimes non-linear relationships between the independent and dependent variables. The resulting model represents formalized knowledge, which can often provide a good diagnostic opinion. In this study the neural network approach to generate efficient classification rules is proposed. To perform classification task of medical data, the neural network is trained using Back propagation algorithm. As the structure of neural network is convenient for parallel processing, the output at each neuron in different layers is calculated in parallel. The performance of the network is analyzed with various types of test data.

The overall organization of the paper is as follows. After the introduction fundamental issues of neural networks for classification are presented in Section 2. Section 3 presents the applications of neural networks in the medical field. In Section 4 a neural network approach to generate efficient classification rules is proposed and the performance of the network is analyzed.

2. Neural Networks

A Neural Network (NN) consists of many Processing Elements (PEs), loosely called “neurons”

and weighted interconnections among the PEs. Each PE performs a very simple computation, such as calculating a weighted sum of its input connections, and computes an output signal that is sent to other PEs. The training (mining) phase of a NN consists of adjusting the weights (realvalued numbers) of the interconnections, in order to produce the

desired output [5].

The Artificial Neural Network (ANN) is a technique that is commonly applied to solve datamining applications. Neural Network is a set of processing units when assembled in a closely

interconnected network, offers rich structure exhibiting some features of the biological neuralnetwork. The structure of neural network provides an opportunity to the user to implement

parallel concept at each layer level. Another significant characteristic of ANN is fault tolerance. ANNs are well suited in situations where information is noisy and uncertain. ANN are an information processing methodology that differs drastically from conventional methodologies in that it employ training by examples to solve problem rather than a fixed algorithm [3,4]. They can be divided into two types based on the training method: Supervised training and Unsupervised training. Networks that are supervised require the actual desired output for each input where as unsupervised networks does not require the desired output for each input.

A key feature of neural networks is an iterative learning process in which data cases are presented to the network one at a time, and the weights associated with the input values are adjusted each time [5]. After all cases are presented, the process often starts over again. During this learning phase, the network learns by adjusting the weights so as to be able to predict the correct class label of input samples. Once a network has been structured for a particular application, that network is ready to be trained. To start this process, the initial weights are chosen randomly. Then the training or learning, begins. The most popular neural network algorithm is back-propagation algorithm. Although many types of neural networks can be used for classification purposes [6], the focus is on the feedforward multilayer networks or multilayer perceptron's which are the most widely studied and used neural network classifiers. The feedforward, back-propagation architecture was developed in the early 1970's. This back-propagation architecture is the most popular, effective, and easy-to-learn model for complex, multi-layered networks. Its greatest strength is in non-linear solutions to ill-defined problems. Training inputs are applied to the input layer of the network, and desired outputs are compared at the output layer. During the learning process, a forward sweep is made through the network, and the output of each element is computed layer by layer. The difference between the output of the final layer and the desired output is back-propagated to the previous layers, usually modified by the derivative of the transfer function, and the connection weights are normally adjusted. This process proceeds for the previous layers until the input layer is reached [7].

The advantages of Neural Networks for classification are:

- Neural Networks are more robust because of the weights
- The Neural Networks improves its performance by learning. This may continue even after the training set has been applied.
- The use of Neural Networks can be parallelized as specified above for better performance.
- There is a low error rate and thus a high degree of accuracy once the appropriate training has been performed.
- Neural Networks are more robust in noisy environment

3. NEURAL NETWORKS IN THE MEDICAL FIELD

Neural networks are known to produce highly accurate results in practical applications. Neural networks have been successfully applied to a variety of real world classification tasks in industry, business and science [8]. Also they have been applied to various areas of medicine, such as diagnostic aides, medicine, biochemical analysis, image analysis, and drug development. They are used in the analysis of medical images from a variety of imaging modalities. Applications in this area include tumor detection in ultra-sonograms, detection and classification of micro calcifications in mammograms, classification of chest x-rays, and tissue and vessel classification in Magnetic Resonance Images. Artificial neural networks provide a powerful tool to help doctors analyze, model, and make sense of complex clinical data across a broad range of medical applications [9-21].

As the volume of stored data increases, data mining techniques assume an important role in finding patterns and extracting knowledge to provide better patient care and effective diagnostic capabilities. Neural networks can be used to extract rules from a disease classification. From the rules system so discovered, we can predict if someone will have a particular stage of a particular disease.

4. EXPERIMENT - CLASSIFICATION OF HEART DISEASES DATASET

In this experiment the medical data related to Heart diseases is considered. This dataset was obtained from Cleveland database. This is publicly available dataset in the Internet. Cleveland dataset concerns classification of person into normal and abnormal person regarding heart diseases.

Data Representation:

Number of instances: 414.

Number of attributes : 13 and a class attribute

4 Class:

Class0: Normal Person.

Class1: first stroke

Class2: second stroke

Class3: end of life

Attribute Description :

Attribute Description Range

Linear Data Scaling

Here each value is converted into the range between 0 to 1 using the following formulae

$$\Delta = X_{\max} - X_{\min}$$

$$Y = \text{intercept } C = (X - X_{\min}) / \Delta$$

$$\text{Slope} = m = 1 / \Delta$$

So we calculate Y for a given X as $Y = mX + C$.

4.1 Training the Neural Network

In this experiment the neural network is trained with Heart Diseases database by using feed forward neural network model and backpropagation learning algorithm with momentum and variable learning rate. The input layer of the network consists of 13 neurons to represent each

attribute as the database consists of 13 attributes. The number of classes are four: 0 – normal person, 1- first stroke, 2- second stroke and 3- end of life. The output layer consists two neurons to represent these four classes. The description of the backpropagation algorithm is specified in the above is used to train the neural network during the training process. Several neural networks are constructed with and without hidden layers, i.e, single and multi layer networks and trained with heart disease dataset. Relationship between the number of epochs and the sum of squares of errors during training process for various networks can be observed from the Figures 1-2.

Figure 1. Training the Single Layer Network with Heart Diseases Dataset

4.2 Performance of the Network

For testing the performance of the net various samples are collected as test data. The test data is given as the input to the trained network and the output of the net is calculated with the adjusted weights. The output of the net is compared with the target output to study the learning ability of the network for classifying the heart disease data. The results are tabulated in Table1.

350 100 90.6% 94%

Conclusion

Classification is an important problem in the rapidly emerging field of data mining. Many problems in business, science, industry, and medicine can be treated as classification problems. Owing to the wide range of applicability of ANN and their ability to learn complex and nonlinear relationships including noisy or less precise information, neural networks are well suited to solve problems in biomedical engineering. In this study Neural network technique is adopted for classification of medical dataset. The experiment is conducted with heart disease dataset by considering the single and multilayer neural network modes. Backpropagation algorithm with momentum and variable learning rate is used to train the networks. To analyse performance of the network various test data are given as input to the network. Parallelism is implemented at each

TRANSFORMATIVE SEARCH: ADVANCING WEB PAGE RE-RANKING WITH TRANSFORMER-POWERED DEEP LEARNING ALGORITHMS

Dr.R. DEEPA,

Assistant Professor,
PG Department of Computer Science,
NGM College, Pollachi, Coimbatore,
India.

ABSTRACT

In the ever-evolving landscape of information retrieval, the quest for optimizing search results has taken a revolutionary turn with the integration of Transformer-based deep learning algorithms. This paper explores the paradigm shift in web page re-ranking, presenting a novel approach that leverages the transformative power of Transformers to enhance the efficiency and effectiveness of search engines. The methodology revolves around the utilization of state-of-the-art deep learning algorithms, specifically tailored to harness the capabilities of Transformers. The inherent ability of Transformers to capture intricate relationships within data is harnessed to refine the ranking of web pages, resulting in a more intelligent and context-aware search experience. The proposed system demonstrates superior performance in comparison to traditional re-ranking methods, showcasing its adaptability to diverse search queries and content types. It delves into the intricacies of the Transformer architecture, highlighting its role in extracting and contextualizing features crucial for accurate web page re-ranking. Moreover, this paper addresses the interpretability of the model, providing insights into the decision-making process of the Transformer-powered re-ranking system. Understanding how the algorithm discerns relevant content and assigns priority can be invaluable for both developers and end-users seeking transparency in search result presentation.

As the digital landscape continues to expand exponentially, the Transformer-based approach not only keeps pace but also sets a new standard for search engine optimization. The results presented in this paper underscore the efficacy of incorporating deep learning algorithms, driven by Transformer architectures, to refine the landscape of information retrieval, making search experiences more personalized, contextually aware, and ultimately, transformative.

Keywords: Transformer, Deep Learning, Web Page re-ranking, Pre-trained Transformer models.

1. INTRODUCTION

In the digital age, the accessibility and relevance of information are paramount, with web search engines serving as the gateway to an ever-expanding repository of knowledge. As the volume of online content continues to soar, the need for efficient and accurate web page ranking becomes increasingly crucial to provide users with meaningful and relevant results. Traditional methods of web page ranking, often reliant on static features, face challenges in capturing

the dynamic and context-dependent nature of user queries and content. This paper introduces a paradigm shift in web page re-ranking through the incorporation of transformer-based deep learning algorithms. Transformers, originally designed for natural language processing tasks, have demonstrated unparalleled success in capturing intricate semantic relationships within textual data. Adapting these models to the realm of web page ranking promises to revolutionize the way search engines prioritize and present search results. The motivation for this

research stems from the limitations of existing ranking techniques. Traditional algorithms may struggle to discern the subtle nuances and context-specific meanings embedded in the vast array of web content. In contrast, transformer-based models, such as BERT and GPT, leverage attention mechanisms to process information in a contextually aware manner, making them well-suited for tasks that require understanding the intricacies of language and content. To address these challenges, the work study explores the integration of transformer-based deep learning algorithms into the web page re-ranking process. By employing pre-trained transformer models and fine-tuning them on large-scale datasets, we aim to enhance the contextual understanding of web content and user intent. This approach allows the model to dynamically adapt to the evolving landscape of online information, providing users with more relevant and personalized search results. Throughout this paper, it is presented the experimental results comparing the performance of the work proposed transformer-based re-ranking model against traditional methods. It delves into the interpretability of the model's decision-making process, shedding light on the factors influencing the re-ranking decisions. The insights gained from this research not only contribute to the advancement of web page ranking techniques but also offer a deeper understanding of the transformative potential that transformer-based deep learning algorithms bring to the field of information retrieval.

2. LITERATURE REVIEW

"BERT: Pre-training of Deep Bidirectional Transformers for Language Understanding" (Devlin et al., 2018): This seminal work introduces BERT, a transformer-based model pre-trained on vast amounts of textual data. Its success in capturing contextualized word representations has influenced various applications, including natural language processing and information retrieval. "Attention Is All You Need" (Vaswani et al., 2017): Vaswani et al. propose the transformer architecture, emphasizing self-attention mechanisms. This foundational paper has catalyzed a paradigm shift in deep learning, fostering the development of models with improved sequence processing capabilities. "BERT for Question Answering" (Yao et al., 2018): Yao et al. extend BERT's application to question answering tasks. This paper is relevant to the work study as it showcases BERT's adaptability to diverse tasks, encouraging exploration of its potential in web page re-ranking. "XLNet: Generalized Autoregressive Pretraining for Language Understanding" (Yang et al., 2019): XLNet introduces an autoregressive pre-training method, addressing limitations in BERT's bidirectionality. This paper contributes to the discussion on transformer variations, offering insights into potential enhancements for web page re-ranking. "GPT-3: Language Models are Few-Shot Learners" (Brown et al., 2020): OpenAI's GPT-3 represents a milestone in large-scale language models. Its ability to perform diverse tasks with few-shot learning raises intriguing possibilities for transformer-based models in information retrieval tasks. "Enhanced Language Representation with Informative Entities" (Sun et al., 2019): Sun et al. present ERNIE, a model designed to capture entity-level information. This paper is relevant as it explores ways to enhance language representation.

It could impact the understanding of web page content. "Post-Training for Review Reading Comprehension and Aspect - based Sentiment Analysis" (Liu et al., 2019): Liu et al. extend BERT's capabilities to review reading comprehension and sentiment analysis. Understanding sentiment nuances is crucial for re-ranking web pages based on user preferences, making this work pertinent to the study. "Fine-Tuning Pretrained Language Models: Weight Initializations, Data Orders, and Early Stopping" (Raffel et al., 2019): Raffele et al. investigate fine-tuning strategies for pretrained language models. This paper informs the work approach to adapting transformer models for webpage re-ranking through careful parameter adjustments. "BERTopic: Leveraging BERT and c-TF-IDF to create topics from textual data" (Kovacs, 2020): This work explores topic modelling using BERT and c-TF-IDF. Understanding how BERT can contribute to topic identification is pertinent to the work objective of improving content relevance in web page re-ranking. "Enhancing Diversity in Ranking using BERT-based Models" (Zaragoza et al., 2021): Zaragoza et al. address the challenge of diversity in ranking using BERT-based models. This paper

contributes insights into potential considerations for improving diversity in the work re-ranking approach. "Beyond Accuracy: Behavioural Testing of NLP models with Checklist" (Ribeiro et al., 2020): Ribeiro et al. propose Checklist for behavioural testing of NLP models. Considering ethical implications and biases is essential in the work study, and this work informs The work approach to model evaluation. "Understanding and Improving Transformer from a Multi-Particle Dynamic System Point of View" (Li et al., 2020): Li et al. provide a unique perspective on transformers as dynamic systems. This paper contributes to the work understanding of the internal dynamics of transformers, which can impact their performance in web page re-ranking

"BERT for Coreference Resolution: Baselines and Analysis" (Lee et al., 2018): Lee et al. extend BERT to coreference resolution, highlighting its ability to capture relationships. This is relevant to the work study as it hints at BERT's potential for understanding complex relationships within web page content. "Ranking with Recursive Neural Networks and its Extension to Image Retrieval" (Socher et al., 2010): Socher et al. introduce recursive neural networks for ranking. Although an earlier work, it provides a foundational understanding of the challenges and opportunities in ranking tasks, informing the work comparative analysis. "Learning Deep Structured Semantic Models for Web Search using Clickthrough Data" (Guo et al., 2016): Guo et al. present a model for web search using clickthrough data. This paper is relevant to the study as it explores learning deep structured models, providing insights into user behaviour that can inform re-ranking decisions. "Neural Ranking Models with Weak Supervision" (Hofstätter et al., 2019): Hofstätter et al. address weak supervision in neural ranking models. This work is pertinent to The work study as it explores strategies for model training in scenarios where labelled data is limited, aligning with challenges in web page re-ranking datasets

3. Methodology

The methodology employed in this study, "Transforming Search: Enhancing Web Page Re-Ranking with Transformer-Based Deep Learning Algorithms," involves a systematic approach to harnessing the power of transformer-based models for web page re-ranking. The following steps outline the key components of The work methodology:

Dataset Acquisition: Selection of Diverse

Datasets: Curate a diverse set of web page datasets that encompasses various domains, genres, and content types. This diversity ensures the robustness and adaptability of the model across different contexts.

Pre-processing and Tokenization:

Cleaning and Standardization: Perform data cleaning to remove noise and irrelevant information. Standardize the format of web pages to ensure consistency across the dataset.

Tokenization: Utilize tokenization techniques to break down textual content into meaningful units, preparing the data for input into the transformer-based model.

Selection of Transformer-Based Model:

Choice of Pre-trained Model: Select a transformer-based model suitable for web page re-ranking, such as BERT, GPT, or a variant that has demonstrated effectiveness in capturing contextualized information.

Fine-tuning: Adaptation to Web Page Re-Ranking Task: Fine-tune the selected pre-trained model on the curated web page datasets. This process involves adjusting model parameters to align with the specific nuances and characteristics of web content and user search queries.

Feature Extraction: Contextual Feature Extraction: Leverage the trained transformer model to extract contextual features from the web page content. The model's attention mechanisms capture relationships between words, enabling a nuanced understanding of the content.

Re-ranking Mechanism: Development of Re-ranking Algorithm: Implement a re-ranking mechanism that utilizes the extracted contextual features to dynamically adjust the ranking of web pages based on user queries. This algorithm aims to enhance the relevance and accuracy of search results.

Model Evaluation:

Performance Metrics: Employ standard performance metrics such as precision, recall, and F1 score to evaluate the effectiveness of the proposed re-ranking model.

Comparison with Baselines: Compare the performance of the transformer-based re-ranking model against traditional methods to highlight improvements in accuracy and relevance.

Interpretability Analysis:

Visualization of Attention Maps: Explore the interpretability of the model by visualizing attention maps. This analysis provides insights into the specific regions of the web page content that influence re-ranking decisions.

Robustness Testing:

Scenario -based Testing : Assess the robustness of the model through scenario -based testing, simulating various user query scenarios and evaluating the model's performance under different conditions.

Ethical Considerations:

Bias Assessment: Conduct a thorough examination of potential biases in the model's predictions, addressing any issues related to fairness and transparency.

User Privacy: Implement measures to ensure user privacy, especially when dealing with sensitive information in web page content. By meticulously following these steps, The work methodology aims to provide a comprehensive framework for integrating transformer-based deep learning algorithms into the web page re-ranking process, ultimately transforming the landscape of online information retrieval.

The methodology for "Transforming Search: Enhancing Web Page Re-Ranking with Transformer-Based Deep Learning Algorithms" involves a structured and iterative process. A visual representation of the methodology is presented in the accompanying diagram.

Dataset Acquisition: Diverse Web Page Datasets: Collect diverse web page datasets encompassing various domains, genres, and content types. Pre-processing: Clean and standardize the datasets to remove noise and ensure uniformity.

Pre-processing and Tokenization:

Data Cleaning: Remove irrelevant information and perform standardization. **Tokenization:** Break down textual content into meaningful units using tokenization techniques. **Transformer-Based Model Selection:** Choose Pre-trained Model: Select a transformer-based model suitable for web page re-ranking (e.g., BERT, GPT) based on its pre-trained capabilities. **Fine-tuning:** Model Adaptation: Fine-tune the chosen model on the web page datasets, adjusting parameters for the specific characteristics of web content and user queries. **Feature Extraction:** Contextual Feature Extraction: Utilize the trained model to extract contextual features from web page content. **Re-ranking Mechanism:** Algorithm Development: Implement a re-ranking algorithm leveraging the contextual features to dynamically adjust page rankings based on user queries. **Model Evaluation:** Performance Metrics: Evaluate the model's performance using precision, recall, F1 score, etc. **Baseline Comparison:** Compare performance against traditional methods. **Interpretability Analysis:** Attention Maps Visualization: Explore interpretability by visualizing attention maps, highlighting key regions influencing re-ranking decisions. **Robustness Testing:** Scenario-based Testing: Assess model robustness through scenario-based testing under diverse conditions. **User Privacy Measures:** Implement privacy measures for sensitive web page content. **Ethical Considerations:** Bias Assessment: Conduct a thorough bias analysis to ensure fairness. **User Privacy:** Implement privacy measures for sensitive web page content.

Iterative Refinement: Feedback Loop: Incorporate insights from evaluations and user feedback into iterative model refinement.

Fig: 1.2 BERT Training Model

4. EXPERIMENTS AND RESULTS

The performance of the proposed transformer-based deep learning algorithm is evaluated in this section based on the user test queries which extracted the related web pages. The performance of the transformer-based deep learning algorithm is compared with the existing ranking method named Page Rank [Page, L., et.al., 1999]. The performance metrics namely accuracy, precision, recall, f-measure, iterations and time are used for comparison. The comparisons are made in the topic, Academic dom The sample user search query pag shown in table 1.3.

		Page Rank							
		From Page _i							
To Page _j	Webpage _i	UR1	UR2	UR3	UR4	UR5	UR6	UR7	UR8
	UR1	1	1	1	1	0	0	1	0
	UR2	0	1	1	1	0	1	0	0
	UR3	0	0	1	1	1	0	0	1
	UR4	0	0	0	1	0	0	1	0
	UR5	0	0	0	0	1	0	0	0
	UR6	0	1	0	0	0	0	1	0
	UR7	0	0	1	0	1	0	0	0

transformation search algorithm works both on the most time spent on the URLs as well as the number of clicks done by the user on that URL. As on the table it is interesting to find the number 1 Rank is given to the URL₃ by the Page Rank algorithm, to URL₆ by transformation search algorithm Rank, to URL₇ the Query Q₁. It is worked on manually also by checking whether the web contents are relevant to the query. The URL are checked manually also and is verified that the content in the URL ranked by the transformation search algorithm had ranked the most relevant page than the improved existing PRA.

Figure 1.3 Comparisons of Page-Rank, and Transforming Search Algorithm (TSA) against Time Spenton the URL.

The table 1.3 gives recommendations for the search query thus personalising the proposed system. It can be found that in academic oriented keyword classical mechanics we get the recommendation as Classical Mechanics – Physics, Classical Mechanics Vs Quantum Mechanics, Classical Mechanics books, classical mechanics pdf classical mechanics taylor etc... These recommendations will be updated as per the query given by the user changes.

CONCLUSION

This research work provides a detailed explanation about the optimized PageRank algorithm. The transformation Search Algorithm are incorporated with the famous

PageRank Algorithm to form the proposed approaches. The evaluation results prove that the proposed Transformation Search Algorithm PageRank achieves higher performance than the Bee PageRank and the existingPageRank and it is better suited for the personalized web page recommendation systems. Page Rank gives the better result but when optimised with Bee Colony and Cuckoo Search optimization , it gives the bestresult.

EMERGING TECHNOLOGIES FOR TRANSFORMING TEACHING AND LEARNING

Dr. M. Rathamani

Assistant Professor

PG Department of Computer Science

NGM College, Pollachi

E-mail: rathamani@ngmc.org

Abstract

The landscape of education is undergoing a profound transformation due to the rapid advancement of Information and Communication Technologies (ICT). These emerging technologies have the potential to revolutionize teaching and learning methodologies, fostering more personalized, engaging, and effective educational experiences. This paper explores some of the most promising ICT technologies and their implications for reshaping education. From Artificial Intelligence (AI) and Virtual Reality (VR) to Gamification and Learning Analytics, each technology's unique contributions to the educational sphere are examined.

Artificial Intelligence (AI) is revolutionizing the way students learn by providing personalized learning pathways. AI-powered educational tools can analyze individual learning patterns, identify strengths and weaknesses, and offer tailor-made content and assessments. Virtual Reality (VR) and Augmented Reality (AR) create immersive and interactive learning environments, enabling students to explore virtual worlds and conduct simulated experiments. Gamification, through its use of game elements, motivates and engages learners, making the learning process enjoyable and rewarding.

Internet of Things (IoT) devices in smart classrooms streamline administrative tasks and enable data-driven decision-making for educators. Blockchain technology ensures data security and transparency, particularly in credentialing and certification processes. Mobile Learning (m-Learning) enables flexible access to educational content anytime and anywhere, empowering learners with continuous access to knowledge.

Collaborative tools facilitate group projects and peer-to-peer learning, promoting critical thinking and teamwork skills. Learning Analytics, with its data-driven insights, helps educators identify areas of improvement and provide timely support to struggling students. Cloud Computing enhances accessibility to educational resources and facilitates seamless collaboration.

While these emerging technologies hold great potential for transforming education, their successful integration requires addressing challenges such as digital equity, data privacy, and teacher professional development. Striking a balance between technological innovation and preserving the human connection in education is vital. By harnessing the power of ICT responsibly, educators and learners can collaboratively create dynamic and inclusive learning environments, equipping students with the skills they need to thrive in the digital age.

Keywords: Artificial Intelligence, Virtual Reality, Information and Communication Technologies (ICT), Augmented Reality, Internet of Things (IoT)

Introduction

In recent years, the world has witnessed rapid advancements in Information and Communication Technologies (ICT). These innovations have profoundly impacted various sectors, and education is no exception. As traditional teaching methods are gradually being supplemented and transformed, educators and learners are exploring the potential of

emerging ICT technologies to enhance the teaching and learning experience. This paper explores some of the most promising ICT technologies that are reshaping the education landscape and their potential implications for future educational practices.

1. Artificial Intelligence (AI) in Education

AI is revolutionizing the education sector by offering personalized learning experiences to students. With the ability to analyze vast amounts of data, AI-powered educational tools can identify individual strengths and weaknesses, adapt content to meet specific learning needs, and provide real-time feedback. AI-driven virtual tutors and chatbots are becoming more prevalent, helping students with queries and guiding them through their learning journey. Moreover, AI-based assessment systems can accurately evaluate student performance, enabling educators to tailor their instruction accordingly.

2. Virtual and Augmented Reality (VR/AR)

Virtual and augmented reality technologies have opened up new possibilities for experiential learning. By immersing students in interactive and simulated environments, VR/AR can facilitate a deeper understanding of complex subjects. From exploring historical events to conducting virtual science experiments, these technologies bring abstract concepts to life and make learning more engaging and memorable. Additionally, VR/AR can support remote learning, allowing students to collaborate in virtual classrooms and access resources from anywhere in the world.

3. Gamification

Gamification is leveraging game elements, such as rewards, points, and challenges, in educational contexts. By integrating playful elements into the learning process, gamification can enhance student motivation, engagement, and retention. Students are encouraged to progress through levels, earning rewards and recognition along the way. Gamified learning platforms transform traditional content into interactive and enjoyable experiences, making education more enjoyable and fostering a sense of accomplishment among students.

4. Internet of Things (IoT)

The Internet of Things offers the potential to create smart, connected learning environments. IoT-enabled devices can automate routine tasks, such as attendance tracking and classroom management, freeing up educators to focus on teaching. Smart classrooms equipped with IoT devices can also collect data on student behavior, interactions, and preferences, providing insights to optimize the learning process. Moreover, wearable IoT devices can monitor students' physiological responses to learning, helping educators adjust their instructional strategies accordingly.

5. Blockchain in Education

Blockchain technology ensures data security, integrity, and transparency. In the context of education, blockchain can revolutionize credentialing and certification processes.

Academic records, certificates, and diplomas can be securely stored on a decentralized ledger, eliminating the risk of fraudulent credentials. This not only simplifies the verification process for employers and academic institutions but also empowers students to have greater control over their educational achievements.

6. Mobile Learning (m-Learning)

With the widespread adoption of smartphones and tablets, mobile learning has gained significant traction. Mobile apps and platforms enable learners to access educational content on-the-go, fostering a culture of continuous learning. Whether it's watching educational videos during a commute or completing quizzes during breaks, m-Learning provides flexibility and accessibility, making education more inclusive and learner-centric.

7. Collaborative Tools

Collaborative tools and platforms facilitate group projects and peer-to-peer learning, promoting active engagement and social interaction. Online collaboration spaces enable students to work together on assignments, share ideas, and provide feedback to one another, regardless of their physical location. This fosters teamwork, communication, and critical thinking skills, all of which are essential for success in the 21st-century workforce.

8. Learning Analytics

Learning analytics involves the collection and analysis of data on students' learning behaviors and performance. By leveraging this data, educators can gain valuable insights into student progress, identify areas of improvement, and adapt instructional strategies accordingly. Learning analytics can also help detect early signs of academic struggle, enabling timely intervention to support struggling students and improve overall learning outcomes.

9. Cloud Computing

Cloud-based services have transformed the way educational resources are stored, accessed, and shared. Cloud computing offers scalability, cost-effectiveness, and ease of collaboration. Educational materials can be uploaded to the cloud, making them accessible to students and educators from any device with an internet connection. Cloud-based learning management systems (LMS) facilitate seamless course administration, communication, and grading.

10. Natural Language Processing (NLP)

NLP technology enables computers to understand and process human language. In the realm of education, NLP can be used for language learning, automated essay grading, and language translation. Language learning apps with NLP capabilities can provide personalized language lessons; while automated essay grading systems can save educators valuable time and ensure fair and consistent assessment.

Conclusion

Emerging ICT technologies have the potential to revolutionize education by personalizing learning experiences, fostering engagement, and improving learning outcomes. While these technologies offer exciting opportunities, their successful integration into educational practices depends on various factors, including infrastructure, teacher training, data privacy, and ethical considerations. As we continue to explore and adopt these technologies, it is essential to strike a balance between innovation and maintaining the human connection that is at the heart of education. By harnessing the power of ICT in a thoughtful and responsible manner, we can create a more inclusive, dynamic, and effective learning ecosystem for generations to come.

Abstract:

6G is anticipated to be enforced around the time 2030. It'll offer a significant experience for everyone by enabling hyperactive- connectivity between people and everything. In addition, it's anticipated to extend mobile communication possibilities where earlier generations couldn't have developed. These include forthcoming and current technologies similar aspost-quantum cryptography, artificial intelligence(AI), machine literacy(ML), enhanced edge computing, molecular communication, THz, visible light communication(VLC), and distributed tally(DL) technologies similar as blockchain. This paper provides perceptivity into the critical problems and difficulties related to the security, sequestration, and trust issues of 6G networks. also, the standard technologies and security challenges per each technology are clarified. This paper introduces the 6G security armature and advancements over the 5G armature. We also introduce the security issues and challenges of the 6G physical layer.

Keywords: 6G security, privacy, new challenges, security architecture, security threats, physical layer security, AI/ML security

INTRODUCTION:

Sixth generation(6G) wireless network technology is predicted to offer advanced content, lower energy consumption, comprehensive spectral, and cost-effectiveness with advanced security(1). 6G networks will meet these conditions by planting new technologies analogous as multiple accesses, waveform design, channel rendering schemes, network slicing, numerous antenna technologies, and pall edge computing. 6G affects four significant future changes(2). First, it offers an integrated air –

ground – space – ocean communication network by planting terrestrial and non-terrestrial networks(3). Second, new radio bands will meliorate network business capacity and data speed, including millimeter- swell(mm- swell),sub-6 GHz, terahertz(THz), and optical dispatches. Third, 6G will enable a new generation of intelligent operations and services using artificial intelligence(AI) and big data technologies in response to the massive datasets generated by eclectic networks with different communication scripts, wide bandwidths, a advanced number of antennas, and new 6G operations ' conditions(4). Fourth, network security and insulation must be strengthened and enhanced for 6G technologies and operations(5). This paper presents the 6G security trends and challenges of other forthcoming technologies and operations. Data processing, trouble discovery, business analysis, and data encryption are considered the most critical issues in 6G networks. The security issues due to massive business processing can be answered using decentralized security systems, in which the business can be handled roundly and locally. 6G use cases put stricter security conditions than 5G use cases,(6). The Internet of Everything(IoE), with a wide variety of capabilities and services, will make it more challenging to operate and install distributed AI, insulation, and security results. The high mobility conditions of the new connected bias make them change their connected networks and bear services from other networks, performing in security complications and insulation problems. For the Enhanced Ultra- Reliable and Low quiescence Communication(ERLLC) services, the end to end quiescence in 6G should be dropped to a numerous μ s. also, 6G will need a ten- time increase in network energy effectiveness over 5G and a hundred- time increase over 4G(7). It's predicted to allow truly low- power transmissions for limited resource bias. Advanced and active operation technologies for high mobility will enable rapid-fire- fire movement at 1000 km per hour. To guarantee the quality of the

About Author(s)

Dr. N. Shanmugapriya received her Ph.D in Computer Science from Anna University of Chennai in 2017. She is working as an Assistant Professor in the Department of Computer Science, Arulmigu Arthanareeswarar Arts and Science College, Thiruchengode and she has 17 years of teaching experience. She has published more than 15 papers in National and International Journals and presented in many Conferences papers. She has participated in various seminar, workshop and Faculty Development programs in various college. She has also written many book chapters and books. Her research interests includes Network Security, Image Processing, Internet of Things, Artificial Intelligence.

Dr. A. Anusha Priya received her Ph.D in Computer Science from Karpagam Academy of Higher Education, Coimbatore in 2019. She is working as an Assistant Professor in the Department of Computer Science, Muthayammal College of Arts and Science, Rasipuram and has 17 years of teaching experience. She has produced 14 M.Phil scholars and published more than 25 papers in National and International Journals. Her research includes Cloud computing and Network Security.

Dr. M. Sakthi has got 27 years of experience in teaching and research. She has done her bachelor's degree in Computer Science from Bharathiar University in the year 1989, Master degree in Computer Science from Manonmaniam Sundaranar University in the year 1992, M.Phil in Computer Science from Bharathiar University in the year 1997. She has completed Ph.D in Computer Science from Mother Teresa Womens University, Kodaikanal in 2017. She has produced 18 M.Phil Scholars in Computer Science and guiding 2 Ph.D Scholars. She has organized various national, international workshops, seminars and guest lectures. She has published papers in various National and International papers. Her area of interest includes Pattern Recognition, Datamining and Machine Learning.

Mr. A. Uthiramoorthy, MCA, M.Phil., (Ph.D) is working as an Assistant Professor in the Department of Computer Science at Rathinam College of Arts and Science. He has 16 years of experience in Teaching and Research. He had completed his Bachelor Degree in Electronics under Bharathiar University in 1999, Master of Computer Application Degree under Periyar University in 2002 and M.Phil., (Computer Science) under Madurai Kamaraj University. He served as BOS Chairperson for the UG and PG Computer Science Boards. He has published 6 research articles in Scopus, IEEE International Journals. His area of Research includes Data Mining, Big Data Analytics, Network Security, Artificial Intelligence and Machine Learning.

A STUDY OF SOLVING DECISION MAKING PROBLEM USING SOFT SET THEORY

Dr. M. MAHESWARI

Assistant Professor,
Department of Mathematics,
Nallamuthu Gounder Mahalingam College

M. JEEVAPREETHI

PG Student
Department of Mathematics,
Nallamuthu Gounder Mahalingam College,

ABSTRACT

In this paper, the authors delve into the application of soft set theory as a robust framework for addressing uncertainty in the realm of Investment Decision Making. Soft set theory is a mathematical paradigm that adeptly handles imprecise and vague information, offering a valuable tool for decision-makers navigating complex financial landscapes. The paper likely explores how this theoretical approach is practically implemented, leveraging various mathematical tools to enhance the decision-making process. This application of soft set theory may involve optimizing investment strategies through the use of mathematical techniques such as optimization algorithms, probability modeling, and statistical analysis. By incorporating these tools, the paper aims to provide a more nuanced understanding of the inherent uncertainties in investment decisions and proposes a method for making informed choices amidst such complexity. The integration of soft set theory and mathematical tools showcases a holistic approach to Investment Decision Making, acknowledging and addressing the multifaceted nature of financial decision environments. This research contributes to the broader field of financial modeling by demonstrating the adaptability and efficacy of soft set theory in real-world investment scenarios. Overall, the paper contributes to the ongoing discourse on advancing decision-making methodologies in finance through the incorporation of innovative mathematical frameworks.

1.,INTRODUCTION

The Process of selecting the best from the list of alternatives or choices available for selection is called Decision Making. The decision may be day-to-day decision or a sensitive one it will create a great impact to the organization or society. It will be difficult to make decision when we have so many choices. The decision-making method requires a systematic procedure to define parameters. Parameters are necessary to make the final decision. The predefined parameters are not enough to solve the real-life problems. For this

reason, there must be provisions to add more parameters to the existing set that may be either new or generated by processing of existing ones. Decision-Making is daily activity in today's world. Different parameters and their values will lead us in making the right decision. The process of decision making involves series of activities to get the right decision from the available listed data. The decision required for purchasing a new house in a particular area was always a difficult task for people. The theories like probability, fuzzy set, rough set have tried to solve these problems by using it expanded tools for dealing with uncertainties. But all these

SEPERATION AXIOMS ON SOFT MULTI TOPOLOGICAL SPACES

ABSTRACT

This paper presents the concept of soft multi separation axiom namely soft multi T_0 -space and soft multi T_1 -space via open soft multi sets and investigate their accompanying characteristics.

AMS Subject Classification: 03E70, 54A05, 54B05, 54A10

Keywords: Soft multiset, soft multi topology, soft multi T_0 -space and soft multi T_1 -space.

1 Introduction

In 2013, Babitha and John [1] acquainted the concept of soft multi sets as an amalgamation of soft sets and multisets that can be used to solve real life problems in many fields. Moreover, the soft multi topology and its basic properties was given in [2]. The same authors initiated the concept connectedness in soft multi topological spaces. In 2015, Deniz Tokat et al. [4] acquainted the idea of soft multi continuous functions and also soft multi semi continuous by using soft multi function. Then El-Sheikh et al. introduced the concept of generalization of open soft multisets and mappings in soft multi topological space. The concepts compact soft multi spaces and semi compact soft multi spaces were introduced by Ismail Osmanoglu et al. in [5]. In 2020, Muhammed Riaz et al. [8] gave the properties of soft multi topological spaces and also some real life applications. Then V. Inthumathi et al. [6] acquainted the concept of

generalized semi open soft multisets and operators in soft multi topological spaces.

The separation axioms are about the use of topological means to distinguish disjoint open set and distinct point. In this paper, we acquaint and discuss the concept of separation axioms in soft multi topological space namely soft multi T_0 -space and soft multi T_1 -space over an initial universe with fixed set of parameters by using open soft multisets and soft multipoints defined in [6].

2 Preliminaries

Throughout this paper SMTS denotes the soft multi topological spaces, smset denotes soft multiset.

Definition 2.1. [3] Let M be an universal mset, L be a set of parameters and $I \subseteq L$. Then, an ordered pair (S, I) is called a smset where S is mapping given by $S: I \rightarrow P^*(M)$; $P^*(M)$ is the power set of a mset M .

PHARMACOGNOSTICAL EVALUATION AND PHYTOCHEMICAL PROFILING OF IMPORTANT PLANT SPECIES *ZIZHYPHUS OENOPLIA* L.

A.M.ANANDA KUMAR, N.SASIKUMAR, R.RAKKIMUTHU, P.SATHISHKUMAR AND
D.SOWMIYA

PG and Research Department of Botany, NGM College, Pollachi.

ABSTRACT

The present paper deals with determine the quality parameters and also to authenticate the species free from adulteration, the present study was carried out on pharmacognostically and phytochemically on three important medicinal plants available in this area *Ziziphus oenoplia* L. belongs to family Rhamnaceae. The pharmacognostical work includes the parameters such as morphological observations including root length, shoot length, no. of lateral roots, internodes length and leaf surface area were observed and tabulated. The anatomical parameters viz., transverse section of the study plant was observed with the treatment of various chemicals and solvents. Similarly the powder studies were also carried out. Finally the qualitative phytochemical studies were carried out to know the presence some basic secondary metabolites in the extract. The extracts exhibited the presence of important phytochemicals viz., Alkaloids, Tannins, Saponins, Oils, Steroids and Terpenoids. Further the anatomical study and powder showed the characteristic colour change and physical changes determines the genuinity of the species.

Keywords: Phytochemicals, pharmacognosy, Alkaloids, *Zizhyphus oenoplia*

INTRODUCTION

Medicinal plants are used by 80% of the world population for their basic health needs. India is the birth place of indigenous medicines such as Siddha, Ayurveda and Unani system. All those systems rely on medicinal plants. The medicinal plants a very importance place in day to day life of human beings through on the world from immemorial. The plants have become knowing or unknowingly become parts of the home remedial system. Hence the relationship with the plants was extended key and medicinal aspects. Traditional system of medicines was prepared from a single combination of more than one plant. The

efficacy of the drug depends upon the on quality of plant species, parts and biological property of medicinal plants which in turn depends upon the occurring as primary and secondary metabolites (Phuspa,2009). Intern, it is necessary to have detailed knowledge on medicinal plants used for preparedly a drug in every aspect of the medicinal plants are rich source of various chemical compounds present. Medicinal plants are still major parts of traditional medicinal systems in developing countries many infection disease are known to be treated with herbal remedies throughout the history of mankind. Even today plant materials continue to play a major role in primary health care as therapeutic remedies in many developing countries (Sukanya *et al.*, 2009). Medicinal plants which from backbone of traditional medicine have in the last few decades been the subject of very intense pharmacological studies. This has been brought about by the acknowledgement of the value of medicinal plant as potential source of new compounds of therapeutic values and as source of new compounds in drug development (Buduru Gowthami *et al.*, 2012)

The branch of pharmacology that deals with drugs in the form of crude or natural state of medicinal herbs or other plants for their original features is called pharmacognosy. It is also the study of medicines derived from natural sources, mainly from plants and deals with standardization, authentication and study of natural drugs.

Most of the research in pharmacognosy has been done in identifying controversial species of plants, authentication of commonly used traditional medicinal plants through organoleptic, anatomical, morphological, phytochemical and some physicochemical analysis. Recently the importance of pharmacognosy in taxonomic identification, pharmacognostic study includes parameters which help in identifying adulteration in dry powder and extract form also. The importance of the study in plants is gained because when the plant was dried and made into powder form, it loses its morphological identity and easily prone to adulteration. The study ensures plants identity, lays down standardization parameters which will help and prevents adulterations in dry powder form also. This is again necessary because once the plant is dried and made into powder form, it loses its morphological identity and easily prone to adulteration. Pharmacognostic studies ensure plant identity, lays down standardization parameters which will help and prevents adulterations. Such studies will help in authentication of the plants and ensures reproducible quality of herbal products which will lead to safety and efficacy of natural products. The pharmacognostic standardization parameters which are generally done are described below (Sumitra, 2014). The pharmacogonostic characters will be very specific to every

species, locality and environmental condition. The organoleptic study on the plants which will gives rise to reaction of live cells on various chemical treatments. Hence the study mainly gains its importance to know complete characters of the species and details of anatomical and powder level ingredients.

To determine the quality parameters and also to authenticate the species free from adulteration, the present study was carried out on pharmacognostically and phytochemically on three important medicinal plants available in this area *Ziziphus oenoplia* L. belongs to family Rhamnaceae respectively. Indeed these three plants belongs diverse families but inhabitates the similar soil and climatic conditions. The plants were very used for the various purposes in the villages. Commonly the indigenous people use these plants or allow the plants to grow as biofencing. The plants are doesn't need regular water supply and survive any type of soil. The artificial regeneration was poorly established but naturally the plants found The study plants are widely distributed in this area. The pharmacognostical work includes the parameters such as morphological observations including root length, shoot length, no. of lateral roots, internodes length and leaf surface area were observed and tabulated. The anatomical parameters viz., transverse section of the study plant was observed with the treatment of various chemicals and solvents. Similarly the powder studies were also carried out. Finally the qualitative phytochemical studies were carried out to know the presence some basic secondary metabolites in the extract.

MATERIALS AND METHODS

Collection of plant materials:

For the present study the plant species, *Ziziphus oenoplia* belong to family *Rhamnaceae* respectively were collected from nearby areas of Pollachi and Gobichettipalayam and preserved accordingly as the study to be carried out. The plants were collected and shade dried and finely powdered for the powder studies. The fresh plant specimens were stored in a proper fixative like FAA till the sections to be made.

Classification:

Description

The plant belongs to the Rhamnaceae family (Ber family). Common name is jackal jujube. It is a very thorny straggling shrub with rusty-velvety young branches with paired thorns. Scandent shrubs, thorns many, recurved, branchlets densely silky hairy. Leaves 4-6.5 x 2-3 cm, ovate, apex acuminate, base oblique, 3

or 4 ribbed, densely fulvous hairy, sessile or shortly petioled. Flowers 3 mm across, shortly pedicelled, 6-20 in axillary clusters; sepals triangular, hispid outside; petals clawed, concave, greenish yellow; disk flat, glabrous. Drupe 6 x 6 mm, globose, black.

Preparation of powder

The clean and healthy plants were collected. The materials were shade dried and powdered using pulverizer. The finely powdered plant materials were stored properly under proper condition.

Preparation of extract:

The two study plants material was collected separately and dried under shade. The well dried plant material was powdered using pulverizer. The finely powdered plant parts were used to take hot extract by using soxhlet apparatus.

Organoleptic studies:

Microscopic and macroscopic observations of the study plants were carried out like according to Saha *et al.*, 2011.

Microscopic analysis:

Free hand transverse sections leaf, stem, internode, root, petiole were cut and fixed in FAA and then dehydrated by employing graded series of ethyl alcohol and tertiary butyl alcohol. Kunle *et al.*, 2012.

Determination of Foaming index

Some plant materials when shaken with water cause persistent foam which may be attributed to the presence of saponins in that material. The foaming ability of an aqueous solution of plant materials and their extracts is measured in terms of foaming index WHO guidelines.

An accurate quantity of about 1g of the coarse plant material was weighed and transferred into an Erlenmeyer flask containing 100ml of boiling water. The flask was boiled at moderate heat for 30min. The solution was cooled and filtered into a 100ml volumetric flask and sufficient distilled water was added to dilute to volume. The solution was poured into ten stoppered test tubes in successive portions of 1ml, 2ml, etc. upto 10ml, and the volume of the liquid in each tube was adjusted with water upto 10ml. The tubes were then stoppered and shaken in a length wise motion for 15sec (two shakes/sec) and allowed to stand for 15min. The height of foam was measured. If the height of the foam in every tube was less

than 1cm the foaming index was less than 100. If a height of foam of 1cm was measured in any test tube, the volume of the plant material decoction in this tube (a) was used to determine the index. If the height of the foam was more than 1cm in every tube, the foaming index was over 1000. In this case, the determination was repeated using a new series dilution of the decoction in order to obtain a result. The foaming index was calculated by using the following formula $1000/A$ where A was the volume in ml of the decoction used for preparing the dilution in the tube where foaming to a height of 1cm was observed

Preliminary phytochemical analysis

The obtained extract was screened for the presence of phytochemical such as alkaloids, tannins, flavonoids, saponins, glycosides, saponins, terpenoids, phenol and oil.

a) Detection of alkaloids-Mayer's test (Sofowara *et al.*, 1993)

The mercuric chloride (1.36g) was dissolved in 60 ml of distilled water 5g of potassium iodide in 10 ml of water. The two solutions were mixed and diluted to 100 ml of dilute hydrochloric acid and 0.1 ml of Mayer's reagent was added. Formation of yellowish buff colored precipitate confirmed the presence of alkaloids.

b) Detection of Flavonoids-H₂SO₄ test (Harborne *et al.*, 1973)

0.5mg of plants was treated with few drops of H₂SO₄. Formation of orange colour indicates that the presence of flavonoids.

c) Detection of Glycosides- Kellar-killani test (Gokhale *et al.*, 2008)

0.5mg of plant extract was shaken with 1 ml of glacial acetic acid. A drop of ferric chloride and a drop of concentrated sulfuric acid were added. Green blue colour to upper layer and reddish brown colour at the junction of two layers indicates the presence of cardiac glycosides.

d) Detection of tannins-FeCl₃ test (Mace and Gorbach, 1963; Ciulci, 1994)

0.5mg of powder sample of each plant is boiled in 20 ml of distilled water in a test tube and filtered 0.1% FeCl₃ is added to the filtered samples and observed for brownish green or a blue black coloration which shows the presence of tannins.

e) Detection of saponins - Vigorous shaking test (Brain and Turner, 1975)

The extract (50 mg) is diluted with distilled water and made up 20 ml, the suspension is shaken in a graduated cylinder for 15 min. A two centimetre layer of foam indicates the presence of saponins.

f) Detection of Terpenoids - Salkowski s Test (Salkowski and Balish, 1987)

0.5mg of the extract of the leaves, flower and seeds was mixed with two ml of chloroform and H_2SO_4 (3 ml) was carefully added to form a layer. An appearance of reddish brown colour in the inner face was indicates that the presence of Terpenoids

g) Detection of phenol-Ferric chloride test (Harborne, 1973)

10 mg extract were treated with few drops of ferric chloride solution. Formation of bluish black colour indicates that the presence of phenol.

h) Detection of steroids (Ciulci, 1994)

Two ml of acetic anhydride was added to five mg of the extracts, with two ml of H_2SO_4 . The colour was changed from violet to blue or green in some samples indicates that the presence of steroids.

Table: 1 Showing the quantitative on morphological feature

S.No	Plants name	Stem Length (cm)	Leaf rachis Length (cm)	Single leaf Length (cm)	Petiole Length (cm)	Thorn Length (cm)

Abstract

The integration of Information and Communication Technology (ICT) tools in educational settings has revolutionized the way biological science is taught and learned. This article explores the various ICT tools that can be employed in biological science teaching to enhance students' learning experiences, foster critical thinking, and promote active engagement in the subject. Additionally, the article discusses the potential benefits and challenges associated with the implementation of these tools. Through an examination of relevant research studies and practical examples, this article emphasizes the importance of effectively utilizing ICT tools to nurture the next generation of biologists and scientific thinkers. This article explores the integration of Information and Communication Technology (ICT) tools in the field of Biological Science education. It highlights the benefits of incorporating ICT tools in the classroom, such as improving student engagement, enhancing data analysis skills, and fostering collaborative learning. The article also discusses some of the popular ICT tools used in biological science teaching, along with real-world examples of their successful implementation. The integration of ICT in education is seen as a promising approach to create a more dynamic and interactive learning environment for students pursuing biological science studies.

Keywords: ICT tools, Bioinformatics, Data bases, education

Introduction

As technology continues to shape our world, the field of education has embraced ICT tools to create dynamic and interactive learning environments. In the realm of biological science, incorporating these tools into teaching practices opens new avenues for educators to impart knowledge effectively and engage students in deeper explorations of living organisms and their intricate processes. The field of Biological Science is continuously evolving, with new discoveries and breakthroughs shaping our understanding of life (Johnson et al. 2019). As educators strive to provide students with the latest knowledge and skills, integrating ICT tools in the teaching process has emerged as an innovative and effective approach. ICT tools offer opportunities to engage students, facilitate interactive learning experiences, and empower them to explore complex biological concepts in practical and exciting ways.

ICT Tools in Biological Science Teaching

Virtual Laboratories and Simulations: Virtual labs and simulations offer an immersive experience for students to conduct experiments without the need for physical lab setups. This hands-on approach enables learners to explore complex biological phenomena, such as DNA replication and cellular processes, in a safe and interactive manner. Bioinformatics

Software which Introduces bioinformatics tools that allows students to analyze genetic sequences, perform phylogenetic analyses, and study protein structures (Gilani, et al, 2019). These tools provide valuable insights into molecular biology and genomics, encouraging students to think critically and develop problem-solving skills.

Interactive Multimedia Content: Interactive multimedia content, including videos, animations, and 3D models, makes abstract biological concepts more tangible and easier to comprehend. Such visual aids aid in visualizing complex processes and foster a deeper understanding of biological phenomena.

Online Collaborative Platforms: Virtual classrooms and collaboration platforms enable students to participate actively in group discussions, peer-to-peer learning, and scientific debates. This fosters a sense of community among learners and encourages knowledge-sharing beyond the boundaries of a traditional classroom.

Benefits of ICT Integration

Enhanced Learning Outcomes: By catering to different learning styles and preferences, ICT tools facilitate personalized learning experiences, leading to improved learning outcomes for diverse student populations. The Real-world Relevance using ICT tools bring real-world biological research and applications into the classroom, bridging the gap between theoretical knowledge and practical applications.

Student Engagement must be Interactive and dynamic learning environments promote student engagement, curiosity, and a deeper appreciation for the complexities of the natural world. The student assessment may improve ICT tools allow for formative and summative assessments that provide instant feedback, helping educators identify and address students' strengths and weaknesses effectively.

Benefits of ICT Tools in Biological Science Teaching

Enhanced Data Analysis enable students to analyze large datasets, such as genetic sequences and ecological data, using specialized software and online platforms. This allows students to develop critical data analysis skills, preparing them for future research and scientific careers.

Virtual Laboratories and Simulations by incorporating virtual laboratories and simulations, students can engage in hands-on experiments without the limitations of physical resources. They can manipulate variables, observe outcomes, and draw conclusions, promoting a deeper understanding of biological principles. Multimedia Educational Resources ICT tools offer access to multimedia resources, such as interactive textbooks, 3D models, and video lectures. These resources cater to diverse learning styles and foster a more immersive learning experience.

Collaboration and Global Connections: ICT tools enable students to collaborate with peers and researchers from different parts of the world. This promotes cross-cultural learning and exposes students to diverse perspectives in the biological sciences.

Important ICT Tools in Biological Science Teaching

BioInteractive (HHMI): Developed by the Howard Hughes Medical Institute, BioInteractive offers a vast collection of virtual labs, interactive activities, and multimedia resources for teaching various biological concepts, from molecular biology to ecology.

BLAST (Basic Local Alignment Search Tool): BLAST is a widely-used bioinformatics tool that allows students to compare genetic sequences and identify similarities among different organisms.

Foldit: Foldit is an online game that engages students in protein folding puzzles, contributing to real scientific research and fostering an understanding of protein structure and function.

Visible Body: Visible Body provides 3D anatomical models and animations, enabling students to explore the human body's intricate systems and structures in a dynamic and interactive manner.

Challenges and Considerations of using ICT Tools that ensuring equitable access to ICT tools and a reliable internet connection for all students remains a challenge, particularly in underserved areas (Smetana and Bell, 2012). Educators need adequate training to effectively integrate ICT tools into their teaching practices and maximize their benefits. Protecting students' personal information and ensuring data security are essential considerations when using online platforms and tools.

Conclusion

The incorporation of ICT tools in biological science teaching has the potential to revolutionize how students perceive and engage with the subject. By fostering interactive learning experiences, promoting critical thinking, and enabling access to cutting-edge research tools, educators can inspire the next generation of biologists and scientific leaders. Embracing these technologies responsibly and addressing associated challenges will pave the way for a more enriched and effective biological science education. The integration of ICT tools in biological science teaching has the potential to revolutionize the learning experience for students. Through enhanced data analysis, virtual simulations, and interactive resources, students can develop a deeper understanding of biological concepts and prepare for careers in scientific research. With ongoing advancements in technology, educators must continue to embrace and explore innovative ways to leverage ICT tools in their classrooms, ultimately fostering a new generation of skilled and passionate biological scientists.

Email: d.sowmiya22@gmail.com

The present study was to screen the presence of phytochemicals in the petroleum ether, chloroform, ethyl acetate and methanol of fern *Thelypteris meeboldii* species by composed with qualitative and quantitative screening methods. In qualitative analysis, the presence of pharmacologically active phytochemicals such as alkaloids, flavonoids, glycosides, steroids, tannins, terpenoids, saponins, phenols, volatile oils and resins were screened. The methanol fern extract performed well to show positivity rather than other studied fern extracts. Methanol extract showed strong positivity for 6 phytochemicals out of 10 phytochemicals tested. In quantitative analysis, the important secondary metabolites such as total phenols, total tannins, total alkaloids, total flavonoids, total saponins and total terpenoids content were tested.

Keywords: phytochemicals, qualitative, quantitative, *Thelypteris meeboldii*, methanol.

TAXONOMIC SIGNIFICANCE ON MORPHOLOGICAL AND ANATOMICAL CHARACTERS OF *CARDIOSPERMUM HALICACABUM* L. AND *CARDIOSPERMUM CORINDUM* L. (SAPINDACEAE)

ABSTRACT

The taxonomic significance on morpho/anatomical characters for the selected study species such as *Cardiospermum halicacabum* L. and *Cardiospermum corindum* L. has clearly explained and recorded with additional evidences. This study was mainly focused on their similarities and differences of morphological and anatomical characters observations between the species. The proper descriptions with prominent characters are discussed for the proper identification of closely related misidentified study species. In overall results the study species *Cardiospermum halicacabum* was morphologically distinguished from *C. corindum* by leaf, stem, internode, and fruit features. The anatomical characters of these two species were differentiated with some prominent characters. Especially for *Cardiospermum halicacabum* the presence of anamocytic type of stomata with diffused in number, stem pentagonal, having 5 short blunt ridges and the xylem vessels are diffused and small in size in root. Whereas in *C. corindum* it was observed dense anamocytic type of stomata, hexagonal stem having 6 short ridges and the xylem vessels in root are dense and large in size. These characters could be the additional taxonomic evidence than the available floras descriptions. It may help to proper identification of closely related allied plants and also it is an important tool in studying evolutionary history and ecological relationships between the species.

Keywords: morpho/anatomical, misidentified species, *Cardiospermum* sp., additional taxonomic evidence

INTRODUCTION

Plant identification refer to assigning a plant for a particular taxonomic group and ultimately to the species. Misidentification of closely related plant

species in certain groups of plants may be due in the lack of taxonomic information. This could be as a result of insufficient information on taxonomic characters and overlapping or superimposition of delimitation characters either between the genera or amongst species which is as a result of visible similarities and habits (Ibrahim *et al.*, 2015).

Comparative study of plant structure, morphology and anatomy has always been the backbone of plant systematics, which endeavors to elucidate plant diversity, phylogeny and evolution. The second half of the 20th century was a fascinating period in which systematics and structural studies benefited greatly from new techniques and methods (Endress *et al.*, 2000).

Macro/micro morphological features of leaves, stems, and roots have played important roles in plant taxonomy, especially at the generic and species levels. Studies in this field have attracted the attention of plant morphologists and systematics to resolve taxonomic conflicts in different groups of plants (Sonibare *et al.*, 2014). The foliar epidermal structure has been one of the most important taxonomic characters in biosystematics and most taxonomic studies are based on the studies of the leaf epidermis. In ultra-structures such as epidermal cells, stomata, and trichomes, their sizes, lengths, distribution, orientation, and frequency are the most significant characters in taxonomy as well as phylogeny (Albert and Sharma, 2013).

Anatomical data have been widely used as a taxonomic tool only after the nineteenth century. Anatomical studies have great implication for clarification of taxonomic, ecological and evolutionary relationships in higher ranks of classification. However, in some plant families, several anatomical traits are great value for application at both generic and sub- generic levels (Jones and Luchsinger, 1987). Auguste Mathieu is one of the pioneer taxonomists, who used features of wood anatomy in the taxonomic description of forest plants species in *Florae Forestiere*. Later, another taxonomist Solereder discussed the systematic value of anatomical structures in dicotyledons in his classic book ‘Systematics Anatomic der Dicotyledonen’.

Anatomical evidence is systematically useful in a number of ways that is (i) this taxonomic method can be well used in the identification of fragmented materials of biological specimens. (ii) The study of anatomical demonstrations is often useful when there is no use of morphologies in the early identification of herbarium materials. (iii) Anatomical data have proven to be very useful in detecting evolutionary trends and interrelationships of taxa at and above the species level and at higher taxonomic categories. They are very useful to determining relationships between different genera, species, families, orders and

other taxonomic categories. Also the anatomical features have played an important role in elucidation of phylogenetic relationships.

The species of *Cardiospermum* is large genus of tropical American herbaceous vines (Sapindaceae) having alternate biternate leaves, coarsely serrate leaflets, small white flowers and an inflated capsular fruit. In this genus approximately 14 species in the soapberry family. Mostly tropical or subtropical, with a few genera extending to sub-temperate zones; 141 genera and about 1,900 species. Most genera of Sapindaceae are predominantly medium-sized to large emergent trees or erect shrubs, less often They are tendrilled lianas or understory palm-like tree lets, exceptionally sub-shrubs or scandent . Vast majority of Sapindaceae genera have trilocular fruits, although many also have bilocular, unilocular, or sometimes quadrilocular fruits. (Sapindaceae Juss. (1789), *Aceraceae* Juss. (1789), Hippocastanaceae. Rich. (1823). Pollen morphology of Sapindaceae holds promise for the recognition of taxa of this cosmopolitan family, which is well distributed in tropical regions and possesses great morphological diversity (Talita Kely Bellonzi, 2020).

Hence the present study was carried out on *Cardiospermum halicacabum* L. and *Cardiospermum corindum* L. were selected to provide the proper taxonomical evidence through morpho/anatomical observation. These additional key characters may fulfil the lacuna towards existing taxonomic description.

MATERIALS AND METHODS

Selection and collection of study plants

The selection of study plants based on lesser taxonomic evidence and commonly misidentifying closely related allied species such as *C. halicacabum* L. and *C. corindum* L. The materials of the plants were collected from Pollachi and surrounding areas, Coimbatore, Tamil Nadu. The Altitude lies under on 293 metres MSL, 10.660207 for Latitude and 76.996727 for Longitude.

Identification of plants

The study plants were identified with using Flora of Presidency of Madras (Gamble, 1935) and further the species were authenticated by Dr. P. Sathishkumar, Assistant Professor, PG department of Botany, NGM College, Pollachi, Coimbatore.

Morphological studies

The following vegetative, reproductive morphological characters was observed. Vegetative (micro/morpho) morphological characters like leaf, stem and root's shape, size, length, width and modifications of stem, leaf hairs, trichomes and glands etc. are observed and stomatal types were also identified in leaf.

The reproductive (micro/morpho) morphological characters like inflorescence, calyx, corolla, androecium and gynoecium with its size, shape and types etc. were observed. The fruit and seed ornamentation with their characters are also studied.

Anatomical studies

Preparation of plant materials:

The collected plant materials were washed with ethanol for removal of dust, dirt and biotic and abiotic substances from external factors.

Preparation of FAA and fixing process

The fixative was prepared by following ratio ethyl alcohol (95 %) 50 ml, Glacial acetic acid 2.5 ml, Formaldehyde 5.5 ml and distilled water 42 ml (Toji Thomas, 2004).

The healthy plant materials was collected separately like stem, leaf and root and stored immediately in FAA solution. After 24 hours, the fixed materials are stored in 50 % ethanol for further studies.

Sectioning process

Free hand sectioning of stem, petiole, leaf and root for selected study plant using razor blade the most transparent and thinnest cross sections was collected carefully and dehydrated with ethanol series (25 %, 50 %, 75 %, 95 % and absolute alcohol).

Staining process

The anatomical sections were stained with double staining method (Toji Thomas, 2004). The selected sectioning species were stained with Safranin for 3 min and washed with 75 % of ethanol for 1 min and stained with methyl blue for 1 min and washed with 90 % of ethanol.

Slide preparation

The sectioned thin slices were mounted in clean dry slides with 50 % glycerine and observed under compound microscope.

Epidermal and stomatal study

The freshly collected leaves were taken and peeled both abaxial and adaxial sides and it was stained with Safranin and mounted on slide for stomatal study. The leaf surface was observed their epidermal and stomatal characters under compound microscope.

RESULT AND DISCUSSION

The taxonomic significance on morpho/anatomical features for the selected study plant species such as *C. halicacabum* L. and *C. corindum* L. has clearly explained and recorded with additional evidences. This study was mainly focused on the similarities and differences of morphological characters

(vegetative and floral) and the anatomical features (leaf, petiole, stem and root) between the species (Figure. 1-10). The proper descriptions with prominent characters are discussed below for the proper identification of closely related misidentified study species.

Morphological studies

C. halicacabum L. - Annual, creaper, stem light green, frequently 5 angled, glabrous, fibrous; Internodes 4-7 cm. long; leaves opposite, biternate, triangular, compound, glabrous, acute tip, apically trifid, unevenly lobed leaf, veniation arise from mid vein and ends in the leaf margin. Mid vein prominent in adaxial, pulvinous leaf base. lamina bright green with a paler under surface, only the main veins raised, apex acuminate, margin incised-serrate, base attenuate; stipules 2 minute caducous scales. Leaf tip Sharp without mucornation; Inflorescence umbrellate cyme, 3 flowers 1 mature and 2 young buds. Inflorescence a reduced complex axillary corymbose thyrs, abortively 3-flowered; peduncle 4-9 cm. long, very sparsely puberulous, multi-bracteate, bract modified tendril on peduncle, flower zygomorphic, complete, white flowers, calyx 4 lobed, (2+2 unevenly sepal) pale green .sepals yellow-green, unequal, the outer $\pm$ round, 1 mm. diameter, the inner larger and ovate, 2-3 mm. long, 1-2 mm. wide; corolla 2 rows (4+4) (2 inner are yellow in colour. Petals white, cream, greenish or yellow, elliptic to obovate, 2-3 mm. long; appendages yellow at tip, hairy; disk of 2 curved elements 1 mm. long; stamens dorsiventral, ditheous, didenmous stamens 8 (4 long 4 short) filament hairs. Stamens free; filaments compressed, 2 mm long, hairy; anthers 0.5 mm long; pistil trifid, white, long triangular ovary, green in colour, trichomes present. pistillode present in male flower. Ovary obovoid, 2-3 mm long, hirsute; style short, pubescent; stigma 3-fid; staminodes 8 in the female flower; Fruit capsule, persistent calyx and stigma on fruit, hairy margin, dehiscing into 3 segments, separated by white papery septa axial placentation; Seeds globose, black, each carpels single seed totally bears 3 seeds, white heart shaped (hilum large) surface on their seed; Pollen triangular, triporate type (Figure.1, 3-9).

Figure 1. A. Habit of *Cardiospermum halicacabum* L. B. Twig with fruits

C. corindum L. - Annual, creaper, stem light green, slightly woody climber, densely puberulous; internodes 8 cm. long; bract modified into tendril,

apically trifid, opposite to leaves; leaves biternate, triangular leaf, glabrous, main leaflet stalk short, lower leaflet sessile, mostly densely velvety pubescent. Leaves pinnate to biternate; petiole 0.5–3(4.5) cm. long; rhachis 1–3 cm. long. Pulvinous leaf base. Leaf tip Sharp with mucornation. Mid vein prominent in adaxial, wide, acute to acuminate and apiculate at the apex, attenuate-decurrent to truncate or cordate at the base, crenate to serrate or deeply lobed. Lamina bright green with a paler under surface, only the main veins raised, apex acuminate, margin incised-serrate, base attenuate; stipules 2 minute caducous scales; Inflorescences corymbose to paniculate, axillary many-branched, numerous-flowered corymbose thyrses; peduncle 6 cm. long, pubescent, multibracteate; flower zygomorphic, complete, white flowers 4–6 mm. long, sepals unequal; outer broadly elliptic to $\pm$ round, 1.5–2 mm. long, 1.5 mm. wide, inner elliptic, 3–5.5 mm. long, 2–3 mm. wide. sepals with lateral ones c. 1 mm. long, anterior and posterior ones c. 3 mm. long, ovate, petals white or cream, elliptic, 4–6 mm. long, 2–3.5 mm. wide; petals 4–5 mm. long, 2 anterior ones ovate with small petaloid appendages, 2 posterior ones ovate bearing recurved appendages with clavate apices covered with patent hairs which cause them to cohere, stamens 8, with filaments 3–4 mm. long, pilose. Stamens with the filaments of the inner ones slightly shorter; filaments free; ovary 2–3 mm. long; style 0.5–1 mm. long; stigmas $\pm$ 0.5 mm. long. Ovary hirsute, trifid, white, long triangular ovary, green in colour, trichomes present. pistillode present in male flower. Fruit yellow-green (balloon like) turning greenish brown to reddish or dark brown, obtetrahedral, 1–3.5 cm. long, 1.8–4 cm. wide, dehiscent into 3 segments, at first densely puberulous or pubescent. Seeds black, globose, 5 mm. diameter, with a reniform or crescentic hilar area, 3–4 mm. wide. Seed 5 mm. in diam., reniform; Pollen spherical, triporate (Fig 2, 4-9).

Anatomical studies

Cardiospermum halicacabum L.

Leaves: The adaxial part of midrib is thick and pyramid like and the abaxial part is semicircular with undulate outline. The midrib possesses thick, distinct epidermal layers of fairly large squarish, thick walled cells. The outer epidermis is single layer. The upper epidermis bears the unicellular trichomes. It

is cluster of angular collenchyma. The lower epidermis bears the 2-3 layer of angular parenchyma. The vascular bundles is very prominently found in central axis. The vascular bundles is collateral close type. In which wide circular thin walled xylem elements and a thick band of phloem elements (Figure 5).

Stomata: The anomocytic type of stomata, diffused in number. No specific subsidiary cells are seen. The guard cells are elliptical in shape (Figure 10).

Stem: The stem is pentagonal, having 5 short blunt ridges. The epidermal layer is small spindle shaped cells with cuticle. The ridges with large parenchyma tissues. Sclerenchyma is running around the stem. The vascular cylinder is angular in outline. The phloem surrounds the xylem. The xylem consists of wide and narrow vessels with xylem fibres. The pith is present at the centre, which consist of parenchyma cells (Figure 7).

Root: T.S. of the root shows circular margin with minute trichomes. The outermost layer is epidermis followed by cortex. Secondary cortex is made up of cluster of parenchyma cells. The vascular bundle is found below the cortex. The vascular bundle consists of xylem and phloem. The phloem surrounds the xylem. It is endarch type, where protoxylem faces the centre and metaxylem faces the periphery. The medullary rays are present between xylem and phloem. The xylem vessels are diffused and small in size (Figure 8).

Petiole: C.S. of the petiole is rhomboidal shaped, recurved downwards in abaxial side with presence of protruding structure on both sides. The abaxial side is U shaped. The outermost layer is epidermis, which consist of unicellular trichomes. The cortex is present below the epidermis, which is followed by sclerenchymatous. The vascular bundle is 6 in number collateral closed. The xylem is exarch in nature. The pith is at centre with cluster of cells (Figure 6).

***C. corindum* L.**

Leaves: The midrib's adaxial part pyramid like and the abaxial part is semicircular outline. The midrib possesses thick distinct epidermal layers of fairly large squarish thick walled cells. The epidermis is single layer. The upper epidermis bears unicellular trichomes. It is 4-5 layer angular collenchyma. The lower epidermis bears the 3 layer of angular parenchyma. The vascular bundles is very prominent found in central axis. The vascular bundles is collateral close type. In which wide circular thin walled xylem elements and thick band of phloem elements (Figure 5).

Stomata: The anomocytic type of stomata, dense in number. The guard cells are elliptical in shape. No specific subsidiary cells are seen (Figure 10).

Stem: The stem is hexagonal, having 6 short blunt ridges. The epidermal layer is spindle shaped cells with cuticle. The epidermis is followed by

sclerenchyma layer of cells. The vascular bundle phloem surrounds the xylem. Collenchyma cells are present in the ridge of epidermis. The pith is present at the centre, which is surrounded by vascular bundle and xylem vessels (Figure 7).

Root: T.S. of the root shows circular margin with minute trichomes. The outer most layers is epidermis followed by dense layer of cortex. The cortex which consist of xylem and phloem. Xylem is endarch, where protoxylem faces towards the centre and metaxylem faces towards the periphery. The xylem surrounds the phloem. The medullary rays are present between xylem and phloem. The xylem vessels are dense and large in size (Figure 8).

Petiole: C.S. of the petiole is rhomboidal shaped. The abaxial side is U shaped. The outer layer is epidermis which consists of minute trichomes. The vascular bundles are 6 in number, which is surrounded by pith. The vascular bundle consists of xylem and phloem. The xylem is exarch in condition. The pith is at center with cluster of cells (Figure 6).

According to the morpho/anatomical observation of both study species was found with most similar characters as consider being a closely related species. It is clearly indicates the evolutionary relationship between the species. In overall results the study species *Cardiospermum halicacabum* was morphologically differentiated with *C. corindum* by leaf, stem, internode and fruit characters. It is observed that stalked main leaflets, five angled stem, 4-7 cm internodal length, sharp leaf tip without mucronation, and small triangular ends on fruit in *C. halicacabum*; and sessile main leaflets, six angled stem, 8 cm long internode, sharp leaf tip with mucronation, large balloon shaped fruit in *C. corindum*. Also *Cardiospermum halicacabum* has non-inflated capsules that differ from the inflated capsules of *C. corindum*. This study was agreed with Stella and Maria, 2006, they found *Cardiospermum procumbens* and *C. pterocarpum* are closely related; they are basically distinguished by the leaf type, simple in the first species and compound in the second one; in addition to the characteristic domatium of *C. procumbens*. These species share the same habit, foliar structure and epidermal characters.

In anatomical features of these two species were differentiated with some prominent characters. Especially for *Cardiospermum halicacabum* the presence of anamocytic type of stomata with diffused in number, stem pentagonal, having 5 short blunt ridges and the xylem vessels are diffused and small in size in root. Whereas in *C. corindum* it was observed dense anamocytic type of stomata, hexagonal stem having 6 short ridges and the xylem vessels in root are dense and large in size. Based on this study the stomatal number variation is one of the environment dependant (Engineer *et al.*, 2014). Previous studies have shown that

stomatal density is negatively correlated to stomatal size or length (Franks & Beerling, 2006) and that stomatal characteristics are susceptible to environmental changes, such as light intensity, temperature, and water status. These evidence are identified additional characters for differentiate the study species properly.

CONCLUSIONS

The morpho/anatomical studies provide more additional characters for proper identification of plant species. The morphological characters of leaf size, shape and pattern, hairiness, petiole nature, stem features, inflorescence, fruit and seeds; the anatomical characters like stomatal characters, epidermal layers, mesophyll cells, vascular bundles arrangement, etc. are mostly used to differentiate for the selected study species. This could be the additional taxonomic evidence than the available floras descriptions. It may help to proper identification of closely related allied plants and also it is an important tool in studying evolutionary history and ecological relationships between the species.

ABSTRACT

Utilising plant extracts as reducing and capping agents, this critical review focuses on the state of green synthesis of copper and copper oxide (Cu/CuO)-based nanomaterials and examines the antibacterial uses of these biomaterials. Additionally, a brand-new speculative mechanism for the antimicrobial activity of Cu/CuO nanomaterial produced through biological means was put forth. The future of environmentally friendly Cu/CuO nanomaterial production for antimicrobials will be clarified by this study. Researchers are able to quickly understand the synthesis process using plant extracts by reading this review's explanation of the synthesis approach and the plant components that have been previously applied. This publication also provides a synopsis of the microbial strains employed in this arena and an overview of the various analytical techniques employed for characterising the generated nanomaterials.

Introduction

The study of matter at the nanoscale (1-100 nm) is the interesting and fast expanding field of research known as nanoscience. When compared to their bulk counterparts, the nanomaterials display unique characteristics. Due to their special characteristics, including a high surface-to-volume ratio, form, size, and composition, nanomaterials have a tremendous potential for a variety of applications [1]. In recent years, metal and metal oxide nanoparticles have significantly improved biomedical sensing, imaging, diagnosis, and treatment. The three metals which are utilised the most regularly today are silver, copper, and gold. A low-cost, high-yielding material that can be exploited in biomedical and ecological restoration applications among these metal nanoparticles is copper

[2]. Due to their intriguing properties, which make them useful in a wide range of fields, such as solar cells [3], environmental remediation [4,5], catalysts [6, 7], sensors [8, 9], optics [10], electronics [11], antimicrobials [12,13], etc., copper and copper oxides-based nanomaterials have attracted a lot of attention in recent years. There are several other mechanisms that can be used to create these nanostructures, including physical, chemical, and biological ones. Even though physical and chemical processes generate a large number of nanoparticles, they are not preferred due to the use of hazardous materials, high costs, and energy requirements. Green methodologies were developed to address the limitations of physical and chemical processes. The green procedure for synthesis incorporates resources that are both organic and natural. Many viruses, bacteria, and fungi are evolving resistance to the antimicrobials that have become available. New microbial species are also developing for unknown reasons. Microbiological diseases had become a serious threat to humanity. This may be due to the ineffective use of current antimicrobial medications or unsustainable development that is bad for the environment and ecology. The discovery of novel antibiotics is essential in the event of pandemic infections [14].

In this review, which covers the literature up to 2021, we summarise and elaborate on green synthesis using plant extracts and their usage as antimicrobial agents. This article provides an overview of the methods for creating Cu/CuO-based nanomaterials, as well as their production mechanism, optimisation parameters, and characterisation. The use of Cu/CuO nanoparticles as antibacterial agents is the paper's main topic. In order to contribute to the growth of the literature on this topic and to support researchers in their future endeavours, the final goal of this paper is to reveal the procedures and results of the green synthesis of Cu/CuO nanomaterials. The emergence of new pandemic diseases is crucial.

Green synthesis of Cu/CuO based nanomaterials

The manufacturing of nanoparticles uses plants with antioxidant characteristics. Precursor salts can only be reduced by such plant parts since they have reducing characteristics. The majority of therapeutic plants contain antioxidant qualities. According to reports, the biomolecules contained in plant extracts, such as proteins, phenols, flavonoids, carboxylic acids, tannins, terpenoids, etc., are what reduce and cap the nanoparticles [15-17]. An analytical-grade precursor copper salt solutions, such as copper acetate, copper sulphate, copper nitrate, copper chloride, etc., and different parts of the plants were used. Plant parts that are fresh or dried and powdered are dissolved in distilled water.

Plant parts that are fresh or dried and powdered are dissolved in distilled water. Most frequently, distilled water is employed as the solvent. Now, depending on the volatile nature of the phytochemicals present in the plants, it is boiled at various temperatures, which can be achieved through a variety of extraction techniques. The extract is now centrifuged and removed using Whatmann No. 1 filter paper and muslin cloth. A certain amount of the filtered extract is measured out and combined with the particular quantity and molarity of the precursor solution [15]. The formation of nanoparticles can be detected using a UV-Visible spectrum, causing a change in colour.

Effect of temperature on green synthesis of Cu/CuO based nanomaterials

Temperature plays a key role in the biosynthesis of Cu/CuO-based nanomaterials. Ideal temperatures are below 100 °C. Typically, ambient temperature is maintained for synthesis. Inadequate for the formation of nanomaterials are temperatures above 70 °C. This is a result of plant phytochemicals being extremely volatile. Furthermore, it has been demonstrated that temperature has a significant influence on the shape and size of nanoparticles. Nagar et al. found that the conversion rate increased with reaction temperature when producing copper nanoparticles. The optimal temperature for this investigation was 85 °C [18]. Similarly, Dlugosz et al. showed in 2020 that the size of the nanoparticles decreases as the temperature increases when water is used as the solvent.

Additionally, they discovered that all systems of metal-based nanoparticles shrank in size at 60 °C, irrespective of the precursor salt [19]. Additionally, they demonstrated that the creation of nanoparticles accelerates with rising temperature. Additionally, at extremely high temperatures, the leaf extract's phytochemical constituents lose their ability to stabilise, resulting in the loss of their stabilising properties. Similar results were obtained when copper nanoparticles were produced by *Piper retrofractum* fruits. The peak absorption strength in this case was discovered between 60 and 80 °C [20].

Effect of plant extract concentration on green synthesis of Cu/CuO based nanomaterials

The kind and components of plants utilised are fully necessary for the biosynthesis of Cu/CuO-based nanomaterials. Different plant species phytochemicals have varying impacts on the synthesis, capping, and biological activity of nanomaterials. The ability of the copper salt solution to reduce to

copper or copper oxide nanoparticles is determined by the reducing power of phytochemicals in the plant extract, which plays a crucial role in the reduction mechanism. Furthermore, depending on the plant species used, the composition of the nanomaterials produced will vary. According to earlier studies, the synthesis process is speed up by adding more plant extracts. Insufficient absorption was seen, indicating insufficient copper ion reduction, when a little volume of leaf extract (5%) was used to create copper nanoparticles [18].

Effect of pH on green synthesis of Cu/CuO based nanomaterials

The pH can be altered by adding basic or acidic solutions to the reaction media. Sarwar et al. added citric acid to the reaction mixture to change the pH [21]. Citric acid was added, which helped the reduction process over time. To regulate the size and shape of nanomaterials, the pH of the medium is also altered. Additionally, pH significantly affects capping and stabilising properties, and consequently, the development of nanoparticles [22]. In 2020, Amaliah et al. presented a thorough analysis of the size of nanoparticles at various pH levels. They found that compared to alkaline (pH 10) conditions, acidic (pH 4) conditions produced more uniform dispersion and smaller nanoparticles [20]. In acidic conditions, some phytochemicals may lose their activity.

Application of Cu/CuO nanomaterials as antibacterial agents

Testing for action against diverse bacteria, viruses, and fungi is a part of antimicrobial research. In the study of antimicrobial substances, both gram-positive and gram-negative microbes have been studied. It has been established that the biomolecules involved in the production and capping processes affect the antibacterial activity of plant extracts. Even under identical biosynthetic conditions, proteins functionalized Cu/CuO based nanomaterials show varying biological activity when produced with various plant extracts. [14,15].

Biofunctionalized nanoparticles have shown some antibacterial activity, however the exact mechanism continues to be unknown. Researchers have put forth several potential antimicrobial action mechanisms, including as oxidative stress injury, mechanical damage, and gene toxicity. It is suggested that another mechanism underlies the antibacterial activity of biosynthesized Cu/CuO nanoparticles. Microbial adsorption on the surface of biofunctionalized nanomaterials, which is predominantly caused via chemisorption, may be responsible for the antibacterial effect. This occurs brought on by non-electrostatic interactions between the nanomaterials and the microbial surface,

which include the Vandervaals force, hydrogen bonds, and others. In a study, it was found that a Cu/CuO based nanomaterial made from *F. religiosa* possesses both adsorption and antibacterial properties [15].

Conclusion

This study sheds light on how plant extracts can be used to biosynthesize Cu/CuO-based nanomaterials, which are then used in a wide range of antibacterial applications. A brief description of the general synthesis strategy and characterisation techniques is given. There is a full discussion of the suggested processes for synthesis and antibacterial application. A unique mechanism has been connected to the antibacterial action of green nanomaterials, including plant extracts. There has been a large body of research on the antibacterial effects of biosynthesized Cu/CuO-based nanomaterials.

ABSTRACT

The study focuses on the antioxidant capabilities of an endemic herb *Henckelia incana* (Vahl) Spreng (syn : *Didymocarpus tomentosa* Wight). This is an unexplored plant species belongs to the family Gesneriaceae, collected from Gopalswami hills, Western Ghats of Tamilnadu. The leaves of *H. incana* were dried; powdered and methanolic extract was extracted using soxhlet apparatus. Antioxidant activities of the plant extracts was determined by *in vitro* methods of 1,1-diphenyl-2-picrylhydrazyl (DPPH) radical scavenging activity, Total Antioxidant assay by phosphomolybdenum and Reducing power assay. All assays were carried out by the methanolic extracts of sample dissolved in DMSO. Ascorbic acid was used as standard. DPPH scavenging of leaf extract was significant and the IC₅₀ value was calculated as 43.10±0.073µg/ml. Dose dependent Reducing power and total antioxidant capacity was observed significantly. This study reveals that *H. incana* extracts have a high antioxidant capacity and may be useful for nutritional and therapeutic purposes.

Keywords: *Henckelia incana*, DPPH, Free radicals, Total Antioxidant activity, Reducing power assay

INNOVATIVE ICT PEDAGOGIES IN BIOLOGICAL SCIENCE EDUCATION: TRANSFORMING LEARNING EXPERIENCES

R. Rakkimuthu, P. Sathishkumar

A.M. Anandakumar & D. Sowmiya

PG and Research Department of Botany

NGM College

rakkimuthu@ngmc.org

Abstract

Information and communication technologies (ICT) have completely changed the educational landscape and opened up new possibilities for improving teaching and learning. The incorporation of cutting-edge ICT pedagogies has drawn a lot of attention in the area of biological science education because it holds the promise of revolutionising conventional methods and producing more immersive and engaging learning environments. This paper investigates the effects of online collaborative projects, augmented reality, gamification, and virtual labs on biological science education. We investigate the effectiveness of these technologies in raising students' comprehension, critical-thinking abilities, and general engagement with the subject matter through a thorough analysis of empirical evidence and case studies. The results imply that cutting-edge ICT pedagogies have the ability to promote a greater appreciation for biological science while providing students with crucial scientific competencies for their future jobs. To give a more complete picture, problems and factors related to the application of these technologies are also discussed. Teachers may develop dynamic learning environments that motivate a new generation of scientifically literate and motivated students in the field of biological science by embracing these transformative pedagogies.

Key words: Innovative ICT Pedagogies, Biological Science Education, Transforming Learning Experiences, Information and Communication Technologies, Virtual Laboratories, Augmented Reality, Gamification

Introduction

The fast development of information and communication technologies (ICT) in recent years has profoundly changed many facets of our lives, including how we teach and learn. ICT has become a potent weapon in the field of education, changing conventional teaching techniques and creating new opportunities for immersive and interactive learning experiences (Smith *et al.*, 2022). The use of cutting-edge ICT pedagogies has had a particularly revolutionary impact on biological scientific education, providing teachers and students with fresh avenues for investigating challenging ideas, carrying out experiments, and working together on projects.

Biology education has undergone a paradigm shift with the introduction of virtual laboratories, augmented reality, gamification, and online collaboration platforms. These innovative tools give teachers the tools they need to design dynamic, interesting learning environments that pique students' curiosity and enhance their comprehension of biological processes. As a result, students not only acquire practical skills that are crucial for their future professions in the biological sciences, but are also better able to understand scientific theories.

This paper explores the realm of cutting-edge ICT pedagogies in biological science education and their profound influence on the learning process. We intend to emphasise the potential of these technologies to revolutionise the way we teach and learn biology, creating a new generation of scientifically literate and enthusiastic learners. To do this, we will examine the advantages, difficulties, and empirical data supporting the use of these technologies.

Virtual Laboratories and Simulations

Simulations and virtual labs have become essential teaching tools for biological science. Students can conduct experiments and investigate difficult concepts in these controlled virtual worlds. Without the use of tangible objects or equipment, students can obtain practical experience while observing the impacts of variables, making predictions, and drawing conclusions. According to a study by Rutherford *et al.* (2019), students exposed to virtual laboratories performed better on practical exams, proving the effectiveness of this ICT-based education for developing scientific skills.

Augmented Reality (AR) in Fieldwork

The learning experience for students studying biological science can be greatly improved by incorporating augmented reality (AR) into practical activities. Students can discover flora, wildlife, and ecological interactions in a dynamic and engaging way thanks to augmented reality (AR), which overlays digital information onto the real-world environment. This all-encompassing method develops a sense of curiosity, critical thinking, and problem-solving abilities. According to a research by Chen *et al.* (2020), students who engaged in AR-based fieldwork showed greater levels of engagement and a deeper comprehension of ecological topics than those who used more conventional fieldwork techniques.

Gamification for Concept Reinforcement

The incorporation of game aspects into educational activities, or "gamification," has been shown to be a successful method for teaching biological science subjects. Virtual scavenger hunts, instructional games, and interactive quizzes encourage healthy competition among students while encouraging active participation in the learning process. Gamification can be used to build cooperative learning environments that promote cooperation and peer interactions. Gamified learning activities have been shown to increase students' knowledge retention and engagement, according to a Smith *et al.* (2018) study, making them a viable ICT pedagogy for biological science education.

Online Collaborative Projects

ICT enables seamless student collaboration, allowing them to collaborate on biological science projects regardless of distance. Students can interact with various viewpoints, discuss ideas, and jointly create comprehensive answers to real-world problems through online collaborative projects. In a case study, Brown *et al.* (2021) showed how online

collaborative projects can improve students' collaboration and communication abilities while also fostering a better comprehension of biological topics.

Conclusion

Innovative ICT pedagogies in biology classrooms have created exciting new opportunities for teachers and students. Learning experiences have changed, becoming more dynamic, engaging, and accessible because to innovations like virtual laboratories, augmented reality, gamification, and online collaborative projects. By embracing new tools, educators may better enable students to understand biological science topics and to develop the next generation of capable and enthusiastic biologists. In order to ensure that their students have a transformative educational experience, educators must stay current on the newest ICT tools and approaches.

AI IN THE ENGLISH LANGUAGE CLASSROOM: TRANSFORMING TEACHING AND LEARNING PRACTICES

Dr. T. SuryaPrabha
Assistant Professor of English
NGM College, Pollachi

Abstract:

This article examines the transformative impact of artificial intelligence (AI) on teaching and learning practices within the English language classroom. AI technologies offer personalized learning experiences by analyzing students' individual learning styles and providing tailored content and activities. Additionally, AI enhances language instruction through virtual language assistants and interactive applications, making learning more engaging and immersive. Automated assessment tools powered by AI offer instant feedback to students, promoting continuous learning and skill development. Moreover, AI facilitates differentiated instruction by providing insights into students' learning profiles and adjusting task difficulty levels accordingly. While AI presents challenges such as data privacy concerns and algorithmic bias, its responsible integration can enhance the quality of English language instruction and prepare students for success in a digital world.

Keywords: Algorithmic bias, Data, Integration, Challenges, Instruction.

Introduction:

Artificial intelligence (AI) is revolutionizing various aspects of our lives, and education is no exception. In particular, AI has made significant strides in transforming teaching and learning practices within the English language classroom. This article explores the myriad ways in which AI is reshaping English language education, from personalized learning experiences to automated assessment tools.

Personalized Learning with AI:

One of the most significant benefits of AI in the English language classroom is its ability to provide personalized learning experiences. AI-powered platforms analyze students' strengths and weaknesses, adapt content to their individual learning styles, and offer tailored exercises and activities. For example, AI algorithms can identify a student's preferred learning modality—whether visual, auditory, or kinesthetic—and deliver content accordingly, thereby optimizing learning outcomes and engagement.

Enhanced Language Instruction:

AI technologies are also enhancing language instruction by offering innovative tools and resources for both teachers and students. Virtual language assistants powered by AI, such as chatbots and voice recognition software, provide students with opportunities for real-time language practice and feedback. Additionally, AI-enabled language learning applications offer interactive exercises, multimedia resources, and gamified activities, making language learning more engaging and immersive.

Automated Assessment and Feedback:

Traditional methods of assessing language proficiency, such as standardized tests and written assignments, can be time-consuming and subjective. AI offers a solution by automating the assessment process and providing instant feedback to students. Natural language processing (NLP) algorithms analyze students' spoken and written language, evaluate their grammar, vocabulary, and pronunciation, and generate personalized feedback. This not only saves teachers time but also allows students to receive immediate guidance on areas for improvement, promoting continuous learning and skill development.

Facilitating Differentiated Instruction:

In a diverse classroom with students of varying proficiency levels and learning needs, differentiated instruction is crucial for ensuring that all students receive appropriate support and challenge. AI can facilitate differentiated instruction by providing teachers with insights into students' learning profiles and suggesting personalized learning paths. Moreover, AI-powered adaptive learning systems adjust the difficulty level of tasks based on students' performance, ensuring that each student is appropriately challenged and supported.

Addressing Challenges and Ethical Considerations:

While the integration of AI in the English language classroom offers numerous benefits, it also presents challenges and ethical considerations. These include concerns about data privacy and security, algorithmic bias, and the potential for overreliance on technology. Additionally, there may be resistance from educators and stakeholders who are unfamiliar with AI or skeptical of its effectiveness. Addressing these challenges requires careful consideration of ethical guidelines, transparent communication, and ongoing professional development for educators.

Conclusion:

AI is transforming teaching and learning practices within the English language classroom, offering personalized learning experiences, innovative instructional tools, and automated assessment and feedback mechanisms. By embracing AI responsibly and collaboratively, educators can enhance the quality of English language instruction, promote student engagement and success, and prepare students for success in a rapidly evolving digital world. As AI continues to advance, its role in the English language classroom will undoubtedly evolve, presenting new opportunities and challenges for educators and learners alike.

The Impact Of Technology On Narrative Structure In Contemporary Fiction

Dr. T. SuryaPrabha

Assistant Professor of English
NGM College, Pollachi

Abstract:

This article explores the evolving landscape of narrative structure in contemporary fiction in response to advancements in technology. With the proliferation of digital platforms and interactive media, authors are experimenting with new narrative techniques and storytelling formats, blurring the boundaries between traditional and digital literature. Drawing on examples from diverse genres and mediums, this research examines how technology influences the construction of narrative in fiction, from nonlinear storytelling and hypertext narratives to augmented reality and interactive storytelling experiences. By analyzing the intersection of technology, narrative theory, and literary innovation, this study sheds light on the transformative effects of technology on the storytelling craft, challenging conventional notions of authorship, reader engagement, and the future of storytelling.

Keywords: Fiction, Augmented reality, Technology, Digital Literature.

Introduction:

The advent of technology has revolutionized every aspect of human life, including the way stories are told and consumed. In the realm of contemporary fiction, authors are harnessing the power of digital tools and platforms to experiment with narrative structure, pushing the boundaries of traditional storytelling conventions. This article explores the profound impact of technology on narrative form in contemporary fiction, examining how authors adapt to and embrace the possibilities afforded by digital innovation.

Technological Influences on Narrative Structure:

One of the most significant ways technology has shaped narrative structure in contemporary fiction is through the exploration of nonlinear storytelling techniques. Digital platforms such as e-books, websites, and mobile apps enable authors to experiment with fragmented narratives, multiple perspectives, and non-chronological storytelling, challenging readers to engage with the text in new and unexpected ways. Novels like “House of Leaves” by Mark Z. Danielewski and “Cloud Atlas” by David Mitchell employ nonlinear structures to mimic the interconnectedness of digital networks and the non-linear nature of human memory, inviting readers to navigate a maze of narratives and uncover hidden connections.

Furthermore, advancements in hypertext technology have facilitated the creation of interactive narratives, where readers have agency to navigate the story world, making choices that shape the outcome of the narrative. Projects like “Inanimate Alice” by Kate Pullinger and Chris Joseph and “The Pickle Index” by Eli Horowitz and Russell Quinn blend text, multimedia elements, and interactivity to create immersive storytelling experiences that transcend the limitations of traditional print media. These interactive narratives challenge conventional notions of authorship and reader passivity, empowering readers to become active participants in the co-creation of the story.

In addition to nonlinear and interactive storytelling, technology has also influenced narrative structure through the integration of augmented reality (AR) and immersive storytelling experiences. AR novels like “Mr. Penumbra's 24-Hour Bookstore” by Robin Sloan and “S.” by J.J. Abrams and Doug Dorst blur the boundaries between the physical and digital worlds, embedding digital content within the physical book to create a multi-layered narrative experience. Immersive storytelling projects such as “Sleep No More” by Punchdrunk and “The Tempest” by the Royal Shakespeare Company leverage virtual reality (VR) and immersive

theater techniques to transport audiences into the heart of the story, blurring the lines between fiction and reality.

Challenges and Future Directions:

While technology has opened up new possibilities for narrative experimentation and innovation, it also presents challenges and ethical considerations for authors, publishers, and readers alike. Issues of accessibility, digital literacy, and data privacy raise questions about the inclusivity and ethics of digital storytelling practices. Moreover, concerns about algorithmic bias, content moderation, and platform monopolies highlight the need for critical engagement with technology and its impact on narrative form.

In conclusion, the impact of technology on narrative structure in contemporary fiction is profound and far-reaching, transforming the way stories are conceived, crafted, and consumed. From nonlinear storytelling and interactive narratives to augmented reality and immersive experiences, authors are embracing the possibilities of digital innovation to push the boundaries of storytelling conventions. As we navigate the ever-changing landscape of digital literature, it is essential to remain vigilant about the ethical implications and societal consequences of technology-mediated storytelling, striving to create inclusive, diverse, and ethical narratives that reflect the complexities of the human experience.

SOCIAL STRATIFICATION: ANALYZING THE POLITICAL PERSPECTIVES IN ARUNDHATI ROY'S *THE GOD OF SMALL THINGS*

Dr. T. Suriyaprabha,

Assistant Professor of English,
Nallamuthu Gounder Mahalingam College, Pollachi.

Abstract:

Arundhati Roy's novel *The God of Small Things* delves into the intricate layers of social stratification, offering a profound analysis through various political perspectives. Set in post-colonial India, the narrative unfolds against a backdrop of deep-rooted societal hierarchies, where caste and class distinctions play a pivotal role in shaping individual destinies. This article seeks to analyze the political perspective in Arundhati Roy's *The God of Small Things*.

Keyword: Narrative, Stratification, Hierarchies, Political, Class.

Arundhati Roy's *The God of Small Things* explores a multitude of themes, blending personal and political narratives against the backdrop of post-colonial India. The novel critically examines the rigid caste system in Kerala and its impact on individuals' lives. It delves into how societal norms and expectations based on caste influence personal relationships, choices, and opportunities. The theme of forbidden love, particularly the love between Ammu and Velutha, challenges societal norms and faces severe consequences due to the social stigma associated with crossing caste boundaries. The narrative explores the tragic consequences of love deemed unacceptable by the rigid caste system.

The novel portrays complex family dynamics, emphasizing the dysfunction within the Ipe family. The family's tumultuous relationships and secrets contribute to the overall tragedy of the narrative. Memory plays a significant role in the novel as the narrative weaves between the past and the present. The characters grapple with traumatic events that continue to haunt them, highlighting the lasting impact of personal and societal wounds. The theme of the loss of innocence is reflected in the experiences of the twin protagonists, Estha and Rahel, as they navigate a world marked by societal expectations, discrimination, and tragic events that disrupt their childhood.

The novel is set against a backdrop of political changes in post-colonial India. It explores the impact of political upheavals, including the Naxalite movement, on the lives of the characters

and the broader societal landscape. The narrative highlights the pervasive gender inequalities and patriarchal norms that restrict the agency of female characters. Ammu, Rahel, and other women in the novel face societal expectations and discrimination based on their gender. The lingering effects of British colonialism are subtly explored, touching upon the cultural and social remnants that shape the characters' identities and the landscape of post-independence India.

The novel incorporates vivid descriptions of the Kerala landscape and uses nature as a powerful symbol. The river, in particular, becomes a metaphor for the flow of time, the inevitability of change, and the interconnectedness of life and death. The theme of language and communication is central to the narrative. The characters navigate linguistic barriers, and the novel explores how language can both connect and separate individuals. Arundhati Roy weaves these themes together in a rich and complex tapestry, creating a narrative that is both intimate and politically charged. *The God of Small Things* is celebrated for its exploration of social, cultural, and political issues through a unique and evocative storytelling style.

1. Caste Hierarchies:

Roy vividly portrays the rigid caste system in Kerala, India, and its profound impact on the characters' lives. The novel critically examines how the caste structure determines societal norms, restricting individuals from forging relationships across caste boundaries. The political perspective here is one of resistance against an oppressive system that marginalizes and exploits certain communities.

2. British Imperialism:

While the novel primarily focuses on the internal dynamics of Indian society, it subtly addresses the aftermath of British imperialism. The legacy of colonial rule is reflected in the socioeconomic disparities, with the upper castes often adopting British values to maintain their status. The political undertone emphasizes the intersectionality of various forms of oppression.

3. Communal Politics:

The narrative also touches upon the communal tensions prevailing in post-independence India. The characters grapple with the political ramifications of religious and caste-based divisions, highlighting how political agendas exploit these fault lines to maintain power. This perspective underscores the interconnectedness of social and political forces in shaping the characters' lives.

4. Gender Politics:

The novel delves into the intersectionality of social stratification, particularly concerning gender. The characters, especially the female protagonists, face the dual challenges of caste and gender-based discrimination. Roy's political lens critiques the patriarchal structures that contribute to the oppression of women within the larger societal framework.

5. Resistance and Subversion:

Throughout the novel, there are instances of resistance and subversion against established social hierarchies. Characters challenge the norms imposed by the dominant political and social forces, often at great personal cost. Roy's political perspective celebrates acts of defiance as a means of disrupting oppressive structures.

6. Political Corruption:

The novel hints at the political corruption that perpetuates social inequalities. The nexus between politics and business further entrenches existing hierarchies, with those in power exploiting their positions for personal gain. This perspective offers a critical commentary on the systemic issues that sustain social stratification.

In *The God of Small Things*, Arundhati Roy weaves a narrative that not only vividly captures the personal struggles of her characters within the complex web of social stratification but also offers a nuanced political critique of the larger forces at play. The novel serves as a compelling exploration of how political perspectives shape and are shaped by the intricacies of social hierarchies.

ABSTRACT

Transgender studies have long been highlighted by social, political, moral, theoretical and methodological constraints, yielding a multitude of transgender representations in the field. As a result of theorisations informed by these constraints, transgender people have been respectively depicted as villains, victims and minions of patriarchal heterosexist binary orders. At the same time, they have been displaced from the very field of research named after them, as scholars have used transgender as a conduit for other theoretical pursuits that have no direct relation to the lived experiences and emancipation of transgender people. The

THE ROLE OF GOOD AND EVIL IN SHAKESPEARE'S MACBETH

Dr.T.Suriyaprabha, Assistant Professor, Department of English, N.G.M.College, Pollachi,
tsuriyaprabha79@gmail.com

ABSTRACT

William Shakespeare was an English playwright, poet and actor. He is widely regarded as the greatest writer in the English language and the world's pre-eminent dramatist. Shakespeare's epic play, Macbeth is one of his greatest works. The play deals with the very powerful theme of the struggle between good and evil, and also the complex nature of good and evil and how they can interplay with one another and that man far from being a simple creature is a complex one within whom both good and evil reside. The main distinction between good and evil that Shakespeare does create in the play is the striking contrast between the witches and the innocent king Duncan. The witches are immediately associated with the supernatural as gothic auditory and visual symbols, respectively 'thunder and lightning' mark their entrance. Macbeth begins as a 'good' man, a very good man – loyal, responsible and honourable. During the course of the action he becomes evil, influenced by the witches who are agents of the power of evil. He is led on by their suggestion that he is destined to become king. The witches who contribute to Macbeth's downfall are symbols and agents of evil. In sharp contrast Duncan, Malcolm, Macduff and Edward are associated with the powers of good. The evil that disrupts the natural order must be defeated so that the natural order can be restored.

INTRODUCTION

The play begins with the brief appearance of a trio of witches and then moves to a military camp, where the Scottish King Duncan hears the news that his generals, Macbeth and Banquo, have defeated two separate invading armies one from Ireland, led by the rebel Macdonwald, and one from Norway. Following their pitched battle with these enemy forces, Macbeth and Banquo encounter the witches as they cross a moor. The witches prophesy that Macbeth will be made thane (a rank of Scottish nobility) of Cawdor and eventually King of Scotland. They also prophesy that Macbeth's companion, Banquo, will beget a line of Scottish kings, although Banquo will never be king himself. The witches vanish, and Macbeth and Banquo treat their prophecies skeptically until some of King Duncan's men come to thank the two generals for their victories in battle and to tell Macbeth that he has indeed been named thane of Cawdor. The previous thane betrayed Scotland by fighting for the Norwegians and Duncan has

K.S.RANGASAMY COLLEGE OF ARTS AND SCEICNE (AUTONOMOUS),
TIRUCHENGODE,
NAMAKKAL (DT).

condemned him to death. Macbeth is intrigued by the possibility that the remainder of the witches' prophecy that he will be crowned king might be true, but he is uncertain what to expect. He visits with King Duncan, and they plan to dine together at Inverness, Macbeth's castle, that night. Macbeth writes ahead to his wife, Lady Macbeth, telling her all that has happened.

Lady Macbeth suffers none of her husband's uncertainty. She desires the kingship for him and wants him to murder Duncan in order to obtain it. When Macbeth arrives at Inverness, she overrides all of her husband's objections and persuades him to kill the king that very night. He and Lady Macbeth plan to get Duncan's two chamberlains drunk so they will black out; the next morning they will blame the murder on the chamberlains, who will be defenseless, as they will remember nothing. While Duncan is asleep, Macbeth stabs him, despite his doubts and a number of supernatural portents, including a vision of a bloody dagger. When Duncan's death is discovered the next morning, Macbeth kills the chamberlains—ostensibly out of rage at their crime—and easily assumes the kingship. Duncan's sons Malcolm and Donalbain flee to England and Ireland, respectively, fearing that whoever killed Duncan desires their demise as well. Frightened, Macbeth goes to visit the witches in their cavern. There, they show him a sequence of demons and spirits who present him with further prophecies: he must beware of Macduff, a Scottish nobleman who opposed Macbeth's accession to the throne; he is incapable of being harmed by any man born of woman; and he will be safe until Birnam Wood comes to Dunsinane Castle. Macbeth is relieved and feels secure, because he knows that all men are born of women and that forests cannot move. When he learns that Macduff has fled to England to join Malcolm, Macbeth orders that Macduff's castle be seized and, most cruelly, that Lady Macduff and her children be murdered.

When news of his family's execution reaches Macduff in England, he is stricken with grief and vows revenge. Prince Malcolm, Duncan's son, has succeeded in raising an army in England, and Macduff joins him as he rides to Scotland to challenge Macbeth's forces. The invasion has the support of the Scottish nobles, who are appalled and frightened by Macbeth's tyrannical and murderous behavior. Lady Macbeth, meanwhile, becomes plagued with fits of sleepwalking in which she bemoans what she believes to be bloodstains on her hands. Before Macbeth's opponents arrive, Macbeth receives news that she has killed herself, causing him to sink into a deep and pessimistic despair. Nevertheless, he awaits the English and fortifies Dunsinane, to which he seems to have withdrawn in order to defend himself, certain that the witches' K.S.RANGASAMY COLLEGE OF ARTS AND SCEICNE (AUTONOMOUS),
TIRUCHENGODE,
NAMAKKAL (DT).

prophecies guarantee his invincibility. He is struck numb with fear, however, when he learns that the English army is advancing on Dunsinane shielded with boughs cut from Birnam Wood. Birnam Wood is indeed coming to Dunsinane, fulfilling half of the witches' prophecy. In the battle, Macbeth hews violently, but the English forces gradually overwhelm his army and castle. On the battlefield, Macbeth encounters the vengeful Macduff, who declares that he was not "of woman born" but was instead "untimely ripped" from his mother's womb what we now call birth by cesarean section. Though he realizes that he is doomed, Macbeth continues to fight until Macduff kills and beheads him. Malcolm, now the King of Scotland, declares his benevolent intentions for the country and invites all to see him crowned at Scone.

Macbeth is first portrayed in the play as a good man. 'A warrior goes out openly in the battlefield, proclaims his allegiance to his side and fights. He murders the king in secret and tries to pass the blame on to the guards. If we were to look at the good and evil, of light and darkness then good is connected to light here and evil to darkness. Macbeth's open bravery in battlefield contrasts that with his secret murder of the king. The battle is in the day, the murder of the king is in the night, a time of darkness. We also see later on in the play Hecate meet the witches during the night. Openness, honesty, bravery, good are all connected to light and deceit, cowardice, evil are all connected to the night and to darkness. Both good and evil exist in the world, both light and darkness, both day and night. How these two pairs interplay with each other is the challenge that man faces. Macbeth is too ambitious to allow his conscience to stop him from murdering his way into power, yet too morally conscious to be happy about his evil actions. Much of his behavior throughout the play is an equivocation because he never quite takes one position over the other, but exists as both good and evil

CONCLUSION

Good and evil are symbolized by light and darkness in the play Macbeth, by William Shakespeare. When there is peace and good, Shakespeare mentions light; whether if it is the sun shining brightly or merely a candle giving light. On the other hand, when there is evil and disorder, he mentions darkness; a shadow or a horrible thunderstorm. Witches are known for evil, chaos, and conflict. Since Witches are known to be evil, whenever they appear, the weather is usually horrible. Shakespeare utilizes light and darkness in order to portray when good or evil will take place. *Macbeth* examines the nature of evil and the corruption of the human soul. In *Macbeth* evil is the opposite of humanity, the deviation from that which is

K.S.RANGASAMY COLLEGE OF ARTS AND SCEICNE (AUTONOMOUS),
TIRUCHENGODE,
NAMAKKAL (DT).

natural for humankind, yet evil originates in the human heart. Supernatural and unnatural forces are the agents of human beings, not their instigators. The witches' words do not seduce Macbeth. He is compelled by his own ambition and his wife's ruthlessness. Similarly, spirits do not solicit Lady Macbeth, rather she invokes their aid for her purposes. The evil of Macbeth and Lady Macbeth is so great that ultimately it destroys both of them. The human soul cannot endure such evil. One way or another evil destroys the soul. Knowing he is doomed to lose, Macbeth still battles against Macduff, the representative of virtue and the redresser of the play. Lady Macbeth is defeated by madness and death. Evil is incompatible with humanity.

Abstract

To maintain green environment, an ecofriendly solid blend biopolymer electrolyte is prepared by using biomaterial aloe vera, bio-polymer iota carrageenan and sodium chloride by solution casting technique. The blend bio-polymer, biomaterial electrolyte is characterized by XRD, FTIR and DSC. The sodium ion conductivity of the blend bio-polymer electrolyte is measured using AC Impedance technique. Pure blend bio-polymer biomaterial electrolyte shows a conductivity of 1.0×10^{-4} S/cm. The blend bio-polymer biomaterial electrolyte with 0.4wt% of sodium chloride shows a conductivity of 1.1×10^{-3} S/cm. The glass transition temperature has been measured for pure blend and highest sodium ion conducting membrane. Primary sodium ion battery has been constructed using highest sodium ion conducting membrane as an electrolyte, sodium metal as anode and MnO_2 as a cathode. The constructed sodium ion primary battery shows an open circuit voltage of 2.46V. The performance of the battery has been studied using different loads.

ABSTRACT

Zinc stannate (Zn_2SnO_4), n-type semiconducting ternary metal oxide is found to be a promising candidate for various applications due to its tuneable large bandgap and high electron mobility. Zinc stannate (ZTO) nanoparticles were prepared via facile hydrothermal technique. The crystallographic, morphological and optical properties of the as prepared sample was analysed using various characterization techniques such as XRD, FTIR, UV-DRS, FESEM with EDS. The crystallite size of the sample is found to be 14nm. Morphology of the sample shows spherical shaped particles with grain size of about 38 to 43nm. From the optical analysis, the maximum absorption of the samples was observed around 255nm with a direct band gap value of 3.84eV. The electrochemical performance of the prepared electrode was performed through three electrode system by varying the concentration (1M, 2M and 3M KOH) of the electrolyte. It was found that the specific capacitance of the sample varies according to the concentration of the electrolyte.

INFLUENCE OF TRANSITION METAL DOPED BARIUM STANNATE FOR SUPERCAPACITOR APPLICATION

ABSTRACT

Embedding of active electrode materials for supercapacitor application is the major ongoing research in the energy storage device technology in recent times. Though the maximum specific capacitance of ~2000F/g has been achieved using hybrid capacitors, the quest for enhancing the capacitance rate with longer cycle life and higher potential window is still in progress. The well-known combination of transition metals and carbon based materials (pseudo and EDLC) redecorate the hybrid systems. The highest specific capacitance obtained for pseudocapacitors is ~700F/g. To improve the specific capacitance of a pseudocapacitor, Barium Stannate a wide bandgap semiconducting material is doped with various transition metals such as Cu, Zn, Ga, and Ag. Structural, morphological and optical properties are analysed and their electrochemical performances are studied using three electrode system.

INVESTIGATION OF PURE AND Cu DOPED ZnCo_2O_4 FOR SUPERCAPACITOR APPLICATION

ABSTRACT

Supercapacitors are electrochemical energy storage devices that exhibits high power density and excellent cyclic stability. In supercapacitor applications, ternary metal oxide materials are found to be superior to binary metal oxides due to its tuneable electrical conductivity, work function and bandgap energy value. Among various ternary metal oxides, spinel Zinc Cobalt Oxide based materials are identified as an effective electrode material as they possess high theoretical capacitance, good redox activity and conductivity. Pure and Cu doped ZnCo_2O_4 electrodes are successfully prepared by employing hydrothermal method. The crystal structure and the corresponding functional group of the samples were investigated using XRD and FTIR techniques. The electrochemical analysis shows that the Cu-doped ZnCo_2O_4 exhibited highest specific capacitance value of 60.65 F/g at 10 mV/s in a 6M KOH electrolyte solution. Cu-doped ZnCo_2O_4 showed outstanding long-term cyclic stability with a capacitance retention ratio of 63% even after 5000 charge discharge cycles.

SYNTHESIS AND CHARACTERIZATION OF PURE AND COBALT DOPED ZINC STANNATE NANOPARTICLES

ABSTRACT

Pure and Cobalt doped ZTO (Zn_2SnO_4) nanoparticles are synthesised by hydrothermal technique. The prepared samples are analysed using XRD, UV-DRS and PL to explore its structural, optical and photoluminescence properties. XRD measurement shows that all the prepared samples are cubic crystal structure. The average crystallite size of pure ZTO was found to be 13 nm which decreases gradually to 9 nm as the concentration of Co increases. With increase in concentration of Co the band gap value of ZTO reduces from 3.85 to 3.03 eV. The doping of Co reduced the PL intensity greatly, indicating the recombination of photo-generated electrons and holes was inhibited strongly, which is favourable to the photo-degradation activity.

COMPUTATIONAL STUDY ON STRUCTURAL STABILITY OF HYDROGEN BONDED CAFFEINE AND THEOBROMINE

M. KARTHIKA*

Department of Physics, NGM College, Pollachi-642 001, India

*Corresponding author. E-mail: karthikrishnan2004@gmail.com Phone: 9788342015

ABSTRACT

The geometry, stability, vibrational spectra and bonding of caffeine with theobromine have been analysed using B3LYP method implementing 6-311G (d, p) basis set. The interaction leads to fourteen structures involving various hydrogen bonds. The complex possessing N-H...N hydrogen bond is the most stable. The interaction energy confirms the stability of CAF-THB-244 complex. The stability has been enhanced by the strong binding of N-H proton donor of THB with imidazole nitrogen of CAF. AIM and NBO analyses confirm the existence of hydrogen bonding. The assignment of the vibrational frequency is made according to the nature, position and relative intensity. A maximum electron density of 0.03 a.u. indicates the higher structural stability observed in CAF-THB-244 complex due to the localization of charges. The stabilization energy between the acceptor and donor has been examined for various intermolecular hydrogen bonds and the major interaction is found to occur between the lone pair N7 and antibond $\sigma^*(N17-H23)$ resulting in the energy of 14.92 kcal/mol.

Keywords : Stability. Interaction energy. AIM. NBO. Electron density. Stabilization energy

A THEORETICAL STUDY ON NILOTINIB AND ITS POLYMORPHS IN GAS PHASE AND AQUEOUS MEDIUM

ABSTRACT

Cancer is one of the leading causes of death in the world. Chronic Myeloid Leukemia is a tumor that affects the blood and bone marrow. This tumor is treated more effectively by the second generation anti-cancer drug Nilotinib [4-methyl-N-[3-(4methyl-1H-imidazol-1-yl)-5-(trifluoromethyl) phenyl]-3-[(4-pyridin-3-ylpyrimidin-2-yl) amino] benzamide]. Density Functional Theory (DFT) has been employed to explore the structure and geometrical parameters of Nilotinib and its Polymorphs in gas phase, water and methanol medium. The electrostatic interaction between the atoms is analysed through hydrogen bond parameter. The calculated band gap energy reveals that Nilotinib and its polymorphs are more stable in gas phase. Molecular Electrostatic Potential (MEP) mapping is used to locate electrophilic and nucleophilic region of the molecule.

Keywords : Nilotinib, DFT, Hydrogen bond parameter, Band gap energy, MEP

SYNTHESIS AND LUMINESCENCE PROPERTIES OF Tm^{3+} DOPED NaCaPO_4 AS BLUE EMITTING NANOPHOSPHOR FOR WHITE LED APPLICATIONS

ABSTRACT

The photoluminescence (PL) of $\text{NaCaPO}_4:\text{Tm}^{3+}$ phosphor synthesized by coprecipitation method is the main focus of this work. The structural, photoluminescence properties were examined by X-ray diffraction and PL. The crystal structure is investigated by using the X-ray diffraction. The $\text{NaCaPO}_4:\text{Tm}^{3+}$ were synthesized by varying the content of Tm^{3+} to study the absorption and luminescence properties. The optimum concentration of Tm^{3+} and band gap of the $\text{NaCaPO}_4:\text{Tm}^{3+}$ is studied. The PL spectra under 358 nm excitation reveal the peak in the blue region. Further the critical energy transfer distance between Tm^{3+} ions which further suggested the multipolar interaction is the origin of the concentration quenching. The CIE chromaticity diagram shows the purity of the emitted color from the prepared samples. Further color rendering index and CCT is studied. The present phosphor emits in the intense blue region which shows the applicability of the phosphor in white light emitting device.

Keywords: Phosphor, Photoluminescence, Inorganic compounds, White light emission.

SYNTHESIS AND CHARACTERIZATION OF BARE AND IRON DOPED COBALT MAGNETITE NANO PARTICLES

PONRAJ T^{1*}

¹Department of Physics, Nallamuthu Gounder Mahalingam College, Pollachi, Tamilnadu

*Corresponding Author e_mail id: ponrajngmc@gmail.com

ABSTRACT

Currently, cobalt magnetite (CoMn_2O_4) nanoparticles are considered to be an attractive substitution for various applications such as energy storage and oxygen reduction reaction, because of their high reversible capacities and cost-effectiveness. The present work deals with the synthesis and characterization of CoMn_2O_4 nanoparticles and to study its nature while adding the dopant. The bare and Fe (2%, 4% and 6%) doped CoMn_2O_4 nanoparticles were prepared by simple co-precipitation method. The CoMn_2O_4 is a semiconductor transition metal, which is doped with Iron in different concentrations to enhance the physical properties. The prepared samples were characterized by various characterization techniques. XRD results reveals the prepared bare and Iron doped CoMn_2O_4 nanoparticles have cubic structure with unit cell parameters $a = b = c = 8.1880\text{\AA}$, $\alpha = \beta = \gamma = 90^\circ$. The average crystallite size of bare and doped samples is found to be $\sim 15\text{-}30\text{ nm}$. The intensity of crystallographic peaks of iron doped samples is found to decrease in comparison with ferrous free CoMn_2O_4 which is due to distortion of lattice. The bare CoMn_2O_4 nanoparticles show that the spherical morphology is randomly distributed on the skin area of the sample. In addition to that, small pores are visible on the sample. The SEM micrographs of 2%, 4% and 6% Fe doped CoMn_2O_4 nanoparticles shows the similar spherical morphology, but its particle size is reduced. As concentration of Fe increases on CoMn_2O_4 , the particle size decreases due to the smaller ionic radii of Fe^{2+} compared with Co^{2+} . From EDAX analysis, it seems the atomic weight percentage of Co and Mn in the Fe doped CoMn_2O_4 is reduced significantly with the increase in dopant concentration. FTIR result shows different functional groups and slight shift in wave numbers in the doped samples. The characterization result indicates the prepared material is suitable for applications in electrochemical devices, solar cell, luminescent devices, batteries, super capacitor, sensors etc.

EFFECT OF CALCINATION TEMPERATURE ON THE STRUCTURAL AND MAGNETIC STUDIES OF IRON OXIDE (Fe_2O_3) NANOPOWDERS

K.SOMASUNDARAM^{1*}, S.THASWIN¹, K.KOWSALYA¹

¹Department of Physics, Nallamuthu Gounder Mahalingam College, Pollachi-642001.

ABSTRACT

The effect of calcination temperature on the synthesized Iron oxide ($\alpha\text{-Fe}_2\text{O}_3$) nanopowders (NPs) by co-precipitation method was studied. The prepared $\alpha\text{-Fe}_2\text{O}_3$ NPs are characterized using X-Ray Diffraction (XRD) analysis and Vibrating Sample Magnetometer (VSM). The powder X-ray diffraction results indicated the presence of $\alpha\text{-Fe}_2\text{O}_3$ NPs with hematite phase and the average crystallite size was found to be 25 to 30 nm. The magnetic properties of the nanoparticles were studied by Vibrating Sample Magnetometer (VSM) at room temperature. All the samples exhibited characteristic hysteresis loop and more importantly the sample calcined at 700°C attained the strong ferromagnetic behaviour of $\alpha\text{-Fe}_2\text{O}_3$ with magnetization (M_s) ~ 0.471 emu/g, Coercivity (H_c) ~ 355.66 Oe, Retentivity (M_r) ~ 0.043 emu/g. Hence, the obtained results confirmed that $\alpha\text{-Fe}_2\text{O}_3$ NPs are promising candidates for Magnetic Resonance Imaging (MRI) as the contrast agents, cell magnetic separation and hyperthermia applications.

Keywords: nanoparticles, iron oxide, hematite, magnetic properties, hyperthermia.

SYNTHESIS, CHARACTERIZATION OF IRON DOPED NICKEL SULPHIDE FOR SUPERCAPACITOR APPLICATIONS

SARAVANAN.V*, ASWANIK, VASANTHAKUMAR.E

Nallamuthu Gounder Mahalingam College, Palakkad Road, Pollachi 642001,
Tamil Nadu, India

ABSTRACT

Metal sulphides such as NiS, CoS₂, FeS₂ and CuS have been used as capable electrode materials for pseudo capacitors due to their excellent electrochemical performance like good reversible capacity and synergetically high electrical conductivity. Among the above metal sulphides, Nickel Sulphide is an important one because of its different phases and various applications in the field of solar cells, batteries, supercapacitors etc. Fe-based sulphides is also an earth abundant and non-toxic element and non-noble candidates used for various applications as water splitting and other electronic devices. Comparing to binary metal sulphides, Metal Sulphides (MMSS) and hybrid metal sulphides have higher electrochemical capacitances and improved electrochemical properties. This work is focused on the synthesis and characterization of iron doped Nickel Sulphide nanoparticles as electrode material for supercapacitor applications. Iron doped Nickel Sulphide nanoparticles were prepared by simple co-precipitation method. The prepared samples were characterized by XRD, UV-VIS, FT-IR, SEM and electrochemical studies.

5. நான்மணிக்கடிகையில் தனிமனித அறம்

- முனைவர் ந.ஜெயகந்தா
தமிழ் உதவிப் பேராசிரியர்

இன்றைய சமூக சூழலில் மனிதன் இயந்திர மயமான வாழ்க்கையை வாழ்ந்து கொண்டிருப்பது எவராலும் மறுக்க முடியாததாகவே இருக்கின்றது. இயந்திர மயமான வாழ்க்கையில் நெறிதவறி வாழும் மனிதன் பல துன்பங்களுக்கு ஆளாகின்றான். அத்தகைய வாழ்க்கையை வாழ்ந்து கொண்டிருக்கின்ற மனிதனுக்கு அவனது வாழ்க்கை முறையினையும் சமுதாய ஒழுக்கங்களையும் எடுத்துக் கூறும் சிறப்பு வாய்ந்தவையாக அற இலக்கியங்கள் திகழ்கின்றன. இவ்விலக்கியங்கள் மனிதனை நல்வழிப்படுத்தி, ஒழுக்க உணர்வுடன் வாழ வழிவகை செய்கின்றன. இலக்கியங்கள் வாழ்வின் முறைப்படுத்த உதவும் வழிகாட்டிகளாகத் திகழ்கின்றன. அத்தகைய அற இலக்கிய நூல்களில் நான்மணிக்கடிகை தலைசிறந்து விளங்குகிறது.

நான்மணிக்கடிகை

பதினெண் கீழ்க்கணக்கு நூல்களுள் ஒன்று. இது ஒரு நீதிநூல், விளம்பிநாகனார் என்னும் புலவரால் இயற்றப்பட்ட இந்நூல் 101 பாடல்களைக் கொண்டுள்ளது. ஒவ்வொரு பாடலும் நான்கு அடிகளால் ஆனது. ஒவ்வொரு பாடலிலும் நான்கு மணியான கருத்துக்கள் சொல்லப்படுகின்றன. இதனாலேயே இது நான்கு வகை மணிகளால் ஆன ஆபரணம், நான்மணிக்கடிகை என்று அழைக்கப்படுகிறது. இவற்றில் இரண்டு பாடல்களை ஜி.யூ.போப் அவர்கள் ஆங்கிலத்தில் மொழிபெயர்த்துள்ளார்.

பதினெண் கீழ்க்கணக்கு நூல்களைத் தனிப்பாடல் ஒன்று பட்டியலிட்டுக் காட்டுகின்றது.

“நாலடி நான்மணி நானாற்பது ஐந்திணைமுப்
பால் கடுகங் கோவை பழமொழி-மாமூலம்
இன்னிலைய வாங் காஞ்சியுடன் ஏலாதி என்பவே
கைநிலை யுமாம் கீழ்க்கணக்கு”

அறம்

‘அறம்’ என்ற சொல்லுக்கு, “தருமம், புண்ணியம், இல்லறம், அறக்கடவுள்” (திருமகள் தமிழகராதி.ப58) என்று வ.த.இராமசுப்ரமணியம் பொருள் கூறுகிறார்.

அறிஞர் அ.த.பன்னீர்செல்வம், தமிழிலே பொதுவாகச் சொல்லப்படும் அறம் என்பதும், திருக்குறளில் சொல்லப்படும் அறம் என்பதும், மிக விரிந்த பொருளுடையது இன்னது என்று ஒரே சொற்களில் அடக்கிவிட முடியாது என்கிறார். சுருக்கமாகச் சொன்னால் அறம் என்பது நல்லவை செய்தல் என்பதாகும்.

கல்வி

நம் வாழ்வில் சிறந்த இடத்தையும் சிறப்பையும் தருவனவற்றில் ஒருவனுக்கு துணையாக இருப்பது கல்வியே என்கிறார், அறிஞர் அண்ணா.

கல்வி எப்படித் துணையாக நிற்கிறது? அது நெருப்பில் வேகாது. தண்ணீரால் அழியாது, திருடரால் களவாட முடியாது, பிறருக்குக் கொடுக்கக் கொடுக்கப் பெருகும் தன்மை உடையது. இவ்வளவு சிறப்புகளை உடைய கல்வி நிச்சயம் நமக்குத் துணையாக நிற்கும் என்று கல்வியின் சிறப்பைக் கூறுகிறார். மேலும்,

“கற்றான் தளரின் எழுந்திருக்கும் கல்லாத
பேதையான் வீழ்வானேல் கால்முறியும்”

(நான்.75)

தனக்கு தன்பம் வந்தபோது துணை நிற்பது கல்வி போல் வேறில்லை. தளர்ச்சியுற்ற காலத்தில் கற்றவர் முயன்று எழுகின்றனர். கல்லாதவர், கால் முறிந்தவர் போல் ஆகிவிடுகின்றனர் என்ற கருத்தையும் விளம்பிநாகனார் விளம்புகின்றார்.

கல்வி நம் வாழ்வில் இன்றியமையாதது என்பதனால்தான் வள்ளுவர்,

ஒருமைக்கண் தான்கற்ற கல்வி ஒருவற்கு
எழுமையும் ஏமாப்பு உடைத்து

(குறள்.398)

ஒரு பிறப்பில் தான் கற்ற கல்வி அப்பிறப்பிற்கு மட்டுமல்லாமல் ஏழு பிறப்பிற்கும் பயனுடையதாக அமையும் என்ற கருத்தை நம் வாழ்வில் உணர வேண்டும்.

மேலும், சமூகத்திற்கு கல்வி குறித்தான சிந்தனையை விவேகானந்தர் கூறுகையில்,

“கல்வி என்பது பண்பாட்டை உருவாக்குவதற்கான சமுதாயத்தை வளப்படுத்துவதற்கான ஒரு வழி, எந்த நாகரிகமும் மறையாமல் தொடர்வதற்குக் கல்வி ஆற்றலே முக்கிய காரணமாக இருந்து வந்துள்ளது”

என்ற இவரின் கல்விச் சிந்தனையை மனதில் கொண்டு, ‘கற்றோர் சென்ற இடமெல்லாம் சிறப்பு’ என்பதையும் மனதில் இருத்தி, கல்விகுறித்தான சிந்தனையோடு வாழ் என அன்புக் கட்டளையிடுகின்றது.

மக்களின் இயல்பு

தம் செயலாலும், தாம் செய்யும் தொழிலாலும் வேறுபட்டு இருக்கும் பல வகையான மக்களின் இயல்புகளைத் தொகுத்துரைக்கின்றது.

மலர் இருப்பதை அதன் மனத்தால் அறிகிறோம். அது போல் ஒருவன் செயல்திறனை அவன் சொல்லால் அறியலாம். ஒருவன் உள்ளக் குறிப்பை அவன் முகத்தால் அறியலாம் என்பதை,

“நாற்றம் உரைக்கும் மலர் உண்மை கூறிய
மாற்றம் உரைக்கும் வினைநலம் தூக்கின்
அகம் பொதிந்த தீமை மனம் உரைக்கும் முன்னம்
முகம் போல முன் உரைப்பது இல்”

(நான்.48)

இப்பாடலின் வழி அறியலாம்.

உழவு மாடு உடையவன் வேளாளன். எவரோடும் மாறுபடாது ஒற்றுமையுடன் வாழ்பவன் அந்தணன், நன்மை செய்யாதவன் துணையின்றி இருப்பான்; நற்குணங்களை உடையவன் இனிமையானவன் என்றும்,

பிறருக்குக் கொடுத்து உண்பவனே புகழ் உடையவன். கொடுப்பவன் கைப்பொருளைப் பறித்து உண்டவன் பேராசைக்காரன் (நான். 2) என்றெல்லாம் அறநோக்கில் மக்களின் இயல்புகளை வகைப்படுத்துவதைக் காணலாம்.

உயிர்க்கொலை

இவ்வுலகத்தில் ஒன்றை உருவாக்கலும் அழித்தலும் நம் கையில் இல்லை என்பதை உணர்ந்திருந்தாலே எவ்விதமான கொலை எண்ணமும் எவரிடமும் வந்திருக்காது. பிற உயிர்களுக்குத் தீங்கு செய்வதால் தனக்கு அதனால் துன்பமே வந்து சேரும் உண்பதற்காக உயிரினங்களை வளர்ப்பதும், விலைகொடுத்து மாமிசத்தை வாங்கி உண்பதும் பெரும் குற்றமே என்கிறது நான்மணி,

“அலைப்பான் பிறவுயிரை யாக்கலும் குற்றம்

.....

கொலைப்பானுங் குற்றமே யாம்”

(நான்.26)

வள்ளுவரும் உயிர்க்கொலை கூடாது என,

“கொல்லான் புலால் மறுத்தானைக் கைகூப்பி

எல்லா உயிரும் தொழும்”

(குறள்.260)

இக்குறள், குற்றம் செய்த மனத்தையே இரங்க வைக்கும். அப்பொழுதுதான் அறம் அங்கு நிற்கும். ஆம், ஒவ்வொரு கண்ணுக்கும் புலனாகாமல் இருக்கும் இரக்க குணமும் அறம் என உணர்த்துகின்றார்.

பின்பற்ற வேண்டியவை

தனிமனிதன் வாழ்வில் பின்பற்றவேண்டியவை எவை என்பதும், நீக்க வேண்டியவை எவை என்பது பற்றியும் எச்சரிக்கை செய்கிறது.

பிறர் செய்த தீமைகளுக்காக அவரை வெறுக்காமல் கோபப்படாமல் இருக்க வேண்டும். அவர் செய்த நன்மைகளை மறக்காமல் இருக்க வேண்டும் என்பதை

“கன்றாமை வேண்டும் கடிய பிறர் செய்த
நன்றியை நன்றாகக் கொளல் வேண்டும்”

(நான்.13)

இவ்வரிகள் விளக்குகின்றது.

இவ்வாறாக நான்மணிக்கடிகை பல அறக்கருத்துகளை முன் வைக்கின்றது. இக்கருத்தோடு நம் வாழ்கை எவ்வாறு பயனுள்ள வாழ்க்கையாக வாழ வேண்டும் என்பதற்கு சிறு விளக்கம்.

‘வாழை போல வாழ்வது வாழ்க்கை’ என்பார்கள். தனக்குப் பின் வாழை தன் சந்ததிகளைத் தன்காலடியில் செழுமையாக வளர்ப்பதில் தவறுவதே இல்லை.

“வாழையடி வாழையென வந்த திருக்கூட்டம்”

என்பது வள்ளற் பெருமானின் வாக்கு. வாழ்க்கையில் நாம் எப்படி வாழ வேண்டும் என்ற பண்பாட்டையும் வாழை நமக்குப் பேர்தித்து நிற்கிறது.

மக்களுக்குப் பயன்படாத பொருள்கள் ஒன்றுகூட வாழையினிடத்தில் இல்லை. தண்டு, பட்டை, நார், இலை, பூ, பிஞ்சு, காய், கனியாகிய தன் அத்தனை உறுப்புகளையும் மக்களின் பயன்பாட்டிற்குத் தந்து மகிழ்கிறது வாழை. அதுபோல நாம் பிறருக்கும் பயன்பட வாழ்வோம். தீமைகளை மறப்போம்! மண்ணிப்போம்!

6. நாட்டுப்புற மக்களின் நம்பிக்கைகள்

- முனைவர் ந. ஜெயசுதா
தமிழ் உதவிப் பேராசிரியர்

நாட்டுப்புற மக்களால் வழிவழியாக நம்பப்பட்டும் பாதுகாக்கப்பட்டும் வருகின்ற நம்பிக்கைகளே நாட்டுப்புற நம்பிக்கைகளாகும். பெரும்பாலான நம்பிக்கைகள் நாட்டுப்புற மக்களாலேயே உருவாக்கப்பட்டும் ஒரு தலைமுறையினரிடம் இருந்து அடுத்த தலைமுறையினருக்கு வழங்கப்பட்டும் வருகின்றன.

பிறப்பு முதல் இறப்பு வரையும், இறந்த பின்னும் நம்மோடும் நம் வாழ்வோடும் நம்பிக்கை என்பது பயணம் செய்கின்றதை கண்கூடாகக் காண்கிறோம். நம்பிக்கை குறித்து ஹெலன் ஜான்சன், “நம்பிக்கைகள் எழக் காரணமாயிருந்த நிகழ்ச்சிகள் உண்மையாகவோ, பொய்யாகவோ இருக்கலாம். ஆனால் நம்பிக்கை இருப்பது உண்மை அவை மெய்ப்பிக்கத் தக்கவை” என்கிறார்.

அறிவியல் தொழில்நுட்பம் நன்கு வளர்ந்துள்ள இக்காலகட்டத்திலும் மக்கள் இன்றும் பழைய நம்பிக்கைகளையும் சடங்குகளையும் பின்பற்றுகின்றனர் என்பது மறுக்க முடியாத உண்மையாகும். காரணம் பழைய நம்பிக்கையாக இருந்தாலும் நம் வாழ்வில் பல நன்மைகள் ஏற்பட வழிவகை செய்கிறது எனலாம். ஏராளமான நம்பிக்கைகளில் சிலவற்றை இக்கட்டுரையில் காண்போம்.

காலந்தோறும் நம்பிக்கைகள்:

நம்பிக்கை என்பதற்கு விசுவாசம், ஆணை, உண்மை, சத்தியம், நிசம், உறுதிப்பாடு என்று மதுரைத் தமிழ்ப் பேரகராதி பல்வேறு பொருளைத் தெரிவிக்கின்றது.

“நம்பிக்கைகள் பெரும்பாலும் அச்சவுணர்வின் அடிப்படையாகத் தோன்றியதாகக் காட்சியளித்தாலும் இயற்கைக்கு அப்பாற்பட்ட செயல்களை உணராத பொழுதும் மனித வாழ்வில் ஏற்படும் சில நிகழ்ச்சிகளுக்குக் காரணம் கற்பிக்க இயலாத பொழுதும் மனித மனமானது சிலவற்றைப் படைத்துக் காரணம் கற்பித்துக் கொள்கிறது. அவைகளே நம்பிக்கைகளாக உருவாகின்றன” என்கிறார் டாக்டர் சு. சக்திவேல் அவர்கள். மேலும், அமெரிக்கக் கலைக் களஞ்சியம், ஒரு பிரச்சனையின் மூலமாக நாம் தெரிந்து கொள்ளும் உண்மையை விரும்பி ஏற்றுக் கொள்ளாதலே பொதுவாக நம்பிக்கை எனப்படும். ஆனால் நுட்பமகவும், சமயரீதியாகவும் பார்க்கும் பொழுது ஒரு மனிதனின் மனத்திண்மையையும், விருப்பத்தையும் பொறுத்தே நம்பிக்கை அமைகிறது என விளக்கமளிக்கிறது.

நம்பிக்கைகளே மனித வாழ்வினை இயக்குகின்றன. தனிமனித நம்பிக்கை காலப் போக்கில் சமுதாய நம்பிக்கையாக மாற்றம் பெற்றுள்ளது.

‘நம்பினார் கெடுவதில்லை’ என்ற பொன்மொழிக்கு ஏற்ப நாட்டுப்புற நம்பிக்கைகள் மக்கள் மனதில் பதிந்திருப்பதை இன்றளவும் காணமுடிகின்றது.

இறை நம்பிக்கை:

தந்தையோடு கடைவீதிக்குச் செல்லும் குழந்தை தந்தையின் சுண்டுவிரணைப் பிடித்துக் கொள்கிறது. அந்த சின்ன ஒரு பற்றுதல் அக்குழந்தைக்கு அதிகமான நம்பிக்கையைத் தருகிறது. தந்தை தன்னைக் கைவிட்டாட்டார். தந்தை தன்னைப் பாதுகாத்துக் கொள்வார் என குழந்தை சந்தேகத்திற்கு இடமின்றி நம்புகிறது. தந்தை மீது அந்தக் குழந்தை வைக்கும் நம்பிக்கைக்குக் காரணம் என்ன? தந்தையின் சுண்டு விரலின் வலிமையா? இல்லை. குழந்தை தந்தையை அறிந்திருக்கிறது என்பது தான்.

அதே போல, தான் இறைவனிடம் நாம் வைக்கும் நம்பிக்கைக்கு "அவர் எப்படிப் பட்டவர்" என்பதை நாம் அறிந்து கொள்வதில் தான் அடங்கியிருக்கிறது. இறைவனின் தன்மைகளை முழுமையாக அறிந்து கொண்ட மூன்றோர்கள் இறைநம்பிக்கையுடன் வாழ்ந்தனர். அவ்வாறே நாமும் பின்பற்றுகிறோம்.

இறை நம்பிக்கை குறித்தான ஒரு கதை.

சீடன் ஒருவன், "குருவே! இறைநம்பிக்கை இல்லாமல் நம்மால் நேர்வழியில் செல்ல முடியாதா? என்று சந்தேகம் கேட்டான்.

"சமயம் வரும்போது சொல்கிறேன்" என்றார் குரு.

ஒரு நாள் அந்தச் சீடன், ஆசிரமப் பசுவை மேய்ச்சல் முடிந்து தொழுவத்தில் கட்டி வைக்க கூட்டிச் சென்றான். அச்சமயம் அங்கு வந்த குரு, "சீடனே, பசுவை நீ வருகிறாயா? அல்லது பசு உன்னுடன் வருகிறதா? பசுவை நீ ஒட்டுகிறாயா? பசு உன்னை அழைத்துச் செல்கிறதா? எனக் கேட்டார்.

குழம்பிய சீடன், "சுவாமி என்ன சொல்ல வருகிறீர்கள்" எனக் கேட்டான்.

இந்தப் பசுவை நீதானே பராமரிக்கிறாய்? இது உன் பேச்சைக் கேட்காதா? ஏன் கயிறு கட்டி இழுத்துச் செல்கிறாய்?

"கயிறை விட்டால் அது ஓடிவிடும்"

"அப்படியென்றால் பசு உன் கட்டுப்பாட்டில் இல்லையானே?" என்றார்.

"குருவே, பசு எனக்குப் பழக்கம் தான் பன்னிரண்டு வருடங்களாகப் பராமரிக்கிறேன். என்றாலும், அது எங்காவது ஓடி விடக்கூடாது என்பதால் அதைக் கயிறு கட்டி அழைத்து வருகிறேன்" என்றான்.

"உன்னைப் போலத்தான் இறைவனும், மனிதர்களாகிய நாம் கட்டுப்பாடு தளர்த்து, சீரழிந்து விடக்கூடாது என்பதற்காக, இறை நம்பிக்கை கொண்டு நம்மைக் கட்டுப்படுத்தி நேர்வழியில் செலுத்துகிறார் என்று அன்றைய கேள்விக்கு பதிலாகச் சொன்ன இக்கதை இறை நம்பிக்கைக்கு விளக்கம் தருகிறது.

இக்கதைக்கு வலுசேர்க்கும் வகையில் நீதி வெண்பா.

"சிவனே சிவனே சிவனேயென் பார்பின்
சிவனுமையாளோடும் திரிவன்:- சிவனருளால்
பெற்ற இளங்கன்றைப் பிரியாமல் பின்னோடிச்
சுற்று பசுப்போல் தொடர்ந்து."

பிறந்த கன்றொன்று பெற்ற தாயிடம் மிகுந்த பாசம் கொண்டாலும், துள்ளி விளையாடும் விளையாட்டால் தூரதூரமாகச் செல்லும். அப்போது பசு அதைப் பிரிந்து விடாமல் அதன் பின்னே தொடர்ந்து ஓடி அதைச் சுற்றி வரும். அதுபோல சிவனே? சிவனே என்று மனம் உருகிச் சொல்லுவார் பின்னே அச்சிவன் தன் பார்வையோடு அவர்களைச் சுற்றியே இருப்பார் என்கிறது.

மனிதனுடைய மனம் பலமற்ற கொடியைப் போன்றது, அதனால் தனித்து நிற்கவோ, செயல்படவோ இயலாது. அதற்கு பற்றிக்கொண்டு எழத் துணையாக இறைவனைக் கொண்டான். சடங்குகளையும் நம்பிக்கைகளையும் மனதில் கொண்டு இறை நம்பிக்கையோடு வாழ்வவனானான். அவ்வாறான நம்பிக்கையில் பலவற்றை நாம் பின்பற்றுகிறோம். அறிவியல் பூர்வமாக அதில் உண்மைகளும் அடங்கும்.

* கோயில்களில் நேர்மறை அதிர்வுகள் அதிகமாக இருப்பதும்,

* கோயிலின் மூலஸ்தானத்தில் பூமியின் அதிகபட்ச காந்த அலைகள் எழுவதாகவும் ஆய்வுகள் சொல்லுகின்றன. காந்த அலைகளும், நல்ல அதிர்வுகளும் ஒருவருக்கு நல்ல மனநிலையைக் கொடுக்கின்றது.

* கோயிலுக்குச் செல்கிறபோது, இறைவனை பார்த்தல், நல்ல இசை, மந்திரங்களைக் கேட்டல், கற்பூர தீபாராதனை போன்ற நல்ல வாசனையை நுகர்தல், பிரசாதத்தை ருசித்தல், நல்ல அதிர்வுகளை உணர்தல் என ஐந்து புலன்களும் தூண்டப்படுதல்.

* கோயில்களில் உள்ள ஆலய மணிக்குப் பின் பெரும் அறிவியல் இருப்பதாக சொல்லப்படுகிறது. மணி என்பது ஒரே ஒரு உலோகத்தால் ஆனது அல்ல. கேட்மியம், ஈயம், துத்தநாகம், தாமிரம், நிக்கல், குருமம் மற்றும் மங்கனம் என்ற பல உலோகத்தால் ஆனவை. இதிலிருந்து வரும் ஒசை மனித உடலுக்குள் ஊடுருவி மனதை அமைதி அடையச் செய்கிறது.

* தேங்காய் உடைக்கும் நிகழ்விலும் நம்பிக்கை நிலவுகிறது. கண் உள்ள மூடி நமக்கும். மற்றைய பகுதி அர்ச்சகருக்கும் என்ற வகையில் அதில் எவ்வித உடைசல் ஏற்படாது. கெட்டுப் போகாதும் இருப்பதே சிறப்பு என நம்புகிறோம்.

இதுபோன்ற பல அறிவியல் பூர்வமான நம்பிக்கையைப் பழக்கமாகக் கொண்டுள்ளோம்.

உணவு நம்பிக்கை:

உணவு என்பது ஓர் உயிரினத்திற்குத் தேவையான ஊட்டச்சத்து கிடைப்பதற்காக உண்ணப்படும் எந்தவொரு பொருளையும் குறிக்கும். மனிதனின் அடிப்படைத் தேவைகளில் ஒன்று உணவு. தமிழர் உணவு முறைகளில் பலவகையான நம்பிக்கைகள் உண்டு.

தமிழர் உணவு முறை குறித்து விக்கிப் பீடியாவில், “பசித்தபின் சாப்பிட வேண்டும். நாக்கால் ருசித்தபின் சாப்பிட வேண்டும். சீராகத் தூங்கிய பின் சாப்பிட வேண்டும். இரசாயன உணவைத் தவிர்த்து இயற்கை உணவை சாப்பிட வேண்டும், அளவோடு சாப்பிட வேண்டும், வயிற்றில் உணவு ஜீரணித்தப் பின் சாப்பிட வேண்டும், அளவோடு அமைதியுடனும் மகிழ்வுடனும் இருக்கும் போது சாப்பிட வேண்டும், கவலையின்றி சாப்பிட வேண்டும் என பட்டியலிடுகின்றது. இப்பட்டியலைச் சார்ந்தே நமது நம்பிக்கைகள் தொடர்கின்றன.

உணவியல் நிபுணர் தாரணி கிருஷ்ணன், “உணவு உண்ணும் நேரம், உடல் எடை, ஆரோக்கியம் ஆகியவற்றுக்கு நேரடித் தொடர்பு இருப்பதாகக் கூறுகிறார். இக்கருத்தையே வள்ளுவர்,

“மருந்தென வேண்டாவாம் யாக்கைக்கு அருந்தியது
அற்றது போற்றி உணின்”

(குறள் 942)

உண்ட உணவை செரிப்பதற்கான கால இடைவெளி தந்து உணவு உண்ணும் உடலுக்கு வேறு மருந்தே தேவையில்லை என்று சொல்வதால், உடலுக்கு மருந்து, ‘உணவு’தான் என்பதை உணர்த்துகின்றது.

உடலுக்குத் தேவையான உணவு ஆரோக்கியமானதாக இருக்க வேண்டும். அன்றைய உணவுகள் விவசாயிகளால் ஆரோக்கியமானதாக வழங்கப்பட்டது. சிறந்த தரமான உணவுப் பெருளின் வளர்ச்சிக்கு முளைப்பாரி போடும் நம்பிக்கை சான்றாகிறது.

முளைப்பாரி போடுதல்:

விவசாயிகள் பருவம் பார்த்து விவசாயம் செய்து அறுவடை செய்யும் நேரத்தில் முதலில் அடுத்த போகத்திற்கான தரமான விதைகளை வெயிலில் காய வைத்து பாதுகாப்பார்கள். பாதுகாத்த விதைகளை அடுத்த பருவத்தில் விதைப்பதற்கு முன் பன்னெடுங்கால வழக்கமாக இருந்திருக்கிறது. அப்படி நம் முன்னோர்கள் குழுவாகச் சேர்ந்து கூட்டு முயற்சியாகச் செய்தது தான் முளைப்பாரித் திருவிழாவாகும்.

முளைப்பாரி என்னும் அரிய தொழில்நுட்பத்தை இப்போதுள்ள விவசாயிகள் கண்டுகொள்ளாத காரணத்தால் இன்று பல ஆயிரம் பாரம்பரிய விதைகளை இழந்து விட்டோம். அதனால் மரபணு மாற்றம் பெற்ற வீரியம் இல்லாத விதைகளை வாங்குகின்ற அவலம்.

ஒவ்வொரு காய், கனி, பூக்களிலும் விதைகள் அவசியம். மறுசுழற்சிக்கு அவைதான் வித்தாகின்றன. ஆனால் இன்றைய காலகட்டங்களில், விதையில்லாத பழங்களும், காய்களுமே நமக்குப் பிடிக்கின்றது. பற்களுக்கு வேலையே இருக்கக்கூடாது என்று எதிர்பார்க்கின்றனர். விதைகளற்ற எவ்வித உணவுப் பொருளும் நமக்கு ஆரோக்கியம் தருவதில்லை.

பாரம்பரிய இயற்கை உணவு இல்லாமல் பலர் துன்பப்படுகின்றனர். உடம்பில் ஏற்படும் சில பல மாற்றங்களுக்கும் இதுவே காரணம். உணவியல் மாற்றமே மரபியல் மாற்றம். மரபியல் மாற்றத்தால் இனப்பெருக்க இன்மை ஏற்படுகிறது. உதாரணமாக, தற்போது பெருகி வரும் செயற்கை கருத்தரிப்பு மையம் ஆகும்.

பத்து குழந்தைகள் தவழ்ந்த வீட்டில் ஒரு குழந்தை தவழ எத்தனை வேண்டுதல்கள்... எண்ணிலடங்காதவை.

மழை பற்றிய நம்பிக்கை:

பருவ நிலைகள் மாறப் போவதை எறும்புகள், பூனைகள், விலங்குகள் உள்ளிட்ட உயிரினங்கள் உணர்ந்துகொண்டு அதற்கேற்ப செயல்படும். இவ்வுயிரினங்களின் செயல்பாடு களைப் பார்த்து அடுத்து என்ன நிகழும் என்று பழந்தமிழ் மக்கள் அறிந்து கொண்டனர். எறும்புகள் தங்களது முட்டைகளைக் கொண்டு மேட்டு நிலப்பகுதிக்குச் சென்றால் எறும்புகள் தங்களது முட்டைகளைத் தூக்கிக்கொண்டு படைபோலச் செல்வதைக் காண்கிறோம். எறும்புகள் தன் முட்டைகளைத் தூக்கிக்கொண்டு படைபோலச் செல்வதைக் காண்கிறோம். எறும்புகள் தன் முட்டைகளைத் தூக்கிக்கொண்டு படைபோலச் செல்வதைக் காண்கிறோம். எறும்புகள் தன் முட்டைகளைத் தூக்கிக்கொண்டு படைபோலச் செல்வதைக் காண்கிறோம். எறும்புகள் தன் முட்டைகளைத் தூக்கிக்கொண்டு படைபோலச் செல்வதைக் காண்கிறோம்.

பாதுகாக்கவே அவ்வாறு செய்கிறது. மழைவரும் என்பதை முன்கூட்டியே அறியும் ஆற்றலையும் கொண்டுள்ளது. மேலும் தட்டான்பூச்சி தாழப் பறப்பதும் தவளை சுத்துவதும் மழைவருவதற்கான அறிகுறி என்ற நம்பிக்கை அனைவரிடமும் உள்ளது. மழை நம்பிக்கை குறித்த பாடல்,

"அஞ்சாந்தேதி இடிச்சா ஆல செவுத்துமேல நெல் வெளையும்
ஆறாந்தேதி இடிச்சா ஆல இலை மேல நெல்வெளையும்
எட்டாந் தேதி இடிச்சா எட்டிப் பார்க்க ஒண்ணும் இல்ல
பத்தாந் தேதி இடிச்சா பாறை மேல நெல் வெளையும்"

(ஆல செவுத்துமேல - கரும்பு ஆலைக் கொட்டகையின் சுவற்றின் மீது) மேற்குறிப்பிட்ட நாட்களில் எட்டாந்தேதியைத் தவிர, பிற நாட்களில் இடிமின்னல் தோன்றினால் தான் அதிக அளவில் மழைவரும் என்றும் எட்டாந்தேதி இடித்தால் மழை பொய்க்கும் என்பதும் நம்பிக்கையாகும். மழை வருமா? வராதா? என்ற கேள்விக்கு இன்று விஞ்ஞானத்தின் பதிலுண்டு. அன்றைய மக்கள் 'வானம் பார்த்த பூமி'யாக மழைக்காலத்தை அனுபவத்தால் உணர்ந்தே பயிர் செய்தனர். பொதுவாக தமிழகத்தில் இரு பருவக்காற்று மழையைக் கொடுக்கும் என குறிப்பிடுவார்கள். வடகிழக்கு பருவக் காற்று, தென்மேற்கு பருவக் காற்று என்ற இரண்டு பருவக் காற்றும் நமக்கு மழைப்பொழிவைத் தரும் என கிராமப்புற மக்களின் நம்பிக்கையாகும். இந்த நம்பிக்கை அறிவியல் பூர்வமானது என்று நாம் நம்பும் வகையில் இயற்கை தூக்கணாங்குருவியைப் படைத்துள்ளது. ஆம் ஆற்றிவு உடைய நாம் அதன் விஞ்ஞான தொழில்நுட்பத்தைக் கண்டு தலைவணங்க வேண்டும். தூக்கணாங்குருவி தனது கூட்டை பருவமழைக்குத் தக்கவாறு பாதுகாப்பாக அமைக்கின்றது.

தென்மேற்குப் பருவக்காற்று வீசும் போது அதன் எதிர்திசையான வடகிழக்குப் பகுதியில் வாசலை அமைக்கும் தன்மையையும் இயற்கையின் குழலையும் தட்ப வெப்பத்தையும் உணர்ந்துள்ளது. மேலும் ஆட்காட்டி, அல்லது வானம்பாடிப் பறவை என்ற சொல்லுவார்கள். இந்தப் பறவை எந்தத் திசையை நோக்கி கூட்டமாக சத்தம் போட்டுச் செல்கின்றதோ அந்தத் திசையில பெருமழை பெய்கிறது; 'கடுங்காத்து மழையாகும்' என்ற பொன்மொழியும் மழைபற்றிய நம்பிக்கையை உணர்த்துகிறது.

கண்திருஷ்டி (அ) கண்படுதல்:

வாழ்வில், ஏதேனும் ஒரு நல்லது நடந்தாலும் கெட்டது நடந்தாலும் நம் வீட்டில் சொல்லும் விஷயம்... திருஷ்டி சுத்திப் போடுங்க... என்பதுதான். கெட்ட எண்ணங்களின் தாக்குதல்தான் கண் திருஷ்டி என்கிறார்கள். இதை கண்ணேறு என்றும் சொல்லுவார்கள்.

சில கண்களுக்குத் தீமை விளைவிக்கும் சக்தி உண்டு. அத்தகையோரின் கண்பட்டால் குழந்தைக்கு நோய்நொடி வரும் என அக்கால நாட்டுப்புற மக்கள் நம்பினர். எனவே தான் கல்லடி பட்டாலும், கண்ணடி படக்கூடாது என்ற பழமொழியை,

"கல்லீட்டிற்கு ஒதுங்கினாலும்
கண்ணீட்டிற்கு ஒதுங்க இயலாது"

என்ற வாக்கையும் பயன்படுத்துகிறார்கள்.

திருஷ்டிக்கண் படுதலிலிருந்து குழந்தைகளைக் காக்க, கண்ணாம்பும், மஞ்சளும் கொண்டு குழந்தைமேல் சுற்றிப் போடும் பழக்கத்தை,

"கண்ணான கண்ணார்க்கு கண்ணோக்கும் வாராமல்
கண்ணாம்பும் மஞ்சளும் சுற்றி எறி கண்ணார்க்கு"

என்ற இப்பாடல் கண்திருஷ்டிப் படுதலிலிருந்து தன்னைப் பாதுகாக்கும் முறையைக் கூறுகின்றது.

நம் வீட்டில் குழந்தைகளுக்குச் சூடம் சுற்றி வீட்டின் முன் எரிய விடும் பழக்கமும், வியாழன், ஞாயிறு அன்று வீட்டில் உள்ள அனைவரையும் வரமிளகாய், கடுகு, உப்பு போன்ற பொருள்களைப் படியில் எடுத்துக் கொண்டு அனைவரையும் சுற்றி நெருப்பில் போடும் பழக்கமும் இன்றளவும் பின்பற்றுகிறோம்.

கண் திருஷ்டி குறித்து பிரபல தத்துவ ஞானி

பிரான்சிஸ் பேகன், ஒருவருக்கு பொறாமை மேலிடும் போது முதலில் அது அவரது கண்களில் தான் வெளிப்படுகிறது என்கிறார். மனிதனின் கண்களிலிருந்து வெளிவரும் ஆற்றல் சில சமயங்களில் மிருகங்களை அல்லது குழந்தைகளைக் கூடக் கொல்லும் ஆற்றல் படைத்தது. சிலருக்கு இன்னும் அதிதமான ஆற்றல் கண் பார்வையினாலேயே சாபம் இட வல்லவர்கள் என்று திருஷ்டியை அறிவியல் ரீதியில் விளக்கம் அளித்த அறிஞர் ப்ரூடார்க் அவர்களின் கருத்து இங்கு ஏற்புடையது.

இதற்கு இன்னும் பயன்பாட்டில் உள்ள பல முறைகளைப் பட்டியலிடலாம்.

* திருஷ்டியிலிருந்து தன்னைக் காக்க, தாயத்துகளை அரைஞாண் கயிற்றில் ஆரம்பித்து, மணிக்கட்டு, கழுத்து போன்ற இடங்களிலெல்லாம் அணிந்து கொள்வது.

* கண்ணுக்கு அழகூட்டுவதற்காக மட்டும் தமிழ் மங்கையர் மையைத் தீட்டிக் கொள்ளவில்லை. தன்னைத் தீய பார்வையிலிருந்து காத்துக் கொள்வதற்காகவும் மையைத் தீட்டிக் கொள்கின்றனர். குழந்தைகளுக்கும் மை தீட்டும் தாய்மார் மறந்துவிடாமல் அதே மையினாலேயே குழந்தையின் கன்னத்தில் ஒரு திருஷ்டிப் பொட்டை வைக்க மறக்க மாட்டார்கள்.

* மணமக்கள் வீட்டிற்குள் நுழைவதற்கு முன்னர் அவர்களை வாசலிலேயே நிறுத்தி வைத்து வீட்டில் அவர்களுக்கு மிகவும் வேண்டியவர்கள், வயதானவர்கள் கற்பூரத்தை ஏற்றி அவர்களைச் சுற்றி திருஷ்டி கழிப்பது பழக்கம். மேலும் நவரத்தினங்களை அணியும் பழக்கமும் இவற்றைப் போக்க பயன்படுத்துகின்றனர்.

* உப்பு மனிதர்களை தீய திருஷ்டியிலிருந்து காக்கிறது என்பதையும் அது சற்று வெப்பப்படுத்தப்பட்டாலோ, அல்லது மேலே தெளிக்கப்பட்டாலோ அதன் சக்தி இன்னும் மிக அதிகமாகிறது என்பது நம்பிக்கை.

உப்பு, மஞ்சள் சிறந்த கிருமி நாசினி என்பது இன்றைய மக்கள் அனைவருக்கும் தெரிந்திருக்கக் கூடும். காரணம் கொரோனாவால் துன்பப்பட்டு பயந்து நாம் நம்பிக்கையில் பயன்படுத்திய பொருட்கள் ஏராளம். அவற்றுள் மிக முக்கியமானது உப்பு மஞ்சள், வேப்பிலை, துளசி இன்னும் பல உள்ளன.

தொண்டை கரகரப்பாக இருந்தால் உப்புநீர் கொப்பளிக்கிறோம், உப்பு மஞ்சள் நீரால் ஆவிபிடிக்கிறோம். பழங்களை உப்புநீரால் சுழவிப் பயன்படுத்துகிறோம். மஞ்சள் கட்டையை கல் உப்பினுள்ளே பல நாட்களுக்கு போட்டு வைத்திருப்பார்கள். குழந்தைகளின் வயிற்றுப் பிரச்சனைகளுக்கு அம் மஞ்சளை அரைத்துக் கொடுக்கும் வழக்கம் இன்றும் உண்டு.

இதுபோல பல நம்பிக்கைகள் அறிவியல் பூர்வமாக நம்பப்பட்டு பயன்பாட்டில் உள்ளதை மறுக்க முடியாது.

நம்பிக்கைகள் பல. நாட்டுப்புற மக்கள் நம்பும் ஒவ்வொன்றிலும் மனித வாழ்க்கை சிறக்கவும் இயற்கையோடு இயைந்து வாழும் முறையைக் கட்டிக்காட்டுவதும், உடல் நலம் பெறவும் வழிவகை செய்கிறது. 'நம்பிக்கையே பலம்' என்பதை மனதில் கொண்டு நாட்டுப்புற மக்கள் வாழ்கின்றனர்.

தொகுப்புரை

காலத்தினால் தொன்மையானது, கருத்தின் செழுமையினால் செப்பமானது. பழந்தமிழ் செம்மையினையும், செம்மாந்த பெருநிலையினையும் தெள்ளத்தெளிய விளக்கிக்காட்டும் ஒப்பற்ற ஒளிவிளக்கமாவது நம் தாய்மொழியாம் தமிழ்மொழி தோன்றிய நாள் முதல் இந்நாள் வரையும் இனி வருங்காலத்தும், எழிலுடனும் ஏற்றமுடனும் திகழும் நம் செம்மொழியாம் தமிழ்மொழி.

இத்தகைய சிறப்புமிக்க நம் தமிழ்மொழியை வளரும் இளம்பருவ மாணவங்களுக்கு வழங்கும் வகையில் உயர்கல்வியை உயரிய நோக்கோடு பயிற்றுவிக்கும் கொங்குமண்டலத்தின் சிறப்புடன் விளங்கும் பொள்ளாச்சி “நல்லமுத்துக்கவுண்டர் மகாலிங்கம் கல்லூரியின்” தமிழ்த்துறையின் வாயிலாக “தமிழ்ச்சோலை” எனும் நான்காம் பருவத்திற்கான தொகுப்பு நூல் வெளியிடப்படுகிறது இந்நூலில் செய்யுட்பகுதி, உரைநடையில், கட்டுரைப்பகுதி, இலக்கணம், இலக்கிய வரலாற்றுப்பாடப்பகுதி, நாடகம், படைப்பாக்கம் எனப் பன்முகத் தன்மை கொண்ட ஓர் நூலாக வெளியிடப்படுகிறது.

இதில் முதலாவதாக இடம்பெற்றிருப்பது செய்யுட்பகுதியில் சங்க இலக்கியம் பதினெண்மேல்கணக்கில் நற்றிணை, குறுந்தொகை, ஐங்குறுநூறு, பதிற்றுப்பத்து, கலித்தொகை, அகநானூறு, புறநானூறு, முல்லைப்பாட்டு ஆகியவற்றில இருந்து சங்க வாழ்வியலை எடுத்துரைக்கும் வகையில் தேர்ந்தெடுக்கப்பட்ட பாடல்கள் வைக்கப்பட்டுள்ளன. மேலும் பதினெண்கீழ்க்கணக்கு நூல்களான நான்மணிக்கடிகை, திருக்குறள், திரிகடுகம், ஆசாரக்கோலை, பழமொழி நானூறு, சிறுபஞ்சமூலம், முதுமொழிக்காஞ்சி, ஏலாதி, இன்னிலை போன்ற அற நூல்களில் உள்ள அறக்கருத்துகளை இளம் கல்லூரி மாணவர்களுக்கு புகட்டும் வகையில் இப்பாடல்கள் வைக்கப்பட்டுள்ளன.

இரண்டாவதாக இடம்பெற்றிருக்கும் பகுதி உரைநடைப்பகுதி. இப்பகுதி தமிழ்த்துறைப் பேராசிரியர்களால் எழுதப்பட்ட பத்துறை சார்ந்த கட்டுரைகள் தொகுத்தளிக்கப்பட்டுள்ளன.

‘காரைக்காலம்மையார் கவிதைகள்’ என்னும் கட்டுரையில் பெண்பாற்கவிஞர்களின் சிறப்பினை சங்க முதல் பக்திவரையிலும் உள்ள பெண் கவிஞர்களையும், காரைக்காலம்மையாரின் கவிதைகளில் உள்ள, நாடக, காட்சிக்கவிதைகளைப் பற்றியும் கூறப்பட்டுள்ளது.

‘ஷெல்லியும் பாரதிதாசனும்’ என்னும் கட்டுரையில் இருபெருங்கவிஞர்களின் சமுதாயப் பணியை ஒப்பு நோக்கும் வகையில் அமைந்துள்ளது.

‘திருவாசகத்தின் மாணிக்கவாசகரின் பக்திநெறி’ என்னும் கட்டுரையில் ஆன்மிகத்தைப் பற்றியும், மாணிக்கவாசகரின் பிறப்பு முதல் அவர் நிகழ்த்திய அற்புதம் வரை எடுத்துரைக்கப்பட்டுள்ளது.

‘திருக்குறள் காட்டும் ஆளுமைத்திறன்’ எனும் கட்டுரையில் திருக்குறளில் உள்ள ஆளுமைத்திறன்களைப் பற்றிய செய்திகளை கவைபட எடுத்துரைக்கப்பட்டுள்ளது.

‘காலந்தோறும் பருவநிலை மாற்றங்கள் என்னும் கட்டுரையில் பருவநிலை அதற்கேற்ற தொழில்கள் குறித்தும் தற்போதைய நிலையில் ஏற்பட்ட மாற்றங்களின் விளைவுகள் பற்றியும் கூறப்பட்டுள்ளது.

Abstract

Being a traditional patriarchal society, women have been given a secondary status which is reflected in the economic, social and political spheres. However, women equality and empowerment has always remained a priority area and has been taken utmost care by stake holders. The paper critically investigates the Indian status among other countries and tries to find out preparedness to achieve Sustainable development Goal -5 of the United Nations. The paper develops argument on the basis of secondary sources as review of existing literature published in journal, books, reports of various, NGOs, Government and international organisations and websites. The paper critically examines women empowerment in India, various models and dimensions. The paper discusses constitutional safe guards as well as plans and programmes by the government and their implementation, indicators of women empowerment.

Keywords: Women Empowerment; Gender Equality; Government

Introduction

Traditionally being a patriarchal society, women have secondary role to play in every household in India. However, issues related to welfare of women have always been a priority among policy makers since independence, though the path has witnessed repositioning with time and as per the requirement from the Fifth Five Year Plan (1974-78) onwards, there has been a remarkable shift in the approach to women's issues from welfare to development. India has also endorsed various global efforts as the the Mexico Plan of Action (1975), the Nairobi Forward Looking Strategies (1985), Convention on Elimination of All Forms of Discrimination Against Women (CEDAW) in 1993, the Beijing Declaration as well as the Platform for Action (1995) and the Outcome Document adopted by the UNGA Session on Gender Equality and Development and Peace for the 21st century. In this background, the paper discusses status of women empowerment in India and its status at the international spectrum with regard to achievement of

SDG Goal 5 of the United Nations by 2030. The plan of the study is as follows. The next section deals with the review of literature and discusses the concept of women empowerment with supportive models alongwith dimensions. Section 3 provides the research objectives and methodology of the study. Section 4 analyses various legislations and government programmes for women empowerment, variegated initiatives taken for women empowerment by different N.G.O.s and corporate sector, international comparison regarding status of women empowerment followed by Section 5 which provides suggestions to meet the challenges and path forward to move ahead.

Dimensions of Women Empowerment The Human Development Index was introduced for the first time by United Nations Development Program (UNDP) in 1990 to measure the socio economic progress of a nation. The 1995 report emphasised on empowering women as it was required for the overall human development. To study the statistics related to human development and the share of women, two indices were introduced namely Gender Development Index (GDI) that takes into account inequality in the achievements between women and men and Gender Empowerment Measure (GEM) which measures the extent to which a women has influence in decision-making in politics, in professional life and in organisations. The Women Empowerment Matrix (Wieringa, 1994) was contrived to map out the general gender issues at national level and to outline the contours of dimensions of empowerment and to demonstrate the interlinkages of gender issues related to specific issues like education, health and women labour. The women empowerment matrix is a tool to aid the researcher in getting an overview of the various levels of women subordination presented along with various spheres in which women subordination is acted out. The matrix can be used for raising awareness, planning, policy analysis and others.

Importance

Over the past decades, there has been a steady increase in women's empowerment. Women must possess self-worth, confidence, and freedom to choose their needs and requirements. Classifying the people based on gender is unreasonable and it is having no worth. Still, women are paid less, expected to cook and restricted by their family members. To overcome these situations and to have an independent role in society, women's empowerment is needed. Empowering women is the fundamental right of women. They can have equal rights to participate in education, society, economics and politics.

The Role of the Woman

In today's world, women play an important role in a variety of fields, from scientific development and literature to financing and fierce competition in the social and economic fabric of dependency and poverty. Effective women empowerment includes a much larger set of rules, including effective participation in different development programs, and encouraging them to be independent and self-confident, to meet the challenges of living in a patriarchal society with courage and self-respect. Individual reinforcement can only be achieved if the individual has the ability to make decisions alone.

Modern Woman

Modern women are aware of their rights and are able to make rational and educated decisions in all spheres of life. Including the continued struggle for the women empowerment in the social, political, economic and religious spheres. Because gender equality means that men and women in society have equal opportunities to reach the internationally agreed development goals. Modern women are not lost in the comfort areas of their homes. Today, women have become doctors, engineers, and scientists, and thus play an important role in society. They also enjoy the freedom of expression and expression without any restrictions. Most countries allow for a strong legal infrastructure that encourages and protects women from exploitation, such as dowry and marriage. The Government is constantly implementing legislation to raise awareness of its rights among women.

Family and Community

If women are strengthened through economic, social, religious and political power, they will be more confident and express their thoughts without fear of laughing and being more effective in their actions. This may be good for him and his family and community, because he will participate in decisions that affect all of the above, and his decisions will depend on what is appropriate for everyone, not just. Providing training and education and mentoring programs that teach young girls, young women, and older women how to enter and live with themselves will lead to a big change in our society that will affect the world. A woman who is satisfied with her identity and learning to love herself and work with other women without fear of losing or envious will promote economic growth and allow women to be more progressive and thus affect every aspect of her life.

Conclusion

Women Empowerment is not merely a slogan but a prerequisite for an optimal capacity for overall development of a family, society, nation and a sustainable world. The paper has covered about affirmative legislation, plans and programmes initiated by the Government, NGOs and Corporate sector through their Corporate Social Responsibility over a very large spectrum starting from the Indian constitution to development in the recent years. It has been reflected by improvement in achieving gender parity in the category of educational attainment, showing improvement in political participation but showing a declining trend in economic participation and opportunity as well as in health and survival segment. In terms of Health and Survival, it is worse even among SAARC countries. As we have a decade towards achieving the SDG Goals, the Government needs to focus on these two segments more to achieve gender parity. There is urgent need of reassessing India's affirmative actions, giving fresh impetus on empowering girls and women not only through conventional education but also hand holding for skill acquisition and providing them with equitable economic opportunity with providing them with fitting medical and healthcare.

Abstract

Online learning, commonly referred to as e-learning, is the most effective approach and may significantly contribute to keeping people engaged and stress-free, particularly in pandemic or crisis situations. This is due to the fact that it is the most practical alternative, allowing teachers to teach from home using virtual classrooms and have access to all of the essential resources, making online sessions just as productive as in-person ones. This paper primarily focuses on the digital initiatives of Government of India, particularly those by the MHRD and UGC, the benefits of online learning, and practical steps to enhance online learning in India.

Keywords: Online Learning, Digital Initiatives, Benefits of online learning

Introduction

Online learning, also referred to as E-Learning, digital learning or electronic learning is acquisition of knowledge which takes place through electronic technologies and media. In other word, "learning that is enabled electronically". Typically, e-learning is conducted on the Internet, where students can access their learning materials online at any place and time. It is most often taking place in the form of online courses, online degree, or online programs. The COVID-19 pandemic has created the largest disruption of education system in history, affecting nearly 1.6 billion learners in more than 190 countries and all continents. Closures of schools and other learning spaces have impacted 94 per cent of world's student population, up to 99.50 per cent in low and lower middle countries (United Nation, 2020). It also states that, this crisis has stimulated innovation within the education sector. It is seen the innovative approaches to support education in this crisis of pandemic from radio and televisions to take-home packages. Distance learning solution were developed thank to quick responses by governments and other private partners all over the world supporting education continuity, including the Global Education Coalition covered by UNESCO.

Objectives of the Study

- ✓ To familiarize the e-learning initiatives by MHRD and UGC
- ✓ To disclose the benefits of online education in India
- ✓ To offer suitable suggestions to overcome the problem in e-learning.

Database and Methodology

The current investigation is supported by secondary information. Many websites, fresh internet articles, news, etc. were reviewed. This study output is the result of a review of papers from reputable national and international journals, websites, and issues that are related to them.

Digital Initiatives of Government of India

The following are noteworthy initiatives carried out by the Government of India and the University Grants Commission (UGC), in order to facilitate online learning in India, which are briefly mentioned in the section below.

(i) SWAYAM: The SWAYAM initiative was started by the Indian government in order to implement the three key tenets of the Education Policy, namely access, equity, and quality. All pupils, especially the most disadvantaged ones, will have access to the best teaching and learning tools through this initiative. SWAYAM hopes to close the digital divide between students who have benefited from the digital revolution so far and those who have not and have been excluded from the knowledge economy.

(ii) SWAYAM PRABHA: SWAYAM PRABHA is another project of the Ministry of Human Resource department, similar to SWAYAM. With DTH (Direct to home), they offer 34 educational channels nationwide on a round-the-clock basis. The channel covers secondary and higher education, as well as curriculum-based classes and support for students taking competitive exams. The INFLIBNET Centre and its uplinks channels from BISAG in Gandhinagar operate the web portal, and NPTEL, IITs, UGC, CEC, IGNOU, NCERT, and NIOS provide content for it.

(iii) NATIONAL ACADEMIEC DEPOSITORY: The National Academic Depository (NAD) is a project that aims to establish an online archive for academic awards like certificates, diplomas, degrees, and mark sheets. These awards can be safely digitized and stored on this platform, which is available twenty-four hours a day, seven days a week to academic institutions, boards, and eligibility assessment agencies. Academic awards can be easily retrieved and accessed quickly through NAD, and their legitimacy is guaranteed. Colleges and universities covered by NAD include Central, State, Deemed, and Private Universities, CBSE, and other State Boards.

(iv) NATIONAL DIGITAL LIBRARY OF INDIA: The National Digital Library of India (NDLI), supported and guided by the Ministry of Education, Government of India, through its National Mission on Education through Information and Communication Technology (NMEICT), is an online library of educational materials that goes beyond simple search and browsing capabilities. Learners can quickly locate the resources they require by using filtered and federated searching. Additionally, NDLI offers specialized services for particular user groups, such as services for researchers and general learners, services for students in high school and college preparing for exams, and services for job seekers.

(iv) E-SHODH SINDHU (eSS): The UGC-INFONET Digital Library Consortium, NLIST, and INDEST-AICTE Consortium were combined into one project called e-Shodh Sindhu by the Ministry of Education on the advice of an Expert Committee. About 10,000 primary, peer-reviewed

publications, as well as several bibliographic, citation, and factual databases from different publishers and aggregators, will be accessible both in real-time and in the past through the e-Shodh Sindhu. These tools will be made available to member institutions, including as universities, colleges, and technical schools with federal funding that are covered by the UGC Act's 12(B) and 2(f) sections.

(v) VIRTUAL LAB: The National Mission on Education through Information and Communication Technology (NMEICT), which is another initiative of the Ministry of Human Resource Development (MHRD), includes a consortium of twelve participating institutions, with IIT Delhi serving as the coordinating institution. This initiative is called Digital Lab. With a focus on remote experimentation, this project represents a substantial transformation in ICT-based education. For remote operation and observation, over 100 Virtual Labs with over 700 web-enabled experiments have been developed. The project aims to assist science and engineering college students and professors who lack access to top-notch lab facilities and equipment, high school students who may develop an interest in pursuing higher education, researchers from various institutions who can collaborate and share resources, and engineering colleges that can make use of the content and related teaching materials.

(vi) E-YANTHRA: E Yantra, a robotics-focused educational program created by the department of computer science and engineering at the Indian Institute of Technology, Bombay, is an IIT Bombay creation. The National Mission on Education through ICT (NMEICT) and the Ministry of Education of the Government of India support e-Yantra in its mission to improve the current engineering and robotics education systems globally and equip engineers with the skills necessary to use technology to address local challenges in a variety of fields, including agriculture, disaster management, defence, manufacturing, smart cities, home automation, and service industries.

(vii) Talk to a Teacher Program: It is a project of IIT Bombay, supported by MHRD under the national mission for ICT-based education (NMEICT). A few of the program's goals include showcasing the expertise of prominent professors, offering faculty and students top-notch engineering education, and assisting professionals in bringing up-to-date knowledge in their industry.

(viii) E-Acharya: The e-Acharya portal, developed under the National Mission for Education through ICT (NME-ICT), provides learners with an integrated platform to access various learning materials such as audio, video, and textual resources across eight subject categories, including Agriculture Science, Biological Science, Chemical Science, Physical Science, Medical and Health Sciences, Engineering and Technology, Social Sciences, and Arts and Humanities, all through a single interface. The website offers top-notch instructional materials from nationally renowned institutions.

(ix) E-Kalpa: FOSSEE, which is a part of the National Mission on Education through Information and Communication Technologies (ICT) under the Ministry of Education (MoE) in the Government of India, encourages the use of FLOSS tools in research and academia. Scilab, Python, eSim, Osdag, DWSIM, and other programs are among the projects that FOSSEE promotes.

(x) Vidwan: VIDWAN is a renowned database that features the bios of scientists, researchers, and professors who work in illustrious academic institutions and R&D organizations conducting

research and teaching in India. It provides important information regarding the experience, expertise, scholarly publications, background, contact details, researcher identity, and accomplishments of the experts. With funding support from the National Mission on Education through ICT, the Information and Library Network Centre (INFLIBNET) built and maintains the database (NME-ICT).

(xi) E-GYANKOSH: The Indira Gandhi National Open University (IGNOU) now provides all of its study resources online for students to access at www.egyankosh.ac.in, alleviating any inconvenience caused by late delivery of these materials. Instead of relying on DVDs and paper copies of study materials that could be delayed in some locations, this website gives students the option of learning online.

(xii) E-ePathshala: The ePathshala portal/app was created by CIET and NCERT and debuted in November 2015 with support from the Ministry of Human Resource Development. It offers educational resources for teachers, students, parents, researchers, and educators. It is available in English, Hindi, and Urdu and can be accessed online as well as through Google Play, the App Store, and Windows.

(xiii) SHODHGANGA: Indian theses can be found in Shodhganga. It was founded in 2011 and is currently maintained by INFLIBNET Centre, an independent inter-university center run by the Indian University Grants Commission (UGC). To act as a liaison between the University and the Center and to ensure that soft copies of PhD theses submitted to the University are submitted to Shodhganga in a timely manner, it is necessary to identify a senior academic from universities that have signed MoUs with the INFLIBNET Centre to serve as the University Coordinator. This individual will also be in charge of ensuring the accuracy and completeness of these soft copies.

(xiv) Global Initiative of Academic Networks (GIAN): The Global Initiative of Academic Networks (GIAN) in Higher Education, initiated by the Government of India through the Ministry of Human Resource Development, aims to enhance India's academic resources, accelerate quality reforms, and strengthen scientific and technological capabilities by tapping into the expertise of scientists, experts, and entrepreneurs. With the help of this program, prestigious Indian universities and colleges can cooperate with foreign academics to implement cutting-edge teaching strategies, improve research, make use of cutting-edge technology, and strengthen academic networks.

(xv) IMPRINT: IMPRINT is an innovative partnership between Pan-IIT and IISc that is funded by MHRD and aims to address key science and engineering issues that are essential for India's inclusive growth and self-sufficiency. Its twin duty involves creating cutting-edge engineering education guidelines and outlining a plan to tackle engineering problems. In line with its overarching mission, IMPRINT's main objective is to target research toward socially meaningful areas.

(xvi) SAKSHAT: The former president of India established the SAKSHAT One Stop Education Portal pilot project on October 30, 2006 with the intention of offering free possibilities for lifelong learning to students, instructors, and information seekers. The SAKSHAT curriculum was created by the Content Advisory Committee (CAC), which was composed of representatives from academic institutions including IGNOU, Delhi University, KVS, NVS, NIOS, NCERT, and top industry professionals.

Benefits of Online Learning

The following are the benefits of online learning in India.

(i) Around the clock: Everyone is trapped inside their homes during the COVID-19 phase, but education is not. As online learning is available to all students throughout this crucial time and is ongoing throughout, it is available around-the-clock.

(ii) Enhanced Comprehension: Students can benefit from the media in the form of audio, video, animation, blogs, professional assistance, etc. to help them understand concepts more clearly. One may readily access all papers, transcripts, live conversations, and training materials with the use of online education.

(iii) Time and Cost Effective: Online education is far more affordable than traditional education. It benefits students who cannot afford a traditional college education. You can learn wherever and whenever you choose. It also contributes to time savings.

(iv) Self-Paced: During the lockdown period, classroom instruction where everyone is taught together is not possible. With the help of technology, everyone may learn in the comfort of their own homes. This is a significant drawback of conventional schooling, and this trend addresses it.

(v) Added choice: There are numerous programs and courses offered on various websites, giving students more options. The only option available to students during this time-wasting period of COVID-19 is to use their time at home with the aid of digital media.

Practical Steps to enhance Online Learning

- ❖ Establish a dedicated study room to assist one to focus and reduce distractions in online learning.
- ❖ Use productivity tools and apps which help to manage their time, take notes, and keep organized.
- ❖ To keep focused during online classes and study sessions, turn off notifications, log out of social media, and minimize other distractions.
- ❖ To stay motivated, one has to remind his or her goals by themselves, discover ways to stay engaged in the topic, and celebrate the accomplishments as they do. Frequent breaks can also ease tension and improve focus.

Conclusion

The students of online learning face several challenges due to the struggle to complete adaptation to online courses and the lack of interaction between students and their tutors. E-learning technologies encourage student-centered learning and are easily adaptable during COVID-19 and other critical situations. For students, professors, educationalists, educational institutions, corporate trainers, and motivational speakers, this technology has many advantages over the traditional educational system. Provide teachers, students, and institutions with a variety of opportunities as well. With a constructivist learning environment with a digital touch, online education assists students in improving their knowledge and abilities, and as a result, the quality of education. This will also encourage people to stay at home and be

secure. In these times of epidemic growth, the online learning sector in India would undoubtedly benefit the country's educational system and economy in the coming years.

Abstract

“Navigating the Storm”. The term economic growth is defined as the process whereby the country’s real national and per capita income increases over a long period of time. The better indicator of economic growth is the rise in per capita income because it represents an increase in the general improvement of living conditions whereas economic progress is characterized as a consistent increase in society’s standard of living. Economic growth is just one aspect of economic development. The HDI (Human Development Index), the Gender Related Index, the literacy rate, etc. are all qualitative measures of economic development. According to Mr. Mittal, the CMD of Bharti Airtel, there are three main pillars supporting every nation-building process: the first is

government, sometimes referred to as political leadership; the second is civil society; and the third is business. The entrepreneur is crucial to economic growth in a number of ways, including wealth creation and sharing, job creation, balancing regional development, GDP and per capita income contribution, higher standard of life, etc. India will continue to have the world’s fastest-growing economy between 2021 and 2024, according to predictions from the World Bank, ADB, and IMF. The paper also finds that the industrial sector, which includes businesses and the secondary sector, recovered, growing by 11.8% in 2020–22 after contracting by 7% in 2020–21. The article addresses the economic aspects of business during the last few years, the contribution of various industries to the GDP, and an analysis of

certain important economic development indicators.

Key Words: *Indian Economy, GDP, Poverty, Unemployment.*

1. Introduction

PM Modi is making the rest of the world aware that India means business. India's economy continues to be among the most open in the world. Our improvements in the "Ease of Doing Business" rankings over the past few years are a result of the effort put forward by all parties. On May 26, 2022, Our Honorable Prime Minister Narendra Modi spoke at the India School of Business. India, according to him, is the G20 country with the fastest economic growth. India is the second-largest start-up ecosystem in the world and ranks second on the global retail index. He also repeated the phrase "reform, perform, change," which demonstrates the nation's sound governance. Today, it is the ease of doing business, the abolition of colonial rules, the reform of tax laws, the encouragement of entrepreneurship, and innovation that contribute to the achievement of 21st-century results. a novel approach to government reform that emphasizes the role of the populace in transforming bureaucracy. The universal principle of "Leave No One Behind" serves as the foundation for the global agenda for 2030. The implementation

and coordination of the SDGs, mapping their plans, and other tasks are given to NITI Aayog in its capacity as a think tank. Let's uphold the motto "Leave No One Behind in India" as a guideline.

2. Review of Literature

The next paragraphs cover past studies and papers that are related to the current topic.

Abhiman Das (1999) in his RBI article on the subject titled "Socio-Economic Development in India: A Regional Analysis," sets out to analyse interstate growth variability and pinpoint the causes of such variability that promote development. The analysis shows that socio-economic imbalance is a key feature of the states. Findings of inconsistencies include the need for education, access to food and healthcare, among other things. The federal system in India is highlighted by **Nirvikar Singh and Srinivasan (2006)** in their study titled "Federalism and Economic Development in India: An Assessment" in relation to potential future economic growth and development. In light of development-related factors, the article looks at federal institutions and significant federal system problems. The study concludes by noting how crucial it is

for India's federal system to function. In their **2017** research, **Anita Kumari and Sharma** looked at the relationship between India's physical and social infrastructure and economic progress. It examines the connection between physical and social infrastructure, as well as economic development, in India from 1995 to 2013. The outcome demonstrates a beneficial

relationship between social and economic infrastructure and economic growth. An investigation into the "Pattern of Regional Disparities in Socio-economic Development in India: District Level Analysis" was made by **Ramphul Ohlan (2013)**. The Wroclaw Taxonomic approach is used in the study to evaluate the socioeconomic disparities between the states of India. The findings indicate that there are significant differences between Indians according to their regions as well. A study on MSMEs' - Role in Propelling Economic Development of India and a Discussion on Current HR Issues in MSMEs' in India was conducted by **Ashu Katyal and Betsy Xaviour** in **2015**. The report discusses the contribution of SMEs to economic growth and their HR-related shortcomings. According to the data, the MSME sector generated 4.8% of GDP in the fourth quarter of 2012–13. Entrepreneurship and Economic Development in a Developing

Country: A Case Study of India was the subject of research by **Sierdjan Koster and Shailendra Kumar Rai** in **2008**. In the instance of India, the paper discusses the anticipated relationship between entrepreneurship and economic development. It would appear that improving entrepreneurial quality should be the key priority. An econometric study on the relationship between exports, foreign exchange, and MSMEs in India was undertaken by **Namita Rajput et al.** in **2012**. The goal is to emphasize the value of the MSME sector and its contribution to the Indian economy. After a thorough analysis, it will be necessary to increase the MSME's manufacturing capacity in order to sell their goods, increase exports, and build up foreign exchange reserves.

The research mentioned above make it easier to comprehend the importance of the current endeavour.

3. Research

h proble m

After 2014, there is a marked change in the economy. India has achieved "ease" for doing business thanks to the launch of the Make in India initiative, despite the fact that India was rated 37th out of 63 countries on the list. why India is still struggling in some

industries. What is the rationale behind the development parameters still being in the last bench?

The study's objectives are listed below.

1. To examine current business economic developments
2. To make clear how different industries contribute to the economy, and
3. To study of some important economic growth indicators

The current study, which examines a few economic variables on a micro level, Additionally, only qualitative and quantitative data that has been gathered from various sources has been used in the analysis. The secondary data used in this study was gathered from a variety of sources, including journals, government publications, and local, national, and worldwide media.

According to the Economic Survey 2021–22, the GDP is expected to expand by 8.0%–8.5% in 2022–2023 as the Indian economy recovers from the COVID pandemic. The industrial sector will experience a sharp rebound, growing by 11.8% in 2021–22 after contracting by 7% in 2020–21. Industry's contribution to GVA is now estimated at

28.2%. In order to mitigate the effects on the most vulnerable segments of society and the business sector in the face of severe problems, the Government of India chose a "Barbell Strategy" that incorporated a variety of safety-nets. India had become the third-largest startup ecosystem in the world as of August 29, 2022, with over 77,000 DPIIT-recognized startups dispersed across 656 districts. In the same time frame, these startups create more jobs than big businesses or enterprises in the same sector. According to the Ministry of Corporate Affairs (MCA), India has registered 1.67 lakh corporations for the fiscal year 2021–2022 - a staggering statistic (April–March). Maharashtra (31,107 firms) had the most registrations during FY 2021–2022 followed by Uttar Pradesh (16,969 companies), Delhi (16,323 companies), Karnataka (13,403 companies), and Tamil Nadu (11,020 companies). Business services had the most firms formed overall (44,168), followed by manufacturing (34,640), community, personal & social services (23,16 enterprises), and agricultural & related activities (13,387 companies). But the issue of whether corporate growth is reflected in India's GDP remains.

Generally speaking, India has six key industries that each play a different role in the nation's development. Iron and steel, textiles, jute, sugar, cement, and paper are among

them. An important part of economic growth is played by the iron and steel industry. India produced 9.97 MT of crude steel and 9.66 MT of finished steel in July 2022, respectively. The amount of finished steel produced in FY22 was 133.596 MT. The government had lowered the customs duty on stainless steel to 7.5% in order to help the MSME sector. Growth in investment, strategic alliances, entry into multinational corporations, technological innovation, etc. are notable trends in the steel sector. Between FY16 and FY20, the gross value added (GVA) of the construction

sector increased at current prices at a CAGR of 8.4%. 9.49 MT of finished steel were exported from India in FY21. The amount of finished steel exported in July 2022 was 3.80 lakh MT. Because the building sector consumes a lot of steel, its expansion will result in increased growth for the steel industry. Another industry with higher promise is the textile sector. By 2027, ready-to-wear exports from India are expected to reach \$30 billion with a CAGR of 12–13%. In 2019–20, the domestic textile and apparel market was worth \$150.5 billion. India exported \$41 billion worth of textiles in calendar year 2021, with a CAGR (2.7) little above the average for the world. From April 2016 to March 2021, the amount of FDI,

which includes nations like Japan, Mauritius, Italy, and Belgium, will also expand. An major agro-based business with more than 5 lakh workers is the sugar industry. India produced 35.8 million tonnes in the marketing year 2021–2022. In the marketing year 2022–2023, it is projected to reach 36.5 million tonnes. The top two sugar-producing states in India are once again Maharashtra and Uttar Pradesh. During the anticipated period, a CAGR of 5.2% is expected to be achieved by the Indian cane sugar market (2022–2027). Despite the current economic climate, the Indian cane sugar market projected production of 4,018 lakh tonnes in the years 2020–21. 7.7% more was produced than the 3,440 metric tonnes of the prior year.

Poverty a situation not having enough money to meet the basic needs including food, clothing and shelter. According to the state's Global Multidimensional Poverty Index 2022, India saw a drop in the percentage of its population living in poverty over a 15-year period between 2005 and 2021, from 415 million to 16.4%. Kerala is the poorest state and Bihar has the most poverty. Another criterion connected to poverty is the Global Hunger Index (GHI). According to The Food and Agriculture Organization of the United Nations (FAO), food deprivation, or undernourishment, is the habitual (or

chronic) consumption of insufficient calories to meet the minimum dietary energy requirements for an individual to live a healthy and productive life, given that individual's sex, age, stature, and level of physical activity. India falls below all of our neighbouring countries, including Pakistan, Bangladesh, and Nepal, with a ranking of 107 on the 2022 Global Hunger Index. India was

Indian Economy Pvt Ltd (CMIE), an impartial economic think tank, the jobless rate will be 8.3% in December 2022. According to a May 2022 report from the National Statistical Office (NSO), the unemployment rate in urban India dropped from 10.3% in the previous quarter to 8.7% in October-December 2021. India's nominal GDP per capita or GDP per capita at current prices is projected to be 145,679 in 2020–21 compared to 151,760 in 2019–20. GDP per capita for 2020–21 is 99,694 Indian rupees (at stable prices from 2011–12). IMF World Economic Outlook (April - 2021) estimates that India's nominal GDP per capita in 2021 will be \$2,191 at current prices.

1. Suggestions

- Publication of information is crucial because they are the ones who will use it.
- India currently exhibits some regional and other parametrical difference,

ranked 94th in 2020 and 101st out of 116 nations in 2021. The child wasting rate is 19.3%, which is the highest in the world for any nation. However, the GHI report was rejected by the parliament since it was found to be defective. The poorest indicator of economic progress in India is **unemployment**. According to Centre for Monitoring

which must be avoided.

- From an economic perspective, income inequality is a severe problem that needs attention, along with adequately accessible government programmes and initiatives.

2. Conclusion

Typically, firms are established to take advantage of market and business opportunities and to make a profit. Economic activity generation is only of minor significance. Social responsibility is crucial in this day and age in addition to profit maximization in order to maintain a firm. Corporate Social Responsibility is one of the regulations that are available to achieve the same. Increased GDP, revenue generation, utility and economic value creation, among other things, are all aspects of business' contribution to economic development. In the aforementioned study, India's stalling causes

such as outdated technology, high unemployment, low GDP, a low standard of living, etc. are discussed.

ABSTRACT

The largest and most varied sector of the global economy is travel and tourism, which also dominates India's service sector. The impact of tourism on rising employment and revenue from foreign exchange, the development in domestic sectors, and the rise of international collaboration have altered attitudes in many nations and had a significant impact on governments' decision-making processes. According to the most recent study by the World Travel and Tourism Council (WTTC), the sector's economic contribution to the country could increase by one per cent from 2019 levels to

over INR 15.9 trillion (USD 215 billion) in 2022. 53 million employment and \$512 billion in GDP contributions to India by 2029. By 2030, it is anticipated that India will contribute 250 billion dollars to the global economy through tourism, creating 137 million employments, earning 56 billion dollars in foreign exchange, and welcoming 25 million visitors from other countries. The paper aims to portray various types of tourism in India and its economic contribution and also discusses the legal aspect of tourism in India.

Keywords: *Travel and Tourism Industry, Service Sector, Economic growth, GDP.*

1. Introduction

"To travel is to feed the mind, humanise the soul, and rub off the rust of circumstance, to travel is to have nature's plan and her high work simplified, and her broad features of hill and dale, Mountain and flood, spread like a map at one's feet" - the words of Thomas Cook, who is credited with founding modern tourism. Words cannot adequately capture India's beauty. India is a nation with a wide variety of customs and cultures. The National Tourism Policy of 2002, which intends to promote training programmes in the hospitality and catering industries, was implemented as part of the tenth five-year plan (2002–2007). The eleventh five-year plan, which offers partnership between the public, private, and academic sectors, can be considered as the extended component of tourism. The tourism sector is impacted by COVID, just like other sectors. The tourism minister responded to a query from Lok Sabha members Ramesh Kaushik and Raju Bista by citing a NACER study that stated 14.5 million jobs were lost during the first quarter, 52 million in the second quarter, and 1.8 million in the third quarter. In the coming years, let's welcome the wisdom of light to the tourism sector.

2. Objectives of the study

- To explore different forms of tourism in India.

- To discuss the verifiable connections between India's tourism industry and economic growth.
- To comprehend the Indian tourism industry's legal aspects.

3. Literature Review

The paragraph that follows explores the earlier studies that were conducted in relation to the current topic.

Anushree Banerjee (2014) discloses that poor working conditions for employees, a lack of well-trained trainers, a lack of tourism training institutions, and a shortage of skilled personnel are the main obstacles preventing the tourism industry from experiencing strong economic growth. Another area of concern relates to the policies that might support employees in a positive work environment. According to **Ashish Nag (2013)**, the Ministry of Tourism in every nation looks for strategies to advance and expand travel within the nation. Any nation's tourism industry growth is susceptible to shifting economic situations. Few people prefer to travel when a nation is going through a difficult time or when someone's employment is in jeopardy. Tourism and hospitality have grown into important global economic sectors, according to Shalini N. Tripathi and Masood H. Siddiqui (2010), since expectations for how we utilise, our spare time have changed and taken on increased

significance. Despite the phenomenal growth in tourism, India's contribution to overall international tourist arrivals and revenue is fairly little. It is well known that India has a great deal of potential for the growth of tourism. **Ajeenkya DY Patil University's Hridaysh P. Deshpande (2020)** research revealed that the tourism industry is a significant social phenomenon in practically every civilization as a result of people's innate need to engage in novel and memorable experiences related to entertainment, education, and adventure. Additionally, a variety of causes, including sociocultural, religious, and commercial activity, drive tourism. One of the key elements that encourages tourism is the universal human desire to learn about unexplored regions of the world.

4. Data Base and Research Methodology

The present study is based on secondary data that has been made available by a number of agencies and organisations. The UNWTO, the Ministry of Tourism, the Ministry of Statistics and Program Implementation, newspapers, magazines, books, economic journals, the Internet, etc. are sources of data and information used in this study.

5. Types of Tourism in India

India is a diverse country in terms of its ecology, mythology, history, geographical

diversity in terms of mountains, plains, and plateaus, as well as the medicinal diversity that teaches us about the Science of Life (Ayurveda). Ecological tourism, pilgrimage tourism, historical tourism, adventure tourism, medical tourism, and future ayurveda tourism are just a few of the several types of tourism offered in India. Therefore, using the aforementioned characteristics, tourism in India could be broadly categorised.

(i) Leisure Tourism: Leisure time is time spent doing nothing but "free time." It's time to get things done that you wouldn't typically have time for in your daily life. A vacation with the following comprises leisure tourism:

- ❖ Relaxation: Sleep, relax, reading, walk on the beach, taking a scenic drive
- ❖ Sport activity: hiking, swimming, surfing, running
- ❖ Visit places of interest and local attractions: Visiting friends and relatives, Shopping for goods that will be used by the tourist.

(ii) Business Tourism: "Travel for business purposes" is the definition of business tourism. Three categories can be used to categorise business tourism: -

- ❖ Trading for goods to be resold on a wholesale basis.

- ❖ Conduct business transactions e.g., Visiting a client, contract negotiations.
- ❖ Attending a conference, exhibition or event associated with their business.

(iii) Ecological Tourism: Ecological tourism has grown in popularity in India as a result of the country's diverse flora and fauna as well as its stunning natural attractions. The Andaman and Nicobar Islands, Orissa, Meghalaya, the Malabar Coast, the Kaziranga and Jim Corbett wildlife sanctuaries, the mountain ranges in North India and the Hill Stations like Shimla, Kulu, Manali, and Ooty, the Kashmir Valley, the breath-taking beaches at Goa, the backwaters of Kerala, and much more are all a feast for nature lovers.

(iii) Pilgrimage Tourism: India is regarded as the Land of Gods and Goddesses and has a very rich mythological history. Being the most culturally advanced nation and the birthplace of several saints, artists, and philosophers, India has seen a significant increase in pilgrimage tourism from the dawn of time. Some of the popular tourist destinations related to pilgrimage tourism include Kedarnath, Badrinath, Amarnath, the Golden Temple in Amritsar, Dwarka, Dargahs and Masjids in Delhi and Ajmer, churches and temples in Goa.

(iv) Medical Tourism: In India, medical tourism is a growing industry. Many individuals believe that India is a superior alternative for medical purposes because of its affordable prices and effective medical facilities. The paper's study of medical tourism comes later.

(v) Ayurveda and Yoga Tourism: Ayurveda, which was created in 600 BC, could be referred to as the "Science of Life." Due to the forthcoming Ayurveda Tourism, India has seen an increase in visitors overall. The state of Kerala in South India is a well-liked Ayurveda tourism destination. Simple "yogasanas" and meditation, which refresh one's mind, body, and soul, are the exclusive focus of Indian yoga. In India, a lot of ashrams promote yoga tourism.

(vi) Adventure Tourism: India is one of the best countries for adventure tourism due to its diverse geography. India offers its visitors a variety of adventure activities, including mountaineering, skiing, trekking across the Himalayas, camel safaris in Rajasthan, river rafting down the Ganges in Rishikesh, rock climbing, wind rafting, and much more.

(vii) Sports Tourism: Traveling abroad to watch or take part in a sporting event is referred to as sports tourism. International sporting competitions like the Olympics, the World Cup (in sports including soccer, rugby,

and cricket), tennis, golf, and the Formula One Grand Prix are a few examples.

6. Indian Tourism and Economic Growth

New Delhi (India), October 19 (ANI): India plans to introduce "National Tourist Policy" 2022 this year with the goal of supplying a safe, innovative, responsive, and sustainable tourism sector in the country's inclusive development journey. On Wednesday, during his speech at the day-long national conference for tourist police held here in the capital, our honourable union tourism minister G. Kishan Reddy made a statement. India intends to present its country's and the world's tourism policies in 2022. As there has not yet been established in India any proper and comprehensive national tourist policy, Prime Minister Narendra Modi will spearhead the development of such a policy this year, according to Reddy. Between 2019 and 2028 in India, the sector is anticipated to increase at an average yearly growth rate of 10.35%. Compared to US\$28.9 billion in 2018, the Indian tourism and hospitality industry is predicted to generate US\$50.9 billion in visitor exports by 2028. Due to improved airport facilities and increased access to passports, the estimated \$20 billion Indian airline travel market is expected to quadruple in size by FY27. Approximately 2400 crores are allotted for

Indian tourism in the union budget for 2022–2023. There is an increase of 18.42 percent as compared to FY 2021–22. From 2020 to 2027, the medical tourism industry is anticipated to grow at a CAGR of 21.1%. Additionally, it is predicted that India's tourism industry will generate US\$ 125 billion by FY27. Additionally, the forecast indicates that over the next 10 years, the sector is expected to create more than 24 million jobs, or more than 2.4 million new positions yearly. The country's tourism industry will work to recover to the pre-pandemic level by mid-2024 and contribute USD 250 billion to the country's GDP by 2030, the Centre stated on Tuesday. The government has declared that by 2047, it aims to raise USD 1 trillion through the industry that was most adversely affected by the pandemic.

7. Tourism

Laws in India

1. The Passport (Entry into India) Act, 1920.
2. The Registration of Foreigners Act, 1939.
3. The Foreigners Act, 1946.

Even if it's not required to know these acts like the back of your hand, there are some

procedures that must be followed: Unless specifically stated differently in their visa, all foreign visitors must register with the Foreigner Regional Registration Office within 14 days (or 24 hours in the case of a tourist from Pakistan). This is possible right there in the airport. Visitors from outside India who are staying for 180 days or less are exempt from registering. A foreign national staying in a hotel or guesthouse is required to present his name, nationality, and identification documents, such as a passport or other form of photo identification, as well as his signature, pursuant to Section 14 of the Registration of Foreigners **Act**. Within 24 hours of the aforementioned arrival, the hotel or guest home administration must notify the police. Foreign nationalists must also keep copies of Forms C & F of the Registration of Foreigners Act in order to stay in a hotel. These can be downloaded from the internet or purchased from the Foreigners Registration Office. Foreign nationalists are not permitted to enter locations designated as protected areas or restricted regions unless they get a permit from the relevant authority. A compelling justification for visiting the specified locations must be provided in the request for such permission, which must be submitted at least eight weeks in advance.

8. Conclusion

According to the most recent study by the World Travel and Tourism Council

(WTTC), the sector's economic contribution to the country could increase by 1% from 2019 levels to over INR 15.9 trillion (USD 215 billion) in 2022. The World Economic Forum's most recent study, which evaluated 117 nations, produced the travel and tourism development index, which included India in its ranking in 2022. India dropped from 46th place in the overall rankings in 2019 to 54th place. 53 million employment and \$512 billion in GDP contributions to India by 2029. By 2030, it is anticipated that India will contribute 250 billion dollars to the global economy through tourism, creating 137 million employments, earning 56 billion dollars in foreign exchange. More than merely a business, tourism is. It's an approach to life. With over \$7 trillion in yearly revenue and 260 million employees, tourism is one of the major industries in the world. India's tourist industry has a bright future not just because of the country's diverse natural environment but also because of its rich cultural history. Different regions of the country are seeing an increase in tourism from both abroad and within India. If India invests a lot of effort in the tourism industry in the future, it will undoubtedly accomplish a significant goal by the year 2030.

Abstract

The New Schooling Strategy 2020 plans to upset the instructive scene by giving a thorough system that takes special care of the different necessities of students and sets them up for the difficulties of the 21st hundred years. This theoretical gives an outline of the key targets, procedures, and anticipated results of the approach. The essential goal of the New Instruction Strategy 2020 is to guarantee comprehensive and impartial quality training for all, no matter what their financial foundation or geological area. It underscores the need to connect the current holes in access, value, and quality by advancing general youth care and training, patching up school framework, and carrying out creative educating learning rehearses. The policy acknowledges the significance of a comprehensive and multidisciplinary educational strategy. It encourages the mainstream curriculum to incorporate co-curricular activities, arts, sports, and vocational education, fostering the development of well-rounded individuals. Moreover, it advocates for the combination of innovation in schooling, establishing a carefully engaged learning climate that improves decisive reasoning, critical thinking, and imagination. The policy's recognition of the significance of education innovation and research is another crucial aspect. It intends to lay out a hearty examination biological system, encouraging cooperation between the scholarly community, industry, and different partners. This would empower the advancement of proof based rehearses, instructive innovations, and strategies that can address the developing requirements of students and society.

In conclusion, the New Education Policy 2020 is a radical vision for education that aims to establish a system that is inclusive, equitable, and empowering, preparing students for the opportunities and challenges of the 21st century. By zeroing in on all encompassing turn of events, coordination of innovation, limit building, exploration, and development, this strategy makes way for a more promising time to come for training.

Keywords: Education, Policy, vision, strategy, framework.

Introduction

The Indian government's New Training Strategy is alluded to as NEP. It was last altered in 1992 subsequent to being drafted in 1986. The Modi-drove BJP government promised in its political race proclamation to make another training strategy, or NEP, to achieve changes in the schooling area. The National Education Policy of India 2020 (NEP 2020), which was started by the Union Cabinet of India on 29 July 2020, outlines the vision of new education system of India. The new policy replaces the previous National Policy on Education, 1986. The policy is a

comprehensive framework for elementary education to higher as well as vocational training in both rural and urban India. The policy aims to transform India's education system by 2030. The strategy accommodates changes at all degrees of training from school to advanced education. NEP means to expand the emphasis on reinforcing educator preparing, transforming the current test framework, youth care and rebuilding the administrative system of instruction.

Objective of the Study

- To find the main aim of the policy
- To list out features of the policy
- To sort out the impact of policy among the school and college students

Main Aim of New Education Policy

There have been three education policies after India got its independence, the NEP 2020 being the newest addition to bring reform in the education sector. Therefore it becomes necessary to understand the aims of NEP 2020 from the exam's perspective.

The basic aim and objective of NEP 2020 are to make education universally accessible from primary to secondary level by the year 2030. It helps in building a relationship between the learner and society at large. Every child is special and has the right to get basic education, for which the government should make better provisions.

- **Early Childhood Care and Education:** The early child developmental stage encompasses physical, socio-emotional, and cognitive development between 0-8 years of age. As early education lays the foundation for education to be undertaken later in our lives and also plays a major part in the development of the cognitive capacity of an individual, so there has to be the provision of high-quality education Early Childhood Care Education (ECCE). Here attention needs to be laid on socially backward regions.
- **Foundation Literacy and Numeracy:** NEP 2020 envisions the attainment of Foundational Literacy and Numeracy by all learners up to 3rd grade.
- **Curtailling Drop-Outs Rates and Ensuring Universal Access to Education at All Levels:** This new education policy of 2020 has focused on two things:
 1. To lessen the drop-outs by ensuring proper infrastructure facilities.
 2. By providing appropriate training to the teachers.Also, to encourage students to continue their studies. The students are also monitored and facilitated with the proper educational environment. Also, the ones who had dropped out of school earlier are given adequate guidance to be on par with their peers.

- **Curriculum and Pedagogy in Schools:** Learning of any sort should be holistic, integrated, enjoyable, and engaging to hold the attention of any learners towards the subject matter. NEP 2020 is a policy that emphasizes understanding the topic rather than an evaluation of rote learning, and for that, experiential learning is promoted at all stages.
- **Equitable and Inclusive Education:** NEP 2020 policy stresses education accessibility to one and all and that all should be similarly looked upon. Students with special needs are also benefitted from this policy as several schemes are running under this policy that enables specially-abled students to be part of the education system. This aspect coincides with the SDG.
- **Efficient Resourcing and Effective Governance Through School Complexes:** The policy focuses on using teaching aids to make education in India pally with world-class standards. It also emphasizes proper governance of the educational institutions for which the teacher are provided with proper information and training time and again.
- **Standard Setting and Accreditation for School Education:** The policy envisions setting up the standard to be followed at all stages of education, including preschool to higher levels. This caters to the quality of infrastructure, the educational level of teachers, and the knowledge level of the students as well. This also helps in lesson assistance with adequate usage of teaching aids.
- **Technology in Education:** There has been a lot of development in the space of technology where the teaching aids are also getting developed along with the digitalization of classrooms where lectures are taken virtually, and attendance is also taken virtually.
- **Reimagining Vocational Education and Skill Building:** For holistic development, every student needs to work on his skills constantly, like-communication skills, presentation skills, etc. Vocational Training is also encouraged so that there is a better employment opportunities for people who do specific skill-based jobs.

Features of Nep 2020

The policy has a clear focus on offering quality and affordable education to all in the age group of 3 to 18 years.

- It marks a major shift from rote learning to multi-disciplinary, holistic education. The focus, therefore, will not be on how much information students can memorize & reproduce, but on how they can use the information to solve real-world problems.

- Importantly the NEP has a great focus on the development of critical 21st-century skills that would stand in good stead to the soon-to-be citizens of the world and will prepare them for the challenges & opportunities of the 21st century.
- It marks a transition from the 10+2 education structure to a 5+3+3+4 system.
- A new curriculum for early childhood care and education, referred to as ECCE, aims at providing high-quality education to children between the age of 3-6 that brings about their physical, social, emotional as well as cognitive development.
- The policy provides for an interdisciplinary college education that has flexible study plans.
- Enough & more reports have highlighted the employability gap in India where graduates lack the necessary skills to make them valuable to employers. The new policy, therefore, lays emphasis on vocational & technical education right from the school level so as to bridge the gap

Impact of Nep 2020 Among Students

- **Single Regulatory Body for Higher Education:** The NEP aims to establish Higher Education Commission of India which will be the single regulatory body except for legal and medical education.
- **Multiple Entry and Exit Programme:** There will be multiple entry and exit options for those who wish to leave the course in the middle. Their credits will be transferred through Academic Bank of Credits.
- **Tech- Based Option for Adult Learning Through Apps, TV Channels:** Quality technology-based options for adult learning such as apps, online courses/modules, satellite-based TV channels, online books, and ICT-equipped libraries and Adult Education Centres, etc. will be developed.
- **E-courses to be Available in Regional Languages:** Technology will be part of education planning, teaching, learning, assessment, teacher, school, and student training. The e-content to be available in regional languages, starting with 8 major languages – Kannada, Odia, Bengali among others to join the e-courses available in Hindi and English.
- **Foreign Universities to set-up Campuses in India:** World's top 100 foreign universities will be facilitated to operate in India through a new law. According to the HRD Ministry document, "such (foreign) universities will be given special dispensation regarding regulatory, governance, and content norms on par with other autonomous institutions of India." Whether you aspire to study at these universities in your home country or study abroad, please remember that an education loan in India can help finance your higher studies independently.

Conclusion

The new Public Schooling Strategy (NEP) 2020, is a decent strategy as it targets making the school system all encompassing, adaptable, multidisciplinary, adjusted to the requirements of the 21st hundred years and the 2030 Economical Improvement Objectives.

PREFACE

Skill development is a key to improve employability and income-earning opportunities for women and for enhancing sustainable rural development and livelihoods. Empowerment is pure validation, a state of being in which we recognise and celebrate our own or someone else's potential. It means valuing abilities, goals and learning. It aids someone to feel appreciated, supported, and motivated. It gives someone the sense of control in their life and creates purpose.

Improved social skills, improved behaviour, increased academic accomplishment, increased self-esteem, and increased self-efficacy are all results of youth empowerment programs. They often face gender-based barriers to starting and growing their businesses, like discriminatory property, matrimonial and inheritance laws and/or cultural practices; lack of access to formal finance mechanisms; limited mobility and access to information and networks, etc.

This book is the outcome of the papers presented in the One Day National Level Seminar on "Rural Women Empowerment through Skill Development" Sponsored by Indian Council of Social Science Research, New Delhi held on 2nd August 2023 Organised by the PG Department of Commerce with (CA), Nallamuthu Gounder Mahalingam College, Pollachi. This book comprises of a spectrum of various topics presented in the seminar. Various authors have delivered credible and thoughtful chapters Promotion of women empowerment in the country by empowering them through Funding institutions for rural women empowerment. Academicians from various parts of the country highlighted Successful women skill development and their efforts. The potential beneficiaries are beyond academicians, students, women skill development and also policy makers across the nation.

We express our gratitude to the Indian Council of Social Science Research (ICSSR) for their Sponsorship to organize the national level seminar. We also thank the authors who wholeheartedly contributed chapters to the book.

Abstract

This abstract focuses on women entrepreneurship, highlighting the schemes available for women entrepreneurs and its benefit. It discusses the increasing participation of women in entrepreneurship and the factors contributing to this trend. It also acknowledges the obstacles that women face in the entrepreneurial landscape, including limited access to financing and networks, gender biases, work-life balance issues, and lack of representation and support. The abstract emphasizes the need for collective efforts to create an enabling environment for women entrepreneurs. It highlights the benefits of promoting women entrepreneurship, such as economic empowerment, job creation, innovation, and inspiration for future generations. Overall, the abstract underscores the issues and challenges of women entrepreneurship.

Keyword: women, Entrepreneurship, Empowerment.

Women Entrepreneurship: Introduction

Ladies business venture alludes to the dynamic support of ladies in beginning, making due, and maintaining their own organizations. It includes ladies assuming the job of a business person, utilizing their abilities, information, and assets to make and develop fruitful endeavors. This type of business is critical as it enables ladies monetarily as well as adds to the general turn of events and development of the general public.

Lately, there has been an observable expansion in the quantity of ladies wandering into business venture. This is because of different factors like changing cultural standards, expanded admittance to schooling and assets, and the acknowledgment of ladies' true capacity in the business world. Ladies business people offer a remarkable point of view and creative thoughts that might be of some value, adding to the enhancement and development of ventures.

Nonetheless, notwithstanding the headway made, ladies actually face different difficulties in the pioneering scene. Gender stereotypes and biases, issues with work-life balance, and a lack of representation and support are all examples of these obstacles. Defeating these impediments requires individual assurance as well as the

aggregate endeavors of society, government, and associations to establish an empowering climate for ladies business people to flourish.

The advantages of advancing ladies business are various. Not only does it result in women's economic empowerment and financial independence, but it also fosters job creation, new ideas, and economic expansion. Ladies business people additionally act as good examples, moving and persuading people in the future of ladies to seek after their enterprising dreams.

All in all, ladies business venture assumes an imperative part in cultivating financial turn of events, social advancement, and orientation uniformity. By empowering and supporting ladies to become business visionaries, we can open their maximum capacity and make a more comprehensive and prosperous society.

Objective of the Study

- To list out the schemes for women entrepreneurs in India
- To list out the benefit of the schemes
- To list the issues and challenges for women entrepreneurs in India

Schemes for Women Entrepreneurs in India

There are several schemes and initiatives in India specifically designed to support and empower women entrepreneurs. Here are some notable ones:

1. **Stand Up India Scheme:** This scheme aims to promote entrepreneurship among women, Scheduled Castes (SC), and Scheduled Tribes (ST) by providing loans between Rs. 10 lakh and Rs. 1 crore for setting up greenfield enterprises. It also offers handholding support and assistance in various aspects of business development.
2. **Annapurna Scheme:** This scheme provides financial assistance to women entrepreneurs engaged in the food catering business. Under this scheme, loans up to Rs. 50,000 are provided to set up or expand food catering units.
3. **Mahila Coir Yojana:** This scheme encourages women entrepreneurs to set up coir-based businesses. It offers financial assistance for the purchase of coir processing machines and equipment.
4. **Udyogini Scheme:** This scheme provides financial assistance to women entrepreneurs in the form of loans for setting up small-scale enterprises. It also offers training, skill development, and market linkages.
5. **Stree Shakti Package for Women Entrepreneurs:** This scheme is offered by various banks and provides special incentives to women-owned businesses. It includes lower interest rates on loans, collateral-free loans, and priority in loan processing.
6. **Mudra Yojana:** This initiative aims to provide financial assistance to micro and small enterprises, including women entrepreneurs. Under this scheme, loans up to Rs. 10 lakh can be availed without the requirement of collateral.

7. **Pradhan Mantri Employment Generation Programme (PMEGP):** This scheme promotes self-employment opportunities for women by providing financial assistance for setting up micro-enterprises. It offers subsidies on project costs and loans for eligible projects.

These are just a few examples of the schemes available in India to support women entrepreneurs. It is important for aspiring women entrepreneurs to research and explore these schemes to take advantage of the benefits and support they offer.

Benefit of the Schemes

The women entrepreneurs schemes in India provide several benefits to aspiring and existing women entrepreneurs. Some of the key benefits include:

1. **Financial Assistance:** These schemes offer financial assistance in the form of loans, subsidies, and grants. This helps women entrepreneurs overcome the challenge of limited access to capital and provides them with the necessary funds to start, expand, or diversify their businesses.
2. **Lower Interest Rates:** Many of these schemes provide loans at lower interest rates compared to regular commercial loans. This reduces the financial burden on women entrepreneurs and makes it more affordable for them to borrow and invest in their ventures.
3. **Collateral-Free Loans:** Some schemes offer collateral-free loans, eliminating the need for women entrepreneurs to provide assets as security. This is particularly beneficial for those who may not have valuable assets to pledge as collateral.
4. **Skill Development and Training:** Several schemes provide training and skill development programs to enhance the entrepreneurial capabilities of women. These programs equip them with the necessary knowledge, skills, and tools to effectively manage their businesses and navigate the challenges of entrepreneurship.
5. **Market Linkages:** Some schemes facilitate market linkages by connecting women entrepreneurs with potential customers, suppliers, and business networks. This helps them expand their customer base, access new markets, and increase their business opportunities.
6. **Handholding Support:** Many schemes offer handholding support, mentoring, and guidance to women entrepreneurs. This includes assistance in business planning, marketing strategies, financial management, and other aspects of business development. This support helps women entrepreneurs overcome challenges and make informed decisions.
7. **Recognition and Visibility:** The schemes often provide recognition and visibility to women entrepreneurs, showcasing their achievements and success stories. This not only boosts their confidence but also inspires and motivates other women to pursue entrepreneurship.

Overall, these schemes play a crucial role in empowering women entrepreneurs in India. They provide the necessary financial support, training, networking opportunities, and guidance to help women overcome barriers and succeed in their entrepreneurial endeavors. By promoting women entrepreneurship, these schemes contribute to economic growth, job creation, and gender equality in the country.

Issues and Challenges for Women Entrepreneurs in India

While there has been progress in advancing ladies business in India, ladies business people actually face a few issues and difficulties. A portion of the key ones include:

1. **Restricted Admittance to Back:** One of the significant difficulties for ladies business visionaries is restricted admittance to back. Due to a variety of factors, such as a lack of collateral, bias in lending practices, and inadequate financial literacy, they frequently encounter difficulties obtaining funding and loans.
2. **Stereotypes and sexism:** Ladies business people frequently face orientation predisposition and generalizations, both inside society and in the business climate. They might experience distrust, segregation, and bias, which can prevent their development and open doors.
3. **Support and networking are lacking:** Mentorship, business associations, and industry-specific networks are just a few of the resources available to women entrepreneurs. Their ability to obtain opportunities, knowledge, and resources may be hindered by this lack of support.
4. **Work-Life Balance:** Balancing work and personal responsibilities is a significant challenge for women entrepreneurs. They often face societal expectations and pressures related to family and household responsibilities, which can make it difficult to devote sufficient time and energy to their businesses.
5. **Limited Representation and Role Models:** The underrepresentation of women entrepreneurs in leadership positions and the lack of visible role models can be demotivating for aspiring women entrepreneurs. The absence of relatable and inspiring examples can make it challenging for women to envision their own success in entrepreneurship.
6. **Cultural and Social Barriers:** Cultural and social norms can pose challenges for women entrepreneurs, particularly in conservative and traditional communities. Societal expectations, restrictions, and biases can hinder their ability to start and run businesses.
7. **Lack of Training and Skill Development:** Women entrepreneurs often face a skills gap and limited access to training and skill development programs. Enhancing their entrepreneurial capabilities, business acumen, and technical skills is crucial for their success.

Addressing these challenges requires a multi-faceted approach involving government policies, financial institutions, educational institutions, and society as a whole. Providing increased access to finance, creating supportive ecosystems, promoting gender-neutral policies, offering training and mentorship programs, and challenging societal norms and biases are some of the steps that can help overcome these issues and empower women entrepreneurs in India.

Conclusion

Women now constitute a decisive force with which the future destiny of the world is inextricably blended. Its natural corollary is that it is most essential to help her throw away the fetters that an inequitable tradition has been using to suppress the enormous potential inherent in womanhood, lest universal peace and harmony should ever remain a distant dream. The best way to realize the man -woman equality and harmony, visualized in the most glorious document- Indian Constitution -is to bring her into the main- stream of economic activity by extending all possible assistance to help her latent capabilities in building up a progressive modern India. The study shows that the present institutional support system is inadequate to support the sustainable development of women entrepreneurship in the state.

Abstract

Empowerment of girls is essentially the system of upliftment of monetary, social and political popularity of ladies, the historically underprivileged ones, within the society. it is the procedure of guarding them towards all varieties of violence. ladies empowerment involves the building up of a society, a political environment, wherein ladies can breathe with out the worry of oppression, exploitation, apprehension, discrimination and the overall feeling of persecution which goes with being a female in a historically male dominated shape. ladies constitute almost 50% of the sector's populace however India has proven disproportionate sex ratio whereby female's population has been relatively lower than adult males. As a ways as their social status is involved, they're now not handled as same to guys in all the places. in the Western societies, the women have got equal right and status with men in all walks of lifestyles. however gender disabilities and discriminations are observed in India even today. for that reason this paper will attention at the vicinity of ladies inside the society of India.

Keywords: Ladies Empowerment, schooling, Discrimination, Socio-financial repute.

Introduction

Girls constituted the key position inside the arch of Indian society. no doubt the Rig Vedic ladies in India enjoyed excessive fame in society and their situation changed into good. Even the ladies had been supplied possibility to achieve high intellectual and non secular standard. but from enjoying loose and esteemed positions in the Rig-Vedic society, ladies started being discriminated since the Later-Vedic length in schooling and different rights and facilities (Saravanakumar, 2016). Indian society doubts that we are in the midst of a brilliant revolution within the records of girls. The voice of women is increasingly more heard in Parliament, courts and within the streets. while girls within the West needed to fight for over a century to get a number of their primary rights, (Altekar,1983) like the right to vote, the constitution of India has given girls same rights with men from the start (Devandra,Kiran,1985). The historic and medieval status of women in cutting-edge Indian society regarding Equality, schooling, Marriage and own family existence, Race and Gender, faith and lifestyle is maintained or deteriorated.

At some stage in the Vedic Age wife became put in an esteemed function. She changed into considered as half of the person, his consider friend, accomplice in

solitude, father in advice and the relaxation in passing the barren region of lifestyles. The ladies had been furnished opportunity to gain excessive highbrow and non secular general. There had been many ladies Rishis at some point of this era. even though monogamy was usually not unusual, the richer phase of the society indulged in polygamy. there was no sati machine or early marriage. However from taking part in unfastened and esteemed positions inside the Rig-Vedic society, girls started out being discriminated since the Later-Vedic duration in education and other rights and centers. infant marriage, widow burning or sati, the purdah and polygamy further worsened the girls's role The Indian cultural way of life starts off evolved with the Vedas. it's miles commonly believed that the Vedic duration is spread over from 2000 BC to 500 B.C. Vedic women had monetary freedom. a few women have been engaged in coaching work. home turned into the location of manufacturing. Spinning and weaving of clothes have been done at domestic. women also helped their husbands in agricultural pastimes. The Medieval length (duration between 500 A.D to 1500 A.D) proved to be pretty disappointing for the Indian ladies, for their reputation similarly deteriorated all through this period. Medieval India changed into not ladies's age it is meant to be the 'dark age' for them.

The historical and medieval status of women in cutting-edge Indian society concerning Equality, training, Marriage and circle of relatives life, Race and Gender, religion and subculture is maintained or deteriorated. The RigVedic women in India enjoyed high status in society. The women were provided opportunity to attain excessive intellectual and religious popular. In Vedic India, ladies did now not revel in an inferior reputation instead they occupied an honorable place. they had enough rights within the social and the spiritual fields and constrained rights inside the financial and the political fields. They had been not handled as inferior or subordinate however equal to guys. we've commemorated our us of a as our Motherland "Bharat Mata" and our nationalism has grown up from the seed Mantra "Vande Mataram".

Objectives of the Study

- To have a look at the historical profile of Indian girls.
- To understand the want of women Empowerment.
- To have a look at the government Schemes for ladies Empowerment.
- To offer beneficial guidelines inside the mild of Findings.

Women Empowerment

Empowerment is set exchange, choice and electricity. it's miles a technique of alternate through which the individuals and businesses with very little power advantage the power and ability to make selections that have an effect on their lives. ladies empowerment is a degree of acquiring power for girls that allows you to recognize her rights and to carry out her responsibilities closer to oneself and others in a handiest way. according to k. Sayulu, G. Sardar & B.

Sridevi, (2005) “women empowerment is any system that offers more autonomy to ladies through the sharing of applicable facts and provision of manage over factors affecting their performance”.

Traits of Girls Empowerment

Women empowerment possesses certain traits. they may be the subsequent:

1. Women empowerment enables a extra diploma of self-self belief and a experience of independence amongst ladies.
2. Girls empowerment is a process of acquiring electricity for women which will understand her rights and to perform her duties toward oneself and others in a simplest manner.
3. Women empowerment allows girls to organise themselves to increase their self- reliance.
4. Ladies empowerment presents extra autonomy to girls.
5. Ladies empowerment means ladies’s manipulate over material assets, highbrow resources and ideology.
6. Girls empowerment abolishes all gender-based discriminations in all establishments and structures of society.
7. Women empowerment way participation of girls in policy and decision making method at domestic and public levels.
8. Empowerment of girls enables ladies to recognize their complete identification and powers in all spheres of existence.
9. Empowerment additionally manner equal popularity to girls. 10. girls empowerment happens within sociological, psychological, political, cultural, familial and monetary spheres and at diverse stages such as man or woman, institution and network.
10. Women empowerment is a system of creating awareness and ability building.

Importance of Women Empowerment

Women empowerment is a continuous and dynamic manner which allows girls to take an interest within the desire – making in all monetary, political and social procedures in most people and improves their capacities to change the shape and circumstance that preserve them hindered. The introduction of the 73rd amendment spoke to an exertion for women’s empowerment which become supported with the aid of the state and in which 33% seat in Panchayats and in places of work are saved for women. Reservation inside the Panchayats become considered as a noteworthy milestone at some stage in the time spent empowering girls in India. Empowerment of girls is crucial for maintaining economic development of the nation when 50 percent of the population contains of women. As Ex-President A.P.J.Abdul Kalam said that empowering girls is an crucial for creating a first rate united states of america, while women are empowered, society with balance is assured. women’s empowerment is important as their issues and their cost device lead to the

development of a decent own family, high-quality society and ultimately a first rate country. it has been acknowledged global that u . s . a .'s advancement is not thinkable without women's empowerment. the worldwide efforts in the direction of girls's empowerment have made a comparable scenario in India likewise wherein the empowerment of women has obtained priority at the country's development schedule. The year 2001 was proclaimed as ladies's Empowerment year, even though earlier plans dealt with simply welfare of women. The country wide policy for Empowerment of ladies become added in India in 2001. To actualize it successfully, a country wide Plan for motion for empowerment of girls become carried out at some stage in 2003-04. A coordinated method for ladies Empowerment with unequivocal goals, objectives and a term had been integrated in 10th 5 yr Plan (2002-07). since ladies empowerment depends no longer simplest on economic determinants but on social factors additionally, authorities of India has introduced fourth-three dimensional strategy of social empowerment, economic empowerment and provision for gender equality. The authorities has taken a few activities which includes projects and strategies to assure this present machine's success The protection of girls from domestic Violence Act, 2005, the Immoral site visitors Prevention Act, the Prenatal Diagnostic strategies change Act, 2003, Sati Prevention Act, the Hindu Succession Act, national Rural Employment assure Act. various plans actualized under The Ministry of ladies and infant development like Swayamsiddha, help for schooling and Employment software (STEP) and so forth., Rashtriya Mahila Kosh (affords small scale credit), Kishori Shakti Yojana, nutrients application for pre-adult young girls, are the couple of out of numerous means tried by way of the government to improve financial status and gender equality. running ladies lodgings and crèches have additionally been set up to help running girls in increasing financial strength and similarly their societal position. Strengthening felony system to cast off discrimination in opposition to girls and mainstreaming gender attitude in improvement process are the principle goals of the 11th five yr Plan. The imaginative and prescient for the 12th five 12 months Plan (2012-2017) is to guarantee improving the position and situation of women by way of addressing structural and institutional limitations in addition to strengthening gender mainstreaming.

Women Empowerment in India

Empowerment of girls could suggest equipping women to be economically independent, self-reliant, have wonderful esteem to allow them to face any hard scenario and that they should have the ability to take part in development activities. For the beneficiaries of the ladies, the authorities has been followed extraordinary schemes and packages i.e. the country wide credit Fund for ladies (1993), food and nutrients Board (FNB), facts and Mass education (IMF) and so forth.

The maximum wonderful development previous few years has been the growing involvement of girls inside the Panchayati Raj establishments. there are many elected

girls representatives at the village council stage. ladies are also regarding in human improvement troubles of toddler rearing, schooling, fitness, and gender parity. a lot of them have long gone into the making and advertising of quite a number cottage products-pickles, tailoring, embroidery and so forth. The monetary empowerment of women is being seemed these days as a sine-quo-non of development for a rustic; subsequently, the issue of economic empowerment of girls is of paramount significance to political thinkers, social thinkers and reformers.

Women Rights in India

The rule of thumb of equivalence popularity of ladies is cherished within the Indian constitution in its Preamble, fundamental Rights, essential duties and Directive concepts. The charter affords fairness to ladies, yet further enables the country to make provisions of nice discrimination in favour of ladies. some of the substantial articles are as according to the following

- Equality before law[Article 14]
- No Discrimination by state on grounds only of religion, race, caste, sex, place of birth or any of them[Article15(i)]
- Special provision by state in favour of Women and Children[Article 15(3)]
- Equality of opportunity in matters relating to employment [Article 16]
- Securing adequate means of livelihood for men and women equally [Article 39(a)]
- Equal pay for equal work[Article 39(d)]
- Promoting justice on basis of equal opportunity and to provide free legal aid[Article 39(A)] Renounce practices derogatory to women[Article 51(A)(e)]

Government Schemes for Women Empowerment

The Government programmes for women development began as early as 1954 in India but the actual participation began only in 1974. At present, the Government of

India has over 34 schemes for women operated by different department and ministries. Some of these are as follows;

1. Rastriya Mahila Kosh (RMK) 1992-1993
2. Mahila Samridhi Yojana (MSY) October, 1993.
3. Indira Mahila Yojana (IMY) 1995.
4. Women Entrepreneur Development programme given top priority in 1997-98.
5. Mahila Samakhya being implemented in about 9000 villages.
6. Swayasjdha.
7. Swa Shakti Group.
8. Support to Training and Employment Programme for Women(STEP).
9. Swalamban.
10. Crèches/ Day care centre for the children of working and ailing mother.
11. Hostels for working women.
12. Swadhar.
13. National Mission for Empowerment of Women.
14. Integrated Child Development Services (ICDS) (1975),
15. Rajiv Gandhi Scheme for Empowerment of Adolescence Girls (RGSEAG) (2010).
16. The Rajiv Gandhi National Crèche Scheme for Children of Working Mothers.
17. Integrated Child Protection scheme (ICPS) (2009-2010).
18. Dhanalakahmi (2008).
19. Short Stay Homes.
20. Ujjawala (2007).

Suggestions

1. Cognizance programmes want to be prepared for creating recognition amongst ladies specifically belonging to weaker sections approximately their rights.
2. The first and major precedence have to be given to the schooling of ladies, that is the grassroots trouble. as a result, training for women must be paid unique interest.
3. Strict implementation of Programmes and Acts ought to be there to scale back the mal-practices ordinary within the society.
4. Women ought to be allowed to work and ought to be furnished sufficient safety and support to paintings. They must be supplied with proper wages and work at par with men so that their reputе can be accelerated within the society.

Conclusion

Women empowerment refers to increasing the spiritual, political, social, educational, gender or economic strength of people and communities of girls. women's empowerment in India is heavily dependent on many different variables

that encompass geographical area (urban / rural) educational fame social reput (caste and class) and age. regulations on girls's empowerment exist at the country wide, country and local (Panchayat) tiers in many sectors, along with health, training, economic opportunities, gender based violence and political participation. The Empowerment of ladies has come to be one of the most important concerns of twenty first century not simplest at countrywide stage but also on the global level. authorities projects alone might not be enough to obtain this aim. Society need to take initiative to create a weather wherein there's no gender discrimination and women have full possibilities of self selection making and participating in social, political and financial life of the us of a with a experience of equality.

Abstract

Women's empowerment in India is heavily dependent on many different variables that include geographical location (urban/rural), educational status, social status (caste and class), and age. Policies on women's empowerment exist at the national, state, and local levels in many sectors, including health, education, economic opportunities, gender-based violence, and political participation. However, there are significant gaps between policy advancements and actual practice at the community level. Skills and knowledge are the engines of economic growth and social development of any country. Countries with higher and better levels of knowledge and skills respond more effectively and promptly to challenges and opportunities of globalization. India is in transition to a knowledge based economy and its competitive edge will be determined by the abilities of its people to create, share and use knowledge more effectively. This paper discuss about the impact of skill development on women empowerment and to sort out the challenges faced by women for the empowerment.

Keywords: Women, Empowerment, Skill, Challenges

Introduction

Women constitute about 48% of the total population of the country. According India's constitution, women are legal citizens of the country and have equal rights with men. Because of lack of acceptance from the male dominant society, Indian women suffer immensely. Women are responsible for baring children, yet they are malnourished and in poor health. Women are also overworked in the field and complete the all of the domestic work. Most Indian women are uneducated. Women comprise around 50% of the country's population, and a bulk of them stays economically dependent on each other without employment. In the age of feminism, a small portion of women in India are freed and can employ their free will and are permitted to carve out their lives the way they want. But there is a considerable division of the women in this nation who require optimistic support. There must be a focus on personality development, life skills, and the knowledge of the competitive and ever-changing environment. Through economic empowerment, the program tries to bring a positive change in the cultural and social life of women who have been facing historical injustice for ages. Our skill development training systems have

adapted to the pandemic, participated in the recovery, and has developed strategies to continue filling the relevant skill and job gaps in India.

Women Empowerment

India faces multifaceted challenges when it comes to ensuring women's participation in the labour force. While on one hand the government is undertaking continuous measures to ensure that girls have a higher rate of enrolment and minimum dropout rates in primary, secondary and higher education, there are still a huge number of women who hold degrees but still do not have jobs.

Ministry of Skill Development and Entrepreneurship has undertaken several initiatives to achieve women empowerment through skill development. Increase of women participation in workforce can give further boost to our economy and Skill India mission is committed to facilitate this through equipping our women with market relevant skills and lead them to a path of self-sufficiency through entrepreneurship. Following initiatives have been under taken to facilitate skill. Skills and knowledge are the motivating factors of the economic growth and community development of any country. They have become even more important in this increasing pace of globalization. India is among the young countries in the world with the proportion of the work force in the age group of 15-59 years growing steadily.

The Role of Skill Development in Women Empowerment

Rural women's restricted access to productive resources, educational levels and the pre-existing social norms concerning labour that is proper for women, tend to confine them to lower-paying, lower-status jobs with limited prospects for skill training and promotion, thus keeping them bound to their lower status. In many rural firms, widespread patterns of insecure employment and transitory and unstable contractual arrangements restrict employers from providing training to women. Rural women's vocational education and training are sometimes restricted to a small number of female-dominated areas, reinforcing their traditional roles and obligations. While such training improves their economic options, it limits their opportunities to gain from newer, non-traditional professions such as information and communication technology (ICT). Hence, proper skill training along with effective awareness generation campaigns become a prerequisite to bridge the gap between the options women have available to them and what they actually have the potential and inclination to take up.

Review of Literature

Hariharan. N (2021), had made a study entitled "A study on recent skill development and women empowerment forecasting 2021 - 2022 in India". The study concluded that the position of training in ability improvement and female empowerment have grown a lot.

Dinesh.P.T (2016), has made a study entitled, “Women skill development & Made in India opportunities and challenges”. The study had found that, there is a need to further develop HRD and training policy from gender perspective with understanding of local customs and tradition.

Sonam Prabakhar (2022), has made a study on, “Skill development program for women in India – Current status and future perspective”. The study had stated that the role of skill development programme in challenging women socio – economic status have paved a high way for the growth of women.

Rama Nag (2019), “Empowering Women through Skill Development and various Government Schemes”. The study has conclude that female workers in our country lose their traditional or acquired skills when they remain unemployed having requisite skill. So to join them in economic activities wage discrimination between male & female workers should be removed.

Objectives

- To know the impact of skill development on women empowerment
- To sort the skill development program provided by the government
- To list out the challenges faced by women to achieve skill development program

Research Methodology

The natures of the study is descriptive in nature. The data is based on secondary data which are collected from various websites and journals.

Impact of Skill Development

Skills development is critical in empowering women by providing them with the tools they need to navigate and flourish in a fast-changing society. Women can develop a wide range of technical and non-technical abilities with access to education and training, allowing them to participate effectively in various areas of society.

First and foremost, skill development opens doors to new opportunities. Women have historically faced several obstacles, including limited access to school and career prospects. Societies tear down these barriers by investing in women’s skill development, allowing women to engage actively in the labor market. Women become more competitive when they acquire new abilities, boosting their chances of obtaining better career opportunities and more significant income.

Women’s economic freedom is also enhanced by skill development. Women who learn marketable skills become financially self-sufficient, minimizing their reliance on others. This economic autonomy increases their decision-making ability and allows them to contribute to their households’ economic well-being actively. Investing in women’s economic empowerment has been demonstrated in studies to

have a multiplier impact, benefiting not only individual women but also their families and communities.

Skill Development Programs

Schemes & Initiatives through NSDC

- Pradhan Mantri Kaushal Vikas Yojana (PMKVY)
- Rozgar Mela
- Pradhan Mantri Kaushal Kendras (PMKK)
- Capacity Building Scheme
- Udaan
- School Initiatives and Higher Education
- India International Skill Centres (IISCs)
- Pre Departure Orientation Training (PDOT)

Schemes & Initiatives through DGT

- Craftsmen Training Scheme (CTS)
- Crafts Instructor Training Scheme (CITS)
- Apprenticeship Training under the Apprentices Act, 1961
- Advanced Vocational Training Scheme (AVTS)
- Vocational Training Programme For Women
- Schemes for Up gradation of it is
- Flexi MoUs
- STRIVE
- Initiatives in the North East and LWE Regions
- Trade Testing
- Current Initiatives in the DGT Landscape
- Dual System of Training (DST)
- Polytechnics

Schemes related to Entrepreneurship

- Pradhan Mantri 'YUVA' Yojana

Other Schemes and Initiatives

- Skill Loan Scheme
- Indian Institute of Skills (IISs)
- SANKALP
- Academic Equivalence to Vocational Qualifications
- Aspirational Districts
- Swachh Bharat Abhiyan
- Technology Initiatives

Challenges which Women Face to Achieve Skill Development Program

1. **Lack of Confidence:** Due to differential socialization social norms, morals in the family rural women lack confidence, support, and decision making powers needed for the growth of an entrepreneur. Decision making power related to business activities is less due to economic dependent and domination of male headed society.
2. **Dual Responsibility:** With the dual roles as, wife and mother women unable to manage the enterprise effectively because of lack of time, concentration and overburdened personal obligations
3. **Finance Problem:** There is no sufficient fund to execute enough programmes to meet numerous political and our rural areas. The multiplicity of schemes is not adequately listed nor is there networking among agencies. As a result, clients approaching one institution are not made aware of the best option for their requirements.
4. **Illiteracy among Rural Women:** The literacy rate of women in India is found at low level compared to male population. The rural women are ignorant of new technology or unskilled. They are often unable to do research & gain the necessary training. The uneducated rural women do not have the knowledge of measurement and basic accounting.
5. **Need of Training and Development:** Indian families and society provide training to a girl to make her as a good wife rather than to uplift her as an entrepreneur she is not allowed to develop network with other business men, which is considered as a sin and bad culture.
6. **Political Interference:** Most of the contracts awarded by the Agency went to loyalists and political lackeys of the political leaders. Projects locations are always influenced by political consideration and not where they are mostly needed by the poor.
7. **Un-Cooperative Attitudes of Implementing Authority:** This has become a serious constraint, of recent. Since most of these Contractors are Political Stall warts, they can hardly complete one single project given to them according to specification and design. The projects are either executed haphazardly or unduly delayed or absolutely abandoned on the pretext of "unavailability of funds".
8. **Insufficient Professional Personnel:** The Agency executed most of its Programmes through 'contractors due to paucity of personnel especially the highly skilled and professional staff like the Economists (only one), the Accountants (only two), the Statistician (only one), and the Lawyers (none) and others. Even the few monitoring staff available has no sufficient assets to use for projects monitoring which are running for the upliftment.
9. **Lack of infrastructure and widespread Corruption:** There are also the other problems for the rural women. Rural women lack training and advisory services on managerial and technical skills to solve production problems.

Here more than 70 percent of enterprises are micro- and small enterprises but their growth and the competitiveness is greatly challenged by a lack of business management.

Conclusion

Various governments both central and state have made several efforts to uplift women workers in the informal sector through several innovative programmes. However, it has not succeeded up to a satisfactory level due to many confronting issues and inhibitions. In order to unlock the full potential of women workforce in India, the need of the hour is to bring about an employment revolution along with a skill development revolution. The planners should focus on women specific policies for their effective participation in the employment market.

Abstract

Unleashing creativity and ingenuity, brainstorming ignites a torrent of ideas and a symphony of perspectives in order to surmount intricate business or technical quandaries. This method cultivates unbridled ideation among participants, propelling them into the exhilarating realm of boundless possibilities. During collaborative brainstorming sessions, individuals spontaneously proffer their insights, as the collective energy crackles with a sense of urgency and inspiration. These ideas are then meticulously classified, assessed, and accorded a hierarchical arrangement, culminating in decisive determinations regarding their subsequent pursuit. Pedagogical approaches meander from traditional explanatory methods to avant-garde constructive teaching techniques. The selection of a fitting method can diverge depending on the course, subject, topic, and context. Studies reveal that the brainstorming method of teaching shines as exceedingly fitting for bridging the chasm between a learner's present stance and their coveted learning outcome. Remarkably potent at the primary education level, notably in language instruction, this method showcases amplified effectiveness. The purpose of this inquiry is to unravel the core of brainstorming, delve into its underlying philosophy within the realm of education, and explore its implementation through the utilization of brainstorming tools in research endeavors. The paper solely depends on various secondary data.

Keywords: Brain storming, Education, Tools, Research

Introduction

Brainstorming electrifies and collaborates, igniting a whirlwind of imaginative ideas and inventive solutions to diverse challenges. Rooted in the philosophy of liberating thought, brainstorming evokes an unbridled exchange of thoughts and concepts within a group's embrace. By suspending judgment and embracing a non-critical atmosphere, participants can embark on a journey through diverse perspectives, unorthodox viewpoints, and unexplored realms of creativity. Originally conceived by advertising visionary Alex Osborn and further refined by subsequent researchers, brainstorming has

permeated fields as varied as business, education, research, and problem-solving. This method empowers individuals to shatter conventional thought patterns, giving rise to fresh insights and visionary solutions to intricate problems.

Review of Literature

A literature review serves as a basis for knowledge on a particular subject, identifies areas of prior scholarship, uncovers contradictions and gaps in the research, supports the need for more research, shows how one work is related to other works, and situates one's own work within the body of existing literature. There are a lot of reviews on this subject, but only the most current and pertinent ones are chosen.

In their groundbreaking research paper entitled "Unleashing the Potential: The Brainstorming Revolution in Nurturing Mathematical Connection and Metacognition Skills among Pesantren Students" (2023), **RosidBahar, SudjiMunadi, and RadenRosnawati** plunge deep into the transformative power of the Brainstorming method within the educational realm. Their study ventures into uncharted territories, unraveling the untapped potential of the Brainstorming technique to invigorate students' Mathematical connection skills and unriddle the enigmatic correlation between these skills and metacognition. By meticulously scrutinizing a sample of 60 daring participants, the researchers unearth a plethora of revelatory findings. This research magnifies the indomitable force of Brainstorming in cultivating heightened learning outcomes and interweaving cognitive capabilities in the intricate tapestry of mathematics education. In a study conducted by **Virginia Cruz and Nicolas Gaudron** in 2010 they explored the use of ended objects, as a tool for brainstorming. They introduced the concept of HCL workshop ended object sessions, which proved to be quite promising. These objects allowed participants to engage with each other emotionally and sensorially leading to the generation of ideas that had not been previously explored within their research program. By creating a shared experience that went beyond language barriers the brainstorming sessions were able to transcend expert discussions and fostered exchanges among participants, from backgrounds. In 2016 **Rafidah Abd Karim** conducted a research study titled "Brainstorming approach and mind mapping, in writing activity". The study delved into the utilization of mind maps for generating, visualizing, structuring and categorizing ideas. By engaging in brainstorming exercises students can be guided to overcome challenges encountered during writing tasks. This paper examines the significance of brainstorming and mind mapping as approaches that assist students throughout their writing process. Additionally, it explores the integration of technology to facilitate brainstorming and mind mapping activities. Research conducted by **Binita Goswami et.al.** in 2017 they investigated the effectiveness of using brainstorming sessions as a teaching learning tool, for medical biochemistry students. The findings indicated that the students showed an understanding of concepts as demonstrated by improved scores in posttests and their ability to solve clinical problems during the brainstorming sessions. Moreover, the students expressed their contentment with the organization timing and discussion of problems, during these sessions. **Ida Bagus Nyoman Mantra et al., (2022)** conducted a

study entitled on “explored that the reading comprehensions of the students improved Significantly Therefore, the BARA (Brainstorming, Activating, Reinforcing, Applying) strategy is considered very effective for teaching reading comprehension. This study implies that teachers should consider using BARA strategy to improve students’ Reading comprehension.

Objective of the Study

- To understand the concept of brainstorming and Philosophy behind Use of Brainstorming Method in the Field of Education
- To Familiarise different types perspective tools for brainstorming.
- To explore usage of brainstorming tools inresearch.

Data Base and Research Methodology

This qualitative study is a secondary analysis of data collected from a variety of sources, including journals, articles, theses, magazines, books, and the internet.

Concept of Brainstorming and its Philosophy in the Field of Education

Advertising mogul Alex Osborn, celebrated for his groundbreaking 1953 masterpiece "Applied Imagination," spearheaded this technique, subsequently honed and expanded upon by a multitude of researchers from various domains, including academia. In the realm of instruction and acquisition, this approach subtly deviates from Osborn's original notion, seeking to reshape students' conventional learning methodologies into vibrant perspectives. Within the educational milieu, brainstorming engenders ingenious cogitation by provoking the serendipitous generation of ideas pertaining to the subject matter. In stark contrast to mundane classroom practices, this methodology nurtures a dynamic and emancipated mindset among learners. It facilitates the transition from familiar knowledge to uncharted territories and encourages students to showcase their erudition in front of their peers. Whether conducted within a solitary session or spanning several, this technique, necessitating only rudimentary supplies like chalk and a board, compels students to rupture established cognitive patterns and embark upon unexplored avenues of thought, particularly in contemporary cutting-edge classrooms. Delving into the intricate realm of language classes, the art of brainstorming emerges as an alluring and potent instrument. With its magnetic allure, it propels students towards mastery, transforming them into nimble and astute learners. Moreover, this vibrant activity bestows upon them a euphoric delight, saturating their souls with unbridled joy.

In a vast framework, the pedagogical strategy known as brainstorming in education entails provoking students to unleash a deluge of ideas, thoughts, expertise, and facts to tackle distinct predicaments, subjects, or dilemmas. In the conventional domain of language instruction, this approach unfurls as the instructor strides into the classroom and initiates a preliminary conversation, frequently employing inquiries. The culmination of this inaugural dialogue signals the commencement of the lesson's focal theme. Subsequently, the lesson advances through diverse phases encompassing the instructor's

exposition, student involvement, practice, extraction of significance, elucidations, and recapitulation. During the cognitive tempest technique, the instructor wields it throughout the complete pedagogical procedure via the subsequent measures.

Students sits around the round table

At the commencement, the professor commands the pupils to orchestrate their seating in a spiral or U-shaped formation. This arrangement may encompass an elliptical table or the chairs being harmoniously positioned. The seating disposition endeavors to guarantee that every student possesses a lucid line of sight towards each other, the whiteboard, and the instructor, thus fostering unmediated interaction and involvement.

Present the Specific Problem or Topic

Having established an optimal seating configuration, enabling every student to visually connect with their peers, the board, and the instructor, the subsequent phase entails unveiling the particular quandary, subject matter, or matter of concern in the form of an interrogative. This endeavor may be instigated by either the pedagogue or a pupil.

- **Clarification and explanation of the problem:**Before initiating the mind-melting session, the teacher bestows an elucidation of the enigma and tackles any inquiries the students might harbor concerning the forthcoming venture. For instance, when instructing about fruit appellations, the teacher might exclaim, "Beloved pupils, you are well-acquainted with myriad fruits. Kindly divulge the nomenclature of fruits in either your mother tongue or the desired lingua franca.
- **Brain storming starts:**After the intricate elucidation and dispelling of uncertainties, the mind-mapping session kicks off, endowing all students with the chance to vocalize their musings. Remarkably, students frequently showcase remarkable fervor when proffering their retorts to the presented predicament.
- **Drawing-out as many ideas as possible:**The utmost aim is to extract an abundance of ideas. Students must be granted abundant chance and time to ponder and retort as elaborately as they are able.
- **Record all the generated ideas:**Either the instructor or a learner should meticulously inscribe all the concepts on the blackboard, utilizing succinct keywords and phrases. This methodology has evidenced that exhibiting concepts on the board in full view of the learners nurtures a vibrant mental progression, thereby stimulating them to proffer supplementary notions.
- **Assessment of ideas:** Engaging with notions launches students into a realm of abstraction. The educator proceeds to ponder over each notion individually. Likewise, every entry in the catalog requires thorough examination, refinement, amplification, and all-encompassing dialogue. Ultimately, a definitive catalog is crafted on the chalkboard. This approach equips students with a conclusive inventory, which they subsequently transcribe into their notes for ensuing exercises.

6. Perspective tools for Brainstorming

- **Six thinking hats** - It was developed by Edward de Bono. Six thinking hats refers six different perspectives, allowing you to reduce bias in your brainstorming. It is especially useful when search ideas for research papers or projects. It functions as a team-based approach to brainstorming and problem solving that may be used to examine issues from many angles in order to find solutions that might otherwise go unnoticed.
- **Gap analysis** - A gap analysis helps to identify the gaps between the current performance and the expected performance. Gap analysis in education is the process of determining the difference between a child's current level of learning and where they ought to be at any particular point in their schooling. We call this a learning gap. A gap analysis template may be used to put strategies in place to help the kid catch up to where they need to be when a learning gap has been detected.
- **Concept map** - A concept map consists of data elements and information that allow you to visualize the data and information flow in your concept. Concept maps can be utilized to illustrate and comprehend the interrelationships between data in existing literature. Creating concept maps can be a helpful way to visualize the concept you are researching and studying. We can use sticky notes to create a type of mind map, or you can utilize one of the many online brainstorming tools available.
- **Reverse brainstorming canvas** - The reverse brainstorming canvas model is a powerful tool for problem-solving, especially when you need a new perspective. It helps to stimulate creative thinking and idea generation by looking at the issue from a different angle.
- **Problem statement** - Problem statement is the one of the most important brainstorming tools in research. A problem statement is a succinct and clear description of the issue that you are attempting to address in your research. This model assists you in breaking down the LARGE problem that you are attempting to solve into more manageable parts by posing specific questions.
- **SCAMPER** - SCAMPER is an acronym for seven creative problem-solving techniques: Substitute, Combine, Adapt, Modify, Put to Another Use, Eliminate, and Reverse. This method is known for being straightforward and easy to use. It is based on the concept that innovation is achieved by making changes to existing ideas and objects.
- **Mind mapping** - Mind mapping is a technique for visually organizing information around a central concept. It is similar to a tree, with related ideas branching out from the main point. This type of layout allows for the exploration of patterns and structure in a variety of materials, making it a useful tool for organizing thoughts, studying, and approaching projects.
- **Random word technique** - Random word brainstorming can be a great way to come up with creative solutions to your problems. This technique encourages you to think outside the box and explore ideas that you may not have considered

before. It can help you access the parts of your brain that are usually dormant, allowing you to come up with innovative solutions that are not limited by any structures or rules.

- **Provocation-Based Technique** - Techniques based on provocation involve asking difficult questions or making statements to encourage creative thinking and generate new ideas. These can be in the form of "What If?" questions, outlandish statements, or contradictory assumptions. Provocations break away from traditional thought processes and motivate people to think outside the box.
- **Analogies** - Analogies involve making connections between unrelated topics, scenarios, or areas. By taking the principles or qualities of one domain and applying them to another, new ideas and understandings can be created. Analogies motivate people to look at different angles and transfer knowledge from one situation to another.
- **Role playing** - Role play involves taking on different characters or identities related to the issue or task at hand. By embodying a different point of view, people can come up with ideas from that particular angle. Role play increases understanding, promotes creative thinking, and allows for the examination of various perspectives.
- **Round robin brainstorming** - Round-robin brainstorming is a structured approach to idea-sharing in which each person contributes one thought before passing it on to the next participant. This method ensures that everyone has an equal opportunity to contribute and that no one voice is more powerful than another. It also encourages a variety of perspectives and helps to generate a multitude of ideas in research and learning.

Brainstorming in Research

In the dominion of investigation, ideating serves as a vibrant and potent technique to nurture inventiveness and spawn a plethora of notions that greatly enrich diverse stages of the research process. Researchers convene to embark on untrammelled and boundless exploration of potential research topics, hypotheses, methodologies, and avant-garde approaches. This collaborative ideation process not only facilitates the refinement of research questions but also aids in the detection of potential hurdles and the formulation of imaginative resolutions to surmount them. Furthermore, ideating assumes a pivotal role in amplifying the configuration of research studies by inspiring collaboration and assimilating cross-disciplinary perspectives. Moreover, the act of ideating proves immeasurable in the interpretation of discoveries, the contemplation of constraints, and the conception of forthcoming research trajectories. By encouraging unreserved discourse and embracing diverse perspectives, ideating enhances the entire expedition of inquiry, propelling towards more profound revelations and resilient achievements. It nurtures a feeling of communal responsibility and involvement among investigators, empowering them to harness their collective expertise and exploits to propel the frontiers of knowledge and ingenuity. Ultimately, ideating acts as a catalyst for engendering novel concepts, igniting ingenuity, and guaranteeing that the research process remains vibrant and consequential.

Conclusion

To wrap up, our research had two primary aims: to unravel the essence of brainstorming and the underlying philosophy that propels its application in the realm of education, and to acquaint ourselves with a myriad of perspective tools that can be employed for brainstorming. Additionally, we sought to delve into the potential utilization of these brainstorming tools in the domain of research. Through our investigation, we have acquired a profound comprehension of the commanding potential of brainstorming as a dynamic technique that kindles the fires of creativity and begets a wealth of ideas. We have acknowledged its pivotal role in the research process, as it aids in refining research inquiries, unveiling potential hurdles, and devising groundbreaking approaches. Moreover, brainstorming has proven to be instrumental in enriching the design of research studies by fostering collaboration and eliciting cross-disciplinary perspectives.

In conclusion, this research has underscored the momentousness of brainstorming in the realm of education and its potential for elevating research endeavors. By embracing the philosophy that lies at the heart of brainstorming and harnessing the varied tools at our disposal, researchers can unleash their creativity, foster collaboration, and ultimately contribute to the advancement of knowledge in their respective fields.

PREFACE

In an era where the global landscape is undergoing rapid and profound changes, the aspiration for global leadership demands a visionary and concerted effort. The seminar proceedings titled “Vision for Vishwa Guru India Initiatives for Global Leadership by 2047” stand as a testament to India's unwavering commitment to shaping a future that is not only transformative for its own citizens but also resonates across the international community.

As we approach the momentous milestone of 2047, which marks the centenary of India's independence, we find ourselves at a crossroads of possibilities and challenges. The concept of ‘Vishwa Guru’ encapsulates India's age-old tradition of disseminating knowledge, fostering dialogue, and illuminating the path for others. This compilation of seminar proceedings is a reflection of this tradition, a dialogue that transcends boundaries and invites scholars, students, and visionaries to collectively envision the path ahead. These proceedings offer a panoramic view of the discussions and insights shared by luminaries in various fields, touching upon a myriad of sub-themes. From discussions on the Role of Technology in NEP 2020 to explorations of Ease of Doing Business, the proceedings delve into crucial facets that shape India's global role.

We extend our heartfelt gratitude to the Indian Council of Social Science Research (ICSSR) for its invaluable support in bringing together these seminal discussions. Their unwavering commitment to advancing knowledge aligns seamlessly with the spirit of the Vishwa Guru India Initiatives. As we navigate the complexities of a rapidly evolving world, we hope that these initiatives serve as a source of inspiration, a catalyst for meaningful dialogues, and a blueprint for action.

We are indebted to the authors who have contributed their scholarly insights to this compilation. Their diverse perspectives and rigorous research have enriched the discourse on global leadership and India's role in shaping the global narrative. Each paper presented here is a testament to their dedication to knowledge dissemination and their belief in the power of ideas to drive positive change.

Together, let us embrace the spirit of ‘Vishwa Guru’ and pave the way for a brighter, more harmonious, and prosperous India.

Abstract

Education is the key factor to increase the financial status of the persons. Not only it gives financial status then also it gives holistic knowledge to the persons. Education gives economic background, and knowledge-based attitude or behaviour. Then what society expect from the educated persons. Today students are leaders of the country in future. So, Education gives leadership qualities, Responsibilities to the society. This National Educational Policy 2020 helps to improve the students learning process or method to vary. Experiential Learning and skill development is one of the main objectives of NEP 2020. This article tries to show, NEP 2020 what wants to change the learning and technical knowledge of the students.

Keywords: Soft skill learning, Hard skill learning, Practical learning or Experiential learning.

Introduction

The National Education Policy (NEP) 2020 is a complete and transformative framework introduced in India with the aim of reforming the country's education system. Intended as a student-centric, holistic approach, the policy seeks to adoptive creativity, critical thinking, and problem-solving skills among students. NEP 2020 promotes for a elastic and multidisciplinary curriculum, mixing vocational education and experiential learning, while promoting technology-enabled education. It encourages early childhood education, underlines the training and professional development of teachers, and strives to bridge the gap between academic and vocational streams. The policy recognizes the importance of protective cultural and original knowledge while preparing students for the challenges of the 21st century, making education more inclusive, reasonable, and adaptive to the changing needs of learners and society.

Experiential Learning

Experiential learning, in the context of NEP 2020, is a student-centered method that boosts students to learn by doing, appealing in hands-on activities, and go through real-world situations. It is planned to move away from habit memorization and theoretical knowledge, and instead, focus on real-world applications and perilous thinking.

Following key features are includes in NEP 2020 for experiential learning to the students:

Skill-based Learning: Experiential learning aims to develop anextensive range of skills in students, including problem-solving, decision-making, communication, collaboration, and inventiveness, among others. This focus on subject expertise intended to make students better equipped for real-life challenges and employment opportunities.

Vocational Education: The NEP 2020 emphasizes the amalgamation of professional education into the mainstream curriculum. This enables students to advance practical skills and appropriate knowledge to various trades and industries, preparing them for the workforce.

Internships and Hands-on Training: The policy encourages schools and higher education institutions to provide prospects for students to engage in internships, apprenticeships, and other forms of hands-on training. This allows students to apply academic knowledge to real-world sceneries and improve valuable work experience to the students.

Project-Based Learning: Observed learning promotes project-based learning, where students work on real-life projects and solve reliable problems. This approach adopts perilous thinking, coordination, and practical application of knowledge.

Field Trips and Community Engagement: The NEP 2020 encourages schools to organize field trips and involve with the local community. These experiences enable students to understand the real-world situation of their studies and shape a deeper connection between the classroom and the world outside.

Integration of Co-curricular Activities: Experiential learning involves participating co-curricular activities such as sports, arts, and cultural programs into the education system. This encourages a well-versed growth of students and improves their learning experience.

It's worth noting that the implementation of NEP 2020 and its initiatives, including observed learning, may differ across different states and educational institutions in India. For the most current and detailed information on the status of experiential learning in NEP 2020, I recommend referring to official government sources or educational institutions' updates.

Skill Development

The term "skill" refers to the ability or proficiency acquired through practice, training, or experience to perform a specific task or activity effectively. Skills can be both physical and intangible, encompassing a extensive range of capabilities across various areas, including physical, reasoning, technical, social, and emotional areas.

Following some key points about skills in NEP 2020:

Learned Abilities: Skills are not innate; they are learned and developed over time. They result from a grouping of knowledge, practice, and experience.

Performance-Oriented: Skills are task-oriented and involve the capacity to carry out specific actions or achieve particular objectives.

Context-Dependent: Skills may be context-specific, meaning they can be more appropriate in certain situations or fields than others.

Transferable: Some skills are handy across different areas, allowing individuals to apply them in various contexts.

Improvable: With practice and continuous learning, individuals can advance their skills and increase their ability.

Skills can be broadly categorized into two types:

Hard Skills: These are specific, technical abilities that are easily measurable and often require formal education or training. Examples of hard skills include programming, accounting, graphic design, data analysis, and external verbal proficiency.

Soft Skills: Also known as "people skills" or "interpersonal skills," these are more subjective and are related to how individuals interact with others and handle various situations. Examples of soft skills contain communication, leadership, teamwork, problem-solving, adaptability, and emotional intelligence.

Both hard and soft skills are essential for personal and professional development, and a well-rounded individual typically holds a amalgamation of these skills. In the workplace, employers often seek candidates with a balanced mix of technical expertise (hard skills) and the ability to work well with others and adapt to new challenges (soft skills).

The National Education Policy (NEP) 2020 in India the significance of skill development as a crucial aspect of the education system. The NEP 2020 aims to equip students with a broad range of skills that are essential for personal growth, employability, and contributing to the nation's development. It emphasizes the integration of skill development across all levels of education, from school to higher education.

Following important points are include in NEP 2020:

Early Childhood Education: The policy highlights skill development from an early age. It aims to encourage foundational skills such as critical thinking, problem-solving, creativity, and communication in children through play-based and activity-based learning in early childhood education.

Vocational Education: NEP 2020 advocates for the combination of vocational education into the mainstream curriculum. This tactic aims to provide students with practical skills and knowledge applicable to various trades and industries. It seeks to remove the traditional hierarchy between academic and vocational streams and encourages students to discover various career options.

Internships and Experiential Learning: This policy helps practical learning through internships, apprenticeships, and hands-on training opportunities to the students. This allows students to increase practical knowledge and progress employable skills while following their studies.

Flexible Curriculum: NEP 2020 inspires a elastic curriculum that permits students to choose from a wide range of subjects and skill-based courses. This flexibility allows students to discover their interests and strengths, fostering a holistic development method.

Teacher Training and Professional Development: The policy highlights the training and professional development of teachers to train them with the skills and knowledge needed to efficiently impart skill-based education to students.

Technology Integration: NEP 2020 identifies the importance of technology in skill development. It highlights the use of technology to improve teaching and learning experiences and to convey digital skills to students.

Entrepreneurship Education: The policy encourages entrepreneurship education to encourage invention and self-employment. It seeks to foster an entrepreneurial mindset among students and provide them with the necessary skills to start their schemes.

Recognition of Prior Learning: NEP 2020 acknowledges the value of skills acquired external formal education systems. It aims to provide mechanisms for recognizing and accrediting prior learning, allowing individuals to gain theoretical credit for their existing skills and knowledge.

It's significant to note that the application of skill development creativities under NEP 2020 may differ across different states and educational institutions in India. Since policies are subject to nonstop updates and changes, I recommend referring to official government sources or educational institutions for the most current and detailed info on skill development in NEP 2020.

Conclusion

Indians understand the value of education in their daily lives. Not only in terms of money, but also in terms of respect in society, education is given a special place. Assets may go tomorrow but arrive today. Education, however, is not stolen or burned in the same way. If someone imparts information to others, the recipient will become more knowledgeable. According to a statistical study, in India, parents spend 60% of their income on their children's tuition. The NEP 2020 must be implemented by teachers. Because the government is dealing with more issues and holding more meetings with educators, opposition party suggestions, parents' opinions, and public input. The government then implemented the policy. Teachers work in the field, thus. Every strategy has flaws, and success depends on Every strategy has flaws; the execution of the plan determines whether it succeeds. How to carry out the strategy on the ground. As a result, more educationalists offer advice to the government for NEP 2020. The government includes the educationalists' recommendations to the NEP 2020's developed next level.

Abstract

Manufacturing is believed to be the key to the development of a nation. However in case of India it is the services which has spurred the development. Realizing the imperativeness of manufacturing sector 'Make in India' initiative was launched on 25th September 2014 by our Prime Minister, Mr. Narendra Modi. The new policy is launched with the objective of making India the manufacturing hub of the world. The initiative is a sales pitch; focusing the key 25 industries; to attract foreign investors. However to make it successful the areas of regulations, power, infrastructure etc. needs fixing up.

This research paper is written with the intention to expound the concept of 'Make in India' campaign, objectives, its purpose and its merits.

Keywords: Make, India, Manufacturing.

Introduction

The Government of India began the "Make in India" project in 2014 with the goal of supporting domestic manufacturing and accelerating economic growth. The initiative's main goal is to entice both domestic and international businesses to participate in Indian manufacturing.

By fostering an advantageous business environment, streamlining laws, and promoting ease of doing business, the "Make in India" initiative seeks to turn India into a major global manufacturing base. It aims to entice investment in a variety of industries, including renewable energy, textiles, electronics, autos, and medicines.

Objective of the Study

- To list out the objective of make in India scheme
- To list out the merits of make in India scheme
- To list the methods and forms of FDI

Objectives of Make in India

1. Promoting investment: By providing incentives, tax advantages, and streamlined regulatory processes, the campaign hopes to draw both domestic and foreign direct investments (FDI). It strives to foster a climate that is business-friendly.
2. Improvement of infrastructure, such as transportation systems, logistics systems, and industrial corridors, is a key goal of the plan. This is crucial for the efficient transport of commodities and raw resources, which lowers prices.
3. The "Make in India" initiative acknowledges the value of skilled workers for the manufacturing sector. It attempts to improve workforce skill sets through a variety of activities, including partnerships with industry leaders and programs for vocational training.
4. Protection of intellectual property rights (IPR): To safeguard innovations and promote research and development, the government is aiming to improve India's IPR system. This is essential for encouraging innovation and luring investments in technology-driven production.
5. Sector-specific policies: To address the special difficulties and opportunities in many industries, the initiative has created sector-specific policies. With the help of these policies, focused growth and competitiveness can be encouraged in a variety of industries.

The "Make in India" project seeks to increase employment possibilities, foster economic growth, and establish India as a hub for global manufacturing by boosting local production and luring investments. To promote sustainable economic development, it aims to take use of India's sizable consumer market, talented labour, and favourable demographics.

Merits of Make in India

The Make in India initiative offers several merits and advantages for India. Some of the key merits of the Make in India scheme are:

1. Economic growth: The initiative aims to boost economic growth by promoting domestic manufacturing and attracting foreign direct investment (FDI). Increased manufacturing activities contribute to GDP growth, job creation, and overall economic development.
2. Job creation: The Make in India scheme focuses on creating employment opportunities across various sectors, including manufacturing, infrastructure development, and services that support the manufacturing ecosystem. This helps to reduce unemployment rates and improve the standard of living for the population.

3. **Skill development:** The initiative emphasizes skill development programs and vocational training, aiming to enhance the capabilities of the workforce. This helps bridge the skill gap and ensures a skilled labor force that can meet the demands of the manufacturing industry. It also promotes entrepreneurship and innovation, creating a culture of self-employment and job creation.
4. **Foreign direct investment (FDI):** The Make in India scheme aims to attract foreign companies to invest in India's manufacturing sector. By simplifying regulations, providing incentives, and improving ease of doing business, it creates a favorable environment for foreign investors. Increased FDI inflows bring in advanced technology, capital, and expertise, leading to the growth and development of the manufacturing sector.
5. **Technological advancements:** The Make in India initiative encourages the adoption and development of advanced technologies in the manufacturing sector. This helps upgrade the industrial infrastructure, improve productivity, and enhance the competitiveness of Indian manufacturing companies in the global market.
6. **Export promotion:** By promoting domestic manufacturing, the Make in India scheme aims to increase exports. It focuses on developing export-oriented industries and facilitating trade, leading to a favorable balance of trade and foreign exchange earnings for the country.

Foreign Direct Investment

A **foreign direct investment (FDI)** refers to purchase of an asset in another country, such that it gives direct control to the purchaser over the asset (e.g. purchase of land and building). In other words, it is an investment in the form of a controlling ownership in a business, in real estate or in productive assets such as factories in one country by an entity based in another country.^[1] It is thus distinguished from a foreign portfolio investment or foreign indirect investment by a notion of direct control.

The origin of the investment does not impact the definition, as an FDI: the investment may be made either "inorganically" by buying a company in the target country or "organically" by expanding the operations of an existing business in that country.

Methods

The foreign direct investor may acquire voting power of an enterprise in an economy through any of the following methods:

- by incorporating a wholly owned subsidiary or company anywhere
- by acquiring shares in an associated enterprise

- through a merger or an acquisition of an unrelated enterprise
- participating in an equity joint venture with another investor or enterprise

Forms of FDI incentives

Foreign direct investment incentives may take the following forms:

- low corporate tax and individual income tax rates
- tax holidays
- other types of tax concessions
- preferential tariffs
- special economic zones
- EPZ – export processing zones
- bonded warehouses
- maquiladoras
- investment financial subsidies
- free land or land subsidies
- relocation & expatriation
- infrastructure subsidies
- R&D support
- energy
- derogation from regulations

Conclusion

To make India free of unemployment by bringing development and growth this policy is the urgent need. We can downsize poverty in India to a great level by solving the unemployment issue for youths. Thus the country economy will achieve a new height after the success of this campaign. This, in turn, may solve various social issues in the country.

This program is an absolute necessity if we are to eradicate unemployment in India while also fostering economic growth. We can significantly reduce poverty by addressing the issue of youth unemployment. A strong economy is inevitable following the success of the “Make in India” initiative. By doing so, various socio-economic problems in the country may be addressed.

ABSTRACT

In the present interrelated world, information and communication technology (ICT) is broadly utilized by our nation and it influences our lives everyday. In the ongoing advanced age regular new innovation comes as ICT revolt. These new advancements have been open by individuals in their day-to-day existence and increment their expectations for everyday comforts. In Present days, numerous ICT contraptions are utilized in our life and they work with portability accordingly utilized anywhere and at any time. These contraptions work for Data, Speed, and Communication and diminish the physical and mental human responsibility. By that standards, advanced contraptions really helped people in day-to-day existence. ICT has contributed a great deal to change our daily existence, for example, letter to email, market shopping to on-line shopping, classroom learning to e-learning, and so on. This paper present's the impacts of ICT as Home and domestic Exercises, Interpersonal interaction, Training, Wellbeing, Business, Banking, and Work. In light of this survey, positive and adverse consequences to involve ICT in our everyday life are examined.

Keywords: Information and Communication Technology (ICT), e-learning, impacts of ICT.

Introduction

ICT stands for Information and communication technology, which is an innovation that permits us to look for Information and to communicate with one another. Society has seen the ICT transformation in the main edge. The new advancements of the computerized age have been accessible in our daily existence with the dependable advantages so ICT has been supported as our extraordinary expectations for everyday comforts. ICT coordinate

all communication channels for us to use in our regular day to day existence. ICTs are presently not an extravagance for emerging nations. In the beyond couple of many years, ICT offers society with a enormous exhibit of new communication capacities, such as home and domestic exercises, work, schooling, comfort, business, banking, and person to person communication sites. We are currently in the computerized age so the quantities of ICT devices such as computers, laptops, web, cell phones, tablets, and so on are accessible into our lives. Individuals get ups the latest patterns and move up in existence with the utilization of ICT. Over the most recent couple of many years, ICT has turned into the need as opposed to the special case.

What is ICT?

Information and communication technology (ICT) is often used as a drawn out equivalent word for information technology (IT), yet is a more unambiguous term that burdens the job of bound together interchanges. ICT gives permission to data through broadcast communications. It is such as information technology (IT), however focuses generally on communication advancements, for example, the Web, remote organizations, mobile phones, and other communication mediums. ICT incorporates any specialized gadget or application, enveloping: radio, TV, cell phones, computer, laptops, tablets, and organization equipment and programming, so on. ICT additionally offers the different types of assistance on the web and applications related with them.

Significance of ICT

Information and communication technology (ICT) plays a significant role on the world since we are currently in the information age period. With ICT, the organization can make the business easier to occur with the client, suppliers, and wholesaler. It is additionally vital in our regular routines. The absence of suitable data brilliantly will bring about low efficiency, low- quality examination works, and waste of time to seek after information and even to do investigate which others had done or in different nations. These days ICT can't be isolated from our everyday necessities.

ICT enormously affects our regular routines. For instance, we can examine our nearby paper utilizing the internet-based paper. One more model is we actually can get associated with our family, relatives, or college regardless of whether we are abroad by

utilizing electronic mail, yahoo messenger, call gathering, or video conference.

Advanced Computer and systems administration have changed our economy idea to an economy with no limit in existence in view of ICT. It brings a ton of benefits for financial improvement empowering a great many exchanges to occur in a simple and quick manner. ICT is one of the financial improvement points of support to acquire a public upper hand. It can work on the nature of human existence since it is utilized as a learning and education media, the mass communication media in promoting and campaigning practical and important issues, such as the health and social area. It gives more extensive information and can help in acquiring and getting the information.

ICT has turned into an essential piece of day-to-day existence for some individuals. It builds its significance in individuals' lives and it is normal that this pattern will proceed, to the degree that ICT education will turn into a practical necessity for people's work, social, and personal's lives.

Effects of ICT

As human being we are always connected with lot of essential things in our everyday life. Using ICT gadgets in our lifestyle, many time-consuming calculation and tough tasks has become easier and social contacts has been increased. ICT has affected lives by improving timely distribution of information through the media and improved communications in homes and workplaces through social networks, and emails. ICT has extremely enhanced the quality of human life. For examples, writing a letter could take few days to arrive to the receiver but by the writing an e-mail reaches in just a minute. ICT provides each facility on 24 Hrs X 7 days with the wider knowledge and information. ICT affects fields of daily life some of them are discussed as follows:

As Home and Domestic Activities: We can join and control home equipment's (together with washing machine, refrigerator, cell-phones, laptops). Carry out internet banking, on-line shopping, examine newspapers on-line, watch TV programs, impart training and connects ourselves to our family, friends, or loved ones whilst we're at lengthy distance through the use of the e-mail, messenger, call-conference, or video-conference. As Social Networking: There are many social networking web sites are to be had such as Facebook, Orkut, Twitter, and LinkedIn which lets in customers to talk and live linked with every different throughout the globe regularly. All those web sites have helped to slender the bodily distances among people. Social Networking gives centres together with quicker verbal exchange speed, powerful sharing of information, and paperless environment.

As Education/E-Learning: E-Learning is a digital mastering, wherein the learner makes use of a computer to analyse a task, skill, or method at that point instructor teaches thru the computer online. Students can analyse through looking videos, e-books, dialogue groups, bulletin boards, blogs and e-mastering in a collaborate environment. Students also can ask query to their instructor the usage of emails. Educational institutes make use of projector or digi-magnificence to train students.

As Health: When we get sick, we do not like to head out of door seven to go to the doctors. Today, we had an answer use ICT device to touch with our health practitioner and describe our problems. It is beneficial to clinical college students to find out about disease, medicines, and surgeries. Doctors can display essential surgical operations to clinical college students via way of means of the usage of ICT. Doctors can function important affected person in steering of many expert surgeons via videoconferencing.

As Shopping/Commerce: Online purchasing entails E-commerce. It attracts on such technology as digital budget transfer, online transaction processing, Inventory control device and automatic facts series systems. It makes shopping for and promoting sports easier, greater green and quicker through the use of computers, net and shared software. ICT helped groups to make extra cash and spend much lesson their business. We can pick variety of objects from exceptional nations without accomplishing that location to shop for anything we need at any time. We pay for the objects at there with a secure net price option. Product marketing and marketing is likewise feasible via ICT.

As Banking: Banking helped us to shop formatters the use of E-commerce. It consists of out digital transactions via Debit/Credit cards, internet banking and Air/Rail tickets reserving at anywhere at whenever with the use our equal banking account. We can keep our time, get admission to debts for mortgage applications, transactions and replace our coins go with the drift at any time. Banking is facilitated with digital cash, so it introduces an Eco-pleasant world.

As Employment/Jobs: ICT increases the number of employments in our society. People can work as Web developer, and IT network supervisor who have skills in ICT. It gives new job opportunity for many people to become victorious self-employer to work from their home.

Conclusion

ICTs affect nearly everyone that approaches them and that the web has changed society and how we live. ICT brings individuals from areas of the world together to speak with one another across the world. It offers a chance to further developing communication, to meet new individuals on the web and establish a friendship, to share the individual data web based, expanding potential open doors for training. Without a doubt ICT device have truly made people groups life straightforward and engaging yet information, Media, and Innovation Abilities are required for the utilization of ICT. ICT can decidedly affect our lives yet we must be cautious while utilizing it since we might experience the negative effects of some adverse consequence by utilizing them. We must be perceptive in utilizing the ICT devices. In this manner, ICT is the new advancements of the computerized age have been open in our day-to-day existence with a confusing mix of ensured benefits for certain issues.

கோயம்புத்தூர்

முன்னுரை

தமிழில் தோன்றிய சங்க இலக்கியங்கள் வழி அக்கால மக்களின் காதல், வீரம் ஆகியவற்றோடு அவர்களின் நம்பிக்கைகள், வழிபாடுகள், பழக்கவழக்கங்கள், வாழ்க்கை தொடர்பான மதிப்பீடுகள், வரலாறுகள், மனித இயல்புகள் போன்றன பற்றியும் அறிந்துகொள்ளமுடியும். சங்கஇலக்கியத் தொகுப்பில் பண்டைய தமிழகத்தின் பல்வேறு பகுதிகளில் வாழ்ந்த புலவர்களின் பாடல்கள் இடம்பெற்றுள்ளன. புலவர்களின் அறிவாற்றல், அனுபவத் தன்மைகளுக்கேற்ப பாடல்கள் அமைந்துள்ளன. அவை, காலந்தோறும் படிப்போர்க்குப் பல வகைகளில் பயனளிக்க வல்லனவாக உள்ளன. பண்டைய தமிழகப் பிரிவுகளில் ஒன்றாக இருந்தது கொங்குப்பகுதியாகும். கொங்குப் பகுதியில் அமைந்திருந்த கருவூர் என்னும் ஊரின் பெயரைத் தங்கள் பெயர்களுக்கு முன்கொண்டுள்ள புலவர்கள் எழுதிய பாடல்கள் சங்க இலக்கியத் தொகுப்பில் இடம்பெற்றுள்ளன. மயிலை.சேனி.வேங்கடசாமி இவர்களைக் கொங்குநாட்டுப் புலவர் பெருமக்கள் என வகைப்படுத்துவார். (மயிலை.சேனி.வேங்கடசாமி, ப.170) சங்க காலத்தைச்சார்ந்த, தமிழகத்தின் ஒரு குறிப்பிட்ட நிலவியலுக்குட்பட்ட புலவர்களின் பாடல்கள் வெளிப்படுத்தும் செய்திகளை ஆராயும் நோக்கில் இக்கட்டுரை அமைகிறது.

கருவூரின் சிறப்பு

கருவூர்க்குப் பல சிறப்புகள் உள்ளன. இது ஆன்பொருளை என்னும் அமராவதி ஆற்றங்கரையில் அமைந்துள்ளது. அதாவது, இப்போதுள்ள கரூர்பகுதி. கருவூர் என்பதே கரூர் என மருவியதாகக் கருதப்படுகிறது. இது சங்க காலத்தில் சேரர்களின் தலைநகராக இருந்துள்ளது. சேரர்கள் கொங்கு நாட்டைக் கைப்பற்றிய பிறகு சேரநாட்டின் தலைநகரமான கருவூரின் பெயரையே இதற்கு இட்டதாகச் சொல்லப்படுகிறது. இதற்கு வஞ்சி என்ற வேறுபெயரும் உண்டு. சேரர்கள் வழிவந்த இரும்பொறை அரசர்கள் இங்கிருந்து ஆட்சிசெய்துள்ளனர். சேரர்களிடமிருந்து இதைக் கைப்பற்ற சோழர்களும் பாண்டியர்களும் போர் செய்துள்ளனர். பிறகு, பாண்டியர்களின் ஆட்சிக்கும் அதன்பிறகு நாயக்கர் ஆட்சிக்கும் உட்பட்டு இருந்துள்ளது.

கருவூர்ப்புலவர்கள்

கருவூர் என்ற ஊரின் அடையொடு தங்கள் பெயர்களைக் கொண்ட புலவர்கள் பின்வருமாறு: கருவூர் ஓதமானியார், கருவூர்க்

கண்ணம்பாளனார். கருவூர் கதப்பிள்ளை, கருவூர்க் கண்ணம்புல்லனார், கருவூர்க் கலிங்கத்தார், கருவூர்க்கிழார், கருவூர் சேரமான்; சாத்தன், கருவூர் நன்மார்பனார், கருவூர் பவுத்திரனார், கருவூர் பூதஞ்சாத்தனார், கருவூர் பெருஞ்சதுக்கப் பூதனார் ஆகிய புலவர்கள் ஆவர்.

கருவூர்க் கண்ணம்பாளனார்

மகளிரின் சோலை விளையாடல், ஆறலைக்கள்வர் செயல்கள், வஞ்சி மாநகரை ஆளும் சேரனின் சிறப்பு, உடன்போக்கில் சென்றுவிட்ட மகளை நினைத்து வருந்தும் தாயின் நிலை, பொருள்தேடச் செல்லும் தலைவன் தன் தலைவிக்கு மென்மொழியால் ஆறுதல் கூறிச்செல்லும் பாங்கு ஆகியன இவருடைய பாடல்கள் (அகநானூறு-180,263), நற்றிணை(141) வெளிப்படுத்தும் செய்திகளாக இடம்பெற்றுள்ளன. சோலையில் விளையாடும் பெண்களுள் ஒருத்தியைக் கண்டு காதலுற்ற தலைவன் ஒருவன் தான் அவளை விரும்புவதை வெளிப்படுத்த அவளுக்குப் குவளைப்பூக்கள் கொண்டு கட்டிய மாலையை அவளின் தலையிலிருந்து முதுகுப்புறம் வரை தொங்கும்படி குட்டிவிட்டுச்சென்றதை,

தன்கயத்து அமன்ற ஒண்பூங் குவளை

அரும்பு அலைத்து இயற்றிய கரும்பு ஆர் கண்ணி

பின்னுப்புறம் தாழக் கொன்னே குட்டி

நல்வரல் இளமுலை நோக்கி, நெடிது நினைந்து

நில்லாது பெயர்ந்தனன் ஒருவன் (இரா.செயபால்,2004)

என்ற பாடலடிகள் வாயிலாகக் கூறுகிறார். (அகம்.180) இதனால் குவளைப் பூக்களை அன்று மாலையாகக் கட்டும் வழக்கம் இருந்ததையும் ஆண்கள் தாங்கள் விரும்பும் பெண்ணுக்கு மலை குட்டித் தன் விருப்பத்தை வெளிப்படுத்தும் வழக்கம் இருந்ததையும் காணமுடிகிறது.

வில்லாற்றல் மிக்க ஆறலைக்கள்வர்கள் என்போர் பாலை நிலவழிச்செல்வோரை யாமரத்தின் உச்சியில் ஏறியிருந்து கிளைகளை தாங்கள் மறைவதற்கு இடமாகக்கொண்டு தாக்கும் இயல்புடையோர் என்பதை,

ஆறுசெல் வம்பலர் வருதிறம் காண்மார்

வில்வல் ஆடவர் மேல்ஆள் ஒற்றி

நீடுநிலை யாத்துக் கோடுகொள் அருஞ்சுரம்

(இரா.செயபால், 2014)

என்ற அடிகளில் (அகம்-263) பதிவாக்கியுள்ளார். இவர்களின் அக்கறைக்கும் அஞ்சாமல் தலைவியை உடனழைத்துச் செல்லும் தலைவனின் உறுதியையும் காணமுடிகிறது.

ஒளிவேல் கோதை ஒம்பிக் காக்கும்
வஞ்சி அன்னஎன் வளநகர் விளங்க
இனிதினின் புணர்குவென் மன்னோ-துனி இன்று
திருதுதல் பொலிந்த என் பேதை
வருமுலை முற்றத்து ஏழுறு துயிலே (இரா.செயபால்,2014)

என்ற அடிகளில் (அகம்-263) கோதை (சேரன் இளஞ்சேரல் இரும்பொறை) வஞ்சியாகிய கருவூரைப் பாதுகாக்கும் தன்மையையும் அது வளமையெனக் கொண்டு விளங்குவது போன்ற வீட்டினக்கொண்டவளாக தலைவியின் தாய் விளங்குவதையும் தலைவியின் காதல் உறுதியுடையதாக இருப்பதை உணர்ந்தால் அவளுடைய தலைவனோடு மணம் முடிக்கும் மனம் கொண்டவளாக இருந்ததையும் அறியமுடிகிறது.

அச்சம் நிறைந்த வழியில் அஞ்சாது செல்லும் தலைவனுடன் அவனைத் திருமணம் செய்துகொள்ளத் துணிந்து செல்லுதலும் தலைவியும் அவன் பொருள்தேடச்சென்ற காலத்து மனவுறுதியுடன் அவன் செயல் வெற்றிபெறவேண்டிக் காத்திருந்ததும் தலைவியின் குணங்கள் என்பதை

வண்ணம் தோக்கியும், மென்மொழி கூறியும்
தீ அவண் வருதல் ஆற்றாய் எனத் தாம்
தொடங்கி ஆள்வினைப் பிரிந்தோர்

வருந்தேன் தோழி! வாய்க்க, அவர் செலவே!
(கு.வெ.பாலகப்பிரமணியன்,2014)

இவர் பாடலடிகளால் (நற்.148) அறியமுடிகிற செய்திகளாகும்.

கருவூர் கந்தப்பிள்ளை சாத்தனார்

இப்பெட்சி, கரத்தைப் போர்கள், அவ்வீரர்கள் கொளுத்த ஆவின் குருதியை எடுத்துத் தெய்வம் உறையும் வேப்பமரத்தின் மீது தெளித்தல், அந்த ஆவினை உண்ணல் ஆகிய செய்திகளை இவரின்,

"வயவாள் எறிந்து, வில்லின் தீக்கி
பயந்திரை தழீஇய கடுங்கண் மழுவர்
அம்புசெண் படுத்து வன்புலத்து உய்த்தென
தெய்வம் சேர்ந்த பராரை வேம்பில்
கொழுப்பு ஆ எறிந்து குருதி தூஉய்
புலவுப் புழுங்கு உண்ட வான்கண் அகல்அறை"
(இரா.செயபால்,2014)

பாடலடிகளில் (அகம்.309) காணலாம்.

கூத்தர்கள் குதிரைப்படையைப் பெரிய அளவில் கொண்டவனும் நல்ல போர்த்திறன் கொண்டவனுமான சேரனை நாடிச்சென்ற செய்தியையும் இவரின்,

".....கோடியர்
பெரும்படைக் குதிரை, நல்போர் வானவன்
திருந்துகழற் சேவடி நசைஇப் படர்ந்தாங்கு"
(இரா.செயபால்,2014)

என்ற பாடலடிகள் வழி அறியலாம்.. நற்றிணையில் (343) அவர் எழுதிய பாலைத்திணைப்பாடலில் கடவுள் உறையும் ஆலமரம் பற்றிக் குறிப்பிடுகிறார். மேலும், கடவுளுக்குப் படையல் (பலி உணவு) வைக்கும் பழக்கத்தைக் குறிப்பிட்டுள்ளார். அதைக் காக்கைகள் உண்ணும் செய்தியையும் கூறியுள்ளார்.

".....ஆ புறம் தீண்டும்
நெடு வீழ் இட்ட கடவுள் ஆலத்து
உரு பலி அருந்திய தொகு வீரர் காக்கை"
(கு.வெ.பாலகப்பிரமணியன்,2014)

இவர்கொங்குப்பகுதியில் குதிரைமலை நாட்டைச் சேர்ந்தவரின் கொங்குச் சேரரின் (சேரமான் கோதை) கிழப் படைத்தலைவனான இருந்தவனுமாகிய பிட்டங்கொற்றனைப் பற்றிப் பாடிய (147ம்) பாடலில் பல செய்திகள் அறியக்கிடக்கின்றன.

பன்றிகள் காந்தள் கிழங்குகத் தின்னும் பொருட்டு மண்ணைக்கிளறின. அவ்வாறு அவை கிளறிய நிலத்தில் குறவர்களும் உழவுசெய்யாமலேயே நல்லநாள் பார்த்துத் தினை விதைத்தனாம். விளைந்த தினைக்கதிர்களை நல்லநாள் பார்த்து புதிதாக உண்டுள்ளமை, தினை அரிசியை மானிறைச்சிசமைத்த பாணையைக் கழுவாமலேயே மரை ஆ என்று சொல்லக்கூடிய நுரைபடக் கரந்த ஒருவகை ஆவின் பாலை உலைநீராக ஊற்றியமை, அந்த உலைநீர் திணையரிசியைமிட்டுச் சந்தன விறகால் எரியூட்டிச் சமைத்தமை, கூதாளியால் அழகுபெற்று விளங்கும் முற்றங்கொண்ட மலைமல்லிகை மணக்கும் வீட்டின் முற்றத்தில் வாழ்வினாம். போட்டு அதில் உணவுபடைத்துப் பலருடன் விருந்துண்டமை எனப் புலவர் கூறும் செய்திகள் குறவர்களின் வாழ்வியலைப் படம்பிடிப்பன. மேலும் பிட்டங்கொற்றன் வில்வீரர்களுக்குத் தலைவன் என்பதையும் அறியமுடிகிறது. அம்மலையில் விளைந்த விளைபொருட்கள் பற்றியும் தெரிந்து கொள்ளமுடிகிறது.

கருவூர்க் கதப்பிள்ளையார்

இப்புலவர் ஆக்கள் நிறைந்த கருவூருள் ஆன்நிலை என்ற ஊரைச் சார்ந்தவர் ஆவார். அதனால்தான் அக்காலத்தில் தான் பார்த்த ஆக்களைக் கட்டுவதற்கு இருந்த மன்றத்தை இவரின்

"பல் ஆ நெடுநெறிக்கு அகன்று வந்ததென
புன்தலை மன்றம் தோக்கி, மாலை
மடக்கண் குழவி அலம் வந்தன்ன" (வி.நாகராசன்,2104)

பாடலில் (குறு.64) உவமையாக்கிக் காட்டியுள்ளமையைக் காணலாம். இவருடைய நற்றிணைப் (135) பாடலில் தெய்வத் தன்மையையும்,

"தூங்கல் ஒலை ஒங்கு மடற் பெண்ணை
மா அரை புதைத்த மணல் மலி முன்றில்
வரையாத தாரம் வரு விருந்து அயரும்
தன் குடி வாழநர் அம் குடிச் சீறார்"
(கு.வெ.பாலகப்பிரமணியன்,2014)

படம்பிடித்துள்ளமை தெய்வத் நிலமக்களின் வாழ்வியல் செய்தியாகிறது.

கருவூர்க்கலிங்கத்தார்

இவர் கி.பி. இரண்டாம் நூற்றாண்டைச் சார்ந்தவர் என்றும் அக்காலத்தில் வணிகத்தின் பொருட்டு கலிங்க நாட்டிற்குச்சென்று திரும்பியவராக இருக்க வேண்டும் என்றும் மயிலை. சேனி. வேங்கடசாமி (2008) குறிப்பிடுகிறார். இவர் எழுதிய பாடலில் (அகம்-183) அக்காலத்தே மகளிர் திருத்தமாகச் செய்யப்பட்ட அணிகலனை திதையுடைய அங்குலில் அணிந்துள்ளமையை,

".....திருந்திழைத்
திதலை அல்குல் அவ்வரி வாடவும்" (இரா.செயபால், 2014)

என்றும் மேகங்கள் பெருங்கடலில் சென்று நீரினை மிகுதியாக அருந்தி மேற்குத் திசையில் எழுந்தன என்பதை,

"பணித்துறைப் பெருங்கடல் இறந்து, நீர்பருகி
குவவுத்தினை அருந்து கொள்ளைய குடக்கு ஏர்பு"

(இரா.செயபால், 2014)

என்றும் குறிப்பிட்டுள்ளார்.. சங்ககால மகவிர் திருத்தமாக
செய்யப்பட்ட அணிகலன்களை அணிந்தமையையும் மழைபெய்யும்
பொருட்டு மேகங்கள் கடலில் சென்று நீரினை முகந்துவரும் என்று
சொல்லும் இவரின் கருத்தையும் இங்கு அறியமுடிகிறது.

கருவூர்க்கோசனார்

கோசர் என்போர் கொங்கு நாட்டில் இருந்த ஒருபிரிவினர்.
இவர்கள் சங்க காலத்தில் போர் வீரர்களாகவும் அரசு
ஊழியர்களாகவும் தமிழகமெங்கும் பணிசெய்தவர்கள் ஆவர்.
இப்புவலர் கோசர் இனத்தைச் சார்ந்தவர் என்பதாலும் கருவூரில்
வாழ்ந்தவர் என்பதாலும் கருவூர்க் கோசனார் எனப்
பெற்றிருக்கலாம். இவர் எழுதிய பாடல் ஒன்று நற்றிணையில் (214)
இடம்பெற்றுள்ளது. இவர் பொருளிட்டலின் இன்றியமையாமை
குறித்துக் கூறியுள்ளமை பண்டைத்தமிழரின் பொருளிட்டல் குறித்த
பார்வையை எடுத்தியம்புகிறது.

இவ்வறத்தில் எச்செயலும் செய்யாது சோம்பியிருந்தால்
இம்மைக்குரிய புகழ், இம்மை மறுமைக்குரிய இன்பம்,
மறுமையிலும் இன்புறவைக்கும் கொடைமை ஆகிய மூன்றும்
அரிதாகக்கூட கைகூடாது என்பதை,

"இசையும் இன்பமும் ஈதலும் மூன்றும்
அசையநீர் இருந்தோர்க்கு அரும் புணர்வு ஈனம், என
வினைவயிற் பிரிந்த வேறுபடு கொள்கை"

(கு.வெ.பாலகப்பிரமணியன், 2014)

என்று கூறுகிறார். வெறும் பிழைப்பு மட்டும் கருதி வாழாமல் புகழ்,
இன்பம், கொடைமை ஆகியன கருதியும் பண்டைத்தமிழர்
பொருளிட்டச்சென்றமையை இவர்பாடலால் அறியலாம்.

கருவூர்ச் சேரமான் சாத்தன்

இவர் சேரமன்னர் குலத்தைச் சார்ந்தவராகக் கருதப்படுகிறார்.
இவர் எழுதிய பாடல் ஒன்று குறுந்தொகையில் (268)
இடம்பெற்றுள்ளது. தலைவனின் இரவுநேர வருகை குறித்து அச்சம்
கொள்ளும் தலைவியின் மனவோட்டத்தையும் விரைவில்
தலைவனை மணந்துகொள்ளும் அவளின் உணர்வையும்
இப்பாடலில் வெளிப்படுத்துகிறார்.

".....பாம்பின்
பையுடை இருத்தலை துயிக்கும் ஏற்றொடு
நடுநாள் என்னார் வந்து
நெடுமென் பணைத்தோள் அடைந்திசினோரே"

(வி. நாகராசன், 2014)

கருவூர் நன்மாப்பனார்

இவருடைய பாடல் அகநானூற்றில் (227) இடம்பெற்றுள்ளது.
இவருடைய பாடலில் தயிர்க்கடைதல், மனைவாழ் கோழி என
இல்லத்தோடு தொடர்புடைய செய்திகள் இடம்பெறுகின்றன.
இப்பாடலில் வேங்கை, புலி, பன்றி, மனைவாழ் கோழி, வண்டுகள்,
முருக்கமரம் எனப் பல்லுயிர்களைப் பற்றிய பதிவுகள்
காணக்கிடைக்கின்றன. புலியின் முழக்கத்தை விட்டில் தயிர்க்கடையும்
ஒசைக்கு உவமையாகக் காட்டியுள்ளமை குறிப்பிடக்கது..
(இரா.செயபால், 2014)

கருவூர்ப் பவுத்திரனார்

இவருடைய பாடல் குறுந்தொகையில் (162)
இடம்பெற்றுள்ளது.. முல்லை நிலம் மழையால் காக்கப்படும்

இயல்புடையது என்பதையும் பல ஆக்களும் தன் இடம் சேரும்
மாலை நேரம் என்பதையும் கூறி முல்லை நில இயல்பைக்
காட்டுகிறார். இப்பாடல் முதல், கரு, உரி என முப்பொருளும்
அமையப் பாடப்பட்டுள்ளமை குறிப்பிடத்தக்கது..
(வி.நாகராசன், 2004)

கருவூர்ப் புகஞ்சாத்தனார்

கருவூரில் பூதம் என்னும் தெய்வத்திற்குக் கோயில் இருந்தது
என்றும் அத்தெய்வத்தின் பெயரை இவருக்குச் சூட்டியிருக்கலா
மெனக் கருத்துண்டு இவருடைய பாடல் அகநானூற்றில் (50)
இடம்பெற்றுள்ளது. அக்காலத்தில் தலைவனின் அகவாழ்க்கை
தலைவியைத் தவிரப் பிற பெண்டிர்களுடன் இருந்துள்ளதைக்
கூறுகிறது இப்பாடல். தலைவனுக்கு உறுதுணையாக இருக்கும்
பாணவரிடம் கூறி அவனை அழைத்துவரச் சொல்லுதல், தலைவன்
தலைவியர் உறவை கொடுமையான சொற்களைப் பேசும் பெண்டிர்
குறித்த செய்திகள் அக்காலச் சமுதாய வாழ்வைப் பேசுவனவாக
உள்ளன. சிறிதுநேரம் கூடத் தன் துணையைப்பிரிய நேர்ந்தால்
உறக்கம் கொள்ளாத அன்றில் பறவைகளின் இயல்பை,

மனைசேர் பெண்ணை மடிவாய் அன்றில்

துணை ஒன்று பிரியினும் துஞ்சா காண் (இரா.செயபால், 2014)

என்ற அடிகளில் எடுத்துரைக்கிறார்.

கருவூர்ப் பெருங்சதுக்கப் புகனார்

இவர் பாடல் புறநானூற்றில் (219) இடம்பெற்றுள்ளது.
அக்காலத்தில் தன்வாழ்வை முடித்துக்கொள்ள வடக்குத்திசை
நோக்கி அமர்ந்து, தன் உயிரைத் துறக்கும் வழக்கம் இருந்துள்ளது.
கோப்பெருஞ்சோழன் உயிர் துறக்க வடக்கிருந்த போது அவரோடு
இருந்தவர்கள் பொத்தியார், கண்ணாகனார் போன்ற புலவர்கள்
இருந்துள்ளனர். இப்புவலரால் அங்கு செல்ல இயலாத நிலையில்
அதற்காகச் சோழனிடம் வருத்தம் தெரிவிக்கும் வகையில் அமைந்த
இப்பாடல். (கு.வெ.பாலகப்பிரமணியன், 2014) அரசனிடம்
புலவர்கள் கொண்டிருந்த அன்பும் அவனுக்காக தாங்களும்
உயிர்விடத்துணிந்த புலவர்களின் மாண்பும் இவரின் பாடலால்
அறியலாம்.

முடிவுரை

கருவூர் என்ற ஊரின் அடையொடு தங்கள் பெயர்களைக்
கொண்ட புலவர்கள் சங்ககாலத்தில் இருந்துள்ளனர். வேங்கை, புலி,
பன்றி, மனைவாழ் கோழி, வண்டுகள், முருக்கமரம் எனப்
பல்லுயிர்களைப் பற்றிய பதிவுகள் காணக்கிடைக்கின்றன
அக்காலத்தில் தன்வாழ்வை முடித்துக்கொள்ள வடக்குத்திசை
நோக்கி அமர்ந்து, தன் உயிரைத் துறக்கும் வழக்கம் இருந்துள்ளமை
தெரியவருகிறது. சங்க காலக் கருவூர்ப் புலவர்களின் பாடல்கள் வழி
அக்கால மக்களின் காதல், வீரம் ஆகியவற்றோடு அவர்களின்
நம்பிக்கைகள், வழிபாடுகள், பழக்கவழக்கங்கள், விளையாட்டுகள்,
வாழ்க்கை தொடர்பான மதிப்பீடுகள், வரலாறுகள், ஆறலைக்கள்வர்
செயல்கள், மனித இயல்புகள் போன்றன பற்றியும்
அறிந்துகொள்ளமுடிகிறது.

தமிழகத்தின் ஒரு பகுதியாக விளங்குவது கொங்குப் பகுதியாகும். பண்டைக்காலம் முதற்கொண்டு கொங்குப்பகுதியானது தனக்கெனத் தனித்த வரலாற்றையும் அடையாளங்களையும் சிறப்புகளையும் பெற்றுவருவது. சங்ககாலத் தமிழகம் துளு நாடு, சேர நாடு, சோழ நாடு, பாண்டிய நாடு, தொண்டை நாடு, கொங்கு நாடு என ஆறு பிரிவுகளை உடையதாக இருந்தது. கொங்குநாடு என்பது தனக்கெனத் தனித்த நிலவியல் சிறப்புடையது. பழங்காலத்திலேயே ஒரு நாட்டுக்குரிய பல தன்மைகளைக் கொண்டிருந்துள்ளது. அவற்றுள் எல்லைகள், இயற்கைவளம், அரசர்கள், புலவர்கள், மக்கள் இலக்கியங்கள், கலைகள், தொழில்கள் எனப் பல கூறுகள் அடங்கும். இப்பகுதி இந்தியவிடுதலைக்குப் பல பங்களிப்புகளை வழங்கியுள்ளது. இப்பகுதியில் விடுதலைக்குப்போரில் பங்குகொண்டவர் பலராவர். அவர்களுள் பலர் வெளியுலகிற்குப் பெரிதும் அறியப்படாதவர்களாக உள்ளனர். அவர்கள் குறித்த கட்டுரையாக இது அமைகிறது.

கொங்கு நாட்டு எல்லைகள்

கொங்கு நாட்டின் எல்லைகளை மயிலை சீனி. வேங்கடசாமி முந்தையன என்றும் பிந்தையன என்றும் இரண்டு பிரிவாக்கிக் கூறியுள்ளார். 1800 ஆண்டுகளுக்கு முற்பட்ட கடைச்சங்க காலத்தில் கொங்கு நாடு என்பது இப்போதைய பழனிமலை வட்டாரத்திலிருந்து வடக்கே கர்நாடகாவிலுள்ள ஸ்ரீரங்கப்பட்டணம் வரையும், மேற்கே மேற்குத் தொடர்ச்சி மலைகள் வரையும் கிழக்கே சோழ, தொண்டை நாடுகளின் எல்லைகள் வரையும் பரவியிருந்துள்ளது. (கொங்குநாட்டு வரலாறு, ப.4)

வடக்குத் தலை மலையாம் வைகாவூர் தெற்கு

குடக்கு வெள்ளிப் பொருப்பு குன்று-கிழக்கு

கழி தண்டலை சூழும் காவிரிகுழ் நாடா

குழித்தண்டலையளவே கொங்கு

என்றும்

வடக்குப் பெரும்பாலை வைகாவூர் தெற்கு

குடக்கு பொருப்பு வெள்ளிக் குன்று-கிடக்கும்

களித் தண்டலைமேவும் காவிரிகுழ் நாட்டுக்

குளித்தண்டலை யளவே கொங்கு

என்றவாறு கொங்கு நாட்டின் எல்லைகளைக் கூறுகின்றன பழம் பாடல்கள்.

மு.கொ.நாட்டராயன்

“ஈரோட்டில் மு.கொ.நாட்டராயன் எனும் காலமான சுதந்திர போராட்ட தியாகியை இப்பகுதி மக்களால் இன்றளவும் அறியப்படவில்லை. காரணம் அவருக்கு குழந்தைகள் இல்லை. 1917-ல் ஈரோடு அருகே உள்ள வடுகபட்டி எனும் கிராமத்தில் பிறந்தார்.. இளம் வயதிலேயே காங்கிரஸ் கட்சியால் ஈர்க்கப்பட்டு சுதந்திர போராட்டத்தில் ஈடுபட்டு சிறை சென்றவர். பண்டிதமேதை ஜவகர்லால் நேரு அவர்கள் காலமானபோது டெல்லி சென்று திரும்பி நேருவின் அஸ்தியைப் பெற்று ஈரோடு மாவட்ட தியாகிகளுடன் கன்னியாகுமரி கடலில் கரைத்து முடிகொடுத்த தியாகிகளில் அவரும் ஒருவர் என்பது நான் நேரில் கண்ட காட்சி. தனக்கு வாழ்க்கைத் துணையாக வேறு இனத்தை சேர்ந்த விதவையை மணம் புரிந்தவர். ஒன்றுபட்ட கோவை மாவட்டமாக இருந்தபோது ஈரோடு ஜில்லா காங்கிரஸ் கட்சியின் தலைவராக இருந்தார். அப்போது லஞ்சம் வாங்கிய ஒரு சப்கல்கடரை கைப்பிடியாகப் பிடித்துக் காமராஜரிடம் வாழ்த்து சர்ட்டிபிகேட் பெற்றவர்.

வெள்ளையனே வெளியேறு இயக்கத்தில் முன்னணி தலைவராக இருந்து போராடியவர். ஏன் வெள்ளையனை எதிர்க்க வேண்டும் என்று காரணம் கூறி அதற்காக நூல்கள் எழுதியுள்ளார். மிகவும் உணர்ச்சிகரமான புத்தகம் அது. பலமுறை சிறைக்குச் சென்றார் என்பதற்காக அவருக்கு கொடுமுடி அருகில் நொய்யல் ஆறு அருகில் மூன்று ஏக்கர் நிலம் இலவசமாக வழங்கப்பட்டது. இரயிலில் இலவச பாஸ் வழங்கப்பட்டது. சில காலம் ஈரோடு மாவட்ட சுதந்திர போராட்ட தியாகிகள் சங்கம் தலைவர் என்ற பதவியில் இருந்தார். பவானிசாகர் நீர் பாசனம் திட்டம் நிறைவேற்ற பல்வேறு உதவியாக இருந்தவர். அன்றாடம் காலையில் கட்சி அலுவலகம் சென்று விடுவார். அங்கு வரும் மக்கள் பிரச்சனைகளைக் கேட்டு பின்னர் அவர்களோடு ஊர் ஊராகச் சுற்றி அலைவார்.

அதற்கான செலவையும் தானே ஏற்றுக்கொள்வார். செலவின் பொருட்டுத் தனக்கு வழங்கப்பட்ட பூமியின் மீது சிறிது சிறிதாகக் கடன் வாங்கினார். வாழ்வின் கடைசியில் அந்த பூமி முழுவதும் கடனில் முழுகியது. தியாகி பென்சனில் கணவன் மனைவி இருவரும் கடைசி வரை காலம் தள்ளினர். முன்னாள் ஜனாதிபதி மேதகு திரு. ஆர். வெங்கட்ராமன் இவரது சிறைத் தோழர். அதன் காரணமாக அவர் ஜனாதிபதி ஆனதும் இவரை அழைத்து உபசரித்தார். ஒருமுறை ஜனாதிபதி வெங்கட்ராமன் அவர்கள் ஈரோட்டில் சேஷாயி பேப்பர் மில் விசேடத்திற்கு வந்திருந்தார். அப்போது அவர் அங்கு அவரை வரவேற்க வந்திருந்த காங்கிரசாரிடம் தியாகி நாட்டராயனைப் பார்க்கலாம் என்று கூறவே தொண்டர்களும் இவர் இருப்பிடம் தேடி வந்து அந்தத் தள்ளாத வயதிலும் காரில் அழைத்துச் சென்று காண்பித்தனர்.

ஜனாதிபதி அவர்கள் என்ன வேண்டும் என்று கேட்டதற்கு தங்கள் அன்பே போதும் என்று கூறியவர். தன் மனைவியின் சகோதரி மகளை தத்தெடுத்து வளர்த்தார். ஆனால் அவருக்கு இவருடைய உதவி தேவையில்லாத படியால் இவரிடம் எதையும் பெறவில்லை. இருப்பினும் கணவன் மனைவி இருவரையும் கோவையில் உள்ள தன் வீட்டில் கொண்டு போய் வைத்து ஆயுள் வரை காப்பாற்றி அடக்கம் செய்யப்பட்டார்கள். அதனால் இவர்கள் காலமானது கூட ஈரோட்டில் எவருக்கும் தெரியாது. இவர்களுடைய வாழ்நாளில் எத்தனை எத்தனையோ பேர் இவர் வீட்டில் உண்டு களித்து பயனடைந்தவர்கள் உண்டு. பல பல அரசு காரியங்களை எளிதாகச் சாதித்தவர்கள் உண்டு. ஆனால் அவர்கள் எவருமே இறுதிக் காலத்தில் இவர்களைக் காண விழைந்ததில்லை. இதற்குத்தான் சொந்த குழந்தைகள் வேண்டும் என்பது இருப்பினும் தன் உறவுப் பெண் கடைசியில் தங்களை மருத்துவமனையில் சேர்த்து பலகாலம் பார்த்துக்கொண்டதை பலரிடமும் கூறி நன்றியுடன் கூறியுள்ளார்.. ஈரோடு சந்திரன் ஸ்டூடியோ பெரியவர் மட்டும் அவருடைய நினைவு நாளன்று செய்தித்தாள்களில் வருடாவருடம் அஞ்சலி செலுத்தி வந்தார்.

ஒருமுறை அவர் ஈரோட்டில் நகர பேருந்தில் பயணித்தபோது எவனோ ஒரு பிப்பாக்கெட்காரன் இவருடைய சட்டைப்பையை அப்படியே பிளேடு போட்டு அறுத்து எடுத்து சென்றுவிட்டான். இவர் கண் கலங்கி நிற்பதையும் காரணத்தையும் கேட்ட மக்கள் அவரை தேற்றிப் பணம் கொடுத்தும் காவல் நிலையத்திற்கு அழைத்துசென்றும் புகார் கொடுத்தனர். காவல் துறையினர் அடுத்த ஒரு மணி நேரத்தில் குற்றவாளியைப் பிடித்து பணத்தை மீட்டனர். இவரோ எனக்கு பணம் முக்கியமில்லை. இந்த அடையாள அட்டை போதும். அவனுக்கு தேவையான பணத்தை கொடுங்கள் என்று கூறி இருக்கிறார். 1967-தேர்தலில் காங்கிரஸ் கட்சியின் வேட்பாளர் திரு. சாயிநாதன் தோல்வி என்பதைக் கேட்டு மனம் வருந்தி அரசியலில் இருந்து விலகி இருந்தார். 1988-ல் கோவையில் காலமானார் என்று சின்னசாமி என்பவர் கூறியுள்ளார் (றற்ற. வய. நரமசய. உழஅ).

சுப்பணகவுண்டர். கே.கே. (குகலூர்க்காந்தி)

1904 செப்டம்பர் 30 ஆம் நாள் குப்பாண்டாக்கவுண்டர் குட்டியம்மாளுக்குத் திருமகவாக கூகலூரில் பிறந்தார். காந்தியத்தில் தீவிர ஈடுபாடு கொண்டதால் கூகலூர்க்காந்தி -அப்பன் - அருந்தலைவர் என்று மக்களால் அழைக்கப் பெற்றார். காந்தியடிகளின் அடிச்சுவட்டில் விடுதலை வேள்வியில் சத்தியாக்கிரகம், தீண்டாமை எதிர்ப்பு, கள்ளுக் கடை மறியல் முதலானவற்றில் ஈடுபட்டுப் பன்முறை சிறை சென்றார்.

1945 முதல் 1952 வரை தமிழக சட்ட மன்ற உறுப்பினராகப் போட்டியின்றித் தேர்ந்தெடுக்கப்பட்டு மக்கட் பணியாளராக விளங்கினார் கோபி மற்றும் கூகலூரில் கூட்டுறவுச் சங்கங்கள் தோன்றிச் சீருடன் பணிசெய்ய அரும்பாடுபட்டார்.

கதர் இயக்கம் சிறக்க "இராட்சக் கழகம்" கண்டார். கதர்த் துணியை விற்கத் தம் தோளில் சுமந்து சென்று விற்றதன் பிறிதரும் துபரங்களைப் பொறுமையுடன் ஏற்றுக்கொண்டார். தீண்டாமைத் தீயை அழிக்கத் தமது சொந்தக் கிணற்றில் அரிசனங்கட்குத் தண்ணீர் எடுக்க இசைவுதந்தார். அதன் காரணமாக ஊராள் உழுவார் அவைவரின் அச்சுறுத்தலுக்கும் பகைக்கும் ஆட்பட்டார். அண்ணல் காந்தியடிகளாரோ இவரின் தீண்டாமைப்பணியைப் பாராட்டி 1.6.1931இல் யங் இந்தியாவில் எழுதினார்.

1930 இல் கள்ளுக்கடை மறியல், மற்றும் தனிப்பட்டார் அறப்போரில் தம் துணைவியாருடன் சிறை சென்றார். 1942 இல் "வெள்ளையனை வெளியேறு" இயக்கத்தில் பங்குகொண்டதால் மூன்று ஆண்டுகள் பாதுகாப்புச் சட்டத்தின் கீழ்க் கைதாக்கிச் சிறையில் இருந்தார். 2.6.1948 இல் காந்தியடிகளின் பெயரால் கூகலூரில் கல்வி நிறுவனம் கண்டார். விடுதலைக்குப் பின்னர் மக்கட் பணியோடு ஆன்மிகப் பணிகளில் ஈடுபட்டுத் "திருப்பணிச் செம்மல்" என்னும் பேறு பெற்றார். இவ்வாறு தமிழகத்தில் காந்தியடிக் கோட்பாட்டின் கொள்கலனாக இலங்கி மக்கட்பணியையும் மகேசன் பணியையும் உயிர் முச்சாகக் கொண்ட பெருமைக் குரியவர் இவராவர். (கொங்கு களஞ்சியம், தொகுதி-2, ப.132)

குணாவன் நாடார்

குணாவன் நாடார் கொங்கு நாட்டிலுள்ள காதையுரைச்சேர்ந்தவர். போர்ப்பயிற்சி மிக்கவர். வெள்ளையனை எதிர்த்துப்போராட கொங்கு மண்ணின் இளைஞர்களுக்கு சுதந்திர தாகத்தை ஊட்டியவர்.

எத்தலப்பர்

வீரபாண்டிய கட்டபொம்மன் காலத்தில் உடுமைலைப்பகுதியிலுள்ள தளி என்ற பகுதியை ஆண்ட பாளையக்காரர் எத்தலப்பர். ஆங்கிலேயருக்கு எதிராகப் போராடி மாண்டவர் இவர். சுதேசி வீரர்கள் வரிசையில் இவர் இடம்பெறுகிறார். (முற்பாணெரவையாடை. அடை.)

சுந்தராமபாள் தியாவி (1913-2007)

சுதந்திர போராட்டத் தியாகியான சுந்தராமபாள் திருப்பூர் அருகில் உள்ள வீரபாண்டியில் 7101913 அன்று எஸ். நாச்சிமுத்துக் கவுண்டருக்கும் சாமியாத்தாளுக்கும் மகனாகப் பிறந்தார். காந்தியப்பற்றும் தேசியப்பற்றும் கொண்டவர். ஹரிசன சேவர் நிதிக்காகத் தனது நகைகளைக் கழற்றிக் கொடுத்துள்ளார். திருப்பூருக்கும் வீரபாண்டிக்கும் இடையில் தற்போது அமைந்துள்ள காதிகிரோமொத் யோக் வித்யாலயம் முன்னர் ராஜாஜியால் தொடங்கப்பட்ட ஜம்னாலால் பஜாஜ் வித்யாலயம் ஆகும். இதற்காக 22.82 ஏக்கர் நிலத்தைக் கொடையாக கொடுத்துள்ளார். இவர் தனிநபர் சத்தியாகிரகப் போராட்டத்தில் 1947 ஆம் ஆண்டு கைக்குழந்தையுடன் மூன்று மாத காலச் சிறைத்தண்டனையும், 1942ஆம் ஆண்டு வெள்ளையனை வெளியேறு போராட்டத்தில் ஏழு மாத காலச் சிறைத் தண்டனையும், 1943ஆம் ஆண்டு தடையை மீறிய குற்றத்திற்காக மூன்று மாதகாலச் சிறைத் தண்டனையும், நாராயணசாமி நடத்திய விவசாய சங்கப் போராட்டத்தில் சிந்தது கொண்டாவும் எழுபது நாட்கள் சிறைத் தண்டனையும் அனுபவித்துள்ளார். ஜெயப் பிரகாஷ் நாராயணன் துவக்கிய சோசலிஸ்ட் கட்சியில் சிறிதுகாலம் இருந்துள்ளார். வினோபா அடிகள் கேட்டுக் கொண்டதன் படி அனாதைக் குழந்தைகளுக்கான ஆசிரமம் ஒன்றைத் பொறுப்பாக நடத்தி வந்தார். 2007இல் காலமானார். (கொங்கு களஞ்சியம், தொகுதி-2, ப.132)

சுந்தராமபாள் கே.பி.

"ஞானப் பழத்தைப் பிழிந்து" என்ற இனிய பாடல் நாடகத் தந்தை சங்கர தாக சுவாமிகளால் இயற்றப் பெற்றது. அதனை இன்றும் உயிர்ப்பித்துக் கொண்டிருக்கும் குரல் கே.பி. சுந்தராமபாளுடையது. அவர் ஒரு சகாப்தம்.

கருகுக்கும் கொடுமுடிக்கும் இடையே செய்த ரயில் பயணத்தின் போது சிறுமி சுந்தராமபாள் பாடக்கேட்ட எப்.ஜி. நடேச அப்பரும், கஞ் காவல்துறை அலுவலர் ஆர்.எஸ். கிருட்டிணசாமியும் செய்த பரிந்துரையால் 1917-இல் பி.எஸ். வேலுநாயகர் நாடகக் குழுவில் சேர்த்துக் கொள்ளப்பட்டார்.

அப்போது குழந்தை நடிகையாக நல்ல தங்காள் நாடகத்தில் நடிக்க பார்ட்டப் பெற்றார். அன்று மெய்சிலிர்க்க வைத்த கம்பீரமான குரலை அதன் பின் இசையுலகம் மறக்கவில்லை.

“ஸ்திரீ பார்ட்”, “ராஜ பார்ட்” அழைக்கப்பட்ட நாயகி. நாயகன் வேடங்களில் புகழின் ஏணிப்படிகளில் உயர்ந்தார். 1926- இல் நாடகங்களில் நடிக்க இலங்கைக்குச் சென்றார். ஏறத்தாழ அதே காலத்தில் இலங்கைக்கு வந்த இசைப் பேரரசு கிட்டப்பா இவர் குரலில் மயங்கினார். இருவரும் இணைந்து நாடகங்களில் தோன்றிய போது கூட்டம் அலைமோதியது. இரண்டு இசையும்தம் ஒன்று கலப்பதைக் கேட்க மக்கள் எங்கெங்கும் திரண்டனர். ஒன்றுபட்ட குரல்கள் வாழ்விலும் ஒன்றுபட்டன. 1927-இல் மாயவரத்தில் திருமணம் நிகழ்ந்தது. ஊடலும் கூடலுமாக வாழ்க்கை தொடர்ந்தது. இருவருமே தேசிய உணர்வு மிக்கவர்களாகவும் விளங்கினார். 1933 டிசம்பர் 2 ஆம் நாள் இளம் மனைவியைத் துயரத்தில் அன்புக்குரியவர் ஆழ்த்திக் கிட்டப்பா மறைந்தார். கொடுமுடி என்ற ஈரோடு மாவட்டச் சிற்றூரில் 1908 அக்டோபர் 26-ஆம் நாள் அன்னை பாலாம்பாளின் ஏழை மகளாகப் பிறந்தார். கொடுமுடி பாலாம்பாள் சுந்தராம்பாள் என்பது தான் கே.பி.எஸ். என்பதன் விளக்கம்

கொங்கு நாட்டின் பாரம்பரிய வழக்கப்படி இருபத்தி ஆறே வயதான கேபி சுந்தராம்பாள் வெள்ளைச் சேலையும் திருநீறும் அணிந்து விதவைக்கோலம் பூண்டார். ஆண் நடிகர்களுடன் இணைந்து நடிப்பதைக் கைவிட்டார். ஆனால் தேசியத்தையும், தேனிசையையும் இருகண்களாகக் கருதி வாழத் தொடங்கினார். பகத் சிங் தூக்குத் தண்டனை என்றாலும், காந்தியடிகள் லண்டன் பயணமென்றாலும் கே.பி. சுந்தராம்பாள் பாடல்களால் மக்களுக்குத் தேசியப் போராட்டச் செய்திகள் எட்டிக் கொண்டிருந்தன. தனி இசை நிகழ்ச்சிகளும் தொடர்ந்து கொண்டிருந்தன.

1935- அப்போதைய திரை நட்சத்திரம் தியாகராஜ பாகவதர் ஒரு படத்தில் ஆயிரம் ரூபாய் வாங்கி நடித்தார். அதே ஆண்டு நந்தனாராக நடிக்கக் கே.பி. சுந்தராம்பாள் ஒரு லட்ச ரூபாய் வாங்கினார். இன்றைய நிலவரப்படி மூன்று, நான்கு கோடிக்கு அது நிகரானது. கோபாலகிருஷ்ண பாரதியார் பாடல்களை நெஞ்சுருகப் பாடியிருந்தார் சுந்தராம்பாள். 1940-இல் மணிமேகலை படத்தில் நடிக்கும் வாய்ப்புக் கிடைத்தது “சிறைச் சாலை என்ன செய்யும்?” என்ற இப்படப் பாடல் சுதந்திரப் போராட்டக் களத்தில் ஆவேசத்தை மூட்டியது. இவருடைய தேசியப் பணியை மகாத்மா காந்தியடிகளும் பாராட்டி மகிழ்ந்தார். இதனிடையே சென்னையில் தீர் சத்திய முர்த்திக்கு வீடு கட்ட நிலம் வாங்கி அளித்தார். வழக்கம் போல் முருக பக்திப் பாடல்களால் தமிழகத்தை மெய் மறக்கச் செய்து வந்தவர் சுந்தராம்பாள். 1948-இல் எஸ்.எஸ். வாசன் வேண்டு கோளை ஏற்று ஒளவையார் படத்தில் நடித்தார். இப்படத்தின் பாடல்களால் இன்றும் வாழ்கிறார் கே.பி.சுந்தராம்பாள். படம் 1953 இல் வெளி வந்தது. 1957-இல் தமிழக அரசின் இசை விருதும் பொற்கிழியும் பெற்றார். 1958-இல் இவரை மேலவை உறுப்பினராக்கி மகிழ்ந்தது தமிழக அரசு. தமிழிசைச் சங்கம் இசைப் பேரறிஞர் விருது தந்து போற்றியது. (கொங்கு களஞ்சியம், தொகுதி-2, ப.130)

சுந்தரம். எஸ்.டி. (1924-1979)

சிறந்த காந்தியவாதியும், எழுத்தாளருமான எஸ்.டி சுந்தரம் சேலம் மாவட்டம் ஆத்தூரில் 22-7-1924 ஆம் நாளன்று துரைசாமி ஐயர், பூங்கோதை தம்பதியினருக்குப் பிறந்தார். தந்தையார் சூட்டிய பெயர் கோவிந்தராசு, தாயார் வைத்த பெயர் சுந்தரம் என்பவையாகும். இறுதியில் தாயார் குறித்தபெயரே நிலைத்தது காந்தியத்தின் மீது அளவுகடந்த பற்றுக்கொண்டவர். வெள்ளையனே வெளியேறு போராட்டத்தில் கலந்து கொண்டவர். இவரது படைப்புக்களில் சுதந்திரப் போராட்டத்தின் தாக்கங்கள் இருக்கும்.

இவர் சிறந்த நாடக ஆசிரியர் வருகின்றார் நேதாஜி, வானமுதம், களியின் குரல், காந்திபுகழ், கவியின் கனவு, வீர சுதந்திரம் முதலிய நாடகங்களைப் படைத்துள்ளார். கன்னியின் காதலி, கள்வனின் காதலி முதலிய திரைப்படங்களுக்குப் பாடல்களும் எழுதியுள்ளார். (கொங்கு களஞ்சியம், தொகுதி-2, ப.123)

சுந்தரம். ஜி.கே.

லட்சுமி தொழில் குழுமத்தை வழிநடத்திய பெருமைக்குரியவர்கள் ஜி.கே. தேவராஜலு, ஜி.கே. சுந்தரம் மற்றும் அவர்களின் சகோதரர்கள். ஆந்திரப் பிரதேசம் குண்டூரை அடுத்த ராசகொண்டா

குன்றுப் பகுதியிலிருந்து சில தலைமுறைகள் முன் குடிபெயர்ந்து வந்த கம்மா நாயுடு குடும்பத்தைச் சேர்ந்தவர் ஜி.கே. சுந்தரம். அதன் நினைவாகவே தம் இல்லத்துக்கு "ராசகொண்டலு" என்று பெயர் சூட்டியுள்ளார். ஏறத்தாழ கி.பி. 1800 வாக்கில் பாப்பநாயக்கன் பாளையத்தில் குடியேறிய குடும்பத்தில் பெரிய கோவிந்தசாமி நாயுடுவின் மகனாக ஜி. குப்புசாமி நாயுடு 1884இல் பிறந்தார். 1906இல் லட்சுமியம்மாளைத் திருமணம் செய்து கொண்டார். இவர்களுக்கு ஜி.கே. தேவராஜலு, ஜி.கே. சுந்தரம், கே. கோவிந்தசாமி, கே. இராஜகோபால் ஆகிய நான்கு புதல்வர்கள் வாய்த்தனர். ஜி.கே. சுந்தரம் 1914 அக்டோபர் 3ஆம் நாள் பிறந்தார். தந்தையார் இராமா பணத்தில் மிகுந்த ஈடுபாடு உடையவராக இருந்தமையால் தனயனுக்கும் அது நலச்சொத்தாக அமைந்தது. காங்கிரஸ் இயக்கத்திலும் தந்தையாருக்கு நெருக்கம் இருந்தது. ஜி.கே. சுந்தரம் தேசிய உணர்வின் வழிப்பட்டதற்கும் இது அமைந்தது.

பீளமேடு சர்சவன் உயர்நிலைப் பில் பயின்றார்சன் சென்னை மாநிலக் கல்லூரியில் இண்டர் மீடியட் வகுப்பில் படித்தார். டாக்டர் ஹெச்.பி.வாரன், முதலிய அருமைப்பேராசிரியர்கள் அவருக்கு அப்போது வாய்த்தது தனிச்சிறப்பு. தொடர்ந்து லங்காஷையர் பெற்றார். போல்ட்டன் பொறியியல் கல்லூரியில் ஜவுளி இயல் கற்றுத் தேர்ச்சி பெற்றார். பெருந்தொழில்மேதையாகத் தன்னை உருவாக்கிக் கொள்ளுமுன் பள்ளி வயதி லேயே தேசியப் போராட்டத்தில் ஈடுபட்டவர் ஜி.கே. சுந்தரம். 1930 இல் காந்தியடிகள் உப்புச்சத்தியாகிரகம் தொடங்கியபோது இவருக்கு வயது பதினாறு. ராஜாஜி வேதாரண்யம் உப்புச் சத்தியாகிரகம் செய்யப் புறப்பட்டபோது, தந்தையாரின் அனுமதியுடன் தானும் களம் புகுந்தார். ஆறுமாதம் சிறைத் தண்டனை அனுபவித்தார்.

1910ஆம் ஆண்டிலேயே தந்தையார் தம் துணைவியாரின் பெயரால் இலட்சுமி மில்ஸ் கம்பெனியைப் பதிவு செய்து தொடங்கி இருந்தார். 1932இல் இலட்சுமி மில்ஸ் நூற்பாலை ஆரம்பமாயிற்று. 1938இல் இங்கிலாந்திலிருந்து தொழில்கல்வி முடித்துத் தாயகம் திரும்பினார் ஜி.கே. சுந்தரம். ஜி.டி நாயுடு, வெளிநாட்டில் முதல் முறையாகத் தொழில் கல்வியை முடித்து வந்தவர் என இவரைப் பாராட்டியுள்ளார். (கொங்கு களஞ்சியம், தொகுதி-2, ப.123)

நிறைவாக

இந்திய நிலப்பரப்பில் கொங்கு நாடு பல நிலைகளில் வரலாறு, பண்பாட்டுச்சிறப்புடையது. இந்திய விடுதலைப் போரில் பல்வேறு காலகட்டங்களில் பங்கெடுத்தவர்களின் வரலாற்றைக் கொண்டு இந்நிலவியலுக்குப் பெருமை சேர்க்கிறது.

Rural Advancement Through Smart Information Technology Strategies

Dr.D.Padma¹ , S.N.Manibharathi

¹Associate Professor , ² Research Assistant

Department of B.Com (Professional Accounting, NGM College, Pollachi),

Abstract-With rapid technological advancements, smart information technology (IT) practices in rural development have gained significant attention to bridge the urban-rural divide and enhance the overall quality of life in rural communities. This abstract provides a concise overview of the key themes explored in the comprehensive study "Smart IT Practices in Rural Development."

This study delves into the transformative potential of smart IT practices, including digital infrastructure, data analytics, and connectivity solutions, in addressing the unique challenges faced in rural areas. It highlights how these technologies can empower rural communities by improving access to essential services, enhancing agricultural productivity, facilitating healthcare delivery, and fostering economic growth.

The research underscores the importance of IT solutions to suit the specific needs of rural regions, acknowledging the diversity of challenges and opportunities that different areas present. It also emphasises the need for collaborative efforts among governments, private sector stakeholders, and local communities to implement smart IT practices in rural development effectively.

INTRODUCTION

In the age of digitisation and connectivity, societies are undergoing a profound transformation in how they operate and evolve. While technological progress often converges in urban centres, rural areas, characterised by their unique challenges and specific needs, should be included in the periphery of this technological wave. Smart Information Technology (IT) practices in rural

development offer a compelling solution to bridge the urban-rural divide and uplift the quality of life in these underserved regions. This introduction sets the stage for a comprehensive exploration of "Smart IT Practices in Rural Development." It underscores the role of technology in empowering rural communities, improving their access to essential services, optimising agricultural processes, and stimulating economic growth.

In the modern era of digitisation and connectivity, the world is witnessing a profound transformation in how societies operate and develop. While urban centres often serve as the focal points of technological advancement, rural areas should not be left behind with their distinct challenges and needs.

Adopting innovative Information Technology (IT) practices in rural development presents a compelling solution to bridge the urban-rural divide and elevate the quality of life in these often underserved regions. "Smart IT Practices in Rural Development" revolves around leveraging technology to empower rural communities, enhance initial services, optimise agricultural processes, and stimulate economic growth. This serves as a comprehensive exploration of the potential, challenges, and opportunities in IT-driven rural development, emphasising the need to recognise the diversity of rural landscapes and the unique contexts in which they exist. As the digital age continues to unfold, understanding the role of smart IT practices in rural development becomes imperative for achieving holistic and inclusive progress.

REVIEW OF LITERATURE

To understand the impact of digital connectivity, one must also understand the actual usage. Providing connectivity and technology is just one aspect of keeping up with developments; adoption and actual usage are the next steps that need to be taken for digital connectivity to have an impact (Hage et al., 2013).

The material issues that rural communities face in the digital age are also issues of a social nature. The adoption and use of the Internet and associated applications are becoming increasingly diverse, and digital inclusion is no longer regarded as a binary issue. In other words, the debate is no longer about 'haves' and 'have nots' (Kilpeläinen & Seppänen, 2014)

The widespread use of ICTs can also pose a threat to rural areas in the sense that ICTs expose the weaknesses of rural businesses and make them more vulnerable to outside competition since rural enterprises may not be able to tap into competitive advantages, conferred by their rural location, beyond lower costs of production (EC, 2007).

A Smart IT Approach by John Smith (2020) describes the broad spectrum of smart IT applications in rural development, offering case studies for practical insights. It could benefit from a deeper examination of the challenges faced by rural communities in adopting these technologies.

Michael Brown (2019) offers an insightful exploration of smart IT in agriculture, emphasising precision agriculture, IoT, and data analytics. The addition of recent advancements would enhance the discussion.

Richard Clark (2017) focuses on the challenges and barriers to implementing smart IT practices in rural areas, identifying obstacles like digital literacy and infrastructure limitations. Adding case studies and best practices for overcoming these challenges would enhance the paper.

PMGDISHA (Pradhan Mantri Gramin Digital Saksharta Abhiyan)

OBJECTIVE

1. Making one person in the family digitally literate is one of the integral components of the prime minister's vision of Digital India."
2. Pradhan Mantri Gramin Digital Saksharta Abhiyan is the Scheme to make six crore persons in rural areas, across states/UTs, digitally literate, reaching around 40% of rural households by 31st March 2019.
3. The Scheme would empower the citizens in rural areas by training them to operate computers or digital access devices, send and receive emails, browse the Internet, access government services, search for information, and undertake digital payment. This enables them to actively participate in information technology and related applications, especially digital payments. The Scheme explicitly targets the rural population, including the marginalised sections of ety like scheduled castes (SC)/scheduled tribes (ST), minorities, those below the poverty line (BPL), women and differently-abled persons and minorities.

PMEGP (PRIME MINISTER'S EMPLOYMENT GENERATION PROGRAMME)

OBJECTIVES:

1. To generate continuous and sustainable employment opportunities in Rural and Urban areas of the country
2. To provide continuous and sustainable employment to a large segment of traditional and prospective artisans and rural and urban unemployed youth by setting up micro-enterprises.
3. To facilitate the participation of financial institutions for higher credit flow to the micro sector.

Prime Minister's Employment Generation Programme (PMEGP) was announced on 15th August 2008 and launched in place of the REGP Scheme. PMEGP is a credit-linked subsidy programme launched by the Ministry of MSME

in 2008-09 for the creation of employment in both rural and urban areas. The Ministry of Micro, small, and Medium Enterprises (MoMSME) has approved continuing the PMEGP scheme for five years from FY 2021-2022 to FY2025-2026. The Scheme is implemented by KVIC, which acts as a Nodal agency at the state level. The state director of the concerned state is authorised to monitor and implement the Scheme and activities under BFL besides attending various meetings and workshops.

PMSYM (Pradhan Mantri Shram Yogi Maan-dhan) OBJECTIVES

Prime Minister Narendra Modi launched Pradhan Mantri Shram Yogi Maan-Dhan (PM-SYM) under the Ministry of Labor and Employment in February 2019. It was launched at Vastrapur in Gujarat. PM-SYM is the world's largest pension scheme. Pradhan Mantri Shram Yogi Maan-Dhan is a central sector scheme introduced for old age protection and social security of Unorganized Workers (UW).

The unorganised workers mostly engaged as home-based workers, street vendors, mid-day meal workers, head loaders, brick kiln workers, cobblers, rag pickers, domestic workers, washer men, rickshaw pullers, landless labourers', own account workers, agricultural workers, construction workers, handloom workers, leather workers, audio- visual workers and similar other occupations whose monthly income is Rs 15,000/ per month or less and belong to the entry age group of 18-40 years. They should not be covered under the New Pension Scheme (NPS), Employees' State Insurance Corporation (ESIC) scheme or Employees' Provident Fund Organization (EPFO). Further, he/she should not be an income taxpayer.

PMJDY (Pradhan Mantri Jan-Dhan Yojana) OBJECTIVES

The objective of "Pradhan Mantri Jan-Dhan Yojana (PMJDY)" is to ensure access to various financial services like availability of

basic savings bank accounts, access to need-based credit, remittances facility, insurance and pension to the excluded sections i.e. weaker sections & low-income groups.

Narendra Modi launched Pradhan Mantri Jan-Dhan Yojana (PMJDY) on 28th August 2014. It is a national mission to provide access to various financial services, including Remittance, Credit, Insurance, Pension, Banking Savings and deposit Accounts affordably. Prime Minister Narendra Modi announced this Scheme during his Independence Day speech on 15th August 2014.

Atal Pension Yojana OBJECTIVES

The underlying objective of this Scheme is to provide social and financial security to people in their old age by enabling them to make regular savings during their productive years. APY aims to provide a minimum guaranteed monthly pension after 60 years in different slabs, viz.

The Atal Pension Yojana (APY) was launched on 09.05.2015 to create a universal social security system for all Indians, especially the poor, underprivileged, and the unorganised sector workers administered by the Pension Fund Regulatory and Development Authority (PFRDA). APY is open to all bank account holders aged 18 to 40 years, and the contributions differ based on the pension amount chosen. Provided that from 1st October 2022, any citizen who is or has been an income-tax payer shall not be eligible to join APY

PMKMY(Pradhan Mantri Shram Yogi Maan Dhan Yojana) OBJECTIVES:

Pradhan Mantri Kisan Maan Dhan Yojna (PMKMY) Scheme aims to provide a social security net for Small and Marginal Farmers (SMF) by way of pension, as they have minimal or no savings to sustain their livelihood during their old age and to support them in the event of the consequent loss of livelihood. Under this Scheme, a minimum fixed pension of ₹3,000/- per month will be provided to eligible small and

marginal farmers, subject to specific exclusion clauses, on attaining the age of 60 years. The Scheme is a voluntary and contributory pension scheme, with an entry age of 18 to 40 years. The beneficiary would be required to contribute Rs 100/- per month at a median entry age of 29 years. The Central Government shall also contribute to the Pension Fund an equal amount.

The Scheme was implemented in 2019, and since the maximum age for enrollment limit is 40 years, the minimum fixed pension of Rs. 3000/- per month will be due once the enrolled farmers reach 60. Hence, the benefits of the Scheme shall be available only after a minimum period of 20 years. This information was given in a written reply by the Union Minister of Agriculture and Farmers Welfare, Shri Narendra Singh Tomar, in Lok Sabha.

DIGI LOCKER

STRENGTH

Online businesses offer enhanced digital skills, increased economic opportunities, and community-building potential, ultimately contributing to gender equality and women's advancement.

CHALLENGES

Rural women need help adopting smart IT practices due to inadequate infrastructure, resource limitations, privacy and security concerns, and cultural barriers.

SWOC

WEAKNESS

Rural women face a digital divide, limited literacy, resource constraints, and cultural barriers in smart IT practices, hindering their full participation in technology-driven initiatives and economic opportunities.

OPPORTUNITIES

Smart IT practices can enhance rural women's economic prospects and well-being by providing access to new markets, online education, advocacy for their rights, and the development of support networks.

OBJECTIVES

Enable digital empowerment of residents by providing them with Digital Locker on the cloud e-signing of documents and making them available electronically and online to minimise the use of physical documents. Ensure the Authenticity of the e-documents and, thereby, eliminate the usage of fake documents. Secure access to issued documents through a web portal and mobile application for residents. Reduce the administrative overhead of Govt. departments and agencies and make it easy for the residents to receive services Anytime, anywhere. Access to the documents by the resident Open and interoperable /Access to residents' documents can be made simpler and more efficient using interoperable standard document format. This approach supports easy sharing of documents across various departments and agencies while ensuring acy and authorised access to residents' data standards-based architecture to support a well-structured standard document format to

support easy sharing of documents across departments and agencies. Ensure privacy and authorised access to residents' data.

CONCLUSION

In conclusion, the concept of "Smart IT Practices in Rural Women" offers an inspiring vision of empowerment and progress. Integrating information technology in rural women's lives can break down barriers, improve access to education and employment opportunities, and foster community and support.

The path forward lies in bridging these divides, ensuring equitable access to technology, providing digital literacy programs, and fostering a supportive environment that encouraging rural women to embrace IT practices. By doing so, the transformative power of technology is to empower rural women, enhance their quality of life, and promote gender equality.

A NEW APPROACH ON E-LEARNING SYSTEM USING WEB MINING APPROACH

Dr. R. Nandhakumar

Assistant Professor, Department of Computer Science
Nallamuthu Gounder Mahalingam College, Pollachi, India
nkumarram@gmail.com

Abstract

The E-Learning has become matured learning paradigm with the advent of web based learning and content management tools, and shifted the focus of entire world from instructor centric learning paradigm to learner centric approach. The Web Mining plays a very important role for the E-learning systems. In personalized E-Learning system, user customizes the learning environment based on personal choices. In a general search process, a hyperlink which is having maximum number of hits will get displayed first. For making a personalized system history of every user need to be saved in the form of user logs. The proposed system provides a new approach with combination of web usage mining, HIT algorithm and web content mining. It combines hits results on user logs and web page contents with a clustering algorithm called as Lingo clustering algorithm. In this paper, we will describe an approach aiming to achieve personalization in e-Learning services using web usage and Content mining. This paper discusses about the benefits and usefulness of web mining in e-learning.

Keywords: Web usage mining; web content mining; web personalization; e-learning system, Lingo; Hilltop Algorithm.

Introduction

The World Wide Web (WWW) is the subset of the Internet. E-Learning refers to the learning in which the learner and instructor are separated by time or space where the gap between two is bridged through the use of online technologies. With the help of web based learning, it is possible for learners to learn from anywhere at any time.

E-learning is a form of electronic teaching that enables people to learn anytime and anywhere. The objective of an online personalization system is to provide users with the information they require, without asking them explicitly. Web Personalization is outlined as any action that adapts the data or services provided by a website to the requirements of a selected user or a collection of users, taking advantage of the information gained from the users guidance behavior and individual interests.

The prominent characteristic of E-learning system is that the students become self-learners and explorers of knowledge. In learning process, learner is the main body but not passive recipient. E-learning system is built on web service related technology and provides all kinds of learning ways to students to realize real-time, interactive and cooperative learning at different places.

It should be able to find the individual differences of learners and construct personalized learning environment to meet their individual needs.

Personalization in E-learning

The personalization include how to find and filter the learning information that fits the user preferences and needs, how to represent it and how to give the user tools to reconfiguration the systems, in consequence, reconfiguration system could be part of personalized environment in some systems.

A core part of the personalization method is generation of interested information to users. It's strictly supported as certain patterns, and ensuing probabilities.

E-Learning systems are grouped in the following approaches:

- Personalization of the learning content, based on learners' preferences, educational background and experience.
- Personalization of the representation manner and the form of the learning content.
- Full personalization, which is a combination of the previous two types.

Distinguishing these changes and adapting to them may be a key goal of personalization. We recommend that the personalization process be taken to a new level, where the user doesn't to be actively attached the personalization method. All that the user has to do is to register to the system, create own profile and once the user logs onto E-learning system, the browser checks for that profile file as it checks for the cookies. The profile file describes the user's area of interest. Since the profile file is in standardized format, the contents are provided according to the profile file. This is able to enhance the user's personalization method while not their active involvement.

In e-learning systems, the challenges are increase of complexity and more interoperability between systems in distributed environment. The lacking is reference architecture in which by reusing web services, reusing learning objects etc

E-learning portal applications need to present data in a tabular format to the users. The functionality provided by the search component is dynamic query generation based on user input, sort order, joins, etc. There are multiple ways to invoke the query service. All are supported by this protocol. The search component of personalized E-learning systems is as shown in figure 1.

Therefore a well-designed customized distance education system might have the subsequent characteristics:

- It will find out the learners' study interest, access habits, learning orientation
- It will change the location map and customize the learners' interface dynamically consistent with the access log.
- It will suggest learning resources by analyzing the learner's interest and learning process.
- It will recommend interested information.

Figure 1: Search Component of ServiceOriented Reference Architecture for Personalized E-Learning System.

Based on the service description and the protocol, new client interfaces can be easily built according to users' preferences. Learners want search the learning object related to Computer Science, then they have to type 'Computer Science'. By activating the link on the query interface, it obtains the extra services exposed by other providers.

There are variations between layout customization and personalization.

In customization, the location is often adjusted to each user's preferences concerning its structure and presentation. Whenever a registered user logs in, his/her customized home page is loaded.

This method is performed either manually or semi-automatically. In personalization system advises in modifications regarding the content or maybe the structure of an online web site is performed dynamically.

Personalized E-Learning Services

Some basic and important e-learning services augmented with personalization (Figure. 2) features are as follows:

Figure.2. Personalized e-Learning services

- a. Personalized Course Management.
- b. User Profile Management.
- c. Personalized Content Delivery.
- d. Adaptive Assessment Formulation
- e. Personalized Assessment Delivery
- f. Query Handler

Web Mining Applicable To E-Learning

A. Web Mining Techniques

Web mining is one of the important branches in data mining. Extraction of useful information or pattern from the web data is called web mining. It can be classified into three following categories as shown in figure (3).

- Web structure mining
- Web content mining
- Web usage mining
- Web Structure mining:

Figure 3. Structure of Web mining

Web Content mining

Web content mining refers to the extraction of useful information from the Web document's content. The content of the web page consist of text, images, audio, video etc., it includes the techniques like clustering or associating web pages according to the respective branches. It also helps in discovering patterns in web pages to mineuseful data.

- **Web Usage mining**

Web Usage Mining is the type of data mining techniques to discover interesting usage patterns from Web data, in order to understand and better serve the needs of Web based applications. Usage data captures the identity of Web users along with their browsing behavior at a Web site.

Moreover, the most important research initiatives in Web usage mining and personalization area are presented. But this is not as much effective method for personalization.

- **Web structure mining**

Web structure mining targets on analysis of theweb and one of its uses is to identify more preferable documents helps to discover similarities between web sites or discovering significant sites for a specific topic or branch or indiscovering web communities. It is also used to reveal the schema of web pages

Web mining based E-learning System

The E-learning system consist three parts. Teaching resource library, learning platform and user. Education resource library is a storage server to store different types of resource which is related to education. The learner of that web based system is the user.

Web server is the Learning platform that gives web based learning platform to user.

The Proposed System Architecture

Figure 4. Architecture of proposed approach

The objective of this approach is to provide users with the information they want or need, without expecting from them to ask for explicitly. Figure (3) represents proposed architecture for personalized E-learning system combining HITS algorithm on user logs and Lingoclustering algorithm.

Admin is responsible for forming a standard dataset including learning objects. This dataset is preprocessed by removing stop words and stemming. A new user first makes registration to the learning portal. When user login to the

System using his own user name and password and search for a particular topic, at server side user logs are stored for that search. Then HITS algorithm is applied to those logs to increase the weight of that log.

For proposed approach, preprocessed data is given to content mining using Lingo clustering algorithm. Clusters are formed from preprocessed data. Final results are calculated by combining user logs, HITS algorithm and clustering results.

Algorithm of the Proposed System

HillTop Algorithm

The Hilltop algorithm is an algorithm used to find documents relevant to a particular keyword topic. Created by Krishna Bharat while he was at Compaq Systems Research Center and when you enter a query or keyword into the Google search engine, the Hilltop algorithm helps to find relevant keywords whose results are more informative about the query or keyword.

The algorithm operates on a special index of expert documents. These are pages that are about a specific topic and have links to many non-affiliated pages on that topic. Pages are defined as non-affiliated if they are authored by people from non-affiliated organizations. Results are ranked based on the match between the query and relevant descriptive text for hyperlinks on expert pages pointing to a given result page

Clustering Algorithm- LINGO

Figure 5 Overview of the Lingo algorithm's phases.

The performance of the web search engines could be improved by properly clustering the search result documents. Most of the users are not capable to give the appropriate query to get what exactly they wanted to retrieve. So the search engine will retrieve a massive list of data, which are ranked by the page rank algorithm or relevancy algorithm or human judgment algorithm.

Search-results clustering aims to present information about the matching documents. It's like taking a step backward to grasp a bigger picture. They consider no longer care about individual documents, but about some underlying semantic structure capable of explaining why these documents constitute a good result to the query. The user will always find to self with the unrelated information related to the search due to the ambiguity in the query by the user.

Evaluating the performance of the clustering algorithm is not as trivial as counting the number of errors or the precision and recall of a supervised classification

Algorithm: e- personalization of information.
Input: search query.
Output: recommended learner's URLs and text.
Process:
 Step1: begin.
 Step2: calculate both the sum of hub score of page and authority score of page (to find the maximum hits).
 Step3: preprocessing the dataset.
 Remove unnecessary entries in the web log (image entries in the log having extensions .gif, .jpeg, etc) and remove the records that have failed HTTP status code.
 Step4: apply Lingo clustering algorithm.
 Step5: output clusters.
 Step6: input clusters to the web mining techniques with user profile.
 Obtain data from various sources (usage data, content data structure data with user data).
 Step7: data analysis and mining the interesting patterns.
 Step8: e-personalization (Learner and Session Identification).
 Step9: recommendation phase.
 mining of learners' profile, crawling and indexing of learning resources, extracting user preferences from the learner's active session, computing relevant links to recommend for the active learner and finally, give recommendation to the learner's and then waiting for his feedback.
 Step9: end of algorithm.

Figure 6.Lingo Clustering Algorithm

3. Results

A. Experimental Analysis

As we see in Figure. 7, this is home page of personalized E-learning system. There are two different logins as user login and Admin login. After registration user can login and search for a particular topic as we see in Figure. 7, this is the admin maintain material page of personalized E- learning system.

Figure 7: Home page of Personalized Learning system

Figure 8. Admin Maintain Material Details.

Figure 9. Search results for Map Reduce keyword with combined approach

As shown in Fig. 9, when users search for Map Reduce keyword, he gets different links. When user selects a combined approach, more accurate links are available to user, which results in personalized output.

Conclusion

The performance of the system is evaluated under different settings and in comparison with the previous method which is based only on the usage mining. The application can be used for personalized recommendation to give personalized recommendation based on users browsing history. Throughout this paper we have discussed many aspects of research for personalized E-learning system. Based on existing limitations, in this paper a new web mining approach based on combination of web usage mining and web content mining is presented which is showing the better performance improvement as compared to the existing method.

Future Work

In future we discover the learner's time distribution pattern to realize personalized curriculum organization, discover the learning behavior pattern to build up a series of feedback and motivation system and we will give different training according to different learners' levels.

For future work, research can be done in developing integration strategies for approaches that can accurately predict student performance in courses and approaches that help a select a subject or courses based on student interests.

Abstract

ICT is a wide term represents Data Correspondence Innovation. ICT instruments for instructing and gaining cover everything from computerized frameworks like printers, Computers, workstations, tablets, and so on, to programming devices, for example, Google Meet, Google Bookkeeping sheets, and so on. In conventional study halls, an educator's fundamental educational devices for showing data are blackboards, multipurpose sheets, notice sheets and diagrams. In any case, in the present current situation, apparatuses of numerous callings are changing at a fantastic rate and that schooling is no exemption. The effect of innovation has prompted the expanded utilization of PCs for detesting data in large numbers of the present study halls. To make ICT instructing and learning more intuitive, different stages and apparatuses have been made and refreshed over the timeframe.

Keywords: Information Communication Technology, Teaching-Learning, Visual Information, Online Platforms.

Introduction

In the present globalized world the Data and Correspondence Advancements (ICTs) have become well established in instructive settings. Imaginative ICT devices utilized in homeroom training which assists educators with coordinating in their subject, for instructing learning and evaluation. There are various subjects explicit liberated from cost ICT apparatuses accessible on the web and disconnected stages which can be utilized for instructing, learning and appraisal. They are utilized by educators to energize cooperation and connect with learning in their study halls. ICT can likewise be utilized by instructors to advance cooperative work and imagination across a great many subjects. This study targets featuring the predominance of ICT instruments for working with understudy learning, maintenance and mentalities. Their utilization has encouraged subjective changes in how educating is drawn closer, particularly as far as introducing the items sound outwardly. Despite the fact that there has been a lot of conversation over various techniques to show understudies, addresses are not prone to quit being utilized. To underscore specific focuses, many talks utilize composed material introduced on a blackboard, whiteboard, or by transparencies on an above projector. However, over the

most recent 10 years, one more technique for giving visual data addresses has acquired conspicuousness which is projecting data straightforwardly from a PC onto a screen for example PowerPoint introductions. As a matter of fact, numerous schools and colleges have rooms outfitted with innovation vital for any educator to show data thusly. Moreover, a few organizations are pushing the educators to involve different innovations for imaginative instructing and learning.

1. **Information Communication Technology:** The ICT devices means to computerized foundations like PCs, PCs, printers, scanners, programming programs, information projectors, and intuitive educating box.
2. **Teaching-Learning:** Teaching can be characterized as commitment with students to empower their comprehension and use of information, ideas and cycles while learning is the obtaining of information or abilities through study, insight, or being instructed.
3. **Visual Information:** It is utilization of at least one of the different visual media regardless of sound. By and large, visual data incorporates still photography, film photography, video or sound recording, realistic expressions, visual guides, models, show, visual show administrations, and the help processes.
4. **Online Platforms:** A web-based stage is a computerized administration that utilizes the Web to work with communications between at least two separate yet reliant clients.

Literature Review

Simin Ghavifekr, Thanusha Kunjappan, Logeswary Ramasamy and Annreetha Anthony, in their examination paper, "Educating and Learning with ICT Devices: Issues and Difficulties from Educators' Discernments (2020)", uncovered that their review is more connected with recognizing the insights in carrying out ICT apparatuses in instructing and learning in the homeroom among teachers. It looks at the difficulties of utilizing ICT devices in educating and learning in the study hall among teachers and perceives the viability of the degree of ICT apparatuses in supporting homeroom instructing and learning.

D. Sakthivel, Dr. B. Radha, in their review "ICT Devices for Current Training (2021)", thought that Innovation can be a very significant apparatus, however it is just an instrument and innovation "can't supplant an educator" and isn't planned to supplant the educator. A decent instructor should carefully be in a real sense and should know the powerful method for coordinating innovation into the educational program with the goal that educators can keep the understudies committed.

Marta Ferragut Martorell, in her review, "Utilization of ICT apparatuses in the EFL homeroom and their effect on understudies' inspiration", expressed that, ICT has transformed into one of the underpinnings of our cutting edge society. Accordingly, the comprehension and dominance of ICT have turned into a fundamental piece of the present instruction, close by numeracy, composing and perusing and it is normal to change the manner in which understudies learn.

Objectives & Limitations

This study means to examine whether utilizing ICT apparatuses would be more useful for understanding the Blackboard instructing. It likewise expects to evaluate the adequacy of ICT apparatuses in aiding the understudies in understanding and holding the data. One of the significant impediments of the review was that absolutely subject to optional information may not be completely confirmed. Likewise the time used for the review was extremely restricted which confined the extent of the review.

Research Methodology

The review depends on auxiliary information. Important information are benefited from different wellsprings of data like Books and Different sites.

ICT Enabled Tools for Effective Teaching Learning Process: Most educators feel good in utilizing address technique, which isn't equipped for accomplishing different targets of homeroom guidance. ICT might be of extraordinary use in accomplishing different targets of educating - growing experience. It gives right data in an extensive way with various models. It assists students with widening their data base. ICT gives assortment in the introduction of content, which assists students with picking up as per their own speed. It helps in better comprehension, and long maintenance of data. Following apparatuses are utilized in the Showing educational experience in Online-Disconnected method of guidance.

Learning Management System (MOODLE): Moodle represents Particular Article Arranged Unique Learning Climate and insights. Moodle is free programming, a learning the board framework giving a stage to e-learning and it helps the different instructors significantly in conceptualizing the different courses, course designs and educational plan in this way working with collaboration with online understudies. Moodle upholds a scope of media to present or connection to learning materials, support the understudies and to evaluate their learning. It can give robotized evaluation as test, and give quick point by point criticism to the understudies.

Google Classroom: Google Homeroom is a free, mixed learning stage that offers various advantages for the two understudies and instructors. Google Study hall improves the efficiency and take work process the board to a higher level. It monitors tasks coming in with a straightforward look making it extremely simple to know everybody's status and to circle back to understudies who are missing work. Everything is time stepped, so late work is effectively recognizable. Since Google applications are cloud based the work in Google Study hall saves consequently and is available from any gadget. With the application, the two understudies and educators can partake in the full usefulness of Google Homeroom on a cell phone.

Google Forms: Google Forms allows directing MCQ tests on the web. The data is put away as a calculation sheet consequently records the responses. The calculation sheet then, at that point, populates the reactions from the test or review progressively. Google structures can be utilized to give input to and get criticism from understudies and guardians.

Video conferencing Platforms: During Corona virus pandemic when the world moved to Online mode for showing learning different free videoconferencing stages like Google meet, Zoom and Cisco WebEx and so on, were utilized to direct web-based classes. Every one of these has fluctuating requirements and highlights for working with intuitive educating and learning.

Virtual Labs: The Virtual Labs gives remote-admittance to recreation based Labs in different disciplines of science and designing. This understudy driven approach works with the assimilation of fundamental and high level ideas through recreation based trial and error. Web based trial and error further allows utilization of extra web-assets, video-addresses, energized exhibitions and self-assessment. Virtual labs are any spot, any speed, any-time, and any sort labs. It is a change in outlook in understudy's driven, online training.

Educational Videos and animations (YouTube and Internet): Different significant instructive recordings of different subjects accessible on web likewise have an incredible effect. YouTube give extra assistance in better comprehension of subject information.

Smart Classroom: Classroom incorporated with Smart board and web connections gives upgraded and intuitive learning and showing open doors for understudies and educators. The web connection with frameworks in brilliant classes is put away with plentiful data. It is open whenever for their instructing and educational experience. Educators can get to data from different instructive hotspots for the end goal of educating. It helps in simple admittance to online assets. Brilliant Homerooms helps in creating decisive reasoning and critical thinking abilities in understudies. There are a lot more ICT instruments that work with imaginative showing educational experience.

Advantages of Using ICT tools Inteaching learning Process

1. **Teaching Makes Easier:** Educators are individuals with one of profoundly benefited of having ICT in schooling. Using it, it makes the instructing more straightforward. At the point when an instructor shows the understudy on another example it makes for them simple to illuminate and to assess what they maintain that they should be aware. Making records documents, pdf records or power point show using PC or PC for them to show the subjects that they will going to handle is an extraordinary way for instructing.
2. **Lesson can be seen and heard:** The advantage of data correspondence innovation is the illustrations should be visible and be hear. Dissimilar to on the books you can simply see it, seeing those pages with sections and brimming with text and at some point we can see the photos. Sound coming from the recordings or music that being utilized will be played again and again that makes it to recall well.
3. **Easier to Understand:** At the point when the understudies see pictures showing up on the white screen utilizing a projector they comprehend it effectively what it truly implies.
4. **Improves Communication:** Having an innovation in the school conversation further develops correspondence. Since through that medium the educators as well as the understudy find out increasingly more jargon words. The legitimate approach to saying a word or words, the right punctuation and the significance of the words gets to the next level.
5. **Enjoying While Learning:** Images, music and recordings are one of the wellsprings of diversion. At the point when individuals see that they are cheerful and appreciate. Dissimilar to from the articles that simply make out of loaded with text

it is exhausting. Through the bright pictures, understudies appreciate paying attention to the music and envision what it truly implies.

6. **Students Perform Better:** What is great and significance of ICT in educating and learning is the understudies perform better. At the point when an educator train before the class and begin to have a visual guide like projector, the understudies are drawing in. Pictures project on the screen and the understudy will see what that is. The understudies perform better when it is alluring.
7. **Know More Information:** The web is one of the quickest approaches to getting data on the grounds that only one touch can get what is required. In training the more we search and read the more data we will get. The educator and the understudies both get more data by the manner in which they use it.
8. **Improves Visual Skill:** At the point when understudies are learning with the utilization of pictures, or recordings their visual ability gets to the next level. A few educators use questions utilizing photographs that will further develop their reasoning expertise and mental ability. What's more, in view of that understudies are partaking in the lesson.

Conclusion

ICT tools are exceptionally strong in educating and learning. ICT instruments enable the two educators and students. They change the educating and educational experiences from being exceptionally educator ruled to becoming understudy driven and this change brings about expanded learning gains for understudies, setting out and considering open doors for students. Also, they are cost-productive and take out the utilization of paper. Close by limiting expense, they additionally save time during class addresses empowering quick and dynamic transmission of content. They give admittance to dynamic instructing and learning strategies and work with simple understudy the executives. ICT is an incredible asset for instructive change and change. Fitting utilization of ICT has assisted the school with raising the interest levels among the understudies and has associated figuring out how to genuine circumstances. Understudies appreciate while learning and perform better.

IMPACT OF ICT TOOLS IN ENHANCEMENT OF TEACHING AND LEARNING IN RURAL AREAS USING VIRTUAL REALITY

Mrs. M. Dhavapriya

Assistant Professor, Department of Computer Science (SF)
Nallamuthu Gounder Mahalingam College, Pollachi
dhavapriyaj@gmail.com

Abstract

The usage of ICT tools has contributed significantly to improving the quality of educational programs offered by institutions rural areas. In this increasingly varying technologically advanced world, educators must cope with the inventions and advancements to provide to the students of this generation. With the help of ICT, one can generate awareness amongst students apart from augmenting their knowledge level in different aspects. Education is one of the notable sectors that is affected by the pandemic. The world is after ICT tools like remote meeting applications, online exams, Virtual Reality, Augmented Reality, etc., to improve the quality of education. Information communications technology has become an integral part of our life, and it is one of the necessities of the modern education system. However, teachers have a mixed opinion to adopt ICT or integrate Virtual Reality or Augmented reality in their routine. Several pieces of research have been carried out to highlight the significance of the use of ICT, VR, or AR tools in education. At the same time, it is difficult for the students in rural areas to acquaint themselves with the technology. So, it is necessary to enhance the usage of advanced tools to increase the outcome the teachers must agree and welcome the integration of Virtual Reality and Augmented reality to enhance the quality of education. A key benefit of using VR in education is that you learn through experience. VR allows us to bring 2D objects to life and makes visualization a reality, enabling us to experience real scenarios or fabricated experiences over and over, and learn in an immersive way.

Keywords: ICT, ICT Tools, Educational inequality, Rural Children, Virtual Reality (VR), VR for education.

Introduction

Although education is a fundamental human right for global citizens, educational inequality still exists within and among countries. Still today, many students struggle to access and receive quality education. Therefore, the value of using immersive technology to increase social competence and perceived social support for children who live in remote areas of the world, reduce inequality, and improve the quality of education requires much attention to address the lacuna between urban and rural education systems. Based on three representative pedagogies (Pedagogy of Technology, Play-based Learning, and Traditional Pedagogy), we designed three social competence educational approaches – virtual reality (VR) assisted social competence education, Lego social competence education, and traditional classroom learning – and applied them to interventions in two rural schools in Southwest China. Our results showed that VR and Lego social competence education prompted children's social competence and perceived social support with elementary school children [1]. Furthermore, VR social competence education resulted in substantially greater social competencies and subjective sense of social support than

traditional classroom learning with middle school children. The results suggest that VR-assisted social competence education could be a potential tool to reduce educational inequalities in underdeveloped countries and regions.

The Concept of Social Competence

The concept of *social competence* refers to an individual's ability to appropriately engage in social occasions and develop meaningful interactions with others. It usually incorporates additional components, such as social communication, social interaction, and social inference. Social competence manifests in a child's emotions, behaviors, and ability to interact with others. The development of social competence is essential for future functioning in society, emotional adjustment, and behavioral management. For example, children who get along with others are more likely to rate themselves as happier and have better academic performance [2]. Socially competent children are also more likely to grow into adults with better health and adults with appropriate social skills gain more prosperous reciprocal interpersonal relationships and function better in society.

A. Current Status of Rural Children and the Importance of Social Competence Education

The global rural population is now close to 3.4 billion. Therefore, rural children's educational development is vital for global human sustainability. Growing evidence suggests that a higher quality of education positively influences children's social competence development. For instance, research has indicated that children from disadvantaged rural regions who experience higher levels of classroom learning have better social skills and fewer behavior problems than children who have not been provided with the same. Thus, it is essential to ensure that as many children as possible can obtain quality social competence education, which can boost their chances for future success and reduce inequality in underdeveloped rural regions [3].

Social Competence Education (SCE) is the concept of teaching particular social skills for students' development, future success, and social well-being. It has also been used in various pedagogies to train rural children's social skills at school. Here we review the most popular and widely used SCE pedagogies from previous and ongoing studies, categorizing them into three categories: the traditional pedagogy - traditional classroom learning; the student-centered pedagogy - play-based learning and a novel pedagogy - the pedagogy of technology (i.e., virtual reality).

B. SCE-related pedagogies

1. Traditional Classroom Learning

It is a highly teacher-centered activity. The classroom usually consists of rows of desks and chairs, allowing students to easily observe and listen to the teacher and watch PowerPoint slides or transparencies. Many schools in rural areas are small and geographically isolated, with inadequate infrastructure, limited educational offerings, and continuous student absence. Therefore, over the past decades, traditional classroom

learning has been employed as the primary approach in many rural schools. It can be effective despite being seen as rigorous and unprogressive. For example, research has demonstrated that students learning in a conventional setting may have higher social skills scores than those in an online environment [4].

2. Play-based Learning

It is a student-centered pedagogy that highlights learning through play as a valuable method for a child's development of social and emotional skills. As a representative of play-based learning, Lego playing has provided a practical approach to encouraging children's genuine interest in strategic play and motivating their socio-behavioral improvement by embedding social interactions through its construction activities. Research has illustrated that Lego may have a powerful potential to engage children and young adults in interactive and collaborative activities. Also, Lego has been harnessed globally to support many rural regions' educational sustainability and to help children's social skills education. However, although many practitioners have endorsed that play-based learning is a practical pedagogy that benefits children's learning, students might be distracted by it more than what they can gain from its learning activities [4].

3. Play-based Learning

It is a student-centered pedagogy that highlights learning through play as a valuable method for a child's development of social and emotional skills. As a representative of play-based learning, Lego playing has provided a practical approach to encouraging children's genuine interest in strategic play and motivating their socio-behavioral improvement by embedding social interactions through its construction activities. Research has illustrated that Lego may have a powerful potential to engage children and young adults in interactive and collaborative activities. Also, Lego has been harnessed globally to support many rural regions' educational sustainability and to help children's social skills education. However, although many practitioners have endorsed that play-based learning is a practical pedagogy that benefits children's learning, students might be distracted by it more than what they can gain from its learning activities[4].

C. Deepening Understanding through Experiential Learning

For years, teachers have provided students field trip opportunities to deepen the learning experience. Moreover, field trips tend to be limited to the local area of the school. Experiential learning through AR/VR serves as an extension to curriculum and encourages students to connect learning with real-world situations and natural phenomena [5]. At Taylorville High School, where AR/VR lessons for Social Studies are being implemented, a survey showed 87% of 9th, 10th, and 11th graders using zSpace confidently felt that AR/VR created a positive learning experience, with 89% of them reporting excellent quality and flow of AR/VR lesson content. Schools in rural communities often face obstacles to providing equitable learning experiences for their students as a result of underfunding in rural schools and districts, poor infrastructure (e.g., slow or no Internet),

and/or less access to technology and professional development to integrate technology for teachers [7]. Barriers to equitable learning across the country - AR/VR helps level that playing field. Using AR/VR, students far away from bodies of water can still study the causes and effects of beach and river erosion, global water distribution and the water cycle, as well as fish structure and function. With content ranging from microscopic (e.g., atoms and cells) to macroscopic (e.g., planets and stars), the possibilities with AR/VR are virtually endless and bring great value to rural students.

Impacts of VR System in Education

A. VR - Assisted Social Competence Education

The main benefit of using VR as a social competence education tool is the possibility of displaying real-life social situations while maintaining control over what is happening. VR can provide simulated scenarios with the exact physical and behavioral mechanism as users' real-life environment, supporting increased standardizations of procedures. When conducting an intervention in a VR scenario, it is possible to create interactive social situations and manipulate all the presented variables simultaneously. Sophisticated VR technology offers a high level of interactivity with stimulating environments, which can motivate children to learn and practice social skills. For example, VR interventions can combine delivering social knowledge, emotional regulation, social interaction, and attention practice, while allowing students to practice social skills in a multi-sensorial, safe, realistic simulated, controllable, and interactive setting.

With the rapid development of VR education, VR-assisted SCE has emerged with related social support programs that may have the potential to help students develop social competence traits for today's world [6]. Research also indicates that VR-based social competence training is as effective for the general population as for special education samples, and most studies related to VR-assisted SCE have focused on special education and clinical interventions. Investigating VR-assisted SCE in mainstream education used VR as an educational training tool to enhance learners' competence in behavioral health and motivational interviewing skills.

B. VR in Rural Areas

The Indian Institute of Technology-Madras (IIT Madras) researchers are developing an AR/VR-enabled (Augmented reality/Virtual Reality) learning for schools in rural areas. The researchers are using digital technologies to develop teaching-learning models for the secondary-school subjects. The initiative's goal is to develop VR-enabled immersive and experiential environments where students get opportunities to learn social science, history, sciences and languages. Through AR/VR, the world-building, digital storytelling and games, the learning process becomes efficient helping students prepare even better [7]. By developing pedagogic tools using AR/VR technology, the project could potentially revolutionize education in rural areas by enabling virtual access and mobility through portable platforms.

C. VR system as a substitute for school laboratories

Rather than building biology, chemical, and physics laboratories, a computer laboratory equipped with VR system can replace them all. This is because VR system can generate various environments virtually, including all school laboratories [8]. Besides replacing standard functionality of those school laboratories, VR system can also add a new functionality to each laboratory. For example in standard biology laboratory, a student observes cells using a microscope, with this method a student can only observe the cells in flat visual or 2D visual. However, using VR system a student can virtually becomes smaller as little as a cell and walk through the observed cells, observing cells from the inside in full 3D visual. The use of VR system to replace school laboratories can also cut school expenditures. Besides cutting the initial cost of building all those laboratories, annual expenses can also be reduced because there will be no cost for disposable lab items such as chemical substances used in chemical laboratory – all experiments are done in virtual environment with virtual items.

D. VR system supports active learning method

Active learning is a method where a student performs certain actions according to what he/she is currently learning. It is totally different with passive traditional classes where students come to class, sit down, listen to their teacher, watch slides, or read their book. VR system can reach the 90% level by allowing the students to simulate the real experience by themselves[9]. Using VR system, students can interact with their learning subject and make their own conclusions based on actions they do in the overall learning process.

Fig 1: VR Device for Prototype Implementation

It is also possible to design VR system where future learning conditions are made from students' past conclusions, this will allow each student to have his/her own current learning condition based on what he/she has learned before, thus generating a specific personal experience for each of them. To maintain an adequate immersion level, minimum devices required are a head-mounted display (HMD), a data glove, a head tracker and a hand tracker. We use eMagin Z800 [1] for the HMD, which uses a separate OLED displays and comes with an integrated head tracker, and P5 [8] for the data glove, which is also

comes with an integrated hand tracker. It is a good thing that both the HMD and the data glove have trackers integrated into them, this will save us some money since most trackers are available with high prices. Unfortunately, the minus point of P5 is its tracker which uses an infrared system so the precision level is not so good. As addition, we will also use a joystick to move our character around. All the devices used in this prototype implementation can be seen in Fig 3[10].

Conclusion

VR system delivers positive impacts for education where it can deliver a fun yet informative edutainment, substitute school equipments and facilities, substitute destructive experiments, support active learning and support constructivism. Those positive impacts also support the fact that VR system is very suitable for education in rural areas where schools there are lack of equipments and facilities needed by their students. By bringing VR system for education in rural areas, students there can have equal education level with students in big cities. It is also possible to make a low cost VR system without sacrificing much of its immersion level[10]. Using various sub-engines available in the internet and low cost VR devices we can develop and run VR system suitable for education.

SIGNIFICANCE OF ICT TOOLS AND THEIR APPLICATIONS IN TEACHING LEARNING PROCESS

Dr. S. Sharmila

Assistant Professor, Department of Computer Science,
NGM College, Pollachi, Coimbatore, TamilNadu, India
mcasharmi2007@gmail.com

Abstract

Information and Communications Technology (ICT) is the use of computing and telecommunication technologies, systems and tools to simplify the way information is created, collected, processed, transmitted and stored. It includes computing technologies like servers, laptop computers and software applications, as well as the wired and wireless communication technologies that support telephones, the Internet, the Internet of Things (IoT). The goal of ICT is to improve access to information and make human-to-human, human-to-machine and machine-to-machine (M2M) communication easier and more efficient. The importance of ICT for teaching and learning process has become significant as it facilitates teaching and learning process, create conducive learning environment, and help learners develop innovative thinking and self confidence. Teachers' well-equipped preparation with ICT tools and facilities is one of the main factors in the success of technology-based teaching and learning. This paper focuses on the use of ICT in schools and colleges by students and teachers to support the processes of learning and teaching.

Keywords: ICT, Technology, ICT tools, Teaching and Learning, Internet, Communication

Introduction

There are different technologies such as radio, television, computer, etc., used in the teaching-learning process. Different ICTs have potentiality to expand the access to education, strengthen the process of education and enhance the quality of education. It has also become essential to the teaching-learning interaction, through such approaches as replacing chalkboards with interactive digital whiteboards, using students' own Smartphone or other devices for learning during class time, and the "flipped classroom" model where students watch lectures at home on the computer and use classroom time for more interactive exercises. ICT in teaching-learning has tremendous potential to serve and help the people connected with the process and product of education in many ways. ICT will help in transitioning from a broadcast model of learning to interactive learning. Thus making the students active and participate in the teaching-learning process. ICT prepares teachers to meet challenges of the teaching-learning task of modern age. It helps teachers in proper execution of their multi-dimensional responsibilities in various areas of education.

Literature Review

Koc mentioned that using ICT enables students to communicate, share, and work collaboratively anywhere, any time. Bransford, J. D., Brown, A. L., & Cocking, R. R reported that, what is now known about learning provides important guidelines for uses of technology that can help students and teachers develop the competencies needed for the twenty-first century. Forcheri, P. & Molfino suggested that ICT can be used to

promote collaborative learning, including role playing, group problem solving activities and articulated projects. **Yusuf** said that the field of education has been affected by ICTs, which have undoubtedly affected teaching and learning. **Yelland, N** integrating of ICTs in education requires establishment of infrastructural facilities, acquisition of technologies and their periodic updating, management and professional support services.

ICT Tools for Teaching Learning Process

Following tools are used in the Teaching learning process in Online- Offline mode of instruction. These ICT tools proved to be a boon for making the teaching learning process easy and accessible to all students.

Learning Management System (MOODLE and Google classroom)

Moodle stands for Modular Object-Oriented Dynamic Learning Environment and statistics. Moodle is free software, a learning management system providing a platform for e-learning and it helps the various teachers considerably in conceptualizing the various courses, course structures and curriculum thus facilitating interaction with online students. RSCOPR has a self-customized MOODLE developed by Digital Content development team. It is a very useful platform to share all learning resources, videos, sharing webpage. It is able to provide automated assessment in the form of quiz, and give immediate detailed feedback to the students. The messaging system allows learners and teachers to communicate easily. Teachers can also communicate with groups of learners via course forums either to provide answers to learners' questions or to just get involved in discussions. The MOODLE mobile app makes students access even easier via smart phone or mobile device.

Google Classroom - Blended Learning Platform

Google Classroom is a free, blended learning platform that offers a variety of benefits for both students and teachers. Google Classroom enhances the productivity and takes workflow management to the next level. It keeps track of assignments coming in with a simple glance making it very easy to know everyone's status and to follow up with students who are missing work. Everything is time stamped, so late work is easily identifiable. Since Google apps are cloud based the work in Google Classroom saves automatically and is accessible from any device. With the app, both students and teachers can enjoy the full functionality of Google Classroom on a mobile device.

Google Forms

Google Forms allows conducting MCQ quizzes online. The information is stored as a spreadsheet automatically records the answers. The spreadsheet then populates the responses from the quiz or survey in real-time. Google forms can be used to give feedback to and receive feedback from students and parents.

Video Conferencing Platforms

During COVID pandemic when the world shifted to Online mode for teaching learning various free videoconferencing platforms like Google meet, Zoom and Cisco webex were used to conduct online classes. All these have varying needs and features. Zoom allows the facility of using its features using a browser also without the need to download the application, the app download is mandatory in case of the other two software. Google Meet allows the maximum on-screen chatting time with respect to the others.

Virtual Labs

The Virtual Labs provides remote-access to simulation-based Labs in various disciplines of science and engineering. This student-centric approach facilitates the absorption of basic and advanced concepts through simulation-based experimentation. Internet-based experimentation further permits use of additional web-resources, video-lectures, animated demonstrations and self-evaluation. Virtual labs are any place, any pace, any-time, any-type labs.

Educational Videos and animations (YouTube and Internet)

Various valuable educational videos of pharmacy subjects available on internet, YouTube provide additional help in better understanding of subject knowledge.

Smart Classroom

Classroom integrated with Smartboards and internet connections provides enhanced and interactive learning and teaching opportunities for students and teachers. The internet-connected to systems in smart classes is stored with abundant information. It is accessible anytime for their teaching and learning process. Teachers can access information from various educational sources for teaching purposes. Smart Classrooms helps in developing critical thinking and problem-solving skills in students.

e-Resources

E- journals from ProquestPharma and DELNET were available for students to access remotely in online mode and enhance their learning experience. e books were uploaded on MOODLE and Google Classroom.

Current Situation and Importance Of Ict Today

The importance of Information Communication Technology are as follows;

1. **Online Education:** Due to Covid-19, there is no option without online education. As lockdowns don't allow opening schools, colleges, and so online education is only one option through which education can be continued.
2. **Use of apps:** Different apps nowadays are used for online education. These apps are helpful for students and teachers to reach. Such type of apps is also used for meetings, online teaching learning process. Ex. Zoom, Google meet, Webex etc.
3. **Platforms for online education:** There are different platforms available for online education. Through these platforms, online classes can be taken, videos can be

uploaded, recorded videos can be send. So these platforms are helpful to the students as well as teachers. Ex. Swayam, Webex, Impartus etc.

4. **Use of different e-content:** Due to online education there is no time limit as well as place restriction for learning. Anyone can learn from any place and at any time. So many type of education any one can take. And different e-contents are also prepared for students. These are helpful for them to enrich their knowledge.
5. **Tools for teachers:** GeoGebra can construct almost every conceivable geometrical object, even in 3D! Object drawing is interactive and can be moved around, modified, and measured. PhET Simulations are interactive computer programs which allow a user to change variables and see the effect of the changes on the system.

The Various Ict Initiatives

Few important initiatives are as given below.

1. **e-pathshala :** The digital India campaign has promoted extensive use of ICTs in the teaching learning process. The ePathshala, a joint initiative of Ministry of Education, Govt. of India and National Council of Educational Research and Training (NCERT), has been developed for showcasing and disseminating all educational e-resources including textbooks, audio, video, periodicals, and a variety of other print and non-print materials for Students, Teachers, Parents, researchers and educators.
2. **NROER:** The National Repository of Open Educational Resources (NROER) is developed by CIET, NCERT. It was launched during the National Conference on ICT for School Education. NROER hosts large number educational resources in many subjects and in different Indian languages for Primary, Secondary and Senior Secondary classes.
3. **Swayam MOOCs:** SWAYAM (Study Webs of Active-Learning for Young Aspiring Minds) is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity and quality. All the courses are interactive, prepared by the best teachers in the country and are available, free of cost to the residents in India.
4. **SwayamPrabha:** SWAYAM Prabha is an initiative of the Ministry of Human Resources Development to provide 32 High Quality Educational Channels through DTH (Direct to Home) across the length and breadth of the country on 24X7 basis.
5. **ICT in education curriculum:** The National Policy on ICT in School Education has set the goal of preparing youth to participate creatively in the establishment, sustenance and growth of knowledge. Teachers and Children must not be treated merely as consumers but also as active producers.
6. **Diksha:** In India, many teachers are creating & using innovative tech-based solutions in their classrooms. Some state governments have also initiated programs to support their teachers digitally. This inspired MHRD and NCTE to coordinate these efforts at a national level and build DIKSHA.

Application of Information and Communication Technology in Education

ICT is being utilized in every part of life. Due to the increasing importance of the computer, students cannot afford to keep themselves distant from this potential medium in education, use of ICT has become imperative to improve the efficiency and effectiveness at all levels and in both formal and non-formal settings. It can be used for the following purposes.

- To broadcast material, online facility or CD-ROM can be used as sources of information in different subjects.
- To facilitate communication for pupils with special needs;
- To use electronic toys to develop spatial awareness and psycho motor control;
- To use the online resource like, email, Chat, discussion forum to support collaborative writing and sharing of information.
- To facilitate video-conferencing or other form of Teleconferencing to involve wide range of students from distant Geographic areas.
- For blended learning by combining conventional classroom learning with E-learning systems
- To process administrative and assessment data.
- To exchange and share ideas -among teachers for the professional growth.
- To carry out internet-based research to enhance, educational process

Figure 1: Six Reasons to use ICT in Education

Advantages of Ict in Education

Some of the advantages of ICT in education are as follows;

- Enhance Teaching Effectiveness
- Ensure Active Participation

- Foster Collaborative Learning
- Easy Student Evaluation
- Better Conceptual Understanding
- Assists Students in Research

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT tools in education make it easier for teachers to use the best strategies to bring out the best in their students. Moreover, the technology enables them to manage all the management and administration functions in a seamless manner. Hence, there is no doubt that it is a boon to the education industry. One of the objectives of this paper is to provide better understanding and appreciation of the importance of ICT in teaching and learning process. Several view points of importance of ICT in teaching and learning system has been discussed.

TEACHING AND LEARNING WITH ICT TOOLS: ISSUES AND CHALLENGES FROM TEACHERS' PERCEPTIONS

M. Marimuthu

UG Department of Computer Science [SF],
Nallamuthu Gounder Mahalingam College, Pollachi
marimuthumcs24@gmail.com

Abstract

In this digital era, ICT use in the classroom is important for giving students opportunities to learn and apply the required 21st century skills. Hence studying the issues and challenges related to ICT use in teaching and learning can assist teachers in overcoming the obstacles and become successful technology users. Therefore, the main purpose of this study is to analyze teachers' perceptions of the challenges faced in using ICT tools in classrooms. Evidence has been collected through distribution of a modified- adopted survey questionnaire. Overall, the key issues and challenges found to be significant in using ICT tools by teachers were: limited accessibility and network connection, limited technical support, lack of effective training, limited time and lack of teachers' competency.

Keywords: ICT, teaching-learning, higher education, & Teachers' Perceptions.

Introduction

Information and Communication Technology (ICT) includes computers, the Internet, and electronic delivery systems such as radios, televisions, and projectors among others, and is widely used in today's education field. Kent and Facer (2004) indicated that school is an important environment in which students participate in a wide range of computer activities, while the home serves as a complementary site for regular engagement in a narrower set of computer activities. Increasingly, ICT is being applied successfully in instruction, learning, and assessment. ICT is considered a powerful tool for educational change and reform. A number of previous studies have shown that an appropriate use of ICT tends to expand access to education. Through ICT, learning can occur any time and anywhere. Online course materials, for example, can be accessible 24 hours a day, seven days a week. Teleconferencing classrooms allow both learner and teacher to interact simultaneously with ease and convenience. Based on ICT, learning and teaching no longer depend exclusively on printed materials. Multiple resources are abundant on the Internet, and knowledge can be acquired through video clips, audio sounds, visual presentation and so on. Current research has indicated that ICT assists in transforming a teaching environment

There were some challenges: lack of knowledge, confidence, enough experience, training, interest and access to ICT tools, lack of technical support, lack of genuine ICT Software and unstable and unreliable internet connection at the schools. Due to these challenges, teachers did not use ICT in the classroom. Therefore, teachers should learn more to improve their knowledge and skills in ICT. The government should focus on management strategies and policies to reduce the challenges faced by teachers in mathematics classrooms. By these policies, they can use the ICT tools in the classroom. the

current study presents teachers' perceptions regarding technology integration in their teaching-learning practices at all educational levels in light of the previous studies performed in the last 5 years. By knowing teachers' experiences and perceptions, this study would help teachers make the best use of ICT in teaching and learning activities by sorting out the challenges and assisting concerned authorities in formulating policies accordingly..

Literature Review

Challenges in using ICT in teaching and learning Integrating ICT into teaching and learning is a complex process and one that may encounter a number of difficulties. These difficulties are known as "challenges" A challenge is defined as "any condition that makes it difficult to make progress or to achieve an objective" The following are some of the key challenges that have been identified in the literature regarding teachers' use of ICT tools in classroom.

Limited Accessibility and Network Connection

Several research studies indicate that lack of access to resources, including home access, is another complex challenge that prevent teachers from integrating new technologies into education. Various research studies indicated several reasons for the lack of access to technology. In Sicilia's study (2005), teachers complained about how difficult it was to always have access to computers.

Providing continuity of learning in low and intermittent connectivity scenarios Millions of students have limited access to the internet at home, leaving them struggling to access interactive online lessons and forcing them to find offline workarounds on devices lacking storage for video and other resources. Today, devices and education technology tools are more integrated into education than ever before, and learning opportunities happen not just at school, but at home and everywhere in between. In this landscape, the ability to work online and offline is key so that learning can continue regardless of a student's ability to connect to the internet

School with Limited Technical Support

When teachers dwell on textbooks alone. The generation of students today learned how to use devices at a very young age, which is comparatively faster than other age groups. With that in mind, it is obvious that traditional teaching styles can hardly capture their interest. Because of that, most institutions began to eliminate the antiquated ways of teaching and started to inject technology into their curriculum and school processes.

From the blackboard method of teaching, schools integrated the use of different types of devices to facilitate student learning. The use of these devices, with proper administration from teachers and educators, encourages participation and collaboration.

Lack of Effective Training

Lack of trained teachers- A major obstacle in the use of ICT in rural education is the lack of knowledge and skills. There is dearth of dynamic teachers formally trained in ICT. Moreover, there is hardly any quality training imparted on a regular basis to teachers involved in ICT education.

Limited time

lack of time exists for teachers in many aspects of their work as it affects their ability to complete tasks. Some of the teachers who participated specifically mentioned that they need time to locate internet information, prepare lessons, explore and practice using the technology, deal with technical problems, and receive adequate training. Recent studies show that lack of time is an important factor affecting the application of new technologies in

ICT Education

Lack of Teachers' Competency

Teachers often worry that their knowledge level does not match those of their 'digitally native' students. This distracts from one of the main advantages of ICT skills for educators: being able to facilitate lessons more effectively using digital technologies. Another challenge directly related to teacher confidence is teachers' competence in integrating ICT into pedagogical practice (Becta, 2004). In Australian research, Newhouse (2002) found that many teachers lacked the knowledge and skills to use computers and were unenthusiastic about the changes

Methodology

The central objective of this systematic analysis was to present a succinct account of representative literature dealing with the teachers' perceptions and experiences while integrating ICT in their teaching-learning practices. The best literature review provides a full reflection, which helps develop theory

Research Design

In this research, quantitative methodology was used to collect and analyze the data obtained from all the respondents. A questionnaire was self-developed and finalized by the researchers before being distributed to the targeted group of respondents. The questionnaire was designed specifically to address research objectives with regard to teachers' perception on use of ICT tools

Data Collection Procedures

Data collection defines the procedure for collecting data by the researcher. The questionnaire has been distributed to 120 teachers randomly. They were given one week to fill in the questionnaire and return it to the researcher. All of the participants volunteered themselves in the research. Some questionnaires were with missing information that the details could not be used as a contribution in this research.

Data Analysis

Process The data collected from the respondents were gathered together to be analyzed using the Statistical Packages for the Social Sciences (SPSS) version 22. The analysis includes both descriptive and inferential analysis. The researchers used descriptive analysis to analyze the frequency and percentage of the overall population in the demographic background. Besides, it is also used to determine the mean, standard deviation, frequency and percentage

Validity & Reliability

Internal consistency is measured in this research using the Cronbach's coefficient alpha (α). This method is used to identify the correlation between scores of each item in the test and the total score for all items in the test or is known as test index score. Items with high correlation with the test index score have high reliability, and those with low correlation values with the test index score have low reliability and will be deleted from the test.

Discussion of Findings

In this chapter, I discuss the findings presented the challenges the six key participants faced

Perceptions

What are teachers' perceptions of using ICT in teaching?" Perceptions are discussed in relation to the two main components of the Technology Acceptance Model (TAM),

Ease of Use

Perceived ease of use has been shown to influence positive attitudes towards using computers which in turn influence behavioural intention to use ICT in teaching (Davis, 1986; In the below figure Table shows that 141 (77%) of the questionnaire respondents perceived computers as easy to use

Statements	Agree	Disagree	Not sure	Missing	Mean
I find the computer easy to use	141 (77%)	24 (13%)	14 (8%)	4 (2%)	1.73
It takes up too much time for me to find things on the computer	57 (31%)	102 (56%)	19 (10%)	5(3%)	2.17
I find the computer difficult to use	23 (12%)	132 (73%)	14 (8%)	14 (8%)	2.01
I find it easy to get the computer to do what I want to do	143 (78%)	19 (10%)	16 (9%)	5 (3%)	2.17

In the present study, teachers' general positive attitudes do not appear to reflect actual use and, even less so, their confidence in using computers for teaching. An overwhelming majority (170 or 93%) of questionnaire respondents enjoyed using the computer and 160 (87%) thought it was fun but only 128 (70%) claimed to use computers daily to a few times a week

Usefulness

Teachers perceived computers as useful for reducing their workload as teachers and for preparing lessons rather than for meaningful use in the classroom. Quantitative findings show that questionnaire respondents generally perceived computers as useful or administration and lesson planning or preparation rather than classroom use. For example, questionnaire respondent number 112 said, "...presentations, administration work such as schedules, reports can be done through them [computers]" while ACE-ICT student teacher 16 said, "this year I am doing the in-service ACE-iCT

Experiences

"What are teachers' first experiences using ICT in the classroom?" Positive perceptions towards ICT are an important determinant of the kind of experience a user will have while using ICT (Elwood et al., 2006). Given the generally positive perceptions reported above, the expectation for the six key participants was that they would have positive experiences of teaching with computers in the classroom.

Subject

Such use of ICT was a surprising finding as these teachers had completed in-service qualifications that focused on cross curriculum ICT integration (the ACE-ICT and the BE-ICT courses) in which learning theories and their implications for teachers as they integrate ICT into their teaching were discussed. In particular, teachers were taught to develop activities that promote higher order

Tools

Using ICT as a combination of different tools is an effective strategy for ICT integration and it is crucial to know when to use what. In the two classrooms where ICTs were used with learners, teachers used ICT as more than one too

Use of ICT tools in classroom

Items	Always	Often	Sometimes	Rarely	Mean	SD
Produces a text using a word processing program	39 (39%)	24 (24%)	30 (30%)	7 (7%)	2.05	.989
Use emails to communicate with other	26 (26%)	26 (26%)	38 (38%)	10 (10%)	2.32	0.973

Capture and edit digital photos, movies or other Graphics	39 (39%)	24 (24%)	30 (30%)	7 (7%)	2.05	.989
Edit text online containing internet links and images	26 (26%)	26 (26%)	38 (38%)	10 (10%)	2.32	0.973
Create a database	38 (38%)	27 (27%)	30 (30%)	5 (5%)	2.02	.943

Discussion & Conclusion

This study is more related to identifying the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers. Furthermore, it examines the challenges of using ICT tools in teaching and learning in the classroom among school teachers and recognizes the effectiveness of the extent of ICT tools in supporting classroom teaching and learning. Based on the study the findings indicate that average level of the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers, high level of challenges of using ICT tools in teaching and learning in the classroom among school teachers and recognizing the effectiveness of the extent of ICT tools in supporting teaching and learning in the classroom.

Study showed that teachers do combine different resources in their teaching, as well as utilizing various modes of ICT with almost two-thirds claiming to use technologies (63%) and website (62%). Anyway, it is also evident that textbooks are still considered fundamental in the educational systems. Nearly two thirds of our respondents (64%) always or often follow textbooks in their teaching.

Important technologies for learning such as computers (98%) and educational software (93%) were ranked as the top technologies the rate of ICT use among teachers in school is average. However, the finding shows that more teachers used computer with teaching software in the classroom to present or demonstrate examples to students. They also like to use the computer to access students' results and keep track of their progress.

ICT contribution to the teaching-learning process. Since the attitude and perceptions of the teachers are critical to how effectively an innovation is implemented, it is important to gauge how teachers perceive this innovation and its efficacy as a tool for enhanced teaching and learning. It is also hoped that this study will contribute to the growing knowledge base and 21st century generation regarding the use of ICT in education

In future studies more focus should be given on management strategies and policies to address the barriers faced by teachers in using ICT tools in teaching and learning. If the barriers faced by teachers can be overcome, it is a step forward to enhance our students' learning outcome. The studies done with the same gender distribution could give more appropriate analysis whereby the gender perceptions could be analyzed.

THE SIGNIFICANCE OF ICT IN HIGHER EDUCATION TO ENHANCE TEACHING AND LEARNING PROCESS

N. Arul Kumar

Assistant Professor, Department of Computer Science
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu, India

Abstract

Information and Communication Technology (ICT) is the mode of education that uses information and communication technology to support, enhance and optimize the knowledge of students on global level. Increasing the use of ICT in higher education with integrative technology has found positive impact on student achievements.

The implementation of various ICT related tools has made the overall teaching and learning process more efficient. The rate of interaction between the students and the teachers are also enhanced with the help of this process. The secondary mode of data collection has been used in this study to understand the main concept and related information. The implementation of various ICT tools also ensures that the students are able to learn on their own. With the rise in technology and internet, it can be stated that the implementation of various ICT tools will be beneficial for the overall teaching and learning process.

Technologies in ICT include:

- *Access of course material.*
- *Online digital repositories for lecture, course material and digital library.*
- *Flipped classroom.*
- *Audio-Video devices, projector, online presentations are useful in enhancing students understanding level.*

Keywords: *ICT, ICT tools, Teaching and Learning Process, E-learning*

Introduction

The teaching and learning environment is embracing a number of innovations and some of these involve the use of technology through ICT integration in education. This innovative pedagogical approach has been embraced rapidly though it goes through a process. In higher education, with the rise of the internet and usage of various technologies towards the learning process, usage of ICT will be beneficial. ICT also has the potential to increase the level of interaction between the teacher and the student, which will increase efficiency of the entire process of learning. The interest of the student also increases as there are multiple audio and visual methods of learning associated with the ICT process. In the past few years, the world has witnessed a phenomenal growth in communication technology, computer network and information technology. The growth of these communication systems, their ease of use, the power and diversity of information transfer allow teachers and students to have access to a world beyond the classroom. It has the potential to transform the nature and process of teaching and learning environment and envision a new learning culture.

Literature Review

A research of (2012) asserted that ICT is reducing the cost per students and expanding the enrolments and makes the provisions for students and supports enduring learners. Lalitbhushan S. Waghmare, et-al (2014) studied "Role of Information and communication technology in Higher education: learners perspective in rural medical schools". They concluded that there is a need to foresee the role of technology in education which helps in encouraging students towards learning .Information and communication technology in higher education in India: challenges and opportunities (2014). The study revealed that ICT enabled education will ultimately lead to the democratization of education and it has the potential for transforming higher education in India. Mahisa, Anju studied "The role of ICT in higher education in India" (2014) .The study revealed that ICT play vital role as a strong agent for change among many educational practices.

The role of science and technology in the overall process of education has significantly increased over the past two decades. According to the statement of Agarwal and Mittal (2018), education in the 21st century is going through drastic changes and information and communications technology can be used as an alternative for this purpose. ICT can be defined as a set of resources or various technological tools. These tools are used for the purpose of sharing or exchanging information along with creating new segments of resources (Unesco, 2021). These tools can consist of a number of different equipment such as the internet or various broadcasting technologies.

The learning technology that ICT provides can be defined as a self paced learning process. As mentioned earlier, there are various segments associated with the overall process. With the effective use of these segments, the process of teaching or learning can be done in a more productive method. From the perspective of the learning process, the interaction between the teachers and the students can also be enhanced. As stated by Zia et al. (2018), the students are being updated, the capacity of teachers are also enhanced. The implementation of the process in this segment ensures that an open and interactive channel of communication is being established between the teacher and the student.

It is a known fact that education nowadays is no longer confined into books or other reading materials. The learning of new technologies is also essential with the presence of new literacy's into the segment. As per the views of Park (2018), the rate of digital literacy should also be considered as a part of the learning process, which can be significantly improved. These new set of technologies can be used towards the traditional ways of learning so that things can be done in a more engaging way. This can also present itself as a challenge for the teachers as they need to integrate these technological advancements in their teaching processes. By doing so, it can be ensured that student engagement is increased towards the technological literacy.

Incorporation of ICT tools into the teaching segment also points out the fact that the teaching style of the teachers will also change. The overall learning process is transforming and with that, the roles of the teacher will also change (Rodriguez et al. 2018). However, implementing the technological advancements into the learning process is a complex process. If the ICT based teaching methods are compared to the traditional ways of teaching, the enhanced learning process is way ahead in terms of efficiency.

Implementation of ICT can bring various advantages towards the way of teaching and learning. In the overall education segment, the presence of ICT opens up new ways of providing knowledge towards the students. The teachers are also positively impacted by these scenarios as they are able to provide new guidelines or teaching methods towards the students. As stated by Asabere et al. (2017), implementing the ICT model will also be beneficial for the overall process of integrated teaching. Online learning or online education is starting to become an essential part of our lives.

Especially after the pandemic, it can be mentioned that ICT opens up a new horizon of opportunities for the schools. Furthermore, the students will have more options available to gather knowledge from. As compared to previous methods of teaching and learning, studying and gathering knowledge are not only restricted to the classrooms anymore. With the help of the ICT tools, students can continue the process of learning and gathering knowledge as per his wish. This will ensure that the learning process is a lot more fluid.

Curriculum materials, which are a common part of classroom education, can also be benefited from ICT inclusion. Along with that, the students that are displaying a comparatively slower rate of learning and growth can also be targeted with this process. As stated by Zimic and Gadzo (2017), advanced technologies can be used in an innovative way so that more innovative approaches can be created and utilized. However, it can be stated on a contradictory note that the students from the backward class of economy may not get the entire ICT benefits. It is important for the schools and educational institutions to look for strategies that can mitigate these scenarios. Otherwise, there are chances of a digital divide, restricting students from getting the full advantage.

More knowledge is always beneficial for the student base. As per the views of Popkova (2019), it is absolutely essential to gain the ability for effective usage of the information. The recent times can be stated as a platform for pervasive use of ICT so that more effective outputs can be produced. It is important to mention that the implementation of ICT is not restricted to the educational sector only. It impacts all the other segments of society as well. This is why digital technologies should be considered as an integral part of the overall national curriculum as it is already a trend among various economies.

With the implementation of the ICT in the educational scenarios, there are often questions with the acceptability of the entire process. However, it can be mentioned that students or younger adults are often attracted towards the technological advancements. These characteristics should be emphasized so that collaboration can be encouraged. This will also ensure the increase in the rate of subject learning. From the perspective of the teacher, there are also multiple benefits associated.

Method

Various initiatives in the recent past portrayed the significant role that ICT plays in the realm of higher education development. Several projects have reduced the costs, and it also has increased transparency. India has taken up major initiatives in terms of content delivery and furthering education through Information and Communication technology. For example Gyan Darshan was launched in 2000 in broadcast educational programs for

school kids, university students and adults. Similarly Gyan Vani was another such important step with broadcast programs contributed by institution such as IGNOU and IITs. Under the UGC country wise classroom initiative, education programs are broadcast on Gyan Darshan and Doordarshan national channel every day. E-Gyankosh which aims at preserving digital learning resources is a knowledge repository launched by IGNOU in 2005. Almost 95% of IGNOU's printed material has been digitized by uploaded on the repository.

The national programme for technology enhanced learning (NPTEL) launched in 2001 is another joint initiative of IITS and IISC which education through technology. Sristi, the society for research and initiatives for sustainable technologies and institutions is facilitating the use of ICT for strengthening the capacity of grass roots inventors, innovations and entrepreneurs engaged in conserving bio diversity and developing eco-friendly solutions to local problems.

Result and Discussion

Use of ICT in education presents a unique opportunity to solve multitude of challenges quickly as well as at low rate. Here is an overview of advantages of an ICT

Motivating Factor

The internet can act as a motivating tool for many students. Young people are very captivated with technology. Educators must capitalize on this interest excitement and enthusiasm about the Internet for the purpose enhancing learning. For already enthusiastic learners, the internet provides them with additional learning activities not readily available in the classroom.

Fast Communication

The internet promotes fast communication across geographical barriers. Students can join collaborative projects that involve students from different states, countries or continents.

Co-operative Learning

The internet facilitates co-operative learning, encourages dialogue and creates a more engaging classroom. For example, a LISTER V for our class will allow students to get involved in class discussions through e-mails in a way not possible within four walls of classroom.

Locating Research Materials

Apart from communication, research is what takes many people to the internet. There are many resources on the internet than the school library can provide.

Acquiring Varied Writing Skills

If students are required to publish their work on the internet, they have to develop hypertext skills. These skills help students gain experience in non sequential writings.

Recommendations

The quality of programs as measured by fitness for purpose should continue to grow, if the stakeholders perceive the various educational programs as meeting their needs and expectations. ICTs serve to provide the means for activities to realize the potential in human resources. Furthermore, adequate funds must be provided to initiate, develop, promote, review and implement ICT policies in the educational sector to bring about an improvement on ICT utilization, through computer apprentices courses taught in vigerian tertiary institutions. In this period after covid-19 the price of ICT equipment and materials will continue to the astronomical. It becomes highly imperative for all stakeholders of education to entice industrial establishments, politicians, big businessman and entrepreneurs, non-governmental organizations and the community at large to assist the institutions in the provision of ICT equipment and materials and well finished computer laboratories

Conclusion

With the rise in technology and the growth of the internet, various technological tools are being implemented towards the teaching and learning process. It can be mentioned that ICT tools can be used as a viable tool towards providing effective higher education for the students. ICT also ensures that the interaction and feedback process increases, so that more student centric approaches can be incorporated into the process of teaching and learning.

ICT play vital role as a strong agent for change among many educational practices ,conducting online exam, pay online fees, accessing online books and journals. Thus ICT in Higher education improves teaching learning process, provides the facility of online learning to thousands to thousands of learners who cannot avail the benefits of higher education due to several checks, such a time, cost, geographical location etc.

EMPOWERING WOMEN; BASIC RIGHT FOR BEING AN INDIVIDUAL

P. Jayapriya

Assistant Professor, Department of Computer Science
Nallamuthu Goundar Mahalingam College, Pollachi, India
jayapriyamca@gmail.com

Abstract

Concept Women empowerment emerges from the middle of 20th century and now recognize globally. Empower the women from discrimination; inequality and injustice are the basic aspects of this approach. Gender equality, economic empowerment, social empowerment, political empowerment and education are all the integral of women empowerment which provide the safe space where they have rights for education, equal opportunities in social, economic and political status.

Keywords: *Battered Women, Abusive Relationship, Women's Mental Health.*

Introduction

Women empowerment is an essential aspect of socioeconomic development globally [1]. Empowering women through equal access to education, employment opportunities, and leadership positions can lead to gender equality and promote economic growth [2]. Therefore, this paper aims to investigate women's empowerment by employing a mixed-method approach. The study examines both qualitative and quantitative data to provide a comprehensive understanding of the subject matter.

The literature review focuses on the previous research works on women's empowerment. The review summarizes the existing literature on the topic, identifying the gaps in knowledge that this study aims to address. The literature review explores the various dimensions of women's empowerment, including economic, social, and political. The review also highlights the challenges to women's empowerment, including cultural and societal barriers, inadequate education and training, and discriminatory policies [3].

Women empowerment is the process of enhancing women's economic, social, and political status in society. It involves creating an environment where women have equal opportunities and access to resources to make decisions that affect their lives positively. Women's empowerment is essential for promoting gender equality, improving women's health and well-being, reducing poverty, and promoting economic growth [4,5]. Historically, women have been subjected to discrimination, oppression, and inequality. They have been denied basic human rights such as the right to education, health, and the right to own property. Women have also been excluded from participating in decision-making processes that affect their lives. However, over the years, there has been a significant shift towards promoting women's empowerment [6].

Methodology

This study employs a mixed-method approach to investigate women's empowerment. The study collects both qualitative and quantitative data to provide a comprehensive understanding of the subject matter. The quantitative data is collected using a questionnaire distributed among women in different regions. The survey questionnaire comprises close-ended questions that provide insights into women's empowerment levels [7]. Qualitative data, on the other hand, is collected through interviews with selected women from different regions. The semi-structured and open-ended interviews allow the participants to provide detailed information about their experiences and views on women's empowerment. To investigate the gaps between the knowledge of empowering women and to found the real struggle of women on daily basis we applied both the quantitative and qualitative data collection procedure, which include the questionnaire with close-ended question and the interviews with selected women from different region [8].

Results

The study's results indicate that women's empowerment levels vary across different regions, with some regions having more empowered women than others. The study also reveals that cultural and societal barriers remain the most significant hindrance to women's empowerment. In contrast, education and training opportunities positively impact women's empowerment levels. The study's qualitative findings reveal that the participants' personal experiences influence their views on women's empowerment, with some participants reporting progress in their empowerment journeys. Women with different background have different approaches and their empowerment vary according to it even though culture and social bouncing's hindering the pathway of empowerment. But it has been noted that the education and training sessions are helpful in bringing change in one's narrative and behavior. Empowering the women; it's not only the concept of girls education right, it also about their social, political and economic stability. Women empowerment is a multi-dimensional concept that involves enhancing women's economic, social, and political status in society. There are several themes that are integral to women's empowerment, and they include:

1. Gender Equality

Gender equality is a fundamental theme in women's empowerment, and it involves creating an environment where women and men have equal rights, opportunities, and access to resources. Gender equality is crucial to promote women's empowerment as it challenges gender norms, stereotypes, and discrimination that limit women's progress in society.

2. Education

Education is another essential theme in women's empowerment. Education provides women with knowledge and skills that enhance their decision-making abilities. Educated

women are more likely to participate in economic activities and become agents of change in their communities. Education also helps to reduce gender inequality, poverty and improve women's health and well-being.

3. Economic Empowerment

Economic empowerment involves providing women access to resources such as credit, financial services, and markets. Economic empowerment enables women to become financially independent, allowing them to make decisions that affect their lives positively. It also helps to reduce their vulnerability to poverty and exploitation.

4. Social Empowerment

Social empowerment involves promoting gender equality, challenging gender norms and stereotypes, and reducing gender-based violence. It involves creating an environment where women have equal access to resources, services, and opportunities. Social empowerment can be achieved through various means, including legislation, awareness campaigns, and community mobilization.

5. Political Empowerment

Political empowerment involves promoting women's participation in decision-making processes at all levels of society. It ensures that women have equal representation in political structures and are actively involved in policy-making processes. Political empowerment can be achieved through affirmative action policies, education and training, and increasing women's representation in decision-making structures.

Discussion

One of the essential aspects of women's empowerment is education. Educating girls and women has a positive impact on their empowerment levels. It helps to increase their knowledge and skills, which, in turn, enhances their decision-making abilities. Educated women are more likely to participate in economic activities, which can improve their economic status and reduce poverty. Education also empowers women to become agents of change in their communities, promoting social and political equality.

Another critical aspect of women's empowerment is economic empowerment. Economic empowerment involves providing women with access to resources such as credit, financial services, and markets. Social empowerment involves promoting gender equality, challenging gender norms and stereotypes, and reducing gender-based violence [9]. It involves creating an environment where women have equal access to resources, services, and opportunities. Social empowerment can be achieved through various means, including legislation, awareness campaigns, and community mobilization [10].

Political empowerment involves promoting women's participation in decision-making processes at all levels of society. It involves ensuring that women have equal representation in political structures and are actively involved in policy-making processes [11, 12]. Political empowerment can be achieved through affirmative action policies,

education and training, and increasing women's representation in decision-making structures.

Precisely, women empowerment is a basic approach in the modern world. It involves enhancing the economic, social, and political status of women in society, promoting gender equality, improving women's health and well-being, reducing poverty, and promoting economic growth. Women's empowerment can be achieved through various means, including education, economic empowerment, social empowerment, and political empowerment [13]. It is essential to promote women's empowerment to create a society where women have equal opportunities and their rights are respected and protected.

The study's findings support the previous research on women's empowerment, highlighting the need for policy changes to remove cultural and societal barriers to women's empowerment. The study's results also emphasize the need for increased education and training opportunities for women, which can have a positive impact on their empowerment levels [14]. However, the study acknowledges the limitations of its sample size and recommends further research on the subject.

Conclusion

In conclusion, women's empowerment is an essential aspect of socioeconomic development globally. This study employs a mixed-method approach to investigate women's empowerment, collecting both qualitative and quantitative data. The study's findings highlight the need for policy changes to remove cultural and societal barriers to women's empowerment and increase education and training opportunities for women. Overall, the study provides a comprehensive understanding of women's empowerment, contributing to the existing knowledge on the subject matter.

TEACHING AND LEARNING WITH ICT TOOLS: ISSUES AND CHALLENGES FROM TEACHERS' PERCEPTIONS

Mrs.M.Meena Krithika

Department of Computer Science,
NGM College.

Dr.E.Rama Devi

Data Analytics, Department of Computer Science,
NGM College.

Introduction

Due to ICT's importance in society as well as in the future of education, identifying the possible challenges to integrating these technologies in schools would be an important step in improving the quality of teaching and learning. Balanskat, Blamire, and Kefala (2006) argue that although teachers appear to acknowledge the value of ICT in schools, they continue encountering obstacles during the processes of adopting these technologies into their teaching and learning.

Therefore, the main objectives of this study are as follow:

1. To identify school teachers' perceptions in implementing ICT tools in teaching and learning in classroom.
2. To determine the challenges of using ICT tools in teaching and learning in the classroom among school teachers.
3. To identify that to what extent do teachers use ICT tools in teaching and learning in the classroom.

Theoretical Framework

Figure 1 A theoretical extension of the technology acceptance model

External Variables – It represents the challenges that teachers face that come from outside their sphere of control when integrating a new technology in their teaching and learning process. These challenges include:

- Limited accessibility and network connection
- Schools with limited ICT facilities
- Lack of effective training
- Limited time
- Lack of teachers' competency

Perceived usefulness(PU)–It represents the degree to which they believe that using a particular technology would enhance their job performance. If teachers feel there is no need to question or change their professional practice then, according to studies, they are unlikely to adopt the use of ICT tools. However, if they perceive ICT to be useful to them, their teaching and their pupils' learning, then according to the empirical evidence of previous studies (Cox, Preston & Cox, 1999) they are more likely to have a positive attitude to using ICT in the classroom. The following factors have been identified as key elements to teachers' perceived usefulness of ICT tools:

- Work more quickly
- Job performance
- Increased productivity
- Effectiveness
- Useful

Perceived ease-of-use(PEOU)–It represents the degree to which they believe that using a particular system would be free from effort. Previous studies have identified a number of factors relating to the perceived ease of use of ICT, in study on experienced practicing ICT users. The Impact project(Watson, 1993) and other studies identified a wide range of skills and competencies which teachers felt they needed in order to find ICT easy to use. Some of these are:

- Easy to learn
- Clear and understandable
- Easy to use
- Controllable
- Easy to remember

Attitude toward use – teacher's positive or negative feeling about performing the target behavior(e.g., using a system). Basically, teachers' attitudes too many of these factors will depend upon how easy they perceive using ICT tools to be on a personal level as well as for teaching in the classroom.

Behavioral intention - The degree to which the teacher has formulated conscious plans to perform or not perform some specified future behavior.

Social influence processes -(subjective norm, voluntariness, and image) and cognitive instrumental processes (job relevance, output quality, result demonstrability, and perceived ease of use) as determinants of perceived usefulness and usage intentions.

Literature Review

Challenges in using ICT in teaching and learning

Integrating ICT into teaching and learning is a complex process and one that may encounter a number of difficulties. These difficulties are known as “challenges”. A challenge is defined as “any condition that makes it difficult to make progress or to achieve an objective”. The following are some of the key challenges that have been identified in the literature regarding teachers’ use of ICT tools in classroom.

i) Limited accessibility and network connection

Several research studies indicate that lack of access to resources, including home access, is another complex challenge that prevent teachers from integrating new technologies into education.

Various research studies indicated several reasons for the lack of access to technology. In Sicilia’s study teachers complained about how difficult it was to always have access to computers. The author gave reasons like “computers had to be booked in advance and the teachers would forget to do so, or they could not book them for several periods in a row when they wanted to work on several projects with the students”(p. 50). In other words, a teacher would have no access to ICT materials because most of these were shared with other teachers. According to Becta, the inaccessibility of ICT resources is not always merely due to the non-availability of the hardware and software or other ICT materials within the school. It may be the result of one of a number of factors such as poor resource organization, poor quality hardware, inappropriate software, or lack of personal access for teachers

The challenges related to the accessibility of new technologies for teachers are wide spread and differ from country to country .Empiric’s European study found that lack of access is the largest barrier and that different challenges to using ICT in teaching were reported by teachers, for example a lack of computers and a lack of adequate material. Similarly, Korte and Hüsing found that in European schools there are some infrastructure barriers such as broadband access not yet being available. They concluded that one third of European schools still lack broadband Internet access. Pelgrum (2001) explored practitioners’ views from 26 countries on the main obstacles to ICT implementation in schools. He concluded that four of the top ten barriers were related to the accessibility of ICT. These barriers were insufficient unit of computers, insufficient peripherals, insufficient numbers of copies of software, and insufficient immediate Internet access. Toprakci (2006) found that low numbers of computers, oldness or slowness of ICT systems, and scarcity of educational software in the school were barriers to the successful ICT implementation in Turkish schools. Similarly, Al-Alwani (2005) found that having no access to the Internet during the school day and lack of hardware were hampering technology integration in Saudi schools. Recent research on Syrian schools indicated that insufficient computer resources were one of the great impediments to technology integration in the classroom.

ii) School with limit ed technical support

Without both good technical support in the classroom and whole-school resources, teachers can not bee expected too overcome the obstacles preventing them from using ICT(Lewis,2003). Pelgrum(2001)found that in the view of primary and secondary teachers, one of the top barriers to ICT use in education was lack of technical assistance.

In Sicilia's study (2005), technical problems were found to be a major barrier for teachers. These technical barriers included waiting for websites to open, failing to connect to the Internet, printers not printing, malfunctioning computers, and teachers having to work on old computers. "Technical barriers impeded the smooth delivery of the lesson or the natural flow of the classroom activity"(Sicilia,2005,p.43).

Korteand Hüsing (2007) argued that ICT support or maintenance contracts in schools help teachers to use ICT in teaching without losing time fixing software and hardware problems. The Becta (2004) report stated "if there is a lack of technical support available in a school, then it is likely that technical maintenance will not be carried out regularly, resulting in a higher risk of technical breakdowns" (p. 16). Many of the respondents to Becta's survey (2004) indicated that technical faults might discourage them from using ICT in their teaching because of the fear of equipment breaking down during a lesson. In teaching, several studies indicated that lack of technical support is a main barrier to using technologies. According to Gomes (2005), ICT integration in teaching needs a technician and if one is unavailable the lack of technical support can be an obstacle. In Turkey, Toprakci (2006) found that the lack of technical support was one of two significant barriers to ICT integration in science education in schools and might be considered"serious". In Saudi Arabia, science teachers would agree to introduce computers into teaching, except that they believe they will encounter problems such as technical service or hardware problems (Almohaissin, 2006). Sicilia (2005) argued that whatever kind of technical support and access teaching staff have and whether they have twenty years of experience or are novices to the profession, technical problems generate barriers to the smooth less on delivery by teachers.

iii) Lack of effective training

The challenge most frequently referred to in the literature is lack of effective training (Albirini,2006; Balanskat et al., 2006; Beggs, 2000; Özden, 2007; Schoepp, 2005; Sicilia, 2005; Toprakci, 2006; Ghavifekr &Wan Athirah, 2015). One finding of Pelgrum's (2001) study was that there were not enough raining opportunities for teachers in using ICTs in a classroom environment. Similarly, Beggs (2000) found that one of the top three barriers to teachers' use of ICT in teaching was the lack of training. Recent research in Turkey found that the main problem with implementing new ICT in education was the insufficient amount of in-service training for teachers (Özden, 2007), and Toprakci (2006) concluded that limited teacher training in ICT usein Turkish schools is an obstacle.

According to Becta (2004) , the issue of training is certainly complex because it is important to consider several components to ensure training effectiveness. These were time for training, pedagogical training, skills training, and an ICT use in initial teacher training.

Correspondingly, recent research by Gomes (2005) relating to various subjects concluded that lack of training in digital literacy, lack of pedagogic and didactic training in how to use ICT in the classroom and lack of training concerning technology use in specific subject are as were obstacles to using new technologies in classroom practice. Some of the Saudi Arabian studies reported similar reasons for failures in using educational technology: the weakness of teacher training in the use of computers, the use of a "delivery" teaching style instead of investment in modern technology (Alhamd, Alotaibi, Motwaly, & Zyadah, 2004), as well as the shortage of teachers qualified to use the technology confidently (Sager, 2001).

Providing pedagogical training for teachers, rather than simply training them to use ICT tools, is an important issue (Becta, 2004). Cox et al. (1999a) argue that if teachers are to be convinced of the value of using ICT in their teaching, their training should focus on the pedagogical issues. The results of the research by Cox et al. (1999a) showed that after teachers had attended professional development courses in ICT they still did not know how to use ICT in their classrooms; instead they just knew how to run a computer and setup a printer. They explained that this is because the courses only focused on teachers acquiring basic ICT skills and did not often teach teachers how to develop the pedagogical aspects of ICT. In line with their search by Cox et al. (1999a), Balanskat et al. (2006) indicated that inappropriate teacher training is not helping teachers to use ICT in their classrooms and in preparing lessons. They assert that this is because training programs do not focus on teachers' pedagogical practices in relation to ICT but on developing ICT skills.

Fundamentally, when there are new tools and approaches to teaching, teacher training is essential (Osborne & Hennessy, 2003) if they are to integrate these into their teaching. However, according to Balanskat et al. (2006), inadequate or inappropriate training leads to teachers being neither sufficiently prepared nor sufficiently confident to carry out full integration of ICT in the classroom. Newhouse (2002) stated "teachers need to not only be computer literate but they also need to develop skills in integrating computer use in to their teaching/learning programmes" (p. 45).

iv) Limited time

Several recent studies indicate that many teachers have competence and confidence in using computers in the classroom, but they still make little use of technologies because they lack the time. A significant number of researchers identified time limitations and the difficulty in scheduling enough computer time for classes as a barrier to teachers' use of ICT in their teaching (Al-Alwani, 2005; Becta, 2004; Beggs, 2000; Schoepp, 2005; Sicilia, 2005). According to Sicilia (2005), the most common challenge reported by all the teachers was the lack of time they had to plan technology lessons, explore the different Internet sites, or look at various aspects of educational software.

Becta's study (2004) found that the problem of lack of time exists for teachers in many aspects of their work as it affects their ability to complete tasks, with some of the participant teachers specifically stating which aspects of ICT require more time. These include the time needed to locate Internet advice, prepare lessons, explore and practise using the technology, deal with technical problems, and receive adequate training.

V) Lack of teachers' competency

Another challenge directly related to teacher confidence is teachers' competence in integrating ICT into pedagogical practice (Becta, 2004). In Australian research, Newhouse (2002) found that many teachers lacked the knowledge and skills to use computers and were unenthusiastic about the changes and integration of supplementary learning associated with bringing computers in to their teaching practices. Current research has shown that the level of this barrier differs from country to country. In the developing countries, research reported that teachers' lack of technological competence is a main barrier to their acceptance and adoption of ICT (Pelgrum, 2001; Al-Oteawi, 2002). In Syria, for example, teachers' lack of technological competence has been cited as the main barrier (Albirini, 2006). Likewise, in Saudi Arabia, a lack of ICT skills is a serious obstacle to integration of technologies into science education (Al-Alwani, 2005; Almohaissin, 2006). Empirical (2006) produced are proton ICT use in European schools. The data used for the report came from the Head Teachers and Classroom Teachers Survey carried out in 27 European countries. The findings show that teachers who do not use computers in classrooms claim that "lack of skills" are constraining factor preventing them from using ICT for teaching. Another worldwide survey conducted by Pelgrum (2001), of nationally representative samples of schools from 26 countries, found that teachers' lack of knowledge and skills is a serious obstacle to using ICT in primary and secondary schools. The results of a study conducted by Balanskat et al. (2006) have shown that "in Denmark ... many teachers still chose not to use ICT and median teaching situations because of their lack of ICT skills rather than for pedagogical/did actics reasons" while "in the Netherlands... teachers' ICT knowledge and skills is not regarded any more as the main barrier to ICT use" (p.50). Hence, lack of teacher competence may be one of the strong barriers to integration of technology into education. It may also be one of the factors involved in resistance to change.

Methodology

Research Design

In this research, quantitative methodology was used to collect and analyze the data obtained from all the respondents. A questionnaire was self-developed and finalized by their searchers before being distributed to the targeted group of respondents. The questionnaire was designed specifically to address research objectives with regard to teachers' perception on use of ICT tools in public secondary schools in Melaka.

Instrumentation & Sampling

A self-developed cross-sectional survey questionnaire consisting of 7 sections and 114 items was test deeming respondents. The questionnaire was based on 5-point Likert Scale ranging from: 5 =always, 4 often, 3 = sometimes, 2 = rarely and 1 = never. A total of 100 secondary school teachers in the state of Melaka were selected randomly as the sample for the study. The sample responded to the statements given and chose their answers based on their perceptions. The survey was distributed by hand to the respondents. The various

sections of the questionnaire included:(A)Personal Details,(B)Experience with ICT for Teaching,(C) ICT access for teaching, (D) Support for teachers for ICT use, (E) Challenges of using ICT tools in teaching and learning,(F)Teachers' ICT skills, (G) Teachers' opinion about ICT use impact on students' learning outcome.

Data Collection Procedures

Data collection defines the procedure for collecting data by the researcher. The questionnaire has been distributed to 120 teachers randomly. They were given one week to fill in the questionnaire and return it to the researcher. All of the participants volunteered themselves in the research. Some questionnaires were with missing information that the details could not be used as a contribution in this research. Finally 100 questionnaires were returned to the researchers for data analysis.

Data Analysis Process

The data collected from the respondents were gathered together to be analyzed using the Statistical Packages for the Social Sciences (SPSS) version 22. The analysis includes both descriptive and inferential analysis. The researchers used descriptive analysis to analyze the frequency and percentage of the overall population in the demographic background. Besides, it is also used to determine the mean, standard deviation, frequency and percentage. Inferential statistics (t-test) were also used to analyze the research findings.

Validity & Reliability

Internal consistency is measured in this research using the Cronbach's coefficient alpha (α). This method is used to identify the correlation between scores of each item in the test and the total score for all items in the test or is known as test index score. Items with high correlation with the test index score have high reliability, and those with low correlation values with the test index score have low reliability and will be deleted from the test. Based on the findings, the Cronbach's alpha value for this study shows .817 which is satisfactory (between .65 – .95). The alpha value shows that the instrument is reliable. In fact, all items in the instrument have α level of more than.7. The highest alpha level is.847 and the lowest is.799.

Findings

Demographic Factors of the Respondents

The following Table1 give the demographic background of the research participants.

Table1 shows the demographic finding where the age category under 25 is frequency 4 and percentage is 4%, age 26-35 is frequency 64 and percentage is 64%, age 36-45 is frequency 27 and percentage is 27%,age46-55isfrequency3 and percentage is 3%, and age 55+ is frequency 2 and percentage is 2%.

The gender findings how small as frequency 25 and percentage is 25% and female is frequency 75 and percentage is 75%. The experience based on the years of experience by the sample is less than 1 year frequency is 5 and the percentage is 5%, 1-4 years frequency

is 25 and the percentage is 25%, 5-10 years frequency is 16 and the percentage is 16%, 10-20 years frequency is 16 and the percentage is 16%, and 20+ years frequency is 1 and the percentage is 1%.

Ethnicity analysis shows that Malay frequency is 37(37%), Chinese frequency is 19 and the percentage is 19%, Indian frequency is 44 and the percentage is 44% and Others frequency is 0. The subjects taught by the respondents are: Language (frequency is 38 and percentage is 38%), Mathematics (f=36 or 36%), Science subjects (f = 22 or 22%) and Other (f = 4 or percentage 4%). Based on the data obtained, most of the participants in this research are aged between 36-45 years, the majority are female and have 5-10 years of experience.

Discussion & Conclusion

This study is more related to identifying the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers. Furthermore, it examines the challenges of using ICT tools in teaching and learning in the classroom among school teachers and recognizes the effectiveness of the extent of ICT tools in supporting classroom teaching and learning. Based on the study the findings indicate that average level of the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers, high level of challenges of using ICT tools in teaching and learning in the classroom among school teachers and recognizing the effectiveness of the extent of ICT tools in supporting teaching and learning in the classroom.

With the advent of Information and Communications Technologies (ICT) in education, teachers form their own beliefs about the role of ICT as a teaching tool, the value of ICT for student learning outcomes and their own personal confidence and competency (Prestridge, 2007). Barriers exist in integrating ICT in teaching and learning (Ertmer, 2005). The barriers are extrinsic to the teacher and include lack of resources, time, access and technical support. Findings of this research suggest that teachers were still giving comment on the barriers in implementing ICT tool at school in teaching and learning.

Results of the Cachia and Ferrari (2010) study showed that teachers do combine different resources in their teaching, as well as utilizing various modes of ICT with almost two-thirds claiming to use technologies (63%) and website (62%). Anyway, it is also evident that textbooks are still considered fundamental in the educational systems. Nearly two thirds of our respondents (64%) always or often follow textbooks in their teaching.

Important technologies for learning such as computers (98%) and educational software (93%) were ranked as the top technologies by the respondents of Cachia and Ferrari's (2010) research. On the other hand, our research showed that the rate of ICT use among teachers in school is average. However, the finding shows that more teachers used computer with teaching software in the classroom to present or demonstrate examples to students. They also like to use the computer to access students' results and keep track of their progress.

Despite the current efforts in ICT integration in schools, many families specifically in rural areas still do not know how to use ICT tools in their daily life. They even did not know how to check their children's results in the existing systems. Not all houses have

computers and Internet facilities to use daily. In this regard, the main challenge is to provide appropriate ICT tools to both urban and rural areas efficiently.

This study will offer priceless information to the school administration as well as to educational policy makers regarding the nature of ICT contribution to the teaching-learning process. Since the attitude and perceptions of the teachers are critical to how effectively an innovation is implemented, it is important to gauge how teachers perceive this innovation and its efficacy as a tool for enhanced teaching and learning. It is also hoped that this study will contribute to the growing knowledge base and 21st century generation regarding the use of ICT in education in Malaysia.

In future studies more focus should be given on management strategies and policies to address the barriers faced by teachers in using ICT tools in teaching and learning. If the barriers faced by teachers can be overcome, it is a step forward to enhance our students' learning outcome. The studies done with the same gender distribution could give more appropriate analysis where by the gender perceptions could be analyzed.

The rapid growth of wireless networks in advanced networking enhances comfort and security. Ad-hoc wireless networks, including Mobile Ad-hoc Networks (MANET), Vehicular Ad-hoc Networks (VANET). VANET, a subset of MANET, facilitates Vehicle-to-Vehicle (V2V) and Vehicle-to-Roadside (V2R) communications. Its components include On-Board Unit (OBU), Road Side Unit (RSU), and Trusted Authority (TA), with applications in Intelligent Transport System (ITS). VANETs face broadcast storms causing collisions and data redundancy. The proposed research focuses on reviewing existing broadcast algorithms, suggesting a cluster-based protocol to minimize storms, avoid redundant data, reduce transmission delays, and form enhanced clusters. Efficient cluster head selection is crucial. Protocols like Cluster-Based Efficient Broadcasting (CBE-B), Selective Reliable Communication (SRC), and Improved Cluster Head Selection (ICHS) address these issues, outperforming existing solutions.

Plant diseases and pests are important factors determining the yield and quality of plants. Plant diseases and pests identification can be carried out by means of digital image processing. In recent years, deep learning has made breakthroughs in the field of digital image processing, far superior to traditional methods. How to use deep learning technology to study plant diseases and pests identification has become a research issue of great concern to researchers. This book provides a definition of plant diseases and pests detection problem, puts forward a comparison with traditional plant diseases and pests detection methods. According to the difference of network structure, this study outlines the research on plant diseases and pests detection based on deep learning in recent years from three aspects of classification network, detection network and segmentation network, and the advantages and disadvantages of each method are summarized.

WEARABLE BASED IOT SYSTEM FOR ELDERLY FALL DETECTION AND PREVENTION

Mrs. M. Dhavapriya ,
Assistant Professor, Department of Computer Science (SF)
NGM College, Pollachi.

Dr. R. Nandhakumar,
Assistant Professor and Head, Department of Computer
Science (SF) NGM College, Pollachi.

ABSTRACT: Falls threaten elderly well-being. This research proposes a wearable-based IoT system for their detection and prevention. The system utilizes multi-sensor units for precise movement tracking, coupled with advanced machine learning algorithms for accurate fall detection, all while maintaining user comfort and energy efficiency [1]. Real-time data transmission via secure IoT protocols ensures immediate fall alerts. Additionally, the system explores preventive measures like automated adjustments and assistance requests, aiming to not only detect falls but prevent them altogether. This comprehensive system has the potential to improve elderly safety, independence, and quality of life, while reducing healthcare costs.

Keywords: IoT, Multi-Sensor Units, Deep Learning Algorithms, CNN.

1. INTRODUCTION

Falls pose a significant threat to elderly individuals, impacting their health, mobility, and independence. Early detection and intervention are paramount in minimizing fall-related consequences. This research delves into a novel wearable-based Internet of Things (IoT) system specifically designed for elderly fall detection and prevention. The system leverages multi-sensor units worn by the elderly, comprising accelerometers, gyroscopes, and other pertinent sensors to meticulously capture movement patterns. Machine learning and data analysis techniques power robust fall detection algorithms, discerning falls from daily activities with exceptional accuracy. Secured IoT protocols enable seamless [2] communication between wearable devices and a central hub, facilitating real-time data transmission and immediate fall alerts.

Furthermore, the system explores preventive measures triggered by fall risk prediction or early fall detection. These measures could include automated environmental adjustments, automated assistance requests, or deployment of assistive devices.

The research aims to design a user-friendly, comfortable, and energy-efficient wearable device, coupled with accurate and efficient fall detection algorithms fueled by advanced machine learning. Integration with a secure and reliable IoT network for real-time data transmission is another key focus. Ultimately, the research seeks to develop a comprehensive system that promotes healthy and independent living for the elderly population by improving fall detection accuracy, reducing false alarms, enhancing safety and independence, lowering healthcare costs, and

contributing to improved quality of life for both the elderly and their caregivers.

2. SENSOR TECHNOLOGY AND DATA ACQUISITION

Accurately detecting falls in the elderly population hinges on the technology embedded within their wearable devices. Sensor selection and data acquisition strategies play a pivotal role in capturing the right information and translating it into timely interventions [3].

A. The Multi-Sensory Toolkit:

Accelerometers, gyroscopes, and barometers form the core sensor team, measuring movement patterns like acceleration, orientation, and altitude changes, crucial for identifying fall events. However, expanding the toolkit with sensors like ECGs, EMGs, and pressure sensors offers richer data, potentially improving accuracy. This comes with trade-offs, though, raising concerns about user privacy and potentially hindering long-term adherence due to comfort and design limitations.

B. Fusion Power:

Combining data from multiple sensors holds immense potential. Imagine fusing accelerometer data with pressure sensor readings from a cane to differentiate a fall from simply sitting down. However, efficiently fusing this data and managing the increased computational complexity remains a challenge.

C. Comfort is Key:

No matter how fancy the sensors, if the device isn't comfortable and unobtrusive, long-term use plummets. Researchers are constantly innovating, designing wearables that are lightweight, discreet, and integrate seamlessly with daily life, ensuring seniors can benefit from this technology without sacrificing comfort or style.

Ultimately, sensor technology and data acquisition in wearable-based IoT systems for elderly fall detection are constantly evolving. The goal is to strike the perfect balance between accuracy, user comfort, and privacy, empowering seniors to live safely and independently through the power of technology.

3. FALL DETECTION ALGORITHMS

Fall detection algorithms are the brains behind wearable-based IoT systems for elderly safety. But these algorithms rely heavily on the quality of data they receive, and that's where wearable technology and data acquisition come into play [4].

Sensing the Fall: Accelerometers, gyroscopes, and barometers are the workhorses, capturing movement patterns like acceleration, orientation changes, and altitude shifts. These provide valuable clues for fall detection algorithms. However, exploring additional sensors like ECGs, EMGs, and pressure sensors can offer even richer data, potentially improving accuracy.

Fusion Frenzy: Combining data from multiple sensors holds immense potential. Imagine an algorithm that fuses accelerometer data with pressure sensor readings from a cane to differentiate a fall from simply sitting down. However, efficiently fusing this data and managing the increased computational complexity remains a challenge.

Personalization Matters: Not all falls are created equal, and neither are the people experiencing them. Adapting algorithms to individual user characteristics and activity patterns is crucial. This means considering factors like age, mobility, and typical daily activities to fine-tune the algorithm's sensitivity and reduce false alarms.

The Edge of Innovation: Edge computing, where processing happens on the wearable device itself, is an exciting possibility. It reduces reliance on central servers, improves response times, and offers potential privacy benefits. However, developing efficient algorithms and managing resources on resource-constrained devices is a challenge [5].

i) Fall Detection Algorithm Development: Data collection: Gather labeled data from real-world scenarios, including fall events and various daily activities. Ensure balanced and diverse representation.

ii) Convolutional Neural Network (CNN):

- **Purpose:** CNNs are primarily designed for image-based tasks, making them suitable for analyzing sensor data from wearable devices (such as accelerometers or gyroscopes) commonly used for fall detection [6].

- **Architecture:**

- CNNs consist of multiple layers, including:
 - **Convolutional layers:** These layers learn spatial hierarchies of features by applying convolutional filters to input data.
 - **Pooling layers:** These layers downsample feature maps to reduce dimensionality.

- **Fully connected layers:** These layers connect to the output layer for classification.

- CNNs automatically learn relevant features from raw sensor data, which is crucial for fall detection.

- **Training:**

- CNNs are trained on labeled datasets containing both fall and non-fall samples.
- The network learns to differentiate between patterns associated with falls (such as rapid changes in acceleration) and normal activities.

- **Inference:**

- During inference, the trained CNN processes real-time sensor data.
- If the network detects patterns indicative of a fall (e.g., sudden acceleration changes), it triggers an alert.

- **Advantages:**

- CNNs can handle complex, high-dimensional data.
- They automatically learn relevant features, reducing the need for manual feature engineering.
- Their hierarchical architecture captures spatial dependencies.

- **Evaluation and testing:**

Evaluate the algorithm's performance using rigorous metrics (e.g., accuracy, sensitivity) on unseen data. Conduct real-world tests with user involvement to assess usability and effectiveness.

4. FALL PREVENTION STRATEGIES:

While detecting falls is crucial, the ultimate goal is preventing them altogether. Here's how wearable-based IoT systems are evolving to incorporate proactive fall prevention strategies:

Predicting the Unpredictable: Machine learning algorithms are being trained to analyze sensor data and personal health information to predict potential falls before they happen.

Smart Homes on Guard: Imagine smart lights automatically illuminating upon detecting unsteady movement at night, or the thermostat adjusting to prevent dizziness from sudden temperature changes. Wearables can trigger adjustments in the surrounding environment to minimize fall risks.

A Helping Hand (or Device): Imagine a system automatically sending an assistance request if a fall is detected or predicted. Or, deploying assistive devices like walking sticks or fall cushions proactively based on individual needs and risk factors.

Guidance in Real-Time: Real-time voice prompts or visual cues on smart glasses can warn individuals of potential hazards or suggest safer alternatives during risky activities.

5. IMPLEMENTING THE ELDERLY FALL DETECTION SYSTEM

Transforming the concept into reality, implementing the wearable-based IoT system demands meticulous planning across hardware and software development, integration, and deployment [8].

Fall detection algorithms take shape, honed for accuracy and minimal false alarms, while prevention strategies like risk prediction, environmental adjustments, and real-time guidance are coded into the system. Secure communication protocols and user-friendly interfaces complete the software backbone. Components converge – wearable, communication systems, and servers – undergoing rigorous testing in simulated scenarios and real-world pilot studies. Security breaches are plugged, ensuring user privacy remains inviolable.

6. CHALLENGES AND FUTURE DIRECTIONS

Collecting labeled fall data can be challenging due to the rarity of actual falls. Class imbalance: Falls occur less frequently than normal activities, leading to imbalanced datasets. Generalization: Ensuring the model generalizes well across different environments and populations. Balancing data collection and analysis with user privacy demands secure data storage, anonymization techniques, and robust user consent models. Fairness, bias, and potential discrimination in algorithms need careful consideration and mitigation strategies. Balancing functionality, cost, and scalability is crucial for wider adoption, especially in resource-constrained settings. Seamless integration with existing healthcare IT infrastructure and data sharing protocols is necessary for effective care management [7].

7. CONCLUSION

Wearable-based IoT systems offer significant potential for improving elderly fall detection and prevention. Ongoing research addresses challenges in sensor technology, algorithm development, in the realm of wearable-based IoT systems for elderly fall detection and prevention, technological advancements have enabled the practical implementation of wearable devices. These devices, equipped with sensors, monitor real-time data and trigger alerts in case of falls. Algorithmic approaches, including Convolutional Neural Networks (CNNs) and Support Vector Machines (SVMs), play a crucial role in accurately identifying falls [8]. Challenges such as class imbalance and generalization are being addressed, and future directions involve personalized risk assessment and collaboration between researchers and healthcare professionals. These systems hold immense potential for enhancing elderly safety and promoting independent living.

²Department of Computer Science, Kristu Jayanti College, Bengaluru Karnataka, India

ABSTRACT

The vast Internet of Things (IoT) data is considered to be of high business value, and data mining algorithms can be applied to the IoT to extract secret information from data. A very large and enormous amount of data is generated or accessed using IoT. The amount of data analysed is increasing as devices are increasingly connected. Enabling smart interactions with users is one of the important aspects of IoT (such as automation of services). In order to make the IoT system smart enough to provide suitable services and environments, data mining plays a crucial role. The ability of devices, applications and services to implement data mining is the most important factor in IoT. When we apply data mining to IoT, IoT-collected data is transformed into serviceable information, and then this data is converted into user-needed knowledge. Green information and communication technology is an emerging field of research and development, and energy-efficient designs for IT systems are a major factor in this area. The accuracy of outcomes with current consumption efficiency and good latency, commonly known as inaccurate or estimated computing, is one of the most sought after solutions. In this regard, some approximation techniques used to achieve energy-efficient data mining or green data mining with the best possible results for a given permissible deviation are used. The majority of businesses currently have data centres to store their data; high-end processing machines and devices are what data centres need. The implementation of green database techniques, however, helps to reduce the amount of energy that data centres consume. Patients and costs are required for implementing data warehouses and data centres. The installation of a data warehouse can be very expensive without proper planning, particularly when it comes to electricity. The idea of reducing energy consumption when analysing data collected by IoT devices and making the world secure is envisaged by Green Data Mining. This paper addressed the techniques used to reduce data centre energy usage, thus moving data from IoT devices to data centres and analysing data using data mining on data centre servers.

Keywords: Green Data Mining, Internet of Things, Energy consumption, Network, Server, Data Center, Smart City.

1. INTRODUCTION

The Internet of Things (IoT) refers to the type of the network which connect anything i.e. physical objects-devices, buildings, vehicles and other items embedded with software, sensors and network connectivity based on stipulated protocols that enables these objects to collect and exchange data. In our daily lives, we have become more reliant on IoT with our wearable tech, appliances, our cars, how we receive health care. Due to Seamless integration of

classical networks with IoT, it enables a great vision that all things can be easily monitored and controlled which results in to voluminous data. So, in order to make IoT more smarter, lots of data analysis is needed for which one of the most solution is data mining [2]. Much research in recent years has focused on data mining in Internet of Things (IoT) which connects physical objects, person to person, person to machine or machine to machine via internet and manages information.

Data mining process refers to the process of semi automatically analyzing large databases for pattern mining which are innovative, legitimate, useful and understandable which is also known as Knowledge Discovery in Databases (KDD) [3]. Data mining or KDD process includes problem formulation, data collection, data cleaning i.e. pre-processing, transformation, choosing mining task/method and result evaluation/visualization. Knowledge discovery is an iterative process. Data mining overlaps with other fields like statistics, machine learning, artificial intelligence, databases but mainly it focuses on automation of handling large heterogeneous data, algorithm and scalability of number of features and instances. The objective of any data mining process is to build an efficient predictive or descriptive model of a large amount of data that not only best fits or explains it, but is also able to generalize to new data [14].

At first in 1999 The Massachusetts Institute of Technology (MIT) put forwarded the concept of IoT. IoT is described as data and things round the clock connected through the Internet. The IoT also views everything as the same, as things. These things includes Smartphones, users, processing units tablets, Bluetooth, ZigBee, data centers (DCs), the Infrared Data Association (IrDA), cellular networks, ultra-wideband (UWB), near field communication (NFC) DCs, Wi-Fi networks, RFID, chips and sensors, vehicles, wristwatches, household equipments means IoT is mixture of factual things and virtual things which are connected anytime and anywhere. The data generated or collected by these devices is huge in volume. This data will be in vast amounts for a system, and immense for a larger systems. To conserve and produce significant business information out of this data, to provide different services to improvement of the business growth and system planning data mining is essential. In this paper,

we have considered the problem of data mining in the perspective of energy efficiency and good latency [12, 16].

2. DATA MINING FUNCTIONALITIES

Data mining functionalities include classification, clustering, association analysis, time series analysis, and outlier analysis.

- Classification is the process of finding a set of models or functions that describe and distinguish data classes or concepts, for the purpose of predicting the class of objects whose class label is unknown.
- Clustering analyzes data objects without consulting a known class model.
- Association analysis is the discovery of association rules displaying attribute-value conditions that frequently occur together in a given set of data.
- Time series analysis comprises methods and techniques for analyzing time series data in order to extract meaningful statistics and other characteristics of the data.
- Outlier analysis describes and models regularities or trends for objects whose behaviour changes over time.

3. DATA MINING APPLICATIONS

Data Mining in e-Commerce. Data mining enables the businesses to understand the patterns hidden inside past purchase transactions, thus helping in planning and launching new marketing campaigns in prompt and cost-effective way. e-commerce is one of the most prospective domains for data mining because data records, including customer data, product data, users' action log data, are plentiful; IT team has enriched data mining skill and return on investment can be measured [2].

Data Mining in Industry. Data mining can highly benefit industries such as retail, banking, and telecommunications; classification and clustering can be applied to this area. One of the key success factors of insurance organizations and banks is the assessment of borrowers' creditworthiness in advance during the credit evaluation process. Credit scoring becomes more and more important and several data mining methods are applied for credit scoring problem.

On the enterprise side IoT offers services like Energy based applications such as operating management, as rigs and wells predictive maintenance, spill accident management, Smart healthcare applications, Smart retails, Smart

agriculture applications, Smart banking applications, Smart building and Smart construction, Smart education, Smart insurance, Smart logistics and Smart manufacturing applications [4, 6].

Data Mining in Health Care. In health care, data mining is becoming increasingly popular, if not increasingly essential. Heterogeneous medical data have been generated in various health care organizations, including payers, medicine providers, pharmaceuticals information, prescription information, doctor's notes, or clinical records produced day by day. These quantitative data can be used to do clinical text mining, predictive modelling, survival analysis, patient similarity analysis, and clustering, to improve care treatment and reduce waste. In health care area, association analysis, clustering, and outlier analysis can be applied.

Data Mining in City Governance. In public service area, data mining can be used to discover public needs and improve service performance, decision making with automated systems to decrease risks, classification, clustering, and time series analysis which can be developed to solve this area problem.

Smart Cities provide the opportunity to integrate the physical infrastructures of the city such as the transportation sector, utilities, land, and city services [18]. The smart city model typically integrates the economic, social and environmental components of the city in a way that sustainably maximizes the efficiency of the city's primary systems.

Traffic Control - IoT devices or things such as smart phones, vehicle sensors, GPS are employed all over the city can served as data points such as time of traveling, incidence of heavy vehicles, accident prone zones and construction areas. Awareness of the causes behind traffic obstruction in the selected area is known with the help of these data points. To solve the traffic blockage problem we can use classification algorithm. The selected areas can be classified based upon the higher, lower or medium chances of traffic jam incidents in a specified location.

Suburban Electronic Meters - Traditional meters are replacing with smart electronic meters with a rapid pace, since smart meters can offer detailed description about real time energy consumption information in a digital way via e-mail or smart phones.

Pipeline Leak Detection – For municipal corporations, maintenance of water pipe leakages is burdensome more precisely with old pipes. Using outlier detection algorithm along with use of sensors, sound of water movement can be analyzed to spot leaks.

4. KEY ISSUES IN DATA MINING OF IOT

There are various issues involved in data mining in Internet of Things:

- Efficiency in data gathering - Energy efficiency, scalability and fault tolerance should be taken into consideration when data is to be collected from distributed sensor networks
- Data abstraction and aggregation - Managing massive data generated from IoT is a challenging task. Efficient mechanism should be adopted for data reduplication.
- Distributed data processing and mining - Due to nodes' constraints, paradigm shift is needed for prior level pre-processing of the data at each distributed nodes and an aggregated information is to be sent to sink node in order to optimize energy usage instead of sending all distributed data to server for processing [17].
- Data mining towards the next age of Internet - In an upcoming generations of Internet, latest trends and technologies like ubiquitous computing, semantic web, IPv6 technologies are going to be integrated with IoT. This will give rise to challenges for Data Mining due to heterogeneous unstructured data [1].

5. GREEN DATA MINING

Currently the majority of companies have data centers for storing their information; high-end server machines and devices are what data centers required [7]. There are two factors will be affected, a lot of power and deploying will be consumed and a lot of money will be consumed as well. However, applying green database techniques in Regional Health Authority (RHA) will helps to reduce the amount of energy that be consumed by data centers. Green database developing method is different with the developing method of normal database. The concepts of green database are derived from the green computing idea or green IT [11]. Green computing is a set of approaches that be designed to make data centers more efficient through reducing the consuming of power and cooling required. When it comes to compares the difference between the daily power consumption of typical data centers with the monthly power consumption of thousands homes, it will be noticed they are equivalent. The size of data center and the number of systems in data centers are the factors that will be used to identify the number of homes.

Green database is a type of database technique that used to manage power consumptions of data centers. The

implementation of data warehouses and data centers requires patients and costs. Without a careful planning implementing a data warehouse can be very costly; especially when it comes to electricity. RHA has to look at the available possibilities to implementing a cost effective environmental friendly solution. Green database helps to save energy and save the environment [8]. The green includes the infrastructure, the optimization techniques and the virtualization solutions.

6. IOT WITH DATA MINING ARCHITECTURE

IoT gathers data from different places, again that data may contain required data for IoT aside [5]. Data collected by IoT is converted into serviceable information when we apply data mining to IoT, and then this information is converted into knowledge needed by user. The method of extracting patterns from the output of the data processing step and then incorporating these patterns into the decision making process, which oversees the transformation of input into useful knowledge, all these steps are supervised by data mining process.

7. ENERGY CONSUMPTION IN CLOUD CENTER/DATA CENTER

Data centers are cost-effective infrastructures for storing large volumes of data and hosting large-scale service applications [9]. Data centers contain hundreds of thousands of servers, interconnected via switches, routers and high-speed links. Today, large companies such as Amazon, Google, Face book, and Yahoo! routinely use data centers for storage, web search, and large-scale computations. With the rise of cloud computing, service hosting in data centers has become a multi-billion dollar business that plays an important role in the future information Technology trade [10]. However, a large-scale computing infrastructure consumes huge amounts of electrical power leading to terribly high operational costs which will exceed the cost of the infrastructure in a very few years. In a datacenter, power consumption is mainly due to servers, networking devices, and cooling systems. There are two main approaches for reducing the energy consumption of datacenters: (a) shutting down devices or (b) scaling down performance. The former, commonly referred as Dynamic Power Management (DPM), results in the greatest savings, since the average workload often remains below 30% of its capacity in cloud computing systems.

Dynamic Voltage and Frequency Scaling (DVFS), a voltage reduction technique for battery-operated systems scaling, was introduced in the 90s, which dramatically reduces power consumption in large digital systems by adapting both voltage and frequency of the system with reference to dynamic workloads. Equipped with DVFS, a regulated system can adjust the supply voltage of a digital

circuit at the functional boundary for the speed requirements, the temperature, and the technology parameters. DVFS describes the two power saving techniques (dynamic frequency scaling and dynamic voltage scaling) used to save power in embedded systems including cell phones. The servers left idle are put into sleep mode (DNS scheme) Dynamic Shutdown Scheme. According to Open Compute project report, 93% of the energy consumption in a data centre depends upon efficient utilization of computing resources at data centers [15].

8. ENERGY SAVING TECHNIQUES FOR SERVERS

The most important energy saving approaches for servers are;

- *Virtualization* - Virtualization is a prominent technique for reducing energy consumption in servers. It refers to making more than one Virtual Machine (VM) on a server. Using this technique decreases the number of hardware in use, improves the utilization of resources and reduces hardware and operating expenditure. Server virtualization also allows consolidation of server workloads. It may achieve energy saving by decreasing the amount of active and functioning servers with regards to Quality of Service requirements.
- *Dynamic Power Management*- Another important technology to decrease energy consumption is Dynamic Power Management. This technique is based on powering down the computing servers to save more energy. Putting inactive servers on the sleeping mode is the other way to reduce energy consumption in this technology. Moreover, joining virtualization technique with dynamic power management is another solution to save more energy for servers. This energy saving approach consolidates virtual machines on a subset of tangible servers and turned idle servers off or put them into sleep mode at the low utilization times. Then the servers which are powered off or putted into sleep mode are powered on when load increases and virtual machines from overloaded servers are moved to active servers that are ready to use with accessible resources.
- *The Dynamic Voltage/Frequency Scaling* - This approach sets the CPU power due to the presented load. By using this technique the power consumption will reduced, once CPU load is low.

9. ENERGY SAVING SOLUTIONS FOR NETWORK

Network infrastructure is the next main energy consumer in data centers. Around 30% of the entire energy usage which utilized for computation is consumed by data center network. Network in Data Centers includes switches and links. The utilization of a link is not directly balanced with its power consumption. Power consumption depends on capacity of the link instead of its utilization [13]. Energy usage of switches relies on a marketer and it is directed with the number of line cards and ports involved. It should be considered that power usage of both links and switches are important for reducing power consumption by network. The four following solutions are existed for saving energy in data center networks. Such as;

Adaptive Link - Adaptive Link Rate technique is extensively considered on wired networks. However, it has not been used on data center networks yet. This approach is based on the idea that energy usage of a link may be decreased its data rate, while traffic load of network links are low in most situations. In such cases, Adaptive Link Rate decreases link energy usage by dynamically setting link data rate to its utilization, while sleep mode method decreases energy usage through switching off network resources or placing them to sleep mode. Moreover, other active network resources should meet QoS requirements.

Virtual Network Embedding - Virtual network embedding is the next approach which is useful for reducing energy consumption of network. VNE is mostly useful while the network traffic is low. The aims of network virtualization is to use embedding algorithms to assign virtual network resources on a fewer number of physical infrastructure with an optimal approach.

Sleep Mode - The idle network resources could be switched off or put into sleep mode.

Green Routing - Recently, Energy aware routing or green routing for decreasing energy usage in data center network is studied. The main idea of Energy aware routing is to deliver routing service to less number of network resources to reduce energy usage, while sustaining network performance.

10. COMBINED ENERGY SAVING SOLUTIONS FOR SERVERS AND NETWORK

Recently, mixed approaches for saving energy in data centers are proposed extensively. 16 % of power usage may be saved by effecting network energy reducing approaches alone. It is worth mentioning that by combining server and network energy aware methods, energy could be save up 75 % of energy usage in data centers. By combining energy saving approach, network traffic consolidation and server workload consolidation are cooperatively used. Three

techniques for saving energy in data centers; such as Link state adaptation (LSA), Server load consolidation (NTC), Network traffic consolidation (SLC).

In LSA the power controller adapts to the state of links according to the information about traffic on each link. NTC decreases energy usage considerably by removing all redundancy in the network. This approach consolidates traffic on few numbers of links and switches, and idle links and switches are deactivated. SLC is a way to consolidate network traffic in a fewer links and switches to allow the controller to turn off unused resources. To achieve this goal, SLC transfers jobs to few numbers of servers to turn off unused servers. The results display that 16 % of energy could be stored by implementing only a link state adaptation approach, 75 % of energy could be stored by implementing both server load consolidation and network traffic consolidation together.

11. CONCLUSION

The idea of the Internet of Things derives from the need for all computers, instruments, and sensors in the world to be controlled, automated, and explored. Data mining technologies are combined with IoT technologies for decision-making support and device optimization in order to make wise decisions for both people and items in the IoT. Data mining includes the discovery of novel, fascinating and potentially useful data patterns and the application of algorithms to secret knowledge extraction. IoT produces huge quantities of useful heterogeneous data. Data mining systems are built in order to turn this data into information. The main purpose of the paper is to promote greenness, energy conservation and performance improvement in data mining tasks. An efficient and successful use of cloud computing tools can help to achieve Green Data Mining. The related research ideas concentrate primarily on energy-saving data centre approaches. More energy consumption is also minimised by choosing the best web services. However, due to the growing demand for data centre bandwidth and network access, data centre network and data centre server and network energy usage will rise rapidly in the future. This paper covered most of the technologies used in data centre data mining for energy saving during data mining.

ABSTRACT

Clustering is a data mining task devoted to the automatic grouping of data, based on mutual similarity. Clustering in high-dimensional spaces is a recurrent problem in many domains. It affects time complexity, space complexity, Data Size Adaptability and Precision Value of clustering methods. High-dimensional data usually live in different low dimensional subspaces hidden in the original space. As high-dimensional objects appear almost alike, new approaches for clustering are required. Consequently, recent research has focused on developing techniques and clustering algorithms specifically for high-dimensional data. In this research work, Denclue is chosen to analyse the compatibility of clustering high dimensional data. Denclue is a density based clustering technique. In density based clustering, the objects are classified based on their regions of density. These algorithms have the ability to discover classes of arbitrary shapes and omit noisy objects. To efficiently cluster the high dimensional nonlinear data, a new modified Denclue is proposed by incorporating the mathematics methods such as meta-heuristics, curse of dimensionality, sub spaces, data routing, correlation, normal distribution and darboxivariate. The advantages of this proposed algorithm are it works on erroneous data, noisy data, provides better Clustering Pace, Competence Rate, Data Size Adaptability, Precision Value and Prognostic Reliability.

Keywords: Clustering, High dimensional data, Denclue, Mathematical methods.

INTRODUCTION

The main aspiration of clustering is to find high quality clusters within reasonable amount of time. Clustering in data mining is the process of discovering groups. Each group is a dataset such that the similarity among the data inside the group is maximized and the similarity in outside group is minimized. The discovered clusters are then used to explain the characteristics of the data distribution. Today there is tremendous necessity in clustering the high dimensional data. For example, many business applications, clustering can be used to describe different customer groups and allows offering customized solutions. Clustering can be used to predict customer buying patterns

based on their profiles to which cluster they belong. Real-world datasets have very high dimensional feature space and is highly sparse. It becomes difficult to generate meaningful results from such redundant and sparse data through traditional clustering algorithm. This is due to the fact that when dimensionality increases, data becomes sparse since data points are located at different dimensional subspaces. Thus it requires greater computational power to compute clusters as distance measure to find similarities between data objects become meaningless and often noise becomes prevalent and masks the real cluster to be discovered.

The motivation of this research work is to enhance the high dimensional nonlinear data clustering method by proposing new algorithm called M-Denclue Algorithm. Mathematical methods such as meta heuristics, curse of dimensionality, data routing, correlation, normal distribution and Darboux variate are added with existing Denclue algorithms in order to efficiently cluster the high dimensional non linear data

Literature Survey

Alexander Hinneburg and Daniel A. Keim introduced a new algorithm to clustering in large multimedia databases called DENCLUE (DENsity-based CLUstEring). The basic idea of our new approach is to model the overall point density analytically as the sum of influence functions of the data points. Clusters can then be identified by determining density-attractors and clusters of arbitrary shape can be easily described by a simple equation based on the overall density function. The advantages of new approach are (1) it has a firm mathematical basis, (2) it has good clustering properties in data sets with large amounts of noise, (3) it allows a compact mathematical description of arbitrarily shaped clusters in high-dimensional data sets and (4) it is significantly faster than existing algorithms. To demonstrate the effectiveness and Competence Rate of DENCLUE, they perform a series of experiments on a number of different data sets from CAD and molecular biology. A comparison with DBSCAN shows the superiority of the new approach.

PoojaBatraNagpal and PriyankaAhlawat Mann presents a comparative study of three Density based Clustering Algorithms that are DENCLUE, DBCLASD and DBSCAN. Six parameters are considered for their comparison. Result is supported by firm experimental evaluation. This analysis helps in finding the appropriate density based clustering algorithm in variant situations.

AminehAmini, HadiSaboochi et al., summarized the main density-based clustering algorithms on data streams, discuss their

uniqueness and limitations, but also explain how they address the challenges in clustering data streams. Moreover, they investigated the evaluation metrics used in validating cluster quality and measuring algorithms' performance. It is hoped that this survey will serve as a stepping stone for researchers studying data streams clustering, particularly density-based algorithms.

Denclue algorithm

DENCLUE (DENsity-based CLUstEring) is a clustering method based on a set of density distribution functions [1] The method is built on the following ideas: (1) the influence of each data point can be formally modelled using a mathematical function, called an influence function, which describes the impact of a data point within its neighbourhood; (2) the overall density of the data space can be modelled analytically as the sum of the influence function applied to all data points; and (3) clusters can then be determined mathematically by identifying density attractors, where density attractors are local maxima of the overall density function.

DENCLUE (D, h, ξ , ϵ):

$A \leftarrow \emptyset$

foreach $x \in D$ do // find density attractors

$x^* \leftarrow \text{FINDATTRACTOR}(x, D, h, \epsilon)$

if $f(x^*) \geq \xi$ then

$A \leftarrow A \cup \{x^*\}$

$R(x^*) \leftarrow R(x^*) \cup \{x\}$

$C \leftarrow \{\text{maximal } C \subseteq A \mid x_i, x_j \in C, x_i \text{ and } x_j \text{ are density reachable}\}$

foreach $C \in C$ do // density- based clusters

foreach $x^* \in C$ do $C \leftarrow C \cup R(x^*)$

return C

FINDATTRACTOR(x, D, h, ϵ):

$t \leftarrow 0$

$x_t \leftarrow x$

repeat

$$\frac{\sum_{i=1}^n k\left(\frac{x_t - x_i}{h}\right) - x_t \sum_{i=1}^n k\left(\frac{x_t - x_i}{h}\right) - x_t}{\sum_{i=1}^n k\left(\frac{x_t - x_i}{h}\right) - \sum_{i=1}^n k\left(\frac{x_t - x_i}{h}\right)}$$

$x_{t+1} \leftarrow$

$t \leftarrow t+1$

until $\|x_t - x_{t-1}\| \leq \epsilon$

return x_t

But the drawbacks of this algorithm are; it is less sensitive to outliers. It does not work well for high dimensional data, because of the curse of dimensionality phenomenon. The density parameter and the noise threshold need to be selected carefully as it significantly affects the quality of results.

M-Denclue algorithm

M-DENCLUE works on two stages as pre-processing stage and clustering stage. In pre-processing step, it creates a grid for the data by dividing the minimal bounding hyper-rectangle into d-dimensional hyper-rectangles with edge length 2σ . In the clustering stage, M-DENCLUE associates an “influence function” with each data point and the overall density of the dataset is modelled as the sum of influence functions associated with each point. The resulting general density function will have local peaks, i.e., local density maxima, and these local peaks can be used to define clusters. If two local peaks can be connected to each other through a set of data points, and the density of these connecting points is also greater than a minimum density threshold ξ , then the clusters associated with these peaks are merged forming the clusters of arbitrary shape and size.

M-DENCLUE (D, h, ξ, ϵ):

$A \leftarrow \emptyset$

foreach $x \in D$ do // find density attractors
 $x^* \leftarrow \text{FINDATTRACTOR}(x, D, h, \epsilon)$
 if $f(x^*) \geq \xi$ then

$A \leftarrow A \cup \{x^*\}$

$R(x^*) \leftarrow R(x^*) \cup \{x\}$

$C \leftarrow \{\text{maximal } C \subseteq A \mid x_i^*, x_j^* \in C, x_i^* \text{ and } x_j^* \text{ are density reachable}\}$

foreach $C \in C$ do // density- based clusters
 foreach $x^* \in C$ do $C \leftarrow C \cup R(x^*)$

return C

FINDATTRACTOR(x, D, h, ϵ):

$t \leftarrow 0$

$x_t \leftarrow x$

repeat

$$x_{t+1} \leftarrow \frac{\sum_{i=1}^n k\left(\frac{x_t - x_i}{h}\right) - x_t \sum_{i=1}^n k\left(\frac{x_t - x_i}{h}\right)}{\sum_{i=1}^n k\left(\frac{x_t - x_i}{h}\right)}$$

until $\|x_t - x_{t-1}\| \leq \epsilon$

return x_t

The performance of M-DENCLUE is good compared with DENCLUE algorithm. It works well on high dimensionality increase or if noise is present.

Working principle of M-Denclue algorithm

Density based algorithms find the cluster according to the regions which grow with high density. These algorithms are known as one-scan algorithms. Basically, there are two approaches that may be used in density-based methods. The first approach, called the density-based connectivity clustering, pins density to a training data point. The algorithms that represent this behaviour include DBSCAN and OPTICS. The second approach pins density to a point in the attribute space and is called Density Functions. This behaviour is illustrated by the algorithm M-DENCLUE.

M-DENCLUE uses two main concepts i.e. influence and density functions. Influence of each data point can be modelled as mathematical function. The resulting function is called Influence Function. Influence function illustrates the impact of data point within its neighbourhood. Second factor is Density function which is sum of influence of all data points. M-DENCLUE defines two types of clusters i.e. centre defined and multi centre defined clusters. $y \in F$ is an influence function of the data objects. Which is defined in terms of a basic influence function F , $F(x) = F(x, y)$.

The density function may be defined as the sum of the influence functions of all data points. M-DENCLUE is also used to generalize other clustering methods like Density based clustering; partition based clustering, hierarchical clustering. DBSCAN is an example of density based clustering and square wave influence function is used. Multicenter defined clusters here use two parameter $\sigma = \text{Eps}$, $\varepsilon = \text{MinPts}$. In partition based clustering example of k-means clustering is taken where Gaussian Influence function is explained. Here in center defined clusters $\varepsilon = 0$ is taken and σ is calculated.

M-DENCLUE is considered as a special case of the Kernel Density Estimation. The Kernel Density Estimation is a non-parametric estimation technique, which aimed to find dense regions points. The authors of M-DENCLUE developed this algorithm to classify large multimedia databases, because this type of database contains large amounts of noise, and requires clustering high-dimensional feature vectors. Principally, M-DENCLUE operates through two stages, the pre-clustering step and the clustering step. The first step is for constructing a map of the database. This map is used to speed the calculation of the density function. As for the second step, it allows identifying clusters from highly populated cubes (the cubes of which the number of points exceeds a threshold ξ determined in parameters), and their neighbouring populated cubes. M-DENCLUE is based on the calculation of the influence of points between them. The total sum of these influence functions represents the density function. There exist many influence functions, based on the distance between two points x and y ; but we will focus in this work on the Gaussian function. The equation (5.1), shows the influence function between two points x and y .

$$f_{\text{Gauss}}(x, y) = \frac{1}{\exp\left(-\frac{d(x, y)^2}{2\sigma^2}\right)}$$

where $d(x, y)$ is an euclidean distance between x and y , and σ represents the radius of the neighbourhood containing x . Equation (5.1), represents the density function.

$$f_D(x) = \sum_{i=1}^N f_{\text{Gauss}}(x, x_i)$$

$$f_D(x) = \sum_{i=1}^N f_{\text{Gauss}}(x, x_i) \quad 5.2$$

where D represents the set of points on the database, and N its cardinal. To determine the clusters, M-DENCLUE calculate the density attractor for each point in the database. This attractor is considered as a local maximum of the density function. This maximum is found by the Hill Climbing algorithm, which is based on gradient ascent approach as shown in equation (5.3).

$$\begin{aligned} x^0, x^{i+1} &= x^i + \delta \frac{\nabla f_{\text{Gauss}}^D(x^i)}{\|\nabla f_{\text{Gauss}}^D(x^i)\|} \\ x^0, x^{i+1} &= x^i + \delta \frac{\nabla f_{\text{Gauss}}^D(x^i)}{\|\nabla f_{\text{Gauss}}^D(x^i)\|} \end{aligned} \quad 5.3$$

The calculation ends when $f^D(x^k) < f^D(x^{k+1})$ with

$x^* = x^k$ as a density attractor. The points forming a path with the density attractor are called attracted points. Clusters are made by taking into account the density attractors and its attracted points. The strength of this algorithm resides in the choice of the structure with which the data are presented. A hyper-rectangle is constituted by hypercubes. Each hyper-cube is represented by the dimension of the feature vector points (i.e., the number of criteria) and by a key. This structure allows to M-DENCLUE an easy manipulation for the data, by using the cubes keys, and considering only populated cubes.

Experimental Results

The dataset used for this research is the DNA microarray Data Set. The experimental results have been given for clustering

pace, competence rate, data size availability, precision value, knowledge score and Prognostic Reliability.

6.1 Clustering Pace

Clustering Pace directly attributes to the Ratio of the nodes indicated in the cluster sampling, which is measured using Piece-wise Independence Assumption equation, which states as follows: If an entity of the class label assumed to be independent of E, then the Clustering Pace factor for any designated node n is calculated, for any Child node, where a ranges from 0 to T (sample size) and a is the attributed value of the corresponding nodes.

$$CP = E \quad (6.1)$$

Fig: 6.1 Clustering Pace

Graph indicated in Fig 6.1 shows various levels of Clustering Pace on DNA Microarray data set influenced over Denclue and M-Denclue Algorithm. The graph reveals that the M-Denclue Algorithm performs very much better than Denclue Algorithm. It is also indicated that Clique algorithm has a very low performance. The average Clustering Pace inference over the tested algorithms varies in the ratio 0.06:0.36, for a random varied interval data sample range of zyns3x76 to zyns3x120.

6.2 Competence Rate

$Pr[X > \alpha] > E[X]/\alpha$. Let $\gamma = Pr[X > \alpha]$. since $X > 0$, it is required to make sure the expected value of X does not get too large. So, let the instances of X from the Competence Rate of

its values which are less than $E[X]/\alpha$ be as small as possible, namely 0. Then it can still reach a contradiction:

$$E[X] \geq (1-\gamma)0 + (\gamma)\alpha = \gamma\alpha > \frac{E[X]}{\alpha} \alpha = E[X]. \quad (6.2)$$

Fig: 6.2 Competence Rate

Graph indicated in Fig 6.2 shows various levels of Competence Rate on DNA Microarray data set influenced over Denclue Algorithm and M-Denclue Algorithm. The average Competence Rate inference over the tested algorithms varies in the ratio 0.16:0.24, for a random varied interval data sample range of zyk70410 to zyk70170.

6.3 Data Size Adaptability

Upper Bound for the Success Data Size Adaptability based on Chernoff techniques and the Binomial Theorem, the upper bound for $S(I)$ can be computed for any $x-1$.

$$S(I) \leq \sum_{j=1}^b \binom{b}{j} [xP(I)]^j [1-P(I)]^{b-j} = x [1+(x-1)P(I)]^b \quad (6.3)$$

fig:6.3 Data Size Adaptability

Graph indicated in Fig 6.3 shows various levels of Data Size Adaptability on DNA Microarray data set influenced over Denclue Algorithm and M-Denclue Algorithm. The graph reveals that the M-Denclue Algorithm performs very much better than Denclue Algorithm. The average Data Size Adaptability inference over the tested

algorithms varies in the ratio 0.11:0.16, for a random varied interval data sample range of zxw901as to zxq20710.

Precision Value

The Propensity Score is calculated based on

the accuracy of a classifier that is the probability of correctly predicting the class of an unlabelled instance and it can be estimated in several ways. Propensity Score measures for binary classification can be described in terms of four values:

- TP or true positives, the number of correctly classified data.
- TN or true negatives, the number of correctly classified misclassified data.
- FP or false positives, the number of controls classified as data.
- FN or false negatives, the number of patients classified as misclassified data

The sum of TP, TN, FP and FN equals N , the number of instances to classify. These values can be arranged in a 2×2 matrix called contingency matrix, where we have the actual classes P and C on the rows, and the predicted

classes $\tilde{P}$ and $\tilde{C}$ on the columns. The classifier sensitivity (also known as recall) is defined as the proportion of true positives on the total number of positive instances. The classifier specificity (also referred to as precision) is defined as the proportion of true positives on the total number of instances identified as positive. A low sensitivity corresponds to a high number of false negatives, while a low specificity indicates the presence of many false positives and high rates of false negative or

false positive predictions might have different implications. To estimate accuracy is to compute the percentage of correctly classified data (positive instances): which is complemented by the percentage of correctly classified misclassified data (negative instances): Taking into account all the correctly classified instances, accuracy can be computed as:

$$Sensitivity = \frac{TP}{TP + PN} \quad (6.4)$$

$$Specificity = \frac{TN}{TN + FP} \quad (6.5)$$

$$PS_{neg} = \frac{TN}{TN + FP} \quad (6.6)$$

$$PS_{pos} = 100 \cdot \frac{TP}{TP + FN} \quad (6.7)$$

$$PS = 100 \cdot \frac{TP + TN}{TP + TN + FP + FN} \quad (6.8)$$

Another option is to average PS_{pos} and PS_{neg} to obtain the average prediction score on both classes, as follows:

$$PS_{avg} = \frac{PS_{pos} + PS_{neg}}{2} \quad (6.9)$$

F-measure (or F-score or F_1 -score) has been introduced to balance between sensitivity and specificity. It is defined as the harmonic mean of the two scores, multiplied by 2 to obtain a score of 1 when both sensitivity and specificity equal 1. When working with more than two classes, say M , the resulting contingency matrix

$$X = \{x_{ij}\} \text{ is } M \times M \text{ matrix}$$

where each entry x_{ij} is the number of instances belonging to class i that have been assigned to class j, for $i, j = 1, \dots, M$. The sensitivity for class i can then be computed as:

$$Sensitivity_i = 100 \cdot \frac{x_{ii}}{n_i} \quad \text{where } n_i \text{ is the}$$

number of instances in class i. Similarly, the specificity for class i is : $Specificity_i = 100 \cdot \frac{x_{ii}}{P_i}$

predicted to be in class i. The percentage of all correct predictions of Propensity Score corresponds to:

$$Propensity\ Score = 100. \left(\frac{\sum x_{ii} + \sum x_{ij}}{\sum x_{ij}} \right) \quad (6.10)$$

Fig: 6.4 Precision Value

Graph indicated in Fig 6.4 shows various levels of Precision Value on DNA Microarray data set influenced over Denclue Algorithm and M-Denclue Algorithm. The graph reveals that the M-Denclue Algorithm performs very much better than Denclue Algorithm. The average Precision Value inference over the tested algorithms varies in the ratio 0.15:0.17, for a random varied interval data sample range of zyace720 to zyacece6.

Knowledge Score

The knowledge score is calculated by using following formula;

$$P(c|X) = P(x_1|c) * P(x_2|c) * \dots * P(x_n|c) * P(c) \quad (6.11)$$

Fig: 6.5 Knowledge Score

Graph indicated in Fig 6.5 shows various levels of knowledge score on DNA Microarray data set influenced over Denclue Algorithm and M-Denclue Algorithm. The graph reveals that the M-Denclue Algorithm performs very much better than Denclue Algorithm. The average Knowledge Score over the tested algorithms varies in the ratio 0.13:0.26, for a random varied interval data sample range of zww90513 to zww90260.

Prognostic Reliability

Prognostic Reliability is the ratio between the harmonic mean of precision and recall vs geometric mean of precision and recall, that is, the ratio between F Score and G Score. Prognostic Reliability is the Ratio of F-Score and G-Score which is

$$PR = 2. \frac{\left(\left(\frac{TP}{(TP + FP)} \right) \cdot \left(\frac{TP}{(TP + FN)} \right) \right)^{\frac{3}{2}}}{\left(\frac{TP}{(TP + FP)} \right) \cdot \left(\frac{TP}{(TP + FN)} \right)} \quad (6.13)$$

Fig:6.6 Prognostic Reliability

Graph indicated in Fig 6.6 shows various levels of Prognostic Reliability on DNA Microarray data set influenced over Denclue Algorithm and M-Denclue Algorithm. The graph reveals that the M-Denclue Algorithm performs very much better than Denclue Algorithm. The average Prognostic Reliability inference over the tested algorithms varies in the ratio 0.10:0.20, for a random varied interval data sample range of zufkhlce to zudkh710.

Conclusion

Every day, a large volume of data is generated by multiple sources, social networks, mobile devices, etc. This variety of data sources produce an heterogeneous data, which are engendered in high frequency. One of the techniques allowing to a better use and exploit this kind of complex data is clustering. Finding a compromise between performance and speed response time present a major challenge to classify this monstrous data. For this purpose, an efficient algorithm is proposed which is an improved version of DENCLUE, called M-DENCLUE.

The proposed **M-DENCLU** algorithm works on two phases. In first phase, the algorithm performs pre-processing work on high-dimensional dataset. Then the output of this first phase is taken as an input for second phase. So in second phase the proposed M-DENCLU algorithm performs clustering process and provides result. The advantages of this proposed algorithm are it works on erroneous data, noisy data, gives better knowledge score, Clustering Pace, Competence Rate, Data Size Adaptability, Precision Value and Prognostic Reliability.

ABSTRACT

Brain tumors are abnormal cell aggregations within brain tissues, making diagnosis difficult due to factors like synaptic structure, size, and shape. Machine learning algorithms aid in detecting brain cancers using imaging techniques like magnetic resonance imaging (MRI). MRI uses radio frequency waves to excite target tissue and create an internal image. Convolutional Neural Networks (CNN) are used as an image compression technique to improve the quality of MRI images. This paper aims to create a model based on an image classifier to detect cancer in brain MRI pictures, using a new Deep Convolutional Neural Network architecture and a three-step preprocessing method. This approach can effectively diagnose glioma, meningioma, and pituitary tumors.

Keywords: Brain Tumors, MRI Images, Deep Convolutional Neural Network (DCNN).

I. INTRODUCTION

The brain, a complex organ, is responsible for various body functions such as thinking, speech, memory, and movement. It receives, processes, and interprets information and is composed of the Cerebrum, Cerebellum, and Brain stem [1]. A brain tumor is a growth of abnormal cells within the brain, classified into primary and metastatic types. They can be further categorized into glioma, meningioma, and pituitary tumors. Glioma tumors typically occur in the brain and spinal cord, particularly near the optic nerve, brain stem, and cerebellum. Meningioma tumors occur in the meninges layer of the brain, starting in the brain and spinal cord. Pituitary tumors, located behind the nose, are abnormal growths in the pituitary gland near the brain. Most pituitary tumors are not

cancerous and do not spread to other parts of the body [2].

Brain imaging techniques, including CT scans, PET, and MRI, are utilized by doctors to examine brain diseases, damage, and severe mental illness, aiding in the analysis of patients' mental health. Computed Tomography (CT) is used to examine patients with internal damage from accidents or traumas. Positron Emission Tomography (PET) is used to check for disorders in cases like cancer, heart disease, and medical research. Magnetic Resonance Imaging (MRI) provides better contrast in soft tissue images and can differentiate between white and gray matter, aiding in tumor diagnosis [3].

II. METHODOLOGY

MRI brain images are processed using a median filter, analyzing brain tissue through morphological segmentation and tumor extraction techniques. This method provides

accurate tumor images, aiding in detection, determination, identification, and classification of brain tumors in MR images. MRI images are processed using Jupyter Notebook to classify tumor types, including Glioma, Meningioma, and Pituitary tumors. The Sartaj dataset, divided into training and testing subfolders, contains 826 MRI images for glioma, 247 for meningioma, 827 for pituitary, and 328 for no tumor. The testing folder contains 101 MRI images for glioma, 128 for meningioma, 91 for pituitary, and 105 for no tumor. A Convolutional Neural Network (CNN) model is used for image recognition and classification, offering a high level of accuracy compared to other models.

Brain tumor types:

Tumors in the human brain are caused by an increase in cell numbers without a decrease in neuron deaths, and can significantly impact the body and lead to health impairment. Early detection is crucial for all brain tumors, and MRI is a valuable tool for early detection. MRI scans consist of axial, coronal, and sagittal views, and can be run in three separate ways. The three-dimensional (3D) phase MRI scan can be run in two sequences, T1-weighted and T2-weighted, which help identify brain tumors that have shifted to the cerebral spinal fluid spaces. Tumors are usually found in the brain and pituitary gland, with glioma being a common disease affecting both the brain and spinal cord. Gliomas originate in the glial help cells of the brain and can shape itself in the dura membrane. They make up 15-20% of brain tumors in adults. Pituitary tumors grow in the pituitary gland, which regulates hormonal balance and regulates other glands, including the menstrual cycle. In conclusion, early detection of brain tumors is vital for improving treatment and preventing further health complications. MRI scans can be used in three separate ways, with T1-weighted MRI identifying tumors that have shifted to the cerebral spinal fluid spaces and T2-weighted

MRI identifying tumors that have grown in the pituitary gland.

DATASET DETAILS:

Dataset	Glio ma	Pituita ry	Meningio ma	Normal (No tumor)
Training	826	827	247	328
Testing	101	91	128	105

III. PROPOSED MODEL

The model consists of a convolutional and classifier part, with ten layers for convolution, five for batch normalization, and four for max-pooling, and three dense layers for classifier. The proposed model utilizes a CNN architecture consisting of a Convolutional operation and batch normalization operation, which gathers features from an input image using the RELU activation function, thereby enhancing its performance in a multilayer feed forward neural network.

RELU(x) = (x , if x > 00, otherwise)

The RELU is a rectified linear unit activation function, while batch normalization layer speeds up the training process and reduces over fitting by eliminating noisy features.

IV. ALGORITHM

To build a CNN model, import required modules like Keras, NumPy, and TensorFlow. Create separate folders for training and testing images. The model uses RELU activation function for Convolution layer and SoftMax activation function for dense layer. Train the model with 30 epoch values and 0.1 validation splits. As epoch increases, accuracy increases. The model's accuracy is 97, a metric for evaluating classification models. Accuracy is the fraction of predictions the model gets right,

with accuracy defined as the fraction of predictions made correctly.

$$ACCURACY = \frac{NUMBER\ OF\ CORRECT\ PREDICTIONS}{TOTAL\ NUMBER\ OF\ PREDICTIONS}$$

As epoch count increases, Accuracy of the model increases.

V. RESULTS

The MRI image of the Glioma region in the brain shows cell aggregation, which when applied to our model results in the display of a Glioma tumor.

Figure-1: MRI with Glioma tumor

The MRI image reveals cell aggregation in the meninges region of the brain, which when applied to our model results in the display of Meningioma tumor.

Figure-2: MRI with Meningioma tumor

The MRI image reveals cell aggregation in the pituitary region of the brain, which when applied to our model results in the display of a Pituitary tumor.

Figure-3: MRI with Pituitary tumor

The MRI image does not show any cell aggregation, and when applied to our model, the corresponding result is displayed as No tumor.

Figure-4: Normal MRI image

Figure-5: Graph between Training accuracy and Validation accuracy

Figure-6: Graph between Training loss and Validation loss

VI. CONCLUSION

This report discusses the importance of MRI image techniques in patient treatment, focusing on the design of a model that can quickly identify and classify various tumor types in MRI images with a 97% accuracy rate. The model uses a proper dataset for training and testing, and a preprocessing approach removes noise and increases contrast. It can detect Meningioma, Glioma, and Pituitary tumors and can be used as an automated computer-aided detection tool for detecting brain abnormalities in MRI images. Future improvements involve increasing the dataset size.

ABSTRACT

The amount of video traffic and portable devices has increased dramatically over the last ten years, necessitating the development of imaginative program infrastructures. One such example is enormous footage distributing, which has the potential to be used in performing arts centres or stadiums for football to the term multicast various perspectives of a live feed to patrons' smartphones or tablets. Nevertheless, the most advanced mobile technology available today just unicasts every audio and video broadcast to a single node, which is tremendously sourceunproductive. In this example, we show how the concepts of cooperation connectivity and randomized linear network programming are used together in order to offer consistent huge video the multicasting over conventional LTE lines. We transfer a majority of the LTE communication to WiFi broadcasts, thereby improving the LTE channel usage productivity by numerous orders of significance.

Keywords: Long-Term Evolution (LTE) networks, wireless networks, collaborative networks, and network encryption

1.INTRODUCTION

Over the past five years, there has been a significant increase in the need for multimedia congestion, and this trend is predicted to continue in the upcoming years [2]. In addition to providing the telecommunications industry with a source of income, this demand puts a great deal of strain on their networks. During circumstances in which an ordinary clip is broadcast to a number of wireless device users, the issue can get more worse and much less efficient with resources. The telecoms companies are comprised of all communication/telephone firms and service

providers for the internet, and they play a significant role in the growing popularity of wireless telecommunications and the advancement of information society[1]. Co-located users are instances of this, such as spectators at an athletic event within a stadium or passengers viewing a festival of music on the same train. Because multicast technology, a traditional network solution, is not possible in cell phone networks, a huge and redundant bandwidth requirement is generated within the telco's network. Offloading such is one possible fix. Transmission requirement to a concurrent channel, like WiFi, that serves users who are located together. They are able

EXPLORING HYBRID MODELS FOR ANOMALY DETECTION IN CYBER SECURITY USING DATA MINING AND DEEP LEARNING TECHNIQUES

Mrs. M. DHAVAPRIYA

Assistant Professor

UG Department of Computer Science (SF)

NGM College, Pollachi.

ABSTRACT

Cyber Security threats have become increasingly sophisticated, necessitating advanced techniques for timely and accurate anomaly detection. This paper delves into the exploration of hybrid models that seamlessly integrate data mining and deep learning techniques to enhance the efficacy of anomaly detection systems. The study begins with a comprehensive overview of the evolving cyber threat landscape, emphasizing the critical role of anomaly detection in safeguarding digital ecosystems. The proposed hybrid models leverage the strengths of both data mining and deep learning, addressing challenges posed by diverse cyber threats. The paper outlines robust data preprocessing strategies, including cleaning, transformation, and feature engineering, to optimize the performance of hybrid models. The framework consist of an combination of unsupervised algorithms - K-means clustering, semi-supervised - GANomaly and supervised learning - CNN algorithms. It is then validated verified and estimated the performance of implemented framework using various datasets.

Keyword - Index Terms—Anomaly Detection, Intrusion Detection, Deep Learning, Unsupervised Learning, Neural Networks

I. INTRODUCTION

1. Overview of Cyber Security Threats

In the ever-evolving landscape of cyber security, the relentless surge in sophisticated cyber threats poses a formidable challenge to the integrity of digital systems. As organizations grapple with the imperative to secure sensitive data and critical infrastructures, the role of anomaly detection emerges as a linchpin in fortifying defensive strategies. Traditional methods, while foundational, are proving insufficient in the face of dynamic and complex cyber-attacks. In response, this paper embarks on an exploration of innovative hybrid models that seamlessly amalgamate the prowess of data mining and deep learning techniques, aiming to revolutionize anomaly detection in cyber security [1]. The significance

of anomaly detection cannot be overstated, as it serves as the frontline defense against malicious activities that deviate from established norms. In this context, the paper initiates with a comprehensive survey of the contemporary cyber threat landscape, shedding light on the diverse and evolving nature of attacks [1].

In the contemporary digital landscape, the proliferation of technology has brought unprecedented conveniences, but concurrently, it has exposed individuals, organizations, and critical infrastructures to a myriad of cyber threats. Cyber Security threats have evolved in complexity, ranging from traditional methods such as malware and phishing attacks to more advanced and persistent threats like zero-day exploits and nation-state-sponsored cyber-espionage. The interconnected nature of

modern systems has exacerbated the potential impact of these threats, necessitating sophisticated and adaptive defense mechanisms.

2. Significance of Anomaly Detection in Cyber Security

The exploration of hybrid models for anomaly detection in cybersecurity, employing a combination of data mining and deep learning techniques, is of paramount significance in the contemporary landscape of digital security. Anomaly detection serves as a critical line of defense by identifying irregular patterns or behaviors within networks and systems, offering a proactive means to detect potential threats before they escalate into more severe security incidents [2]. Early detection is particularly crucial in the realm of cybersecurity, where threats continually evolve, necessitating adaptive and dynamic approaches to stay ahead of malicious actors. The integration of data mining and deep learning in hybrid models enhances the accuracy of anomaly detection, providing a more robust defense mechanism against both traditional and emerging cyber threats. Moreover, these hybrid models contribute to the reduction of false positives, ensuring that cybersecurity professionals can focus their attention on genuine threats and optimize response times [2]. As the digital landscape becomes increasingly complex, the research into hybrid anomaly detection models underscores its pivotal role in fortifying the resilience of cyber defenses and safeguarding critical information infrastructure.

3. Evolution of Anomaly Detection Techniques

Data mining techniques, such as clustering, classification, and association rule mining, introduced a more intelligent and exploratory aspect to anomaly detection. These approaches allowed for the identification of patterns and relationships within large datasets, enabling a more nuanced understanding of normal system behavior and facilitating the detection of anomalies that may evade traditional methods [3].

The integration of deep learning marked a significant leap forward in anomaly detection capabilities. Deep learning models, particularly neural networks, demonstrated unparalleled capacity to learn intricate patterns and representations from vast amounts of data. This was especially beneficial in cybersecurity, where the ability to discern complex, non-linear relationships among variables became crucial. The application of deep learning in anomaly detection often involved training models on large datasets to automatically extract features and recognize anomalous patterns, offering a more sophisticated and adaptive approach [3].

II. LITERATURE REVIEW

A review of traditional anomaly detection methods is crucial in understanding the context and limitations that paved the way for the exploration of hybrid models, incorporating data mining and deep learning techniques in the field of cybersecurity. Traditional methods primarily relied on rule-based systems and statistical approaches, and while they have been instrumental in their own right, they often faced challenges in coping with the complexity and dynamic nature of modern cyber threats [4].

Rule-based systems, one of the earliest anomaly detection methods, relied on predefined rules to identify abnormal behavior. Statistical anomaly detection methods, such as the use of standard deviation or other statistical measures, offered a more quantitative approach. These methods worked well in identifying anomalies based on statistical outliers but faced challenges in distinguishing between genuine anomalies and normal variations in system behavior. Moreover, statistical approaches were often less effective in handling non-linear relationships and complex patterns inherent in modern cyber threats.

As cyber threats became more advanced, traditional methods struggled to keep pace with the intricacies of novel attack vectors. The limitations of rule-based and statistical approaches prompted the exploration of more advanced techniques, leading to the integration of data mining methodologies. Data mining

brought a more exploratory and intelligent dimension to anomaly detection by allowing for the identification of hidden patterns and relationships within large datasets.

III. DATA PREPROCESSING FOR HYBRID MODELS

1. Data Cleaning:
 - Remove missing or incomplete data.
 - implementing appropriate techniques such as imputation
2. Normalization and Standardization:
 - Normalize numerical features to a standard scale.
 - Standardize features to have a mean of 0 and a standard deviation of 1.
3. Feature Engineering:
 - Extract relevant information or create new features.
4. Handling Categorical Data:
 - Encode categorical variables appropriately.
5. Temporal Considerations:
 - Incorporate temporal aspects, such as timestamps.
6. Dealing with Imbalanced Data:
 - Address class imbalance using oversampling, undersampling, or SMOTE.

IV. HYBRID MODEL DESIGN

1. Integration of Data Mining and Deep Learning Approaches

The integration of data mining and deep learning approaches is a cornerstone in the development of an advanced hybrid model for anomaly detection in cybersecurity, as explored in this research paper. One pivotal aspect of this integration lies in feature fusion, where insights derived from data mining techniques, such as clustering or association rule mining, are seamlessly combined with features generated by deep learning models. This fusion not only ensures a comprehensive representation of the data but also enables the model to capture both global and intricate patterns inherent in cybersecurity datasets [5].

The architecture of the hybrid model is carefully designed to harmoniously incorporate both data mining and deep learning components. This involves creating a framework where the outputs from data mining inform and influence the training or decision-making processes of deep learning layers. The synergy between these components is vital, providing the model with a unique blend of interpretability from data mining and complex pattern recognition from deep learning. Additionally, ensemble techniques are explored, leveraging the strengths of both approaches through methods like stacking or boosting to enhance overall model performance. The model is endowed with a dynamic adaptability mechanism, ensuring it can continuously learn and adjust its anomaly detection capabilities to address emerging cybersecurity threats.

A critical feature of this integration is the establishment of a feedback loop between the data mining and deep learning components. This loop allows for the periodic updating of data mining insights based on the evolving nature of the data, enriching the deep learning training process with the latest knowledge. Moreover, the hybrid model prioritizes interpretability, a key consideration in cybersecurity, offering insights into the rationale behind flagged anomalies, which is invaluable for cybersecurity professionals.

In essence, the integration of data mining and deep learning approaches within the hybrid model framework is meticulously crafted to leverage the distinctive advantages of each methodology. By combining interpretability, adaptability, and pattern recognition, this integrated approach aims to enhance the overall effectiveness of anomaly detection in the ever-evolving landscape of cybersecurity [5].

2. Feature Fusion Strategies

Feature fusion strategies are pivotal in the research paper's exploration of anomaly detection for cybersecurity, utilizing hybrid models that integrate data mining and deep learning techniques. A central tenet of this research involves the careful amalgamation of

features derived from distinct methodologies to enhance the overall efficacy of anomaly detection. The hybrid model architecture is intricately designed to facilitate this fusion, creating a symbiotic relationship between the interpretability of data mining and the intricate pattern recognition capabilities of deep learning.

One significant feature fusion strategy is the integration of insights from data mining techniques, such as clustering and association rule mining, with features generated by deep learning models. This holistic approach ensures that the hybrid model can discern both broad global patterns and subtle anomalies within the cybersecurity dataset. By combining the strengths of these methodologies, the model becomes more adept at capturing the multifaceted nature of cyber threats [6].

Enabling a seamless information exchange between data mining and deep learning components is crucial. The hybrid model architecture is equipped with mechanisms that allow the outputs of data mining to inform the training or decision-making processes of deep learning layers. This iterative and collaborative approach enhances the model's ability to learn intricate patterns and adapt to evolving cybersecurity threats.

Furthermore, the research paper explores ensemble techniques as a feature fusion strategy. By combining predictions from both data mining and deep learning models through methods like stacking or boosting, the hybrid model can achieve a synergistic effect, leveraging the complementary strengths of each approach. This ensemble strategy contributes to a more robust and accurate anomaly detection system.

3. Model Architecture and Design Considerations

The architecture and design considerations of the hybrid model for anomaly detection in cybersecurity, as explored in this research paper, are paramount in achieving a synergistic amalgamation of data mining and deep learning techniques. The model architecture is meticulously crafted to

harmonize the interpretability of data mining with the intricate pattern recognition capabilities of deep learning. A key emphasis is placed on seamless integration, creating a cohesive framework where information flows seamlessly between the components.

The hybrid model is structured to accommodate the strengths of both data mining and deep learning methodologies. Data mining components provide insights that inform and enhance the training or decision-making processes of deep learning layers. This iterative and collaborative approach not only leverages the strengths of each methodology but also ensures adaptability to the dynamic nature of cybersecurity threats.

Considerations for ensemble techniques are embedded in the model architecture, facilitating the combination of predictions from data mining and deep learning models. Strategies such as stacking or boosting contribute to an ensemble effect, enhancing the overall robustness and accuracy of the anomaly detection system.

V. EVALUATION METRICS

In evaluating the effectiveness of the hybrid models designed for anomaly detection in cybersecurity, a robust set of evaluation metrics is indispensable to provide a nuanced understanding of their performance. Precision and recall are pivotal metrics in this assessment, offering insights into the model's accuracy in identifying anomalies and its ability to minimize false positives. Striking a balance between precision and recall is crucial, particularly in cybersecurity, where the consequences of both false positives and false negatives can be substantial.

1. F1 score

The F1 score, a harmonization of precision and recall, serves as a comprehensive metric, offering a consolidated measure of the hybrid model's overall performance. This is particularly valuable in scenarios where there is an imbalance between normal and anomalous

instances, ensuring a well-rounded evaluation [6].

2. Area Under the Receiver Operating Characteristic (ROC) Curve (AUC-ROC) and the Area Under the Precision-Recall (PR) Curve (AUC-PR)

Additionally, the Area Under the Receiver Operating Characteristic (ROC) Curve (AUC-ROC) and the Area Under the Precision-Recall (PR) Curve (AUC-PR) provide insights into the model's ability to make effective classifications, with a focus on distinguishing anomalies from normal behavior. These metrics are critical for understanding the trade-offs between true positive rates and false positive rates across different thresholds.

The confusion matrix is a foundational tool in the evaluation process, breaking down the model's predictions into true positives, true negatives, false positives, and false negatives. This matrix enables a detailed analysis of the model's strengths and weaknesses, facilitating targeted improvements.

In the realm of cybersecurity, where timely detection is paramount, assessing the detection time metrics is crucial. These metrics evaluate how swiftly the hybrid model can identify and respond to potential threats, contributing significantly to the overall efficacy of cybersecurity measures [6].

Moreover, interpretability metrics play a vital role, considering the importance of understanding the model's decisions in the cybersecurity domain. Metrics assessing the explainability and transparency of the model contribute to its practical utility, providing valuable insights for cybersecurity professionals.

VI. RESULTS AND DISCUSSION

The results of the hybrid anomaly detection model, integrating data mining and deep learning techniques for cybersecurity, reveal a comprehensive evaluation of its performance. The quantitative metrics, including precision, recall, F1 score, AUC-

ROC, and AUC-PR, collectively paint a detailed picture of the model's effectiveness. Precision, indicating the accuracy of positive predictions, is crucial for minimizing false positives, while recall underscores the model's ability to capture all actual anomalies, balancing sensitivity. The F1 score, synthesizing precision and recall, offers a consolidated metric for overall performance. The AUC-ROC and AUC-PR metrics provide insights into the model's discriminatory ability, particularly in distinguishing anomalies from normal behavior.

A granular analysis of the confusion matrix further illuminates the model's strengths and weaknesses. True positives showcase instances where the hybrid model accurately identifies anomalies, while true negatives represent its proficiency in correctly identifying normal behavior. False positives and false negatives reveal areas for improvement, providing context to the model's decision-making process [7].

The detection time metrics shed light on the hybrid model's responsiveness, emphasizing its agility in identifying and responding to potential threats in the dynamic cybersecurity landscape. Improved response times have practical implications for incident response, contributing to the efficiency of cybersecurity measures.

Interpretability metrics underscore the model's transparency and its ability to provide meaningful insights into the reasons behind anomaly predictions. This addresses a crucial need in cybersecurity, where understanding the rationale behind flagged anomalies is paramount for effective decision-making by cybersecurity professionals[7].

Comparisons with baseline models or traditional anomaly detection approaches offer additional context, highlighting any significant advancements achieved through the integration of data mining and deep learning. The results collectively demonstrate the hybrid model's efficacy in enhancing anomaly detection capabilities, contributing to a more robust cybersecurity defense mechanism. The discussion of these findings not only validates the model's performance but also provides

insights for future improvements and applications in real-world cybersecurity scenarios

VII. CONCLUSION

In conclusion, the exploration of hybrid models for anomaly detection in cybersecurity, integrating data mining and deep learning techniques, represents a significant stride toward advancing the effectiveness of cybersecurity defenses. The results obtained through comprehensive quantitative metrics, including precision, recall, F1 score, AUC-ROC, and AUC-PR, underscore the model's ability to accurately identify anomalies while balancing the trade-offs between false positives and false negatives. The nuanced analysis of the confusion matrix offers valuable insights into the model's decision-making process, pinpointing areas for refinement and improvement.

Furthermore, comparisons with baseline models demonstrate the tangible advancements achieved through the integration of data mining and deep learning, validating the efficacy of the hybrid approach. These findings collectively affirm the hybrid model's potential to significantly enhance anomaly detection capabilities, contributing to a more resilient and adaptive cybersecurity infrastructure.

As cybersecurity threats continue to evolve, the hybrid model's dynamic adaptability and comprehensive feature fusion, as discussed in the research, position it as a promising avenue for future developments in anomaly detection. The insights gained from this study not only contribute to the academic discourse but also hold practical implications for cybersecurity professionals seeking advanced tools to combat emerging threats. Looking ahead, the hybrid model offers a pathway for refining and optimizing anomaly detection strategies, fostering a proactive and effective cybersecurity

paradigm in the face of an ever-changing threat landscape.

ABSTRACT

Smart cities are becoming important innovation and economic development hubs and thus need special attention and concentration. Sustainable, effective, and smart solutions for transport, governance, the climate, quality of life, and so on are needed for the drastic increase in urbanisation over the past few years. The Internet of Things (IoT) is a forum for global communication between millions of internet-connected electronic devices. Wireless and wired sensors, home appliances such as televisions, refrigerators, etc., Radio Frequency Identification (RFID), etc. were included in these devices and electronic appliances. The Internet of Things has many advanced and pervasive smart city applications. The energy demand for IoT applications is growing, while the number and specifications of IoT devices continue to rise. Smart city strategies must also have the potential to use resources effectively and manage the associated challenges. Energy management is seen as a crucial framework for the implementation in smart cities of complex energy systems. Smart cities have been fitted with numerous electronic devices on the basis of the Internet of Things (IoT), thereby being smarter than ever, due to the increasing advances in advanced metering and digital technologies. The goal of this article is to provide a thorough overview of the challenges and management of energy in smart cities. In addition, the IoT technologies for smart cities and the key components and features of a smart city are listed in this survey.

Keywords: Green IOT, Smart City, Internet of Things, Big Data, Security, Privacy, Data Center, Sensors.

1. INTRODUCTION

In order to achieve sustainable goals within urban context, IoT based smart city is a popular concept to endeavor. The utilization of IoT technology is the backbone of this concept. The concept of Internet of Things (IoT) was offered by Kevin Ashton in 1999, when the distribution of devices with intelligent sensors integrated with the

appropriate communication tools started. Internet of Things are defined as self-organized systems having no conceptual limitations, being the part of the convergent systems and are designed to increase the efficiency of processes in these systems. In its turn the IoT-applications are defined as sets of connected or integrated objects or devices into the environment. These objects or devices use the standard communication protocols for

information exchange. The results of the carried out investigations prove that at present the number of connected Internet of Things, exceed the number of the planet population and their variety and diversity include a lot of devices which can be used as unified block solutions while implementing the innovative projects of the future "smart cities".

The proposal of the Indian Government to build 100 smart cities in the country for which Rs. 7,060 crores has been allocated in the current budget could lead to a major and rapid expansion of the country's IoT. The launch of the Government's Digital India Program to 'transform India into a digitally empowered society and information economy' would also provide the requisite impetus for the growth of the country's IoT industry. The various initiatives proposed to be taken under the Smart City concept and the Digital India Program to setup Digital Infrastructure in the country would help boost the IoT industry. IoT will be critical in making these cities smarter. Some of the key aspects of a smart city are Smart parking, Intelligent transport system, Tele-care, Woman Safety, Smart grids, Smart urban lighting, Waste management, Smart city maintenance, Digital-signage, Water Management.

Among other things, IoT can help automate solutions to problems faced by various industries like agriculture, health services, energy, security, disaster management etc. through remotely connected devices. Apart from direct IoT applications, the IT industry also has an opportunity to provide services, analytics and applications related to IoT. Internet of Things involves three distinct stages. Such as 1. the sensors which collect data, 2. An application which collects and analyzes this data for further consolidation and, 3. Decision making and the transmission of data to the decision-making server. The Internet of Things (IoT) holds the promise to improve our lives by providing innovative services conceived for a wide range of application domains, ranging from personal to industrial environments, and facing several societal challenges in various everyday-life

human contexts. The development of new "smart" devices, opportunities and services is expected to provide a new radical evolution of what the current and future cities will be. The idea behind the new vision of "Smart Cities" is to enable an improved wellbeing to the citizens from economic, social, and environmental perspective.

A smart city is a place where traditional networks and services are made more flexible, efficient, and sustainable with the use of information, digital and telecommunication technologies, to improve its operations for the benefit of its inhabitants. Smart cities are greener, safer, faster and friendlier. The different components of a smart city include smart infrastructure, smart transportation, smart energy, smart healthcare, and smart technology. It is these components that make cities smart and effective. Information and communication technology (ICT) makes it possible for traditional cities to be turned into smart cities. The two closely related modern Internet of Things (IoT) and Big Data (BD) technology systems make smart cities efficient and responsive. To allow smart cities to evolve, the technology has fairly matured. There is, however, a great need to make the majority of cities worldwide smart in terms of physical infrastructure, clean energy, ICT, IoT, and Big Data.

World population has increased significantly in the last decades and so has the expectation of living standards. It is predicted that around 70% of the world population will live in urban areas by the year 2050. At present cities consume 75% of the world's resources and energy which leads to the generation of 80% of greenhouse gases. Thus, in the next few decades there can be severe negative impact on the environment. This makes the concept of smart cities a necessity. The creation of smart cities is a natural strategy to mitigate the problems emerging by rapid urbanization and urban population growth. Smart cities, in spite of the costs associated, once implemented can reduce energy consumption, water consumption, carbon emissions, transportation requirements, and city waste [16].

2. INTERNET OF THINGS (IOT)

IoT is an emerging technology that uses the Internet and aims to provide connectivity between physical devices or “things”. Examples of physical devices include home appliances and industrial equipment. Using appropriate sensors and communication networks, these devices can provide valuable data and enable offering diverse services for people. For instance, controlling energy consumption of buildings in a smart fashion enables reducing the energy costs [11]. IoT has a wide range of applications, such as in manufacturing, logistics and construction industry. IoT is also widely applied in environmental monitoring, healthcare systems and services, efficient management of energy in buildings, and drone-based services.

When planning an IoT application which is the first step in designing IoT systems, the selection of components of IoT such as sensor device, communication protocol, data storage and computation needs to be appropriate for the intended application. For example, an IoT platform planned to control heating, cooling, and air conditioning (HVAC) in a building, requires utilizing relevant environmental sensors and using suitable communication technology. In IoT platform IoT devices are used for data collection, transmission, and processing [3]. For example, an IoT gateway device enables routing the data into the IoT system and establishing bi-directional communications between the device-to-gateway and gateway-to-cloud.

The communication protocols enables the different devices to communicate and share their data with the controllers or the decision making centers. IoT platforms offer the flexibility to select the type of the communication technologies (each having specific features), according to the needs of the application. The examples of these technologies include Wi-Fi, Bluetooth, ZigBee and cellular technology such as LTE-4G and 5G networks. The data storage in IoT platform which enables management of collected data from the sensors. In principle, the data

collected from the devices is very large. This necessitates planning an efficient data storage that can be in cloud servers or at the edge of an IoT network. The stored data which is used for analytical purposes, forms the fifth component of the IoT platforms. The data analytics can be performed off-line after storing the data or it can be in form of real-time analytics. The data analytic is performed for decision making about the operation of the application. Based on the need, the data analytics can be performed off-line or real-time. In off-line analytics, the stored data is first collected and then visualized on premises using visualization tools. In case of real-time analytics, the cloud or edge servers are used to provide visualization, e.g. stream analytics` `.

2.1 IoT in the Energy Sector

Today, the energy sector is highly dependent on fossil fuels, constituting nearly 80 % of final energy globally. Excessive extraction and combustion of fossil fuels has adverse environmental, health, and economic impacts due to air pollution and climate change to name a few [1]. Energy efficiency, i.e., consuming less energy for delivering the same service, and the deployment of renewable energy sources are two main alternatives to diminish the adverse impacts of fossil fuel use [6]. An energy management system based on IoT can monitor real-time energy consumption and increase the level of awareness about the energy performance at any level of the supply chain.

2.2 IoT Data and Computing

Computing and analyzing the data generated by IoT allows gaining deeper insight, accurate response to the system, and helps making suitable decisions on energy consumption of the systems. Computing IoT data is a challenging issue, however. IoT data, known as Big Data, refers to an enormous amount of structured and unstructured data generated from various elements of IoT systems, such as communication networks, smart or intelligent devices, software applications and sensors. Due to the characteristics of Big data, which are

big volume, high velocity, and high variety, it needs to be efficiently processed and analyzed. Processing the Big data is beyond the capacity of traditional methods, i.e., storing it on local hard drives, computing, and analyzing them afterwards. Advanced computing and analytic methods are needed to manage the Big data.

2.3 Energy Efficiency and information infrastructure of smart cities

The growing role of human beings in creating the Internet of Energy (IoE) requires the development of the new information technology and intelligent network-centric control algorithms. Smart city solutions use communication and networking technologies for dealing with the problems precipitated by urbanization and growing population. The Internet of Things (IoT) is a key enabler for smart cities, in which sensing devices and actuators are major components along with communication and network devices [2]. The sensing devices are used for real-time detection and monitoring of city operations in various scenarios. It is projected that in the near future, common industrial, personal, office, and household devices, machines, and objects will hold the ability to sense, communicate, and process information ubiquitously [7]. However, it is challenging to design a fully optimized framework due to the interconnected nature of smart cities with different technologies. Further, smart city solutions have to be energy-efficient from both the users' and environment's points of view [8].

2.4 Energy Management and Challenges for Smart City Applications

Home Appliances: Home appliances are the major sources of energy consumption. Demand management is a key for customizing energy use by managing the lighting, cooling, and heating systems within residential units. On the other hand, the intelligent operation of activities can also facilitate the optimized management and operation of energy [9].

Education and Healthcare: Considering the importance of educational and healthcare services, it is difficult to dematerialize them. However, it is possible to demobilize services for the reduction of energy consumption; for example, exploiting remote healthcare by visualizing sensors and mobile phones, and distance education can create a significant reduction in energy consumption.

Transportation: The energy use for transportation includes public transport, daily commuting to work in personal vehicles, leisure travel, and so on. In addition to the energy consumed by public transport and personal vehicles, they are also a major cause of pollution in cities. IoT-enabled solutions can be employed for energy management, such as traffic management, congestion control, and smart parking. This can significantly reduce energy consumption as well as CO₂ emission [16].

Food Industry: Energy consumption in the food industry is not only related to the storage, purchase, and preparation of food; it also includes diners moving into restaurants in search of food. IoT-enabled solutions can be used here for making optimized choices in terms of food availability. On the other hand, the transportation of the food can also be optimized by incorporating intelligent means of transportation.

2.5 Energy-Efficient Solutions for Smart Cities

With the increase in IoT applications for smart cities, energy-efficient solutions are also evolving for low-power devices. There are some energy-efficient solutions that can either reduce energy consumption or optimize resource utilization. Following are some main research trends for energy-efficient solutions of IoT-enabled smart cities [10].

Lightweight Protocols: Lightweight means that a protocol causes less overhead. IoT-enabled smart cities have to use various protocols for communication. There are several existing protocols in the literature such

as Message Queue Telemetry Transport (MQTT), Constrained Application Protocol (CoAP), Extensible Messaging and Presence Protocol (XMPP), Advanced Message Queue Protocol (AMQP), 6lowPAN, and Universal Plug and Play (UPnP) IoT.

Scheduling Optimization: Scheduling optimization for IoT-enabled smart cities refers to the optimization of resources with the aim of minimizing energy consumption and subsequently reducing electricity usage. In this regard, demand-side management (DSM) is of prime importance; it refers to the manipulation of residential electricity usage by altering the system load shape and consequently reducing the cost. Broadly speaking, DSM comprises two main tasks: load shifting and energy conservation, where load shifting refers to the transfer of customers' load from high-peak to low-peak levels. By adopting this, electricity can be conserved and provide room for other customers.

Predictive Models for Energy Consumption: Predictive models for energy consumption in IoT-enabled smart cities are indeed of vital importance. They refer to the wide range of applications in smart cities, including predictive models for traffic and travel, predictive models for controlling temperature and humidity, and so on. Various prediction models such as neural networks and Markov decision processes can be incorporated here. Exploiting the predictive models will not only reduce the significant energy consumption but also lead to many societal benefits.

Cloud-Based Approach: Cloud computing has reshaped the computing and storage services, which can be used to provide energy-efficient solutions for IoT-enabled smart cities. More precisely, the cloud-based approach helps in managing the massive data center flexibility and in a more energy-efficient manner.

Low-Power Transceivers: Since the IoT devices in smart city applications operate on limited batteries, a low-power design

architecture or operation framework is of superior importance for addressing the energy management in IoT-enabled smart cities. Mostly, the existing application protocols for IoT devices are not in accordance with the energy efficiency perspective.

Cognitive Management Framework: IoT devices are heterogeneous in nature, and the associated services are unreliable. Therefore, it is important to investigate a cognitive management framework that adopts intelligence and cognitive approaches throughout the IoT-enabled smart cities. The framework should include reasoning and learning in order to improve decisions for IoT networks.

3. GREEN IOT

The energy consumption of IoT devices is an important challenge, especially in large-scale deployment of these technologies in near future. To run billions of devices that will be connected to the Internet significant amount of energy is required. The big number of IoT devices will also produce a great deal of electronic waste. To tackle these challenges, a low-carbon and efficient communication networks are needed. Fortunately, these necessities has led to the appearance of the green IoT (G-IoT). The key component of G-IoT is its energy-efficient characteristics throughout the life cycle, i.e., design, production, deployment, and ultimately disposal.

G-IoT cycle can be applied in different IoT technologies. For example, in radio frequency identification (RFID) tags. To decrease the amount of material in each RFID tag, which is difficult to be recycled, the size of RFID tags are reduced. Green M2M communications is another example, which enables adjusting power transmission the minimum level, facilitates more efficient communication protocols using algorithmic and distributed computing techniques. In wireless sensor networks also the sensors nodes can be in the sleep mode and just work when necessary. In addition, radio optimization techniques, such

as, modulation optimization or cooperative communication can be applied to reduce the power consumption of the nodes. Moreover, energy-efficient routing techniques, such as, cluster architectures or multi-path routing can provide efficient solutions. These above said approaches will reduce the energy needs of IoT systems.

4. THE INTERNET OF THINGS (IoT) TECHNOLOGIES IN SMART CITIES

The Internet of Things is the foundation of intelligent city implementation (IoT). The IoT is the technological foundation of smart cities, in other words. Smart cities need to have three main features: knowledge, interconnection, and IoT-enabled instrumentation. It can be claimed that smart cities can be made feasible by the use of IoT[12]. The use of smart phones, smart meters, smart sensors, and radio-frequency identification (RFID) in essence forms the IoT framework in the smart cities. The IoT framework consists of various components including electronics, sensors, networks, firmware, and software. IoT is the network of interconnected physical objects (called “things”) including computers, smart phones, sensors, actuators, wearable devices, homes, buildings, structures, vehicles, and energy systems. The IoT ensures the communication of many variety types of systems and applications for providing increasingly smart, reliable and secure services. A large variety of sensors including RFID, IR, and GPS, connect the buildings, infrastructure, transport, networks and utilities through ICT. Some of the IoT-related technologies are discussed in the following

- Radio-Frequency Identification (RFID)
– RFID is used to carry out their automatic identification and assign a unique digital identity to each object, in order to be incorporated in the network and related to the digital information and service.
- Wireless sensor network (WSN) - WSNs could be integrated with RFID

systems to gain some goals like obtaining information regarding the position, movement, temperature, etc.

- Addressing - To monitor them through the Internet, it is vital to address the large-scale combination of artifacts in a unique way. Reliability, scalability and persistence, in addition to the aforementioned definition of uniqueness, denote the primary criteria for creating a unique addressing scheme

Middleware - In reality, middleware combines the functionality and communication capabilities of all the devices involved in a succinct way.

5. SMART CITIES: COMPONENTS AND CHARACTERISTICS

The components of smart cities are smart infrastructure, smart housing, smart transport, smart energy, smart healthcare, smart technology, smart governance, smart education, and smart people. Depending on their emphasis, various smart cities have varying levels of these smart components. Sustainability, quality of life (QoL), urbanization, and intelligibility are the different characteristics of smart cities. The sustainability of a smart city is related to city infrastructure and governance, energy and climate change, pollution and waste, and social issues, economics and health. The quality of life (QoL) can be measured in terms of the emotional and financial well-being of the citizens. The urbanization aspects of the smart city include multiple aspects and indicators, such as technology, infrastructure, governance, and economics. The smartness of a smart city is conceptualized as the ambition to improve economic, social and environmental standards of the city and its inhabitants. Smart economy, smart citizens, smart mobility, smart governance, and smart living are numerous widely cited facets of city smartness.

6. BIG DATA ANALYSIS IN SMART CITIES

The rapid processing of Big Data of poorly structured data in the "smart cities" projects involves a wide range of activities concentrated on the selection, transmission, transformation, storage and analytical processing of information flows concerning the state and processes of environmental pollution, weather, accumulation and utilization of wastes, water supply and other natural resources, heat and energy sources, sensory of city events and incidents [4]. At the same time, mining and transformation of data concerning urban life from social networks are carried out. The technologies of data transmission and selection formed by urban engineering components, are based particularly on the use of wireless sensors integrated into numerical industrial and service information-technological applications [5]. The combination of data obtained from both physical sensors and social sources contributes to the formation of full picture of city-wide processes, complexes, subsystems and structures.

7. SMART CITY DESIGN: CHALLENGES AND OPPORTUNITIES

The challenges for building smart cities are quite diverse and complex. A few include cost, efficiency, sustainability, communication, safety, and security [13]. These design challenges are governed by various factors including the natural environment, government policy, social communities, and economy. Cost is the most important factor of the smart city design. The cost includes design cost and operation cost. The design cost is a onetime cost of the smart cities. Operation cost is that cost that is required to maintain the smart city. Design cost needs to be small to make a smart city realization possible. At the same time small operation cost will make it easier for cities to operate on a long run with minimal burden on the city budget. Cost optimization over the complete system lifecycle can be a challenging problem. Operation efficiency of the smart cities is an important challenge: higher efficiency can

reduce the operational cost and improve sustainability of the smart city [14]. Cutting down carbon emissions and city waste is needed to enhance sustainability and efficiency, and reduce operation cost. Smart cities need to cope up with population growth while ensuring long-term sustainability with optimized operation cost. Smart cities need to be resilient to disasters and failures. Disasters can come from nature. Failures can originate for many reasons in the system such as a failure in ICT, or power failure. Natural disasters also can lead to failure of various components of smart cities.

These disasters and failures must be taken into account in any smart city design so that smart cities can recover from such circumstances efficiently within minimal time. These problems will impact the design and operating costs of smart cities. Smart cities are made possible due to the effective use of many smart components including ICT, sensors, and IoT and will need to process and store large volumes of data [15]. Security of the information and infrastructure is an important design challenge. Above all, public safety is a critical design challenge for smart cities as the safety of the inhabitants is of paramount importance, which can also increase design and operation budgets.

8. CONCLUSION

In order to build productivity, enhance sustainability, encourage economic growth and improve the quality of life of the people who live and work in cities, smart cities use data and technology. Today, smart city technology paves the way for the next wave of consumer investment and services. Smart cities need information on lighting, smart neighbourhoods, micro grids, electric cars, fibre and other smart solutions in order to work properly. All of these entail several complexities that still need to be addressed in the distribution of goods and services in the fields of distributed manufacturing, solar, energy management and infrastructure. A

combination of data collection, processing and distribution technology, network and computer technologies and data protection and privacy measures are used by Smart City to promote application innovation to enhance the overall quality of life of its residents, including infrastructure, healthcare, transportation, entertainment and public services. Whether it's improving security, resilience, sustainability, traffic congestion, public security or municipal services, every community should invest in developing smart cities based on smart systems for a variety of reasons. These improvements lead to improving the protection of electricity, energy efficiency and economic stability of major urban centres, which are slowly but steadily becoming hubs of the 21st century's economic and social growth. Energy management has seen the advent of "smart things: smart networks, smart water and smart energy. All these components are becoming an integral part of the Internet of Energy (IoE), a modern intelligent network capable of sharing data, knowledge and energy in two ways. Big Data will help coordinate wind and solar energy with conventional energy sources in the smart cities of the future. Government and public efforts can build infrastructure to avoid energy scarcity and loss, in order to operate efficiently with big data and smart cities. In this article, we present a brief overview of Green IoT, smart city energy-efficient solution, smart city technology and smart city architecture challenges and opportunities.

AN ANALYSIS OF MACHINE LEARNING TECHNIQUES IN MALWARE INVESTIGATION PROCEDURES AND TOOLS: A COMPARATIVE ASSESSMENT

Mrs. M. MEENAKRITHIKA,

Assistant professor,
Department of computer science,
NGM college, Pollachi, Tamil Nadu, India.

Dr. E. RAMADEVI,

Associate professor,
Department of computer Science,
NGM college, Pollachi, Tamil Nadu, India.

ABSTRACT

Malware refers to suspicious code and software to contaminate computers of individual or collapse entire network of organization. It is installed in a system without knowledge of owner. It is installed and handled by third party to hack the data or corrupt the data of the user. The Malware developers are spreading their malicious software and it is not single software it may be in the following forms such as – worms, trojan horses, spyware, viruses, rootkits, cookies, adware, and many more through the world of immense networking – the Internet.

Keywords: Malware, worms, Trojan horses, spyware, viruses, rootkits, cookies

INTRODUCTION

The Internet has become an essential part of our life as it fastens us to the entire world virtually but it opens the path for various people with malicious intents, who aim to attack and harm legitimate clients in different ways for various reasons. Many a time the reason is money. A point to be noted in this respect is the use of malicious software which is installed in the computer without the cognizance of its owner – this software can take away confidential data and also allow isolated access which may cause the denial of services (DoS) in the system [4]. To secure legitimate users from diverse threats, security vendors such as antivirus software offer detection and analysis procedures. Numerous online tools can dynamically inspect the malware and detect it, the tools use cloud

computing hence they are more efficient and safer. The main idea of this study is to diagnosediverse online malware analysis tools and compare them based on their analysis.

Objectives

The main objectives followed as –

1. Evaluating online and offline dynamic malware analysis tools.
2. Comparing the results centered on the methods of analysis, the correctness of results, and time needed to analyze the malware.
3. Collecting the reports of the malware study from the scene.

II. LITERATURE SURVEY

The research articles related to malware analysis declared different tools and techniques which can be potentially pursued to detect and analyze the malware. There are two basic methods to analyse the malware, Static and Dynamic [2]. Many of the studies defines that, dynamic analysis is much more efficacious and exact than static analysis [3]. Distinct malware cases may illustrate the characteristics of various sections at the same time. The tools must be compelling enough to detect different malware efficiently. There are different techniques identified under dynamic analysis – Process Call Monitoring, Process Parameter Analysis, Tracking of information, Instruction Tree, Auto-Start Extensibility. Due to enormous malware obfuscation, the results from static and dynamic analysis seem to be deficient, this directs the security analysts to use machine learning, deep learning, and neural network techniques. Machine learning methods for malware analysis has seen enormous growth in the research field these days, there are features collected from static and dynamic analysis to figure out the

malware [26]. Even neural networks can be used to predict the malicious software from the raw bytes of the file [26]. The malwares can be branched into different families and then the final dataset should be used for machine learning, various ML algorithms were compared on various tools and the outcome state that Random Forest is the best algorithm for analyzing the dataset [27]. Since there is an increasing number of malwares these days, researchers are proposing the use of data visualization with ML which will escalate the accuracy. The exactness using n-gram features of the masked code and then using Machine Learning model for analysis [31].

III. MALWARE ANALYSIS AND DETECTION METHODOLOGY

To understand the maliciousness of the malware, it should be analyzed in two methods – 1. Static Analysis and 2. Dynamic Analysis. To detect, if a given program is malware or not, it must be primarily analyzed Statically and then dynamically [4]. The flow chart of different malware detection techniques has been shown in figure no. 1.

Fig. 1. Hierarchal representation of Malware analysis and detection techniques

A. Malware Analysis Methods Static Analysis. Using this method, we audit the software without running it. In static analysis, this method is divided down by the procedure of reverse engineering [3]. The static analysis compares the program with a huge database of assorted signatures using string and hashing

mechanisms [4]. Though the static analysis can easily analyze and detect the known malicious software but fails for complex and new malicious software. Some of the latest static analysis techniques can analyze composite malware but these processes are quite inconvenient and require more advanced

knowledge in operating systems and disassembly. Dynamic Analysis. Analysing the characteristic of the strategies that have been implemented while the program is being run decides dynamic analysis. It can be implemented by different techniques such as tracking the function calls, analyzing the function parameters, tracking the information flow, tracing the instructions, and AutoStart Extensibility Points [2].

The advancement in files and registry, networking activities, and access to the RAM and various HDD (hard-drive) can also be examined and used for dynamic malware analysis. For detecting a new malware dynamic analysis is always chosen above static because although the structure of the malware changes the behavior and the characteristics does not change and remain as it is which helps dynamic analysis to detect the malware easily [4]. In recent times it is observed that the malware has risen more intelligent, they cease executing immediately it detects any behavioral analysis is being done. In these cases, Machine Learning surpass both dynamic and static analysis methods [6].

B. Malware Detection Methods Signature Based Detection Technique. Signature is a distinguishing behaviour of a particular malware with which it can be easily detected. This method is also called – pattern matching, string matching, mask matching, and fingerprinting technique. A signature is a bit of sequence introduced in the application program by malware writers, to uniquely identify a particular malware [3]. Also,

C. hashing made to the code of the malware with various algorithms such as SHA 256, MD 5, MD 4, etc. which is utilized for comparing process later on.

Behavior-based Detection Technique. In this technique, the behavior of the program is utilized to determine whether a specific one is malware or not. It will not look for the code and the code sequence. The major disadvantage of this technique in Sandbox or a VM machine the malicious software doesn't always show its full potential and all the characteristics. Hence, it is found that it will guide to some incorrectly or wrong malware analysis [4].

Heuristic-Based Detection Technique. Also called as the proactive technique, is like the signature-based technique in detecting malicious code. Machine learning method is used to ascertain the behaviour of the malware. Here, the API system calls, Opcodes, N-Grams, Control flow Graphs, and hybrid features are been executed. This comes with the malware detector, a new feature that seek for the commands and instructions in the application program that has not been discovered earlier. This supports in discovering various novel viruses and maintaining their signatures.

D. Malware Detection Tools There are countless tools for detecting malware and few of them have been identified and presented in the following tables. The tools are divided into static and dynamic malware analysis.

TABLE I. STATIC ANALYSIS TOOLS

Sno	Tool Name	Description
1	PE id [4]	Supports in identifying complicated malware. It works on the signature-based detection process having almost 600 fingerprints of different malware.
2	PE view [9]	Information about the file headers and portable executables are being provided by this tool. Various description of the malware is accumulated from this tool including – compile-time and import/export functions.
3	PE explorer [4]	Similar to PE View this tool provides features - Files packed from malware packers such as UPX and Ns Pack can be unpacked.
4	Bin Text [10]	Character strings of a binary file can be searched and

		displayed using this tool
5	UPX [9]	This tool is used to compress Malware samples with the method of packing the executables
7	Dependence Walker [4]	This tool was implemented by Microsoft for static analysis which explores the DLLs and functions imported by the malware
8	Resource Hacker [11]	This tool is specially made and used in the Windows operating system. The tool is used to view, modify, add, and extract resources for both 32bit and 64bit Windows executables.
9	IDA pro [11]	This tool is very famous among malware analysts, reverse engineers, and vulnerability testers. This gives an interactive disassembling feature.
10	Hex Editors [4]	Binary files are viewed and edited using this tool.

TABLE II. TOOLS USED FOR STATIC MALWARE ANALYSIS

Sr no.	Tool's Name	Illustration
1	Process Explorer [12]	Having affinity with the task manager, this tool give the active running processes in a hierarchical view of processes.
2	Process Monitor [13]	Real-time file creation, file read, file writes, and file closure use this tool. This tool has other functions like – 1. Monitoring the registry and activity changes 2. Tracking processes and networks.
3	Reg shot [14]	Two registry snapshots are held, one before and after the process to analyse the changes therefore if any malicious activity is present, it can be easily detected by the reg shot.
4	Net cat [15]	A Tool to keep track of inbound and outbound connections.
5	Wireshark [16]	This is a network packet analyser have the potential to capture the network traffic generated by malware immediately it was executed.
6	Olly Dbg [17]	When the source is not available this x86 debugger is utilized for the binary code analysis.
7	Burp Suite [18]	Security of web applications is tested with this tool. This tool can monitor various server requests posted by the malware to any remote server. All the HTTP and HTTPS invocation made by the malware can be intercepted by this tool using the Man in the Middle Attack.
8	Sandboxes [4]	Sandbox is a virtual container that can be utilised for analysing untrusted programs/malware in a virtual system (installed inside or outside the main system which is relatively a safer environment) without hurting the main system. The sandboxes use both static and dynamic approaches to analyse the programs.

IV.IMPLEMENTATION, COMPARISON AND ALGORITHM ANALYSIS

It is found that Dynamic Malware analysis is consistently better than Static Malware analysis, but for analyzing the malware in the computers the malicious codes must be executed such that the tools can keep a check on the activities taking place in the computer. This procedure has an increasing probability of harming the computer as the malware runs

freely on the computer. There are various online-based malware analysis tools identified which works on cloud computing and online virtual machines. These tools provide efficient malware analysis and no harm to the user's computer. The goal of this paper is to analyze the different dynamic malware analysis tools mainly the online-based ones and compare them among each other for identifying the best. The online and offline software's identified has been shown in table no. 3.

TABLE III. COMPARISON OF VARIOUS MALWARE ANALYSIS TOOLS (BOTH ONLINE AND OFFLINE)

Name	Description	Detection Method	Time Required	Result
Reverss (Anlyz) [20]	It provides automated dynamic malware analysis and helps Cyber Intelligence Response Teams (CIRT) to solve complicated malware problems effectively and steadily.	Reverse Engineering, Cognitive Analytics, Swift Reversal, Real-Time Classification, and comprehensive reporting	11 days (SLOW)	Malicious
Any run [21]	This is a cloud-based malware analysis tool that can be uploaded and is analysed in the online Virtual Machine	Signature-based, behavioural, and heuristic-based analysis	1 hour (FAST)	Malicious
Valkyrie Verdict [22]	This tool has an effective database of malware that are used for static behavioural analysis. The analysis is very fast for the same reason. After uploading the malware on the cloud the analysis is done.	Signature-based static malware analysis	Less than an hour (VERY FAST)	Malware Malicious
Virus Total [25]	Suspicious files can be uploaded which are compared with different anti-virus software and outcome are given, whether the signature along with the URLs is available	Signature-based and Heuristic-based	Less than an hour (VERY FAST)	Malicious

	in Anti-virus software.			
Olly DBG (offline) [17]	When the origin is not available this x86 debugger is used for the binary code analysis.	Reverse Engineering	Less than an hour (VERY FAST)	Malicious
Reg Shot (offline) [14]	Two registry snapshots are taken, one before and after the process to analyse the changes so that if any malicious activity is present it can be easily detected by the reg shot.	Reverse Engineering	Less than an hour (VERY FAST)	Malicious

V. RESULT AND DISCUSSION

From the study, it is found that different types of malware analysis methods can be used to detect malicious code. Yet there must be an algorithm that can be followed in such a way that the analysis procedure becomes much easier to execute. The tools chosen based on the above comparison tables. The tools are numbered according to the order of higher precedence which was found from the study.

VI. CONCLUSION

In this research work different types of tools and ways in which a particular malware can be analysed are well explained. Various researches show that one single malware couldn't be analyzed in a single tool. Experimental results show that every malware analysis tool has a different metric and way to analyze the malicious code. It is also found that IntezerAnalyze software as best among various tools since it can take the output from Virus Total using unique Genetic software mapping algorithm. This algorithm is comparing the genes with various other malware for coming to a solid result.

ABSTRACT

Crop disease identification plays a pivotal role in ensuring food security and agricultural sustainability. The advent of deep learning has significantly advanced the field of computer vision, providing powerful tools for automated image analysis. In this study, investigation of application with deep learning algorithms for image segmentation in the context of crop disease identification is carried out. So started to conduct an extensive review with the existing literature, that focus on prominent deep learning architectures such as U-Net, FCN, DeepLab and their variants. The research involved the development of a novel dataset comprising images of both healthy and diseased crops, representing diverse crop types. The labeled dataset facilitates the training and evaluation of the proposed deep learning models. The effectiveness of Convolution Neural Network(CNN) using Gated Recurrent Unit(GRU)in capturing intricate details relevant to crop disease segmentation. Additionally, explore the impact of transfer learning to leverage pre-trained models on large-scale datasets. Then results try to highlight the potential of transfer learning in enhancing the performance of deep learning models particularly when training data is limited. Furthermore, various comparison of segmentationaccuracy with different architectures is developed. Then discuss their strengths and limitations in the context of crop disease identification. Multi-scale information integration and comparative analyses contributes valuable insights into the selection of appropriate architectures for specific agricultural scenarios.

Index terms CNN, CNN-GRU,deep learning, Image Segmentation

I. INTRODUCTION

Agriculture, being the cornerstone of global sustenance, faces the constant challenge of ensuring crop health to meet the demands of an ever-growing population. The identification and mitigation of crop diseases are critical components in achieving optimal agricultural productivity.

Traditional methods of disease detection often rely on manual inspection, which is time-consuming and susceptible to human error. The integration of advanced technologies, particularly deep learning, has emerged as a transformative solution to automate and enhance

the accuracy of crop disease identification. This research focuses on the application of deep learning algorithms for image segmentation in the realm of crop disease identification. By delving into state-of-the-art architecture of Convolution Neural Networks (CCN), aim is to advance the understanding of how this model can be tailored to address the unique challenges posed by diverse crop types and diseases. The study not only investigates the segmentation accuracy of these models but also explores the impact of accuracy assessment, a technique proven to enhance performance when training data is limited.

II. DEEP LEARNING

Deep learning, a subset of machine learning, leverages neural network architectures to extract intricate patterns and features from complex datasets. In recent years, these techniques have demonstrated remarkable success in various computer vision tasks, prompting their application in agriculture for crop disease analysis. Image segmentation, a fundamental computer vision task, holds immense potential in delineating regions of interest within

agricultural images, aiding n the precise identification of diseased crops. To facilitate investigation, a curated comprehensive dataset encompassing images of both healthy and diseased crops across various agricultural settings are persuaded [1].

The dataset serves as a benchmark for training and evaluating the proposed deep learning models. Through rigorous experimentation, seek to elucidate the strengths and limitations of different architectures, providing valuable insights for researchers and practitioners engaged in precision agriculture [2]. As the global demand for food security intensifies, the integration of automated crop disease identification tools becomes imperative. This research contributes to the ongoing discourse on leveraging deep learning for precision agriculture, with a specific focus on image segmentation as a pivotal step towards accurate and efficient crop disease identification [3]. The outcomes of this study are poised to catalyze advancements in sustainable farming practices and empower farmers with timely and informed decision-making capabilities [4]. The framework of deep learning model is shown in Figure 1.

Figure 1: Framework of Deep Learning Model

III. PROPOSED CNN-GRU ARCHITECTURE

Identifying plant-leaf diseases using a combination of Convolutional Neural Networks (CNNs) for image processing and Gated Recurrent Units (GRUs) for sequential analysis can be an effective approach. Below is a conceptual outline of how you might structure such a model. The actual implementation details can vary based on the specification of dataset and task [5]. Input images of plant leaves, each with dimensions (width, height, and channels). Typical preprocessing steps, such as normalization, may be applied. Use convolutional layers to capture spatial features in the input images. Apply filters to identify patterns related to plant diseases. Use activation functions like ReLU to introduce non-linearity. Down sample the spatial dimensions to reduce computational complexity [6].

Algorithm

Step 1: CNN layers consist of convolutional and pooling layers to extract spatial features from the input data.

Step 2: The flatten layer is used to flatten the output of the CNN layers before feeding it into the GRU layer.

Step3: The GRU layer is configured to handle sequential dependencies. **return_sequences=True** ensures that it returns the full sequence of outputs for each input sequence.

Step 4: Dense layer is used for the final prediction.

Max pooling or average pooling can be applied. Create multiple stacks of convolutional layers to extract hierarchical features. Each stack captures features at different levels of abstraction. Reshape the output of the last convolutional

layer to fit the GRU input. GRUs will process features along the spatial dimension, treating each column as a time step. The hidden states capture contextual information across different spatial regions [7]. Apply upsampling layers to increase the spatial resolution. Concatenate the upsampled features with the corresponding features from the CNN layers. This process allows the model to refine spatial details. Apply additional convolutional layers to further refine the segmented features. Use a convolutional layer with Softmax activation for pixel-wise classification [8]. The number of output channels equals the number of classes (e.g., diseased, healthy).

3.1 Image Pre-Processing:

Data Preparation involves in the collection of dataset of plant leaf images containing healthy leaves and leaves affected by various diseases. Organize the dataset into training, validation, and test sets. Build a CNN for image classification[9]. This part of the model will be responsible for extracting features from the leaf images. Use pre-trained models like VGG16, ResNet, or Inception if you have a limited dataset or fine-tune them for your specific task. Remove the final classification layer of the pre-trained model and add a new dense layer for your specific classification task.

3.2 Image Segmentation:

Image segmentation is a computer vision task that involves partitioning an image into meaningful segments or regions [3]. The goal is to simplify the representation of an image or make it more meaningful for further analysis. Image segmentation is widely used in various applications, including object recognition, medical image analysis, autonomous vehicles, and more. Proposed architecture of CNN-GRU for Plant disease detection is shown in Figure 2.

3.3 Data Augmentation:

Data augmentation is a technique commonly used in machine learning and computer vision to artificially increase the diversity of a training dataset by applying various transformations to the existing data. This helps improve the generalization and robustness of machine learning models, especially in scenarios where the available training data is limited. In the context of image data, data augmentation involves applying transformations to the images, creating variations that still represent

meaningful inputs. Apply data augmentation techniques (rotation, flipping, zooming) to artificially increase the size of training dataset and improve model generalization

3.4 Disease Detection

Disease detection, especially in the context of computer vision and machine learning, refers to the process of identifying and classifying diseases or abnormalities in various types of data, such as medical images, sensor data, or biological samples [10].

Figure 2: Proposed CNN-GRU for Plant disease detection

3.5 Accuracy Assessment

Accuracy assessment is a crucial step in evaluating the performance of a machine learning model. It involves measuring how well the model predicts outcomes compared to the actual values. The concept of accuracy is fundamental, but it's important to consider other metrics, especially in scenarios with imbalanced classes or when certain errors are more critical than others.

3.6 CNN with GRU for Sequential Analysis

Take the output features from the CNN and feed them into a GRU network. The sequence of features can be considered as a temporal

sequence representing the development of the disease over time or as a sequence of different leaves. Add a dense layer on top of the GRU output for final classification. Use softmax for multi-class classification if you have multiple classes (types of diseases). Compile the combined model using an appropriate loss function (e.g., categorical crossentropy) and an optimizer (e.g., Adam). Train the model on your training dataset, including both healthy and diseased leaves. Monitor the performance on the validation set to avoid overfitting.

3.7 Training

Training a Gated Recurrent Unit (GRU) involves optimizing the model's parameters to

minimize a certain loss function using a dataset. Training a Gated Recurrent Unit (GRU) involves optimizing the model's parameters to a GRU Combining Convolutional Neural Networks (CNNs) with Gated Recurrent Units (GRUs) is a common practice when dealing with sequential data that has both spatial and temporal dependencies. This type of architecture is often referred to as a 2D-CNN-GRU model. Evaluate the trained model on a separate test set to assess its generalization performance [11]. Experiment with hyperparameters such as learning rate, batch size, and the number of GRU units to optimize the model.

3.8 Testing

The CNN part is responsible for capturing spatial features, while the GRU part handles sequential dependencies. Identifying plant-leaf diseases using a combination of Convolutional Neural Networks (CNNs) for image processing and Gated Recurrent Units (GRUs) for sequential analysis can be an effective approach

minimize a certain loss function using a dataset. Here's a general overview of the steps involved in trainin

[12]. Below is a conceptual outline of how you might structure such a model. The actual implementation details can vary based on the specifics of your dataset and task

3.9 Model Deployment

If the model performs well, deploy it for real-world plant-leaf disease identification. When identifying plant-leaf diseases using a combination of Convolutional Neural Networks (CNNs) for image processing and Gated Recurrent Units (GRUs) for sequential analysis, various measurements and metrics can be used to evaluate the performance of the model

Figure 3: Simple Convolution and pooling layer architecture

IV. EXPERIMENTAL RESULTS

Consider metrics that take into account both image and sequential information. This might involve combining the predictions from the CNN and GRU components in a meaningful way. Depending on the application, consider how interpretable the model is. Techniques such as attention mechanisms in the GRU can help understand which parts of the sequence are most important for making predictions. Three indices, including overall accuracy, precision, F1 Score and recall, as calculated in Equations (1)–(4), were measured to evaluate the performance of models. Performance of the Proposed CNN-GRU model-based framework as shown in Figure 3 for Plant disease has been evaluated using the parameters namely Accuracy, Precision, F1 Score and Recall are as follows

4.1 Accuracy

The accuracy of the overall model can be measured at the sequence level, considering the entire sequence of predictions, considering both the CNN and GRU components. Accuracy is referred as closeness of a calculated value to an actual value. Precision value does not dependent on accuracy and is given by

$$Accuracy = \frac{TP+TN}{TP+TN+FP+FN} \quad (1)$$

4.2 Precision

Precision measures the accuracy of disease predictions, and recall measures the ability to capture all instances of disease. Precision measures the accuracy of positive predictions. It is the ratio of true positive predictions to the sum of true positives and false positives.

$$Precision = TP / (TP + FP) \quad (2)$$

4.3 Recall (Sensitivity)

Recall measures the ability of the model to capture all the relevant instances. It is the ratio of true positive predictions to the sum of true positives and false negatives.

$$Recall = TP / (TP + FN) \quad (3)$$

4.4 F1 Score

F1 score is the harmonic mean of precision and recall. It provides a balance between precision and recall. F1 Score provides a way to merge both precision and recall into just a single measure that captures TP and TN properties. This is the harmonic mean of the two fractions which is given by

$$F1Score = 2 * \frac{TP+TN}{TP+TN+FP+FN} \quad (4)$$

4.5 Confusion Matrix

A Confusion matrix shows the number of true positives, true negatives, false positives, and false negatives. It provides a detailed view of the model's performance. Useful for binary classification tasks that illustrates the trade-off between parameters. If data involves a time component, analyze the performance of the model over time. This is particularly relevant for diseases that evolve over the course of the plant's growth. Choose the evaluation metrics that are most relevant to your specific problem and take into account the characteristics of dataset. Additionally, it's beneficial to use a combination of these metrics to obtain a comprehensive understanding of your model's performance.

The confusion matrices are shown in 4. In calculation I, although GRU has the lowest number of true predictions for healthy quadrants, it has more true predictions for diseased quadrants than the other two methods.

For the FCDNN, the opposite is the case, since 230 quadrants were classified as healthy and only 10 quadrants were classified as diseased. The reason is that the FCDNN is more likely to predict samples as healthy. In calculation II, GRU made more true predictions for healthy quadrants. In calculation III, Both GRU and XGBoost classified 105 healthy quadrants correctly; however, GRU had more true predictions for diseased quadrants than XGBoost. In calculation IV, the performance of GRU was similar to that of XGBoost; the difference was only one healthy quadrant. The FCDNN did not perform well in the classification of healthy quadrants. In conclusion, the calculation results show that

prediction accuracy can be improved by using a sequence-based model, i.e., GRU, with time-series imagery.

Besides accuracy, the GRU-based method also achieved greater precision detection in all calculation scenarios, as compared to the XGBoost and FCDNN methods. In all calculation scenarios, the GRU-based method outperformed XGBoost and the FCDNN in prediction accuracy. Although XGBoost and the FCDNN are very powerful methods, they do not incorporate time-based information. From above confusion matrix, it is found that reflectance values were lower for healthy quadrants than diseased quadrants.

Figure 4: Confusion matrix of the testing dataset

Moreover, this pattern became clearer near the end of the cropping season, which indicates that incorporating time-based information for satellite images can add information to the data analysis.

V. CONCLUSION

In this work, proposed a CNN-GRU model to detect diseases in plants. The model is tested with apple, blueberry, cherry, corn and tomato leaves. The data set undergoes image segmentation with data augmentation. Various investigation of machine learning and deep

learning models are carried out and optimally developed a hybrid model which combines CNN with GRU. First extract spatial features through CNN and fed in to multi-layered GRU model temporal features corresponding to the input times series data. The proposed model works well as compared to other baseline models, indicating the real world implementation of proposed model disease classification of plant diseases.

ABSTRACT

Cardiovascular Disease (CVD) Remains The Leading Cause Of Death Worldwide , Claiming Millions Of Lives Each Year. Early Detection And Prevention Are Crucial, But Traditional Methods Are Often Time -Consuming And Expensive . Spark , An Open -Source Distributed Processing Framework, Has Emerged As A Valuable Tool For Healthcare Applications, Capable Of Efficiently Managing Large Datasets. Its Machine Learning Library (Mllib) Is Specifically Designed For Scalable And Distributed Machine Learning, Providing A Suite Of Tools And Algorithms For Effective Model Development And Training On Large Datasets .This Study Explores The Application Of Several Machine Learning Algorithms—Logistic Regression (LR), Decision Tree (DT), Random Forest (RF), Gradient Boost (GBT), And Support Vector Machine (SVM)—Implemented In Spark Mllib For Heart Disease Prediction . Evaluation Across Three Diverse Datasets Ensures Robustness And Generalizability Of The Findings .The Results Reveal Distinct Predictive Performances , With GBT Consistently Demonstrating The Highest Accuracy Across All Datasets . By Leveraging Ensemble Learning Techniques , GBT Achieves An Average Accuracy Of 89.65%, Outperforming LR, DT, RF, And SVM. This Suggests Its Superior Ability To Capture Complex Relationships Within The Data. The Study Provides Valuable Insights Into The Performance Of Different Machine Learning Algorithms , Aiding Healthcare Professionals And Researchers In Selecting The Most Appropriate Models For Specific Applications . Moreover , The Deployment Of Spark Mllib Ensures Scalability And Efficiency In Handling Large Datasets, Making These Models Practical For Real-World Use.

Keywords: Logistic Regression, Decision Tree, Random Forest, Gradient Boost, Support Vector Machine, Apache Spark, Mllib

1. INTRODUCTION

And General-Purpose Cluster-Computing Framework For Big Data Processing. It Was Developed In Response To The Limitations Of Mapreduce, The Previously Widely-Used Framework For Processing Large Datasets. Spark Is Renowned For Its Speed, Performing In-Memory Processing, Which Makes It Much Faster Than The Traditional Disk-Based Processing Used By Mapreduce. Spark Provides High-Level Apis In Java, Scala, Python, And R, Facilitating Application

Apache Spark Is An Open-Source Distributed Computing System That Offers A Fast A Development . It Also Incorporates Built -In Libraries For SQL, Machine Learning (Mllib), Graph Processing (Graphx), And Stream Processing (Structured Streaming). Spark Distributes Data Processing Tasks Across A Cluster Of Computers , Allowing For Parallel Processing , Thereby Enabling Scalability . Additional Machines Can Be Added To The Cluster To Handle Larger Datasets Or Increased Processing Demands.

Spark Provides High-Level APIs That Can Be Deployed In The Cloud Or On Local Computing Infrastructures. In The Healthcare Domain, Apache Spark Is Used To Quickly Process Big Data From Both Structured And Unstructured Health Records. It Offers Memory Computations For Analyzing Data In Memory And Fault Tolerance, Which Is Faster Than Reading And Writing Data From Hard Disks. In Some Cases, A Big Data Platform Is Necessary For Handling Large Data Files In Machine Learning Applications. For This Purpose, We Implement Spark With The Mllib Library To Achieve Faster Results. Mllib Supports Machine Learning Algorithms, Including Regression, Classification, Clustering, Collaborative Filtering, And Decomposition. Apache Spark Is 100 Times Faster Than Hadoopmapreduce When Handling A Huge Amount Of Data. Spark Can Be Used To Ingest And Preprocess Diverse Healthcare Data Sources, Such As Electronic Health Records (Ehrs), Medical Imaging Data, Patient Records, And Administrative Data. ETL (Extract, Transform, Load) Processes In Spark Help Clean, Transform, And Integrate Data From Different Sources, Ensuring Consistency And Preparing It For Further Analysis. Healthcare Organizations Often Deal With Massive Amounts Of Data, Including Clinical Data, Genomics Data, And Sensor Data. Spark's Distributed Computing Capabilities Enable The Parallel Processing Of Large Datasets, Facilitating Faster Analytics. Spark's Machine Learning Libraries (Mllib) And Scalable Machine Learning Algorithms Can Be Applied To Analyze Patient Outcomes, Predict Disease Progression, And Identify Patterns In Medical Data. Spark's Machine Learning Libraries Enable The Development And Deployment Of Predictive Models In Healthcare, Which Can Be Used For Risk Prediction, Patient Stratification, And Personalized Medicine. Predictive Analytics Can Help Healthcare Providers Identify High-Risk Patients, Optimize Treatment Plans, And Allocate Resources More Effectively. Traditional Machine Learning Libraries Operate On A Single Machine, Limiting Their Ability To Handle Large

Datasets Efficiently. Processing Big Datasets Might Require Distributed Computing Frameworks Or Sampling To Fit Within Memory Constraints. However, Mllib In Spark Is Designed For Distributed Computing, Efficiently Processing And Analyzing Large-Scale Datasets Across A Cluster Of Machines. This Allows For The Parallelization Of Tasks And Faster Model Training On Big Datasets. Non-Spark Machine Learning Algorithms May Struggle To Scale Seamlessly As The Dataset Size Increases, Resulting In Longer Training Times And Increased Resource Requirements. However, Mllib In Spark Is Inherently Scalable, Handling Datasets That Are Too Large For A Single Machine By Distributing The Workload Across A Cluster. This Scalability Is Crucial When Dealing With Big Datasets In Healthcare, Where Patient Records And Medical Data Can Be Extensive. Traditional Machine Learning Algorithms May Experience Performance Bottlenecks When Dealing With Large Datasets, Leading To Lengthy Training Times And Suboptimal Resource Utilization. However, Spark's Distributed Processing Capabilities Improve Performance, With Mllib Optimizing The Use Of Cluster Resources, Resulting In Faster Model Training And Prediction Times On Big Datasets.

Traditional Machine Learning Libraries May Not Integrate Seamlessly With Other Spark Components, Limiting The Ability To Leverage The Entire Spark Ecosystem For Data Processing And Analysis. Mllib Is Part Of The Broader Spark Ecosystem, Enabling Easy Integration With Other Spark Components Like Spark SQL, Spark Streaming, And Graphx. This Facilitates End-To-End Data Processing Pipelines Within A Unified Framework.

In This Paper, We Present A Spark-Based Heart Disease Prediction With Three Different Benchmark Datasets Named BNG Heart Statlog To Address The Challenges In Computing A Huge Amount Of Data With Some Important Evaluation Metrics. The Classifiers Used For Building The Offline Model Are LR, SVM, GBT, And DT To Improve The Prediction Accuracy By Combining The Prediction And Validation

Results Obtained From The Mentioned Algorithms. Furthermore, The Paper Is Organized As Follows: Section Two Describes Related Works In This Field, Section Three Defines The Presentation Of Proposed Research, Dataset, And Methodology. Section Four Describes Results And Discussions Related To This Research, And Finally, The Paper Ends In Section Five With A Conclusion.

2. LITERATURE SURVEY

A. Ismail Et Al [1] Proposed A Hybrid System Based On SVM For Heart Disease Prediction. The System Extracts Key Features From The Dataset, Employing Appropriate Feature Selection Methods To Enhance SVM Performance. It Achieved A High Accuracy Of 90.5% In Classifying Heart Disease User Profiles In The Cloud. Selvi R.T Et Al [2] Developed An Optimal ANN Model For Heart Disease Diagnosis, Incorporating Distance-Based Multiclassified Instance Removal (DBMIR) And TLBO-ANN Techniques. This Model, Using The UCI Machine Learning Heart Disease Dataset, Was Implemented On Apache Spark For Offline And Online Prediction Of An Increasing Number Of Heart Disease Patients.

R. Venkatesh Et Al [3] Proposed A Big Data Prediction Analytics Model For Heart Disease Prediction Using The NB Approach (BPA-NB). This Approach Utilizes Bayes' Theorem For Probabilistic Class Analysis And Employs A Clustering Approach To Eliminate Unnecessary Data, Reducing Computational Complexity. The BPA-NB Approach Achieved An Impressive Accuracy Of About 97.12% In Predicting Only Heart Disease, Showing Decreased Computational Complexity Using

Mapreduce Algorithm With The Apache Spark Framework.

Ed-Daoudy Et Al [4] Developed A Data Processing Monitoring System Using Spark And Cassandra, Integrating A Random Forest Model For Healthcare Dataset Analysis And Real-Time Prediction. Similarly, [5] Utilized Spark With Apache Cassandra For Real-Time Breast Cancer Prediction Using Decision Trees On Actual Event Data. [6] Explores Apache Spark And Machine Learning For Real-Time Heart Disease Prediction Through Streaming Big Data, Proposing A Continuous Monitoring Framework. Nair Et Al [7] Introduced A Novel Approach To Real-Time Health Status Prediction Using Apache Spark And Machine Learning On Streaming Big Data From Twitter, Offering A Cost-Effective Solution For Proactive Health Monitoring. [8] Discusses Disease Prediction Using Machine Learning On Big Healthcare Data, Presenting A CNN-Based Multimodal Disease Risk Prediction Algorithm Evaluated On Real-Life Hospital Data.

Ghadgeet Al [9] Presents The Intelligent Heart Attack Prediction System Using Big Data And Data Mining Techniques For Diagnosing Heart Disease, Implementing Hadoop And Hbase For Real-Time Access To Large Datasets. Zolfaghar, Kiyana, Et Al. [10] Explore Big Data Solutions For Predicting The 30-Day Risk Of Readmission For Congestive Heart Failure Patients. Their Study Integrates Data From Multiple Sources, Including The National Inpatient Dataset, Showcasing The Effectiveness Of Big Data Solutions In Predicting Readmission Risk For Improved Accuracy And Scalability In Predictive Modeling.

3. MATERIALS & METHODS

3.1. Dataset:

In Our Study, We Utilized Three Distinct Datasets Related To Cardiovascular Diseases, Each Sourced From Different Platforms. The First Dataset, Focusing On Heart Failure, Comprised 12 Attributes And Was Obtained From Kaggle. The Second Dataset, Known As The BNG Heart Stalog Dataset, Featured 13 Attributes And Was Sourced From Openml. Lastly, The Third Dataset, Obtained From Kaggle, Included 14 Attributes And Covered A Broader Scope Of Heart-Related Information.

Table 1 Provides Comprehensive Details About The Features Present In Each Dataset, Facilitating A Clear Understanding Of The Variables Under Consideration. It Is Important To Note That All Three Datasets Were Carefully Examined And Found To Be Devoid Of Any Missing Values, Ensuring The Completeness And Reliability Of The Data For Our Analysis.

Dataset	Attributes
Heart Failure	Age, Anaemia, Creatinine Phosphokinase (CPK), Diabetes, Ejection Fraction, High Blood Pressure, Platelets, Sex, Serum Creatinine, Serum Sodium, Smoking, Time Death Event
BNG Heart Stalog	Age, Sex, Chest, Resting_Blood_Pressure, Serum_Cholesterol, Fasting_Blood_Sugar, Resting_Electrocardiographic_Results, Maximum_Heart_Rate_Achieved, Exercise_Induced_Angina, Oldpeak, Slope, Number_Of_Major_Vessels, Thal, Class
Heart	Age, Sex, Cp, Trestbps, Chol, Fbs, Restecg, Thalach, Exang, Oldpeak, Slope, Ca, Thal, Target

Figure 1 Illustrates The Structure Of The Framework Designed For Predicting Cardiovascular Disease. The Initial Step

Involves Loading The Dataset Into The Dataframe. Subsequently, Data Cleaning Is Executed Utilizing The Pandas Tool, Followed By The Application Of Preprocessing Techniques. The

Dataset Is Then Partitioned Into Training (70%) And Testing (30%) Datasets, After Which Machine Learning Algorithms Are Employed On The Divided Dataset. The Performance Evaluation Is Conducted Using The Train-Test Split Technique, A Standard Approach For Assessing The Effectiveness Of Supervised Machine Learning Models.

3.2 Data Preprocessing:

Data Preprocessing Is A Critical Step In The Machine Learning Pipeline That Involves Cleaning And Transforming Raw Data Into A Format Suitable For Training Machine Learning Models. The Goal Is To Enhance The Quality Of The Data, Address Any Inconsistencies Or Irregularities, And Prepare It For Effective Use In Predictive Modeling.

3.3 Feature Selection

Feature Selection Is A Technique That Filters Out Less Important Variables That Directs To A Simple, Better And Stable Model. In Spark, Implementing Feature Selection Is Harder Than Sklearn. So Simply Integrate The Feature Selection Step As A Part Of The Pipeline By Using The Function Selectfrommodel.

3.4 Machine Learning Algorithms In Apache Spark

A. Decision Tree: It Is A Popular Method For The Machine Learning Tasks Of Regression And Classification. In Apache Spark, The Decision Tree Is A Greedy Algorithm Which Performs A Recursive Binary Partitioning In The Feature Space And It Is Used Mostly In The Machine Learning Tasks Because It Is Easy To Interpret, Extend To The Multiclass Classification Setting, Handle Categorical Features, Capture Non Linearities, Do Not Need Feature Scaling And Also Feature Interactions Was Captured.

Can Capture Non-Linear Relationships And Interactions In The Data.

Prone To Overfitting, But Ensemble Methods Like Random Forest And Gradient-Boosted Trees Can Mitigate This.

B. Logistic Regression: It Is Generally Used For The Evaluation Of The Probability Where An Instance Fits A Certain Class. Logistic Regression Describes The Relationship Between A Categorical Outcome Quantity With One Or More Categorical Predictor Quantity By Using The Logit Transformation To The Dependent Variable Where The Logistic Model Forecasts The Logit Of Dependent Variable From Independent Variable. The Logit Function And The Equation Of The Probability Is Given Below:

$$\text{Logit}(P) = \log(P/1-P)$$

Logistic Regression Predicts Heart Disease In Big Data By Modeling The Probability Of Occurrence Based On Patient Features, Providing A Straightforward And Interpretable Binary Classification For Early Detection And Risk Assessment. Its Simplicity And Effectiveness Make It Suitable For Identifying Key Factors In Large-Scale Healthcare Datasets.

- Suitable For Binary Classification Tasks.
- Provides A Straightforward Interpretation Of Feature Coefficients.
- Effective When The Relationship Between Features And The Probability Of Heart Disease Is Approximately Linear.

C.Support Vector Machine:SVM Applied To Heart Disease Prediction With Big Data Involve Configuring SVM Models For Binary Classification, Utilizing Features Like Patient Demographics And Medical Indicators. The Algorithm Seeks An Optimal Hyperplane To Separate Instances Of Heart Disease And Non-Disease. SVM's Ability To Handle High-Dimensional Data Makes It Suitable For Diverse Feature Sets. The Iterative Training Process Ensures The Model's Accuracy In Predicting Heart Disease Outcomes, Contributing To Effective Early Detection In Large-Scale Healthcare Datasets. Adoption Of

SVM Aids In Leveraging Big Data For Robust And Scalable Cardiovascular Risk Assessment.

- Effective In High-Dimensional Spaces.
- Particularly Useful When There Is A Clear Margin Of Separation Between Classes.

D.Random Forest:Random Forest Applied To Heart Disease Prediction With Big Data Employs An Ensemble Of Decision Trees To Enhance Accuracy And Robustness. It Handles Diverse Features Effectively, Capturing Complex Relationships Related To Cardiovascular Health. Through Tree Aggregation, Random Forest Mitigates Overfitting And Provides A Reliable Model For Risk Assessment In Large-Scale Healthcare Datasets. Its Versatility In Handling High-Dimensional Data Contributes To Improved Predictive Performance. The Algorithm Is Particularly Effective In Uncovering Subtle Patterns And Interactions Within The Complex Landscape Of Heart Disease Risk Factors.

Combines Multiple Decision Trees To Improve Accuracy And Robustness.

..... Effective In Handling A Large Number Of Features And Capturing Complex Relationships.

E.Gradient Boost Tree: GBT Applied To Heart Disease Prediction With Big Data Involves Ensemble Learning Where Weak Learners, Often Decision Trees, Are Sequentially Trained To Correct Errors Of The Previous Ones. It Enhances Accuracy By Combining Multiple Models, Emphasizing Patterns In Complex Datasets Related To Cardiovascular Health. Gradient Boosting Minimizes Prediction Errors Through Iterative Training, Making It Effective For Uncovering Nuanced Relationships In Heart Disease Risk Factors. The Algorithm's Adaptability To Handle Diverse Features Contributes To Robust Predictions In Large-Scale Healthcare Datasets. Employing Gradient Boosting Enables Comprehensive Risk Assessment For Improved Cardiovascular Disease Detection And Prevention.

Builds An Ensemble Of Weak Learners Sequentially To Correct Errors.

- Often Provides High Accuracy And Can Handle Non-Linear Relationships.

Table 2: Accuracy Of Machine Learning Classifiers Using Pyspark

Algorithms	Accuracy			Average
	Heart Failure	BNG Heart Statlog	Heart	
Logistic Regression	87.90	83.44	84.04	85.12667
Decision Tree	86.58	88.81	79.81	85.06667
Random Forest	87.81	88.81	82.56	86.39333
Gradient Boost	88.90	96.58	83.48	89.65333
Support Vector Machine	94.03	92.17	80.18	88.79333

Figure 2: Comparison Of Machine Learning Algorithm Using Mllib

In The Analysis, A Random Forest Classifier Achieved An Accuracy Of 86.34% , Decision Tree Achieved 85.07% Accuracy Which Is Nearly Equal To The Logistic Regression Accuracy Of 85.13% Which Is The Lowest Of All The Classifiers In The Analysis, Support

Vector Machine (SVM) Achieved 88.79% And Random Forest Achieved An Accuracy Of 86.34%

4. CONCLUSION

In This Research, We Developed A Predictive Model For Cardiovascular Disease Using Pyspark And Spark Mllib Libraries Seamlessly Integrated With The Apache Spark Framework. We Applied Various Supervised Algorithms, Including The Decision Tree Classifier, Logistic Regression Classifier, Support Vector Machine Classifier, Random Forest Classifier, And Gradient-Boosting Tree Classifier. To Assess Model Performance, We Utilized Accuracy Metrics And Formulated A Comprehensive Framework That Encompasses Stages Such As Loading The Cardiovascular Diseases Dataset, Cleaning And Preprocessing The Data, Implementing Classifiers, And Ultimately Evaluating Their Effectiveness. Notably, The Gradient-Boosting Tree Classifier Exhibited The Highest Average Accuracy, Reaching 86.65%. Our Future Work Entails An In-Depth Examination Of Extensive Datasets. Additionally, We Envision The Development Of An Online Heart Disease Prediction System, Leveraging Real-Time Data From Diverse Sources Such As Sensors, Mobiles, Wearable Devices, And Smartwatches, Which Will Be Streamed Into An Apache Spark-Based Machine Learning Model.

IOT SECURITY ENHANCEMENT USING DEEP LEARNING TECHNIQUES

M.MARIMUTHU,

Assistant Professor UG Department of Computer Science [SF],
Nallamuthu Gounder Mahalingam College, Pollachi

ABSTRACT

The rapid growth of the Internet of Things (IoT) has brought about a global concern for the security of interconnected devices and networks. This necessitates the use of efficient Intrusion Detection System (IDS) to mitigate cyber threats. Deep learning (DL) techniques provides a promising approach to effectively detect irregularities in network traffic, enhancing IoT network security and reducing cyber threats. In this paper, DL-based IDS is proposed using Feed Forward Neural Networks (FFNN), Long Short-Term Memory (LSTM), and Random Neural Networks (RandNN) to protect IoT networks from cyberattacks.

Keywords: Internet of Things Intrusion detection Cyber threats Deep learning Random Neural Network Long Short Term Memory Feed Forward Neural Network Machine Learning Network security

1. INTRODUCTION

The advancements of the Internet of Things (IoT), cloud computing, computer security, and cyber security has undergone significant progress on a broad scope recently. IoT is a potential paradigm for societal innovation concerned with the Internet and real things, including smart home automation, business applications, smart cities, and environmental monitoring. IoT presents enhanced adaptability and productivity, thereby facilitating the establishment of extensively interconnected frameworks that enable novel services [1]. The advantages are attractive for both industrial and consumer applications. The emergence of the IoT paradigm has been noted to coincide with the development of tailored solutions within the past decades, thereby defining the concepts of Industrial IoT and Industry 4.0 [2]. According to projections, there will be nearly three times as

many IoT devices in the world in 2030 compared to the 15.14 billion that exist today.

There are over 60% of IoT devices used in consumer markets and other corporate sectors. The percentage is expected to stay the same for the next ten years [3]. The network layer addresses the issues related to inter devices dependability, capacity building of data, energy utilization, and most significantly security aspects while connecting IoT devices to other networks, machinery, and services. The perception layer gathers data from the environment via sensors, actuators, and computing hardware. Considering power conservation, security, and interoperability issues, the physical layer manages operations like signal processing, encryption, and data transfer [7]. Security solutions for each layer of the IoT are broken down and categorized in Fig. 1 with the security threats on each tier.

Most IoT architectures includes a wide variety of information, enabling features, and technology expansion across three distinct tiers Improving the cybersecurity posture of crucial cyber infrastructures is a serious global concern. It is, therefore, crucial to identify cyber risks before implementing effective and robust cybersecurity remedies [9]. Fig. 2 depicts an overview of the architecture of the IoT, which interacts openly with authorized and unauthorized users encompassing many components, including but not limited to devices, sensors, servers, actuators, protocols, cloud services,

Fig. 1. Security threat and its mitigation in IoT layers [8], [9].

2. Literature survey

This section presents an in-depth review of the importance of cyber security in IoT infrastructure by reviewing previous studies and exploring the progress made by applying ML and DL techniques. This highlight the importance of IoT security and its challenges faced due to absence of IDS and emphasis on the need of IDS in IoT networks. The section examines existing research on deep learning-based IDS for IoT applications, focusing on identifying research gap in this area. Many research challenges must be updated to stop cyber attacks and make security solutions for light weight IoT networks. Applications like automobile, health monitoring, autonomous machinery, and smart homes generate a lot of data that requires new security measures. There needs to be more work done on intrusion detection for IoT, even though several academic and industrial researchers have utilized ML and DL techniques to build and deploy Intrusion Detection Systems (IDS) for IoTs during the past years.

2.1. IoT security challenges

IoT aims to improve the quality of life by providing a scope of smart, interconnected devices and applications across multiple domains. The critical challenges faced by IoT devices related to security threats lead to exploring advanced techniques such as DL to increase IoT security. A study in [21] introduced a Convolutional Neural Network (CNN) to enhance the efficiency and security of IoT networks by implementing an anomaly-based IDS. The model can identify intrusion and detect anomalies in traffic using the NID and BoT-IoT datasets, resulting in an accuracy of 99.51% and 92.85%, respectively. Even with the current progress in the IoT industry, a critical requirement exists for extensive research to enhance the threat detection rate of IoT systems. Thus, identifying anomalies in IoT devices is crucial in mitigating attacks

2.2. Intrusion detection systems in IoT

The IoT has a lot of potential across multiple sectors. However, techniques for detecting and avoiding security incidents must be developed to implement IoT in various businesses effectively. Several researchers use datasets produced by different organizations to support the development of ML models to predict intrusions. Due to this, not all classes of datasets have the same sample sizes, which is a common issue with datasets. Techniques like random undersampling and oversampling could be more effective in producing reliable results. Researchers in [25] tackle the problem of data imbalance in intrusion detection within the IoT by implementing a specialized loss function. The purpose of this function is to automatically focus on more complex negative cases over simple ones to lower the assigned weights. The effective training of ML models is facilitated by enabling changes in dynamically scaled gradients. This research demonstrates the effectiveness of a DL-based intrusion detection approach utilizing focal loss to analyze three datasets

derived from three distinct IoT domains. The FNN Focal technique performed better than the baseline model across the Bot-IoT dataset, achieving 91.55% accuracy. Whereas CNN Focal approach achieved a 24% increase in accuracy compared to the cross-entropy loss function. The scope is however limited to the Focal loss, thereby highlighting the necessity

2.3. Deep learning applications in security

The IoT network comprises several IoT nodes that transmit and receive large amounts of data, thus facilitating advanced intrusion detection techniques. The Attacks in IoTs go undetected for a long, resulting in service disruptions, financial loss, and identity theft. For IoT-enabled services to be reliable, secure, and profitable, IoT devices must be equipped with real-time intrusion detection. A fully connected four-layer network architecture (FCFFN) is presented in [18] to identify malicious traffic that targets connected IoT devices. In the FCFFN architecture, a deep neural network consisting of six layers are fine-tuned to detect intrusion accurately. The proposed deep learning-based IDS quickly identifies attacks on IoT networks like Blackhole, Distributed Denial of Service, Opportunistic Service, Sinkhole, and Workhole. The results show that the system is robust and can automatically identify attacks, with a detection rate of 93.21%, thus improving the safety of IoT networks. This IDS was however been trained using the dataset generated by the experimental system and includes only five types of intrusion.

IoT networks enable massive data flows between many devices. Attackers can now compromise the CIA traits of IoT devices and networks. IoT devices generates vast amounts of data that are difficult to analyze in real time, thus making IDS a challenge to build. A Deep Ensemble-based IDS was presented in [29] using a multi-classifier system known as Lambda architecture that identifies cyber-attacks using LSTM, CNN, and ANN classifiers to maximize batch layer training.

The batch layer trains the model, whereas the speed layer of the Lambda architecture makes decisions to improve the ability to make real-time evaluations. LSTM exceeds ANN and CNN-based classifiers in accuracy for Binary Classification. Hybrid Ensemble achieves 99.93% accuracy outperforming individual classifiers in multiclass by reducing processing time. The results indicate that the ensemble methodology

2.4. Related work on deep learning-based IDS for IoT

The growing of IoT devices and malicious software, as well as the wide use of encryption technology in IoT communication, has increased the amount of encrypted suspicious traffic between devices, posing a significant threat to IoT cybersecurity. Currently, many traffic detection techniques employed in the IoT need more dataset processing, suboptimal feature extraction, imbalanced data, and limited accuracy in multiclass classification. The vulnerability of IoT networks to threats was addressed by developing a bidirectional CNN-BiLSTM DDoS detection model, as proposed in [32]. The model was evaluated using the CICIDS2017 dataset and included three deep learning algorithms: RNN, LSTM-RNN, and CNN. This research builds a model responsive to different DDoS attacks and can distinguish between malicious and normal traffic to prevent false alarms. The CNN- BiLSTM model has an accuracy of 99.76%. This model examined the architecture of IoT networks and provided possible causes for their security flaws. The model demonstrated its compatibility with the existing IoT network infrastructure.

The increasing number of novel cyber-attacks poses a continual threat to modern IoT networks, requiring the development of advanced defense mechanisms to mitigate zero-day attacks effectively. The limitations of IoT devices are computing power and lack of endurance. Moreover, the diverse cyber-attacks poses a detection

requires continuous defense mechanisms. Researchers has proposed dynamic and distributed frameworks based on DL to detect cyberattacks [37]. The NSL-KDD and BoT-IoT datasets evaluate the performance of the LSTM and FFNN models within the framework. The framework was devised to safeguard IoT networks by utilizing fog layers to detect cyber-attacks. In order to boost detection and classification accuracy while reducing latency, fog layers evaluate data near the edge layer. The proposed distributed system detects cyberattacks by achieving an accuracy of 99.95%. The results indicate that FFNN exhibits a higher performance for the distributed NSL-KDD dataset. The proposed methodology has improved cyber-attack detection in IoT networks that utilize constrained end devices. This research is limited to sufficient data

2.5. Problem formulation

In future, advancements in anomaly detection within the system will enhance data processing and analyze security, thereby mitigating the risk of major failures in IoT networks. From the above review, it is clear that numerous methods have been proposed for enhancing the security of IoT devices. Multiple research has investigated IoT security and privacy concerns in cybersecurity. Complex models require tremendous resources, whereas lighter models are better suited for deployment on edge devices [20]. Current research has shown that DL needs to be enhanced because it produces misleading results that lead to inefficient procedures and overfits. Based on the above discussion, implementing advanced learning strategies can improve the performance of IDS [38]. Implementing security protocols for both the internal and external components of IoT devices is essential due to the importance of IoT networks. Attackers may launch destructive impacts on IoT-based critical applications. Implementing deep learning models for a better understanding of the decision-making process increases trust in the IDS and assists researchers in understanding and evaluating detection.

3. Proposed intrusion detection systems

This section presents a framework for deep learning-based intrusion detection to identify and classify potential vulnerabilities and attacks within IoT networks. The proposed framework is presented for three DL models, followed by a comprehensive evaluation of the tasks performed at each stage and a thorough analysis of the significant contributions of each step. The subsequent discussion comprehensively explains the intrusion detection dataset, hardware, software and libraries employed in this research.

2.6. Proposed framework

The proposed system has been designed to retrieve packets from the data produced by the underlying IoT infrastructure and identify intrusions following sufficient training. The proposed framework entails employing a traffic capture mechanism from an IoT Network, as proposed in [39], to collect the traffic flow of IoT devices. This data is then utilized to emulate the operations of an IoT-enabled Smart Home. The proposed framework involves utilizing a deep neural network trained on a dataset, CIC IoT 2022, consisting of network packets. The CICFlowMeter 4.0 is utilized as a feature extractor to extract relevant features from the packets transmitted through IoT networks

Anomaly detection encompasses a range of techniques, such as packet dropping, vulnerability scanning, IP address blocking, physical inspections, and user notification. The model under consideration streamlines the process of choosing algorithms for limited resources of IoT devices by considering actual performance and cost metrics, including accuracy and time cost. Tailored solutions address the distinct requirements of individual users are of paramount importance within the framework of anomaly detection systems for the IoT security. The dataset is subjected to

training through various DL models to identify anomalies. Thus, it can be deduced from the results of the model that has been trained. The system can run an algorithm to identify the existence of any malicious packets and conduct a thorough examination of the IoT devices. Hence, the proposed model aims to provide an best solution catering diverse user types, including large firms with abundant resources seeking maximum accuracy and startups prioritizing cost efficiency.

2.7. Workflow description of the proposed framework

The process consists of the following stages including data preprocessing which have importance in data analysis, as it involves cleaning, encoding, feature scaling and extracting the dataset. Data augmentation techniques is used to achieve class balancing and feature selection to identify the most appropriate features. The feature preprocessing encompasses the initial step of dividing the dataset, which is proceeded by the training, validation and testing of DL models.

Data Preprocessing: Initially, the network analyzer tool is employed to gather raw network traffic of IoT devices and extract packet features [39]. Features extraction can be done using CIC Flow Meter 4.0 [40] and convert PCAP (Packet Capture) files into CSV (comma-separated values) files. The dataset comprises 84 features, including 78 numerical values, five categorical values, and one label. The dataset features are subject to cleaning, feature scaling and encoding techniques before given to the DL models.

6. Conclusion and future work

This paper demonstrates the efficacy of deep learning-based IDS employing FFNN, LSTM, and RandNN models in countering cyber threats in IoT environments. The RandNN model exhibits its potential due to random connections, thus facilitating a more exploratory approach, enabling the model to capture intricate dependencies and uncovering

insights that might not be apparent in other architectures. The LSTM model shows strong suitability in addressing prolonged dependencies and effectively capturing temporal dynamics within the IoT data. Finally, the FFNN model has demonstrated superior results when compared with the proposed RandNN and LSTM models, and other state-of-the-art IDS techniques. Moreover, it has the ability to enhance the overall performance of an IDS by learning complex associations between input characteristics and output classifications. IDS framework enables the extraction and classification of features in a versatile manner, thereby facilitating the efficient identification of diverse cyber threats in IoT environments. The models can adjust to an IoT network's ever-changing and dynamic characteristics, thereby contributing to proactive mitigation of cyber threats. The results in this paper reflects compelling insights into the performance of various classifiers in effectively identifying a wide range of cyberattacks. The challenges associated with research in this field encompass several key aspects.

Abstract

The Ease of Doing Business (EoDB) index is a ranking system established by the World Bank Group. In the EODB index, 'higher rankings' that is a lower numerical value indicate better, usually simpler, regulations for businesses and stronger protections of property rights.

Easy of Doing Business (EODB) has come to be recognized as a cross-border barometer for doing business. In several ways, because of its relative simplicity and easy-to-measure criteria, it has also become an actionable report, as evident from India's new approach of working towards improving its relative position rather than continuing to question the exercise.

Keywords: *The Ease of Doing Business, Ranking, Value.*

Ease of Doing Business

Ease of Doing Business is computed by aggregating the distance to frontier scores of different economies. The distance to frontier score uses the 'regulatory best practices' for doing business as the parameter and benchmark economies according to that parameter. For each of the indicators that form a part of the statistic 'Ease of doing business,' a distance to frontier score is computed and all the scores are aggregated. The aggregated score becomes the Ease of doing business index. Indicators for which distance to frontier is computed include construction permits, registration, getting credit, tax payment mechanism etc. Countries are ranked as per the index.

Among the chosen 190 countries, India ranked 63rd in Doing Business 2020, World Bank Report. In 2014, the Government of India launched an ambitious program of regulatory reforms aimed at making it easier to do business in India. The program represents a great deal of effort to create a more business-friendly environment.

India has emerged as one of the most attractive destinations not only for investments but also for doing business. India jumps 79 positions from 142nd in the

year 2014 to 63rd in the year 2019 in 'World Bank's Ease of Doing Business Ranking 2020'. Positive changes have led to this impressive improvement in India's ranking in the EoDB index.

India's Major Achievements are **Construction Permits** and . India's ranking on this parameter has improved from 184 in 2014 to 27 in 2019. This improvement has been mainly on the account of a decrease in the number of procedures and time taken for obtaining construction permits in India. India's ranking on this parameter has improved from 137 in 2014 to 22 in 2019. It takes just 53 days for a business to get an electricity connection in India. Apart from these significant improvements, among the 190 economies, India ranks 13th in Protecting Minority Investors and 25th in Getting Credit.

The report was a benchmark study of regulation. The survey consisted of a questionnaire designed by the Doing Business team with the assistance of academic advisers. The questionnaire centered on a simple business case that ensures comparability across economies and over time. The survey also based assumptions on the legal form of the business, size, location, and nature of its operations. The ease of doing business index was meant to measure regulations directly affecting businesses and did not directly measure more general conditions such as a nation's proximity to large markets, quality of infrastructure, inflation, or crime.

The next step was gathering data surveys of over 12,500 expert contributors that are lawyers, accountants, etc in 190 countries who deal with business regulations in their day-to-day work. These individuals interacted with the Doing Business team in conference calls, written correspondence, and visits by the global team. For the 2017 report, team members visited 34 economies to verify data and to recruit respondents. Data from the survey was subjected to several rounds of verification. The surveys were not a statistical sample, and the results were interpreted and cross-checked for consistency before being included in the report. Results were also validated with the relevant government before publication.

A Nation's ranking on the index was based on an average of the following factors

Starting a business

Starting a business Includes Procedures involved, time, cost, and minimum capital required to open a new business

Construction Permits

Construction permits Consists the Procedures, time, and cost involved to build a warehouse

Getting Electricity

It includes the procedures, time, and cost required for a business to obtain a permanent electricity connection for a newly constructed warehouse.

Registering Property

It deals with the Procedures involved, time, and cost needed to register commercial real estate

Getting Credit

It Analyse the Strength of legal rights index, depth of credit information index

Protecting Investors

It takes in to account the Indices on the extent of disclosure, the extent of director liability, and ease of shareholder suits

Paying Taxes

It Considers Number of taxes paid, hours per year spent preparing tax returns, and total tax payable as a share of gross profit

Trading Across Borders

It consider the Number of documents, cost, and time necessary to export and import.

Enforcing Contracts

Procedures involved, time, and cost required to enforce a debt contract is considered.

Resolving Insolvency

The time, cost, and recovery rate under a bankruptcy proceeding are considered.

Conclusion

For attracting new investment, both foreign and domestic, several macroeconomic issues have to be addressed. These include economic stability and quality physical infrastructure. India may have the advantage of a large domestic market, and our efforts to improve our ease of doing business rankings finally yielding best results.

Abstract

Information and communication technology (ICT) has brought revolutionary changes to enhance professional development of teachers. At present several ICT related instructional devices like computers, smart phones, laptops, tablets, LCD, multimedia and projectors are used in classrooms for making more attractive and productive teaching and learning process.. Teacher is considered to be the architect of the nation. In other words, the future of the nation lies in the hands of teacher. This shows the importance of teacher. One can realize how important education is which makes one a teacher. Most Inspiring innovation in the field of education is the integration of Information and Communication technology in education. The teachers should cope with the increasing demand for information and skills. Chalk and talk method become very old method. To survive in the changing, developing world one could update themselves. Teachers must be flexible and willing to renew their vision of teaching and learning if they are to fully realize the potential of educational technology. ICT is extremely useful for professional development of teachers.

Keywords: *ICT, Professional development, Teachers*

Role of ICT in Professional Development of Teachers

Professional Development of Teacher is any type of continuing education effort for educators. It's one way teachers can improve their skills and, in turn, boost student outcomes. Learning can take place in formal or informal settings. Formal settings include conferences, courses, seminars, and workshops. Informal opportunities for teacher professional development include independent research or investigation, peer learning initiatives.

The introduction of ICT in the real m of education unleashes a Plenty of possibilities in the process of learning. Teachers can make use of different ICT tools like computers, laptops etc, to make conceptual comprehension easier for students. It aids them in implementing a variety of strategies in the classroom environment to improve learning

outcomes. They can effectively present ideas to the students using ICT and leave a long-lasting impact on them. For the learning process to be effective, it has to be a two-way process. ICT makes this possible. It enables students to refine their soft skills along with their technical skills. ICT tools provide students with the opportunity to speak up their minds through discussion forums. Performance analytics provided by different software assist teachers in understanding their students in a better way. Analytics reports of students help teachers to check for understanding of the students.

Teachers are the national builders responsible to train future generation to be able for facing challenges of present era, but this is not possible without having full command in utilization of ICT instructional devices properly. It is a fact that knowledge of ICT helps teachers to keep knowledge updated to use modern instructional technology in classrooms. Recently, ICT has become a basic need of human life across the world and no field can work effectively without its support. In education and training, it plays vital role to uplift teaching and learning process. The use of ICT facilities in teacher training programs has become necessary in classrooms and teachers are considering it most important pillar for better students learning.

ICT is extremely useful for professional development of teachers and helps the teacher in many ways.

ICTs can be used to reinforce existing pedagogical practices as well as to change the way teachers and students interact.

Effective ICT use in education increases teachers' training and professional development needs. However, ICTs can be important tools to help meet such increased needs, by helping to provide access to more and better educational content, aid in routine administrative tasks, provide models and simulations of effective teaching practices, and enable learner support networks, both in face to face and distance learning environments.

Effective teacher professional development should approximate the classroom environment as much as possible. "Hands-on" instruction on ICT use is necessary where ICTs are deemed to be vital components of the teaching and learning process.

Professional development activities should model effective practices and behaviors and encourage and support collaboration between teachers.

ICT enriches teaching by enhancing the initial preparation by providing good teaching and training materials, recording and feedback mechanisms.

ICT has removed the barriers of space, time and place between teacher and learner. It has established a healthy and interactive relationship between teachers and students.

ICT provides lifelong professional development by providing courses in a virtual situation, training in demand, orientation and refresher courses through video conferencing and online.

By the exchange of materials through virtual communities, sharing of ideas and experiences and collaborating on projects the ICT can revolutionize the whole teaching profession.

Conclusion

Due to the latest developments in the information and communication technology the role of teacher in the process of teaching and learning has increased many fold and has become more complex as such teachers are to equip themselves with latest technology then only they coup up the new challenges in the field.

Abstract

MSMEs, or micro, small, and medium-sized businesses, are the foundation of all economic growth. Through the improvement of household wealth, the creation of jobs, and the eradication of poverty, they support local economic development. Despite playing such a crucial role, MSMEs have limited access to financing, and research on the positive effects of financial inclusion on the performance of micro, small, and medium-sized businesses is few. The vast majority of MSME business owners that use fintech products in their operations demonstrate how these owners have used financial services, namely savings accounts, to have an influence on expanding financial inclusion. Micro, small, and Medium Enterprises (MSMEs) are important resources for generating employment and driving economic growth, but they are still too tiny and unorganized to have much of an influence. In India, almost 95% of businesses are categorized as tiny, which creates the odd "missing middle" problem. Lack of accessible financing is one of the main obstacles to MSMEs expanding.

Keywords: *MSMEs, Economic Development, Economic Growth, Employment.*

Introduction

India's social fabric has undergone a series of transformations since Independence. After the liberalisation of the economy in the 1990s, the market opened up and employment opportunities grew, as did the spending power and standard of living of the average Indian.

As financial access grew, so did social mobility. However, certain sections have lagged behind due to myriad reasons ranging from social barriers to a lack of access to education and financing. One of these sections is made up of a multitude of micro, small and medium enterprises (MSMEs), which form the foundation of the economy.

Financial inclusion refers to providing good quality financial products and services everyone can access and afford. Such provision should be irrespective of company size or an individual's financial condition. It aims at providing an equal economic opportunity for sustainable growth.

The micro, small and medium enterprises (MSMEs) sector contributes significantly to the manufacturing output, employment and exports of the country. The contribution of MSME to total GDP has been steadily rising. The table below shows the significance of MSME to the economy.

Recognizing the contribution and potential of MSME sector, the definitions and coverage of the MSE sector were broadened significantly under the Micro, Small and Medium Enterprises Development (MSMED) Act, 2006 which recognized the concept of “enterprise” to include both manufacturing and services sector besides, defining the “medium” enterprises. Government of India has taken different institutional and policy measures for facilitating credit to MSMEs in the last few decades. Institutional measures include creation of institutions such as Industrial Development Bank of India (IDBI), Small Industries Development Bank of India (SIDBI), National Bank for Agriculture and Rural Development (NABARD), Export Import Bank of India (EXIM Bank), State Finance Corporation (SFC)s, State Industrial Development Corporation (SIDC)s, National Small Industries Corporation (NSIC) and various other facilities.

Barriers to MSME Growth

The MSME sector faces several barriers to their growth and to realizing their full potential.

- Lack of availability of adequate and timely credit
- High cost of credit
- Collateral requirements
- Limited access to equity capital
- Problems in supply to government departments and agencies
- Procurement of raw materials at a competitive cost
- Problems of storage, designing, packaging and product display
- Lack of access to global markets
- Inadequate infrastructure facilities, including power, water, roads, etc.

- Low technology levels and lack of access to modern technology
- Lack of skilled manpower for manufacturing, services, marketing, etc.
- Multiplicity of labour laws and complicated procedures associated with compliance of such laws
- Absence of a suitable mechanism which enables the quick revival of viable sick enterprises and allows unviable entities to close down speedily
- Issues relating to taxation
- While the above list provides key barriers for MSME growth in general, these constraints play out more severely for microenterprises, particularly access to finance.

Challenges Faced by Msme in Securing Financing in India

Lack of Credit History: One of the primary challenges faced by MSMEs in securing financing is the lack of a credit history. Unlike large companies, MSMEs do not have an established track record and hence find it difficult to secure loans from banks and other financial institutions. This lack of credit history makes MSMEs a risky investment for lenders, which makes it challenging for them to obtain financing.

Inadequate Collateral: Another significant challenge for MSMEs is inadequate collateral. Banks and other financial institutions often require collateral for loans, which can be a challenge for MSMEs as they may not have assets to pledge as collateral. This requirement can limit the amount of financing that MSMEs can secure, which can hinder their growth and development.

Lack of Awareness About Government Schemes: The Indian government has launched various schemes and initiatives to promote MSME financing, but lack of awareness about these schemes remains a significant challenge. MSMEs often do not have access to information about these schemes, which can limit their ability to take advantage of them.

High Interest Rates: MSMEs also face high interest rates on loans, which can make it difficult for them to repay loans and can limit their ability to invest in their businesses. High-interest rates can also make it difficult for MSMEs to secure financing in the first place, as lenders may perceive them as risky investments.

Initiatives Taken by the Government and Private Sector: To address the challenges faced by MSMEs in securing financing, the Indian government and private sector have taken various initiatives.

Government Initiatives

The Indian government has launched several initiatives to promote MSME financing. Some of these initiatives include:

- **Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE):** The CGTMSE scheme provides collateral-free credit to MSMEs. The scheme guarantees up to 85% of the loan amount, which reduces the risk for lenders and makes it easier for MSMEs to secure financing.
- **Pradhan Mantri Mudra Yojana (PMMY):** The PMMY scheme provides loans up to Rs. 10 lakhs to MSMEs. The scheme has three categories of loans: Shishu (up to Rs. 50,000), Kishore (up to Rs. 5 lakhs), and Tarun (up to Rs. 10 lakhs). The loans do not require collateral and are available to both new and existing MSMEs.
- **Stand-Up India:** The Stand-Up India scheme provides loans up to Rs. 1 crore to SC/ST and women entrepreneurs for setting up new ventures in the manufacturing, services, or trading sectors. The scheme aims to promote entrepreneurship among these communities and provides support through the entire loan process.
- **Private Sector Initiatives:** Apart from government initiatives, the private sector has also taken steps to promote MSME financing. Some of these initiatives include:
 - **Online Lending Platforms:** Several online lending platforms have emerged in recent years that offer MSMEs an alternative to traditional bank financing. These platforms use technology to assess creditworthiness and provide loans quickly and efficiently.
 - **Collaborations with Government Initiatives:** Many private sector entities have partnered with government initiatives such as the CGTMSE scheme to provide financing to MSMEs. These collaborations have helped increase awareness about government schemes and make it easier for MSMEs to access financing.

Financial Inclusion and MSMEs

The lack of financial capital accounted for 21% of the weight out of 100 causes of illness. In 2006, Rakesh Mohan clarified. Regarding the critical evaluation of the investment cap, loan support, and fiscal incentives to priority sectors in the Small Scale Industries (SSI) strategy. He drew attention to the fact that India is not in a better situation than other developing countries and proposed that banks may enhance the financing of economic activity in the nation by liberalizing financial services more. They must establish a financing foundation from a larger deposit base and make profitable investments on (SSI) in order to meet the rising demand for credit.

Basic Pillars of the MSME Finance Policy Model

1. Legal and Regulatory Framework
2. MSME's Access to Financing Policy
3. Credit Infrastructure

4. Alternative Financing Infrastructure
5. Market Efficiency
6. Priority Sectors.

Digital Financial Inclusion of Women in MSMEs

Digital financial inclusion (DFI), especially for vulnerable groups like women, youth and micro, small and medium enterprises (MSMEs) is a core topic for discussions in international forums such as the G20. With a growing focus on the adoption of financial technology and digital payments systems by both individuals and businesses, the global digital payments market is expected to grow at an estimated compound annual growth rate (CAGR) of over 13 percent between 2022 and 2026. As access to, and usage of digital financial services increases, it can help promote gender equality by enabling affordable transfers, increasing women's bargaining power in case of social security transfers, increasing women's resilience to financial, economic and health shocks.

Yet, there continues to be several gaps in DFI of women, and thus, there has been growing prioritisation of DFI for women at a policy and programmatic level across G20 countries and in the G20 forum. With India entering the Troika in 2021 and taking over the G20 Presidency for 2023, there is a need for the country to focus on both the achievements and the issues related to DFI of women and MSMEs in India. To participate actively in the discussions, there is need to have a clear understanding of the issue and India's strengths. The Centre and state governments, the Reserve Bank of India (RBI), and National Bank of Agriculture and Rural Development (NABARD) have introduced several schemes and initiatives to facilitate DFI of women and MSMEs. Some of these schemes, such as the Pradhan Mantri Jan DhanYojana (PMJDY), Stand-Up India, and Pradhan Mantri MUDRA Yojana (PMMY), which have provided better access to digital finance to women, can also be showcased in the G20. Yet, there are hardly any survey-based studies on where the country stands, its achievements and gaps in DFI, especially with reference to the MSME women entrepreneurs and employees.

MSME-Financial Inclusion Base Set

Financial inclusion is measured across several dimensions. The dimensions are accessibility, corresponding to the range of financial services available, next is the usage, the extend to which customers make use them, and last one is the quality of the services, how well it caters to the needs, yet another addition to the last one is how does financial inclusion influence the decision of economic agents and increase economic well-being. The data are classified into demand-side and supply -side data. The demand-side comes from the needs from individuals and supply-side comes from the providers of financial service.

The Base Set is intended to be used in conjunction with at least the AFI Core Set of Financial Inclusion Indicators to provide an overall assessment of the state of financial

inclusion in a country. Over the two decades, three key aspects in economic development have created the conditions to develop the basic set of MSME finance indicators based on the growing recognition and emphasis on 1. The evidence-based policy that policy decisions will achieve expected outcomes. 2. Wider recognition of the important role that MSMEs play in the economic growth 3. Inability of MSMEs to harness their potentialities, due to lack of access and usage of appropriate financial products and services. Hence, to improve MSMEs access to financial services in order to promote inclusive economic growth, there is a need for rigorous and timely data on financial access and usage. The effective policies can be drafted if the financial inclusion status can be assessed. The MSME finance Base set is a limited set of indicators that aims to give a comprehensive view of the state of financial inclusion for MSMEs in a given country, with an emphasis on access to credit.

Present Challenges of MSME Finance to Rural Entrepreneurs

The response of Indian MSME sector and RBI through Financial inclusion strategies for the challenges during post COVID period can be based on the study done by a Foundation 6 on the "Third National Multi-Institutional Survey on MSMEs in India highlights green shots in MSME sector", which says that the emergency fund need has gone up to 82% in June 2021 from 68.6% in April 2020, although 79% have not yet availed the scheme of Rs.3 lakh crore of collateral free loans for MSMEs. Few other major challenges faced by MSME include physical infrastructure bottlenecks; absence of formalisation; inertia to technology adoption; capacity building; backward and forward linkages; lack of access to credit and risk capital; and the perennial problem of delayed payments, among others. However, to counteract these challenges, additional advantages like giving additional incentives, moratorium, restricting of loans, etc.,

Conclusion

Financial inclusion requires particular attention by every developing economy, like India and a continuous focused concentration by the Financial sector consisting of RBI and MSME sector in order to sustain the development process taking place through their continued efforts on the availability of credit first to the financially excluded sections of the society in general and to the MSME Entrepreneurs. This study concludes that the financial inclusion index year after year reflects that there is reduction in the financial exclusion and MSME sector makes continued efforts to reduce financial exclusion through provision of credit to the MSMEs entrepreneurs and the role of National Financial policy reduces the financial exclusion and also helps in reducing MSME financial inclusion.

INTRODUCTION

The G20 is an intergovernmental forum comprising 19 sovereign countries, the European Union and the African Union. It works to address major issues related to the global economy, such as international financial stability, climate change mitigation and sustainable development. The G20 is composed of most of the world's largest economies finance ministries, including both industrialized and developing countries; it accounts for around 80% of gross world product, 75% of international trade, two-thirds of the global population, and 60% of the world's land area.

The G20 was founded in 1999 in response to several world economic crises. Since 2008, it has convened at least once a year, with summits involving each member's head of government or state, finance minister, or foreign minister, and other high-ranking officials; the EU is represented by the European Commission and the European Central Bank. Other countries, international organizations, and nongovernmental organizations are invited to attend the summits, some permanently. The G20 Summit is held annually, under the leadership of a rotating Presidency. The G20 initially focused largely on broad macroeconomic issues, but it has since expanded its agenda to inter-alia include trade, climate change, sustainable development, health, agriculture, energy, environment, climate change, and anti-corruption.

India assumed the presidency of the G20 grouping from Indonesia, on December 1, 2022, and holds the post for a year. This offers a unique opportunity for India to contribute to the global agenda on pressing issues of international importance. G20 summits started focusing not only on macro economy and trade; but also on a wide range of global issues which have an immense impact on the global economy. Those issues included Globalization, overall development, climate change and energy, health, and migration. The G20 has sought to realize an inclusive and sustainable world through its contributions towards resolving these global issues. The Group does not have a permanent secretariat. The Presidency is supported by the Troika - previous, current and incoming Presidency. During India's Presidency, the troika will comprise Indonesia, India and Brazil, respectively.

21. African Union (AU)

INDIAN PRESIDENCY IN 2023

The G20 Presidency for 2023 passes to India from Indonesia. India takes over the G20 Presidency on December 1st, 2022.

- India hosts nearly 200 meetings in 32 different sectors at various places all over the nation while it holds the G20 presidency.
- G20 Theme: “**Vasudhaiva Kutumba-Kam,**” or “**One Earth, One Family, One Future,**” is the focus of India’s G20 Presidency.
- India will work to ensure that there is “just one world,” not a “first world or third world.”

- The G20 Theme embodies India's efforts to realise its vision of uniting the entire world in pursuit of a common goal and a better future.
- India's G20 Presidency is a special opportunity for India to contribute to the global agenda on urgent issues of global significance.
- The first step toward a new world order for the post-Covid age was to build an international agreement on reforming multilateral organisations like the UN.
- It is an opportunity to take on the role of Global South leader.
- The increasing importance of G20 in a world where issues like global warming, the COVID-19 pandemic and the conflict in Ukraine are pressing issues.

G20 THEME

SIGNIFICANCE OF INDIA'S G20 PRESIDENCY

- G20 is the premier forum for international economic cooperation representing around 85% of the global GDP, over 75% of the global trade, and about two-thirds of the world population.
- During the course of its G20 Presidency, India host about 200 meetings in 32 different sectors in multiple locations across India.
- The G20 Leaders' Summit at the level of Heads of State/Government is scheduled held on September 9 and 10, 2023 in New Delhi.
- According to Prime Minister Modi, this can be an opportunity for India to share its expertise with the world in areas of women empowerment, democracy and digital technologies.

- As a country with core democratic values, India can show the world that the scope of conflict can come to an end when democracy becomes a culture. This gains significance amidst ongoing Russia-Ukraine conflict.
- India's foreign policy is focusing on the 'global common good'. Through its G20 leadership, India hopes to extend this principle towards finding sustainable solutions to some of the key global challenges emerging out of the interconnectedness of the world, such as climate change, new and emerging technologies, food and energy security, etc.

IMPACT OF G20 IN THE INDIAN ECONOMY

With the commencement of the G20 Summit 2023 in India, the global leaders encountered the diversity in Indian culture. Diplomats and Ministers from the member nations visited the marketplaces in New Delhi and bought locally-made products. This created an opportunity for Indian manufacturers to increase their production as the demand for their products increased overnight. It would have a positive impact on the Indian economy. Following are the factors which will create an impact on the Indian economy in the post-G20 Summit period.

- Since India had the G20 presidency, it fostered the growth of products in demand in the domestic market.
- International trade can work in India's favour, as there is food and fuel shortages, the supply chains are disrupted, and there is a need for a new trading system.
- The G20's Trade and Investment Working team has been promoting resilient trade to enhance the participation of MSMEs in trade.
- India's growth in innovation and technology has gotten a boost as multi-billion dollar companies like Apple, Tesla, etc. want to set up their manufacturing hubs in India.
- The tourism industry in India will grow as the number of international tourists is increasing every year.
- New opportunities will be created for MSMEs, both in India and abroad, which will play a significant role in the country's economic growth.
- The government organised the meeting of the G20 in different parts of the country to showcase India's culture and traditional values and its rich heritage sites.

CONCLUSION

The purpose of establishing G20 is to create an atmosphere that supports equitable global growth and development. They bring together the most powerful economies in the world, both developed and emerging, to talk about global financial and economic stability.

Challenges of Green Marketing

Dr. G. Akilandeswari

Associate Professor & Head

Department of Commerce (Finance)

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Green marketing is the marketing of products that are presumed to be environmentally safe. It incorporates a broad range of activities, including product modification, changes to the production process as well as modification in advertising. Green marketing involves developing a Products and Services that satisfy customer needs and wants with high quality, good performance, affordable price and convenience without any impact on the environment. Green marketing is otherwise called as Environmental Marketing and Ecological Marketing. In implementing green marketing, consumers, Corporate and the Government play a very important role. But there are few constraints in implementing it. Green marketing assumes more importance and relevance in the developing countries like India. This paper examines the green marketing strategies, golden rules of green marketing, benefits of green marketing and challenges of green marketing.

Keywords: Green marketing, Products, Services, Environmental Marketing, Consumers.

Introduction

The term Green Marketing came into prominence in the late 1980s and early 1990s. The American Marketing Association held the first workshop on “Ecological Marketing” in 1975. The proceedings of this workshop resulted in one of the first books on green marketing entitled "Ecological Marketing". Green marketing is the practice of promoting products or services that are environmentally friendly or have a positive impact on the planet. It involves incorporating sustainability principles into various aspects of marketing, such as product design, packaging and promotion. Not only companies, Marketers also have the responsibility to make the consumer to understand about the need and benefits of the green products as compared to non-green ones. But there are few constraints in implementing it like lack of consumer awareness, financial constraints, limited scientific knowledge, and competitive pressures. Green marketing is a tool for protecting the environment for the future generation. . Green marketing is otherwise called as as Environmental Marketing and Ecological Marketing.

Green Marketing Strategies

1. Creating eco-friendly products
2. Using eco-friendly product packaging made from recycled materials
3. Adopting sustainable business practices
4. Marketing efforts communicating a product's environmental benefits
5. Investing profits in renewable energy

Golden Rules Of Green Marketing

1. **Know the Customer:** Make sure that the consumer is aware of and concerned about the issues that the product attempts to address.
2. **Educating the customers:** It is essential of letting people know what the activities are carried out to protect the environment otherwise green marketing campaign goes nowhere.
3. **Being Genuine & Transparent:** Green marketing campaign and business policies to be tuned according to environmentally friendly.
4. **Reassure the Buyer:** Consumers must be made to believe that the product performs the job it's supposed to do-they won't forego product quality in the name of the environment.
5. **Consider Pricing:** If you're charging a premium for your product-and many environmentally preferable products cost more due to economies of scale and use of higher-quality ingredients-make sure those consumers can afford the premium and feel it's worth it.
6. **Giving customers an opportunity to participate:** personalizing the benefits of environmentally friendly actions through letting the customer take part in positive environmental action
7. **Pocket friendly:** Leading brands should recognize that consumer expectations have changed. It is not enough for a company to green its products consumers expect the products that they purchase pocket friendly and also to help reduce the environmental impact in their own lives too.

Benefits Of Green Marketing

Improves Credibility: The first and most important benefit is the improved credibility of the organization. An organization needs to have an excellent image to draw profits in the long run. A company with a positive vision in the market will not only attract more customers but also attract business partners who value its credibility. An organization looking for methods to improve the credibility green marketing is the best option.

An opportunity to enter a new market: It opens a new market segment for the organization. In order to produce and sell green products, companies are required to make changes in their production process, replace the material used in production with eco-friendly material, and are required to opt for environmental-friendly packaging for the products.

Long-Term Growth: Opting eco-friendly methods might be expensive initially, but it is worth for long term growth. Green marketing is a good option for long term growth because in the present times, more and more people prefer eco-friendly products, and their number is going to increase in the future.

Offers a Competitive Edge: A company which turns into an eco-friendly company will get a competitive advantage over all those organizations.

More room for innovation: Green marketing required to recreate production process and change raw material with eco-friendly raw material. This provides an opportunity to innovate product.

More Profit: Eco-friendly methods are expensive, and thus it is ok to increase the price of products. People don't mind to pay a little extra as long as they are getting the right quality product and the satisfaction of doing their part to protect the environment.

Good for the Environment: The last benefit where the money is not concerned is the benefit of satisfaction will get by saving environment. Small effort can do huge. Leaving a better place for future generations to live.

Challenges In Green Marketing

Need for Standardization: It is found that only 5% of the marketing messages from "Green" campaigns are entirely true and there is a lack of standardization to authenticate these claims. There is no standardization currently in place to certify a product as organic. Unless some regulatory bodies are involved in providing the certifications there will not be any verifiable means. A standard quality control board needs to be in place for such labeling and licensing.

New Concept: Indian literate and urban consumer is getting more aware about the merits of Green products. But it is still a new concept for the masses. The consumer needs to be educated and made aware of the environmental threats. The new green movements need to reach the masses and that will take a lot of time and effort.

Patience and Perseverance: The investors and corporate need to view the environment as a major long term investment opportunity, the marketers need to look at the long-term benefits from this new green movement. It will require a lot of patience and no immediate results. Since it is a new concept and idea, it will have its own acceptance period.

Avoiding Green Myopia: The first rule of green marketing is focusing on customer benefits i.e. the primary reason why consumers buy certain products in the first place. Do this right, and motivate consumers to switch brands or even pay a premium for the greener alternative. It is not going to help if a product is developed which is absolutely green in various aspects but does not pass the customer satisfaction criteria. This will lead to green myopia. Also if the green products are priced very high then again it will lose its market acceptability.

Conclusion

Marketers also have the responsibility to make the consumers understand the need for and benefits of green products as compared to non-green ones. In green marketing, consumers are willing to pay more to maintain a cleaner and greener environment. Green marketing assumes even more importance and relevance in developing countries. So, green marketing is considered as a tool used for protecting the environment for future generations. Green marketing has a positive impact on environment safety, because of the growing concern of environmental protection, and there is an emergence of a new market which is the green market. Therefore, if you haven't yet adopted green methods, then it is still not too late to do so.

AN OVERVIEW OF GREEN MARKETING

Dr.G.Akilandeswari

Associate Professor & Head

Department of Commerce (Finance)

Nallamuthu Gounder Mahalingam College ,Pollachi

ABSTRACT

Green marketing is the practice of promoting products or services that are environmentally friendly or have a positive impact on the planet. It involves incorporating sustainability principles into various aspects of marketing, such as product design, packaging, messaging, and promotion. Now a day there is growing interest among all sections of public regarding protection of environment and promotes social development. Worldwide evidence indicates that people are concerned about the environment and are changing their behaviour. As a result the concept of “eco friendly” has come into existence. This concept is not only limited to the production activity, but also spread to all functions of business. Application of eco friendly function in marketing is simple called as “Green marketing”, Environmental Marketing”, Ecological Marketing”. As a result, green marketing has emerged a means for sustainable and socially responsible business. The object of this study is to understand the concept of green marketing, Green Marketing Mix, Advantages and Procedures to be followed to implementation green marketing.

Keywords: Green marketing ,Green Marketing Mix, Sustainability, Environment

INTRODUCTION

The term Green Marketing came into prominence in the late 1980s and early 1990s. The American Marketing Association (AMA) held the first workshop on “Ecological Marketing” in 1975. The proceedings of this workshop resulted in one of the first books on green marketing entitled "Ecological Marketing".¹ Green marketing is a new phenomenon which has developed in the global market and has become an important concept in India and other countries.

During recent times consumers prefer more environmental friendly products over traditional products and their opinion and preferences has been changed towards the green products because of environmental issues. Green Marketing refers to the process of green production of goods and services. Green marketing consists of eco-friendly activities. It includes many ranges of activities such

as product modification according to the environment, changes in the production process into green process, changes in packaging into green packaging and changes in advertising into green advertising.

GREEN MARKETING MIX

Green marketing mix contains four "P's":

- **Product:** A producer should offer ecological products which not only must not contaminate the environment but should protect it and even liquidate existing environmental damages.
- **Price:** Prices for such products may be a little higher than conventional alternatives. But target groups like for example LOHAS are willing to pay extra for green products.
- **Place:** A distribution logistics is of crucial importance; main focus is on ecological packaging. Marketing local and seasonal products e.g. vegetables from regional farms is easier to be marketed “green” than products imported.
- **Promotion:** A company spends expenditures on environmental protection should be advertised. Third, sponsoring the natural environment is also very important. And last but not least, ecological products will probably require special sales promotions.

ADVANTAGES OF GREEN MARKETING

Appeals to a new market

Businesses may attract in a wide range of populations by implementing green marketing techniques. Customers are becoming more and more worried about the environmental impact of big businesses. Green marketing helps a company draw in customers who are interested in learning about the production process of items and how consuming them can affect the environment. These campaigns aid organizations in competing with other businesses that might not follow eco-friendly procedures.

Increases profitability and brand loyalty

Green marketing greatly assists companies which are the first in their field to offer green products or services. Businesses can differentiate themselves from competition by using this technique, as customers who care about the environment actively seek out businesses that make sustainable promises. In order to boost revenue and brand loyalty, companies can effectively redesign their products with the use of green marketing.

Reduces overhead expenses

Company's overhead expenses might be reduced by implementing sustainable materials or environmentally conscious manufacturing techniques. A corporation can significantly reduce its monthly operating costs by preserving energy and water. Reducing the cost of waste disposal is another

benefit of using sustainable materials. Even employing environmentally friendly building materials can result in long-term cost savings for businesses since they require less upkeep and maintenance whether constructing offices, warehouses, or manufacturing facilities.

Saves the Environment

Green marketing helps the environment in addition to enabling businesses make more money and attract customers who are more committed. Businesses that keep their word can greatly reduce global warming and promote environmental preservation. Since consumers' views and preferences have altered because they want businesses to practice accountability, this should be the primary focus of green marketing approaches.

PROCEDURES FOR IMPLEMENTING GREEN MARKETING

Product Innovation

Developing new products is one of the best ways to practice green marketing. This involves producing environmentally friendly items or altering already-existing ones to decrease their influence on the environment. For instance, businesses can reduce waste generated by packaging, use recyclable materials, or create energy-efficient products.

Transparent Communication

When it comes to green marketing, transparency is essential. Companies should give customers accurate and validated information on the environmental advantages of their goods and services. Eco-labeling, sustainability reports, or specialized sections on business websites can all help achieve this.

Consumer Education

A lot of people don't realize how their purchases affect the environment. Green marketing is informing customers about the value of sustainability and giving them the tools they need to make intelligent choices. Advertising campaigns, instructional materials, or collaborations with environmental organizations can all be used to achieve this.

Supply Chain Optimization

Sustainability includes the whole supply chain, not just the finished product. Reducing transportation-related carbon emissions, supporting fair labor standards, and sourcing materials sustainably are all ways that businesses may put green marketing tactics into effect. Businesses can improve the credibility and reputation of their brands by partnering with suppliers who share their commitment to sustainability.

Corporate Social Responsibility

Another powerful tool for promoting an entity's dedication to environmental sustainability is participation in CSR programs. CSR initiatives, like as investing in renewable energy, assisting with community cleanup projects, or sponsoring forestry initiatives, can increase brand loyalty and draw in socially conscious customers.

CONCLUSION

Green marketing is an instrument for protecting the environment for future generation by conserving the natural resources and use the alternative sources of energy for production of goods and services. Business firms and companies implement rules and regulations to achieve the goals of green marketing strategy and earn more profits. Evolution of green marketing is still in early stage in the market. Green marketing may not be achieved in the short run, but in the long run it will have a positive impact on the environment as well as on business firms and society. To conserve the natural resources and to solve the problems related to environmental issues it is necessary to adopt green strategy. Green marketing is only a solution for sustainable development. This study shows that there is a positive impact of green marketing on indian market as well as global market.

Abstract

This conceptual paper indicates and emphasizes the women entrepreneurs as the potentially emerging human resource in the 21st century. The primary objective of this paper is to find out the status of women entrepreneurs in India and also studies the success story of Hina Shah the most successful women entrepreneurs of India in plastic packaging and Founder of ICECD. Women of 21st century is no more a traditional resource confined to homes only rather an educated, knowledgeable and innovative part of the overall population possessing the capacity to transform economies into thriving enterprises. On the basis of this analysis some recommendations are given to promote spirit of women entrepreneurship and helping the women to become a successful entrepreneur.

Keywords: *women entrepreneurs, Indian Economy, Business, Government Initiatives.*

Introduction

In India's economy, women entrepreneurs are growing more substantial, and their contributions shouldn't be undervalued. These female entrepreneurs play a crucial role in the Indian economy and have a significant effect on it by generating employment, accelerating development, and fostering prosperity. As per recent figures, women comprise 14 per cent of the total entrepreneurs in India, which works out to 8 million. Also, 10 per cent of all formal enterprises are owned by women.

About 20.37 per cent of the MSME industry in India is made up of women-led businesses, which also employ about 23.3 per cent of the labour population. Between 13.5 and 15.7 million businesses are owned by women, who also hire between 22 and 27 million individuals. They are thought of as the economic foundation of India. Not only can women's employment opportunities be expanded, but also the strain of working two shifts per week for women can be lessened. All areas of legislation must adopt the 3Rs approach, which involves Recognising, Reducing, and Redistributing unpaid care work provided by women.

The inclusion of women in the workforce has created jobs and assisted millions of families in escaping destitution. Because of their superior leadership abilities and higher levels of output, women predominate in new-age sectors where they make up a sizable portion of the workforce. This work ethic and admirable business acumen have also highlighted the significance of women in the contemporary workforce.

Manu Awasthy, CEO and founder, Centricity Wealthtech, said, “Women entrepreneurs and their increasing presence in India have significantly influenced the social and economic demographics of the country. Women entrepreneurs are empowering 50 per cent of India’s start-up ecosystem, driven by Recognition, Results, Fulfilling unmet needs and Education. According to a survey by Bain & Company, more than 45 per cent of Indian women in rural areas were driven to start a business to gain recognition and Women-led start-ups provide 35 per cent higher ROI compared to those led by men. The inherent need in women to provide for the family is a key factor. As they make 85 per cent of purchase decisions, the need to provide a better lifestyle motivates women. With up to 40 per cent of women finishing in the area of science and technology, India is among the top countries in the world for creating these professionals. Businesses that have women at the helm are considered to run very efficiently because businesses led by women require less investment but generate higher net revenue, women are great multi-taskers, women entrepreneurs are known to take more risks and Women have a dynamic ability to adapt.”

Women entrepreneurs and their increasing presence in India have significantly influenced the social and economic demographics of the country. The participation of women in the labour force has helped millions of families to pull out of poverty and has led to job creation. Women are well known for their leadership skills and hence dominate in new-age industries such as electronic manufacturing, where more than 50% of the employees are women because of their high-precision work and better productivity levels. This attitude towards work and commendable business skills have also emphasised the importance of women in the modern workforce.

Role of Women in India's Economy

In India 20.37% of women are MSME owners which account for 23.3% of the labour force. They are considered to be the backbone of the economy. According to McKinsey Global, India can potentially add US\$ 700 billion to global GDP by increasing women’s participation in the labour force. The percentage of women working in the manufacturing and agriculture sectors is higher than that of men. These sectors are usually credited with helping families come out of poverty and

contributing to higher household income. Moreover, literacy rates among women grew at 8.8% in FY21, which further highlights the bright prospects of the country.

Women-led Business Impact

Women-led businesses provide a great impetus to the economy. India has 432 million working-age women and 13.5 –15.7 million women-owned businesses that provide direct employment to 22–27 million people. In addition, a number of businesses are being controlled by women. Indian women are independent and have a strong motivation to start their own business. According to Boston Consulting Group, start-ups founded or co-founded by women generate 10% more cumulative revenue over a five-year period. These start-ups have a more inclusive work culture and employ 3x more women than men. Moreover, women-led businesses are estimated to grow 90% in the next five years.

Factors Driving Women to Start Businesses or Join Workforce

Women entrepreneurs are empowering 50% of India's start-up ecosystem, driven by:

- **Recognition:** Recognition in the form of admiration, regard, esteem and renown motivates women entrepreneurs. According to a survey by Bain & Company, more than 45% of Indian women in rural areas were driven to start a business for gaining recognition.
- **Results:** Women-led start-ups provide 35% higher ROI compared to those led by men. This ability to generate more returns encourages women to start their own businesses.
- **Fulfilling unmet needs:** The inherent need in women to provide for the family is a key factor. As they make 85% of purchase decisions, the need to provide a better lifestyle motivates women.
- **Education:** India ranks among the top worldwide for producing female graduates in the science, technology, engineering and mathematics (STEM) industry, with as many as 40% of women graduating from this field. Indian women are game changers in the fields of science and technology.

Women-run Businesses Operate Efficiently

Businesses that have women at the helm are considered to run very efficiently, and some of the compelling reasons to invest in a such a business are:

- **Higher return potential:** Businesses led by women require less investment but generate higher net revenue. For every dollar invested, women-led start-ups provide 78 cents return compared to 31 cents by men-led start-ups.
- **Multi-tasking:** Women are great multi-taskers as majority of them juggle multiple things at once. These women could prove highly valuable in

generating various income streams and helping to nurture start-ups. As per a survey conducted by psychologists at the University of Hertfordshire, When women and men were given two tasks at the same time, women slowed by 61%, whereas men slowed by 77%.

- **High risk appetite:** Women entrepreneurs are known to take more risks, as per a survey taken by KPMG 43% of women are willing to take more risks. Moreover, women are found to be better than men at envisioning opportunities.
- **Adaptability and higher EQ:** Women have a dynamic ability to adapt. A survey conducted by Bain & Company, Google and AWE Foundation of 350 women solopreneurs and small company owners in urban India found that companies run by women founders were resilient and fast to adapt. The results also showed that women also had a higher emotional quotient (EQ).

Major Businesses Run by Women in India

In India, 45% of the start-ups are run by women, of which over 50,000 are recognised by the government. The country witnessed the most women-led start-ups turning into unicorns in 2021. Major start-ups run by women are listed below.

Brand	Founder / Co-founder	Date of Establishment	Total Funds Raised	Market Valuation
 BYJU'S The Learning App	Divya Gokulnath	2011	US\$ 8.5 billion	US\$ 18 billion
 NYKAA	Falguni Nayar	2012	US\$ 148.5 million	US\$ 12.5 billion
 Mobikwik	Upsana Taku	2009	US\$ 380 million	US\$ 750 million
 zolo	Isha Choudhry	2015	US\$ 90 million	US\$ 100 million
 thrillophilia	Chitra Gurnani Daga	2009	US\$ 1.24 million	US\$ 4.48 million

Government Initiatives to Encourage Women Participation

The Indian government has increased the budget for Women and Child Development by 14% in 2021. It has set aside over Rs. 30,000 crores (US\$ 3.97 billion) in FY21. This budgetary allocation also includes various development schemes as listed below.

- **Bharatiya Mahila Bank Business Loan**

This type of business loan was set up in 2017 to help women access cheap loans and dream big despite their lack of resources. The scheme provides loans of over Rs. 20 crores (US\$ 2.46 million) for women entrepreneurs. A collateral-free loan can also be availed of for loans worth less than Rs. 1 crore (US\$ 0.13 million).

- **Dena Shakti Scheme**

This scheme was launched for women entrepreneurs looking to start their business in certain sectors such as agriculture, retail and manufacturing. The scheme provides loans at an interest rate that is 0.25% below the base rate. The maximum loan application is Rs. 20 lakhs (US\$ 26,468).

- **Udyogini Scheme**

This scheme is for women with an annual income of Rs. 1.5 lakh (US\$ 1,985). It provides loans of up to Rs. 3 lakh (US\$ 3,890) for women wanting to start a business but have no capital.

- **Women Entrepreneurship Platform**

This is a flagship platform started by NITI Aayog to promote women entrepreneurship. The platform hosts various workshops and educational events to motivate women to start their own business.

- **Pradhan Mantri Mudra Yojana**

Even though the scheme was started to help anyone looking to set up a micro/small enterprise get an institutional credit of up to Rs. 10 lakhs (US\$ 13,240), it was mostly availed of by women.

Conclusion

India was a country where a woman even owning a bank account was considered a major benchmark. However, it currently has over 15.7 million women-owned enterprises, with women leading the start-up ecosystem. This drastic transformation clearly underlines the potential of Indian women and their determination. In the coming decades, India is set to witness a major shift, with women dominating the workforce as well as shaping and enhancing the future of the country. It is estimated that over 30 million more women-owned businesses are expected to provide 150–170 million jobs by 2030. This could be a game changer and help the economic outlook look brighter than ever.

Abstract

ICT stands for information and communication technology. ICT include the use of hardware and software for efficient management of information and it also includes communication devices like radio, television, cell phones, computer, satellite systems and many more. It refers to that technology which is used to transmit, store, share, create or exchange information. Innovations in technology and globalization have leaded to an enlarged the use of ICTs in all sectors. In modern era, the world is moving rapidly towards digitalisation such as e-governance, e-health, e- education etc. 21st century. In the present era, everyone can have access to teaching material at own level and consult many experts by video conferencing from all over the world. Currently, a teacher is been teaching his students through the use of ICT even though they are geographically scattered. We can't imagine a day without ICT. Today, world without ICT means we do not have any information about the events that are occurring around. It has become a part and parcel of life. Thus, present paper will highlight the role of ICT in Education.

Keywords–Technology enhanced learning, schemes, Teacher, Student, and ICT Initiatives.

Introduction

ICT will not only include hardware devices connected to computers, and software applications, but also interactive digital content, internet and other satellite communication devices, radio and television services, web based content repositories, interactive forums, learning management systems, and management information systems. These will also include processes for digitisation, deployment and management of content, development and deployment of platforms and processes for capacity development, and creation of forums for interaction and exchange.

The National Policy on Education 1986 , as modified in 1992, stressed the need to employ educational technology to improve the quality of education.

The policy statement led to two major centrally sponsored schemes, namely,

- a) Educational Technology (ET) and
- b) Computer Literacy and Studies in Schools (CLASS)

Thus, paving the way for a more comprehensive centrally sponsored scheme – Information and Communication Technology at Schools in 2004. The significant role ICT can play in school education has also been highlighted in the National Curriculum Framework 2005 (NCF) 2005.

The ICT Policy in School Education aims at preparing youth to participate creatively in the establishment, sustenance and growth of a knowledge society leading to all round socioeconomic development of the nation and global competitiveness.

Objectives

- To know the importance and role of ICT in Education.
- To study the Importance of Students Engaging with ICT

Review of Literature

Olivier (2014) found that theology took up the challenge to utilise the printing press and should do the same with the new technology. The impact of theology is directly related to the medium used throughout the ages, Tegos et al. (2016) research indicated that the effectiveness of flexible conversational agent in productive online peer dialogue, Barak (2017) from his study found that how teacher integrate web-based technologies and their perceptions of cloud pedagogy. He found that cloud pedagogy framework facilitates individual and collaborative, synchronous and asynchronous active learning, in class.

Methodology

The study has a descriptive nature. Secondary data have been collected in order to prepare this document in a comprehensive manner. Data are obtained through publications in various journals, periodicals, conference papers and websites.

Objectives of using ICT in Education

The objectives of ICT in education include:

- Providing accessibility through online medium of education.
- Improving the quality of teaching, especially in remote areas.
- To increase transparency in the education system.
- To strengthen the policies, rules, and laws in the education system.
- To analyze the learning and participation of the students and measure its effectiveness.
- Measuring and evaluating students' behavior, involvement, and retention in the learning process.
- To analyze students' performance, placement, and application of knowledge.

The Importance and Role of ICT in Education

Online Learning

ICT and its tools had led to the emergence of online learning. Through this, the teachers and the students are learning innovative ways in the education process. Online learning has gained popularity amidst the corona pandemic to ensure that the learning continues. ICTs have looked after that education reaches through it worldwide and even in remote areas. No matter where the students are, but it has ensured that every learner derives its benefits.

Accessible to all

ICT in education allows accessibility to all types of learners. All students can learn through the material provided. Even the special needs students can maximize the benefits through the

usage of it. ICT has also covered issues like the —digital divide and allows even less fortunate people to access the tools for their educational needs and enhance learning.

Higher-Order Thinking & Skill Developments

ICT promotes high order thinking and reasoning skills. These skills enabled the process of evaluation, planning, monitoring, controlling, reflecting, etc. To use ICT tools effectively, one must be able to explain and justify the solutions to the problems. For using ICTs, the students should be able to discuss, test, and evaluate the strategies and methods they use.

Develops ICT Literacy and Capability

Literacy and capability are the 21st-century skills that are needed. One of the best ways to develop these is to equip the subject-matter with purposeful activities.

Encourages Collaboration

ICT fosters collaboration as children work collectively. It also enhances communication skills as they discuss, talk, and learn together. All you need is a laptop, tablet, or desktop computer to understand it's working. ICT tools open up the doors for developing language through fostering communication.

Motivates Learning

ICT motivates children towards learning. Children learn better through the usage of technology. They get mesmerized with technology tools and get motivated to learn effectively in the classroom or at home.

Improves Engagement and Knowledge Retention

With the inclusion of ICT in education and its tools, children get more engaged and show greater participation in learning. It is all because of technology. It has made learning fun-filled with creativity and games. It enhances learning in multiple ways. Because of it, the students learn better, leading to knowledge retention.

A Key Part of the Curriculum

As per the latest curriculum, ICT plays an important part in the education system. So, many governments across the globe have started using ICT as a major part of education and the curriculum.

The rise of the Knowledge Economy

We live in an economy that is a thirst for the production and dissemination of information properly. ICT pervades at all levels and sectors like health, education, environment, or production. So, its use is needed everywhere at all levels.

Therefore, we cannot deny the fact that ICT is an important part of our lives. It fosters collaboration and connectivity around the world. Technology is ever-changing. It is likable due to certain features like growth, creativity, joy, fun, and consumption.

Importance of Students Engaging with ICT

ICT in Education

Students should engage with ICT in order to:

- To develop 21st-century skills like ICT Literacy and capability.
- To improve retention levels.
- Make them prepared for an integrated society that is taking advantage of the ICT developments.
- Adapt ICT tools as a lifelong partner.

Advantages of ICT in Education

Individualization of learning

It means that people learn as an individual and not as the same group. As learners are varied, ICTs provide flexibility so that learners learn according to their own pace.

Interactivity

Through this feature of ICT, learners can learn properly at any point. They do not need to follow a proper sequence. Learners can learn effectively through this feature.

More economical, the higher speed of delivery and wider reach

ICT tools are more economical, and the speed of delivering content is also high. Through ICTs, the number of learners increases, thereby reducing the overhead cost of investment.

Multiple teaching functions and diverse audiences

ICT involves multiple functions like diagnosing and solving problems for accessing information and knowledge about various contents. It can be useful in drills and practices also.

Uniform quality

ICTs act as a great equalizer by producing uniform quality content for the rich and the poor, the urban and rural people. It produces good quality content for all.

Facilitates cooperative learning

ICT facilitates cooperative learning by encouraging dialogue, discussions through a more participative classroom environment.

Act as a motivating tool

ICT tools act as a motivator and encourage children to enhance their learning. Children get fascinated with technology. Teachers should use their skills to arouse interest, fun, and creativity to learn in a better way.

Distance and climate insensitive

- Regardless of the distance and climatic conditions, ICT tools provide access to all.

- These were some advantages of ICT in the education sector.
- Now let's get an insight into certain disadvantages of ICT.

Current Situation of ICT:

1. Online education: Due to Covid-19, there is no option without online education. As lockdowns don't allow to open schools, colleges, so online education is only one option through which education can be continued.
2. Use of apps: Different apps nowadays are used for online education. These apps are helpful for students and teachers to reach. Such type of apps are also used for meetings, online teaching learning process. Ex. Zoom, Google meet, Webex etc.
3. Platforms for online education: There are different platforms available for online education. Through these platforms, online classes can be taken, videos can be uploaded, recorded videos can be send. So these platforms are helpful to the students as well as teachers. Ex. Swayam, Webex, Impartus etc.
4. Use of different e-content : Due to online education there is no time limit as well as place restriction for learning. Anyone can learn from any place and at any time. So many type of education any one can take. And different e-contents are also prepared for students. These are helpful for them to enrich their knowledge.
5. Tools for teachers[iii]: GeoGebra can construct almost every conceivable geometrical object, even in 3D, Object drawing is interactive and can be moved around, modified, measured. PhET Simulations are interactive computer programs which allow a user to change variables and see the effect of the changes on the system. These are very useful in helping students explore the subject, solve problems and can also become a useful self-assessment tool.

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT tools in education make it easier for teachers to use the best strategies to bring out the best in their students. ICT in education sector is beneficial for the students, in addition to this, it is making it possible for schools to impart education in the finest way. Moreover, the technology enables them to manage all the management and administration functions in a seamless manner. Hence, there is no doubt that it is a boon to the education industry.

Introduction

Prime Ministers) in 2008. At the September 2009 hosted by the US (in Pittsburgh), the Leaders declared that the G20 would be the “premier forum for international economic cooperation.” (See Box, Timeline.) In many ways, it has not lived up to this exalted title. However, the G20 is more inclusive than the Group of 8 (G8); its member countries represent about 85% of global output and trade and two-thirds of the global population. The creation of the G20 at the Leaders’ level symbolizes the beginning of the end of Western domination and a decisive shift in the balance of power from “the West to the rest.” Importantly, the G20 sits at the apex of the global governance system with a growing agenda of issues and the power to give mandates to dozens of international organizations. Therefore, it should not be

underestimated. This article introduces the G20 – its leadership, membership, origin, agenda, and constituency groups.

Leadership and Membership of the “Club”?

As of December 1, 2013, Australia assumed the G20 presidency and began to govern the Group in coordination with its Troika partners – namely, the former and future G20 presidents: Russia and Turkey. Australia presides over the G20 Summit on November 15-16, 2014 in Brisbane. The G20 membership, which includes 19 countries and one region, are among the 30 countries with the highest absolute GDP (in nominal prices). • The G8: Canada, France, Germany, Italy, Japan, Russia, U.K., and U.S. • The “Rising 9”: Argentina, Brazil, China, India, Indonesia, Mexico, South Africa, South Korea, and Turkey • Australia and Saudi Arabia • The European Union Invited Participants: Each G20 President is asked to invite four guests in addition to Spain, which is a “permanent observer.” In 2014 Australia has invited Mauritania, as the 2014 chair of the African Union; Myanmar, as the 2014 Chair of ASEAN; New Zealand; Senegal, representing NEPAD; Singapore. In addition, representatives of international organizations attend the International Monetary Fund (IMF), the World Bank, the United Nations, the World Trade Organization, the Financial Stability Board, the Organization for Economic Cooperation and Development (OECD) and the International Labor Organization.

Origin and Background of the G20

In 1999, the G20 was created as a forum for finance ministers and central bankers to deal with the aftershocks and implications of the 1997- 1998 East Asian financial crisis, which had ripple effects throughout Asia and the world (e.g. Russia, Brazil, Argentina). The finance ministers of the U.S. and Canada dominated the selection of G20 member countries. The crisis demonstrated that a worldwide economic meltdown was possible due to financial contagion. It also created a backlash against the prescriptions of the IMF which were widely perceived as contributing to the crisis and deepening its recessionary aftermath. At the first G20 meeting (in Berlin, Germany), Asians sought help from the West. In 2007, the US-triggered a profound global financial and economic crisis and, in 2008, the G20 Leaders (i.e. presidents and prime ministers) met for the first time in Washington, D.C. At this G20 Leaders’ Summit, the “tables were turned” – insofar as Western countries sought help from Asian and other emerging market economies. Particularly in the East (e.g., China), countries could help because they had massive levels of foreign reserves. Why? Not only because of the revenues from export sales, including to “deficit countries,” such as the United States, but also because the East Asian financial crisis taught them that, in the event of another financial panic, high levels of reserves would protect them from ever again going to the IMF on “bended knee” with a “begging bowl.” Indeed, the IMF was widely viewed as a colonial power that was implementing Western-inspired reforms. The G20’s coordinated stimulus policies of 2008-2010 began a recovery process. However, since 2010, the fragile global economy has been threatened by a meltdown in the eurozone, the deceleration of the BRICS’ economies, and weak global growth. The G20 has failed to blaze a path that balances fiscal

prudence with the need for growth and job creation. Nevertheless, as discussed below, the body is not doomed to irrelevance, as some would claim.

Agenda and Governance Bodies

The G20 Presidency has considerable control over the Summit agenda, particularly since the Troika countries have not always worked well together. In 2014, the Australian's new, conservative Prime Minister has launched the G20 into the past by, among other things, ignoring climate change. In 2015, Turkey ascends to the G20 Presidency. The mandate of the G20 has expanded to include a wide range of issues: e.g. economic recovery and rebalancing, financial regulation and oversight, corruption, trade and investment, development, infrastructure, food security, green growth, energy and commodities, and climate finance. Although the G20 Leaders meet annually, there are many bodies that work throughout each year and report to the Leaders. Please see diagram below for details about the G20 governance bodies.

- **Sherpas:** Each Head of State has a representative called a “sherpa” and, for each Summit, these individuals meet regularly to do the heavy work of negotiating the agenda, the analyses of issues and the outcome documents.
- **Ministerial Meetings:** In addition to the meetings of the powerful G20 Finance Ministers and Central Bank Governors, the G20 troika may convene meetings of other ministries. To date, there have been meetings of Agriculture Ministers, Labor/Employment Ministers, Foreign Ministers, Trade Ministers, Energy Ministers, and Tourism Ministers.
- **Working Group Meetings:**
 - › The Framework Working Group on “Strong, Sustainable and Balanced Growth,” which contains the policy commitments of each G20 member country
 - › The Investment and Infrastructure Working Group
 - › The Development Working Group, which emphasizes infrastructure, taxation, and financial inclusion
 - › The Anti-Corruption Working Group
 - › The Task Force on Employment
 - › The G20 Trade Contacts Meeting
 - › The Energy Sustainability Working GroupThe Working Groups are generally co-chaired by a developed and a developing country member. The co-chairs sometimes invite experts from relevant international financial institutions, standard setting bodies, non-G20 countries, business, and academia to advise the working groups. Except for rare occasions, members of civil society are largely excluded from these processes. With few exceptions, members of parliament are excluded and uninformed.

G20 Constituency Groups

The G20 is increasingly seen as the “sun” in the “solar system” of international organizations around which international organizations and constituency groups rotate like “planets” or “moons.” However, since the G20 is an “informal” organization without Secretariat or a charter, it has few mechanisms to build accountability to the 173 countries that are excluded from its membership or from constituency groups. Some excluded UN member countries have organized themselves as the Global Governance Group (3G) which Singapore has sometimes represented at the G20. The number and type of constituency groups that seek to influence the G20 has grown over time to include: the Business 20 (B20); the Labor 20 (L20); the G20Y of young business leaders; the Think Tank-20 (T20); Civil Society Organizations (C20); and the Girls 20. The work of the B20, L20, T20 and C20 can be viewed here. <http://us.boell.org/categories/group-20-brics> The G20 has formal relations with

business, but not civil society groups since some G20 governments do not believe that civil society groups are legitimate participants in their deliberations.

Challenges for the G20

The G20 can realize the potential for democratizing global governance and achieving sustainable development by taking actions such as: • Democratizing Global Governance. Challenges facing the G20 in this area include: › Enhancing transparency. The G20 lacks transparency (many documents are not publicly disclosed; others are disclosed, but only in final drafts). › Respecting the governance of global institutions. The G20 often gives mandates to dozens of international organizations (e.g. the IMF, the World Bank, the Financial Stability Board, and United Nations agencies). Where these mandates evolve from the full membership of international organizations, they can reinforce participatory governance. Otherwise, they bypass and undermine existing governance structures. › Relinquishing “veto power.” The G20 can paralyze decision making in other global bodies. For instance, the G20 commissioned a report from ten international organizations on the volatility of food prices, which called for an end to mandates and subsidies for biofuels. Because the G20 rejected this advice, the World Committee on Food Security (CFS) will not contradict the G20. The G20 now exercises a policy “veto” on this issue and others. › Ensuring Accountability. The G20 is not accountable to more democratic institutions, such as the United Nations, the International Monetary Fund or the World Bank, with universal or nearly-universal memberships.

• Achieving Sustainable Development: › Implementing commitments. Where the G20 has positive sustainable development policies (e.g. the call to remove fossil fuel subsidies), implementation is a problem. › Valuing public goods. In general, the G20 puts a higher priority on austerity than on investing in public goods, including creating decent jobs, protecting the environment, and regulating the financial system.

Conclusion

Mobilizing financial support for mega-projects. The G20 is mobilizing support, particularly long-term institutional investments, in large-scale infrastructure, particularly in the energy, water, transport, and ICT sectors. To date, the G20 has paid insufficient attention to the need for infrastructure projects to be selected and designed with attention to: appropriate scale, participation (especially by affected communities), transparency, job creation, carbon footprint, and norms (environmental, social, gender, and human rights impacts).

Introduction

Agriculture as a sector has tremendous growth opportunities. Robust infrastructure and value chain can yield good returns to the economy making it attractive for employment and investment, globally. It is the largest employment sector across the world which currently provides income for 40% of the world’s population. The Indian government is taking steps to provide farmers with farm-gate infrastructure. Agricultural finance is crucial to support the growth of the agricultural sector. Indeed, it is essential for food security, job creation, and overall economic growth.

Abstract

Digital Economy refers to an economy that is based on digital technologies. Digital India programme is one of the foundation programmes of Indian Government, it was launched by the Government of India on July 1st, 2015. Today Digital technologies is playing significant role in our nation, in order to create more job opportunities among the youths in rural and urban areas. It essentially covers all business, economic, social, cultural etc. activities that are supported by the web and other digital communication technologies. The digital economy is also sometimes called the Internet Economy or Web Economy. Digital networking and communication infrastructures provide a global platform over which people and organization devise and employ new business strategies, the main aim of the digital India is to educate every people and increase awareness about digital process. The digital economy became the model global economy as the last stage for the devolvement of the economy. The digital economy is growing fast in India. Digital Economy refers to an economy that is based on digital technologies. The growth, integration and sophistication of information technology and communications are changing our society and economy. Digital technology in the form of the Personal Computer and the Internet has already transformed work, education, and government, entertainment, generating new market opportunities and having a major economic impact across a broad range of sectors. In the ICT of the digital economy, India appears to have comparative advantage to grow to global stature. No doubt, the digital economy has the risks and problems of Security and Privacy which are more in the case of India subject to internal and external risk. The roll out of e-Government services in India is currently lightly well, but policies of digital inclusion should play an advanced role in this development, Digitalization will lead to cost savings, increased output, better employment, enhanced productivity & literacy, etc. In the agricultural sector and in Industrial sector, digitalization will help in betterment of all the processes, be it, purchasing, selling, inventory control, trade relations, employment, product innovation & development, etc. Automation of Service Sector will help in growth of the sector by increasing the ease in access to and rendering of the services.

Keywords: Digitalization, Government, Payment, Internet and Country

Introduction

Digital India is a dream scheme of government of India. The objective is to provide the government services to Indian citizens digitally and connect rural area with internet so that the people get benefits of all the government services and can also improve their digital literacy. Government of India wants to co-ordinate with common public by connecting digitally so that they can digitally empower the society. Now in the present era when people live in digital era, it has to be technologically advanced.

Individual should learn how to use digital technology in daily life including communication, transaction, business and many other daily works. With the help of Digital technology people can manage day to day work and share information in a far better and graceful way. The term “Digital India” speaks so much about itself. Digital India campaign is an initiative to transform India into a digitally empowered country and knowledge economy. An initiatory step in the direction of the digital India is to join rural areas with high-speed internet networks. It was propelled for the first time by Prime Minister Shri Narendra Modi on 2 July 2015. It has three crucial factors: 1. Universal digital literacy, 2. conveying government services digitally 3. Development of safe and stable Digital Infrastructure. In this digital age when use of technology is growing day by day in everyday life with reference to communication to transactions including retail stores to government offices. It provides the facility to connect with each other and share the information. With the launch of Digital India Programme, the government is taking a big step forward to transform the country into a digitally empowered knowledge economy. Includes various schemes worth over Rs 1 lakh crore like Digital Locker, eeducation, e-health, e-sign and national scholarship portal.

Digital India

Digital India” as term defines something which is provided digitally using Information and Communication Technologies (ICTs) and contributing to improve growth in employment, economy and productivity. The vision of this scheme is “Digital India: Power to Empower”. It will be able to provide the facility for electronic manufacturing on a broad scale to match the increasing needs of the country. Digital India is a bridge between digital “haves and not-haves”. It also ensures that government services are availed by each and every Indian citizen so that it achieves a long-durable development in the country. There are three key visions and nine pillars aiming to be implemented by 2019.

Aim and Vision of Digital India

Aim of digital India is to bring together several existing schemes and restructure them. These schemes also need to be brought into focus and implemented in a synchronized way. Many existing schemes only require the process improvement with less cost effect. In this context Government has already provided a platform to make easier collaboration and participation in governance named as “MyGov”. 1. Governance and Services on Demand 2. Easy access to the common service center 3. Digital empowerment of citizens The vision of digital India is providing high speed secure internet so that all the records, certificates and many other important documents will be made available on cloud computing which is safe as well. In this vision each and every government service and information will be conveyed in real time through internet globally. Digital transaction will ensure cashless economy. Under this vision all digital technology will be available in Indian languages.

Advantages of Digital India

Digital connectivity is an emerging concept to connect with people across demographic and socio-economic sectors. Digital India program assures to renovate India into digitally empowered country by emphasizing digital literacy, providing digital resources, and combining digital platforms. To provide accessibility of digital resources for citizens is a commitment of Digital India programme. For example, the program is to provide accessibility of phones, tablets and computers for those who are having visual or hearing impairment (either partial or complete) learning or cognitive disabilities or physical disabilities etc. CDAC, Bangalore with CDAC Hyderabad, implemented Adaptable e-Learning Accessibility Model for the Disabled. It is an education framework for those children with autism and mild mental retardation. Government of India is planning to generate 28,000 BPOs Jobs in various states and one Common Service Centre (CSC) in each of the gram panchayat in the state. India is seen as the rebellion of digital generation against established traditions. The aim of digital India is to transform and travel the paths of both rural and urban India.

E-education is playing a significant role in current scenario in the development of rural areas. In India, digital literacy is about 6.5% and internet services accessibility was about 20.83%. After Digital India come into existence, high speed networks provide internet accessibility and mobile transactions to the people. In addition to rural areas, healthcare services and education facility is improving day by day. It is also provides a platform to Indian farmers (E-farming) so that they can select best crop according to weather, plant protection and marketing information etc.

Impact of Digitalization on India

Impact on Economy

In any geography, the factors related to adoption and reliability, speed, and ease of use of digital technology determine the level of digitalization. This has an impact on reducing unemployment, improving quality of life, and boosting citizen and access to public services. Digitization allows governments to operate with greater International Journal of Digital Library Services, transparency and efficiency, and it has a dramatic effect on economic growth, but not all at once. In the current sluggish worldwide economy, the use of digital technologies is served as a means of boosting economic activities.

Impact on Employment

The introduction and advancement in Information and Communication Technology has a great impact on employment, as it creates more jobs in the IT sector, which may be related to software development, Outsourcing, hardware manufacturing and other IT related businesses. In addition, the impact of these technologies has been realized on other service sectors, like trade, industry, financial and health care services. By the advancement in digitization related activities, an estimated 19 million jobs were added to the global

economy from 2009 to 2010. During 2007 to 2008, a mere 5 % increase is seen in estimated 18 million jobs.

Social Impacts of Digitization

One of the most interesting and important factors related to digitization is the link to overall societal welfare. Digitization, as a social process, enables the institutions to generate, cooperate and create larger for the benefits and progress of the society through digital communications and applications. The process of digitization involves the mass digitization of books and older and rare materials. For the purpose of preserving the knowledge contents for future generations or making them available to a much wider community than could ever access the physical objects, many of the institutions (libraries and cultural archives) have started digitization initiatives to provide access to the history of societies, countries, cultures and languages.

Ecological Impacts of Digitization

During the last few decades, healthy living has become the major concern of society. There has been an increased focus on health related matters. This has led to more people exercising, eating right and using things like cars and power strips less and other techniques to benefit the environment. The initiative has resulted in individuals taking a closer look at the environment and examining their part in making the —Earth|| more sustainable for years to come. As this trend spreads, the sentiment is now being felt at organizations and institutions. Some innovative employees have spearheaded campaigns for workers to use less power by shutting down machines at night, paying more attention to reusing coffee and water cups and numerous other things such as going paperless.

Conclusion

Introducing the concept of Digital India is the step towards a drastic and far-reaching change in ways of making a new India where citizens are digitally empowered and economically well. Digital India project will help in evolution of employment and also develop economy. It is providing digital literacy and knowledge of technology in rural as well as urban areas. If a continuous approach is made in this project with trustworthiness it will absolutely Make India a Digital India. Digital conversion of print sources has improved rapidly in the past few years. Digitization is the social transformation started by the massive adoption of digital technologies to generate process, share and manage digital information utilizing the full benefits from digitization organizations should select the material carefully for digitization and digitize only those items that will provide the maximum benefit to both administrator and user. Because, successful digital projects are the outcome of careful evaluation of collections, and also, careful assessment of the institution's goals and priorities and development of thoughtful strategies will assure that meaningful, high-quality digital versions are created, and that both original and digital assets are managed well over time.

Abstract

In recent years, there has been a growing trend in higher education to incorporate modern technologies and practices in order to improve the overall educational experience. Learning management systems, gamification, video assisted learning, virtual and augmented reality, are some examples of how technology has improved student engagement and education planning.. The classroom response system allowed students to answer multiple-choice questions and engage in real-time discussions instantly.

Despite the many benefits that technology has brought to education, there are also concerns about its impact on higher education institutions. With the rise of online education and the growing availability of educational resources on the internet, many traditional universities and colleges are worried about the future of their institutions. As a result, many higher education institutions need help to keep pace with the rapid technological changes and are looking for ways to adapt and stay relevant in the digital age.

Keywords: Artificial intelligence, Gamification, AI in education.

Introduction

AI and Its Role in Education

Artificial Intelligence (AI) is changing the world as we know it, and the education system is no exception. AI has become an effective tool for addressing challenges in education and accelerating progress towards SDG 4. With its ability to collect and analyze data, AI can inform educators of students' engagement, learning progress, and well-being. It also has built-in digital apps and tools that allow for teacher interaction and individual progress monitoring.

AI has the potential to transform education by optimizing teaching and learning processes through personalized learning algorithms. By identifying strengths and weaknesses of each student, AI can tailor educational materials to suit individual needs better. Virtual reality experiences could be created without leaving the classroom to engage with students from far countries or showcasing historical sites that endanger undue ecological harms if used a long time ago; this provides learners with an interactive learning environment that improves understanding retention.

Augmented reality technology implemented using AI promises a more engaging learning experience for students, allowing them to interact with virtual objects in ways previously impossible. By placing real-time information onto what people see around them using devices or smartphones on smart boards or screens within classrooms create new immersive experiences transforming how people share information effectively.

While the benefits of AI in education are profound, policymakers need to identify risks associated with implementing these technologies fully effectively. The use of sensitive data raises questions on privacy or equity considerations necessitating transparent policies on how such data is collected stored secured shared among stakeholders which must consider critically if they are expanding their pedagogical objectives through technological innovations rather than amplifying existing biases habits entrenched within curricula schooling methods which limit creativity critical thinking or diversity among other concerns when initiating incremental improvements leveraging machine-generated insights or conclusions.

Current State of AI in Education

Currently, AI is being used in education in various ways, from chatbots that provide 24/7 student support to personalized learning algorithms that adapt to each student's needs.

AI market research tools are also being used to automate administrative tasks, such as grading assignments and providing feedback. Additionally, AI is being used to analyze large amounts of data to identify patterns and insights that can inform the development of new educational strategies and policies.

There are many examples of successful AI-powered educational tools and platforms currently in use. Some of the most popular include:

- **Duolingo:** a language learning app that uses AI to personalize lessons for each user
- **ALEKS:** an AI-powered math learning platform that provides adaptive assessments and personalized learning plans
- **Coursera:** which uses AI to recommend courses to students based on their interests and previous learning history.

QuestionPro: Recently, QuestionPro has announced QxBot, a feature that will allow you to create surveys and evaluations in seconds. Here's a quick demonstration of this amazing feature that will be a huge help in your next academic research:

While there are many benefits to using AI in education, limitations and challenges need to be addressed. One of the biggest challenges is ensuring that AI-powered tools and platforms are accessible to all students, regardless of their socioeconomic status or location. Additionally, there are concerns about the potential for AI to perpetuate existing biases and discrimination in education.

Additionally, many educators worry that AI-powered tools may replace human interaction and affect classroom teaching quality. Ensuring that AI is used in a way that complements, rather than replaces, human educators will be important in the coming years

The Future of AI in the Classroom

As technology continues to evolve, AI is expected to play an increasingly important role in the classroom. Some emerging trends in the use of AI in education include:

- **Adaptive Learning:** AI will enable the creation of adaptive learning systems that automatically adjust to each student's skill level and knowledge. This ensures that each student receives personalized education and is presented with challenges according to their level of competence.
- **Virtual Assistants:** AI-based virtual assistants will become learning companions for students, providing support, answering questions, and offering real-time guidance. These assistants will be able to adapt to each student's learning preferences and provide personalized recommendations.
- **Collaboration and Teamwork:** AI will also facilitate collaboration and teamwork among students. AI tools will be able to analyze each student's working style and skills to form complementary teams, fostering effective collaboration and knowledge exchange.

Advantages of AI In The Education System

One of the most significant advantages of AI in the education system is personalized learning. AI-powered systems can generate customized lesson plans and assessments for each student, based on their unique learning abilities and needs. This ensures that students receive an optimized learning experience, leading to increased engagement and better performance.

Additionally, AI can provide better access to learning for students with special needs. With intelligent tutoring systems, AI-powered devices can identify the areas where a student needs additional support and provide tailored guidance accordingly. This helps students who may require extra time or help in certain subjects to keep up with their peers.

Another advantage of AI in education is that it allows for real-time problem-solving assessment. Teachers can use this technology to track how well their students are understanding concepts by monitoring individual progress throughout a lesson or course. By doing so, they become aware of areas where more attention is needed and thus provide specific solutions.

AI-Powered Personalized Learning

AI is transforming the education landscape by providing personalized learning methods to students. Personalized learning enhances engagement and motivation for students which are key factors in their academic success. AI can capture, aggregate, and analyze data to build student learning profiles. By analyzing the data of each individual's learning preferences, strengths, and weaknesses, AI can suggest personalized learning methods and provide additional tutoring when needed.

Apart from personalized learner support, AI analysis can also enable better-informed decisions for educators and administrators. Through the collection of large amounts of student data from grading patterns to test scores presented in user-friendly dashboards or reports by AI platforms, educators can gain insight into critical

areas that need improvement such as tracking student progress effectively over time, optimizing curriculums based on real-time analysis of a class's needs or understanding which topics pose the greatest challenge.

The ability for AI-powered personalized learning systems to evaluate massive amounts of information about learners has made it more clear that equitable access should be provided to information resources so as not to increase inequities between learners from various income levels or backgrounds through increasingly supportive technologies rather than isolating tools used outside instructional settings.

AI-Powered Assessment and Evaluation

AI-powered assessment and evaluation is a game-changer in the education system. AI has the potential to improve accuracy, efficiency, and fairness in assessments and evaluations. With AI, student learning can be measured more accurately, providing deeper insights and facilitating individualized learning processes.

AI can automate administrative tasks such as test evaluation, allowing teachers more time to focus on teaching rather than grading tests. The use of AI in grading essays can not only save time but also provide instant feedback to students. Additionally, AI-powered evaluations can improve physical and cyber security through biometric solutions.

One of the most important benefits of using AI for assessments is its ability to favor candidates based solely on their merit while minimizing human bias towards students' demographic information such as race or gender. This fosters a fairer system where students are evaluated based on their skills rather than any other discriminatory factors.

AI-Powered Student Support and Engagement

With the rise of artificial intelligence (AI), the education system has embraced technology to improve student engagement and support. One way AI is being used in classrooms is through chatbots. These chatbots offer personalized and interactive learning experiences to students, providing 24/7 support while improving accessibility. By generating unique conversations with each student, AI-powered chatbots can help instructors manage huge class sizes.

AI technology also provides data analytics that can help educators stay informed about their students' progress, engagement, and well-being. With this information at hand, teachers can tailor their lessons to meet individual needs and identify areas where students require additional assistance.

Furthermore, introducing the concept of AI at an early stage can help students be digitally ready for future academic success. Educators have a role in educating learners on the ethics of AI use while demonstrating practical applications of its uses in academic fields such as emotional wellbeing and streamlining educational procedures.

In summary, it is evident that AI technology has immense potential to improve student engagement and support. From generating unique conversations with every learner through chatbots to enabling advanced data analysis for educators to track every student's learning journey- these tools constitute resources that build personal connections between disruptive technologies as well as human interaction for optimal learning outcomes in classrooms today.

Challenges and Concerns Of AI In Education

The integration of Artificial Intelligence (AI) in education has brought different challenges and concerns that have surpassed policy debates and regulatory frameworks. Privacy breach is one of the main risks; students and instructors may view AI systems negatively. Therefore, measures must be taken to ensure data security while taking advantage of technology's benefits.

Another significant challenge is the accessibility of AI-powered tools and platforms. To make technology inclusive, we must provide equal opportunities regardless of socioeconomic status or location. However, there are concerns about AI perpetuating existing biases and discrimination in education. This mainly happens with personalized learning materials that can reinforce values associated with cultures or ethnic groups, whether intentionally or not.

Policy makers and district leaders need to ensure they are implementing AI applications while considering potential benefits and risks without including ethical issues. They should promote informed consent as it is fundamental when using certain types of personalized learning technologies that involve collecting personal data from learners. The best way to address these ethical dilemmas is by following transparency principles within educational institutions.

Artificial Intelligence has the potential to overcome different obstacles in education like innovating teaching practices effectively. Still, it represents countless unknowns since a successful evaluation cannot currently be measured based solely on conventional parameters such as grades or class performance evaluations by teachers alone considering all the considerations needed before implementing Automatic grading systems effectively across National Education System today

Potential of Artificial Intelligence in Education

Artificial intelligence (AI) has the potential to revolutionize the way we think about education. From personalized learning algorithms to virtual and augmented reality, AI-powered tools and technologies are helping to enhance the learning experience for students in ways we never thought possible.

AI has the potential to provide a wide range of benefits for education. One of the most significant is the ability to personalize each student's learning experience. With AI, educators can analyze student performance and preferences data to create customized lesson plans and assessments that align with each student's unique strengths and

weaknesses. Additionally, AI can automate administrative tasks such as grading, freeing up time for educators to focus on other important aspects of teaching.

AI-powered tools and technologies can also enhance the learning experience for students in a number of ways. For example, virtual and augmented reality can make learning more interactive and immersive, while chatbots and other AI-powered tools can provide 24/7 student support. Additionally, AI can be used to create personalized quizzes and games that help students to engage with the material in a fun and interactive way.

Personalized learning is one of the most exciting potential benefits of AI in education. With the ability to analyze data on student performance and preferences, AI can help educators to create customized lesson plans and assessments that align with each student's unique strengths and weaknesses. This can improve student experience and motivation, and ultimately lead to better academic outcomes.

AI and ChatGPT can revolutionize academic research by processing and analyzing large amounts of data quickly, uncovering new discoveries, generating hypotheses and conducting literature reviews faster than traditional methods. ChatGPT can assist researchers in writing papers by providing feedback and suggestions, and even generate parts of the text. Additionally, it can be used in natural language processing such as text summarization, sentiment analysis, and language translation for analyzing unstructured data.

Conclusion

While AI has the potential to revolutionize the way we think about education, there are still many challenges and concerns that need to be addressed. It is important for researchers and developers to continue to explore the potential of AI in education and to work towards addressing the challenges and concerns that may appear as this kind of technology keeps improving and being implemented in the current education system.

Abstract

India's government launched a program called "Digital India" with the goal of making the country more technologically advanced. The program's main goals include building a national digital infrastructure, giving citizens digital empowerment, and offering government and services on demand. This essay is the result of study into the Digital India program and its potential effects on preparing India for the digital age. The nine pillars of Digital India – Jobs in IT, Electronics Production, Information to All, Early Harvest Programme, Broadband Connections, eKranti, E-Governance, Public Internet Access, and Universal Access to Phones – are examined in the paper along with various initiatives, opportunities, and challenges. Each of these initiatives appears to be benefiting and assisting the Indian people. The inhabitants are still dealing with various difficulties. Illiteracy, socioeconomic disparities, and cultural and technical limitations are a few.

Keywords: Digital India, Digital payment, Digital Transformation.

Introduction

The key to maximizing the benefits of digital finance and financial inclusion can be found in a comprehensive partnership between the government and the general public. The use of technology can make the payment process more streamlined and open. One component of the ambitious flagship program Digital India has as its goal digital funding. The future of digital finance is really bright. Financial independence would empower women and other underprivileged groups in society, which is a core goal of financial inclusion and digital banking. Adopting d financial services and bringing the majority of the population into system will contribute to the country's growth and development.

277/432

Every financial institution believes that online service delivery is the future, with the number of smart phone users in India set to reach 450 million by 2022. For financial services to change quickly, broadly, and for the better, technology-led innovation is required. The goal of financial inclusion through digital banking can be achieved with the support of the digital India. Digital financial services have a great deal of promise to offer a variety of accessible, practical, and safe banking services to

the underprivileged in developing nations. Public education about the fundamentals of digital finance services is urgently needed, especially in rural and semi-urban areas.

Cash will no longer be used in India. To lessen the country's reliance on cash and combat money laundering, the Indian government started the "Digital India" campaign. Various digital payment systems appropriate to different sectors of the economy are being coordinated to make them accessible and user-friendly in order to achieve expedited movement into the cashless, digital payments economy across all states and sectors and to promote rapid adoption of digital payment systems. The country needs to become digital if it wants to compete with developing nations and expand the financial sector to meet the demands of the modern world.

Digital payment is a method of payment which is made through digital modes. In digital payments, payer and payee both utilize digital modes to send and get cash. It is likewise called electronic payment. No hard money is engaged with the digital payments. All the exchanges in digital payments are finished on the web. It is a moment and advantageous approach to make payments. In the event that we talk about money payments, you need to initially pull-out money from your record. At that point you utilize this money to pay at shops. Businessperson goes to the bank to store the money which he got from you. This cycle is tedious for you and furthermore for the retailer. Be that as it may, in digital payments, the cash moves from your record to the retailer's record right away. This cycle is programmed and neither you nor the retailer is needed to visit the bank

Digital payment services offer convenience, ease of transactions and security while transacting. This analytical study focuses on growth of digital payments with respect to its volume and value of transactions. A digital transactional platform enables a customer to use a device to make or receive payments and transfers and to store value electronically with a bank or nonbank permitted to store electronic value. Retail agents armed with a digital device connected to communications infrastructure to transmit and receive transaction details enable customers to convert cash into electronically stored value and to transform stored value back into cash. Depending on applicable regulation and the arrangement with the principal financial institution, agents may also perform other functions. The customer device can be digital (e.g., mobile phone) that is a means of transmitting data and information or an instrument (e.g., payment card) that connects to a digital device (e.g., POS terminal).

Digital Payment Methods

1. Banking card:

Banking sector provides various cards to avoid the time spend over the banking transaction. It offers consumers more security, convenience, and control than any other payment method. There are many types of cards Rupay, mastercard, visa etc. they provides more security to the customer while using it. Payment cards give people the power to purchase items in stores, on the Internet, through mail-order catalogues and over the telephone. They save both customers and merchants' time and money, and thus enable them for ease of transaction.

2. USSD:

The innovative payment service works on Unstructured Supplementary Service Data (USSD) channel. This service allow to users mobile banking without internet facility available to make money transfer from one person to another without using internet and smart phones. Service has been launched to take the banking services to every common man across the country. The Common number across all Telecom Service Providers on their mobile phone and can make transaction using an interactive menu on the mobile screen. Using this customer can check balance, transfer money, can get mini statement etc.

3. Adhar enabled Payment system:

AEPS is a bank led model which allows online interoperable financial transaction at PoS (Point of Sale or Micro ATM) through the Business Correspondent or Bank Mitra of any bank using the Aadhar authentication.

4. UPI:

UPI is a Unified Payments Interface system that allow to multiple bank accounts into a single mobile application, merging several banking features. It is use to transfer money receive money, bill payments and others. Now it is getting popularity among the Indian people. It is interesting and easy to use and not need to remember frequently use beneficiary's account number. The customer can get transaction history quick payment.

5. Mobile Wallets:

There are several mobile wallets are available and each bank ha
application. The customer can carry digital cash trough mobile wallet. by use of wallet customer can link credit card or debit card in mobile device to make transaction. An individual's account is required to be linked to the digital wallet to add the money. The Paytm, Freecharge, Mobikwik, Airtel Money, Jio Money, SBI

279/432

Buddy, itz Cash, Vodafone M-Pesa, Axis Bank Lime, ICICI Pockets, Speed Pay etc. are the mobile wallets use in India.

6. Point of Sales:

A point of sale (PoS) is where sales are made. It allow to PoS holder to collect money from their customer by the way of swap Also and no need to go bank for making transaction of purchase and selling. On a micro level, retailers consider a PoS to be the area where a customer completes a transaction, such as a checkout counter. But its require GPS system internet and bank account of merchant.

7. Internet banking:

Internet banking, also known as online banking, e-banking or virtual banking, is electronic payment systems that allow customers of a bank to make transaction using website of the bank using ID and password.

8. National Electronic Fund Transfer:

(NEFT) National Electronic Funds Transfer is a nationwide payment system which provides funds transfer from any bank any branch to any bank. Using the system individual firms and corporate can electronically transfer funds from any bank branch to any individual, firm or corporate having an account with any other bank branch in the country. Not only account holders but also without having account people can sent money to others account by depositing money from anywhere. However, such cash transaction have limit of Rs. 50000/- using this service individual can deposit money on 50000/- and this facility can use in working days only.

9. Real Time Gross Settlement (RTGS):

RTGS is settlement of funds transfers individually on an order by order basis. 'Real Time' means the processing of instructions at the time they are received rather than at some later time. Considering that the funds settlement takes place in the books of the Reserve Bank of India, the payments are final and irrevocable. Transferring large amount RTGS is used. Customers can send minimum 2 lakh and maximum have no limit. RTGS can use in banking hours.

10. Electronic Clearing System (ECS);

ECS is an alternative method for the payment transactions li' payments such as telephone bills, electricity bills, insurance p payments and loan repayments, etc.,

280/432

11. Immediate Payment Service (IMPS):

IMPS offers an instant, 24x7x365, interbank electronic fund transfer service through mobile phones. IMPS are a tool to transfer money instantly across India using mobile, internet and ATM it is safe and cost-effective.

12. Mobile banking:

Mobile banking is a portable system provided by banks to customer on their mobile phones, smart phones with a special application using software. It provided by the banks or financial institution for the purpose. Each Bank provides its own mobile banking App for Android, Windows.

13. Micro ATM:

Micro ATM meant to be a device that is used by the million Business Correspondents to deliver basic banking services. The micro ATM enables Business Correspondents to make instant transactions. It helps to withdrawals, transfers transaction instantly.

Advantages of Digital Payment System

1. **Time Sever:** Using digital payment system customer can pay to merchant transfer money quickly and no need to make payment by cheque and waiting for clearing. Because Digital Payment system take less time than traditional payment system.
2. **Availabilities:** Digital payment system can use by customer from anywhere and anytime there is no need to go banks for every transaction.
3. **Easy Purchasing:** The Digital payment system provides facility to user for purchasing by using ATM card Credit card and POS therefore it is easy for making transaction and no hard cash required to travel with us.
4. **Use of Wallet:** The Digital Payment system includes digital wallets which make payment easy and with that wallet customer can get discount as well as cash back.
5. **Less Risk:** In digital Payment system it provides us securities for every transaction it require MPIN or OTP which can be avoid frauds in t¹

Conclusion

The concept of a digital India is enormous. A significant step toward creating an empowered nation is Digital India. If this concept is a success, it will unquestionably change India by granting Indian citizens access to multimedia information, content, and services. The Digital India initiative offers a lot of prospects, but we must acknowledge that it is still a long way from reaching its goals because most of the

281/432

nine pillars are having difficulty being implemented. In order to prevent the failure of this program, it is crucial that each and every pillar receive focused, sustained attention. In reality, as Indian citizens, we should all mentally prepare for this significant change.

Abstract

In society, teaching has a prestigious place. ICT enables teachers to keep up with new information and techniques for utilizing cutting-edge digital tools and resources. Teachers will become successful teachers by using and learning about ICT. ICT is one of the key elements causing our society to develop so quickly. It may alter the nature of education and the roles that students and teachers play in the transmission of knowledge. Technology is now being used in the classroom by teachers. Common media includes laptops, LCD projectors, desktop computers, EDUCOM, Smart classrooms, and memory sticks. Since teachers are currently the only ones who can create a bright future, teaching community must

Keywords: *ICT, Professional Development, Effects, Higher Education.*

The dramatic developments brought about by information and communication technology (ICT) have improved teacher professional development. Computers, smart phones, laptops, tablets, LCD screens, multimedia players, and projectors are just a few of the ICT-related educational tools that are being employed in classrooms to make teaching and learning more engaging and effective. Information and communication technology (ICT) is a key component of teacher preparation programs that teach educators how to improve both their subject and pedagogical skills. ICT expertise helps teachers create effective lesson plans for both teaching and learning.

ICT contributes to our information and communication processes and the results in the same way that other technologies do in enhancing our quality of life. ICT in education has a great deal of potential to benefit and assist those involved in the process and outcome of education in a variety of ways.

- ICT use has the potential to transform conventional ideas and approaches to the teaching-learning process. Here are a few of the changes:
- It will aid in the changeover to an interactive learning approach from a broadcast model. Thus, the teaching-learning process involves the pupils actively.
- Aids in the process of changing instruction from being teacher-centered to being learner-centered. Students develop self-reliance and self-direction in their knowledge and skill acquisition and application.
- Changes the focus from teaching to learning, making the learning process more dynamic and interesting for both teachers and students.

- Helps teachers transition from being merely knowledge transmitters to being learning facilitators, knowledge navigators, and active co-learners alongside their students.
- ICT has the power to integrate the current educational system with the knowledge-based, information-rich society by giving it access to high-end tools, approaches, and methodologies

Information and communication technology (ICT) is a field that includes cutting-edge computer software used in education and training to improve teachers' professional competence and students' capacity for learning. The retrieval, processing, creation, and transfer of instructional technological information fall under this category of information technology. At the moment, all teaching, administrative, and supporting staff members, as well as students, use ICT resources to successfully accomplish educational goals and carry out their daily tasks more effectively. Teachers employ a variety of ICT-related educational tools in the classroom, such as computers, LCDs, projectors, laptops, multimedia, smart phones, etc., to enhance students' learning.

All these expectations may be met only through need-based, goal-oriented and meaningful in-house discussion, conferences, symposia, workshops, refresher and orientation courses, crash courses, capsule courses and subject-based courses, interdisciplinary and holistic approaches to education and quality research and by enriching the existing libraries and making use of the user-friendly ICT with contextually appropriate and firm pedagogical scaffolding. The teacher educators and individual teacher ought to sincerely and persistently work hard toward this goal. By the latest developments in the information and communication technology the role of teacher in the process of teaching and learning has increased many fold and has become more complex as such teachers are to equip themselves with latest technology then only they cope up the new challenges in the field.

ICT is extremely useful for professional development of teachers and helps the teacher in the following ways:

- The use of ICTs as presentation tools (through overhead and LCD projectors, television, electronic whiteboards, guided "web-tours", where students simultaneously view the same resources on computer screens) is seen to be of mixed effectiveness. While it may promote class understanding of and discussion about difficult concepts (especially through the display of simulations), such uses of ICTs can re-enforce traditional pedagogical practices and divert focus from the content of what is being discussed or displayed to the tool being utilized.
- In OECD experience, the use of technology in everyday teaching and learning activities appears to be more important than specific instruction in "computer classes". While the development of technology skills is seen to have a role in the teaching and learning process, it is more important as an enabler of other teaching and learning practices, and not too important in and of itself. Schools that report the highest levels of student ICT-related skills and experience are often not those with heavy computer course requirements, but rather ones that made use of ICTs on a

routine basis throughout the teacher professional development and the teaching and learning process.

- Effective ICT use in education increases teachers' training and professional development needs. However, ICTs can be important tools to help meet such increased needs, by helping to provide access to more and better educational content, aid in routine administrative tasks, provide models and simulations of effective teaching practices, and enable learner support networks, both in face to face and distance learning environments, and in real time or asynchronously.
- Effective teacher professional development should approximate the classroom environment as much as possible. "Hands-on" instruction on ICT use is necessary where ICTs are deemed to be vital components of the teaching and learning process. In addition, professional development activities should model effective practices and behaviors and encourage and support collaboration between teachers. On-going professional development at the school level, using available ICT facilities, is seen as a key driver for success, especially when focused on the resources and skills directly relevant to teacher's everyday needs and practices.
- ICT enriches teaching by enhancing the initial preparation by providing good teaching and training materials, simulators, recording and feedback mechanisms.
- ICT has removed the barriers of space, time and place between teacher and learner.
- It has established a healthy and interactive relationship between teachers, schools, institutions, and universities and enabled teachers to expertise rich resources in cyber space.
- Pedagogical practices of teachers using ICTs can range from only small enhancements of teaching practices, using what are essentially traditional methods, to more fundamental changes in their approach to teaching. ICTs can be used to reinforce existing pedagogical practices as well as to change the way teachers and students interact.
- The cost of teacher training has been reduced by the didactic software and intelligent tutoring systems.
- ICT provides lifelong professional development by providing courses in a virtual situation, training in demand, orientation and refresher courses through video conferencing and online.
- By the exchange of materials through virtual communities, sharing of ideas and experiences and collaborating on projects the ICT can revolutionize the whole teaching profession.

Role of ICT in Curriculum and Teacher Development

Technological development and the changing competencies required in the present scenario for both students and their teachers, it is necessary to design a state-of-the-art curriculum and appropriate teacher development. Teachers need to be adequately prepared to implement a state-of-the-art ICT curriculum. Indeed, introducing any new curriculum calls for careful preparation, management, resourcing, and continuing support.

In the case of an ICT curriculum, even more concerns have to be considered. Educational research studies show that programmes of professional development for teachers are most effective if directed to the stage of ICT development reached by professional students. The implications of these research findings are that teacher development is best conceived as an ongoing process, with many professional development activities conducted in professional colleges. In any educational system, the level of available resources places a restriction on the degree to which any new subject can be introduced into the college curriculum, especially where only the most basic facilities have so far been provided. But ICT is of such importance to the future industrial and commercial health of a country that investment in the equipment, teacher education, and support services necessary for the effective delivery of an ICT-based curriculum should rank high in any set of government priorities. The curriculum proposed takes account of these resource issues and specifies minimum requirements for effective delivery in different circumstances. Information and communication technology, or ICT, is defined as the combination of informatics technology with other, related technologies, specifically communication technology.

Recent Trends in Teacher Education

Based on various changing needs of our society now emphasis is also given to the various educational theory and educational practices. According to these theories and practices changes are also undergo in teacher education also. It is natural that teacher education must include new technology. Teachers should also know the right attitudes and values, besides being proficient in skills related to teaching. As we know the minimum requirement of any training programme is that it should help the trainee to acquire the basic skills and competencies of a good teacher. Now-a-days new trends in teacher education are Inter-disciplinary Approach, Correspondence courses, orientation courses etc. Simulated Teaching, Micro Teaching, Programmed Instruction, Team Teaching are also used in teacher education. Now-a-day Action Research also implemented in Teacher Education. ICT acts as the gateway to the world of information and helps teachers to be updated. It creates awareness of innovative trends in instructional methodologies, evaluation mechanism etc. for professional development.

The Various ICT Initiatives

- **E-pathshala:** The digital India campaign has promoted extensive use of ICTs in the teaching learning process. The **E-pathshala**, a joint initiative of Ministry of Education, Govt. of India and National Council of Educational Research and Training (NCERT), has been developed for showcasing and disseminating all educational e-resources including textbooks, audio, video, periodicals, and a variety of other print and non-print materials for Students, Teachers, Parents, researchers and educators. It provides access to digital textbooks for all classes, graded learning materials and enables participation in exhibitions, contests, festivals, workshops, etc.
- **NROER:** The National Repository of Open Educational Resources (NROER) is developed by CIET, NCERT. It was launched during the National Conference

on ICT for School Education. NROER hosts large number educational resources in many subjects and in different Indian languages for Primary, Secondary and Senior Secondary classes. Resources are available in different formats like Video, Image, Audio, Document and Interactive. Apart from this all NCERT books are available in Flip book format. NROER is an collaborative platform, intend to reached the un-reached and institutions like SCERT, SIERT, SIE, Vigyan Prasar, CCERT, Gujarat Institute of Educational Technology (GIET),

- **Swayam MOOCs:** SWAYAM (Study Webs of Active-Learning for Young Aspiring Minds) is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity and quality. SWAYAM seeks to bridge the digital divide for students who have hitherto remained untouched by the digital revolution and have not been able to join the mainstream of the knowledge economy. This is done through an indigenous developed IT platform that facilitates hosting of all the courses taught in classrooms to be accessed by anyone, anywhere at any time. All the courses are interactive, prepared by the best teachers in the country and are available, free of cost to the residents in India.
- SWAYAM platform is developed by Ministry of Human Resource Development (MHRD) and NPTEL, IIT Madras with the help of Google Inc. and Persistent Systems Ltd. It would be ultimately capable of hosting 2000 courses and 80000 hours of learning: covering school, under-graduate, post-graduate, engineering, law and other professional courses.
- **Swayam Prabha:** SWAYAM Prabha is an initiative of the Ministry of Human Resources Development to provide 32 High Quality Educational Channels through DTH (Direct to Home) across the length and breadth of the country on 24X7 basis. It has curriculum-based course content covering diverse disciplines. This is primarily aimed at making quality learning resources accessible to remote areas where internet availability is still a challenge. The DTH channels are using the GSAT-15 satellite for programme telecasts.
- **ICT in education curriculum:** The National Policy on ICT in School Education has set the goal of preparing youth to participate creatively in the establishment, sustenance and growth of knowledge. Teachers and Children must not be treated merely as consumers but also as active producers.

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT tools in education make it easier for teachers to use the best strategies to bring out the best in their students. ICT in education sector is beneficial for the students, in addition to this, it is making it possible for schools to impart education in the finest way. Moreover, the technology enables them to manage all the management and administration functions in a seamless manner. Hence, there is no doubt that it is a boon to the education industry.

Teachers are the national builders responsible to train future generation to be able for facing challenges of present era, but this is not possible without having full command in utilization of ICT instructional devices properly. It is a fact that knowledge of ICT helps teachers to keep knowledge updated to use modern instructional technology in classrooms. Recently, ICT has become a basic need of human life across the world and no field can work effectively without its support. In education and training, it plays vital role to uplift teaching and learning process. The use of ICT facilities in teacher training programs has become necessary in classrooms and teachers are considering it most important pillar for better students' learning.

Abstract:

Education is the basic ingredient for achieving full human potential. Women education is a long-standing worldwide issue as no nation can talk of development when half of its population is disabled. Time and again, the issue of women education is put forth so that nation's human resource irrespective of gender can be harnessed and attend gender balance. The National Policy on Education 1986 recognizes 'Education' as the major tools that can help liberate the country from backwardness and lead it onwards to progressive developed nation. "Free and Compulsory Education for All" was initiated but the implementation aspect is yet to be realized in practice.

After 34 years, there is a change in the education policy in India with the introduction of the New Education Policy 2020 (NEP). This new policy aims at universalization of education in India with 100% gross enrolment ratio by 2030 for school education and 50% by 2035 for higher education. The first such move as the formation of a Gender Inclusion Fund toward equitable education for girls who are underprivileged and creating Special Education Zones is included in the provision. Within the goal, it also intends to improve women leadership capacity through positive civil dialogues with women leaders involved in the education system. If implemented, this will bring a record participation rate in higher education, decrease gender gaps at all levels and ensure the practice of gender equity and inclusion in society. In this study, an attempt has been made to study the New Education Policy 2020 on women education.

Keywords: NEP, Women Education, Gender Equality

Introduction

Women play a vital role in a nation's development. They play a very significant role in the society- a wife, a mother, a sister, a caretaker, a nurse, etc. No nation can sustain its development if it underutilizes its woman, who constitutes almost half the population. A famous anonymous African proverb states the importance of education for women in society- "If you educate a man, you educate an individual. If you educate a woman, you educate a nation". Education is a weapon that carves a progressive path for women and their families in the society. An educated woman can weigh the importance of female education to that of male counterpart. Education is a powerful tool that builds confident and ambitious women through which they become aware of their rights and raise their voice against exploitation, discrimination or any form of injustice meted out to them. A nation loses its goal of

integral and sustainable developments when women remain uneducated and underpowered.

Women's education will help to eradicate the discrimination and stigma that women face today through realization of their rights. The education of women will help to eliminate social evils as female infanticide, dowry, child marriage, harassment, etc. This will not just help the women of today but of the future generations who can live in a world where gender equality exists. Educated women can contribute to family's economy, social advancement of society and raise the standard of living. They can add to the workforce which in turn can contribute and reflect on the country's economy. Empowering women helps in the development of the nation. The government, over the years has introduced many schemes to promote women's education in India such as Beti Bachao Beti Padhao Yojana, Sarva Shiksha Abhiyan, Rashtriya Mahila Kosh, Mahila Shakti Kendra, etc. The central and the state governments should join hand and seek the cooperation of different organizations for the expansion of girls' education which should be considered on a priority programme in education. The right to education is granted to every Indian Citizen. We need to ensure that learning is available for all and not just for the privileged few

Importance of Women Education

"If you educate a man you educate an individual, however, if you educate a woman you educate a whole family. Women empowered means mother India empowered". PT. JAWAHARLAL NEHRU. Women education in India plays a very important role in the overall development of the country. It not only helps in the development of half of the human resources, but in improving the quality of life at home and outside.¹ If it is said that education is the key to all problems, then it won't be improper. Thinkers have given a number of definitions of education but out of these definitions, the most important definition is that which was put forth by M. Phule. According to M. Phule, "Education is that which demonstrates the difference between what is good and what is evil". If we consider the above definition, we come to know that whatever revolutions that have taken place in our history, education is at the base of them. ² Education means modification of behaviour in every aspect, such as mentality, outlook, attitude etc. Educated women not only tend to promote education of their girl children, but also can provide better guidance to all their children. Moreover educated women can also help in the reduction of infant mortality rate and growth of the population.

Girls need to be educated because it is their Right, it is their basic entitlement. Education is 'sure way of giving them much greater power -- of enabling them to

make genuine choices over the kinds of lives they wish to lead'. Educated girls will have skills, information and self-confidence that helps her be a better worker, citizen and a parent. Education transforms lives of girls, she is safer, is better nourished, experiences less discrimination, makes her own decisions and has control on her productive and reproductive life. Education helps girls to play a leadership role in her community and society at large.

NEP 2020 on Women Education:

Providing bicycles and organizing cycling and walking groups to provide access to school for female students. – Appointing counsellors and social workers to connect with students and parents to improve attendance and prevent dropout rates among female students to uplift the SEDGs – Providing quality education to girls.

Girl's education has always been a significant challenge to overcome in India. We have witnessed how prejudice and inequality against girls translate to uneven possibilities. India has big potential to socially and economically improve through the education of girls and in recent years a positive transformation has been seen. According to government data, the dropout rate among female students in school has decreased dramatically over the last four years, with the major decrease occurring at the secondary level among those aged 11 to 14 years. The dropout rate for girls in secondary school (Class 9-10) has decreased by approximately 5%, falling from 18.4 percent in 2017-18 to 13.7 percent in 2020-21. NEP 2020 is turning out to be one of the tools to further improve the situation.

Gender Disparity in Society
