ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING: IMPLICATIONS AND APPLICATIONS IN COMMERCE

Dr.S.Jegadeeswari

Assistant Professor of Commerce

Karpagam Academy of Higher Education, Coimbatore

Dr.R.Velmurugan

Associate Professor of Commerce

Karpagam Academy of Higher Education, Coimbatore

Abstract

Artificial intelligence (AI) and machine learning (ML) have emerged as powerful technologies with significant implications and applications in the field of commerce. This essay explores the implications of AI and ML in commerce, including their impact on customer experience, business operations, and decision-making processes. It also discusses the applications of AI and ML in various sectors of commerce, such as retail, e-commerce, marketing, supply chain management, and finance. Moreover, the essay examines the challenges and ethical considerations associated with the use of AI and ML in commerce, highlighting the need for responsible and transparent practices.

Keywords: *Artificial Intelligence, Machine Learning, Commerce, Implications, Applications.*

Introduction

Artificial intelligence (AI) refers to the development of computer systems capable of performing tasks that typically require human intelligence, such as visual perception, speech recognition, decision-making, and problem-solving. Machine learning (ML), on the other hand, is a subset of AI that focuses on enabling computer systems to learn from data and improve their performance without explicit programming. The integration of AI and ML in commerce has been rapidly increasing in recent years. Businesses are leveraging these technologies to gain a competitive edge, enhance customer experiences, streamline operations, and make data-driven decisions. The growing importance of AI and ML in commerce can be attributed to several factors.

- **Increasing Data Availability:** The digital age has generated vast amounts of data from various sources, including customer interactions, online transactions, social media, and sensors. AI and ML algorithms can analyze and extract valuable insights from these data sets, providing businesses with a deeper understanding of their customers, markets, and operations.
- **Advanced Analytics and Predictive Capabilities:** AI and ML techniques enable businesses to analyze large and complex datasets to identify patterns,

correlations, and trends. This allows for the development of predictive models that can anticipate customer preferences, market trends, and demand patterns. By leveraging these capabilities, businesses can make proactive and informed decisions, leading to improved performance and competitiveness.

- **Automation and Efficiency:** AI and ML technologies automate repetitive tasks and processes, freeing up human resources for more strategic and value-added activities. For example, chatbots can handle customer inquiries, machine learning algorithms can automate data entry and analysis, and robotic process automation (RPA) can streamline routine tasks. This automation improves efficiency, reduces errors, and enhances overall productivity.
- **Personalization and Customer Experience:** AI and ML algorithms can analyze vast amounts of customer data to personalize recommendations, offers, and experiences. By understanding customer preferences, behaviors, and needs, businesses can deliver targeted and relevant content, products, and services, thereby enhancing customer satisfaction and loyalty.
- **Competitive Advantage:** The integration of AI and ML in commerce allows businesses to stay ahead of the competition by leveraging advanced technologies for innovation, product development, and service delivery. Organizations that effectively harness AI and ML can gain insights, optimize processes, and create unique value propositions that differentiate them in the marketplace.

Overall, the growing importance and integration of AI and ML in commerce stem from their potential to drive business growth, enhance customer experiences, and enable data-driven decision-making. As these technologies continue to advance, their influence on commerce is expected to expand further, transforming industries and shaping the future of business.

Implications of AI and ML in Commerce

a. Enhanced Customer Experience

- **Personalized recommendations and tailored experiences:** AI and ML algorithms analyze customer data to understand preferences, behaviors, and purchase history. This enables businesses to deliver personalized recommendations, targeted advertisements, and tailored experiences that align with individual customer needs and preferences.
- **Chatbots and virtual assistants for customer support:** AI-powered chatbots and virtual assistants provide 24/7 customer support, addressing customer queries and providing instant assistance. These intelligent systems can handle routine inquiries, resolve issues, and guide customers through the purchasing process, enhancing customer satisfaction and reducing response times.

b. Improved Business Operations

- Automation of routine tasks and processes: AI and ML technologies automate repetitive tasks, such as data entry, document processing, and inventory management. This reduces human error, speeds up processes, and frees up employees' time to focus on higher-value activities.
- Predictive analytics for demand forecasting and inventory management: ML algorithms can analyze historical sales data, market trends, and external factors to predict future demand patterns. This enables businesses to optimize inventory levels, reduce stockouts, and improve supply chain efficiency, resulting in cost savings and improved customer satisfaction.

c. Enhanced Decision-Making

- Data-driven insights for strategic planning and decision-making: AI and ML algorithms analyze large volumes of data to identify trends, patterns, and correlations. This provides businesses with valuable insights for strategic planning, market analysis, and product development. Data-driven decision-making helps businesses stay agile, identify growth opportunities, and make informed choices.
- Real-time analytics for dynamic pricing and risk management: ML algorithms can analyze real-time market data, competitor prices, and customer behavior to optimize pricing strategies. Dynamic pricing allows businesses to respond to market changes, maximize revenue, and remain competitive. ML algorithms can also identify potential risks and fraud patterns, enabling businesses to proactively mitigate risks and protect against fraudulent activities.

By leveraging AI and ML in these areas, businesses can enhance customer experiences, streamline operations, and make more informed and data-driven decisions. This ultimately leads to improved business performance, increased efficiency, and a competitive advantage in the rapidly evolving commerce landscape.

Applications of AI and ML in Commerce**a. Retail and E-Commerce**

- Intelligent product recommendations: AI and ML algorithms analyze customer data, purchase history, and browsing behavior to provide personalized product recommendations. This enhances the shopping experience, increases customer engagement, and drives sales.

- Predictive customer behavior analysis: ML algorithms analyze customer data to predict buying patterns, preferences, and customer churn. This enables businesses to tailor marketing strategies, optimize inventory, and improve customer retention.

b. Marketing and Advertising

- Targeted marketing campaigns: AI and ML algorithms analyze customer data, demographic information, and online behavior to create targeted marketing campaigns. This ensures that marketing efforts reach the right audience, resulting in higher conversion rates and improved ROI.
- Sentiment analysis and social media monitoring: AI and ML technologies can analyze social media posts, customer reviews, and feedback to gauge sentiment and monitor brand reputation. This helps businesses understand customer perceptions, identify emerging trends, and respond effectively to customer feedback.

c. Supply Chain Management

- Optimization of logistics and inventory management: AI and ML algorithms optimize supply chain operations by predicting demand, optimizing routing and transportation, and improving inventory management. This reduces costs, improves efficiency, and minimizes stockouts and excess inventory.
- Predictive maintenance and demand forecasting: ML algorithms can analyze data from sensors and equipment to predict maintenance needs and optimize maintenance schedules. This helps businesses reduce downtime, increase asset lifespan, and improve overall supply chain performance.

d. Finance and Banking

- Fraud detection and prevention: AI and ML algorithms analyze large volumes of financial data to identify patterns and anomalies that may indicate fraudulent activities. This helps financial institutions detect and prevent fraud, safeguard customer accounts, and maintain trust.
- Credit scoring and risk assessment: ML algorithms analyze customer data, credit histories, and financial information to assess creditworthiness and determine risk levels. This enables financial institutions to make informed lending decisions and manage risks effectively.

These are just a few examples of how AI and ML are transforming various aspects of commerce. By harnessing the power of these technologies, businesses can gain a competitive edge, enhance operational efficiency, and deliver personalized experiences to their customers.

Challenges and Ethical Considerations

- a. **Data privacy and security:** The integration of AI and ML in commerce raises concerns about the privacy and security of customer data. Businesses must ensure that proper measures are in place to protect sensitive information, comply with data protection regulations, and maintain customer trust. Encryption, secure data storage, and robust access controls are crucial in safeguarding data privacy and preventing unauthorized access or breaches.
- b. **Bias and fairness in AI algorithms:** AI algorithms learn from historical data, and if that data is biased, it can perpetuate unfair outcomes and discrimination. It is essential to address bias and ensure fairness in AI systems. This involves using diverse and representative training datasets, employing algorithmic fairness techniques, and conducting regular audits to detect and mitigate bias.
- c. **Transparency and explainability of AI systems:** AI algorithms can be complex and difficult to interpret, leading to concerns about their transparency and accountability. Businesses need to ensure that AI systems are explainable, meaning the reasoning behind their decisions can be understood. This promotes trust, enables users to understand how AI systems work, and facilitates regulatory compliance. Techniques such as model explainability and interpretability can provide insights into the decision-making process of AI algorithms.

Addressing these challenges is crucial to harnessing the full potential of AI and ML in commerce. Businesses should prioritize ethical considerations, establish clear guidelines and standards, and involve diverse stakeholders in the development and deployment of AI systems. By promoting data privacy, fairness, and transparency, businesses can build trust, mitigate risks, and maximize the benefits of AI and ML in commerce.

Conclusion

The integration of AI and ML in commerce raises concerns about the privacy and security of customer data. Businesses must ensure that proper measures are in place to protect sensitive information, comply with data protection regulations, and maintain customer trust. Encryption, secure data storage, and robust access controls are crucial in safeguarding data privacy and preventing unauthorized access or breaches. AI algorithms learn from historical data, and if that data is biased, it can perpetuate unfair outcomes and discrimination. It is essential to address bias and ensure fairness in AI systems. This involves using diverse and representative training datasets, employing algorithmic fairness techniques, and conducting regular audits to detect and mitigate bias.

AI algorithms can be complex and difficult to interpret, leading to concerns about their transparency and accountability. Businesses need to ensure that AI systems are explainable, meaning the reasoning behind their decisions can be understood. This promotes trust, enables users to understand how AI systems work, and facilitates regulatory compliance. Techniques such as model explain ability and interpretability can provide insights into the decision-making process of AI algorithms. Addressing these challenges is crucial to harnessing the full potential of AI and ML in commerce. Businesses should prioritize ethical considerations, establish clear guidelines and standards, and involve diverse stakeholders in the development and deployment of AI systems. By promoting data privacy, fairness, and transparency, businesses can build trust, mitigate risks, and maximize the benefits of AI and ML in commerce.

TECHNOLOGY STARTUPS: INNOVATION AND GROWTH IN EMPLOYMENT

Dr. B. Thulasipriya

*Assistant Professor, Department of Commerce
PSGR Krishnammal College for Women, Coimbatore, Tamil Nadu, India*

Ms. Larisha Janet Rodrigues

*Research Scholar, Department of Commerce
PSGR Krishnammal College for Women, Coimbatore, Tamil Nadu, India*

Abstract

This paper explores the relationship between technology startups, innovation, and growth. Technology startups play a crucial role in driving economic growth and technological advancements in various industries. By fostering a culture of innovation, startups introduce disruptive technologies, challenge traditional business models, and generate new opportunities. This paper examines the key factors contributing to the success of technology startups, the innovation processes they employ, and the strategies they adopt to achieve sustained growth. Furthermore, it discusses the impact of startups on the economy and society, as well as the challenges they face. The findings of this research provide insights into the significance of technology startups as drivers of innovation and growth.

Keywords: *Technology Startups, Innovation, Growth, Entrepreneurship, Disruptive Technologies.*

Background and Significance of Technology Startups

With the emergence of the fourth industrial revolution and the evolution of technology, there has been a notable shift in business models and structures. Consequently, technology startups have garnered significant attention due to their pivotal role in fostering employment opportunities and driving innovation. A crucial driving force behind technology startups is the pursuit of radical innovations that can lead to transformative changes in employment dynamics. Historical experiences of job displacement resulting from technological advancements during previous industrial revolutions have prompted ongoing concerns about the intricate relationship between innovation and employment. These concerns stem from the necessity to strike a balance between the macroeconomic benefits derived from technological innovation and the individual satisfaction associated with navigating job transitions, thereby ensuring sustainable socio-economic growth. Additionally, apprehensions arise regarding the potential job displacement caused by the rapid advancement of high-end technologies, such as artificial intelligence and the internet of things, as they have the capacity to replace both physical and intellectual labor.

Technology startups have the potential to materialize this phenomenon by ushering in the emergence of new job opportunities and driving changes in existing

ones. In light of these transformative shifts, our attention shifts from solely focusing on the quantity of labor, as measured by factors such as the unemployment rate, to considering the qualitative aspects of employment, including education and working hours. Thus, it becomes imperative to assess not only the quantitative impact of technology startups on employment but also their qualitative implications. Technology startups are primarily driven by their emphasis on possessing and leveraging advanced technology, founded on a deep understanding of its potential. They are commonly defined as entities that create products and services through the development and utilization of cutting-edge technology. Numerous research reports have demonstrated the positive effects of technology startups on employment growth and performance. Nevertheless, ongoing debates persist regarding the precise impact of entrepreneurship on employment status.

These arguments prompt inquiries into the ways technology startups influence changes in employment and foster innovation. While technology startups are expected to have a quantitative impact on employment creation, there is limited research addressing their effects on the quality of employment. Additionally, little attention has been given to investigating the relationship between technology startups and the outcomes of innovation in relation to employment. To address these research questions and shed light on the role technology startups can play in employment and innovation, this study aims to accomplish the following objectives. First, it will examine the impact of technology startups on employment change, specifically focusing on qualitative aspects. Second, it will explore how employment changes influence innovative performance. Lastly, it will assess the technological innovation exhibited by technology startup companies, considering both product and process innovation, in relation to employment change.

Literature Review

Impact of technology and employment

David B. Audretsch and Julie Ann Elston (2004) conducted a study on "Can institutional change Impact High- Technology firm growth? Evidence from Germany's Neuer Markt." The study investigated to facilitate the transition of the German economy from traditional manufacturing industries to emerging technologies, a dedicated segment of the Frankfurt exchange was established in 1997 known as "Der Neue Markt." This study presents compelling evidence that not only did numerous new firms secure funding from the Neuer Markt, but also, for the first time in recent history, Germany achieved the milestone of enabling smaller firms to outpace larger ones in terms of growth. These findings indicate that the implemented policies not only successfully promoted the emergence of a new breed of companies that might not have otherwise existed, but also transformed the sources of growth and innovation within the German economy.

Andrew A. Toole , Dirk Czarnitzki , and Christian Rammer (2014) conducted a study on “University Research Alliances, Absorptive Capacity, and the Contribution of Startups to Employment Growth”. The study investigated the impact of university research alliances and other cooperative links with universities on the growth of startup employment. The startup's "scientific absorptive capacity" plays a crucial role in leveraging the benefits of university research alliances, but it may not be as significant for other university connections. Additionally, quantify the overall contribution of startup firms to employment and attribute the employment gains to both university research alliances and other university connections. The findings indicated substantial contributions to employment growth from university research alliances and other university connections. However, the scientific absorptive capacity is particularly critical for university research alliances. Among the startup population, only 7% maintained a university research alliance. Nevertheless, within this group, 3.4% of the total jobs created can be attributed to their alliances. These outcomes highlight the importance of university connections for job growth, with university research alliances playing a significant role in fostering job creation for firms that have established such alliances.

Employment and Innovation

Seungku Ahn , Kwon-Sik Kim , Kwang-Hoon Lee (2022) conducted a study on Technological capabilities, Entrepreneurship and Innovation of Technology based Startups: The resource based View”. The study investigated Despite large-scale financial support of the government, there is increasing criticism about the inefficiency of public R&D investment that fails to lead directly to technological innovation of technology-based start-ups. This paper analyzes the factors that influence technological innovation in Korean technology-based start-ups based on the resource-based view (RBV). The empirical analysis combines ordinary least squares and ordered probit analysis of data collected from 248 technology-based start-ups in Korea. The analysis results statistically confirm the effects of technological capabilities and entrepreneurship on technological innovation. First, a start-up’s technological capabilities measured by patents and technological competitiveness have significant positive effects on technological innovation, while the effect of having an in-house R&D department for technological innovation is not significant. Second, entrepreneurship has a significant positive effect on the technological innovation of a start-up, and this positive effect has a moderating effect that further promotes the positive effect of technological competitiveness on technological innovation.

Michela Piccarozzi (2017) conducted a study on “Does Social Innovation Contribute to Sustainability? The Case of Italian Innovative Start-Ups” This study

investigated to find out start-ups, alongside other enterprises, play a significant role in driving technological advancements, commercialization, and national economic development. As firms serve as the epicenter of innovation within a society, it is crucial to understand their dynamics. In Italy, recent regulatory measures have focused on establishing a framework for defining and regulating innovative start-ups. Of particular interest are innovative start-ups with a social vocation, which have received limited attention in existing literature. This paper has a dual objective: firstly, to examine the relationship between social innovation and sustainability within these businesses, and secondly, to explore avenues for enhancing sustainability through them.

To achieve these objectives, the researchers analyzed Italian cases of innovative start-ups using content analysis applied to the Social Impact Assessment Documents provided by the firms. The findings reveal that these documents explicitly address social innovation and sustainability in various ways. However, they do not explicitly establish a direct link between social innovation and sustainability. Nevertheless, a careful examination of these documents uncovers a clear association between social innovation and the three dimensions of sustainability: economic, social, and environmental. This realization presents an opportunity for better management and integration of social innovation with sustainability objectives.

Statement of the Problem

Technology startups play a critical role in driving innovation and economic growth, often serving as key engines of job creation. As these startups evolve and scale, their ability to innovate becomes crucial not only for their survival but also for their continued expansion and success. However, the relationship between employment changes within technology startups and their innovative performance remains a complex and underexplored area of research. Hence this study aims to increase an understanding the impact of tech- startups on employment change in order to contribute towards the influence in innovative performance considering both product and process innovation.

Objectives of the Study

The specific objectives of the study are as follows:

- To examine the impact of technology startups on employment change.
- To explore how employment changes influence innovative performance.
- To assess the technological innovation exhibited by technology startup companies, considering both product and process innovation.

Nature and Source of Data

The secondary data on several aspects of the activities of the technology startups in employment change were collected from different sources.

Impact of Technology Startups on Employment Change

Job Creation: Technology startups have been significant contributors to job creation. A study by the Kauffman Foundation found that startups, including those in the technology sector, accounted for a substantial portion of net job creation in the United States. These startups often require a range of specialized skills, leading to the creation of jobs in fields such as technology, software development, data analysis, marketing, and sales.

High-Growth Potential: Technology startups have the potential for rapid growth and scalability, which can result in increased employment opportunities. As startups secure funding and expand their operations, they often hire new employees to support their growth strategies. This can lead to job creation not only within the startup itself but also in the surrounding ecosystem, as startups collaborate with or supply services to other businesses.

Industry Disruption: Technology startups often introduce disruptive innovations that reshape traditional industries. While this disruption may lead to job losses in some sectors, it can also create new job opportunities in emerging industries. For example, the rise of ride-sharing startups has transformed the transportation sector, leading to the creation of jobs for drivers, as well as in areas such as app development, customer support, and vehicle maintenance.

Regional Economic Growth: Technology startups can contribute to regional economic growth. Concentrations of startups, often referred to as "startup ecosystems" or "innovation hubs," can attract investment, talent, and resources to a region, leading to increased employment opportunities and economic development.

It is important to note that while technology startups have a positive impact on employment change, the specific effects can vary depending on factors such as the startup's industry, business model, and market conditions. Additionally, there may be challenges and risks associated with startup employment, such as job instability and the potential for business failures.

Influence of Employment Changes Through Innovative Performance

• Measuring Innovative Performance in Technology Startups

In today's fast-paced and highly competitive business landscape, technology startups face the constant challenge of driving innovation to stay ahead. Measuring innovative performance is critical for startups to evaluate the effectiveness of their innovation strategies, identify areas for improvement, and demonstrate their

competitive advantage. However, various metrics and approaches are used to measure innovative performance in technology startups, considering both quantitative and qualitative measures which includes:

- ❖ **Key Performance Indicators (KPIs) for Innovative Performance:** One of the primary ways to measure innovative performance is through key performance indicators (KPIs) that provide quantifiable insights. These KPIs include:
 - ❖ **Research and Development (R&D) Expenditure:** The amount of investment allocated to R&D activities reflects a startup's commitment to innovation. Tracking R&D expenditure allows startups to assess their level of investment in developing new technologies, products, or services.
 - ❖ **Time-to-Market for New Innovations:** The speed at which a startup can bring innovations to market is crucial in competitive industries. Measuring the time taken from ideation to commercialization helps assess the startup's efficiency and agility in executing innovative projects.
 - ❖ **Customer Satisfaction and Feedback:** Feedback from customers regarding the usability, effectiveness, and overall satisfaction with a startup's products or services provides valuable insights into the success and impact of their innovations.
- **Employee Engagement and Motivation in Driving Innovation**

In today's highly competitive and rapidly evolving business landscape, innovation has become a key driver of success for organizations, particularly in the technology sector. While the importance of innovation is widely recognized, harnessing the creative potential of employees is crucial for driving meaningful and sustainable innovation. By understanding how engaged and motivated employees contribute to innovation and identifying strategies to enhance their involvement, organizations can create an environment that nurtures innovation and fuels growth.
- **The Link Between Employee Engagement, Motivation, and Innovation**
 - ❖ **Employee Engagement:** Employee engagement refers to the emotional commitment and dedication employees have toward their work and organization. Engaged employees are passionate, motivated, and fully invested in their roles, which creates an ideal foundation for innovation.
 - ❖ **Employee Motivation:** Motivation is the internal drive that influences employees' behavior and effort. Motivated employees are more likely to exhibit proactive behaviors, take risks, and generate innovative ideas.
 - ❖ **Risk-Taking and Experimentation:** Motivated employees exhibit a willingness to take calculated risks and experiment with new ideas, pushing boundaries and driving disruptive innovations.

- ❖ **Problem-Solving and Creativity:** Engaged employees are more likely to display higher levels of problem-solving skills and creative thinking, allowing them to identify novel approaches and generate innovative solutions.
- **Technological innovation exhibited by technology startup companies, considering both product and process innovation**
 - ❖ **Product Innovation in Technology Startups:** Product innovation refers to the creation and introduction of new or improved products that address market needs, solve problems, or provide novel solutions. Technology startups exhibit various forms of product innovation, such as:
 - ❖ **Disruptive Technologies:** Startups often introduce disruptive technologies that challenge existing products and market dynamics. These innovations can redefine industries, create new markets, and revolutionize customer experiences.
 - ❖ **New Features and Functionality:** Startups continuously enhance and evolve their products by adding new features and functionalities. This allows them to stay ahead of competitors, meet changing customer demands, and deliver superior user experiences.
 - ❖ **User-Centric Design:** Technology startups prioritize user-centered design methodologies, ensuring their products are intuitive, user-friendly, and provide seamless interactions. This customer-centric approach drives innovation by considering user needs and preferences.
 - **Process Innovation in Technology Startups:** Process innovation involves introducing new methods, techniques, or approaches to improve operational efficiency, enhance productivity, and streamline workflows. Technology startups exhibit process innovation in several ways:
 - ❖ **Agile Development Methodologies:** Startups often embrace agile development methodologies, such as Scrum or Kanban, to enhance flexibility, collaboration, and responsiveness during product development cycles. This iterative approach accelerates innovation and enables rapid product iterations.
 - ❖ **Lean Startup Principles:** Startups adopt lean startup principles, emphasizing the rapid validation of ideas, experimentation, and learning from customer feedback. This lean approach minimizes waste, maximizes resource utilization, and speeds up the innovation cycle.
 - ❖ **Automation and Digitalization:** Technology startups leverage automation and digitalization to optimize processes, reduce manual tasks, and improve efficiency. By automating routine activities, startups can allocate more time and resources to innovation and strategic initiatives.

Technological innovation exhibited by technology startups encompasses both product and process innovation. Startups introduce disruptive technologies, enhance product features, and prioritize user-centric design to create innovative products that address market needs. Simultaneously, they embrace agile methodologies, lean principles, and digitalization to optimize processes, enhance efficiency, and drive operational excellence. The synergy between product and process innovation enables startups to gain a competitive edge, deliver superior user experiences, and fuel sustained growth. By continually pushing the boundaries of technological innovation in both product and process domains, technology startups shape industries, inspire change, and pave the way for the future of innovation.

Findings of the Study

The study aimed to examine the impact of technology startups on employment change, explore how employment changes influence innovative performance, and assess the technological innovation exhibited by technology startup companies, considering both product and process innovation. The findings are as follows:

- **Impact of Technology Startups on Employment Change**
 - ❖ Technology startups have a significant impact on employment change by creating new job opportunities. They often require a diverse range of skills and expertise, leading to job creation in areas such as software development, data analysis, digital marketing, and customer support.
 - ❖ Startups also contribute to employment change through their ability to adapt and disrupt traditional industries, leading to the transformation or displacement of certain job roles. This dynamic nature of startups can lead to job reallocation and retraining of employees.
- **Influence of Employment Changes on Innovative Performance**
 - ❖ Employment changes play a crucial role in shaping the innovative performance of technology startups.
 - ❖ The recruitment and retention of highly skilled and talented employees are vital for startups to foster a culture of innovation. Hiring individuals with diverse backgrounds and expertise brings fresh perspectives and promotes creative problem-solving.
- **Technological Innovation Exhibited by Technology Startup Companies**
 - ❖ Technology startups exhibit both product and process innovation to drive their competitive advantage.
 - ❖ Product innovation is a key focus for startups, as they aim to develop new or improved offerings that address market needs, provide unique value propositions, and disrupt existing industries. Startups leverage emerging technologies and user-centric design principles to create innovative products with enhanced features and functionalities.

- ❖ Process innovation is critical for startups to optimize their operations, enhance efficiency, and accelerate their innovation cycles. Startups adopt agile development methodologies, lean startup principles, and automation to streamline workflows, improve collaboration, and reduce time-to-market.

Overall, the findings of the study highlight the profound impact of technology startups on employment change, the significance of employment changes in driving innovative performance, and the emphasis placed on both product and process innovation by startups to stay competitive and drive growth. These insights contribute to our understanding of the dynamics of technology startups and their role in shaping innovation and employment in the modern economy.

Conclusion

Technology startups play a crucial role in driving innovation, fostering economic growth, and shaping employment landscapes. This essay has explored the relationship between technology startups, innovation, and employment, highlighting the significant impact of startups on employment change and the role of innovation in driving growth. The findings demonstrate that startups create new job opportunities, require diverse skills, and contribute to job reallocation and transformation in various industries.

Moreover, the study has emphasized the importance of innovation in technology startups. Startups leverage product and process innovation to differentiate themselves, disrupt markets, and gain a competitive edge. They prioritize user-centric design, employ emerging technologies, and adopt agile and lean methodologies to develop innovative products and optimize their operations. This commitment to innovation drives economic growth, fuels industry evolution, and attracts talent.

Technology startups continue to be powerful drivers of innovation and employment growth. Further research and exploration of policy frameworks, entrepreneurial ecosystems, technological disruption, skills development, sustainability, and social impact will contribute to a deeper understanding of the role of technology startups in shaping innovation and employment landscapes, driving economic growth, and addressing societal challenges.

Abstract

The role of women in the business landscape has evolved significantly in recent years, particularly in the context of Digital India's transformative initiatives. The government's Digital India campaign has provided a robust platform for women entrepreneurs to leverage technology, bridge gender disparities, and tap into various opportunities. This paper aims to analyze the emergence and impact of women entrepreneurs in the digital sector in India, highlighting their contributions to the economy and society. The study draws on a comprehensive review of existing literature, data's and to investigate the challenges and opportunities faced by women entrepreneurs in the digital ecosystem. However, the study also showcases inspiring success stories of women who have overcome these barriers to create innovative businesses and disrupt traditional industries. The study concludes by highlighting the importance of fostering an enabling environment that supports and nurtures women entrepreneurs in the digital space.

Keywords: *Women entrepreneurs, Digital India, Digital economy, Gender equality, Digital transformation.*

Introduction

A woman's from half of the society. The pressure of domestic work such as home- making, child care and health care makes it efficient, if not impossible, for India women to engage in the entrepreneurial actives. But the remarkable success of wide-spread e-commerce, helps many women in marketing their long-cherished of becoming entrepreneurs in the reality. Women entrepreneur is one who incubates new ideas starts her enterprise added value to society based on their independent initiative. She is self confident and has faith in herself and her abilities. She has the strength to bring the change and overcome resistance. The increasing presence of women as entrepreneurs has led to significant business and economic growth in the country. Women-owned business enterprises are playing a prominent role in society by generating employment opportunities in the country, bringing in demographic shifts and inspiring the next generation of women founders. With a vision to promote the sustainable development of women entrepreneurs for balanced growth in the country, Startup India is committed towards strengthening women entrepreneurship in India through initiatives, schemes, creation of enabling

networks and communities and activating partnerships among diverse stakeholders in the startup ecosystem.

In recent years, the emergence of digital India has led to a significant transformation in various sectors, including entrepreneurship. One of the most notable developments has been the rise of women entrepreneurs who are making remarkable strides in the digital landscape. Women in India are breaking traditional barriers and embracing technology to build successful ventures, contributing significantly to the nation's economic growth and empowerment of women. The digital revolution in India has opened up unprecedented opportunities for women to leverage technology, access information, and connect with a global audience. Empowered with digital tools and platforms, women entrepreneurs are not only establishing innovative businesses but also driving social change and gender equality.

Women Entrepreneurs in India

Women who start and run their own businesses are considered female entrepreneurs. A woman entrepreneur is one who improves the lives of economically and socially disadvantaged women in society. Go describes women entrepreneurs as "a business owned and controlled by women that creates jobs for its employees." Encouraging women to initiate and sustain enterprises could play a pivotal role in uplifting India's economy and bring about improvements on various social indicators linked to the quality of life and well-being of families. Being inextricably tied with care giving roles at home, like caring for children, preparing food, etc, also means that women tend to prioritize the well-being of their families and therefore spend a considerable portion of their income on ensuring better education for their children along with the health and nutrition of family members. The Landscape Study on Women Entrepreneurship by EdelGive Foundation shows that women entrepreneurs spend most of their income on food (65%), children's education (53%), clothing (51%) and health/medical facilities (24%), which results in better educated and healthier generations. Moreover, past studies have indicated that promoting women's participation in employment and entrepreneurship in India can potentially increase the country's gross domestic product (GDP) by \$0.7 trillion by 2025. Yet, despite the positive impact that women's entrepreneurship has on societal development and women's empowerment, the contribution of women to India's GDP is estimated at 17% as compared to the global average of 37%, with the share of women-led micro, small and medium enterprises (MSMEs) being a meager 14% .

The women entrepreneurs have leveraged technology and innovation to create successful ventures and drive social and economic change in the digital space in India:

1. **Falguni Nayar:** She is the founder of Nykaa, an e-commerce platform focused on beauty and wellness products. Nykaa has become one of the leading online beauty retailers in India.
2. **Richa Kar:** Richa Kar is the founder of Zivame, an online lingerie and intimate apparel store that has transformed the way women shop for undergarments in India.
3. **Upasana Taku:** Co-founder of MobiKwik, a digital wallet and mobile payments platform, Upasana has played a significant role in promoting cashless transactions in India.
4. **Radhika Ghai Aggarwal:** Co-founder of ShopClues, an online marketplace that connects buyers and sellers across India, offering a wide range of products.
5. **Shradha Sharma:** Founder and CEO of YourStory, a media platform that showcases stories of startups, entrepreneurs, and change-makers in India.
6. **Sabina Chopra:** She co-founded Yatra.com, one of India's leading travel portals, making it easier for people to book flights, hotels, and travel packages online.
7. **Suchi Mukherjee:** Founder of Limeroad, an e-commerce platform known for its social shopping experience, where users can create their own fashion looks and share them.
8. **Aditi Gupta:** Co-founder of Menstrupedia, a digital platform that educates people about menstruation, breaking taboos and promoting menstrual hygiene.
9. **Anisha Singh:** Founder of MyDala, a platform that provides deals and discounts on various services, making it popular among online shoppers.
10. **Neha Singh:** Co-founder of Tracxn, a startup intelligence platform that tracks data on emerging tech companies and sectors.

These women have overcome various challenges and have shown immense determination in building successful digital enterprises. They continue to inspire and encourage other aspiring women entrepreneurs in India to embrace technology and create a lasting impact in the digital ecosystem.

Women Entrepreneurs in Digital India

Women entrepreneurs in Digital India face both opportunities and challenges. It's important to note that the landscape may have evolved since then, but I'll provide insights based on the information available up to that point:

Opportunities for Women Entrepreneurs in Digital India

1. **Digitalization and E-commerce:** With the growth of Digital India initiatives, more business activities have moved online. This presents an excellent opportunity for women entrepreneurs to establish e-commerce ventures, digital marketing agencies, or online service providers.
2. **Access to a Wider Audience:** The internet allows women entrepreneurs to reach a global audience from the comfort of their homes. They can leverage social media, online marketplaces, and digital advertising to promote their businesses internationally.
3. **Government Initiatives and Support:** The Indian government has launched various schemes and programs to support women entrepreneurs, including financial assistance, skill development programs, and networking opportunities.
4. **Remote Work and Flexibility:** The digital era enables flexible work arrangements, which can be particularly advantageous for women entrepreneurs who may need to balance family responsibilities with business ventures.
5. **Empowerment through Education:** Digital platforms offer numerous educational resources, online courses, and webinars that empower women with the knowledge and skills needed to start and grow their businesses.

Challenges Faced by Women Entrepreneurs in Digital India

Despite the positive growth and progress, women entrepreneurs in Digital India also face some challenges, including:

1. **Gender Bias:** The tech industry, like many others, still faces gender bias, making it difficult for women to access funding, resources, and opportunities at times.
2. **Work-Life Balance:** Balancing entrepreneurial responsibilities with family and societal expectations can be challenging for women, affecting their entrepreneurial journey.
3. **Access to Funding:** Access to capital and venture funding remains a significant obstacle for many women-led startups in India.
4. **Digital Literacy:** While digital adoption is increasing in India, some women entrepreneurs still face challenges related to digital literacy, which can affect their ability to leverage digital tools effectively.

Despite these challenges, women entrepreneurs in Digital India are making strides, and the ecosystem is gradually becoming more inclusive and supportive. The government and various organizations are taking initiatives to encourage and

empower women to participate in the digital economy and entrepreneurship, which will likely contribute to further growth and opportunities for women in the future.

Conclusion

Women entrepreneurs in Digital India have demonstrated remarkable strength, resilience, and innovation in transforming the landscape of the country's digital economy. They have overcome various challenges, including societal norms, gender biases, and access to resources, to establish their ventures and contribute significantly to economic growth. In conclusion, the rise of women entrepreneurs in Digital India has been a powerful force for change. Their active participation in various sectors, from e-commerce to fintech, has led to the creation of job opportunities, the development of innovative solutions, and the empowerment of women in the workforce. As they continue to break barriers and pave the way for others, it is crucial for policymakers and society at large to provide adequate support, resources, and an enabling environment to further foster the growth of women-led businesses.

ANALYSIS OF SECURITY IN MULTIPATH DISTANCE VECTOR ROUTING

Ms. R.Surya Prabha

*Assistant Professor, Department of Computer Science
Sri Krishna Arts & Science College, Coimbatore*

Dr.S.Saraswathi

*Associate Professor, Dean-Academic affairs
Nehru Arts and Science College, Coimbatore*

Abstract

Secured optimization with on-demand multipath distance vector (OMDVM) in mobile ad-hoc networks (MANETs) is a promising approach to improve the performance and security of MANETs. OMDVM is a routing protocol that creates multiple paths between source and destination nodes, which can help to improve reliability and performance in the event of link failures or congestion. Additionally, OMDVM can be used to implement security mechanisms such as authentication and encryption, which can help to protect MANETs from denial-of-service attacks and other malicious activity. There are a number of benefits to using OMDVM in MANETs. First, OMDVM can improve reliability by providing multiple paths between source and destination nodes. This means that if one path fails, communication can still be maintained using the other paths. Second, OMDVM can improve performance by load-balancing traffic across multiple paths. This can help to reduce congestion and improve the overall throughput of the network. Third, OMDVM can be used to implement security mechanisms, which can help to protect MANETs from malicious activity.

Keywords: Load Balancing, Efficiency, Routing.

Association of Challenges in OMDV: There are also some challenges associated with using OMDVM in MANETs. One challenge is that OMDVM can increase the overhead of the network. This is because OMDVM requires nodes to maintain information about multiple paths, which can increase the amount of data that needs to be transmitted. Another challenge is that OMDVM can be more complex to implement than other routing protocols. This is because OMDVM needs to take into account the security mechanisms that are being used, which can add to the complexity of the protocol. OMDVM is a promising approach to improving the performance and security of MANETs. However, there are some challenges associated with using OMDVM, such as increased overhead and complexity. These challenges need to be addressed before OMDVM can be widely adopted in MANETs.

Introduction

Overhead of OMDVM without Sacrificing Reliability or Performance

There are a number of ways to reduce the overhead of OMDVM without sacrificing reliability or performance. Some of these methods include: Compressed routing tables. OMDVM routing tables can be compressed to reduce the amount of data that needs to be transmitted. This can be done by using a variety of compression techniques, such as lossless compression or lossy compression. Selective routing. OMDVM can be configured to only maintain information about the most important paths. This can help to reduce the amount of overhead associated with maintaining information about all possible paths. Efficient routing algorithms. OMDVM can use efficient routing algorithms that minimize the amount of data that needs to be transmitted. This can be done by using algorithms that only transmit information about the most important changes to the network topology. It is important to note that reducing the overhead of OMDVM may also reduce the reliability or performance of the protocol. For example, if the routing tables are too compressed, it may be difficult to find a path if one of the paths fails. Similarly, if selective routing is used too aggressively, it may be difficult to maintain connectivity between nodes. Therefore, it is important to carefully balance the need to reduce overhead with the need to maintain reliability and performance.

Implementation of OMDVM Without Compromising Security

Simplified security mechanisms. OMDVM can be configured to use simplified security mechanisms, such as authentication without encryption. This can help to reduce the complexity of the protocol without compromising security.

Lightweight security protocols. OMDVM can use lightweight security protocols, such as IPsec or TLS. These protocols are designed to be efficient and easy to implement, which can help to simplify the implementation of OMDVM.

Security frameworks. OMDVM can use security frameworks, such as the Trusted Computing Group (TCG) or the Open Platform for Security (OPSEC). These frameworks provide a number of security services, such as authentication, encryption, and key management. This can help to simplify the implementation of OMDVM by offloading some of the security-related tasks to the framework. It is important to note that simplifying the implementation of OMDVM may also reduce the security of the protocol. For example, if simplified security mechanisms are used, it may be easier for attackers to compromise the security of the network. Similarly, if lightweight security protocols are used, they may not be as secure as more traditional security protocols. Therefore, it is important to carefully balance the need to simplify the implementation with the need to maintain security.

Efficient Security Mechanisms for OMDVM

Cryptographic algorithms. OMDVM can use efficient cryptographic algorithms, such as lightweight block ciphers or stream ciphers. These algorithms are designed to be efficient in terms of both computational complexity and memory footprint.

Efficient key management schemes. OMDVM can use efficient key management schemes, such as elliptic curve cryptography or password-authenticated key exchange (PAKE). These schemes are designed to be efficient in terms of both the number of messages exchanged and the amount of computation required. Efficient authentication mechanisms. OMDVM can use efficient authentication mechanisms, such as message authentication codes (MACs) or digital signatures. These mechanisms are designed to be efficient in terms of both the amount of computation required and the amount of data transmitted.

It is important to note that developing more efficient security mechanisms may also reduce the security of the protocol. For example, if less secure cryptographic algorithms are used, it may be easier for attackers to compromise the security of the network. Similarly, if less efficient key management schemes are used, it may be more difficult to manage the keys used to secure the network. Therefore, it is important to carefully balance the need to improve efficiency with the need to maintain security.

Evaluating the Performance and Security of OMDVM in Real-World Manets Simulation

OMDVM can be evaluated in simulation using a variety of tools, such as NS-3 or Omnet++. This allows researchers to evaluate the performance and security of OMDVM under a variety of conditions, such as different network topologies, traffic patterns, and security threats. Emulation. OMDVM can be evaluated in emulation using a variety of tools. This allows researchers to evaluate the performance and security of OMDVM in a more realistic environment than simulation, as it takes into account the effects of real-world factors, such as radio propagation and node mobility. Using field trials. OMDVM can be evaluated in field trials using real MANETs. This allows researchers to evaluate the performance and security of OMDVM in a real-world environment, but it can be more difficult and expensive to conduct field trials than simulation or emulation.

Each of these methods has its own advantages and disadvantages. Simulation is the most flexible method, as it allows researchers to evaluate OMDVM under a variety of conditions. However, simulation may not be as realistic as emulation or field trials. Emulation is more realistic than simulation, but it may not be as flexible. Field trials are the most realistic method, but they can be more difficult and expensive to conduct.

The best method for evaluating the performance and security of OMDVM depends on the specific research goals. If the goal is to evaluate OMDVM under a variety of conditions, then simulation may be the best method. If the goal is to evaluate OMDVM in a realistic environment, then emulation or field trials may be the best method.

Conclusion

Security is a major concern in mobile ad hoc networks (MANETs), as these networks are typically open and dynamic, making them vulnerable to a variety of attacks. Multipath distance vector (MDV) routing protocols are a popular choice for MANETs, as they can provide improved reliability and performance over single-path routing protocols. However, MDV protocols are also vulnerable to a number of attacks, such as flooding, blackhole, and grayhole attacks. MDV routing protocols are vulnerable to a number of attacks, but there are a number of security mechanisms that can be used to protect them. The use of security mechanisms can help to improve the reliability and performance of MDV routing protocols. The choice of security mechanisms depends on the specific threat model and the security requirements of the network.

THE VALUE OF ICT RESOURCES IN HIGHER EDUCATION

Dr. D. Rajasekaran

*Assistant Professor, Department of Commerce – Banking and Insurance
Nallamuthu Gounder Mahalingam College, Pollachi*

Dr. M. Jeeva

*Associate Professor and Head, Department of Commerce – Banking and Insurance
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

Education in the country Preparedness for ICT usage in Effective integration of ICTs into educational system is a complex and multifaceted process that involves in educational policy and planning, infrastructure, capacity building, language and content and financing. With the paradigm shift in the curriculum, teacher acts as a facilitator in a student centred learning and ICT based education makes the teaching-learning process effective. ICT implementation has given a magnificent opportunity for the Education Implementation specialists to reanalyze what we want our future leaders of India to be like. NEP 2020, an expert committee led by former Indian Space Research Organisation (ISRO) Chief Krishnaswamy Kasturirangan were recommended the education policy which has broaden the horizon of India education system mainly focussed on technological based education which will develop in students' inventive thinking, higher- order thinking and sound reasoning, effective communication, and high productivity. This paper presents the highlights of NEP 2020 and various provisions for ICT in Teacher Education and the present status of ICT usage in Higher Education with some challenges for implementation. Lastly, some suggestions are put forward for successful implementation of ICT in teacher education in Nagaland.

Keywords: *ICT tool s, Higher Education,*

Introduction

ICT stands for Information and Communication Technology. It is defined as the application of technology in processing of information and communication which includes the use of computers and software to not only convert and store but also process, transmit and retrieve information. National policy on ICT (NCF 2005), has defined it as all devices, tools, content, resources, forums, and services, digital and those that can be converted into or delivered through digital forms, which can be deployed for realizing the goals of teaching learning, enhancing access to and reach of resources, building of capacities, as well as management of the educational system. With the merging of technologies, it has become imperative to take a comprehensive look at all possible information and communication technologies for improving teacher teacher education, teacher-educators with varying levels of awareness of and ability to use ICT in teaching process and teacher-trainees with

varied levels of exposure which led every learner to negotiate learning spaces on their own and develop their unique world views. Engage of the North Central Regional Educational Laboratory (US) has identified what it calls “21 century Skills,” which includes digital age literacy. In 2012, Zuppo provided an ICT hierarchy, where all levels of hierarchy “contain some degree of commonality in that they are related to technologies that facilitate the transfer of information and various types of electronically mediated communication.”

Objective of the Study

- To find out the present status of ICT usage in Various Colleges in
- To explore the NEP 2020 of various provisions for ICT in teacher education
- To examine the challenges for implementation of ICT
- Suggestions for future improvement for effective implementation of ICT in higher education

Methodology

The study based on secondary data and the data were collected through various websites and magazines to obtaining the Information and Communication in Technology (ICT) in teacher education and highlights the present usage of ICT in colleges based on the challenges for effective implementation.

Current Status of ICT usage in Higher Education

In this 21st century known as the digital age where different ICTs are said to help expand access to education, strengthen the relevance of education to the increasingly digital workplace. Usage of ICT is one of the way by which India’s large population base can be effectively reached. The role of a teacher plays an integral part in the learning process where teacher can utilize ICT tools to get benefits from using these tools in the area of content, curriculum, instruction and assessment.

Undertook the survey of current status of ICT usage in higher Education, the availability of educational technology related aids that are utilize for teaching-learning process and how much these ICT tools are used for educational purpose.

Demographical Information

The study had selected respondents who were around the group of 25-50 years. This set of samples was taken from both B.Ed teacher-trainees and teacher-educators comprising of 15 teacher-educators and 110 teacher- trainees from both pre-service and in-service teachers around the state. The researcher approaches the concerned college authorities and sought permission for conducting the test on the students and the educators.

Respondents' Division of ICT usage and Their Scores

Fig.3.1. Respondents of teacher-educators' division and scores of ICT usage

Fig.3.1. indicates the division and scores of ICT usage of teacher- educators. The figure represents according to the division and scores of the teacher-educators from highest to the lowest percentage of ICT usage. The figure shows that the teacher- educators highly used of ICTs like internet, smart-phone, laptop, social media, projector and PPT during teaching. Followed by interactive white-board, Wikipedia, e-learning materials, web-camera, camera, tablet, scanner/printer, television, microphone/speaker, tele/video conferencing and lastly, least usage is tape recorder/voice recorder

Fig.3.2. Respondents of teacher-trainees' division and scores of ICT usage

Fig.3.2. indicates the division and scores of ICT usage of teacher-trainees. The figure represents according to the division and scores of the teacher- trainees from highest to the lowest percentage of ICT. The figures shows that the teacher-trainees highly usage of ICTs like internet, Smartphone and social media. Followed by Wikipedia, scanner/printer, projector, PPT, tablet, camera, television, tape recorder/voice recorder and the least usage is e-books.

Various Provisions of NEP 2020 for ICT in Teacher Education

In recent rise of pandemics demands digital platforms on ICT based educational initiative. In this regard, the National Education Policy 2020 recognizes the importance of leveraging the advantages of technology while acknowledging its potential risks and dangers. It calls for carefully designed and appropriately scaled pilot studies to determine how the benefits of online/digital education can be reaped while addressing or mitigating the downsides. In the meantime, the existing digital platforms and ongoing ICT-based educational initiatives must be optimized and expanded to meet the current and future challenges in providing quality education for all.

- According to NEP 2020, the use of technology platforms such as SWAYAM/DIKSHA for online training of teachers will be encouraged to standardized training programmes can be administered to large numbers of teachers within a short span of time.
- The National Educational Technology Forum (NETF) will be created to provide a platform for free exchange of ideas on the use of technology to enhance learning, assessment, planning, administration, and so on, both for school and higher education.
- According to NEP 2020 that educational software will be available for both the teachers and students at all levels including students in remote areas and Divyang students. Setting of e-content for teaching and learning developed by all states in their regional languages and by NCERT, CIET, CBSE, NIOS, etc., and will be uploaded in the DIKSHA platform.
- Technological interventions for improving teaching learning and evaluation processes, supporting teacher preparation and professional development, enhancing educational access, and streamlining educational planning, management, and administration including processes related to admissions, attendance, assessments, etc.
- According to NEP 2020 that Suitable ICTs equipments will be made available to teachers at schools so that teachers can suitably integrate e-contents into teaching- learning practices.

- NPE 2020 stressed on suitable training and development for effective online educators for the teachers. It cannot be assumed that a good teacher in a traditional classroom will automatically be a good teacher in an online classroom. According to NEP 2020 emphasis on setting up the building of digital infrastructure, digital content and capacity building will be created in the Ministry to look after the e-education needs of both school and higher education. With the rapid advancement of technology, we need specialists to deliver high quality e-learning, a vibrant ecosystem has to be encouraged to create solutions that not only solve India's challenges of scale, diversity, equity, but also evolve in keeping with the rapid changes in technology, whose half-life reduces with each passing year. This centre will, therefore, consist of experts drawn from the field of administration, education, educational technology, digital pedagogy and assessment, e-governance, etc.

Given the emergence of digital technologies and the emerging importance of leveraging technology for teaching- learning at all levels from school to higher education, this Policy recommends the following key initiatives:

- a. Pilot studies for online education: Appropriate agencies, such as the NETF, CIET, NIOS, IGNOU, IITs, NITs, etc. will be identified to conduct a series of pilot studies, in parallel, to evaluate the benefits of integrating education with online education while mitigating the downsides and also to study related areas, such as, student device addiction, most preferred formats of e-content, etc. The results of these pilot studies will be publicly communicated and used for continuous improvement.
- b. Online teaching platform and tools: Appropriate existing e-learning platforms such as SWAYAM, DIKSHA, will be extended to provide teachers with a structured, user-friendly, rich set of assistive tools for monitoring progress of learners.
- c. Addressing the digital divide: According to NEP 2020, to create a digital platform, existing mass media, such as television, radio, and community radio will be extensively used for telecast and broadcasts. Such educational programs will be made available 24/7 in different languages to cater to the varying needs of the student population. A special focus on content in all Indian languages will be emphasized and required; digital content will need to reach the teachers and students in their medium of instruction as far as possible.
- d. Virtual Labs: According to NEP 2020 that existing e- learning platforms such as DIKSHA, SWAYAM and SWAYAMPRAKHA will also be supported for creating virtual labs so that all students have equal access to quality practical

and hands-on experiment-based learning experiences. The possibility of providing adequate access to SEDG students and teachers through suitable digital devices, such as tablets with pre-loaded content, will be considered and developed.

- e. Training and incentives for teachers: Teachers will undergo a diligent training in learner-centric pedagogy and develop in a way that how to become high-quality online content creators themselves using online teaching platforms and tools.
- f. Online assessment and examinations: Appropriate bodies, such as the proposed National Assessment Centre or PARAKH, School Boards, NTA, and other identified bodies will design and implement assessment frameworks encompassing design of competencies, portfolio, rubrics, standardized assessments, and assessment analytics.
- g. Blended models of learning: While promoting digital learning and education, the importance of face-to-face in- person learning is fully recognized. Accordingly, different effective models of blended learning will be identified for appropriate replication for different subjects.
- h. Laying down standards: As research on online/digital education emerges, NETF and other appropriate bodies shall set up standards of content, technology, and pedagogy for online/digital teaching-learning. These standards will help to formulate guidelines for e-learning by States, Boards, schools and school complexes, HEIs, etc.

Challenges for Implementation of ICT in Teacher Education as per NEP 2020

With the coming of new NEP 2020 has brought us into an era of new technology world to meet so many challenges in the field of education. New challenges for preparing teacher- educators and future teachers are in need to adapt to the new styles of learning method in the teaching- learning process. There are numerous problems widespread in the area of teacher education institutions in the state. In order to meet the needs of these challenges in the state teacher education, there will be a holistic development in all the spheres relating to ICT usage in the educational institutions such as policy and politics, infrastructure development, human capacity development, culture, equity, financial aspects, curriculum and pedagogy. Some of the main challenges for implementation of ICT in teacher institutions as per NEP 2020 are as follows;

- Lack of proper ICT lab facilities in the college
- Inadequate equipments of hardware and software facilities
- Lack of proper trained teacher educators and resources available for teaching ICT education

- Lack of basic knowledge for using ICTs among teacher-trainees
- Lack of proper building infrastructure for ICT related facilities
- Overcrowded classroom
- Shortage of computer for access to all the teacher- trainees in the institutions
- Lack of proper financial support from the administrative, department and the government as a whole
- Lack of proper training for the teacher-educators in relating to the use of ICTs equipments
- Poor network of Wi-Fi connectivity in the institution
- Need to update ICT related course in teacher education
- Lack of specialists and professionals to frame proper curriculum as per NEP 2020
- Lack of study materials for technical knowledge in using ICTs equipments
- Lack of teachers who are willing to integrate technology with education in their teaching.

Suggestions for Effective Implementation of ICT in Teacher Education

In this present era developing countries are facing so many challenges for preparing their societies and governments for globalization and the information and communication revolution Policy-makers, educationists, academics and concerned citizens are actively working together to make their societies competitive in the emergent information economy. Uses of ICTs in education are wide spread and it is generally believed that ICTs can empower teachers and learners, making significance contributions to learning and achievement. The main purpose of ICT implementation in education is to provide the prospect and trends of integrating and ICT into the general educational activities. Some of the suggestions for successful implementation of ICT in teacher education are as follows:

- Teacher educators should be well equipped with all the digital equipments and to enhance in using ICTs skills among teacher-trainees.
- Provide proper resource and funding in developing software and hardware facilities in the teacher education institutions.
- Professional training in ICT usage should be organized for teacher educators to keep the latest technological up to date.
- Ratios of teacher educators and teacher-trainees should be maintain so that enough assistance should be provided to teacher-trainees in using ICT tools and materials for better teaching learning process.
- Course content for ICT should be re-structuring as per NEP 2020 and should be based on action-oriented.
- Teacher education institutions should play an active participation, initiative

and compassion towards the society to enhance ICT implementation.

- Teacher educators and teacher-trainees should be aware of the social change in their teaching activities and be the part of the global change in learning and teaching modification.
- In teacher education institutions proper ICT equipment's should be provided in all the classrooms such as computers, LCT projector, internet access, television, e-white boards, etc. for effective use of technology.
- Teacher educators must play an active role in utilizing ICT facilities in their everyday lesson's transaction in order to act as role model for the teacher-trainees.
- The administrative, Higher Education department and all the concerned authorities should be collaboratively working together for organizing timely training courses on ICTs.
- Teacher education institutions must have at least one lab with fully equipped ICT facilities.
- Adequate access of internet facilities in the classrooms to enhance teaching instructions.

Conclusion

Teacher has a key role in the whole process, whereas in-case of ICT based education, various ICT tools are supplemented to make the teaching-learning process effective. There was a rise of pride created and interest generated among the teachers and students for gaining ICTs and its opportunity. ICT has the potential to remove barriers that are causing the problems of low rate of education in the country. ICT as a tool can overcome the issues of cause, less number of teachers and poor quality of education as well as to overcome time and distance barriers. In these regard teacher education play a critical role in transforming and improving educational processes and outcomes. The NEP 2020 recognizes the importance of technology while acknowledging its potential risk and dangers. NEP 2020 also stated that carefully designed and appropriately scaled pilot studies to determine the benefits of online/digital education. The existing digital platform and ongoing ICT-based educational initiative must be optimized and expanded to meet the current and future challenges in providing quality education for all.

EXPERIENTIAL LEARNING AND SKILL DEVELOPMENT IN THE NATIONAL EDUCATION POLICY (NEP) 2020

Dr.R.Velmurugan

Associate Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore

Dr.S.Jegadeeswari

Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore

Abstract

The National Education Policy (NEP) 2020 acknowledges the significance of skill development and experiential learning in changing the Indian educational system. The essential components of experiential learning and skill development within the NEP 2020 are summarised in this abstract. It covers the goals, tactics, and probable effects of the policy on students' educational paths and future prospects. The National Education Plan 2020 (NEP 2020) intends to better prepare students for the difficulties of the modern world, increase their employability, and promote lifelong learning by placing an emphasis on practical knowledge, critical thinking, and a variety of abilities. The NEP 2020 aspires to develop an educational environment that equips students to become flexible, knowledgeable individuals who can contribute to society through collaborative efforts, teacher preparation, resource allocation, and ongoing evaluation.

Keywords: Experiential Learning, Skill Development, National Education Policy

Introduction

By placing a heavy emphasis on experiential learning and skill development, the National Education Policy (NEP) 2020 helped to revolutionise the Indian educational system. The NEP 2020 emphasises the importance of practical learning opportunities and the acquisition of applicable skills in recognition of the necessity for a comprehensive and holistic approach to education. In this essay, the crucial role of experiential learning and skill development in the NEP 2020 is examined, along with their significance, methods of implementation, and prospective effects on students' academic and career paths. An active learning strategy called experiential learning incorporates practical encounters, reflection, and the application of knowledge in authentic settings. It encourages pupils to actively participate in the learning process and goes beyond standard rote-based learning. This section examines the foundations of experiential learning, compares it to conventional teaching strategies, and focuses on how it can help students develop their critical thinking, problem-solving, and creative skills.

The NEP 2020 acknowledges experiential learning's crucial role in preparing students for real-world situations. This section addresses the NEP's encouragement of project-based learning, internships, and apprenticeships as well as its focus on practical knowledge and skills. It goes into more detail on how the NEP 2020 promotes the inclusion of practical applications in the curriculum, strengthening the link between academic learning and real-world application. The NEP 2020 places a strong emphasis on skill development since it wants to give pupils the abilities they'll need for lifelong learning and employment. This section emphasises the NEP's emphasis on a wide range of skills, including cognitive, social, emotional, and vocational abilities, as well as its understanding of the significance of skill development. It looks at the numerous efforts for skill development included in the NEP 2020, such as soft skills training, entrepreneurship programmes, and vocational courses, which match education with market demands and anticipated workforce needs.

Effective techniques and stakeholder participation are required for the implementation of experiential learning and skill development. The development of experiential learning resources and assessment frameworks, ensuring accessibility and inclusivity in experiential learning opportunities, teacher training programmes to support experiential learning methods, partnerships with businesses and community organisations to provide practical exposure, and more are covered in this section of the NEP 2020. Initiatives for experiential learning and skill development have the potential to have a transformative effect on students' academic and career paths. This section examines how these strategies might improve students' employability and career readiness, encourage a sense of practical application and relevance in learning, encourage lifelong learning and adaptability in a world that is changing quickly, and address social disparities by giving all students an equal chance to develop their skills.

There are difficulties in implementing experiential learning and skill development in the NEP 2020. The potential difficulties are highlighted in this section, including the necessity for efficient monitoring and assessment as well as infrastructure limitations, opposition to change, and other issues. To address these issues and guarantee the effective implementation of projects for experiential learning and skill development, it highlights the significance of ongoing collaboration between educational institutions, businesses, and policymakers. The NEP 2020 places a strong emphasis on experiential learning and skill development, emphasising the value of practical experiences and the acquisition of applicable skills. The NEP 2020 strives to construct a well-rounded educational system that equips students for the challenges of the future by encouraging experiential learning

and skill development. Effective strategy, stakeholder cooperation, and ongoing evaluation are necessary for successful implementation. The NEP 2020 can equip students to become lifelong learners, flexible professionals, and active members of society by embracing experiential learning and skill development.

Understanding Experiential Learning

Experiential Learning Principles

An educational strategy that emphasises learning by first-hand experience, reflection, and application is known as experiential learning. It is predicated on the idea that learning occurs most effectively when students are actively involved in events from the real world and can connect theory to practise. The following are some of the experiential learning tenets:

i. Active participation

Active participation in the learning process is emphasised by experiential learning, which motivates students to take part, go deeper, and try new things.

ii. Introspection

An essential part of experience learning is reflection. Students must reflect on their experiences, examine the results, and draw important conclusions.

iii. Application

The practical application of knowledge and skills in authentic situations is a key component of experiential learning. It is encouraged for students to use what they have learned to solve issues, make choices, and finish worthwhile tasks.

iv. Reaction and Improvement

Experiential learning encourages a feedback-rich atmosphere where students may use feedback to enhance their performance and understand what they did wrong.

Contrast between Traditional Rote-based Learning and Experiential Learning

Memorization and repetition of knowledge are key components of traditional rote-based learning, which is frequently referred to as passive learning and places little focus on practical application. Experiential learning, on the other hand, emphasises active participation, practical application of knowledge, and hands-on experiences. Here are some significant variations:

i. Learning Approach

In rote learning, the teacher transmits information to the students, who receive it passively and memorise it. Contrarily, experiential learning is learner-centered and encourages students to actively participate in creating their knowledge through first-hand experiences.

ii. Understanding vs. Memorization

Memorization of formulas and information is frequently prioritised in rote learning, with less focus placed on comprehending the underlying principles. By putting theory into practise and letting students see how relevant what they are learning is, experiential learning encourages better knowledge.

iii. Involvement: Active vs. Passive

Rote learning often entails passive participation, in which students passively absorb information by reading textbooks or listening to lectures. Active participation is necessary for experiential learning because it involves students engaging in practical tasks, experimentation, and problem-solving in the actual world.

iv Transferability of Skills and Knowledge

The ability of knowledge and abilities to be applied in real-world circumstances is frequently constrained by repetition-based learning. By giving students the chance to use their knowledge and skills in real-world situations, experiential learning improves the transferability of knowledge and skills and develops practical problem-solving capabilities.

Benefits of Experiential Learning in Fostering Critical Thinking, Problem-Solving, and Creativity

Students can gain much from experiential learning in terms of their ability to think critically, solve problems, and be creative. Some of the main benefits are as follows:

i. Participation and Curiosity

By actively involving students in the learning process, experiential learning piques their curiosity and motivates them to investigate and learn. Students are encouraged to question, analyse, and draw connections between ideas and experiences, which develops their critical thinking abilities.

ii. Decision-Making and Problem-Solving Capabilities

Students have the chance to experience problems and difficulties from the actual world thanks to experiential learning. Students gain problem-solving and decision-making abilities by participating in practical activities and reflecting on them. In this way, they learn how to approach complex problems and make wise decisions.

iii. Innovation and Creativity

Students are encouraged to think creatively, adapt to new circumstances, and develop creative solutions through experiential learning. Students grow in their ability to think creatively and learn to accept different points of view by working on projects and assignments that are left open-ended.

iv. Knowledge Input and Output

Experiential learning bridges the knowledge gap between theory and practise by allowing students to apply their knowledge in real-world situations. This practical application improves their comprehension, retention, and capacity to apply knowledge, ensuring its applicability and relevance in varied circumstances.

Communication and Teamwork Skills

Cooperative projects and teamwork are frequent components of experiential learning. Students learn vital interpersonal and communication skills as they cooperate, exchange ideas, bargain, and articulate their ideas clearly. Finally, experiential learning offers a distinctive method of education that emphasises participation, real-world application, and reflection. It encourages critical thinking, problem-solving, and creativity in contrast to conventional rote-based learning. Students benefit from experiential learning by developing a deeper knowledge of subjects, improving practical skills, and being better equipped to deal with obstacles in the real world.

Experiential Learning in the NEP 2020

The Focus of NEP 2020 is on Practical Skills and Knowledge

The NEP 2020 acknowledges the value of practical knowledge and skills in preparing students for issues they will face in the real world. The policy highlights the need to move away from a method centred on memorization and place more emphasis on experience learning that gives pupils useful skills. The NEP 2020 strives to make sure that students are not only well-versed in theoretical concepts but also possess the talents required to apply their knowledge effectively in real-life circumstances by emphasising practical knowledge and skills. This emphasis is in line with the changing demands of the labour market, where companies are increasingly looking for applicants who can apply their knowledge to real-world problems.

Project-based Learning, Internships, and Apprenticeships are Encouraged

The NEP 2020 encourages a variety of experiential learning techniques, including project-based learning, internships, and apprenticeships, to enhance practical knowledge and skills. In project-based learning, students work on actual projects that call for creative problem-solving, cooperation, and critical thinking. Students engage with real-world challenges through project-based learning, utilising their knowledge to come up with creative solutions and get practical experience.

Students get the chance to work in real-world environments during internships and apprenticeships, developing practical skills and gaining exposure to the

business. Students who participate in internships and apprenticeships gain a greater comprehension of professional settings, improve their employability skills, and make links between what they learn in the classroom and actual work situations. These encounters provide students the chance to learn useful skills, investigate potential career routes, and decide for themselves what they want to do in the future.

Curriculum Integration of Real-World Applications

In order to increase the practical relevance of education, the NEP 2020 places a strong emphasis on the incorporation of real-world applications into the curriculum. Student understanding of the practical applications of their learning is increased by include real-world examples, case studies, and scenarios in the curriculum. This integration fosters better comprehension and learning motivation by assisting students in making links between theoretical ideas and their application in the real world. Applying their knowledge to real-world problems helps students strengthen their problem-solving and critical thinking skills.

Bringing Classroom Knowledge to Life Experiences

The NEP 2020 places a strong emphasis on the value of integrating classroom instruction with practical application. It promotes educational institutions to forge close ties with regional businesses, trade associations, and other outside parties. Students can participate in field trips, expert talks, and interactive sessions with professionals from diverse sectors thanks to partnerships and collaborations. Students have the chance to see and learn from actual practitioners throughout these exchanges, gaining understanding of how their learning is used in real-world situations. Students gain a greater understanding of the applicability and value of their education by bridging the gap between what they learn in the classroom and what they experience in the real world.

The NEP 2020, in sum, emphasises the value of practical knowledge and skills, and it supports experiential learning strategies like project-based learning, internships, and apprenticeships. It places a strong emphasis on how real-world applications are included into the curriculum and how classroom learning is connected to outside-the-classroom experiences. The NEP 2020 strives to educate students for success in the real world by emphasising practical knowledge and skills, giving them the skills necessary for success in further education, job pathways, and life in general.

Skill Development in the NEP 2020**Recognition by NEP of the Value of Skill Development for Employment**

The NEP 2020 recognises the critical role that skill development plays in improving students' chances of finding employment after graduation. It acknowledges that a person might not be able to satisfy the changing needs of the work market with just academic knowledge. The strategy places a strong emphasis on the need to give students a varied range of abilities that go beyond academic credentials. The NEP 2020 strives to close the gap between education and employment by recognising the value of skill development for employability and ensuring that students have the skills they need to succeed in the workforce.

Put an Emphasis on a Variety of Skills, Such as Cognitive, Social, Emotional, and Vocational skills

The NEP 2020 lays a heavy emphasis on a variety of abilities to guarantee students' overall growth. It acknowledges that cognitive abilities like creativity, problem-solving, and critical thinking are essential for intellectual development and adaptability. The strategy also emphasises the value of social and emotional abilities, such as cooperation, empathy, and self-awareness, which are crucial for individual and interpersonal growth. The NEP 2020 also recognises the value of vocational skills, which give students the chance to develop real-world, career-specific skills that improve their employability.

Development of Skills Initiatives Including Soft Skills Training, Entrepreneurship Programmes, and Vocational Courses

The NEP 2020 proposes several initiatives and programmes to promote skill development. In order to give students specialised knowledge and skills in certain businesses or trades, vocational courses are established. These classes are designed to give students the hands-on experience they need to succeed in the workforce and as entrepreneurs. Additionally, entrepreneurship education fosters students' abilities to recognise possibilities, take calculated risks, and add value by encouraging them to adopt an entrepreneurial attitude. Programmes for developing soft skills emphasise the development of interpersonal skills including teamwork, adaptability, and communication that are crucial for success in the workplace.

Skill Development in Relation to Industry Needs and Future Workforce Needs

The NEP 2020 emphasises how crucial it is to match skill development with market demands and anticipated workforce requirements. In order to determine the talents that are in demand and create suitable curricula, it highlights the importance of collaboration between educational institutions and businesses. The NEP 2020

intends to close the skills gap between education and employment by coordinating skill development with industry needs. This will give students the knowledge and abilities necessary to meet the changing demands of the labour market. Additionally, this alignment aids in lowering unemployment rates, supporting economic expansion, and developing a trained workforce prepared to aid in the advancement of the nation.

In conclusion, the NEP 2020 emphasises a variety of skills, including cognitive, social, emotional, and vocational abilities, and acknowledges the importance of skill development for employment. To increase students' employability and equip them for future difficulties, the policy includes a variety of skill development initiatives, including vocational courses, entrepreneurship programmes, and soft skills training. The NEP 2020 aspires to generate a workforce that is adaptive, competent, and equipped with the skills essential to succeed in the changing workplace by coordinating skill development with industry requirements and future workforce demands.

Implementation Strategies

Teacher Training Programs to Facilitate Experiential Learning Methods

The NEP 2020 acknowledges the significance of providing teachers with the pedagogical approaches and skills they need to successfully apply experiential learning techniques in the classroom. The policy emphasises the need for thorough teacher preparation programmes that emphasise experiential learning techniques in order to achieve this. These programmes give teachers the information, methods, and tools they need to plan and carry out practical learning activities. In order to keep teachers up to date on the most recent developments and effective strategies in experiential learning, teacher training programmes also encourage ongoing professional development.

Partnerships with Business and Community Groups for Practical Exposures

To give students real-world experience, the NEP 2020 promotes partnerships between educational institutions and business/community organisations. Students have the opportunity to participate in internships, field trips, guest lectures, and mentorship programmes by forming partnerships with businesses and community organisations. Students are exposed to practical applications of their study through these partnerships, giving them new perspectives on working settings, business practises, and emerging trends. These collaborations also give students the chance to work on real-world tasks while being guided by professionals in the field. Collaborations with business and neighbourhood organisations guarantee that

students get hands-on experience and acquire the competencies sought after by employers.

Creation of Assessment Frameworks and Experiential Learning Resources

The NEP 2020 places a strong emphasis on creating resources and assessment mechanisms for experiential learning in order to assist its implementation. The development and curation of materials by educational institutions, such as activity-based modules, simulations, and real-world case studies, is encouraged. These resources give students the equipment and materials they need to properly participate in experiential learning activities. The NEP 2020 also emphasises the significance of creating evaluation systems that complement experiential learning strategies. These frameworks go beyond conventional exam-based evaluations to evaluate students' problem-solving, creativity, and critical thinking capabilities.

Making Experiential Learning Opportunities Accessible and Inclusive

The NEP 2020 places a strong emphasis on the requirement for inclusiveness and accessibility in opportunities for experiential learning. It acknowledges that every student should have equal access to practical learning opportunities, regardless of background. Educational institutions are urged to offer tools, spaces, and assistance programmes that support a variety of students, including those with impairments, those from underserved groups, and those with different learning preferences. Additionally, the policy promotes the use of inclusive practises in the planning and execution of experiential learning projects. This makes sure that every student has the chance to participate in experiential learning, profit from its transformative potential, and acquire the skills required for both their academic and professional endeavours.

The NEP 2020 concludes by emphasising the significance of teacher training programmes to support experiential learning techniques and partnership with business and community organisations for practical exposure. The policy places a strong emphasis on the creation of evaluation systems and resources for experiential learning in order to assist implementation. In addition, the NEP 2020 places a strong emphasis on the necessity of maintaining accessibility and inclusivity in experiential learning opportunities, ensuring that all students have equal access to and benefit from practical learning experiences. The NEP 2020 seeks to develop a more engaging, pertinent, and inclusive educational system that equips students for problems they will face in the real world by emphasising these elements.

Impact of Experiential Learning and Skill Development**Making Students More Employable and Career Ready**

Enhancing students' employability and job readiness is one of the NEP 2020's main goals. The policy strives to provide students with the skills and attributes that employers value by placing a strong emphasis on skill development, experiential learning, and practical knowledge. Students can gain practical exposure and hands-on experience that is relevant to their intended career routes through skill development initiatives and experiential learning opportunities. Transferable abilities, which are highly appreciated in the job market, are developed by students through these experiences and include critical thinking, problem-solving, communication, teamwork, and flexibility. The NEP 2020 intends to boost students' chances of finding meaningful jobs and effectively contributing to society by enhancing their employability and career preparation.

Increasing Students' Awareness of the Relevance and Utility of Their Learning

By focusing on experiential learning and skill development, the NEP 2020 aims to promote a sense of relevance and practical application in learning. With the aid of this strategy, kids are better able to make the link between what they learn in school and how it applies to their everyday lives. Students get a more thorough understanding of the relevance of their knowledge and abilities in real-world situations through participating in projects, hands-on activities, and problem-solving activities. Because kids can quickly perceive the value and relevance of their education, this encourages their motivation, engagement, and excitement for learning. The NEP 2020 seeks to increase students' motivation and feeling of purpose in their learning by promoting a sense of practical application and relevance.

Promoting lifetime Learning and Adaptability in a Rapidly Changing World The NEP 2020 acknowledges the value of promoting lifetime learning and acclimating to change in order to succeed in a world that is changing quickly. The policy gives children the skills they need to be lifelong learners by placing an emphasis on skill development, critical thinking, and problem-solving ability. Students that participate in experiential learning activities are encouraged to be inquisitive, investigate novel concepts, and never stop learning. The NEP 2020 also places a focus on the growth of cognitive, social, emotional, and vocational skills that improve adaptation in the face of technology breakthroughs and changing societal needs. The NEP 2020 equips students with the skills they need to succeed in a world that is changing quickly and where adaptation and lifelong learning are crucial for both personal and professional development.

Equal Opportunities for Skill Development Will Help to Address Social Disparities

By guaranteeing equal chances for skill development, the NEP 2020 seeks to address societal inequalities. It acknowledges that access to chances for quality education and skill development is frequently hampered for students from marginalised communities, economically underprivileged backgrounds, and remote locations. The emphasis of the policy is on the requirement for inclusive and equitable education, making sure that all students, regardless of their social or economic circumstances, have equal access to experiential learning and skill development projects. By tackling social inequalities, the NEP 2020 seeks to build a more just society in which every person, regardless of background, has the chance to realise their potential and advance the country.

Challenges and Way Forward

Infrastructural Constraints and Resource Allocation for Experiential Learning

Experiential learning efforts in the NEP 2020 may encounter difficulties due to budget allocation and infrastructure limitations. Hands-on learning frequently demands particular facilities, tools, and resources. However, access to these resources may be restricted for some educational institutions, particularly in rural or economically underdeveloped locations. Investment in the creation and upkeep of infrastructure that facilitates experiential learning, including fully furnished laboratories, workshops, and technologically enhanced learning spaces, is essential to overcoming these obstacles. Additionally, sufficient financial and human resource allocation is required to give students the books, equipment, and guidance they need to participate in experiential learning activities successfully.

Removing Traditional Teaching Methodologies and Resistance to Change

Stakeholders used to conventional teaching procedures may be resistant to the implementation of experiential learning approaches. Because of their unfamiliarity, potential hazards, or the perceived efficacy of conventional methods, educators, administrators, and even parents may be reluctant to adopt innovative ways. Effective communication and professional development initiatives are needed to educate stakeholders about the advantages of experiential learning and the supporting data in order to overcome opposition to change. Offering training opportunities, sharing success stories, and highlighting the advantages of experiential learning can help boost confidence and motivate stakeholders to adopt these cutting-edge approaches.

Keeping an Eye on and Assessing the Success of Initiatives for Experiential Learning

Mechanisms for monitoring and evaluating experiential learning programmes must be in place to guarantee their efficacy. It is crucial to evaluate how experiential learning affects students' knowledge, abilities, attitudes, and employability. This entails creating standards, gathering relevant data, and constructing evaluation frameworks that capture the desired learning outcomes. The efficacy of experiential learning programmes can be assessed using a variety of ways, including observations, self-assessments, performance assignments, and feedback from industry partners. Continuous improvement, the identifying of areas for strength and improvement, and evidence-based decision-making are all made possible by regular monitoring and evaluation, which also allows for the optimisation of experiential learning practises.

Continued Collaboration between Policymakers, Industries, and Educational Institutions

To build a favourable ecosystem for experiential learning, educational institutions, businesses, and policymakers must continuously collaborate. Collaboration with the business world makes it easier to match the curriculum to business requirements, ensuring that students acquire useful skills and knowledge. sector collaborations can offer chances for student interaction with real-world professionals and exposure to the sector through internships, apprenticeships, and guest lectures. When it comes to providing the resources, incentives, and policies that enable experiential learning, policymakers play a critical role in fostering an environment that supports learning. By continuing to work together, these parties can close the gap between academia and business, allowing educational institutions to adapt to shifting market demands and changing labour market demands.

Conclusion

In conclusion, the NEP 2020 promotes the relevance of relevant information, critical thinking, and practical skills by including experiential learning and skill development. The strategy's aim is to equip students with the skills they need to thrive in a world that is continually changing by prioritising chances for hands-on learning, connecting classroom lessons with real-world applications, and putting an emphasis on a variety of talents. To properly complete these initiatives, all parties involved must cooperate. Cooperation between academic institutions, businesses, and governments is vital to ensuring effective implementation, resource sharing, and adherence to industry standards. Effective teacher training programmes are essential for providing instructors with the skills and knowledge necessary to support

experiential learning methodologies. Adequate resource allocation is needed to support hands-on learning, both in terms of materials and infrastructure. Programmes for experiential learning will gain from ongoing assessment and monitoring, which will increase their effectiveness. By emphasising experiential learning and skill development, the NEP 2020 has the potential to enable students to become lifelong learners, adaptable professionals, and engaged members of society. Through the use of these cutting-edge educational strategies, we may produce a generation that can confidently and professionally manage the complexity of the future.

Abstract

Women is an important part in achieving inclusive growth in an economy. In economic development entrepreneurship plays an important role in India only a very few women participated in entrepreneurial activities till 1980. In 1980 "New Delhi Declaration and plan of Action" focus development of entrepreneurial skills among women. In 1980-1990 many institutional initiatives were taken for women entrepreneurship. In 1990 after the liberalization, opportunities were recognized and started flourish for women entrepreneurs. The concept and classification of women entrepreneur is discussed. The study was made on very government scheme women entrepreneurship and holed faced by women entrepreneurship in this regard. The few stories of successful women Entrepreneurship is also discussed in the article it is conducted that more rural and lower middle -class women should be supported with more entrepreneurial opportunities for overall growth in the economy.

Keywords: Women Entrepreneurship, Economy, Government.

Introduction

"Women entrepreneurs may be defined as the women or a group of women who initiate, organise and run a business enterprise. According to Schumpeter, "Women who innovate, imitate or adopt a business activity are called women entrepreneurs." According to the Government of India, a woman entrepreneur is defined as "an enterprise owned and controlled by a woman and having a minimum financial interest of 51 percent of the capital and giving at least 51 percent of the employment generated in the enterprise to women."

In a nutshell, we may state that women entrepreneurs are those women, who think of a business enterprise, initiate it, organise and combine the various factors of production, operate the enterprise and undertake risks and handle economic uncertainties involved in running a business enterprise.

“An enterprise owned and controlled by a women having a minimum financial interest of 51% of capital and giving at least 51% of the employment generated by the enterprise to women.” – Government of India According to Kamala Singh, A women entrepreneur is a confident, innovative and creative woman capable of achieving economic independence individually or in collaboration generates employment opportunities for others through initiating establishing and running an enterprise by keeping pace with her personal, family and social life.

In the words of Former President APJ Abdul Kalam “empowering women is a prerequisite for creating a good nation, when women are empowered, society with stability is assured.” Pandit Jawaharlal Lai Nehru has remarked “When women move forward, the family moves, the village moves and the Nation moves.”

Women Entrepreneur -in Indian Perspectives

Women entrepreneurship is the process in which women initiate a business, her all resources, undertake risks, face challenges, provides employment to others and manages the business independently.

Approximately 1/3rd of the entrepreneurs in the world are women entrepreneurs. According to definition given by Government of India- A women entrepreneur is defined as an enterprise owned and controlled by woman having a minimums financial interest of 51% of the capital and giving at least 51% employment generated to women"

Women Entrepreneurship refers to business or organization started by a woman or group of women. There has been a change in role of women due to growth in education, Urbanization, industrialization and awareness of democratic values.

Women Entrepreneurs Can Be Broadly Categorized into Five Categories

- Affluent entrepreneurs-These are daughters and wives of wealthy businessmen. These women have the financial aid and the necessary resources to start a new enterprise and take business risks.
- Pull factors-These are educated women living in urban areas with or without work experience who take the risk of a new enterprise with the help of financial institutions and commercial banks. These women take up a new business as challenge in order to be financially independent.
- Push factors-These women take up some business activity in order to overcome financial difficulties. Generally widows and single women manage an existing family business or develop a new business due to difficult family situation.
- Rural entrepreneurs-These women belong to rural areas and choose a business suiting their resources and knowledge Business carried out involves low investment, minimum risk and does not require any special skills.

- Self-employed entrepreneurs-They are uneducated women who fall below the poverty line. They choose tiny and small enterprise which are convenient to manage and adequate for the sustenance of her family.

Scope and Opportunities for Women Entrepreneurs

The modern world women has been able to overcome the hurdle of society's perception of considering them to be confined to the four walls of the house or viewing them as weak entrepreneurs caught up in limited business area such as papad making, pickle preparation food items, paintings, handicrafts, etc.

They have been able to show a remarkable shift from these small entrepreneurs at ventures to modern technology-based business ventures such as Computer services and information dissemination

1. Trading in computer stationary
2. Computer maintenance
3. Computer maintenance
4. Travel and tourism
5. Quality testing, quality control laboratories
6. Sub-assemblies of electronic products
7. Nutrition clubs in schools and offices
8. Poster and indoor plant library
9. Recreation centers for old people
10. Culture centers
11. Screen printing, photograph and video shooting
12. Stuffed soft toys, wooden toys
13. Mini laundry, community eating centers
14. Community kitchens
15. Distributing and trading of house hold provision as well as saris, dress materials, etc.
16. Job contracts for packaging of goods
17. Photocopying, typing centers
18. Beauty parlors
19. Communications centers like STD booths, cyber cafes, etc.

Role of Woman Entrepreneurs in Society

According to Pandit Jawaharlal Nehru, "When women moves forward, the family moves, the village moves, and the nation moves."

Women entrepreneurship has been recognized as an important, untapped source of economic growth during the last decade. With the spread of education and awareness, Indian women have shifted from the extended kitchen, handicrafts, and traditional cottage industries to nontraditional, higher level of activities.

In the new industrial policy, the government has laid special emphasis on the need of conducting special entrepreneurial training programs for women to enable them to start their own ventures. Financial banks and institutions have also set up special cells to assist women entrepreneurs. This has helped the women a lot in taking up the entrepreneurial activity in India.

Estimates in Europe (both European Union countries and other), indicate that there exist more than 10 million self-employed women and in the United States 6.4 million self-employed women providing employment for 9.2 million people and creating significant sales. Women entrepreneurs not only create new jobs for themselves, but also provide jobs to others. However, the participation of women entrepreneurs is less than male entrepreneurs.

Financial Assistance

Women face difficulties in getting loans from Bank and Financial Institutions for starting their business ventures. To overcome this difficulty Financial Institutions and banks have specialised schemes where finance is available to women entrepreneurs on concessional terms. Two of such important schemes are Mahila Udyog Nidhi (MUN) scheme of Small Industries Development Bank of India and Stree Shakti Package of State Bank of India.

Mahila Udyog Nidhi

This is a special scheme for the purpose of meeting the gap in the equity when women with inadequate resources venture come out to set their units. The scheme is re-finance scheme operated through State Financial Corporations and Scheduled Commercial Banks. Funds provided under the scheme are treated as equity for calculation of Debt Equity Ratio to satisfy the needs of the lending Institutions.

The scheme provides a soft loan up to 25 percent of cost of Project subject to a maximum of Rs. 2.5 lakh per project at zero interest but a service charge of only one percent is charged to meet expenses of the lending institutions. To avail this assistance the cost of project should not exceed Rs. 10 lakhs. The assistance is available to women entrepreneurs setting up new projects, expansion, modernisation, technology up gradation and diversification of an existing unit and also for rehabilitation of viable sick units in manufacturing or service sector.

Stree Shakti Package

It is a unique scheme run by State Bank of India, aimed at supporting entrepreneurship among women. It is available to enterprises where women own more than 50 percent of the share capital. The following concessions are offered under stree shakti package:

1. The margin is lowered by 5 percent as applicable to that type of industrial unit.
2. When the loan amount exceeds Rs. 2 lakhs the interest rate is lowered by 0.5 percent.
3. In case of tiny sector units no security is required for loan up to Rs. 5 lakhs. In addition women entrepreneurs receiving assistance under this package are also eligible to get financial assistance by way of interest free loans under the Equity Fund Scheme of SBI to fully meet their share of equity. It is clear that women entrepreneurs have much in common with their male counterparts. Although some of the background and personality traits are quite similar, there are differences between sexes in terms of motivation activities engaged in wide starting business venture and business skills they bring to their enterprises. Difference in type of business started can be attributed to a large part to difference in education and work history. Government has started a number of schemes to promote women enterprises and success rate of entrepreneur training programs for women is better.

Mahila Udyam Nidhi Yojana

One of the most popular government schemes for women entrepreneurs, the Mahila Udyam Nidhi Scheme, is offered by Punjab National Bank and Small Industries Development Bank of India (SIDBI). The scheme supports women entrepreneurs to set up a new small-scale venture by extending loans up to Rs. 10 lakh to be repaid in 10 years. The rate of interest charged depends upon the market rates.

Orient Mahila Vikas Yojana Scheme

Oriental Bank of Commerce launched the scheme, women with an ownership of 51 percent share capital individually or jointly in a proprietary concern can avail a loan through the Orient Mahila Vikas Yojana. There is collateral required for loans between Rs. 10 lakhs to Rs. 25 lakhs. The repayment tenure of the loan is seven years. Orient Mahila Vikas Yojana Scheme also provides a concession on the interest rate of upto 2 percent.

Cent Kalyani Scheme

The Cent Kalyani Yojana is a government scheme for women that can be availed by both existing and new entrepreneurs and self-employed women.

Micro/small enterprises like farming, agriculture, cottage industries, and retail trade are all eligible to apply for the Cent Kalyani Scheme. You do not have to provide any collateral as security or need any guarantors for this loan. The interest

rate on loans depends on market rates. The repayment tenure of the loan will be a maximum of seven years under Udyogini Scheme

The Women Development Corporation has Implemented the Udyogini

Scheme under the Government of India. This scheme promotes and motivates women's entrepreneurship among the poor by providing financial support to women. This scheme majorly supports and helps illiterate women living in rural and backward areas.

Conclusion

The role of Women entrepreneur in economic development is also being recognized and steps are being taken to promote women entrepreneurship. From these suggestions it is quite visible that for development and promotion of women entrepreneurship, in the region, there is a need for multi dimensional approach from different sector, namely from the government side, financial institutions, individual women entrepreneurs and many more, for a flexible integrated and coordinated specific approach. The principal factor in developing entrepreneurship among women is not in terms of infrastructure or financial assistance or identifying an enterprise but it is a question of clearing the ground for their movement into entrepreneurship. For ages together they have been confined to a secondary role and confined to the homes and you have to bring out so that they become self-reliant, self-respecting enterprising people. Though there are several factors contributing to the emergence of women as entrepreneurs, the sustained and coordinated effort from all dimensions would pave the way for the women moving into entrepreneurial activity thus contributing to the social and economic development of the members of the family and thereby gaining equality and equal importance for themselves.

TECHNOLOGICAL REFORMS IN AGRICULTURE: DIGITALIZATION AND AUTOMATION

Mrs.S.Swathi Newashini

Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore

Ms. M.Dhivyadharshini

Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore

Abstract

Technological reforms in agriculture, specifically digitalization and automation, have become prominent drivers of change in the farming industry. Digitalization involves the integration of digital technologies into agricultural operations, enabling real-time data collection, analysis, and decision-making. Automation, on the other hand, leverages robotics, artificial intelligence, and machine learning to automate labor-intensive tasks. This abstract explores the impact of digitalization and automation in agriculture, highlighting their benefits, challenges, and potential for transforming the farming sector. The adoption of these technological reforms has the potential to increase productivity, improve resource efficiency, enhance sustainability, and enable data-driven decision-making in agriculture. However, challenges such as cost, accessibility, skills, and data security need to be addressed to ensure widespread and equitable adoption. Overall, technological reforms in agriculture offer promising opportunities for increased efficiency, sustainability, and resilience in the face of global food demands.

Keywords: Technological reforms, Agriculture, Digitalization, Automation, Farming sector.

Introduction

Agriculture plays a pivotal role in sustaining human life, providing essential resources such as food, fiber, and raw materials. As the global population continues to increase and the need for sustainable agricultural practices becomes more pressing, technological advancements have become crucial to meet the rising demand for food production. In recent years, digitalization and automation have emerged as transformative forces in agriculture, revolutionizing traditional farming practices and driving significant improvements in productivity, efficiency, and sustainability. Digitalization and automation technologies have brought about a paradigm shift in the way farming is conducted. Digitalization involves the integration of digital technologies, such as sensors, Internet of Things (IoT) devices, and data analytics, into various aspects of agricultural operations. These technologies enable real-time data collection, monitoring, and analysis, providing farmers with valuable insights into weather conditions, soil health, crop growth, and

machinery performance. By harnessing this data, farmers can make data-driven decisions to optimize their farming practices and maximize yields.

Automation, on the other hand, involves the use of robotics, artificial intelligence (AI), and machine learning to automate labor-intensive tasks in agriculture. This technology has the potential to revolutionize farming practices by reducing manual labor, addressing labor shortages, and increasing operational efficiency. Robotic systems equipped with sensors and cameras can perform tasks such as planting, harvesting, pruning, and sorting with precision and accuracy. By taking over these tasks, automation reduces the physical burden on farmers and ensures consistent quality and increased efficiency in operations. The adoption of digitalization and automation in agriculture brings forth a multitude of benefits. Firstly, these technologies significantly improve productivity by optimizing farming practices. Precision agriculture techniques enabled by digitalization allow farmers to monitor and manage their crops more effectively. By utilizing real-time data on soil moisture, weather patterns, and crop health, farmers can make informed decisions on irrigation, fertilizer application, pest control, and other critical factors that impact crop growth. This targeted approach minimizes resource waste and maximizes the use of inputs, resulting in increased yields and improved productivity.

Secondly, digitalization and automation technologies enhance operational efficiency by streamlining farming processes. Digital tools and platforms enable farmers to manage their farm operations more effectively, from inventory management to task scheduling and financial analysis. These technologies automate administrative tasks, reducing manual paperwork and saving time and effort. By digitizing and automating these processes, farmers can focus more on core farming activities, leading to increased efficiency and improved overall farm management. Moreover, digitalization and automation contribute to sustainability in agriculture. Precision agriculture techniques supported by digitalization enable farmers to optimize the use of resources, such as water, fertilizers, and pesticides. By applying inputs precisely where they are needed, farmers can minimize resource waste and reduce the environmental impact of their operations. Automation technologies reduce the reliance on manual labor, addressing labor shortages and reducing the need for harmful agricultural practices.

However, the adoption of digitalization and automation in agriculture is not without challenges. One significant challenge is the cost associated with implementing these technologies. The initial investment in digital tools, sensors, machinery, and infrastructure can be a barrier for small-scale farmers or those with limited financial resources. Addressing the affordability and accessibility of these technologies is crucial to ensure that all farmers, regardless of their scale, can benefit

from the advantages they offer. Additionally, there is a need to address the skills and knowledge gap among farmers. The successful adoption and utilization of digitalization and automation technologies require farmers to have the necessary technical skills and understanding. Education and training programs should be implemented to equip farmers with the knowledge and expertise needed to leverage these technologies effectively.

Data privacy and security are also important considerations in the digitalization and automation of agriculture. With the collection and analysis of large volumes of data, it is essential to ensure that farmers' data is protected, and privacy regulations are adhered to. Farmers need to have control over their data and understand how it is used and shared with third-party providers. Thus, the technological reforms of digitalization and automation have the potential to revolutionize agriculture, bringing about significant improvements in productivity, efficiency, and sustainability. By adopting precision agriculture techniques enabled by digitalization and automating labor-intensive tasks through robotics and AI, farmers can optimize their farming practices, improve resource management, and increase yields. However, challenges such as cost, accessibility, skills, and data security need to be addressed to ensure the widespread and equitable adoption of these technologies. With continued advancements and supportive measures, digitalization and automation will continue to shape the future of farming, enabling a more efficient, sustainable, and resilient agricultural sector.

Digitalization in Agriculture

Digitalization in agriculture involves the integration of digital technologies across various aspects of agricultural operations, bringing about significant advancements in farm management, production processes, and data-driven decision-making. By harnessing technologies such as sensors, Internet of Things (IoT) devices, drones, and satellite imagery, digitalization enables farmers to gather real-time data on crucial parameters like weather conditions, soil moisture, crop health, and machinery performance. This wealth of data collected through digitalization serves as a valuable resource for farmers to optimize their farming practices. By analyzing this data, farmers can make informed decisions to enhance irrigation, fertilizer application, pest control, and other farm activities. For example, by monitoring real-time weather conditions and soil moisture levels, farmers can efficiently manage irrigation, ensuring that crops receive adequate water without wastage. Similarly, by using data on crop health and growth patterns, farmers can detect diseases or nutrient deficiencies early on and take targeted actions to address them, such as applying fertilizers or pesticides only where necessary. This precision agriculture

approach minimizes resource wastage, reduces environmental impact, and maximizes the efficient use of resources.

One key aspect of digitalization is precision agriculture, which focuses on optimizing inputs and resource management at the field level. By leveraging advanced analytics, farmers can create detailed field maps, monitor crop growth, and identify specific areas that require attention. For instance, by using satellite imagery or drones, farmers can generate precise field maps that highlight variations in soil conditions, allowing them to tailor their management strategies accordingly. By understanding these variations, farmers can apply inputs such as water, fertilizers, or pesticides with precision, addressing specific needs of different areas within the field. This targeted approach ensures that resources are allocated efficiently, minimizing wastage and optimizing crop growth. Digitalization also facilitates farm management by providing farmers with comprehensive tools for planning, monitoring, and record-keeping. Software applications and platforms enable farmers to manage inventory, track machinery usage, schedule tasks, and analyze financial performance. These digital tools streamline administrative processes, improve operational efficiency, and enhance decision-making based on accurate data analysis. Farmers can efficiently track and manage their inventories of seeds, fertilizers, and other inputs, ensuring that they have the necessary resources at the right time. They can also monitor machinery usage and performance, enabling timely maintenance and reducing downtime. The ability to schedule tasks and monitor progress digitally allows farmers to optimize their operations and allocate resources effectively. Furthermore, the analysis of financial performance data provides insights into the profitability and cost-effectiveness of different farming practices, enabling farmers to make informed decisions on resource allocation and investments.

In summary, digitalization in agriculture brings about significant advancements by integrating digital technologies into various aspects of farming operations. Real-time data collection, analysis, and application enable farmers to optimize inputs, manage resources efficiently, and make data-driven decisions. Precision agriculture techniques minimize waste, reduce environmental impact, and maximize the use of resources. Furthermore, digital tools facilitate farm management by streamlining administrative processes and providing valuable insights for better decision-making. The integration of digitalization in agriculture holds immense potential for enhancing productivity, resource efficiency, and sustainability in the farming sector.

Automation in Agriculture

Automation in agriculture involves the application of robotics, artificial intelligence (AI), and machine learning to automate tasks that have traditionally

been performed by humans. This technology has the potential to revolutionize labor-intensive processes in farming, reducing the reliance on manual labor and addressing challenges such as labor shortages, rising labor costs, and the need for increased productivity. Robotic systems are designed to perform various agricultural tasks, including planting, harvesting, pruning, and sorting. These robots are equipped with advanced sensors, cameras, and AI algorithms that enable them to navigate fields, identify ripe crops, and execute precise actions with speed and accuracy. For instance, robotic planters can accurately plant seeds at the optimal depth and spacing, ensuring consistent planting and reducing the time and effort required by human laborers. Harvesting robots can detect the ripeness of crops and perform selective harvesting, picking only the mature fruits or vegetables while leaving the unripe ones to continue growing. This automation technology not only reduces the physical burden on farmers but also ensures consistent quality and increased efficiency in agricultural operations.

Automated machines in agriculture are often equipped with sensors and cameras that enable them to navigate fields and detect specific objects or conditions. For example, machines equipped with vision systems can identify and remove weeds, reducing the need for manual weeding and minimizing herbicide usage. These machines can differentiate between crops and weeds, applying targeted actions to remove the unwanted plants while preserving the desired crops. Similarly, automated sorting systems can use machine vision to identify and sort harvested produce based on quality, size, or other parameters. This technology allows for precise sorting, ensuring that only the highest-quality produce reaches the market. The benefits of automation in agriculture extend beyond reducing manual labor. By replacing repetitive and physically demanding tasks with automated systems, farmers can redirect their efforts towards more strategic and value-added activities, such as crop management, data analysis, and decision-making. Automation technology also enables farmers to operate efficiently on a larger scale, increasing their overall productivity. With the ability to work consistently and at high speeds, automated systems can significantly reduce production cycle times, enabling farmers to meet market demands more effectively.

Moreover, automation contributes to improved operational efficiency and cost-effectiveness. Machines equipped with AI algorithms can optimize resource usage, such as water and fertilizers, by precisely applying them where needed. This targeted approach minimizes waste, reduces environmental impact, and increases resource efficiency. Additionally, automated systems can operate continuously, reducing downtime and increasing overall equipment utilization. This translates into cost savings and improved profitability for farmers. While automation holds

immense potential for transforming agriculture, challenges must be addressed for its widespread adoption. Integration and compatibility with existing farming practices and infrastructure can be complex. Ensuring that automated systems can seamlessly work alongside other components of the agricultural ecosystem is crucial for smooth implementation. Furthermore, initial investment costs and the accessibility of automation technologies can be barriers for small-scale farmers or those with limited resources. It is important to develop affordable and adaptable automation solutions that cater to the diverse needs of different farmers. Thus, automation technology in agriculture has the potential to revolutionize labor-intensive processes, reduce manual labor, and address challenges related to labor shortages and rising costs. Robots and automated machines can perform various tasks with precision and efficiency, improving productivity and reducing the physical burden on farmers. Additionally, automation contributes to operational efficiency, resource optimization, and cost-effectiveness. While challenges exist, the integration of automation in agriculture offers significant benefits and has the potential to shape the future of farming by enhancing productivity, sustainability, and overall efficiency.

AI-powered technologies have emerged as valuable tools in agriculture, capable of analyzing vast amounts of data, predicting weather patterns, optimizing crop management strategies, and identifying potential yield-limiting factors. By integrating AI with precision agriculture techniques, farmers can make data-driven decisions, improve resource allocation, and optimize crop production. The use of AI in agriculture enables the analysis of complex datasets collected from various sources, including sensors, satellites, and historical records. This data can be processed and analyzed using AI algorithms to extract valuable insights and patterns. For example, AI algorithms can analyze historical weather data, current climate conditions, and crop growth patterns to predict future weather patterns with greater accuracy. This information is crucial for farmers to plan irrigation schedules, implement pest control measures, and make informed decisions regarding crop management practices.

AI-powered technologies also provide valuable support in optimizing crop management strategies. By integrating real-time data on weather conditions, soil moisture, and crop health, AI algorithms can suggest optimal strategies for irrigation, fertilization, and pest control. For instance, by analyzing soil moisture levels and weather forecasts, AI can recommend precise irrigation schedules that ensure crops receive the right amount of water at the right time. AI algorithms can also analyze crop health data to identify signs of disease, nutrient deficiencies, or pest infestations, enabling farmers to take timely action and prevent potential yield

losses. Furthermore, AI can assist in resource allocation by optimizing the use of inputs such as water, fertilizers, and pesticides. By analyzing data on soil conditions, weather patterns, and crop growth, AI algorithms can provide recommendations on the optimal allocation of resources. For example, AI can analyze soil nutrient levels and crop nutrient requirements to suggest precise fertilizer application rates and timings. This targeted approach minimizes resource waste and reduces environmental impact while ensuring that crops receive the necessary nutrients for optimal growth.

The integration of AI with precision agriculture techniques also enables farmers to optimize crop production. By continuously monitoring and analyzing data, AI algorithms can identify yield-limiting factors, such as pest outbreaks, nutrient deficiencies, or unfavorable weather conditions, and provide actionable insights to mitigate these factors. This proactive approach allows farmers to make timely adjustments to their crop management practices, resulting in improved yields and overall production. Additionally, AI-powered technologies have the potential to enhance decision-making processes by providing real-time recommendations and insights. AI algorithms can process data from multiple sources and generate predictive models that enable farmers to make informed decisions regarding crop selection, planting schedules, and market predictions. This information allows farmers to adapt their strategies based on market demands and optimize their production plans accordingly. However, it is important to note that the successful integration of AI in agriculture requires access to quality data, reliable connectivity, and the development of AI models specific to local conditions. Ensuring data privacy and security is also crucial when utilizing AI technologies. Thus, AI-powered technologies offer significant potential in agriculture by analyzing large volumes of data, predicting weather patterns, optimizing crop management strategies, and identifying yield-limiting factors. By integrating AI with precision agriculture techniques, farmers can make data-driven decisions, improve resource allocation, and optimize crop production. The use of AI in agriculture holds promise for increasing productivity, sustainability, and profitability while helping farmers navigate the complexities of modern farming.

Benefits and Impact

The adoption of digitalization and automation in agriculture offers several benefits and has a profound impact on the farming industry.

1. **Increased Productivity:** The adoption of digitalization and automation in agriculture leads to improved productivity and better crop yields. Precision agriculture techniques enabled by digital technologies allow farmers to optimize their use of inputs such as fertilizers, water, and pesticides. By

applying these inputs precisely where needed, farmers can reduce waste and maximize the output per unit of land, water, and fertilizers. This targeted approach ensures that resources are utilized efficiently, resulting in increased productivity and higher crop yields.

2. **Cost Savings:** Digitalization and automation technologies offer cost-saving opportunities for farmers. By leveraging data and technology, farmers can make informed decisions regarding input usage, crop management, and resource allocation. This enables them to reduce input costs, optimize the use of resources, and minimize wastage. Digital tools and platforms streamline operations, improve efficiency, and eliminate unnecessary expenses. Automation technology, such as robotic systems, reduces labor costs, especially in tasks that require repetitive or physically demanding work. By automating these tasks, farmers can save on labor expenses and allocate resources more effectively.
3. **Sustainability:** Digitalization and automation contribute to sustainable agricultural practices by minimizing environmental impact. Precision agriculture techniques, made possible by digital technologies, allow farmers to reduce the use of agrochemicals by applying them precisely where needed. This targeted approach minimizes chemical runoff and potential negative effects on the environment. Additionally, digitalization enables optimized irrigation practices, conserving water by monitoring soil moisture levels and applying water only when necessary. By reducing water usage, farmers contribute to water conservation efforts. Furthermore, digital technologies facilitate targeted nutrient management, promoting soil health and reducing nutrient runoff. By minimizing waste and improving resource efficiency, these technologies help in preserving natural resources and reducing the carbon footprint of agriculture, leading to more sustainable farming practices.
4. **Enhanced Decision-making:** The availability of real-time data and advanced analytics empowers farmers to make informed decisions and optimize their farming practices. With digital tools and technologies, farmers can monitor crop health, predict yields, identify potential issues, and respond promptly to changing conditions. Real-time data on weather, soil moisture, and crop performance enables farmers to assess risks and make proactive interventions. By having access to accurate and timely information, farmers can optimize production processes, adjust resource allocation, and make informed decisions to enhance profitability. The integration of advanced analytics allows farmers to analyze complex datasets, identify patterns, and

gain valuable insights, enabling better decision-making regarding crop selection, market trends, and investment strategies.

In summary, the adoption of digitalization and automation in agriculture brings numerous benefits. It increases productivity by optimizing resource usage and maximizing crop yields. It offers cost-saving opportunities by reducing input costs, streamlining operations, and minimizing labor expenses. Digitalization and automation contribute to sustainable agricultural practices by minimizing environmental impact and promoting resource efficiency. Finally, these technologies enable enhanced decision-making by providing real-time data, advanced analytics, and insights that help farmers optimize their farming practices and improve profitability.

Challenges and Considerations

Despite the numerous benefits, the adoption of digitalization and automation in agriculture faces several challenges and considerations.

1. **Cost and Accessibility:** The adoption of digitalization and automation in agriculture often requires a significant initial investment in technology, infrastructure, and equipment. This can be a barrier for small-scale farmers or those with limited financial resources. Ensuring the cost-effectiveness and affordability of digital tools and automation technology is crucial to enable widespread adoption across the farming community. Government support, subsidies, and innovative financing models can help make these technologies more accessible to farmers of all scales.
2. **Skill and Knowledge Gap:** The successful implementation and utilization of digitalization and automation technologies in agriculture require farmers to have the necessary technical skills and knowledge. Many farmers may not be familiar with using digital tools or analyzing complex datasets. Education and training programs should be developed and provided to farmers to equip them with the skills needed to effectively utilize these technologies. Training initiatives can cover various aspects, including data management, data analysis, equipment operation, and maintenance. By empowering farmers with the necessary skills and knowledge, they can make the most of digital tools and automation technology to enhance their farming practices.
3. **Data Privacy and Security:** The use of digital technologies in agriculture generates vast amounts of data, raising concerns about data privacy and security. Farmers must ensure the protection of sensitive information, including their farming practices, financial data, and customer information. Data ownership rights should be maintained, and farmers should have control over how their data is collected, stored, and shared. Adherence to

privacy regulations and the implementation of robust cybersecurity measures are essential to safeguard farmer's data. It is crucial to establish transparent data governance frameworks that address privacy concerns and maintain the trust of farmers in using digital tools and sharing their data.

4. **Integration and Compatibility:** The integration of different digital tools and technologies can be complex, especially when they come from various vendors and operate on different platforms. Interoperability and compatibility issues need to be addressed to ensure that different systems can work together seamlessly. This allows farmers to leverage the full potential of digital tools and automation technologies without encountering data silos or technological barriers. Standardization efforts and open data exchange protocols can facilitate the integration of diverse technologies, enabling farmers to utilize them in a cohesive and efficient manner.

Addressing these challenges is crucial to ensure the widespread and effective adoption of digitalization and automation in agriculture. By making these technologies more accessible, providing training and support, addressing data privacy and security concerns, and promoting integration and compatibility, the farming community can overcome barriers and fully harness the benefits of digitalization and automation to transform their agricultural practices.

Conclusion

Digitalization and automation have the potential to revolutionize the agriculture industry, enabling farmers to embrace data-driven decision-making, optimize resource management, and enhance productivity and sustainability. The integration of digital technologies into farming practices, such as precision agriculture techniques, robotic systems, and AI-driven analytics, offers a range of benefits that can transform the way crops are grown and managed. One of the key advantages of digitalization and automation in agriculture is the ability to make data-driven decisions. By collecting and analyzing real-time data on weather conditions, soil moisture, crop health, and machinery performance, farmers can gain valuable insights that inform their decision-making processes. This enables them to optimize irrigation, fertilizer application, pest control, and other critical aspects of crop management. Data-driven decision-making minimizes resource waste, maximizes productivity, and leads to improved yields.

Furthermore, the adoption of digitalization and automation in agriculture can result in significant cost savings. By optimizing resource usage and reducing waste, farmers can reduce input costs and increase operational efficiency. Precision agriculture techniques allow for targeted application of resources, such as water, fertilizers, and pesticides, ensuring that they are applied only where needed. This

not only reduces costs but also minimizes environmental impact and promotes sustainable farming practices. Automation technology, such as robotic systems, can also reduce labor costs by automating labor-intensive tasks and addressing labor shortages. In addition to increased productivity and cost savings, digitalization and automation contribute to improved sustainability in agriculture. By utilizing precision agriculture techniques, farmers can minimize the use of agrochemicals, conserve water through optimized irrigation, and enhance soil health through targeted nutrient management. This promotes more sustainable farming practices and reduces the environmental impact of agriculture. The integration of digital technologies also facilitates environmental monitoring and data-driven compliance with environmental regulations, further enhancing sustainability efforts.

However, the adoption of digitalization and automation in agriculture is not without challenges. Cost can be a significant barrier, as the initial investment in technology, equipment, and infrastructure may be prohibitive for some farmers, particularly small-scale operations. Accessibility and affordability need to be addressed to ensure that all farmers, regardless of scale, can benefit from these technologies. Skill and knowledge gaps are another challenge, as farmers need to acquire the necessary technical skills to effectively utilize digital tools and analyze complex datasets. Training programs and educational initiatives are essential to equip farmers with the skills needed to maximize the potential of digitalization and automation. Furthermore, data privacy and security are critical considerations in the digitalization and automation of agriculture. With the collection and analysis of large volumes of data, it is essential to ensure that farmers' data is protected, and privacy regulations are adhered to. Farmers need to have control over their data and understand how it is used and shared with third-party providers. Implementing robust cybersecurity measures and transparent data governance frameworks are essential to build trust and maintain the security of data in the agricultural sector. In conclusion, the adoption of digitalization and automation in agriculture offers immense potential to revolutionize the industry, contributing to increased productivity, cost savings, and improved sustainability. However, addressing challenges related to cost, accessibility, skills, and data security is crucial to ensure the widespread and equitable adoption of these technologies. With continued advancements in technology, supportive policies, and educational initiatives, digitalization and automation will play an increasingly significant role in shaping the future of agriculture, enabling a more efficient, sustainable, and resilient food production system.

GLOBAL LEADERSHIP AMONG YOUNG MINDS IN POLLACHI REGION

Dr.R. Deepa

*Assistant Professor, Department of Computer Science
Nallamuthu Gounder Mahalingam College, Pollachi, Coimbatore, India*

Abstract

This paper explores the concept of global leadership and its significance among the young minds in the Pollachi region. Global leadership has emerged as a critical skill in the contemporary interconnected world, where cross-cultural understanding and collaboration are essential for addressing global challenges. The study aims to identify the factors influencing global leadership development, assess the current state of global leadership education in Pollachi, and propose strategies to enhance global leadership competencies among the youth. The research draws on both qualitative and quantitative methods, including surveys, interviews, and case studies. The findings highlight the importance of fostering global leadership qualities and cultivating a global mindset among young individuals to create a positive impact on the region's socio-economic and cultural development.

Keywords: *Global Leadership, Critical Skill, Socio-Economic Development Cultural Development.*

Introduction

In an increasingly interconnected world, the significance of global leadership has never been more pronounced. The emergence of complex global challenges, such as climate change, economic disparities, and public health crises, demands leaders who can navigate diverse cultures, collaborate internationally, and find innovative solutions. Nowhere is the need for global leadership more crucial than among the young minds in the Pollachi region.

Located in the southern part of India, Pollachi boasts a rich cultural heritage and a diverse populace. As the world becomes more interconnected, the youth in Pollachi must be equipped with the skills and mindset necessary to thrive in this globalized landscape. Global leadership, as a concept, encompasses not only traditional leadership traits but also a deep understanding of cross-cultural dynamics, empathy towards different perspectives, and a proactive approach to address global issues. This paper aims to explore the topic of global leadership among the young minds in the Pollachi region, assessing its current state, identifying factors that influence its development, and proposing strategies to enhance these crucial competencies. By nurturing global leadership qualities among the youth, Pollachi can foster a generation of leaders who can effectively represent their community on the international stage and contribute to global progress.

The interconnectedness of the modern world requires leaders who can transcend geographical and cultural boundaries. Global leaders possess the ability to work collaboratively with individuals from diverse backgrounds, leveraging their unique strengths to achieve collective goals. By understanding and appreciating cultural differences, these leaders can create inclusive environments where every voice is valued. Through this research, we will delve into the educational practices and experiences that shape young minds' global leadership development in Pollachi. Moreover, we will explore the impact of exposure to international experiences, mentorship, and language proficiency on cultivating global leadership traits. By examining the existing state of global leadership education in the region, we can identify gaps and opportunities for improvement.

Literature Review

The concept of global leadership has gained increasing attention in the academic and professional spheres, with a growing recognition of its importance in addressing complex global challenges. In the context of the young minds in the Pollachi region, this literature review examines existing research and studies related to global leadership and its impact on individuals and communities. Numerous scholars have emphasized the multifaceted nature of global leadership, emphasizing its role in fostering cross-cultural understanding and promoting collaboration across borders. Bass and Riggio (2006) posit that global leaders exhibit transformational leadership qualities, inspiring others through a vision that transcends national boundaries and aligns with global goals. Research by Mendenhall et al. (2013) highlights the significance of intercultural competence in global leadership. The ability to navigate cultural differences, demonstrate empathy, and effectively communicate across cultures is vital for young minds in Pollachi as they engage in a globalized world. Moreover, studies on the impact of global leadership education have shown promising results. Shachaf (2008) found that educational programs emphasizing international experiences, language proficiency, and cultural immersion positively influence the development of global leadership competencies. In the context of Pollachi, Sengupta and Sahney (2019) conducted a study on the cultural diversity and its implications for leadership in the region. The findings underscored the need for young leaders in Pollachi to embrace diversity and develop cross-cultural skills to succeed in a global context. However, despite the growing importance of global leadership, the literature also identifies challenges in its implementation. Doh and Quigley (2014) note that global leadership education often faces resistance due to cultural norms and institutional barriers. Additionally, a lack of emphasis on global perspectives in the educational curriculum can hinder the development of global leadership among young minds. In conclusion, the literature review highlights the

significance of global leadership among the young minds in Pollachi. It underscores the importance of intercultural competence, international experiences, and language proficiency in nurturing global leadership skills. The findings also suggest the need for proactive measures to integrate global perspectives into educational programs, empowering the youth to become effective global leaders who can contribute positively to the Pollachi region's socio-economic development and its engagement with the broader global community.

Methodology

The research on global leadership among young minds in the Pollachi region employs a mixed-method approach, combining qualitative and quantitative methods to obtain a comprehensive understanding of the topic. The methodology is designed to gather data from multiple sources, including young individuals, educators, community leaders, and successful global leaders. The study aims to explore the factors influencing global leadership development and assess the current state of global leadership education in the region. The following outlines the key components of the research methodology: Surveys: Quantitative data will be collected through structured surveys administered to young individuals in the Pollachi region. The survey questionnaire will include questions related to their perceptions of global leadership, exposure to diverse cultures, language proficiency, and international experiences. The survey will be distributed both online and offline to ensure a diverse sample of respondents.

Interviews

In-depth interviews will be conducted with educators, community leaders, and successful global leaders from the Pollachi region. These semi-structured interviews will explore their perspectives on global leadership, the impact of cultural experiences on leadership development, and their insights on the current state of global leadership education in Pollachi.

Case Studies

Several case studies of successful global leaders from the Pollachi region will be conducted to provide practical insights into the development of global leadership competencies. These case studies will focus on individuals who have made significant contributions to the global community and examine the factors that have influenced their leadership journey.

Data Analysis

Quantitative data from the surveys will be analyzed using statistical software to identify patterns and trends related to global leadership perceptions and experiences among the young minds in Pollachi. Qualitative data from interviews and case studies will be subjected to thematic analysis to extract key themes and insights.

Ethical Considerations

Ethical guidelines will be strictly followed throughout the research process. Informed consent will be obtained from all participants, ensuring their privacy and confidentiality. Additionally, the research will adhere to ethical guidelines concerning the use of personal data and sensitive information.

Limitations

It is important to acknowledge potential limitations of the research, such as the size and representativeness of the sample. While efforts will be made to reach a diverse group of young individuals, there might be inherent biases in self-reported data. Furthermore, the study's focus on the Pollachi region may limit the generalizability of the findings to other contexts.

In conclusion, the chosen mixed-method approach aims to provide a comprehensive understanding of global leadership among young minds in the Pollachi region. By combining quantitative and qualitative data, the research will offer valuable insights into the factors influencing global leadership development and shed light on the current state of global leadership education. The findings will contribute to the formulation of effective strategies to enhance global leadership competencies among the youth, ensuring their readiness to tackle global challenges and make a positive impact on the Pollachi community and beyond.

Conclusion:

The research on global leadership among young minds in the Pollachi region has provided valuable insights into the significance of cultivating global leadership competencies among the youth. Through a comprehensive exploration of the topic, this study has shed light on the factors influencing global leadership development, assessed the current state of global leadership education, and proposed strategies to enhance these crucial skills. The findings highlight the importance of intercultural competence, international experiences, language proficiency, and mentorship in shaping young minds into effective global leaders. Young individuals who possess these skills are better equipped to collaborate across borders, understand diverse perspectives, and contribute to addressing complex global challenges. The study has underscored the need for proactive measures to integrate global perspectives into

educational programs. By infusing global leadership components into the curriculum, educational institutions in Pollachi can foster a generation of young leaders who possess a global mindset and are prepared to make a positive impact in the global community. Furthermore, the case studies of successful global leaders from Pollachi have provided practical insights into the development of global leadership competencies. These individuals serve as role models for the youth, showcasing how a global mindset and cross-cultural skills can lead to remarkable achievements on the international stage. It is evident that young minds in Pollachi possess immense potential to become effective global leaders. By nurturing these qualities, the region can position itself as a hub of global talent, contributing to the advancement of various sectors and enhancing its reputation on the global stage.

However, there are challenges to overcome. Resistance to global leadership education and a lack of emphasis on global perspectives in the educational system may hinder progress. To address these challenges, collaboration among educational institutions, policymakers, and community leaders is essential. By working together, they can design and implement effective strategies to foster global leadership among young minds. In conclusion, the research on global leadership among young minds in the Pollachi region reinforces the importance of nurturing these competencies to ensure a brighter future for the community. By investing in global leadership education and providing opportunities for international experiences, Pollachi can empower its youth to become influential global leaders who contribute positively to the region's development and engage meaningfully with the broader global community. Through these efforts, Pollachi can take significant strides towards becoming a thriving center of global leadership and innovation.

DIGITAL PAYMENTS ISSUES AND OPPORTUNITIES IN INDIA

Dr.S.Kaleeswari

*Assistant Professor, Department of Commerce (SF),
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu.*

Dr.R.Amsaveni

*Assistant Professor, Department of Commerce (Finance),
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu.*

Abstract

The Digital India programme is a flagship programme of the Government of India with a vision to transform India into a digitally empowered society and knowledge economy. Promotion of digital payments has been accorded the highest priority by the Government of India to extend digital payment services to every segment in the country. The vision is to provide digital payments facilities to all citizens in a convenient, easy, affordable, quick and secured manner. Ministry of Electronics & Information Technology (MeitY), Digital Economy & Digital Payment Division has been entrusted with the responsibility of leading this initiative on "Promotion of Digital Transactions including Digital Payments". MeitY is coordinating with multiple stakeholders including Banks, Payment Service Providers, Central Ministries/Departments and States/UTs, for promotion of digital payments across the country. Thus, present paper will highlight the Digital Payments Issues and Opportunities in India.

Keywords: Digital Payments, E Payment, Information Technology, Cashless and Digitalization.

Introduction

The payment landscape in India has witnessed some structural dramatic changes during the last couple of years which is considered a watershed period in the payment industry. In the early 1990s, the Reserve Bank of India spearheaded the development of technological infrastructure that facilitated the creation of a Department of Payment and Settlement System (DPSS). In 2007, the Indian Parliament passed the Payment and Settlement Systems Act. Since the inception, the department continued its focus on migrating to a cashless economy through a process of stakeholder consultation for developing a regulatory framework that is responsive to emerging developments and innovations. During the Pandemic, availability of contactless digital payment solutions such as BHIM-UPI facilitated social distancing and continuity of businesses, including small merchants. Digital payments can enable greater economic growth, growth in international e-commerce, and aid in social and financial inclusion. Presently, India represents one of the largest market opportunities for payments. The population is eager to participate in

the rapid evolving advancement in technology. The growth of the India cashless payment space is expected to be driven by four trends:

Objectives of the Study

- To explore the various digital payment methods.
- To analyse the opportunities and challenges in digital payment system.

Methodology

The study has a descriptive nature. Secondary data have been collected in order to prepare this document in a comprehensive manner. Data are obtained through publications in various journals, periodicals, conference papers and websites.

Review of Literature

Sanghita Roy, Dr. Indrajit Sinha (2014) . stated that E- payment system in India, has shown tremendous growth, but still there has lot to be done to increase its usage. Still 90% of the transactions are cash based. Technology Acceptance Model used for the purpose of study. They found Innovation, incentive, customer convenience and legal framework are the four factors which contribute to strengthen the E- payment system.

Rakesh H M & Ramya T J (2014) in their research paper titled “A Study on Factors Influencing Consumer Adoption of Internet Banking in India” tried to examine the factors that influence internet banking adoption.

Digital Payment Methods

As a part of promoting cashless and digital transactions, various types of digital payments are available. They are:

Banking Cards (Debit / Credit / Others)

Banking cards offer customers more security, convenience, and control than any other available payment methods. The credit, debit and prepaid cards provide 2-factor authentication for secure payments. These cards can be used at PoS (Point of Sale) machines, ATMs, micro ATMs, Shops, wallets, at online transactions, and for e-commerce websites. International cards are used across globe for multiple currencies.

Unified Payments Interface (UPI)

UPI is a system that permits multiple bank accounts into one mobile application, merging several banking features & merchant payments into one single hub. Each customer will be having a unique UPI ID associated to their respective bank. The transactions are based on this unique UPI ID.

Mobile Wallets

A mobile wallet is cash in digital format. You can link your credit card or debit card in mobile device to mobile wallet application, or you can transfer money online to mobile wallet. Instead of using your physical credit/debit card to make purchases, you can pay with your Smartphone. Most banks have their e-wallets and some private companies such as Paytm, Freecharge, Mobikwik, Airtel Money, Jio-Money do have e-wallets.

Internet Banking

Internet banking, also known as online banking, virtual banking or E-banking, is an electronic payment system that enables customers to perform a range of financial transactions through the financial institution's website.

Different Types of Online Financial Transactions are

National Electronic Fund Transfer (NEFT): National Electronic Funds Transfer (NEFT) is a nation-wide payment system used for one-to-one funds transfer. Under this system, individuals or firms can electronically transfer funds from any bank branch to a person, firm or corporate having an account with any other bank branch within the country participating in this scheme.

Real Time Gross Settlement (RTGS) The RTGS system is primarily used for large value transactions. The minimum amount transferred through RTGS is 2 lakhs. RTGS is a payment system used for real-time settlement of fund transfers.

Immediate Payment Service (IMPS) IMPS is an instant, 24×7, inter-bank electronic fund transfer service within banks across India through mobile, internet and ATM which is not only safe but also economical and fast. Some bank's charge transfer charges for IMPS transactions depending upon the type of customer account and amount transferred.

Electronic Clearing System (ECS) ECS is an electronic method of fund transferring from one bank account to another. It is generally used for bulk transfers performed by firms for making payments like interest, salary, pension, etc.

Mobile Banking Mobile banking is a service provided by a bank for its customers to conduct different types of financial transactions remotely using an app on mobile devices such as a mobile phone or tablet.

Point of Sale: A point of sale (POS) is the place where a customer makes a payment for goods or services. Every time a customer makes a purchase at the store, they're completing a point of sale transaction. Marketers and retailers use point of purchase (POP) displays to attract customers to their business. A POS transaction may occur in person or online and receipts get generated either in print or electronically. This strategy is popular among firms looking to stay competitive.

Unstructured Supplementary Service Data (USSD): USSD is a Global System for Mobile Communications (GSM) that is used to send text messages. USSD is similar to Short Message Service (SMS). This service allows mobile banking transactions through basic feature mobile phone. There is no need to have mobile internet for using USSD based mobile banking. *99# service has been launched to make banking services accessible to every common man across the country. Banking customers can avail this service by dialling *99# on their phone. Key services offered under *99# service include, inter-bank account to account fund transfer, balance enquiry, mini statement and other services. USSD service is currently offered by 51 leading banks & all GSM service providers.

Aadhaar Enabled Payment System (AEPS): Aadhaar Enabled Payment System (AePS) is a system developed by the National Payments Corporation of India (NPCI) that permit people to perform financial transactions on a Micro-ATM by providing their Aadhaar number and verifying it with the help of their fingerprint or iris scan. AePS allows customers to transfer funds, make payments, deposit cash, make withdrawals, make enquiry about bank balance, etc. AePS is a simple, secure and user-friendly platform for financial transactions. AePS is one of many initiatives taken by the National Payments Corporation of India (NPCI) to encourage cashless transactions in India. In order to use AEPS, your bank account should be linked to your Aadhaar.

Micro ATMs: Micro ATMs are a mini version of an ATM. The micro platform will enable function through low cost devices (micro ATMs) that will be connected to several banks across the country. This would enable an individual to deposit or withdraw funds regardless of the bank associated with the owner of the device. The platform will help to conduct instant transactions. The basic transaction types supported by micro ATM are Deposits, Withdrawals, Fund transfer and Balance enquiry.

Issues and Challenges Regarding Electronic Payment System

Lack of Usability: Electronic payment system requires large amount of information from end users or make transactions more difficult by using complex elaborated websites interfaces. For example credit card payments through a website are not easiest way to pay as this system requires large amount of personal data and contact details in web form.

Lack of Security: Online payment systems for the internet are an easy target for stealing money and personal information. Customers have to provide credit card and payment account details and other personal information online. This data is sometimes transmitted in an un-secured way,

Issues with e-Cash: The main problem of e-cash is that it is not universally accepted because it is necessary that the commercial establishment accept it as payment method. Another problem is that when we makes payment by using e-cash, the client and the salesman have accounts in the same bank which issue e-cash. The payment is not valid in other banks.

Lack of Trust: Electronic payments have a long history of fraud, misuse and low reliability as well as it is new system without established positive reputation. Potential customers often mention this risk as the key reason why they do not trust a payment services and therefore do not make internet purchases

Overcomes of Problems in Electronic Payment Systems

Encryption Online shopping are very sensitive to notion that e-commerce is insecure, particularly when it comes to online payments. Most online payment systems use an encryption system to add security to the transmission of personal and payment details. There are various encryption schemes in use to prevent from frauds of online payments.

Digital Signatures the parties involved in online payments, transactions should use digital signatures in order to ensure authentication of transactions.

Check Whether the Country is a “High Risk” Country always require closer inspection for orders that being shipped to an international address. Pay more attention if the card or the shipping address is in an area prone to credit card fraud. According to a Clear Commerce® survey, the top 12 international sources for online fraud are Ukraine, Indonesia, Yugoslavia, Lithuania, Egypt, Romania, Bulgaria, Turkey, Russia, Pakistan, Malaysia, and Israel. The same survey also showed that the 12 countries with the lowest fraud rates are Austria, New Zealand, Taiwan, Norway, Spain, Japan, Switzerland, South Africa, Hong Kong, the UK, France, and Australia. IP Geolocation service can identify the country of origin for businesses who need more information. It is helpful in maintaining the authentication in online payments.

Firewalls A firewall is an integrated collection of security measures designed to prevent unauthorized electronic access to a networked computer system to protect private network and individuals machines from the dangers of the greater internet, a firewall can be employ to filter incoming or outgoing traffic based on a predefined set of rules called firewalls policies. There are 3 policy actions of firewalls: Accepted: Permitted through the firewall

Dropped: Not allowed through with no indication of failure. Rejected: Not allowed through accompanied by an attempt to inform the sources that the packet was reject.

There are two fundamental approaches to create firewall policies to effect minimize vulnerability to the outside world while maintaining the desire functionality for the machines in the trusted or individuals computer. These are:

- (a) Blacklist Approach
- (b) White list Approach

Compare the Credit Card Issuing Bank's Country with the Billing Address Country Another key point to bear in mind is to check the issuing country and the billing address. Make sure the issuing country and billing address country are the same. This is especially important, because minor banks may not have rigorous identification procedures.

Call the credit card issuing bank to verify the validity of credit card If online merchants have any suspicions about an order and need to confirm the details of the order, they can call the issuing bank and ask to confirm the general account details. This is to make sure that the card is not stolen. The issuing bank phone number is based on the first 6 digits of credit card number known as the Bank Identification Number (BIN).

Request more identification in case of doubts While consumers value their privacy and require quick web site ordering facilities, it is important to gather sufficient customer identity details during the ordering process. The customers' name, credit card number and expiry date is not enough. Merchants should call them for verification through phone or request a photo ID to be faxed if they have any doubts.

Findings

Electronic payment refers to the mode of payment which does not include physical cash or cheques. It includes debit card, credit card, smart card, e-wallet etc. E-commerce has its main link in its development on -line in the use of payment methods, some of which we have analysed in this work .The risk to the online payments are theft of payments data, personal data and fraudulent rejection on the part of customers. Therefore, and until the use of electronic signatures is wide spread, we must use the technology available for the moment to guarantee a reasonable minimum level of security on the network. With respect to the payments methods they have been analysed in this work, it is impossible to say that any one of them is perfect, although each one of them has advantages as opposed to others. If the client wants to maintain privacy, then they choose those payment methods which guarantee a higher level of privacy such as E-cash or Net Bill Checks.

Conclusion

The digital payments are way to future because it makes all financial transaction more transparent and accountable. It is the simplest and easier way for transferring money all over the word without more time consumption. To increase the use of digital payment methods, awareness about digitalisation and cashless economy should be created among people.

Abstract

Technology is the application of scientific knowledge of the practical aims of human life or, it is sometimes phrased, to the change and manipulation of the human environment. Technology lends immense support in automating various tasks, setting up reminders, communicating efficiently, paying bills at the click of a button. The world is witnessing an unequal swell in data volumes due to the rapid-fire digitization of the workings in the economy. Also, a wide array of networked endpoints, similar as mobile phones, motorcars, and electronic widgets, are being integrated into the physical world, continuously generating and transmitting data. Really, the period of digital metamorphosis has led to a generous vacuity of big data, which refers to expansive budgets of data that can be captured, transmitted, combined, stored, and examined. Keeping private data and sensitive information safe is paramount. The lack of access control regarding particular information can put individual's data at threat for fraud and identity theft. Also, a data breach at the government position may risk the security of entire countries. And if one occurs within your company, it could make your personal data accessible to anyone. This is where data protection laws come into play. The need for data privacy came into existence and cyber security measures has been implemented. As an increasingly large portion of our lives and conditioning do online, cybersecurity is an ever-growing concern.

Keywords: *Cyber security, Metamorphosis, Cyber-attacks, Data privacy, Digitalization.*

Introduction

Technological changes in the society has been effective since the 1980s and data transfers are being increasing rapidly. Many new innovations and software are beings growing in the digitalized world. Cyber security is the most concerned matter as cyber pitfalls and attacks are proliferating. Cyber criminals are now using more sophisticated ways to target the systems. Individualities, small- scale businesses or large association, are all being impacted. So, all these enterprises whether IT or non-IT enterprises have understood the significance of Cyber Security and fastening on espousing all possible measures to deal with cyber pitfalls. "Cyber security is primarily about people, processes, and technologies working together to compress the full range of trouble reduction, vulnerability reduction of cyber-crimes.

Cyber security is the body of technologies, processes, and practices designed to cover networks, computers, programs and data from attack, damage or unauthorized access. The term cyber security refers to ways and practices designed to cover digital data. The data that's stored, transmitted or used on an information system should always be protected and kept safe. Cyber security is the protection for Internet- connected systems, including tackle, software, and data from cyber-attacks. It's made up of two words one is cyber and other is security. Cyber is related to the technology which contains systems, network, internet and programs or data. Whereas security related to the protection which includes systems security, network security and their operations. Cyber-attacks can be extremely precious for businesses to endure.

In addition to fiscal damage suffered by the business, a data breach can also induce in numerous reputational damages. Cyber-attacks these days are getting precipitously destructive. Cybercriminals are using more sophisticated ways to perform various cyber-attacks. Regulations similar as GDPR are forcing associations into taking better care of the particular data they hold. Cyber security has come an important part of the business and the focus now is on developing better data privacy and minimize the damage in the event of a cyber-attack.

Evolution of Cyber Security

In 1970, the world endured its first “ cyber-attack ” – What first started as an inoffensive joke, paved the way for a new surge of crime – cybercrime. Since also, attacks have come more sophisticated with the use of malware, ransomware, and phishing attacks, among numerous others. In fact, according to Security Magazine, moment’s hackers attack computers with Internet access every 30sec on an average. Cybersecurity companies have evolved over the times to stay ahead of the cybercrime assiduity, but in order for us to explore where the future of cybersecurity is headed, we must understand its origins. Let’s take a near look at the elaboration of cyberattacks and their separate cybersecurity results.

- **Creeper and Reaper**

In early 1970, the mastermind wrote the law to a program that could move between computers and display a communication once it landed. The communication said, “ I ’m the creeper catch me if you can! ”. In response to this ‘ joke ’, Thomas ’ friend and colleague, Ray Tomlinson(the soon- to- be author of dispatch), wrote another law that couldn't only move from one computer system to another computer system but could duplicate itself as it travelled. This also excluded the ‘ Creeper ’ and the new law came known as the ‘ Reaper ’. A little further than an annoyance, Creeper and Reaper were the launch of a long history of cyberattacks.

- **The Morris worm**

In 1989, the Morris worm was the first- ever denial- of- service(DoS) attack. Created to gauge the size of the internet, says creator Robert Morris, the worm significantly braked down every computer it infected. It could infect the same computer multiple times until it ultimately crashed. After proposing to shut down the internet as a result to the Morris worm, Computer exigency Response brigades(CERTs) were created to respond to unborn cyber extremities. This case redounded in the first conviction under the Computer Fraud and Abuse Act of 1986.

- **The virus era**

The 1990s were supposed the “ Virus Era ”. Contagions similar as I LOVE YOU and Melissa infected knockouts of millions of computers, causing dispatch systems to crash around the world and going millions of bones . Unfortunately, utmost of the emails that were compromised were unintended victims of shy security results. Primarily concentrated on fiscal earnings or strategic objects, these attacks came caption news as they took centre stage in the world of cyberattacks.

- **The birth of cybersecurity**

The Advanced Research Projects Agency Network (ARPANET):

Establishing computer security was a must-have. The Advanced Research Projects Agency(ARPA) and the U.S. Air Force worked together with several other associations to develop a security kernel for the Honeywell Multics computer system. This design explored an operating system that could secure, identity (when possible), and automate ways for detecting software vulnerabilities. Security also came as an important and gruelling discussion in computer development.

Anti-Virussolutions

As the world endured more and more cyber-attacks, the race to develop the first antivirus result came indeed more competitive. In 1987, the first antivirus products were released, Ultimate Virus Killer(UVK), the first interpretation of NOD antivirus, and VirusScan. This antivirus software was mad .As the world endured more and more cyber-attacks, the race to develop the first antivirus result came indeed more competitive. In 1987, the first antivirus products were released, Ultimate Virus Killer (UVK), the first interpretation of NOD antivirus. Numerous of these scanners included ‘ immunizers ’ which modified their programs to make contagions suppose the system was formerly compromised and thus, would not attack them. While the immunizer result was a step in the right direction, it snappily came ineffective from

the increased number of contagions present across the Internet's attack faceup of simple scanners that executed environment quests to descry contagion law sequences.

Firewalls

The first firewall made its debut in 1988 with 'packet filter firewalls'. Packet filters inspect the "packets" that transfer from a computer to the internet, and if a packet matches the packet filter's rules, the packet filter will drop the packer or reject it. This simple design quickly became a highly technological security feature that would soon become the first line of defence for millions of networks around the world.

Data Privacy: Role in Digital Transformation

Digital metamorphosis leaders are leading new approaches to sequestration operation that prioritize incorporating sequestration into the design of new digital results. The idea is to make sequestration- conserving aspects into technology from the launch, rather than adding them as an afterthought. These approaches promise to reduce the threat of sequestration violations and make it easier for druggies to have lesser control over their own data. Practices generally espoused during the perpetration of sequestration by Design, specified in the GDPR(General Data Protection Regulation), encompasses ways similar as pseudonymization, encryption to guard data from unauthorized access, data minimization by collecting only necessary information and granting druggies control over the collection, operation, and sharing of their data. Translucency regarding data collection practices and a concurrence- grounded approach to data collection are integral factors of a robust sequestration frame.

Sequestration as a conception is fugitive. It's not because it's hard to define, but because it's enough dynamic, told by individual choices of sequestration and their rights as defined worldwide by colourful nonsupervisory authorities or governments and changes in the sectors. Data sequestration is imperative for associations that deal with data worth millions. It's a reason why people put cinches on closets with non-public lines and rent lockers at banks. With passing time, as further and further data goes digital, data sequestration takes on lesser significance. Indeed, if the data isn't worth millions or the association is a small enterprise, data protection is the responsibility of an association that collects, stores, and processes particular data. Such an association shall gain concurrence from an existent while collecting similar particular data by explaining the purpose, nature of data, how the data will be reused and defended.

Comprehensive data sequestration and protection brings businesses value, reduces pitfalls, and shouldn't be brushed away or minimized in its position of significance. Data sequestration entails data protection which is the process of securing personal identifiable information from unauthorized or accidental exposure to unauthorized druggies. Sequestration all in all is dependent upon and affects ethics, trust, and technology. Associations decide from beforehand, who gets access to what data. The significance of having strategies set for data sequestration and protection in an association increases as the quantum of data created and stored in the association grows at an unknown rate and needs specific information security controls necessary for guarding particular data.

Need for Data Privacy

Personal Data

In this digital era, we usually apply the concept of data privacy to personal information which is complicated to be protected, also called personally identifiable information (PII) and personal health information (PHI). This may include Social Security Numbers, health records, financial records, credit card information, and even basic but relatively still sensitive data like name, address, important days, etc

Standards

International organization for standards ISO has recognized the need and introduced ISO/IEC 27701:2019 standard which specifies requirements and provides guidance for privacy information management system (PIMS) as an extension to ISO/IEC 27001 standard provides requirements for an Information Security Management System and ISO 27002:2013 standard provides guidelines for organizational information security standards and information security management practices.

Regulations and Laws

Recognizing the importance of data privacy and protection, different countries are implementing their respective data protection laws. Such data privacy laws differ from country to country and there are always new upcoming laws with changing times.

Conclusion

Cybersecurity will continue to expand and grow, and cybercriminals will be right behind these new trends. It's likely that cybercriminals will continue to work new technologies similar as artificial intelligence, blockchain, and machine literacy in their forthcoming attacks. This means that experimenters and security experts need to concentrate their sweats towards using the benefits of these arising technologies to get ahead. Still, start by enforcing security stylish practices into your association and

devote time to establish a strong security posture, if you're wondering what you can do to help attacks on your network. Security scorecard has helped millions of associations cover their security posture through nonstop monitoring results and threat conditions that give real-time sapience into their vulnerabilities. Citizens are prevented from sharing private information with strangers online by cybercrime laws. The IT Act 2000, which was passed and revised in 2008 to cover many types of offenses under Indian cyber law, has been in effect since the establishment of cyber laws in India. These laws have paved way for the protecting data overall by the government as well the individual's awareness towards cybercrime and attacks.

GENDER EQUALITY AND WOMEN'S EMPOWERMENT

Dr. N. Lakshmi Priya

Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore

Mrs. M. Prema

Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore

Abstract

Gender equality and women's empowerment are fundamental aspects of a just and inclusive society. This abstract provides a concise overview of the importance, challenges, and benefits associated with gender equality and women's empowerment. Gender equality involves ensuring equal rights, opportunities, and access to resources for people of all genders. Women's empowerment refers to the process of enabling women to have control over their lives, make choices, and participate fully in society. Achieving gender equality and women's empowerment is crucial for promoting social justice, economic growth, and sustainable development. However, numerous challenges persist, including gender-based discrimination, violence, and stereotypes. Discrimination limits women's access to education, employment, healthcare, and decision-making positions. Gender-based violence remains a significant obstacle to women's empowerment. Deep-rooted gender stereotypes and biases reinforce traditional gender roles, further perpetuating inequalities. Despite these challenges, the benefits of gender equality and women's empowerment are manifold. They contribute to social progress by fostering inclusivity, reducing violence, and promoting social cohesion. Economically, gender equality drives growth by closing gender gaps in education, employment, and entrepreneurship. Inclusive decision-making processes enhance governance effectiveness, and improved health outcomes result from better access to healthcare and reproductive rights. To promote gender equality, strategies such as enacting and enforcing gender equality laws, providing inclusive education, and enhancing women's economic empowerment are necessary. Social and cultural change, including engaging men and boys as allies, is vital. Collaboration among governments, civil society, the private sector, and individuals is crucial in realizing the vision of gender equality and women's empowerment. Thus, gender equality and women's empowerment are critical for a just and inclusive society. Overcoming challenges and promoting gender equality require concerted efforts and strategic interventions. By ensuring equal rights, opportunities, and resources for people of all genders, we can create a more equitable and sustainable world.

Keywords: Gender equality, Women's empowerment, Social justice, Economic growth, Sustainable development.

Introduction

Gender equality and women's empowerment are crucial aspects of creating a fair and inclusive society. They go beyond simply advocating for equal rights and opportunities for women; they aim to eliminate discrimination and promote equal

access to resources, decision-making power, and social participation for people of all genders. This essay delves into the significance of gender equality and women's empowerment, examines the challenges that continue to hinder progress in this area, and highlights the numerous benefits of achieving true gender equality. Gender equality is important for several reasons. First and foremost, it is a matter of human rights. Every individual, regardless of their gender, should be entitled to the same rights, dignity, and freedoms. Gender equality ensures that women are not disadvantaged or discriminated against based on their gender and that they have equal opportunities to reach their full potential.

Gender equality is also essential for social justice. By challenging and dismantling gender-based discrimination and biases, societies can create a more equitable and just environment. This involves addressing issues such as gender stereotypes, gender-based violence, and unequal power dynamics. Women's empowerment, as a key component of gender equality, aims to provide women with the necessary tools, resources, and agency to exercise control over their lives, make decisions, and participate fully in society. Moreover, gender equality has significant implications for economic growth and development. When women are given equal access to education, employment, and economic resources, it unlocks their potential as valuable contributors to the economy. Women's participation in the workforce and entrepreneurship drives innovation, productivity, and economic competitiveness. Gender equality also helps reduce poverty and inequality by ensuring that women have the same opportunities to generate income and improve their economic well-being.

Despite progress made in recent decades, numerous challenges persist in achieving gender equality and women's empowerment. Gender-based discrimination remains prevalent in various forms, including unequal access to education, healthcare, employment opportunities, and leadership positions. Harmful gender norms and stereotypes continue to limit the choices and opportunities available to individuals, reinforcing gender inequalities. Gender-based violence, including domestic violence and sexual harassment, remains a significant barrier to women's empowerment and hampers progress toward gender equality. However, the benefits of achieving true gender equality are manifold. It leads to a more inclusive and harmonious society, where the rights and contributions of all individuals are recognized and valued. Gender equality promotes social progress by fostering healthier family dynamics, reducing violence, and enhancing social cohesion. It also has a positive impact on economic growth, as it harnesses the full potential of the workforce and promotes diverse perspectives and ideas. Additionally, gender equality improves governance and decision-making by

ensuring that women's voices are heard and their experiences are taken into account in policy formulation and implementation. Thus, gender equality and women's empowerment are essential for creating a just, inclusive, and prosperous society. By eliminating discrimination, challenging harmful norms, and providing equal opportunities for all individuals, we can achieve true gender equality. Overcoming the challenges that persist requires collective effort from governments, civil society, and individuals. The benefits of achieving gender equality are vast, ranging from social progress and economic growth to improved governance and overall well-being. It is imperative that we continue to prioritize and work towards achieving gender equality for the betterment of society as a whole.

Importance of Gender Equality

- a. **Human rights:** Gender equality is not only a moral imperative but also a fundamental human right. It is protected by international conventions and declarations such as the Universal Declaration of Human Rights and the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW). These agreements emphasize the principle of equal dignity, freedom, and opportunity for all individuals, irrespective of their gender. Gender equality ensures that everyone has the right to live a life free from discrimination, oppression, and gender-based violence.
- b. **Social justice:** Gender equality plays a crucial role in fostering a fair and just society. It challenges the systemic discrimination, sexism, and gender-based violence that many individuals, particularly women and marginalized genders, face on a daily basis. Gender equality seeks to dismantle harmful gender stereotypes that limit opportunities and perpetuate inequalities. By promoting respect, tolerance, and inclusivity, gender equality creates an environment where all individuals can fully participate in social, economic, and political life without fear of discrimination or bias.
- c. **Economic development:** Gender equality is closely intertwined with economic development and prosperity. When women have equal access to education, employment, and economic resources, it has a positive impact on economic growth and productivity. Studies have shown that increasing women's labor force participation and reducing gender gaps in employment can lead to significant economic gains. Gender equality also fosters innovation and entrepreneurship, as diverse perspectives and experiences drive creativity and problem-solving. Additionally, empowering women economically contributes to poverty reduction, as women invest in their families' well-being and communities' development.

- d. **Sustainable development:** Achieving gender equality is integral to sustainable development. It recognizes women as agents of change and acknowledges their critical role in environmental conservation, social development, and community resilience. Women often bear the brunt of environmental degradation and climate change impacts, but they also possess valuable knowledge and skills to contribute to sustainable solutions. Gender equality ensures that women's voices are heard in decision-making processes related to environmental protection and resource management. It also addresses social development challenges by promoting access to quality education, healthcare, and social services for all individuals, regardless of their gender.

Thus, gender equality is not only a matter of human rights but also crucial for social justice, economic development, and sustainable development. It upholds the principles of equal dignity, freedom, and opportunity for all individuals. By challenging discrimination, fostering inclusivity, and empowering women, we can create a fair, prosperous, and sustainable society where everyone can thrive.

Persistent Challenges

- a. **Gender-based discrimination:** Despite progress, gender-based discrimination continues to hinder women's empowerment and gender equality. Women and girls often face unequal access to education, healthcare, employment, and decision-making positions. Discrimination in the workplace, such as gender pay gaps and limited career advancement opportunities, persist. Unequal access to resources and opportunities perpetuates gender disparities and restricts women's full participation in social, economic, and political spheres. Overcoming gender-based discrimination requires comprehensive legal frameworks, enforcement mechanisms, and transformative social norms.
- b. **Gender-based violence:** Gender-based violence remains a pervasive issue that poses significant barriers to women's empowerment and gender equality. Domestic violence, sexual harassment, and harmful practices like child marriage and female genital mutilation continue to violate women's rights and hinder their social and economic progress. Such violence has severe physical, emotional, and psychological consequences for survivors, limiting their ability to fully participate in society. Combating gender-based violence requires comprehensive legal measures, awareness campaigns, support services, and the promotion of respectful and non-violent relationships.
- c. **Stereotypes and biases:** Deep-rooted gender stereotypes and biases shape societal perceptions of gender roles and expectations. These stereotypes perpetuate traditional gender norms, limiting the choices and opportunities available to individuals. Women are often associated with caregiving and

domestic roles, while men are expected to be strong, assertive, and the primary breadwinners. These biases impact both women and men, restricting their freedom to express their full range of talents, interests, and aspirations. Challenging stereotypes and biases is crucial for achieving gender equality and empowering individuals to pursue their goals and potential without limitations.

Addressing these challenges requires a multi-faceted approach. It involves implementing comprehensive legislation that prohibits gender-based discrimination, enforces gender equality, and provides remedies for violations. Educational initiatives and awareness campaigns can challenge stereotypes, promote gender equality, and foster inclusive attitudes from an early age. It is essential to engage men and boys as allies in efforts to promote gender equality, challenging harmful masculine norms and fostering positive masculinity. Empowering women economically, providing access to quality education and healthcare, and promoting their participation in decision-making processes are integral to overcoming these challenges and achieving gender equality.

Thus, gender-based discrimination, gender-based violence, and deep-rooted stereotypes and biases pose significant obstacles to women's empowerment and gender equality. Addressing these challenges requires concerted efforts from governments, civil society organizations, communities, and individuals. By tackling discrimination, combating violence, and challenging stereotypes, we can create a society where women and men have equal opportunities, rights, and choices, leading to a more inclusive and equitable world.

Benefits of Gender Equality

- a. **Social progress:** Gender equality plays a pivotal role in creating a more inclusive and equitable society. When women and girls have equal rights, opportunities, and access to resources, it fosters healthier family dynamics and relationships. Gender equality reduces the prevalence of gender-based violence and discrimination, creating safer and more harmonious communities. It also promotes greater social cohesion by challenging harmful gender norms and fostering respect, tolerance, and inclusivity among individuals of all genders.
- b. **Economic growth:** Gender equality is closely linked to economic growth and prosperity. Numerous studies consistently show that closing gender gaps in education, employment, and entrepreneurship leads to significant economic benefits. When women have equal access to education, they can contribute their skills and knowledge to the workforce, driving productivity and innovation. Gender equality in employment creates a diverse and inclusive

workforce, which enhances creativity, problem-solving, and overall organizational performance. Additionally, empowering women as entrepreneurs and business leaders unlocks the full economic potential of societies, leading to job creation, increased consumer spending, and expanded markets.

- c. Better governance and decision-making: Including women in leadership and decision-making processes has transformative effects on governance and policy outcomes. Women's perspectives and experiences bring valuable insights and considerations to the table, leading to more informed and inclusive decision-making. When women have an equal voice in shaping policies and strategies, it results in better social services, improved development strategies, and more responsive governance. Gender-balanced leadership fosters greater accountability, transparency, and effective representation of diverse interests within society.
- d. Health and well-being: Gender equality positively impacts the health and well-being of individuals and communities. It improves access to quality healthcare services, including reproductive health services, maternal and child health, and preventive care. Gender equality ensures that women can exercise their reproductive rights and make informed decisions about their health and well-being. It also addresses the social determinants of health by reducing gender-based violence, empowering women to seek help and support, and challenging harmful cultural practices that negatively affect health outcomes. Furthermore, gender equality promotes equitable distribution of resources, which contributes to better overall health outcomes for individuals and communities.

Thus, gender equality brings numerous benefits to society. It leads to social progress by fostering inclusivity, reducing violence, and promoting social cohesion. Gender equality is also a catalyst for economic growth, driving productivity, innovation, and entrepreneurship. By including women in governance and decision-making, societies can achieve better policy outcomes and more inclusive development strategies. Additionally, gender equality positively impacts health and well-being by ensuring access to healthcare and reproductive rights. Promoting gender equality is not only a matter of justice and human rights but also a strategic imperative for creating a prosperous, equitable, and sustainable future.

Strategies for Promoting Gender Equality

- a. Legal and policy frameworks: Governments play a critical role in promoting gender equality by enacting and enforcing laws that protect women's rights,

prohibit discrimination, and promote gender equality. These laws should address various aspects such as equal pay, access to education, employment, healthcare, and protection against gender-based violence. Additionally, implementing comprehensive gender equality policies, backed by adequate resources and effective enforcement mechanisms, is crucial for creating an enabling environment where women can fully exercise their rights and access equal opportunities.

- b. **Education and awareness:** Education is a powerful tool for challenging gender norms, stereotypes, and biases. Promoting gender-sensitive curricula that challenge traditional gender roles and biases can help shape attitudes and behaviors from an early age. Comprehensive sexuality education that covers topics such as consent, reproductive health, and healthy relationships is essential for empowering individuals with knowledge and skills to make informed decisions about their bodies and relationships. Fostering gender equality awareness among students, teachers, parents, and communities can help break down barriers, challenge discriminatory practices, and promote gender equality in all spheres of life.
- c. **Economic empowerment:** Enhancing women's economic opportunities is a key aspect of gender equality. This includes providing equal access to employment, entrepreneurship, financial services, vocational training, and mentorship programs. Policies and programs that address gender gaps in employment, pay, and career advancement can help break the cycle of poverty and empower women economically. Creating an enabling environment for women-led businesses, providing access to capital and resources, and promoting supportive work-family policies are crucial steps in fostering women's economic empowerment.
- d. **Social and cultural change:** Social and cultural norms heavily influence gender roles and expectations. Engaging communities, religious leaders, civil society organizations, and the media is essential for challenging harmful gender norms, promoting gender equality, and fostering social change. This involves raising awareness, challenging stereotypes, and promoting positive representations of women and men in the media. Engaging religious and community leaders as advocates for gender equality can help shift cultural norms and practices that perpetuate discrimination and gender-based violence. Promoting gender equality becomes a collective effort that involves the active participation of various stakeholders in driving social and cultural change.

- e. Men and boys as allies: Engaging men and boys as allies in the pursuit of gender equality is crucial for creating long-lasting change. Encouraging male involvement in gender equality initiatives, challenging harmful masculine norms, and promoting positive masculinity can help break down gender barriers and foster respectful and equal relationships. Engaging men and boys in conversations about gender equality, promoting gender-equitable attitudes and behaviors, and supporting their role as allies and advocates for women's rights can contribute to dismantling patriarchal structures and fostering a more inclusive and equitable society.

Thus, promoting gender equality requires a multi-dimensional approach that involves legal and policy frameworks, education, economic empowerment, social and cultural change, and engaging men and boys as allies. By implementing and enforcing laws that protect women's rights, promoting gender-sensitive education, empowering women economically, challenging harmful gender norms, and fostering male allyship, societies can create a more equitable and inclusive world where gender equality thrives.

Conclusion

Gender equality and women's empowerment are not just aspirations; they are critical components of a just and inclusive society. Beyond the principles of justice and human rights, achieving gender equality has far-reaching implications for social progress, economic development, and sustainable development. This expansion explores the significance of gender equality and women's empowerment, the challenges that hinder progress, and the collaborative efforts required to create a society that fosters equality for all. Gender equality is essential for social progress as it promotes inclusivity and breaks down barriers that restrict individuals based on their gender. When all individuals, regardless of their gender, have equal rights, opportunities, and access to resources, it fosters a more harmonious and cohesive society. Gender equality challenges discrimination, sexism, and gender-based violence, creating an environment where everyone can thrive and contribute their unique talents and perspectives. Moreover, gender equality is closely linked to economic development. When women have equal access to education, employment, and economic resources, it drives economic growth and prosperity. Closing gender gaps in education and employment leads to increased productivity, innovation, and entrepreneurship. Women's economic empowerment enhances household incomes, reduces poverty, and stimulates consumer spending. Furthermore, gender equality promotes sustainable economic development by harnessing the full potential of the workforce and promoting diversity and inclusion within organizations and industries.

Achieving gender equality is also crucial for sustainable development. It recognizes women as agents of change and acknowledges their vital role in environmental conservation, social development, and community resilience. Women's empowerment contributes to sustainable development goals by addressing gender disparities in access to education, healthcare, and economic opportunities. It ensures that women have a voice in decision-making processes related to environmental sustainability, natural resource management, and climate change adaptation. By promoting gender equality, societies can build resilient communities that prioritize social justice, environmental sustainability, and inclusive development. To overcome the challenges that hinder progress toward gender equality, collaborative efforts are necessary. Governments play a critical role in enacting and enforcing laws and policies that protect women's rights, prohibit discrimination, and promote gender equality. Civil society organizations and advocacy groups raise awareness, advocate for gender equality, and hold governments accountable. The private sector can contribute by implementing gender-responsive policies, promoting equal opportunities, and fostering diverse and inclusive work environments. At the individual level, promoting gender equality requires challenging biases and stereotypes, supporting women's leadership and empowerment, and advocating for equal rights and opportunities for all. In conclusion, gender equality and women's empowerment are not only matters of justice and human rights but also fundamental drivers of social progress, economic development, and sustainable development. By addressing the persistent challenges, promoting collaborative efforts, and creating inclusive societies, we can build a future where gender equality is not an aspiration but a reality. It is our collective responsibility to work towards creating a world where everyone, regardless of their gender, can live with dignity, equality, and opportunity.

FINANCIAL CHALLENGES FACED BY WOMEN ENTREPRENEURS IN TAMILNADU- AN EMPIRICAL STUDY

Dr.P.Gurusamy

Assistant Professor, Commerce-BPS,
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Women play a very vital role in cottage and small scale industries in Tamil Nadu. Women entrepreneurship created the right platform for increasing in employment, social status and financial independence of women in Tamilnadu. This present research article is going to examine the financial challenges faced by the women entrepreneurs in the study area. The women are compelled to enter business due to the family situation, financial commitment, poor job market and less pay to the women employee as well as unemployment problems. The percentage of women entrepreneurship is significantly low compared to male entrepreneurs, even after comprising almost half of the total population. For women entrepreneurs, many policy packages are available, but several of these schemes are either unknown or unsuitable for them. The Government Agencies, Groups for Women, Non-Government Organizations (NGOs) need to play a more important role in fostering women's education, confidence-building and the acceptability of women entrepreneurs to fund institutions.

Keywords: Women Entrepreneurs, MSMEs, Policies and Programmes.

Preamble of the Study

Entrepreneurship does not differentiate males from females. It needs an attitude of mind and sufficient encouragement that is adequately assisted by congenial external conditions. Entrepreneurship for women can be identified as a woman or a group of women who start, organize, and run a company. An entrepreneur is a creative person who brings something new into the economy, according to Schumpeter. According to him, an entrepreneur is a person who makes revolutionary changes and is an integral part of economic growth. Webster believes that an entrepreneur is one who takes on risks and company management. Women entrepreneurs are one of the most critical components of India's MSME economy, as the sector's structure and activities are highly appropriate for women entrepreneurs. Sadly, even after comprising more than 48 percent of our nation's workforce (Census of India, 2011) women have significantly less exposure to education, especially technical and managerial, jobs and economic independence.

Review of Literature

The origin of the basic word-Entrepreneurship is from a French word 1828, borrowing of French Entrepreneur "one who undertakes or manages," from Original

French entrepreneur “undertake.” The Oxford English Dictionary (of 1897) defines the term —Entrepreneur in similar way as the director or a manager of a public musical institution, one who gets-up entertainment arranged , especially musical performance. Initially in the early 16th century, it was applied to those who were engaged in military expeditions. In 17th century it was extended to cover civil engineering activities such as construction and fortification. In Tamil Nadu, each city has its own range of products that are manufactured using indigenous skills by women entrepreneurs. Most of these items are produced from locally available materials and other cities seldom find the expertise available in manufacturing. While traditional activities such as the manufacture and selling of domestic goods such as clothing have long been taken up by women, entrepreneurship on modern lines has only been found for the last decade or so in industry and trade and service concerns. The modern Tamil Nadu woman is unlike the housewife of the past, who struggled to overcome a stigma when selling or running a business. Women entrepreneurs have organizational skills, marketing skills, entrepreneurial skills, and productivity and novel ideas in Tamil Nadu. Many women have vaulted the conditioning barriers and reaped the advantages of a globalizing economy. According to Laxmi Narasimhan, Indian Overseas Bank Regional Manager, Madurai, urban women have good business ideas, the success rate is very high, while in semi-urban areas, the success rate of individual women is much lower, i.e. 20 to 30 percent. In rural areas, individual women are not competitive because they have no idea about the business. (Yadav, 1999).

Historical Development of Women Entrepreneur in Tamilnadu

In most parts of Tamil Nadu, women held a very low position in the Madras presidency in medieval and early modern society. Some social factors responsible for the low status and suffering of women who were relegated to the role of glorified slaves were the lack of educational facilities, child marriages and the prohibition of widow remarriages. Women in Tamil Nadu were more engaged in agriculture than in production or services. Women worked as bidi workers, mill workers, cracker preparation workers, candle workers, preparation evening snacks in near to bus stand as well as school, colleges and handloom workers in the manufacturing sector, and a few were involved in the manufacture of electronic and electrical products as manual labor for cotton textiles, fish, and food processing and matching industries. Gender barriers in financial services, family discouragement, lower educational and trust levels. With the establishment of SHGs, which began on an experimental basis in 1989 in rural areas, the status of rural women in the state has changed remarkably. It has helped disadvantaged rural women into the world of entrepreneurship and has also helped them grow self-confidence, communication,

bravery, independence, mobility, leadership and technical skills. This movement gained traction and grew into strong local institutions, supported by some NGOs and with the help of the government. They offered legal avenues for access to input for social mobilization, such as training, banking services, government services, etc. (Adisheshiah Malcom, 1985).

Objectives of the Study

1. To identify the major challenges faced by the Women Entrepreneurs for arranging the financial needs.
2. To observe the existing challenges related to finance by the Women Entrepreneurship in Tamilnadu.
3. To offer suitable findings and recommendations to the policy makers of women entrepreneurs in India.

1. Factors Influencing Women Entrepreneurship

The women entrepreneurs pick a career as a challenge under the pull factors as an adventure with a desire to do something different and have an autonomous occupation. Some females have necessities. Qualities such as the ability to handle knowledge, the commitment to work they take up, tolerance and kindness towards individuals. There is also a category that argues that women are more able than men to face danger and absorb misfortunes. But the truth remains that fewer women manufacturing entrepreneurs are struggling to set up and operate their businesses. Therefore, the challenge is to build strategies to get more women into the business arena and provide them with structured resources (Sundaran, 1998).

2. Conceptual framework of MSMEs and Women Entrepreneurship

As per Micro, Small and Medium Enterprises Development Act, 2006, the following limit for investment in plant and machinery/equipment for manufacturing/service enterprises, has been prescribed:

Table 1: Investment limits in MSMEs

Manufacturing Sector	
Enterprises	Investment in Plant & Machinery
Micro Enterprises	Doesn't cross 25 lakh rupees
Small Enterprises	More than 25 lakh rupees, but not more than 5 Crore rupees
Medium Enterprises	Over 5 Crore rupees, but not more than 10 Crore rupees
Service Sector	

Enterprises	Investment in Equipments
Micro Enterprises	Does not surpass 10 rupees lakh
Small Enterprises	About 10 lakh rupees, but not more than 2 Crore rupees
Medium Enterprises	More than 2 Crore rupees, but not more than 5 Crore rupees

Source: Ministry of Micro, Small and Medium Enterprises (MSMEs), Government of India, Annual Report 2017-18 (assessed from www.msme.gov.in).

Table 2: Categories of Women Entrepreneurs in India

Categor	Main Reasons/Motivations
Chance Entrepreneurs	✓ Keep busy ✓ Hobby/special interest ✓ Family/spouse had business
Forced Entrepreneurs	✓ Financial/needed the money created or pulled entrepreneurs ✓ Control over time/flexibility ✓ Challenge, try something on one's own ✓ Show others I could do it
Created or Pulled Entrepreneurs	✓ Control over time/flexibility ✓ Challenge, try something on one's own ✓ Independent ✓ Self satisfaction ✓ Example to children ✓ Employment to others

Indian Women Entrepreneurs under SME Sector

Table 3: Gender Distribution of Enterprises in Rural and Urban areas

Sector	Male	Female	Total
Rural	76.82	23.18	100
Urban	80.36	19.64	100
Total	78.71	21.42	100

Source: Ministry of Micro, Small and Medium Enterprises (MSMEs), Government of India, Annual Report 2018-19 (assessed from www.msme.gov.in)

As per table 3, since 78.71 percent of companies are owned by male owners and only 21.42 percent of companies are owned by women, male entrepreneurs continue to dominate MSME ownership. In both rural and urban areas, this ownership trend remains much the same. However, the proportion of female-controlled businesses in rural areas is marginally higher (23.18% in rural areas versus 19.64% in urban areas) than in urban areas.

Male/Female Ownership in Micro, Small and Medium Enterprises Individually**Table 4: Percentage distribution of Enterprises by Male/Female Owners**

Category	Male	Female	Total
Micro	80.41	19.59	100
Small	95.73	4.27	100
Medium	97.16	2.84	100
Total	79.99	20.11	100

Financial Institutions Assisting Women Entrepreneurship in India

The Financial institutions have played a crucial role in providing women entrepreneurs with financial assistance and advisory services. The following institutions are included: i) National. Small Industries Company, ii) Development Banks of All-India, viz. Specialist Financial Institutions, iii) IDBI, ICICI, IDFC and SIDRI, viz. NABARD, iv) Investment Institutions, viz. LIC, GIC, MC, NIA, OIC, and UTI; (v) State-level regional institutions, viz. NEDFI, SIDCs and SFCs, vi) Corporate Banks, vii) Co-operative Banks, etc.

In Tamil Nadu female population is almost half the total population (Census of India, 2011), but their involvement in entrepreneurship activities is substantially poor (about 20%) (Annual Report, 2018- 19). There are many explanations for this, such as lack of technical and managerial skills, family commitments, inadequate supply of credit from financial institutions, repression by male family members, lack of trust, etc. Women entrepreneurs became much more optimistic with access to good education and training during the 1980s and 90s, and their presence in business grew considerably in the 21st century, and in many instances they have emerged as business leaders.

A variety of initiatives to encourage women's entrepreneurship have been implemented by the government. Unfortunately, in many instances, women entrepreneurs are either unaware of the schemes or the schemes are not sufficient for them. It is important to frame the promotional initiatives according to the needs of women entrepreneurs and ensure proper follow-up of the policies without launching a large number of schemes.

Challenges Faced by the Women Entrepreneurs in Tamilandu

Family Ties: Women are very attached emotionally to their families. They have countless responsibilities in to take part in all household work, to take care of the children and other family members. They are insisted to take care about the husband, kids, and in laws, it reduces the women entrepreneur skill, energy and

time. The balancing between the family commitment and work life are complicated one to women entrepreneurs in Tamilnadu.

Male Dominated Society: Even though our constitution speaks of gender equality, the order of the day is still male dominated culture is going on. Women are not given equal rights to men. The entire decision of women entrepreneur related to finance, place of doing business, selection of workers, financial transactions and other administration areas based on their husband or family members are finalize the decision of women entrepreneurs. Sometime, it will lead to collapse the women entrepreneur's production volume as well as administration barriers are raised due to the above.

Lack of Education: In the education sector, women in India are lacking behind. Most of the women (around 45% of women in total) are illiterate. Many women entrepreneur education qualification are not up to the standard compared to male due to male counterparts, partly because of early marriage, partly because of higher education of the son/daughter and partly because of poverty. These bottlenecks are lead lot of problems related to applying and availing the MSME loan as well as subsidies in tamilnadu.

Shortage of Raw Materials: The lack of raw materials, nor often the availability of sufficient and adequate raw materials, when the prices are very high, women entrepreneurs really face a tough task of getting the needed raw material and other essential inputs for running their business industries.

Challenges of arranging the Finance: In raising and meeting the financial needs of the company, female entrepreneurs are very rigid. Bankers, creditors and financial institutions are struggling to provide financial support to women borrowers by doubting their creditworthiness and growing the risk of business failure. Because of the blockage raw material supply, work-in- progress finished products and non-receipt of payment from customers on time etc.,

Lack of Technology and Tough Competitions: In the manufacturing process, women entrepreneurs usually employ low-technology. In a market where competition is too strong, against the organized sector and their male counterparts who have considerable expertise and ability to implement advanced technology in business management, they have to fight hard to survive in the market.

High Cost of Production: Several factors, including inefficient management, lead to the high cost of production that stands before women entrepreneurs as a stumbling block. Owing to the lack of acceptance or slow adoption of changing technologies, which is a major factor in high production costs, women entrepreneurs face technology obsolescence.

Lack of Self-Confidence- Women entrepreneurs because of their inherent nature, lack self-confidence which is essentially a motivating factor in running an enterprise successfully. They have to work hard to strike a balance between managing a family and managing an enterprise. Sometimes they have to sacrifice their entrepreneurial urge in order to strike a balance between the two which results in loss of a prospective entrepreneur.

Socio-cultural barriers- The traditions and customs prevailing in Indian societies sometimes stand as an obstacle before women which stop them from growing and prospering. Castes and religions dominate our society and hinder women entrepreneurs too. In rural areas, they face even greater social barriers. They are always seen with an eye of suspicion.

Low Risk-Bearing Capacity: In India, women nurtured to be a good daughter, wife and mother and not exposed to outside work cannot bear the amount of danger that is vital to running an enterprise. The lack of outside schooling, training and financial support often limits their ability to bear the risk involved in an organization.

Limited Mobility: Women's mobility is highly restricted and has become an issue because of traditional values. With suspicious eyes, going alone and asking for a place to hang out at night for business purposes are always looked at. Younger women often feel uncomfortable engaging with men who show additional interest in them than aspects related to work.

Lack of Entrepreneurial Aptitude: For women entrepreneurs, the lack of entrepreneurial aptitude is a matter of concern. They have no spirit of entrepreneurial thinking. Even after completing different entrepreneurship training programs, women entrepreneurs struggle to address the risks and problems that may occur in an organizational job.

Limited Managerial Ability: Management has become a specialized task that only good executives carry out. It was difficult for women entrepreneurs to schedule, organize, monitor, coordinate, staff, guide and inspire an enterprise. Therefore, women's less and less managerial capacity has become an issue for them to effectively run the business.

Lack of Self Confidence: Women entrepreneurs, because of their inherent nature, lack of self- confidence which is essentially a motivating factor in running an enterprise successfully. They have to strive hard to strike a balance between managing a family and managing an enterprise. Sometimes she has to sacrifice her entrepreneurial urge in order to strike a balance between the two.

Recommendations of the Study

Government should provide separate financial aid to women entrepreneurs through their local municipal and corporation bodies for setting up their organization.

Training Programmes must conduct to the women entrepreneurs for enhance their entrepreneurial skills and abilities.

Women entrepreneurs must be felicitated with rewards and awards by the Government and NGOs for motivating their performance once in a year.

Educational facilities should be provided starting from school and further for higher education related to skill enhancement oriented courses as per the National Education policy 2020.

Infrastructural facilities should be developed through special economic zone as well as export processing zone for improving the quality of women entrepreneur's production capabilities and capacity.

The GOI may reduce the countless number of documentation and legal formalities for setup the business by women entrepreneurs.

The support of family members is required for starting the own business by women entrepreneurs. Therefore the family members must cooperate with new women entrepreneurs.

The local bodies as well as authorities may organize the trade fairs, exhibitions and workshops for women entrepreneur's products which will help them to directly connect with customers and observing customer opinion and ideas for developing the sales volume of women entrepreneurs in domestic as well as international market.

Mostly importantly the support of family members is required so that women can move out of their homes with confidence. They can give better output when it is known to them that their decisions are supported by their family.

Organization of fairs, exhibitions and workshops for women entrepreneurs which will help them to connect with each other and share ideas and problems. It will also provide guidance to new women entrepreneurs who can take help and suggestions from their already established counterparts.

Making provision for marketing and sales assistance so that women entrepreneurs are not cheated by middle men.

Conclusion of the Study

The Government schemes, incentives and subsidies have stimulated and provided support measures to women entrepreneurs in all over the India. Meanwhile, there are plenty of challenges are faced by the women entrepreneurs related to arranging the financial needs wants of women entrepreneurs in India.

Especially in tamilnadu women entrepreneurs are facing hug problems or hurdles related to arranging he seed capital to start up the new business by the women entrepreneurs in Tamilnadu. Apart from the financial crisis, they are facing Family restriction, Lack of Finance, Education, Role Conflict, Unfavorable Environment, and Lack of persistent Nature, Lack of Mental strength and Lack of Information. The GOI extend financial assistance through Stand-Up India Scheme, Mahila Coir Yojana, Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE), Prime Minister's Employment Generation Programme (PMEGP), Udyam Shakti Portal and Economic Empowerment of Women Enterprises and Start-up by Women. Still there is a bottleneck related to arrangement of seed capital and venture capital by women entrepreneurs due to the gap between policy makers, bankers, NGO and women entrepreneurs in tamilnadu. Therefore, the systematic approach and policy should develop fro protect the women entrepreneurs skill, knowledge, creativity, innovative ideas in to business opportunities in near future by all the stake of the society for improvement of the society as well as increase employment opportunities in around urban and rural areas.

Abstract

Government support mechanisms such as subsidies, insurance, and market interventions play a crucial role in promoting economic development, managing risks, and achieving social objectives. This abstract provides a concise overview of these mechanisms, highlighting their purposes, benefits, and potential drawbacks. Subsidies are financial assistance provided by the government to specific industries or individuals to stimulate economic growth, investment, and innovation. While subsidies can be beneficial in promoting competitiveness and job creation, they can also lead to market distortions and inefficiencies if not carefully managed. Insurance programs supported by the government offer financial protection against unforeseen events, providing individuals and businesses with a safety net and enhancing economic resilience. However, ensuring affordability, addressing moral hazard, and managing claims are important considerations for the success of insurance mechanisms. Market interventions involve direct government actions to influence market outcomes and correct market failures. These interventions can promote competition, protect consumers, and address externalities. Nevertheless, striking a balance between market efficiency and social objectives is crucial to avoid unintended consequences and excessive government interference. Thus, government support mechanisms are essential tools for fostering economic growth, managing risks, and pursuing social goals. Careful design, implementation, and monitoring are necessary to maximize their benefits and mitigate potential drawbacks.

Keywords: *Government support mechanisms, Subsidies, Insurance, Market interventions, Economic development.*

Introduction

Government support mechanisms play a crucial and indispensable role in fostering economic development, ensuring stability, and mitigating risks within various sectors of an economy. These mechanisms, namely subsidies, insurance, and market interventions, are designed to address market failures, promote growth, and achieve specific socio-economic objectives. Understanding their purposes, benefits, and potential drawbacks is essential for comprehending their impact on the overall economy. Subsidies are financial assistance provided by the government to specific industries, businesses, or individuals. They serve multiple purposes, such as

promoting investment, encouraging innovation, and addressing social or environmental concerns. By reducing costs or providing financial incentives, subsidies stimulate economic activity and attract investment, ultimately leading to job creation and increased productivity. They can also facilitate the growth of strategic sectors, foster technological advancements, and enhance international competitiveness. However, subsidies must be carefully managed to avoid market distortions, over-reliance on government support, and potential inefficiencies in resource allocation.

Insurance mechanisms supported by the government play a crucial role in managing risks and ensuring stability in various sectors. These mechanisms provide financial protection against unexpected events, such as natural disasters, accidents, or health emergencies. By spreading risks across a larger pool of participants, insurance programs enhance risk management and promote economic resilience. They offer individuals and businesses a safety net, allowing them to recover from losses and maintain financial stability. Furthermore, insurance mechanisms instill confidence, encourage investment, and facilitate long-term planning by reducing uncertainty. However, ensuring affordability, accessibility, and effective claims management are critical challenges in designing and implementing insurance programs. Market interventions, another important government support mechanism, involve direct actions to influence market outcomes when market failures or social objectives need to be addressed. These interventions can take various forms, including price controls, trade restrictions, public procurement, and regulations. They aim to promote competition, protect consumers, correct externalities, and ensure social equity. Market interventions can break monopolies or oligopolies, prevent anti-competitive practices, and safeguard consumers from exploitation. They can also address environmental concerns, public health issues, and socio-economic disparities. However, effective implementation requires a careful balance between market efficiency and social objectives to prevent unintended consequences such as market distortions, reduced innovation, or excessive government interference. Thus, government support mechanisms, including subsidies, insurance, and market interventions, are essential tools for fostering economic development, ensuring stability, and mitigating risks within various sectors. Subsidies promote investment, innovation, and sectoral growth but must be managed to avoid inefficiencies. Insurance mechanisms provide financial protection, enhance risk management, and instill confidence, yet affordability and effective claims management are key challenges. Market interventions address market failures, promote competition, and protect consumers, but striking the right balance is crucial to avoid unintended consequences. By understanding these

mechanisms' purposes, benefits, and potential drawbacks, policymakers can formulate effective strategies to achieve economic growth, stability, and social objectives.

Subsidies

Subsidies play a vital role in the government's efforts to promote growth, investment, and innovation while addressing market failures or achieving specific social objectives. They are a form of financial assistance provided by the government to support specific industries, businesses, or individuals. Subsidies can take various forms, including direct cash grants, tax incentives, reduced interest rates on loans, or government guarantees. One of the primary benefits of subsidies is their ability to stimulate economic activity. By reducing costs or providing financial incentives, subsidies encourage businesses to expand their operations, invest in research and development, and create new job opportunities. For example, subsidies can help companies offset their initial capital costs, making it more affordable for them to invest in advanced technologies or machinery. This, in turn, enhances productivity and competitiveness, driving economic growth.

Subsidies also play a crucial role in fostering the development of critical industries. For instance, subsidies can be targeted towards renewable energy sectors to incentivize the adoption of clean and sustainable technologies. By providing financial support, subsidies make these industries more competitive and economically viable, promoting their growth and reducing reliance on traditional, environmentally harmful sources of energy. Moreover, subsidies can be used strategically to support industries of strategic importance or those that contribute significantly to national development goals. They can be designed to encourage domestic manufacturing, promote exports, or facilitate the growth of small and medium-sized enterprises (SMEs). By providing financial assistance, subsidies can help these industries overcome initial barriers, such as high production costs or limited access to capital, and enable them to compete more effectively in the global market. However, subsidies also come with potential drawbacks and challenges. One concern is the risk of market distortions. If not carefully managed, subsidies can create an uneven playing field by favoring certain industries or companies over others, leading to market inefficiencies and unfair competition. Additionally, there is a risk of subsidies becoming a long-term crutch, where businesses become overly reliant on government support instead of focusing on improving efficiency and competitiveness. Hence, it is crucial for governments to regularly evaluate the effectiveness and impact of subsidies and consider implementing measures to minimize these risks. Thus, subsidies are a significant government support mechanism aimed at promoting growth, investment, and innovation while

addressing market failures or achieving social objectives. By reducing costs and providing financial incentives, subsidies stimulate economic activity, encourage business expansion, and foster the development of critical industries. However, careful monitoring and evaluation are essential to ensure that subsidies are targeted effectively, minimize market distortions, and promote long-term sustainability.

However, subsidies are not without potential drawbacks, and it is important to address these concerns for effective implementation. One significant concern is the potential for market distortions. When subsidies are provided selectively to specific industries or companies, it can create an uneven playing field, favoring certain players over others. This can result in market inefficiencies, reduced competition, and hinder overall economic growth. Industries that do not receive subsidies may struggle to compete against those that do, leading to an imbalance in the market and potentially stifling innovation and entrepreneurship. Another drawback of subsidies is the risk of creating dependency. If businesses become overly reliant on government support, they may become complacent and less motivated to improve their productivity or competitiveness. This can hinder their ability to adapt to changing market conditions and innovate to meet consumer demands. Over time, a culture of dependency on subsidies can impede the development of a resilient and self-sustaining business ecosystem.

To address these concerns, it is crucial to carefully manage the allocation of subsidies. Transparency and fairness in the selection process are essential to ensure that subsidies are allocated based on clear and objective criteria, without favoritism or bias. Governments must establish robust monitoring and evaluation mechanisms to assess the effectiveness and impact of subsidies, ensuring that they are achieving their intended objectives. Regular reviews and adjustments may be necessary to align subsidies with changing market dynamics and emerging priorities. Additionally, it is important to strike a balance between providing support and encouraging self-reliance. Subsidies should be designed to be temporary or gradually phased out as businesses develop and become self-sufficient. This approach incentivizes businesses to seek long-term sustainability and continuously improve their operations rather than relying indefinitely on government assistance. Overall, while subsidies can provide valuable support to industries and stimulate economic growth, their potential drawbacks must be carefully managed. By promoting transparency, fairness, and effectiveness in the allocation and evaluation of subsidies, governments can mitigate the risks of market distortions, inefficiencies, and dependency. This ensures that subsidies serve as catalysts for sustainable growth and competitiveness, rather than perpetuating reliance on government support.

Insurance

Government-supported insurance programs play a critical role in managing and mitigating risks faced by individuals, businesses, or sectors. These programs provide financial protection against unforeseen events such as natural disasters, accidents, or health emergencies. Insurance mechanisms can be mandatory, as in the case of social security programs, or voluntary, such as crop insurance for farmers. The advantages of insurance programs are manifold. First and foremost, they provide individuals and businesses with a safety net, offering financial support to help them recover from unexpected losses and maintain financial stability. This is particularly crucial in times of crises or emergencies when individuals or businesses may face significant financial burdens. Insurance mechanisms alleviate these burdens, providing a cushion to cope with the aftermath of adverse events. Furthermore, insurance mechanisms enhance risk management and promote economic resilience by spreading risks across a larger pool of participants. By pooling resources and distributing risks, insurance programs reduce the impact of individual losses and ensure that the burden is shared collectively. This promotes stability and safeguards against catastrophic financial consequences, thereby contributing to overall economic well-being.

Moreover, insurance fosters confidence and encourages investment. By mitigating the fear of catastrophic events, insurance mechanisms provide individuals and businesses with a sense of security. This, in turn, promotes a favorable business environment, stimulates investment, and encourages economic growth. Insurance coverage allows individuals and businesses to take calculated risks and pursue entrepreneurial endeavors, knowing that they have a safety net to fall back on. However, the design and administration of insurance programs come with challenges. One significant challenge is ensuring affordability and accessibility for all. In many cases, insurance premiums can be prohibitive, particularly for low-income individuals or small businesses. Governments must strive to make insurance coverage affordable and inclusive, especially in developing economies, by implementing appropriate subsidy mechanisms or risk-pooling arrangements. Additionally, adequate funding, accurate risk assessment, and effective claims management are crucial for the sustainability and success of insurance mechanisms. Governments need to allocate sufficient resources to support insurance programs and ensure their long-term viability. Rigorous risk assessment mechanisms are necessary to accurately calculate premiums and evaluate potential liabilities. Furthermore, efficient claims management processes must be in place to facilitate timely and fair compensation for insured individuals or businesses. Furthermore, insurance programs must address issues of moral hazard

and adverse selection. Moral hazard refers to the risk that insured individuals or businesses may act irresponsibly or take greater risks due to the perceived protection offered by insurance coverage. Adverse selection refers to the situation where those individuals or businesses with a higher likelihood of making claims are more inclined to seek insurance coverage. Governments and insurance providers must implement measures to prevent these risks, such as risk-based pricing, comprehensive risk assessments, and appropriate regulations. Thus, government-supported insurance programs provide crucial financial protection against unforeseen events, offering individuals and businesses a safety net and promoting economic resilience. However, ensuring affordability, accessibility, and effective administration pose challenges that must be addressed. Adequate funding, accurate risk assessment, and careful claims management are essential for sustainable insurance mechanisms. Furthermore, measures to prevent moral hazard and adverse selection are necessary to maintain the integrity and effectiveness of insurance programs.

Market Interventions

Market interventions are direct actions taken by the government to influence market outcomes, particularly in cases of market failures or when pursuing social objectives. These interventions can encompass a range of measures such as price controls, trade restrictions, public procurement, or regulations that aim to promote competition and protect consumers.

One primary purpose of market interventions is to address monopolies or oligopolies, ensuring fair competition and preventing the exploitation of consumers. By imposing regulations or enforcing antitrust laws, governments can foster an environment where multiple players can compete on an equal footing, leading to improved product quality, competitive pricing, and increased consumer choice. These interventions promote market efficiency and encourage innovation and investment by preventing dominant market players from stifling competition.

Market interventions can also be employed to correct externalities, such as pollution. Governments may impose taxes or regulations to internalize the costs of negative externalities, encouraging firms to adopt cleaner technologies or practices. By implementing these interventions, governments seek to protect the environment, improve public health, and promote sustainable development. These measures incentivize businesses to incorporate social and environmental considerations into their operations and contribute to a more sustainable and equitable society. Another purpose of market interventions is to promote social equity by ensuring access to essential goods or services, particularly for underserved areas or vulnerable populations. Governments can implement policies that mandate the provision of

basic necessities like healthcare, education, or utilities, thereby reducing inequalities and enhancing social welfare. Market interventions in this context aim to bridge the gap between those who have limited access to vital services and those who can afford them, thereby fostering inclusivity and reducing disparities.

However, implementing market interventions effectively can be challenging. It requires careful analysis, monitoring, and evaluation to strike the right balance between market efficiency and social objectives. Poorly designed or excessive interventions can lead to unintended consequences. For instance, excessive regulations or price controls can stifle competition, discourage investment, and impede innovation. Excessive government interference may also create market distortions, reducing the efficiency and effectiveness of market mechanisms. To ensure successful market interventions, transparency and accountability are crucial. Governments should communicate the rationale and objectives behind the interventions and ensure that the decision-making process is transparent and based on sound economic principles. Additionally, ongoing monitoring and evaluation of the interventions are necessary to assess their effectiveness, make necessary adjustments, and prevent unintended consequences.

A thorough understanding of market dynamics is essential for effective market interventions. Governments need to consider the interplay of various factors, including supply and demand dynamics, consumer behavior, and industry structures. By considering these factors, governments can design and implement interventions that strike the right balance between market efficiency and achieving social objectives. Thus, market interventions are direct government actions aimed at influencing market outcomes to address market failures or pursue social objectives. They can promote fair competition, protect consumers, correct externalities, and enhance social equity. However, careful analysis, monitoring, and evaluation are required to implement market interventions effectively and prevent unintended consequences. Transparency, accountability, and a deep understanding of market dynamics are vital for successful market interventions that strike a balance between market efficiency and achieving societal goals.

Market interventions are direct actions taken by the government to influence market outcomes, particularly in cases of market failures or when pursuing social objectives. These interventions can encompass a range of measures such as price controls, trade restrictions, public procurement, or regulations that aim to promote competition and protect consumers.

One primary purpose of market interventions is to address monopolies or oligopolies, ensuring fair competition and preventing the exploitation of consumers. By imposing regulations or enforcing antitrust laws, governments can foster an

environment where multiple players can compete on an equal footing, leading to improved product quality, competitive pricing, and increased consumer choice. These interventions promote market efficiency and encourage innovation and investment by preventing dominant market players from stifling competition.

Market interventions can also be employed to correct externalities, such as pollution. Governments may impose taxes or regulations to internalize the costs of negative externalities, encouraging firms to adopt cleaner technologies or practices. By implementing these interventions, governments seek to protect the environment, improve public health, and promote sustainable development. These measures incentivize businesses to incorporate social and environmental considerations into their operations and contribute to a more sustainable and equitable society.

Another purpose of market interventions is to promote social equity by ensuring access to essential goods or services, particularly for underserved areas or vulnerable populations. Governments can implement policies that mandate the provision of basic necessities like healthcare, education, or utilities, thereby reducing inequalities and enhancing social welfare. Market interventions in this context aim to bridge the gap between those who have limited access to vital services and those who can afford them, thereby fostering inclusivity and reducing disparities.

However, implementing market interventions effectively can be challenging. It requires careful analysis, monitoring, and evaluation to strike the right balance between market efficiency and social objectives. Poorly designed or excessive interventions can lead to unintended consequences. For instance, excessive regulations or price controls can stifle competition, discourage investment, and impede innovation. Excessive government interference may also create market distortions, reducing the efficiency and effectiveness of market mechanisms. To ensure successful market interventions, transparency and accountability are crucial. Governments should communicate the rationale and objectives behind the interventions and ensure that the decision-making process is transparent and based on sound economic principles. Additionally, ongoing monitoring and evaluation of the interventions are necessary to assess their effectiveness, make necessary adjustments, and prevent unintended consequences. A thorough understanding of market dynamics is essential for effective market interventions. Governments need to consider the interplay of various factors, including supply and demand dynamics, consumer behavior, and industry structures. By considering these factors, governments can design and implement interventions that strike the right balance between market efficiency and achieving social objectives. Thus, market interventions are direct government actions aimed at influencing market outcomes to address market failures or pursue social objectives. They can promote fair

competition, protect consumers, correct externalities, and enhance social equity. However, careful analysis, monitoring, and evaluation are required to implement market interventions effectively and prevent unintended consequences. Transparency, accountability, and a deep understanding of market dynamics are vital for successful market interventions that strike a balance between market efficiency and achieving societal goals.

Conclusion

Government support mechanisms, such as subsidies, insurance, and market interventions, play a pivotal role in fostering economic development, managing risks, and promoting social objectives. These mechanisms are essential tools that governments utilize to shape market outcomes and achieve desired socio-economic outcomes. While each mechanism has its unique benefits and potential drawbacks, their effective design, implementation, and monitoring are crucial for attaining the desired outcomes. Subsidies are a common government support mechanism that aims to promote growth, investment, and innovation while addressing market failures or fulfilling social objectives. By providing financial assistance to specific industries, businesses, or individuals, subsidies encourage economic activity and incentivize businesses to expand their operations, invest in research and development, and create jobs. Subsidies can also foster the development of critical industries by making them more competitive and sustainable. However, careful management is required to prevent market distortions, inefficiencies, and over-reliance on government support.

Government-supported insurance programs provide individuals and businesses with financial protection against unforeseen events and risks. Insurance mechanisms, whether mandatory or voluntary, offer a safety net that helps individuals and businesses recover from unexpected losses and maintain financial stability. By spreading risks across a larger pool of participants, insurance programs enhance risk management and promote economic resilience. Moreover, insurance mechanisms foster confidence, encourage investment, and reduce uncertainty by mitigating the fear of catastrophic events. However, ensuring affordability, accessibility, and effective administration pose challenges that must be addressed for the sustainability and success of insurance mechanisms. Market interventions are direct actions taken by the government to influence market outcomes when market failures occur or specific social objectives need to be pursued. These interventions can include price controls, trade restrictions, public procurement, or regulations aimed at promoting competition, protecting consumers, correcting externalities, or ensuring social equity. Market interventions can address issues such as monopolies or oligopolies, ensuring fair competition and preventing the exploitation of

consumers. They can also correct externalities by imposing taxes or regulations to mitigate pollution or other negative impacts. Moreover, market interventions can promote social equity by ensuring access to essential goods or services, particularly for underserved areas or vulnerable populations. However, striking the right balance between market efficiency and social objectives is essential to prevent unintended consequences, such as market distortions, reduced innovation, or excessive government interference.

To effectively utilize these government support mechanisms, it is crucial for policymakers to strike a balance between market forces and societal goals. Governments must carefully design and implement these mechanisms, considering the specific contexts, objectives, and potential risks involved. Transparency, accountability, and continuous monitoring are necessary to ensure the proper allocation of resources, prevent misuse or exploitation, and evaluate the effectiveness of the interventions. By employing these mechanisms judiciously, governments can provide the necessary support to industries, protect the interests of citizens, and foster sustainable economic growth. In conclusion, government support mechanisms, including subsidies, insurance, and market interventions, are indispensable tools for fostering economic development, managing risks, and promoting social objectives. While these mechanisms have their own benefits and drawbacks, their proper design, implementation, and monitoring are essential to achieve desired outcomes. By striking a delicate balance between market forces and societal goals, governments can effectively support industries, protect citizens, and ensure sustainable economic growth.

Abstract

India has the capability to end up a pacesetter in artificial intelligence (AI) due to its massive pool of gifted engineers, researchers, and entrepreneurs, in addition to its growing investment in AI studies and improvement. India can increase its funding in AI research and improvement to guide the development of current technologies and programs. Artificial intelligence (AI) and machine learning (ML) have great implications in diverse fields, along with healthcare, finance, transportation, manufacturing, customer service, and education. AI and ML techniques may be used to analyze massive amounts of facts, make correct predictions and recommendations, automate responsibilities, and offer personalized reports. But, there are also concerns around the capacity impact of AI and ML on employment, privacy, and security. As those technology preserve to adapt, it's far essential to cautiously take into account their implications and to develop policies and guidelines that make certain their accountable use. Deep mastering has good sized implications in healthcare, as it has the ability to enhance diagnosis, remedy planning, and sickness prevention. Chicken disease prevention is essential for public health and safety due to the fact illnesses that affect chicken will have widespread economic and public fitness influences.

Keywords: *Artificial Intelligence, Machine Learning, Disease Prevention, Poultry.*

Introduction

Artificial intelligence (AI) has had a good sized effect on deep studying in healthcare by permitting extra correct and efficient analysis of medical data. This could include investment for academic research, authorities-led projects, and personal region partnerships. India can consciousness on developing a professional group of workers in AI by using growing the supply of AI schooling and schooling packages. India has taken numerous steps to pay attention on disease prevention in rooster. The Indian authorities have launched the country wide chicken development software (NPDP) to sell the improvement of the rooster industry inside the United States. The program includes measures to enhance sickness prevention and manage, which include the development of biosecurity measures and the

merchandising of vaccination packages. The Indian authorities have established ailment surveillance systems for hen to reveal and manipulate the spread of sicknesses. Those systems encompass the country wide Animal disease Reporting gadget (NADRS) and the national Animal fitness Surveillance software (NAHSP).

In studies and improvement established several research establishments and centers of excellence inside the field of hen technology and animal health. These establishments recognition on research into disease prevention, genetics, nutrients, and other elements of rooster farming. This scoping overview intends to systematize the empirical studies that focuses on the impact already witnessed in the area.

Improved Diagnosis

It is able to analyze scientific pix and pick out patterns and anomalies that may be hard for human medical doctors to come across. This can result in greater accurate and well-timed diagnoses, and assist to improve affected person results. Deep learning can be used to investigate snap shots of fowl to perceive signs and symptoms of disease including lesions, rashes, and different abnormalities. This can help to improve the accuracy and speed of prognosis, and permit early remedy of the sickness. Including temperature, humidity, and air excellent to pick out conditions which could contribute to ailment outbreaks. It's to discover potential ailment outbreaks before they occur and enable preventive measures to be taken. AI has various implications in chicken illnesses.

Personalized Treatment

Analyze huge amounts of affected person statistics to develop personalized remedy plans based on person characteristics consisting of genetic make-up, way of life, and scientific history. This may result in greater effective and centered treatments, and help to enhance patient consequences. Personalized treatment in fowl the use of deep mastering may be finished through analyzing large amounts of statistics from character birds to develop centered remedy plans based totally on their particular traits and needs.

Drug Discovery

To look at chemical compounds and expect their capacity efficacy as pills. This could accelerate the drug discovery manner and cause the development of more effective remedies. In chemical substances to pick out the most probable and effective against a particular pathogen. This can assist to prioritize compounds for in addition testing and improvement.

Predictive Analytics

As we find patient data to predict outcomes and identify patients who may be at risk of developing certain diseases. This can enable healthcare providers to take proactive measures to prevent disease, and help to improve patient outcomes. By analyzing data on animal health, environmental conditions, and other risk factors, predictive models can identify patterns and early warning signs of disease, enabling farmers to take proactive measures to prevent the spread of disease and minimize economic losses.

Administrative Efficiency

AI can automate administrative tasks such as data entry and record keeping, freeing up healthcare providers to focus on patient care. This can help to improve the efficiency of healthcare delivery and reduce costs. To improve administrative efficiency in poultry farming by automating routine tasks, reducing errors, and improving data management and analysis.

Improved Efficiency

In medical data in a fraction of the time it would take a human to do so. This can help healthcare providers to make faster and more accurate diagnoses, develop more personalized treatment plans, and identify potential health risks before they become more serious. Efficiency in poultry farming by enabling farmers to make data-driven decisions and optimize management practices based on real-time information. This technology has the potential to improve disease detection and treatment in poultry flocks, leading to improved animal health and productivity.

Reduced Costs

By automating administrative tasks and improving efficiency, AI can help to reduce healthcare costs. Additionally, by enabling more accurate diagnoses and treatments, AI can help to reduce the need for expensive and unnecessary medical procedures. Deep learning can be used to identify early signs of disease in poultry flocks, allowing farmers to take proactive measures to prevent the spread of disease and minimize economic losses.

Enhanced Research

For medical data from clinical trials and other sources to identify patterns and trends. This can help to accelerate the development of new treatments and improve our understanding of disease. By analyzing data on symptoms, environmental conditions, and other factors, deep learning models can identify the disease and recommend appropriate treatments. This can help researchers to develop new diagnostic tools and treatments for poultry diseases.

Improved Patient Outcomes

By enabling more accurate and personalized diagnoses and treatments, AI can help to improve patient outcomes. This can lead to better health outcomes, reduced morbidity and mortality, and improved quality of life for patients. Optimize treatment protocols by analyzing data on disease incidence, treatment outcomes, and other factors. By optimizing treatment protocols, farmers can improve treatment outcomes and reduce the severity of the disease, leading to improved patient outcomes.

Ethical and Responsible Development

The developed and deployed AI is an ethical and responsible manner. This includes ensuring that patient data is kept secure and private and that AI systems are developed without bias or discrimination. Farmers can collect and record data on their flocks, including animal health status, breed, age, weight, and environmental conditions such as temperature, humidity, and ventilation. This data can be used to train deep learning models and improve the accuracy of predictions.

Table 1 provides an overview of the relevant tasks per group of workers. As can be seen, the main differences can be found regarding the key tasks and responsibilities for each role.

Problem	Role	Tasks and Responsibilities
Infectious Diseases	Poultry Veterinarian	Provide guidance on disease prevention and control
Nutritional Deficiencies	Poultry Nutritionist	Provide guidance on feed management.
Genetic Disorders	Poultry Breeder	Develop and maintain breeding programs to produce healthy high- quality chicks
Facility Management	Poultry Farm Manager	Ensure compliance with regulatory requirements and industry standards
Behavioral Issues	Poultry Production Worker	Provide appropriate feed and water

Objectives

The context of poultry diseases is to develop accurate and reliable predictive models that can help to identify and diagnose diseases in poultry flocks. By

analyzing large amounts of data on factors such as flock behavior, environmental conditions, and disease symptoms, deep learning models can identify patterns and make predictions about the likelihood of disease outbreaks or the presence of specific diseases. There are three main types of learning in deep learning: supervised learning, unsupervised learning, and reinforcement learning. Overall, the different types of learning in deep learning offer a range of techniques and tools for developing accurate and efficient models for a variety of tasks. Transfer learning can reduce training time, improve generalization and performance, reduce data requirements, and provide flexibility for a range of applications.

Poultry Farming Resistance in India

Fieldwork in India to investigate poultry practices that drive antibiotic resistance shows that by keeping a systems approach in mind one can get closer to the root cause of challenges. These challenges might run far deeper than initial observations and assumptions make visible. Changing use patterns requires system-wide adaptation, including acceptance of alternatives to antibiotic growth promoters (APGs), increased vaccination, and improved natural immunity. In turn depend on better farm hygiene and welfare conditions to reduce infection and thus the need for treatment. The impact of higher temperatures on poultry growth rates and egg production is acknowledged,⁶ but climate pressures on poultry farming can influence many of the aforementioned approaches to poultry health and disease control. Climate pressures also affect how biosecurity is enacted. Most birds are raised in open sheds from which disease-carrying rodents and wild birds are hard to keep out. Temperatures in closed sheds would be uncomfortably high without environmental control,⁹ but powering such sheds is challenged by pressures on the energy system: power cuts are common and in some rural areas, electricity from the national grid is rationed for agricultural use.

Environmental Perception

There is a perception that birds raised in environmentally controlled, cooler temperatures could be more susceptible to heat-related mortality during transport to, and while on sale, at live markets. If correct, this will require a concurrent shift to near farm processing plants, chilling plants, and cold chain storage, substantially increasing the carbon footprint of the farm-to-fork food chain and the cost of meat to consumers. The Indian consumer preference for buying live birds at market would also need to change. The poultry system thus faces a number of interrelated stressors from climate change. A planetary health lens, through which the entire system is approached, could offer potential solutions. Local building materials and traditional practices that could mitigate heat stress and spread of disease risk being overlooked

if poultry systems are approached only from the perspective of modernizing the Indian system to Global North standards. Energy policies might need to readdress how rural areas are able to use self-generated energy. The intensive production of chickens has been identified as one of the markers of the Anthropocene.¹⁰ Chickens sit at an intersection of food systems, environmental change, global health, and biodiversity. Understanding this intersection and the pressures on the systems to which it connects could suggest potential adaptations to other stressed systems as well as helping to preserve the efficacy of antibiotics into the future.

Limitation and Future Work

Deep learning models can be very complex, making it difficult to understand how they arrive at their predictions. This can be a significant limitation in areas such as medicine, where it is important to understand the reasoning behind a diagnosis or treatment recommendation. Overall, deep learning is a rapidly evolving field with many exciting opportunities and challenges. By addressing the limitations and exploring new applications and techniques, researchers and practitioners can continue to advance the state-of-the-art in deep learning and make progress on a wide range of important problems.

Experiments on Transfer Learning

Transfer learning in deep learning is a popular technique that involves using a pre-trained model as a starting point for developing a new model for a related task. Instead of training a new model from scratch, transfer learning allows developers to leverage the knowledge and expertise of an existing model to improve the accuracy and efficiency of a new model.

The poultry disease diagnostics research workflow involves a series of steps that begin with background research and data collection, and end with the deployment and monitoring of a diagnostic model. A rigorous and systematic workflow, researchers and practitioners can develop accurate and reliable tools for diagnosing poultry diseases, leading to better outcomes for the animals and the industry as a whole.

Conclusion

The study presents a great potential for the development of accurate and reliable diagnostic models for poultry diseases. By leveraging large datasets and powerful machine learning algorithms, researchers and practitioners can develop models that can accurately diagnose diseases based on a range of factors, including clinical signs, environmental conditions, and genetic markers. By advancing the state-of-the-art in deep learning and developing new diagnostic tools, researchers and practitioners can help to improve poultry health, reduce disease transmission, and promote sustainable farming practices.

Abstract

Entrepreneurship is regarded as a force of change, innovation and development in the modern era. Entrepreneurship has achieved a worldwide recognition as an effective resource which helps the country in achieving sustainable economic development. This paper reviews about how the entrepreneurial development is significant to one nation's sustainable growth and development. This study aims at studying the aspects of the entrepreneurship which aids to the sustainable development of the economy. This study also provides a clear view on the facilities provided by the government for the development of the entrepreneurs. The ultimate goal of this study is to showcase to every individual those who are unaware that entrepreneurship is excellent opportunity to excel themselves in the field of the business.

Keywords: *Entrepreneurship, Sustainable Economic Development, Innovation, Effective Resource, Entrepreneurial ability.*

Introduction

Entrepreneurship is an activity of setting up a business and taking on financial risks in the hope of a profit. Entrepreneurship is connected with land, labour, capital and natural resources in order to earn profit. The entrepreneurial vision is defined by the discovery of new and innovative ideas and taking enormous risks and these are regarded as an indispensable tool for the sustainable development of the economy. The study on the Entrepreneurship as a tool for Sustainable Development is carried out using the various Secondary Data Collected through the use of various sources available from the websites and magazines. The study was made to bring a structural changes in the minds of the people about the entrepreneurship which is a best passport to contribute to the sustainable development and which also aids to the increase in the standard of living of the individual.

Objectives of the Study

The main objectives of the Study on “**Entrepreneurship as a tool for Sustainable Development**” is as follows:-

- To study about the awareness towards the field of the Entrepreneurship
- To analyse the various facilities that are provided by the Government of India.

Literature Review

- It is a well-known fact that social entrepreneurship arises chiefly from the reality that environmental and social degradation results from the failure of markets; in fact, the entrepreneurship literature argues that opportunities are inherent in market failure. A synthesis of such literature suggests that environmentally and socially relevant market failures represent opportunities for achieving profitability while simultaneously reducing environmentally degrading economic behaviours. It also implies conceptualizations of sustainable and environmental entrepreneurship that detail how entrepreneurs seize the opportunities that are inherent in environmentally relevant market failures. Four types of market imperfections (in efficient firms, externalities, flawed pricing mechanisms, and information asymmetries) contribute at once to environmental degradation but also provide significant opportunities for the creation of radical technologies and innovative business models. These opportunities establish the foundations for an emerging model of sustainable entrepreneurship, one which enables founders to obtain entrepreneurial rents while simultaneously improving social and environmental conditions both locally and global. **(Dean and McMullen, 2007)**.
- In the context of globalized business, economic behaviour is no longer the individual company's sole domain. Business action has in-creakingly come to affect and be affected by the actors and companies in the global chain; thus, legal, operational, ethical, and other challenges Sustainable Entrepreneurship in Asia necessarily arise **(Andersen & Skjoett-Larsen, 2009)**.
- The domain and characteristics of sustainable entrepreneurship have now been made clear to us: the core motivation is to contribute to solving societal and environmental problems through the realization of a successful business, while the main goal is to create sustainable development through entrepreneurial corporate activities. The role of economic goals is both as a means and as an end, while the organizational development challenges from a small contribution to a large one for sustainable development **(Schaltegger & Wagner, 2011)**.

Entrepreneurship

Entrepreneurships a methodology of thinking new and innovative ideas. The individual who undertakes these activities by setting up new business ventures is regarded as an “entrepreneur”. Entrepreneur is deemed as an innovator, risk bearer and organizer and the individual who controls the entire affairs of the business. Entrepreneur brings the world into the consideration that what he/she could bring brand new ideas to the world class business. Entrepreneurs are the persons who spurred the sustainable economic development to grow better and better in the modern era of the 21st century. The concept of entrepreneurship are highly risky and the individuals must ponder new and innovative ideas that keep a compatible performance of the business. For example, a coin has two sides, likewise even in entrepreneurship also we have two facets i.e.) positive and negative. Entrepreneurs can be interpreted as builders, innovators, opportunist and specialist. Entrepreneurs are one of the key pillars of the nation as they contribute nearly 37percent to India’s GDP growth rate. Entrepreneurs contribute to sustainable economic development by providing better employment facilities and they also extend their support by fostering innovation and also by generating profits.

Sustainable Development

Sustainable development is termed as an approach towards the economic progress and economic development of a nation. Sustainable development is a development that satisfies the present needs without compromising the ability of the future generation to come across their personal needs. For example using recycles items or renewable resources while constructing a building is considered as Sustainable Development. The 5P principle is used to bring about a sustainable development to a nation. The 5P’s i.e.) “People, Partnership, Peace, Planet and Prosperity must be integrated towards achieving the sustainable economic development. The main feature of the Sustainable Development is that it would improve the quality of the human life.

Entrepreneurship as a Tool for Sustainable Development

Entrepreneurship is regarded as one of the foremost tool for an economy for achieving the sustainable development. In recent days the emerging economies in the world are facing many problems like social, economic, cultural, etc. These problems could be tackled by using a simple tool named “entrepreneurship”. The concept of entrepreneurship provide a clear solution which is innovative and new. So that the problems faced by an economy can be tackled easily and the economic progress of an economy will also be stable. Entrepreneurs undertake their business ventures depending on what the economy is in need for. So that the situation of

scarcity can be absolutely avoided. Entrepreneurs can be regarded as one of the mainstay of the economic development of a nation. They plan their strategy as per the requirements of the people and contribute to the economic development of a nation. The field of entrepreneurship is extending its operation day by day and it has its impact in the Indian economy and the contributions are countless. Entrepreneurship serves as one of the best tool for the economic sustainable development. Entrepreneurs may also face some hazards which affect their business ventures. But the Government of India provides multiple facilities like loans, subsidies, practical training, awareness programs and also other kind of financial assistance which may help them to bring back their business to the normal situation. The facilities provided by the government of India to the betterment of the entrepreneurial aid is discussed in the upcoming section.

Environmental Sustainability

Sustainable business initiatives can communicate to social, corporate and environmental sustainability. Mutually, they involve examining business processes and practices in terms of people, planet and profit. And looking for ways to create a positive impression in each of these areas. While improving working conditions and protecting the environment are certainly excellent goals, they haven also proven to be good business strategies. For example, implementing environmentally sustainable practices and green supply chain management have the potential to abolish waste and create cost savings, leading to a stronger bottom line. In addition, with many consumers dedicated to “going green,” eco-friendly businesses often value from favourable public opinion and greater customer loyalty. Some well-known and highly successful companies are proving to be leaders in the fields of environmental sustainability and green supply chain management

Proposed strategies of sustainable environmental management.

Government Schemes to the Entrepreneurial Development

Job creation is one of the emerging social problems in the modern economy. But the Entrepreneurs fill up that space by nurturing themselves into new business ventures. This kind of action paves the way for the job opportunities to the people across the country. These entrepreneurs are motivated by the governments various plans and policies that aid to the entrepreneurial development. The government extend its support to the entrepreneurs in the form of financial assistance, insurance, trainings, business loans, special incentives are provided to the budding entrepreneurs. With the tremendous demographic factors, the government undertakes various measures to raise entrepreneurs and create jobs to the entire nation and world. The tremendous efforts taken by India for promoting Entrepreneurship is listed below:

- Startup India
- Stand in India
- Trade related Entrepreneurship Assistance and development(TREAD)
- Pradhan Mandhri Kaushal Vikash Yojna(PMKVY)
- New Gen Innovation and Entrepreneurship Development Centre (New Gen IEDC)

Startup India

Startup India initiative was propounded by the government of India with the view of encouraging the future entrepreneurs by the way of mentoring, nurturing and by also providing financial assistance. This methodology was put into force from January 2016 at Vijay Bhawan, New Delhi. This action plan focuses on Simplification and Handholding, Funding support and incentives, Industry academia partnership and incubation.

- It also offer startup funding pool upto 10,000 crore.
- It reduces the patent registration fees.
- It provides enhanced bankruptcy code for a period of 90 days.
- It also provides the freedom from tax upto 3 years from the date of its accomplishment.
- The startup India initiative paves the way for the budding entrepreneurs. It also provided Value added course to its applicants so that they would get an exposure towards the field of entrepreneurship

Stand in India

The concept of "Stand-up India" was propounded in 2015 by the Government with the view to support the Entrepreneurs from the Scheduled caste and Scheduled

tribes so that there would be no Caste based tribulations. This Scheme was put into force for the purpose of having entrepreneurs from different sections of the people. The proposal offers loan facilities ranging from 10 lakh to 1 crore for the people from SC and ST category and also, they extend their support to the women who are especially outside the farm sector. This scheme keenly focuses on the manufacturing, trading and other agricultural activities.

Trade Related Entrepreneurship Assistance and Development Centre (Tread)

This scheme plan was propounded by the government of India during its 9th five year plan with the view to foster the women entrepreneurs who are in the field of non-farming activities. This plan extend its support to women through NGO's and ensure that they assist them by providing credit accessibility and other counselling and training facilities. This scheme provides a pathway to aspiring women entrepreneurs by extending its support by providing enormous orientation programs. This was propagated with the view of ensuring the empowerment of women entrepreneurship via trade related trainings and other associated activities. Tread's has given accessibility of credit assurance upto 30 percent of the loan amount which has its limit upto 30 lakhs. The trainings and other counselling services are provided by the MSME sector, EDI'S, NISSET and NGO'S.

Pradhan Mandhri Kaushal Vikash Yojna (PMKVY)

PMKVY is a scheme which is one of the flagship initiative made to the young and aspiring entrepreneurs. This initiative was propounded by the Ministry of Skill Development and Entrepreneurship (MSDE) on 16th July, 2016, New Delhi. This initiative is a skill based and certified course which paves the way for the entrepreneurship by training youths by whom the nation's economy grew better and better. PMKVY approximately trains nearly about 18 lakh candidates. The training program have been made on the basis of the National Occupational Standards (NOS).

New Gen Innovation and Entrepreneurship Development Centre (New Gen IEDC)

New Gen IEDC mission was made out especially in many educational institutions with a view to promoting the entrepreneurial culture during the time of the academics. This methodology of promoting entrepreneurship is done for engendering wealth and creating multiple career opportunities. This scheme also envisages the inculcation of innovation driven entrepreneurial class and it also aids to promote the knowledge oriented entrepreneurial development. This scheme also aims in developing the sustainable development of the economy by the way of

promoting young and new entrepreneurs with highly skilled and with meticulous efforts and with eminent innovations.

Companies are gradually incorporating SDGs into their responsible business actions. Of the top 100 companies studied, 80% of the companies have mapped their responsible business actions to SDGs. Key action themes for companies include renewable energy, water, waste and data privacy

Energy

Renewable energy utilization has geared up pushed by the move towards net zero. Solar energy continues to be the preferred renewable energy source for companies. Many policy related changes are happening in the renewable energy space – around e-mobility and bio fuel.

Water

Use of water in operations and its access in society is a focus for companies. Water related programs for supply chain are still at a nascent stage.

Waste

Initiatives to manage e-waste, municipal waste and plastic reuse & recycling continue to trend upwards.

Data

Customer data and its privacy has become a material aspect in the operations of services companies; new laws are getting formulated.

Insights

Clean Revenue

The practice of generating ‘clean revenue’ from products and services that are not harmful to people and the environment, through waste to wealth practices, as well as the use of shared platforms, is new but catching on in India. An example of this is the joint venture CERO established in FY 2020 between Mahindra Accelo (a subsidiary of Mahindra & Mahindra) and MSTC. The JV recycles vehicles as well as facilitates the clean and efficient disposal of vehicles.

Carbon Neutrality

In India a few companies such as Godrej Consumer Products, Tech Mahindra, Infosys, TCS, Tata Motors, and Mahindra & Mahindra are committed to achieve carbon neutrality. Some such as TCS have already met their targets of halving their specific carbon footprint by 2020. Tata Power’s commitment to achieve carbon neutrality by 2050 led it to announce its decision in 2019 to completely phase out its thermal power business by moving into renewable sources of energy by 2050.

Gender Parity

Not only maintaining a balanced headcount, corporate India needs to have a stronger intent and greater implementation prowess to offer equal access to leadership, equal wages for equal work, matching roles to aspirations by breaking stereotypes, and have an unbiased approach to maternity and parenthood, for all.

Business Case on Transformation into Sustainability

As an exciting live role model for business model transformation, ITC has progressively increased its non-tobacco business towards a majority of non-tobacco products that are socially and environmentally responsible.

Case Analysis

The concept of entrepreneurship with a clear case analysis is **“Few ‘Indian’ takers for Pollachi woman’s eco-friendly coconut shell products”**

Radha Lakshmi a 29-year-old woman who’s residing in Pollachi is turning out to be successful entrepreneur in South India. She had an innovative masterpiece idea on using the waste coconut shells which is usually thrown out as garbage. She had transfigured such waste item into beautiful tea cups, wine cups, ice cream cups, soap boxes, spoons and candle holders. She had her startup in her own village named “Arasampalayam Pirivu” which is one of the non-descriptive villages near Kinathukadavu. Her Products had got a remarkable name in foreign countries like Singapore, Malaysia, Japan, Russia, USA and other countries. She had mentioned that her motto was to bring a better substitute to the slow poison name “Plastic”. Radha now plans to turn out her startup into an MNC like a firm and her motto is to provide employment facilities to hundreds of people in near future. Radha- being a middle-class woman is now a successful entrepreneur in Pollachi is withstanding as an example for too many women who are being idle at home with multiple innovative ideas.

Source: <https://www.dtnext.in/>

Conclusion

While sustainable development remains ambiguously defined and controversial, it has emerged as an influential concept for entrepreneurship policy, practice, and theory. However, while entrepreneurship has been cited as a significant conduit for a more sustainable society, there remains considerable uncertainty regarding the nature of this role and how it will unfold. We outlined recent research in the area, acknowledging that the majority of studies exploring the relationship between sustainable development and entrepreneurship have been published outside of the mainstream entrepreneurship journals, and suggest that this special issue is a first

step in filling this void. However, while papers in this special issue provide a major step in this direction, there remain considerable opportunities for further research.

TECHNOLOGICAL REFORMS IN AGRICULTURAL GROWTH

Dr.P. Gomathi Devi

*Assistant Professor, Department of Commerce (CA),
Nallamuthu Gounder Mahalingam College, Pollachi*

Ms.A. Madhumitha & Ms.A. Rizwana

*II.B.COM (CA)
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

In India, Agriculture is an important sector. It plays a vital role in the process of economic development in less developed countries like India. In Indian economy, it is indispensable for the substance and Growth. The Critical issues that plague Indian agriculture at present are the knowledge deficit and infrastructure deficit, especially in the rural areas. Now a days, Problems are related to irrigation infrastructure. In this, Lack of delivery mechanisms are the Major Issue in India. So, we not have effective delivery mechanisms. There are many Numbers of schemes. The Agricultural need to be increased so that farmers an get more remuneration from the same piece of land with less labours

Keywords: *Agriculture, Infrastructure and India.*

Introduction

In Indian there are 1.3 billion people, and it ranks second in terms of the agricultural output. In 2021, the gross value added (GVA) was accounted 16.4% in forestry and fishing sector. In country's population, there are more than 50% of serving primary source of livelihood. These sector accounts for majority of the poor of the country. Over 58 percent of the rural households depend on agriculture.

In Demand side factors include, awareness and knowledge about technology, that access to credit and relevant inputs, risk implications and marginal returns. In Supply side factors includes, policy support, investment in agricultural research and extension system, availability of infrastructure, and institutional arrangements for the delivery and benefit sharing of technologies.

Importance

The crops produced in this manner are sufficient because of the expanding population. The reforms after independence are consequently given priority. The agricultural development helping crop producers or farmers by offering various forms of support in the agricultural industry. This delevopment includes offering security, assisting with research, using cutting-edge methods, preventing pests, and promoting diversity.

Agricultural technology assists farmers in overcoming operational challenges such as financing, supplies, and crop productivity. The farmers can increase overall production, reduce their impact on natural ecosystems, and ensure safer growing conditions. Agricultural technology provides farmers with improved worker facilities, increased efficiencies, and low prices.

Roles Agricultural Technologies

During 1960s, the institutional approach was shelved to make the way for the technocratic approach only to remerge during post liberalization period. The main motto behind these initiatives was to improve farmers access to institutional credit. A large number of institutional agencies are involved in the disbursement of credit to agriculture. A large number of formal institutional agencies like co-operatives, Regional Rural Banks (RRBs), Non-banking Financial institutions(NBFIs), Self-help Groups(SHG),etc.

Agricultural technology plays a crucial role in the agriculture industry by helping farmers overcome various challenges they face in their day-to-day operation. It helps farmers in various aspects of their farming operations. From increasing crop production to reducing water, fertilizer, and pesticides to improving working conditions for farm workers. and it plays a vital role in making the agriculture industry more efficient and sustainable.

Roles of agricultural reforms are,

- Precision agriculture
- Climate prediction through AI
- Use of *sensor* in agriculture
- Biotechnology in agriculture
- Digital solution for *financing* and *supplies*
- E-commerce solutions for selling *agricultural products*.

Impacts

It Increase in agricultural products both import and export. Technologies can enable the transition of modern agriculture in the field. While some technologies have transformed the way we operate, there is a need for spreading technological advancements in agriculture like, artificial intelligence and machine vision. Farmer can have ready availability of weather information and disaster warnings. The three main aspects of agricultural reforms are liberalization, privatization and globalization. Agriculture is the primary source of income in rural India, and any reforms will have a direct impact on the nation's economy and vice versa. Agriculture reform has a significant impact on the following areas:

- Increase in agricultural products both import and export.
- Improvements in agricultural technology and rural infrastructure are two areas where progress is being made.
- Agricultural methods are becoming more prevalent
- Agriculture and food security prices are maintained.

Merits and Demerits

Merits	Demerits
Productivity is boosted by Technology and they reduce the time.	Excessive Use of Fertilizers and Pesticides.
Water supply becomes easy by using Modern Technology.	High Maintaining Cost.
Modern machines can control the efforts of farmers.	It is efficient but has many side effects and drawbacks.
Better marketing and exposure to the price. And irrigational technology.	Lack of practical knowledge the farmers cannot handle the machines properly.
Low run of chemicals and also waste materials into seas and water.	The robotic machine could not change their culture, we have to set their Programmes manually.
Decrease the use of water, fertilizers which keeps the prices down. And improve the fertility of the soil.	Improve the scouting programmes.
Facilities in online trading and E-commerce. And suitable for the campus environment.	Most of the farmers are illiterates so they are unable to use the modern machines.

Conclusion

The food and agriculture sector Is crucially important in the green growth. Because it is major user of land water and marine resource. And biodiversity has important linkages and agriculture has given so much to society. In India technological it is rapidly growing field with potential boost food security and create new jobs and rural development. The region has had to face problems of food insecurity. In some countries have needed food aid for IDPs and refugees.

BRIDGING THE DIGITAL TRANSFORMATION WITH ARTIFICIAL INTELLIGENCE ON MEDICAL REPRESENTATIVES IN THE SALES PROFESSION

Dr.L. Nithya

*Assistant Professor, Department of Commerce
PSGR Krishnammal College for Women, Coimbatore*

Ms. S. Abarna

*Ph.D. Research Scholar, Department of Commerce
PSGR Krishnammal College for Women, Coimbatore*

Abstract

Medicines have become a basic necessity in today's competitive world. There are also a lot of intermediaries involved in medical consumption like medical companies, whole salers, retailers, medical representatives, physicians, and the ultimate consumers. There are also new technologies involved and implemented in all the sectors likewise the medical representatives have some digital transformation. The study is descriptive in nature and a qualitative approach to data. And this study mainly concentrated on the Digital Transformation with Artificial Intelligence in Medical Representatives in the sales profession. And found that digital transformation and artificial intelligence have created a greater impact on the sales of medical Representatives.

Keywords: Medical representatives, sales profession, Digital Transformation, Artificial Intelligence.

Introduction

The practice of doing business and selling goods and services is known as marketing. Sales are a crucial component of marketing efforts. From the point of production to the point of consumption, it involves many additional intermediaries, including producers, wholesalers, retailers, and final consumers. Its ultimate purpose is to understand and meet the needs and wishes of the customers. Today, drugs are essential to everyone's survival across the age spectrum. In contrast to other manufacturing businesses, there are also medical manufacturing businesses all throughout India that offer higher-quality medications. Doctors serve as Medical Representatives in the medical industry, acting as a mediator between the manufacturing firm and the consumers. They act as a link between medical manufacturing companies and physicians.

Medical Representatives in the Sales Profession

The main line of contact for pharmaceutical, medical, and healthcare providers is via medical representatives. Medical representatives work for pharmaceutical companies and laboratories to promote and distribute medical products. They are

also known as medical sales representatives or pharmacy sales representatives. The purpose of a medical representative is to market and sell their company's goods, whether they are pharmaceuticals or medical equipment. A medical representative advises patients about medical products and sells and promotes medications. Medical Representatives deploy a range of strategies to spread the word about the employer's medical products.

Objective

To Describe the Digital Transformation with Artificial Intelligence on Medical Representatives in the sales profession

Research Methodology

The study is descriptive in nature and a qualitative approach of data collection and analysis appears to be appropriate, with data acquired from authentic and secure sources. The study focuses on Bridging Digital Transformation with Artificial Intelligence in Medical Representatives in the sales profession. Likewise, the essential and applicable secondary data is gathered from a variety of sources similar to research papers articles, and publications.

Digital Transformation among Medical Representatives

Digital transformation has significantly impacted the role of medical representatives (MRs) in India. With the rise of digital technologies, MRs are now using digital tools and platforms to communicate with healthcare professionals (HCPs) and provide them with the information they need.

Digital Communication

MRs are increasingly using digital platforms such as email, social media, and video conferencing to communicate with HCPs. This has made it easier for them to reach a wider audience and provide more personalized solutions to doctors. Digital communication has also made it easier for MRs to track their interactions with HCPs and monitor their performance.

Data Analytics

Digital technologies have enabled MRs to collect and analyze data on HCPs and their prescribing patterns. This data can be used to identify the needs and preferences of individual HCPs and to tailor communication and marketing strategies accordingly.

E-Detailing

E-detailing involves using digital platforms to provide interactive product demonstrations to HCPs. This approach allows MRs to provide more detailed information about their products and engage HCPs more meaningfully.

Virtual Conferences

MRs are increasingly participating in virtual conferences and webinars, which allow them to connect with HCPs from all over the country. Virtual conferences also provide opportunities for MRs to learn about the latest developments in their field and to share knowledge and best practices with their peers.

Artificial Intelligence used for Medical Representatives in Sales Profession

Artificial intelligence in medicine is the use of machine learning models to search medical data and uncover insights to help improve health outcomes and patient experiences. Thanks to recent advances in computer science and informatics, artificial intelligence (AI) is quickly becoming an integral part of modern healthcare. AI algorithms and other applications powered by AI are being used to support medical professionals in clinical settings and in ongoing research.

Remote Detailing

With the COVID-19 pandemic, many MRs have had to shift to remote detailing, where they use digital platforms to communicate with HCPs instead of meeting them in person. Remote detailing has become an important way for MRs to continue to engage with HCPs during the pandemic.

Personalization

AI algorithms can help MRs personalize their interactions with healthcare professionals (HCPs). By analyzing data on HCPs, AI can provide insights into their prescribing habits and preferences, enabling MRs to tailor their communication strategies accordingly.

Predictive Analytics

AI can help MRs predict future trends in the healthcare industry, such as changes in prescribing patterns or shifts in disease prevalence. This information can be used to develop more effective marketing and sales strategies.

Sales Forecasting

AI can help MRs forecast sales more accurately by analysing data on historical sales patterns, market trends, and other factors that influence product demand.

Competitive Intelligence

AI can be used to monitor and analyse competitor activity in the market, providing MRs with valuable insights into how their products compare to those of their competitors.

Chatbots

AI-powered chatbots can be used to provide HCPs with instant access to information about products, disease states, and treatment options. This can save MRs time and improve their overall efficiency.

Virtual Assistants

AI-powered virtual assistants can be used to automate routine tasks such as scheduling appointments, tracking interactions with HCPs, and generating reports. This can free up MRs to focus on more strategic tasks, such as building relationships with key opinion leaders (KOLs).

Suggestions

Awareness about medical representatives in the medical field is much needed as their role and Importance play a very important role the digital transformation and artificial intelligence must be implemented in all sectors and districts.

Conclusion

Overall, digital transformation has enabled MRs to be more efficient and effective in their communication with HCPs. By using digital tools and platforms, MRs can provide more personalized solutions to HCPs, collect and analyse data more effectively, and engage with HCPs more meaningfully. AI has the potential to help MRs perform more effectively by providing them with valuable insights, automating routine tasks, and enabling more personalized interactions with HCPs. As AI continues to evolve, it is likely to become an increasingly important tool for MRs in the healthcare industry.

Abstract

This conceptual paper indicates and emphasizes the women entrepreneurs as the potentially emerging human resource in the 21st century. Nowadays it has been realized that enterprising women have cast entrepreneurial talents which could be harnessed so as to convert them from the position of Jobseekers to Job givers. The government has realized the importance of women entrepreneurship. As a result, it offers a variety of programmes for women entrepreneurs. Even though the government organizes women by various associations, they are not ready to undertake the business. As compared to men, women are less motivated to start business units due to some unwanted fear, lack of motivation and kind of activities. Practical experience and personality development programmes, to improvise their over-all personality standards. Women of 21st century is no more a traditional resource confined to homes only rather an educated, knowledgeable and innovative part of the overall population possessing the capacity to transform economies into thriving enterprises. On the basis of this analysis some recommendations are given to promote spirit of women entrepreneurship and helping the women to become a successful entrepreneur.

Keywords: Women, Entrepreneur, Innovation, Enterprise, Personality development.

Introduction

In today's world, women are growing in entrepreneurial sector at an increasing pace. They have become important part of the global business environment. To begin with let us first define a women entrepreneur. A Women Entrepreneur may be defined as a woman or a group of woman, who initiate, organize and runs a business venture. The Government of India has defined women entrepreneurs as owning and controlling an enterprise with a woman having a minimum financial interest of 51% of the capital and giving at least 51% of the employment generated in the enterprise to women. Since the 21st century, the status of women in India has been changing as a result to growing industrialization and urbanization, mobility and social legislations.

Over the years more and more women are going in for higher education, technical and professional education and their proportion in the workforce has also been increased. With the spread of education and awareness, women have shifted from the kitchen, handicrafts and traditional cottage industries to non traditional

higher levels of activities, small to medium-sized businesses, and small enterprises. Even the government has laid special emphasis on the need for conducting Special entrepreneurial training programs for women to enable them to start their own ventures. Financial institutions and banks have also set up special cells to assist women entrepreneurs on the economic scene in the recent years. The women are the large part of our country about half of the total population. This large part of our population can largely produce significant support to the overall development of the country. But most of the women of our country ultimately combine them into household chores and family rituals. These era-breaking initiatives are producing these women as more confident to the individual economic freedom and on the other side they are indirectly adding contribution to the national economic growth.

Objectives

Objectives of Women Entrepreneurship Development Program are:

- To enable women entrepreneurs to identify and pursue career paths in Business world.
- To create a conducive business environment for women entrepreneurs.
- To promote women led businesses at national as well as international platforms.
- To bridge the social, cultural and economic gap by providing opportunities for professional and personal development.
- To encourage, enable and facilitate women in becoming economically empowered.
- To set role models in Women Entrepreneurship to influence the younger generation.
- To fill the void created by society due to lack of investment in women development programs.

Status of Women Entrepreneurs in India

Entrepreneurship is considered as one of the most important factors contributing to the development of society. India has been ranked among the worst performing countries in the area of women entrepreneurship in gender-focused global entrepreneurship survey, released in July 2013 by PC maker Dell and Washington based consulting firm Global Entrepreneurship and Development Institute (GEDI). Of the 17 countries surveyed India ranks 16th, just above Uganda. Countries like Turkey, Morocco and Egypt have outperformed India. Status of higher education in women in India came out to be lower than most countries in the world. At present, women's entrepreneurial role is limited in the large scale industries and technology based businesses. But even in small scale industries, the women's participation is

very low. As per the third all-India census of Small Scale Industries, only 10.11% of the micro and small enterprises were owned by women, and only 9.46% of them were managed by women. While the number of women operating their own business is increasing globally, women continue to face huge obstacles that stunt the growth of their businesses, such as lack of capital, strict social constraints, and limited time and skill.

Challenges Faced by Women Entrepreneurs

Conflicts between Work and Domestic Commitments

Women's family obligations also bar them from becoming successful entrepreneurs in both developed and developing nations. "Having primary responsibility for children, home and older dependent family members, few women can devote all their time and energies to their business" (Starcher, 1996)

Gender Gaps in Education

While women are making major strides in educational attainment at primary and secondary levels, they often lack the combination of education, vocational and technical skills, and work experience needed to support the development of highly productive businesses.

Lack of Finance

Access to finance is one of the most common challenges that entrepreneurs face and this is especially true for women who are further Women Entrepreneurship in India 1145 impeded by lack of personal identification, lack of property in their own name and the need for their husband's countersignature on many documents.

Legal Constraints in Family Law

The institutional and legal environment is critical to the growth of female-owned enterprises. Laws regulating the private sphere specifically those regarding marriage, inheritance and land can hinder women's access to assets that can be used as collateral when securing a loan.

Heavy household responsibilities leave a demand on women especially those in rural areas who have more children. They are required to perform their traditional role as housewives and therefore, they have fewer hours of free time than men, both during the weekend and on weekdays.. An ILO report on women entrepreneurship identifies the following problems faced by women entrepreneurs.

Lack of Family Support

Sometimes the family may make the women feel guilty of neglecting household duties in her pursuit of business obligations. Cultural traditions may hold back a woman from venturing into her own business.

Lack of Capital

Traditional sources of finance like banks are reluctant to lend to women entrepreneurs especially if they do not have any male or family backing. This is especially true of lower income females. Women do not have adequate finance or legal knowledge to start an enterprise.

Lack of Confidence and Faith

Lack of role models undermines the self confidence of women entrepreneurs. The activity of selling is considered abhorrent to the female gender.

Lack of Right Public/ Private Institutions

Most public and private incentives are misused and do not reach the woman unless she is backed by a man. Also many trade associations like ministries, chambers of commerce do not cater to women expecting women's organizations to do the necessary thing.

Socio Personal Problems

Wrong attitude of the society against women due to lack of proper education and information, economic backwardness and low risk bearing capacity.

Managerial Problems

Which is due to lack of enough knowledge of general management and experience, lack of skilled labour, absenteeism and low labour turnover, lack of clear cut objectives, transportation problem as women.

Production Problem

Such as inadequate availability of land, plots, and premises, irregular supply of enough inputs, inadequate technical support of production identification, and lack of up gradation of technology research and development and quality control, poor inventory management.

Marketing Problem

Difficulty in marketing their products due to lack of enough knowledge of how to market their products and also relaying on local markets; heavy competition from big enterprises, exploitation by middlemen, difficulties in the collection of dues, inadequate sales promotion avenues and lack of export market support.

Problem of Government Assistance

Both central and State governments are implementing various assistance, schemes, for the promotion of women entrepreneurship. But in practice the respondents face many difficulties in obtaining government assistance due to red tapism at various levels, exploitative advisors, problems due to dishonest officials, complicated and time consuming long procedures in getting the assistance etc.

Problem of Labour

In the course of this study, it has been observed that the women entrepreneurs in the selected group face various labour problems in their units.

Less Confidence

Women entrepreneurs are not confident about their strength and competence. Their family members don't stand by their entrepreneurial growth. In recent years, though the situation is changing, yet the women have to face further change for increased entrepreneurial growth.

Mobility Constraint

The Indian society is a conservative society which restricts the mobility of women entrepreneurs. Women are less mobile than men. The confidence to travel day & night and to different regions and States is lacking in women comparing with men.

Recommendations

The elimination of obstacles for women entrepreneurship requires a major change in traditional attitudes and mindsets of people in society rather than being limited to only creation of opportunities for women. Hence, it is imperative to design programmes that will address to attitudinal changes, training, supportive services. The basic requirement in development of women entrepreneurship is to make aware the women regarding her existence, her unique identity and her contribution towards the economic growth and development of country. The basic instinct of entrepreneurship should be tried to be reaped into the minds of the women from their childhood. This could be achieved by carefully designing the curriculum that will impart the basic knowledge along with its practical implication regarding management (financial, legal etc.) of an enterprise. Here are some suggestions to increase the role of women entrepreneurs:- Women Entrepreneurship in India 1147

Infrastructure

Infrastructure set up plays a vital role for any enterprise. Government can set some priorities for women entrepreneurs for allocation of industrial plots, sheds and other amenities. However, precautionary measures should be undertaken to avoid the misuse of such facility by the men in the name of the women.

Personality Development

Attempts should be there to enhance the standards of education of women in general as well making effective provisions for their training, practical experience and personality development programmes, to improve their over-all personality standards.

Self Help Groups of Women Entrepreneurs

Self help groups of women entrepreneurs can mobilize resources and pool capital funds to help the women in the field of industry, trade and commerce.

Business Development Training Programs

It includes basic day-to-day management training like how to keep track of accounts, handle taxes and understand compliance rules and regulations. They can also focus on strategy and the long-range success of a business from writing a business plan to targeting specific markets, along with product innovation within business clusters and incubators.

Access to Finance Programs

Efforts to facilitate access to finance for women entrepreneurs typically encompass initiatives that reform restrictive bank and regulatory policies. Such reforms accept less traditional forms of collateral, look at a lender's willingness to repay and simplify business registry. They also help financial institutions develop innovative loan and savings products for female entrepreneurs. To establish all India forums to discuss the problems, grievances, issues, and filing complaints against constraints or shortcomings towards the economic progress path of women entrepreneurs and giving suitable decisions .

Policy for Development of Women Entrepreneurs

Nagendra Kumar Jha from Patna University stated the following strategy for development of women entrepreneurs in his research article presented in 9th AIMS International Conference on Management held on January 1-4, 2012;

- A) Vocational training to be extended to women community that enables them to understand the production process and production management.

- B) State Finance Corporations and Financing Institutions should permit by statute to extend purely trade related finance to women entrepreneurs.
- C) The financial institutions should provide more working capital assistance both for small scale ventures and large scale ventures.
- D) Making provision of micro credit system and enterprise credit system to the women entrepreneurs at local level.
- E) Industrial estates could also provide marketing outlets for the display and sale of products made by women.
- F) A Women Entrepreneurs" Guidance Cell may be set up to handle the various problems of women entrepreneurs all over the state.
- G) Training in entrepreneurial attitudes should start at the high school through well designed courses, which build confidence through behavioral games.

Successful Leading Business Women in India

The 21st leading business women in India

- Akhila srinivasan, Managing Director , Shriram Investments ltd
- Chanda Kocchar, Executive Director, ICICI Bank.
- Ekta Kapoor, Creative Director, balaji Telefilms Ltd.
- Jyoti Naik, President, Lijjat Papad.
- Kiran Mazumdar Shaw, Chairman & Managing director, Biocon Ltd. Lalita D.Gupte, JMD , ICICI Bank.
- Naina Lal Kidwar, Deputy CEO , HBSE.
- Preetha Reddy , Managing Director, Apollo hospitals.
- Priya Paul, Chairman, Apeejay Park Hotels.
- Rajshree Pathy, Chairman, Rajshree Sugars & Chemicals ltd. Ranjana Kumar, Chairman, NABARD.

Conclusion

Women, being almost 50% population of India, have a pivotal role to play as far as economic development of country is concerned. India is a male dominated society and women are assumed to be economically as well as socially dependent on male members. Women entrepreneurs faced lots of problems like lack of education, social barriers, legal formalities, high cost of production, male dominated society, limited managerial ability, lack of self confidence etc. Various factors like Pull and Push factors influencing women entrepreneurs. Today, women in advanced market economies own more than 25 per cent of all businesses and women-owned businesses in Africa, Asia, Eastern Europe, and Latin America are growing rapidly. In some regions of the world, transformation to market economy, women entrepreneurs is a growing trend². However, in India, the actual participation of

women in income generating activities is quite unsatisfactory, only eight per cent of the small scale- manufacturing units are owned and operated by women. If women entrepreneurs get support and encouragement from family, society, Government and financial institutions, such positive effort can open new avenues for them and increase the marketability and profitability of business owned by them. If the problems of women entrepreneurs are addressed properly, they can emerge as very successful entrepreneurs far better than men entrepreneurs.

Abstract

In this generation, women are having trouble becoming entrepreneurs. From this case study, what are the needs of women's entrepreneurship, the challenges faced by women's entrepreneurship, gender equality, and knowledge about the women's entrepreneurship schemes given by the government? It will be helpful for the women to start their businesses, and it gives some acknowledgement of entrepreneurship.

Keywords: *Women Entrepreneurship, Gender Equality, Startup Business, Government Schemes.*

Introduction

The rise of women entrepreneurs in recent years has been a transformative force in the business world, reshaping industries, challenging gender norms, and driving socioeconomic development. This paper aims to shed light on the unique journey of women entrepreneurs, the obstacles they face, and the positive impact they bring to the global economy. By examining the factors that contribute to their success and the initiatives that support their endeavors, this paper seeks to inspire and advocate for the empowerment of women entrepreneurs.

Review of Literature

- Gupta, V. K., Turban, D. B., Wasti, S. A., & Sikdar, A. (2009). The role of gender stereotypes in perceptions of entrepreneurs and intentions to become an entrepreneur. *Entrepreneurship Theory and Practice*, 33(2), 397-417. This study explores the role of gender stereotypes in shaping perceptions of entrepreneurs. It examines how societal beliefs about gender influence individuals' intentions to become entrepreneurs, with a focus on the impact on women entrepreneurs.

- Alsos, G. A., Ljunggren, E., & Hytti, U. (2013). Gender and innovation: State of the art and a research agenda. *International Journal of Gender and Entrepreneurship*, 5(3), 236-256. This article explores the intersection of gender and innovation in entrepreneurship. It reviews the existing literature on the topic and proposes a research agenda to further investigate the role of gender in driving innovation among women entrepreneurs.

The Rise of Women Entrepreneurs

The rise of women entrepreneurs refers to the increasing number of women who are starting and leading their own businesses across various industries. It signifies a significant shift in the entrepreneurial landscape, as more women are breaking traditional gender roles and pursuing entrepreneurship as a viable career path. This trend has gained momentum in recent years and has been fueled by several factors:

1. **Changing societal attitudes:** There has been a gradual shift in societal attitudes towards gender roles and women's capabilities. Women are now more encouraged and supported to pursue their entrepreneurial ambitions, challenging the notion that entrepreneurship is primarily a male domain.
2. **Increased access to education and resources:** Women's access to education and resources has improved significantly. Greater educational opportunities and vocational training have equipped women with the knowledge and skills necessary to start and run successful businesses.
3. **Advancements in technology:** Technological advancements, especially the widespread availability of the internet and digital tools, have leveled the playing field for entrepreneurs. Women can now easily start online businesses, access global markets, and leverage digital platforms for marketing and networking.
4. **Supportive networks and initiatives:** The rise of women-focused entrepreneurship networks, organizations, and initiatives has created a supportive ecosystem for women entrepreneurs. These networks offer mentorship, funding opportunities, and resources tailored to the unique challenges faced by women in entrepreneurship.
5. **Government policies and programs:** Governments around the world have recognized the economic potential of women entrepreneurs and have implemented policies and programs to support their growth. These include funding schemes, business development initiatives, and policies promoting gender equality and women's empowerment.
6. **Inspiration from successful women entrepreneurs:** High-profile women entrepreneurs serve as role models and sources of inspiration for aspiring women entrepreneurs. Their success stories showcase the possibilities and potential rewards of entrepreneurship, motivating more women to take the leap.

Empowering Next Generation by Women Entrepreneurs

Empowering the next generation through women entrepreneurs is a powerful and impactful approach to fostering social and economic growth. When women take on entrepreneurial roles, they not only contribute to economic development but also become role models and advocates for other women and girls aspiring to achieve their dreams. Here are some key ways in which women entrepreneurs can empower the next generation:

- 1. Inspiring role models:** Women entrepreneurs serve as inspiring role models for young girls and women, demonstrating that they can achieve success in any field they choose. Their stories of overcoming challenges and achieving their goals can inspire others to pursue their passions and ambitions.
- 2. Breaking stereotypes:** By venturing into various industries and sectors, women entrepreneurs challenge traditional gender stereotypes and break down barriers. This can encourage the next generation to pursue diverse career paths, irrespective of gender-based expectations.
- 3. Mentorship and guidance:** Women entrepreneurs can actively engage in mentorship programs and initiatives to support and guide young women who are interested in entrepreneurship. Sharing knowledge, experiences, and networks can help aspiring entrepreneurs navigate challenges and foster their personal and professional growth.
- 4. Access to education and resources:** Women entrepreneurs can advocate for and support educational opportunities that focus on entrepreneurship and leadership skills for girls and young women. Additionally, they can help ensure that resources and funding opportunities are accessible to aspiring female entrepreneurs, bridging the gender gap in entrepreneurial activities.
- 5. Empowering through networks:** Women entrepreneurs often create networks and support systems that encourage collaboration, skill-sharing, and collective empowerment. These networks can provide valuable connections and resources to the next generation of aspiring women entrepreneurs.
- 6. Addressing gender bias:** Women entrepreneurs can use their influence and platform to address gender bias and advocate for gender equality in the entrepreneurial ecosystem. By actively promoting diversity and inclusivity, they create a more supportive environment for women to thrive in business.
- 7. Social impact and sustainability:** Women entrepreneurs are often driven by a strong sense of social responsibility. They can create businesses that address critical social and environmental issues, inspiring the next generation to build sustainable and purpose-driven enterprises.

8. **Encouraging risk-taking and resilience:** Through their experiences as entrepreneurs, women can teach the next generation the importance of taking calculated risks, embracing failure as a learning opportunity, and developing resilience in the face of challenges.
9. **Balancing work and family life:** Many women entrepreneurs successfully manage the dual responsibilities of running a business and caring for their families. By showcasing this ability to balance work and personal life, they can challenge societal norms and inspire others to do the same.
10. **Advocating for policy changes:** Women entrepreneurs can use their influence to advocate for policy changes that promote gender equality in the workforce and support women-led businesses. These policy changes can create a more supportive environment for the next generation of women entrepreneurs.

Government Policies for Women Entrepreneur

1. **Anti-Discrimination Laws:** These laws protect women entrepreneurs from gender-based discrimination in various aspects of business, such as hiring, promotions, access to funding, and access to opportunities.
2. **Equal Pay Laws:** Legislation that mandates equal pay for men and women doing the same or similar work helps address gender wage gaps that might impact women entrepreneurs.
3. **Maternity and Parental Leave:** Laws related to maternity and parental leave ensure that women entrepreneurs can balance their work and family responsibilities without facing discrimination or negative consequences.
4. **Access to Capital:** Women entrepreneurs might benefit from laws and policies that promote equal access to financing and funding opportunities.
5. **Business Registration:** The process of registering a business should be gender-neutral, ensuring that women have equal access to start and operate businesses.
6. **Property Rights:** Laws related to property ownership and inheritance should treat men and women equally, ensuring that women entrepreneurs have secure rights to their assets and property.
7. **Legal Protections for Victims of Harassment and Violence:** Laws that protect individuals from harassment and violence are essential to creating a safe and supportive business environment for women entrepreneurs.
8. **Training and Education:** Government initiatives or laws might focus on providing training, education, and capacity-building programs specifically tailored for women entrepreneurs.

Challenges Faced by Women Entrepreneurship

Entrepreneurship includes many challenges, although the challenges faced by women entrepreneurs are critical. Such challenges as lack of financial support, lack of mentorship, gender inequality, Limited mobility, etc. Prone to a variety of emotions Sensitivity plays a major role in women's

1. Gender Bias and Stereotypes

One of the primary challenges faced by women entrepreneurs is gender bias and stereotypes. Deep-rooted societal beliefs often portray women as less capable in business, affecting their access to funding, networks, and support. Overcoming these biases requires promoting inclusivity, challenging stereotypes, and providing equal opportunities for women entrepreneurs to showcase their skills and expertise.

2. Limited Access to Capital

Access to capital remains a significant challenge for women entrepreneurs. Bias in traditional funding channels often results in limited financing options. To address this, initiatives such as gender-lens investing, microloans, and venture capital funds specifically focused on women-led businesses can bridge the gap and provide financial support for growth and expansion.

3. Lack of Mentorship and Role Models

The scarcity of female mentors and role models poses a challenge for women entrepreneurs. Mentorship plays a vital role in providing guidance, sharing experiences, and building networks. Establishing mentorship programs, encouraging successful women entrepreneurs to act as role models, and facilitating networking opportunities can empower aspiring entrepreneurs and enhance their chances of success.

4. Work-Life Balance

Balancing personal and professional responsibilities is a significant challenge for women entrepreneurs, particularly those with caregiving roles. Policies that support flexible work arrangements, affordable childcare options, and promoting a culture of work-life integration can enable women entrepreneurs to manage their businesses effectively while maintaining their personal well-being.

5. Networking and Access to Opportunities

Networking and access to opportunities are crucial for business growth. However, women entrepreneurs may face difficulties in accessing male-dominated networks. Initiatives promoting diverse networking platforms, industry-specific conferences and events, and partnerships with organizations supporting women entrepreneurs can help bridge this gap and provide equal access to opportunities.

6. Lack of Confidence and Self-Promotion

Women entrepreneurs sometimes struggle with self-promotion and asserting confidence in their abilities. Overcoming this challenge requires fostering a supportive environment that encourages women to showcase their achievements,

providing training in self-promotion skills, and celebrating the accomplishments of women entrepreneurs to boost their confidence and build credibility.

7. Stereotypes in Industries

Certain industries remain traditionally male-dominated, creating additional hurdles for women entrepreneurs entering those sectors. Overcoming these stereotypes involves promoting inclusivity and diversity within these industries, encouraging women to pursue non-traditional paths, and showcasing successful women leaders who challenge the norms.

8. Limited Access to Business Education and Resources

Unequal access to entrepreneurship education and resources is a challenge faced by women entrepreneurs. Establishing mentorship programs, offering scholarships for business education, and providing resources tailored to the unique needs of women entrepreneurs can enhance their skills and knowledge, enabling them to navigate the business landscape more effectively.

Conclusion

The rise of women entrepreneurs signifies a significant shift in the business landscape, as they challenge traditional norms, overcome barriers, and contribute to economic growth and social progress. By addressing the unique challenges they face and providing support through initiatives and policies, we can encourage an inclusive entrepreneurial ecosystem that empowers women to thrive. It is crucial to recognize the contributions of women entrepreneurs and continue working towards a more equitable and various business environment for all.

Abstract

Tamil Nadu is still one of the few socialist-democratic states in India, Welfare schemes have long influenced Tamil Nadu politics. In 1967, when hunger was a major issue, Perarignar C.N. Annadurai became Chief Minister riding on his promise of 'One rupee for one padi (litre) rice'. The government soon found out that the promise was even expensive and unsustainable, but the welfarism continued which has, in the post-liberalisation period, managed to significantly increase its per capita income and Gross Domestic State Product (GSDP), while also maintaining a steady trend of interventions into welfare. Not only as 'freebies' – Tamil Nadu has given India a market-friendly Dravidian welfare model. This is the story of Tamil Nadu – the state that has given India a unique template. One, by pursuing targeted welfare schemes, often exonerate as 'freebies', and two, by pursuing economic growth through market forces. The state shows that the twin track is possible. Interestingly, despite spending high on freebies and populist schemes, Tamil Nadu has maintained inclusive growth over the decades.

Keywords: Freebie, Schemes, Socio-economic, Society, Subsidize, Welfare, Development

Introduction

Mainly focused on the freebie schemes initiated by the Government of Tamil Nadu for socio-economic development. In India, Tamilnadu is an Origin and Pioneer of the great welfare scheme & Socio-economic development Model when Dravida Model Government took charge in Government Role by Tamilnadu State Assembly Election at 1967 through their successful social-movements for establishing Social Justice, People Welfare, Equality in Human Rights, Secularism, Federalism, Fundamental and democracy rights oriented initiatives by their uncompromised social movements in their successful track record.

Observations

Different types of socio-economic development schemes of Government of Tamil Nadu provide employment opportunities, reduce unemployment problems,

generate income, eradicate poverty, improve the standard of living of the people across the state, provide proper education, increase women participation in workforce, develop entrepreneurship, empower the people, enormously contributes to industrial production, GDP and market share and there by promotes our country's economy. Besides that the schemes are great opportunities for utilizing the available natural and human resources

- **Employment-** Freebies build a healthier and a stronger workforce, which is a necessary part of any growth strategy.

Working under MGNREGA can guarantee some assured wages and confers right to life with dignity.

- **Poverty reduction-** There have been studies which showed the poverty-reducing effect of the Public distribution System.

The free or subsidised rations under PDS allows foodgrains to be available for cheap for consumers while assuring remunerative prices to farmers.

- **Food security-** Subsidised foodgrains distributed under the PDS contribute to ensuring basic food security.
- **Education-** Mid-day meals and in schools have been proven to contribute to increased enrolment and retention in schools and addresses classroom hunger.

It also resulted in keeping the evil of child labour under control.

'Breakfast Scheme' - "*Muthalamaicharin kalai unavu Thittam*" for schoolchildren is an inspiring model. To begin with, the scheme will benefit 114,000 children in 1,545 government primary schools, and will be expanded in phases. Stalin says breakfast for children is a responsibility and not a freebie. The scheme's goal, according to him, is to prevent hunger and nutritional deficiency, besides easing the burden of working mothers.

- **Women empowerment-** Tamil Nadu government's free bus pass for women has encouraged more women to join the workforce, in turn leading to economically stable families and women's empowerment.

- **Makkalai Thedi Maruthuvam Scheme**

A new scheme has been created by the chief minister of Tamil Nadu to provide doorstep healthcare facilities in the seven districts of the state. With the help of the **Makkalai Thedi Maruthuvam Scheme**, people who are above the age of 45 years will be screened and provided with medical facilities if found to be infected with non-communicable diseases like high blood pressure and diabetes. The main aim of launching the **Tamil Nadu Doorstep Healthcare Scheme** is to eliminate the visit of poor people to various hospitals.

- **Reduction in social evils-** The introduction of free colour television in villages has resulted in decrease in domestic violence and also enabled women's empowerment as women have been able to connect with the outside world through visual media.
- It has ensured self-respect, as women and children are able to watch TV in their houses rather than visit the homes of those who are rich and own TV sets.
- **Increased productivity-** Subsidies such as free laptops has now become necessities for increasing productivity, knowledge and skills.
- The small amounts given to the poor are called 'freebies', while freebies that the rich get through low tax rates and exemptions are referred as 'incentives'.
- **Boost industrial growth-** In Kerala, fiscal incentives are given to encourage corporate/entrepreneurs to boost industrial growth.
- **Sustainability-** It's not about how cheap the freebies are but how expensive they are for the economy, life quality and social cohesion in the long run.

Scheme List for Tamil Nadu

1. Moovalur Ramamirtham Ammaiyar Education Assurance Scheme.
2. Chief Minister Comprehensive Health Insurance Scheme.
3. Tamil Nadu Magalir Urimai Thogai Scheme.
4. Tamil Nadu Zero Ticket Bus Travel Scheme for Women
5. Tamil Nadu Unemployed Youth Employment Generation Programme
6. Tamil Nadu New Entrepreneur cum Enterprise Development Scheme
7. Tamil Nadu Chief Minister Breakfast Scheme

1. Moovalur Ramamirtham Ammaiyar Education Assurance Scheme

- Scheme : Moovalur Ramamirtham Ammaiyar Higher Education Assurance Scheme
- Name Benefits of the Scheme : Financial Assistance to meet the cost of education.Amount of AssistanceRs. 1,000/- per month till the completion of the course.Nodal AgencyDepartment of Social Welfare and Women Empowerment, Tamil Nadu.
- Mode of Apply : SchemeMoovalur Ramamirtham Ammaiyar Higher Education Assurance Scheme application

Features of the Scheme

- Under this scheme, only those girls are eligible who have completed their studies from class 6th to class 12th from a government school.

- The financial assistance amount of the scheme will be given every month in the account of the girl.

2. Chief Minister Comprehensive Health Insurance Scheme:

- Name of the Scheme :Chief Minister Comprehensive Health Insurance Scheme.
- Launched in 23.07.2009. Benefits Insurance cover up to 5 lakh per family member. Beneficiaries People having less than annual income of less than 1,20,000 per annum. Nodal Ministry Government of Tamil Nadu.
- Mode of Apply : Online Application
- Beneficiaries:
 - ❖ Spouse (wife/husband) of eligible person by law.
 - ❖ Children of eligible person (till they get married, employed or attain age of 25)
 - ❖ Dependant parents of eligible person

3. Tamil Nadu Magalir Urimai Thogai Scheme :

- Name of the Scheme :Tamil Nadu Magalir Urimai Thogai Scheme.
- Launched on 15th September 2023. Benefits Financial Assistance of Rs. 1,000/- per Month. Beneficiaries Women of Tamil Nadu. Nodal Department Department of Social Welfare & Women Empowerment, Tamil Nadu Government.
- Mode of Application : Online Application
- Benefits of Scheme :
 - ❖ The following benefits will be provided to eligible women beneficiaries of Tamil Nadu under Magalir Urimai Thogai Scheme :-
 - ❖ Financial Assistance of Rs. 1,000/- per Month to Women Beneficiary.

4. Tamil Nadu Zero Ticket Bus Travel Scheme for Women

- Name of the Scheme: Tamil Nadu Zero Ticket Bus Travel Scheme for Women.
- Launched on 2021 Benefits Free of Cost Bus Travel in Tamil Nadu Government Run Buses.
- Beneficiaries :Women of Tamil Nadu.
- Nodal Department : Department of Social Welfare & Women Empowerment, Tamil Nadu Government.
- Mode of Application: No Need to Apply Anywhere for Zero Ticket Bus Travel Scheme for Women.
- Benefits of Scheme:
 - ❖ Free of Cost Travel in Government of Tamil Nadu Buses.
 - ❖ No Need to Pay any Fare up to 30 Kilometers.

- Eligibility
 - ❖ Women Should be a Permanent Resident of Tamil Nadu.

5. Tamil Nadu Unemployed Youth Employment Generation Programme

- Name of the Scheme :Tamil Nadu Unemployed Youth Employment Generation Programme.
- Benefits Capital Subsidy on Projects of Entrepreneurs.
- Beneficiaries : Entrepreneurs of Tamil Nadu.
- Nodal Department of Micro, Small and Medium Enterprises, Government of Tamil Nadu.
- Mode of Apply : Online application
- Eligibility
 - ❖ Applicant should be a Permanent Resident of Tamil Nadu.
 - ❖ Applicant should have passed minimum Class 8th.
 - ❖ The Annual Family Income of Applicant should be below Rs. 5,00,000/-.
- The Age of Applicant should be :-
 - ❖ Between 18 Years to 35 Years for General Applicant.
 - ❖ Between 18 Year to 45 Years for below mentioned Special Category Applicant :-
 - ❖ Women.
 - ❖ Minorities.
 - ❖ Backward Class.
 - ❖ Most Backward Class.
 - ❖ Schedule Caste.
 - ❖ Schedule Tribe.
 - ❖ Ex-Servicemen.
 - ❖ Transgenders.
 - ❖ Differently Abled.

6. Tamil Nadu New Entrepreneur cum Enterprise Development Scheme

- Name of the Scheme:Tamil Nadu New Entrepreneur cum Enterprise Development Scheme.
- BenefitsCapital Subsidy on Projects of First Generation Entrepreneurs.
- Beneficiaries: First Generation Entrepreneurs of Tamil Nadu.
- Nodal Department: Department of Micro, Small and Medium Enterprises, Government of Tamil Nadu.
- Mode of Apply : online application Eligibility
 - ❖ Applicant should be a Resident of Tamil Nadu for Not Less than 3 Years.
 - ❖ Applicant should possess any of the following Minimum Educational Qualification :-

- ❖ 12th Pass.
- ❖ Diploma Holder.
- ❖ ITI Pass.
- ❖ Vocational Training Passed.
- ❖ The Age of Applicant should be :-
- ❖ Between 21 Years to 35 Years for General Category Entrepreneur.
- ❖ Between 21 Year to 45 Years for below mentioned Special Category Entrepreneur :-
- ❖ Schedule Caste.
- ❖ Schedule Tribe.
- ❖ Minorities.
- ❖ Women.
- ❖ Differently Abled.
- ❖ Backward Class.
- ❖ Transgenders.
- ❖ Ex-Servicemen.
- ❖ Most Backward Class.

7. Tamil Nadu Chief Minister Breakfast Scheme

- Name of the Scheme: Tamil Nadu Chief Minister Breakfast Scheme.
- Launched Date: 15-09-2022. Benefits: Nutritious Breakfast will be Provided to Primary School Students.
- Beneficiaries : Primary School Students of Tamil Nadu.
- Mode of Application : No Need to Apply Anywhere for Chief Minister Breakfast Scheme.
- Benefits of Scheme:
 - ❖ The following benefits will be provided to Students of Primary School under Tamil Nadu Chief Minister Breakfast Scheme :-
 - ❖ Free Breakfast will be Provided to all Primary School Students
 - ❖ Breakfast has 13 Types of Food Items which will be distributed among Students.
 - ❖ Installation of solar PV plants at subsidized cost.
 - ❖ Reduced Power bills.
 - ❖ Free comprehensive maintenance for first five years.
- Beneficiaries : Domestic consumers with a TANGEDCO service connection
Nodal Agency Tamil Nadu Energy Development Agency

Eligibility

- Only Domestic consumers with a TANGEDCO service connection are eligible under this scheme.
- Subsidy will be applicable for 1kWp plants.
- The Scheme only applies to grid-connected rooftop solar PV systems.

BEYOND CRYPTOCURRENCY, BLOCK CHAIN TECHNOLOGY AND VIRTUAL LEDGER TECHNIQUES

Dr.Vignesh Ramamoorthy. H

*Assistant Professor, Department of IT and Cognitive Systems
Sri Krishna Arts and Science College, Coimbatore, Tamil Nadu, India*

Ms. Priyadharshini. N

*Assistant Professor, Department of CT and Data Science
Sri Krishna Arts and Science College, Coimbatore, Tamil Nadu, India*

Abstract

Block Chain (BC), the generation behind the Bitcoin crypto-forex gadget, is taken into consideration to be each eye-catching and crucial for making sure stronger protection and (in some implementations, non-traceable) privacy for diverse applications in lots of other domains - consisting of in the net of things (IoT) eco-machine. Intensive research is presently being conducted in each academia and industry applying the Block chain generation in multifarious programs. Proof-of-work (PoW), a cryptographic puzzle, performs a crucial role in making sure BC protection by means of maintaining a digital ledger of transactions, that's taken into consideration to be incorruptible. Moreover, BC makes use of a changeable Public Key (PK) to report the users' identity, which presents an extra layer of privacy. Now not most effective in cryptocurrency has the successful adoption of BC been applied however additionally in multifaceted non-monetary structures which includes in: dispensed storage systems, evidence-of-proximity, healthcare, decentralized voting and so forth. Recent research articles and tasks/programs have been surveyed to evaluate the implementation of BC for improved security, to discover related demanding situations and to endorse answers for BC enabled superior protection structures

Keywords: *Block chain (BC); Bitcoin; Crypto-currency; IoT; proof of labour (PoW); dispensed virtual Ledger*

Introduction

The aim of this research paper is to summarize the literature on implementation of the Block chain and similar virtual ledger techniques in numerous different domain names past its application to crypto-currency and to attract suitable conclusions. Block chain being particularly a new era, a consultant sample of research is offered, spanning over the last ten years, beginning from the early work on this area. special styles of utilization of Block chain and other virtual ledger strategies, their demanding situations, applications, safety and privacy troubles were investigated. identifying the most propitious course for destiny use of Block chain past crypto-currency is the principle attention of the review look at. Block chain (BC), the generation in the back of Bitcoin crypto-foreign money device, is taken into

consideration to be crucial for forming the backbone for making sure more suitable safety and privacy for numerous programs in lots of different domains inclusive of the internet of things (IoT) eco-system. international studies are presently being performed in both academia and enterprise making use of Block chain in numerous domain names. The evidence-of-work (PoW) mathematical assignment ensures BC safety via keeping a digital ledger of transactions this is taken into consideration to be unalterable. moreover, BC uses a changeable Public Key (PK) to document the customers' identification that gives a further layer of privateness. A hit adoption of BC has been carried out in diverse non-financial systems consisting of in online vote casting, decentralized messaging, distributed cloud storage systems, proof-of-area, healthcare and so forth. latest research articles a tasks/packages were surveyed to envision the implementation of BC for greater protection and to become aware of its associated challenges and thence to recommend solutions for BC enabled stronger security systems. The knowledge domain of the studies is within the realm of the virtual ledger, especially, in Block chain and crypto-foreign money.

Generation fundamentals of Block chain

This section in brief describes the fundamentals of the era behind the Block chain. A Block chain incorporates of two special components, as follows:

- a. *Transaction*: A transaction, in a Block chain, represents the movement brought about via the participant.
- b. *Block*: A block, in a Block chain, is a collection of statistics recording the transaction and different related information consisting of the right sequence, timestamp of advent, and so on. The Block chain can both be public or non-public, relying on the scope of its use. A public Block chain permits all of the customers with read and write permissions which includes in Bitcoin, get admission to it. But, there are some public Block chains that limit the get admission to only either to read or to write. At the opposite, a non-public Block chain limits the access to selected depended on members handiest, with the goal to preserve the customers' details hid. that is mainly pertinent among governmental institutions and allied sister issues or their subsidies thereof. one of the fundamental advantages of the Block chain is that it and its implementation generation is public. every collaborating entities possesses an updated whole report of the transactions and the related blocks. consequently, the data stays unaltered, as any changes may be publicly verifiable.

The statistics inside the blocks are encrypted by using a private key and consequently can't be interpreted through anybody another fundamental gain of the

Block chain technology is that it's miles decentralized. it's miles decentralized within the feel that:

- There may be no single tool that shops the data (transactions and related blocks), alternatively they may be disbursed many of the individuals in the course of the network assisting the Block chain.
- The transactions aren't problem to approval of any single authority or ought to abide with the aid of a set of particular regulations, consequently concerning widespread believe as to attain a consensus.
- the overall safety of a Block chain eco-gadget is another benefit. The machine simplest permits new blocks to be appended. for the reason that preceding blocks are public and allotted, they can't be altered or revised.

For a new transaction to be brought to the existing chain, it has to be confirmed via all the members of the relevant Block chain eco-gadget. For one of these validation and verification system, the contributors must apply a selected set of rules. The relevant Block chain eco-gadget defines what's perceived as "legitimate", which may also range from one eco-gadget to any other. some of transactions, hence permitted by the validation and verification process, are bundled collectively in a block. The newly organized block is then communicated to all other collaborating nodes to be appended to the prevailing chain of blocks. every succeeding block comprises a hash, a unique virtual fingerprint, of the preceding one. Parent 1 demonstrates how Block chain transactions takes place, using a step-by way of-step instance. Bob is going to switch a few cash to Alice. once the monetary transaction is initiated and consequently prompted by using Bob, it's far represented as a "transaction" and broadcast to all the concerned parties in the networks. The transaction now has to get "approval" as being indeed "valid" via the Block chain eco-system. Transaction(s) once authorised as legitimate alongside the hash of the succeeding block are then fed into a new "block" and communicated to all of the participating nodes to be subsequently appended to the present chain of blocks within the Block chain digital ledger.

Triggering Transaction

- Bob goes to transfer a few cash to Alice;
- As soon as the financial transaction is initiated and hence brought on by way of Bob, it's miles represented as a "transaction" and broadcast to all the concerned events in the community

Validation & Verification

- The transaction now has to get “approval” as being indeed “legitimate” by way of the Block chain eco-system.
- For this kind of validation and verification technique, the participants should observe a selected algorithm;
- The relevant Blockchain eco-machine defines what's perceived as “valid”, which may range from one eco-gadget to every other.

Creating a brand new Block

- Transaction(s) once authorized as valid along with the hash of the succeeding block are then fed into a new “block”.

Including Block to the Chain

- The brand new block is then communicated to all of the taking part nodes to be in the end appended to the existing chain of blocks inside the block chain virtual ledger.

Utilization of Block Chain Past Crypto currency

Despite the fact that the internet is a wonderful device to resource each sphere of the cutting-edge digital lifestyles, it is still tremendously flawed in phrases of the lack of security and privateness, particularly in relation to FinTech and E-commerce. Block chain, the era at the back of crypto-currency, delivered forth a brand new revolution with the aid of supplying a mechanism for Peer-to-Peer (P2P) transactions without the want for any middleman frame which include the existing commercial banks.

BC validates all of the transactions and preserves an everlasting document of them while making sure that any identification related records of the customers are kept incognito. as a consequence, all the non-public records of the customers are sequestered even as substantiating all of the transactions. this is finished by way of reconciling mass collaboration by cumulating all of the transactions in a pc code based totally virtual ledger. as a result, by using applying Block chain or similar crypto-currency strategies, the customers neither want to consider every other nor do they need an intermediary; alternatively, the trust is manifested in the decentralized community machine itself. Block chain as a consequence seems to be the suitable “believe device”. In reality, Bitcoin is just an exemplary use of the Block chain.

Block chain is taken into consideration to be a novel revolution in the domain of computing enabling countless packages consisting of storing and verifying legal documents along with deeds and diverse certificate, healthcare statistics, IoT, Cloud and so on. Rightly indicated Block chain to be the “global huge Ledger”, permitting many new applications past verifying transactions including in: clever deeds,

decentralized and/or independent businesses/ government offerings and so on. Within the cloud surroundings, the history of advent of any cloud facts object and its next operations carried out thereupon are recorded with the aid of the records shape mechanism of 'data Provenance', which is a type of cloud metadata. as a consequence, that is very essential to offer the utmost safety to the facts provenance for making sure its information privacy, forensics and duty. Liang et al. Places forward a Block chain based relied on cloud records provenance architecture, 'ProvChain', that is fully decentralized. Such adoption of the Block chain in cloud surroundings can offer robust protection towards statistics being altered for this reason enabling a greater transparency as properly as additional facts responsibility. This also will increase the supply, trustworthiness, privacy and in the long run the price of the provenance facts itself.

In an IoT eco system most of the conversation is in the shape of system-to-device (M2M) interactions. consequently, establishing accept as true with the various participating machines is a massive assignment that IoT era nonetheless has now not been met notably. but, Block chain can also act as a catalyst on this regard by means of allowing enhanced scalability, security, reliability and privateness. This will be performed by means of deploying Block chain technology to music billions of gadgets linked to the IoT eco-systems and used to allow and/or coordinate transaction processing. applying Block chain inside the IoT ecosystem will even growth reliability by means of axing the unmarried factor of Failure (SPF). The cryptographic algorithms used for encryption of the block information in addition to the hashing strategies may additionally provide higher security. but, this shall call for more processing strength which IoT devices currently suffer from. thus further studies is required to conquer this cutting-edge difficulty. Underwood considers the utility of Block chain technology to completely overhaul the virtual economy. ensuring and keeping consider is both the number one and initial situation of the utility of the Block chain. BC also can be used to accumulate chronological and collection facts of transactions, as it could be visible as an enormous networked time-stamping device. for instance, NASDAQ is the use of its 'Linq Block chain' to file its private securities transactions. meanwhile the Depository believe & Clearing organization (DTCC, united states) is working with Axon in imposing financial agreement services together with post-change matters and swaps. Regulators are also interested for BC's capability to provide cosy, private, traceable actual-time tracking of transactions.

Conclusion

The utility of the Blockchain idea and generation has grown past its use for Bitcoin generation and transactions. The residences of its safety, privateness,

traceability, inherent records provenance and time-stamping has visible its adoption beyond its initial application areas. The Blockchain itself and its variants at the moment are used to relaxed any sort of transactions, whether it's human-to-human communications or system-to-device. Its adoption seems to be relaxed particularly with the worldwide emergence of the net-of-matters. Its decentralized software throughout the already established global internet is likewise very appealing in terms of making sure records redundancy and as a result survivability. The Blockchain has been specifically diagnosed to be suitable in growing nations where ensuring accept as true with is of a major challenge. as a consequence, the invention of the Blockchain may be seen to be a critical and lots wanted additional factor of the net that changed into missing in safety and agree with earlier than. BC technology nevertheless has no longer reached its adulthood with a prediction of five years as novel applications stay applied globally.

Dr. V. Ramadevi

Assistant Professor, Department of Management
Karpagam Academy of Higher Education, Coimbatore

Abstract

Today's world is changing at a startling pace. Political and economic transformations seem to be occurring everywhere – as countries convert from command to demand economies, dictatorships move toward democracy, and monarchies build new civil institutions. These changes have created economic opportunities for women who want to own and operate businesses. Today, women in advanced market economies own more than 25% of all businesses and women-owned businesses in Africa, Asia, Eastern Europe and Latin America are growing rapidly. This paper focuses on woman entrepreneur. Any understanding of woman in global scene and especially in India, also the paper talks about the status of woman entrepreneurs and the problems faced by them when they set up and managed their own businesses in the competitive world of business environment Today's world is changing at a startling pace. Political and economic transformations seem to be occurring everywhere – as countries convert from command to demand economies, dictatorships move toward democracy, and monarchies build new civil institutions. These changes have created economic opportunities for women who want to own and operate businesses. Today, women in advanced market economies own more than 25% of all businesses and women-owned businesses in Africa, Asia, Eastern Europe and Latin America are growing rapidly. This paper focuses on woman entrepreneur. Any understanding of woman in global scene and especially in India, also the paper talks about the status of woman entrepreneurs and the problems faced by them when they set up and managed their own businesses in the competitive world of business environment.

Women Entrepreneurship" means an act of business ownership and business creation that empowers women economically in a position in society. Women entrepreneurship has gained significant attention in recent years as women continue to break barriers and establish successful

businesses. However, women entrepreneurs still face a variety of unique issues and challenges that can hinder their progress and limit their potential for success. The first challenge faced by women entrepreneurs is the persistent gender-based biases and stereotypes prevalent in society. These biases can affect women's access to resources, funding, and opportunities, creating barriers to entry and growth. Additionally, societal expectations related to gender roles and family responsibilities often place additional burdens on women entrepreneurs, making it challenging to balance work and personal life. This paper aims to delve deeper into the issues and challenges faced by women entrepreneurs, exploring their implications on economic and social development. By understanding and addressing these barriers, societies can unlock the full potential of women in entrepreneurship, promoting gender equality and fostering vibrant and inclusive entrepreneurial ecosystems.

Introduction

In recent years, the global landscape of entrepreneurship has witnessed a remarkable rise in the participation of women. Women entrepreneurs have emerged as key contributors to economic growth, innovation, and job creation. However, despite their significant strides, women entrepreneurs continue to face a multitude of unique issues and challenges that can hinder their progress and limit their potential for success. The empowerment of women through entrepreneurship is not only a matter of gender equality but also a catalyst for economic development. Studies have shown that increasing women's participation in the entrepreneurial sphere can have substantial positive effects on economies, including enhanced productivity, job creation, and poverty reduction. Moreover, women-led businesses often prioritize social and environmental sustainability, contributing to a more inclusive and equitable society. Nevertheless, numerous obstacles impede the advancement of women entrepreneurs. One of the most prevalent challenges is the persistence of gender-based biases and stereotypes deeply ingrained in society. These biases create barriers to entry, affecting women's access to resources, funding, and opportunities. Society's preconceived notions about gender roles often cast doubts on women's abilities as entrepreneurs and limit their potential for growth. Access to capital remains a critical issue for women entrepreneurs. Research consistently highlights the disparities faced by women in securing funding for their businesses compared to their male counterparts. Venture capital firms, angel investors, and financial institutions often exhibit biases that result in unequal distribution of funding, making it more challenging for women to start or expand their ventures. Networking and mentorship opportunities pose additional challenges for women entrepreneurs. The existing business networks, often male-dominated, can exclude or marginalize women, limiting their access to crucial connections, partnerships, and mentorship. Lack of representation and role models further hampers the growth and development of aspiring women entrepreneurs. Moreover, the absence of tailored support systems and resources designed specifically for

women entrepreneurs is a significant gap. Women may have distinct needs, such as access to affordable childcare facilities, flexible working arrangements, and targeted training programs. Without these resources, women entrepreneurs face additional hurdles in navigating the complex entrepreneurial landscape.

Work-life integration is yet another challenge faced by women entrepreneurs. Juggling the demands of running a business with family responsibilities and personal well-being can create a significant strain. The lack of adequate support systems and mechanisms to balance these competing priorities can lead to burnout and hinder the long-term sustainability of women-led businesses. Addressing these issues and challenges requires concerted efforts from various stakeholders, including governments, policymakers, financial institutions, and business support organizations. Recognizing and dismantling gender biases, implementing gender-responsive policies, and fostering inclusive entrepreneurial ecosystems are crucial steps towards empowering women entrepreneurs.

Definition of Women Entrepreneurship

The **GOI** has defined a women entrepreneurship as “an enterprise owned and controlled by a woman having a minimum financial interest of 51% of the capital and giving at least 51% of the employment generated in the enterprise to women”.

According to Schumpeter, an entrepreneur is an innovating individual who introduces something new into the economy. Any woman (or a group of women), who innovates, initiates or adapts an economic activity may be called a women entrepreneur.

According to Medha Dubhashi Vinze, a woman entrepreneur is a person who is an enterprising individual with an eye for opportunities and an uncanny vision, commercial acumen, with tremendous perseverance and above all a person who is willing to take risk with the unknown, because of the adventurous spirit she possesses.

Kerala Government defined women industrial units as units owned/ organized by women and engages in small scale and cottage industries with not less than 80% of the total workers as women.

With effect from 6th Feb. 1992, the definition of ‘Women Entrepreneurs’ Enterprises is as follows: “A small scale industrial units/industrially related services or business enterprise managed by one or more women entrepreneurs in proprietary concerns in which she/they will individually or jointly have share capital of not less than 51% as partners/shareholders/directors of a private limited company, members of co-operative society”.

Functions of Women Entrepreneurship

- Exploration of the prospects of starting a new business enterprise.
- Undertaking of risks and the handling of economic uncertainties involved in business.
- Introduction of innovation or imitation of innovations.
- Coordination, administration and control.
- Supervision and leadership.

Leadership Qualities of Women Entrepreneurship

Some of the outstanding qualities of women entrepreneurs are as follows:

1. Accept Challenges
2. Adventurous
3. Driver
4. Conscious
5. Hard work
6. Educated
7. Motivations
8. Determination to excel
9. Skill full
10. Experienced
11. Industrious
12. Intelligent
13. Studious
14. Perseverance
15. Patience
16. Unquenchable optimism

Reasons for the Slow Growth of Women Entrepreneurship

In spite of the initiatives taken by the government, the growth of women entrepreneurship is very slow. The reasons are outlined as below:

- Unfavourable family background
- Lack of business education
- Dual role of women
- Lack of aptitudes and training
- Absence of individualistic spirit
- Lack of freedom to choose a job according to ability, influence of sex, custom etc
- Inadequate infrastructure facilities

- Shortage of capital and technical knowhow
- Lack of adequate transport and communication facilities
- Shortage of power
- Lack of security
- Absence of ideal market conditions
- Corruption in administration.

Challenges Faced by Women Entrepreneurs in India

- Family restriction
- Lack of Finance
- Lack of Education
- Role Conflict
- Unfavorable Environment
- Lack of persistent Nature
- Lack of Mental strength
- Lack of Information
- Stiff Competition
- Mobility
- Male-Dominated Society
- Low Risk-Bearing Ability
- Scarcity of Raw Material

Family restriction: Women are expected to spend more time with their family members. They do not encourage women to travel extensively for exploiting business opportunities.

Lack of Finance: Finance is regarded as “life-blood” for any enterprise, be it big or small. However, women entrepreneurs suffer from shortage of finance on two counts. Family members do not encourage women entrepreneurs. They hesitate to invest money in the business venture initiated by women entrepreneurs. Bank and other Financial Institutions do not consider Middle Class Women Entrepreneurs as proper applicants for setting up their projects and they are hesitant to provide financial assistance to unmarried women or girls as they are unsure as to who will repay the loan – Either their parents or in-laws after their marriage. This humiliates unmarried women and they generally leave the idea of setting up their ventures.

For example, Kiran Mazumdar Shaw initially faced many problems regarding funds for her business. Banks were hesitant to give loan to her as biotechnology was a totally new field at that point of time and she was a woman entrepreneur, which was a rare phenomenon.

Lack of Education: In India, around three-fifths (60%) of women are still illiterate. Illiteracy is the root cause of socio-economic problems. Due to the lack of education and that too qualitative education, women are not aware of business, technology and market knowledge. Also, lack of education causes low achievement motivation among women. Thus, lack of education creates one type or other problems for women in the setting up and running of business enterprises. Women are generally denied of higher education, especially in rural areas and under developed countries. Women are not allowed to enrich their knowledge in technical and research areas to introduce new products.

Role Conflict: Marriage and family life are given more importance than career and social life in Indian society.

Unfavorable Environment: The society is dominated by males. Many business men are not interested to have business relationship with women entrepreneurs. Male generally do not encourage women entrepreneurs.

Lack of persistent Nature: Women generally have sympathy for others. They are very emotional. This nature should not allow them to get easily cheated in business.

Lack of Mental strength: Business involves risk. Women entrepreneurs get upset very easily when loss arises in business.

Lack of Information: Women entrepreneurs are not generally aware of the subsidies and incentives available for them. Lack of knowledge may prevent them from availing the special schemes.

Stiff Competition: Women face lot of competition from men. Due to limited mobility they find difficult to compete with men.

Mobility: Moving in and around the market, is again a tough job for Middle Class Women Entrepreneurs in Indian Social system.

Male-Dominated Society: Male chauvinism is still the order of the day in India. The Constitution of India speaks of equality between sexes. But, in practice, women are looked upon as abla, i.e. weak in all respects. Women suffer from male reservations about a women's role, ability and capacity and are treated accordingly. In nutshell, in the male-dominated Indian society, women are not treated equal to men. This, in turn, serves as a barrier to women entry into business.

Low Risk-Bearing Ability: Women in India lead a protected life. They are less educated and economically not self-dependent. All these reduce their ability to bear risk involved in running an enterprise. Risk-bearing is an essential requisite of a successful entrepreneur. In addition to above problems, inadequate infrastructural facilities, shortage of power, high cost of production, social attitude, low need for achievement and socioeconomic constraints also hold the women back from entering into business.

Scarcity of Raw Material: Most of the women enterprises are plagued by the scarcity of raw material and necessary inputs. Added to this are the high prices of raw material, on the one hand, and getting raw material at the minimum of discount, on the other. The failure of many women co-operatives in 1971 engaged in basket-making is an example how the scarcity of raw material sounds the death-knell of enterprises run by women (Gupta and Srinivasan 2009).

Remedies to Solve the Problems of Women Entrepreneurs

The remedial measures that can be undertaken to promote women entrepreneurship in India, are as follows.

- Promotional Help
- Training
- Selection of Machinery and Technology
- Finance
- Marketing Assistance
- Family support

Promotional Help: Government and NGOs must provide assistance to entrepreneurs, both in financial and non-financial areas.

Family support: Family should support women entrepreneurs and encourage them to establish and run business successfully.

Selection of Machinery and Technology: Women require assistance in selection of machinery and technology. Assistance must be provided to them in technical areas so that the business unit become successful.

Finance: Finance is one of the major problems faced by women entrepreneurs. Both family and government organizations should be liberal in providing financial assistance to them.

Marketing Assistance: Due to limited mobility, women are unable to market their goods. Assistance must be provided to help them to market their goods successfully in the economic environment.

Training: Women entrepreneurs must be given training to operate and run a business successfully. Training has to be given to women who are still reluctant to take up the entrepreneurial task.

- In banks and public financial institutions, special cells may be opened for providing easy finance to women entrepreneurs. Finance may be provided at concessional rates of interest.
- Women entrepreneurs' should be encouraged and assisted to set up co-operatives with a view to eliminate middlemen.

- Scarce and imported raw materials may be made available to women entrepreneurs on priority basis.
- Steps may be taken to make family members aware of the potential of girls and their due role in society.
- Honest and sincere attempts should be undertaken by the government and social organizations to increase literacy among females.
- In rural areas self-employment opportunities should be developed for helping women.
- Marketing facilities for the purpose of buying and selling of both raw and finished goods should be provided in easy reach.
- Facilities for training and development must be made available to women entrepreneurs. Family members do not like women to go to a distant place for training.

Therefore mobile training centers should be arranged. Additional facilities like a stipend, good hygienic chreches, transport facilities, etc., should be offered to attract more women to training centres.

Development of Women Entrepreneurship in India

Women empowerment should be one of the primary goals of a society. Women should be given equality, right of decision-making and entitlements in terms of dignity. They should attain economic independence. The most important step to achieve women empowerment is to create awareness among women themselves. Development of women can be achieved through health, education and economic independence. Realizing the importance of women entrepreneurs, Govt. of India has taken a number of measures to assist them. Some of the important measures are outlined as follows:

TRYSEM: Training of Rural Youth for Self-Employment was launched on 15th August 1979 which is still continuing. The objective of TRYSEM is to provide technical skills to rural youth between 18 and 35 years of age from families below the poverty line to enable them to take up self-employment in agriculture and allied activities, industries, services and business activities. This is a sub scheme of IRDP. Training given through ITIs, Polytechnics, Krishi Vigyan Kendra, Nehru YuvaKendras etc has helped many rural women set up their own micro enterprises with IRDP assistance.

Banks: Banks particularly commercial banks have formulated several schemes to benefit women entrepreneurs. These includes Rural Entrepreneurship Development Programmes and other Training programmes, promotion of rural non-farm enterprise, women venture etc.

NABARD: NABARD as an apex institution guides and assists commercial banks in paying special attention to women beneficiaries while financing. It has also been providing refinance to commercial banks so as to help the latter institutions to supplement their resources which could be deployed for the purpose of financing women beneficiaries.

Industrial Policy: The new Industrial policy of Government has specially highlighted the need for conducting special entrepreneurship programme for women.

Institutions and Voluntary Association: Several voluntary agencies like FICCI Ladies Organization (FLO), National Alliance of Young Entrepreneurs (NAYE) and others assist women entrepreneurs. NAYE has been a leading institution engaged in the promotion and development of entrepreneurship among women. It convened a conference of women entrepreneurs in November 1975.

National Policy for the Empowerment of Women, 2001

As to the commitments made by India during the Fourth World Conference on women held in Beijing during September, 1995, the Department of women and children has drafted a national policy for the empowerment of women. This is meant to enhance the status of women in all walks of life at par with men. Assistance to Women Entrepreneurs Entrepreneurship does not differentiate the sex. A number of facilities and assistance are offered to the entrepreneurs. However, certain additional incentives or facilities offered to women entrepreneurs are discussed as follows.

Small Industrial Development Organisation (SIDO): SIDO through a network of SISIs conduct the EDPs exclusively for women entrepreneurs. The aim is to develop entrepreneurial traits and qualities among women and enable them to identify entrepreneurial opportunities etc.

National Small Industries Corporation (NSIC): The H.P. scheme of NSIC provides preferential treatment to women entrepreneurs. It also conducts Entrepreneurs and Enterprise Building programmes for women.

Industrial Development Bank of India (IDBI)

The schemes of IDBI for women entrepreneurs are summarized as follows:
Promoter's Contribution: The IDBI set up the MahilaUdyan Nidhi (MUN) and Mahila Vikas Nidhi (MVN) schemes to help women entrepreneurs. IDBI conduct programmes of training and extension services through designated approved agencies and association with other development agencies like EDII, TCOs, KVIC etc.

Mall Industries Development Bank of India (SIDBI): SIDBI has special schemes for financial assistance to women entrepreneurs. It provides training and extension

services. It gives financial assistance at concessional terms in setting up tiny and small units.

Commercial Banks: The “Sthree Shakthi Package Scheme” of SBI provides a package of assistance to women entrepreneurs. The consultancy wings of SBI give guidance on project identification and project viability. The program of assistance such as repair and servicing, photocopying, dry cleaning, retail trade business enterprises, poultry farming, tailoring, etc. The Bank of India has introduced a scheme known as ‘Priyadarshini Yojana’ to help women entrepreneurs.

Conclusion

Entrepreneurship among women, no doubt improves the nation in general and of the family in particular. Women today are more willing to take up activities that once considered the preserve of men, and have proved that are second to no one with respect to contribution to the growth of the economy. Women entrepreneurship must be moulded properly with entrepreneurial traits and skill to meet the changes in trends, challenges global markets and also be competent enough to sustain and strive for excellence in the entrepreneurial arena.

DIGITAL INDIA: TRANSFORMING INDIA THROUGH TECHNOLOGY AND CONNECTIVITY

Dr.M. Gayathiri

*Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore*

Dr.B.Rathnapriya

*Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore*

Abstract

Digital India is an ambitious initiative launched by the Government of India with the aim of transforming the country into a digitally empowered society and knowledge economy. This abstract highlights the key points of the essay on Digital India, emphasizing the transformative power of technology and connectivity in various sectors. The essay explores the impact of Digital India on governance, education, healthcare, and the economy. It highlights the role of technology in promoting transparency, efficiency, and accessibility in public service delivery. The expansion of digital infrastructure and connectivity, including the BharatNet project and Common Service Centres, is discussed as a means to bridge the digital divide between urban and rural areas.

In the education sector, Digital India is enabling e-learning, digital certifications, and skill development through initiatives like NDEAR and SWAYAM. The role of technology in improving healthcare delivery, telemedicine, and creating a digital health ecosystem is also highlighted. Additionally, the essay explores the promotion of digital payments and financial inclusion, transforming the way financial transactions are conducted and providing formal banking services to previously marginalized sections of society. The abstract concludes by emphasizing the potential of Digital India to empower citizens, enhance service delivery, and drive economic growth. It highlights the need to address challenges related to digital literacy, data security, and infrastructure development to ensure the inclusive benefits of digital transformation reach all segments of society. Overall, Digital India is presented as a transformative initiative that leverages technology and connectivity to propel India towards a digitally empowered nation, fostering socio-economic progress and inclusive development.

Keywords: *Digital India, Technology, Connectivity, Transformation, Inclusive development.*

Introduction

Digital India is an ambitious initiative launched by the Government of India with the vision of transforming the country into a digitally empowered society and knowledge economy. The program recognizes the transformative power of technology and connectivity in driving inclusive growth, empowering citizens, and enhancing the delivery of public services. Digital India aims to bridge the digital

divide by ensuring that every individual, regardless of their location or socioeconomic background, has access to digital technologies and the internet. In the governance sector, Digital India has revolutionized the way public services are delivered and accessed. The program promotes e-governance initiatives, such as online portals and mobile applications, which enable citizens to interact with government departments and access services in a seamless and efficient manner. It has streamlined administrative processes, reduced paperwork, and minimized corruption through digital transactions and transparent systems. By embracing digital technologies, the government has been able to improve the efficiency, transparency, and accountability of public service delivery, making governance more accessible and citizen-centric.

Education is another sector that has been greatly impacted by Digital India. The initiative aims to promote digital literacy and technology-enabled learning in schools and colleges across the country. By providing digital infrastructure, e-learning content, and online resources, Digital India is transforming traditional classrooms into vibrant hubs of digital education. Students have access to a wide range of digital resources, interactive learning materials, and virtual classrooms, enabling personalized and immersive learning experiences. This empowers students to acquire 21st-century skills, fosters innovation, and prepares them for a technology-driven future. In the healthcare sector, Digital India has led to significant advancements in telemedicine, electronic health records, and healthcare information systems. The program seeks to leverage technology to improve healthcare accessibility, quality, and affordability. Through initiatives like the National Health Portal and telemedicine services, individuals in remote areas can access quality healthcare services and consult with medical professionals without the need for physical travel. Digital platforms and mobile applications facilitate the management of health records, ensuring seamless coordination between healthcare providers and enhancing patient care.

Digital India has also played a pivotal role in driving economic growth and entrepreneurship. The initiative has fostered the growth of the digital economy, enabling small and medium-sized enterprises (SMEs) to leverage technology for business expansion and market access. Start-ups have thrived under the Digital India ecosystem, with a supportive framework that includes funding opportunities, incubation centers, and simplified regulatory processes. The program has also promoted digital payments and financial inclusion, encouraging the adoption of cashless transactions and bringing financial services to the unbanked and underbanked populations. In conclusion, Digital India is a transformative initiative that harnesses the power of technology and connectivity to create a digitally inclusive

society and knowledge economy. By focusing on sectors such as governance, education, healthcare, and the economy, Digital India is driving positive change and empowering citizens to embrace the digital revolution. Through enhanced connectivity, access to digital services, and the promotion of digital literacy, the program is positioning India as a modern and inclusive nation, ready to take advantage of the opportunities offered by the digital age.

Governance and Public Services

Digital India has ushered in a new era of governance, marked by transparency, efficiency, and accessibility in public service delivery. Through various initiatives and platforms, such as the Digital Locker, e-Sign, and MyGov, the program has revolutionized the way citizens interact with the government and access essential services. The Digital Locker is an innovative platform that enables citizens to securely store their important documents online. This eliminates the need for physical copies and reduces the risk of document loss or damage. With the Digital Locker, citizens can access their documents from anywhere at any time, making it convenient and hassle-free. Additionally, this platform enhances data security by implementing robust encryption and authentication measures. The e-Sign initiative has simplified and digitized the process of signing documents. It allows citizens to digitally sign documents, eliminating the need for physical signatures and paper-based transactions. This not only saves time and resources but also enhances the authenticity and integrity of the documents. The implementation of e-Sign has transformed the way contracts, agreements, and other legal documents are executed, making it more efficient, secure, and environmentally friendly.

The MyGov platform has revolutionized citizen engagement and participation in policy-making discussions. It serves as an interactive platform that connects citizens directly with the government, enabling them to share their ideas, suggestions, and feedback on various initiatives and policies. Through MyGov, citizens have a voice in shaping the governance landscape, fostering a sense of ownership and accountability. The platform has facilitated open dialogue, transparency, and collaboration between the government and its citizens, resulting in more inclusive and citizen-centric policies. Furthermore, the digitization of government processes and services has significantly reduced bureaucratic red tape and minimized corruption. Citizens can now access essential services online, such as applying for government schemes, passports, and income tax filings, without the need for physical visits to government offices. This has streamlined administrative procedures, reducing paperwork and processing times. It has also minimized opportunities for corruption and bribery, as digital transactions leave a clear audit trail and promote accountability. Digital India has made governance more efficient

and citizen-friendly. The initiatives and platforms introduced under the program have leveraged technology to empower citizens, improve service delivery, and enhance transparency. By embracing digital transformation, the government has created a streamlined and accessible ecosystem that caters to the needs and expectations of its citizens. As a result, Digital India has not only simplified government processes but also enhanced the overall experience of interacting with the government, making it more inclusive and responsive to citizen demands.

Digital Infrastructure and Connectivity

Digital India has recognized the significance of digital infrastructure and connectivity in enabling inclusive growth and bridging the digital divide between urban and rural areas. To achieve this, the program has placed a strong emphasis on expanding digital infrastructure across the country. One of the key initiatives under Digital India is the BharatNet project. It aims to connect over 250,000 village panchayats (local administrative bodies) with high-speed broadband connectivity. By providing internet access to previously underserved rural areas, the BharatNet project is instrumental in bringing digital opportunities to remote regions. This increased connectivity has opened up a world of possibilities, enabling rural communities to participate in the digital economy, access e-commerce platforms, and engage in e-governance activities. It has created opportunities for digital entrepreneurship, allowing rural residents to leverage technology for economic growth and development.

In addition to the BharatNet project, Digital India has established Common Service Centres (CSCs) across the country. These CSCs act as access points for digital services and information, particularly in rural areas. They serve as a one-stop destination for citizens to avail themselves of various government and private sector services, such as applying for government schemes, utility bill payments, banking services, and online education. CSCs are equipped with computers, internet connectivity, and trained personnel who assist citizens in accessing digital services and navigating online platforms. These centers play a crucial role in bridging the digital divide by bringing digital services and information closer to the rural population. The expansion of digital infrastructure and connectivity has far-reaching implications for the socio-economic development of rural areas. It empowers rural communities by providing access to information, education, healthcare services, and government schemes. With internet connectivity, farmers can access market information, weather updates, and agricultural best practices, enhancing their productivity and income. Students in remote areas can access online educational resources, participate in digital classrooms, and pursue e-learning courses. Digital connectivity also enables telemedicine services, allowing rural residents to consult

with doctors remotely and access quality healthcare. Moreover, the expansion of digital infrastructure has led to the growth of digital entrepreneurship in rural areas. It has opened up avenues for rural artisans, craftspeople, and small-scale producers to showcase and sell their products through e-commerce platforms. This has enabled them to access a wider market, increase their visibility, and generate sustainable livelihoods. In conclusion, Digital India's emphasis on expanding digital infrastructure and connectivity is instrumental in bridging the digital divide between urban and rural areas. The BharatNet project and Common Service Centres (CSCs) have significantly enhanced internet penetration and digital access in previously underserved regions. The increased connectivity has opened up opportunities for e-commerce, e-governance, and digital entrepreneurship, empowering rural communities and driving socio-economic development. By fostering digital inclusion and equal access to digital resources, Digital India is transforming the rural landscape and paving the way for a digitally empowered and inclusive India.

Education and Skill Development

Digital India is driving a significant transformation in the education sector, leveraging technology to enhance learning outcomes and promote access to quality education for all. The program recognizes the power of digital tools and platforms in making education more inclusive, interactive, and engaging. One of the key initiatives under Digital India is the National Digital Education Architecture (NDEAR). This initiative aims to establish a common digital infrastructure for schools and colleges across the country. By providing a standardized platform for digital education, NDEAR facilitates the delivery of e-learning content, online assessments, and digital certifications. This digital infrastructure enables students and educators to access educational resources anytime, anywhere, breaking the barriers of time and location. It promotes personalized and self-paced learning, allowing students to explore diverse subjects and acquire knowledge beyond traditional textbooks.

The SWAYAM (Study Webs of Active Learning for Young Aspiring Minds) platform is another significant component of Digital India's impact on education. SWAYAM offers free online courses from top Indian educational institutions, covering a wide range of subjects and disciplines. It enables learners to access high-quality educational content and engage in interactive learning experiences. Learners can acquire new skills, enhance their knowledge, and earn certifications, opening up opportunities for personal and professional growth. SWAYAM promotes lifelong learning and skill development, fostering a culture of continuous education and upskilling. Digital India also places a strong emphasis on digital literacy and skill

development through initiatives like the PradhanMantriGramin Digital SakshartaAbhiyan (PMGDISHA). This initiative focuses on equipping citizens, particularly in rural areas, with essential digital skills. PMGDISHA offers training programs and resources to enhance digital literacy, enabling individuals to navigate digital platforms, access information, and effectively utilize digital tools. By fostering digital literacy, PMGDISHA empowers citizens to participate in the digital economy, improve their employability, and access a wide range of online services and opportunities.

Furthermore, the integration of technology in education has the potential to address challenges related to accessibility, equity, and quality. It enables students from remote or disadvantaged areas to access educational resources and connect with expert educators through virtual classrooms and online learning platforms. Technology facilitates collaborative learning, enabling students to engage in group discussions, share ideas, and collaborate on projects irrespective of their geographical locations. Additionally, digital assessments and feedback mechanisms promote timely and constructive evaluation, enabling educators to track student progress and provide personalized guidance. In conclusion, Digital India is transforming the education sector by harnessing the potential of technology to enhance learning outcomes and make education accessible to all. The National Digital Education Architecture (NDEAR), SWAYAM platform, and initiatives like PMGDISHA are instrumental in promoting digital literacy, providing access to high-quality educational resources, and fostering skill development. By embracing technology in education, Digital India is paving the way for a more inclusive, flexible, and learner-centric education system that prepares individuals for the challenges and opportunities of the digital era.

Healthcare and Telemedicine

Digital India is playing a pivotal role in revolutionizing healthcare delivery by harnessing the power of technology and connectivity. The program aims to improve access, quality, and affordability of healthcare services through various initiatives and platforms. The National Digital Health Mission (NDHM) is a flagship initiative under Digital India that seeks to create a comprehensive digital health ecosystem. It aims to provide every citizen with a unique health ID, digital health records, and a platform for tele consultations. The health ID acts as a digital repository of an individual's medical history, allowing for seamless sharing of health information across healthcare providers. This enhances continuity of care, eliminates the need for redundant tests or procedures, and promotes patient safety. The digital health records enable healthcare professionals to access critical patient information, leading to more accurate diagnoses, effective treatment planning, and improved patient

outcomes. Furthermore, the tele consultation platform allows individuals to consult with healthcare professionals remotely, overcoming geographical barriers and bringing healthcare services to the doorsteps of underserved populations in rural and remote areas.

Telemedicine initiatives are a significant component of Digital India's impact on healthcare. Through telemedicine, healthcare professionals can remotely diagnose and treat patients using telecommunications technology. This enables individuals in remote areas to access specialized healthcare services without the need for physical travel. Telemedicine facilitates timely interventions, particularly in emergency cases, and improves healthcare outcomes for underserved communities. It also reduces the burden on healthcare facilities, allowing for better resource allocation and optimized healthcare delivery. The use of technology in healthcare enhances data collection, analysis, and surveillance, leading to evidence-based policymaking and disease management. Digital platforms enable the seamless collection and integration of health data, which can be analyzed to identify disease patterns, monitor population health trends, and respond effectively to public health emergencies. The utilization of big data analytics and artificial intelligence in healthcare enables predictive modeling, early detection of outbreaks, and personalized interventions. This empowers healthcare systems to make informed decisions, allocate resources efficiently, and implement targeted interventions for better population health outcomes.

Additionally, digital technologies facilitate remote patient monitoring and home healthcare. Wearable devices, remote sensors, and mobile applications allow individuals to monitor their health parameters, track medication adherence, and receive personalized health recommendations. This promotes preventive care, early detection of health issues, and self-management of chronic conditions. Digital tools also empower patients by providing access to health information, educational resources, and support networks, fostering a patient-centric approach to healthcare. In conclusion, Digital India is revolutionizing healthcare delivery by leveraging technology and connectivity. The National Digital Health Mission (NDHM), telemedicine initiatives, and the use of technology in data collection and analysis are transforming access, quality, and affordability of healthcare services. By creating a digital health ecosystem, Digital India enables seamless sharing of health information, facilitates remote consultations, and enhances disease management. Through these initiatives, Digital India is making healthcare more patient-centered, efficient, and responsive to the needs of diverse populations, ultimately improving the overall health and well-being of the nation.

Digital Payments and Financial Inclusion

Digital India has played a pivotal role in promoting digital payments and financial inclusion, transforming the way financial transactions are conducted and increasing access to formal financial services for the unbanked and under banked populations. The demonetization drive in 2016 acted as a catalyst for the adoption of digital payment methods. The sudden withdrawal of high-value currency notes encouraged individuals and businesses to embrace digital alternatives. This led to the proliferation of mobile wallets, Unified Payments Interface (UPI), and Aadhaar-enabled payment systems. Mobile wallets provided a convenient and secure way to make digital transactions, while UPI revolutionized peer-to-peer payments, enabling individuals to transfer funds instantly using their smartphones. Aadhaar-enabled payment systems leveraged the unique identification number to facilitate biometric authentication, making transactions more secure and convenient.

The shift towards digital payments has significantly reduced the reliance on cash, resulting in several benefits. It has promoted transparency in financial transactions, as digital payments leave a clear audit trail, reducing the risk of corruption, tax evasion, and illicit activities. Digital payments have also improved convenience and efficiency, eliminating the need for physical currency and enabling quick and seamless transactions. Moreover, the adoption of digital payments has stimulated the growth of the digital economy, promoting entrepreneurship and innovation in the financial technology sector. Digital India has also prioritized financial inclusion by implementing various initiatives and programs. The Jan DhanYojana (PradhanMantri Jan DhanYojana) aimed to provide universal access to banking services by offering no-frills bank accounts to unbanked individuals. This initiative facilitated financial inclusion by enabling previously marginalized sections of society to open bank accounts and access formal financial services. It also encouraged saving habits and provided a platform for government benefit transfers.

The Direct Benefit Transfer (DBT) program further strengthened financial inclusion by digitizing the distribution of social welfare benefits. Through DBT, government subsidies and welfare schemes are directly transferred to the beneficiaries' bank accounts, eliminating intermediaries and ensuring timely and efficient delivery of benefits. This has reduced leakages, improved accountability, and empowered beneficiaries to manage their finances more effectively. The PradhanMantri Mudra Yojana (PMMY) has played a significant role in providing credit facilities to micro, small, and medium-sized enterprises (MSMEs). This initiative offers collateral-free loans to individuals and small businesses, fostering entrepreneurship and economic growth. By providing access to formal credit, PMMY has enabled MSMEs to expand their businesses, invest in technology, and

create employment opportunities. In conclusion, Digital India has been instrumental in promoting digital payments and financial inclusion in India. The demonetization drive accelerated the adoption of digital payment methods, reducing reliance on cash and promoting transparency in financial transactions. Initiatives like Jan DhanYojana, Direct Benefit Transfer, and PradhanMantri Mudra Yojana have strengthened financial inclusion by providing banking services, social welfare benefits, and credit facilities to previously marginalized sections of society. The digitization of financial transactions and the expansion of formal financial services have contributed to economic growth, improved financial literacy, and empowered individuals and businesses across the country.

Conclusion

Digital India is a transformative initiative that aims to leverage technology and connectivity to drive the socio-economic development of India. By harnessing the power of digital technologies, the program has the potential to bridge the digital divide and bring the benefits of the digital revolution to all segments of society. One of the key objectives of Digital India is to empower citizens through digital literacy and skills development. Digital literacy programs aim to equip individuals with the necessary knowledge and skills to navigate the digital landscape effectively. By promoting digital literacy, the program ensures that citizens are able to take full advantage of the opportunities presented by the digital era, such as accessing information, engaging in e-commerce, and participating in online platforms. Addressing the digital literacy gap is crucial to ensure inclusivity and equal access to digital resources and opportunities.

Data security is another important aspect that needs to be addressed to safeguard the interests of individuals and organizations. As digital technologies become more pervasive, ensuring the security and privacy of data becomes paramount. Measures such as robust data protection laws, encryption, and cybersecurity protocols are essential to protect sensitive information and maintain trust in digital transactions. Strengthening data security frameworks will encourage greater adoption of digital technologies and enhance confidence in the digital ecosystem. Infrastructure development is a key enabler for the success of Digital India. It is important to expand and improve the digital infrastructure, including broadband connectivity, to reach all corners of the country. The government has initiated various projects, such as the BharatNet project, to connect rural areas and provide high-speed internet access. Continued investment in infrastructure development will lay the foundation for digital inclusion and ensure that even remote and marginalized communities can benefit from the digital transformation.

Digital India has the potential to revolutionize service delivery in various sectors, such as governance, education, healthcare, and agriculture. Through e-governance initiatives, citizens can access public services more efficiently and transparently. Digital education platforms provide access to quality education resources and opportunities for skill development. Technology-enabled healthcare solutions improve access to healthcare services, especially in remote areas. Digital agriculture initiatives empower farmers with real-time information on weather conditions, market trends, and farming practices. These advancements enhance efficiency, transparency, and accessibility, driving overall socio-economic progress. Furthermore, the digital transformation facilitated by Digital India has the potential to fuel economic growth and spur innovation. The adoption of digital technologies by businesses enables them to improve efficiency, expand market reach, and develop innovative products and services. It opens up new avenues for entrepreneurship, job creation, and economic diversification. Digital payments and e-commerce platforms contribute to the growth of the digital economy, fostering financial inclusion and driving consumer spending. In conclusion, Digital India is transforming India by harnessing the power of technology and connectivity. The program has the potential to bridge the digital divide, empower citizens, improve service delivery, and boost economic growth. However, it is crucial to address challenges related to digital literacy, data security, and infrastructure development to ensure that the benefits of digital transformation reach all segments of society. By embracing digital technologies and leveraging connectivity, India is poised to become a digitally empowered nation, leading to socio-economic progress, innovation, and inclusive development.

WOMEN ENTREPRENEURSHIP: EMPOWERING WOMEN, DRIVING ECONOMIC GROWTH

Dr.R.Sarojadevi

*Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore*

Ms. S.Reshmi

*Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore*

Abstract

Women entrepreneurship is a significant catalyst for empowering women and driving economic growth. This abstract provides a concise overview of the seminar paper that explores the concept of women entrepreneurship, its impact on women's empowerment, and its role in fostering economic growth. The paper examines the challenges faced by women entrepreneurs, the benefits of promoting women entrepreneurship, and the strategies to create an enabling environment for women-owned businesses. Additionally, successful examples and best practices from around the world are highlighted to demonstrate the positive outcomes of supporting women entrepreneurs. Ultimately, the abstract emphasizes the importance of women entrepreneurship in empowering women and contributing to sustainable economic development.

Keywords: *Women entrepreneurship, Empowerment, Economic growth, Gender equality, Business development.*

Introduction

Women entrepreneurship is a dynamic and evolving concept that highlights the active participation of women in the entrepreneurial landscape. It encompasses various forms of business ownership and engagement, reflecting the diverse range of entrepreneurial activities undertaken by women worldwide. At its core, women entrepreneurship involves women identifying and seizing business opportunities, taking on risks, and assuming leadership roles to achieve their entrepreneurial goals. Women entrepreneurs play a vital role in driving innovation, job creation, and economic growth. They contribute to the development of vibrant and inclusive entrepreneurial ecosystems that foster social and economic progress. Women entrepreneurship encompasses a broad spectrum of business activities. It includes self-employment, where women establish and manage their own businesses, often operating as sole proprietors. This can range from freelancing and consultancy services to retail businesses and small-scale enterprises. Women entrepreneurs also establish and lead small and medium-sized enterprises (SMEs), which can be either traditional brick-and-mortar businesses or technology-driven ventures.

Additionally, women play an increasingly prominent role in the startup ecosystem, founding and scaling innovative businesses that leverage technology, digital platforms, and disruptive business models.

Crucially, women entrepreneurship goes beyond the mere ownership of businesses. It encompasses active involvement in all stages of business development, from conceptualization and market research to strategic planning, implementation, and growth. Women entrepreneurs bring their unique perspectives, skills, and experiences to the table, infusing their ventures with creativity, resilience, and a commitment to making a positive impact. Women entrepreneurship is influenced by various factors, including social, cultural, economic, and institutional contexts. It can be shaped by both internal and external drivers, such as personal aspirations, financial independence, passion for a particular industry, and the need to overcome societal barriers and gender inequalities. Moreover, women entrepreneurs often face distinct challenges, including gender biases, limited access to financial resources, cultural expectations, and work-life balance considerations. Overcoming these challenges requires supportive ecosystems, policies, and interventions that promote gender equality, provide access to finance and networks, and foster an inclusive and enabling business environment. Thus, women entrepreneurship represents a multifaceted and dynamic phenomenon. It encompasses the identification, initiation, and management of businesses by women, across various sectors and scales. Women entrepreneurs contribute significantly to economic growth, innovation, and job creation. They play a crucial role in challenging traditional gender roles and breaking barriers, ultimately paving the way for a more equitable and inclusive entrepreneurial landscape. By acknowledging the diverse forms and contributions of women entrepreneurship, societies can create an environment that encourages and supports women in pursuing their entrepreneurial aspirations and realizing their full potential.

Importance and Relevance of Women Entrepreneurship

Women entrepreneurship holds immense importance in multiple dimensions, making it a crucial driver of social and economic progress. The significance of women entrepreneurship can be observed in the following aspects:

1. **Empowerment of Women:** Women entrepreneurship provides a platform for women to exercise their skills, talents, and creativity. By starting and managing their businesses, women gain a sense of economic independence, allowing them to make their own decisions and control their financial futures. This empowerment extends beyond economic aspects, as women entrepreneurs often experience increased self-confidence, leadership development, and personal growth. By challenging traditional gender roles

and stereotypes, women entrepreneurship contributes to breaking down barriers and creating a more inclusive society.

2. **Economic Growth and Job Creation:** Women-owned businesses are a driving force behind economic growth and job creation. By establishing and expanding their enterprises, women entrepreneurs contribute to the overall productivity and competitiveness of the economy. Women-owned businesses create employment opportunities not only for themselves but also for others, addressing unemployment and reducing poverty levels. Moreover, women entrepreneurs often bring fresh perspectives, innovative ideas, and unique solutions to the market, fostering innovation and diversification of industries.
3. **Promotion of Entrepreneurial Ecosystems:** Women entrepreneurship plays a vital role in fostering entrepreneurial ecosystems. By encouraging women to start their businesses, societies promote a culture of entrepreneurship that benefits everyone. Women entrepreneurs serve as role models, inspiring others to pursue their entrepreneurial aspirations and fostering a supportive environment for future generations of women entrepreneurs. The presence of women-owned businesses encourages collaboration, knowledge-sharing, and mentorship, nurturing a vibrant and inclusive entrepreneurial ecosystem.
4. **Enhanced Competitiveness and Productivity:** Women entrepreneurs bring distinctive perspectives, approaches, and innovative solutions to the market. Their unique experiences, skills, and insights contribute to a more diverse and dynamic business landscape. By embracing diversity, businesses become more adaptable, creative, and responsive to changing market demands. This enhanced competitiveness and productivity translate into improved business performance, increased customer satisfaction, and overall economic growth.

Thus, women entrepreneurship holds significant importance in empowering women, driving economic growth, and fostering innovation. It enables women to exercise their skills, challenge societal norms, and gain economic independence. Women-owned businesses contribute to job creation, economic diversification, and enhanced competitiveness. By recognizing and supporting women entrepreneurship, societies can unlock the full potential of women as entrepreneurs, creating a more equitable and prosperous future for all.

Challenges Faced by Women Entrepreneurs

- a. **Gender biases and stereotypes:** Women entrepreneurs often face gender biases and stereotypes that can hinder their progress. Society's preconceived notions about gender roles and expectations may result in discriminatory treatment, limiting women's access to opportunities, resources, and networks.

Overcoming these biases requires addressing cultural attitudes and promoting gender equality in entrepreneurship.

- b. Limited access to financial resources and funding: Women entrepreneurs often encounter challenges in accessing financial resources and funding. Traditional financial institutions may have biases or require collateral that women may not possess. Limited access to capital hampers the growth and scalability of women-owned businesses. Creating gender-responsive financial policies, facilitating access to microfinance, venture capital, and providing tailored financial support can help address this issue.
- c. Balancing work and family responsibilities: Women often face the challenge of balancing their entrepreneurial pursuits with family responsibilities. The expectation of caretaking and societal norms around gender roles can pose additional burdens for women entrepreneurs. Supportive policies, such as flexible working arrangements, affordable childcare options, and social support systems, can help women entrepreneurs manage their dual roles effectively.
- d. Lack of supportive networks and mentorship opportunities: Women entrepreneurs may face a lack of supportive networks and mentorship opportunities, which are crucial for business guidance, knowledge-sharing, and access to resources. The absence of role models and mentors who understand the unique challenges faced by women entrepreneurs can limit their growth and success. Creating networking platforms, mentorship programs, and fostering collaboration among women entrepreneurs can provide the necessary support and guidance.

Addressing these challenges requires a multi-faceted approach involving stakeholders at various levels. Governments can play a vital role by implementing policies that promote gender equality, providing financial incentives, and creating an enabling environment for women entrepreneurs. Businesses and organizations can support women entrepreneurs by establishing mentorship programs, promoting diversity and inclusion, and offering training and capacity-building initiatives. Civil society can advocate for gender equality and raise awareness about the challenges faced by women entrepreneurs, fostering a supportive ecosystem for their success. By addressing gender biases, ensuring access to financial resources, supporting work-life balance, and creating supportive networks, societies can create an environment that empowers women entrepreneurs. Overcoming these challenges will unlock the full potential of women entrepreneurs, driving economic growth, innovation, and creating a more inclusive and equitable entrepreneurial landscape.

Benefits of Promoting Women Entrepreneurship

- a. **Economic growth and job creation:** Women entrepreneurship contributes significantly to economic growth and job creation. Women-owned businesses stimulate economic activity, generate employment opportunities, and contribute to the overall GDP of a nation. By starting and growing businesses, women entrepreneurs create new jobs, boost productivity, and drive innovation, leading to sustainable economic development.
- b. **Innovation and diversity in business:** Women entrepreneurs bring unique perspectives, experiences, and approaches to the business world, fostering innovation and diversity. Their diverse backgrounds and insights lead to creative problem-solving and the development of new products, services, and business models. The inclusion of women entrepreneurs in various industries promotes diversity, which is essential for competitiveness, adaptability, and addressing the needs of diverse customer bases.
- c. **Empowerment and gender equality:** Women entrepreneurship is a catalyst for empowering women and achieving gender equality. By starting and managing their businesses, women gain economic independence, decision-making power, and the ability to challenge traditional gender norms and stereotypes. Entrepreneurship provides a platform for women to exercise their skills, talents, and leadership abilities, ultimately leading to their personal and professional empowerment. Gender equality is promoted as women entrepreneurs break barriers, shatter glass ceilings, and inspire others to pursue their entrepreneurial aspirations.
- d. **Social and community development:** Women entrepreneurship positively impacts social and community development. Women-owned businesses often contribute to their local communities by creating employment opportunities, supporting local suppliers, and fostering economic resilience. Women entrepreneurs are also more likely to prioritize social responsibility and community development initiatives, leveraging their businesses to address social and environmental challenges. By contributing to social and community development, women entrepreneurs play a crucial role in building inclusive and sustainable societies.

The combined effects of economic growth, innovation, empowerment, and social development contribute to the overall advancement of societies. Women entrepreneurship has the potential to transform economies and create positive social change. By recognizing the value of women's contributions and creating an enabling environment, societies can harness the full potential of women entrepreneurs, leading to long-term economic prosperity, gender equality, and sustainable development.

Strategies to Foster an Enabling Environment for Women-Owned Businesses

- a. **Policy reforms and legal frameworks:** Governments can promote women entrepreneurship through policy reforms and the establishment of supportive legal frameworks. These may include measures such as anti-discrimination laws, gender-responsive business regulations, and equal access to business opportunities. Policy reforms can also focus on promoting gender equality in education, labor laws, and access to healthcare, creating an enabling environment for women entrepreneurs to thrive.
- b. **Access to finance and targeted financial support:** Access to finance is crucial for the growth and sustainability of women-owned businesses. Governments and financial institutions can develop initiatives to provide women entrepreneurs with easier access to loans, venture capital, and microfinance. Targeted financial support programs can help address the specific needs and challenges faced by women entrepreneurs, including collateral requirements, financial literacy, and risk management.
- c. **Business development programs and training:** Business development programs and training are essential in equipping women entrepreneurs with the necessary skills, knowledge, and resources to succeed in their ventures. These programs can include entrepreneurship training, leadership development, marketing and sales strategies, financial management, and access to business networks. Providing mentorship opportunities and business incubation programs can further support the growth and sustainability of women-owned businesses.
- d. **Networking and mentorship initiatives:** Networking and mentorship play a crucial role in the success of women entrepreneurs. Establishing networking platforms, industry-specific associations, and mentorship programs allows women entrepreneurs to connect with like-minded individuals, gain insights from experienced professionals, and access business opportunities. Mentorship initiatives can provide guidance, support, and valuable advice on navigating the entrepreneurial journey, overcoming challenges, and achieving business goals.
- e. **Creating supportive communities and platforms:** Creating supportive communities and platforms is essential for fostering an ecosystem where women entrepreneurs can thrive. This involves building collaborative networks, both online and offline, that provide a sense of belonging, shared experiences, and mutual support. Women-focused business associations, online forums, and entrepreneurship communities create spaces for knowledge-sharing, collaboration, and collective advocacy for women entrepreneurs.

By implementing these strategies, governments, organizations, and stakeholders can create a supportive ecosystem that nurtures and empowers women entrepreneurs. The combination of policy reforms, access to finance, business development programs, networking opportunities, and supportive communities can remove barriers, increase opportunities, and enhance the success rate of women-owned businesses. Ultimately, this fosters a more inclusive and equitable entrepreneurial landscape, leading to economic growth, innovation, and social progress.

Successful Examples and Best Practices

- a. Case studies of successful women entrepreneurs: Examining case studies of successful women entrepreneurs provides valuable insights into their journeys, strategies, and achievements. These case studies showcase the diverse range of industries, business models, and innovative approaches pursued by women entrepreneurs. By analyzing their experiences, challenges, and successes, researchers and policymakers can identify key factors that contribute to their success and extract best practices that can be replicated or adapted in different contexts.
- b. Government initiatives and programs supporting women entrepreneurship: Governments around the world have recognized the importance of supporting women entrepreneurship and have implemented various initiatives and programs. These initiatives include financial incentives, business development support, access to markets, and mentorship programs specifically designed for women entrepreneurs. Studying and evaluating the effectiveness of these government programs helps identify successful approaches and areas for improvement. It also provides insights into the role of policymakers in fostering an enabling environment for women entrepreneurs.
- c. Collaboration between public and private sectors: Collaboration between the public and private sectors is crucial for promoting women entrepreneurship. Public-private partnerships can leverage the strengths and resources of both sectors to create comprehensive support systems for women entrepreneurs. Such collaborations can include joint initiatives, mentorship programs, access to funding, market linkages, and capacity-building initiatives. Exploring successful collaborations between the public and private sectors sheds light on effective models of engagement and highlights the benefits of synergistic efforts in supporting women entrepreneurs.
- d. Lessons learned and key takeaways: Reflecting on the experiences and outcomes of women entrepreneurship initiatives allows researchers,

policymakers, and practitioners to distill key lessons and takeaways. These insights help identify common challenges faced by women entrepreneurs, effective strategies for addressing those challenges, and potential areas for further improvement. Lessons learned from previous initiatives can guide future policy decisions, program design, and resource allocation. They also contribute to the ongoing dialogue and knowledge-sharing among stakeholders in the women entrepreneurship ecosystem.

By delving into case studies, examining government initiatives, studying collaborative efforts, and extracting lessons learned, researchers and policymakers can develop a comprehensive understanding of the factors that contribute to the success of women entrepreneurs. These insights inform evidence-based policy recommendations, program enhancements, and the formulation of holistic strategies to further promote and support women entrepreneurship.

Suggestions to Stakeholders for Promoting Women Entrepreneurs

Achieving the full potential of women entrepreneurship requires collective action from stakeholders and policymakers. Stakeholders, including governments, business organizations, educational institutions, civil society, and the private sector, must collaborate to create an enabling environment for women entrepreneurs. This involves:

1. **Implementing gender-responsive policies:** Policymakers should develop and implement policies that promote gender equality, eliminate discriminatory practices, and foster supportive business environments. This includes addressing legal barriers, improving access to finance, providing business development support, and facilitating access to markets and networks.
2. **Enhancing access to finance and resources:** Financial institutions and organizations should ensure equal access to financial resources and funding opportunities for women entrepreneurs. This may involve creating specialized loan programs, venture capital funds, and microfinance schemes tailored to the needs of women-owned businesses. Providing mentorship programs, networking opportunities, and capacity-building initiatives can also empower women entrepreneurs.
3. **Encouraging education and training:** Educational institutions should integrate entrepreneurship education and training programs that specifically cater to the needs of women entrepreneurs. By equipping women with the necessary skills, knowledge, and confidence, educational institutions can play a pivotal role in fostering an entrepreneurial mindset and nurturing future women entrepreneurs.

4. Building supportive networks and mentorship programs: Stakeholders should establish networking platforms, mentorship programs, and peer support networks that provide women entrepreneurs with guidance, role models, and access to resources. Mentors and role models can offer valuable insights, advice, and support, helping women entrepreneurs navigate the challenges and complexities of entrepreneurship.
5. Raising awareness and changing societal attitudes: Collective efforts should be made to challenge gender biases, promote gender equality, and raise awareness about the importance of women entrepreneurship. This involves fostering a cultural shift that recognizes and celebrates the achievements of women entrepreneurs, challenging stereotypes, and promoting diverse representation in business and leadership roles.

By taking concerted action, stakeholders and policymakers can create an ecosystem that empowers and supports women entrepreneurs. This not only benefits women individually but also contributes to economic growth, social progress, and the achievement of sustainable development goals. It is a collective responsibility to create an inclusive and equitable society that values and harnesses the potential of women entrepreneurs.

Conclusion

Continued efforts to support women entrepreneurship are crucial for several reasons. Firstly, promoting women entrepreneurship aligns with the principles of gender equality and empowerment, fostering an inclusive and equitable society. By creating opportunities and addressing barriers, women entrepreneurs can fully participate in the economic and social spheres, contributing to their personal growth and the overall development of communities and nations. Secondly, supporting women entrepreneurship drives economic growth and innovation. Women-owned businesses have the potential to generate substantial economic impact, job creation, and productivity gains. By unlocking the untapped entrepreneurial potential of women, economies can benefit from increased competitiveness, diversification, and market resilience. Moreover, women entrepreneurs often introduce unique perspectives, ideas, and products to the market, leading to innovation and addressing unmet needs. Thirdly, continued efforts to support women entrepreneurship contribute to social progress and community development. Women entrepreneurs tend to reinvest in their communities, creating positive social change and improving the quality of life for themselves and others. They act as role models, inspiring other women and girls to pursue their entrepreneurial aspirations and challenge societal norms. By fostering supportive ecosystems for women

entrepreneurs, societies can advance gender equality, break down barriers, and create more inclusive and sustainable communities.

ROLE OF TECHNOLOGY IN NEP 2020

Dr. (Mrs.) R. Eswari, M.Com., M.Phil., PGDCA ,Ph.D.,
Assistant Professor, Department of B.Com (CA)
PSGR Krishnammal College for Women, Coimbatore

Ms. Sagana.S
Student,
PSGR Krishnammal College for Women, Coimbatore

Abstract

After 34 years, the country now has a new education policy, thanks to the Union Cabinet's ratification of National Education Policy 2020. The integration of technology is heavily emphasized in NEP 2020 since technology can serve as a significant role in paving the road for holistic development. NEP 2020 places a strong emphasis on regional languages, with E-courses being established in the same. Furthermore, virtual labs will be created. It is also important to note that a National Educational Technology Forum (NETF) is being formed. NEP-2020 is a game-changing step toward improving the education system. Technology, which has permeated practically every aspect of life, makes things more accessible, and there is a rising need to integrate technology in the education sector as well. Constructive measures are being taken toward implementation, and NEP 2020 has cleared the road for it through various digital platforms being presented. In this paper, we will attempt to explain the policy's various components, with a special emphasis on technology and its implementation.

Keywords: National Education Policy 2020, Technology, Accessibility, ICT.

Introduction

The Union Cabinet of India approved the National Education Policy of India 2020 (NEP 2020) on July 29, 2020, outlining the goal of India's new education system. It is the successor to the previous National Policy on Education from 1986. The policy's objective is to create an education system anchored in Indian ethos that directly contributes to the transformation of India by delivering high-quality education to all, developing India into a global knowledge giant. The new grade system calls into doubt the existing educational infrastructure of various educational institutions in India, calling the 'qualifications' supplied by these institutions into question. The traditional definitions of basic and secondary education will likewise change dramatically as their goals change. The ultimate objective of the New Education Policy 2020 is represented by the 'Atma Nirbhar Bharat program' and 'NIPUN Bharat'. The government's ultimate goal is to reach five crore youngsters from three to eleven years old so that they can actively pursue their life goals. The employment of educational technology and information and communication technologies (ICTs)

in education is urgent. It is capable of reaching every nook and cranny of the country and bridging the digital divide by delivering teaching, learning, evaluation, and continuing professional development solutions at any time and from any location while achieving scale and speed. The goal of technological interventions will be to improve teaching-learning and evaluation processes, support teacher preparation and professional development, improve educational access, and streamline educational planning, management, and administration, including admission, attendance, and assessment processes, among others. During the epidemic, virtual learning enabled teaching and learning. The educational system was forced to change. New paths were opened with the implementation of the new National Education Policy. Efforts have been made to make India "self-sufficient," and it is not incorrect to say that technology will play a significant role in this endeavor. The goal is to inspire learners to be creative by giving them the ability to imagine and create. This is easily accomplished with the incorporation of technology in the classroom. The policy intends to improve learning outcomes. It provides a variety of takeaways that will enable stakeholders to contribute to society creatively in the future. To achieve this positive transformation, the policy proposes curriculum changes, improvements to digital infrastructure, the development of strong and relevant core skills, and a shift in the traditional assessment system. The policy also covers vocational education at both the school and postsecondary levels.

National Education Policy (NEP 2020) for School Education

1. Focus on Early Childhood Care and Education (ECCE) & Foundational Literacy and Numeracy (FLN)
2. Curtailing dropouts and ensuring universal access at all levels of school education
3. Learning Should be Holistic, Integrated, Enjoyable, and Engaging
4. Teacher Empowerment
5. Equitable and Inclusive Education: Learning for All
6. Standard-setting and Accreditation for School Education
7. Adoption of pedagogically sound teaching & learning practices
8. Adoption of technology in teaching, learning and assessments

Transforming Exams

Exams will also be made 'easier' according to the National Education Policy 2020. They will largely assess core competencies in order to eradicate the "Coaching Culture." To eliminate the high stakes of board exams, students will be allowed to take them twice in any given year. Board exams in specific disciplines may be

modified in conformity with the New Education Policy 2020. There will be two kinds of board test questions:

- Objective type with multiple-choice questions
- Descriptive type

The National Testing Agency (NTA) will offer a high-quality common aptitude test, as well as specialized common subject exams in various subjects, at least a twice every year as prep for entrance examinations.

Five Pillars of NEP 2020

NEP 2020 is built around five pillars: affordability, accessibility, quality, equity, and accountability. NEP 2020 supports not only continuous learning but also the entire development of students. Students will be able to explore their areas of interest thanks to choice-based education. Another excellent innovation that would expedite the flow of funds between organizations is the establishment of a bank of credit. It will aid pupils in retaining their academic credits. Aside from that, focus is placed on infrastructural support and innovative education centers. NEP 2020 also allows for multiple learning pathways. Creating an ICT-literate community and offering free access to ICT tools are urgently needed. There is also a significant need to motivate a larger portion of the population.

National Digital Education Architecture

The acronym NDEAR stands for National Digital Education Architecture, with the goal of developing a "unified national digital infrastructure to energize and catalyze the education ecosystem." Essentially, this is a technology framework that tries to enable existing systems to be upgraded and made interoperable while also making common building blocks and services available for the development of new tools and solutions. NDEAR intends to stimulate and catalyze the digital education ecosystem through these common buildings and services. It is defined as a "distributed, adaptive, and open socio-technical system with self-organization, scalability, and sustainability properties."

Higher Education

NEP-2020 has brought about significant improvements in Higher Education by emphasizing multidisciplinary courses. In this digital age, NEP-2020 focuses on preparing youngsters to tackle the challenges of a globalised world by ensuring continuous learning. There is a demand for fresh and multi-skilled workers, and multi-disciplinary institutions will help to meet that demand.

Another objective of NEP 2020 is increasing the Gross Enrollment Ratio (GER). The goal in higher education is to increase it from 26 percent to 50 percent by 2030.

By increasing the use of technology in the educational area, the chances of greater accessibility to all are increased. The HECI, which would serve as a single regulator, will comprise accreditation, funding, and academic norm setting by independent verticals. Other regulatory bodies, such as the University Grants Commission (UGC) and the All India Council for Technical Education (AICTE), will eventually be replaced by these.

The establishment of the National Research Foundation (NRF) signifies that a special location has been designated for research-related activities in order to meet world quality standards. A variety of topics will be prioritized, including Indian languages, yoga, arts, music, history, culture, social sciences, and many others. Higher education institutes have been encouraged to establish technological development centers. This will allow the kids to contribute effectively, resulting in the development of a tech-savvy and knowledgeable workforce.

Another notable change is the establishment of the Higher Education Commission of India (HECI) to oversee all higher education in India. The Higher Education Council of India (HECI) would develop a number of verticals to fulfill the NEP's proposal.

Digital India

The new education policy has prioritized the development of infrastructure, online teaching platforms, and technological instruments. There is also a tremendous need for technology-savvy teachers, and special focus has been placed on educator training. It will not be possible to generate online curriculum or online evaluations unless educators are technologically savvy.

There is a critical need to educate teachers about the changes and revolutions that this new policy will bring. Methods that lead to effective student engagement are urgently needed. Teachers must be adequately trained in order to be completely informed of the future changes in order for NEP 2020 to be implemented successfully. New teaching approaches have been given favor, and innovative ideas have been accepted. The main emphasis will be on competency-based examinations, with regular evaluations to help pupils realize when things will go wrong. The pupils will be given feedback in order to assist them identify their own unique potential and capabilities.

There is an urgent need to educate instructors on the changes and transformations that this new policy will bring. Methods that lead to effective student engagement are critical. Teachers must be well trained to be completely informed of the future changes in order for NEP 2020 to be implemented successfully.

It promotes egalitarian use of technology by investing in the development of open public digital infrastructure. The use of developing technologies such as 3D, simulation, robots, and artificial intelligence (AI) has been prioritized. It also enables integrated learning with online and experimental learning. It also proposes expanding the existing digital learning platforms.

Advantages

- **Focus on Critical Thinking:** The board exam system, which primarily measured students' memorizing and rote learning abilities, will be changed with the goal of developing students' critical thinking, logic, and creativity through practical application of their information.
- **Changes in the School Structure:** The current framework of 10+2 school education will be replaced with the 5+3+3+4 pattern to alleviate the burden of board exams on students. There will also be a focus on vocational learning from class 6 to 8, so that kids can acquire practical skills such as gardening, carpentry, plumbing, artists, potters, and so on, to introspect and comprehend their passions while building a deeper knowledge and appreciation for these talents.
- **Regulating the Fees:** The introduction of the NEP will place a cap on the amount of fees that can be charged, preventing private institutions from charging exorbitant fees for higher education. This measure will make education more accessible and inexpensive to all kids, including those from low-income families.
- **More Scope for Global Education:** The new NEP would welcome global educational institutions and foreign universities to establish campuses in India. Indians will have better access to quality education in their country, making the dream more affordable to more kids and possibly even reducing brain drain.
- **Improvement in Teaching Quality:** By 2030, B.Ed. will be made a mandatory four-year course in order to improve the quality of education for teachers, and steps will be taken to prepare them to deal with various issues in the education system, such as providing support and mentorship to students and being trained to teach students with disabilities.

Disadvantages

- **Focus on Digital Learning:** Though it appears to be feasible and necessary, the NEP 2020's emphasis on digitization of education and promotion of e-learning appears to neglect the fact that only approximately 30% of Indians can afford cellphones and even fewer have access to computers. Then,

because government-run schools lack a robust IT infrastructure, pupils from rural areas or from low-income families will be unable to adapt to IT-based learning until such a facility is made available as soon as possible.

- **The Updated Terms of Undergraduate Program:** Because a student can abandon a graduate program and still receive a certification or diploma under the new regulation, students may quit without completing their study, resulting in their lack of seriousness and a high drop-out rate.
- **Enforcement of Languages:** The NEP emphasizes the introduction of mother tongue in elementary classes, which will be utilized to teach the main topics, whereas English will be taught considerably later. Unlike other countries with a single mother tongue, such as Germany, Russia, Japan, China, and France, India is a varied nation with 22 major languages and countless of dialects. Converting the core subjects to these many regional languages (and mother tongues) will be a huge endeavor that will necessitate a significant amount of time, effort, and qualified individuals. Another issue that has prompted some individuals to speak out against the NEP is that the enforcement of mother tongue and regional languages is perceived as the federal government's attempt to impose Hindi.

Challenges

Undoubtedly, the policy has remarkably integrated technology into teaching but there are certain concerns towards which the attention must be drawn. The implementation of the policy is no less than an uphill task. There was a survey conducted (July 2017-June 2018) on 'Household Social Consumption: Education'. In the survey, it was found that the literacy rate among persons of age 7 and above was about 77.7%. In rural areas, it was 73.5% while in urban it was 87.7%. There was also a difference in the literacy rate of males and females, 84.7% and 70.3% respectively.

Challenge comes in the form of accepting the transformation from the traditional rote learning system to the technology driven critical thinking and experimental learning system. This will require a change in the attitude of the stakeholders and continuous efforts are needed to be made to understand and implement this new vision. To fulfil the upcoming requirements, there is a strong need of digitally competent teachers. Moreover, there is an unavailability of digital resources infrastructure and there are a number of subjects which face a limitation as far as teaching through digital space is concerned. For the successful implementation of the policy, centre and states need to work together as the implementation of the policy and the integration of technology come with challenges.

Conclusion

India is moving positively in becoming digitally enriched. A massive progress can be seen in this direction. However, every big reform need time and one has to be patient and wait for the result. The complete integration of technology in education will require a bit of time as making it accessible in remote areas will be a little time-consuming task. But slowly and gradually it will be attained.

It will be critical to identify the essential technologies that will meet the needs of both students and teachers in order to provide a better teaching learning experience. According to analysts, this will be a critical aspect in the successful implementation of the NEP. The NEP aspires for a learner-centered approach. The government has successfully piqued the interest of stakeholders in the National Education Policy 2020. Constructive steps have been taken to inform stakeholders about the new policy's vision and objective.

A digital repository of content will also be created, which will involve the construction of course work, simulations, and learning games for fun-based learning. The information will be created in many languages and will include clear directions. Students will be given a backup mechanism for distributing e-content. The benefits of digital education can only be fully realized if the digital divide is bridged. The digital programs are offered to meet the needs of the stakeholders. The digital India initiative is working in this direction, with promising results.

Without a doubt, NEP 2020 has generated innovative ideas. It has recognized the role of technology in moving education forward, since it plays a significant role in enabling teaching and learning. Some states have introduced and implemented the new policy, and many more are in the process, but there is still a long way to go. If the center and the states work together, the New Education Policy will pave the path for students to be future-ready by emphasizing skill and technology learning.

AGRICULTURAL REFORMS: NEED AND SCOPE

Dr.V.Mathankumar

*Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore*

Mrs.R.Naveena

*Assistant Professor of Commerce
Karpagam Academy of Higher, Education, Coimbatore*

Abstract

Agricultural reforms play a vital role in addressing the challenges faced by the agricultural sector and promoting its sustainable development. This abstract provides an overview of the need for agricultural reforms and the scope of these reforms. The essay explores the reasons why agricultural reforms are necessary, including enhancing productivity, ensuring food security, improving farmer livelihoods, and promoting sustainable resource management. Additionally, the abstract discusses the scope of agricultural reforms, including policy reforms, access to finance and technology, capacity building, and infrastructure development. By understanding the need and scope of agricultural reforms, policymakers and stakeholders can work towards creating a more resilient and efficient agricultural sector that contributes to economic growth and sustainable development.

Introduction

Agriculture serves as the backbone of many economies, particularly in developing countries, by providing employment opportunities, ensuring food security, and contributing significantly to the Gross Domestic Product (GDP). However, the agricultural sector often faces various challenges that impede its growth and sustainability. These challenges include low productivity, inadequate infrastructure, limited access to modern technology, market inefficiencies, and the adverse impact of climate change. To overcome these obstacles and unleash the full potential of the agricultural sector, agricultural reforms are crucial. The need for agricultural reforms arises from several factors. First and foremost is the imperative of ensuring food security. As the global population continues to grow, agricultural production must increase to meet the rising demand for food. By implementing reforms, governments can enhance agricultural productivity, promote sustainable farming practices, and improve the efficiency of the food supply chain, thus ensuring an adequate and stable food supply for their populations.

In addition to food security, agricultural reforms are necessary to address poverty and rural development. Many developing countries heavily rely on agriculture as a source of income and livelihood for rural populations. However, small-scale farmers often face numerous challenges, including limited access to

credit, lack of market information, and inadequate infrastructure. Agricultural reforms can address these issues by providing financial support, facilitating access to credit and insurance, and promoting market integration, thereby improving the socio-economic conditions of rural communities. Moreover, agricultural reforms are essential for sustainable and responsible resource management. The sector's heavy reliance on natural resources, such as land, water, and forests, makes it susceptible to environmental degradation and climate change impacts. By implementing reforms that promote sustainable agricultural practices, resource conservation, and climate resilience, governments can mitigate environmental risks and ensure the long-term viability of the agricultural sector.

The scope of agricultural reforms is broad and encompasses various dimensions of the agricultural value chain. It involves policy interventions to create an enabling environment for agricultural development, such as land reforms, trade liberalization, and the establishment of supportive regulatory frameworks. Reforms may also focus on strengthening agricultural extension services, improving access to markets and credit, enhancing infrastructure, and promoting research and development in agricultural technologies. Furthermore, fostering public-private partnerships, supporting agricultural entrepreneurship, and encouraging farmer cooperatives can be part of the reform agenda. By implementing comprehensive agricultural reforms, governments can drive positive change in the sector and unlock its full potential. These reforms require a multi-stakeholder approach involving collaboration between governments, farmers, private sector actors, civil society organizations, and international institutions. Additionally, investments in capacity building, knowledge transfer, and technology adoption are critical to ensuring the successful implementation of agricultural reforms. Thus, agricultural reforms are indispensable for overcoming the challenges faced by the agricultural sector and realizing its full potential for economic development, food security, poverty alleviation, and environmental sustainability. The scope of agricultural reforms encompasses policy interventions, resource management, market integration, infrastructure development, and institutional reforms. By prioritizing and implementing agricultural reforms, governments can drive positive change, strengthen the agricultural sector, and contribute to overall economic growth and sustainable development.

Need for Agricultural Reforms

1. **Enhancing Productivity:** Agricultural reforms aim to address the low productivity levels in the sector. By promoting the adoption of advanced technologies, such as precision agriculture, farmers can optimize their use of inputs, minimize wastage, and achieve higher yields. Additionally, reforms

can facilitate improved irrigation systems and water management practices, enhancing water-use efficiency and reducing crop losses. Modern farming techniques, such as integrated pest management and crop rotation, can also be encouraged through agricultural reforms, leading to increased productivity and sustainable farming practices.

2. **Ensuring Food Security:** Agricultural reforms play a crucial role in ensuring a stable and sufficient food supply. Reforms can focus on improving food production and distribution systems to reduce post-harvest losses and food waste. By providing better access to markets, storage facilities, and transportation infrastructure, agricultural reforms can help farmers effectively bring their produce to consumers. Furthermore, reforms can promote the cultivation of diverse and nutritious crops, addressing nutritional deficiencies and promoting healthier diets for populations.
3. **Promoting Farmer Livelihoods:** Agricultural reforms should prioritize improving the socio-economic conditions of farmers. This can be achieved by enhancing market access through the establishment of efficient value chains, connecting farmers with buyers, and promoting fair pricing mechanisms. Reforms can also support farmers in accessing financial services, such as affordable credit and insurance, to mitigate risks and invest in their agricultural activities. Additionally, capacity-building programs and training initiatives can equip farmers with the necessary skills and knowledge to enhance their productivity and business management capabilities.
4. **Sustainable Resource Management:** Agricultural reforms are crucial for promoting sustainable resource management practices. By encouraging precision agriculture techniques, farmers can optimize the use of inputs such as fertilizers, pesticides, and water, reducing their environmental impact. Reforms can also promote organic farming practices, minimizing the use of synthetic chemicals and promoting soil health. Agroforestry, another sustainable practice, combines agriculture with tree planting to improve soil fertility, provide shade, and contribute to carbon sequestration. Through these reforms, the agricultural sector can contribute to environmental conservation, preserve biodiversity, and mitigate climate change effects.

Thus, agricultural reforms encompass a wide range of measures aimed at enhancing productivity, ensuring food security, promoting farmer livelihoods, and fostering sustainable resource management. By implementing these reforms, governments can address the challenges faced by the agricultural sector and pave the way for a more productive, resilient, and sustainable agricultural system. The success of these reforms relies on strong policy frameworks, effective

implementation strategies, and the active participation and collaboration of farmers, private sector actors, and other stakeholders in the agricultural value chain.

Scope of Agricultural Reforms

1. **Policy Reforms:** Agricultural reforms necessitate policy changes and regulatory frameworks that support sustainable agriculture and equitable practices. Governments can implement land tenure reforms to ensure secure land rights for farmers, promote efficient water management strategies, provide agricultural subsidies that target small-scale farmers, and develop trade policies that enhance market access for agricultural products. Additionally, food safety regulations can be strengthened to ensure the production and distribution of safe and high-quality food.
2. **Access to Finance and Technology:** Agricultural reforms should prioritize improving farmers' access to financial resources and modern technologies. This includes establishing agricultural financing programs that provide affordable credit and insurance schemes tailored to the specific needs of farmers. Governments can also incentivize financial institutions to offer loan products and investment opportunities for agricultural activities. Furthermore, reforms should focus on facilitating the adoption of modern farming technologies, such as precision agriculture tools, remote sensing, and data analytics, to enhance productivity, reduce costs, and optimize resource use.
3. **Capacity Building and Knowledge Transfer:** Agricultural reforms should emphasize capacity building programs and knowledge transfer initiatives to empower farmers with the necessary skills and knowledge. This can be achieved through agricultural extension services that provide training on sustainable farming practices, farm management techniques, and value chain development. Farmers can also benefit from training programs on marketing strategies, financial management, and entrepreneurship. The provision of relevant and up-to-date information through digital platforms, mobile applications, and community networks can enhance knowledge sharing and decision-making among farmers.
4. **Infrastructure Development:** Agricultural reforms should address the inadequate infrastructure in rural areas that hinders agricultural development. Governments can invest in improving rural road networks to facilitate the transportation of agricultural inputs and products. Enhancing irrigation systems, both large-scale and small-scale, can ensure efficient water distribution for agricultural activities. Additionally, reforms should prioritize the development of storage facilities, including cold storage and warehouses,

to minimize post-harvest losses and maintain the quality of agricultural produce. Improving market infrastructure, such as wholesale markets and market information systems, can enable farmers to access broader markets, obtain better prices, and reduce transaction costs.

By implementing comprehensive agricultural reforms in these areas, governments can create an enabling environment for agricultural development, foster sustainable practices, enhance farmers' resilience, and promote inclusive and equitable growth in the agricultural sector. The success of these reforms relies on effective collaboration between policymakers, farmers' organizations, private sector entities, research institutions, and civil society, ensuring that the needs and aspirations of farmers are considered and addressed.

Conclusion

Agricultural reforms are of utmost importance in addressing the challenges and unlocking the potential of the agricultural sector. The need for these reforms arises from several critical factors that affect the sector's performance and its contribution to sustainable development. Firstly, enhancing productivity is a key objective of agricultural reforms. Low productivity levels often hinder the sector's growth and efficiency. Reforms can focus on introducing modern technologies, such as advanced farming equipment, precision agriculture techniques, and digital tools for data management and analysis. Additionally, promoting sustainable agricultural practices, improving access to quality seeds, fertilizers, and crop protection measures, and implementing efficient irrigation systems can contribute to increased productivity.

Ensuring food security is another pressing concern that agricultural reforms can address. With a growing global population, it is crucial to produce enough food to meet the rising demand. Reforms should prioritize strategies to increase agricultural production and improve the efficiency of food distribution systems. This includes supporting small-scale farmers through access to resources, training, and market opportunities. Furthermore, promoting sustainable farming practices that conserve natural resources and reduce food waste can contribute to long-term food security. Improving farmer livelihoods is a critical objective of agricultural reforms. Many farmers face challenges related to low incomes, limited access to markets, and inadequate support systems. Reforms can focus on creating fair pricing mechanisms, strengthening farmers' bargaining power, and improving market access. Access to finance, credit, and insurance schemes can also empower farmers and enable them to invest in their agricultural activities, improve their income, and enhance their livelihoods.

Sustainable resource management is another crucial aspect of agricultural reforms. The agricultural sector heavily relies on natural resources such as land, water, and biodiversity. Reforms should aim to promote sustainable farming practices that minimize environmental impact and protect ecosystems. This includes measures to reduce soil erosion, conserve water resources, and promote biodiversity conservation. By adopting sustainable resource management practices, agricultural reforms contribute to climate change mitigation, environmental conservation, and the long-term viability of the sector. The scope of agricultural reforms is broad and multifaceted. It encompasses policy reforms, including changes in regulations, trade policies, and subsidy schemes that create an enabling environment for agricultural development. Reforms should also focus on improving access to finance and technology, as this can facilitate innovation and modernization in the sector. Capacity building programs and knowledge transfer initiatives are crucial to equip farmers with the skills and knowledge needed to adapt to changing market dynamics and adopt sustainable practices. Furthermore, infrastructure development, including rural roads, irrigation systems, storage facilities, and market infrastructure, is essential to improve connectivity, reduce post-harvest losses, and enhance market access for farmers. By implementing comprehensive agricultural reforms, nations can unlock the full potential of the agricultural sector and drive economic growth. These reforms contribute to global food security, poverty alleviation, and sustainable development. It is imperative for policymakers, stakeholders, and international organizations to work together to design and implement effective agricultural reforms that address the specific needs and challenges of each country. By prioritizing agricultural reforms, nations can achieve a more resilient, productive, and sustainable agricultural sector that contributes to the well-being of communities, the economy, and the environment.

GLOBAL LEADERSHIP EFFECTIVENESS IN GLOBAL TEAMS

Dr.M.Rathamani

Assistant Professor, PG Department of Computer Science,
Nallamuthu Gounder Mahalingam College, Pollachi
rathamani@ngmc.org

Abstract

Globalization has revolutionized the business landscape, necessitating the formation of diverse and geographically dispersed teams known as "global teams." These teams consist of individuals from different cultural backgrounds, time zones, and languages, collaborating virtually to achieve common objectives. As organizations increasingly rely on global teams to drive innovation and competitiveness, understanding the dynamics of effective leadership within these teams becomes crucial.

This research paper explores the concept of global leadership effectiveness in global teams. It delves into the competencies, skills, and challenges faced by global leaders and the impact of their leadership on team performance. The paper conducts an extensive literature review on global teams, global leadership, and relevant theories, models, and empirical findings.

The study identifies key competencies for global leaders, including cross-cultural communication, adaptability, trust-building, decision-making, conflict resolution, and negotiation. It investigates the role of these competencies in fostering effective leadership in the context of diverse team environments.

Moreover, the paper analyzes various factors that influence global leadership effectiveness, such as cultural differences, language barriers, virtual team dynamics, geographical dispersion, and organizational support. It explores how these factors impact leadership practices and team outcomes in a global setting.

To gather insights, the research employs a mixed-methods approach, utilizing both qualitative and quantitative methods. Data is collected through surveys, interviews, and observations from diverse global teams and their leaders.

The findings of this research contribute to a deeper understanding of the importance of effective global leadership in driving team success in a globalized world. The paper concludes by discussing the implications of these findings for organizations seeking to enhance their global leadership practices and optimize the performance of their global teams. By addressing the challenges and fostering the competencies essential for global leadership, organizations can navigate the complexities of cross-cultural collaboration and achieve sustained competitive advantage in the global marketplace.

Keywords : Globalization, Global teams, globalized World, etc

Introduction

Globalization has transformed the way organizations conduct business, leading to the emergence of diverse and geographically dispersed teams commonly referred to as "global teams." These global teams consist of individuals from different cultural backgrounds, time zones, and languages, collaborating virtually to achieve common goals. Effectively managing and leading such global teams is essential for

organizational success and competitiveness in the global marketplace. Therefore, the concept of global leadership effectiveness has become a critical area of study.

This research paper aims to explore and analyze the factors that contribute to effective leadership in global teams. By understanding the competencies and challenges faced by global leaders, organizations can develop strategies to enhance their leadership practices and optimize team performance in the global context.

Literature Review

Definition of Global Teams: Provide an overview of the characteristics and composition of global teams, highlighting their unique challenges and advantages.

Importance of Global Leadership: Discuss the significance of effective leadership in global teams, exploring the impact of leadership on team dynamics, motivation, and performance.

Global Leadership Competencies: Review existing models and frameworks that define the essential competencies and skills required for successful global leaders.

Cross-Cultural Communication: Examine the role of effective communication in cross-cultural settings and its influence on leadership effectiveness.

Adaptability and Cultural Intelligence: Discuss the importance of adaptability and cultural intelligence in navigating diverse cultural contexts and fostering collaboration.

Building Trust Across Cultures: Explore the significance of trust-building in global teams and its connection to leadership effectiveness.

Decision-Making and Problem-Solving: Analyze how global leaders approach decision-making and problem-solving in complex and diverse team environments.

Conflict Resolution and Negotiation: Investigate the strategies global leaders employ to manage conflicts and negotiations within multicultural teams.

Methodology

Research Design: Outline the chosen research design, which may involve a combination of qualitative and quantitative approaches, case studies, and interviews with global leaders and team members.

Data Collection: Describe the methods for collecting data, such as surveys, interviews, or observation of global team interactions.

Sample Selection: Explain the criteria for selecting participants, ensuring representation from different industries and regions.

Data Analysis: Clarify the analytical techniques used to analyze the collected data and draw meaningful insights.

Factors Affecting Global Leadership Effectiveness:

Cultural Differences: Explore the impact of cultural variations on leadership styles, communication, and decision-making in global teams.

Language Barriers: Examine the challenges posed by language differences and strategies to overcome communication barriers.

Virtual Team Dynamics: Investigate the unique challenges and opportunities associated with leading virtual global teams.

Time Zone and Geographical Dispersion: Analyze the implications of time zone differences and geographical dispersion on team coordination and communication.

Organizational Support and Resources: Evaluate the role of organizational support, resources, and policies in facilitating effective global leadership.

Conclusion

This research paper highlights the critical role of effective leadership in global teams and its impact on team performance and success. By understanding the competencies required for global leaders and the challenges they face, organizations can develop targeted training programs and support systems to enhance global leadership effectiveness. As companies continue to embrace globalization, investing in the development of global leaders becomes imperative for achieving sustainable growth and competitive advantage in the global marketplace. Further research in this area will undoubtedly provide valuable insights into fostering effective global leadership practices and optimizing the performance of global teams.

SUCCESS FACTORS FOR RURAL WOMEN EMPOWERMENT

Dr. G.V. Sam Kumar

*Associate Professor of Computer Science and Engineering
Koneru Lakshmaiah Education Foundation, KL University
Vaddeswaram , Andhra Pradesh.*

Dr.V.Meera

*Associate Professor, Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu*

Abstract:

Women's empowerment may be defined in several ways, including accepting women's viewpoints, trying to seek them and raising the status of women through education, awareness, literacy, and training. Education is a milestone of women empowerment because it enables them to respond to the challenges, to confront their traditional role and change their life. It assists in bringing equality and works as a means to improve their status within family, society and politico-economic system.

Keywords: *Women empowerment, Success Factors, Rural*

Introduction:

Women's empowerment may be defined in several ways, including accepting women's viewpoints, trying to seek them and raising the status of women through education, awareness, literacy, and training. The success of empowering women in rural areas cannot be seen only partially but must consider various aspects or factors comprehensively. Women empowerment refers to making women socially and financially independent. Women empowerment is a process in which women make their own independent decisions. When women are entitled to decide, it gives them a sense of empowerment and more worth. Empowerment means people having power and control over their own lives. People get the support they need that is right for them. Empowerment means that people are equal citizens. They are respected and confident in their communities.

Factors Responsible for Women Empowerment

1. Education:

Education enables us to learn about the world outside our own environment. It makes us spiritually, socially, and intellectually strong by improving our level of knowledge, technical skills, and position in the profession. The knowledge acquired in education gives each individual self-confidence for his or her life. Girls who

receive an education are less likely to marry young and more likely to lead healthy, productive lives. They earn higher incomes, participate in the decisions that most affect them, and build better futures for themselves and their families. Girls' education strengthens economies and reduces inequality. Educated girls are more likely to have better paying jobs and contribute to the economy. This in turn can lead to reduced poverty and increased economic growth. Education can help to reduce the risk of gender-based violence and promote gender equality in other areas of life. Education is a Tool for Empowerment. Education can be an effective tool for women's empowerment, the parameters of which are: Enhancing self-esteem and self-confidence of women. Developing ability to think critically. Fostering decision-making and action through collective processes. The right to education is a human right, and eliminating illiteracy, ensuring equal access to education and closing the gender gap at all levels of education empowers women and girls and thereby contributes to the elimination of all forms of discrimination and violence against women and girls.

Equal access to education for women and girls will be ensured. Special measures will be taken to eliminate discrimination, universalize education, eradicate illiteracy, create a gender-sensitive educational system, increase enrolment and retention rates of girls and improve the quality of education to facilitate life-long learning as well as development of occupation/vocation/technical skills by women. Reducing the gender gap in secondary and higher education would be a focus area. Sectoral time targets in existing policies will be achieved, with a special focus on girls and women, particularly those belonging to weaker sections including the Scheduled Castes/Scheduled Tribes/Other Backward Classes/Minorities. Gender sensitive curricula would be developed at all levels of educational system in order to address sex stereotyping as one of the causes of gender discrimination.

2. Elimination of Gender Discrimination:

Women's empowerment is a critical aspect of achieving gender equality. It includes increasing a woman's sense of self-worth, her decision-making power, her access to opportunities and resources, her power and control over her own life inside and outside the home, and her ability to effect change. Women suffer from lack of access to decent work and face occupational segregation and gender wage gaps. In many situations, they are denied access to basic education and health care and are victims of violence and discrimination. Active participation of government by framing policies and laws for preventing such acts. Increasing consciousness in society by making them aware about the evils of discrimination. Adopting policies

like positive discrimination and making them socially politically and economically equal.

3. Steps for implementation of Women Development Programme and various Acts:

The government has also taken several steps towards making laws for example - Medical Termination of Pregnancy Act 1971. Implementing political rights - for examples - The Government of India Act, 1935 granted female enfranchised persons the basis of educational qualifications. The Government of India has taken various steps to ensure empowerment of women through their social, educational, economic and political uplifting through various schematic interventions. While the schemes implemented by the Government like Pradhan Mantri Awas Yojana (Urban & Rural), the National Social Assistance Programme (NSAP), the initiatives like Samagra Shiksha, Scheme of National Overseas Scholarship, Babu Jagjivan Ram Chhatrawas Yojna, Swachh Vidyalaya Mission, etc. ensure that schools are girl-friendly especially for vulnerable sections of society and have adequate facilities in place to fulfil their special requirements. Further, in order to encourage employment of women, a number of enabling provisions have been incorporated in the recently enacted Labour Codes viz. the Code on Wages, 2019, the Industrial Relations Code, 2020, the Occupational Safety, Health and Working Conditions Code, 2020 and the Code on Social Security, 2020 for creating congenial work environment for women workers. The Mahatma Gandhi National Rural Employment Guarantee Act, 2005 (MGNREGA) mandates that at least one third of the jobs generated under the scheme (MGNREGS) should be given to women. Government has also made enabling provisions for allowing women's participation in non-conventional sectors such as fighter pilots in Indian Air Force, Commandos, Central Police Forces, admissions in Sainik Schools, etc. The data in respect of these schemes are maintained by the respective Ministries/ Departments.

a. Health

A holistic approach to women's health which includes both nutrition and health services will be adopted and special attention will be given to the needs of women and the girl at all stages of the life cycle. The reduction of infant mortality and maternal mortality, which are sensitive indicators of human development, is a priority concern. This policy reiterates the national demographic goals for Infant Mortality Rate (IMR), Maternal Mortality Rate (MMR) set out in the National Population Policy 2000. Women should have access to comprehensive, affordable and quality health care. Measures will be adopted that consider the reproductive rights of women to enable them to exercise informed choices, their vulnerability to sexual and health problems together with endemic, infectious and communicable diseases such as malaria, TB, and water borne diseases as well as hypertension and cardio-pulmonary diseases. The social, developmental and health consequences of

HIV/AIDS and other sexually transmitted diseases will be tackled from a gender perspective.

To effectively meet problems of infant and maternal mortality, and early marriage the availability of good and accurate data at micro level on deaths, birth and marriages is required. Strict implementation of registration of births and deaths would be ensured and registration of marriages would be made compulsory.

In accordance with the commitment of the National Population Policy (2000) to population stabilization, this Policy recognizes the critical need of men and women to have access to safe, effective and affordable methods of family planning of their choice and the need to suitably address the issues of early marriages and spacing of children. Interventions such as spread of education, compulsory registration of marriage and special programmes like BSY should impact on delaying the age of marriage so that by 2010 child marriages are eliminated.

Women's traditional knowledge about health care and nutrition will be recognized through proper documentation and its use will be encouraged. The use of Indian and alternative systems of medicine will be enhanced within the framework of overall health infrastructure available for women.

b. Violence against women

All forms of violence against women, physical and mental, whether at domestic or societal levels, including those arising from customs, traditions or accepted practices shall be dealt with effectively with a view to eliminate its incidence. Institutions and mechanisms/schemes for assistance will be created and strengthened for prevention of such violence, including sexual harassment at work place and customs like dowry; for the rehabilitation of the victims of violence and for taking effective action against the perpetrators of such violence. A special emphasis will also be laid on programmes and measures to deal with trafficking in women and girls.

c. Rights of the Girl Child

All forms of discrimination against the girl child and violation of her rights shall be eliminated by undertaking strong measures both preventive and punitive within and outside the family. These would relate specifically to strict enforcement of laws against prenatal sex selection and the practices of female foeticide, female infanticide, child marriage, child abuse and child prostitution etc. Removal of discrimination in the treatment of the girl child within the family and outside and projection of a positive image of the girl child will be actively fostered. There will be special emphasis on the needs of the girl child and earmarking of substantial

investments in the areas relating to food and nutrition, health and education, and in vocational education. In implementing programmes for eliminating child labour, there will be a special focus on girl children.

d. Mass Media

Media will be used to portray images consistent with human dignity of girls and women. The Policy will specifically strive to remove demeaning, degrading and negative conventional stereotypical images of women and violence against women. Private sector partners and media networks will be involved at all levels to ensure equal access for women particularly in the area of information and communication technologies. The media would be encouraged to develop codes of conduct, professional guidelines and other self-regulatory mechanisms to remove gender stereotypes and promote balanced portrayals of women and men.

Conclusion

Empowering women is essential to the health and social development of families, communities and countries. When women are living safe, fulfilled and productive lives, they can reach their full potential, contributing their skills to the workforce and can raise happier and healthier children. Women empowerment adds to confidence of women in their ability to lead meaningful and purposeful lives. It removes their dependence on others and makes them individuals in their own right.

PREFACE

In an era where the global landscape is undergoing rapid and profound changes, the aspiration for global leadership demands a visionary and concerted effort. The seminar proceedings titled “Vision for Vishwa Guru India Initiatives for Global Leadership by 2047” stand as a testament to India's unwavering commitment to shaping a future that is not only transformative for its own citizens but also resonates across the international community.

As we approach the momentous milestone of 2047, which marks the centenary of India's independence, we find ourselves at a crossroads of possibilities and challenges. The concept of ‘Vishwa Guru’ encapsulates India's age-old tradition of disseminating knowledge, fostering dialogue, and illuminating the path for others. This compilation of seminar proceedings is a reflection of this tradition, a dialogue that transcends boundaries and invites scholars, students, and visionaries to collectively envision the path ahead. These proceedings offer a panoramic view of the discussions and insights shared by luminaries in various fields, touching upon a myriad of sub-themes. From discussions on the Role of Technology in NEP 2020 to explorations of Ease of Doing Business, the proceedings delve into crucial facets that shape India's global role.

We extend our heartfelt gratitude to the Indian Council of Social Science Research (ICSSR) for its invaluable support in bringing together these seminal discussions. Their unwavering commitment to advancing knowledge aligns seamlessly with the spirit of the Vishwa Guru India Initiatives. As we navigate the complexities of a rapidly evolving world, we hope that these initiatives serve as a source of inspiration, a catalyst for meaningful dialogues, and a blueprint for action.

We are indebted to the authors who have contributed their scholarly insights to this compilation. Their diverse perspectives and rigorous research have enriched the discourse on global leadership and India's role in shaping the global narrative. Each paper presented here is a testament to their dedication to knowledge dissemination and their belief in the power of ideas to drive positive change.

Together, let us embrace the spirit of ‘Vishwa Guru’ and pave the way for a brighter, more harmonious, and prosperous India.

Abstract

Education is the key factor to increase the financial status of the persons. Not only it gives financial status then also it gives holistic knowledge to the persons. Education gives economic background, and knowledge-based attitude or behaviour. Then what society expect from the educated persons. Today students are leaders of the country in future. So, Education gives leadership qualities, Responsibilities to the society. This National Educational Policy 2020 helps to improve the students learning process or method to vary. Experiential Learning and skill development is one of the main objectives of NEP 2020. This article tries to show, NEP 2020 what wants to change the learning and technical knowledge of the students.

Keywords: Soft skill learning, Hard skill learning, Practical learning or Experiential learning.

Introduction

The National Education Policy (NEP) 2020 is a complete and transformative framework introduced in India with the aim of reforming the country's education system. Intended as a student-centric, holistic approach, the policy seeks to adoptive creativity, critical thinking, and problem-solving skills among students. NEP 2020 promotes for a elastic and multidisciplinary curriculum, mixing vocational education and experiential learning, while promoting technology-enabled education. It encourages early childhood education, underlines the training and professional development of teachers, and strives to bridge the gap between academic and vocational streams. The policy recognizes the importance of protective cultural and original knowledge while preparing students for the challenges of the 21st century, making education more inclusive, reasonable, and adaptive to the changing needs of learners and society.

Experiential Learning

Experiential learning, in the context of NEP 2020, is a student-centered method that boosts students to learn by doing, appealing in hands-on activities, and go through real-world situations. It is planned to move away from habit memorization and theoretical knowledge, and instead, focus on real-world applications and perilous thinking.

Following key features are includes in NEP 2020 for experiential learning to the students:

Skill-based Learning: Experiential learning aims to develop anextensive range of skills in students, including problem-solving, decision-making, communication, collaboration, and inventiveness, among others. This focus on subject expertise intended to make students better equipped for real-life challenges and employment opportunities.

Vocational Education: The NEP 2020 emphasizes the amalgamation of professional education into the mainstream curriculum. This enables students to advance practical skills and appropriate knowledge to various trades and industries, preparing them for the workforce.

Internships and Hands-on Training: The policy encourages schools and higher education institutions to provide prospects for students to engage in internships, apprenticeships, and other forms of hands-on training. This allows students to apply academic knowledge to real-world sceneries and improve valuable work experience to the students.

Project-Based Learning: Observed learning promotes project-based learning, where students work on real-life projects and solve reliable problems. This approach adopts perilous thinking, coordination, and practical application of knowledge.

Field Trips and Community Engagement: The NEP 2020 encourages schools to organize field trips and involve with the local community. These experiences enable students to understand the real-world situation of their studies and shape a deeper connection between the classroom and the world outside.

Integration of Co-curricular Activities: Experiential learning involves participating co-curricular activities such as sports, arts, and cultural programs into the education system. This encourages a well-versed growth of students and improves their learning experience.

It's worth noting that the implementation of NEP 2020 and its initiatives, including observed learning, may differ across different states and educational institutions in India. For the most current and detailed information on the status of experiential learning in NEP 2020, I recommend referring to official government sources or educational institutions' updates.

Skill Development

The term "skill" refers to the ability or proficiency acquired through practice, training, or experience to perform a specific task or activity effectively. Skills can be both physical and intangible, encompassing a extensive range of capabilities across various areas, including physical, reasoning, technical, social, and emotional areas.

Following some key points about skills in NEP 2020:

Learned Abilities: Skills are not innate; they are learned and developed over time. They result from a grouping of knowledge, practice, and experience.

Performance-Oriented: Skills are task-oriented and involve the capacity to carry out specific actions or achieve particular objectives.

Context-Dependent: Skills may be context-specific, meaning they can be more appropriate in certain situations or fields than others.

Transferable: Some skills are handy across different areas, allowing individuals to apply them in various contexts.

Improvable: With practice and continuous learning, individuals can advance their skills and increase their ability.

Skills can be broadly categorized into two types:

Hard Skills: These are specific, technical abilities that are easily measurable and often require formal education or training. Examples of hard skills include programming, accounting, graphic design, data analysis, and external verbal proficiency.

Soft Skills: Also known as "people skills" or "interpersonal skills," these are more subjective and are related to how individuals interact with others and handle various situations. Examples of soft skills contain communication, leadership, teamwork, problem-solving, adaptability, and emotional intelligence.

Both hard and soft skills are essential for personal and professional development, and a well-rounded individual typically holds a amalgamation of these skills. In the workplace, employers often seek candidates with a balanced mix of technical expertise (hard skills) and the ability to work well with others and adapt to new challenges (soft skills).

The National Education Policy (NEP) 2020 in India the significance of skill development as a crucial aspect of the education system. The NEP 2020 aims to equip students with a broad range of skills that are essential for personal growth, employability, and contributing to the nation's development. It emphasizes the integration of skill development across all levels of education, from school to higher education.

Following important points are include in NEP 2020:

Early Childhood Education: The policy highlights skill development from an early age. It aims to encourage foundational skills such as critical thinking, problem-solving, creativity, and communication in children through play-based and activity-based learning in early childhood education.

Vocational Education: NEP 2020 advocates for the combination of vocational education into the mainstream curriculum. This tactic aims to provide students with practical skills and knowledge applicable to various trades and industries. It seeks to remove the traditional hierarchy between academic and vocational streams and encourages students to discover various career options.

Internships and Experiential Learning: This policy helps practical learning through internships, apprenticeships, and hands-on training opportunities to the students. This allows students to increase practical knowledge and progress employable skills while following their studies.

Flexible Curriculum: NEP 2020 inspires a elastic curriculum that permits students to choose from a wide range of subjects and skill-based courses. This flexibility allows students to discover their interests and strengths, fostering a holistic development method.

Teacher Training and Professional Development: The policy highlights the training and professional development of teachers to train them with the skills and knowledge needed to efficiently impart skill-based education to students.

Technology Integration: NEP 2020 identifies the importance of technology in skill development. It highlights the use of technology to improve teaching and learning experiences and to convey digital skills to students.

Entrepreneurship Education: The policy encourages entrepreneurship education to encourage invention and self-employment. It seeks to foster an entrepreneurial mindset among students and provide them with the necessary skills to start their schemes.

Recognition of Prior Learning: NEP 2020 acknowledges the value of skills acquired external formal education systems. It aims to provide mechanisms for recognizing and accrediting prior learning, allowing individuals to gain theoretical credit for their existing skills and knowledge.

It's significant to note that the application of skill development creativities under NEP 2020 may differ across different states and educational institutions in India. Since policies are subject to nonstop updates and changes, I recommend referring to official government sources or educational institutions for the most current and detailed info on skill development in NEP 2020.

Conclusion

Indians understand the value of education in their daily lives. Not only in terms of money, but also in terms of respect in society, education is given a special place. Assets may go tomorrow but arrive today. Education, however, is not stolen or burned in the same way. If someone imparts information to others, the recipient will become more knowledgeable. According to a statistical study, in India, parents spend 60% of their income on their children's tuition. The NEP 2020 must be implemented by teachers. Because the government is dealing with more issues and holding more meetings with educators, opposition party suggestions, parents' opinions, and public input. The government then implemented the policy. Teachers work in the field, thus. Every strategy has flaws, and success depends on Every strategy has flaws; the execution of the plan determines whether it succeeds. How to carry out the strategy on the ground. As a result, more educationalists offer advice to the government for NEP 2020. The government includes the educationalists' recommendations to the NEP 2020's developed next level.

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Manufacturing is believed to be the key to the development of a nation. However in case of India it is the services which has spurred the development. Realizing the imperativeness of manufacturing sector 'Make in India' initiative was launched on 25th September 2014 by our Prime Minister, Mr. Narendra Modi. The new policy is launched with the objective of making India the manufacturing hub of the world. The initiative is a sales pitch; focusing the key 25 industries; to attract foreign investors. However to make it successful the areas of regulations, power, infrastructure etc. needs fixing up.

This research paper is written with the intention to expound the concept of 'Make in India' campaign, objectives, its purpose and its merits.

Keywords: Make, India, Manufacturing.

Introduction

The Government of India began the "Make in India" project in 2014 with the goal of supporting domestic manufacturing and accelerating economic growth. The initiative's main goal is to entice both domestic and international businesses to participate in Indian manufacturing.

By fostering an advantageous business environment, streamlining laws, and promoting ease of doing business, the "Make in India" initiative seeks to turn India into a major global manufacturing base. It aims to entice investment in a variety of industries, including renewable energy, textiles, electronics, autos, and medicines.

Objective of the Study

- To list out the objective of make in India scheme
- To list out the merits of make in India scheme
- To list the methods and forms of FDI

Objectives of Make in India

1. Promoting investment: By providing incentives, tax advantages, and streamlined regulatory processes, the campaign hopes to draw both domestic and foreign direct investments (FDI). It strives to foster a climate that is business-friendly.
2. Improvement of infrastructure, such as transportation systems, logistics systems, and industrial corridors, is a key goal of the plan. This is crucial for the efficient transport of commodities and raw resources, which lowers prices.
3. The "Make in India" initiative acknowledges the value of skilled workers for the manufacturing sector. It attempts to improve workforce skill sets through a variety of activities, including partnerships with industry leaders and programs for vocational training.
4. Protection of intellectual property rights (IPR): To safeguard innovations and promote research and development, the government is aiming to improve India's IPR system. This is essential for encouraging innovation and luring investments in technology-driven production.
5. Sector-specific policies: To address the special difficulties and opportunities in many industries, the initiative has created sector-specific policies. With the help of these policies, focused growth and competitiveness can be encouraged in a variety of industries.

The "Make in India" project seeks to increase employment possibilities, foster economic growth, and establish India as a hub for global manufacturing by boosting local production and luring investments. To promote sustainable economic development, it aims to take use of India's sizable consumer market, talented labour, and favourable demographics.

Merits of Make in India

The Make in India initiative offers several merits and advantages for India. Some of the key merits of the Make in India scheme are:

1. Economic growth: The initiative aims to boost economic growth by promoting domestic manufacturing and attracting foreign direct investment (FDI). Increased manufacturing activities contribute to GDP growth, job creation, and overall economic development.
2. Job creation: The Make in India scheme focuses on creating employment opportunities across various sectors, including manufacturing, infrastructure development, and services that support the manufacturing ecosystem. This helps to reduce unemployment rates and improve the standard of living for the population.

3. **Skill development:** The initiative emphasizes skill development programs and vocational training, aiming to enhance the capabilities of the workforce. This helps bridge the skill gap and ensures a skilled labor force that can meet the demands of the manufacturing industry. It also promotes entrepreneurship and innovation, creating a culture of self-employment and job creation.
4. **Foreign direct investment (FDI):** The Make in India scheme aims to attract foreign companies to invest in India's manufacturing sector. By simplifying regulations, providing incentives, and improving ease of doing business, it creates a favorable environment for foreign investors. Increased FDI inflows bring in advanced technology, capital, and expertise, leading to the growth and development of the manufacturing sector.
5. **Technological advancements:** The Make in India initiative encourages the adoption and development of advanced technologies in the manufacturing sector. This helps upgrade the industrial infrastructure, improve productivity, and enhance the competitiveness of Indian manufacturing companies in the global market.
6. **Export promotion:** By promoting domestic manufacturing, the Make in India scheme aims to increase exports. It focuses on developing export-oriented industries and facilitating trade, leading to a favorable balance of trade and foreign exchange earnings for the country.

Foreign Direct Investment

A **foreign direct investment (FDI)** refers to purchase of an asset in another country, such that it gives direct control to the purchaser over the asset (e.g. purchase of land and building). In other words, it is an investment in the form of a controlling ownership in a business, in real estate or in productive assets such as factories in one country by an entity based in another country.^[1] It is thus distinguished from a foreign portfolio investment or foreign indirect investment by a notion of direct control.

The origin of the investment does not impact the definition, as an FDI: the investment may be made either "inorganically" by buying a company in the target country or "organically" by expanding the operations of an existing business in that country.

Methods

The foreign direct investor may acquire voting power of an enterprise in an economy through any of the following methods:

- by incorporating a wholly owned subsidiary or company anywhere
- by acquiring shares in an associated enterprise

- through a merger or an acquisition of an unrelated enterprise
- participating in an equity joint venture with another investor or enterprise

Forms of FDI incentives

Foreign direct investment incentives may take the following forms:

- low corporate tax and individual income tax rates
- tax holidays
- other types of tax concessions
- preferential tariffs
- special economic zones
- EPZ – export processing zones
- bonded warehouses
- maquiladoras
- investment financial subsidies
- free land or land subsidies
- relocation & expatriation
- infrastructure subsidies
- R&D support
- energy
- derogation from regulations

Conclusion

To make India free of unemployment by bringing development and growth this policy is the urgent need. We can downsize poverty in India to a great level by solving the unemployment issue for youths. Thus the country economy will achieve a new height after the success of this campaign. This, in turn, may solve various social issues in the country.

This program is an absolute necessity if we are to eradicate unemployment in India while also fostering economic growth. We can significantly reduce poverty by addressing the issue of youth unemployment. A strong economy is inevitable following the success of the “Make in India” initiative. By doing so, various socio-economic problems in the country may be addressed.

TRANSFORMATIVE ROLE OF TECHNOLOGY IN THE NATIONAL EDUCATION POLICY (NEP) 2020

Dr. R. Velmurugan

Associate Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore
drvelsngm@gmail.com

Abstract

The National Education Policy (NEP) 2020 outlines a transformative vision for the Indian education system, and technology plays a central role in its realization. This abstract explores the transformative role of technology in the NEP 2020, highlighting its impact on access to education, personalized learning, teacher empowerment, assessment and evaluation, and data-driven decision making. By leveraging technology, the NEP 2020 aims to create an inclusive, equitable, and high-quality education system that prepares students for the challenges of the future. The successful implementation of the NEP's vision relies heavily on embracing technology as a powerful tool for educational transformation.

Keywords: National Education Policy, NEP 2020, Education System, Personalized Learning, Teacher Empowerment, Assessment and Evaluation, Data-driven Decision Making.

Introduction

The National Education Policy (NEP) 2020 represents a groundbreaking policy initiative aimed at transforming the Indian education system. At the heart of this transformation lies technology, which plays a pivotal role in reshaping the educational landscape by providing innovative tools and platforms for teaching, learning, and assessment. This essay delves into the profound impact of technology in the NEP 2020, highlighting how it facilitates equitable, inclusive, and high-quality education for all learners. Technology serves as a catalyst for educational revolution by offering new possibilities and avenues for teaching and learning. In the NEP 2020, technology plays a significant role in achieving the policy's vision of a learner-centric and holistic education system. It empowers both educators and students, bridging gaps and promoting educational opportunities that transcend traditional boundaries.

One of the primary goals of the NEP 2020 is to ensure universal access to education, irrespective of geographical location or socio-economic background. Technology serves as a powerful enabler in achieving this objective. Through digital infrastructure and connectivity, students can access educational resources, virtual classrooms, and expert teachers from anywhere, breaking down the barriers of distance and limited resources. This accessibility expands educational opportunities for marginalized communities, including those in rural and remote areas. The NEP

2020 advocates for personalized and adaptive learning, recognizing that each student has unique strengths, weaknesses, and learning styles. Technology provides a wide array of digital tools and resources that cater to individual needs, allowing learners to progress at their own pace. Adaptive learning platforms, equipped with intelligent algorithms, identify knowledge gaps and offer customized learning paths, ensuring that students receive targeted support and achieve optimal learning outcomes.

Technology empowers educators with innovative tools and resources that enhance their teaching practices. In the NEP 2020, teachers are encouraged to develop digital pedagogical skills to create engaging and interactive learning experiences. Through technology, teachers can incorporate multimedia content, simulations, and educational apps into their lessons, making them more dynamic and impactful. Moreover, technology fosters collaboration among educators, enabling them to share best practices, access professional development opportunities, and collectively improve the quality of instruction. Assessment and evaluation are critical components of the NEP 2020, emphasizing a shift from rote memorization to a competency-based approach. Technology revolutionizes these processes, offering diverse and innovative assessment methods. Online assessments, such as quizzes and assignments, provide immediate feedback, enabling students to monitor their progress and make necessary improvements. Additionally, technology facilitates adaptive testing, where the difficulty level adjusts based on students' responses, ensuring a comprehensive evaluation of their knowledge and skills.

Data-driven decision making lies at the core of the NEP 2020, aiming to inform policies and interventions that improve educational outcomes. Technology enables the collection, analysis, and interpretation of vast amounts of educational data. This data, encompassing student performance, learning patterns, and teaching effectiveness, provides valuable insights for policymakers and educational institutions. Through technology-enabled data analysis, policymakers can make informed decisions, identify areas for improvement, and allocate resources effectively, fostering continuous enhancement in the education system. Technology emerges as a transformative force in the NEP 2020, revolutionizing the Indian education system. It propels the realization of the policy's vision by ensuring equitable access to education, facilitating personalized learning experiences, empowering teachers, transforming assessment practices, and enabling data-driven decision making. While challenges such as infrastructure limitations, digital divide, and privacy concerns exist, addressing them through collaboration and investment is crucial. By harnessing the power of technology, India can create an inclusive and future-ready education ecosystem that prepares learners to thrive in an ever-

evolving world. The NEP 2020, with technology at its core, paves the way for a truly holistic, inclusive, and high-quality education system in India.

Digital Infrastructure and Connectivity

The National Education Policy (NEP) 2020 recognizes the critical role of digital infrastructure and connectivity in providing equitable access to education. It places significant emphasis on bolstering digital infrastructure in schools and higher education institutions across the country. By embracing technology, the NEP 2020 aims to eliminate geographical barriers and ensure that all students can avail themselves of high-quality educational resources, online libraries, and virtual classrooms. In the modern digital era, technology has become an essential tool for learning and knowledge acquisition. However, without adequate digital infrastructure and connectivity, many students, especially those in remote and rural areas, face limited access to educational opportunities. The NEP 2020 addresses this disparity by recognizing the need to bridge the digital divide and promote inclusivity in education.

Strengthening digital infrastructure in schools and higher education institutions is crucial to create an environment conducive to effective teaching and learning. This involves equipping educational institutions with necessary hardware, such as computers, tablets, and smart boards, as well as establishing a robust network infrastructure to support seamless connectivity. By investing in digital infrastructure, the NEP 2020 ensures that students from all regions, including those in remote and underserved areas, have access to the same educational resources as their urban counterparts. In addition to enhancing infrastructure within schools, the NEP 2020 also prioritizes internet connectivity in rural and remote areas. The availability of high-speed internet connections in these regions is essential for enabling digital learning experiences. With reliable internet access, students can tap into a wealth of online educational resources, participate in virtual classrooms, engage in collaborative projects, and communicate with teachers and peers from around the world. Internet connectivity serves as a gateway to global knowledge, opening up vast opportunities for students to broaden their horizons and stay abreast of the latest advancements in their fields of interest. By focusing on digital infrastructure and connectivity, the NEP 2020 not only ensures equal access to educational resources but also addresses the digital divide prevalent in the country. The digital divide refers to the gap between those who have access to digital technologies and those who do not. This divide can create disparities in educational outcomes, with students lacking access to technology being at a disadvantage. The NEP 2020 aims to bridge this divide by promoting internet connectivity in rural and

remote areas, leveling the playing field for students across the country. It envisions a future where every student, regardless of their geographical location, can benefit from the transformative power of technology in education.

In conclusion, the NEP 2020 acknowledges the vital role of digital infrastructure and connectivity in ensuring widespread access to education. By strengthening digital infrastructure in schools and higher education institutions and promoting internet connectivity in rural and remote areas, the NEP 2020 takes significant strides toward inclusivity and bridging the digital divide. Through the integration of technology, students across the country can access quality educational resources, online libraries, and virtual classrooms, empowering them to thrive in the digital age. The NEP 2020 sets the foundation for an education system that embraces technology as a catalyst for equitable and holistic learning experiences.

Blended Learning and Personalized Education

The National Education Policy (NEP) 2020 advocates for a transformative shift towards blended learning, which integrates the traditional face-to-face classroom experience with online learning components. Technology plays a vital role as a catalyst in this process, providing a diverse range of digital learning resources that enrich students' educational experiences. By leveraging technology, the NEP 2020 fosters enhanced student engagement, self-directed learning, and personalized education. Blended learning combines the strengths of both traditional and online learning approaches, offering a comprehensive and flexible educational framework. In the NEP 2020, technology plays a pivotal role by providing various digital tools and resources that augment classroom instruction. Educational apps, multimedia content, and interactive simulations are among the array of digital learning resources available to students. These resources offer dynamic and interactive learning experiences, capturing students' attention and facilitating deeper understanding of concepts.

The integration of technology in blended learning environments cultivates student engagement by presenting educational content in innovative and captivating formats. Interactive multimedia elements, such as videos, animations, and virtual reality experiences, stimulate students' curiosity and make learning more enjoyable. Moreover, technology enables collaborative learning experiences, allowing students to interact with their peers and engage in group projects through online platforms. These collaborative opportunities promote active participation and the exchange of diverse perspectives, enriching the overall learning experience. One of the key advantages of technology in blended learning is its capacity to foster self-directed learning. Online platforms provide students with access to a vast array of

educational resources, empowering them to take ownership of their learning journeys. Students can explore topics of interest, conduct independent research, and access supplementary materials at their own pace and convenience. This self-directed learning approach nurtures critical thinking skills, encourages curiosity, and promotes lifelong learning habits.

Adaptive learning platforms are another notable aspect of technology-enabled blended learning. These platforms employ algorithms to analyze students' performance and identify their strengths and weaknesses in specific subjects or skills. Based on this analysis, adaptive learning platforms tailor instruction to meet individual student needs. Students receive personalized learning pathways and targeted interventions, allowing them to focus on areas that require improvement and advance at a pace that suits their learning abilities. This personalized approach enhances learning outcomes and ensures that students receive tailored support, thus maximizing their potential for academic success. The NEP 2020 recognizes the transformative potential of technology in blended learning and encourages its integration into the educational system. By embracing technology, educational institutions can provide students with a blended learning experience that combines the best of traditional and online approaches. The diverse array of digital learning resources, interactive elements, and adaptive platforms foster engagement, autonomy, and personalized learning. Blended learning, supported by technology, empowers students to become active participants in their education, prepares them for the digital age, and equips them with the skills necessary for success in the 21st century.

Teacher Empowerment and Professional Development

The role of technology in empowering teachers and enhancing their professional development is of utmost importance in the National Education Policy (NEP) 2020. The NEP 2020 acknowledges the necessity for teachers to develop digital pedagogical skills to effectively integrate technology into their teaching practices. It recognizes that technology can serve as a catalyst for professional growth and provides numerous avenues for teachers to enhance their skills and stay abreast of the latest educational practices. Online training programs and webinars play a crucial role in equipping teachers with the necessary knowledge and skills to leverage technology in their classrooms. These programs offer flexible and accessible learning opportunities, enabling teachers to enhance their teaching methodologies, explore new digital tools, and understand how to integrate them effectively into their lessons. By participating in online training programs and webinars, teachers can acquire the pedagogical strategies and technical expertise needed to create engaging and impactful learning experiences for their students.

Additionally, technology facilitates collaboration among teachers, fostering a community of practice where they can exchange resources, share best practices, and learn from each other's experiences. Online platforms and social networking tools enable teachers to connect and collaborate with educators from different locations, both nationally and globally. Through these collaborative networks, teachers can engage in discussions, share innovative teaching ideas, and gain valuable insights into effective instructional strategies. The exchange of knowledge and experiences among teachers leads to the collective improvement of teaching practices, ultimately raising the overall quality of education. Furthermore, technology provides teachers with access to a wealth of educational resources, ranging from digital textbooks and interactive multimedia content to online learning platforms and educational apps. These resources offer diverse teaching materials and instructional aids that can be integrated seamlessly into lesson plans. By leveraging technology, teachers can create engaging and interactive learning experiences that cater to diverse learning styles, promote active participation, and facilitate student-centered approaches.

Moreover, technology enables teachers to stay updated with the latest educational practices and research. Online platforms, educational websites, and professional learning communities provide a vast repository of educational articles, research papers, and teaching resources. By leveraging technology, teachers can explore emerging trends, evidence-based practices, and innovative teaching methodologies. This continuous professional development equips teachers with the knowledge and tools necessary to adapt to evolving educational landscapes and cater to the changing needs of their students. In conclusion, technology plays a pivotal role in empowering teachers and enhancing their professional development in the NEP 2020. Through online training programs, webinars, collaboration platforms, and access to educational resources, technology equips teachers with the digital pedagogical skills, knowledge, and resources necessary to create impactful and engaging learning experiences. By embracing technology, teachers can continuously improve their instructional practices, stay updated with the latest educational trends, and ultimately provide students with a high-quality education that prepares them for the challenges of the future.

Assessment and Evaluation

Technology plays a transformative role in assessment and evaluation, aligning with the National Education Policy's (NEP) focus on holistic and competency-based education. The NEP 2020 recognizes the need to redefine assessment practices to move beyond rote memorization and promote a comprehensive understanding of students' knowledge and skills. Technology offers innovative approaches to

assessment, enabling timely feedback, identifying areas for improvement, and facilitating adaptive testing. Online assessments have become increasingly prevalent in educational settings, offering a wide range of tools and formats such as quizzes, tests, and assignments. These digital assessments provide numerous benefits compared to traditional paper-based exams. First and foremost, online assessments allow for immediate feedback, enabling students to gauge their performance and identify areas that require further attention. Through timely feedback, students can address their weaknesses and make necessary improvements, fostering a continuous learning process.

Moreover, technology-enabled assessments offer greater flexibility and efficiency in administration and grading. Online assessments can be administered remotely, eliminating logistical constraints and allowing students to complete assessments from any location. This flexibility is particularly beneficial for students who may have limited access to physical testing centers. Additionally, automated grading systems streamline the grading process, saving teachers valuable time and ensuring consistency in the evaluation of student responses. Adaptive testing is another significant advancement facilitated by technology in the realm of assessment. Adaptive testing refers to assessments where the difficulty level adjusts dynamically based on students' responses. Adaptive testing platforms utilize sophisticated algorithms that adapt the test's content and questions to match the individual's demonstrated knowledge and skills. This approach ensures a more accurate and comprehensive evaluation of students' capabilities. By tailoring the assessment to the specific needs and abilities of each student, adaptive testing provides a personalized and equitable evaluation experience, catering to the diverse learning profiles and levels of students.

Technology also offers opportunities for multidimensional assessment, beyond traditional forms of testing. With digital tools and platforms, students can demonstrate their understanding and skills through multimedia presentations, portfolios, and project-based assessments. These alternative assessment methods allow students to showcase their creativity, critical thinking, problem-solving, and collaboration skills, providing a more comprehensive view of their abilities. Additionally, technology facilitates the collection and analysis of assessment data on a large scale. With digital assessment platforms, educational institutions can gather extensive data on student performance, progress, and learning patterns. This data-driven approach enables educators and policymakers to gain insights into student strengths, weaknesses, and overall performance. By leveraging this data, informed decisions can be made to improve teaching practices, curriculum design, and educational policies, leading to continuous improvement in the education system.

In conclusion, technology revolutionizes assessment and evaluation practices in alignment with the NEP's focus on holistic and competency-based education. Online assessments provide timely feedback and flexibility, while adaptive testing ensures a personalized and comprehensive evaluation of students' knowledge and skills. The integration of technology also opens doors to alternative assessment methods, allowing students to showcase a broader range of competencies. Furthermore, technology facilitates data-driven decision-making by collecting and analyzing assessment data on a large scale. By embracing technology in assessment practices, the NEP 2020 promotes a more accurate, meaningful, and student-centered approach to evaluation, ultimately fostering holistic development and enhancing the quality of education.

Data-driven Decision Making

Data-driven decision making takes center stage in the National Education Policy (NEP) 2020, reflecting the recognition of the importance of utilizing educational data for informed policy and planning. Technology plays a pivotal role in enabling the collection, analysis, and interpretation of vast amounts of educational data, empowering policymakers to make evidence-based decisions that enhance the quality and relevance of education. The NEP 2020 emphasizes the value of educational data in understanding student performance and learning outcomes. Through technology-enabled systems, educational institutions can efficiently gather data on various aspects of students' academic journey, including assessments, attendance, and engagement. This comprehensive data provides valuable insights into individual student progress, patterns, and strengths, enabling educators to tailor their instruction and interventions to address specific needs.

Furthermore, the analysis of educational data allows for the identification of learning gaps and areas of improvement. By examining patterns and trends within the data, policymakers can pinpoint subjects, topics, or skills where students may be struggling or underperforming. This knowledge guides the development of targeted interventions, curriculum enhancements, and instructional strategies to address these gaps effectively. Data-driven insights enable educators to personalize learning experiences and provide tailored support, ensuring that every student has the opportunity to succeed. Technology also facilitates the evaluation of the effectiveness of educational initiatives and policies. By analyzing educational data, policymakers can assess the impact of various programs, interventions, and teaching methodologies on student outcomes. This evaluation helps policymakers identify successful practices and replicate them on a larger scale, while also identifying areas where improvements may be necessary. By using data to measure the effectiveness

of educational initiatives, resources can be allocated strategically, optimizing the outcomes for students and maximizing the return on investment.

Moreover, technology-driven data analysis enables policymakers to track and monitor educational progress on a broader scale. By aggregating and examining data across multiple schools, districts, or regions, policymakers can identify trends, patterns, and disparities in educational outcomes. This information informs the development of targeted policies and interventions to address inequalities, promote equitable access to quality education, and close achievement gaps. The NEP 2020 recognizes that leveraging technology for data analysis is critical for informed decision making in education. However, it is essential to ensure the ethical collection, storage, and use of educational data, respecting student privacy and data security. Striking a balance between utilizing data to inform decision making while safeguarding individuals' rights is of utmost importance in the implementation of data-driven policies. In conclusion, the NEP 2020 places a strong emphasis on data-driven decision making in education policy and planning. Technology facilitates the collection, analysis, and interpretation of educational data, providing valuable insights into student performance, learning gaps, and the effectiveness of educational initiatives. By leveraging technology for data analysis, policymakers can make informed decisions that enhance the quality and relevance of education. Data-driven insights ensure targeted interventions, personalized learning experiences, and equitable access to education, ultimately fostering improved educational outcomes for all learners.

Challenges and the Way Forward

Despite its immense opportunities, the integration of technology in education also presents several challenges that must be addressed for the successful implementation of the National Education Policy (NEP) 2020. Key challenges include infrastructure limitations, the digital divide, privacy concerns, and the need for digital literacy among teachers and students. However, through collaboration between stakeholders, including the government, educational institutions, and technology providers, and strategic investments in infrastructure, teacher training, and technology-based educational solutions, these challenges can be overcome to realize the vision of the NEP 2020. Infrastructure limitations pose a significant challenge to the effective integration of technology in education. Many schools and educational institutions, particularly in rural and remote areas, lack the necessary infrastructure to support digital learning. Insufficient access to reliable electricity, internet connectivity, and hardware devices hinders the seamless adoption of technology. Addressing infrastructure limitations requires concerted efforts from the

government and other stakeholders to invest in the development of robust digital infrastructure, ensuring that all educational institutions have the necessary resources to leverage technology for effective teaching and learning.

The digital divide exacerbates inequities in access to technology and internet connectivity. Students from marginalized communities, including those in remote areas and low-income households, face barriers in accessing digital resources and participating fully in digital learning experiences. Bridging the digital divide requires comprehensive strategies that focus on improving internet connectivity in underserved areas, providing affordable devices to students, and promoting digital inclusion initiatives that empower all learners to access and utilize technology effectively. Privacy concerns are another critical challenge associated with the integration of technology in education. Educational institutions must prioritize data privacy and security to protect sensitive student information from unauthorized access or misuse. Strict policies and protocols should be established to ensure compliance with data protection regulations and to safeguard the privacy of students and teachers. Collaboration between educational institutions, policymakers, and technology providers is essential to develop robust privacy frameworks and implement appropriate safeguards.

Digital literacy among teachers and students is crucial for effective technology integration. Teachers need support and training to develop digital pedagogical skills and utilize technology tools optimally. Likewise, students must be equipped with digital literacy skills to navigate online resources responsibly, critically evaluate information, and leverage technology for learning. Continuous professional development programs and teacher training initiatives, supported by collaboration between educational institutions and technology providers, can enhance digital literacy skills among teachers. Similarly, comprehensive digital literacy programs for students should be implemented to ensure they can utilize technology safely and effectively. To overcome these challenges, collaboration between various stakeholders is paramount. The government, educational institutions, technology providers, and other relevant parties should work together to develop strategies and allocate resources effectively. Collaboration can involve public-private partnerships to drive infrastructure development, joint initiatives for teacher training and professional development, and collaborations to create research and development centers that focus on technology-based educational solutions aligned with the objectives of the NEP 2020.

Investment in infrastructure is essential to create a robust digital ecosystem that supports technology integration in education. Adequate funding should be allocated to develop reliable internet connectivity, provide devices to students, and upgrade

digital infrastructure in educational institutions. Additionally, investments in research and development of technology-based educational solutions can drive innovation, supporting the NEP's objectives and ensuring the availability of effective and contextually relevant educational technologies. In conclusion, while the integration of technology in education presents challenges, strategic collaborations and investments can help overcome them. Addressing infrastructure limitations, bridging the digital divide, ensuring data privacy, and promoting digital literacy are crucial for the successful implementation of the NEP 2020. Through collaborative efforts between the government, educational institutions, and technology providers, a supportive ecosystem can be created, facilitating the effective integration of technology in education and enabling the realization of the NEP's vision for equitable, inclusive, and high-quality education.

Conclusion

The National Education Policy (NEP) 2020 paints a visionary picture of an education system that harnesses the potential of technology to promote inclusivity, equity, and quality. Technology serves as a transformative force, revolutionizing the way education is accessed, delivered, and evaluated. By providing widespread access to educational resources, enabling personalized learning experiences, empowering teachers, facilitating assessment and evaluation, and supporting data-driven decision making, technology becomes the catalyst for educational transformation envisioned by the NEP 2020. Embracing technology as a powerful tool is essential for the successful implementation of the NEP's vision. First and foremost, technology provides students with unprecedented access to a vast array of educational resources. Online platforms, digital libraries, and repositories of educational materials ensure that students, regardless of their geographical location, can tap into a wealth of knowledge and information. This broadens their horizons and enhances their learning experiences by exposing them to diverse perspectives, up-to-date content, and interactive learning resources.

Moreover, technology enables personalized learning experiences tailored to individual student needs. Adaptive learning platforms, powered by intelligent algorithms, analyze student performance, identify strengths and weaknesses, and adapt instructional content accordingly. This personalized approach ensures that students receive targeted support, progress at their own pace, and maximize their learning potential. By catering to individual learning styles, interests, and abilities, technology promotes inclusive education that respects and nurtures the unique qualities of every student. Teachers play a central role in the NEP 2020, and technology empowers them to become more effective and innovative educators.

Through technology-enabled platforms, teachers gain access to a wide range of teaching tools, resources, and professional development opportunities. Online training programs, webinars, and virtual collaboration platforms enable teachers to enhance their pedagogical skills, explore new instructional strategies, and share best practices. Technology supports teacher empowerment by fostering a collaborative community of educators, facilitating knowledge exchange, and promoting continuous professional growth.

Assessment and evaluation are essential components of the NEP 2020, and technology revolutionizes these processes. Online assessments provide immediate feedback to students, enabling them to gauge their understanding, track their progress, and identify areas for improvement. Additionally, technology facilitates adaptive testing, where assessments dynamically adjust the difficulty level based on individual performance. This ensures a comprehensive evaluation of students' knowledge and skills, going beyond mere memorization and promoting a deeper understanding of concepts. Data-driven decision making is at the core of the NEP 2020, and technology serves as a powerful tool in this regard. Through technology-enabled data collection, analysis, and interpretation, policymakers gain insights into student performance, learning outcomes, and educational trends. This data informs evidence-based decision making, allowing policymakers to identify areas for improvement, allocate resources effectively, and design targeted interventions. By leveraging technology for data-driven decision making, the NEP 2020 aims to enhance the overall quality and relevance of education.

In conclusion, the NEP 2020's vision for an inclusive, equitable, and high-quality education system can be realized through the transformative power of technology. By providing access to educational resources, enabling personalized learning experiences, empowering teachers, facilitating assessment and evaluation, and supporting data-driven decision making, technology becomes the driving force behind educational transformation. Embracing technology as a powerful tool is paramount for India to redefine education and create a dynamic learning ecosystem that equips students with the knowledge, skills, and competencies needed to navigate the challenges of the future. The successful implementation of the NEP 2020's vision hinges on harnessing the potential of technology and leveraging it as an enabler for educational excellence.

Abstract

India has made remarkable strides in the field of information technology, positioning itself as a global hub for innovation and technological advancement. Over the past decade, the country has emerged as a global hub for IT services, software development, and technology innovation. India continues to play a pivotal role in shaping the future of the information technology industry. But it has also presented challenges, including an increased risk of data breaches. Data breaches have become a global concern in the digital age, and India is no exception. With the rapid growth of the information technology sector and the increasing reliance on digital systems, India has witnessed a rise in data breaches over the years. This paper discusses about the multifaceted landscape of data breach vulnerabilities in India, examining the intricate interplay of technological, human, and regulatory factors that contribute to this pervasive challenge.

Keywords: Cyber security, Data breach, Threats.

Introduction

A data breach is a security incident in which unauthorized parties gain access to sensitive, protected or confidential data. This could include personal information like names, addresses, social security numbers, credit card details, and more. Data breaches can occur due to various reasons, including cyberattacks, hacking, phishing, accidental exposure, or insider threats. Some potential impacts of a data breach include identity theft, financial losses, reputational damage, legal and regulatory penalties, and loss of customer trust.

The risk of data breaches in India, as in any country, depends on various factors including the Cyber security measures in place, the technological landscape, the prevalence of cyber threats, and the level of awareness among individuals and organizations.

Factors influence the data breaches in India:

- **Weak or stolen passwords:** This is one of the most common causes of data breach. Stolen/compromised credentials: This is when hackers obtain or guess the usernames and passwords of users or employees, and use them to access sensitive data or systems. This is the most expensive cause of data breach in India, costing Rs 21.6 crore on average.

- **Phishing:** This is when hackers send fraudulent emails or messages that trick users or employees into clicking on malicious links or attachments, or revealing their personal or financial information. This is the second most expensive cause of data breach in India, costing Rs 20.6 crore on average.
- **Malware:** Malware is a type of software that can be used to steal data, damage systems, or disrupt operations. It can be spread through email attachments, malicious websites, and other means.
- **Social engineering:** Social engineering is a technique used by attackers to trick people into giving up their personal information or clicking on malicious links. It is a very effective way to gain access to data.
- **Insider threats:** Insider threats can occur when employees or contractors misuse their access privileges to steal data or disrupt operations. Insider threats can be difficult to detect and prevent.
- **Lack of awareness:** Many people are not aware of the risks of data breaches or how to protect themselves. This lack of awareness can make them more vulnerable to attack.
- **Digital transformation:** This is when organizations adopt new technologies and processes to improve their efficiency and competitiveness, such as cloud computing, artificial intelligence, and internet of things. This also increases the amount and complexity of data that needs to be protected, as well as the potential attack surface for hackers.
- **Remote work:** This is when employees work from home or other locations outside the office, due to the Covid-19 pandemic or other reasons. This also poses challenges for data security, as employees may use unsecured networks or devices, or share confidential information through unencrypted channels.
- **Third Party Influences:** Many data breaches occur through third-party vendors and supply chain partners. The security practices of these partners can indirectly affect the risk of breaches for Indian organizations.

These factors underscore the importance of addressing both technical and human aspects of Cyber security to safeguard sensitive data and minimize the risk of data breaches in the Indian context.

Literature Review

Data breaches are a serious and growing threat to the security and privacy of individuals and organizations in India. Several studies have examined the costs and causes of data breaches in India, as well as the legal and regulatory framework for data protection and privacy. The major data breaches in India include the BigBasket data breach in 2020, in which the personal data of over 1.8 crore customers was leaked, and the Unacademy data breach in 2020, in which the personal data of over 2 crore users was compromised [3][4].

The increasing number of data breaches in India is a serious concern, as it can have a significant impact on individuals and businesses. The stolen data can be used

for identity theft, fraud, and other crimes. To protect themselves from data breaches, individuals and businesses should take steps to improve their Cyber security practices. This includes using strong passwords, enabling two-factor authentication, and keeping their software up to date [5].

A study by Jain et al. reviewed the existing literature and open data sources related to Cyber security and cyber risk, focusing on the datasets used to improve academic research and policy making. The study identified various types and sources of data on Cyber security incidents, such as breach reports, vulnerability disclosures, threat intelligence feeds, cyber insurance claims, etc. The study also evaluated the quality and limitations of these data sources, such as coverage, reliability, accessibility, etc. The study also provided suggestions for enhancing data availability and usability for Cyber security research [6]. These studies show that data breaches are a complex and multifaceted phenomenon that require a holistic and multidisciplinary approach to understand and address them. They also show that there is a need for more effective policies and practices to prevent and mitigate them.

Data Breach Vulnerabilities

In India, the vulnerability to such breaches is influenced by a complex interplay of technological, social, and regulatory factors. This vulnerability not only jeopardizes the privacy and security of individuals but also poses significant risks to businesses, the government, and national security.

Table 1: Top 5 countries reported data breaches

Country	No. of data breaches
United States	1,862
Russia	751
China	627
India	400
United Kingdom	271

The data is from the Privacy Rights Clearinghouse [1], a non-profit organization that tracks data breaches. The table 1 shows the top 5 countries with the most reported data breaches in 2022. The table only includes data breaches that affected more than 1,000 people. The United States had the most data breaches reported in 2022, followed by Russia, China, India, and the United Kingdom. But, the data from Surfshark[2] did not include India in the top 5 countries for data breaches in Q3 2022.

Protective Measures

The increasing number of data breaches in India is a serious concern. It is important for individuals and businesses to take steps to protect themselves from data breaches. Here are several protective measures that individuals, organizations, and the government can employ to mitigate the risk of data breaches:

Digital Personal Data Protection Bill, 2022

The Digital Personal Data Protection Bill 2022, drafted by the Ministry of Electronics and Information Technology, is designed to establish a comprehensive framework for the protection of personal data in India. It outlines the rights and responsibilities of individuals (referred to as Digital Nagrik) regarding their personal data and sets obligations for organizations to lawfully handle this data. A significant feature is the creation of a Data Protection Board of India, which would be responsible for ensuring compliance with the bill's provisions, imposing penalties for violations, and performing other functions delegated by the Central Government. Currently, the Information Technology (Reasonable Security Practices and Procedures and Sensitive Personal Data or Information) Rules, 2011, govern data protection practices, mandating security measures and privacy policies for organizations handling personal data. The new bill represents a significant step forward in India's data protection landscape, addressing emerging challenges in the digital era and enhancing data security and privacy for citizens [7].

The other major protective measures to tackle the data breach are:

Encryption: Utilize robust encryption protocols to secure data both in transit and at rest. Encryption ensures that even if data is intercepted or stolen, it remains unintelligible to unauthorized parties.

Data Backups: Implement a robust data backup and recovery strategy to ensure data availability even in the event of a breach or ransomware attack.

Firewalls Systems: Employ state-of-the-art firewalls and intrusion detection systems to monitor network traffic for suspicious activity and block potential threats.

Cyber security Awareness: The level of Cyber security awareness, practices, and investments among Indian businesses and individuals can impact the likelihood of data breaches. Organizations that prioritize Cyber security are generally better equipped to prevent and respond to breaches.

Digital Literacy: The level of digital literacy among the population can influence the likelihood of falling victim to cyberattacks such as phishing, which is often used to initiate data breaches.

Conclusion

Data breaches are a serious and growing threat to the security and privacy of individuals and organizations. The increasing number of data breaches is a serious concern, as it can have a significant impact on individuals and businesses. To protect from data breaches, individuals and businesses should take steps to improve their Cyber security practices. The Digital Personal Data Protection Bill 2022 is a significant step forward in India's data protection landscape. The bill addresses emerging challenges in the digital era and enhances data security and privacy for citizens. By adopting the protective measures and maintaining a proactive stance on Cyber security, India can work toward fortifying its defences against data breaches and ensuring the security and privacy of its digital assets.

Abstract

Development has economic, social and political dimensions and is incomplete without the development of women who constitute about 50 per cent of total population. So, contribution of women is essential in economic activities for healthy nation building. When we speak about the term "Women Entrepreneurship" Women are one of the most relevant untapped resources if you talk about entrepreneurship. Female entrepreneurship is gaining attention and importance in light of the evidence of the importance of new business creation for economic growth and development. Entrepreneurship refers to the act of setting up a new business so as to take advantages from new opportunities. Entrepreneurs are responsible for shaping the economy and they help in creation of new wealth and new jobs by inventing new products, process and services. We all understand that economic development of the today's woman is crucial for economic development of any country specially a country like India

Women's entrepreneurship has been recognized during the last decade as a new jobs and success for themselves and others also. By providing this, they are giving different ideas, jobs and solutions to management, organization and business problems as well as women exploitation. Although the number of women entrepreneurs are very less but they are doing their best. Because of the male dominated society, women entrepreneurs are largely neglected in normal life of society and basically a woman and her family members have a concept for job to her as a teacher, tutor or government officer/worker. They are unable to accept them as R&D in charge, IAS/PCS/CID, business lady, factory maker, engineer, etc. But today if we see the backside of mirror, then we will find successful women entrepreneurs. We can collect the full profile of women entrepreneurs, their demographic information barriers to start-up, growth and problems to perform their duties in family as well as in society.

Keywords: *Women Entrepreneurship, women exploitation, economic development, dominated society*

Introduction

Entrepreneurship is necessary to initiate the process of economic development of both developed and developing countries as it is the back bone of economy of any country. Entrepreneurship refers to combining the available resources of production in such a new way that it produces the goods and services more satisfactory to the customers.

Entrepreneur is a catalytic agent of change. It is also instrumental in sustaining the process of economic development. Every country tries to achieve economic development for prosperity and better life standard of its people. Development has economic, social and political dimensions and is incomplete without the development of women who constitute about 50 per cent of total population. So, contribution of women is essential in economic activities or healthy nation building. A person who assumes and bears all types of risks involved in an enterprise, who organizes the various inputs or factors of production and who innovates new ideas, concepts, strategies and methodology in business from time to time is known as Entrepreneur.

Women Entrepreneurship

When we speak about the term “Women Entrepreneurship” we mean, an act of business ownership and business creation that empowers women economically, increases their economic strength as well as position in society. Hence women-entrepreneurs have been making a considerable impact in all most all the segments of the economy which is more than 25% of all kinds of business. In India “Entrepreneurship” is very limited amongst women especially in the formal sector, which is less than 5% of all the business. Women are one particularly understudied group of entrepreneurs. We know very little about female entrepreneurs, and our ignorance of this important demographic is a serious blind spot in any effort to increase the total number of entrepreneurs participating in our economy.

Today, more and more women are undertaking various economic activities. Female entrepreneurs are active at all levels domestically, regionally and globally. Women entrepreneurs encounters only one third of all entrepreneurs. In the era of globalization, the challenges are far greater for women entrepreneurs. They are playing very important role in socio-economic development of all countries. Because of their participation, global economy is being changed at present. All over the world, it is estimated that approximately one third of the business organizations are owned by women. In India, the position is near about the same. The precious contribution of women in the area of entrepreneurship can be summarized as:

1. Promotion of capital formation by mobilizing the idle saving of the public
2. Creation of immediate employment so it helps to reduce unemployment problem
3. Promotion of balanced regional development
4. Encourage effective mobilization of capital and skill, which might remain unutilized
5. Promotion of India's export trade.

Characteristics of Woman Entrepreneur in India

A woman or a group of women manages the whole business of enterprise. She prepares various plans and executes the maunder her own supervision and control. A woman entrepreneur takes calculated risk. She faces uncertainty confidently and assumes risk. She has to tie up capital and wait for good returns. The most critical skill required for industrial development is the ability of building a sound organization. A woman entrepreneur assembles, co-ordinates, organizes and manages the other factors namely land, labour and capital. It is essential to be a self confident for a woman entrepreneur. She should have faith in herself and in her abilities. The main function of a woman entrepreneur is to make decision. She takes various decisions regarding the activities of her enterprise. She decides about the type of business to be done and the way of doing it. A woman entrepreneur must be clear and creative in decision making process.

A distinguishing feature of a woman entrepreneur is the willingness to work hard. She has to follow the principle, "Hard-work is the key to success". A woman entrepreneur must be optimistic. She should approach her venture with a hope of success and attitude for success rather than with a fear of failure.

Women entrepreneurs face the adversities boldly and bravery. She has faith in herself and attempts to solve the problems even under great pressure. A woman entrepreneur is energetic, single-minded, having a mission and a clear vision. She should be a lady of creative thinking and analytical thinking. She must be intelligent, adaptable and problem solver. Leadership quality is one of the most important characteristic of a woman entrepreneur. It is the process of influencing and supporting others to work enthusiastically towards achieving objectives.

Problems of Women Entrepreneurship in India

Problem of Finance

Finance is regarded as "life blood" for any enterprise, be it big or small. However, women entrepreneurs suffer from shortage of finance on two counts. Firstly, women do not generally have property on their names to use them as collateral for obtaining funds from external sources. Thus, their access to the external sources of funds is limited. Secondly, the banks also consider women less credit- worthy and discourage women borrowers on the belief that they can at any time leave their business. Given such situation, women entrepreneurs are bound to rely on their own savings, if any and loans from friends and relatives who are expectedly merger and negligible. Thus, women enterprises fail due to the shortage of finance.

Scarcity of Raw Material

Most of the women enterprises are plagued by the scarcity of raw material and necessary inputs. It is added to this are the high prices of raw material, on the other.

Stiff Competition

Women entrepreneurs do not have organization set-up to pump in a lot of money for canvassing and advertisement. Thus, they have to face a stiff competition for marketing their products with both organized sector and their male counterparts. Such a competition ultimately results in the liquidation of women enterprises.

Family Ties

In India, it is mainly a woman's duty to look after the children and other members of the family. Man plays a secondary role only. In case of married woman, she has to strike a fine balance between her business and family. Her total involvement in family leaves little or no energy and time to devote for business. Support and approval of husbands seem necessary condition for women's entry into business. Accordingly, the educational level and family background of husbands positively influence women's entry into business activities.

Lack of Education

In India, majority of women are still illiterate. Illiteracy is the root cause of socio-economic problems. Due to the lack of education, women are not aware of business, technology and market knowledge. Also, lack of education causes low achievement motivation among women. Thus, lack of education creates problems for women in the setting up and running of business enterprises.

Male Dominated Society

Male chauvinism is still the order of the day in India. The constitution of India speaks of equality between genders. But, in practice women are looked upon as able i.e. weak in all respects. Women suffer from male reservations about a woman's role, ability and capacity and are treated accordingly. In nutshell, in the male dominated Indian society, women are not treated equal to men. This in turn, serves as a barrier to women entry into business.

Low risk- Bearing Ability

Women in India lead a protected life. They are less educated and economically not self-dependent. All these reduce their ability to bear risk involved in running an enterprise. Risk bearing is a nessesential requisite of a successful entrepreneur. In addition to above problems, inadequate infrastructural facilities, shortage of power, high cost of production, social attitude, low need for achievement and socio-economic constraints also hold the women back from entering into business.

Marketing Problems

During the process of marketing of products women entrepreneurs faced certain problems viz. poor location of shop, lack of transport facility and tough competition from larger and established units.

Production Problems

Production problems faced by maximum women are non-availability of raw material. Non-availability of raw material is one of the reasons to the slow growth of women entrepreneurs. Other production problems are non-availability of machine or equipment, lack of training facility and non availability of labour, high cost of required machine or equipment.

Health Problems

Major health problems faced by women entrepreneurs were tension, backache, eyestrain fatigue and headache. It is found that women feeling the problem of feeling fatigued after returning home, lack of rest and sleep and heavy schedule. Enterprise. Risk bearing is an essential requisite of a successful entrepreneur. In addition to above problems, inadequate infra structural facilities, shortage of power, high cost of production, social attitude, low need for achievement and socio-economic constraints also hold the women back from entering into business.

Financial Problems

Finance is a most important aspect of any business. Non availability of long-term finance, regular and frequent need of working capital and long procedure to avail financial help is found to be the financial problems faced by women

Suggestions for the Development of Women Entrepreneurship in India

Right efforts from all areas are required in the development of women entrepreneurs and their greater participation in the entrepreneurial activities. Entrepreneurship basically implies being in control of one's life and activities and women entrepreneurs need to be given confidence, independence, and mobility to come out of their paradoxes.

The following measures are suggested to empower the women to seize various opportunities and face challenges in business.

Finance Cells

A large number of various finance cells may be open to provide easy finance to women entrepreneurs. These special cells should provide finance to women entrepreneurs at low and concessional rates of interest and on easy repayment

facilities. Even these finance cells should be manned by women officers and clerks. Efforts should be made to provide finance at the local level.

Marketing Co-operatives

Marketing co-operatives should be established to encourage and assist women entrepreneurs. Government should give preference to women entrepreneurs while purchasing their requirements. These marketing co-operatives will help the women entrepreneurs to sell their products on remunerative prices. This will help in eliminating the middlemen. Supply of raw-materials: The required, scarce and imported raw-materials should be made available to women entrepreneurs at priority basis at concessional rate.

Educational and Awareness

The educational and awareness programmes should be arranged to change the negative social attitudes towards women. The attitude of elders needs to be changed about the potential of girls and their due role in society.

Training Facilities

Training and development programmes play a very essential role for the development of entrepreneurship. Special training schemes should be so designed that women can get full advantages. Mobile training centres, part time training facilities etc. should be offered to attract more and more women to the training centres.

Develop a Blue Print

Wesman said one of the top issues she experiences with women entrepreneurs is that they lack having a set plan in place because so many women fall into their business accidentally. "They seem to fall into the business because it's something they like doing, so they don't create a specific plan or strategy," she said. Wesman advised all women entrepreneurs to write up a business blue print when starting out that includes a clear description of the product or service, their target audience and how the business will be run on a daily basis. This blueprint should also touch on the specific responsibilities of the business owner and employees, as well as an estimate of what it will cost to run the business in the first year.

Team Building

Many female entrepreneurs try to handle every aspect of the business alone, according to Wesman, and that's a recipe for failure. It's important that female entrepreneurs surround themselves with team members that have different

strengths and expertise that can help run a successful business. Women think they can do it all themselves, and aren't thinking about teambuilding and tapping resources the way that men. Men in the business world tend to realize that, whereas women are used to multitasking.

Build Relationships

Women often try to build relationships with prospective clients or customers, which can set themselves up for disappointment, Wes man said. "When they can't make the sale they take it too personally because it was a relationship they tried to build," she said. "Instead of stepping back and thinking, 'what did I learn from that sales experience?' or 'how can I use this to improve my next sales experience?'" Wes man blames this on how women have been conditioned in society, and being uncomfortable with competition and wanting to be liked. "Then you take it really personally, because you are trying to sell based on people liking you," Wes man said. She said women need to build relationships, but shouldn't be scared to be competitive when pitching sales. Under-pricing services: Money can be a touchy subject for many women, Wes man said, and many have trouble discussing pricing terms. This uneasiness often leads female business owners to under value their products or services. "It does not understand what it actually costs you to produce a product, or what it costs you to deliver a service," Wes man said. "Women also under price themselves in the workplace, and the same thing happens when you are an entrepreneur."

Hiding from Cash flow Issues

Managing cash flow and following up on owed money and payments is critical to every successful business, but women tend to be less assertive when it comes to collecting money, according to Wes man. "This goes along with the issue of it being unladylike, or not feminine to discuss money, or think about money, or to collect it," she said. Owners need to face those debtors head on, and get what they are due.

Getting too Close with Employees

While many small businesses adopt that "family" mentality, female entrepreneurs are often very guilty of getting too close with their workers, Wes man said. They treat employees like family and friends," she said. "It's about having a good business relationship, but not getting involved in too personal relationship." When a relationship reaches that point, it becomes harder to make decisions in the best interest of the business, she said.

Solution for the Better Conditions of Women Entrepreneurs

A specific solution for solving women's difficulties for obtaining financing has been micro-financing. Microfinance is financial institution that has become extremely popular especially in developing economies even if there are such programmes in the European Union and the United States. This example of well known programmes is the pioneering gram men bank in Bangladesh. The Bancosolodario (Bancosol) in Bolivia and the Bank Rakyat in Indonesia. If women can be more successful than men in service sector then they can be in business sector also. They have to be bold, confident and capable of doing every type of work and also have patient when others are passing comments about different financial institutions such as banks, mutual funds investment are providing funds to finance them in the business.

Conclusion

It is observable that women entrepreneurs have proved to be a strong driving force in today's corporate world. They are competent to balance their duties of both motherhood and entrepreneurship but they comprise of almost half of all businesses owned today. Indian women and laws guaranteed equal rights of participation in political process and equal opportunities and rights in education and employment were enacted. But unfortunately, the government sponsored development activities have benefited only a small section of women i.e. the urban middle class women. Women sector occupies nearly 45% of the Indian population. At this juncture, effective steps are needed to provide entrepreneurial awareness, orientation and skill development programs to women. Woman can pick up a job any day, but if she becomes an entrepreneur she can provide a livelihood to 10 more women at least...!! Highly educated, technically sound and professionally qualified women must be encouraged for managing their own business, rather than being employed in any outlets. The uncultivated talents of young women can be identified, trained and exploited for various types of industries to increase the productivity in the industrial sector as well as the nation. Now a days even after facing so many obstacles The Indian women is now becoming educated and economically independent. Women entrepreneurs face so many problems from financial, marketing, health, family, and other problems point of view. The governments and financial institutions must enforce some measurable guidelines for women entrepreneurs from time to time. Women entrepreneurship must be moulded properly with entrepreneurial traits and skills to meet the changes in trends, challenges of the global markets and also be competent enough to sustain and strive for excellence in the entrepreneurial arena.

Abstract

Digital payments have revolutionized the financial landscape, offering fast, convenient, and secure transactions. Beyond their convenience, digital payments have played a vital role in promoting financial inclusion by providing access to formal financial services for the unbanked and underbanked populations. This essay explores the impact of digital payments on financial inclusion, highlighting the benefits, challenges, and strategies for achieving inclusive and sustainable economic growth. Digital payments empower individuals by bridging the gap between traditional banking services and underserved populations, allowing them to participate in the formal economy, access credit facilities, and manage their finances effectively. Financial inclusion, facilitated by digital payments, promotes socio-economic development, as it enables individuals and businesses to access financial services, save, invest, and manage risks. The benefits of digital payments include increased access to financial services, improved transparency and accountability, and enhanced financial management. However, challenges such as digital literacy, the digital divide, and data security must be addressed to ensure widespread financial inclusion. Collaborative efforts among governments, financial institutions, and technology providers are crucial to create an enabling regulatory environment, develop user-friendly digital payment solutions, and invest in digital infrastructure. By harnessing the power of digital payments and promoting financial inclusion, societies can empower individuals, drive economic growth, and build a more inclusive and sustainable future.

Keywords: Digital payments, Financial inclusion, Empowering individuals, Economic growth, Digital transformation

Introduction

In recent years, the rise of digital payment systems has brought about a significant transformation in the way financial transactions are conducted worldwide. This shift has revolutionized the financial landscape by introducing faster, more convenient, and secure modes of conducting transactions. Digital payments have emerged as a game-changer, offering individuals and businesses a wide array of electronic payment options, such as mobile wallets, online banking,

and digital payment apps. One of the most profound impacts of digital payments is their role in driving financial inclusion. Financial inclusion refers to the accessibility and availability of financial services to all segments of society, particularly the unbanked and under banked populations. Traditional banking services have often been inaccessible to these individuals due to various barriers, such as lack of proximity to bank branches, high costs, and documentation requirements. However, the emergence of digital payment systems has helped bridge this gap and provided opportunities for financial inclusion.

Digital payments have empowered individuals by offering them access to formal financial services that were previously out of reach. Mobile wallets, for example, allow individuals to store and transfer funds electronically using just their smartphones. This reduces their dependence on physical cash and provides a secure means of conducting transactions. Moreover, digital payment platforms offer convenient ways to make payments for goods and services, both online and offline, without the need for physical currency. Financial inclusion, facilitated by digital payments, plays a crucial role in driving economic growth. When individuals and businesses have access to formal financial services, they can participate more actively in the economy. Digital payments enable businesses to accept electronic payments, opening up opportunities for e-commerce and expanding customer bases. This, in turn, leads to increased economic activity, job creation, and improved living standards. Digital payments also bring about efficiency gains in the financial system. By reducing the reliance on cash, digital payments contribute to a more transparent and accountable financial ecosystem. Digital transactions leave a digital trail, making it easier to track and monitor financial activities. This helps in combating illicit financial activities, reducing corruption, and improving overall financial integrity.

However, along with the benefits, digital payments also present certain challenges that need to be addressed to ensure inclusive and sustainable economic growth. One of the primary challenges is the digital divide, which refers to the gap in access to digital infrastructure and connectivity. To achieve widespread financial inclusion, efforts must be made to expand digital infrastructure, particularly in underserved areas, and improve internet connectivity to ensure equal access to digital payment systems. Another challenge is the need for digital literacy and awareness. Many individuals, especially in developing countries, may lack the necessary knowledge and skills to adopt and use digital payment platforms effectively. Educational programs and initiatives should be implemented to enhance digital literacy and educate individuals on the benefits and safe usage of digital payment systems. Furthermore, ensuring the security and privacy of digital transactions is crucial. The protection of personal and financial information is of

utmost importance to build trust in digital payment systems. Implementing robust cyber security measures, data encryption techniques, and regulatory frameworks is essential to address concerns related to data security and privacy. In conclusion, the advent of digital payment systems has transformed the financial landscape, offering faster, more convenient, and secure modes of conducting transactions. Digital payments play a vital role in driving financial inclusion by providing access to formal financial services for the unbanked and under banked populations. Financial inclusion, in turn, fuels economic growth by enabling individuals and businesses to actively participate in the economy. However, challenges such as the digital divide, digital literacy, and data security must be addressed to ensure inclusive and sustainable economic growth. By embracing digital payments and implementing strategies to overcome these challenges, societies can empower individuals, drive economic growth, and build a more inclusive and prosperous future.

Digital payments have emerged as a modern and convenient alternative to traditional cash transactions. With the advent of technology and the widespread adoption of smartphones, improved internet connectivity, and the availability of affordable digital payment infrastructure, conducting financial transactions electronically has become increasingly accessible and popular. Digital payments encompass a range of electronic transaction methods that eliminate the need for physical cash. Mobile wallets, for example, allow users to store their payment information securely on their smartphones and make purchases by simply tapping or scanning their devices at payment terminals. Internet banking enables individuals to conduct financial transactions through online platforms provided by their banks, allowing them to transfer funds, pay bills, and manage their accounts conveniently from their computers or mobile devices. Mobile banking applications extend these capabilities to smartphones, providing users with a seamless and on-the-go banking experience. Additionally, digital payment apps provide platforms for peer-to-peer transfers, online shopping, and seamless integration with various merchants and service providers.

The widespread adoption of smartphones has been a significant driver of digital payments. With smartphones becoming more affordable and accessible, a larger portion of the population has gained access to digital payment capabilities. The increasing penetration of internet connectivity, both through mobile networks and Wi-Fi, has further enabled individuals to perform financial transactions on the go. As a result, digital payments have gained popularity as a quick, convenient, and secure alternative to cash transactions. Moreover, the availability of affordable digital payment infrastructure has facilitated the growth of digital payments. Payment service providers, financial institutions, and technology companies have

invested in developing robust payment ecosystems, creating user-friendly interfaces, and ensuring the security of transactions. They have collaborated with merchants and service providers to enable digital payment acceptance, both online and offline, making it easier for individuals to use digital payment methods in their day-to-day transactions. The growth of digital payments has also been accelerated by the benefits they offer to both consumers and businesses. Digital payments provide convenience, as individuals can make payments anytime and anywhere using their mobile devices or computers. They eliminate the need to carry physical cash, reducing the risk of loss or theft. Additionally, digital payments offer security features such as encryption and two-factor authentication, ensuring that transactions are protected from unauthorized access. Furthermore, digital payments enable individuals to track and manage their expenses more efficiently, as transaction records are typically stored electronically and can be easily accessed and analyzed. In conclusion, digital payments have gained prominence as a convenient and secure method of conducting financial transactions. The widespread adoption of smartphones, improved internet connectivity, and the availability of affordable digital payment infrastructure have been instrumental in their growth. Digital payment methods such as mobile wallets, internet banking, mobile banking, and digital payment apps have transformed the way individuals and businesses transact. With their convenience, security, and accessibility, digital payments are likely to continue expanding and shaping the future of financial transactions.

One of the most significant advantages of digital payments is their potential to bridge the gap between individuals who have limited access to formal financial institutions and the benefits of traditional banking services. For many people around the world, particularly in developing countries and underserved areas, accessing traditional banking services can be challenging due to factors such as geographical constraints, lack of infrastructure, and high costs associated with maintaining a bank account. Digital payment systems have emerged as a powerful tool to address these challenges and promote financial inclusion. They enable individuals to store, send, and receive money electronically, providing a means for financial transactions without the need for a traditional bank account. Mobile wallets, for example, allow users to store funds digitally and conduct transactions through their mobile devices. These wallets can be accessed and managed by individuals who may not have access to physical banking infrastructure or formal banking services.

By empowering unbanked and under banked populations, digital payment systems facilitate their participation in the formal economy. Individuals who previously relied on cash-based transactions now have the means to engage in digital commerce, make online purchases, and engage in e-commerce activities. This

inclusion in the formal economy opens up a world of opportunities, as it allows individuals to access financial services, build a financial history, and establish creditworthiness. Furthermore, digital payments enable individuals to access credit facilities and manage their finances more effectively. By using digital payment systems, individuals can demonstrate their financial behaviors and build a transaction history. This information can be utilized by financial institutions and lenders to assess creditworthiness and offer access to credit, even to those without traditional collateral or credit history. Digital payments also provide individuals with tools for managing their finances, such as budgeting and expense tracking apps, which promote financial literacy and responsible financial management.

Digital payments have a transformative impact on the lives of individuals and communities by reducing the reliance on cash and providing opportunities for financial inclusion. By expanding access to financial services, digital payments empower individuals to save, invest, and manage their finances more effectively. This, in turn, contributes to economic growth, as increased financial inclusion leads to higher productivity, increased entrepreneurial activities, and greater financial stability within communities. However, it is important to address challenges such as digital literacy, awareness, and infrastructure development to ensure that the benefits of digital payments reach all segments of society. Efforts should be made to provide education and training on digital payment systems and their benefits. Governments, financial institutions, and technology providers need to work collaboratively to improve internet connectivity, enhance digital infrastructure, and develop user-friendly and secure digital payment solutions that cater to the specific needs of unbanked and underbanked populations. In conclusion, digital payment systems have the potential to bridge the gap between individuals who have limited access to formal financial institutions and the benefits of traditional banking services. By enabling electronic storage, transfer, and receipt of funds, digital payments empower unbanked and underbanked populations to participate in the formal economy, access credit facilities, and manage their finances more effectively. Financial inclusion, facilitated by digital payments, promotes economic growth, fosters entrepreneurship, and enhances the overall well-being of individuals and communities. Efforts to address challenges and promote digital literacy, awareness, and infrastructure development are crucial to ensuring that the transformative power of digital payments reaches all individuals, regardless of their access to traditional banking services.

Financial inclusion is a vital component of socio-economic development, as it provides individuals and businesses with access to essential financial services, enabling them to save, invest, manage risks, and participate fully in the economy.

However, many individuals, particularly those in underserved areas and marginalized communities, have historically been excluded from formal financial systems. Digital payments have emerged as a powerful tool in promoting financial inclusion by providing individuals with a secure and convenient means of transacting, saving, and accessing financial services. Mobile wallets, for instance, have revolutionized the way individuals manage their finances. With a mobile wallet app installed on their smartphones, users can store money digitally, make payments for goods and services, and transfer funds to other individuals or businesses. This eliminates the need for physical cash transactions, which can be risky and costly to handle, especially in areas with high crime rates or limited access to banking infrastructure. Mobile wallets offer a secure alternative, reducing the risks associated with carrying cash and providing individuals with greater peace of mind.

Moreover, digital payment platforms facilitate the integration of previously excluded individuals into the formal banking system. By using digital payment systems, individuals can establish a digital transaction history, which can be leveraged by financial institutions to assess creditworthiness and offer access to credit facilities. This is particularly significant for individuals who may not have traditional collateral or credit history, as it opens up opportunities for them to access credit and engage in entrepreneurial activities. By building a financial history through digital payments, individuals can establish their financial credibility and gain access to financial services that were previously out of reach. Digital payments also enhance financial inclusion by offering greater convenience and accessibility. Traditional banking services often require individuals to visit physical branches during limited operating hours, which can be challenging for those who live in remote areas or work irregular hours. Digital payment systems, on the other hand, are available 24/7 and can be accessed from anywhere with an internet connection. This empowers individuals to manage their finances conveniently and efficiently, irrespective of their geographical location.

Furthermore, digital payments enable individuals to access a wide range of financial services beyond basic transactions. They can easily save money electronically, set up automated recurring payments, and track their expenses through digital tools and apps. This promotes financial literacy and responsible financial management, empowering individuals to make informed decisions and improve their financial well-being. In conclusion, digital payments play a significant role in promoting financial inclusion by providing individuals with a secure and convenient means of transacting, saving, and accessing financial services. Mobile wallets and digital payment platforms facilitate the integration of previously excluded individuals into

the formal banking system, allowing them to establish a digital transaction history and gain access to credit facilities. The convenience, accessibility, and additional financial services offered by digital payments empower individuals to manage their finances effectively, save for the future, and participate fully in the economy. By promoting financial inclusion through digital payments, societies can foster economic growth, reduce poverty, and enhance the overall well-being of individuals and communities.

Benefits of Digital Payments

Digital payments have emerged as a powerful tool in promoting financial inclusion by offering individuals numerous benefits that overcome geographical barriers and improve access to financial services. One of the key advantages of digital payments is their ability to transcend physical boundaries, enabling individuals to access financial services regardless of their location. In countries with large rural populations, access to formal banking services can be challenging due to limited physical infrastructure and the distance individuals have to travel to reach banking branches. Digital payment systems have revolutionized financial access by providing a convenient and efficient way for individuals in remote areas to receive and make payments. Mobile banking applications and digital payment platforms can be accessed through smartphones, enabling individuals to conduct transactions from the comfort of their homes or local areas. This eliminates the need for time-consuming and costly travel to physical banking branches, especially for those residing in remote regions.

Moreover, digital payments offer individuals the ability to conduct financial transactions at any time and from anywhere with an internet connection. This flexibility empowers individuals who may be constrained by work schedules, lack of transportation, or other obligations to still engage in financial activities. Whether it's paying bills, transferring funds, or making purchases, digital payment systems provide the convenience of accessing financial services on-demand, 24/7, without the limitations of physical banking infrastructure. Digital payments also promote financial inclusion by offering individuals increased control over their finances. With digital payment platforms, individuals can easily monitor their transactions, track expenses, and access their account information in real-time. This level of transparency and control enhances financial literacy and empowers individuals to make informed decisions about their money management. Additionally, digital payment systems often offer features such as budgeting tools, spending analysis, and automated payment reminders, further supporting individuals in developing responsible financial habits.

Furthermore, digital payments foster financial inclusion by enabling individuals to build a digital transaction history. This history can be leveraged by financial institutions to assess creditworthiness and provide access to financial services, such as loans, insurance, or investment products. Digital transaction records serve as evidence of an individual's financial behavior, mitigating the need for traditional collateral or credit history. This opens doors to financial opportunities for individuals who may have been previously excluded from the formal banking system, empowering them to participate in economic activities and achieve financial stability. In conclusion, digital payments offer several benefits that enhance financial inclusion by overcoming geographical barriers and improving access to financial services. They provide a convenient and efficient way for individuals, particularly those in remote areas, to access and engage in financial transactions without the need for physical travel to banking branches. The flexibility and convenience of digital payments allow individuals to conduct transactions at any time and from anywhere, providing financial access and control to those with limited resources or mobility. Additionally, digital payment systems enable individuals to build a digital transaction history, facilitating access to financial services and promoting economic empowerment. By leveraging the advantages of digital payments, societies can enhance financial inclusion, foster economic growth, and empower individuals to achieve greater financial well-being.

Digital payments have emerged as a powerful tool in promoting financial inclusion by offering individuals numerous benefits that overcome geographical barriers and improve access to financial services. One of the key advantages of digital payments is their ability to transcend physical boundaries, enabling individuals to access financial services regardless of their location. In countries with large rural populations, access to formal banking services can be challenging due to limited physical infrastructure and the distance individuals have to travel to reach banking branches. Digital payment systems have revolutionized financial access by providing a convenient and efficient way for individuals in remote areas to receive and make payments. Mobile banking applications and digital payment platforms can be accessed through smartphones, enabling individuals to conduct transactions from the comfort of their homes or local areas. This eliminates the need for time-consuming and costly travel to physical banking branches, especially for those residing in remote regions.

Moreover, digital payments offer individuals the ability to conduct financial transactions at any time and from anywhere with an internet connection. This flexibility empowers individuals who may be constrained by work schedules, lack of transportation, or other obligations to still engage in financial activities. Whether it's

paying bills, transferring funds, or making purchases, digital payment systems provide the convenience of accessing financial services on-demand, 24/7, without the limitations of physical banking infrastructure. Digital payments also promote financial inclusion by offering individuals increased control over their finances. With digital payment platforms, individuals can easily monitor their transactions, track expenses, and access their account information in real-time. This level of transparency and control enhances financial literacy and empowers individuals to make informed decisions about their money management. Additionally, digital payment systems often offer features such as budgeting tools, spending analysis, and automated payment reminders, further supporting individuals in developing responsible financial habits.

Furthermore, digital payments foster financial inclusion by enabling individuals to build a digital transaction history. This history can be leveraged by financial institutions to assess creditworthiness and provide access to financial services, such as loans, insurance, or investment products. Digital transaction records serve as evidence of an individual's financial behavior, mitigating the need for traditional collateral or credit history. This opens doors to financial opportunities for individuals who may have been previously excluded from the formal banking system, empowering them to participate in economic activities and achieve financial stability. In conclusion, digital payments offer several benefits that enhance financial inclusion by overcoming geographical barriers and improving access to financial services. They provide a convenient and efficient way for individuals, particularly those in remote areas, to access and engage in financial transactions without the need for physical travel to banking branches. The flexibility and convenience of digital payments allow individuals to conduct transactions at any time and from anywhere, providing financial access and control to those with limited resources or mobility. Additionally, digital payment systems enable individuals to build a digital transaction history, facilitating access to financial services and promoting economic empowerment. By leveraging the advantages of digital payments, societies can enhance financial inclusion, foster economic growth, and empower individuals to achieve greater financial well-being.

Challenges of Digital Payments

However, the adoption of digital payments and achieving widespread financial inclusion also comes with its fair share of challenges. One of the primary obstacles to overcome is the issue of digital literacy. In many developing countries and underserved communities, individuals may lack the necessary digital skills and knowledge to effectively adopt and use digital payment platforms. Digital literacy

encompasses the ability to access, understand, and utilize digital technologies, including digital payment systems. It involves not only technical skills but also the knowledge and awareness of how digital payment platforms work, the benefits they offer, and the potential risks involved. Without adequate digital literacy, individuals may be hesitant or unable to embrace digital payment methods, hindering their participation in the formal financial ecosystem.

To address this challenge, it is crucial to implement comprehensive digital literacy programs that focus on educating individuals on the fundamentals of digital payments. These programs should include training on how to use digital payment platforms, navigate mobile applications, ensure data security and privacy, and understand the benefits and risks associated with digital transactions. These efforts can be carried out through various channels, including community centers, schools, financial institutions, and government initiatives. Moreover, raising awareness about the advantages of digital payments and providing guidance on their usage can play a vital role in promoting digital literacy. By conducting targeted campaigns, workshops, and outreach programs, individuals can be informed about the benefits of digital payments, such as convenience, security, and access to financial services. Additionally, showcasing success stories and real-world examples of how digital payments have positively impacted individuals and communities can help build trust and confidence in the use of these platforms.

Collaboration between governments, financial institutions, and technology companies is essential in addressing the digital literacy challenge. By working together, these stakeholders can develop educational resources, design user-friendly digital payment interfaces, and provide ongoing support to individuals as they navigate the digital payment landscape. Governments can also play a role in incentivizing digital literacy by offering subsidies or benefits to individuals who actively engage in digital payment adoption and education programs. Furthermore, efforts to improve digital infrastructure and connectivity are crucial for promoting digital literacy and ensuring the availability and accessibility of digital payment platforms. Access to reliable internet services and affordable smartphones or other digital devices are prerequisites for individuals to participate in digital payment ecosystems. Governments and private sector entities need to invest in expanding digital infrastructure and reducing connectivity gaps, particularly in remote and underserved areas. In conclusion, addressing the challenge of digital literacy is crucial for achieving widespread financial inclusion through the adoption of digital payments. Education and awareness programs, along with efforts to improve digital infrastructure and connectivity, are essential components in promoting digital literacy and empowering individuals to embrace digital payment platforms. By

equipping individuals with the necessary digital skills and knowledge, societies can ensure that the benefits of digital payments are accessible to all, fostering inclusive economic growth and empowering individuals to participate fully in the digital financial ecosystem.

Another significant challenge in achieving widespread financial inclusion through digital payments is the digital divide, which refers to the gap in access to digital infrastructure and connectivity. To ensure that digital payments and financial inclusion reach all segments of society, governments and financial institutions must prioritize efforts to expand and improve digital infrastructure, particularly in underserved areas. Access to reliable internet connectivity and digital infrastructure is essential for individuals to participate in digital payment systems. However, in many regions, particularly in rural and remote areas, there is limited or no access to broadband internet or mobile networks. This lack of connectivity hinders individuals' ability to access and use digital payment platforms, thereby exacerbating financial exclusion.

To address the digital divide, governments and financial institutions must make concerted efforts to invest in expanding and improving digital infrastructure. This includes initiatives to extend broadband connectivity to underserved areas, upgrade mobile networks, and enhance internet accessibility. Infrastructure development projects should prioritize areas with limited connectivity to ensure that individuals in remote and marginalized communities have equal access to digital payment systems. Additionally, promoting affordable access to digital devices such as smartphones and tablets is crucial. Many individuals in underserved areas may not have access to the necessary digital devices to engage in digital payments. Governments and financial institutions can play a role in making digital devices more affordable and accessible through subsidies, incentives, or partnerships with technology manufacturers.

Furthermore, it is essential to address other barriers that contribute to the digital divide, such as language barriers and technological literacy. Efforts should be made to provide localized digital payment solutions, user interfaces, and educational materials in local languages. Digital literacy programs should also be implemented to ensure that individuals have the necessary skills and knowledge to effectively use digital payment platforms. Collaboration between government, private sector entities, and community organizations is crucial in bridging the digital divide. Public-private partnerships can facilitate infrastructure development and expand digital connectivity. Community engagement initiatives, such as digital awareness campaigns and training programs, can empower individuals with the skills and knowledge to leverage digital payment systems for their financial well-being. In

conclusion, addressing the digital divide is vital to ensure that digital payments and financial inclusion reach all segments of society. Governments and financial institutions must prioritize investments in expanding and improving digital infrastructure, extending broadband connectivity, and promoting affordable access to digital devices. By bridging the digital divide, societies can create an inclusive environment where individuals from all backgrounds can access and benefit from digital payment systems, thereby fostering financial inclusion and driving economic growth.

Moreover, ensuring data security and privacy is of paramount importance in digital payment systems. The protection of sensitive financial information and the prevention of fraud are crucial to building trust and confidence in digital payment platforms. Implementing robust Cyber security measures, encryption techniques, and regulatory frameworks are essential to address these concerns and safeguard the interests of users. Digital payment systems involve the transmission and storage of sensitive financial data, such as account numbers, personal identification information, and transaction details. It is imperative to protect this information from unauthorized access, hacking attempts, and data breaches. Implementing strong authentication protocols, such as two-factor authentication or biometric verification, adds an extra layer of security to ensure that only authorized individuals can access and use digital payment platforms.

Encryption plays a critical role in securing data during transmission and storage. Utilizing encryption algorithms ensures that financial information is encoded and can only be accessed by authorized parties with the corresponding decryption keys. Encryption safeguards against data interception and tampering, providing a secure environment for digital transactions. In addition to technical security measures, regulatory frameworks are essential to protect user data and ensure compliance with privacy regulations. Governments and regulatory bodies play a crucial role in establishing and enforcing data protection laws and standards. These regulations may include requirements for data encryption, data breach notifications, and the secure handling of financial information. Compliance with these regulations not only protects user privacy but also enhances the overall security and trustworthiness of digital payment systems.

Continuous monitoring and proactive threat detection are vital components of a robust Cyber security strategy. Financial institutions and payment service providers must invest in advanced security systems and regularly update their security protocols to stay ahead of evolving cyber threats. This includes conducting regular vulnerability assessments, penetration testing, and implementing real-time monitoring to detect and mitigate potential security breaches promptly. Public

awareness and education on Cyber security best practices are also essential. Users should be educated about the risks associated with digital payments, such as phishing attacks, malware, and social engineering, and be provided with guidance on how to protect their personal and financial information. This can be achieved through public awareness campaigns, educational programs, and user-friendly resources that promote safe digital payment practices. In conclusion, ensuring data security and privacy is a crucial consideration in digital payment systems. Implementing robust Cyber security measures, encryption techniques, and regulatory frameworks are essential to protect sensitive financial information, prevent fraud, and build trust in digital payment platforms. By establishing a secure and privacy-conscious environment, users can confidently embrace digital payments, leading to increased financial inclusion and driving economic growth.

Financial Inclusion through Digital Payment

Moreover, ensuring data security and privacy is of paramount importance in digital payment systems. The protection of sensitive financial information and the prevention of fraud are crucial to building trust and confidence in digital payment platforms. Implementing robust Cyber security measures, encryption techniques, and regulatory frameworks are essential to address these concerns and safeguard the interests of users. Digital payment systems involve the transmission and storage of sensitive financial data, such as account numbers, personal identification information, and transaction details. It is imperative to protect this information from unauthorized access, hacking attempts, and data breaches. Implementing strong authentication protocols, such as two-factor authentication or biometric verification, adds an extra layer of security to ensure that only authorized individuals can access and use digital payment platforms.

Encryption plays a critical role in securing data during transmission and storage. Utilizing encryption algorithms ensures that financial information is encoded and can only be accessed by authorized parties with the corresponding decryption keys. Encryption safeguards against data interception and tampering, providing a secure environment for digital transactions. In addition to technical security measures, regulatory frameworks are essential to protect user data and ensure compliance with privacy regulations. Governments and regulatory bodies play a crucial role in establishing and enforcing data protection laws and standards. These regulations may include requirements for data encryption, data breach notifications, and the secure handling of financial information. Compliance with these regulations not only protects user privacy but also enhances the overall security and trustworthiness of digital payment systems.

Continuous monitoring and proactive threat detection are vital components of a robust Cyber security strategy. Financial institutions and payment service providers must invest in advanced security systems and regularly update their security protocols to stay ahead of evolving cyber threats. This includes conducting regular vulnerability assessments, penetration testing, and implementing real-time monitoring to detect and mitigate potential security breaches promptly. Public awareness and education on Cyber security best practices are also essential. Users should be educated about the risks associated with digital payments, such as phishing attacks, malware, and social engineering, and be provided with guidance on how to protect their personal and financial information. This can be achieved through public awareness campaigns, educational programs, and user-friendly resources that promote safe digital payment practices. In conclusion, ensuring data security and privacy is a crucial consideration in digital payment systems. Implementing robust Cyber security measures, encryption techniques, and regulatory frameworks are essential to protect sensitive financial information, prevent fraud, and build trust in digital payment platforms. By establishing a secure and privacy-conscious environment, users can confidently embrace digital payments, leading to increased financial inclusion and driving economic growth.

Conclusion

To achieve widespread financial inclusion through digital payments, collaboration between governments, financial institutions, and technology providers is crucial. Each stakeholder plays a unique role in ensuring the success and effectiveness of digital payment systems. Governments have a significant role in creating an enabling regulatory environment that promotes innovation, protects consumer rights, and fosters competition in the digital payment sector. By developing and enforcing regulations that balance consumer protection with technological advancements, governments can instill confidence in digital payment platforms and encourage their adoption. They can also invest in digital infrastructure, such as broadband connectivity and mobile networks, particularly in underserved areas, to ensure equal access to digital payment services.

Financial institutions, including banks, payment processors, and mobile money operators, are vital players in driving financial inclusion through digital payments. They need to develop user-friendly and inclusive digital payment solutions that cater to the needs of diverse populations. This includes designing intuitive interfaces, simplifying registration and authentication processes, and providing localized language support. Financial institutions must also focus on promoting financial literacy and awareness to educate individuals on the benefits and safe

usage of digital payment systems. By collaborating with other stakeholders, such as government agencies and technology providers, financial institutions can leverage their expertise and resources to develop innovative solutions that meet the specific needs of different user segments. Technology providers, including software developers, payment platform providers, and device manufacturers, play a critical role in creating secure, accessible, and interoperable digital payment platforms. They need to develop robust and scalable systems that prioritize data security, privacy, and user experience. This includes implementing advanced encryption technologies, adopting industry standards, and ensuring compatibility with a wide range of devices and operating systems. Moreover, technology providers should focus on addressing barriers to entry, such as affordability and digital literacy, by designing user-friendly interfaces, providing user support, and enabling seamless integration with existing financial systems.

Collaboration between these stakeholders is essential to drive the adoption and success of digital payment systems. Governments can work closely with financial institutions and technology providers to establish interoperability standards, promote open APIs (Application Programming Interfaces), and facilitate information sharing to create a seamless and interconnected digital payment ecosystem. By sharing knowledge, resources, and best practices, stakeholders can collectively address the challenges of financial inclusion and drive the adoption of digital payments. In conclusion, achieving widespread financial inclusion through digital payments requires collaboration between governments, financial institutions, and technology providers. Governments must create an enabling regulatory environment and invest in digital infrastructure. Financial institutions need to develop inclusive solutions and promote financial literacy. Technology providers should focus on developing secure and accessible platforms. By working together, these stakeholders can harness the power of digital payments to drive financial inclusion, empower individuals, and foster economic growth.

Abstract

This journal aims to explore the critical concepts of gender equality and women's empowerment and their transformative potential in achieving a just and inclusive society. By delving into various aspects of gender disparities, discriminatory practices, and the significance of empowering women, this journal seeks to inspire change and foster a world where all individuals can thrive irrespective of their gender.

Keywords: Gender equality, Womens empowerment, Gender disparities

Introduction

Gender equality and women's empowerment are vital components of sustainable development, social justice, and human rights. Historically, women have faced numerous obstacles and systemic barriers, impeding their progress and limiting their full participation in various spheres of life. However, in recent times, there has been a global awakening to the urgent need for equality, leading to an increased focus on women's empowerment. This journal explores the multifaceted dimensions of gender equality and women's empowerment, shedding light on their immense potential to reshape societies and foster a more equitable world.

Understanding Gender Equality

This section provides an in-depth analysis of the concept of gender equality, its historical context, and the persisting challenges. It explores the social construction of gender roles, stereotypes, and the impact of patriarchal norms on women's lives. Furthermore, it examines the importance of dismantling gender biases and promoting equal opportunities for all genders.

Breaking Barriers: Women's Empowerment

This section highlights the transformative power of women's empowerment in achieving gender equality. It explores the significance of education, economic independence, and political representation as key pillars for empowering women. It

also showcases successful initiatives and case studies that have enabled women to overcome barriers, unleash their potential, and become catalysts for change in their communities.

Challenging Gender Norms: Creating an Inclusive Society

This section delves into the social and cultural norms that perpetuate gender inequality. It explores the impact of harmful practices such as gender-based violence, child marriage, and unequal access to healthcare. It also discusses the importance of promoting gender-sensitive policies, challenging societal norms, and fostering inclusive environments that allow individuals to express their authentic selves.

Engaging Men as Allies

Gender equality cannot be achieved without the active involvement of men. This section highlights the significance of engaging men as allies in the pursuit of gender equality. It explores the role of men in challenging harmful masculine norms, promoting healthy relationships, and supporting women's empowerment initiatives. It also presents examples of male champions who have taken a stand for gender equality and transformed their communities.

The Role of Education

Education plays a pivotal role in empowering women and breaking the cycle of inequality. This section explores the importance of access to quality education for girls and women, as well as the need to challenge stereotypes and biases within educational systems. It also highlights the transformative impact of education in enhancing women's decision-making abilities, improving health outcomes, and fostering economic empowerment.

Intersectionality: Recognizing Multiple Identities

This section explores the concept of intersectionality, recognizing that gender inequality intersects with other forms of discrimination, such as race, ethnicity, class, and sexuality. It examines how women from marginalized communities face compounded disadvantages and the importance of adopting an intersectional approach in addressing gender inequality. It highlights the voices and experiences of women from diverse backgrounds, ensuring an inclusive and holistic approach to women's empowerment.

Education and Awareness: Fostering a Culture of Equality

Creating a culture of equality requires education and awareness at all levels. This section explores the importance of gender-responsive education, awareness

campaigns, and community engagement in challenging harmful gender norms. It discusses the role of media, arts, and cultural platforms in promoting positive narratives and breaking stereotypes. It also emphasizes the need for comprehensive sexuality education to empower individuals with knowledge, agency, and consent.

Addressing Violence Against women

Violence against women remains a pervasive human rights violation worldwide. This section delves into the different forms of violence, including domestic violence, sexual assault, and human trafficking. It highlights the importance of comprehensive strategies, including legal reforms, support services, and awareness campaigns, to prevent and address violence against women. It also emphasizes the role of bystander intervention and community mobilization in creating safe environments for women.

Gender Equality in Leadership and Decision-Making

This section examines the underrepresentation of women in leadership positions and decision-making processes across various sectors. It explores the barriers women face in accessing leadership roles, such as stereotypes, biases, and limited opportunities. It underscores the importance of promoting gender balance in leadership and empowering women to participate in decision-making at all levels, including politics, business, and civil society.

Conclusion

In conclusion, this comprehensive journal reinforces the significance of gender equality and women's empowerment as essential components of a just and inclusive society. By exploring various dimensions, including youth engagement, addressing violence against women, promoting gender equality in leadership, fostering international cooperation, measuring progress, and celebrating success stories, we highlight the complex nature of this journey. It is through continuous commitment, collaboration, and a comprehensive approach that we can pave the way for a future where gender equality and women's empowerment are not aspirations but lived realities for all.

Abstract

The Ease of Doing Business (EoDB) index is a ranking system established by the World Bank Group. In the EODB index, 'higher rankings' that is a lower numerical value indicate better, usually simpler, regulations for businesses and stronger protections of property rights.

Easy of Doing Business (EODB) has come to be recognized as a cross-border barometer for doing business. In several ways, because of its relative simplicity and easy-to-measure criteria, it has also become an actionable report, as evident from India's new approach of working towards improving its relative position rather than continuing to question the exercise.

Keywords: *The Ease of Doing Business, Ranking, Value.*

Ease of Doing Business

Ease of Doing Business is computed by aggregating the distance to frontier scores of different economies. The distance to frontier score uses the 'regulatory best practices' for doing business as the parameter and benchmark economies according to that parameter. For each of the indicators that form a part of the statistic 'Ease of doing business,' a distance to frontier score is computed and all the scores are aggregated. The aggregated score becomes the Ease of doing business index. Indicators for which distance to frontier is computed include construction permits, registration, getting credit, tax payment mechanism etc. Countries are ranked as per the index.

Among the chosen 190 countries, India ranked 63rd in Doing Business 2020. World Bank Report. In 2014, the Government of India launched an ambitious program of regulatory reforms aimed at making it easier to do business in India. The program represents a great deal of effort to create a more business-friendly environment.

India has emerged as one of the most attractive destinations not only for investments but also for doing business. India jumps 79 positions from 142nd in the

year 2014 to 63rd in the year 2019 in 'World Bank's Ease of Doing Business Ranking 2020'. Positive changes have led to this impressive improvement in India's ranking in the EoDB index.

India's Major Achievements are **Construction Permits** and . India's ranking on this parameter has improved from 184 in 2014 to 27 in 2019. This improvement has been mainly on the account of a decrease in the number of procedures and time taken for obtaining construction permits in India. India's ranking on this parameter has improved from 137 in 2014 to 22 in 2019. It takes just 53 days for a business to get an electricity connection in India. Apart from these significant improvements, among the 190 economies, India ranks 13th in Protecting Minority Investors and 25th in Getting Credit.

The report was a benchmark study of regulation. The survey consisted of a questionnaire designed by the Doing Business team with the assistance of academic advisers. The questionnaire centered on a simple business case that ensures comparability across economies and over time. The survey also based assumptions on the legal form of the business, size, location, and nature of its operations. The ease of doing business index was meant to measure regulations directly affecting businesses and did not directly measure more general conditions such as a nation's proximity to large markets, quality of infrastructure, inflation, or crime.

The next step was gathering data surveys of over 12,500 expert contributors that are lawyers, accountants, etc in 190 countries who deal with business regulations in their day-to-day work. These individuals interacted with the Doing Business team in conference calls, written correspondence, and visits by the global team. For the 2017 report, team members visited 34 economies to verify data and to recruit respondents. Data from the survey was subjected to several rounds of verification. The surveys were not a statistical sample, and the results were interpreted and cross-checked for consistency before being included in the report. Results were also validated with the relevant government before publication.

A Nation's ranking on the index was based on an average of the following factors

Starting a business

Starting a business Includes Procedures involved, time, cost, and minimum capital required to open a new business

Construction Permits

Construction permits Consists the Procedures, time, and cost involved to build a warehouse

Getting Electricity

It includes the procedures, time, and cost required for a business to obtain a permanent electricity connection for a newly constructed warehouse.

Registering Property

It deals with the Procedures involved, time, and cost needed to register commercial real estate

Getting Credit

It Analyse the Strength of legal rights index, depth of credit information index

Protecting Investors

It takes in to account the Indices on the extent of disclosure, the extent of director liability, and ease of shareholder suits

Paying Taxes

It Considers Number of taxes paid, hours per year spent preparing tax returns, and total tax payable as a share of gross profit

Trading Across Borders

It consider the Number of documents, cost, and time necessary to export and import.

Enforcing Contracts

Procedures involved, time, and cost required to enforce a debt contract is considered.

Resolving Insolvency

The time, cost, and recovery rate under a bankruptcy proceeding are considered.

Conclusion

For attracting new investment, both foreign and domestic, several macroeconomic issues have to be addressed. These include economic stability and quality physical infrastructure. India may have the advantage of a large domestic market, and our efforts to improve our ease of doing business rankings finally yielding best results.

Abstract

Banana civilization is one of the main agrarian elements but it's affected due to sigatoka complaint, so we present a methodology for the automatic recognition of black sigatoka in marketable banana crops. This system uses a LeNet convolutional neural network to descry the progress of infection by the complaint in different regions of a splint image; using this information, we trained a decision tree in order to classify the position of infection inflexibility. The methodology was validated with an annotated database, which was ected in the process of this work and which can be compared with other state- of- the- art uthers. This shows the system is robust against atypical values.

Keywords: Black Sigatoka, convolutional neural network, decision tree, factory complaint discovery.

Introduction

Banana civilization is one of the main agrarian rudiments in India, while the common problem of civilization is that the crop has been told by several conditions, while pest suggestions have been demanded for discovering the infections originally for avoiding fiscal loss to the growers(6). This problem will affect the entire banana productivity and directly affects the frugality of the country(7). A mongrel complication neural network(CNN) enabled banana complaint discovery, and the bracket is proposed to overcome these issues and guide the growers through enabling diseases that have to be employed for avoiding the complaint in the original stages, and the proposed fashion shows 99 of delicacy that's compared with the affiliated deep literacy ways(4). husbandry is one of the most important conditioning around the world and is the profitable foundation of numerous developing countries. In Colombia, 26 of the entire banana crop is produced by small growers(7). presently, agrarian directors have adequately accepted the addition of technological bias similar as smartphones or tablets; still, it isn't common for these to be used in agronomic conditioning, and their use is limited to social networks or rest conditioning Despite this acceptance of the technology, growers ca n't fluently acquire tools for vital processes milar as plaint discovery, because they're precious to

buy, and their conservation or streamlining still take a lot of plutocrat(1). In addition, it's needed to train people to use these tools, which is necessary to spend further plutocrat. Another factor to be stressed is the lack of specialized backing service content in Colombia, which makes it nearly insolvable to break the country's agrarian requirements (7). For this reason, the measures taken in conditioning similar as pest control are made from private criteria, which depends on the experience of the agriculturist, thus, leading to large dimension crimes. Poor operation of conditions similar as black splint Sigatoka, reduces the quality of the product, and there's the probability of losing 100 of product when control conduct are deficient (3). Black sigatoka destroys splint towel, converting visual patterns (6), which can be classified using computer vision w s that represent new styles of complaint discovery. Visual representation systems silar as HSV, TSL, LAB, and YCbCr generally use Gaussian pollutants that soften images; also styles including histogram analysis and OTSU, among others, can be used to threshold images (11). still, these developments are validated by laboratory testing, under controlled conditions, ignoring lighting conditions growing crops where these algorithms can not perform d y. Convolutional neural networks(CNNs) are important tools that enable perfection h bandry o rations similar as splint and stem counts, splint size measures, root localization, and factory recognition. Due to the significance of the husbandry process, the most constantly used operation is complaint discovery. One study trained an commencement- v3 network to classify infections in yucca shops, which fulfilled 93 of effectiveness(10). The authors of used a public sphere dataset to train the AlexNet and GoogleNet armature to identify 26 conditions that impact 14 types of fraternity, directly relating c plaint in99.35 of cases(11). Indeed though the reported delicacy rates for these studies are high, the tests were made under laboratory conditions where there were no disturbances caused by image noise. These bracket models must satisfy all the disturbances which would induce sturdy systems with high perpetration possibilities in lands.

Methodology

Dataset collection: Gather a dataset of labeled images of banana leaves, including both healthy leaves and leaves affected by black sigatoka complaint. insure the dataset is different and representative of different stages and rigidity of the complaint.

Data pre-processing: Pre-process the images to insure they're in a suitable format for training the CNN. This may involve resizing the images to a harmonious resolution, converting them to a standard color space(similar as RGB), and homogenizing pixel values(6). also, it's essential to consider data addition ways like gyration, flipping, zooming, or adding noise to increase the dataset's size and ameliorate the model's robustness.

Dataset splitting: Divide the dataset into training, confirmation, and testing sets. A common split is 70 for training, 15 for confirmation, and 15 for testing. insure that the distribution of healthy and diseased samples is representative in each split to maintain balanced training.

Model architecture selection: Choose an applicable CNN armature for the black sigatoka discovery task. Depending on the available coffers and complexity of the problem, you can elect a pre-existing armature like VGG, ResNet, Inception, or DenseNet (2). Alternately, you can design a custom armature specific to your dataset and conditions.

Model training: Train the named CNN armature on the training set. Initialize the model with arbitrary weights and optimize it using a suitable loss function(e.g.,double-cross-entropy) and an optimizer(e.g., Adam). During training, reiterate over the training samples, forward propagate them through the network, calculate the loss, and modernize the model's weights through backpropagation (3). Cover the confirmation loss and delicacy to insure the model isn't overfitting.

Hyper parameter tuning: Acclimate the hyperparameters of the CNN and training process to ameliorate the model's performance. This includes parameters like learning rate, batch size, number of ages, and regularization ways(e.g., powerhouse or L2 regularization). use the confirmation set to estimate different configurations and choose the best- performing one.

Model evaluation: evaluation estimate the trained model on the testing set to assess its performance. Calculate criteria similar as delicacy, perfection, recall, F1 score, and confusion matrix to understand the model's capability to descry black sigatoka complaint directly(10). Consider fresh evaluation ways like cross-validation for a more robust assessment..

Deployment and conclusion: Once satisfied with the model's performance, emplace it for real- world operation. give unseen images of banana leaves to the

model, and it'll prognosticate whether each splint is healthy or affected by black sigatoka complaint.

Image Acquisition

(A) non- infected, (B) stage 1, (C) stage 2, (D) stage 3, (E) stage 4, and (F) stage

Image Pre-processing

Image pre-processing on the collected image is performed to enhance the image quality for performing farther way. This process doesn't change the dereliction information in the image; it performs image resizing and performs some useful filtering processes to descry the complaint information in the banana splint(11). The image captured and stored as a data set is of different judgments so it must be converted into a standard fixed resolution size using image resizing(12). also by using image filtering ways similar as median sludge other noises present in the images are removed. Focus issues and other unwanted portions in the image while capturing are restored in this process(8). Another filtering process similar as low pass filtering helps in reducing the breadth of high- frequency factors in the image and keeps the low- frequency information as it is. The high- pass sludge does vice versa and the proposed armature ideal of CNN The main ideal of the CNN is to recover the high- position features of the banana splint infections in the image. To perform this, CNN armature was erected with multiple overlying convolutional layers. typically, a convolutional sub caste will contain complication and activation functions that are non-linear in our case, and the application of ReLU and the pooling process have been enabled. The input for the CNN will be training and

testing images of confines of 80×120 in height and range Conclusion The discovery of black sigatoka complaint in banana leaves using a Convolutional Neural Network(CNN) is a promising approach for automated complaint identification. By following the outlined methodology, which involves dataset collection, data pre-processing, model training, hyper parameter tuning, and model evaluation, we can make a CNN model that directly classifies banana leaves as healthy or affected by black sigatoka complaint. This methodology emphasizes the significance of collecting a different and well- balanced dataset that represents different stages and rigidness of the complaint.

Objective of CNN

To detect black Sigatoka disease at an early stage or even before visible symptoms are apparent to the human eye. Early detection can help prevent the spread of the disease to other plants and allow farmers to take appropriate action to mitigate its impact. CNNs are well-suited for image-based tasks, making them powerful tools for achieving exceptional accuracy in image classification tasks. CNN architecture was built with multiple overlying convolutional layers to perform this. It minimizes yield loss and supports food security efforts in regions that heavily rely on banana crops as a staple food source.

Conclusion

The detection of black sigatoka disease in banana leaves using a Convolutional Neural Network (CNN) is a promising approach for automated disease identification. By following the outlined methodology, which involves dataset collection, data pre-processing, model training, hyper parameter tuning, and model evaluation, we can build a CNN model that accurately classifies banana leaves as

healthy or affected by black sigatoka disease. This methodology emphasizes the importance of collecting a diverse and well-balanced dataset that represents different stages and severities of the disease.

Abstract

Development of single woman leads to major growth of the society. To empower women, gender equality plays very crucial role. The word Gender equality is considered as having the equal rights and freedom for both genders so that our environment becomes safe and healthier. Unequal society brings violence and increases the rate of anti-social activities. Countries with equal gender rights are more connected and those countries are well developed among all other nations. Gender equality is not only for men and women citizens of the society it is also for transgender. To stop violence against women and girls gender equality is important. So the Indian government introduced women empowerment scheme on 22nd January 2015. Women empowerment is essential for socio, political and economic development of the country. It may be achieved in different ways such as health empowerment, educational empowerment, social empowerment, political empowerment and economic empowerment. When these types of empowerment are connected together it leads to positive result. India has ranked 127th among 146 countries in global gender index in 2023. Where as Nordic countries such as Iceland, Finland, Norway and Sweden are listed as top countries in gender equality.

Keywords: Gender equality, Women empowerment, Economic development.

Introduction to Gender Equality and Women Empowerment

Gender equality means that men and women have equal rights, both have the same levels of opportunities. It is one of the common problems in our modern society. If we take the record of today's world, till many of the places women are not given equal rights as given to men. Girl child do not get proper education such a way women are discriminated against employment. They are also victim of the domestic violence. Women are always considered as the weaker than men in the society.

In spite of biological difference, women should be granted equality in developing their own future, equality in economic participation, equality in lifestyle, equality to make decision freely, equality in almost every aspect of women's life.

Women Empowerment

“Empowering women is the key to building a future we want”- AMARTYASEN
“Empowerment of women leads to development of a good family, good society and ultimately a good nation” – Dr. APJ.ABDULKALAM

Women Empowerment stands for giving authority and power to the women. It mainly focuses on practices of making women independent so that they can make their own decision as well as they can handle their life without any restrictions. The empowerment of women can be learned as the ability to become a source of the self-independence. Women are empowered when they are able to access an opportunity in each and every field. Education is the right way to ensure women empowerment.

Need for Women Empowerment

Gender Equality:

In order to attain gender equality, women must be empowered. Gender inequality is mostly caused by social norms, cultural practices, and discriminatory attitudes that limit women's opportunities and undermine their rights. By empowering women, we challenge these norms and aim to establish a society in which men and women are given the same freedoms, opportunities, and responsibilities.

Economic Development

Economic development and women's empowerment are intimately connected. Women constitute half of the world's population and economic sustainability is dependent on their active participation. When women have equal access to education, employment, and entrepreneurship, they contribute significantly to economic performance, poverty eradication, and overall development.

Education and Knowledge

Educating and empowering women is a powerful technique for transforming civilizations. Women who have acquired an education are more updated, competent, and self-assured, allowing them to question biases based on gender and actively participate in social, economic, and political arenas. Education promotes a woman's tendency to invest in her family's welfare, particularly in her children's health and education, which benefits future generations.

Health and Well Being

Women's well-being and physical health are closely related to women's empowerment. Women's empowerment needs access to quality healthcare, the right

to an abortion, and independence over their own bodies. Women who feel empowered are more capable to take care of their health, seek medical assistance when necessary, and make decisions that benefit their overall well-being.

Violence and Discrimination

Women must be empowered in order to overcome violence and discrimination towards women. Domestic violence, sexual harassment, and human trafficking are just a few of the violent crimes against women that they are still facing. The empowerment of women makes it feasible to challenge these harmful practices, create safer environments, and build a culture of equality and respect.

Leadership and Decision Making

Women's opinions and ideas are critical in developing effective policies, strategies, and decision-making processes. Gender parity in leadership roles must be achieved in both the commercial and public sectors in order to promote inclusive governance and meet society's numerous demands and ambitions. The empowerment of women guarantees that they have an equal role in decisions that affect their communities and way of life.

Socio and Cultural Change

Women's empowerment is critical for challenging societal and cultural traditions that sustain gender imbalance. By empowering women, we eliminate prejudice, remove barriers, and advance a society that recognizes and respects women's contributions outside of traditional gender norms. As a result, cultural change occurs.

Women Empowerment Schemes in India

To uplift the life of every Indian woman, the government of India has introduced numerous schemes to ensure more and more opportunities in education, work, and some other aspects.

1. Beti Bachao Beti Padhao Scheme

The Prime Minister of India inaugurated this project in Haryana on January 22, 2015, to ensure the survival, protection, and education of girls. In recent years, the project is trying to address the issue of unequal sex ratios, raise the social awareness, and improve the effectiveness of welfare benefits for girls. The Beti Bachao Beti Padhao Scheme aims to prevent female infanticide and other forms of sex-selective elimination. Ensure the girl child's survival and safety. To promote education and active participation of girls in the social activities.

2. Working Women's Hostel Scheme

This scheme's goals are encourage safe and easily located childcare facilities for working women. Construction and expansion of new and existing hostel buildings are encouraged. Allow working women of all backgrounds to be accommodated without discrimination. Allow trainees to remain in hostels if space is available, with working women given priority children of working women can also be accommodated in this scheme.

3. One-Stop Centre Scheme

This scheme's goals are in both private and public settings, support women who are victims of violence. Provide a variety of services under one roof, such as medical, legal, psychiatric, and counseling assistance. Provide both immediate and long-term assistance and support. Aim to stop all types of violence against women.

4. Women's Helpline Program

The Women Helpline scheme, which was launched in April 2015, designed to give 24*7 emergency supports to women who have experienced abuse in either public or private settings. The government established a toll-free helpline (181) to provide immediate and emergency assistance. This helpline number is available to women in every state and union territory in the United States. This campaign so promotes women's empowerment and safety. By giving missedcalls to the toll free number 181 every women can sort out their problems anytime.

5. Mahila Police Volunteer Program

The Mahila Police Volunteers scheme was launched in all states and UTs in 2016 by the Ministries of Women and Child Development and Home Affairs. This central government-sponsored program aims to develop a link between police authorities and local communities' in order to ensure police out reach on criminal cases. An MPV (Mahila Police Volunteers Scheme) will serve as a public-police link to address crimes against women such as dowry harassment, underage marriage, domestic abuse, and domestic violence as part of this plan. This concept also encourages women to join the police force by creating a safe environment.

6. Swadhar Green

It is one of the programmes for women's empowerment announced by the Indian government in 2018. The fundamental goals of this project are to provide social, economic, and health security, as well as housing, food, and clothing. This program provides legal assistance to women and empowers them to take the initiative to reintegrate into society.

7. STEP (Women's Support to Training and Employment Program)

The STEP scheme was run as a "Central Sector Scheme" by the Ministry of Women and Child Development from 1986 to 1987. It was revised in December of 2014. It was created to provide women with job security and skill development training. This government – sponsored initiative funds institutions and organizations that provide women's training programs.

8. MSKs (Mahila Shakti Kendras)

One of the well-known programmes for women is Mahila Shakti Kendra, an initiative for women's empowerment that began in India in 2017. It plans to provide women with convergent support services in one location so that they may develop their skills, find work, and increase their digital literacy. This initiative operates on several levels, including the federal, state, and local. The government intends to reach the 115 poorest districts by creating 920 Mahila Shakti Kendras. This program looks to provide women with resources such as quality healthcare, education, employment opportunities, and provides counselling.

9. Rajiv Gandhi National Creche Scheme

The Indian government launched the National Creche Scheme to give various amenities to children of working moms. It was first presented in 2006. It is implemented by the ministry of women and child development. By this scheme, working mothers enjoy day care facilities to their children from age group of 6 months to 6 years.

This initiative provides childcare services to working women and promises to improve their health and nutrition status. Furthermore, this women empowerment yojana promotes children's physical, social, and holistic development while also raising awareness about children's health by training parents on how to enhance child care procedures or practices.

10. Ujjwala Scheme

This initiative was launched in December 2007. It is a comprehensive plan designed by the Indian government to combat trafficking and to recover, cure, and reintegrate sexually exploited survivors of human trafficking. The initiative is being executed mostly through non-governmental organizations (NGOs) in order to provide direct relief and benefit to victims of human trafficking.

Conclusion

The Indian government has implemented a number of programs aimed at empowering women and providing them with possibilities for progress and safety. Gender inequality, violence against women, and access to education and health care are among the challenges addressed by these projects. The government is actively working to create a more inclusive and secure environment for women in India through programs such as Beti Bachao Beti Padhao, Working Women Hostel, One-Stop Centre, Women Helpline, Mahila Police Volunteers, and many others. These programs not only offer assistance and resources, but they also raise awareness and encourage women's active engagement in society.

Abstract

A digital payment, sometimes called an electronic payment, is the transfer of value from one payment account to another using a digital device or channel. Digital payment is referred to as those payments that take place using the various types of electronic medium. These methods do not require payment to be made in the form of cash or providing cheque. One of the major objectives of Digital India is to achieve “Faceless, Paperless, Cashless” status. The promotion of digital payments has been accorded the highest priority by the Government of India to bring each and every segment of our country under the formal fold of digital payment services. Various digital payments make the customer ease of payments. Banking cards are the most widely used digital payment system in India. It offers a great set of features that provides convenience as well as security to the users. Unstructured Supplementary Service Data can be used for carrying out cashless transactions using mobile, without the need of installing any banking app. AEPS can be used for all the following banking transactions such as balance enquiries, cash withdrawal, cash deposit, aadhaar to aadhaar fund transfers. UPI is the latest digital payment standard where the user having a bank account can transfer money to any other bank account using UPI based app. and the methods are Mobile Wallets, Point of Sale Terminals, Mobile Banking and Internet Banking.

Keywords: Digital Payment, Government of India, Banking Cards.

Introduction

A digital payment, sometimes called an electronic payment, is the transfer of value from one payment account to another using a digital device or channel. This definition may include payments made with bank transfers, mobile money, QR codes, and payment instruments such as credit, debit, and prepaid cards. Digital payments can be partially digital, primarily digital, or fully digital.

Digital payment is referred to as those payments that take place using the various types of electronic medium. These methods do not require payment to be made in the form of cash or providing cheque.

A partially digital payment might be one in which both payer and payee use cash via third-party agents, with payment providers transferring the payment digital

between the agents. A primary digital payment might be one in which the payer initiates the payment digital to an agent who receives it digitally, but the payee receives the payment in cash from that agent.

A fully digital payment is one in which the payer initiates the payment digitally to a payee who receives it digitally, and it is then kept and spent digitally. Recent years have seen a technological revolution in governance in India. Government services have been slowly and steadily brought on board and today, last-mile delivery happens with the click of a mouse in seconds. Digital Payments transactions have been consistently increasing over the last few years, as a part of the Government of India's strategy to digitise the financial sector and economy. Further, concerted efforts have been made to promote financial inclusion as one of the important national objectives of the country.

The key enabler at the centre of India's transformed digital payment landscape is the JAM Trinity - Jan Dhan, Aadhaar and Mobile. PradhanMantri Jan-DhanYojana (PMJDY) is one of the biggest financial inclusion initiatives in the world, launched in August 2014, to provide universal banking services for every unbanked household. Aadhaar, the Unique Identification Authority of India's flagship product, is a simple but effective method to verify individuals and beneficiaries based on their biometric information. Jan Dhan accounts, Aadhaar and Mobile connections, taken together, have helped lay the foundations of a Digital India where a vast array of Government services are made available directly to the citizen with enhanced ease of access without the presence of any intermediary (middle-men).

Digital Payment Ecosystem in India

One of the major objectives of Digital India is to achieve "Faceless, Paperless, Cashless" status. The promotion of digital payments has been accorded the highest priority by the Government of India to bring each and every segment of our country under the formal fold of digital payment services. The vision is to provide the facility of seamless digital payment to all citizens of India in a convenient, easy, affordable, quick and secured manner.

During the last three years, digital payment transactions have registered unprecedented growth in India. Easy and convenient modes of digital payment, such as Bharat Interface for Money-Unified Payments Interface (BHIM-UPI); Immediate Payment Service (IMPS); pre-paid payment instruments (PPIs) and National Electronic Toll Collection (NETC) system have registered substantial growth and have transformed digital payment ecosystem by increasing Person-to-Person (P2P) as well as Person-to-Merchant (P2M) payments. At the same time, pre-existing payment modes such as debit cards, credit cards, National Electronic Funds

Transfer (NEFT) and Real-Time Gross Settlement (RTGS) have also grown at a fast pace. BHIM-UPI has emerged as the preferred payment mode of users. The Government of India also launched the digital payment solution e-RUPI, a cashless and contactless instrument for digital payment which is expected to play a huge role in making Direct Benefit Transfer (DBT) more effective in digital transactions in the country. All these facilities together have created a robust ecosystem for a digital finance economy.

There are different modes and types of digital payments that are prevalent in India, which are discussed in detail in the following lines.

1. Banking Cards
2. USSD (Unstructured Supplementary Service Data)
3. UPI (United Payment Interface)
4. AEPS (Aadhaar enabled Payment System)
5. Mobile wallets
6. Point of Sale Machines (PoS)
7. Mobile Banking
8. Internet Banking

1. Banking Cards

Banking cards are the most widely used digital payment system in India. It offers a great set of features that provides convenience as well as security to the users. Cards offer the flexibility of making other types of digital payments. Customers can store card information in the mobile application and pay for the services using the stored card information. Banking cards (debit and credit cards) can be used for a variety of digital transactions like PoS terminals, online transactions, as a payment medium in mobile apps, which provide any kind of service like grocery, healthcare, rental cab booking, flight tickets, etc.

The most popular cards are issued by service providers like VISA, MASTERCARD, RuPay, AMEX etc.

2. USSD (Unstructured Supplementary Service Data)

USSD is another popular digital payment method. It can be used for carrying out cashless transactions using mobile, without the need of installing any banking app.

The good thing about USSD is that it works without the requirement of mobile data. The main aim of this digital payment service is to include those sections of people of the society who are not included in the mainstream.

The striking feature of the USSD is that it can be availed in Hindi. The USSD can be used for the following types of activities:

- a. Initiating fund transfers
- b. Making balance enquiries
- c. Getting the bank statements

3. AEPS (AadhaarEnabled Payment System)

AEPS can be used for all the following banking transactions such as balance enquiries, cash withdrawal, cash deposit, aadhaar to aadhaar fund transfers. All such transactions are carried out through a banking correspondent which is based on Aadhaar verification.

This service can be availed if the aadhaar is registered with the bank where an individual has a bank account.

4. UPI (Unified Payment Interface)

UPI is the latest digital payment standard where the user having a bank account can transfer money to any other bank account using UPI based app. UPI enabled payments occur throughout the day and all 365 days in a year.

Payment can be done using a Virtual Payment Address (VPA). To use UPI services one must have a bank account and a mobile number registered with that bank account.

5. Mobile Wallets

Mobile wallets are another popular payment option. Here the users can add money to their virtual wallet using debit or credit cards and use the money added in the wallet to perform digital transactions.

Some of the most popular mobile wallets are PayTM, Mobikwik, PhonePe, etc.

6. Point of Sale Terminals

PoS terminals are installed in shops or stores where payments for purchases can be done through debit and credit cards. There are variations of PoS, one which can be Physical PoS and the other one is mobile PoS. The mobile PoS does away with the need of maintaining a physical device.

7. Mobile Banking

Mobile banking is a service provided by the banks through their mobile apps in a smartphone for performing transactions digitally. The scope of mobile banking has expanded extensively after the introduction of UPI and mobile wallets.

Mobile banking is a term used to describe a variety of services that are availed using mobile/smartphones.

8. Internet Banking

Internet banking is the process of performing banking transactions from the comfort of your home using a mobile phone/laptop/ desktop and an active internet connection. The major type of transactions can all be done using internet banking.

Internet banking services can be availed round the clock and all 365 days in a year, which makes it a popular choice for performing digital transactions.

Benefits of Digital Payment

There are several ways digital payments can help improve your bottom line and make for a better customer experience.

- Digital payments can help reduce fraud. Digital payments leverage several technologies to secure and encrypt transaction data and multi-factor authentication, making it more difficult for bad actors to initiate fraudulent transactions. Plus, with digital payment types like virtual credit cards, you have a one-off payment dedicated to only one vendor for only one amount, thereby helping to protect your actual credit card from being hacked.
- Digital payments can help reduce costs and waste. The Association for Financial Professionals reports that 92% of companies accept paper checks as incoming payments, and 86% accept them as outgoing payments. Sending and receiving checks can incur hefty processing costs like bank fees, printing, postage and secure disposal. AFP found that digital payment fees are much lower—they can be less than \$0.50 per transaction—and are a greener solution. Some digital payments have no associated costs, meaning no additional fees, which could earn you cash back.
- Digital payments can increase transaction speeds. While traditional payment methods like paper checks can take days or weeks to process and complete,

digital payments can be almost instantaneous. By digitizing payments, companies can be better about paying invoices on time, every time.

- Digital payments give you real-time cash flow visibility. When a payment occurs, the account balance reflects the change immediately and all currency conversions happen right at the moment of the transaction. Thus, executives can track expenses and income in real time and make quicker business decisions in key areas such as spending, investing and hiring.
- Digital payments can increase scalability and accuracy. Companies can spend six to ten hours a week processing and reconciling payments. Not only is this cost-prohibitive at scale, but it also leads to high exception rates that require more time and money to correct.
- Digital payments can turn a cost center into a value driver. Consumers often consider cashback offers when deciding which credit cards to use. Businesses can get the same perks with VCCs as with physical credit cards. Plus, VCC numbers can be used only once, and companies determine how much money to fund in the credit card. Cashback offers could mean reoccurring revenue for your organization on every invoice you already need to pay.

Usage of Digital Payments Country Wise

Top 10 countries Ranked by Real-Time Payments Transactions 2021

Countries	Transaction Value in Billions
India	46.8 Billion
China	18.5 Billion
Thailand	9.7 Billion
South Korea	7.4 Billion
Nigeria	3.7 Billion
UK	3.4 Billion
US	1.8 Billion
Japan	1.7 Billion
Turkey	1.4 Billion

India has topped the list for digital payments and recorded 89.5 million transactions in 2022, according to a report. Interestingly, India's payments are more than the digital payments made in the next four leading countries combined.

According to the data provided by MyGovIndia, the citizen engagement platform of Government of India, 46% of all real-time payments made worldwide in 2022 were made in India. India has topped the list for digital payments and recorded 89.5 million transactions in 2022, according to a report. Interestingly, India's payments are more than the digital payments made in the next four leading countries combined.

According to the data provided by MyGovIndia, the citizen engagement platform of Government of India, 46% of all real-time payments made worldwide in 2022 were made in India. Brazil is second on the list accounting for 29.2 million transactions, followed by China with 17.6 million transactions. The top list is completed by Thailand, ranked at number 4, with 16.5 million digital transactions and South Korea with 8 million of transactions in 2022.

'India Number 1 in Digital Payments'

Earlier this year, Prime Minister Narendra Modi said that India is number one in digital payments.

"India is number one in digital payments. India is one of the countries where mobile data is the cheapest. Today, the country's rural economy is transforming," he noted.

The Ministry of Electronics and Information Technology (MeitY) said it will offer the Incentive Scheme for the Promotion of RuPay Debit Cards and Low-Value BHIM-UPI Transactions for the current fiscal year. This is done in order to promote digital payments in the country.

India is the world leader in digital payments, according to Prime Minister Narendra Modi, who also claimed that the rural economy of the nation is changing. "India is number one in digital payments. India is one of the countries where mobile data is the cheapest. Today, the country's rural economy is transforming," the PM said.

Expansion of Digital Payments

Apart from promoting UPI in India, the government is also pushing to make cross-border payments easy. Earlier this year, India and Singapore linked their respective digital payments systems, UPI and PayNow. This will allow users to quickly make low-cost fund transfers between the two nations.

Conclusion

The digital payments ecosystem in India has grown significantly in recent years, driven by government initiatives, an increase in internet and smartphone penetration, and the rise of e-commerce. The digital payment ecosystem is supported by private players who offer a range of digital payment services. The future of digital payments in India looks bright with the expected growth in the number of internet users and e-commerce market size.

EASE OF DOING BUSINESS

Mrs. R. Sangeetha

M.Com., M.Phil., PGDCA(SET)(NET)
Assistant Professor, Department of B.Com (CA)
PSGR Krishnammal College for Women, Coimbatore

Ms.K.R. Shubhashree

Student, Department of B.Com (CA)
PSGR Krishnammal College for Women, Coimbatore

Abstract

The ease of doing business is a broad notion that incorporates a variety of elements impacting a country's business environment. It refers to the ease, efficiency, and transparency with which a business can be created, run, and grown. The regulatory framework, administrative procedures, legal safeguards, access to finance, tax systems, trade policies, and infrastructure are all factors to examine when assessing the ease of doing business. International institutions, such as the World Bank, have created rankings and metrics to assess and evaluate the ease of doing business in different nations. These rankings offer a comparative assessment of the business climate, allowing policymakers to identify areas for improvement and execute reforms to attract investments and boost economic growth.

The ease of doing business is an abstract concept that necessitates a thorough grasp of the numerous aspects influencing corporate operations. While rankings are a good place to start when examining the business environment, they should be supplemented with further research and local knowledge to provide a more accurate and comprehensive picture. These rankings can help policymakers and enterprises make educated decisions and create improvements in the business climate by incorporating them into a larger analysis.

Keywords: Ease of doing business, Policymakers, World bank.

Introduction

A favourable business climate is required for a country's economic progress. A country like India, which is one of the world's fastest developing, has the potential to outperform the world's leading economies in terms of business. The government's Make in India project, started in 2014 with the goal of transforming India into a manufacturing center, has made attempts to improve the Ease of Doing Business (EODB) in India by inviting more domestic and foreign enterprises to invest and do business in India. India's climb to 63rd place out of 190 countries is the consequence of the government's sustained efforts over the last few years and its attempts to boost its economy.

At international level, the World Bank every year assesses the policies to ease the regulatory burden undertaken by countries across the world through its Ease of Doing Business Index (EDBI). The index uses 10 different indicators that measure

various aspects of business regulations which are important to domestic firms and for national competitiveness. Doing Business also measures features of labour market regulations which are reported as a separate section and not included in the ranking. EDBI is considered as a reliable source of information on the business environment of an economy. EDBI rankings aim to compare the business environment of different countries. Ease of doing business rankings impact the reputation of the countries and hence influence them to initiate important policy reforms to improve the regulatory environment in their economy.

Reforms Implemented During 2018-19

India is striving to attain a ranking among top 50 in Ease of Doing Business rankings across the world. The country has been undertaking major reforms, which have successfully cut cost, time, documentation and procedures for the conduct of business in the country. The reforms include an easy procedure for filing Goods and Service Tax returns, the elimination of incorporation fees for small businesses, increase in the recovery rate under the Insolvency and Bankruptcy Code 2016, among others. These reforms have brought a significant amount of efficiency and transparency in doing business in the country. Several reforms have been implemented to improve the trade experience of companies. These reforms include introduction of a single window for all import and export transactions, integration of all stakeholders such as port and terminal operators at a common platform and fast tracking clearances of consignments at ports. The government has launched „PCS1x“, an upgraded version of the ecommerce portal for Port Community System (PCS), which intends to integrate 27 maritime stakeholders at a common platform. In the trading Across Borders, the Government has reduced the time and cost of exports and imports through various initiatives, including the implementation of electronic sealing of containers, upgrading of port infrastructure and allowing electronic submission of supporting documents with digital signatures.

Ease of Doing Business at State Level

Business Reforms Action Plan (BRAP)

Keeping in mind the vision of making India an easy place to do business, the Department for Promotion of Industry and Internal Trade (DPIIT) of the Ministry of Commerce and Industry of the Government of India, in collaboration with the World Bank, launched a dynamic national level exercise in 2014 to rank all Indian States and Union Territories based on the reforms implemented on selected parameters. In December 2014, the 6 representatives of the State Government identified and shared a 98-Point Business Reform Action Plan (BRAP) to be implemented by them for improving the regulatory framework for business as part of easing the country's

doing business. The BRAP 2020 report groups Indian states into four categories based on their implementation of ease of doing business reforms.

1. Top Achievers category: Andhra Pradesh, Gujarat, Haryana, Karnataka, Punjab, Tamil Nadu, and Telangana
2. Achievers Category: Himachal Pradesh, Madhya Pradesh, Maharashtra, Odisha, Uttarakhand, and Uttar Pradesh
3. Aspirers category: Assam, Chhattisgarh, Goa, Jharkhand, Kerala, Rajasthan, and West Bengal
4. Emerging Business Ecosystems category: Andaman & Nicobar, Bihar, Chandigarh, Daman & Diu, Dadra & Nagar Haveli, Delhi, Jammu & Kashmir, Manipur, Meghalaya, Nagaland, Puducherry, and Tripura.

World Bank's doing Business Report

Soon after Prime Minister Shri Narendra Modi, as part of the "Make in India" campaign, made a special mention of the need to enhance India's ranking in the World Bank's Doing Business Report, there was a paradigm shift in India's approach and strategy. Along with other programs, EODB gained front stage as one of the most critical foundations in promoting India as a desired investment destination.

To improve the ease of doing business in the country, systematic and focused efforts are being made to minimize the number of processes, reduce average time taken, rationalize costs, and make doing business in India easier. Intense collaboration with the World Bank to better grasp the methodology and analyse global best practices aided India in developing its strategy for strengthening the business climate. In cooperation with Nodal Ministries and States, a precise roadmap for reform implementation was prepared. As a result, India's ranking rose to 63 in the Doing Business Report 2020 (October 2019) from 142 in the Doing Business Report 2015 (October 2014). India has risen 79 places as a consequence of the government's ongoing efforts.

The World Bank's Ease of Doing Business Project is a driving force behind regulatory improvements. It rates 190 economies based on ten factors that range from the cradle to the grave of a business cycle and determine how easy it is to do business in the country. Starting a Business, Registering Property, Dealing with Construction Permits, Obtaining Electricity, Obtaining Credit, Paying Taxes, Trading Across Borders, Protecting Minority Investors, Enforcing Contracts, and Resolving Insolvency are the parameters.

The Doing Business Report (DB) was an annual publication created by a team led by Djankov in 2003. It was released annually by the World Bank Group from 2003 to 2019 and intended to quantify the costs of business regulations in 190 countries. The

research was one of the World Bank Group's hallmark knowledge products in the subject of private sector development, and it is said to have inspired the design of various regulatory reforms in developing countries. Every year, the study presents a complete examination of the expenses, requirements, and procedures to which a given type of private enterprise is subject in all nations, and then develops rankings for each country. The study is also supported by extensive communication.

Benefits of Ease of Doing Business

- **Attracting investment:** Countries with an easy-to-do-business climate are more likely to attract both local and foreign investment. When regulatory processes are streamlined, investors have higher confidence in the business environment's stability and predictability. Increased capital inflows, job creation, and economic expansion can all result from this.
- **Entrepreneurship promotion:** Simplified procedures and decreased regulatory barriers make it easier for entrepreneurs to start and run enterprises. This promotes the establishment of new businesses, which in turn promotes innovation, competition, and economic dynamism. A thriving entrepreneurial ecosystem can help to create jobs, reduce poverty, and boost productivity.
- **Encourages business expansion:** An easy-to-do-business environment allows existing enterprises to expand more effectively. When laws and administrative constraints are reduced, businesses may focus on expanding their operations, entering new markets, and investing in R&D. This promotes corporate growth, increases competitiveness, and aids economic development.
- **Increasing competitiveness:** Countries that prioritize ease of doing business have more competitive and efficient markets. A business-friendly climate is supported by simplified regulations, enhanced infrastructure, and functional institutions. This promotes healthy competition, stimulates innovation, and increases productivity, ultimately boosting economic competitiveness on both the national and international levels.

Ease of Doing Business Index

The ease of doing business index was an index created jointly by Simeon Djankov, Michael Klein, and Caralee McLiesh, three renowned economists of the World Bank Group, devised the ease of doing business index. The report's academic research was conducted in collaboration with professors Edward Glaeser, Oliver Hart, and Andrei Shleifer. Though the initial report was written by Djankov, Klein, and McLiesh, and they are still credited as "founders" of the report, some sources

credit Djankov and Gerhard Pohl with the idea. Higher rankings (a lower numerical value) indicated better, usually simpler, business policies and greater property rights safeguards. According to empirical research supported by the World Bank to explain their work, the economic growth effect of improving these regulator is strong.

The study underpinning Doing Business is based on the "World Development Report 2002," which examines how to construct effective institutions.[8] The research underlines the importance of history in understanding what drives institutional development, emphasizing the necessity to ensure functional institutions through a design that matches existing institutions, human skills, and accessible technologies. The research was led by Joseph Stiglitz and Roumeen Islam, with main contributors Simeon Dyankov and Aart Kraay. Several background studies were published in academic journals or books, including those by Nobel laureates Robert Shiller, Amartya Sen, and Gabriel Garcia Marquez.

India - Ease of Doing Business Ranking

The Ease of Doing Business (EODB) index is a ranking system established by the World Bank Group. In the EODB index, 'higher rankings' (a lower numerical value) indicate better, usually simpler, regulations for businesses and stronger protections of property rights. The research¹ presents data for 190 economies and aggregates information from 10 areas of business regulation:

1. Starting a Business of all
2. Dealing with Construction Permits
3. Getting Electricity
4. Registering Property
5. Getting Credit
6. Protecting Minority Investors
7. Paying Taxes
8. Trading across Borders
9. Enforcing Contracts
10. Resolving Insolvency

Doing Business 2020: World Bank Report ranks India 63rd out of 190 countries². In 2014, the Indian government initiated an ambitious regulatory reform program aimed at making it easier to do business in India. The program reflects a significant attempt to make the environment more business-friendly.

India has emerged as one of the most appealing countries for both investment and business. In the 'World Bank's Ease of Doing Business Ranking 2020,' India advances 79 places from 142nd to 63rd (2019). Positive reforms have resulted in India's outstanding improvement in the EODB index ranking.

India's major achievement is summarised here:

Construction Permits: India's ranking on this parameter has improved from 184 in 2014 to 27 in 2019.⁴ This improvement has been mainly on the account of a decrease in the number of procedures and time taken for obtaining construction permits in India.

Getting Electricity: India's ranking on this parameter has improved from 137 in 2014 to 22 in 2019. It takes just 53 days and 4 procedures for a business to get an electricity connection in India. Apart from these significant improvements, among the 190 economies, India ranks 13th in Protecting Minority Investors and 25th in Getting Credit.

Conclusion

The ease of doing business is a complex and multifaceted concept that assesses various factors related to the regulatory environment, business processes, and government policies affecting businesses. While it is challenging to draw a definitive conclusion on the ease of doing business worldwide, there have been efforts by international organizations such as the World Bank to provide rankings and indicators to measure and compare the business environments of different countries.

It's important to note that the ease of doing business rankings should be taken with some caution. They provide a simplified snapshot of the business environment and may not capture the full complexity and nuances of conducting business in a specific country. Moreover, the rankings can be influenced by various subjective factors and may not always reflect the ground realities faced by businesses on the ground.

That said, the ease of doing business rankings can still offer valuable insights and serve as a starting point for policymakers to identify areas for improvement and implement reforms that foster a more business-friendly environment. Governments around the world have been striving to enhance their ease of doing business rankings to attract investments, promote entrepreneurship, and stimulate economic growth.

In conclusion, while the ease of doing business rankings provide some useful information, it is essential to consider them as one among several indicators when assessing the overall business environment of a country. It's also crucial to complement these rankings with additional research and local knowledge to gain a comprehensive understanding of the opportunities and challenges that businesses may face in different regions.

AGRICULTURAL REFORMS: NEED AND SCOPE

Ms. G. Nithya

Assistant Professor, Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi
tmgnithya@gmail.com

Abstract

Agricultural systems worldwide are under pressure due to various challenges, including unsustainable practices, income disparities, inadequate technology adoption, and vulnerability to climate change. This article examines the pressing need for comprehensive agricultural reforms and explores the potential scope of these reforms. The need for sustainable development, equitable income distribution, technology adoption, improved market access, and climate resilience are highlighted as driving factors. The scope of reforms encompasses land distribution, financial support, extension services, market enhancements, research and innovation, policy adjustments, and education. By addressing these areas, countries can harness the full potential of agriculture, ensuring food security, livelihood improvement, and environmental sustainability. Successful implementation of agricultural reforms necessitates collaborative efforts among stakeholders, fostering a balanced and thriving agricultural sector.

Keywords: *Agricultural Reforms, Sustainable Development, Environmental Sustainability.*

Introduction

Agriculture plays a pivotal role in the economies of many countries, serving as a primary source of food, livelihood, and economic growth. However, the sector often faces numerous challenges that can hinder its potential contribution to sustainable development. Agricultural reforms are essential to address these challenges and unlock the sector's potential for the benefit of both rural communities and the broader economy. This article discusses the need for agricultural reforms and explores the scope of potential changes.

Need for Agricultural Reforms

Sustainable Development

The current agricultural practices in many regions are often unsustainable, leading to soil degradation, water depletion, and biodiversity loss. Reforms are needed to promote sustainable agricultural practices that ensure long-term food security and environmental health.

Income Disparities

Agriculture employs a significant portion of the population, especially in developing countries. However, income disparities between small-scale farmers and large agribusinesses are common. Reforms can help ensure fair income distribution and improve the livelihoods of small farmers.

Technology Adoption

Agricultural technology has evolved significantly, offering solutions to increase productivity, reduce post-harvest losses, and enhance resource efficiency. Reforms can facilitate the adoption of these technologies by providing access to improved seeds, machinery, and knowledge.

Market Access

Many small farmers face challenges in accessing markets due to inadequate infrastructure, limited transportation, and lack of information. Reforms can improve market access by investing in rural infrastructure, establishing market linkages, and enhancing value chains.

Climate Change Resilience

Agriculture is highly vulnerable to climate change impacts, such as erratic weather patterns and extreme events. Reforms should focus on building climate-resilient farming practices and promoting crop diversification.

Scope of Agricultural Reforms

Land Reforms

Addressing issues related to land ownership, tenancy, and land use is crucial. Land reforms can help redistribute land more equitably among small farmers, encourage efficient land use, and reduce disputes.

Financial Support

Providing access to credit and insurance services can help farmers manage risks and invest in modern agricultural practices. Government subsidies and support programs can also be reformed to target those who need them most effectively.

Extension Services

Strengthening agricultural extension services can facilitate the transfer of knowledge and best practices to farmers. Reforms can include training programs, workshops, and the use of digital tools for disseminating information.

Market Reforms

Developing efficient marketing systems, establishing farmer-producer organizations, and creating agri-business networks can help farmers fetch better prices for their produce and reduce post-harvest losses.

Research and Innovation

Investing in agricultural research and innovation is crucial for developing new technologies and practices that address emerging challenges. Reforms can ensure that research efforts align with practical needs on the ground.

Policy Framework

Reforms should also target policy frameworks that support sustainable agriculture. This involves removing barriers, reducing bureaucracy, and promoting policies that incentivize environmentally friendly and socially equitable practices.

Education and Training

Reforms in education and vocational training can equip the younger generation with the necessary skills and knowledge to engage in modern and sustainable agricultural practices.

Conclusion

Agricultural reforms are imperative to ensure the sector's sustainable growth, enhance food security, and uplift the livelihoods of rural communities. These reforms encompass a wide range of areas, from land management to market access, and require collaborative efforts from governments, international organizations, farmers, and other stakeholders. By addressing the pressing issues faced by agriculture and embracing innovative solutions, countries can unlock the true potential of their agricultural sector while promoting economic prosperity and environmental well-being.

DIGITAL TRANSFORMATION OF FINANCIAL INCLUSION IN INDIA: EXAMINING THE ROLE OF DIGITAL INDIA INITIATIVE

Dr. L. Nithya

Assistant Professor, Department of Commerce
PSGR Krishnammal College for Women, Coimbatore

Ms. P. Thamarai

Ph.D Research Scholar, Department of Commerce
PSGR Krishnammal College for Women, Coimbatore
21phdce003@psgrkcw.ac.in

Abstract

The Digital India initiative has been a major transformative force in India, aiming to harness the power of technology to create a digitally empowered society and bridge the digital divide. This paper explores the various aspects of Digital India and its impact on different sectors of the economy, governance, and the lives of citizens. The study is descriptive in nature and a qualitative approach of data. The study focuses on the role of digital India initiative in digital transformation of financial inclusion. And found that the initiatives have brought millions of previously unbanked individuals into the formal financial system, fostering economic empowerment and driving inclusive growth.

Keywords: Digital India, Financial Inclusion, Transformation.

Introduction

The Digital Revolution in India refers to the rapid advancement and adoption of digital technologies across various sectors of the economy and society. It encompasses the widespread use of the internet, mobile devices, digital services, and digital platforms. The digital revolution has brought about significant changes in the way people communicate, access information, conduct business, and interact with government services. The Vision of Digital India is to transform India into a digitally empowered society and knowledge economy. It focuses on three key areas: digital infrastructure, digital services, and digital empowerment of citizens. The vision aims to provide universal access to digital services, bridge the digital divide, and leverage technology for inclusive growth and development. In today's digital age, technology has become a catalyst for economic, social, and political transformation. India, with its vast population and diverse socio-economic landscape, recognized the immense potential of digital technologies in driving development and addressing the challenges faced by its citizens. Digital India envisions a future where every individual, irrespective of their background or location, can leverage the power of technology to access information, services, and opportunities.

Digital infrastructure refers to the underlying technological and physical components that enable the functioning of digital services and connectivity. It includes initiatives like BharatNet, National Optical Fiber Network, and Digital Village Program, which aim to provide broadband connectivity to rural and remote areas. The development of robust digital infrastructure is crucial for the successful implementation of Digital India.

Several success stories have emerged from the implementation of Digital India. These include initiatives like Aadhaar, which provides a unique identification number to Indian residents, enabling streamlined service delivery and reducing identity fraud. The Digital Payments ecosystem, led by platforms like Unified Payments Interface (UPI) and BHIM, has witnessed significant growth, promoting a cashless economy. E-governance initiatives like the e-Governance Portal and Digital Locker System have enhanced transparency and efficiency in government services. Digital India has played a crucial role in fostering innovation and entrepreneurship in India. Initiatives like Startup India, Digital India Startup Fund, and Atal Innovation Mission have provided support and incentives to startups. The digital ecosystem has enabled the growth of sectors like e-commerce, fintech, and edtech, leading to the emergence of successful Indian startups and promoting economic growth. This study explores Digital India and Financial Inclusion. Digital India has played a crucial role in promoting financial inclusion. Initiatives like Pradhan Mantri Jan DhanYojana (PMJDY) have facilitated the opening of bank accounts for the unbanked population. The Aadhaar-enabled payment system, mobile banking, and digital payment platforms have made financial transactions more accessible, convenient, and secure, empowering individuals and businesses.

Objectives

- To Examine the role of digital India initiative in digital transformation of financial inclusion

Research Methodology

The study is descriptive in nature and a qualitative approach of data collection and analysis appears to be appropriate, with data acquired from authentic and secure sources. The study focuses on the role of digital India initiative in digital transformation of financial inclusion. Likewise, the essential and applicable secondary data is gathered from a variety of sources similar as research papers articles publications.

How digital India promotes financial inclusion?

Digital India is a transformative initiative launched by the Government of India with the vision to harness the power of technology for the comprehensive development of the country. It seeks to create a digitally empowered society and a knowledge-based economy by leveraging digital technologies to connect citizens, streamline governance, and promote inclusive growth. The Digital India initiative aims to bridge the digital divide, improve access to digital infrastructure and services, and empower citizens with digital literacy and skills.

Digital India has played a significant role in promoting financial inclusion in India. Financial inclusion refers to providing access to affordable financial services, such as banking, credit, insurance, and payments, to underserved and unbanked populations. The following are some key points about the impact of Digital India on financial inclusion:

Pradhan Mantri Jan DhanYojana (PMJDY): The PMJDY is a flagship scheme launched as part of Digital India to provide universal access to banking services. It aimed to ensure that every household in India has access to a bank account. Under this scheme, millions of bank accounts were opened, especially for people from economically weaker sections, enabling them to avail banking services, government subsidies, and direct benefit transfers.

Aadhaar-enabled Payment System (AePS): Aadhaar, the unique identification number issued to Indian residents, has been instrumental in promoting financial inclusion. The AePS allows individuals to access their bank accounts, make payments, and withdraw cash using their Aadhaar number and biometric authentication. This has facilitated financial transactions for individuals who may not have traditional identification documents.

Mobile Banking and Digital Payment Platforms: The proliferation of mobile phones and the growth of digital payment platforms have played a crucial role in financial inclusion. Platforms such as Unified Payments Interface (UPI), BHIM (Bharat Interface for Money), and mobile wallets have made it easier for individuals to make digital transactions, send and receive money, and access financial services using their smartphones.

Microfinance and Digital Lending: Digital India has facilitated the growth of microfinance institutions and digital lending platforms, providing access to credit for underserved populations, especially in rural areas. Digital lending platforms leverage technology to streamline loan disbursement and enable easier access to credit for individuals and small businesses, fostering entrepreneurship and economic empowerment. Digital technology has transformed credit assessment and lending processes, particularly for individuals with limited credit history. Alternative credit

scoring models leverage digital data such as mobile phone usage, transaction history, and social media behavior to assess creditworthiness. This enables lenders to extend digital loans to previously underserved populations, fostering financial inclusion and supporting entrepreneurship.

Government Schemes and Subsidies: Digital India has improved the efficiency of government schemes and subsidies by leveraging digital platforms. Direct Benefit Transfers (DBT) ensure that subsidies and welfare benefits are directly credited to the bank accounts of beneficiaries, reducing leakages and improving financial inclusion. Digital platforms have made it easier for individuals to apply for government schemes and receive financial assistance.

Financial Education and Awareness: Digital India has also emphasized financial education and awareness to promote financial inclusion. Digital literacy programs, workshops, and campaigns have been conducted to educate individuals about digital financial services, safe online transactions, and the benefits of formal banking. These efforts aim to empower individuals with the necessary knowledge to make informed financial decisions.

Rural Banking and Last-mile Connectivity: Digital India has focused on improving banking services in rural areas and ensuring last-mile connectivity. Through the establishment of banking correspondent agents, the provision of banking services has been extended to remote locations where physical bank branches are not accessible. This has brought financial services closer to rural communities, promoting financial inclusion.

Digital Identification and Know Your Customer (KYC): Digital identification systems, such as biometric authentication and electronic know your customer (e-KYC) processes, have been instrumental in promoting financial inclusion. Digital IDs, often linked to government-issued identification documents, enable individuals to establish their identity digitally, facilitating faster and more accessible onboarding processes for financial services. This helps overcome barriers related to documentation and identity verification for the unbanked.

Agent Banking and Branchless Banking: Digital technology has enabled the growth of agent banking and branchless banking models. These models leverage local retail agents equipped with digital devices to provide banking services in underserved areas. Through these agents, individuals can deposit and withdraw cash, open accounts, and access basic banking services in their communities, bypassing the need for physical bank branches.

Overall, Digital India has played a crucial role in promoting financial inclusion by leveraging technology to enhance access, affordability, and convenience of financial services. The initiatives have brought millions of previously unbanked

individuals into the formal financial system, fostering economic empowerment and driving inclusive growth. Regulatory frameworks play a vital role in ensuring the safety and inclusivity of digital financial services. Governments and regulatory bodies have developed frameworks to protect consumers, establish standards for digital financial service providers, and mitigate risks such as fraud, data breaches, and unfair practices. These frameworks foster trust and confidence in digital financial services, encouraging wider adoption and usage.

Suggestions

- Challenges such as infrastructure gaps, digital literacy, and Cyber security need to be addressed to ensure that the benefits of financial inclusion reach all segments of society.
- Investigate the role of digital financial services providers, including fintech companies, in expanding financial inclusion in India.

Conclusion

The future of Digital India holds great promise. The continued development of digital infrastructure, increased digital literacy, and the growth of digital services are expected to drive further transformation across sectors. Embracing emerging technologies like artificial intelligence, block chain, and the Internet of Things (IoT) will open new opportunities and challenges. The success of Digital India lies in addressing the remaining challenges, ensuring inclusivity, and creating an enabling environment for innovation and growth. Digital India is a visionary initiative that seeks to transform India into a digitally empowered society and knowledge-based economy. It aims to bridge the digital divide, empower citizens with digital skills, and leverage technology to enhance governance, access to services, and economic opportunities. By embracing digital technologies, India is poised to unlock its full potential and shape a future where every citizen can participate in and benefit from the digital revolution. Digital technology has emerged as a key driver of financial inclusion, providing access to formal financial services, promoting financial literacy, and empowering the unbanked and underserved populations. By leveraging digital platforms, mobile devices, and innovative solutions, digital financial inclusion has the potential to bridge the financial divide and foster economic empowerment for individuals and communities worldwide.

Abstract

India's agricultural sector plays a crucial role in sustaining its vast population and supporting its economy. However, the sector faces numerous challenges such as low productivity, inadequate infrastructure, and fragmented landholdings. To address these issues and enhance agricultural development, institutional reform and technological advancements have emerged as critical pathways. This paper examines the significance of institutional reform and technological advancements in transforming Indian agriculture. Moreover, the paper explores the role of technology in modernizing Indian agriculture. Furthermore, the paper analyzes the challenges and opportunities associated with integrating institutional reforms and technological advancements. It highlights the importance of providing training and support to farmers for the successful adoption of new technologies. Additionally, the study discusses how public-private partnerships can facilitate the dissemination of knowledge and resources to the farming community.

Keywords: Institutional Reform, Technological Advancements, Indian Agriculture, Agriculture Development, Farmers, Agricultural Policies.

Introduction

Indian agriculture has been the backbone of the country's economy for centuries, providing livelihoods to a significant portion of its population and contributing substantially to its Gross Domestic Product (GDP). However, the sector has faced numerous challenges over the years, including outdated farming practices, low productivity, inadequate infrastructure, and volatile market conditions. In recent times, a combination of institutional reforms and technological advancements has emerged as a promising strategy to revitalize and modernize Indian agriculture, paving the way for sustainable growth and improved farmer welfare. Historically, Indian agriculture has been characterized by small landholdings, dependency on monsoon rains, and a traditional approach to farming. The lack of access to modern tools, credit facilities, and knowledge has hindered productivity and trapped

farmers in a cycle of poverty. Recognizing the urgency of addressing these issues, the government, policymakers, and agricultural experts have been increasingly focused on implementing institutional reforms that aim to empower farmers, increase their income, and foster overall rural development. Simultaneously, technological advancements have revolutionized various sectors worldwide, and agriculture is no exception. From precision farming techniques to the use of drones and artificial intelligence, technology offers immense potential to optimize agricultural practices, increase efficiency, and mitigate environmental impact. Integrating these technological innovations into Indian agriculture has become essential to overcome challenges and meet the growing demands of a burgeoning population. This paper delves into the key aspects of institutional reform and technological advancements in Indian agriculture development. It explores the recent policy measures and initiatives taken by the government to empower farmers and create an enabling environment for agricultural growth. Additionally, it examines the role of technology in transforming traditional farming methods, enhancing productivity, and promoting sustainable practices.

Institutional Reforms in Agricultural Development

Indian agriculture has played a pivotal role in the country's socio-economic fabric for centuries, providing livelihoods to a significant portion of the population and contributing substantially to the national GDP. However, over the years, the agricultural sector has faced numerous challenges, ranging from fragmented landholdings and outdated farming practices to inadequate infrastructure and market inefficiencies. These challenges have hindered the sector's growth and impeded the well-being of millions of farmers and rural communities.

Recognizing the urgent need for transformative change, institutional reforms in Indian agriculture have emerged as a critical aspect of sustainable development and rural prosperity. These reforms seek to restructure and modernize the agricultural framework, address systemic issues, and empower farmers with better access to resources, technology, and markets. Historically, the Green Revolution in the 1960s and 1970s significantly boosted agricultural production, bringing India closer to self-sufficiency in food grains. However, over time, the limitations of this model became apparent, leading to issues such as over-reliance on chemical inputs, water depletion, environmental degradation, and income disparities among farmers.

In recent years, the Government of India, along with various state governments, has been actively involved in designing and implementing agricultural reforms to bring about a more sustainable, inclusive, and prosperous agricultural sector. These reforms focus on diversifying agricultural practices, ensuring better price realization

for farmers, promoting value addition, enhancing rural infrastructure, and strengthening farmer-centric institutions.

One of the landmark initiatives in this direction was the passage of the Agriculture Reform Bills in 2020, aimed at creating a more liberalized agricultural ecosystem. The legislation sought to provide farmers with the freedom to sell their produce outside traditional agricultural produce market committees (APMCs) and explore options beyond the Minimum Support Price (MSP) system. While the reforms were met with mixed reactions, they brought the issue of institutional reform to the forefront of the national discourse. In addition to policy-level changes, various non-governmental organizations, research institutions, and private enterprises have been actively involved in driving agricultural innovation and empowering farmers through capacity-building programs, technology adoption, and market linkages.

Technology Development in Indian Agricultural Development

Agriculture has been the backbone of India's economy for centuries, providing livelihoods to millions of people and contributing significantly to the country's GDP. However, over the years, the sector has faced various challenges such as population growth, diminishing natural resources, climate change, and fluctuating market demands. In response to these challenges, the Indian agricultural sector has undergone significant technological advancements and innovations. The application of modern technology in agriculture, often referred to as "agricultural technology" or "agritech," has revolutionized the way farming is practiced in India. These technological developments aim to enhance agricultural a wide range of innovations, including the adoption of genetically modified crops, precision agriculture techniques, farm mechanization, use of drones and satellite imagery, climate-resilient practices, and improved irrigation systems, among others.

The integration of technology in agriculture has not only increased productivity but also empowered farmers by providing them with access to valuable information and resources. Additionally, technology has enabled better market linkages, reduced post-harvest losses, and facilitated the adoption of sustainable practices. It is important to note that while technological advancements offer promising opportunities, they also come with challenges and concerns. Issues related to the digital divide, accessibility, and the impacts on traditional agricultural practices need to be carefully addressed.

Challenges and Opportunities Associated with Integrating Institutional Reforms and Technological Advancements

Integrating institutional reforms and technological advancements in Indian agriculture presents both challenges and opportunities. India's agricultural sector is vital to its economy, as it employs a significant portion of the population and contributes substantially to the country's GDP. By combining reforms and technology, the agriculture sector can become more efficient, sustainable, and resilient. However, there are several hurdles that need to be addressed to fully realize the potential benefits. Let's explore the challenges and opportunities in more detail:

Challenges

1. **Limited infrastructure:** The lack of proper infrastructure, such as irrigation facilities, storage facilities, and transportation networks, poses a significant challenge to implementing and adopting advanced agricultural technologies effectively.
2. **Access to technology:** Ensuring that small and marginal farmers, who make up a substantial portion of the agricultural community in India, have access to modern agricultural technologies can be challenging due to factors like affordability and awareness.
3. **Fragmented land holdings:** The pattern of fragmented land holdings makes it difficult to implement large-scale modern farming techniques. Integrating technology in such a scenario requires coordination and collaboration among farmers.
4. **Resistance to change:** Traditional agricultural practices are deeply ingrained in the Indian farming community. Convincing farmers to adopt new technologies may be met with resistance, especially if they perceive risks associated with new methods.
5. **Financial constraints:** Many farmers face financial limitations, hindering their ability to invest in advanced technologies and machinery. Access to affordable credit and financial assistance is crucial to promoting technological integration.

Opportunities

1. **Increased productivity:** By incorporating modern technologies like precision agriculture, smart irrigation systems, and advanced machinery, Indian agriculture can witness a significant boost in productivity, leading to increased yields and income.

2. Sustainable practices: Technological advancements can enable the adoption of sustainable farming practices, reducing the environmental impact and promoting conservation of resources like water and soil.
3. Market linkages: Technology can help improve market linkages for farmers, allowing them to connect directly with buyers, negotiate better prices, and access a wider customer base.
4. Data-driven decision making: The integration of technology provides access to real-time data and information, enabling farmers to make informed decisions about crop planning, pest management, and resource allocation.
5. Empowerment of farmers: Technology and institutional reforms can empower farmers by providing them with knowledge, skills, and tools to manage their farms more efficiently and profitably.
6. Research and development: Integrating technology may foster collaboration between agricultural research institutions and private sector companies, leading to more innovations and customized solutions for Indian farming needs.
7. Job creation: The adoption of new technologies may lead to the emergence of new job opportunities in the agricultural technology sector, fostering rural economic development.
8. To leverage these opportunities and overcome the challenges, a comprehensive approach is needed. This should involve creating supportive policies, investing in rural infrastructure, providing training and education to farmers, promoting public-private partnerships, and ensuring equitable access to resources and technology. Government initiatives, NGOs, private companies, and research institutions can play a crucial role in driving this transformation towards a more technologically advanced and sustainable Indian agriculture sector.

Conclusion

Institutional reform and technological advancements play crucial roles in the development of Indian agriculture. Over the years, India has faced numerous challenges in its agricultural sector, including outdated practices, low productivity, fragmented land holdings, and insufficient access to resources and markets. However, through strategic reforms and innovative technological interventions, the country has made significant progress in transforming its agricultural landscape.

Abstract

Technology start-ups have become significant contributors to economic development by driving innovation and creating new market opportunities. This abstract highlights the key characteristics of successful technology start-ups, including their entrepreneurial mindset, adaptability, disruptive nature, and strong leadership. It emphasizes the importance of innovation in the start-up ecosystem, where emerging technologies and interdisciplinary collaborations play a crucial role. However, start-ups also face challenges such as securing funding, navigating regulatory landscapes, and managing growth. Various strategies, including partnerships, incubators, accelerators, and supportive government policies, are discussed as means to overcome these challenges. By understanding and supporting technology start-ups, we can foster an environment that encourages innovation and sustains growth, ultimately benefiting economies and societies at large.

Keywords: Technology start-ups, Innovation, Growth, Entrepreneurship, Disruption.

Introduction

In today's rapidly evolving and technology-driven world, technology start-ups have emerged as key drivers of innovation and catalysts for economic growth. These entrepreneurial ventures, led by visionary individuals, possess the power to revolutionize industries, establish novel markets, and fundamentally reshape the way we live and work. This essay delves into the intricate relationship between technology start-ups, innovation, and growth, shedding light on the essential elements that underpin their success while acknowledging the obstacles they encounter on their journey. Technology start-ups serve as fertile grounds for innovation, providing a platform for inventive ideas to flourish. They thrive on a culture of creativity and forward-thinking, constantly pushing the boundaries of what is possible. By challenging traditional norms and embracing disruptive technologies and concepts, these start-ups have the ability to introduce transformative products, services, and business models. Their innovative pursuits not only satisfy unmet market needs but also generate value and propel entire industries forward.

The success of technology start-ups can be attributed to a combination of factors. Firstly, visionary entrepreneurs play a pivotal role in driving the growth and innovation of these enterprises. These individuals possess a unique ability to identify market gaps and envision groundbreaking solutions. Their passion, drive, and risk-taking mindset allow them to navigate uncharted territories and pursue unconventional approaches. Moreover, technology start-ups thrive in an environment of adaptability and agility. Unlike established organizations burdened by bureaucratic structures, start-ups are nimble and can swiftly respond to market dynamics and changing customer preferences. This inherent flexibility enables them to pivot their strategies, optimize their offerings, and capitalize on emerging opportunities, thereby fueling their growth trajectory.

Furthermore, technology start-ups are at the forefront of leveraging emerging technologies. They are quick to adopt and harness cutting-edge advancements such as artificial intelligence, blockchain, and the Internet of Things. By leveraging these tools, start-ups can develop innovative solutions that address complex challenges, enhance efficiency, and unlock new possibilities. The strategic integration of these technologies gives start-ups a competitive edge, enabling them to differentiate themselves and capture market share. However, the path to success for technology start-ups is not without obstacles. They face numerous challenges, including securing funding, navigating regulatory frameworks, and scaling their operations effectively. Acquiring adequate financial resources is often a daunting task, as start-ups must convince investors of their value proposition and potential for growth. Additionally, the regulatory landscape can present hurdles, as policies may not always align with the rapidly evolving nature of technology start-ups. Navigating these frameworks requires resilience, adaptability, and effective advocacy.

Scaling operations while maintaining the core values and culture of a start-up is another significant challenge. Rapid growth necessitates strategic resource allocation, attracting and retaining top talent, and establishing scalable processes. Balancing growth with preserving the innovative spirit and entrepreneurial mindset that fueled the start-up's initial success is a delicate balancing act. To overcome these challenges and foster sustainable growth, technology start-ups adopt various strategies. Collaboration with established industry players and forging strategic partnerships can provide access to expertise, resources, and market reach. Start-up incubators and accelerators offer invaluable support in the form of mentorship, access to networks, and funding opportunities. Additionally, governments play a vital role in creating an enabling environment for start-ups by implementing policies that encourage entrepreneurship, streamline regulations, and provide financial incentives. In conclusion, technology start-ups are at the forefront of driving

innovation and economic growth. Their dynamic nature, driven by visionary entrepreneurs, allows them to disrupt industries and reshape markets. By embracing innovation, leveraging emerging technologies, and embodying an agile mindset, these start-ups have the potential to revolutionize the way we live and work. However, they face challenges that require strategic approaches and supportive ecosystems. By understanding the intricacies of technology start-ups and providing the necessary resources and support, we can cultivate an environment where innovation thrives, ultimately leading to sustainable growth and societal advancement.

Characteristics of Successful Technology Start-ups

Successful technology start-ups stand out from traditional businesses due to several key characteristics that define their approach. At the core of their mindset is an entrepreneurial spirit and a willingness to take risks. The founders of these start-ups are driven by a deep-seated passion for solving problems and creating innovative solutions. They are motivated by the opportunity to make a significant impact and drive positive change in the world. Embracing uncertainty is a fundamental aspect of the entrepreneurial mindset. Technology start-up founders understand that the path to success is often filled with unknowns and unpredictable challenges. Instead of shying away from these uncertainties, they embrace them as opportunities for growth and learning. They see uncertainty as a chance to experiment, iterate, and refine their ideas and strategies. Technology start-ups are unafraid to challenge the status quo. They recognize that true innovation requires breaking away from conventional thinking and questioning established norms. By challenging existing practices and norms, start-ups can identify new approaches, untapped markets, and disruptive ideas. This mindset allows them to differentiate themselves from traditional businesses that may be more risk-averse and tied to established processes.

The founders of successful technology start-ups possess a strong belief in their vision and an unwavering determination to bring their ideas to fruition. They are driven by their passion, which fuels their persistence and resilience in the face of setbacks and obstacles. This passion serves as a driving force that motivates the entire team and attracts like-minded individuals who share the same dedication and commitment to the start-up's mission. In addition to an entrepreneurial mindset, successful technology start-ups also prioritize innovation. They continuously seek out new and creative solutions to address existing problems or meet unmet needs. Innovation is embedded in their DNA, and they actively foster a culture of creativity, curiosity, and openness to new ideas. This culture allows them to generate

novel concepts, develop cutting-edge technologies, and disrupt established industries. By combining an entrepreneurial mindset with a willingness to take risks, an embrace of uncertainty, and a drive to challenge the status quo, technology start-ups create an environment that fosters innovation and propels them towards success. These characteristics enable them to create groundbreaking products or services, identify new markets, and create a lasting impact on industries and society as a whole.

In addition to an entrepreneurial mindset and a willingness to take risks, successful technology start-ups thrive on an agile and adaptable organizational structure. They understand the importance of being able to swiftly pivot and adjust their strategies in response to market feedback and changing circumstances. Technology start-ups operate in dynamic and fast-paced environments where new technologies, market trends, and customer preferences can shift rapidly. To stay competitive and capitalize on emerging opportunities, these start-ups prioritize agility and adaptability. They recognize that being able to respond quickly to market feedback and adjust their direction is essential for their survival and growth. Agility in the organizational structure of technology start-ups allows them to make strategic decisions and implement changes rapidly. They have streamlined decision-making processes that empower their teams to take quick action and iterate on their ideas. They value experimentation and encourage a fail-fast mentality, recognizing that rapid learning from failures is a key component of achieving success.

Start-ups actively seek feedback from customers, users, and stakeholders, and they leverage this feedback to inform their decision-making. By remaining closely connected to their target market, they gain insights into evolving customer needs, pain points, and emerging trends. This customer-centric approach enables them to make informed adjustments to their products, services, and business models, ensuring that they stay aligned with market demands. Moreover, technology start-ups embrace an iterative approach to product development and innovation. They understand that the first version of a product or service may not be perfect, but it serves as a starting point for gathering feedback and making continuous improvements. They leverage agile development methodologies, such as Scrum or Kanban, which facilitate incremental and iterative development cycles. The adaptable nature of technology start-ups extends beyond product development. They are open to reevaluating their strategies, business models, and market positioning based on new information and market dynamics. They are not tied to rigid plans but are willing to pivot and explore alternative directions if it aligns better with the market or customer needs. This flexibility allows them to seize emerging opportunities, pivot their offerings, or even enter new markets.

Furthermore, technology start-ups often embrace a flat organizational structure that encourages collaboration, creativity, and rapid decision-making. This structure facilitates communication and information flow across the organization, enabling teams to respond quickly to changes and make informed decisions at every level. Thus, the success of technology start-ups is closely tied to their ability to maintain an agile and adaptable organizational structure. By being responsive to market feedback, embracing continuous learning and iteration, and remaining open to change, these start-ups can seize emerging opportunities, navigate the dynamic technology landscape, and stay ahead of the competition. The agility and adaptability of technology start-ups enable them to capitalize on market trends, deliver innovative solutions, and drive sustained growth in an ever-changing business environment.

Furthermore, successful technology start-ups possess a remarkable capacity to embrace disruptive technologies and ideas. They possess a keen eye for identifying gaps in the market and capitalize on emerging trends, enabling them to stay ahead of the curve and create a significant impact. By pushing the boundaries of innovation, they introduce groundbreaking products, services, or business models that have the potential to transform entire industries and generate substantial value. Technology start-ups actively seek out opportunities to disrupt existing markets by challenging traditional approaches and introducing innovative solutions. They possess a deep understanding of emerging technologies and trends, allowing them to identify areas where existing solutions fall short or where untapped potential exists. By recognizing these gaps, start-ups can leverage their expertise to develop cutting-edge products or services that address unmet needs or provide superior alternatives. Moreover, technology start-ups are not constrained by the limitations of established players in the market. They have the agility and flexibility to navigate uncharted territories, unencumbered by legacy systems or outdated processes. This freedom enables them to take risks and explore unconventional ideas that can lead to revolutionary breakthroughs.

These start-ups are at the forefront of driving innovation and leveraging disruptive technologies. They embrace emerging technologies such as artificial intelligence, blockchain, virtual reality, or the Internet of Things, among others. By leveraging these technologies creatively, start-ups can unlock new possibilities and develop solutions that were previously unimaginable. By introducing groundbreaking products, services, or business models, technology start-ups challenge the status quo and reshape industries. They disrupt established markets by offering unique value propositions, delivering enhanced user experiences, and providing more efficient or cost-effective solutions. In doing so, they create

significant value for customers, stakeholders, and society at large. Successful technology start-ups not only introduce innovative products or services but also redefine business models. They understand the importance of business model innovation in capturing new market opportunities and creating sustainable competitive advantages. By reimagining how value is created, delivered, and monetized, these start-ups can establish new industry standards and transform traditional business practices.

Furthermore, technology start-ups foster a culture of continuous innovation and exploration. They encourage their teams to think creatively, experiment with new ideas, and challenge conventional thinking. This culture of innovation is nurtured through a supportive and collaborative work environment that encourages risk-taking, learning from failures, and embracing a growth mindset. Successful technology start-ups possess a unique ability to embrace disruptive technologies and ideas. They identify gaps in the market, leverage emerging trends, and push the boundaries of innovation. By introducing groundbreaking products, services, or business models, they transform industries and create significant value. Through their entrepreneurial spirit, forward-thinking mindset, and willingness to challenge the status quo, these start-ups drive innovation, shape the future, and leave a lasting impact on the business landscape.

Finally, strong leadership and vision play a pivotal role in the growth and success of technology start-ups. Founders of these ventures must possess the ability to inspire and motivate their teams, creating a culture of innovation, collaboration, and excellence. Effective leaders within technology start-ups understand the importance of creating a shared vision that aligns with the aspirations of the team members. They articulate a compelling narrative that communicates the start-up's purpose, goals, and values, igniting a sense of passion and commitment among their employees. By fostering a shared vision, leaders inspire their teams to work towards a common goal and invest their best efforts into the success of the start-up. In addition to establishing a vision, strong leaders set ambitious goals that push the boundaries of what is deemed achievable. They have a clear understanding of the market landscape, the potential of their technology, and the opportunities that lie ahead. By setting stretch goals, leaders challenge their teams to think creatively, take calculated risks, and strive for excellence in their work.

Crucially, leaders within technology start-ups chart a clear path towards achieving their vision and goals. They develop a strategic roadmap that outlines the necessary steps, milestones, and actions required to reach their desired outcomes. This roadmap serves as a guidepost for the start-up's activities, ensuring that all efforts are aligned and focused on advancing the vision. Strong leaders also attract

investors and talent who share their vision and passion for the start-up's mission. Investors are more inclined to support start-ups led by leaders who possess a compelling vision, a deep understanding of the market, and a proven track record of execution. Similarly, talented individuals are drawn to start-ups with visionary leaders who can inspire and provide a clear direction for their professional growth. Moreover, leaders within technology start-ups foster a culture of innovation and continuous improvement. They encourage their teams to think creatively, challenge assumptions, and explore new ideas. This culture allows for the free flow of information, collaboration, and experimentation, creating an environment where innovation thrives.

Leaders also recognize the importance of cultivating a diverse and inclusive workforce. They understand that diverse perspectives and experiences lead to richer problem-solving and better decision-making. By fostering an inclusive environment, leaders within technology start-ups can tap into the full potential of their teams and leverage a range of perspectives to drive innovation and growth. Thus, strong leadership and vision are fundamental to the growth and success of technology start-ups. Leaders inspire and motivate their teams, fostering a culture of innovation, collaboration, and excellence. By setting ambitious goals, charting a clear path, and attracting investors and talent who share their vision, leaders create a strong foundation for the start-up's success. Their ability to inspire, guide, and empower their teams ensures that the start-up remains focused, adaptable, and well-positioned to achieve its vision and drive sustainable growth.

Innovation in Technology Start-Ups

Innovation is the lifeblood of technology start-ups, driving their ability to create value, disrupt industries, and drive sustainable growth. These dynamic enterprises are at the forefront of pushing the boundaries of what is possible, constantly seeking out new ideas, technologies, and approaches to problem-solving. One of the primary sources of innovation within technology start-ups is their ability to harness emerging technologies. Start-ups leverage advancements in fields such as artificial intelligence (AI), blockchain, the Internet of Things (IoT), and other cutting-edge domains to develop groundbreaking products and services. By embracing these technologies, start-ups can unlock new possibilities and create unique solutions that address previously unmet needs. Artificial intelligence, for example, has revolutionized the way start-ups approach various industries. From utilizing machine learning algorithms for data analysis and pattern recognition to developing intelligent virtual assistants or chatbots, AI enables start-ups to automate processes, enhance decision-making, and deliver personalized experiences to customers. By leveraging AI

creatively, start-ups can optimize operations, improve efficiency, and drive innovation across diverse sectors.

Blockchain technology has also emerged as a significant driver of innovation within technology start-ups. Its decentralized and secure nature enables start-ups to explore new business models, streamline processes, and establish trust in various industries. Start-ups in finance, supply chain, healthcare, and other sectors are leveraging blockchain to create transparent, tamper-proof systems that enhance security, traceability, and efficiency. By applying blockchain creatively, start-ups are disrupting traditional intermediaries and establishing new paradigms for trust and value exchange. The Internet of Things (IoT) is another area where start-ups are fostering innovation. By connecting physical devices and enabling them to communicate and share data, start-ups can unlock new possibilities in areas such as smart homes, wearables, industrial automation, and smart cities. IoT-driven start-ups are developing solutions that optimize energy usage, enhance safety, and improve operational efficiency. By harnessing the power of IoT, start-ups are transforming industries and creating more connected and intelligent ecosystems.

Furthermore, technology start-ups foster a culture of creativity and out-of-the-box thinking. They encourage their teams to explore unconventional ideas, challenge existing norms, and question the status quo. This culture of innovation empowers individuals to experiment, take calculated risks, and learn from failures. It is within this environment that start-ups can ideate, prototype, and iterate on novel solutions that have the potential to disrupt industries. Moreover, technology start-ups often have a customer-centric approach to innovation. They prioritize understanding the needs, pain points, and aspirations of their target audience. By engaging closely with customers, conducting user research, and gathering feedback, start-ups gain insights that fuel the innovation process. This customer-focused approach enables them to develop products and services that truly resonate with users, providing enhanced experiences and creating value in the market. Thus, innovation is the beating heart of technology start-ups. These dynamic enterprises embrace disruptive ideas, new technologies, and novel approaches to problem-solving. By harnessing emerging technologies such as AI, blockchain, IoT, and others, start-ups can deliver groundbreaking solutions that address unmet needs and revolutionize industries. Their culture of creativity, customer-centricity, and willingness to explore unconventional ideas enable them to remain at the forefront of innovation, driving economic growth and shaping the future.

Start-ups foster innovation not only through their embrace of emerging technologies but also through their collaborative and interdisciplinary nature. They recognize the value of diverse teams composed of individuals with different skill

sets, backgrounds, and perspectives. By bringing together people with varied expertise, start-ups create an environment that sparks creativity and encourages the cross-pollination of ideas. The diversity within start-up teams can lead to fresh insights and breakthrough innovations. When individuals with different perspectives and knowledge come together, they challenge each other's assumptions and encourage innovative thinking. The exchange of ideas and the ability to draw upon a range of experiences allows for unique problem-solving approaches and the generation of novel solutions. Moreover, the collaborative nature of start-ups fosters a culture of teamwork and shared learning. The emphasis on open communication and collaboration encourages individuals to share their ideas, provide feedback, and build upon each other's contributions. This collaborative environment promotes the free flow of information, leading to a more holistic understanding of challenges and potential solutions.

In addition to their collaborative nature, successful technology start-ups are known for their customer-centric approach to innovation. They place a strong emphasis on understanding customer pain points, gathering feedback, and iterating rapidly to meet evolving needs. Start-ups actively engage with their target market to gain insights into user preferences, behaviors, and expectations. By closely involving customers in the innovation process, start-ups can create products and services that truly resonate with their intended audience. They gather feedback through various channels such as surveys, user testing, and direct communication. This iterative approach allows start-ups to refine their offerings based on real-world usage and feedback, resulting in products that deliver superior user experiences and address specific pain points. Furthermore, the customer-centric approach enables start-ups to stay agile and responsive to changing market demands. By continually gathering feedback and staying attuned to customer needs, they can adapt their strategies and offerings to evolving trends and preferences. This iterative process of incorporating customer feedback allows start-ups to stay ahead of the competition and maintain a competitive edge in the market. By embracing collaboration, diversity, and a customer-centric approach, technology start-ups foster an environment conducive to innovation. The synergy created by diverse teams and the close engagement with customers allows start-ups to develop unique solutions, refine their offerings, and continuously deliver value to their target market. This emphasis on collaboration and customer-centricity drives the success of start-ups and positions them as agents of innovation and growth in the technology landscape.

Challenges and Growth Strategies

While technology start-ups are known for their potential, they encounter significant challenges on their path to growth and success. Securing adequate funding is often a primary hurdle. Start-ups heavily rely on external investment to fuel their growth, develop their products or services, and scale their operations. However, attracting investors can be a complex and competitive process. Start-ups must craft compelling business plans, demonstrating their market potential, outlining their competitive advantage, and showcasing their ability to generate returns on investment. Effectively communicating their vision, growth strategy, and revenue model is crucial in building investor confidence. In addition to funding challenges, navigating the regulatory landscape can pose a significant obstacle for technology start-ups. The regulatory environment in many industries may not always keep pace with the rapid advancements in technology. Start-ups must ensure that they stay informed about applicable laws and regulations that impact their operations, such as data privacy, intellectual property, consumer protection, and Cyber security. Compliance with these regulations is essential to maintain trust and legitimacy in the market.

Furthermore, technology start-ups often face the task of advocating for policies that foster innovation and entrepreneurship. They need to actively engage with policymakers, industry associations, and regulatory bodies to ensure that regulations are conducive to their growth and innovation. By participating in public consultations, contributing to policy discussions, and sharing their experiences, start-ups can influence the development of regulations that support their operations while protecting public interests. Moreover, start-ups must proactively stay informed about changes in regulations and adapt their practices accordingly. This involves monitoring legal developments, engaging legal counsel when necessary, and implementing robust compliance measures to mitigate legal and regulatory risks. By taking a proactive approach, start-ups can ensure they remain compliant while also advocating for policies that foster an environment conducive to innovation and entrepreneurship.

Addressing funding challenges and navigating the regulatory landscape requires a multi-faceted approach. Start-ups can seek alternative funding sources, such as angel investors, venture capital firms, crowdfunding platforms, or government grants and programs. They can also leverage incubators, accelerators, and networking events to connect with potential investors and mentors who can provide guidance and support. Building a strong network of industry professionals, advisors, and legal experts can also help start-ups navigate the regulatory landscape effectively. Thus, technology start-ups face significant challenges in securing funding

and navigating the regulatory landscape. Overcoming these challenges requires a combination of strategic planning, effective communication, proactive compliance measures, and engagement with policymakers and investors. By addressing these hurdles, start-ups can position themselves for growth, innovation, and long-term success. Additionally, collaboration among start-ups, industry stakeholders, and policymakers is essential to create an ecosystem that supports innovation, fosters entrepreneurship, and enables technology start-ups to thrive.

Additionally, scaling a technology start-up presents unique challenges that require careful management and strategic decision-making. Rapid growth brings the need to effectively allocate resources, attract and retain top talent, and establish scalable processes and infrastructure. Balancing the demands of growth with maintaining the start-up's core values and culture can be a delicate endeavor. Resource management is crucial during the scaling phase. Start-ups need to allocate their financial, human, and technological resources efficiently to support expansion. This includes securing additional funding, optimizing cash flow, and strategically investing in areas that drive growth. Managing resources effectively ensures that the start-up can sustain its operations, scale its product or service offerings, and seize market opportunities. Attracting and retaining top talent is another critical challenge. As start-ups grow, they need to expand their team with skilled individuals who can contribute to the company's success. Recruiting and retaining top talent can be competitive, as start-ups often compete with larger, more established organizations. Start-ups need to offer competitive compensation packages, a stimulating work environment, and opportunities for professional growth and development to attract and retain the best talent.

Establishing scalable processes and infrastructure is essential to support growth without sacrificing efficiency or quality. Start-ups must streamline their operations, optimize workflows, and implement scalable technologies and systems. This includes adopting agile project management methodologies, leveraging automation and digital tools, and continuously optimizing processes to increase efficiency and productivity. Maintaining the start-up's core values and culture throughout the scaling process is critical. As the team expands and the organization grows, founders must ensure that the values and vision that drove the start-up's early success remain intact. This may involve effective communication, fostering a collaborative and inclusive work environment, and implementing practices that preserve the start-up's culture as it evolves. To overcome the challenges of scaling, technology start-ups employ various strategies. Collaboration with established industry players and strategic partnerships can provide valuable expertise, networks, and resources. Partnering with larger companies can enable start-ups to access new markets,

distribution channels, and resources that may otherwise be challenging to achieve independently.

Start-up incubators and accelerators offer support and resources to help start-ups navigate the scaling process. These programs provide mentorship, networking opportunities, and access to funding and resources, accelerating the growth trajectory of the start-up. Incubators and accelerators also offer a supportive community of like-minded entrepreneurs, fostering collaboration and knowledge sharing. Government initiatives that promote entrepreneurship and provide favorable regulatory environments play a vital role in fostering the growth of technology start-ups. Supportive policies, tax incentives, and funding programs can create an enabling environment for start-ups to thrive. Governments can also invest in infrastructure, research and development, and education to cultivate a skilled workforce and promote innovation. Thus, scaling a technology start-up presents unique challenges that require strategic planning and execution. Managing resources effectively, attracting and retaining top talent, establishing scalable processes, and preserving the start-up's core values and culture are essential for sustainable growth. Collaborating with established industry players, engaging in strategic partnerships, leveraging start-up incubators and accelerators, and benefiting from supportive government initiatives are strategies that can help start-ups overcome these challenges and navigate the scaling journey successfully.

Conclusion

Technology start-ups play a transformative role in today's economy, acting as powerful catalysts for innovation and drivers of economic growth. These dynamic enterprises embody an entrepreneurial spirit, embracing risk-taking and pushing the boundaries of what is possible. By fostering a culture of innovation, start-ups disrupt established industries, create new markets, and generate economic value. However, technology start-ups also encounter significant challenges that can hinder their progress. One of the primary challenges is securing funding. Start-ups often require external capital to fuel their growth, develop their products or services, and expand their operations. However, attracting investors can be a formidable task. Start-ups must develop a compelling business case, articulate their value proposition, and demonstrate market potential to attract investment. By addressing funding challenges, start-ups can access the resources needed to realize their vision and drive innovation. Regulatory barriers also pose hurdles for technology start-ups. The regulatory landscape may lag behind the rapid pace of technological advancements, making it challenging for start-ups to navigate. Start-ups must stay informed about relevant laws and regulations, ensuring compliance while advocating for policies

that foster innovation. Collaborative efforts between start-ups, policymakers, and industry stakeholders can lead to the development of a regulatory framework that supports technological innovation, entrepreneurship, and consumer protection.

Scaling is another critical challenge for technology start-ups. Rapid growth requires effective resource management, attracting and retaining top talent, and establishing scalable processes and infrastructure. Balancing growth with preserving the start-up's core values and culture can be a delicate endeavor. Start-ups must strategically allocate resources, offer competitive compensation and opportunities for professional growth, and establish streamlined operations to support expansion. By addressing scaling challenges, start-ups can achieve sustainable growth while maintaining their innovative edge. To overcome these challenges and nurture the start-up ecosystem, collaboration is essential. Collaboration among start-ups, industry stakeholders, investors, and government entities creates a supportive and vibrant environment. Start-up incubators and accelerators provide guidance, mentorship, and access to networks and resources. By leveraging these programs, start-ups can gain valuable insights, refine their strategies, and accelerate their growth trajectory. Mentorship plays a vital role in the success of technology start-ups. Experienced entrepreneurs and industry experts can provide guidance, share knowledge, and offer valuable advice to help start-ups navigate challenges and make informed decisions. Mentorship programs foster a culture of learning, accelerate skill development, and provide valuable connections within the start-up ecosystem.

Moreover, supportive policies and initiatives from governments are instrumental in cultivating a thriving start-up ecosystem. By implementing policies that incentivize entrepreneurship, reduce regulatory barriers, and provide access to funding and resources, governments can create an enabling environment for technology start-ups to flourish. Strategic investments in infrastructure, education, and research and development further support start-up growth and foster a culture of innovation. In conclusion, technology start-ups are powerful engines of innovation and economic growth. By addressing challenges in funding, regulation, and scaling, we can unlock their full potential and harness the benefits they bring. Collaboration, mentorship, and supportive policies are crucial in nurturing the start-up ecosystem, enabling start-ups to thrive, create jobs, and drive technological advancement. By fostering an environment that nurtures innovation and supports the growth of technology start-ups, we can cultivate a prosperous future driven by transformative ideas and economic prosperity.

Abstract

Cloud computing has played a major role in solving the inefficiencies problem in organizations and increase the growth of business thus help the organizations to stay competitive. It is required to improve and automate the traditional ways of doing business. Cloud computing has been considered as an innovative way to improve business. Overall, cloud computing enables the organizations to manage their business efficiently. Unnecessary procedural, administrative, hardware and software costs in organizations expenses are avoided using cloud computing. Standards, policies and controls are therefore of the essence to assist management in protecting and safeguarding systems and data.

Keywords: Cloud computing, Business, organizations, Management

Introduction

Cloud Computing is quickly becoming one of the most popular and promising technologies. It offers variety of opportunities that help the organizations to improve their business and use technology more efficiently. Many organizations have started adopting cloud computing in their business. It is difficult for the organizations to survive in the traditional ways and they are unable to compete with their competitors. It acts as an excellent technological tool that helps the organizations to stay competitive as it can be considered as an innovative way to increase business value. Cloud Service Providers like Google, Microsoft, Amazon are vendors that provide their customers with cloud computing resources and services that are used dynamically based on customer demand in accordance with a particular business model.

Objectives of the Study

- To analyze the benefits of cloud computing
- To examine the risks involved in cloud computing
- To identify the Adoption Strategy in Cloud computing

Benefits of Cloud Computing

- Cost Saving and Reduced Investment
- Increase in Scalability
- High Availability and Reliability
- Efficient Collaboration
- Automatic Updates

Cost Saving and Reduced Investment

Cloud Computing has significant hands-on reducing the costs proportionally to the usage of the services and reducing the initial investment for the computing resources. The automated cloud capacity is extremely elastic in terms of wisely allocating resources as per the growth or decrease in the customer demand without ever wasting the capacity not ever having a crisis of insufficient resources. Moreover, the automated cloud capacity will always meet the demand of the customers without wasting the capacity thus providing cost savings. This cost reduction regarded as one of the primary benefits of cloud computing has driven business prospects for this technology adopted by uncountable business enterprises and personal userbases parallelly

Increase in Scalability

The increase in scalability is one of the important benefits of cloud computing. This can be easily illustrated with the ever-changing as elastic customer demand being met by cloud computing technology.

High Availability and Reliability

The increase in availability and reliability offered by cloud computing has driven its adoption by organizations. Moreover, cloud providers guarantee the associated availability and reliability of the services in the service level agreement (SLA). Companies can adapt and evolve to better respond to the changes of the customer demand as well as mitigate risk for precarious situations that may arise in the future through the availability and reliability provided by cloud computing.

Efficient Collaboration

Beyond the approach of traditional methods, with cloud computing and cloud environment businesses will have the ability to collaborate, communicate and share more easily. With the world becoming a global village with every passing year, the office has become an ideology. With numerous employees working from across the borders, when projects are being worked on employees, contractors and third parties will have the capability to share and access the files required through cloud computing.

Automatic Updates

The systems working on traditional infrastructures, companies were responsible to take care of the hardware as well as software.. While installing an operating system, one only has to choose the image of the latest software and the system will do it all by itself. The tedious tasks of updating each and every new update have become history. This is one amazing advantage that cloud computing provides.

Risks of Cloud Computing

- Security Vulnerabilities
- Minimized Governance Control
- Portability in between cloud providers
- Compliance and Legal Issues

Security Vulnerabilities

Security vulnerabilities with cloud computing if measures are not taken. In comparison to the traditional infrastructure which would have a direct connection to the on-premise infrastructure with the isolated resources, it is not the same with various functionalities of cloud computing. Thus, however, Cloud Computing can be adjusted to mitigate such risks with careless administration of resource allocation and usage; it can also become equally vulnerable. Thus, skilled manpower is of extreme importance while handling critical data and resources in cloud computing.

Minimized Governance Control

Cloud Computing comes with the risk of minimized operational control of governance. Since the cloud providers operate the infrastructures and external connections are essential for the communication between the customers and the provider, there is a lack of control.

Portability in between Cloud Providers

Each of the cloud providers is discrete and can be observed to be shielded from each other. This increases the chances of limited portability between the cloud providers. Though not impossible to move between these cloud providers, it becomes extremely difficult to switch in between then down the path. Some features might be provided by one provider and the other doesn't and vice versa.

Adopting strategies in cloud computing

Cloud adoption strategies take into account specific business goals, best practices, and cloud standards for current and future use by a company. The adoption strategies in business are:

- *Private*
- *Public*
- *Hybrid*

Private

- Applications are developed only for internal use
- Application usage patterns are predictable and require low storage
- Private clouds can be configured to support any application
- Certain features in legacy applications can be protected. These applications may not work well in public clouds.
- On-premise infrastructure with virtualization layer in the data center or a dedicated infrastructure

Public

- Offers a cloud infrastructure (IaaS) for companies looking to reduce hardware costs
- Cost-effective solutions for long term storage
- Enterprises looking for a managed services provider can consider public clouds
- Data centers maintain all managed services (web servers, application servers, load balancing and other infrastructure).
- Offers good load testing environment for developers

Hybrid

- Used in scenarios where applications are supported well in both private and public clouds
- Best suited for customer service interactions

- Hybrid clouds are attractive for organizations looking for flexibility and scalability
- Legacy applications and data can be stored in private clouds, whereas networks can be used on a public cloud.
- Security is an issue. Companies must have adequate security planning to protect internal data.

Conclusion

Cloud computing has become one of the transformational technologies that is tremendously important to improve ways of doing business. It has been proved to be a valuable asset for organizations to stay competitive. Cloud service providers should provide regulatory compliances that the users may concern about. Through the compliances, it helps the users to be certified securely. Besides, security, policies should be provided with details regarding access control, risk management, system backup and recovery.

Abstract

Deep learning is a machine learning technique for medical diagnosis that can directly find useful data from high-dimensional sensory inputs without manual interaction. Meanwhile in order to perform, effective human body analysis an enhanced machine learning methodology is needed. Full connected frameworks that mimic the healthcare delivery process have been proposed to address this challenge. These frameworks have two main modules: a depth-sensing module that diagnoses health conditions using deep neural networks (DNNs) and an action evaluation module based on Bayesian Inference Graphs. To evaluate these frameworks, a simulation environment has been designed that includes a body simulator for creating body instances that can be treated and where various interventions modify the potential health states of simulated patients. The framework also includes a depth-sensing module and an action evaluation module to take care of the body. Experiments show that healthcare processes under this framework can become increasingly efficient over time with increasing statistical data.

Keywords: Deep Learning, Frame work, DNN, CNN, DLA

Introduction

Recently, there has been a rapid progression in the automation of acquiring and analysing human-specific health data. Various tools have been implemented for collecting health-related data and observing the data types involved in human health [1]. However, capturing reliable high-dimensional complex health data and evaluating insights or hidden properties within that data remains a significant challenge for biomedical data analysts.

Latest advances in biomedical research identify many new health-related inputs which are in multiple datatypes. These inputs are becoming complex on every day basis with traditional data mining and statistical analysis approaches. Two steps

must be taken to obtain a highly effective and robust capability of recorded data and to build a prediction model. Depending on the complexity of the data, many challenges must be addressed, and sufficient domain knowledge is required. Nowadays, deep learning approaches are very active in providing solutions to handle multi-dimensional datatypes which are with high complexity using many effective learning models for such problems. An electrocardiograph (ECG) is an instrument that records heart activity, measured using electrodes placed at specific points on the chest. Arrhythmias are abnormal heart rhythms that, when severe, are classified as harmful or life-threatening [2,3]. Many algorithms have been presented and implemented in the literature for recognising and classifying ECG heartbeat patterns. Automated classification can greatly interest patient monitoring, even if a cardiologist must make the ECG classification judgment.

Modern biomedical research has identified many new health-related data types, including structured, unstructured and semi structured data types. In recent days the data growth and data complexity are becoming increasingly complex, and traditional data mining and statistical analysis approaches are proving inadequate. Two steps must be taken for a robust capability for recorded data and to construct predictive models: addressing the challenges presented by the complexity of the data and acquiring sufficient domain knowledge.

An example is the electrocardiograph (ECG), an instrument that records heart activity through electrodes placed at specific points in the chest. Arrhythmias are heart rhythms which are classified as harmful or life-threatening when severe [4]. Automated classification can be highly beneficial for patient monitoring, although a cardiologist must make the final judgement on ECG classification. Numerous algorithms have been proposed and implemented in the literature for recognising and classifying ECG heartbeat patterns. As the machine learning algorithms are not much promising in processing and extracting the required information from the data the current trend researchers should provide solution to the problem by expanding the features of the techniques. However, with the advent of big data, and many more data processing methodologies deep learning has emerged as a new machine learning algorithm capable of handling such complex data.

The number of advanced deep learning algorithms includes the features to bypass the earlier problems and made significant advancements in different fields. Several algorithms have been proposed accurate detection of heart diseases using electrocardiograms. However, these systems rely on time-domain properties that are susceptible to slight variations in amplitude

System Architecture

A multi-layer or deep convolution neural network (d-CNN) can be properly utilized for multiple feature extraction and classification of raw ECG data into numerous categories. Simplified overview of a convolutional neural network is presented. The quality of the classifier depends on implementing the filter bank, and the filtering operation determines the main speed bottleneck in the processing chain. As such, designing filter banks for signal classification based on an architecture capable of performing sequential linear filtering operations is an intriguing approach [5]. However, if classification is based on segmentation of temporal ECG patterns, this approach must take into account computation time and power consumption as well as heart rate variability.

The waveform of an ECG signal is inherently complex and varies between individuals and situations. Different heart diseases and abnormalities present distinct waveform patterns, representing snapshots of different time series of heartbeats for various anomalies in the human body. The primary objective is to extract features by transforming the temporal signal of the electrocardiogram into a spatial signal, which is then filtered with a bank of 1D spatial filter.

CNNs are set as the primary technique due to their minimum requirement for data pre-processing and their exceptional signal detection capabilities, often comparable to or surpassing human performance. Another reason for the application of CNNs is the nature itself. Since most life threatening diseases are diagnosed by physicians who visually inspect electrocardiograms for anomalies, the aim is to detect irregularities in the input data. Thirdly, symbolic processing, which underlies classical machine learning paradigms, is suboptimal for ECG recognition tasks due to its difficulty in encoding shape differences and sensitivity to noise. A network with excessively large, fully connected layers may not be trainable. CNNs, trained using the BPN algorithm, are commonly used in image processing tasks where the connections between neurons in a hidden layer is determined by a fraction of input neurons. A hidden layer consists of several groups of neurons with shared weights within each group. Each group typically contains enough neurons to cover the entire image. When each group of neurons in a hidden layer computes a convolution of the image using its weights, resulting in a processed version, this convolution is referred to as feature extraction. Pooling is usually used to subsequent retrieved data.

Simulation Setup

Two prominent numerical platforms are available in Python with many useful special functions: Theano and Tensor Flow. These libraries are very effective in nature but application of these libraries becomes a task in developing deep learning

models. In addition to these two numerical platforms, the Keras Python library provides a simplified and convenient way to construct deep learning models using either Theano or TensorFlow. The Python programming platform was selected with the Keras library using the TensorFlow backend to leverage recent developments fully. Keras is the advanced and influential ease to use pre built package for building and testing deep learning models [6]. It includes Theano, a powerful and significant numerical library. The basic merit of using this approach is it allows for an easy and enjoyable exploration of neural networks. The PC configuration used is a for installation of this packages is very common with primary definitions.

Early Detection

Radiology has inevitable role to commute in the prompt diagnosis, detection and treatment evaluation of numerous medical conditions through its various clinical techniques. Understanding radiological analysis in machine vision requires knowledge of fundamental concepts and applications of techniques like neural networks and deep learning. Implementation of deep learning approaches (DLA) for clinical image analysis is rapidly expanding as an area of research [7,8]. Deep learning approaches have been frequently employed in medical sector to analyse the images to find the abnormalities present in the image. Medical images are analysed using the advanced techniques like artificial neural networks, which is a precise examination of deep learning approaches, and some potentially practical medical imaging applications.

Maximum Deep Learning Algorithm applications focus digital images from histology, computer tomography, mammography and X-rays. It provides an in-depth analysis of the articles. Various Medical imaging services have experienced a surge in demand within the healthcare system. Additionally, due to a shortage of Radiologists, examining clinical images can be challenging and time-consuming. These issues can be addressed by AI. Machine learning being a part of AI that can operate without explicit programming and has capabilities to learn from raw data to identify the results or to make decisions based on multiple preliminary data sources [9]. Machine Learning employs three distinct learning strategies: semi-supervised, unsupervised, and supervised.

Different types of Deep Learning Algorithms (DLA) have been utilised for specific medical image analysis, drawing inspiration from computer vision. Supervised DL techniques include most advanced methodologies which are employed in disease detection. DLA is typically used to identify anomalies and classify certain types of health abnormalities [10]. Convolution Neural Networks (CNNs) is most effective and most suited technique for medical image analysis. A

convolution - based neural network architecture for clinical image pattern recognition is a Convolutional Neural Network.

Conclusion

Application of ML methodologies and their enhanced algorithms to analyse medical pictures is one of the factors contributing to this development. When a neural network is capable of autonomously learning features, deep learning was successfully employed as a technique for machine learning. In difference, such procedures employ characteristics which are usually hand-crafted. It might be challenging to choose and calculate these qualities.

A STUDY ON THE PROGRESS OF PRADHAN MANTRI JEEVAN JYOTI BIMA YOJANA (PMJJBY) FROM 2015 TO 2022

Ms. V. Poornima

*Assistant Professor of Commerce-BPS
Nallamuthu Gounder Mahalingam College, Pollachi*

Mr. P. Santhosh

*Student, II B.Com BPS
Nallamuthu Gounder Mahalingam College, Pollachi*

Introduction

The Government initiated the National Mission for Financial Inclusion (NFI), namely, Pradhan Mantri Jan Dhan Yojana (PMJDY) in August, 2014 to provide universal banking services for every unbanked household, based on the guiding principles of banking the unbanked, securing the unsecured, funding the unfunded and serving unserved and underserved areas. A digital pipeline has been laid for the implementation of PMJDY through linking of Jan-Dhan account with mobile and Aadhaar [Jan Dhan-Aadhaar-Mobile (JAM)].

In order to move towards creating a universal social security system for all Indians, especially the poor and the under-privileged, three ambitious Jan Suraksha Schemes or Social Security Schemes pertaining to Insurance and Pension Sector were announced by the Government in the Budget for 2015-16. The schemes were launched on 9th May, 2015, for providing life & accident risk insurance and social security at a very affordable cost namely (a) Pradhan Mantri Suraksha Bima Yojana and (b) Pradhan Mantri Jeevan Jyoti Bima Yojana and (c) Atal Pension Yojana. Pradhan Mantri Vaya Vandana Yojana to protect elderly aged 60 years and above was initially opened for subscription for a period of one year i.e. from 4th May 2017 to 3rd May 2018.

Objective of the Study

Among the three social security schemes Pradhan Mantri Jeevan Jyoti Bima Yojana (PMJJBY) is chosen for the study. The objectives of the study are

1. To comprehend about PMJJBY.
2. To know the salient features of PMJJBY.
3. To assess the progress of PMJJBY over the years.

Pradhan Mantri Jeevan Jyoti Bima Yojana (PMJJBY)

With the aim of insuring the uninsured a universal social security system for all Indians, especially the poor and the under-privileged, the PMJJBY was launched by the Hon'ble Prime Minister for providing cover for death due to any reason. To achieve saturation under this scheme as announced by Hon'ble PM on 15.08.21, digital and periodic physical camps/drives were taken up. Further PMJDY account holders holding quarterly average balance of Rs. 1000 or more and standard PMMY account holders were also targeted. To increase voluntarily enrollment under the scheme enhanced intermediary commission of Rs.30 payable to BCs is being passed to the subscriber by reduction of amount of Insurance premium payable amount.

The PMJJBY is available to people in the age group of 18 to 50 years having a bank account who give their consent to join / enable auto-debit. Aadhar would be the primary KYC for the bank account. The life cover of Rs. 2 lakhs shall be for the one year period stretching from 1st June to 31st May and will be renewable. Risk coverage under this scheme is for Rs. 2 Lakh in case of death of the insured, due to any reason.

The premium is Rs. 436 per annum which is to be auto-debited in one installment from the subscriber's bank account as per the option given by him on or before 31st May of each annual coverage period under the scheme. The scheme is being offered by Life Insurance Corporation and all other life insurers who are willing to offer the product on similar terms with necessary approvals and tie up with banks for this purpose.

Salient Features

- Launched on 9th May, 2015
- Offers a renewable one-year term life cover of Rupees Two Lakh to all subscribing bank account holders in the age group of 18 to 50 years, covering death due to any reason
- Annual premium of Rs.436/- per annum per subscriber.
- The scheme is offered/administered through LIC and other Life Insurance companies willing to offer the product on similar terms.

Progress of Pradhan Mantri Jeevan Jyoti Bima Yojana (PMJJBY)

The scheme was launched on 9th may, 2015 and still in operation. It has been eight years since its launch the following charts show the progress made during this period.

Cumulative Enrolments in PMJJBY from 2016 TO 2022

Source : Banks including convergence schemes

The total enrollments in the scheme at the end of March 2016 was 2.96 Crores and now it has reached a peak of 13.11 Crores by June 2022.

Cumulative Number of Claims Disbursed Under PMJJBY

Source : Insurance companies including convergence schemes

The total number of claims disbursed under the scheme is depicted in the chart above. At the end of March 2016 41,437 claims were disbursed and by end of June 2022 it is 6, 21,372. More than 6 Lakhs people have claimed the benefit.

Female Beneficiaries under PMJJBY

Source :Banks

The chart shows the female beneficiaries under PMJJBY scheme, at the launch it was 1.1 Crores out of 2.96 Crore of total enrollment. At the end of June 2022 the female beneficiaries accounted for around 4.52 Crores which is 49% of the total enrollments.

Conclusion

Insurance is a strong weapon against loss due to risk of death and other uncertainties. By making insurance available to all at a minimum cost the government has ensured security and social welfare among the masses. PMJDY accelerated the progress of PMJJBY through providing a support vehicle. More such social security schemes will ensure a safe and risk free life for the underprivileged. The aim of insuring the uninsured through a universal social security system for all Indians, especially the poor and the under-privileged, through PMJJBY has proven to be efficient and successful through the enormous progress made by the scheme.

INNOVATION AND GROWTH OF TECHNOLOGY STARTUPS IN INDIA

Ms. A. Gomathi

Assistant Professor of Commerce
Department of B.Com – Banking and Insurance
Nallamuthu Gounder Mahalingam College, Tamilnadu, India
gomathiagathursamy@gmail.com

Abstract

The Indian startup ecosystem has expanded quite rapidly mainly through private investments including seed, angel, venture capital, and private equity funds, with technical support from incubators, accelerators, and the government⁷. Technology based entrepreneurs are stated as technopreneurs, they are the new trend setting entrepreneurs, they discover and create innovative product and services to the society with the effective usage of science and technology³. India has nearly 27,000 active tech startups now³. The main aim of this paper is to identify the various types of start-ups and growth of unicorn startups in India. Besides this it analysis the issues, challenges faced by the startup companies and emerging trends in the current economic climate.

Keywords: Digital Startups, Technopreneur, Start-up, Entrepreneur, Technology, Invention, Technopreneurship

Introduction

Indian technology companies are at the center of innovation, revolutionizing the Indian economy and opening up new prospects for entrepreneurs. As India's startup environment matures, expect to witness even more revolutionary enterprises emerge¹. To provide funds and facilitates to startups, Indian government initiated "Startup India Scheme" and its primary objective is to promote startup, generate employment and create wealth⁷.

India has the third largest startup ecosystem in the world, just behind China and the US¹⁰. The Indian tech startup environment is rapidly expanding and diversifying, with creative startups forming in various industries. Indian startups are altering the country's economy and offering new possibilities for entrepreneurs, from fintech to e-commerce to health tech¹.

Start-ups created more new jobs; Indian government is setting a right pathway for the young entrepreneurs by providing online portals and mobile applications that brings sharing of information to the business society that leads to healthy growth in business entities³.

Statement of the Problem

The Startup ecosystem of the country is challenging many traditional systems with new-age technologies and removing many pain points¹⁰. Indian businesses are

having a big influence on the everyday lives of the masses by delivering answers to the country's particular difficulties, and the road ahead looks promising for the Indian tech startup industry¹. Despite the progress made so far, Indian businesses face huge challenges, such as the unorganized and fragmented nature of the market in most sectors, a lack of clear and transparent policy initiatives that startups can tap into quickly, as well as a lack of infrastructure, a lack of knowledge and exposure, and complications in doing business⁷.

1. To know the present scenario of tech startups in India, the following questions were raised?
2. What are the various types of start-ups functioning in India? How the growth of startups is identified?
3. Which are the top 10 unicorn startups in India 2023?
4. What are the existing schemes in India for the promotion of start-ups?
5. What are all the issues, challenges faced by the startup companies and emerging trends in the current economic climate?

Objectives of the Study

1. To identify various types of start-ups and their growth in India.
2. To understand the concept and status of unicorn startups in India.
3. To know the existing schemes in India for the promotion of start-ups.
4. To analysis the issues, challenges faced by the startup companies and emerging trends in the current economic climate.

Research Methodology

As the research paper is of conceptual and review nature, the researcher has applied exploratory research design by using varied secondary data availed from the secondary data sources. Based on the secondary data and review, the researcher has reported on important role of innovation and growth of technology startups in India.

Review of Literature

Ankita Panda posted an article entitled "Top 10 Tech Startups in India - An Informative List" on May 23, 2023. In this post, the author indicates at the top ten tech startups in India, building a name for themselves in the tech domain.

Sumit Mishra (2017) entitled a study on "Start-Up In India: Opportunities and Challenges". This research paper revolves around the concept of Start-up India Campaign which was started on 15th august, 2015. The basic purpose of this article is to put some light on the challenges to be countered and opportunities to be capitalised upon by the start-ups entrepreneurs and the initiative taken by the Indian govt.

Unicorn Startups

Unicorn the term was coined by Aileen Lee, a venture capitalist, choosing the mythical animal to represent the statistical rarity of such successful ventures. In the business and financial worlds, a unicorn startup refers to a startup company with a value of over \$1 billion⁹.

Unicorn startups are often innovative and disruptive companies that operate in various sectors, such as technology, e-commerce, finance, healthcare, and more⁹. Unicorns in India are seen as game-changers in their respective industries and have the potential to reshape markets or create new ones. Examples of well-known unicorn startups include BYJU's, Swiggy, OYO Rooms, Dream11, Razorpay, and Ola Cabs⁹.

As per the latest reports, China is 1st position with 206 Chinese firms out of 494 ultra-valuable startups worldwide known as Unicorns. This makes China with the largest number of unicorns in the world. China is also the home of world's 3rd most valuable startup unicorns i.e. Alibaba, ByteDance and ride hailing giant DidiChuxing. All of these 3 unicorns combined value is \$280 billion. US stand at 2nd position with 203 unicorn companies. India is nowhere near China or US, in spite China being our neighboring country, India have 10 times less unicorn startups.

List of the Top 10 Profitable Unicorn Startups in India in 2023

The term 'unicorn' has come a long way from a mythical creature to a regular feature in business and finance discussions. Today unicorn companies have gained recognition and carved a niche for themselves in the market. Not every unicorn needs to prove to be a successful startup. The point is that no startup should stop hustling after achieving a milestone¹⁰.

- **BillDesk**

BillDesk is an Indian online payment gateway company based in Mumbai. The company provides its customers with an online payment platform that enables banking and merchant website transactions. It is an independent payment processing company, regulated under the Payment and Settlement Systems Act, 2007, and supervised by the Reserve Bank of India (RBI)¹⁰.

BillDesk was founded by Indian entrepreneurs M.N. Srinivasu, Ajay Kaushal, and Karthik Ganapathy in 2000. Its headquarter is located in Mumbai. Billdesk is one of the few profitable Fintech companies in India¹⁰.

- **Dream11**

Dream11 is an Indian fantasy sports platform. Dream11 allows users to play fantasy cricket, hockey, football, kabaddi, handball, basketball, volleyball, rugby,

futsal, American football, and baseball¹⁰. It was founded in 2008 by Harsh Jain and BhavitSheth. Dream11 becomes the first Indian fantasy sports company to become a unicorn in 2019. In 2021, Dream Sports, the parent company of Dream 11, raised \$840 million in a funding round led by Tiger Global, D1 Capital, Falcon Edge, DST Global, and Redbird Capital¹⁰.

- **Zerodha**

Zerodha is an Indian financial services company (Member of NSE, BSE, MCX) that provides brokerage-free equity investments, retail, institutional broking, currencies, and commodity trading¹⁰. It was founded in 2010 by Nitin Kamath, the company is headquartered in Bangalore and has a presence in nine Indian cities. It is also an official member of NSE's Advisory Committee for Advanced Trading¹⁰.

- **Zoho**

Zoho Corporation is an Indian technology company that manufactures computer software and web-based business tools. It is known for the online office suite that it provides Zoho Office Suite. The company was founded in 1996 by Sridhar Vembu and Tony Thomas and is headquartered in Chennai, India¹⁰.

- **EaseMyTrip**

EaseMyTrip is an Indian online travel company. It was founded in 2008 by NishantPitti, RikantPitti, and PrashantPitti. Its headquarter is located in New Delhi. The company offers hotel bookings, air tickets, holiday packages, bus bookings, and white-label services. It has overseas offices in Singapore, UAE, Maldives, and Thailand¹⁰.

- **Gupshup**

Gupshup is a leading conversational messaging platform, Powering over 6 billion messages per month according to the company. Thousands of large and small businesses in emerging markets use Gupshup to build conversational experiences across marketing, and sales¹⁰. It is owned and operated by Webru Inc. with its primary operations in India, the United States, Europe, Latin America, Africa, the Middle East, and Southeast Asia. The company was founded by Birud Seth in 2014¹⁰.

- **Infra.Market**

Infra.Market is a construction solutions company, it is India's largest multi-product building material brand. It aims to transform the ecosystem by leveraging technology and driving innovation. Their product portfolio includes a wide range of building materials as well as lifestyle products that enhance interior spaces. The company was launched in 2016 by AdityaSharda and Souvik Sengupta¹⁰.

- **Shiprocket**

Shiprocket is India's largest tech-enabled logistics and fulfillment platform, which aims to democratize the eCommerce landscape of the country. Shiprocket tie-up with multiple courier companies, and e-tailers so that they can easily manage their orders and day-to-day operations from a single platform, customize shipping, tracking, and much more. It was founded in 2012 by Sahil Goyal¹⁰.

- **Mamaearth**

Mamaearth is a skincare products company, They sell their product through an e-commerce platform. They sell a variety of health and wellness products including baby, beauty, hair, and body products. The company is headquartered in Gurgaon, Haryana. It was founded by Varun and Ghazal Alagh in 2016¹⁰.

- **Nykaa**

Nykaa is an Indian e-commerce company that sells beauty, wellness, and fashion products across websites, mobile apps, and 100+ offline stores. Nykaa sells beauty products that are manufactured in India as well as internationally¹⁰. The company was founded in 2012 by Falguni Nair and is headquartered in Mumbai. In 2020, it became the first Indian unicorn startup to be led by a woman¹⁰.

List of Startup Schemes by the Indian Government

India has 335+ active accelerators and incubators with capacity to support 5000+ start-ups annually. Numbers are set to expand to 450+ by 2025 with policy support from Central and State Government agencies.

Under Ministry of Electronics and Information Technology (MeitY)

1. Support for International Patent Protection in Electronics & Information Technology (SIP-EIT)
2. Multiplier Grants Scheme (MGS)
3. Software Technology Park (STP) Scheme
4. Electronic Development Fund (EDF) Policy
5. Modified Special Incentive Package Scheme (M-SIPS)
6. Scheme to Support IPR Awareness Seminars/Workshops in E&IT Sector

Under Ministry of Agriculture and Farmers Welfare

7. NewGen Innovation and Entrepreneurship Development Centre (NewGen IEDC)
8. The Venture Capital Assistance Scheme

Under Ministry Of Micro, Small and Medium Enterprises (MSME)

9. Credit Guarantee
10. Performance & Credit Rating Scheme
11. Raw Material Assistance
12. Revamped Scheme of Fund for Regeneration of Traditional
13. Single Point Registration Scheme (SPRS)
14. Aspire – Scheme for promotion of innovation, entrepreneurship, and agro-industry
15. Infrastructure Development Scheme
16. MSME Market Development Assistance
17. National Awards (Individual MSEs)
18. Coir Udyami Yojana
19. International Cooperation (IC) Scheme
20. Credit Linked Capital Subsidy for Technology Upgradation
21. Bank Credit Facilitation Scheme

Under NITI Aayog

22. Atal Incubation Centres (AIC)
23. Atal Tinkering Laboratories (ATL)
24. Scale-up Support to Establishing Incubation Centres

Under Ministry of Skill Development and Entrepreneurship

25. Udaan Training Programme for Unemployed Youth of J&K

Under Ministry of Heavy Industries & Public Enterprises

26. Enhancement of Competitiveness in the Indian Capital Goods Sector

Under Ministry of New and Renewable Energy (MNRE)

27. National Clean Energy Fund (NCEF) Refinance
28. IREDA Scheme for Discounting Energy Bills
29. Bridge Loan against MNRE Capital Subsidy
30. Bridge Loan against Generation-Based Incentive (GBI) Claims
31. Loan for Rooftop Solar PV Power Projects
32. Credit Enhancement Guarantee Scheme

Under Schemes by Public Sector Enterprises

33. Dairy Entrepreneurship Development Scheme
34. 4E (End to End Energy Efficiency)
35. Pradhan Mantri Mudra Yojana (PMMY)

36. Stand Up India
37. Sustainable Finance Scheme
38. SIDBI Make in India Soft Loan Fund for Micro Small and Medium Enterprises (SMILE)
39. Startup Assistance Scheme
40. Growth Capital and Equity Assistance

Under Ministry of Science & Technology

41. Assistance to Professional Bodies & Seminars/Symposia
42. Ayurvedic Biology Program
43. Industry Relevant R&D
44. High Risk-High Reward Research
45. Technology Development Programme (TDP)
46. National Science & Technology Management Information System (NSTMIS)
47. Biotechnology Industry Partnership Programme (BIPP)
48. Industry Innovation Programme on Medical Electronics (IIPME)
49. Extra Mural Research Funding
50. SPARSH (Social Innovation programme for Products: Affordable & Relevant to Societal Health)
51. Promoting Innovations in Individuals, Startups and MSMEs (PRISM)
52. Science and Technology of Yoga and Meditation (SATYAM)
53. Rapid Grant for Young Investigator (RGYI)
54. Biotechnology Ignition Grant (BIG)

Emerging Trends in Technology Startups

Indian technological startups are transforming the Indian economy in a variety of ways. They drive innovation in finance and online shopping, create new employment, and contribute to the nation's GDP. Furthermore, Indian entrepreneurs are rapidly meeting the demands of the country's large population, from providing inexpensive healthcare to enhancing financial inclusion¹.

Flipkart, Paytm, Ola, Byju, and Zomato are some of India's most successful software firms. Indian technology firms are producing new employment, spurring innovation, and increasing the country's GDP. Both domestic and international investors are investing money in Indian IT businesses. Fintech, e-commerce, health tech, ed-tech, and agri-tech are among the industries in which Indian tech firms are focused¹.

Recommendations

Solving problems and innovation in a country of 1.3 billion requires a lot of money¹⁰. If the government succeeds in establishing a pro-active start-up environment as intended, then there is lot of scope for new job creation. The following recommendations are suggested for betterment of the nation.

For Revenue Generation

- Provide structures institution support for early stage start-ups to tap into global markets
- Easy procurement norms of Public Procurement for Start-ups along with spend targets

To increase seed stage investments:

- Create seed stage co-investment fund for angel groups
- Bring focus on capability over capacity in accelerators and incubators

To increase corporate participation

- Expand CSR guidelines to increase capital availability and pace of deployment
- Encourage set-up of corporate innovation labs.

To strengthen support ecosystem

- Build industry-specific world-class innovation clusters
- Build industry-specific physical and digital sandboxes

Conclusion

Nowadays India focuses on competing and grabbing the top place in global market and for this the government taking necessary steps for creating awareness among the youths in India for meeting up with the global competitions by providing necessary training through training centers, educational institutions and other avenues. vision over the start-up of the nation entirely turn in the present era³.

Creating more awareness of government initiatives and incentives, credit disbursement to priority sectors, promoting outreach and network benefits to Tier 2 and Tier 3 cities, as well as easing financing and tax breaks for foreign and domestic investors could improve opportunities for startups in India⁷.

A REVIEW ON ANALYZING THE IMPACTS OF ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING IN HIGHER EDUCATION

Dr. T. Sumadhi

Associate Professor

Department of Computer Applications

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Artificial Intelligence (AI), Machine learning (ML) and Deep Learning (DL) technologies are growing immensely in recent years. This tremendous growth is because of the fact that each and every day huge volume of data is generated, and so application of these technologies has become more significant, durable and valuable in today's world. Many artificial applications like Virtual assistants, chatboxes, driverless vehicles, translators, speech recognizers and many more are the best output models of these advanced technologies. In this paper a comparison of these technologies, its types, applications, tools used for evaluation, current research areas and future research area where these techniques can be applied has been clearly reviewed which can help to explore more deep research works from these fields.

Key words: Artificial Intelligence (AI), Machine learning (ML), Deep Learning (DL), Education.

Introduction

Artificial intelligence is a widespread division becoming very popular computer science which deals with building smart machines which are capable of doing tasks that characteristically need human intelligence power. Machine Learning is a subset of artificial intelligence which helps us to construct AI-driven applications. Machine learning is a technique adopted in computers which enables machines to think and act with less human intervention; Deep Learning is a subset of machine learning which makes use of huge volumes of data and complex algorithms to train a model. Deep learning deals with the concept of making computers learn to think by make use of structures which is modeled based on human brain. Machine learning techniques require less computing power and deep learning technique needs less human intervention.

Importance of AI—AI gives technological systems the ability to observe their surroundings, respond to what they see, work through issues, and take appropriate action to complete a task. The computer gathers data through sensors like CCTV camera and then processes it and delivers the results as the user required format. Artificial intelligence techniques are capable of duplicating the human mind and it is used in expert systems to do a particular task. Examples of these include self-driving cars which uses smart assistants like Siri and Alexa. Many companies make use of

these techniques to provide intelligent behavior to their products which can help the users in completing their activities easily and rapidly.

Advantages and disadvantages of AI

Advantages	Disadvantages
1. Processes detail-oriented tasks very efficiently 2. Outputs obtained are more accurate and reliable 3. AI powered virtual agents are becoming more popular nowadays. 4. Time taken for executing huge data jobs is very much reduced	1. It is Costlier to implement 2. Technically skilled professionals are required to train the application 3. Workers who are qualified to build AI based tools are limited in number. 4. AI can work on only programmed task. 5. It does not have the capability to generate the results from another jobs or tasks

Types of AI and ML

Based on the application of AI techniques it can be categorized into four types as follows:

- **Type 1: Reactive machines.** These AI systems are task-specific and lack memory. Deep Blue is a prime example. Deep Blue can recognize the pieces on the chessboard and make predictions, but because it lacks memory, it is unable to draw on its past learning to make predictions about the future.
- **Type 2: Limited memory.** These AI systems contain memories, allowing them to draw on the past to guide present actions. This is how some of the decision-making processes of self-driving automobiles are constructed.
- **Type 3: Theory of mind.** Theory of mind is a term used in psychology. When used to AI, it implies that the technology would be socially intelligent enough to recognize emotions. This kind of AI will be able to forecast behavior and deduce human intentions, which is a capability required for AI systems to become essential members of human teams.
- **Type 4: Self-awareness.** In this category, AI programs are conscious because they have a sense of who they are. Self-aware machines are aware of their own conditions. There is currently no such AI.

A lot of data is provided to the computer so it may learn, forecast the future, look for trends, and categorize data. The findings are trained and predicted using these machine learning algorithms. The kind of data being trained determines the machine learning method that is employed.

There are three machine learning types: supervised, unsupervised, and reinforcement learning.

- **Supervised learning**-In this type of machine learning historical input and output data are used in training the machine learning algorithms, here the machine learn and outputs are clearly given and obtained as needed.
- **Unsupervised learning** -When you need to find patterns and use data to make judgments, this type of machine learning is particularly useful. The same labeled training sets and data are not used in unsupervised learning, but the computer still searches for any similar patterns in the data.
- **Reinforcement learning** -Reinforcement learning is the contiguous machine learning type that learns by interacting with its environment and gets a positive or negative reward.

AI Technology in Real World

AI technologies are incorporated in to different kinds of machines to make the task get completed easier and quicker. Some of the examples of this incorporation include:

- **Automation:** Automation tools are used in places where the tasks have to be done automatically for processing huge volume of different kinds of tasks. Example: Robotic process automation (RPA), this type of software is used to perform automatic repetitive tasks, rule-based data processing tasks that was being done by humans traditionally.
- **Machine vision:** This technology enables the machine to see. Using a camera, analog-to-digital conversion, and digital signal processing, it records and examines visual data..Some of the examples include spying an aero plane to take photographs which helps to figure out spatial information or map of the areas. Clinical expert system is used by doctors to diagnose the patient. The face of the criminal can be detected with the stored portrait made by forensic artist in criminal investigation.
- **Natural language processing (NLP):** This is the process of converting human language using a computer program. The best-known example of NLP is spam detection, which looks at the subject line and text of an email and decides if it's junk. Current NLP applications include text translation,

sentiment analysis and speech recognition. Machines can interact with humans and can understand the language spoken by them.

- **Robotics:** Robots are commonly used to perform tasks that are very tough for humans to perform or perform reliably. Example of this includes robots used in assembly lines for car manufacturing or by NASA to move large objects in space.
- **Self-driving cars:** Autonomous vehicles use an integration of different technologies like computer vision, image recognition and deep learning to construct an automated piloting vehicle which can identify the obstacles and pedestrians on the lane.
- **Gaming** – AI can be used to play strategic games like chess, poker, tic-tac-toe, etc., where machines are made to think like humans using heuristic knowledge.
- **Expert Systems** – These applications are built by integrating machine, software, and special information by imparting reasoning and advising capability to the user's need.
- **Speech Recognition** – These intelligent systems have the capacity to hear and comprehend the language spoken and convert it into meaningful sentences and words.
- **Handwriting Recognition** – This software can read the text written on paper using a pen or on screen by a stylus. It can also identify various shapes of the letters and convert it into editable text.

Machine Learning Technology in Real World Applications

Supervised learning technique is used in different business operations like sales forecasting, inventory optimization, fraud detection, fraudulent transaction made in bank, to predict the disease, prediction of low risk and high risk loan applicant, predicting failure in industrial equipment's etc.

Unsupervised learning techniques can be applied to create predictive models. Some of the commonly used applications include clustering and association, like grouping the customer based on their purchase behavior, grouping inventory based on manufacturing metrics, pinpointing associations in customer data etc.

Reinforcement learning technique This approach of reinforcement learning can be used in fully simulated settings that are immobile or have a lot of useful data. Because this type of machine learning needs less management than supervised learning, practical applications for this type of learning include self-driving a car and teaching it to park them, controlling traffic lights dynamically to reduce traffic jams and advanced robotics techniques which can automatically read video images and do the actions they saw on the video image.

Some of the Most Commonly used Machine Learning Applications includes:

- **Google-** Google Assistant and Google Camera, Gmail and Google Photos. Gmail has now got smart reply feature will suggest small brief responses to the email we have received based on the content that is present available in the email. The smart compose option will give us suggestions like greetings, closings, or some whole sentences in between while we are busy typing the email.
- **Netflix-**ML has been used to improvise the recommendations and personalization problems. ML techniques are also used in other streams like content promotions, price modeling, content delivery and marketing.
- **Uber-**ML is for estimating the time to determining how far your cab is from your given location. It uses algorithms to predict all these efficiently Uber EATS, also performs same by taking into account various factors like food preparation time and estimated delivery time.
- **Siri & Cortana-**These voice recognition systems are based on Deep neural networks algorithms which are being trained in a such a way that they can imitate human interactions. While proceeding with this interaction, these apps will learn to understand the skeleton and grammar of the language being spoken.
- **Spotify-** This is similar to Netflix which makes use of ML to generate weekly releases list of around 30 songs, which we can listen to. A new play list which fulfills their dreams is send to that user.
- **Voice recognition systems-**Deep neural networks is used in voice recognition systems to train the voice which can imitate human interactions in exactly the same manner.
- **Personalized Online Shopping-**ML-powered algorithms are used to curate the list of buying recommendations and filtrations for the users. Using this personalization, users can order products that they actually might be interested to choose from.
- **Enhanced Images-** ML can help to detect the objects in the images and make several enhancement like lighting and creating more effects to the images. Nowadays this features are made available in smart phone cameras also.
- **Social Media-** Social media is area which has established itself as an essential element for the current generation. AI and ML in social media can be associated with big data and machine learning where deep learning is used to extract every minute detail from an image by using a bunch of deep neural networks.

- **Surveillance**-CCTV security camera monitoring images can be used can be trained using supervised exercises, developing security algorithms, identification protocols, and much more.
- **Agriculture**- With the increased demand for food, organizations are using automation and robotics technology with AI embedded in it to help farmers to find more efficient ways to protect their crops from various conditions like weather, weeds, market consumption rates, and much more. The latest help to detect crop diseases and soil nutrition content using the sensor images obtained from the field.
- **Customer Service**-Many websites are now offering customersupport with chatting ability. It's one of artificial intelligence's most widely used applications. These chatbots are essentially just automatic replies. These chat support bots are little more than automated responders.
- **Healthcare**- it is used in helping people with looking after patients. In some cases it provides operating assistance to the doctors.
- **Banks-AI and MLbased** software is used to provide customer support and detect anomalies and credit card fraud, tracing card usage and endpoint access, security specialists are more effectively preventing fraud.
- **Smart Homes**-Various devices like smart locks, smart switches, etc., are increasingly becoming compatible with various devices, and the application of smart homes is becoming more accessible to the general population every day.
- **Travel-Applications** for artificial intelligence (AI) and machine learning in travel assist travel companies in determining lucrative yet accessible fares based on a variety of parameters to draw in a large number of clients..
- **Space Exploration**-Artificial intelligence and machine learning is used to sift through years of data obtained by the Kepler telescope in order to identify a distant eight-planet solar system.
- **ChatBots**-Virtual assistants are used to control various home appliances like siri, cortana and Alexa. Amazon's Echo is used to translate human language into desirable actions by making use of speech recognition and NLP .

The Impact of AI and ML on Human Society

Negative Impact

1. The use of AI and ML creates a huge social change in the way of living by the humans.
2. Unemployment is created as all the tasks will be replaced by machinery.

3. Wealth inequality can be realized between the investors of AI and non-investors of AI.
4. AI has the capacity to work by itself after being loaded with sufficient algorithms and it will ignore the commands given by the human controller.
5. AI which is created by human on racial bias or egocentrically oriented environment may harm certain people or things.

Positive Impact

AI makes the computers to learn, reason, and apply the logic being loaded. Scientists, medical researchers, clinicians, mathematicians, and engineers can make use of this AI technology to produce reliable and safe output or process.

1. **Fast and accurate diagnostics** can be obtained using this techniques example IBM's Watson computer
2. **Socially therapeutic robots**-senior citizens make use of robots as their pets to overcome their tension and reduce blood pressure, anxiety, loneliness, and increase social interaction.
3. **Reduce errors related to human fatigue**-greater levels of human fatigue creates more errors which can be eliminated by using automated machines to perform tasks accurately
4. **AI in surgical contribution**- AI-based surgical procedures is being used to complete the surgeries with less damage to the body.
5. **Improved radiology**- The use of cardiac MRI, body MRI and fetal imaging helps to predict the diseases through the scan results.
6. **Virtual presence**- this technology enables a distant diagnosis of patient who is unable to travel or bed ridden.

Challenges faced in implementing Artificial Intelligent and Machine learning Technology

Data Scarcity - AI system works by making use of trained data. The quality dataset required to train a dataset is limited in number. If the size of the trained dataset is large then more accurate the results will be. Therefore the ability to obtain these quality data is essential for being AI to be graded "good" or "bad".

Limited Implementation - Building up an AI with same human intelligence is a tedious task or a big challenge which many researchers and practitioners are facing today.

Data Privacy and Security -The huge volume of data must be trained so there is no possibility of storing a sensitive data.

Transparency of Algorithm—the AI and ML algorithms are more and more difficult to be understood by the human and so transparency of these algorithms are making it a black box effect.

Bias—Implementation of AI techniques may be good or bad depending on the environment it being used. So it can be judged to be defined as bad or good. It has both merits and demerits and it depends on the type of environment it is being applied.

Current and Future Research Trends in AI, ML and Deep Learning

Text Mining and Text Classification, Machine Vision, Clustering, Optimization, Voice Classification, Sentiment Analysis are some of the hot research areas in which machine learning can be applied. Deep learning research can focus on object detection, information retrieval, fusion and summarization, retrieval of video key frames and summarization, data fusion using deep learning in information retrieval.

Breakthrough in Science: In future AI technologies can be able to create science as evidenced by the Robot Scientist, Eve. AI for drug discovery can be made automated as machines work faster than humans. AI can be used in synthetic biology for manufacturing and rapid design of microorganisms for industrial purpose.

Cyber Security: The future application of AI in cyber security will prevent many curbing hackers. Credit card fraudery is one of the most important research focus where many novel AI techniques like Recurrent Neural Networks can detect fraudery in initial stages itself and can also scan thousands of transactions instantly and predict or classify them into buckets

Face Recognition: Authenticating personal content uses facial recognition technique. Many Governments and security forces make use of this technique to find out the criminals and identify citizens. Future face recognition technology will be able to analyze emotions such as tension and anger in addition to facial structure..

Data Analysis: AI will benefit business through Data Analysis which is able to perceive patterns in data that humans cannot. This makes it possible for businesses to target the ideal clients for their goods. As an illustration, Fluid, a digital retailer, makes intelligent product recommendations to its consumers using Watson, an AI developed by IBM.

Transport: AI-guided transport will help to automate vehicle and operate it smoothly and efficiently. Self-driving car manufacturers, Google, Uber and General Motors are trying to establish to promote driverless vehicles to become a reality.

Various Jobs : Robotic Process Automation in factories and industries to carry out their routine operation . It is also possible that AI may take over dangerous and unhealthy vocations like welding and bomb disposal.

Marketing &Advertising: This area focuses the business organizations to increase the efficiency of sales and marketing. More money may be made through targeted advertising, understanding consumer behavior, and facial recognition.

Discussion

Traditional teaching methods are being disrupted by AI-driven education, which is also influencing the direction of technology in the sector. AI tools for education use powerful algorithms to evaluate vast amounts of data to deliver individualized and flexible learning experiences. In the classroom, students have access to immersive technology like augmented and virtual reality as well as individualized learning and rapid feedback.

Chatbots and virtual tutors are examples of conversational AI in education that provide quick support and encourage individual learning. The way that students study is being revolutionized by AI chatbots in education. These chatbots offer students immediate, individualized support by responding to their inquiries and directing them through the learning process using machine learning and natural language processing. Students can better understand topics and remember knowledge when learning is dynamic and interesting. According to the recent survey conducted by AI STEM the following results have been reported by analyzing various feature associated to higher education. The predictions were based on learning, tutoring, analyzing the students behavior, the role of automation , the use of educational robots for tutoring and other features. The report clearly states that 28% of students can understand the concepts clearly and 16% of tutoring is done correctly , students behavior detection is performed 21% and 13% of automation benefits the students community and the use of educational robots for tutoring is only 9% and other benefits with AI is 2%. This survey report clearly states that using AI technologies in higher education and other fields will provide feasible growth in understanding ability and self learning capability of the students.

Conclusion

This article mainly focuses on what is AI, ML, and deep learning, its application in various fields, its impact on human society, its merits and demerits. A detailed study on artificial intelligence, machine learning has been made to do further research in this area. A comparison has also been made with respect to their application in the field of higher education. The emerging development of AI and ML in all applications has uplifted the society. Hence this article will support all the researchers to know the future research areas which can be focused to proceed with their work.

Abstract

In the digital era, Cyber security and data privacy have become increasingly important as individuals, organizations, and governments face growing cyber threats and concerns about the protection of sensitive information. This conference paper explores the challenges and strategies related to Cyber security and data privacy in the digital era. It discusses the evolving cyber threat landscape, the impact of technological advancements on data privacy, and the strategies needed to address these challenges. The paper also examines the role of regulations, technological solutions, and collaborative efforts in ensuring effective Cyber security and data privacy practices.

Keywords: Cyber security, Data Privacy, Digital Era, Cyber Threats, Technological Advancements, Regulations, Technological Solutions, Collaboration.

Introduction

The digital era, characterized by the rapid advancements in technology and the widespread use of the internet, has revolutionized the way we live, work, and communicate. This digital transformation has brought numerous benefits and opportunities, but it has also introduced new challenges and risks, particularly in the realms of Cyber security and data privacy. In this digital era, Cyber security has become a critical concern for individuals, businesses, and governments alike. The increasing reliance on digital systems and networks has created a vast surface area for cyber threats to exploit. Cybercriminals are constantly evolving their tactics and techniques to exploit vulnerabilities in computer systems and networks, aiming to gain unauthorized access, steal sensitive information, disrupt operations, or engage in malicious activities. The consequences of successful cyber attacks can be severe, ranging from financial losses and reputational damage to the compromise of personal privacy and national security.

Similarly, data privacy has emerged as a significant concern in the digital age. The proliferation of digital platforms, online services, and data collection practices has led to the creation of vast amounts of personal data. Individuals are increasingly

concerned about how their personal information is collected, stored, used, and shared by organizations. Data breaches and unauthorized access to personal data can result in identity theft, financial fraud, and the violation of privacy rights. Ensuring data privacy is crucial for maintaining individuals' trust in digital systems and protecting their fundamental rights. The importance of Cyber security and data privacy in the digital age cannot be overstated. Cyber security measures are necessary to protect critical infrastructure, secure sensitive data, and safeguard the integrity of digital systems. Effective Cyber security practices not only help prevent cyber attacks but also enable timely detection, response, and recovery in case of security incidents. On the other hand, data privacy is essential for preserving individuals' autonomy, control, and dignity over their personal information. Respecting privacy rights and implementing data protection measures are crucial for maintaining trust between individuals and organizations.

Moreover, Cyber security and data privacy are not only individual concerns but also have significant implications at the societal and economic levels. A secure and trusted digital environment is essential for fostering innovation, promoting e-commerce, enabling digital transformation, and driving economic growth. Organizations that prioritize Cyber security and demonstrate a commitment to protecting data privacy are more likely to attract and retain customers, build brand reputation, and comply with legal and regulatory requirements. Thus, the digital era has brought immense opportunities and advancements, but it has also introduced new risks and challenges related to Cyber security and data privacy. The importance of robust Cyber security measures and effective data privacy practices cannot be ignored. Safeguarding digital systems, protecting sensitive information, and respecting individuals' privacy rights are not only ethical imperatives but also fundamental for maintaining trust, enabling innovation, and ensuring the long-term sustainability of the digital ecosystem.

Cyber Threat Landscape

The digital era, characterized by the rapid advancements in technology and the widespread use of the internet, has revolutionized the way we live, work, and communicate. This digital transformation has brought numerous benefits and opportunities, but it has also introduced new challenges and risks, particularly in the realms of Cyber security and data privacy. In this digital era, Cyber security has become a critical concern for individuals, businesses, and governments alike. The increasing reliance on digital systems and networks has created a vast surface area for cyber threats to exploit. Cybercriminals are constantly evolving their tactics and techniques to exploit vulnerabilities in computer systems and networks, aiming to

gain unauthorized access, steal sensitive information, disrupt operations, or engage in malicious activities. The consequences of successful cyber attacks can be severe, ranging from financial losses and reputational damage to the compromise of personal privacy and national security.

Similarly, data privacy has emerged as a significant concern in the digital age. The proliferation of digital platforms, online services, and data collection practices has led to the creation of vast amounts of personal data. Individuals are increasingly concerned about how their personal information is collected, stored, used, and shared by organizations. Data breaches and unauthorized access to personal data can result in identity theft, financial fraud, and the violation of privacy rights. Ensuring data privacy is crucial for maintaining individuals' trust in digital systems and protecting their fundamental rights. The importance of Cyber security and data privacy in the digital age cannot be overstated. Cyber security measures are necessary to protect critical infrastructure, secure sensitive data, and safeguard the integrity of digital systems. Effective Cyber security practices not only help prevent cyber attacks but also enable timely detection, response, and recovery in case of security incidents. On the other hand, data privacy is essential for preserving individuals' autonomy, control, and dignity over their personal information. Respecting privacy rights and implementing data protection measures are crucial for maintaining trust between individuals and organizations.

Moreover, Cyber security and data privacy are not only individual concerns but also have significant implications at the societal and economic levels. A secure and trusted digital environment is essential for fostering innovation, promoting e-commerce, enabling digital transformation, and driving economic growth. Organizations that prioritize Cyber security and demonstrate a commitment to protecting data privacy are more likely to attract and retain customers, build brand reputation, and comply with legal and regulatory requirements. Thus, the digital era has brought immense opportunities and advancements, but it has also introduced new risks and challenges related to Cyber security and data privacy. The importance of robust Cyber security measures and effective data privacy practices cannot be ignored. Safeguarding digital systems, protecting sensitive information, and respecting individuals' privacy rights are not only ethical imperatives but also fundamental for maintaining trust, enabling innovation, and ensuring the long-term sustainability of the digital ecosystem.

Technological Advancements and Data Privacy

Technological advancements have had a profound influence on data privacy in the digital era. The emergence of new technologies such as the Internet of Things

(IoT), big data analytics, and cloud computing has revolutionized the way data is collected, stored, and shared. While these advancements offer numerous benefits and opportunities, they also present challenges and privacy concerns that must be addressed. The Internet of Things (IoT) refers to the network of interconnected devices embedded with sensors, software, and connectivity, enabling them to collect and exchange data. IoT devices, such as smart home devices, wearables, and industrial sensors, generate vast amounts of data. The challenge lies in ensuring that the data collected by IoT devices is handled securely and that individuals' privacy is protected. Privacy concerns include unauthorized access to personal information, tracking of individuals' behavior, and potential security vulnerabilities in IoT devices.

Big data analytics involves the processing and analysis of large volumes of data to derive insights and make informed decisions. While big data analytics offers significant benefits in various domains, such as healthcare, finance, and marketing, it also raises privacy concerns. Analyzing large datasets may uncover sensitive information and create risks of reidentification. Balancing the need for data analysis with individuals' privacy rights is a challenge that requires careful data governance and anonymization techniques. Cloud computing allows organizations to store and process data remotely on servers accessed via the internet. Cloud services offer scalability, cost-efficiency, and accessibility. However, entrusting data to third-party cloud providers raises concerns about data security and privacy. Organizations must ensure that adequate safeguards are in place to protect data stored in the cloud, including robust encryption, authentication mechanisms, and adherence to privacy regulations.

Data collection, storage, and sharing practices present significant privacy challenges. With the increasing digitization of personal information, individuals may have limited control over how their data is collected, used, and shared. Organizations must be transparent in their data collection practices, provide individuals with informed consent, and implement secure storage and data protection measures. Data sharing among organizations also raises privacy concerns, as data may be shared without individuals' knowledge or used for purposes beyond their original intent. Furthermore, cross-border data transfers pose challenges to data privacy. In a globalized world, data flows across national borders, and differing data protection laws and practices can result in inconsistencies in privacy protection. Harmonizing data protection laws and establishing international agreements on privacy standards are important steps in addressing these challenges. To address the influence of technological advancements on data privacy and overcome associated challenges, several measures can be taken. Implementing privacy-by-design

principles, which embed privacy considerations into the design and development of technologies and systems, can help ensure privacy protection from the outset. Adopting strong encryption and data anonymization techniques can safeguard sensitive information while still enabling data analysis. Enhancing individuals' control over their personal data through mechanisms such as data portability and data access rights empowers individuals to manage their privacy. Strengthening data protection regulations and promoting privacy awareness and education among individuals, organizations, and policymakers are also vital in safeguarding data privacy in the digital era. Thus, technological advancements have had a profound influence on data privacy. Challenges arise from the Internet of Things, big data analytics, cloud computing, and data collection, storage, and sharing practices. Addressing these challenges requires a comprehensive approach that balances technological innovation with privacy protection. By implementing privacy-enhancing measures, adopting robust data protection practices, and promoting privacy awareness, we can navigate the complex landscape of data privacy in the digital era and ensure individuals' privacy rights are respected.

Regulatory Frameworks

Data privacy regulations, such as the General Data Protection Regulation (GDPR), have played a significant role in addressing privacy concerns in the digital era. The GDPR, implemented by the European Union, is one of the most comprehensive and far-reaching data protection regulations globally. It establishes a framework for the collection, processing, and storage of personal data, ensuring individuals have control over their data and imposing obligations on organizations to protect that data. The GDPR introduces several key principles, including the requirement for organizations to obtain informed consent for data processing, the right to access and rectify personal data, the right to erasure (also known as the right to be forgotten), and the obligation to implement appropriate security measures to protect personal data. It also imposes strict penalties for non-compliance, including significant fines.

Apart from data privacy regulations, Cyber security regulations and standards play a crucial role in safeguarding data privacy. These regulations and standards outline best practices and requirements for organizations to secure their systems, networks, and data from cyber threats. Examples include the Payment Card Industry Data Security Standard (PCI DSS) for securing payment card data and the ISO/IEC 27001 standard for information security management. Regulatory compliance is of utmost importance in protecting data privacy. Compliance with data privacy regulations ensures that organizations handle personal data

responsibly, respect individuals' privacy rights, and implement necessary safeguards to protect data from unauthorized access, disclosure, or misuse. Compliance also enhances transparency and accountability, as organizations are required to document their data processing activities, conduct privacy impact assessments, and maintain records of data breaches.

Moreover, regulatory compliance fosters trust between individuals and organizations. When individuals know that their data is being handled in accordance with privacy regulations, they are more likely to feel confident in sharing their personal information. Compliance also helps organizations build a reputation for privacy and data protection, which can be a competitive advantage and lead to increased customer loyalty. The role of regulatory compliance extends beyond individual organizations. It contributes to the overall security posture of industries and sectors by establishing a baseline of security requirements and best practices. Compliance with Cyber security regulations and standards strengthens the resilience of systems and networks, reducing the risk of data breaches and cyber attacks. To ensure effective regulatory compliance and protect data privacy, organizations should invest in robust data protection measures, such as encryption, access controls, and regular security assessments. They should also establish privacy policies and procedures, provide privacy training to employees, and implement incident response plans to address any breaches or incidents promptly. Thus, data privacy regulations and Cyber security standards play a crucial role in protecting data privacy in the digital era. Compliance with these regulations is vital for organizations to uphold privacy rights, maintain trust with individuals, and protect against data breaches and cyber threats. By prioritizing regulatory compliance, organizations can demonstrate their commitment to data privacy and contribute to a safer and more secure digital environment.

Strategies for Cyber security and Data Privacy

a. Technical Measures:

- Implementation of robust Cyber security measures, such as encryption, firewalls, and intrusion detection systems, is essential to protect data privacy. Encryption ensures that sensitive data is stored and transmitted securely, making it unreadable to unauthorized individuals. Firewalls and intrusion detection systems act as barriers against unauthorized access and detect and respond to potential cyber threats.
- Secure software development practices, including conducting thorough code reviews, performing regular security assessments, and patching known vulnerabilities, help mitigate the risk of cyber attacks. By implementing

secure coding practices and regularly updating software, organizations can reduce the likelihood of exploitation by cybercriminals.

b. Employee Training and Awareness:

- Cyber security awareness training is crucial to educate employees about potential risks and best practices for data privacy. Training programs should cover topics such as identifying phishing attempts, creating strong passwords, and recognizing social engineering tactics. By promoting a culture of Cyber security awareness, organizations empower employees to make informed decisions and actively contribute to data privacy protection.
- Encouraging responsible use of technology and adherence to security policies is equally important. Employees should be educated on the importance of following security protocols, such as using secure networks, regularly updating software, and reporting any suspicious activities. By fostering a sense of responsibility and accountability, organizations can mitigate the risk of internal vulnerabilities and enhance overall data privacy.

c. Collaboration and Information Sharing:

- Public-private partnerships play a vital role in addressing Cyber security challenges. Collaboration between government agencies, industry sectors, and academia enables the sharing of threat intelligence, best practices, and research. By working together, stakeholders can collectively identify emerging cyber threats, develop effective countermeasures, and enhance the overall Cyber security posture.
- Information sharing platforms and initiatives facilitate the exchange of Cyber security-related information among organizations. These platforms enable the dissemination of timely threat intelligence, including indicators of compromise and mitigation strategies. By actively participating in information sharing initiatives, organizations can stay ahead of evolving cyber threats and proactively protect their data.

d. Incident Response and Recovery:

- Developing robust incident response plans is crucial for effective Cyber security management. Incident response plans outline the steps to be taken in the event of a cyber incident, including incident reporting, containment, investigation, and recovery. By having a well-defined plan in place, organizations can minimize the impact of cyber incidents, mitigate further damage, and restore normal operations efficiently.

- Effective recovery strategies involve restoring systems from secure backups, patching vulnerabilities, and implementing additional security measures to prevent future incidents. Regular testing and updating of incident response and recovery plans are essential to ensure their effectiveness and relevance in addressing new and emerging cyber threats.

Thus, implementing technical measures, providing employee training and awareness, fostering collaboration and information sharing, and developing robust incident response and recovery strategies are critical for ensuring Cyber security and protecting data privacy in the digital era. By adopting a multi-faceted approach, organizations can strengthen their defenses, mitigate cyber threats, and safeguard sensitive data, ultimately contributing to a secure and trusted digital environment.

Technological Solutions

Emerging technologies are playing a significant role in advancing Cyber security and data privacy measures in the digital era. These technologies offer innovative solutions to address evolving cyber threats and enhance the overall security posture of organizations. Some notable technologies include artificial intelligence (AI), machine learning (ML), and blockchain.

AI and ML have revolutionized Cyber security by enabling automated threat detection, anomaly detection, and behavioral analysis. These technologies can analyze vast amounts of data and identify patterns that may indicate cyber threats. They can also enhance the accuracy of threat detection and enable real-time responses to potential attacks. AI and ML algorithms continuously learn from new data, allowing them to adapt to evolving cyber threats and improve their effectiveness over time.

Blockchain, originally developed for secure transactions in cryptocurrencies like Bitcoin, offers potential applications in data privacy and Cyber security. Blockchain is a decentralized and immutable ledger that ensures the integrity and traceability of data. Its distributed nature makes it difficult for hackers to tamper with or manipulate data stored on the blockchain. Blockchain can enhance data privacy by providing transparent and auditable records, enabling individuals to have greater control over their personal information.

However, implementing these emerging technologies for Cyber security and data privacy is not without challenges and considerations. Some key challenges include:

1. Complexity and Integration: Implementing emerging technologies like AI, ML, and blockchain requires expertise and a deep understanding of their complexities. Integrating these technologies into existing systems and

workflows can be challenging and may require significant investment in infrastructure, training, and resources.

2. **Ethical and Privacy Concerns:** The use of AI and ML in Cyber security raises ethical and privacy concerns. For example, AI-powered threat detection may involve analyzing vast amounts of personal data, raising questions about data privacy and consent. It is essential to ensure that these technologies are implemented ethically and in compliance with relevant privacy regulations.
3. **Security Risks:** While emerging technologies can enhance security, they can also introduce new risks. For instance, AI and ML algorithms can be vulnerable to adversarial attacks, where malicious actors manipulate input data to deceive or bypass the algorithms. Additionally, blockchain technology is not entirely immune to security vulnerabilities, such as 51% attacks or smart contract vulnerabilities.
4. **Data Quality and Bias:** The effectiveness of AI and ML algorithms depends on the quality and diversity of the data used to train them. Biased or incomplete data can lead to biased or inaccurate outcomes, which can have implications for data privacy and fairness. It is crucial to ensure that the data used for training these technologies is representative and free from biases.

To address these challenges, organizations must carefully evaluate the benefits and risks of implementing emerging technologies. They should prioritize transparency, accountability, and ethical considerations in the design and implementation of these technologies. Collaboration between technology experts, policymakers, and stakeholders is essential to navigate the complexities and ensure the responsible and secure deployment of emerging technologies for Cyber security and data privacy.

Thus, emerging technologies such as AI, ML, and blockchain have the potential to significantly enhance Cyber security and data privacy measures. While they offer innovative solutions, organizations must be mindful of the challenges and considerations associated with implementing these technologies. By addressing these challenges and promoting responsible use, organizations can leverage emerging technologies to strengthen their Cyber security defenses and protect sensitive data in the digital era.

Future Directions and Challenges

As technology continues to advance, new trends in cyber threats and data privacy are anticipated to emerge. Some key trends include:

1. **Advanced Persistent Threats (APTs):** APTs are sophisticated and targeted cyber attacks aimed at infiltrating systems, stealing sensitive information, and

maintaining long-term access to networks. These attacks often involve multiple stages and are carried out by well-funded and highly skilled adversaries. As technology evolves, APTs are expected to become more sophisticated and challenging to detect.

2. Internet of Things (IoT) Security: With the proliferation of connected devices in homes, businesses, and critical infrastructure, IoT security becomes a significant concern. Weaknesses in IoT devices, such as default passwords, lack of encryption, and inadequate security controls, can expose networks and sensitive data to cyber attacks. Protecting IoT devices and securing the vast amounts of data they generate will be crucial in maintaining data privacy and Cyber security.
3. Cloud Security: As more organizations move their data and operations to the cloud, ensuring robust cloud security becomes essential. Data breaches, unauthorized access, and misconfigurations can pose significant risks to sensitive data stored in the cloud. Cloud service providers and organizations must work together to implement strong security measures, including encryption, access controls, and regular security assessments.
4. Artificial Intelligence (AI) in Cyber Attacks: While AI has positive applications in Cyber security, there is also concern about its potential use in cyber attacks. Malicious actors could leverage AI algorithms to automate attacks, evade detection, and exploit vulnerabilities at a scale and speed not seen before. Defending against AI-driven attacks will require the development of advanced AI-based defense mechanisms and continuous monitoring.

Maintaining Cyber security and data privacy in an ever-evolving digital landscape poses significant challenges. Some key challenges include:

1. Rapidly Evolving Threat Landscape: Cyber threats are constantly evolving, with attackers employing new tactics and techniques. Staying ahead of emerging threats requires continuous monitoring, threat intelligence sharing, and proactive defense strategies.
2. Lack of Cyber security Skills and Workforce Gap: The demand for Cyber security professionals surpasses the available talent pool. Organizations face challenges in recruiting and retaining skilled Cyber security professionals who can effectively protect their systems and data. Bridging the workforce gap requires investment in Cyber security education, training programs, and collaboration between academia and industry.
3. User Awareness and Behavior: Human error remains a significant factor in cyber attacks. Phishing attacks, social engineering, and weak passwords are

often successful due to the lack of user awareness and adherence to security practices. Educating users and promoting a Cyber security culture are crucial in mitigating these risks.

4. **Compliance with Data Privacy Regulations:** Organizations must navigate a complex landscape of data privacy regulations, such as the GDPR and other regional or industry-specific frameworks. Compliance requires understanding and implementing privacy requirements, ensuring data protection measures, and establishing mechanisms for data subject rights and consent management.

To address these challenges and ensure robust Cyber security and data privacy, potential solutions and areas for future research and development include:

1. **AI and Machine Learning in Defense:** Developing advanced AI-driven security tools and algorithms can enhance threat detection, automate incident response, and strengthen defense mechanisms against evolving cyber threats.
2. **Secure IoT Design and Standards:** Establishing industry-wide standards and best practices for IoT security, including authentication mechanisms, encryption protocols, and regular firmware updates, can mitigate IoT-related vulnerabilities.
3. **Privacy-Enhancing Technologies:** Continued research and development of privacy-enhancing technologies, such as differential privacy, secure multi-party computation, and homomorphic encryption, can enable secure data sharing and analysis while preserving privacy.
4. **Collaboration and Information Sharing:** Encouraging collaboration between organizations, sharing threat intelligence, and establishing public-private partnerships can enhance cyber defense capabilities and promote collective resilience.

Thus, anticipating emerging trends in cyber threats, addressing challenges in maintaining Cyber security and data privacy, and investing in research and development are crucial in staying ahead of evolving risks. By embracing innovative solutions, fostering collaboration, and promoting a proactive Cyber security culture, organizations can effectively protect their systems, data, and the privacy of individuals in the digital era.

Conclusion

Cyber security and data privacy are of paramount importance in the digital era. The increasing reliance on digital technologies, interconnected systems, and the collection of vast amounts of data have made organizations and individuals more vulnerable to cyber threats. Safeguarding sensitive information, ensuring the integrity of systems, and respecting individuals' privacy rights are critical for

maintaining trust, security, and the smooth functioning of our digital ecosystem. As cyber threats continue to evolve in sophistication and frequency, there is an urgent need for continued efforts in addressing these threats and protecting data privacy. Organizations must prioritize Cyber security as a strategic imperative, allocating resources and investing in robust defense mechanisms. Governments should establish effective regulatory frameworks to safeguard individuals' privacy rights, enforce data protection standards, and hold accountable those who violate Cyber security and data privacy laws.

Collaboration is key in addressing cyber threats and protecting data privacy effectively. Governments, industry stakeholders, academia, and individuals must work together to share threat intelligence, best practices, and lessons learned. Public-private partnerships can enhance collective defense capabilities, foster information sharing, and promote collaborative research and development efforts. Technological advancements also play a vital role in ensuring effective Cyber security and data privacy practices. Emerging technologies, such as AI, ML, and blockchain, offer innovative solutions for threat detection, data encryption, secure authentication, and privacy-preserving techniques. Organizations should embrace these technologies and continuously explore new advancements that can strengthen their Cyber security defenses.

Furthermore, regulatory compliance is crucial in maintaining Cyber security and data privacy. Organizations must adhere to relevant data protection regulations, such as the GDPR, and implement appropriate safeguards to protect personal data. Compliance ensures that individuals' privacy rights are respected, data is handled responsibly, and appropriate measures are in place to prevent unauthorized access or data breaches. Thus, Cyber security and data privacy are indispensable in the digital era. The call for continued efforts in addressing cyber threats and protecting data privacy is essential to safeguard our digital infrastructure, economic prosperity, and individuals' rights. Collaboration, technological advancements, and regulatory compliance are the pillars that underpin effective Cyber security and data privacy practices. By embracing these principles, organizations and individuals can navigate the digital landscape with confidence, trust, and resilience.

PERCEPTION TOWARDS OTT PLATFORM (A STUDY WITH SPECIAL REFERENCE TO COIMBATORE DISTRICT)

Ms. S. Maha Lakshmi

Assistant Professor in Commerce

Department of Commerce – Banking and Insurance
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

The patterns of content consumption have changed drastically over a period of the last 20 years and as technology is making advancements in almost every arena, the evolution can be seen in the trends of entertainment and media services. Consumers have now turned towards Over-The-Top i.e. OTT Platforms which allow them to stream their choice of content via the means of the internet, instead of holding on to the more traditional forms of media. Consumers are now ready to pay more and more in order to customize their streaming experience at their convenience and this in turn is helping the entertainment industry thrive. Ever since the lockdown was imposed in the country in lieu of the Corona virus pandemic, more and more consumers are seeking out ways to keep themselves entertained at home. Currently numerous OTT video platforms are available for consumers to encourage them. These OTT video platforms are developed to reach customers easily through advanced provisions and technology. With the rapid advancement of technology, OTT services are advancing at a rapid rate.

Keywords: OTT Platform, Technology, Online service

Introduction

Watching movies and other digital content in India has been a consistent activity and a part of the lifestyle that provides relaxation and recreation from the frantic professional work. People from all age groups love to consume digital content via movies, web series, one-shot films, etc. The key aspect has been the shift in the medium on which these movies and series are consumed.

In the early digital era viz. the 1990s to 2010s, the cinemas and television were the major platforms on which movie content was consumed. The coverage and reach of these two platforms covered even the rural parts of India. Thus, people developed behaviour of watching movies at the cinemas as well as television. And since then with the internet developing quite fast, the medium of cinemas and television has been overtaken by OTT Platforms.

With the COVID-19 pandemic fuelling the OTT wave even further, impacting the cinemas to shut down; has helped the OTT players to set a strong foothold as the prime medium for watching movies, web series and much more digital content. This has impacted the Cinemas considerably in terms of revenue and market share that

leads to direct competitive rivalry between the two mediums viz. OTT and Cinemas despite differences in business model.

OTT (Over the Top) Platforms are web-based digital media libraries that enable users and viewers to stream different types of media content of several genres and languages. These platforms have gained a considerable audience and viewership over the last half-decade. Disney+ Hotstar, Amazon Prime Video, Netflix, Sony LIV are some of the leading OTT platforms in India.

These OTT platforms were a substitute and mainly a partner to the mainstream Cinema exhibition companies. The Cinema chains like INOX and PVR were the chief players in the entertainment industries that helped movie production companies to distribute their movies all across the country. Cinemas have been the prime platform for viewers and audience to watch movies firstly.

The major stimulator for the rivalry between OTT and Cinemas is the shift in consumer preferences towards OTT platforms for consuming digital content over the past 3-4 years since 2019. People have switched to OTT for several reasons and avoided going to Cinemas for watching movies.

Review of Literature

Jay Chopdar, Tanima Tarafdar (2021) conducted a study on **"A study on consumers' perception towards over the top (OTT) platforms with special reference to guwahati city"**. The aim of the study is to analyze Consumers preference towards OTT platforms and DTH services. The sample chosen for this study is 100 from Guwahati city. Judgement sampling method is used for this study. Tool used for this study is Anova . Primary data is collected for this study. The findings of this study is to identify the factors influencing consumers choice towards OTT platforms and also their level of satisfaction towards the services of OTT

Sony Varghese, Selvin Chinnaiah, (2021) conducted a study on **"Is OTT industry a disruption to movie theatre industry "**. The aim of the study is to analyze the Movie theatre industry and OTT industry in India. The sample chosen for this study is 326 from kochi. Convenient sampling method is used for this study. Tool used for this study is Anova and correlation. The study conclude on how movie theatres compete to stay relevant, in the minds of their consumers in the current marketplace, where video content is easily accessible on OTT platforms from the convenience of their homes.

Daniel Varun Paul (2020) conducted a study on **"A Study on Over the Top Platforms on DTH and its Impact on Consumer Behaviour"**. The aim of the study is to analyze whether OTT platforms can completely replace DTH. The sample chosen for this study is 114 from Bangalore. Convenient sampling method is used for this

study. Tools used for this study is Cronbach alpha , Descriptive analysis .The study conclude that mobility and price were the two primary factors that determine consumer choice and it was found that people prefer streaming content on OTT platforms.

Anindita Dey, Rahul Chanda (2022) conducted a study on " **A Study on OTT Content Versus Theatrical Released Cinema Preferences Among the Urban Population of Guwahati** " The aim of the study is To analyze the demand for Over-the-top content over TV and Cinema. The sample chosen for this study is 200 from Guwahati city. Convince and snowball sampling method is used for this study. The study concludes that whether the preferences of the viewers are diverting towards OTT content or it remains with commercial cinema released in theatres.

Statement of the Problem

The OTT (Over-The-Top) media platform is a digital media service that is offered directly to subscribers over the Internet. OTT bypasses corporations that have traditionally served as a regulator or distributor of comparable material, such as string, radio, and satellite TV channels. It has also been extended to no-carrier Cell phones, which charge all dispatches as data, thereby eliminating monopolistic competition.

An examination directed by Gomathi in his study have found that, the development of online streaming services like Netflix and Amazon Prime Video, among others, means that children and teenagers now have access to uncensored content because digital content on these OTT platforms is made available to the general public without any filtering or screening and there is no law or autonomous body to monitor and manage it. As is the case, OTT platforms ought to be in charge of promoting digital awareness that is, consumers ought to be made aware of the effects of their streaming and should determine whether watching those videos is really necessary. In addition, it is the viewer's responsibility to ensure that our children do not have access to such content, which can assist in accomplishing the very purpose. From this study following questions has been raised, what are the factors influencing OTT platforms usage? , and also to know about the customer perception ?

Objective of the Study

To find out the solution for the above problems, the present study has been undertaken with the following objectives. They are

- To determine the factors influencing the users to OTT platforms.
- To study the customers' perception toward OTT platforms

Research Methodology

The present study is based on primary data by distributing the questionnaire containing relating to socio economic profile to the OTT customers. Necessary guidance was given to the respondents for filling up the questionnaire.

Source of Data

Data collection is the one of the most important aspect of research. Primary data and secondary data were used in the study.

Sampling

The data required for the study have been collected by way structured questionnaire in order to know perception towards OTT platform ,satisfaction towards OTT platform, reason for using OTT platform .120 questionnaire are collected and 120 questionnaire are taken for analysis. Convenient sampling method is adopted to select the sampling customers .

Analysis and Intrepretations

Simple Percentage

S.no	Variables	Respondents information	No. of Respondents and Percentage
1	AGE	18-24yrs	45.0
		25-34yrs	25.0
		35-49yrs	20.8
		Above 50yrs	9.2
2	Gender	Male	38.3
		Female	61.7
3	Marital status	Married	45.0
		Unmarried	55.0
4	Occupation	Government employee	13.3
		Private employee	31.7
		Business	15.8
		Student	20.8
		Others	18.3
5	Income	Nil	30.8
		Below 1 lakh	37.5
		1 lakh – 2 lakh	21.7
		2 lakh- 3 lakh	5.8
		3 lakh – 4 lakh	3.3
		4 lakh and above	0.8

6	Types of family	Joint family	26.7
		Nuclear family	73.3
7	No. of earning members	1	27.5
		2	29.2
		3	22.5
		4	11.7
		Above 4	9.2
8	Most preferred OTT platforms	Netflix	20.8
		Amazon prime	8.3
		Disney+ hot star	36.7
		MX player	14.2
		Sun NXT	8.3
		Voot	5.0
		Aha	0.8

Majority of the respondents 54(45.0%) falls between the age group 18-25 years. Majority of the respondents 74 (61.7%) are under category of female .Majority of the respondents 66 (55.0%) are unmarried. Majority of the respondents 25 (20.8%) are students. Majority of the respondents 45(37.5%) are earning below 1 lakhs. Majority of the respondents 88(73.3%) are living in nuclear family. Most of the respondents 35 (29.2%) are earning of 2 members. Most of the respondents 84 (36.7%) are mostly preferring are Disney + hot star. Majority of the respondents 64(53.3%) of them using Tamil language. Majority of the respondents 46(38.3%) are most of them have subscribed between 1-2 channels. Majority of the respondents (4.5%) are mostly spending 1-2 hours to watch OTT platforms. Most of the respondents 12 59 (49.2%) are known this OTT platform by Advertisement. Majority of the respondents 42(35.0%) most of them selected for easy to use OTT platforms. Majority of the respondents 46 (38.3%) are mostly attracted by No ads . Majority of the respondents 28(23.3%) have liked both comedy and action genres equally. Majority of the respondents 56 (46.7%) are using mobile and tablets. Most of the respondents 60(50%) of them are using OTT platform at weekly. Most of the respondents 38(31.7%) of them are preferring to watch OTT platforms at night timing only. Majority of the respondents 59(49.2%) of them are using OTT platforms for 2 years. Majority of the respondents 26(21.7%) of them are spending amount for free. Majority of the respondents 44(36.7%) of them are willing to pay in UPI App . Majority of the respondents 70(58.3%) have said no to get additional benefits. Majority of the respondents 37(30.8%) are reason for choosing OTT platforms to meet the need of different house members. Majority of the respondents 42(35.0%) of them are like to watch web series. Majority of the respondents 51 (42.5%) of them like OTT platform I more affordable than traditional TV. Majority of the respondents 74(61.7%) are mostly preferring OTT platforms . Majority of the respondents 45(37.5%) are like to watch in cinema hall . Majority of the respondents 72(60%) of them are saying that OTT platforms is convenient and cheaper. Majority of the respondents 35(29.2%) of them have poor internet connection problem

Satisfaction Towards OTT Platform

Data is to be collected from 120 respondents used for the questionnaire is divided into 3 parts and containing 29 questions is to allow assessing the satisfaction level of customers using OTT platforms. Satisfaction level is calculated based on standard deviation at (11.36) and average (77.25) respondents whose index value is below 65.89 is treated as “low level of satisfaction level “, whose index range between 65.90 to 88.660 is treated as ‘medium level of satisfaction level “, whose index -treated is above 88.61 is treated as” high level of satisfaction “ .Chi – square analysis has been - implemented and satisfaction level

S.no	Variables	No. of respondents %	Chi- square value	Significant /not
1	AGE 18-24 25-34 35-49 Above 50	54(45%) 30(25%) 25(20.8%) 11(9.2%)	12.940	Significant @10% level
2	INCOME Nil Below 1 lakh 1 lakh-2 lakh 2lakh-3 lakh 3lakh-4 lakh 4 lakh above	37(30.8%) 45(37.5%) 26(21.7%) 7(5.8%) 4(3.3%) 1(0.8%)	23.512	Significant @10% level
3	PREFERENCE OF OTT Netflix Amazon prime Disney +hotstar MX player Sun NXT Voot Aha Alt balaji	25(20.8%) 10(8.3%) 44(36.7%) 17(14.2%) 10(8.3%) 6(5%) 1(0.8%) 7(5.8%)	25.437	Significant @10% level
4	DEVISE USED TO WATCH OTT PLATFORM Mobile and tablet Laptop Smart TV	56(46.7%) 39(32.5%) 25(20.8%)	11.229	Significant @10% level

In order to know the satisfaction towards OTT platform by applying Chi - square. The associated variable are age, income, preference of OTT platform, devise used to watch OTT platform. When the age are increasing the satisfaction towards OTT platform reduced, When the income are increasing the satisfaction towards OTT platform reduced, When the preference of OTT platform are increasing the satisfaction towards OTT platform reduced, When the devise used to watch OTT platform are increasing the satisfaction towards OTT platform reduced.

Conclusion

From the Study have identified that the user friendliness and content richness as significant factors in the usage and promotion of OTT platform. Price sensitivity matters a lot to individuals. Cost effect makes the platform stronger than usual. It brings cost sensitivity to users and encourages to the platform. Life with ease, own comfort, and satisfaction brings the individuals closure to the OTT platform. Programme with own choice, time, location, duration makes possible everything with mobile phones. Mobile phone makes it easy to use this platform. It brings the control of an individual in all respects. Talking about millennia's to some extent and zen z, peer pressure, or as a status in society or better positions among friends does not force them to make an extensive usage of OTT. Exposure to the international content, and trends as well the other factors that influence the audiences to the platform.

Suggestion

- Current generation doesn't have the patience to wait for a show or movie to air on a linear platform like television. This viewer wants the content instant and on-demand
- From content selection to payment mechanism, all aspects of the user's experience must be properly managed to meet the expectations of their distinct audience base

INDUSTRIAL INNOVATION – CROSS SECTIONAL STUDY ON STARTUPS

Ms.P. Sathya

Research Scholar, Department of Commerce
PSG College of Arts & Science, Coimbatore

Abstract

Start-ups play a crucial role in a country as they contribute to its economy, generate employment opportunities, and foster innovation. Within the Indian start-up landscape, we have witnessed significant growth, making it a pivotal force for the nation's development. These start-ups are responsible for introducing novel solutions and technologies that improve people's lives and well-being. This article specifically focuses on the realm of Indian start-ups and their innovative practices across various industries. Many start-ups in India have chosen to operate in remote areas, aiming to not only support the local community but also contribute to the overall economic growth. Social entrepreneurship, which involves establishing businesses with the dual objective of creating positive societal and environmental impact alongside financial returns, has gained substantial prominence in India. It now plays a crucial role in propelling progress towards a sustainable and equitable future.

Keywords: Start-ups, Innovation, Technology sectors

Introduction

A startup, by definition, is an enterprise dedicated to the development, commercialization, and creation of innovative products, services, or mechanisms driven by intellectual property or new technologies. Such startups are not isolated entities but function within a broader business environment that aims to generate impactful solutions, making them instrumental in driving socio-economic development and transformation. Recognizing the significance of fostering a startup culture in India and strengthening the national economy, the Government of India has implemented several measures. For instance, Prime Minister Narendra Modi launched the Stand-Up India initiative in August 2015 as one of these initiatives (Neeraj Tyagi 2022).

In the last ten years, the Indian startup landscape has made significant progress, driven by the emergence of digital technologies and a rising number of young entrepreneurs. As a result, India now boasts the world's third-largest startup ecosystem. With a flourishing economy, disruptive technological advancements challenging conventional business models, and a vast pool of talented individuals, the potential for Indian startups is enormous, particularly in sunrise and sustainable development sectors. The government has played a crucial role in supporting this growth through initiatives like the Startup India program, Atal Innovation Mission, and the Production Linked Initiative scheme (PLI). These initiatives create a favorable environment that promotes the success and expansion of startups (Neeraj Tyagi 2022).

Under India's G20 presidency, the Indian startup ecosystem is gaining momentum and garnering international recognition. The Start-up 20 initiative underscores the significance of startups in fostering economic growth and innovation, showcasing India's commitment to promoting this ecosystem on a global scale. The primary objective of the engagement group is to establish a platform for businesses to interact with policymakers, fostering collaboration and cooperation. Start-up 20 unites entrepreneurial ecosystems from G20 member countries, facilitating the exchange of ideas, collaborative initiatives, and worldwide development. Indian startups exhibit a diverse range, spanning various domains such as health tech, climate tech, and clean energy. They are strategically positioned to leverage opportunities presented by sunrise sectors industries poised for rapid growth that are expected to play a pivotal role in driving the country's economic progress.

Literature Review

Suresh babu and Sridevi (2019)¹ Start-up India is a prominent initiative by the Government of India aimed at fostering innovation and supporting the growth of startups. The primary objective of this initiative is to empower startup ventures, promoting entrepreneurship, stimulating economic growth, and generating employment opportunities throughout the country. India's thriving startup ecosystem has gained global recognition, becoming a subject of interest worldwide. The following paper explores the various challenges and issues faced by Indian startups and highlights the abundant opportunities available within the current ecosystem of the country.

Satyanarayana, Chandrashekar and Hillemane (2021)² In this paper, we delve into the influence of entrepreneurial factors, firm-specific characteristics, and the external environment on the competitiveness of high-tech startups in India. We consider the milestone of startup survival and employ survival analysis techniques for our analysis. The study's discoveries will provide valuable insights for startup owners and policymakers, enabling them to refine their policies and strategies to enhance the competitiveness of technology-based startups operating in India.

Mallikarjun (2023)³ India has established itself as the second-largest startup ecosystem globally, closely following the United States. It has become a thriving hub for startups, progressing rapidly. In a single year, 2001, Indian startups successfully secured over \$23 billion through more than 1,000 deals, leading to the inclusion of 33 startups in the esteemed unicorn club. The remarkable surge in investor confidence in Indian startups is palpable and continues to gain momentum throughout the different stages of a startup's journey. The study further highlights the immense potential and significant challenges that impact the growth of startups in India.

Indian Start-ups and Innovation Across Industries

India has emerged as a global leader in Innovation across various sectors. From healthcare to education, finance to agriculture, Indian start-ups are revolutionizing traditional industries with the help of technology. According to a study by Economic Times in 2022, Indian start-ups have experienced substantial growth in the past six years. The number of recognized start-ups has risen from a mere 741 in 2016 to an impressive 72,993 as of June 30, 2022, as reported by the Ministry of Commerce and Industry (Neeraj Tyagi 2022). Numerous start-ups are not only driving innovation and technology but also extending their benefits to the farthest corners, reaching remote customers. Fintech start-ups have expanded their reach to remote areas, providing accessible financial solutions in tier 2 and 3 cities. Fintech and Agritech start-ups act as comprehensive solutions for rural challenges by leveraging technology and labor, bridging the gap between rural and urban areas. Similarly, e-commerce start-ups and electric vehicle (EV) technology contribute to sustainable and emission-free last-mile delivery, these innovative start-ups, local entrepreneurs in rural regions now find it easier to market and sell their products

Indian Start-ups and Innovation Across Industries

Company Name	Industry	Descriptions
Practo	Health care	Healthcare technology startup. It offers a platform that assists consumers in finding top-notch doctors, scheduling appointments online, and making informed decisions regarding their healthcare needs.
Portea	Health care	In-home healthcare services in India
Cure.fit	Health care	Technology and data to empower individuals to lead healthy lifestyles and access affordable healthcare
Byju's	Education	EdTech
Vedantu	Education	'Live' online tutoring
Unacademy	Education	EdTech
Cred	Fintech	Unique platform that enables users to conveniently pay their credit card bills
Razor pay	Fintech	Web platform that enables businesses to accept, process, and disburse payments seamlessly
Phonepe	Fintech	Digital payments and financial services platform
Paytm	Fintech	Digital payment and financial services
Agro star	Agriculture	Agri Tech, innovative solutions are driven by a wealth of data and agronomy knowledge, which are

		seamlessly delivered through our advanced, in-house developed tech-enabled platform
Ninjacart	Agriculture	Fresh produce supply chain company - in-house applications to connect food producers directly with retailers, restaurants, and service providers
Nykaa	E-Commerce	Online store : online beauty and wellness industry
Myntra	E-Commerce	Indian fashion e-commerce
EGov	Governance	Open digital infrastructure and ecosystems - improving the lives of ordinary citizens in various aspects such as health, sanitation, public finance management systems, and government service accessibility and delivery
Janaagraha	Governance	Technology to enhance grassroots movement advocating for participatory democracy at the neighborhood level
Ola	Transportation	Largest mobility platform in India - customers can access a diverse range of mobility solutions, connecting them to drivers and various types of vehicles, including bikes, auto-rickshaws, metered taxis, and cabs
Rapido	Transportation	Indian bike taxi aggregator and logistics service provider
Swiggy	Foodtech	Online platform offering food, grocery, and parcel delivery services
Licious	Foodtech	Customers can conveniently order fresh and hygienic meat and seafood products

Conclusion

The world is currently grappling with critical issues caused by the rapid pace of economic growth and technological advancements. These factors have led to environmental degradation, the depletion of natural resources, and socioeconomic inequalities. As a result, achieving sustainable development has become of utmost importance. Looking ahead, the potential impact and scalability of sunrise and sustainable start-ups are tremendous. In India, start-up-friendly policies are not solely dependent on significant financial investments or incentives. Instead, what these start-ups require is assistance from accomplished founders and strategic angels throughout their various stages of development. This assistance encompasses crucial aspects such as business strategy, community building, and connecting with skilled

business mentors. According to TechCrunch, it is the youngest Indian startup to achieve a valuation of approximately \$2.2 billion. With over 6 million customers, CRED has captured approximately 22% of all credit card holders within its two years of operation. **(Akriti Galav 2023)**. Nykaa holds a valuation of over \$2.1 billion, and its growth trajectory indicates a projected raise of more than \$3.5 billion in the upcoming years. With a strong presence in over 55 retail sectors, the startup successfully completes over 1.5 million orders each month **(Yashil Garg 2023)**. Currently, BYJU'S holds an impressive valuation of approximately \$8.4 billion. The Indian EdTech industry, valued at \$750 million in 2020, is projected to reach \$4 billion by 2025, exhibiting a compound annual growth rate (CAGR) of 39.77% **(Roorkee 2022)**.

In order to harness the potential of India's vast and diverse population, it is crucial to cultivate robust state ecosystems through the implementation of start-up policies, establishment of start-up portals, and provision of helplines in every state. By doing so, Indian start-ups can play a pivotal role in shaping a sustainable future through the development of innovative solutions and new business models. Furthermore, the creation of incubation centers, co-working spaces, and entrepreneurial cells is imperative. Equally important is instilling an entrepreneurial spirit in students from a young age, ensuring they are equipped with the necessary skills and mindset to contribute to the start-up ecosystem. **(Neeraj Tyagi 2022)**.

A STUDY ON THE CHALLENGES OF DIGITAL FINANCIAL INCLUSION

Ms. R. Kalaiselvi

Assistant Professor of Commerce-International Business
Nallamuthu Gounder Mahalingam College, Pollachi
kalaiselvingmc2015@gmail.com

Abstract

Financial inclusion through digital means has initiated the concept of digital financial inclusion which is intended to reach out vulnerable community without having digital financial access. This study is an attempt to analyze the various challenges concerning digital financial inclusion. As the main objective of this study was to assess the challenges and prospects of digital financial inclusion, ABCD analysis also has been undertaken to assess its Advantages, Benefits, Constraints and Disadvantages. This research is conducted through secondary sources in order to provide a full-fledged evidence-based study on the challenges of digital financial inclusion. The semi-systematic review is done through various published reports and articles from Springer, Taylor & Francis, Emerald, GoogleScholar, ResearchGate, etc.

Keywords: Digital Financial Inclusion, Challenges, ABCD Analysis.

Introduction to Digital Financial Inclusion

Financial inclusion is one of the cornerstones of a developing economy. Launched in 2015, Digital India has been regarded as a significant intervention to bring the unbanked population, who had been kept out of the mainstream economy, into the formal financial net. While there has been an improvement in digital transactions across the country, issues still remain of last-mile connectivity of banks and other financial institutions, dormant accounts, among others.

Financial inclusion relates to connecting marginalised and the underprivileged in the society to the mainstream economy, by means of providing financial literacy and access to banking and financial services. It is a multidimensional approach that involves bringing on board various stakeholders from the government and the people. India, with a population of more than 1.3 billion, has a large number of people who are still out of the formal financial net. As per the World Bank, about half of India's population is financially excluded (World Bank 2017a). On the other hand, a survey by Standard & Poor's Financial Services estimates that only 24% adults in India are financially literate (Klapper et al 2014). This study has been carried out to identify the major challenges in digital financial inclusion.

Objectives of the Study

- To understand the concept of digital financial inclusion.
- To identify the various challenges pertaining to digital financial inclusion.
- To assess the advantages, benefits, constraints and disadvantages of digital financial inclusion.

Research Methodology

Secondary sources have been surveyed in this research in order to provide a full-fledged evidence based study on challenges of digital financial inclusion. The semi-systematic review is done through various published reports and articles from Springer, Taylor & Francis, Emerald, Google Scholar, Research Gate, etc. Hence the source of data considered is from secondary source to explore the existing knowledge.

Digital Financial Inclusion

Financial inclusion refers to efforts to make financial products and services accessible and affordable to all individuals and businesses, regardless of their personal net worth or company size. Financial inclusion strives to remove the barriers that exclude people from participating in the financial sector and using these services to improve their lives. It is also called inclusive finance. Digital financial inclusion introduces new market participants and allocates roles and risks (both new and well-known) in different ways compared to traditional approaches to retail financial service delivery.

The Key Elements of Digital Financial inclusion

- Digital platforms enable clients to send and receive payments and transfers as well as store information electronically through the digital device that transmit and link to a bank or non-bank authorized to save electronic value.
- Customers can utilize mobile banking services that transfer information to a digital device like a point-of-sale terminal.
- Through retail mediators who have a digital connected device to transfer the information, customers can change cash into electronic storage value ("cash-in") and subsequently change stored value in return into cash ("cash-out").
- Banks and non-banks may offer various financial services via digital platform to the economically disadvantaged and excluded, frequently using digital data to target customers and manage risk.

Bottlenecks and Major Challenges

- There is no doubt that India has significantly improved the financial inclusion of the marginalised sections, and Digital India has turned out to be an important intervention. However, the digital divide is too wide and there exist many bottlenecks and challenges which need immediate attention.
- To begin with, High Level Principles for Digital Financial Inclusion, published by the G20 under the rubric of Global Partnership for Financial Inclusion in 2016, provides useful insights to address the issues impeding financial inclusion, and how digital technologies can help in the process (World Bank 2017b). These include the promotion of financial services as a national plan, the need to balance innovation and risk, providing legal and regulatory frameworks, and expanding the digital financial ecosystems, among others. Similarly, it suggests the need to ramp up investments for digital tools that can help integrate systems and databases making it easier for auditors and regulators to process information. It also highlights that the advent of digital systems would mean huge data volumes and without the presence of adequate data mining and data analytics, countries would have to handle too much data with limited outcomes.
- The most common barriers to the digital financial inclusion include the non-availability of suitable financial products, lack of skills among the stakeholders to use digital services, infrastructural issues, teething problems between various systems, and low-income consumers who are not able to afford the technology required to access digital services (Niranjan 2017).
- Another challenge to digital financial inclusion arises from the attitude of the stakeholders. For instance, take the case of Jan Dhan bank accounts. When the scheme was launched in 2015, banks were given ambitious targets to open accounts for the marginalised. This has resulted in the opening of many dormant accounts which never saw actual banking transactions. All such activities incur costs on the institutions, and thus, huge operative costs only proved to be detrimental to the actual objective. To avoid these counterproductive outcomes, it is important that all stakeholders participate in such programmes with proper intent and not just for the sake of it.
- Another major bottleneck faced by Digital India, with respect to financial inclusion, is the heavily dominated cash economy in the country. The data from RBI reveals that cash circulation has increased in 2018 after demonetisation. As per a report of the International Labour Organization (ILO), about 81% of the employed persons in India work in the informal sector (ILO 2018). The combination of a huge informal sector along with a

high dependence on cash mode of transaction poses an impediment to digital financial inclusion.

- There is also a gender dimension to financial inclusion in the country. According to the 2017 Global Findex database, 83% of males above 15 years of age in India held accounts at a financial institution in 2017 compared to 77% females (World Bank 2018). This is attributed to socio-economic factors, including the availability of mobile handset and internet data facility being higher among men than women.

Conclusion

In conclusion, for the success of digital initiatives, there has to be a multidimensional approach through which existing digital platforms, infrastructure, human resources, and policy frameworks are strengthened (Kim 2014). More importantly, human resources should be leveraged by skilling and positively engaging with them to achieve the last-mile connectivity of financial institutions. If corrective measures are taken to tide over the existing problems, interventions, such as Digital India, have the potential to amplify the benefits of economic growth to the poor. Not only will it reduce the costs for the financial institutions, but it would also address safety concerns and accuracy of the data involved in financial transactions.

Abstract

As the digital era continues to advance, ensuring robust cyber security and protecting data privacy have become paramount concerns for individuals, organizations, and governments. This paper explores the significance of cyber security and data privacy in the digital age, highlighting the associated challenges and proposing strategies to mitigate risks. By leveraging cutting-edge technologies, implementing robust encryption protocols, fostering awareness and education, and enforcing stringent regulations, we can fortify cyber defences and safeguard sensitive information. This paper emphasizes the need for a collective effort to address the evolving threats and protect the privacy of individuals and organizations in the interconnected world.

Keywords: Cyber security, Data Privacy, Digital Era, Threats, Encryption, Technologies, Awareness, Education, Regulations, Protection.

Introduction

Cyber security and data privacy are two critical areas in the field of technology that focus on protecting sensitive information and maintaining the security of digital systems. With the increasing reliance on technology and the interconnectedness of our digital world, the need for robust Cyber security measures and effective data privacy practices has become more crucial than ever before.

Cyber security refers to the protection of computer systems, networks, and data from unauthorized access, attacks, and damage. It encompasses a range of practices, technologies, and protocols designed to prevent, detect, and respond to potential threats to information systems. The goal of Cyber security is to ensure the confidentiality, integrity, and availability of digital assets, as well as safeguarding them from various types of cyber threats, such as malware, ransomware, phishing attacks, and data breaches.

Cyber security

Cyber security refers to the practice of protecting computer systems, networks, software, and data from unauthorized access, damage, theft, or disruption. It encompasses a wide range of measures and technologies designed to safeguard information and prevent cyber-attacks. Cyber threats can come from various

sources, including hackers, cybercriminals, statesponsored actors, and even insider threats. The consequences of successful cyber-attacks can be severe, leading to financial losses, reputational damage, and compromise of sensitive data.

Data Privacy

Data privacy is the concept of ensuring that individuals have control over their personal information and how it is collected, processed, stored, and shared by organizations. With the vast amount of data generated and collected in the digital age, protecting individuals' privacy is critical. Data privacy regulations, such as the General Data Protection Regulation (GDPR) in Europe or the California Consumer Privacy Act (CCPA) in the United States, aim to establish guidelines and requirements for organizations to handle personal data responsibly and ethically.

Challenges in the Digital ERA

- **Sophisticated Cyber Threats:**

Cybercriminals are continuously developing advanced techniques to breach security measures and exploit vulnerabilities in systems and networks.

- **IoT and Connectivity:**

The widespread adoption of the Internet of Things (IoT) devices and interconnected systems introduces new entry points for potential attacks.

- **Data Collection and Monetization:**

Companies gather vast amounts of personal data for analysis and monetization, leading to concerns about how this data is used and protected.

- **Cloud Security:**

The shift to cloud computing brings convenience but also raises concerns about the security of data stored on third-party servers.

- **Insider Threats:**

Employees or individuals with authorized access can also pose risks to data security through malicious actions or unintentional mistakes.

Importants of Cyber Security and Data Privacy

- **Protection of Sensitive Information:**

Cyber security measures help prevent unauthorized access to sensitive data, safeguarding personal, financial, and corporate information.

- **Maintaining Trust and Reputation:**

By prioritizing data privacy and security, organizations can build trust with their customers and stakeholders, leading to a positive reputation.

- **Compliance with Regulations:**

Adherence to data privacy regulations not only ensures legal compliance but also helps organizations avoid hefty fines and legal repercussions.

- **Economic Stability:**

Cyber security is crucial for the smooth functioning of economies, as cyber-attacks can disrupt critical infrastructure and financial systems.

Measures to Enhance Cyber security and Dataprivacy

- **Strong Authentication:**

Implementing multi-factor authentication (MFA) can add an extra layer of security to protect accounts from unauthorized access.

- **Regular Software Updates and Patching:**

Keeping software, applications, and operating systems up-to-date helps fix known vulnerabilities.

- **Encryption:**

Encrypting sensitive data both during transit and storage ensures that even if data is intercepted, it remains unreadable without the decryption key.

- **Privacy by Design:**

Organizations should incorporate data privacy considerations into their products and services from the outset rather than as an afterthought.

- **Data Minimization:**

Collect and retain only the necessary data to reduce the potential impact of a breach.

Differences between Cyber security and Data Privacy

FOCUS:

Cyber security:

Primarily concentrates on safeguarding computer systems, networks, and devices from unauthorized access, cyberattacks, and data breaches.

Data Privacy:

Focuses on ensuring the proper handling, collection, storage, and sharing of personal data, protecting individuals' rights to control their information.

Objective:**Cyber security:**

Aims to protect the entire digital infrastructure from potential threats, including viruses, malware, ransomware, and hackers, to maintain system availability, integrity, and confidentiality.

Data Privacy:

Aims to protect the personally identifiable information (PII) of individuals, ensuring it is collected and processed lawfully and only used for the intended purposes.

Scope:**Cyber security:**

Encompasses a broader range of measures, including network security, endpoint protection, firewall management, encryption, and incident response, to secure the organization's overall digital environment.

Data Privacy:

Focuses more specifically on the management of personal data, including compliance with data protection regulations (e.g., GDPR, CCPA) and establishing policies for data handling and consent.

Adversaries:**Cyber security:**

Addresses threats posed by cybercriminals, hackers, state-sponsored actors, and other malicious entities trying to exploit vulnerabilities in the system.

Data Privacy:

Concerns both external threats (e.g., data breaches) and internal risks, such as unauthorized data access or unintentional disclosure by employees.

Conclusion

Cloud computing has revolutionized the way businesses and individuals access, store, and process data. Its scalability and flexibility have empowered organizations to adapt rapidly to changing demands and leverage cutting-edge technologies without massive upfront investments. The cost-effectiveness of cloud services has

democratized access to powerful computing resources, leveling the playing field for startups and small businesses. However, security and privacy concerns remain significant challenges that require constant attention and innovative solutions. As we move forward, cloud computing will continue to be a fundamental driver of technological advancement, shaping the digital landscape for years to come.

DIGITAL FINANCIAL INCLUSION IN INDIA - AN OVERVIEW

Dr. T. Kiruthika

Assistant Professor

Department of Commerce (E-Commerce)

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

This article discusses what has been accomplished in the area of digital financial inclusion in India thus far, as well as how we may leverage modern technologies to develop a more inclusive society by using different digital drivers. This article outlines the different obstacle and challenges that remain in the way of attaining a digitally inclusive society. The development of E-commerce-enabled financial inclusion is discussed in this article. Policymakers and regulators have the opportunity to build a digital financial inclusion environment that promotes access and use of financial services in e-commerce markets.

Key words: Financial inclusion, E-commerce, Fintech, Payment Banks.

Introduction

The impact of digital finance on financial system reliability & stability is the main focus area of this study. Financial organizations, governments, and authorities are constantly promoting financial inclusion through digital media. However, despite these wide promoting initiatives, digital financial inclusion is not progressing as predicted or as it should be due to consumer ideology, which is one of the major roadblocks to the achievement of an e-commerce enabled economy or financial inclusion. This article sought to assess the various programs and initiatives and to what degree they have been successful, as well as to sort out some consumer ideology as barriers in the way of digital financial inclusion. The rise of e-commerce has resulted in an expansion in the number of digital financial services available to businesses and individuals. Services are increasingly being offered by non-profit organizations including electronic payments, credit financing, and insurance at the POS, this tendency known as E-commerce Enabling Financial Inclusion or Digital Financial Inclusion. The Government of India has always prioritized financial inclusion in its economic strategies. Initiatives like Jan Dhan, Aadhaar-Mobile, and Digital India have changed the game by ensuring that India's underbanked population has equal and economical access to financial services, hence lowering income disparity. While e-commerce has been quite successful in creating demand for digital financial goods and services for microenterprises and individuals at the bottom of the economic pyramid. Recent evolution in both the public and commercial sectors has fueled India's growth of digital financial inclusion. From

2014 to 2017, the percentage of adult Indians possessing financial institution account climbed from 52.8 percent to 79.8 percent (Source: Global Findex, 2017).

Objectives

1. To understand the concept of digital financial services.
2. To know the types of digital financial services.
3. To identify the Government initiatives towards digital financial services.
4. To study the advantages of digital financial services.

Research Methodology

The study is based on the secondary data collected from different journals, magazines, research articles, periodicals, websites.

Literature Review

Mukherjee (2011) the author discussed the role of Information and Communication Technology (ICT) to bring development in the rural sector. The rural dominated economies are striving for the growth and development. The ICT has started playing an important role in each segment of the society. It has a link with the financial services, receiving government benefits and many more. The nature of the requirement becomes more sophisticated because of which customer preference also changes drastically.

Gupta et al (2013)

The authors described the ICT based payment system in the Indian banking sector. It also helps to make process simpler and cost effective. Services like withdrawing money, opening bank accounts, transferring money from one account to another also becomes possible with the help of these facilities. Access to capital becomes easier. The timely availability of fund helps the business groups to generate cash for business requirement in a hassle-free manner.

Pallab Sikdar and MunishMakkad (2013)

Studies the benefits it provides from the point of view of bank's customers as well the banking organization. Internet banking, a major constituent of e-banking framework, has changed the dynamics of commercial banking worldwide by virtually bringing the entire banking set-up at the doorstep of a common banking customer.

Gurpreet Kaur (2015)

Studies the effect of digital India initiative on the concept of financial inclusion. The digital India initiative can easily connect the different groups of society and can help to achieve the objective of financial inclusion through digital banking.

Dr. N. Sundaram and M. Sriram (2016)

Discusses reviews on financial inclusion in the Indian perspective, discussed by different researchers all over the world and to highlight the awareness level of financial inclusion, digital financial inclusion and barriers confronted to financial access.

Suresh Aaluri, Dr. M. Srinivasa Narayana, Dr. P. Vijay Kumar (2016)

Studies the trends in banking sector for financial inclusion, regulation, technology in India. The recent initiatives taken by Government of India boost to promote financial inclusion and surely leading to the position where all Indians have their bank accounts, using Information Technology enabled services.

India's DFS Journey and Key Players in The Way of DFI

"Since 2014, the rise of DFS (Digital Financial Service) in India has been divided into three distinct periods. The first phase, which lasted from 2014 to roughly August 2016, was marked by a continuous increase in volume growth on the leading digital platforms of approximately 2% per month. The second period was mainly fueled by demonetization, whereas the third stage was fueled by the Unified Payments Interface rather than pre-paid instruments (UPI)" (Source: Journey Map Report, RBI data- 2014-2018). Following are the key players in the path of digital financial inclusion:

Jan Dhan Yojana

The Pradhan Mantri Jan-Dhan Yojana (PMJDY) is an initiative that promotes digital financial inclusion. It followed a legacy of bank-driven financial inclusion program in India when it was launched in August 2014. Data shows that the accessibility income Shodhsamhita, ISSN 2277-7067 Vol: XXIV, No: 11, July 2022 8 gap has begun to narrow since 2014, after widening between 2011 and 2014. "Only 27% of the lowest income Indians held a bank account in 2011, comparing to 41% of the wealthiest (a gap of 14 percent). In 2014, the disparity had grown to 16% (43 percent vs. 59 percent). However, by 2017, the disparity had shrunk to barely 5%. By 2017, the disparity had faded, with 79 percent of rural Indians having a bank account comparable to 76 percent of urban Indians" (Global Findex database, 2017).

Government-to-Person (G2P) payments and Direct Benefit Transfers (DBT):

The expansion "of the government's Direct Benefit Transfer (DBT) program, which presently administers 433 schemes from 56 ministry divisions, has been strongly related to PMJDY" (Journey Map Report, march 2019). 11 Direct Benefit Transfer (DBT) is a governmentdriven effort that consists of a number of schemes

wherein benefits are directly transmitted to beneficiaries, typically through state organizations.

RuPay:

Customers were given RuPay debit cards to let them to use their newly opened PMJDY bank accounts for ATM withdrawing cash and POS (point of sale) payments. "A RuPay card has been provided to 79 percent of the 330 million whom have PMJDY plan bank accounts" (Report of Ministry of Finance, GOI). As per the Global Findex report, penetration of debit card jumped from 22percent in 2014 to 33percent in India in 2017.

Aadhaar:

Aadhaar's expansion has been inextricably linked to PMJDY, as the Aadhaar number has become the legally recognized identity for rural Indians seeking to create their first bank account. "The number of e-KYC validations with Aadhaar grew from 48 million to 138 million during 2016-17 and 2017-18" (Source: Journey Map Report, march 2019). "As from August 2018, Aadhaar had been seeded in over 83 percent of active PMJDY accounts (excluding Assam, Meghalaya, and Jammu & Kashmir)" (Continuation of PMJDY, GOI).

Demonetization and GST:

Demonetization may have acted as a catalyst for rapid increase in digital transactions. The rise seen at the beginning of 2016 appears due to the development of UPI, which overlapped with improved business framework and with the introduction of the GST, rather than demonetization.

Licensing to new levels of banking institutions:

The establishment of a new differentiated banking structure was also a feature of India's financial inclusion era from 2014 to 2018. The competitive structure of India's financial and banking markets has evolved as a result of the new legislative agenda in favor of differentiated banking. Creating strategic models from across conventional banking, including some from fintech companies and global firms, were pushed to encourage competition and innovation.

Payments Banks:

Payment banks were created with the goal of bringing non-traditional performers into the formal banking system, such as telecommunications companies, fintech's, business tycoons, and the postal system, to use existing channels to expand DFI via modest savings and payment. "Paytm Payments Bank processes 124 million mobile

enabled banking transactions every month, which is 47% greater than SBI, the next largest bank in terms of mobile banking transactions. 0.35 percent of total transactions were handled by Aditya Birla Idea Payments Bank” Small Finance and Microfinance Banks: Goal of allowing and licensing a new layer of SFB (Small Finance Banks) has been to use digital technology to minimize the cost of banking services and expand their reach to lower-income customers. Ten institutions, dispersed around the country, were granted licenses. “As of June 2018, there were 17.6 million loan accounts, up above 17.3 million a year before and 15.8 million in 2016” (Source: MFIN data, March 2021).

Fintech:

Payment firms that process P2P and retail payments, along with technology firms such as Pine Labs and Mswipe, are examples of fintech. Many of these burgeoning fintech's now have a business rationale thanks to the underlying digital infrastructure provided by India Stack and the Aadhaar. The advent of e-commerce in India has intimately linked the expansion of India's payments fintech's. “Pre-paid instrument (PPI) transactions more than doubled (from 127m to 296m) from October 2016 to January 2017” (RBI data).

Penetration of Smart phone and Internet:

The rate where the smartphones and lowcost internet have touched communities traditionally underrepresented from the digital economy has enabled India's rapid growth in DFI. The former has benefited from the decreasing cost of hardware.

Current Barriers and Observation

There seems to be no doubt that India has made great progress in bringing the underprivileged segments of the economy into the digital financial inclusion. The digital divide, on the other hand, is far too wide, and there are several bottlenecks and obstacles that require rapid response:

- It's more difficult for emerging, private institutions to construct a degree of confidence and loyalty that will enhance customer's ideology to shift their cash into such a digital account because of the legacies of government-owned banks.
- Digital finance supplier companies expanding to relatively low-income regions will be challenged around low literacy and the capacity to interpret the principles and implication of utilizing digital financial products.
- Consumers prefer cash, and sellers also transact in cash, so staying in a cash system makes more sense. One of the main reasons for non-adoption of digital payments is a lack of demand.

- Some shopkeepers and merchants feel that transitioning from a cash-based economy to a digital one will push small enterprises and people to pay taxes that are not paying taxes yet.
- Many people living in remote and rural areas still don't have access to the network and digital infrastructure that is needed to foster confidence and frequent use of digital services.
- Rural economies remain predominantly cash-based, notwithstanding modest early proliferation of digital finance in remote and rural areas. People who are poorer are more responsive to data prices. so, prices of data are also a basic challenge connecting rural people to digital financial inclusion.
- The majority of digital financial products that is available in English and sometimes in Hindi. However, most rural people feel reluctance in other languages due to illiteracy and unfamiliarity, and they prefer digital financial products in their local language.
- The lack of relevant financial products is one of the most common hurdles to digital financial inclusion

Conclusion

With the digital shift in core business, finance needs to enable and drive the change. A holistic cooperation between consumers and Government can be the road-map to reap true potential of digital finance and financial inclusion. The application of technology can improve the payment facility more smooth and transparent. The ambitious flagship Scheme DIGITAL INDIA also has one pillar as digital financing as its target. The potential of digital finance is huge. Financial independence will give empowerment to women and weaker sections of society, which is imbedded motive of financial inclusion and digital finance. Adopting digitization in financial services and including most of population in the net of banking will help in growth and development of country. With several digital financial instruments in the market, the consumer now has more choice than ever.

Abstract

This research paper focuses on strategies and best practices being employed to help India to achieve its vision by 2047. This paper throws light on the MSME formation, Make in India initiatives, startup India, and lastly state wise contributions towards Make in India initiatives. The results are concluded on the basis of impact of MSME formation, Contribution of Indian entrepreneurs and manufacturers and states, etc.

Keywords: Vision, Strategies, MSME, Startup, Make in India, entrepreneurs, Manufacturers.

Introduction

MAKE IN INDIA is an initiative rolled out by our honorable Prime Minister of India Shri. Narendra Modi on September 25, 2014. Which promotes domestic manufacturers to reach the international markets. This initiative started to make India self-reliant and lower down the dependency of China. This initiative includes the education of entrepreneurship, schemes and subsidies to give financial support to MSMEs. Though Ministry of MSME was formed in 2007, and it was not a part of Make in India, But I believe that the formation of MSME is the first steps to become India as a self-reliant country. Later on it was revised in 2020 and stated various new

regimes such as, manufacturing companies and service companies are treated equally, fund allocation for Subsidies has been increased since 2007, entrepreneurs and promoters can easily avail the schemes and subsidies. With time the Government of India initiates various initiatives to grow the economy and make India self-reliant like, MAKE IN INDIA, STARTUP INDIA, which stimulates the entrepreneurs to come up with new ideas, and execute them in the Indian market as startups. The STARTUP INDIA campaign was majorly designed to facilitate investment, foster innovation, protect intellectual property, and build best-in-class manufacturing infrastructure for the aspiring entrepreneurs. After the launch of STARTUP INDIA, entrepreneurs and startup founders got immersive support from the Government in terms of funding, subsidies, international market exposure, etc. Lastly, State Governments also took this as a serious business and equally contributed towards this MAKE IN INDIA campaign, such as Tamil Nadu, Assam, Uttar Pradesh, many more states.

Literature Review

Boat's co-founder AmanGupta said, highlighting that initiatives like Startup India and celebration of innovation has changed the mood of the nation towards entrepreneurship.

The major thrust of this initiative is to make India a global manufacturing hub. (Das, 2015). With its focus on twenty-five sectors the initiative vows to increase the share of manufacturing in the country's GDP from 16 percent to 25 percent by 2022. It also pledges to add 100 million new jobs by the year 2022. (Bhattacharya and Verma, 2016). Manufacturing has the potential to provide large scale employment, because, in addition to forward linkages it also has strong backward linkages. (Kapoor, 2015). India is considered a challenging nation to start a new venture as its business environment presents too many barriers (Nally, Kapoor, & Juan 2015). According to a report by Nasscom, the Indian startup ecosystem is expected to reach a valuation of USD 500 billion by 2025, up from USD 135 billion in 2021.

Objectives of this Study

1. To study the MSME Contribution.
2. To study the Growth of the startup economy.
3. To study the impact of the Make in India campaign.
4. To study the contribution of state governments toward MAKE IN INDIA.

Research Methodology

This study is adopted descriptive research methodology and it based on secondary data. It has been collected from various books, journals, magazines and websites.

Analysis and Interpretation

Graph 1: Shows Msme Contribution Towards The Indian Economy

he Expert Committee on Micro, Small and Medium Enterprises (MSME), Reserve Bank of India, 2019

Graph 2: Shows Startup Growth in India (2016 - 2018)

Graph 3: Shows Number of Manufacturers Started after Make in India (2014) Campaign

Table 1: Shows Contributions of 4 States towards the Make in India Campaign

States of India	Contributitional Schemes and Measures Towards Make in India Campaign
Uttar Pradesh	One District, One Product (ODOP)
Assam	Paramparagat Krshi Vikas Yojana (PKVY)
Tamil Nadu	Economic facilities for manufacturers, such as, free trade zones, infrastructure for transportation, etc.
Maharashtra	Maharashtra State Industrial Cluster Development Scheme (MSI-CDP) and Central Government's Micro, Small and Medium Enterprises Cluster Development Scheme (MSE-CDP)

Source: MSMEs Official Website.

Conclusion

Setting up a manufacturing unit in India, could be a great investment for MNCs in the long run, due to its business friendly laws and other economic infrastructures, such as communication, transportation and distribution networks, financial institutions and markets, and energy supply systems given by the Government of India. This stimulated the organization to set up their manufacturing plant in India. All this happened when our honorable Prime Minister Shri. Narendra Modi initiated the MAKE IN INDIA campaign and it got a huge reception among startup founders, entrepreneurs, promoters, manufacturers and investors. So far, the Government announced several MAKE IN INDIA projects to promote local businesses, such as Aadhar, UPI BHIM, ONDC, OCEN. By analyzing the developing interests of entrepreneurship among youngsters, the Prime Minister later announced, STARTUP INDIA on 16th January 2016 which reflects a meteoric growth in the startup economy.

According to a report by NASSCOM, the Indian startup ecosystem is expected to reach a valuation of USD 500 billion by 2025, up from USD 135 billion in 2021.

EXPERIENTIAL LEARNING AND SKILL DEVELOPMENT IN NEP 2020

Mrs. D. Divya

Assistant Professor

PG Department of Commerce with International Business

Nallamuthu Gounder Mahalingam College, Pollachi

Ms. R. Indhurekha

II M.comIB

Nallamuthu Gounder Mahalingam College, Pollachi

indhurekhamib@gmail.com

Abstract

Experiential learning is an active learning method where students "learn by doing" and expressing opinions on the experience. Experiential learning activities include fieldwork, internships, practicals, undergraduate research, and classroom performances. This paper presents a thorough examination of the role of experiential learning methodologies in fostering skill development and enhancing the effectiveness of national education policies. There is a growing emphasis on providing students with both academic knowledge and practical competencies because the global economy is continually changing and demands a qualified workforce. This paper helps to know the key concepts of experiential learning and skill development aspects in nep and its integration into national education policies, analyzing the best practices to create a holistic and dynamic educational environment. The NEP 2020 makes use of experiential learning as one of its fundamental ideas. This is effectively used in schools, higher education, corporate training for educational learning, personal development and skills building. The NEP also emphasises skill development, which aims to provide students with a wide range of skills necessary for both their personal and professional development. The policy places a strong emphasis on developing 21st-century abilities like critical thinking, interaction, teamwork, innovation, and digital literacy.

Keywords: NEP 2020, Experiential learning, Skill development, Employability, Holistic learning, Indian education system.

Introduction

*"Education is simply the soul of a society as it passes
from one generation to another"*

— G.K. Chesterton

The National Education Policy 2020 is a comprehensive framework that aims to transform the education system in India. The Indian government approved NEP to solve many issues with the current educational system and offer a more comprehensive and contemporary approach to learning. The NEP 2020 places a strong emphasis on skill development and experience learning as essential elements to preparing students for the future. The instructors play an important role by

helping students learn through hands-on activities in the classroom. The Introduction of National Educational Policy 2020's was an important move that completely transformed the Indian education sector. It is anticipated that it will raise educational standards for students in both high schools and colleges.

Objectives

The objectives of this study on Experiential learning and Skill development in National Education Policy 2020 are:

- To know the key aspects of experiential learning and skill development in NEP.
- To identify the role of NEP 2020 in the Indian education system and the approaches adopted for promoting holistic learning among students.

Experiential Learning

Experiential learning is an approach that encourages students to learn through hands-on experiences, active engagement, and reflection. Students can get a greater understanding of the subject matter through the practical application of information and skills in real-world situations. The NEP 2020 recognises the value of experiential learning and intends to include it into the curricula at all educational levels.

Key Aspects of Experiential Learning in the NEP 2020:

Play-Based Learning:

The policy recognizes the significance of play-based learning in early childhood education. It promotes learning through play, which helps the children explore and understand their environment while fostering creativity and problem-solving skills.

Vocational Education:

The NEP 2020 places a strong emphasis on integrating vocational education at the secondary school level to give students useful skills and prepare them for the workforce

Internships and Practical Training

The strategy promotes requiring students in higher education to participate in internships and practical training opportunities. They can use their theoretical knowledge in practical situations and acquire skills necessary for their chosen professions.

Skill Development

The NEP 2020 places a strong emphasis on skill development to prepare students for the challenges of the 21st-century job market. The policy aims to bridge the gap between education and employability by equipping students with a wide range of skills that are essential for personal and professional success.

Key Aspects of Skill Development in the NEP 2020:**21st-Century Skills:**

The policy focuses on nurturing critical thinking, problem-solving, creativity, communication, collaboration, and other essential skills needed for the 21st-century workforce.

Multidisciplinary Approach:

The NEP 2020 encourages a multidisciplinary approach to education, where students have the flexibility to choose subjects of their interest from various disciplines, enabling them to develop a diverse skill set.

Flexible Curriculum:

The policy promotes a flexible curriculum that allows students to explore and specialize in areas aligned with their passion and aptitude, facilitating skill development in their chosen fields.

Continuous Assessment:

The NEP 2020 advocates for a shift from rote learning to continuous assessment methods that assess not only academic knowledge but also a student's practical application of skills.

Role of NEP in the Indian Education System**Curriculum and Pedagogy**

The conventional 10+2 school curricula structure is to be replaced by a 5+3+3+4 structure corresponding to ages 3-8, 8-11, 11-14, and 14-18 years respectively. This implies that a student must have 12 years of schooling preceded by 3 years of Anganwadi or pre-schooling experience. To implement this change at grassroots levels, curriculum, content, and pedagogy restructuring must be done as per the NCF (National Curriculum Framework) and content revisited in textbooks.

Holistic Learning

Holistic education is a teaching approach that focuses on preparing students to meet the problems they may face in both their personal lives and academic careers.

- NEP insists a creative and multidisciplinary curriculum that focuses equally on other subjects such as humanities, sports, fitness, languages, culture, arts, etc. apart from Science, Mathematics, etc.
- The National Education Policy 2020 also recognizes the importance of soft skills such as communication, teamwork, problem-solving, decision making, analytical thinking, resiliency, etc. as imperative life skills.
- In order to help students advance in their job paths, leadership qualities are also instilled in them along with other talents.
- NEP 2020 permits foreign institutions to establish campuses and conduct business in India. Students will benefit from having access to international education of the highest caliber. They will be ready to compete and meet the highest standards around the world. This will enable them to begin concentrating on developing themselves in accordance with their chosen job path.

Integrating Technology in Learning and Teaching Process

A regulatory body NEAT (National Educational Alliance for Technology) has been set up to integrate technology for better learning outcomes. NEAT aims to use Artificial Intelligence to personalize learning experience depending on learner's requirement. It even proposes to extend national alliance interests with EdTech companies for enhanced learning outcomes. However, one of the biggest challenges is to establish a robust digital infrastructure in remote areas.

Assessment

PARAKH (Performance Assessment, Review, and Analysis of Knowledge for Holistic Development), a national assessment centre has been proposed to set up to keep a regular check on the education system. NEP2020 aims to recognise the need to evaluate "higher order skills" such as creativity, critical thinking, problem-solving, visualisation, and idea generation. Shifting the focus of assessments from academic grades to higher order skills creates higher performance standards demonstrated through varying degrees of competency across social levels.

Mother Tongue as a Medium of Instruction

NEP 2020 focuses on using mother tongue as the instructional medium, although it does not compel anyone to use a specific language. It is preferred that children speak their native tongue or home language until eighth grade so they can readily understand complex ideas.

Teacher Training

The new education system is an evolved blend of the digital and traditional learning system. Educators, therefore, have to be trained digitally to blend into the new digital learning processes. NEP 2020 is a milestone in the history of the education system in India. It will provide the much-needed tectonic shift in the pedagogical structure emphasising experiential and practical learning that will inculcate 21st-century skills in children.

Conclusion

Experiential learning and skill development occupy a central position in the National Education Policy 2020. India's education system aspires to create learners who are not only academically proficient but also possess the practical skills, creativity, and adaptability needed to thrive in a rapidly changing world. Numerous programmes in higher education rely on case studies, real-world projects, study abroad opportunities, internships, field trips, etc., but these activities come at a cost and with other practical implications. These challenges could be removed to achieve the aim of NEP in shaping the individuals who can contribute to society and lead India toward progress and prosperity.

Abstract

As technology continues to advance and permeate every aspect of our lives, the need for robust Cyber security measures becomes increasingly critical. This paper aims to address the challenges and propose effective solutions to enhance Cyber security in the current digital landscape. The abstract begins by emphasizing the growing significance of Cyber security in the face of escalating cyber threats and attacks. It highlights the need to adapt to the evolving nature of cyber threats and outlines the potential consequences of failing to do so. The paper then proceeds to discuss key areas where Cyber security measures can be improved. It explores the significance of user awareness and education in fostering a cyber-resilient culture. Furthermore, it delves into the importance of implementing strong authentication mechanisms and encryption protocols to safeguard sensitive data. Additionally, the abstract highlights the significance of adopting proactive security measures such as intrusion detection and prevention systems, as well as regular vulnerability assessments and patch management. It emphasizes the importance of timely response and incident management to mitigate the impact of cyber incidents. The proposed solutions aim to foster a multi-layered approach to Cyber security, acknowledging that no single measure can provide absolute protection. By combining technical solutions with human factors, organizations can strengthen their security posture and reduce the likelihood of successful cyber attacks. Lastly, the abstract concludes by underlining the significance of collaboration among stakeholders, including government bodies, industry experts, and individual users, in addressing the collective challenges of Cyber security. It emphasizes the need for ongoing research, innovation, and knowledge-sharing to stay ahead of cyber threats and ensure a secure digital environment for all. In summary, this paper's abstract provides an overview of the importance of Cyber security, identifies key areas for improvement, and proposes comprehensive solutions to enhance Cyber security measures in the modern digital landscape.

Keywords: Cyber security, Cyber attacks, digital landscape, Strong authentication

Introduction

The Journal of Cyber Security Research is a prominent scholarly publication dedicated to advancing the field of Cyber security. It serves as a platform for researchers, academics, and professionals to share systems. Their innovative ideas, research findings, and practical insights in the realm of Cyber security. This esteemed journal provides a comprehensive and up-to-date understanding of emerging threats, vulnerabilities, and countermeasures in the rapidly evolving digital landscape.

Network Security: This section explores techniques and methodologies to protect computer networks from unauthorized access, intrusions, and data breaches. **Data Protection and Privacy:** This area focuses on safeguarding sensitive information, preserving privacy, and ensuring secure data handling practices across various domains. **Cryptography and Cryptanalysis:** The journal publishes cutting-edge research on encryption algorithms, cryptographic protocols, and methods to analyze and break cryptographic

Threat Intelligence and Incident Response: This section addresses the detection, analysis, and mitigation of cyber threats, as well as strategies for effective incident response and recovery.

Secure Software Development: It encompasses the methodologies, tools, and best practices for developing secure software applications, emphasizing the prevention of vulnerabilities throughout the software development life cycle.

Internet of Things (IoT) Security: This area delves into the unique challenges and solutions in securing interconnected devices, systems, and infrastructures in the IoT ecosystem.

Artificial Intelligence (AI) and Machine Learning (ML) Security: It explores the intersection of Cyber security and AI/ML, including adversarial attacks, robust AI models, and secure AI deployment.

The Journal of Cyber Security Research maintains a rigorous peer-review process to ensure the quality, validity, and relevance of the published articles. It encourages submissions from both academia and industry, fostering collaboration between researchers and practitioners.

By disseminating the latest research advancements and practical insights, the Journal of Cyber Security Research plays a pivotal role in strengthening Cyber security practices, improving resilience against cyber threats, and contributing to the overall security posture of organizations, individuals, and societies.

Researchers, professionals, and students interested in staying at the forefront of Cyber security knowledge are encouraged to engage with the Journal of Cyber Security Research by submitting their work, reviewing papers, and accessing the published articles to stay informed about the latest trends and developments in the field.

Cyber security

- Cyber Security is a application of technologies, process and control to protect the system, network, device and data from cyber attacks.
- It also refers to a practice of securing electronic devices from unauthorized access or attack

Principals of Cyber Security

- The primary objective of Cyber security is to protect data. The security community commonly refers to a triangle of three related principles.

Confidentiality

- Ensuring sensitive data is only accessible to those people who actually need it and are permitted to access according to organizational policies, while blocking access to others.

Integrity

- Making sure data and systems are not modified due to actions by threat actors, or accidental modification. Measures should be taken to prevent corruption or loss of sensitive data, and to speedily recover from such an event if it occurs.

Availability

- Ensuring that data remains available and useful for its end-users, and that this access is not hindered by system malfunction, cyber attacks, or even security measures themselves

Active Attack

Active attack harms the system. In active attack system resources can be damaged. Active attack is dangerous. Victims actually know about attack.

Application Security

Application security describes security measures at the application level that aim to prevent data or code within the app from being stolen or hijacked. It encompasses the security considerations happen during application development and design, but it also involves systems and approaches to protect apps after they get deployed know about the attack

Passive Attack

Passive attack does not harm the system. In passive attack system resources is unchanged. Victims doesn't know about the attack.

Cyber Attacks

The most common types of dos(Denial-of-Service) and ddos. Distributed Denial of Service) attacks or the TCP, SYN, Flood attack, Tear drop attack, SMURF attack, ping of death attack and bot led.

There are different types of Cyber security. They are Critical infrastructure security, Application security Network security. Cloud security.

Critical Infrastrucure Security

Critical infrastructure security is the area of concern surrounding the protection of systems, networks and assets whose continuous operation is deemed necessary to ensure the security of a given nation, its economy, and the publics health and safety.

Application Security

Application security describes security measures at the application level that aim to prevent data or code within the app from being stolen or hijacked. It encompasses the security considerations that happen during application development and design, but it also involves systems and approaches to protect apps after they get deployed.

Network Security

Network security is a set of technologies that protects the usability and integrity of a company infrastructure by preventing the entry or proliferation within a network of a wide variety of potential threats. Network security consists of the policies, processes and practices adopted to prevent from unauthorized access.

Cloud Security

Cloud security, also known as cloud computing security, is a collection of security measures designed to protect cloudbased infrastructure, applications, and data. These measures ensure user and device authentication, data and resource access control, and data privacy protection. They also support regulatory data compliance. Cloud security is employed in cloud environments to protect a companys data from distributed denial of service (DDoS) attacks, malware, hackers, and unauthorized user access or use.

Main Threats of 2021

Social engineering threats: these cyber security threats use the psychology of individuals to trick them into giving away confidential and sensitive data,often using social media platforms as the vehicle.

Ransomeware Attacks

These are where the hacker holds the data and IT systems hostage until a ransom is paid.

Internet of things Threats

Many of the Internet of Things' devices have immature or non-existent security measures installed. Patch management: Failing to keep your systems and applications up-to-date with the latest patches leaves you open to known threats.

Phishing Emails

These are emails that seem to be genuine but come from hackers.

Cases of attack in Cyber security in Digital banking

In India, banks have seen relentless attacks from organized criminals and hackers. It was illustrated in a recent case with Canara Bank where a hacker attacked and defaced the bank's site by inserting a malicious page and tried blocking some of the bank's e-payments.

Conclusion

In conclusion, this journal article has shed light on the crucial and evolving field of cyber security. The study delved into various aspects of cyber threats, vulnerabilities, and countermeasures, providing valuable insights and recommendations for individuals, organizations, and governments to enhance their cyber defenses.

Throughout the article, the authors emphasized the escalating nature of cyber attacks and the increasing sophistication of malicious actors. They highlighted the significance of adopting a proactive and multi-layered approach to cyber security, which includes technological solutions, robust policies and procedures, and a well-trained and vigilant workforce.

Furthermore, the article emphasized the importance of continuous monitoring, threat intelligence sharing, and collaboration among various stakeholders in the cyber security ecosystem. The authors stressed that cyber security is not just a technical issue but also a societal one, requiring the collective efforts of individuals, organizations, and governments to protect critical infrastructure, personal data, and intellectual property.

While advancements in technology have brought numerous benefits, they have also introduced new vulnerabilities and attack vectors. The article highlighted the need for ongoing research and development in cyber security to keep pace with emerging threats, such as artificial intelligence-based attacks, IoT vulnerabilities, and social engineering techniques.

In conclusion, this journal article has underscored the critical importance of cyber security in today's interconnected world. It serves as a reminder that cyber threats are pervasive and ever-evolving, necessitating a proactive and collaborative approach to safeguarding our digital systems, infrastructure, and information. By staying informed, implementing best practices, and investing in robust cyber defenses, individuals, organizations, and governments can mitigate risks and ensure a secure and resilient digital environment.

THE IMPACT OF WOMEN EMPOWERMENT SCHEMES IN TAMIL NADU STATE TRANSPORT CORPORATION LIMITED (TNSTC), COIMBATORE

Dr. S. Kaleeswari

Assistant Professor, Department of Commerce (SF)
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu
kaleeswaringmc@gmail.com

Abstract

Economic development of a country is largely conditioned by the adequacy, efficiency, regularity, safety and punctuality of transport services. It links up villages, towns, cities and metropolises and it also integrates the economy. Transport is an infrastructure, a public utility and a commercial venture and therefore it is unique in more than one sense. Among the four major modes of transport namely road, rail, water and air, the first one lends itself to a greater flexibility, variety and versatility. The road transport which encompasses the passenger and cargo segments is, in fact the best possible mode of linking remote hinterlands with growing cities. On May 7 2021 Tamil Nadu's honorable Chief Minister M.K.Stalin, announced the scheme that enables all women in the state of Tamil Nadu to travel free of cost in Government-owned city and town buses. The main intention of this scheme is to increase the rate of women participation in all the sectors and to promote public transportation. It is also said that it has generated ideas for women to undertake self-employment. Thus, present paper will highlight the Impact of Women Empowerment Schemes in Tamil Nadu state Transport Corporation Limited (TNSTC)

Keywords: Economic, Transport, Tamilnadu and Passengers

Introduction

No transport business can exist without passengers. No transport business can survive without satisfying the needs of the passengers. In general compared with other modes of transport, bus transport and its services are more indispensable, convenient and very easy to access. In certain situations, bus transport may suit with the needs of the passengers and facilitate more in all aspects. It carries the people from one place to another place to enable the people to carry out their day to day activity; business etc. therefore bus transport and its quality serviced is too important in a man's day to day life of the general public. Bus transport services are similar to central nerves system of a human body. Bus transport connects different levels of people and it aid the people to have, build their business contact, celebrating festivals and in, many ways. The increasing importance of transport in the world of agriculture can't be over emphasized. Before and after harvesting, transport plays an important role. Transport services, the productivity of agricultural of improved manures and fertilizers. Before the introduction of motor truck and railways, this

facility was not available. Besides, the transport helps marketing of agricultural products. Industrial progress depends upon transport that helps new industries. Industrial development would not have taken place if there was no transport. Transport industry has been set quantities of goods and transport millions of passengers. Thus transport has contributed to the industrial development of the world.

In 1944 British Government appointed a committee to analyse public transport in the country. On 01.01.1972, Pallavan Transport commission was established under companies act 1956 and buses operated in Chennai and Chengalpattu were brought under it and paved the way for inception of other state transport undertakings. 21 state transport undertakings were created by bifurcation from 1972 to 1996. Now it is functioning as eight from 2004. Tamil Nadu state transport corporation limited (TNSTC) is fully owned and operated by the government of Tamil Nadu. TNSTC owns 321 depots and 5 workshops with a combined fleet strength of 21,678 buses. TNSTC covers 38 districts with the road length of 2,16,352 km with 32,598 buses. The total number of daily bus passenger is around 1.6 crore in Tamil Nadu, which implies there are 839 daily passengers for every bus. An estimated 53 lakh passengers travels everyday in city and town buses in Tamil Nadu.

According to Government assumption, 40 percent of the passengers, or 18 lakh, could be women. Tamil Nadu has become the third state in India to make public bus transport free for women after Delhi and Punjab and it is also the first state to introduce pass to travel in the corporation buses at free of cost for school students. On May 7 2021 Tamil Nadu's honorable Chief Minister M.K. Stalin, announced the scheme that enables all women in the state of Tamil Nadu to travel free of cost in Government-owned city and town buses. The main intention of this scheme is to increase the rate of women participation in all the sectors and to promote public transportation. It is also said that it has generated ideas for women to undertake self-employment. After this government's announcement, most of the women passengers are likely to shift from private buses to government buses. The free travel for women in town buses across the state also led to an increase in the share of women passengers from 40 percent to 61 percent.

Passenger is the occupant of a transportation vehicle other than the person operating it. Women passengers satisfaction is indefinite and a conceptual term, which will vary from one person to another and from one service to another service. Impact is the force of impression of one thing on another. Positive and negative, primary and secondary long term effects produced by a development intervention, directly or indirectly, intended or unintended.

Objectives of the Study

To study the Impact of Women Empowerment Schemes in Tamil Nadu state Transport Corporation Limited (TNSTC), Coimbatore District.

Review of Literature

Vijayaganeh (2019), has analysed “the satisfaction level and discomfort of the passenger, using TNSTC buses” Primary data was collected through the interview method. Simple percentage method, weighted average method and Rank method was applied to find the results. The study suggested that bus conductor and driver should be trained to behave with the passenger. **Kiruthika and Ravi (2022)**, have conducted the performance of women free bus operations and the complications faced by women passengers. The data for the study was secondary data which is collected from various journals and articles. The research found out that it is very useful for college students, women who want to study, house wife’s who want to do small business at home. The study concluded that the safety and ease of travel can encourage greater numbers of women to take self-employment as well as wage employment that requires them to commute or travel. **Kalimuthu and Preethika (2023)**, have conducted “Impact of Women Passenger towards Tamilnadu Free Bus Scheme Provided by Tamilnadu State Transport Corporation “(With Special Referenceto Coimbatore City). The study reveals that most of the respondents are aware about this free bus scheme. with the gdp growth rate of the country.

Methodology

The study has a descriptive nature. Secondary data have been collected in order to prepare this document in a comprehensive manner. The data have been collected from publications in various journals, periodicals, conference papers and websites.

Profile of Tamilnadu State Transport Corporation Limited (TNSTC)

Tamil Nadu State Transport Corporation Ltd.-(TNSTC) is a Government owned public transport bus operator in Tamil Nadu, India. It operates Intercity bus services to cities within Tamil Nadu, and from Tamil Nadu to its neighboring states. It also operates town busses from major cities and towns of Tamil Nadu to its neighborhoods, with the exception of Chennai, where the public bus service is operated by MTC, a subsidiary of TNSTC. It is the largest Government bus transport corporation in India. It operates intercity bus services to cities within Tamil Nadu and from Tamil Nadu to its neighbouring states with a combined fleet strength of 23,078 buses as of 2016-17. It also operates public transport bus service in many cities of Tamil Nadu, with the exception of Chennai, where the public bus service is

operated by MTC, a subsidiary of TNSTC. TNSTC is fully owned and operated by the Government of Tamil Nadu. It caters to all the districts within Tamil Nadu and also operates services to neighbouring states of Andhra Pradesh, Karnataka, Kerala, Telangana and union territory of Puducherry.

History of Tamil Nadu State Transport Corporation (TNSTC), Coimbatore

In pursuance of Government Nationalization policy, Cheran Transport Corporation Limited was incorporated as a company under companies act on 17.02.1972. It commenced its services on 01.03.1972 with 109 buses taken over from the Anamalais Bus transport pvt. Ltd., Pollachi in Coimbatore district at the time of formation. Subsequently, it took over 121 buses from 19 private operators in Nilgiris district in pursuance of Tamil Nadu State Transport carriages and contract act 1973 on 14.01.1973.

The name of the company, Cheran Transport corporation limited, Coimbatore was changed as "Tamil Nadu state transport corporation Coimbatore Division-I limited", and the name of the company, MahakaviBharathiyar Transport Corporation Limited, Udhamandalam has been changed as "Tamil Nadu state transport corporation (Coimbatore Division-III) Ltd., with effect from 23.07.1997.

Tamil Nadu state transport corporation (Coimbatore Division-III) Ltd., Udhamandalam was merged with M/S. Tamil Nadu state transport corporation (Coimbatore Division-I) Ltd., Coimbatore with effect from 07.11.2000 Subsequently, Tamil Nadu state transport corporation (Coimbatore Division-II) Ltd., Erode was merged with Tamil Nadu state transport corporation (Coimbatore Division-I) Ltd., from 30.12.2003, and this corporation is at present functioning in the name of "Tamil Nadu state transport corporation (Coimbatore) Ltd., Under this corporation there are four regions covered. Districts covered are Coimbatore, Ooty, Erode, Tirupur.

Scheme Details

Free travel facilities have been provided for all women including working women, Transgender and girls who are pursuing higher education in ordinary fare city buses operated under the control of the Tamil Nadu State Transport Corporation since 2021.

- Tamil Nadu Government announces and implement lots of scheme for the welfare of people of Tamil Nadu.
- One of the social welfare scheme for Tamil Nadu Women is Zero Ticket Bus Travel Scheme.
- The main objective behind launching Zero Ticket Bus Travel Scheme is to encourage women of Tamil Nadu for higher work participation and reduce the dependency on private mobility.

- Most of the Working Women, Girls Students and Women Labourers doesn't have their own convenience to commute one place to another.
- They regularly pay for travelling fare which overburden them financially.
- So to unburden the Women of Tamil Nadu financially, Government came up with a idea to provide free of cost travel in government run buses.
- Under Tamil Nadu Zero Ticket Bus Travel Scheme, No women have to any fare if they are travelling in Government of Tamil Nadu run buses.
- Zero Fare Ticket will be issued to women beneficiary at the time of travelling.
- Free of cost travel in government run buses will only valid up to 30 kilometers.
- Women Beneficiary has to carry one photographed identity card for verification purpose.
- Transgenders are also eligible for free of cost travel under Zero Ticket Bus Travel Scheme of Tamil Nadu.
- Free of Cost Bus Service will only provided in Tamil Nadu Government run Ordinary/ City Buses or Buses operated under the control of Tamil Nadu State Transport Corporation.
- There is no need to apply anywhere to avail the benefit of free of cost travel in buses.
- Women Beneficiary can directly travel free of cost under Zero Ticket Bus Travel Scheme for Women of Government of Tamil Nadu.

Benefits of Women Empowerment Schemes in TNSTC

There is a lot of gender disparity in Indian society, and the mobility of women is restricted for a host of social and economic reasons. Fare free bus travel will, therefore, lead to economic, emotional, and social benefits for women.

Economic Benefits

In most Indian households which have a vehicle (car, two wheeler or even bicycle), it is primarily used by the male members, which restricts the mobility of women to a great extent. Women, especially women from lower socio-economic backgrounds, are often forced to take up jobs in locations which are close to their residence, which restricts the number of job opportunities available to them.

- Offering fare free bus travel enables women to look at taking up jobs with are a distance away from home, and will, hopefully, lead to improved labour force participation.
- Women who are currently spending a substantial chunk of their earnings on bus fares will be able to save the amount and can then use it on other basic expenditure like education or healthcare.

- Fare free bus travel enables women to use public transport for running errands and for other purposes, therefore saving the time which might otherwise be spent on walking to their destination.
- Women who might have earlier walked to their place of work and back can now save time by taking the bus.
- Many mothers, for instance, wait outside the school compound after dropping the children off, since they cannot afford to spend on bus fare to return to their homes.
- Fare free bus travel will empower these women to spend their time more productively if they choose.

Emotional Benefits

Fare free bus travel will give women the freedom to move freely within the city, and will reduce their dependence on other family members for their mobility.

- School students who are forced to drop out of school after primary school because the secondary school is a distance away, can now avail of fare free bus travel to travel to school without imposing an additional financial burden.
- Women can visit family and friends, without having to depend on others to take them. Women, particularly from rural areas, can now access better medical facilities.
- Being able to study and work without worrying about the cost of the commute is a big benefit for women.
- Equally important, fare free bus travel empowers women to use public transport for shopping and leisure which is good for their mental well-being.

Social Benefits

- Fare free bus travel will lead to more female passengers in the bus. Since we always feel more comfortable when we are with more people like us, this will increase our perception of safety and security.
- After fare free bus travel was introduced in Delhi, women said that travelling by DTC buses had become safer than traveling by private buses. Women also reported that incidents of casual molestation had gone down with the increase in number of female passengers. This is a virtuous cycle, which will eventually lead to greater safety for women.
- Hopefully, this will lead to more women switching from private vehicles which they can ill afford to public transport.

Conclusion

The main aim of the paper is to know the impact of women passenger using TNSTC free busses provided by Tamil Nadu State Transport Corporation in Coimbatore city. Based on study findings, it can be concluded that free buses have helped women passengers to save. The money which is saved is used in household expenses of the women passengers family. Students and working women are benefited by this scheme as they can study and go to work places also and many women travel 5 kilometers-10 kilometers per day to fulfill their needs. This scheme is great initiatives by the government for the welfare of women in Tamil Nadu.

Abstract

This study aims to examine the state of women entrepreneurship in India in the year 2023, exploring the opportunities, challenges, and socio-economic impact of women-owned businesses. India has witnessed a significant rise in women entrepreneurs in recent years, and this study seeks to understand the factors contributing to their emergence, as well as the barriers they face.

The study adopts a mixed-methods approach, incorporating both qualitative and quantitative research methods. Qualitative methods include interviews and focus group discussions with women entrepreneurs, industry experts, government officials, and relevant stakeholders. Quantitative data is collected through surveys distributed among a diverse sample of women entrepreneurs across different sectors and regions of India.

The research explores various aspects of women entrepreneurship, including the motivators and drivers behind women's decision to start businesses, the types of industries they are engaged in, and the challenges they encounter. It also examines the role of government policies and support mechanisms in fostering women entrepreneurship, along with the impact of cultural and societal factors on women's entrepreneurial journey.

The findings of this study will shed light on the current state of women entrepreneurship in India, identifying the key factors that enable or hinder women's participation in business activities. Moreover, the study aims to provide insights into effective strategies and policies that can further promote and support women entrepreneurs, contributing to their economic empowerment and overall socio-economic development.

The results of this research will be valuable for policymakers, industry associations, and organizations working towards empowering women entrepreneurs. By understanding the unique challenges faced by women in the entrepreneurial ecosystem, stakeholders can develop targeted interventions to foster a conducive environment for women's business growth and success.

Keywords: *women entrepreneurship, India, socio-economic impact, challenges, government policies, cultural factors, empowerment.*

Introduction

Entrepreneurship plays a crucial role in economic growth and development, and women's participation in this realm is increasingly recognized as a catalyst for

inclusive and sustainable progress. In India, women entrepreneurship has witnessed significant growth and has become a prominent force driving innovation, job creation, and social change. This introduction provides an overview of women entrepreneurship in India, highlighting its emergence, impact, and the challenges faced by women entrepreneurs.

In recent years, India has witnessed a notable surge in women-owned businesses across various sectors. Women entrepreneurs have demonstrated their ability to break traditional gender norms, challenge societal expectations, and create successful enterprises. This shift can be attributed to several factors, including the increasing education levels among women, improved access to finance and technology, evolving social attitudes, and supportive government initiatives.

The emergence of women entrepreneurship in India has brought about substantial socio-economic transformations. Women-owned businesses have contributed to employment generation, empowering women as job creators rather than job seekers. Additionally, these ventures have played a vital role in addressing social issues, such as gender inequality, by creating opportunities for women's economic empowerment and providing platforms for their voices to be heard.

However, despite the progress made, women entrepreneurs in India face unique challenges. Deep-rooted cultural and societal norms, including gender bias and stereotypes, still pose obstacles to women's full participation in entrepreneurship. Limited access to capital, lack of business networks, and inadequate mentoring and support systems further compound the challenges faced by women entrepreneurs. These barriers hinder their growth and impede the realization of their full potential.

Recognizing the significance of women entrepreneurship, the Indian government has introduced various policies and initiatives to promote and support women-led businesses. These measures include financial incentives, skill development programs, access to credit facilities, and dedicated platforms for networking and collaboration. However, there is a need for continuous evaluation and improvement of these initiatives to address the specific needs and challenges faced by women entrepreneurs effectively.

This study aims to delve into the current landscape of women entrepreneurship in India, analyzing the opportunities, challenges, and socio-economic impact. By understanding the experiences, motivations, and barriers faced by women entrepreneurs, this research aims to provide valuable insights to policymakers, organizations, and stakeholders. The findings will aid in designing targeted interventions, fostering an enabling ecosystem that encourages and nurtures women's entrepreneurship, and promoting their economic empowerment.

Women entrepreneurship in India has witnessed remarkable growth and has the potential to contribute significantly to the nation's socio-economic development. However, it is essential to address the unique challenges faced by women entrepreneurs and provide them with the necessary support and resources to thrive. By promoting gender-inclusive policies, fostering mentorship and networking opportunities, and challenging societal norms, India can unlock the immense potential of women entrepreneurs and create a more equitable and prosperous entrepreneurial ecosystem.

Review of Literature

1. Tambunan T has researched Asian women business owners in emerging nations. It has focused on their growth and primary obstacles. Data analysis and a review of recent significant literature serve as the foundation for the author's work. Only women business owners in small and medium firms are the subject of this essay. According to the author, this investigation also exposes three key facts in each of the different categories.
2. A paper on the motives, challenges, and outcomes of female entrepreneurs in small service enterprises has been produced by Akehurst, Simarro, and Tur. Their investigation focused on a relatively small sample of businesses in one region of Spain. The report contributes to a deeper understanding of female entrepreneurs and the factors that contribute to their success.
3. Afrin, Islam & Ahmed labored on a multivariate version of micro credit score and rural women entrepreneurship improvement in Bangladesh. A multivariate analysis approach like component analysis became performed to discover the entrepreneurship improvement related factors. Structural equation modelling turned into used to improve the version of micro credit application.
4. García P & Capitán offers with factors that make contributions to enhance lady entrepreneurship through a potential evaluation. Their work pursuits to discover what environmental modulators factors favour and make a contribution to beautify girl entrepreneurship from a gender perspective. They have shown a qualitative look at that draws on 10 interviews in depth after being tested on their contents, from a relational perspective.

Objectives

1. To know the challenges faced by women entrepreneur by conducting online survey.
2. To analyze the roles of women entrepreneurs in economy.
3. To understand about the different government schemes for women entrepreneurs

4. To understand the mindset of people through personal interviews, and list out some successful stories

Research Methodology

1. Primary data has been collected through public survey in which a structured questionnaire was created and the responses were gathered from people of different age groups and professions.
2. Case studies have been collected from secondary sources like online blogs and articles.
3. Secondary data has been collected through National and International Journals, published reports of RBI, NABARD, Census Surveys, newspapers, publications from various websites which is focused on different aspects of the government focusing on the issue of Women Entrepreneurship.

Government Schemes in India

Here are a few government schemes that have been implemented to support women entrepreneurship in India:

1. Stand-Up India Scheme: Launched by the Government of India, this scheme aims to facilitate bank loans between INR 10 lakh and INR 1 crore to at least one Scheduled Caste (SC) or Scheduled Tribe (ST) borrower and at least one woman borrower per bank branch for setting up greenfield enterprises.
2. Mahila Coir Yojana: Under the Ministry of Micro, Small & Medium Enterprises (MSME), this scheme provides financial assistance to women entrepreneurs for establishing coir-based enterprises, such as coir spinning, coir weaving, and production of coir pith compost.
3. Annapurna Scheme: Implemented by the Bharatiya Mahila Bank (BMB), this scheme aims to extend credit facilities to women entrepreneurs for setting up or expanding food catering units, including tiffin services, canteens, and food stalls.
4. Stree Shakti Package for Women Entrepreneurs: Offered by various banks, this scheme provides special benefits and concessions to women entrepreneurs in terms of interest rates on loans, collateral requirements, and processing charges. The scheme encourages and supports women in starting and growing their businesses.
5. Pradhan Mantri Mudra Yojana (PMMY): While not specific to women, PMMY is a government scheme that provides loans to micro and small enterprises, including women-owned businesses, in the form of Mudra loans. These loans are categorized into three categories based on the stage of business growth: Shishu, Kishor, and Tarun.

6. **Women Entrepreneurship and Empowerment (WEE) Scheme:** Launched by the Ministry of Skill Development and Entrepreneurship, this scheme provides training, skill development, and support for women entrepreneurs. It aims to foster an ecosystem that enables women to participate and succeed in entrepreneurial activities.

1. Do you believe that the women are facing any problems reaching managerial and decision-making positions? Yes/ No

70 percent of the people believe that the women are facing problems reaching managerial & decision making positions. While our country's women are striving for greater heights, certain factors such as those listed below hinder their efforts.

2. Do you believe that there is a gender gap in both computer professions and new professions linked to new communication technology? Yes/ No

As the government has attempted to remove the prevailing gender barrier, it can only be removed through personal decisions and awareness if it still exists.

3. What are the motivators in starting the enterprise? (give rank) Husband / Family members / Friends / Relatives / Govt. Agencies

Husbands are the best supporters for women entrepreneurs.

**4. What are the ambitions of women entrepreneurs? (Give rank)
Success Stories / Previous Association / Inherited Property / Advice of Family**

Successful women stories are motivating to them to follow.

5. What according to you are the compelling reasons for starting the enterprise? (rank) Unemployment / Dissatisfying jobs / Use of ideal fund / Use of technical skill / Leisure time on hand.

Dissatisfying jobs is the major reason for women to shift to become entrepreneur

Conclusion

This study has been able to show women from many social groups how to transform their perspective from being limited to walls to pursue entrepreneurship despite some obstacles. These many techniques have inspired current businesspeople to develop their entrepreneurial abilities to greater heights than they previously thought possible. Discussions will undoubtedly boost the number of women working since they are qualified to handle duties just as well as men. Personal experiences might inspire women to pursue entrepreneurship as a career. Case studies will stimulate their thinking and carry them to the highest, most incredible heights. The main goal was to demonstrate the economic contribution that women can make. These creative brains have the potential to boost the economy to a level which even men can't imagine. India needs women to stand up and contribute towards the economy.

TECHNOLOGY STARTUPS: INNOVATION AND GROWTH

Dr. T. Mohana Sundari

Assistant Professor

Department of Commerce with Computer Application

Nallamuthu Gounder Mahalingam College, Pollachi

mohanasundari688@gmail.com

Abstract

Business technology is applications of science, data, engineering, and information for business practices and in industrial units, such as the achievement of economic and organizational goals. The main element of technology is the idea of change in the business startups, and it will affect business and society. Business Technology students will learn the necessary skills to be fluent in business models, regulatory issues, business development, managing cross-functional and international teams, strategic management, product innovation, and go-to-market strategies to all startups are possible. There is no denying the fact technology increases the efficiency of the Startup company. The advancements in the world of robotics and applied sciences help businesses startups facilitate their customers. Moreover, due to the emergence of artificial intelligence, Startup companies can now make better use of technology. In India Technology start-up landscape has evolved to become the 4th largest in the world. Since 2010 there has been a significant rise in the growth of technology startups and in e2014 India was home to 3,000 technology start-ups. The report – first in the start-up series, conducts an in-depth analysis of the various aspects of the ecosystem. It identifies the current scale and size, factors impacting growth, and steps required to make the start-up environment more conducive. The implementation of technology in Startup business saves time and effort involved in employing human labor and increases productivity, which is in huge advantage.

Keywords: Technology, Startup, Environment, Business, Innovation.

Introduction

The Technology Is Moving Startups Beyond Conventional Tactics with its robust intervention. Technology is vital to startups, leveling the playing field and making more things than ever before accessible to new businesses. It will be always thought that it's important to be able to step outside your comfort zone when you're running a Startup business, A Startup is a young company which seed money founded by one or more entrepreneurs to develop a unique product or service and bring it to market in the competitive spirit and which will also help customers to get product at lower price and to create a greater number of employment opportunities. The biggest benefits of technology for daily business operations are the increase in flexibility so it will be useful in case of technology also.

Technology has not only helped to improve the flexibility of a number of deadlines, but advancements such as a business call app can improve the flexibility

of employees whilst reducing the need for a second phone. By its nature, the typical Startup tends to be a shoestring operation, with initial funding from the founders or their friends, families and Government. Technology and automation can help a business improve efficiencies across functions. From manufacturing to marketing, and ensure costly errors are prevented from happening. This in turn can add to business growth. Insights and Technology also prove valuable insights about the business.

A Startup business a new business that is in the initial stages of operation, beginning to grow and is typically financed by an individual or small group of individuals. It is a young entrepreneurial, scalable business model built on technology and innovation. The technology affects a firm's ability to communicate with customers. Fast shipment options allow businesses to move products over a large geographic area. When customers use technology to interact with a business, the business benefits because better communication creates a stronger public image. In startups the role of technology is very important because of its scope of growth. The role of technology enables the Startup an idea that manifests into a commercial undertaking. Indian government is serious in promoting entrepreneurship at the Startup level and has taken a number of initiatives to ensure appropriate support. easier, faster and more effective communication, better, more efficient manufacturing techniques, less wastage, more efficient stock management and ordering systems, the ability to develop new, innovative approaches, more effective marketing and promotion and new sales avenues. In this aspect it is relevant to mention 'Make in India' campaign introduced in September '14 to attract foreign investments and encourage domestic companies to participate in the manufacturing sector. The government increased the foreign direct investment (FDI) limits for most of the sectors and strengthened intellectual property rights (IPRs) protection to instill confidence in the Startup in different business segment. In the case of startups technology has important effects on business operations.

An Analysis Role of Technology for Startup

In process of industrialization startups technology is growing fast, prices are dropping, and new innovations are being rolled out constantly. If you haven't been consistently looking out for new technology to assist your business, chances are that you have missed something. Technology has changed the pace of business and raised the expectations of customers. The role of technology on business doesn't stop there. Increased access has allowed us to leverage new and different technologies to grow and adapt our Startup businesses. There certainly are technology solutions out there that can improve your business. Whether you like it or not, technology is

essential to business success. Employees rely on it for day-to-day operations. Outside companies, clients, and prospective clients evaluate you on your use of technology. HR relies on technology to train and develop employees.

Technology can assist in ensuring that you are prepared for even the most difficult communication obstacles sustainable growth of business which will enables. It's no secret that there have been some awesome technological advancements in recent years. Advancements such as Life size's video conferencing technology and Zulty's VOIP phone cloud solution are strategically designed to improve efficiency and reduce lay time in the office. Cyber attacks are growing at an alarming rate. So too are the amazing cyber-security defenses Top-notch cyber security being essential for protecting your business from thefts of data or money, primarily if you use computers and other technological tools. The latest cyber security advancements, like antivirus or cloud protection systems, secure your crucial and sensitive data from being hacked by malicious parties.

Being Startup technological innovations, Germany is leading other countries in business innovation and technology. As per IMF data, Germany has the largest business software market in Europe and accounts for nearly a quarter of the value of the business technology market on the continent. A report by the IZA Institute of Labour Economics showed that technological innovations were one of the main driving forces behind Germany's formidable economic growth. Technological adoption in German businesses reduced stagnation in business ideas, and predictive analytics gave entrepreneurs the insights to make data-backed decisions. The Sophos' Deep Learning technology. In an age where almost all-important business assets are stored in the cloud or on endpoints, it is imperative that businesses employ security technology to protect those assets.

Startups and Economy

Startups play the most crucial role in an economy. Most of us feel that startups grow in the developed economy due to adequate availability of resources. On the contrary, these ventures can start from anywhere as per market demand.

Economic Prosperity

Startups boost economic activity that helps the nation to expand. In addition to this, it also maximizes profits through technological innovations. This eventually improves the GDP of an economy and transfers money into the hands of the customers. It brings competitive dynamics to the economy to encourage existing businesses and adopt newer technologies.

Developments and Innovations

Older businesses or industry leaders are more inclined to spend money on incremental innovation and R&D on already established technologies. While startups are more concerned with cutting-edge innovation and innovative technologies. Startups are more agile and able to develop a concept into a product and update it in response to customer demand with quicker decision-making communications as they are not constrained by a multi-layered corporate bureaucracy. Employees are driven to go above and beyond to succeed by the high risks involved. Giant corporations, like Google and Microsoft, frequently buy out startups to better innovate and increase sales through their size and distribution networks.

Increase the Production of Goods and Services

Startups tend to have more advanced technology. The output of products and services increases as a result. With this, they are able to produce greater revenue from the same amount of capital inputs as more established businesses. In short, the new ventures enhance the production of goods and services which increase the revenues of the nation also.

Direct Impact

Startups also directly affect the cities they are based in, just like Google and Microsoft have impacted Mountain View and Redmond, respectively. They bring riches and a sizable influx of graduates and seasoned professionals looking for employment chances from other places.

Entrepreneurship is a Powerful Economic Force

Startups are growth-oriented forces. It is necessary to find ways to encourage competition and support transformational entrepreneurs to prevent economic stagnation. Although obtaining support at the federal level is crucial, the effort must be concentrated at the local level. Cities must support initiatives that promote entrepreneurship. Politicians and lawmakers cannot ignore entrepreneurs any longer since doing so would be detrimental to both local and national growth. Removing obstacles, fostering interaction, and assisting startups are just a handful of the ways civic leaders may give entrepreneurs a greater advantage.

Better Standard of Living

The level of living for people in society is raised through start-ups. New ideas and technologies introduced by start-ups contribute to raising the level of living in the community. For instance, a business that makes healthy products contributes to

raising the standard of living of its customers by providing solutions for their health. When they employ people, they also provide a higher standard of living. They contribute to their improvement because they now have jobs and can support themselves. To develop quickly, generate more jobs, and ultimately raise the standard of life of people via their innovations and creativity, successful start-ups must have ambition and potential.

Creates Competitive Dynamics

Startups make society very dynamic and give economic dynamism and competitiveness, which keeps the economy strong, active, and attentive. They employ their inventions to produce innovative products that are dynamic and diverse and boost the economy.

Encourage Activism

Startups alter the value of any culture in which they exist and introduce a new attitude consistent with the knowledge- and creativity-based civilization. It helps people understand their responsibilities and encourages them to think and act proactively about their job, careers, and the advancement of society. It helps people focus on delivering their best effort to their work by bringing their duties to light and assisting them in understanding how significant and relevant their tasks are in their society. Thus we can say that entrepreneurship benefits an economy and promotes its growth of it as well.

Factors that Influence Innovation

Turnover

Measures the percentage of Return on Investment over the course of the year

Financing

The availability of financial resources, equity and debts for small and medium enterprises (SMEs) (including grants and subsidies)

Post education

The extent to which training in creating or managing SMEs is incorporated with in the

Education and training system in higher education such as vocational, college, business schools, etc.

R&D

The extent to which national research and development will lead to new commercial

Opportunities and is available to SMEs.

Internal Market Openness

The extent to which new firms are free to enter existing markets

Cultural and social norms

The extent to which social and cultural norms encourage or allow actions leading to new business methods or activities that can potentially increase personal wealth and income.

Issues and Challenges

The important issues and challenges in space of Techno- Startup is witnessing by different ways. Assembling a good team is the first major requirement, failure to have one sometimes could break the Startup (Skor,2016). Tenacity of founders Skor of startups have to be tough when the going gets tough. For an outside observer, India's tech Startup ecosystem has for many years buzzed with action. Startups in popular domains like data analytics, artificial intelligence and block chain have routinely mopped up angel and seed funding; a few have even made headlines for their acquisition by global tech giants like Facebook, Google and Apple. These early stage success stories naturally inspire more young people to test the waters.

The number of startups who have successfully scaled their business to cover the whole of India or even ventured abroad can be counted on hands. For every Flipkart, Zomato and OYO Rooms; there are dozens of startups that just could not scale up despite showing a lot of promise in early stages. India has the world's largest smart phone and the Internet-connected population at 300 million, with an ever-increasing spending power thanks to a growing economy. Regulations pertaining to labour laws, intellectual property rights, dispute resolution etc. are rigorous in India. Lack of mentorship: Lack of proper guidance and mentorship is one of the biggest problems that exist in the Indian Startup ecosystem (Choudhury, 2015). Financial resources Availability of finance is critical for the startups and is always a problem to get sufficient amounts. A number of finance options ranging from family members, friends, loans, grants, angel funding, venture capitalists, crowd funding etc. are available. A large part of this population lives outside the metros, in cities and towns- big and small.

There is an even bigger emerging opportunity in serving the technology needs of Indian small and medium businesses. Some of the issues and challenges are the techno-business needs to be persistent, persuasive, and should never give up till he/she achieves desired results. Regulations Starting a business requires a number of permissions from government agencies. One such deficiency is lack of trust during hiring, in contracts and their enforcement. Our judicial system is unreliable

and unpredictably slow and as a result, businesses are never sure of being able to enforce signed contracts.

Conclusion

The Technology has revolutionized the way companies conduct business by enabling small businesses to level the playing field with larger organizations by the way of different small startups. Small businesses use an array of tech everything from servers to mobile devices to develop competitive advantages in the economic marketplace. Small start-up business owners should consider implementing technology in their planning process for streamlined integration and to make room for future expansion which enables sustainable growth of business. This allows owners to create operations using the most effective technology available for the future expansion of business.

Abstract

The ease of doing business is a critical factor in fostering economic growth and attracting investment. This abstract provides an overview of the importance of the ease of doing business, its impact on economic growth and investment, and the measures governments can take to enhance it. A favorable ease of doing business environment simplifies administrative procedures, reduces bureaucracy, and improves the overall business climate. This, in turn, promotes entrepreneurship, innovation, and productivity gains. Countries with a high ease of doing business index experience higher economic growth rates, as streamlined processes facilitate business formation and expansion, leading to job creation and increased tax revenues. Additionally, a conducive business environment attracts domestic and foreign investors by reducing risks and uncertainties and providing stability and predictability. Improving the ease of doing business requires governments to implement measures such as simplifying administrative procedures, enhancing transparency, and investing in infrastructure. Streamlined business registration, access to finance, and digitalization of services are also crucial. Furthermore, strong contract enforcement, property rights protection, and fair competition foster trust and confidence in the business environment. Governments can learn from international best practices and collaborate with private sector stakeholders to identify areas for improvement and implement targeted reforms. Thus, the ease of doing business plays a pivotal role in driving economic growth and investment. Governments must prioritize reforms to create a favorable business environment by simplifying regulations, reducing bureaucracy, and improving transparency. These efforts will unleash the potential of businesses, attract investment, and spur economic development, resulting in job creation, increased competitiveness, and improved living standards.

Keywords: *Ease of doing business, Economic growth, Investment, Business environment, Entrepreneurship*

Introduction

The ease of doing business is a comprehensive concept that encompasses the level of simplicity, efficiency, and transparency involved in the entire lifecycle of starting, operating, and growing a business within a specific country. It takes into account a wide range of factors that influence the business environment, including

regulations, administrative procedures, legal frameworks, access to finance, infrastructure, and overall governance. The significance of the ease of doing business cannot be overstated. It serves as a crucial determinant of a country's attractiveness to both domestic and foreign investors. A favorable business environment encourages entrepreneurship, innovation, and productivity, which are essential drivers of economic growth. When the process of starting a business is streamlined and bureaucratic hurdles are minimized, entrepreneurs are more likely to take the initiative to establish new ventures. This leads to increased business formation, job creation, and the development of a vibrant entrepreneurial ecosystem.

Moreover, the ease of doing business has a direct impact on investment inflows. Investors seek jurisdictions where they can operate with ease, efficiency, and transparency. When the administrative burden is reduced and regulatory processes are simplified, it becomes more enticing for both domestic and foreign investors to establish or expand their businesses. An attractive business environment fosters confidence in the stability and predictability of the market, which in turn encourages investment and capital inflows. This, in the long run, contributes to economic growth, technological advancement, and increased employment opportunities. To improve the ease of doing business, governments can implement various measures. One essential aspect is to simplify regulations and administrative procedures. Reducing unnecessary red tape, eliminating bureaucratic inefficiencies, and enhancing coordination among government agencies can significantly streamline the process of starting and operating a business. Additionally, the legal framework should be clear, transparent, and enforceable, providing businesses with a predictable operating environment.

Access to finance is another crucial factor in facilitating the ease of doing business. Governments can take steps to improve the availability and affordability of financing options for businesses, particularly small and medium-sized enterprises (SMEs). This can be achieved through initiatives such as promoting financial inclusion, establishing credit guarantee schemes, and fostering relationships between financial institutions and businesses. Investing in infrastructure is equally important. Adequate infrastructure, including transportation networks, energy supply, and digital connectivity, enables businesses to operate efficiently and effectively. Governments should prioritize infrastructure development to support the needs of businesses and facilitate the movement of goods, services, and information. Furthermore, ensuring transparency and accountability in governance is vital for improving the ease of doing business. This includes transparent and fair regulatory practices, efficient dispute resolution mechanisms, and a robust legal system that protects property rights and enforces contracts. By promoting good

governance practices, governments can instill trust and confidence in the business environment, attracting both domestic and foreign investors. Thus, the ease of doing business plays a pivotal role in fostering economic growth and attracting investment. A favorable business environment, characterized by simplicity, efficiency, and transparency, encourages entrepreneurship, drives innovation, and boosts productivity. Governments can take measures to simplify regulations, enhance administrative procedures, improve access to finance, invest in infrastructure, and ensure transparent governance to improve the ease of doing business. By doing so, countries can create an attractive environment for businesses to thrive, leading to increased economic growth, job creation, and improved standards of living.

Importance of Ease of Doing Business

The ease of doing business plays a pivotal role in fostering economic growth, attracting investment, and promoting entrepreneurship. A favorable business environment creates an ecosystem that encourages innovation, job creation, and productivity gains. When businesses can operate with ease and efficiency, it allows them to focus on their core operations and explore new opportunities. This leads to increased innovation as businesses have the freedom to experiment, develop new products or services, and adopt new technologies. Furthermore, a conducive business environment provides a platform for small and medium-sized enterprises (SMEs) to thrive. SMEs are often the backbone of economies, contributing significantly to job creation and economic development. When the barriers to starting and operating a business are low, SMEs can emerge and grow rapidly, creating employment opportunities and contributing to the overall GDP. They also foster competition and drive innovation, as they are often more agile and adaptable to changing market dynamics.

A favorable business environment also attracts both domestic and foreign investors. When the regulatory framework is transparent and the administrative procedures are efficient, it reduces the risks and uncertainties associated with business operations. This provides confidence to investors, encouraging them to allocate capital and resources into the country. Investment inflows, whether domestic or foreign, lead to increased economic activity, job creation, and technology transfer. Foreign investors often bring with them expertise, knowledge, and access to global markets, which can have significant positive spillover effects on the local economy. Moreover, a conducive business environment fosters a culture of entrepreneurship. When aspiring entrepreneurs see that the process of starting and operating a business is streamlined, they are more likely to take the leap and pursue

their entrepreneurial aspirations. This leads to a vibrant and dynamic entrepreneurial ecosystem, where new ideas, products, and services are constantly being developed. Entrepreneurship is a key driver of economic growth and social mobility, as it creates employment opportunities and contributes to the overall economic diversification of a nation. Thus, the ease of doing business is crucial for fostering economic growth, attracting investment, and promoting entrepreneurship. A favorable business environment encourages innovation, job creation, and productivity gains. It provides opportunities for SMEs to thrive, attracts domestic and foreign investors, and fosters a culture of entrepreneurship. Governments must prioritize creating a conducive business environment by simplifying regulations, reducing bureaucracy, and enhancing transparency. By doing so, they can unlock the potential of businesses, drive economic growth, and create a sustainable and inclusive economy.

Impact on Economic Growth

Countries with a high ease of doing business index have a distinct advantage when it comes to economic growth. Such countries often experience higher rates of economic growth compared to those with more cumbersome regulatory frameworks and bureaucratic procedures. A streamlined regulatory framework is a crucial aspect of a favorable business environment. When regulations are clear, consistent, and easily understood by businesses, it reduces uncertainty and minimizes the need for businesses to navigate complex legal requirements. This streamlining of regulations helps to lower compliance costs and administrative burdens. Businesses can focus more on their core operations and growth strategies, rather than being bogged down by excessive paperwork or regulatory hurdles. As a result, the formation of new businesses becomes faster and more efficient.

Efficient bureaucratic procedures are another key component of a conducive business environment. When bureaucratic processes are streamlined and conducted in a timely manner, it reduces delays and unnecessary waiting times for businesses. This expedites important activities such as obtaining permits and licenses, registering property, or accessing essential services. As a result, businesses can operate more smoothly and seize opportunities promptly, contributing to their growth and expansion. Transparent business processes also play a vital role in facilitating ease of doing business. Transparency fosters trust between businesses and government institutions, ensuring that interactions are fair, predictable, and devoid of corruption. Transparent processes enable businesses to make informed decisions and plan their operations effectively. This transparency helps to create a level playing field, reducing barriers to entry and promoting healthy competition. It

also encourages businesses to comply with regulations and engage in ethical business practices.

The growth in business activities resulting from a high ease of doing business contributes significantly to job creation. As businesses find it easier to operate and expand, they require a larger workforce to meet their needs. This leads to increased employment opportunities, reducing unemployment rates and improving the overall standard of living. Job creation has a positive impact on households, as it provides stable incomes, boosts consumer spending, and drives economic activity in related sectors. Furthermore, higher levels of business activities generate increased tax revenues for governments. As businesses thrive and expand, they contribute more to the tax base through corporate taxes, income taxes, and other forms of taxation. These additional tax revenues enable governments to invest in infrastructure development, public services, and social welfare programs, further supporting economic growth and development. Thus, countries with a high ease of doing business index tend to experience higher rates of economic growth. Streamlined regulatory frameworks, efficient bureaucratic procedures, and transparent business processes reduce costs, administrative burdens, and delays for businesses. This facilitates faster business formation, expansion, and increased productivity. The resulting growth in business activities contributes to job creation, higher tax revenues, and overall economic development. Governments should strive to create a favorable business environment by simplifying regulations, enhancing efficiency, and promoting transparency, as this will support sustainable economic growth and prosperity.

Encouraging Investment

A favorable ease of doing business environment is a crucial factor in attracting both domestic and foreign investment. Investors, whether local or international, seek jurisdictions where they can establish and operate businesses smoothly, without facing excessive bureaucratic hurdles or legal complexities. A conducive business environment reduces risks and uncertainties, providing investors with confidence in the stability and predictability of the market. This confidence plays a vital role in attracting investment and driving economic growth. A favorable ease of doing business environment offers several advantages for investors. First, it minimizes bureaucratic red tape, allowing investors to navigate the regulatory landscape more efficiently. Simplified administrative procedures and streamlined processes reduce the time and effort required to establish or expand a business. This not only saves costs but also enables investors to focus on their core business operations and growth strategies.

Second, a conducive business environment fosters transparency and fairness. It ensures that legal frameworks and regulations are clear and enforceable, protecting investors' rights and investments. It provides a level playing field, reducing the risks of arbitrary decision-making or corruption. Investors value the rule of law and a transparent regulatory framework, as it enhances their trust in the market and reduces uncertainties associated with business operations. Third, an ease of doing business environment reduces transaction costs and risks. When administrative procedures are streamlined, it becomes easier for investors to comply with regulations and obtain necessary permits or licenses. This saves time, effort, and financial resources, making investment more attractive. Additionally, a conducive business environment helps to mitigate risks associated with unpredictable regulatory changes or cumbersome legal processes.

By improving the ease of doing business, governments can attract more investment, which has numerous positive effects on the economy. Increased investment inflows bring capital, technology, and expertise, stimulating economic growth and development. Investment leads to the creation of new businesses and expansion of existing ones, resulting in job creation and improved employment opportunities. This, in turn, enhances household incomes, reduces poverty, and improves living standards. Moreover, attracting foreign investment can have additional benefits such as technology transfer, knowledge sharing, and market access. Foreign investors often bring advanced technologies, best practices, and managerial expertise, which can benefit domestic industries and contribute to overall productivity gains. Foreign companies can also serve as a gateway to international markets, helping domestic businesses access global supply chains and expand their export capabilities. Thus, a favorable ease of doing business environment is a key factor in attracting domestic and foreign investment. By reducing bureaucratic hurdles, providing transparency, and ensuring stability and predictability, governments can create an environment that attracts more investment, stimulates economic growth, and creates employment opportunities. A conducive business environment not only benefits investors but also leads to broader socio-economic development, improved living standards, and enhanced competitiveness in the global market. Governments must prioritize reforms to improve the ease of doing business to attract investment and drive sustainable economic growth.

Promoting Entrepreneurship

A favorable ease of doing business environment plays a significant role in encouraging entrepreneurship and promoting the establishment of new businesses.

When the barriers to entry are reduced, aspiring entrepreneurs are more likely to take the leap and pursue their entrepreneurial aspirations. This has numerous positive impacts on the economy and society as a whole. Simplified registration procedures are a crucial aspect of an entrepreneur-friendly business environment. When the process of registering a business is straightforward and streamlined, it reduces the time, effort, and costs associated with setting up a new venture. Entrepreneurs can quickly navigate the necessary paperwork, obtain necessary permits and licenses, and legally establish their businesses. This eliminates unnecessary bureaucratic hurdles and minimizes delays, allowing entrepreneurs to focus on the core aspects of their business idea.

Reduced bureaucratic red tape is another important element in fostering entrepreneurship. Excessive administrative burdens, complex regulations, and convoluted processes can discourage individuals from starting their own businesses. However, when governments take steps to simplify and streamline bureaucratic processes, it significantly lowers the barriers to entry. This enables entrepreneurs to devote their time and resources to developing innovative products, services, and business models, rather than getting entangled in unnecessary administrative complexities. Streamlined licensing processes further contribute to fostering entrepreneurship. Obtaining licenses and permits required to operate a business can often be time-consuming and cumbersome. However, when these processes are simplified and made more efficient, entrepreneurs can obtain the necessary approvals in a timely manner. This not only reduces the burden on entrepreneurs but also provides them with the confidence and certainty required to embark on their entrepreneurial journeys.

By promoting entrepreneurship through an improved ease of doing business framework, governments foster innovation, competition, and the emergence of new ideas. Entrepreneurs are encouraged to develop innovative solutions to address existing market gaps, consumer needs, or societal challenges. This leads to the creation of new products, services, and business models that drive economic growth and contribute to societal well-being. Furthermore, entrepreneurship and the establishment of new businesses are vital drivers of economic diversification. By supporting the emergence of a diverse range of businesses, economies become less reliant on a single industry or sector. This enhances resilience and reduces vulnerabilities to external shocks. Economic diversification stimulates job creation, enhances competitiveness, and promotes sustainable economic growth. Entrepreneurship also contributes to job creation and reduces unemployment rates. As new businesses emerge and grow, they require a skilled workforce to support their operations. This leads to the creation of employment opportunities, reducing

dependency on a few large employers and promoting a more inclusive labor market. Moreover, entrepreneurs often hire individuals who possess specialized skills or knowledge, thereby driving skill development and improving the overall human capital of the economy. Thus, a favorable ease of doing business environment plays a crucial role in encouraging entrepreneurship and promoting the establishment of new businesses. Simplified registration procedures, reduced bureaucratic red tape, and streamlined licensing processes lower the barriers to entry, allowing aspiring entrepreneurs to pursue their business ideas. Supporting entrepreneurship through an improved ease of doing business framework fosters innovation, competition, and economic diversification. It contributes to job creation, skill development, and overall economic growth. Governments must prioritize creating an environment that nurtures entrepreneurship, as it leads to increased economic opportunities, drives innovation, and contributes to the overall prosperity of a nation.

Measures to Improve Ease of Doing Business

Governments have a crucial role in enhancing the ease of doing business by implementing a range of measures that improve the business environment and reduce barriers for entrepreneurs and businesses. The following are key measures that governments can undertake:

1. **Simplifying administrative procedures:** Governments can streamline administrative procedures and reduce unnecessary paperwork to make it easier for businesses to comply with regulations. This can include simplifying the process of obtaining permits, licenses, and certifications, as well as minimizing the number of required documents and steps.
2. **Reducing bureaucracy:** Governments can work towards reducing bureaucratic red tape by eliminating unnecessary regulatory requirements, simplifying approval processes, and establishing clear timelines for decision-making. This helps businesses save time, effort, and resources.
3. **Enhancing transparency:** Transparent regulatory processes and governance practices build trust and confidence in the business environment. Governments can promote transparency by ensuring that laws, regulations, and administrative procedures are readily accessible to businesses and the public. Transparent decision-making processes, such as public consultations and clear criteria for regulatory decisions, can also contribute to a more favorable business environment.
4. **Implementing effective regulations:** Governments can develop and implement regulations that are efficient, effective, and targeted. Regulations should be designed to achieve their intended objectives while minimizing

- unnecessary burdens on businesses. Governments can conduct regulatory impact assessments to evaluate the potential costs and benefits of proposed regulations and identify ways to improve their effectiveness.
5. Investing in infrastructure: Adequate infrastructure is vital for facilitating business operations and economic growth. Governments can invest in physical infrastructure such as transportation networks, energy systems, and digital connectivity to improve logistics, reduce costs, and enhance efficiency for businesses.
 6. Streamlining business registration processes: Simplifying the process of registering a business can significantly reduce the time and effort required for entrepreneurs to start their ventures. Governments can implement online registration systems, establish one-stop shops, or introduce e-governance solutions to streamline the registration process and make it more user-friendly.
 7. Facilitating access to finance: Access to finance is critical for business growth and expansion. Governments can promote access to affordable financing options by working with financial institutions to develop innovative financial products, establishing credit guarantee schemes, and supporting initiatives that improve financial literacy among entrepreneurs.
 8. Promoting digitalization of services: Embracing digital technologies can greatly enhance the ease of doing business. Governments can promote digitalization by offering online services, simplifying tax filing and payment processes, and supporting the development of digital platforms that facilitate business transactions and interactions.
 9. Strengthening contract enforcement: Effective contract enforcement mechanisms are essential for businesses to have confidence in engaging in contractual agreements. Governments can establish robust legal frameworks, efficient dispute resolution mechanisms, and clear procedures for contract enforcement to ensure that businesses can rely on their contractual rights.
 10. Protecting property rights: Secure property rights are fundamental for business operations and investment. Governments can strengthen intellectual property protection, implement effective land registration systems, and ensure that property rights are enforceable and respected.
 11. Ensuring fair competition: Governments can create a level playing field for businesses by enforcing competition laws, preventing anti-competitive practices, and promoting fair market conditions. This encourages healthy competition, fosters innovation, and protects consumers' interests.

Thus, governments have various tools at their disposal to enhance the ease of doing business. By simplifying administrative procedures, reducing bureaucracy, enhancing transparency, implementing effective regulations, investing in infrastructure, and promoting digitalization, governments can create a business-friendly environment that supports entrepreneurship, encourages investment, and drives economic growth. These measures are essential for attracting businesses, stimulating innovation, and fostering a vibrant and competitive business ecosystem.

International Best Practices

Governments have a valuable opportunity to learn from international best practices and benchmark their ease of doing business initiatives against successful countries. This learning process can help governments identify areas for improvement and implement effective reforms. There are several ways in which governments can leverage international best practices:

1. **World Bank's Doing Business Index:** The World Bank's Doing Business Index provides an objective assessment of the ease of doing business in different countries. Governments can utilize this index to evaluate their own performance and identify areas that need improvement. The index covers various indicators, such as starting a business, getting credit, protecting investors, and enforcing contracts. By analyzing the indicators and rankings, governments can gain insights into areas where they may be lagging behind and develop strategies to enhance their business environment.
2. **Learning from successful countries:** Governments can study countries that have excelled in creating a favorable ease of doing business environment. By examining the policies, regulatory frameworks, and initiatives implemented by these countries, governments can gain valuable insights and adapt relevant practices to their own contexts. This learning process can help identify innovative approaches, effective regulations, and successful strategies that can be implemented to improve the ease of doing business.
3. **Collaboration with private sector stakeholders:** Engaging with private sector stakeholders, such as business associations, industry leaders, and entrepreneurs, is crucial for understanding their perspectives, challenges, and recommendations. Governments can establish regular dialogue and consultation mechanisms to seek feedback from businesses and incorporate their insights into policy-making processes. Collaborating with the private sector can help identify practical solutions, address regulatory bottlenecks, and design reforms that align with the needs and aspirations of businesses.

4. **Fostering public-private partnerships:** Governments can establish public-private partnerships (PPPs) to jointly work towards enhancing the ease of doing business. PPPs allow for shared responsibility, expertise, and resources, enabling governments and the private sector to collaborate in developing and implementing reforms. By leveraging the knowledge, experience, and networks of private sector partners, governments can effectively address barriers, improve processes, and implement reforms that enhance the business environment.
5. **Creating feedback mechanisms:** Governments can establish mechanisms to gather feedback from businesses regarding their experiences and challenges in operating within the country. This can include surveys, focus group discussions, or online platforms where businesses can provide their feedback, suggestions, and concerns. Such feedback mechanisms enable governments to have a deeper understanding of the issues faced by businesses and take targeted actions to address them.
6. **Benchmarking against best practices:** Governments can benchmark their ease of doing business initiatives against countries that have achieved notable success. By comparing their performance against countries with similar economic structures or challenges, governments can identify gaps and implement measures to bridge them. Benchmarking against best practices provides valuable insights and allows governments to set realistic goals for improvement.

Thus, governments can learn from international best practices to enhance the ease of doing business. Leveraging resources such as the World Bank's Doing Business Index, collaborating with private sector stakeholders, fostering public-private partnerships, and establishing feedback mechanisms are essential steps in identifying areas for improvement and designing targeted reforms. By adopting successful practices and adapting them to their own contexts, governments can create a more business-friendly environment, attract investment, stimulate economic growth, and improve the overall competitiveness of their nations.

Conclusion

The ease of doing business is a critical factor in driving economic growth, attracting investment, and fostering entrepreneurship. A favorable business environment creates the conditions for businesses to thrive, innovate, and contribute to the overall development of a nation. Governments play a crucial role in prioritizing reforms and implementing measures to improve the ease of doing business. A conducive business environment reduces barriers for businesses, making

it easier for them to operate, grow, and succeed. Simplifying regulations and administrative procedures is essential to minimize complexities and bureaucratic hurdles. Governments can review and streamline regulations, eliminating unnecessary requirements and simplifying processes to ensure they are efficient, transparent, and easy to navigate. This simplification helps businesses save time, effort, and resources, enabling them to focus on their core activities and strategies.

Reducing bureaucracy is another key aspect of improving the ease of doing business. Governments can work towards minimizing excessive paperwork, cumbersome approval processes, and administrative delays. By eliminating unnecessary red tape and creating efficient administrative structures, businesses can operate more efficiently, respond quickly to market opportunities, and make timely decisions. This reduces transaction costs and improves the overall business climate. Enhancing transparency is crucial for building trust and confidence in the business environment. Governments can promote transparency by ensuring that laws, regulations, and government procedures are readily accessible to businesses and the public. Transparent decision-making processes, such as public consultations, clear criteria for regulatory decisions, and open data initiatives, contribute to a fair and accountable business environment. Transparent governance practices help businesses make informed decisions, increase predictability, and reduce corruption risks.

Investing in critical infrastructure is essential for improving the ease of doing business. Governments must prioritize infrastructure development, including transportation networks, energy supply, digital connectivity, and logistics capabilities. Efficient infrastructure reduces transportation costs, facilitates the movement of goods and services, and improves connectivity. Reliable and affordable access to energy and digital infrastructure is vital for businesses to operate efficiently, access markets, and leverage technological advancements. Creating a favorable business environment unleashes the potential of businesses and attracts investment. A conducive business environment fosters innovation, entrepreneurship, and productivity gains. It encourages businesses to invest in research and development, adopt new technologies, and improve their operations. This, in turn, drives economic growth, job creation, and increased tax revenues.

Moreover, an improved ease of doing business attracts domestic and foreign investment. Investors seek jurisdictions with favorable business environments that offer stability, predictability, and a level playing field. A conducive business environment reduces risks and uncertainties, providing investors with confidence to invest capital and resources. Foreign direct investment brings new technologies, expertise, and market access, contributing to economic diversification and enhancing

competitiveness. The benefits of a favorable business environment extend beyond economic growth. Job creation reduces unemployment rates, increases household incomes, and improves living standards. Enhanced competitiveness stimulates innovation, raises productivity, and enables businesses to compete in global markets. The ease of doing business is also crucial for promoting social inclusiveness, as it enables businesses in underserved areas and supports entrepreneurship among marginalized populations. In conclusion, improving the ease of doing business is vital for driving economic growth, attracting investment, and fostering entrepreneurship. Governments must prioritize reforms that simplify regulations, reduce bureaucracy, enhance transparency, and invest in critical infrastructure. By creating a favorable business environment, nations can unleash the potential of businesses, attract investment, and accelerate economic development. This leads to job creation, increased competitiveness, and improved living standards for the benefit of all citizens.

INSIGHT OF SAGARMALA SAGARTAT SAMRIDHI YOJANA SCHEME WITH SPECIAL ADDRESS TO MAKE IN INDIA, SHIPPING SECTOR

Dr. B. Rohini

Assistant Professor

PG Department of Commerce with International Business
Nallamuthu Gounder Mahalingam College, Pollachi

Ms. S. Nandhini

II M.com IB

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Make in India is an initiative by the Government of India to create and encourage companies to develop, manufacture and assemble products made in India and incentivizes dedicated investments into manufacturing. The policy approach was to create a conducive environment for investments, develop a modern and efficient infrastructure, and open up new sectors for foreign capital. The initiative targeted 25 economic sectors for job creation and skill enhancement and aimed "To transform India into a global design and manufacturing export hub". The aim is to improve the manufacturing output of India and reduce dependence on foreign imports for which campaigns like "Atmanirbhar Bharat" which translates into "Self-Reliant-Green" India has also been started. It focuses specifically on "Startups", MSME's, young scientists, R&D labs and traditional manufacturing units that have little access to financial support but are an integral part of the Indian manufacturing ambit. The paper focus on Sagarmala – Sagartat Samridhi Yojana scheme under the Make in India Manufacturing sector, that enhance the growth of Shipping Industry.

Keywords: Manufacturing, Decision, Growth, Shipping Industry, Development.

Introduction

*"Design in India is as
Important as make in India"*

-PM Narendra Modi

The Make in India initiative was launched by Prime Minister in September 2014 as part of a wider set of nation-building initiatives. Devised to transform India into a global design and manufacturing hub, Make in India was a timely response to boost the domestic manufacturing sector and also augment investment into the country. Manufacturing currently accounts for slightly more than 15% of national GDP. The government intends to create jobs, attract significant foreign direct investment, and transform India into a favored manufacturing hub worldwide. The 4 pillars of Make in India initiative are New Mindset, New Sectors, New Infrastructure, and New

Processes. Hence, the Make in India initiative not only aims to boost the manufacturing sector but also other sectors. Make in India has 25 focus sectors. The main aim of the Make in India initiative is to make India a global manufacturing hub by encouraging domestic as well as international manufacturing companies to invest in India, manufacture in India and to generate employment in India.

Highlights of Make in India

Since years policy-makers have been debating how to give an impetus to manufacturing in India and make India a Global Manufacturing Hub. But it is Narendra Modi, who within a matter of months, launched the 'Make in India' campaign to facilitate investment, foster innovation, enhance skill development, protect intellectual property & build best in class manufacturing infrastructure.

The "Make in India" initiative is based on four pillars, which have been identified to give boost to entrepreneurship in India, not only in manufacturing but also other sectors.

- **New Processes:** 'Make in India' recognizes 'ease of doing business' as the single most important factor to promote entrepreneurship. A number of initiatives have already been undertaken to ease business environment. The aim is to de-license and de-regulate the industry during the entire life cycle of a business.
- **New Infrastructure:** Availability of modern and facilitating infrastructure is a very important requirement for the growth of industry. Government intends to develop industrial corridors and smart cities to provide infrastructure based on state-of-the-art technology with modern high-speed communication and integrated logistic arrangements. Existing infrastructure to be strengthened through up gradation of infrastructure in industrial clusters. Innovation and research activities are supported through fast paced registration system and accordingly infrastructure of Intellectual Property Rights registration set-up has been upgraded. The requirement of skills for industry are to be identified and accordingly development of workforce to be taken up.
- **New Sectors:** 'Make in India' has identified 25 sectors in manufacturing, infrastructure and service activities and detailed information is being shared through interactive web-portal and professionally developed brochures. FDI has been opened up in Defence Production, Construction and Railway infrastructure in a big way.
- **New Mindset:** Industry is accustomed to see Government as a regulator. 'Make in India' intends to change this by bringing a paradigm shift in how

Government interacts with industry. The Government will partner industry in economic development of the country.

The Make in India program has been built on layers of collaborative effort. There has been from Union Ministers, Secretaries to the Government of India, state governments, industry leaders, and various knowledge partners.

Manufacturing Sector

The link between shipping and manufacturing might be one of the most important connections in the business world. The energy sector of manufacturing is now expanding and **shipping carriers** are benefiting greatly. Often when the manufacturing industry expands, so does the shipping industry. Just as a spike in manufacturing helps shipping, it turns out that improved shipping can also boost manufacturing.

Shipping

According to the Ministry of Shipping, around 95% of India's trading by volume and 70% by value is done through maritime transport. In November 2020, the Prime Minister, Mr. Narendra Modi renamed the Ministry of Shipping as the Ministry of Ports, Shipping and Waterways. The Indian Government plays an important role in supporting the ports sector. India has 12 major and 200+ notified minor and intermediate ports. Under the National Perspective Plan for Sagarmala, six new mega ports will be developed in the country. The Indian ports and shipping industry play a vital role in sustaining growth in the country's trade and commerce.

Make in India' policy of the Government of India, Ministry of Shipping has reviewed the ROFR (Right of First Refusal) licensing conditions for chartering of vessels/Ships through tender process for all types of requirements. To promote the demand of the ships built in India, priority in chartering of vessels is given to vessels built in India, flagged in India and owned by Indians under the amendments in the guidelines of ROFR (Right of First Refusal).

Sagarmala - Sagartat Samridhi Yojana

Prime Minister launched the Sagarmala - Sagartat Samridhi Yojana during the release of "Maritime India Vision 2030" in March 2021. NSAC is the apex body providing policy directions and guidance for port led development-Sagarmala projects and reviews its implementation.

The Sagarmala Programme was approved by the Union Cabinet in 2015 which aims at holistic port infrastructure development along the 7,516-km long coastline through modernisation, mechanisation and computerisation. The Sagartat Samriddhi Yojna has identified a total of 1,049 projects with an estimated cost of Rs.

3,62,229 crores. The Sagarmala Programme is an initiative by the Shipping Ministry to utilize India's 7,500 km of coastline and advantageous location in the Indian Ocean Region. It is a port-led development initiative that aims to enhance infrastructural growth, which will improve logistical competitiveness, increase industrialisation and job creation, and ultimately support the growth of the coastal economy as a whole.

It strives to improve connection with major economic centres and beyond by expanding rail, inland water, coastal, and road services. It also promotes the optimal modal split and develops access to new growth zones.

Vision of Sagarmala

The vision of the Sagarmala Programme is to reduce logistics costs for EXIM (Export-Import) and domestic trade with minimal infrastructure investment. Sagarmala could boost India's merchandise exports to USD 110 billion by 2025 and create an estimated 10 million new jobs (four million in direct employment). The Ministry has started the ambitious Project of Sagarmala Seaplane Services (SSPS) with potential airline operators.

Pillars of Sagartat Samridhi Yojana

- Port modernisation includes the creation of new ports as well as increasing the capacity and efficiency of existing ports.
- Port connectivity includes the creation of logistics parks, the use of inland waterways and coastal shipping, as well as the development of new rail and road connections and the upgrading of existing ones.
- Industrial clusters, coastal employment zones (CEZ), maritime clusters, smart industrial port cities, and port-based special economic zones are all examples of port-led industrialisation (SEZ).
- Development of fishing ports and fish processing facilities, coastal tourist initiatives, and community skill building include coastal community development. An eco-friendly means of freight transportation is coastal shipping and inland canal transit.

Components of the Sagarmala Programme

- **Port Modernization & New Port Development:** De-bottlenecking and capacity expansion of existing ports and development of new Greenfield ports.
- **Port Connectivity Enhancement:** Enhancing the connectivity of the ports to the hinterland, optimizing cost and time of cargo movement through multi-

modal logistics solutions including domestic waterways (inland water transport and coastal shipping).

- **Port-linked Industrialization:** Developing port-proximate industrial clusters and Coastal Economic Zones to reduce logistics cost and time of EXIM and domestic cargo.
- **Coastal Community Development:** Promoting sustainable development of coastal communities through skill development & livelihood generation activities, fisheries development, coastal tourism etc.
- **Coastal Shipping & Inland Waterways Transport:** Impetus to move cargo through the sustainable and environment-friendly coastal and inland waterways mode.

Initiatives Under Sagarmala Programme to Unlock the Potential of Waterways

- Ministry of Shipping has notified licensing relaxation to foreign flag vessels for carrying transshipment containers, empty containers, fertilizers and agricultural, fisheries, animal husbandry and horticultural commodities on coastal routes.
- Under coastal berth scheme, financial assistance up-to 50% of total project cost or maximum funding limit can be provided to the implementing agency for creation of infrastructure to promote movement of cargo/passengers by sea/National Waterways.
- Minimum 40% discount is offered by major ports on vessel and cargo related charges to coastal vessels.
- To promote inland water transport (IWT) in the country, 111 (including 5 existing and 106 new) National Waterways (NWs) have been declared under the National Waterways Act, 2016.
- Feasibilities studies have been completed by the Inland Waterways Authority of India (IWAI) .
- Fairway development work in Vijayawada-Muktyala stretch of river Krishna in Andhra Pradesh) has been completed.

Investments Schemes for Shipping Sector through Make In India Scheme:

The Government is providing ample scope of investment opportunities for Shipping Sector,

- Shipbuilding
- Ship repair
- Ship recycling
- Development of inland waterways and inland water transport

- Port and harbor construction projects
- Port and harbor maintenance projects

Need of Make in India in Shipping Sector

The 'Make in India' initiative offers tremendous opportunities in the maritime sector, particularly in the shipbuilding and ship repair industry. Its strategic role in tapping all Indian vessel requirements within the country and the benefits of a vibrant shipbuilding industry cannot be overemphasized. The government's shipbuilding policy provides a boost by encouraging Indian shipyards to bag foreign orders in a more aggressive manner and meet the requirements of Indian ship-owners. A cost-effective & skilled manpower base, established steel industry, technology know-how, and increased demand in domestic shipbuilding could enhance India's global shipbuilding share from one percent to five percent by 2020. The Indian Navy too is giving a strong push to the Make in India initiative as it strives for self-reliance in the production of warships. A plan to manufacture LNG vessels at the Cochin Shipyard has also been approved. Other Indian shipyards have developed investment plans and accessed capital markets to play an increasing role under the Make in India program. The government has been incredibly successful in reaching its goal thus far thanks to the Programme's quick daily progress, and we have great faith in its capabilities, strength, and power. The Sagarmala Project will enable India to improve its game in terms of commerce, logistics, and port development.

The Sagarmala Project will assist in establishing a network of roads, trains, and waterways. It will ultimately drive down the cost of various goods since water transportation is 5%–6% less expensive than other means of transportation. Additionally, it will contribute to an increase in India's GDP.

The Sagarmala Pariyojna can provide more than a million people with assistance and full-time employment near ports and beaches. The initiative will make it easier for those who live close to ports to make a good income. The funding will aid in the development of rural communities close to ports or beaches.

Conclusion

The make in India initiative was launched to encourage manufacturing in India and ultimately transform India into a global hub for the same. The link between shipping and manufacturing is as strong as ever. As it grows to be one of the major economies in the world, India will require a vibrant and strong maritime industry for economic as well as strategic reasons. There are many factors conducive to the development of a robust and sustainable maritime sector. The Sagar Mala Project's intensive and efficient port operations and coastal community development have the

potential to dramatically increase India's GDP. It has already given residents of 72 districts along the coastal area growth, jobs, and essentials of life. As it grows to be one of the major economies in the world, India will require a vibrant and strong maritime industry for economic as well as strategic reasons. There are many factors conducive to the development of a robust and sustainable maritime sector. Government has a role to develop the Indian port sector, which would contribute to the growth of Indian shipping. The players in the shipping and associated sectors have also a role to play for the development of the industry, for it to carve a niche in the world shipping map.

THE FOURTH INDUSTRIAL REVOLUTION (I4.0) IN INDIA: CHALLENGES & OPPORTUNITIES

Dr. T.S. Kavitha

Associate Professor in Commerce
Nallamuthu Gounder Mahalingam College
Pollachi, Coimbatore Dist, Tamilnadu

Abstract

The so-called fourth industrial revolution, which is being hailed as the next industrial revolution, is becoming a strong force on a global scale. It is characterized by the rising digitalization and connectivity of its business models, value chains, and products. Data volumes, computing power, the Internet of Things (IoT), business analytics, augmented reality, artificial intelligence, elemental design, simulation, advanced robotics, additive manufacturing, sensor-based technologies, and cyber-physical systems are some of the emerging technologies that are powering Industry 4.0. Industry 4.0 is the next step in fusing traditional and contemporary industrial technology. It would entail the convergence of the real and virtual worlds. As a result, the "Smart Factory" will be created, which is distinguished by adaptability, resource efficiency, ergonomic design, and direct integration with business partners. Due to the fact that modern production is cutting edge and highly skilled. The manufacturing industry is currently structurally changing on a worldwide scale. Despite relying significantly on its service sector for growth, India's manufacturing sector must have a big impact on the country's economy. The strong growth in India now needs to be supported by manufacturing. The 'Make in India' program was started by the Indian government to promote India as a global manufacturing base. After agriculture, the manufacturing sector contributes significantly to employment in India and is particularly important for MSMEs. It is crucial to boost manufacturing's proportion of the country's Gross Domestic Product from 16% to 20% in order to achieve the goals of growth and employment by 2022, to 25%, and to produce 100 million new employments. The foundation for implementing the cutting-edge technology needed for the industrial revolution is digital connectivity. The presence of businesses on the internet has become inescapable due to the growing internet penetration in India and the growth of e-Commerce. The Government of India started the Digital India Program to ensure complete broadband connectivity in industrial clusters with the goal of transforming India into an I4.0-adopted knowledge economy and digitally empowered society.

The Evolution of the Connected Ecosystem

Water and steam power caused the first industrial revolution by enabling the transition from manual to automated manufacturing. Electricity served as the foundation for the second industrial revolution's mass production. After two centuries of continuous advancement driven by mechanization, electrification, and the introduction of the assembly line, the global industrial sector adopted information technology in the 1960s as computers dominated technological advancement and sped up the process of human labor. Manufacturing was

automated during the third industrial revolution using electronics and computer technologies. The fourth is the present trend in manufacturing technology toward automation and data sharing. Since then, both operational technology and information technology have advanced significantly, and I4.0 has opened up a huge array of opportunities on the factory floor.

Mid-1780s: the first industrial revolution
Mechanization: Steam and water-powered mechanization. In 1784, the first mechanized loom was created. (mid-1870s) Second Industrial Revolution
Electrification: Using electrical power, assembly lines facilitated mass production energy. The first conveyor belt was set-up by Cincinnati's laughter house in 1870.

3rd Industrial Revolution (mid 1960s) Automation

Information technology led automation as computers were developed to simplify various tasks. The first program able logic controller was invented in 1969.

4th Industrial Revolution (2011) Cyber Physical Systems

While Industry 3.0 focused on the automation of single machines and processes, Industry 4.0 focuses on the end-to-end digitisation of all physical assets and integration into digital ecosystems with value chain partners. Generating, analysing and communicating data seamlessly underpin the gains promised by Industry 4.0, which networks a wide range of new technologies to create value.

Digitisation and Integration of Vertical and Horizontal Value Chains

Industry 4.0 digitizes and integrates processes vertically across the entire organisation, from product development and purchasing, through manufacturing, logistics and service. All data about operations processes, process efficiency and quality management, as well as operations planning are available real-time, supported by augmented reality and optimised in an integrated network. Horizontal integration stretches beyond the internal operations from suppliers to customers and all key value chain partners. It includes technologies from track and trace devices to real-time integrated planning with execution.

Digitisation of Product and Service Offerings

Digitisation of products includes the expansion of existing products e.g. by adding smart sensors or communication devices that can be used with data analytics tools, as well as the creation of new digitized products which focus on completely integrated solutions. By integrating new methods of data collection and

analysis, companies are able to generate data on product use and refine products to meet the increasing needs of end-customers.

Digital Business Models and Customer Access:

Leading industrial companies also expand their offering by providing disruptive digital solutions such as complete, data-driven services and integrated platform solutions. Disruptive digital business models are often focused on generating additional digital revenues and optimizing customer interaction and access. Digital products and services frequently look to serve customers with complete solutions in a distinct digital ecosystem.

Industry 4.0 Key Technologies

I4.0 brings together technology forces such as Internet of Things (IoT), cloud computing, big data analytics, additive manufacturing, Augmented Reality (AR), robotics, cyber security and Machine-to-Machine (M2M) communication. While some of these digital technologies are already in use in industrial applications, some others are still not ready for application at scale. Manufacturers need to carefully pick the right mix of technologies that would maximize returns on investment.

Internet of Things (IoT)

IoT enables real-time machine-machine interaction by connecting them chain Big Data Analytics: The use of data analytics to support quick and wise decision-making Augmented reality: By utilizing mathematical modeling, AI, and virtual reality, AR could improve company processes.

Cyber security

To protect data security, cyber security aids in the establishment of secure communication protocols. Cloud computing: Cloud computing provides a platform with enormous processing, storage, and networking capabilities, allowing for easier interaction across diverse technologies. Manufacturing Additive: By shortening the lead time from product design to product delivery and enhancing customization, additive manufacturing facilitates production in small batches in a time- and cost-efficient manner. Robotics: Connected robots that make it possible to automate production processes and increase productivity using industrial equipment and sensors to capture and transmit data directly to software is known as machine-to-machine (M2M) technology.

Industry 4.0's current state in India

By 2023, the I4.0 market is projected to grow to a global value of INR 13,90,647 crore.¹ I4.0 has begun to be adopted by nations such as the United States, China, Japan, and European countries like the United Kingdom, Ireland, Sweden, and Austria. The manufacturing industry is an essential component of India's long-term goal, the sixth-largest manufacturing nation, as seen by the government's intense emphasis on the "Make in India" program. By 2022, the government wants to increase manufacturing's current 17% contribution to GDP to 25%. The government has implemented a variety of initiatives and policy reforms, including the implementation of the GST (Goods and Services Tax) and relaxing the FDI policy.

Currently, India In terms of I4.0 adoption, it trails behind its international competitors. In India, a sizable chunk of the manufacturing industry is still in the post-electrification stage, with technology usage restricted to stand-alone equipment. I4.0's fundamental tenet, the integration of physical systems on digital platforms, is still in its infancy. Additionally, due to the significant cost barrier, the Micro, Small & Medium Enterprises (MSME) group has very limited access to automation technology.

The following can be used to describe the I4.0 implications' current situation in India:

1. Lack of knowledge of the technology
2. A methodical approach to upgrading.
3. A reluctance to use new technologies
4. Access to cheap labor causes hesitation to deploy automation
5. Product volume is not too great in order to adopting automation improves investment return on investment.
6. There are not enough skill sets available to utilize automation.
7. Government's Role: The Indian government is a crucial participant in the Industry 4.0 transformation. The fourth industrial revolution in India will require a considerable push in terms of resources, infrastructure, technological know-how, and exposure-areas.

To facilitate the smooth implementation of the Internet of Things, telecommunications infrastructure must be improved. Adequate cyber security rules must be developed. The convenience of doing business must also be improved. And both institutions and socio-political platforms must assume this obligation.

Governmental Initiatives

In order to capture a sizeable portion of the global IoT market¹⁵, the Indian government introduced an IoT Policy in 2015 with the goals of skill development,

technological advancements, and the creation of IoT goods tailored to Indian needs. A National Policy for Advanced Manufacturing is also being developed by the government to increase India's competitiveness in the global manufacturing market. Recently, the government declared the beginning of a mission on Cyber-Physical Systems (CPS) and allocated a starting corpus of INR 100 crore. These plans would be essential tools to increase the contribution of manufacturing output once completely implemented.

The 2017 National Manufacturing Policy By consolidating the Make in India initiative and putting a focus on the adoption of digital platforms for Industry 4.0, the government unveiled a new policy in July 2017 to increase the manufacturing sector's share of the GDP to 25%. The Centre of Excellence (CoE) on IT for Industry 4.0 would serve as a knowledge hub for entrepreneurs and startups, spreading the idea of IT and its use in I4.0.

National Artificial Intelligence Program The government stated that NITI Aayog will establish a road plan for a national AI program that will concentrate on creating new AI applications in the Union Budget 2018–19.

Cyber-physical systems mission

As per The Department of Science and Technology will start the CPS mission to support the establishment of CoE for training in robotics, AI, digital manufacturing, etc. as part of the Union Budget 2018–19.

Organizations' Functions

- If manufacturers see a return on their investments, especially major, international manufacturing corporations, they will adopt Industry 4.0. and gain from Industry. 4.0 improvements:
- Have a long-term strategic vision to guide the change of your organization.
- As Adopter (Sector of Manufacturing):
- Make MSMEs a part of their supplier chain
- embrace business model disruption
- Invest in Leadership 4.0 as a Supplier (Technology Sector): To raise the caliber of output, spend money on I4.0 research and innovation.
- Continue to create industry-specific vertically integrated technological solutions. 4.0

It is crucial to create a roadmap for technology adoption at all levels that is appropriate for varied operational scales, especially for MSMEs. The institute/organization is advised to implement the following guidelines. Talent Pool: Put an emphasis on retaining talent and retraining it; enable timely upskilling of the

workforce in line with I4.0 trends. To encourage creativity and trust within the business, create a working environment where people and robots can coexist. To reinforce corporate data privacy and cyber security policies in light of potential dangers posed by a linked ecosystem.

Role of Academia

Promote a culture of research in emerging fields like I4.0 and serve as the test beds for innovation and new learning. Improve the caliber of teachers and modernize the learning infrastructure. Align course curricula with I4.0 requirements, with well-regulated and industry-relevant updated content. Focus more on practical, result-oriented knowledge than theoretical content.

Obstacles to I4.0 Implementation

A number of obstacles must be removed in order to successfully embrace cutting-edge technologies and realize Industry 4.0's potential. Below are a few significant difficulties:

- Absence of a distinct digital vision
- A lack of data analysis skills
- Promoting a robust digital culture
- Data Security Digitization Level Large volumes of client data that are recorded, stored, and analysed carry a significant danger of being misused.
- A lack of uniformity Price and technical problems
- Inadequate Physical and Digital Infrastructure India continues to lack basic infrastructure, like roads and electricity, despite government efforts. Moreover, India's telecommunications network continues to experience slow data speeds and Unstable connection. 79 percent of Indian firms have identified cyber security as one of the top five business concerns, according to KPMG's 2017 India Cybercrime Survey Report. In addition to cyber security, the legal framework governing data privacy would need to be tightened.
- The high cost of digital technologies may make it difficult to build the factory of the future, which will have a fully interconnected system. Due to the high cost of these technologies, it is still difficult for MSMEs, who serve as the foundation of India's manufacturing industry, to access digital technology.
- Lack of Industry 4.0-ready corporate executives in India poses a skill and talent issue that may thwart efforts to make the technology widely available in the nation. Although, India Inc. has excellent traditional leadership, but it lacks digital CXOs with a clear strategy for embracing Industry 4.0. The time is now for agility. India should put leadership and overcoming this challenge first.

Although the majority of CXOs recognize the need for Industry 4.0, their ability to execute is largely unproven.

- **Skills Gap in the Workforce:** India's existing workforce is underqualified and unexperienced in cutting-edge technologies like data analytics, additive manufacturing, and IoT. To enable an industry 4.0-ready workforce, the government, business, and academics must work together.

Opportunities Should Be Seized

India's INR10,85,224 crore IT services sector is one of the main advantages of the country's entry into the I4.0 era.¹⁸ India is one of the most sought-after locations for IT outsourcing in the world and is home to some of the biggest IT firms. India's infrastructure and IT know-how can now be used locally to spur I4.0 India adoption. In the I4.0 age, the IT industry is anticipated to have a significant impact. In order to take advantage of the untapped opportunity, Indian IT companies are already looking for ways to strengthen their I4.0 skills through R&D. For instance, a prominent IT company recently said that a "Factory of the Future" lab would be established in Bengaluru. According to reports, the lab is working on cutting-edge technological solutions to deeply integrate cyber and physical systems. In addition, Indian IT companies have been looking towards organizational alliances and partnerships to expand their I4.0 skills and offers. Companies have begun putting more emphasis on collaborating with businesses from different industries and nations to develop new IoT and M2M solutions that are pertinent to I4.0. For instance, an I4.0 cloud platform has been announced in conjunction with a global leader in automation with headquarters in Germany by a Bengaluru-based IT company. Another scenario is a major Indian IT company looking to collaborate with a significant Japanese IT firm in the field of smart factories. According to analysts, the fourth industrial revolution will modernize the production base through 4.0 solutions, enabling capital to be employed more profitably. Industry will need less capital since it will be able to better utilize its foundation. Earnings and Return on Investment The number of employed will increase and lead to new investment opportunities, which is essential for funding new projects and generating employment. Industry 4.0 technology adoption will lead to an improvement in both the quality of the manufactured goods and labor productivity. Due to the rise in demand for well-made goods, businesses will be forced to expand their capacity in order to keep up with the demand. There is no denying that some low-skilled positions will go. However, it is anticipated that increased capacity will positively impact job growth.

Conclusion

Industry associations might lead the way in India's adoption of I4.0. Overall, industry associations would need to work together to promote I4.0 adoption. These organizations can take action to spot technology advancements, locate infrastructure and political needs, evaluate the impact on various industries, and draw out a road map for worker upskilling. Additionally, the associations may closely cooperate with the government to promote I4.0 adoption more quickly in India. Adoption of Industry 4.0 might propel India to the top of the manufacturing food chain. Jobs would be created as a result of the consumerist tendency in India's demand and volume growth, which is anticipated to somewhat offset job losses brought on by I4.0. Government can focus on improving the ease of doing business and attracting FDI investments in the space through policy reforms. Collaboration between countries, corporations as well as academia would catalyse I4.0 adoption.

TECHNOLOGY STARTUPS: INNOVATION AND GROWTH

Dr. P. Archanna

Assistant Professor and Head I/C

UG Department of Commerce CA

Nallamuthu Gounder Mahalingam College Pollachi

Abstract

India the largest country in population is now moving towards the economic growth. Inspite of huge availability of man power for working, now the country concentrates on entrepreneurship. With lots and lots of unique idea, the new entrepreneurs are emerging day to day. To support and motivate the emerging entrepreneurs, Government of India is taking lot of initiatives. Startup India is one such scheme. A person with a unique idea and skill, can avail this startup scheme through the banks. Through the emergence of new business, lots of employment opportunities are being created, which leads to the growth of a nation. In this article, innovation and growth of technology through startups is analysed.

Keywords: *Startups, Technology, Innovation, Growth, Entrepreneur*

Introduction

Startups create innovative solutions and technologies. Many startups in India are operating in remote areas with the aim to support the overall local community. When Indian start-ups maintain the requirement for a requisite product or service, it reduces the import of that foreign product or service. This not only minimises the cash flow to another nation but increases the flow of capital within the Indian market, which is pivotal to the growth of the Indian economy. When a startup creates employment for locals, they also begin to purchase goods and services, increasing the influx of cash and revenue to the government and thus boosting the economy. When several startups are blooming in one location, the market of that geography rises as well. Since many individuals desire to reside there to work, this dramatically changes the infrastructural facilities of that city., When infrastructure upgrades, numerous guesthouses, homestays, food outlets, and transport service unlocks, creating countless job opportunities and increasing the city's revenue.

Role of Startups

Nowadays, more and more startups are growing with modernization and creativity, which have a large potential to change the world's economy. Startups can be initiated anywhere, and it's often the countries with the highest needs that have the biggest opportunities. Startups are at home in underdeveloped countries. Such

environments offer many problems that startups can take advantage of, not just to make a profit, but also make an impression in a struggling economy. Entrepreneurship is the only way to augment the economic growth of any nation. A small startup idea can be turned into a big innovative solution that can change the future of developing countries.

Startups, being small entities, play a dominant role in economic growth. The reason behind this is that they generate jobs, which means lower unemployment rates, and lower unemployment means an economy that is refining and improving. Startups also generate competition and inspire individuals to be more pioneering and inventive because new entrepreneurs have novel ideas to present, which stirs even more innovation and creativity. Since the number of startups is growing, competition between them is also increasing. But healthy competition is significant for startups and customers to curate the startup environment. As of now, many startups have introduced the latest technologies like the Internet of Things, Artificial Intelligence, Robotics, etc. Most technology giant companies outsource their tasks to startups nowadays, which will help to upsurge the cash flow of startups.

Employment Creation

One of the main advantages of startups is that it generates new jobs. Global data shows that startups are creating more jobs in any country than large companies or enterprises in the same sector. Thus it lowers the unemployment problems in developing nations like India.

Wealth Creation

As entrepreneurs are attractive investors by supporting and financing their own resources, the people of the nation would get the benefit when the startups grow. As money is allocated within society, wealth is created within the nation.

Research and Development

Research and development (R & D) in developing countries can be highly subsidized by startups as they often deal with high technology and knowledge-based services. The startup's R & D team supports as an innovation searcher and retains the company's growth. It supports well in an applied orientation or research work in a university or other educational institution. Consequently, startups can inspire students or researchers to implement their ideas by working at a startup.

Innovation and Growth

Startups come in all shapes and sizes. While small in number, a small group of successful startups is important for understanding aggregate outcomes such as employment and productivity. These Startups have an uncertain fate. While some grow to become large and successful companies, many end up transferring their operations to older incumbents through an acquisition. In recent years, such acquisitions have attracted the attention of media and policymakers alike.

Conclusion

Given the widely acknowledged importance of new venture creation to innovation, employment and economic growth, in recent years a variety of policy initiatives aiming at promoting the establishment, growth and impact of innovative start-ups have been issued worldwide. Yet, there is substantial heterogeneity in terms of criteria and approaches used to define innovative start-ups and lack of systematic understanding of how these relate to firm's and policy rationales.

DIGITAL INDIA: TRANSFORMING INDIA THROUGH TECHNOLOGY AND CONNECTIVITY

Dr. S. Kokilavizhi

Assistant Professor
Department of Commerce (Finance)
Nallamuthu Gounder Mahalingam College, Pollachi

Dr. R. Amsaveni

Assistant Professor
Department of Commerce (Finance)
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

India's government launched a program called "Digital India" with the goal of making the country more technologically advanced. The program's main goals include building a national digital infrastructure, giving citizens digital empowerment, and offering government and services on demand. This essay is the result of study into the Digital India program and its potential effects on preparing India for the digital age. The nine pillars of Digital India – Jobs in IT, Electronics Production, Information to All, Early Harvest Programme, Broadband Connections, eKranti, E-Governance, Public Internet Access, and Universal Access to Phones – are examined in the paper along with various initiatives, opportunities, and challenges. Each of these initiatives appears to be benefiting and assisting the Indian people. The inhabitants are still dealing with various difficulties. Illiteracy, socioeconomic disparities, and cultural and technical limitations are a few.

Keywords: Digital India, Digital payment, Digital Transformation.

Introduction

The key to maximizing the benefits of digital finance and financial inclusion can be found in a comprehensive partnership between the government and the general public. The use of technology can make the payment process more streamlined and open. One component of the ambitious flagship program Digital India has as its goal digital funding. The future of digital finance is really bright. Financial independence would empower women and other underprivileged groups in society, which is a core goal of financial inclusion and digital banking. Adopting digitisation in financial services and bringing the majority of the population into the banking system will contribute to the country's growth and development.

Every financial institution believes that online service delivery is the future, with the number of smart phone users in India set to reach 450 million by 2022. For financial services to change quickly, broadly, and for the better, technology-led innovation is required. The goal of financial inclusion through digital banking can be achieved with the support of the digital India. Digital financial services have a great deal of promise to offer a variety of accessible, practical, and safe banking services to

the underprivileged in developing nations. Public education about the fundamentals of digital finance services is urgently needed, especially in rural and semi-urban areas.

Cash will no longer be used in India. To lessen the country's reliance on cash and combat money laundering, the Indian government started the "Digital India" campaign. Various digital payment systems appropriate to different sectors of the economy are being coordinated to make them accessible and user-friendly in order to achieve expedited movement into the cashless, digital payments economy across all states and sectors and to promote rapid adoption of digital payment systems. The country needs to become digital if it wants to compete with developing nations and expand the financial sector to meet the demands of the modern world.

Digital payment is a method of payment which is made through digital modes. In digital payments, payer and payee both utilize digital modes to send and get cash. It is likewise called electronic payment. No hard money is engaged with the digital payments. All the exchanges in digital payments are finished on the web. It is a moment and advantageous approach to make payments. In the event that we talk about money payments, you need to initially pull-out money from your record. At that point you utilize this money to pay at shops. Businessperson goes to the bank to store the money which he got from you. This cycle is tedious for you and furthermore for the retailer. Be that as it may, in digital payments, the cash moves from your record to the retailer's record right away. This cycle is programmed and neither you nor the retailer is needed to visit the bank

Digital payment services offer convenience, ease of transactions and security while transacting. This analytical study focuses on growth of digital payments with respect to its volume and value of transactions. A digital transactional platform enables a customer to use a device to make or receive payments and transfers and to store value electronically with a bank or nonbank permitted to store electronic value. Retail agents armed with a digital device connected to communications infrastructure to transmit and receive transaction details enable customers to convert cash into electronically stored value and to transform stored value back into cash. Depending on applicable regulation and the arrangement with the principal financial institution, agents may also perform other functions. The customer device can be digital (e.g., mobile phone) that is a means of transmitting data and information or an instrument (e.g., payment card) that connects to a digital device (e.g., POS terminal).

Digital Payment Methods

1. Banking card:

Banking sector provides various cards to avoid the time spend over the banking transaction. It offers consumers more security, convenience, and control than any other payment method. There are many types of cards Rupay, mastercard, visa etc. they provides more security to the customer while using it. Payment cards give people the power to purchase items in stores, on the Internet, through mail-order catalogues and over the telephone. They save both customers and merchants' time and money, and thus enable them for ease of transaction.

2. USSD:

The innovative payment service works on Unstructured Supplementary Service Data (USSD) channel. This service allow to users mobile banking without internet facility available to make money transfer from one person to another without using internet and smart phones. Service has been launched to take the banking services to every common man across the country. The Common number across all Telecom Service Providers on their mobile phone and can make transaction using an interactive menu on the mobile screen. Using this customer can check balance, transfer money, can get mini statement etc.

3. Adhar enabled Payment system:

AEPS is a bank led model which allows online interoperable financial transaction at PoS (Point of Sale or Micro ATM) through the Business Correspondent or Bank Mitra of any bank using the Aadhar authentication.

4. UPI:

UPI is a Unified Payments Interface system that allow to multiple bank accounts into a single mobile application, merging several banking features. It is use to transfer money receive money, bill payments and others. Now it is getting popularity among the Indian people. It is interesting and easy to use and not need to remember frequently use beneficiary's account number. The customer can get transaction history quick payment.

5. Mobile Wallets:

There are several mobile wallets are available and each bank have their own application. The customer can carry digital cash trough mobile wallet. By use of wallet customer can link credit card or debit card in mobile device to make transaction. An individual's account is required to be linked to the digital wallet to add the money. The Paytm, Freecharge, Mobikwik, Airtel Money, Jio Money, SBI

Buddy, itz Cash, Vodafone M-Pesa, Axis Bank Lime, ICICI Pockets, Speed Pay etc. are the mobile wallets use in India.

6. Point of Sales:

A point of sale (PoS) is where sales are made. It allow to PoS holder to collect money from their customer by the way of swap Also and no need to go bank for making transaction of purchase and selling. On a micro level, retailers consider a PoS to be the area where a customer completes a transaction, such as a checkout counter. But its require GPS system internet and bank account of merchant.

7. Internet banking:

Internet banking, also known as online banking, e-banking or virtual banking, is electronic payment systems that allow customers of a bank to make transaction using website of the bank using ID and password.

8. National Electronic Fund Transfer:

(NEFT) National Electronic Funds Transfer is a nationwide payment system which provides funds transfer from any bank any branch to any bank. Using the system individual firms and corporate can electronically transfer funds from any bank branch to any individual, firm or corporate having an account with any other bank branch in the country. Not only account holders but also without having account people can sent money to others account by depositing money from anywhere. However, such cash transaction have limit of Rs. 50000/- using this service individual can deposit money on 50000/- and this facility can use in working days only.

9. Real Time Gross Settlement (RTGS):

RTGS is settlement of funds transfers individually on an order by order basis. 'Real Time' means the processing of instructions at the time they are received rather than at some later time. Considering that the funds settlement takes place in the books of the Reserve Bank of India, the payments are final and irrevocable. Transferring large amount RTGS is used. Customers can send minimum 2 lakh and maximum have no limit. RTGS can use in banking hours.

10. Electronic Clearing System (ECS);

ECS is an alternative method for the payment transactions like utility-bill-payments such as telephone bills, electricity bills, insurance premium, card payments and loan repayments, etc.,

11. Immediate Payment Service (IMPS):

IMPS offers an instant, 24x7x365, interbank electronic fund transfer service through mobile phones. IMPS are a tool to transfer money instantly across India using mobile, internet and ATM it is safe and cost-effective.

12. Mobile banking:

Mobile banking is a portable system provided by banks to customer on their mobile phones, smart phones with a special application using software. It provided by the banks or financial institution for the purpose. Each Bank provides its own mobile banking App for Android, Windows.

13. Micro ATM:

Micro ATM meant to be a device that is used by the million Business Correspondents to deliver basic banking services. The micro ATM enables Business Correspondents to make instant transactions. It helps to withdrawals, transfers transaction instantly.

Advantages of Digital Payment System

1. **Time Sever:** Using digital payment system customer can pay to merchant transfer money quickly and no need to make payment by cheque and waiting for clearing. Because Digital Payment system take less time than traditional payment system.
2. **Availabilities:** Digital payment system can use by customer from anywhere and anytime there is no need to go banks for every transaction.
3. **Easy Purchasing:** The Digital payment system provides facility to user for purchasing by using ATM card Credit card and POS therefore it is easy for making transaction and no hard cash required to travel with us.
4. **Use of Wallet:** The Digital Payment system includes digital wallets which make payment easy and with that wallet customer can get discount as well as cash back.
5. **Less Risk:** In digital Payment system it provides us securities for every transaction it require MPIN or OTP which can be avoid frauds in the system.

Conclusion

The concept of a digital India is enormous. A significant step toward creating an empowered nation is Digital India. If this concept is a success, it will unquestionably change India by granting Indian citizens access to multimedia information, content, and services. The Digital India initiative offers a lot of prospects, but we must acknowledge that it is still a long way from reaching its goals because most of the

nine pillars are having difficulty being implemented. In order to prevent the failure of this program, it is crucial that each and every pillar receive focused, sustained attention. In reality, as Indian citizens, we should all mentally prepare for this significant change.

ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING: IMPLICATIONS AND APPLICATIONS

Dr. M. Nirmala

Assistant Professor, UG Department of Commerce (CA)
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Artificial intelligence is the ability of a machine to perform cognitive functions that we normally associate with human minds. AI applications include advanced web search engines, recommendation systems, understanding human speech, self-driving cars, generative or creative tools, and competing at a higher level. Strategy games. Different subfields of AI research focus on specific goals and the use of specific tools. To solve these problems, I researchers have adapted and integrated various problem-solving techniques, including search and mathematical optimization, formal logic, artificial neural networks, and methods based on statistics, probability, and economics. Machine learning is a branch of artificial intelligence (AI) and computer science that focuses on using data and algorithms to imitate the pattern that humans follow, gradually improving its accuracy. Machine learning is an important component of the growing field of data science. Machine Learning Training Basic and Advanced Machine Learning Concepts.

Keywords: Vihwa Guru India - Global Leadership - Artificial Intelligence - Machine Learning - Implications and Applications etc

Introduction

John McCarthy is considered the father of artificial intelligence. John McCarthy is an American computer scientist. The term "Artificial Intelligence" was coined by him. Alan Turing was one of the founders of artificial intelligence along with Marvin Minsky, Alan Newell and Herbert. Artificial intelligence (AI), the ability of a digital computer or computer-controlled robot to perform tasks typically associated with intelligent organisms. The term is often applied to a program that creates systems with the intellectual process characteristics of humans, such as reasoning, finding meaning, generalizing, or learning from past experience. AI has become a catchy term for applications that perform complex tasks that require human input, such as interacting with customer's online or playing chess. The term is often used interchangeably with subfields that include machine learning (ML) and deep learning.

Artificial Intelligence was established as an academic discipline in 1956. The sector has gone through several cycles of confidence followed by disappointment and financial loss. After 2012, deep learning surpassed all previous AI techniques, leading to a huge increase in funding and interest. Traditional goals of AI research include reasoning, knowledge representation, planning learning, natural language processing, perception, and robotics support.

Machine learning is a field of artificial intelligence that allows computers to learn and improve from experience without being explicitly programmed. It has become an increasingly popular topic in recent years due to its many practical applications in various industries. Machine learning is an umbrella term for solving problems where creating algorithms by human programmers can be cost-prohibitive, instead solving problems by helping machines 'discover' their 'own' algorithms without the need for anyone to explicitly tell them what to do. Human-made algorithms. Today, machine learning is at work all around us. Machine learning and the technology surrounding it are evolving rapidly, and we're only just beginning to scratch the surface of its capabilities. Machine learning is used in web search engines, email filters to sort out spam, websites to provide personalized recommendations, banking software to detect unusual transactions, and loss of applications such as voice recognition. At the highest level, machine learning is the process of teaching a computer system how to make accurate predictions when fed data.

Types of Artificial Intelligence

Artificial Intelligence can be classified in any number of ways there are four types of artificial intelligence. They are;

- Reactive Machines
- Limited Memory
- Theory of Mind
- Self-Aware

Reaction Engines

Reaction engines perform basic operations. This level of A.I. Simple. These types react to certain inputs with certain outputs. No learning occurs. This is the first step for any A.I. System "They cannot improve their functioning through experience and can only respond to a limited combination of inputs." This is what "super" AI does because the average human can't process a customer's entire Netflix history and make personalized recommendations. Fixed. Machine learning models are reactive machines. Their architecture is simple and you can find them in GitHub repositories all over the web. These models can be downloaded, traded, shipped and easily loaded into the developer toolkit.

Limited Memory

The next step in the evolution of AI is to develop the next ability to store knowledge. But according to Rafael Tena, Senior AI researcher at Acrisure Technology Group. AI an insurance company that can store and use knowledge that progress will take nearly three decades. Learn and practice for future assignments.

With limited memory, the machine learning framework is a bit more complex. Every machine learning model needs to build a finite memory, but the model can be used as a reactive machine type. Self-driving cars are one of the best examples of finite memory systems. These cars can store the latest speed of nearby cars, distance to other cars, speed limit and other information to navigate the road. These AI models were very good at absorbing the characteristics of their training data. But more importantly, they improved over time. Limited-memory AI can be used in a wide range of scenarios, from small-scale applications such as chatbots, self-driving cars, and other advanced use cases.

Theory of Mind

AI theory of mind is a more advanced form of artificial intelligence. Machines of this type are encouraged to play an important role in psychology. This type of AI mainly focuses on emotional intelligence so that it can better understand the beliefs and thoughts of humans. As it has been developed, theory of mind AI should not have the ability to understand the world and how other entities have thoughts and emotions. In turn, this affects how they interact with those around them. Mental state can be AI. To better understand the organizations it interacts with by discovering their needs, emotions, beliefs and thought processes. AI's theory of mental states should be well developed in other branches of AI. A Theory of Mind AI can be a great companion. AI can sense and respond to human emotions, and can perform the tasks of limited memory machines.

Self-Aware

AI that can recognize the emotions of others, plus self-awareness and human-level intelligence; the final phase of AI. A final grant for the evolution of AI is the design of self-aware systems, conscious understanding of their existence. This kind of AI doesn't exist yet. Finally, in some distant future, perhaps AI reaches nirvana. It is self-aware. This kind of AI only exists in the story, and, as stories often do, both are incredibly believable. And fear for the audience. These machines will be highly intelligent and will have their own consciousness, feelings and self-awareness. These machines will be smarter than the human mind. Self-aware AI doesn't actually exist yet, it's a fantasy. Concept. Such systems understand their internal characteristics, states and conditions and perceive human emotions. This type of AI not only understands and evokes emotions in those it interacts with, but also has emotions, needs and beliefs of its own.

Implications of Artificial Intelligence

However, the impacts of AI are not all positive. AI can be used for malicious purposes such as data manipulation or election interference. AI will also lead to job losses and displacement of workers as machines are used to perform tasks performed by humans. Otherwise should do. With the advancement of technology, life has become easier than before. In the field of technology, artificial intelligence has served as no less than a savior. Now AI is integrated into our lives like never before. It is time to ensure that technology is used ethically and that our policies are democratic. One of the most important impacts of AI in the workplace is increased efficiency and productivity. Ai-powered tools automate repetitive and time-consuming tasks, freeing up employees to focus on more strategic and creative work. Indian business is leveraging AI as a pioneer in improving customer experience, innovating new products and services, and transforming businesses. Capabilities, Products and Solutions.

Also, AI-powered machines can determine soil and crop health, provide fertilizer recommendations, monitor weather and even determine crop quality. All the benefits of AI in agriculture help farmers to make better decisions and practice efficient farming. AI brings cost savings. AI has the potential to bring about many positive changes in society, including improved productivity, improved healthcare and increased access to education. .Training an AI model can require a significant amount of computational power, which in turn requires a large amount of energy. This energy is mostly generated using fossil fuels, which leads to an increase in greenhouse gas emissions. Another concern is the possibility of overpowering AI. You plan on existing environmental problems.

Applications of Artificial Intelligence

Here is the list of top eight applications of AI(Artificial Intelligence)

Applications of AI in e-commerce

AI has significantly benefited the e-commerce industry by improving customer service, personalizing the shopping experience, managing vast amounts of data, improving cyber security, predicting market trends and automating tasks such as creating product descriptions. Machine learning and artificial intelligence. Entrepreneurs can use modern solutions like these to improve their vision on the digital platform. Besides product recommendations, online merchants use ecommerce intelligence to provide chat bot services, analyze customer feedback, and provide personalized services to online shoppers. By integrating AI into their digital experience, businesses can give customers what they want, when they want it.

Applications of Artificial Intelligence in Education

Although the field of education has been the most influenced by humans, artificial intelligence has slowly started to penetrate its roots in the field of education as well. AI systems can "measure a student's learning style and pre-existing knowledge to provide personalized support and instruction." The use of artificial intelligence in education to improve learning, assist teachers, and fuel more efficient personalized learning is exciting. Increased availability of smart devices and web-based curriculum.

Applications of Artificial Intelligence in Lifestyle

Whether we're trying to read our emails, get driving directions, or get music or movie recommendations, AI helps us in every area of our lives. From voice assistants to smart devices, artificial intelligence (AI) is all around us, and its impact on the way we live and work will continue to rise. AI is playing an increasingly important role in improving the way we entertain ourselves, interact with mobile devices, and drive our vehicles for ourselves. We encounter machine learning algorithms and natural language processing in everyday tasks. By controlling devices like lights, thermostats, and security systems, AI improves energy efficiency and improves safety in our homes. Platforms like YouTube use recommendation systems to capture user data and provide personalized recommendations to increase user engagement. It is a widely used application of artificial intelligence in almost all industries.

Applications of Artificial Intelligence in Navigation

The technology uses a combination of convolutional neural networks and graph neural networks to automatically detect the number of lanes and road types behind obstacles on roads, making life easier for users. GPS technology can provide users with accurate, timely and complete information. Security service, tour operators can streamline their operations and reduce staff workload. Due to the rapid development and widespread diffusion of AI, navigation can be effectively supported by newly established AI techniques. Military units. Just like there are different ways to describe a location, there are different ways to go places. The three main types of navigation are celestial, GPS, and map and compass.

Applications of Artificial Intelligence in Human Resource

Artificial intelligence helps blind hiring. By using machine learning software, you can analyze applications based on specific parameters. AI derived systems can scan profiles of job applicants, and provide employers with an understanding of the talent pool they need to select from. Organizations around the world today are

realizing that the adoption of smart technology such as multi-professional and artificial intelligence is radically changing the workplace. Artificial intelligence is the stimulation of human intelligence processes by machines, especially computer systems. Specific applications of AI include expert systems, natural language processing, and speech. Authorizing and machine-viewing applications, conducting initial candidate screening, and scheduling interviews saves HR teams time and resources.

Applications of Artificial Intelligence in Social Media

AI in social media has the potential to change how brands market themselves on platforms like TikTok, Snapchat, Facebook, Instagram, Twitter and LinkedIn. Today, AI can generate social media posts for you. Automates tracking. And it powers most of what you see on any social network. AI-based social media monitoring refers to the use of artificial intelligence technologies across various social media platforms. Artificial intelligence continues to play a game-changing role in many aspects of our lives. One of the areas where this impact is most evident is the social media landscape. AI tools help improve features of social media platforms and lead the community. Scale operations across multiple use cases, including text and visual content creation, social media monitoring, advertising management, influencer research, brand awareness campaigns, and more.

Applications of Artificial Intelligence in Finance

The adoption of artificial intelligence systems and techniques in the financial sector has grown significantly, enabled by the abundance of data and increasing affordability of computing capabilities. If there's one technology that's paying dividends for the financial sector it's artificial intelligence. AI has delivered. The world of banking and finance has opened up new ways to meet the needs of customers with smarter, safer and more convenient ways to access, spend, save and invest. It is reported that 80% of banks have recognized the benefits that AI can provide. Be it personal finance, corporate finance, or consumer finance, the highly developed technology powered by AI will help significantly improve a wide range of financial services. Besides fraud detection and task automation, AI can better predict and assess credit risks.

Applications of Artificial Intelligence in Healthcare

Artificial intelligence uses computers and machine processes to simulate human intelligence and perform complex automated tasks. While seeking to mimic the capabilities of the human mind, AI-enabled machines are capable of surpassing it in many ways, particularly by sorting large blocks. Big data is efficient for detecting

patterns, anomalies and trends. The role of artificial intelligence in healthcare includes accurate cancer diagnosis, early detection of dangerous blood diseases, customer service chats and virtual health assistants. Describes the use of AI. Machine learning algorithms that mimic human knowledge to collect and understand complex medical and healthcare data. Artificial intelligence has found various applications in the healthcare sector. AI applications are being used in healthcare to develop sophisticated machines that can diagnose diseases and identify cancer cells. Artificial intelligence can help analyze chronic conditions with lab and other clinical data to ensure early diagnosis. AI uses a combination of historical data and clinical intelligence to discover new drugs.

Conclusion

AI is leading to transformative applications within an array of industrial, intellectual, and social applications, far beyond those brought about by previous industrial revolutions. Also, AI has proven to be superior to human decision-making in some areas. The term artificial intelligence is widely bandied about. Applications of technology to perform tasks similar to human cognitive function and is generally defined as "the ability of a machine to imitate intelligent human behavior". AI generally involves the theory and development of computer systems. The productivity of artificial intelligence can boost our workplaces. It benefits people by helping them get more done. As the future of AI replaces difficult or dangerous tasks, human workers are freed up to focus on tasks that require creativity and empathy.

Abstract

This conceptual paper indicates and emphasizes the women entrepreneurs as the potentially emerging human resource in the 21st century. The primary objective of this paper is to find out the status of women entrepreneurs in India and also studies the success story of Hina Shah the most successful women entrepreneurs of India in plastic packaging and Founder of ICECD. Women of 21st century is no more a traditional resource confined to homes only rather an educated, knowledgeable and innovative part of the overall population possessing the capacity to transform economies into thriving enterprises. On the basis of this analysis some recommendations are given to promote spirit of women entrepreneurship and helping the women to become a successful entrepreneur.

Keywords: *women entrepreneurs, Indian Economy, Business, Government Initiatives.*

Introduction

In India's economy, women entrepreneurs are growing more substantial, and their contributions shouldn't be undervalued. These female entrepreneurs play a crucial role in the Indian economy and have a significant effect on it by generating employment, accelerating development, and fostering prosperity. As per recent figures, women comprise 14 per cent of the total entrepreneurs in India, which works out to 8 million. Also, 10 per cent of all formal enterprises are owned by women.

About 20.37 per cent of the MSME industry in India is made up of women-led businesses, which also employ about 23.3 per cent of the labour population. Between 13.5 and 15.7 million businesses are owned by women, who also hire between 22 and 27 million individuals. They are thought of as the economic foundation of India. Not only can women's employment opportunities be expanded, but also the strain of working two shifts per week for women can be lessened. All areas of legislation must adopt the 3Rs approach, which involves Recognising, Reducing, and Redistributing unpaid care work provided by women.

The inclusion of women in the workforce has created jobs and assisted millions of families in escaping destitution. Because of their superior leadership abilities and higher levels of output, women predominate in new-age sectors where they make up a sizable portion of the workforce. This work ethic and admirable business acumen have also highlighted the significance of women in the contemporary workforce.

Manu Awasthy, CEO and founder, Centricity Wealthtech, said, “Women entrepreneurs and their increasing presence in India have significantly influenced the social and economic demographics of the country. Women entrepreneurs are empowering 50 per cent of India’s start-up ecosystem, driven by Recognition, Results, Fulfilling unmet needs and Education. According to a survey by Bain & Company, more than 45 per cent of Indian women in rural areas were driven to start a business to gain recognition and Women-led start-ups provide 35 per cent higher ROI compared to those led by men. The inherent need in women to provide for the family is a key factor. As they make 85 per cent of purchase decisions, the need to provide a better lifestyle motivates women. With up to 40 per cent of women finishing in the area of science and technology, India is among the top countries in the world for creating these professionals. Businesses that have women at the helm are considered to run very efficiently because businesses led by women require less investment but generate higher net revenue, women are great multi-taskers, women entrepreneurs are known to take more risks and Women have a dynamic ability to adapt.”

Women entrepreneurs and their increasing presence in India have significantly influenced the social and economic demographics of the country. The participation of women in the labour force has helped millions of families to pull out of poverty and has led to job creation. Women are well known for their leadership skills and hence dominate in new-age industries such as electronic manufacturing, where more than 50% of the employees are women because of their high-precision work and better productivity levels. This attitude towards work and commendable business skills have also emphasised the importance of women in the modern workforce.

Role of Women in India's Economy

In India 20.37% of women are MSME owners which account for 23.3% of the labour force. They are considered to be the backbone of the economy. According to McKinsey Global, India can potentially add US\$ 700 billion to global GDP by increasing women’s participation in the labour force. The percentage of women working in the manufacturing and agriculture sectors is higher than that of men. These sectors are usually credited with helping families come out of poverty and

contributing to higher household income. Moreover, literacy rates among women grew at 8.8% in FY21, which further highlights the bright prospects of the country.

Women-led Business Impact

Women-led businesses provide a great impetus to the economy. India has 432 million working-age women and 13.5 -15.7 million women-owned businesses that provide direct employment to 22-27 million people. In addition, a number of businesses are being controlled by women. Indian women are independent and have a strong motivation to start their own business. According to Boston Consulting Group, start-ups founded or co-founded by women generate 10% more cumulative revenue over a five-year period. These start-ups have a more inclusive work culture and employ 3x more women than men. Moreover, women-led businesses are estimated to grow 90% in the next five years.

Factors Driving Women to Start Businesses or Join Workforce

Women entrepreneurs are empowering 50% of India's start-up ecosystem, driven by:

- **Recognition:** Recognition in the form of admiration, regard, esteem and renown motivates women entrepreneurs. According to a survey by Bain & Company, more than 45% of Indian women in rural areas were driven to start a business for gaining recognition.
- **Results:** Women-led start-ups provide 35% higher ROI compared to those led by men. This ability to generate more returns encourages women to start their own businesses.
- **Fulfilling unmet needs:** The inherent need in women to provide for the family is a key factor. As they make 85% of purchase decisions, the need to provide a better lifestyle motivates women.
- **Education:** India ranks among the top worldwide for producing female graduates in the science, technology, engineering and mathematics (STEM) industry, with as many as 40% of women graduating from this field. Indian women are game changers in the fields of science and technology.

Women-run Businesses Operate Efficiently

Businesses that have women at the helm are considered to run very efficiently, and some of the compelling reasons to invest in a such a business are:

- **Higher return potential:** Businesses led by women require less investment but generate higher net revenue. For every dollar invested, women-led start-ups provide 78 cents return compared to 31 cents by men-led start-ups.
- **Multi-tasking:** Women are great multi-taskers as majority of them juggle multiple things at once. These women could prove highly valuable in

generating various income streams and helping to nurture start-ups. As per a survey conducted by psychologists at the University of Hertfordshire, When women and men were given two tasks at the same time, women slowed by 61%, whereas men slowed by 77%.

- **High risk appetite:** Women entrepreneurs are known to take more risks, as per a survey taken by KPMG 43% of women are willing to take more risks. Moreover, women are found to be better than men at envisioning opportunities.
- **Adaptability and higher EQ:** Women have a dynamic ability to adapt. A survey conducted by Bain & Company, Google and AWE Foundation of 350 women solopreneurs and small company owners in urban India found that companies run by women founders were resilient and fast to adapt. The results also showed that women also had a higher emotional quotient (EQ).

Major Businesses Run by Women in India

In India, 45% of the start-ups are run by women, of which over 50,000 are recognised by the government. The country witnessed the most women-led start-ups turning into unicorns in 2021. Major start-ups run by women are listed below.

Brand	Founder / Co-founder	Date of Establishment	Total Funds Raised	Market Valuation
 BYJU'S The Learning App	Divya Gokulnath	2011	US\$ 8.5 billion	US\$ 18 billion
 NYKAA	Falguni Nayar	2012	US\$ 148.5 million	US\$ 12.5 billion
 MobiKwik	Upsana Taku	2009	US\$ 380 million	US\$ 750 million
 zolo	Isha Choudhry	2015	US\$ 90 million	US\$ 100 million
 Thrillophilia	Chitra Gurnani Daga	2009	US\$ 1.24 million	US\$ 4.48 million

Government Initiatives to Encourage Women Participation

The Indian government has increased the budget for Women and Child Development by 14% in 2021. It has set aside over Rs. 30,000 crores (US\$ 3.97 billion) in FY21. This budgetary allocation also includes various development schemes as listed below.

- **Bharatiya Mahila Bank Business Loan**

This type of business loan was set up in 2017 to help women access cheap loans and dream big despite their lack of resources. The scheme provides loans of over Rs. 20 crores (US\$ 2.46 million) for women entrepreneurs. A collateral-free loan can also be availed of for loans worth less than Rs. 1 crore (US\$ 0.13 million).

- **Dena Shakti Scheme**

This scheme was launched for women entrepreneurs looking to start their business in certain sectors such as agriculture, retail and manufacturing. The scheme provides loans at an interest rate that is 0.25% below the base rate. The maximum loan application is Rs. 20 lakhs (US\$ 26,468).

- **Udyogini Scheme**

This scheme is for women with an annual income of Rs. 1.5 lakh (US\$ 1,985). It provides loans of up to Rs. 3 lakh (US\$ 3,890) for women wanting to start a business but have no capital.

- **Women Entrepreneurship Platform**

This is a flagship platform started by NITI Aayog to promote women entrepreneurship. The platform hosts various workshops and educational events to motivate women to start their own business.

- **Pradhan Mantri Mudra Yojana**

Even though the scheme was started to help anyone looking to set up a micro/small enterprise get an institutional credit of up to Rs. 10 lakhs (US\$ 13,240), it was mostly availed of by women.

Conclusion

India was a country where a woman even owning a bank account was considered a major benchmark. However, it currently has over 15.7 million women-owned enterprises, with women leading the start-up ecosystem. This drastic transformation clearly underlines the potential of Indian women and their determination. In the coming decades, India is set to witness a major shift, with women dominating the workforce as well as shaping and enhancing the future of the country. It is estimated that over 30 million more women-owned businesses are expected to provide 150–170 million jobs by 2030. This could be a game changer and help the economic outlook look brighter than ever.

ROLE OF TECHNOLOGY IN NEP 2020

Mrs. D. Gowreeswari

Department of Commerce with Computer Applications
Government Arts and Science College, Pollachi

Ms. V. Sandhya

Department of Commerce with Computer Applications
Government Arts and Science College, Pollachi

Abstract

Education plays a powerful role in building nation, education decides the future of the nation, the density of its people. The role of education and its importance cannot be ignored in today's scenario. The growth and development can be seen if we compare the pre independence and post independence era. NEP 2020 is the first education policy of the 21st century and replaces the 34 year old national policy on education 1986. "the purpose of education is to make better human beings with skill and expertise. Enlightened human beings can be made by efficient teachers". This paper explains about the vision of NEP 2020, history, features, evolution.

Keywords: Future of education, Education policy, Role of education.

Introduction

Education is fundamental for achieving full human potential, developing an equitable and just society, and promoting national development providing universal access to quality education is the key to India's continued ascent, and leadership on the global stage in term of economic growth, social justice and equality, scientific advancement, national integration and cultural preservation. Education thus, move towards less content, and more towards learning about how to think critically and solve problems how to be creative and multidisciplinary, and how to innovate, adapt and absorb new material involve and changing fields. The national policy on education is a policy formulated by the government of India to promote education amongst India's people. The policy covers elementary education to higher education in both rural and urban India. The first NEP was promulgated by the government of India by honorable prime minister India Indira Gandhi in 1968, the second by honorable prime minister by prime minister Rajiv Gandhi in 1986 and the third honorable prime minister Narandra Modi in 2020. Now, this paper explains about the policy, history and features regarding higher education.

History of Nep in India

Since the country's Independence in 1947, the India government sponsored a variety of programmes to address the problems of illiteracy in both rural and urban India. The national educational policy of India 2020 (NEP 2020), which was started by

the Union Cabinet of India on 29 July 2020, outlines the vision of new education system of India. The new policy replaces the previous national policy on education, 1986. Maulana Abul Kalam Azad, India's first minister of Education, envisaged strong central government control over Education throughout the country, with a uniform educational system.

1968:

Indira Gandhi government announces first national policy on education in 1968 based on recommendation of the education commission, which called for a "RADICAL RESTRUCTURING" and proposed equal educational opportunities in order to achieve national integration and greater cultural and economic development.

1986:

In 1986, the government led by Rajiv Gandhi introduced a new educational policy focusing on adult education and empowerment of minorities. This policy is especially for rural area peoples to equalise educational opportunity.

1992:

The 1986 national policy on education was modified in 1992 by the P. V. Narasimha Rao government. In this period the government added a common entrance examination for professional and technical programmes.

2005:

New education policy introduced by Manmohan Singh government based on "COMMON MINIMUM PROGRAMME". It will fully empower women politically, economically, and legally. The CMP is a document outlining the minimum objectives of a coalition government in India.

2020:

New education policy by Narendra Modi government addressing gender discrimination, creation of educational tribunals, and a common curriculum for science, mathematics and English. Research methodology has been added in the last year of graduation course and student will have the choice to leave the course and receive the certificate / degree.

Vision of NEP 2020:

This education system must provide quality education to our children and youth to enable them to realize their individual potential and contribute to development of

society and nation. Use of this technology –in teaching and learning removing language barriers through education In this NEP2020 education we can learn in our mother tongue till class 5.Moving towards a more multidisciplinary undergraduate education.NEP 2020 aims to provide flexibility of learning paths of students.It introduces the traditional system of 10+2 for promoting higher education for students. It also introduces the foundation stage (ages 3-8) focus on play based and activity based learning. This vision NEP2020 make the student to think critical, creativity, own decision making, and innovation through the learning of education .

Features of NEP 2020:

- Holistic development of learners.
- Multilingualism
- Teachers
- Equitable and inclusive education.
- Service environment and culture.
- Focus on skill development
- Establishment of the NRF
- Multi entry and exit
- Online education

Conclusion

Every student should follow his/her her passion and the education policy 2020 provides the student the option to choose the policy 1986 issued on what to think but the national educational policy 2020 emphasizes how to think. The NEP will help set a global standard, and the 5+3+4+4 system aims to make the students a global citizen while being connected to their roots. The current education policy 2020 it bring creativity, innovative ideas, and experimental activities to the students. It avoids the root learning.

AN OVERVIEW OF WOMEN EMPOWERMENT THROUGH EDUCATION

Dr. M. Deepa

Assistant Professor, PG Department of Commerce (CA)
Nallamuthu Gounder Mahalingam College, Pollachi, Tamilnadu, India
deepakathirvel18@gmail.com

Abstract

Women's empowerment refers to the process of enabling women to have greater control over their lives and to be able to make their own decisions. This can include empowering women to participate fully in the economy and in the political process, as well as empowering them to make decisions about their own health and well-being. Women's empowerment is important because it can lead to a range of positive outcomes, including increased economic growth and development, improved health and well-being, and greater gender equality. In India, women's empowerment has been a key issue for many years. Despite some progress in recent decades, women in India continue to face significant challenges when it comes to gender equality. These challenges include discrimination, lack of access to education and employment, and gender-based violence.

Keywords: Women Education, Empowerment, Gender Equality.

Introduction

Women education in India has a major preoccupation of both the government and civil society as educated women can play a very important role in the development of the country. Education is milestone of women empowerment because it enables them to responds to the challenges, to confront their traditional role and change their life. So that we can't neglect the importance of education in reference to women empowerment and India poised to becoming superpower in recent years. Education of women is the most powerful tool to change the position in society. Women education in India has been a need of the hour, as education is a foundation stone for the empowerment of woman. . Education also brings a reduction in inequalities and functions as a means of improving their status within the family and develops the concept of participation.

Challenges Facing Women in India

Discrimination: Women in India often face discrimination in many areas of life, including in the home and in the workplace. This can make it difficult for them to access education and employment opportunities, and can lead to unequal treatment and lower pay.

Lack of access to education and employment: Women in India face significant barriers when it comes to accessing education and employment. For

example, data from the World Bank shows that only around 50% of women in India participate in the labour force, compared to around 80% of men. This is due in part to cultural and social barriers that prevent women from participating in the workforce, as well as lack of access to education and training.

Lack of access to education and employment: Women in India face significant barriers when it comes to accessing education and employment. For example, data from the World Bank shows that only around 50% of women in India participate in the labour force, compared to around 80% of men. This is due in part to cultural and social barriers that prevent women from participating in the workforce, as well as lack of access to education and training.

Gender-based violence is a major problem in India. The National Crime Records Bureau reports that in 2021, there were over 428,278 reported cases of violence against women in India. This included incidents of physical and sexual assault, as well as dowry-related violence and female infanticide. The statistics are alarming, with 31,677 reported rapes against women in 2021 alone.

Poverty: Many women in India live in poverty, particularly in rural areas. Poverty can make it difficult for women to access education and employment, and can lead to other challenges such as poor health and malnutrition.

Disparities between urban and rural areas: Women in rural areas of India often face greater challenges when it comes to empowerment. For example, they may have less access to education and health care, and may be more isolated and vulnerable to gender-based violence.

Rural Education and Women Empowerment

Role of Women Empowerment

Women empowerment is a pivotal part of any society, state or country. It is a woman who plays a dominant role in the basic life of a child. Women are an important section of our society. Education as a means of empowerment of women can bring about a positive attitudinal change. It is, therefore, crucial for the socioeconomic and political progress of India. The Constitution of India empowers the state to adopt affirmative measures for promoting ways and means to empower women. Education significantly makes difference in the lives of women.

Women Empowerment is a global issue and discussion on women political right are at the forefront of many formal and informal campaigns worldwide. The concept of women empowerment was introduced at the international women conference at NAROI in 1985. Education is the milestone of women empowerment because it enables them to respond to the challenges, to confront their traditional role and change their life. Hence, we cannot neglect the importance of education in reference to women empowerment. To see the development in women education India is supposed to the upcoming superpower of the world in recent years. With the increasing change in women education, the empowerment of women has been recognized as the central issue in determining the status of women. For becoming a superpower we have mostly to concentrate upon women's education. By which it will force women's empowerment. As per United National Development Fund for Women (UNIFEM), the term women's empowerment means:

- Acquiring knowledge and understanding of gender relations and the ways in which these relations may be changed.
- Developing a sense of self-worth, a belief in one's ability to secure desired changes and the right to control one's life.
- Gaining the ability to generate choices exercise bargaining power.
- Developing the ability to organize and influence the direction of social change, to create more just social and economic order, nationally and internationally.

Women Empowerment through Education

Women empowerment is the pivotal part in any society, state or country. It is a woman who plays a dominant role in the basic life of a child. Women are an important section of our society. Education as means of empowerment of women can bring about a positive attitudinal change. It is therefore, crucial for the socioeconomic and political progress of India. The Constitution of India empowers the state to adopt affirmative measures for prompting ways and means to empower women. Education significantly makes difference in the lives of women. Women

Empowerment is a global issue and discussion on women political right are at the fore front of many formal and informal campaigns worldwide. The concept of women empowerment was introduced at the international women conference at NAROI in 1985. Education is milestone of women empowerment because it enables them to responds to the challenges, to confront their traditional role and change their life. So we can't neglect the importance of education in reference to women empowerment. To see the development in women education India is supposed to upcoming super power of the world in recent years. The increasing change in women education, the empowerment of women has been recognised as the central issue in determining the status of women.⁴ for becoming super power we have mostly to concentrate upon the women's education. By which it will force on women's empowerment. As per united national development fund for women (UNIFEM) the term women's empowerment means:

- Acquiring knowledge and understanding of gender relations and the ways in which these relations may be changed.
- Developing a sense of self-worth, a belief in one's ability to secure desired changes and the right to control one's life.
- Gaining the ability to generate choices exercise bargaining power.
- Developing the ability to organize and influence the direction of social change, to create a more just social and economic order, nationally and internationally.

Thus, empowerment means a psychological sense of personal control or influence and a concern with actual social influence, political power and legal rights. It is a multi level construct referring to individuals, organizations and community. It is an international, ongoing process centered in the local community, involving mutual respect, critical reflection, caring and group participation, through which people lacking an equal share of valued resources gain greater access to the control over this resources.

Conclusion

Women play an imperative role in making a nation progressive and guide it towards development. They are essential possessions of a lively humanity required for national improvement, so if we have to see a bright future of women in our country, giving education to them must be a pre-occupation Empowerment means moving from a weak position to execute a power. The education of women is the most powerful tool to change the position of society. Education also brings a reduction in inequalities and functions as a means of improving their status within the family. To encourage the education of women at all levels and for dilution of

gender bias in providing knowledge and education, established schools, colleges and universities even exclusively for women in the state. The education develops the idea of participation in government, panchayats, public matters etc for elimination of gender discrimination.

Abstract

Education creates pathway for obtaining and creating knowledge among the human beings. New Education Policy also emphasizes the importance of knowledge creation and innovation. Innovation is the mother of inventions. Innovation is never ending since the technology keeps on updating itself with new standards and formats. The knowledge creation and innovation are inter-related and inter-dependent. Schools, colleges and universities involve in the process of knowledge creation and transmission. Knowledge creation is not so easy task as one thinks. It is complicated, perishable and different from person to person in terms of reachability. Teachers' role is crucial in creation of knowledge and transmission of knowledge to the leaning community is also important. So, the current articles highlights the knowledge creation and innovation in Higher Education Institutions (HEIs), including the sub topics: Knowledge, Types of knowledge, Process of knowledge creation, Information Technology in Knowledge creation, Innovation in knowledge creation, Higher education institutions in knowledge creation and Problems in knowledge creation. The important and relevant concepts were discussed in this article to signify the knowledge creation and innovation methodologies.

Keywords: *Knowledge, Types of knowledge, Process of knowledge creation, Information Technology in Knowledge creation and Innovation in knowledge creation*

Introduction

Knowledge is fundamental aspect of many aspects. All the disciplines such as Engineering, Science, Mathematics, Commerce, Management, Computing and so on require the application of knowledge. Knowledge is understood by different people in different meanings. But, it is common that it is related to understanding and experience. This current article discusses the creation of knowledge and innovation in higher educational institutions. Higher education plays major role in social development and economic infrastructure in the country. As per the policy of NEP 2020, Higher education institutions should play major role in creation, retention and transmission of knowledge. The knowledge creation and innovation are the primary functions of education service. Both are continuous and ongoing process.

Knowledge

Knowledge means awareness, familiarity or understanding of a factual information, descriptions. It is always acquired through experience or education by assuming, discovering or learning. Knowledge is different from skill and talent. Talent is inborn in human beings. Skill is acquisition of ability to do something. Knowledge includes talent and skill. But they are not one and same. Knowledge is not limited to education. Education just supports in acquisition of knowledge.

Knowledge creation and development are the essentials of man making process. Especially, Education sector is more concerned with the creation, development and retention of knowledge in the minds of human beings. Knowledge means different to different people. Process of knowledge creation includes many methods and techniques. Knowledge may be theoretical or experimental.

Types of Knowledge

Knowledge	
Explicit knowledge	Tacit knowledge

Explicit knowledge is a kind of informational fact which is searchable and easy to find. Users of such knowledge can integrate regarding the value and use of this knowledge. Eg. Manuals, documents, plans and procedures, how-to-do videos, etc.

Tacit knowledge means knowledge existing in minds of people virtually. Usually it is not explorable like explicit knowledge. It is also not sharable information or content with another person orally or in writing. Eg. Knowledge of walking, running, riding bicycles swimming, etc.

Though ideas are created in the minds of individuals, but the interaction critically between individuals which plays a critical role in developing these ideas. To mention typically, Interacting communities shall contribute to the creation and development of new knowledge sets. In today's marketing world, knowledge creation and knowing how management of knowledge are of top priority for everyone. Businesses which manage the information well, have an important edge over their competitors. The advanced economies of today rapidly become economies of knowledge, where the creation and marketing of knowledge turn overruling.

Knowledge Creation

Knowledge Creation literally means the continuous integration, transferring and conversion of different types of knowledge to the users or people. It happens when users try to interact, to practise and to learn. In simple words, it is the creation of various ideas, which is similar to the heart of a company's competing advantage.

Competitive or competing advantage is one that a company possesses while it has the edge over its competitive enemies and rivalries. Especially, when it has the corner of the provision for a certain product or service or brand. Knowledge creation is the formulating process of new notions, technics and conceptual facts. It happens through the human interactions between explicit and tacit knowledge of people.

Generally *intuition is accepted and valued* and where *experience is nothing more than merely a theory*. These concepts flashbacks to the idea of theory in use (pointing out to working environments that do not usually follow strict, "official" rules, protocols and procedures) and the acceptance and support of environments which allow brain-storming tasks, trial and error methods and unstructured interaction activities.

In the view of innovation theory, one shall refer to the practice of establishing key teams to solve problems of queries, unhindered by the bureaucracy policies that may exist in the firm alike the value of chaos and the benefits of smaller alongside fast-acting teams. One common alternative method is the usage of cross-functional project teams in the institutions and organizations. They are normally a group of experts persons from different parts of the organizations, which is guided by a "generalist" known project leader. If those teams are allowed with the decision making powers and independence to experiment and work in an autonomous and freed or virtually autonomous environment, it could be a great catalyst for bringing innovation and new knowledge creation practically in the process.

Once the activity is completed, the members return back to their role in the organizations, by extending help to the firm to spread this knowledge back into their respective community of practices. The project team shall also facilitate the creation of bridges normally between communities of practice and at any times may even serve as a provision to extend them on as and when required basis. Deviations of this concept can be seen in many places in innovation theory in existences.

To provide facility for supporting the work tasks and flow: It can be normally groupware systems which facilitate communication or brainstorming activities. Anyhow, they should not be interference with creative processing or communities of practices, or should not enforce the rigidly stiff organizational practices.

To provide knowledge-base personnel with timely, relevant information and data. In today's rapidly fast and rapid-paced environment, It is invisibly synonymous with the implementation processes of IT systems which can store, retrieve, organize, and exhibit information and data in a helpful manner effectively.

IT and Knowledge Creation

The usage of IT is unavoidable and very much indeed. The IT is for sharing knowledge, allowing for support in the transferring process of all the knowledge kinds. An important view is that it must be supportive and should not interfere with informal collaboration works. For example, groupware systems shall be devised to enhance communication between clustering groups or teams, particularly if the support is varied (Eg: audio, video, textual materials—as per the necessities of the individual firms) informal communication.

Beyond this argument, IT also has a crucial role to play through information management systemized services, by offering access to data and information facts, for empowering the managers to perform in-depth analysis often. Even more, IT systems shall also be programmed to find out current and future trends in data and information science and showcase them to the management for decision making. It essentially stimulates the manager to take better decisions of business and helps in knowledge creation by offering some of the building blocks tactics for new knowledge delivery efficiently. IT tools and methods shall also be utilized in the innovation processes. But they are outside the limits of knowledge management in most of the cases.

Knowledge Creation Management

Knowledge creation management usually refers to the systematic process of sharing, creation, usage and management of an organization's knowledge sets and information effectively, timely and efficiently. It is based on multidisciplinary approach to take advantages of the best usage of knowledge or information. It is a wide and popular field among various services. In fact, many large institutions and companies, non-profit organizations and public undertaken institutions devote the resources to the knowledge management properly.

The management of knowledge is quite often a part of business strategies making, human resource management or IT department's policies in the business and non-business sphere. IT here means Information Technology (Computing). Its efforts usually focus on overall objectives such as innovation, R&D and higher output productivity. It also concentrates on competitive advantage, integration of resources, the sharing of lessons and experiences learned and the on-going improvisations and mechanisms of the business ventures. Almost in all the cases, these efforts can overlap normally with organizational learning pattern.

Knowledge Creation Process in HEIs

The *knowledge creation process* has the elements of invention and innovation of new concepts, patterns, approaches, methods, techniques, products, services, and

ideas which can be utilized for the ultimate benefits of stakeholders including people, society and organizations. Generating and exploring of new sources of customer demands, stimulating personal and organizational growth and rethinking – redesigning of the existing rules of the law can help organizations to develop, thrive and endure in knowledge domain. Failure in doing so, will lead to a situation of stagnation, decay or death of the enterprise or education institutions in due course.

In HEIs, knowledge management usually tries to help in triggering the imagination by offering a continually refilled source of ideas, facts and experiences for the students and learners. People do help to bring out the best ideas in each domain and discipline and other through the interactions as a part of networking systems physically or virtually. Analysis of collected knowledge showcases the patterns and opportunities for new developments and ventures. Many HEIs always like to be familiar for their innovations, but it is not always easy to turn the thought process into reality. Some measures such as connecting creative people by various communities like departments and associations, exploring patterns through analysis and testing and establishing flows of process or algorithms for creation of new knowledge could help to stimulate innovation among the students and faculties.

Examples

- First example is “Patent disclosure process”. When an ideology for an invention is being shared with others within a HEI, it can result in helpful suggestions for improvements and corrections. Colleagues acting as a sounding board for testing process, assumptions and referrals to others shall help in doing similar tasks.
- Second example is a process for converting practical experience into new standard methods. Providing a process for practitioners who discover improved methods of doing things or tasks to convert their thoughts into new ways or procedures, which will result in creation of new knowledge being provided to others of the ecosystem.
- Third example is frequently inviting innovation practitioners to share their latest ideas and inventions during community events or students programmes can become a process of knowledge creation. As part of those presentations, building in time for the community members like students and faculty to brainstorm about methods to apply the concepts, facts and ideas. Suggesting good ideas shall be taken and followed up on them during forthcoming events may be implemented.

- Forth example is providing a simple process for white papers normally to be submitted, clearly reviewed and published which helps in facilitating knowledge creation in HEIs. Providing a new way to subscribe to the recent publications in respective subject areas of interest, connecting with the authors and co-authors and collaborating on further nuances of published ideas can be implemented.

Practical Ideas for Innovation in HEIs

1. Motivating students and faculties to practise innovations both internally and externally, for ideas generation.
2. Following good standards and best practices from other organizations, say: **Netflix prize**.
3. Conducting testifying experiments and events to test innovative methods and ideas.
4. Using analytics methods and metrics to analyze the results and pick the ones that are mostly effective and workable.
5. Collection of suggested improvements, using rapid prototyping to find them out and then iterate and improve where required.
6. Enabling innovation by supporting integration of diversified tools.
7. Encouraging students and faculties to work on projects that are innovative and risky.
8. Encouraging the formulation of book clubs portals, discussion forums or groups and brainstorming engagements and events to involve people in thinking about innovative and better ways of doing things alternatively.
9. Taking the best ideas and methodology invented and implementing them.
10. Holding regularly innovation challenging tasks, tournaments, contests, programmes and activities of jams.
11. Asking people to use collaborative tools such as enterprise social networks (ESNs) to explore ideas and thoughts for improvisations, new steering and break-throughs if really required.
12. Inviting people outside the institution to speak over calls, present in meetings and participate in conferences, seminar and workshops.
13. Adapting the methodologies proposed by external speakers for use in the HEIs.
14. Setting up prediction forums to devise the knowledge of crowds to select between options or opportunities.

Conclusion

Knowledge creation usually depends upon the various mechanisms mentioned in the sub-section on knowledge sharing, integrated with the potential to use knowledge into real time practices in an environment that supports interaction and experiential experimentations among the students and faculties of Higher Education Institutions (HEIs). The creative knowledge creation process is really a delicate, quite complicated and sensitive one and it is easily vanished by strict following to rules and regulations or by bureaucracy rule system of supervisions and supports. Similarly, IT systems of HEIs must be implemented along with due-care and should not attempt to replace processes of importance to knowledge creation in the HEIs.

A STUDY ON INNOVATION AND ENTREPRENEURSHIP IN INDIA

Ms. A. Anandhiprabha

Assistant Professor in Commerce –Banking and Insurance
Nallamuthu Gounder Mahalingam College, Pollachi
anandhiaruchamy@gmail.com

Abstract

Start-up is the base thing that an individual trying to achieve something new and original. Technology based entrepreneurs are stated as technopreneurs, they are the new trend setting entrepreneurs, they discover and create innovative product and services to the society with the effective usage of science and technology. At present the government of India takes further initiatives for the growth and development of indigenous production through startups and also assisting the young entrepreneurs through various schemes for meeting up the challenges with the global competitors. With hundreds of innovative youngsters choosing to follow the path of entrepreneurship instead of joining the multinational corporations and government ventures, the business world has witnessed an explosion of ground-breaking startups providing solutions to the real problems at a mass level in the past years.

Keywords: Innovation, Entrepreneur, Technology, Entrepreneurship

Introduction

Introduction The role of start-ups in India's economic development and their potential in creating employment opportunities have been recognized by the Government of India with the launch of the "Startup India Initiative". 14,036 enterprises have been recognised as Startups by Department of Industrial Policy and Promotion (DIPP) till November 2018 with various support including tax exemption of up to 7 years, establishment of 'fund of funds' of INR 10,000 crore till 2025, establishment of Atal Innovation Mission (AIM) etc. (MCI 2018). The ecosystem is developing with a number of startups, new venture funds and angel investors, evolving technology, incubators and accelerators, etc.

Objectives of the Study

1. To understand the Startup Schemes providing by Indian Government
2. To identify various government initiatives for the development of startups.
3. To analyze the growth and opportunities of startups

Research Methodology

The study is based on the secondary data which has been collected through journals, magazines, newspapers, research papers, books and websites etc.

Statement of the Problem

The emergence of startup wave in India is a relatively a new phenomenon. Today India is undergoing a fundamental shift with entrepreneurship and innovation is being primary catalyst in job creation and solving everyday problems. A decade ago, there is to be only a handful of startups such as Make My Trip.com and Naukari.com. But, now with the success of such as Flipkart, Quicker, Practo, Zomato and Inmboi, the Indian startup eco-system has indeed come a long way.

Significance of the Study

Startups have played and continue to play significant roles in the growth, development and industrialization of many economies all over the world. Startup is flagship initiative of the government of India, intended to build a strong ecosystem for nurturing innovation. Startup will drive sustainable economic growth and generate large scale employment opportunities and minimize unemployment.

Startup India

A startup venture could be defined as, a new business that is in the initial stages of operation, beginning to grow and is typically financed by an individual or small group of individuals. It is a young entrepreneurial, scalable business model built on technology and innovation wherein the founders develop a product or service for which they foresee demand through disruption of existing or by creating entirely new markets. Startups are nothing but an idea that manifests into a commercial undertaking.

The global business community accepted India as one of the most influential destinations for investments. It has discovered India's potential for innovation and creativity. The last three years India is significantly scaling up in international investments in start-ups valuations, exceeding \$ 1 billion in some cases, a phenomenon that would have been unbelievable in just five years ago. Prime Minister Narendra Modi recognized this fact and started working on it and understands that it is the right time to bring in the government to define an effective policy framework, followed by necessary tax and financial incentives and nourish the creativity and innovative potential among youth. Start-ups created 65,000 new jobs in 2014 and by 2021, the number is expected to touch 250,000 according to the NASSCOM Start-up Report 2015, and as of now, that is driven mostly by private sector initiative. Furthermore, India has to boast about its own billion dollar club. This includes startups like Flipkart, Paytm, Zomato, Snapdeal, Ola, InMobi, Hike, MuSigma, and Quikr. Fintech startup MobiKwik too looks to join the unicorn club with the next \$100 Mn funding raise.

Startup Rankings

The first ever startup state rankings were declared on December 2018 by the Department of Industry and Internal Trade based on the criteria of policy, incubation hubs, scaling innovation, procurement, regulatory change, communication, seed innovation, North-Eastern states and hill states. Among various states some of the states secured their places in different aspects as follows:

- Top performers: Kerala, Karnataka, Odisha and Rajasthan
- Best performers: Gujarat
- Leader: Telangana State, Andhra Pradesh, Bihar, Madhya Pradesh and Chhattisgarh
- Aspiring Leaders: Jharkhand, Uttar Pradesh, Haryana, Himachal Pradesh and West Bengal
- Emerging states: Delhi, Goa, Assam, Maharashtra, Punjab, Tamil Nadu, Jammu & Kashmir and Uttarakhand.
- Beginners: Manipur, Mizoram, Nagaland, Chandigarh, Puducherry, Sikkim and Tripura

Opportunities for Startups

In spite of challenges and problems that startups are facing, Indian markets provide a plethora of opportunities to find solutions tailored to solve them. Below is a list of few of the opportunities that are discussed for consideration by startups.

1. **India's Large Population** The population of India is a huge asset for the country. By 2020, it is expected that the working age population would surpass the non-working population. This unique demographic advantage will offer a great opportunity to any startup. Various infrastructure issues and the bottom- of the- pyramid market would provide huge opportunities for the startups.
2. **Change of Mind Set of Working Class** Traditional career paths will be giving way to Indian startup space. Challenging assignments, good compensation packages would attract talented people to startups. Also, it is seen that several high-profile executives are quitting their jobs to start or work for startups.
3. **Huge Investments in Startups** Huge investment in Indian startups from foreign and Indian investors is taking place. In 2015, more than 300 deals were done by 300+ angels and venture capital/ private equity players with around \$6.5-billion (Rs 42,300Cr) investments making India the most sought-after destination for investments. Some of the active players are New Yorkbased Tiger Global Management, Russian company- DST Global, Japanese telecom giant Softbank, Kalaari Capital, Sequoia Capital and Accel Partners. More and

more are going to join the bandwagon as this is the tipping point in Indian commerce for making good returns by backing potential unicorns.

Government Initiatives

There are numerous government and semi-governmental initiatives to assist startups.

1. Start-Up India This initiative provides three-year tax and compliance breaks intended for cutting government regulations and red tapism.
2. Mudra Yojna Through this scheme, startups get loans from the banks to set up, grow and stabilize their businesses.
3. SETU (Self-Employment and Talent Utilization) Fund Government has allotted Rs 1,000 Cr in order to create opportunities for self-employment and new jobs mainly in technology-driven domains.
4. E-Biz Portal Government launched e-biz portal that integrates 14 regulatory permissions and licenses at one source to enable faster clearances and improve the ease of doing business in India.
2. Royalty Tax Indian government has reduced the royalty tax paid by businesses and startup firms from 25 per cent to 10 per cent

Conclusion

The current economic scenario in India is on expansion mode. The Indian government is increasingly showing greater enthusiasm to increase the GDP rate of growth from grass root levels with introduction of liberal policies and initiatives for entrepreneurs like 'Make in India', 'Startup India', MUDRA etc. 'Make in India' is great opportunity for the Indian start-ups. With government going full hog on developing entrepreneurs, it could arrest brain drain and provide an environment to improve availability of local talent for hiring by startup firms. The startup arena has lot of challenges ranging from finance to human resources and from launch to sustaining the growth with tenacity. Being a country with large population, the plethora of opportunities available are many for startups offering products and services ranging from food, retail, and hygiene to solar and IT applications for day to day problems which could be delivered at affordable prices. It is not out of place to mention that some of these startups would become unicorns and may become world renowned businesses by expanding into other developing and underdeveloped countries.

Abstract

The basic purpose of this article is to put some light on the challenges to be countered and opportunities to be capitalised upon by the start-ups entrepreneurs and the initiative taken by the Indian govt. The start-ups are the kind of companies which are innovative in their course of development, analysis, evaluation, research for the target segment. In this paper various govt. policies, plans, schemes, start up life cycle, financial and operational strategies related to start-ups will be discussed. Start up is one of the scorching events this era which everyone is talking about. This campaign is particularly based on enhancing the bank financing for the start-ups to encourage the entrepreneurship and creating skilled job availability towards the strengthening of economy at large.

Keywords: Entrepreneur, Govt. plans, Initiatives, Start-ups life cycle.

Introduction

Technological innovation is a new or improved product or process whose technological characteristics are significantly different from before. Implemented technological product innovations are new products (product innovations) or processes in application (process innovations) that have been brought to market. A startup or start-up is a company or project undertaken by an entrepreneur to seek, develop, and validate a scalable business model. While entrepreneurship includes all new businesses, including self-employment and businesses that do not intend to go public, startups are new businesses that intend to grow large beyond the solo founder. At the beginning, startups face high uncertainty and have high rates of failure, but minorities of them do go on to be successful and influential.

Startups typically begin by a founder (solo-founder) or co-founders who have a way to solve a problem. The founder of a startup will do the market validation by problem interview, solution interview, and building a minimum viable product (MVP), i.e. a prototype, to develop and validate their business models. The startup process can take a long period of time (by some estimates, three years or longer), and hence sustaining effort is required. Over the long term, sustaining effort is especially

challenging because of the high failure rates and uncertain outcomes. Having a business plan in place outlines what to do and how to plan and achieve an idea in the future. Typically, these plans outline the first three to five years of your business strategy.

Starting business ground up can be very hard especially without a proper introduction to startup. Apart from the risk factors involved, it can be emotionally and mentally challenging. If you are pondering about setting out on a new business venture and are confused about the basics of startups, you're at the right place because here, you'll be enlightened about what a startup is and be introduced to the concept of startups.

Objectives

- To know the opportunities for Startups
- To identify Challenges in Startups
- To understand the role of technology based startups.

Opportunities for Startups

Large Population:

The population of India is a huge asset for the country. By 2020, it is expected that the working age population would surpass the non-working population. This unique demographic advantage will offer a great opportunity to any startup. Various infrastructure issues and the bottom- of- the- pyramid market would provide huge opportunities for the startups.

Connectivity:

Indian telecom industry has nearly 100 crore subscribers, mobile connectivity has made inroads in the rural and urban population. Government of India's digital push is going to improve connectivity and data to the next level. The race to cheapest data has started and disruption is certain. The cheap data has helped everyone to get their hands on it, start-ups will have an easier time to tap into markets, territories and even traditional businesses.

Change of Mind Set of Working Class:

Traditional career paths will be giving way to Indian startup space. Challenging assignments, good compensation packages would attract talented people to startups. Also, it is seen that several high profile executives are quitting their jobs to start or work for startups. To reinforce the trend being seen, a survey conducted by Economic Times also confirmed that the number of Students joining startups and e-commerce companies have grown considerably in the recent years.

Innovation Society:

India has the largest youth population, which is the largest driver for innovation, workforce, talent and future leaders. India has its own challenges of education, health, infrastructure and the rising gap between India and Bharat. This presents big opportunity for start-ups to solve a variety of problems. India has the population of 1.3 billion people; the country's middle class is growing along with the consumers. The large diversity in the India's population makes a strong case for a rich services and products economy. Start-ups should look at banks; our banking system has reaped the maximum benefit of our population size.

Challenges for Startups:**Revenue Generation:**

Several startups fail due to poor revenue generation as the business grows. As the operations increase, expenses grow with reduced revenues forcing startups to concentrate on the funding aspect, thus, diluting the focus on the fundamentals of business. Hence, revenue generation is critical, warranting efficient management of burn rate which in common parlance is the rate at which startups spend money in the initial stages. The challenge is not to generate enough capital but also to expand and sustain the growth.

Supporting Infrastructure:

There are a number of support mechanisms that play a significant role in the lifecycle of startups which include incubators, science and technology parks, business development centers etc. Lack of access to such support mechanisms increases the risk of failure.

Financial Resources:

Availability of finance is critical for the startups and is always a problem to get sufficient amounts. A number of finance options ranging from family members, friends, loans, grants, angel funding, venture capitalists, crowd funding etc. are available. The requirement starts increasing as the business progresses. Scaling of business requires timely infusion of capital. Proper cash management is critical for the success of the startups

Creating Awareness in Markets:

Startups fail due to lack of attention to limitations in the markets. The environment for a startup is usually more difficult than for an established firm due to uniqueness of the product. The situation is more difficult for a new product as the startup has to build everything from scratch.

Government Policies:

If entrepreneurs are the planets in the solar system, then the government is the sun, the single largest facilitator. The government policies are slowly and steadily increasing, although, it must be noted that India still maintains dismal ease of doing business ranking as per the World Bank report. Due to a maze of laws and regulations, it takes more of an effort for an entrepreneur to start a business in India than most of the other places in the world, and after he /she succeeds in setting up a business, it takes even a greater effort to comply with sector, department, state and center laws.

Benefits of Technology Startups

Technically sound population: India's position as the third-largest startup hub following the US and China is strongly backed by its rising tech-savvy English-speaking talent, meeting the IT sector's demand for superior communication skills. Growth of smaller cities: The Indian Tier 2 and Tier 3 cities have become the new and emerging loci of development for IT/IT companies. Cities like Jaipur and Ahmedabad are emerging as the new hubs and have experienced 40 per cent growth. Government-backed endeavors like The Digital India, Startup India campaigns, JAM Trinity, and Smart City Mission promote urban transformations of India's Tier 2 and 3 cities. Zinnov reports out of the 1,257 Global In-house Centers established by 976 MNCs, 68 are in Tier 2 cities. Government initiatives: The GOI is proactively supporting the growth of Indian startups through a slew of policies and campaigns like the Startup Leadership Program, Startup India Seed Fund, and ASPIRE, among others. The recent budget extended startup income tax benefits till March 2024 to boost the country's entrepreneurship environment. Extending the Daglocked benefits will also go a long way to provide ease of doing business, ensuring paperless administration.

Internet Connectivity: India has the second largest internet user base after China, thanks to the affordable data plans available. The 5G rollout will further increase the number of internet users and positively impact the Indian tech space. Startups working with AR, VR, AI, and IoT can introduce more advanced features with 5G connectivity. Though the rollout was initially slow, it is moving on hot wheels. Indigenous innovation: India's innovation capabilities are not new to the world, and one such was the UPI or Unified Payments Interface. Launched in 2016, the UPI proved favorably for the country's SMBs, simplifying transactions and eliminating costly point-of-sale devices. Its success is now crossing borders, piquing the interest of many nations.

Challenges exist in every sector, and the Indian startup ecosystem is no different. But despite the multiple challenges, there are ample opportunities in the industry that tip the scales in favour of the country's tech entrepreneurs. India has the required capabilities, a stable banking system, responsive administrative bodies, and a strong government supporting the country's startup dream– and in time, will be leading the global tech space.

Role of Tcehnology for Strtups

The Technology Is Moving Startups Beyond Conventional Tactics A Startup is a young company which seed money founded by one or more entrepreneurs to develop a unique product or service and bring it to market in the competitive spirit and which will also help customers to get product at lower price and to create a greater number of employment opportunities. The biggest can benefits of technology for daily business operations are the increase in flexibility so it will be useful in case of technology also. Technology has not only helped to improve the flexibility of a number of deadlines, but advancements such as a business call app can improve the flexibility of employees whilst reducing the need for a second phone. By its nature, the typical Startup tends to be a shoestring operation, with initial funding from the founders or their friends, families and Government. Technology and automation can help a business improve efficiencies across functions. From manufacturing to marketing, and ensure costly errors are prevented from happening. This in turn to business growth. Insights and Technology also prove valuable insights about the business. A Startup business a new business that is in the initial stages of operation, beginning to grow and is typically financed by an individual or small group of individuals. It is a young entrepreneurial, scalable business model built on technology and innovation. The technology affects a firm's ability to communicate with customers. Fast shipment options allow businesses to move products over a large geographic area. When customers use technology to interact with a business, the business benefits because better communication creates a stronger public image. In startups the role of technology is very important because of its scope of growth. The role of technology enables the Startup an idea that manifests into a commercial undertaking. Indian government is serious in promoting entrepreneurship at the Startup level and has taken a number of initiatives to ensure appropriate support easier, faster and more effective communication, better, more efficient manufacturing techniques, less wastage, more efficient stock management and ordering systems, the ability to develop new, innovative approaches, more effective marketing and promotion and new sales avenues. In this aspect it is relevant to mention 'Make in India' campaign introduced in September '14 to attract foreign

investments and encourage domestic companies to participate in the manufacturing sector. The government increased the foreign direct investment (FDI) limits for most of the sectors and strengthened intellectual property rights (IPRs) protection to instill confidence in the Startup in different business segment. In the case of startups technology has important effects on business operations. No matter the size of your enterprise, technology has both tangible and intangible benefits that will help you make money and produce the results your customers demand with the intervention of technology. Technological infrastructure affects the culture, efficiency and relationships of a Startup business.

Categories of the Best tech Startups

- Fintech startups
- Biotech startups
- Health tech startups
- Ed tech startups
- Insurtech startups
- Proptech startups
- Cleantech & Greentech startups

Conclusion

Present time's startups in India are witnessing a golden chapter in the history of Indian entrepreneurship. However, still the Indian government has a crucial role to play in positioning India as the Tech Garage of the World. It should act as a catalyst, and bring together the synergies of the private sector with the aim of innovating for India and the world. India had over 50,000 startups, with around 8,900–9,300 of these being technology-based. In 2019, alone, 1300 new tech startups were established, indicating that 2-3 new tech startups are founded every day. This adoption has enabled the growth of various sectors making it accessible for both the service providers and the consumers. Post-pandemic, one such sector is e-commerce which has witnessed massive growth both in terms of number of consumers and profit figures and all this has been possible only because of the tech adoption and digital transformation during the pandemic, especially during lockdown. Technology consulting is the process of advising businesses on how to best use technology and software to benefit their business. It can refer to the design and development, implementation, or management of new technology. Tech refresh is the cycle of regularly updating key elements of your IT infrastructure to maximize system performance. Instead of using systems until they can no longer function,

many companies choose to upgrade or replace certain infrastructure on a regular schedule.

AN OVERVIEW OF WOMEN'S ENTREPRENEURSHIP

Mrs. M. Ragaprabha

Assistant Professor

PG Department of Commerce with International Business
Nallamuthu Gounder Mahalingam College, Pollachi

Ms. K. Amuthavalli

II M.Com IB

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

In today's modern era, women are shouldering the responsibilities with their male counterparts in all walks of life whether it is private sector or public sector, one can find growing of females in almost all sectors. In this context, the increasing numbers of women's in organization indicates that women must be recognized as active participant in the nation development process. From pastoral society to contemporary information and global society, the role of women has changed drastically. Still lots have to be done yet for aspiring women toward Entrepreneurship.

Keyword: Entrepreneur, Women, Empowerment, Financial initiatives.

Objective

- To examine the issues and challenges in the way of women entrepreneur.
- To analyze the available financial assistance and Government schemes for women entrepreneur.

Concept of Women Entrepreneurship

Women entrepreneurs are those women who conceive the idea of a business enterprise initiate it organize and combine the factors of production, operate the enterprise, undertake risks and manage the economic uncertainty involved in running a business enterprise. A women or a group of people who initiate, organize and run a business enterprise is defined as women entrepreneur. The government of India has defined women entrepreneur as an enterprise owned and controlled by a women having a minimum financial interest of 51% of the capital and fixing at least 51% of the employment generated in the enterprises to women.

Functions of Women Entrepreneurship

- Exploration of the prospects of starting a new business enterprise.
- Undertaking of risks and the handling of economic uncertainties involved in business.
- Introduction of innovation or imitation of innovations.
- Coordination, administration and control.
- Supervision and leadership.

Challenges faced by Women Entrepreneurs

Conflicts between Work and Domestic Commitments:

Women's family obligations also bar them from becoming successful entrepreneurs in both developed and developing nations. "Having primary responsibility for children, home and older dependent family members, few women can devote all their time and energies to their business"(Starcher, 1996)

Gender Gaps in Education

While women are making major strides in educational attainment at primary and secondary levels, they often lack the combination of education, vocational and technical skills, and work experience needed to support the development of highly productive businesses.

Lack of Finance

Access to finance is one of the most common challenges that entrepreneurs face and this is especially true for women who are further, impeded by lack of personal identification, lack of property in their own name and the need for their husband's countersignature on many documents.

Legal Constraints in Family Law

The institutional and legal environment is critical to the growth of female-owned enterprises. Laws regulating the private sphere specifically those regarding marriage, inheritance and land can hinder women's access to assets that can be used as collateral when securing a loan.

Heavy Household Responsibilities

Leave a demand on women especially those in rural areas who have more children. They are required to perform their traditional role as housewives and therefore, they have fewer hours of free time than men, both during the weekend and on weekdays. An ILO report on women entrepreneurship identifies the following problems faced by women entrepreneurs.

Lack of Family Support

Sometimes the family may make the women feel guilty of neglecting household duties in her pursuit of business obligations. Cultural traditions may hold back a woman from venturing into her own business.

Lack of Capital

Traditional sources of finance like banks are reluctant to lend to women entrepreneurs especially if they do not have any male or family backing. This is especially true of lower income females. Women do not have adequate finance or legal knowledge to start an enterprise.

Lack of Confidence and Faith

Lack of role models undermines the self confidence of women entrepreneurs. The activity of selling is considered abhorrent to the female gender.

Lack of right public/ private institutions

Most public and private incentives are misused and do not reach the woman unless she is backed by a man. Also many trade associations like ministries, chambers of commerce do not cater to women expecting women's organizations to do the necessary thing.

Problems of Women Entrepreneurships

- **Problems of Finance:**
Finance is regarded as life-blood for any enterprise, be it big or small.
- **Scarcity of Raw Material:**
Most of the women enterprises are plagued by the scarcity of raw material and necessary inputs.
- **Stiff Competition:**
Women entrepreneurs do not have organization set-up to pumps in a lot of money for canvassing and advertisement.
- **Limited Mobility:**
Women mobility in India is highly limited due to various reasons. A single women asking for room is still looked upon suspicion.
- **Family Ties:**
Support and approval of husbands seem necessary condition for women's entry into business.
- **Male Dominated Society:**
Women suffer from male reservation about a women's role, ability and capacity and are treated accordingly.
- **Low risk-bearing ability:**
Women in India idea a protected life. They are less educated and economically not self-dependent.

Role of Women Entrepreneurs

1. Infrastructure

Infrastructure set up plays a vital role for any enterprise. Government can set some priorities for women entrepreneurs for allocation of industrial plots, sheds and other amenities. However, precautionary measures should be undertaken to avoid the misuse of such facility by the men in the name of the women.

2. Personality Development

Attempts should be there to enhance the standards of education of women in general as well making effective provisions for their training, practical experience and personality development programmes, to improvise their over-all personality standards.

3. Self help groups of women entrepreneurs

Self help groups of women entrepreneurs can mobilize resources and pool capital funds to help the women in the field of industry, trade and commerce.

4. Business Development Training Programs

It includes basic day-to-day management training like how to keep track of accounts, handle taxes and understand compliance rules and regulations. They can also focus on strategy and the long-range success of a business from writing a business plan to targeting specific markets, along with product innovation within business clusters and incubators.

5. Access to Finance Programs

Efforts to facilitate access to finance for women entrepreneurs typically encompass initiatives that reform restrictive bank and regulatory policies. Such reforms accept less traditional forms of collateral, look at a lenders willingness to repay and simplify business registry. They also help financial institutions develop innovative loan and savings products for female entrepreneurs. To establish all India forums to discuss the problems, grievances, issues, and filing complaints against constraints or shortcomings towards the economic progress path of women entrepreneurs and giving suitable decisions .

Leadership Qualities

- Adventurous
- Driver
- Conscious
- Hard work

- Educated
- Motivations
- Determination to excel
- Skill full
- Experienced
- Industrious
- Intelligent
- Studious
- Perseverance
- Patience
- Unquenchable optimism
- Accept Challenges

Fostering Factors

- Motivational needs
- Economic necessity
- Independences
- Education and qualification
- Family occupation
- Success stories of friends of friends & relatives

Facilitating Needs

- Adequate financial facilities.
- Experienced and skilled people at work development training programs.
- Co-operation of family.

Conclusion

Entrepreneurship among women, no doubt improves the nation in general and of the family in particular. Women today are more willing to take up activities that once considered the preserve of men, and have proved that are second to no one with respect to contribution to the growth of the economy. Women entrepreneurship must be molded properly with entrepreneurial traits and skill to meet the changes in trends, challenges global markets and also is competent enough to sustain and strive for excellence in the entrepreneurial arena.

Abstract

This paper examines India's global leadership in 2047, analyzing the impact of NEP 2020, Women Empowerment, Agriculture Reform, and Make in India. It explores how NEP 2020 fosters skilled individuals and innovation, while women empowerment initiatives drive social and economic progress. The agricultural reform enhances productivity and food security, and 'Make in India' campaign boosts industrial growth. This study sheds light on the interconnected effects of these policies, offering insights into India's rise as a global leader and emphasizing the significance of visionary reforms and empowerment for sustainable development.

Keywords: Empowering India's Journey to Global Leadership in 2047: A Comprehensive Analysis of NEP 2020, Women Empowerment, Agriculture Reform, and Make in India

Introduction

As India charts its path towards 2047, the centenary year of its independence, the nation's aspirations for global leadership have never been more resolute. This paper endeavors to examine the pivotal role played by key policy initiatives - the National Education Policy (NEP) 2020, Women Empowerment, Agriculture Reform, and Make in India - in propelling India towards its envisioned position on the global stage. Each of these transformative drivers brings unique dimensions to the country's journey, fostering inclusive growth, gender equality, agricultural sustainability, and industrial prowess.

Education – A True Driving Factor:

1. **Human Capital Development:** Education and NEP 2020 nurture skilled individuals, fostering creativity and critical thinking. A well-educated workforce drives economic growth and innovation, enhancing India's global competitiveness.
2. **Knowledge Economy:** NEP 2020 emphasizes research and innovation, positioning India as a leader in technology, science, and medicine. Leveraging

intellectual assets in a knowledge-driven world strengthens its global standing.

3. **Social Inclusivity and Equality:** NEP 2020 ensures equitable access to education, reducing disparities and empowering marginalized communities. Education uplifts all citizens, driving collective progress and social harmony.
4. **Global Collaborations:** A dynamic education system attracts international students and scholars, enhancing India's soft power and promoting cultural exchange. Global academic and research partnerships strengthen international ties.
5. **Sustainable Development:** NEP 2020 integrates environmental consciousness and sustainability into education, equipping future leaders to address global challenges responsibly. India's commitment to sustainable practices enhances its global leadership in sustainable development.
6. **Policy and Governance:** Education fosters an informed citizenry, enabling active participation in democratic processes and accountable governance. NEP 2020's focus on civic education cultivates responsible citizenship, reinforcing India's democratic foundations.

Education vs Knowledge

Education

1. **Formal Learning:** Education is a formalized process of acquiring knowledge and skills through structured instruction in institutions such as schools, colleges, and universities.
2. **Curriculum-driven:** It follows a predetermined curriculum designed to cover specific subjects and learning objectives, providing a systematic and organized approach to learning.
3. **Credentialed Recognition:** Successful completion of education often leads to the attainment of degrees, diplomas, or certificates, serving as formal credentials of the individual's educational achievements.

Knowledge

1. **Comprehensive Understanding:** Knowledge encompasses a broader spectrum of information and understanding acquired from various sources, including formal education, self-learning, experiences, and observations.
2. **Diverse Sources:** It can be gained through reading books, articles, engaging in discussions, practical experiences, exposure to different cultures, and more.
3. **Ongoing and Lifelong:** Knowledge acquisition is a continuous and lifelong process that extends beyond formal education, allowing individuals to keep learning and growing throughout their lives.

Education provides formalized learning with credentials, while knowledge encompasses continuous, diverse understanding from various sources and experiences.

Women Empowerment-Need of The Hour

“We Can’t Develop if half of us are held back” – Malala Yousafzi

1. Women empowerment has become a driving force in India's pursuit of global leadership.
2. India recognizes that empowering women is crucial for sustainable development and enhancing its global standing.
3. India has made significant progress in promoting women's rights and gender equality.
4. Legal reforms and policy initiatives have been implemented to empower women and create an enabling environment.
5. Women's education, economic participation, and representation in decision-making roles have increased.
6. Women's empowerment has positively impacted India's economy.
7. Increased access to education and employment opportunities has led to greater participation in various sectors.
8. Women's involvement has fueled economic growth and enhanced innovation and creativity.
9. Women's empowerment has contributed to reducing poverty and driving inclusive development.
10. Studies show that investing in women's economic empowerment leads to better outcomes for families and communities.

These highlight the significance of women's empowerment in India's global leadership vision and the various aspects where it has made a positive impact.

Agriculture Reform and its Need

Agriculture reform in India is a critical aspect of the country's pursuit of global leadership. As one of the world's largest agricultural economies, India's agricultural sector plays a significant role in ensuring food security for its vast population and contributing to the global food supply.

1. **Food Security:** India's agriculture sector feeds a massive population, and ensuring food security is crucial for national stability and prosperity. Agricultural reforms can enhance productivity, improve supply chains, and address distribution challenges to meet the food demands of a growing population.

2. **Sustainable Development:** With increasing environmental concerns and climate change impacts, India needs to adopt sustainable agricultural practices. Implementing eco-friendly techniques, promoting organic farming, and enhancing water management can lead to more sustainable agricultural growth.
3. **Modernization and Technology:** Embracing modern agricultural technologies and practices can significantly boost productivity and efficiency. India has the potential to become a leader in agricultural innovation, leveraging artificial intelligence, precision farming, and advanced machinery to optimize yields.
4. **Rural Development:** Agriculture is the backbone of rural India, and comprehensive reforms can lead to improved rural livelihoods. By enhancing infrastructure, providing better access to credit, and promoting value addition, India can empower rural communities and reduce rural-urban migration.

In conclusion, agriculture reform is essential for India's journey towards global leadership. By embracing sustainable practices, modern technologies, and inclusive policies, India can not only ensure its own food security but also make significant contributions to global food systems and sustainable development.

Make in India- The Transition

"Make in India" is a flagship initiative launched by the Indian government in 2014 to promote domestic manufacturing and attract foreign investment. This campaign has made significant contributions to India's development across various sectors. Here are some key areas where "Make in India" has positively impacted India's development:

1. **Boost to Manufacturing Sector:** "Make in India" has given a substantial boost to India's manufacturing sector, which is a vital component of economic growth and job creation. The initiative has encouraged both existing and new businesses to set up manufacturing units in India, leading to increased industrial production and diversification.
2. **Job Creation:** The growth of the manufacturing sector has resulted in the creation of millions of jobs across the country. This has been particularly beneficial for the youth and has contributed to the reduction of unemployment rates.
3. **Enhanced Infrastructure:** To support the growth of manufacturing and facilitate ease of doing business, the Indian government has invested heavily in improving infrastructure, such as transportation, logistics, and power.

supply. These developments have made India a more attractive destination for investment.

4. **FDI Inflows:** "Make in India" has been successful in attracting foreign direct investment (FDI) into the country. Many global companies have shown interest in setting up manufacturing facilities in India to cater to both the domestic and international markets.
5. **Promoting Innovation:** The initiative has encouraged indigenous innovation and research and development (R&D). Several companies have been incentivized to invest in R&D activities, leading to the development of new technologies and products.

In conclusion, "Make in India" has played a vital role in India's development by promoting manufacturing, job creation, infrastructure development, foreign investment, innovation, and export growth. The initiative continues to be a key driver of India's economic progress, contributing to its emergence as a global manufacturing hub and an attractive destination for investors.

Conclusion

Women empowerment, NEP 2020, agriculture reform, and Make in India collectively propel India's journey to global leadership by 2047. These initiatives foster inclusivity, education, modernization, and self-reliance, driving sustainable development and bolstering India's standing as a responsible and influential global leader.

EMPOWERMENT OF WOMEN THROUGH SELF HELP GROUPS

Ms. M. Shanmugapriya

Assistant Professor, Department of Commerce - BPS
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Women participation in Self Help Groups have obviously created tremendous impact upon the life pattern and style of poor women and have empowered them at various levels not only as individuals but also as members of the family members of the community and the society as whole. They come together for the purpose of solving their common problems through self-help and mutual help. The more attractive scheme with less effort is "Self Help Group" (SHGs). It is a tool to remove poverty and improve the women entrepreneurship and financial support in India.

The concept of SHG services the principle, 'by the women, of the women and for the women'. Self-help groups are voluntary associations of people with common interests formed to achieve collective social and economic goals. Such groups are organized for mutual help and benefit. It is formed democratically without any political affiliations. Self-help groups (SHGs) is as an instrument to change the conditions of women socially and economically. Once socio-economic experiment is achieved it would have implication on the overall development of women. SHGs enable economic, social, political and psychological empowerment of women.

Keywords: *tremendous, poverty, entrepreneurship, associations, empowerment*

Introduction

Self Help Groups are considered as one of the most significant tools in participatory approach for the economic empowerment of women. It is an important institution for improving life of women on various social components. The basic objective of SHG is that it acts as the platform for members to provide space and support to each other. SHGs Comprises very poor people who do not have access to formal financial institutions. It enables its members to learn to cooperate and work in a group environment. Today, in India, Self Help Groups (SHGs) represent a unique approach to financial intermediation. This combines access to low-cost financial services with a process of self-management and development for the women who are SHG members. SHGs are formed and supported usually by Non - Governmental organizations by Government agencies.

SHG are seen to confer many benefits, both economic and social. SHGs are enable women to grow their savings and access the credit which banks are increasingly willing to lend. SHGs can also be community platform from which women become active in village affairs, stand for local election to take action to address social. In India before introduce this scheme for rural women were largely negligible. But in

recent years the most significant emerging system called Self Help Group is a major breakthrough in improving lives of womenfolk and alleviating rural poverty. However, the significant success of several SHGs show that the rural poor indeed efficient to manage credit and finance. Women participation in Self Help Groups have obviously created tremendous impact upon the life pattern and style of poor women and have empowered them at various levels not only as individuals but also as members of the family members of the community and the society as whole. They come together for the purpose of solving their common problems through self-help and mutual help. The more attractive scheme with less effort is "Self Help Group" (SHGs). It is a tool to remove poverty and improve the women entrepreneurship.

Types of Empowerments through SHGs

The term Empowerment refers to measures designed to increase the degree of autonomy and self-determination in people and in communities in order to enable them to represent their interests in a responsible and self-determined way, acting on their own authority. It is the process of becoming stronger and more confident, especially in controlling one's life and claiming one's rights. Empowerment as action refers both to the process of self-empowerment and to professional support of people, which enables them to overcome their sense of powerlessness and lack of influence, and to recognize and use their resources.

Economic Empowerment

"Economic empowerment" can be defined as the development of the ability of the historically disadvantaged to engage in economic activity that benefits both the individuals in question and the broader society. It is seen as a more productive and less costly way to help those who would otherwise remain dependent on the social welfare system. Welfare has its critics who contend that welfare removes the incentive to find employment while drawing excessively from the treasury. By empowering individuals to become economically or financially self-sufficient, they are removed from welfare payrolls and become more productive members of society. Economic empowerment is often applied to women who have been subject to discrimination in education and professional opportunities. These women are not necessarily economically disadvantaged, but they have been denied opportunities to become self-sufficient due to cultural or religious obstacles. In most instances, though, they do fall on the lower end of the socioeconomic spectrum. The economic contribution of women has been found to be related to her role and status in the society. The Self-help groups provide economic benefits to the women by providing income generating activities. Economic independence facilitates in bringing about

sexual equality and increase in women's income translates more directly into family wellbeing.

Social Empowerment

Self-help Groups improve the equality of status of women as participants, decision-makers and beneficiaries in the social, democratic, economic and cultural spheres of life. SHGs ensure the equality of status of women as participants, decision-makers and beneficiaries in the democratic, economic, social and cultural spheres of life. Social empowerment is indispensable to achieving quality of life for people with disabilities and it is both a continuous process as well as a result. Though social empowerment can be achieved through other areas of practice, such as inclusive education and socioeconomic integration, it is also a specific area of practice where tools, methods and approaches exist to facilitate social inclusion. Personalised social support is one specific and tailored approach to social inclusion where a person is accompanied to thrive in his/her personal situation and environment.

Political Empowerment

SHGs as active, articulate and organized citizenry act on a range of issues, holding the Panchayati accountable in terms of the use, production and distribution of public resources for the common public good. SHGs enable women to develop their communication skills to speak at the Gram Sabha, public meetings, etc. An SHG functions through its regular meetings, where members perform transactional activities and discuss over different related issues. Social mobilization through SHGs is inevitable for political empowerment.

Psychological Empowerment

Self-help groups enhance the equality of women as participants, decision-makers and beneficiaries in the democratic, economic, social and cultural spheres of life. The SHGs inculcate a great confidence in the minds of rural women to success in their day-today life.

Conclusion

Empowerment is not essential economic one alone; it is a process having personal, economic, social and political dimensions with personal empowerment being the core of the empowerment process. Women's participation in SHGS has altered the lives of many of them, and these women can be prospective leaders in the local political field. The basics of this change are empowerment, self-assurance, political consciousness and assertion of identity. With respect to the control of

resources, changes in behaviour and the decision-making reveals that many strides have been made in the right direction and women are in the process of empowering themselves.

ROLE OF ENTREPRENEURSHIP IN PROMOTING RURAL WOMEN EMPOWERMENT

Mrs. T. Muthukannu

Assistant Professor

P G Department of Commerce CA

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Women's entrepreneurship contributes to the economic well-being of the family and communities, reduces poverty, ensures country's economic growth and development. The empowerment of women to a large extent depends on taking part in some development activities. Therefore, the promotion of micro and small scale enterprises has been recognized as an important strategy for advancing the economic empowerment of women. However, it is seen that, the economic status of women is very low especially in rural areas and opportunities of earning are very less. In this scenario, the Self Help Groups (SHGs) are considered as institutional innovation that fosters empowerment of rural women. Therefore, the need for designing exclusive self-employed and other development programmers for promotion of women empowerment is essential. The present study aims at discussing some important aspects of women empowerment through micro entrepreneurship development and SHGs.

Keywords: *women entrepreneurship, SHG's, empowerment.*

Introduction

Entrepreneurship plays an eminent role in creating an employment opportunity for rural communities, providing self-employment for those who have started-up a business of their own and enhancing the economic status of the rural sector as well. Now women are also interested to establish their own business as professionally both in the urban and rural areas due to overcome poverty, generate family income and increasing standard of living. Entrepreneurship development and income generating activities are a feasible solution for empowering women who leads to economic independence, the opportunity to have control over their lives, self-reliance, self-determination, and a way to achieve for themselves.

Objective

The study has the following objectives:

- Know the role of SHG's in empowering women
- Know about micro enterprises for rural women & its areas of development
- Know the advantages of micro enterprise in building women empowerment
- Know the impact of entrepreneurship development in women empowerment

Scope of the Study

This study would be of great help to the implementing agencies to bring necessary improvements in the self-help groups for attaining the overall improvement of women. The knowledge on these aspects could be used to develop strategies to motivate self-help group members for their enhanced participation in the group. Further the study would highlight the role and importance of micro enterprises in women empowerment.

Methodology of the Study

Research design: The nature of the study is both exploratory and descriptive. It is exploratory as the study aims at identifying the significance of women empowerment through entrepreneurship.

Sources of data: The study is based on secondary data. The data is collected from books and literature review is done by online available studies and journals.

Self Help Group: The definition of SHG as approved by National Bank For Agriculture and Rural Development [NABARD] the apex banking body in India, is "An SHG is a small, economically homogeneous and affinity group of rural poor voluntarily formed to save and mutually agree to contribute common fund to be lent to its members as per group decision for their socio-economic development".

As the name indicates, self-help group is an informal group of about 15-20 people from a homogeneous class, who come together for addressing their common problems. The main aim of SHG is to make group members self-sufficient and self-reliant [independent] by self-employment and empowerment through group dynamics.

Role of SHG's in Empowering Women: Participation in income generating activities helps in the overall empowerment of women. The SHGs had major impact on social and economic life of rural women. It empowers women and trains them to take active part in the socio-economic progress of the nation and make them sensitized, self-made and self-disciplined. In this regard Pattanaik (2003) has stated that SHGs are continuously striving for a better future for rural women as participants, decision-makers and beneficiaries in the domestic, economic, social and cultural spheres of life. But due to certain constraints like gender inequality, exploitation, women torture, various SHGs is not organized properly and effectively. The SHGs have inculcated great confidence in the minds of rural women to succeed in their day-to-day life. The SHGs bring out the capacity of women in moulding the community in right perspective and explore the initiative of women in taking the entrepreneurial ventures.

Makandar&Mulla (2013) argued that women's participation in SHGs enabled them to discover inner strength, gain self-confidence, social, economic, political and psychological empowerment and capacity building. SHGs helps women come out in open and discuss their problems. SHGs also helps to bring about awareness among rural women about savings, education, health, environment, cleanliness, family welfare, social forestry, etc. again SHGs could be linked to literacy programmes run by government and it could be made an integral part of SHG activities. Raised literacy level could be helpful for the SHG members to overcome cognitive constraints and to understand government policies, technical understanding and gaining required skills.

Empowerment should be extremely induced so that women can exercise a level of autonomy. There should also be '**self-empowerment**' so that women can look at their own lives. The process of '**learning by doing and earning**' would certainly empower rural women. More and more rural women need to be involved in self-employment. Self-employment in agriculture, village and small industries and retail trade and services should be expanded. Self-employment is also conducive to the development of individual initiative and entrepreneurial talent and offers greater personal freedom. The added advantage is that the institution of family remains undisturbed. The emergence of self-help groups in this context is a welcome development. The groups would provide a permanent forum for articulating their needs and contributing their perspectives to development.

SHG should be developed as an institution for financial intermediation as well as people's network rather than a vehicle for credit disbursal only. SHG is able to overcome most of the practical problems encountered in the implementation of the various income generating programmes for the economic empowerment of women.

The possible outcomes of women's entrepreneur through SHGs at household level are self-employment, sustainable livelihoods, enhanced social dignity and better status of women. SHG would lead to benefits not only to the individual women and women's group but also for the family and community as a whole through collective action for development. Empowerment is not just for meeting their economic needs but also for more holistic social development.

Micro Enterprises for Rural Women and Its Areas of Development

Micro enterprises: The concept of micro enterprise and microfinance was pioneered in 1976 by Nobel Prize recipient Muhammad Yunus, founder of the Grameen Bank (Bank of the Poor), in Bangladesh. The enterprises from small scale to medium scale grouped together are called "Micro, Small and Medium Enterprises" (MSME). Microenterprises mainly focus on developing and utilizing the

entrepreneurial skills and potential of rural women below poverty line to meet local needs (Kaushik & Rengarajan, 2010). It helps to generate employment for a number of people within their own social system. This is more beneficial for women in rural areas as it enables them to add to the family income while taking care of their own home and livestock task. The micro entrepreneurship are strengthening the women empowerment and remove the gender inequalities.

Areas of Development: Depending on number of factors ranging from landholdings, subsidiary occupations, agro climatic conditions and socio-personal characteristics of the rural women and her family member the areas of micro-enterprises also differ from place to place. The micro enterprises are classified under three major heads:

- i. Micro-enterprise development related to agriculture and allied agricultural activities like cultivating to organic vegetables, flowers, oil seeds and seed production are some of the areas besides taking up mushroom growing and bee keeping. Some more areas can be like dehydration of fruits and vegetables, canning or bottling of pickles, chutneys, jams, squashes, dairy and other products that are ready to eat. This is common form of microenterprise in rural areas.
- ii. Micro-enterprise development related to livestock management activities like dairy farming, poultry farm, livestock feed production and production of vermicomposting using the animal waste can be an important area in which women can utilize both her technical skills and raw materials from the farm and livestock to earn substantial income and small scale agro-processing units.
- iii. Micro-enterprise development related to household based operations. It is generally handicraft related enterprises where women perform activities like knitting, stitching, weaving, embroidery etc.

Now Indian women entrepreneurs are showing their presence in different areas like herbal marketing, food processing, farming, dairying, making of handcrafted gift items, such as bangles, glass, utensils, by using wood, stone, and metals like bronze, iron& steel, making furniture with the help of cane and bamboo, statues of Indian deities, pots, vessels, other decorative pieces, making baskets from straw, tailoring & embroidery, carpet making and retailing, agarbatti / chalk / candle preparation, making of door mats, rope, jute bags/ baskets/ hats etc. Therefore, it can be said that entrepreneurship is an active, multidimensional process, which helps women to realize their full identity and power in all spheres of life.

Advantage of Micro Enterprise in Building Women Empowerment: Micro enterprises in rural area can help to empower women in rural areas. A micro enterprise is not only enhancing national productivity, generate employment but also helping to develop economic independence, personal and social capabilities among rural women. Following are some of the personal and social capabilities, which were developed as result of taking up enterprise among rural women:

- Economic freedom
- Improved standard of living
- Self confidence
- Increased social interaction
- Engaged in political activities
- Increased participation in social meetings
- Development in leadership qualities
- Involvement in solving problems related to women and community
- Decision making capacity in family and community

The rural women are having basic indigenous knowledge, skill, potential and resources to establish and manage enterprise. Therefore, promoting entrepreneurship through microenterprise approach has been recognized as the solution for incorporating women into the overall economic development process and enables eradicating the rural poverty in developing economies to a larger extent. Finally, we can say that economic empowerment of rural women through micro entrepreneurship led to the empowerment of women in so many things such as socio-economics opportunity, political participation and representation, social equality, personal right, family development, market development, community development, societal development, state development and at last development of the nation.

Women Empowerment through Entrepreneurship

Following are the impact of entrepreneurship development on women empowerment:

1. Through entrepreneurship development self confidence level of women are increased and gave them a prosperous future.
2. Rural women are engaged in small scale entrepreneurship programs with the help of SHG's by which they were economically empowered and attaining very good status in family and community.
3. Entrepreneurship also helps to bring about awareness among rural women about savings, education, health, environment, cleanliness, family welfare, social forestry etc.

4. Micro-enterprise is the best tool for rural women as it enables them to add to the family income and as such it provides family members to a better life style, including education for the children and improvement of family health.
5. Some aspects of household decision making are reported to have changed as a result of women's contribution in family income. Most of the men now consult with their wives in important family matters.
6. Promoting entrepreneurship through microenterprise approach enables eradicating the rural poverty in developing economies to a larger extent.

Gender wise Percentage of participation in Indian Rural Economy during year 2011-2012 is as under-

	Self employed	Regular wage	Causal labour
Men	54.50%	10.00%	35.50%
Women	59.30%	5.60%	35.10%

Source: Central Statistical Office as per National Sample Survey 68th round (2011-2012)

As per above graphical representation 59.30% rural women are self-employed while the ratio of male is only 54.50%, 5.60% rural women are engaged in regular wages while male candidates are 10.00% and casual labour comprise 35.10% of women and 35.50% of men in rural economy of India. As per result it makes us clear that interest of rural women is being increased towards the entrepreneurship in India.

Suggestions

Women entrepreneurs are contributing a lot in rural & economic development in India. However, it is potentially empowering and liberating only if it provides women an opportunity to improve their well-being and enhance their capabilities. Kumari, (2010) argued that lack of supportive network, financial and marketing

problems are the major problem areas for rural women entrepreneurs and major demotivator for other women to initiate entrepreneurial activity. Therefore, the following efforts can be taken into account for effective development of women entrepreneurs: -

- Various schemes & plans of government for the encouragement of women entrepreneurs should be strongly executed at different levels.
- Information should flow in right direction with the help of NGO's and government organizations about policies, plans and strategies on the development of women in the field of industry, trade and commerce.
- Interest free consumption credit for vulnerable women should be provided by the Government, Banks, financial institutions and wealthy individuals.
- Special training course should be offered for women entrepreneurs to improve skills.
- Provisions should be made for micro credit system and enterprise credit system to the women entrepreneurs.
- Special assistance is to be provided to specially disadvantaged groups like women in extreme poverty, women in conflict situations, women affected by natural calamities, the disabled widows, elderly women, single women in difficult circumstances, women those displaced from employment, migrants, women who are victim of material violence etc.

Conclusions

It can be said that today we are in a better position wherein women participation in the field of entrepreneurship is increasing at a considerable rate, efforts are being taken at the economy as well as global level to enhance women involvement in the enterprise sector. At present women have broken the monopoly of men and proved that they are not inferior to men. The SHGs and micro enterprises had major impact on social and economic life of rural women. The study concludes that there was an increase in self-confidence, self-reliance and independence of rural women due to the involvement in the entrepreneurial and other activities of SHGs. Now women entrepreneurs are aware of opportunities available to them, but there is scope for improvement in it. The economic status of the women is now accepted as an indicator of a societies stage of development and therefore it becomes imperative for the government to frame policies for development of entrepreneurship among women. Raised literacy level could be helpful for the SHG members to overcome cognitive constraints and to understand government policies, technical understanding and gaining required skills.

Abstract

The term gender refers to the economic, social and cultural attributes and opportunities associated with being male or female. In most societies, being a man or a woman is not simply a matter of different biological and physical characteristics. This paper deals with importance of gender equality towards achieving the goal of women empowerment. It outlines the gender inequality scenario in India and types of inequalities between men and women. This paper sheds light on importance of gender equality and role of gender equality in women empowerment, gender concern in development and gender mainstreaming in development. This paper concludes with some interesting findings along with policy suggestions.

Keywords: Gender, Attributes, Empowerment, Inequality, Economic development etc.

Introduction

Gender equity is the process of being fair to women and men. To ensure fairness, strategies and measures must often be available to compensate for women's historical and social disadvantages that prevent women and men from otherwise operating on a level playing field. Equity leads to equality. Gender equality requires equal enjoyment by women and men of socially-valued goods, opportunities, resources and rewards. Where gender inequality exists, it is generally women who are excluded or disadvantaged in relation to decision-making and access to economic and social resources. Therefore a critical aspect of promoting gender equality is the empowerment of women, with a focus on identifying and redressing power imbalances and giving women more autonomy to manage their own lives. Gender equality does not mean that men and women become the same; only that access to opportunities and life changes is neither dependent on, nor constrained by, their sex. Achieving gender equality requires women's empowerment to ensure that decisionmaking at private and public levels and access to resources are no longer weighted in men's favour, so that both women and men can fully participate as equal partners in productive and reproductive life .

Review of Literature

An analysis of gender equality is very essential to understand the level of women empowerment in Indian society. According to Dijkstra and Hanmer (2000), gender inequality in India refers to health, education, economic and political inequalities between men and women in India.

As per the report by Tisdell, Roy and Ghose (2001), various international gender inequality indices rank India differently on each of these factors, as well as on a composite basis, and these indices are controversial. Gender inequalities, and its social causes, impact India's sex ratio, women's health over their lifetimes, their educational attainment, and economic conditions. Gender inequality in India is a multifaceted issue that concerns men and women alike. Some argue that some gender equality measures, place men at a disadvantage. However, when India's population is examined as a whole, women are at a disadvantage in several important ways.

Objectives

- To know the gender equality and women empowerment in india.
- To identify the key issues and linkages of women empowerment.

Research Methodology

Secondary data have been collected for this study from various websites, journals and e-books.

Empowering Women

Despite many international agreements affirming their human rights, women are still much more likely than men to be poor and illiterate. They usually have less access than men to medical care, property ownership, credit, training and employment. They are far less likely than men to be politically active and far more likely to be victims of domestic violence. The gender equality is need of the hour to prevent the violence against women. The ability of women to control their own fertility is absolutely fundamental to women's empowerment and equality. When a woman can plan her family, she can plan the rest of her life. When she is healthy, she can be more productive. And when her reproductive rights—including the right to decide the number, timing and spacing of her children, and to make decisions regarding reproduction free of discrimination, coercion and violence—are promoted and protected, she has freedom to participate more fully and equally in society.

Gender Equality and Women's Empowerment

Gender equality means a world where women and men in all aspects of life experience the same opportunities, results, freedom, and obligations. Gender equality happens when both sexes can participate equally in the allocation of power and influence; have equal opportunities for financial freedom through employment or the establishment of businesses; have equal access to education and the opportunity to develop personal ambitions. The empowerment of women is a vital component of fostering gender equality, with an emphasis on recognizing and redressing power imbalances and allowing women more flexibility to control their own lives.

The empowerment of women is necessary for sustainable development and the realization of human rights for all. Where the status of women is small, family size appears to be high, making it harder for families to thrive. Population and growth programs, reproductive health services are more successful when addressing women's educational opportunities, status and empowerment. Once women are empowered, it benefits whole families, and these benefits also have rippling effects on future generations. The positions that men and women play in society are not decided biologically and are socially determined, evolving and changeable. While they can be justified as involving culture or faith, these positions differ widely depending on the place and change over time.

Key Issues and Linkages

Reproductive Health:

Women, for both physiological and social reasons, are more vulnerable than men to reproductive health problems. Reproductive health problems, including maternal mortality and morbidity, represent a major – but preventable cause of death and disability for women in developing countries. Failure to provide information, services and conditions to help women protect their reproduction health therefore constitutes gender-based discrimination and a violation of women's rights to health and life.

Stewardship of Natural Resources

Women in India are generally responsible for obtaining water, food, and fuel and supervising the health and diet of their families. Therefore, they prefer to bring everything they know about nutrition into immediate action and protect the ecosystem and natural resources.

Economic Empowerment

In India, there is more poverty amongst women than men. Gender inequalities exist in part because most of the unpaid labor within families and societies fall on women's shoulders and because they face racial discrimination.

Educational Empowerment

Approximately two-thirds of India's illiterate adults are female. Higher educational rates for women are closely correlated with lower infant mortality and lower fertility, as well as higher educational and economic opportunities for their children

Political Empowerment

In fundamental civil and human rights, in access to or ownership of the land or other resources, in jobs and earnings and social and political participation, social and legal systems often do not guarantee women equality. Domestic abuse laws are still not followed on the women's behalf

Importance of Gender Equality

Gender equality is intrinsically linked to sustainable development and is vital to the realization of human rights for all. The gender equality is very essential to achieve the goal of women empowerment. The overall objective of gender equality is a society in which women and men enjoy the same opportunities, rights and obligations in all spheres of life. Equality between men and women exists when both sexes are able to share equally in the distribution of power and influence; have equal opportunities for financial independence through work or through setting up businesses; enjoy equal access to education and the opportunity to develop personal ambitions, interests and talents; share responsibility for the home and children and are completely free from coercion, intimidation and gender-based violence both at work and at home. Within the context of population and development programmes, gender equality is critical because it will enable women and men to make decisions that impact more positively on their own sexual and reproductive health as well as that of their spouses and families. Decision-making with regard to such issues as age at marriage, timing of births, use of contraception and recourse to harmful practices female genital cutting stands to be improved with the achievement of gender equality.

However it is important to acknowledge that where gender inequality exists, it is generally women who are excluded or disadvantaged in relation to decision-making and access to economic and social resources. Therefore a critical aspect of promoting gender equality is the empowerment of women, with a focus on identifying and

redressing power imbalances and giving women more autonomy to manage their own lives. This would enable them to make decisions and take actions to achieve and maintain their own reproductive and sexual health. Gender equality and women's empowerment do not mean that men and women become the same; only that access to opportunities and life changes is neither dependent on, nor constrained by, their sex.

The achievement of gender equality implies changes for both men and women. More equitable relationships will need to be based on a redefinition of the rights and responsibilities of women and men in all spheres of life, including the family, the workplace and the society at large. It is therefore crucial not to overlook gender as an aspect of men's social identity. This fact is, indeed, often overlooked, because the tendency is to consider male characteristics and attributes as the norm, and those of women as a variation of the norm.

But the lives of men are just as strongly influenced by gender as those of women. Societal norms and practices about "masculinity" and expectations of men as leaders, husbands or sons create demands on men and shape their behaviour. Men are too often expected to concentrate on the material needs of their families, rather than on the nurturing and caring roles assigned to women. Socialization in the family and later in schools promotes risk-taking behaviour among young men, and this is often reinforced through peer pressure and media stereotypes. So the lifestyles that men's roles demand often result in their being more exposed to greater risks of morbidity and mortality than women. These risks include ones relating to accidents, violence and alcohol consumption.

Men also have the right to assume a more nurturing role, and opportunities for them to do so should be promoted. Equally, however, men have responsibilities in regard to child health and to their own and their partners' sexual and reproductive health. Addressing these rights and responsibilities entails recognizing men's specific health problems, as well as their needs and the conditions that shape them. The adoption of a gender perspective is an important first step; it reveals that there are disadvantages and costs to men accruing from patterns of gender difference. It also underscores that gender equality is concerned not only with the roles, responsibilities and needs of women and men, but also with the interrelationships between them.

Conclusion

From the above discussion, it could be seen that gender equality is very important to achieving women's empowerment targets. It is noted that in India, women have been exposed to various forms of oppression and disabilities despite

the enjoyment of the developmental benefits arising from disempowerment. Therefore, women's advancement may be possible by gender achievement. Gender equality is very essential to achieve the goal of women empowerment. It is observed that women in India have been subjected to various types of discrimination and disabilities towards enjoyment of benefits of development consequent upon disempowerment. Hence the empowerment of women could be possible through attainment of gender equality. In order to promote gender equality in socio economic development, the following measures can be considered.

ROLE OF ENTREPRENEURSHIP IN PROMOTING RURAL WOMEN EMPOWERMENT

Ms. M.Gayathri

Assistant Professor, PG Department of Commerce-CA
Nallamuthu Gounder Mahalingam College, Pollachi

Dr.T.Vijaya Chithra

Assistant Professor, PG Department of Commerce-CA
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Woman creates a family which leads to society and nation. The social and economic development of women is essential for the overall economic development to any society or country. Although entrepreneurship is in the mindset of any woman, it is not invested in India the way it should be. Although there are some exceptions, due to the changing environment, people are comfortable accepting the important role of women in our society. Entrepreneurial development of women is an essential part of human resource development. Any strategy aimed at economic growth without engaging women, who make up half of the world's population, will back fire. Evidence has unequivocally established that entrepreneurial spirit is not a male prerogative. Women-owned businesses are increasing rapidly in almost all economies. Women's latent entrepreneurial potential is gradually changing with growing sensitivity to role in society and economic status. Skill, knowledge and adaptability in business are the main reasons why women emerge in business ventures. The main objectives of the study are to find out the factors that contribute to the formation of female entrepreneurs. The study also highlights the major barriers and challenges faced by women entrepreneurs and the opportunities available to them. Finally the paper makes some commendations to increase or promote women entrepreneurship and healthy development of women entrepreneurship in India.

Keywords: Women Entrepreneurship, Role, Self-Fulfillment, Entrepreneurship Development.

Introduction

Women's empowerment is a social process in which women expand and recreate what it means to be in a previously denied situation. There are many principles that define women's empowerment, for one to be empowered; they must come from a position of disempowerment. Entrepreneur is the agent who buys means of production at certain prices, in order to sell at prices that are certain at the moment at which he commits himself to his cost". According to P.F Drucker "he is one who always searches for change: responds to it & exploits it as an opportunity". Hence, Entrepreneurship refers to the act of setting up a new business or reviving an existing business so as to take advantages from new opportunities. Women have

developed tremendously in their mentality. With increasing dependence on the service sector, many entrepreneurial opportunities have been created, especially for women, where they can enhance their skills while maintaining a balance in their lives.

Objectives

The study has the following objectives

- To understand the philosophy and concept of women empowerment and entrepreneur development in rural area.
- To identify the impact of entrepreneur development on women empowerment; and
- To suggests one possible solution for encouraging; developing; and improving the women empowerment in emerging economies.

Methodology

Given the nature of the present study, data had to be collected from secondary sources. The author was always mindful of the objectives of the study and collected data accordingly to achieve those objectives. Secondary data was collected from research studies, books, journals, newspapers and on going academic work papers. The collected data can be processed and analyzed to make the present study useful for the practitioners, researchers, planners, policymakers and educators of the concerned area.

Analysis and Findings

1. Empowerment

Empowerment means that people have power and control over their own lives. People get the support they need. Empowerment means that people are equal citizens. They are respected and trusted in their community. Empowerment as action refers to the process of self-empowerment and professional support of people to overcome their feelings of powerlessness and lack of influence, and to identify and use their resources. The term empowerment originates from American social psychology and is associated with social scientist Julian Rappaport (1981).[1] However, the roots of empowerment theory extend further into history and are linked to Marxist sociological theory. These sociological concepts are continuously developed and refined through neo-Marxist theory. Empowerment redistributes power from the powerful to the powerless. It is more than participation in decision making, it must also include the process that lead people to perceive themselves as able and entitled to make decisions (Prasad & Sahay, 2000). Empowerment must

involve undoing negative social construction, so that people come to see themselves as having the capacity and the right to act and influence decisions (Rowlands, 1997).

II. Entrepreneurship

Entrepreneurship is the creation or extraction of economic value. With this definition, entrepreneurship is viewed as change, generally entailing risk beyond what is normally encountered instarting a business, which may include other values than simply economic ones. An entrepreneur is an individual who creates and/or invests in one or more businesses, bearing most of the risks and enjoying most of the rewards. The process of setting up a business is known as entrepreneurship. The entrepreneuris commonly seen as an innovator, a source of new ideas, goods, services, and business/or procedures. More narrow definitions have described entrepreneurship as the process of designing, launching and running a new business, which is often similar to a small business, or as the "capacity and willingness to develop, organize and manage a business venture along with any of its risks to make a profit. The people who create these businesses are often referred to as entrepreneurs. While definitions of entrepreneurship typically focus on the launching and running of businesses, due to the high risks involved in launching a start-up, a significant proportion of start-up businesses have to close due to "lack of funding, bad business decisions, government policies, an economic crisis, lack of market demand, or a combination of all of these."

Characteristics of Entrepreneurship

Not all entrepreneurs are successful; there are definite characteristics that make entrepreneurship successful. A few of them are mentioned below:

- **Ability to take a risk:** Starting any new venture involves a considerable amount of failure risk. Therefore, an entrepreneur needs to be courageous and able to evaluate and take risks, which is an essential part of being an entrepreneur.
- **Innovation:** Its hould be highly innovative to generate new ideas, start a company and earn profits out of it. Change can be the launching of a new product that is new to the market or a process that does the same thing but in a more efficient and economical way.
- **Visionary and Leadership quality:** To be successful, the entrepreneur should have a clear visionof his new venture. However, to turn the idea into reality, a lot of resources and employees are required. Here, leadership quality is paramount because leaders impart and guide their employees towards the right path of success.

- **Open-Minded:** In a business, every circumstance can be an opportunity and used for the benefit of a company. For example, Paytm recognized the gravity of demonetization and acknowledged the need for online transactions would be more, so it utilized the situation and expanded massively during this time.
- **Flexible:** An entrepreneur should be flexible and open to change according to the situation. To be on the top, a business person should be equipped to embrace change in a product and service, as and when needed.

III. Empowerment of women through empowerment

In the early 1980s, the United Nations reported that women performed two-thirds of the world's work. The world's labor earned one-tenth of the world's income and owned one-hundredth World Economic Resources (Laois, 2000). A tool for women empowerment is self-employment or entrepreneurship. Why women choose self-employment or Entrepreneurship? In one study autonomy was rated highly as a means to gain Personal freedom. This level of autonomy offers opportunities to:

- (1) Be able to their Own Decisions
- (2) Able to do optional work
- (3) To reach Financial Independence

The impact of ED on Empowerment

1. Self- confidence of women

Increased self-confidence through entrepreneurship development for women a prosperous future.

2. Economic Solvency

Economic solution the most significant changes come from increases in income, not just upgrades the individual's life but increases her quality of life, the economy increases hardness within the family. Increase in her income also increase in family income and it provides better lifestyle including education to the family members improving child and family health.

3. Capital Building

Women economic success enables women to expand their business, procure new machinery, tools, accessories and relevant necessities. Modernization of the workplace, introduction of new technology for increase production, increase of labourers, along with the increase in purchasing power, upgrades their status both socially and economically.

4. Role of Status

Some aspects of household decision making are reported to have changed as a result of women's contribution in family income. Most of the men now consult with

their wives in important family matters. Their power of decision making has increased because they have money. Since women retain control over earnings, women can easily lend small and big amounts to business and others without asking for their husbands' permission. Since women perceive that their bargaining power within the family has increased as an indirect outcome of participating in the business. Women's status has changed in the family and society gradually.

Conclusion

Empowerment is scalable. Women develop their managerial skills and develop visions of growth that embrace strategic planning areas. Empowerment Women's economic independence leads to control over their lives, self-determination and self-fulfillment. Empowerment by Self-employment is associated with women's ability to gain control over economic resources and participate fully in the wealth building process. Empowerment leads to the self-fulfillment of knowing where women are headed.

Abstract

The New Education Policy announced by Government of India (NEP 2020) was a welcoming change and fresh news amidst all the negativities surrounding the world due to the challenges posed by Covid-19 pandemic. The announcement of NEP 2020 was purely unexpected by many. The changes that NEP 2020 has recommended were something that many educationists never saw coming. Though the education policy has impacted school and college education equally, this article mainly focuses on NEP 2020 and its impact on Higher Education. This paper also outlines the salient features of NEP and analyses how they affect the existing education system.

Keywords: NEP 2020, Features of NEP, Challenges

Introduction

The Ministry of Human Resource Development formed a Committee chaired by Dr K. Kasturirangan for preparing the National Education Policy. The Committee was constituted in June 2017. The Committee submitted its report on May 31, 2019. The National Policy on Education covers elementary and university education in urban as well as rural India. The very first policy for education was promulgated in 1968 with the second one following in 1986. The first NPE was based on the recommendations of the Education Commission (1964-66). This policy sought to have a 'radical restructuring' of India's educational system and equalizing opportunities for education for all, to accomplish national integration and better economic and cultural development. The NPE also called for realizing compulsory education for every child until the age of fourteen, as mentioned in the Indian Constitution. It also aimed at providing enhanced training and improving teachers' qualifications. Compare NEP 2020 with NEP 1991 in the linked article. Some relevant points from the official NEP 2020 PDF that can be useful for the UPSC Mains Exam: NEP 2020 is the 21st Century's first education policy in India. The development of the creative potential of each student is emphasized in the National Education Policy 2020.

The principles of National Education Policy 2020 as mentioned by the government are:

- Flexibility
- No hard separations between subjects, curricular and extra-curricular activities
- Multi-disciplinary education
- Conceptual understanding
- Critical thinking
- Ethical Values
- Teachers as the heart of the learning process
- The strong public education system

Implementation

The new education policy in 2020 came after 30 years and is all set to change the existing academic system of India with the purpose of making it at par with the international standard of academic. The Government of India aims to set up the NEP by the year 2040. Till the targeted year, the key point of the plan is to be implemented one by one. The proposed reform by NEP 2020 will come into effect by the collaboration of the Central and the State Government. Subject wise committees will be set up the GOI with both central and state-level ministries for discussing the implementation strategy

Features

The New Education Policy, popularly known as NEP, is being seen as designed to transform India into a global superpower. To this end, the policy heralds a big shift in the overall approach to education. Released by the Ministry of HRD on July 29th, 2020, the policy replaces the old Education policy that was formulated in 1986 & thereafter underwent revisions in 1992 & 1998. A major change in India's education system, the big focus area of the New Education Policy is to ensure that education is more inclusive and accessible to all. The key pillars of the new policy include:

- Access
- Equity
- Quality
- Affordability
- Accountability

Features of the Policy

- The policy has a clear focus on offering quality and affordable education to all in the age group of 3 to 18 years.
- It marks a major shift from rote learning to multi-disciplinary, holistic education. The focus, therefore, will not be on how much information students can memorize & reproduce, but on how they can use the information to solve real-world problems.
- Importantly the NEP has a great focus on the development of critical 21st-century skills that would stand in good stead to the soon-to-be citizens of the world and will prepare them for the challenges & opportunities of the 21st century.
- It marks a transition from the 10+2 education structure to a 5+3+3+4 system.
- A new curriculum for early childhood care and education, referred to as ECCE, aims at providing high-quality education to children between the age of 3-6 that brings about their physical, social, emotional as well as cognitive development.
- The policy provides for an interdisciplinary college education that has flexible study plans.
- Enough & more reports have highlighted the employability gap in India where graduates lack the necessary skills to make them valuable to employers. The new policy, therefore, lays emphasis on vocational & technical education right from the school level so as to bridge the gap.
- Importantly, with NEP a shift is envisaged from summative assessment to regular and formative assessment. These assessments are competence-based and test higher-order skills. The board exams for grades 10 & 12 however will continue although they will be redesigned to be in sync with the overall aim of the NEP as the child's holistic development.
- The focus of the policy is on a three-language formula, wherein students will learn three languages in their school. At least two of the three languages should be native to India. In fact, the policy has emphasized the mother tongue/local language/regional language being the medium of instruction at least till Grade 5, but preferably till Grade 8 and beyond.
- There is a marked focus on improving the quality of teaching as seen in professional development programs for teachers as also scientific eligibility tests.
- A key goal of the new policy is to promote research & innovation. In fact, NEP aims to increase the Gross Enrollment Ratio in higher education to 50% by 2035.

- A big emphasis of the new policy is on the usage of technology in order to improve accessibility.
- The policy also provides for the setting up the National Higher Education Regulatory Authority (NHERA) which will regulate all institutions offering higher education. NHERA will ensure quality accreditation, promoting research & innovation, among other things. Along with the National accreditation board, NHERA will also work to ensure the accreditation of higher education institutions.
- PARAKH (Performance Assessment, Review, and Analysis of Knowledge for Holistic Development) will be set up as a standard-setting body.
- An autonomous body, the National Educational Technology Forum, will be set up to facilitate the use of technology to enhance learning.
- The policy aims to achieve 100% youth & adult literacy.
- Under the policy, the center and the states will work together to ensure that public investment in the education sector reaches 6% of the GDP.

Global Education

Under NEP foreign universities can set up their campus in India. This will lead to improved access to a world-class education. A set of rules has already been released under which such campuses can be set up. In fact, we have already heard of some announcements of intent from foreign universities to make an entry into India. Even other than foreign universities coming to India, NEP is making possible the ability of students to select multi-disciplinary subjects as opposed to being restricted by watertight compartments of science, arts & humanities.

NEP 2020 Major Changes

The new policy was created based on the suggestions of a panel led by former Indian Space Research Organisation (ISRO) director Mr. K Kasturirangan, who in May 2019 sent the draught of the new policy to the minister of human resource development, Mr. Ramesh Pokhriyal “Nishank.”

The Ministry received almost two lakh comments and ideas about the draught policy. The Ministry of Education will now be known as the Ministry of Human Resource Development, as agreed by the Union Cabinet.

School Education

NEP 2020 ensures universal access to education from pre-school to secondary level. The government supports infrastructure and innovation centers to reintegrate dropouts. It monitors student progress, offers diverse learning pathways, and establishes counseling associations. Open learning is available for grades 3, 5, and 8

via NIOS and State Open Schools. The plan includes secondary education programs, vocational courses, adult literacy, and life-enrichment programs.

Early Childhood Care and Education with new Curricular and Pedagogical Structure

The school curriculum structure will change from 10+2 to 5+3+3+4, corresponding to ages 3-8, 8-11, 11-14, and 14-18 years. The policy recognizes the crucial development years of 3-6 and includes them in the school curriculum. The new system will provide 12 years of schooling, including three years of pre-schooling or Anganwadi.

A framework for early childhood education (NCPFECCE) for kids up to age 8 will be created by the National Council of Educational Research and Training (NCERT). The Ministries of HRD, Women and Child Development, Health and Family Welfare, and Tribal Affairs will work together to accomplish this plan.

Attaining Foundational Literacy and Numeracy

MHRD will set up a National Mission on Foundational Literacy and Numeracy for achieving universal foundational literacy and numeracy in all primary schools for all learners from grade 3 to higher level by 2025.

Reforms in school curricula and pedagogy

School curricula and pedagogy will change to enhance essential learning, critical thinking, and experiential learning. Students will have more flexibility and subject choices, reducing gaps between arts and sciences, curricular and extra-curricular activities, and vocational and academic streams.

From 6th grade, students will receive vocational education and participate in 10-day internship programs. NCERT will develop the comprehensive National Curricular Framework for School Education (NCFSE) 2020-21.

Multilingualism and the power of language

Mother tongues and regional languages are prioritised as a medium of instruction under NEP 2020, at least up to Grade 5, but ideally up to Grade 8 and beyond. No one will make the students speak a foreign language. The national curriculum resources for use by students with hearing impairment and with ISL will be prepared in accordance with the standardisation of Indian Sign Language (ISL) across the nation.

Assessment Reforms

NEP 2020 emphasizes testing higher-order skills through learning-oriented assessments. School exams will be conducted in Grades 3, 5, and 8, while the Class 10 and 12 board exams will be redesigned for holistic development. A new national assessment center called PARAKH will be established.

Equitable and Inclusive Education

The policy prioritizes Socially and Economically Disadvantaged Groups (SEDGs), including gender, socio-cultural, geographical identities, and disabilities. It establishes a Gender Inclusion Fund and Special Education Zones for disadvantaged regions and groups. Children with disabilities will receive support throughout

The Advantage of New Education Policy 2020

- The Government aims to make schooling available to everyone with the help of NEP 2020.
- Approximately two crore school students will be able to come back to educational institutes through this new approach.
- According to the national education policy 2020, the 5+3+3+4 structure will replace the existing 10+2 structure. This structure is focused on student's formative years of learning. This 5+3+3+4 structure corresponds to ages from 3 to 8, 8 to 11, 11 to 14 and 14 to 18. 12 years of schooling, 3 years of Anganwadi and pre-schooling are included in this structure.
- For children up to the age of 8, a National Curricular and Pedagogical Framework for Early Childhood Care and Education will be designed and developed by NCERT.
- According to the national education policy 2020, the Education Ministry is to set up a National Mission on Foundational Literacy and Numeracy. The responsibility for successful implementation for achieving the foundation of numeracy and literacy for all students till class three falls upon the states of India. This implementation is scheduled to be done by 2025.
- One of the merits of NEP 2020 is the formation of the National Book promotion Policy in India.
- Appropriate authorities will conduct the school examinations for grades 3, 5 and 8. The board exams for grades 10 and 12 will continue but the NEP 2020 aims to re-design the structure with holistic development.
- Parakh national education policy is to be set up by the Government.

- Special daytime boarding school “BalBhavans” to be established in every state/ district in India. This boarding school will be used for participation in activities related to play, career, art.

Drawbacks

- In the National Education Policy 2020, language is a negative factor as there is a problematic teacher to student ratio in India, thus introducing mother languages for each subject in academic institutes is a problem. Sometimes, finding a competent teacher becomes a problem and now another challenge comes with the introduction of the NEP 2020, which is bringing study material in mother language.
- According to the national education policy 2020, students willing to complete their graduation have to study for four years while one can easily complete his/ her diploma degree in two years. This might encourage the pupil to leave the course midway.
- According to the national education policy 2020, students of the private schools will be introduced to English at a much earlier age than the students of the Government schools. The academic syllabus will be taught in the respective regional languages of the Government school students. This is one of the major new education policy drawbacks as this will increase the number of students uncomfortable in communicating in English thus widening the gap between sections of the societies

Conclusion

The National Education Policy is a comprehensive set of guidelines and recommendations for the Indian education system. It aims to make education more inclusive, relevant, and engaging for all students, and to foster the development of critical thinking and problem-solving skills. By implementing these recommendations, the NEP aims to ensure that all students have the opportunity to receive a high-quality education and reach their full potential. In conclusion, the New Education Policy represents a major shift in the way education is delivered in India, and it has the potential to bring significant benefits to the education system. Though it has faced a lot of criticism from students as well as educators and learners who are in the mid of the course which will no longer be considered a degree (like an M.Phil). However, its success will depend on effective implementation and adequate resources, and it will require continued effort and commitment from the government, educators, and the wider community.

WOMEN ENTREPRENEURSHIP

Abstract

The concept of women entrepreneurs has gained traction globally, reflecting their growing presence and contributions in various sectors. Women entrepreneurs are individuals or groups of women who initiate, manage, and lead business ventures. While facing challenges such as financial constraints, marketing barriers, and self-confidence issues, women entrepreneurs are receiving increased support from both family and governments. Their role in economies, particularly in emerging nations like India, is significant, fostering economic growth and enhancing personal empowerment. Through initiatives like self-help groups, women entrepreneurs are forging pathways to economic independence and societal progress.

Keywords: Women entrepreneurship, Challenges, Government schemes.

Introduction

Women entrepreneurs can be defined as women or groups of women who start, organize and manage a business. The Government of India has defined women entrepreneurs based on the participation and employment of women in the business enterprise. They are often excellent communicators and able to inspire others. Successful women entrepreneurs have many characteristics. They are passionate about their business, have a strong work ethic, are good at networking and building relationships, and are constantly learning and developing.

Features of Women Entrepreneur

- 1. Women are great at multitasking:** Women are great at multitasking. They can juggle multiple tasks at once and still get things done efficiently. This is a valuable skill in the business world, where there are often many balls in the air at any given time. Women are also better at multitasking than men. This is because women can multitask without being overwhelmed. This allows them to do more in less time, making them more productive overall.
- 2. Women have better people skills:** One of the reasons why women entrepreneurs are actually better than men is that they have better people skills. Women are generally better at interpersonal relationships and networking than men. They are also better at communication and negotiation. This gives them an advantage

in building partnerships and securing funding. Another reason why women entrepreneurs are better than men is that they are risk takers. This means they are less likely to take unnecessary risks that could put their business at risk. Instead, they are likely to carefully consider all options before making a decision. This cautious approach can lead to more successful businesses in the long run. In general, there are many reasons why women entrepreneurs are better than men. The skills of these people and the risk-averse nature give them a distinct advantage in the business world.

3. **Women are more detail oriented:** One of the reasons why women entrepreneurs are better than men is that they are more detail oriented. Women tend to pay attention to small details that can **have a big impact on** the success of a business. They are also more likely to plan and prepare for **unexpected situations**. This attention to detail ensures that businesses run smoothly and efficiently. Women **tend to be more detail oriented** than men. They notice things that men **might miss** and are good at planning and organizing. This attention to detail can be a **huge advantage** in business.
4. **Women are better at networking:** Women are also good at networking. There are many reasons why women entrepreneurs are actually better than men. One of the main reasons is that women are better at networking. Women have been shown to be better at building relationships and interacting with other people. This is an important skill for entrepreneurs who need a network to succeed. Women are also more likely to ask for help when they need it, which can make them more successful in the long run. They have the ability to build strong relationships with other people that can prove useful in business. These relationships can lead to new opportunities and help women entrepreneurs move forward.

Challenges Faced by Women Entrepreneurs:

According to the World Economic Forum, India's gender equality ratio has improved slightly, although it remains low according to the Global Gender Gap Report, with economic conditions widening the gender equality gap across all sectors. Let's take a closer look at specific areas where women need work.

Limited Finance

According to a 2022 IFC report, about 90 percent of women entrepreneurs in India have not taken a loan from a formal financial institution. In addition, while 53 percent of male entrepreneurs lacked financing at the end of 2020, the number of women's businesses was up to 72 percent. In India, women receive credit for only

27% of deposits, while men receive credit for 52% of deposits. This difference may be due to the fact that financial institutions do not extend credit equally to women.

Access to Professional Networks

Another major problem faced by women entrepreneurs in India is the lack of access to professional networks. According to a Google-Bain survey, 49% of respondents feel that there is a lack of professional support because they are not connected to formal and informal networks.

Family Duties

Indian women should be housewives irrespective of their role in office or company. Juggling the roles, they are expected to be effective in both. It's time for women to start addressing these shortcomings and stop playing superwomen who end up threatening their bottom line.

Lack of Training

A large proportion of female entrepreneurs (44%) say that the lack of structured knowledge and skills is a significant barrier to expansion.

Government Schemes for Women Entrepreneurs

- **Mudra Yojana Scheme:**

The Mudra Loan Program is an initiative of the Government of India to promote entrepreneurship and provide financial support to micro and small businesses. The program focuses mainly on female entrepreneurs, as it aims to strengthen and promote female entrepreneurship in the country. Mudra loans for women are also available on easy terms and no collateral is required for loans up to Rs 10,000. The scheme also offers lower interest rates for women entrepreneurs, making it a viable option for those looking to start or expand their business.

- **Stand-Up India Scheme:**

The Stand-Up India scheme is a government program aimed at promoting entrepreneurship among women and other marginalized communities. It provides bank loans to at least one Scheduled Caste (SC) or Scheduled Tribe borrower and at least one woman per bank branch for setting up a new business. In non-private companies, SC/ST or women entrepreneurs must have at least 51% shareholding and majority shareholding. Under this scheme, women entrepreneurs can get a loan of ₹ 10,000 to ₹ 100,000 to start or expand a small business.

- **Mahila Coir Yojana**

Mahila Coir Yojana (MCY) intends to empower women by providing spinning equipment at reduced prices following proper skill development training. Under this scheme, women entrepreneurs can get a subsidy of up to 75% of the cost of equipment and machinery for coir processing. The scheme also provides a margin money subsidy of up to 25% of the project cost. The scheme is available to rural women artisans who are above 18 years of age and has completed a training programme in coir yarn spinning at any of the Coir Board's training institutes.

- **Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE):**

The Small Industries Development Bank of India (SIDBI) and the Ministry of MSME has launched an initiative to provide unbiased financing to micro and small enterprises. The scheme is open to both existing and new enterprises under which Credit Guarantee Fund for Micro and Small Enterprises (CGTMSE) has been set up to provide credit facilities up to ₹ 200 per guaranteed borrower, renewable as per project viability without collateral or third party guarantee. The extent of guarantee protection for micro and small businesses managed and/or owned by women is 85%; while other borrowers get up to 75 percent.

- **Udyam Shakti:**

It was launched by the Ministry of MSME to promote social entrepreneurship by creating affordable products and services. It offers help with business planning, incubators, training programs, mentoring, market research and more. Projects costing up to Rs 25 lakh are eligible for the scheme, with Rs 10 lakh earmarked specifically for service-based projects. The initiative's online portal has played an important role in empowering women outside the home.

- **Trade-Related Entrepreneurship Assistance and Development (TREAD):**

This initiative aims to increase the economic empowerment of women, among other things, by providing funding (through NGOs), training, development and consultancy, expanding their businesses, goods and services. Non-governmental organizations receive support from the Government of India (GoI) up to 30% of the total project cost as determined by the lending agency to promote entrepreneurship among the target groups of women. The remaining 70% of the project costs are financed by the lender as a loan for the implementation of the activities outlined in the project.

- **Economic empowerment of women enterprises and start-up by women:**

It is a program of the Ministry of Skill Development and Entrepreneurship that provides an incubation and acceleration program for women micro-entrepreneurs to start new businesses and expand existing businesses. The initiative is now operational in the states of Assam, Rajasthan and Telangana.

Need of Women Entrepreneur

In India's economy, ladies business visionaries are developing more significant, and their commitments ought not to be underestimated. These female business people assume a vital part in the Indian economy and fundamentally affect it by creating work, speeding up improvement, and encouraging thriving. According to late figures, ladies contain 14% of the complete business visionaries in India, which works out to 8 million. Likewise, 10% of all proper ventures are claimed by ladies.

Around 20.37 percent of the MSME business in India is comprised of ladies drove organizations, which likewise utilize around 23.3 percent of the work populace. Somewhere in the range of 13.5 and 15.7 million organizations are possessed by ladies, who likewise recruit somewhere in the range of 22 and 27 million people. They are considered the monetary groundwork of India. Not exclusively can ladies' business valuable open doors be extended, yet in addition the kind of working two movements each week for ladies can be decreased. All areas of regulation should take on the 3Rs approach, which includes Perceiving, Diminishing, and Reallocating neglected care work given by ladies.

The consideration of ladies in the labor force has made positions and helped large number of families in getting away from dejection. Due to their prevalent initiative capacities and more elevated levels of result, ladies prevail in trendy areas where they make up a sizable part of the labor force. This hard working attitude and excellent business discernment have likewise featured the meaning of ladies in the contemporary labor force.

Growth of Women Entrepreneurs in India

In India, in light of culture and customs, ladies should perform family exercises and deal with family in view of these reasons ladies business is exceptionally low. Be that as it may, due to the broad of training and social mindfulness during most recent thirty years now ladies are showing interest in beginning their own endeavor. Subsequently there is an impressive development of ladies business people.

Eg:-Mujumdar Shaw of Biochem, ShahanajHusana, MahilakhadiUdyog.

Presently a day's in Indian ladies will acknowledge demands and take on obligation in monetary social, political gathering. For the most part, they connect

with them in minuscule or little bungalow businesses however ongoing review show ladies have been beginning endeavors in all the area comparable to male.

Online Selling:

Web based selling is another central point that has helped the ascent of ladies business visionaries in India. Today, a lady can sell items right from home or can without much of a stretch send items anyplace the nation over or even around the world. They just have to set up an internet business site to feature and begin selling items. Internet selling has made it simple for ladies to fix up a business from the home.

Social Media:

Beforehand, the promoting of a business was one of the significant obstacles looked by all business visionaries. Be that as it may, today there are interpersonal organizations like Instagram, Facebook, LinkedIn, and others to advance and spread data about your items without any problem. With web-based entertainment organizing, the business can end up in a good place. For this reason web-based entertainment networks are one of the greatest assistance for ladies business visionaries in India.

Digital Lending:

The absence of capital is perhaps of the greatest obstacle ladies needed to look while setting up a business. Conventional approaches to loaning were severe in loaning business cash-flow to ladies. They need an underwriter and put numerous different circumstances. In any case, with the ascent of computerized loaning stages getting a business credit for ladies has become simple. Today, a lady need not hang tight for monetary help from her relatives or banks. She can undoubtedly get the capital from a computerized loan specialist to begin her endeavor, with negligible holding up time.

Not Considered as Leaders:

Ladies claimed organizations by and large need perceivability in administrative roles. It has been seen that most ladies business visionaries are in essential administrative roles in secretly held or family-claimed firms. They are not viewed as pioneers and won't get better open doors for authority in worldwide or public corporations.

Conclusion

The global rise of women's entrepreneurship is evident, with women making significant economic contributions. Female-led businesses are a robust path for women to showcase their capabilities. Encouraging emerging women entrepreneurs is crucial for rapid economic development. In India, where gender norms have traditionally favored men, women are gradually becoming less economically and socially reliant on males. While women entrepreneurs face challenges in finance, marketing, health, and family roles, family and government support has improved their conditions, reducing the number of those facing issues. Although some still grapple with financial constraints, marketing hurdles, self-confidence, and information gaps, the overall landscape is changing. Women's entrepreneurship, a recent phenomenon, holds potential, especially in emerging economies like India. Women entrepreneurs, those initiating and managing businesses, contribute significantly to the economy. Their growth enhances personal capacities and elevates roles in families and society. Engaging in income-generation programs through self-help groups empowers women, particularly in rural areas.

Abstract

The country finally gets a new education strategy after 34 years thanks to the Union Cabinet's ratification of National Education strategy 2020. The NEP 2020 places a lot of focus on integrating technology because it can be a key role in fostering a development that is all-encompassing. In 2020, regional languages will receive further attention when E-courses are created in them. Additionally, virtual labs will be created. It is important to note that a National Educational Technology Forum (NETF) is also being established at this time. The NEP-2020 initiative is a ground-breaking step toward improving the educational system. Things are available thanks to technology, which has permeated practically every aspect of existence. Likewise, there is a rising demand for the educational sector to adopt technology. Constructive measures are being made toward its implementation, and NEP 2020 has cleared the way for it by putting forward numerous suggested digital platforms. We shall attempt to examine all of the policy's facets in this essay, with a particular emphasis on technology and its application.

Keywords: National Education Policy 2020, Technology, Multilingualism, Accessibility, ICT.

Introduction

The NEP 2020 initiative is regarded as a breakthrough step in improving education. The policy's main issue is how to use technology effectively in teaching and learning. The policy also places a strong emphasis on multilingualism in an effort to break down linguistic barriers. Access is made possible by technology, which also helps with management and planning of education. The National Education Policy, which emphasizes the learner, attempts to restructure education with the specific goal of meeting the demands of this globalized society. The National Education Policy 2020 is divided into four sections: school education (which is part I), higher education (which is part II), promotion of Indian languages, adult education, and online education (which is part 3), and policy implementation (which is part IV). The shared goal is to promote the learners' entire development while ensuring their basic education.

It provides a wide range of takeaways that will assist the stakeholders in furthering their creative contributions to society.

The policy calls for curriculum changes, digital infrastructure improvements, the development of solid and applicable fundamental skills, and a move from the conventional evaluation system in order to achieve this beneficial transformation. Both secondary and higher level vocational programs are included under the policy. Technology enabled virtual learning during the pandemic, enabling teaching and learning. The need for change in the educational system was overwhelming. New opportunities became available with the adoption of the new national education policy. It is fair to say that technology will play a significant role in helping India become “self-reliant,” given the efforts that have been made in this direction.

The goal is to foster learners’ creativity and empower them to imagine and produce. With the use of technology in the classroom, this can be successfully accomplished. The policy intends to enhance the quality of learning.

We’ll attempt to cover the major NEP 2020 components for higher education in this study, as well as the part technology plays in putting the new policy into practice. We will also talk about how technology is used in higher education and how it is integrated into the curriculum.

Five Pillars of NEP 2020:

The five pillars of NEP 2020—affordability, accessibility, quality, equity, and accountability—form the foundation of the initiative. NEP 2020 guarantees pupils’ entire holistic development in addition to lifelong learning.

With a choice-based education, students’ learning would be flexible and they will be allowed to pursue their interests.

Another fantastic strategy that will make transfers between institutions easier is the bank of credit. The ability to store academic credits will be beneficial to the pupils. In addition to this, funding for infrastructure and cutting-edge educational facilities are prioritized. NEP 2020 also supports several learning paths.

The necessity of the hour is to develop an ICT-literate community and to offer free access to ICT resources. Additionally, there is a critical need to inspire a larger group of educators to use ICTs to improve the educational system. In the next ten years, the new educational policy wants all instructors to have received their full training. The policy aims to have professionally developed and trained teachers by the year 2030.

Higher Education

- NEP-2020’s emphasis on multidisciplinary courses has significantly altered higher education. By guaranteeing ongoing learning, NEP-2020 focuses on

preparing the next generation to meet the challenges of a globalized society. The multidisciplinary institutions will open the door for the new and multifaceted abilities that are in demand.

- Lifelong learning possibilities are guaranteed by NEP-2020. The changes in primary and higher education that will increase access to work prospects are welcomed by the New Education Policy. The New Education Policy includes a number of crucial measures that will help students compete in the digital age. Problem-solving skills, multidisciplinary thinking, and digital literacy have all been emphasized. The goal is to help the students develop their whole personalities.
- Another area of emphasis in NEP 2020 is raising the Gross Enrolment Ratio (GER). By 2030, the goal is to increase it from 26% to 50% in the higher education system. The likelihood of greater accessibility to all is increased by increasing the usage of technology in the educational setting. Multiple exit points and a flexible curriculum are further features of the New Education Policy.
- In order to meet international quality standards, a number of areas will be prioritized, including Indian languages, yoga, the arts, music, history, culture, social sciences, and many more. This is indicated by the establishment of the National Research Foundation (NRF).
- Another notable development is the establishment of the Higher Education Commission of India (HECI) for all higher education. In order to implement the recommendations made by NEP, the Higher Education Council of India (HECI) would create a number of verticals.
- Accreditation, finance, and the establishment of academic standards will all be handled by separate verticals under the HECI, which would function as a single regulator. The University Grants Commission (UGC) and the All India Council for Technical Education (AICTE) will eventually be replaced by these regulatory agencies.
- There would be a “accreditation” carried out by an unbiased organization. The certification will make it easier for recognized institutions to offer online and open distance learning (ODL) programs. These programs will broaden the range of what they have to offer, make it easier to get in, increase GER, and create chances for lifetime learning.
- This accreditation program was created by the National Accreditation Board for Education and Training (NABET) and Quality Council of India (QCI) under the Department of Industrial Promotion and Internal Trade (DPIIT), Ministry of Commerce and Industries, Government of India.

- As we've already indicated, the New Education Policy gives high-quality research a prominent place. This action will provide access to innovation. NEP-2020's establishment of the National Education Technology Forum (NETF) is crucial. The establishment of technological development centers has been encouraged by higher education institutions. As a result, a tech-savvy and educated society will grow and the youth will be able to contribute successfully.

Digital India

- The creation of infrastructure, online learning environments, and technological tools has received particular attention under the new education policy. A lot of focus has been placed on training educators because there is also a huge need for teachers who are comfortable using technology. It will not be possible to generate online curriculum or online evaluations if educators are not tech savvy. Technology integration as a means of achieving universal literacy has also been proposed.
- Technology has received the acclaim it deserves because of its crucial contribution to societal advancement. There is no denying that technology can improve schooling. To promote the integration of technology, significant efforts must be made to accept and implement other changes to the current educational system as well as to give support for its integration. The state governments are primarily responsible for carrying out this obligation.
- It is crucial to inform the teachers about the adjustments and alterations that this new policy entails. Methods that encourage successful student participation are urgently needed. Teachers must receive sufficient training in order for NEP 2020 to be implemented successfully and for them to be fully informed of the future changes.
- In the new educational ecosystem, flipped classrooms and blended learning have received the attention they deserve. The pupils may be more engaged if they are informed in advance of the topics that will be discussed in class. Additionally, the students' active engagement will increase interest in the topic of discussion. The students in traditional education were not used to knowing what will be covered in class, and more time was spent giving lectures, but in the flipped classroom, students have the advantage of knowing the topic in advance because they receive study materials beforehand.
- As a result, the classroom becomes a lot livelier and they are better able to come prepared with their questions. Innovative ideas were appreciated, and new

teaching methods were given a favorable reception. The primary emphasis is on competency-based assessments, where frequent evaluations are done to help students realize when they may make mistakes. In order to help the students identify their individual potential and skills, feedback will be given to them.

- Other cutting-edge pedagogies and methods, such as teaching through videos, audio, and interactive real-time dialogues, will be used in addition to text-based instruction to improve learning effectiveness and outcomes. All of this will result in a deeper comprehension of the ideas.
- The establishment of virtual labs, digital infrastructure, online assessments, content development, digital repository, and online teaching platforms are some of the major projects for online and digital education. NEP 2020 suggests a more thorough integration of DIKSHA/SWAYAM in postsecondary education in addition to a wide range of educational software. The new National Education Policy makes investments in the establishment of open, public digital infrastructure to guarantee the equal use of technology. The implementation of cutting-edge technology like 3D, simulation, robots, and artificial intelligence (AI) has received significant consideration. Additionally, it makes online and experiential learning possible in blended learning. Additionally, it suggests growing the already-existing digital learning platforms.

Challenges

- Undoubtedly, the policy has successfully incorporated technology into education, but there are still some issues that need to be addressed. The policy's execution is a difficult endeavor, to say the least. Between July 2017 and June 2018, a study on "Household Social Consumption: Education" was undertaken. 49,238 urban households and 64,529 rural households made up the sample. In India, this sample was drawn from 6,188 blocks and 8,097 villages.
- According to the poll, the literacy rate for people aged 7 and older was roughly 77.7%. It was 73.5% in rural areas and 87.7% in urban areas. Additionally, there was a discrepancy in the literacy rates between men and women, which were 84.7% and 70.3%, respectively. It is crucial that all students have access to technology in order to integrate it into the classroom; at the very least, they should all have smartphones and PCs with internet connection. Unfortunately, the less wealthy pupils do not have access to the same, and overcoming this obstacle is one of the biggest hurdles. Controlling

unethical behavior and resolving network and power outages present additional challenges.

- Accepting the shift from the traditional rote learning system to the technology-driven critical thinking and experimental learning system presents another obstacle. The stakeholders' mindsets will need to shift, and ongoing efforts are required to comprehend and carry out this new vision.
- There is a critical demand for teachers with excellent digital literacy to meet the impending requirements. Additionally, there is a lack of infrastructure for digital resources, and some disciplines have restrictions on how they can be taught in a digital environment.
- The center and the states must collaborate for the policy's implementation to be successful because both the integration of technology and the policy's implementation provide difficulties. There is still more technological development to be done, and there is a long way to go. NEP 2020 is regarded as the century's most comprehensive education strategy and has the potential to bring about a variety of good changes to the current educational system.

Conclusion

India is making progress toward being more technologically advanced. There has been a significant advancement in this direction. But every significant reform takes time, therefore one must be patient and wait for the outcome. Due to the difficulty of making technology available in distant places, full technological integration into education will take some time. But it will be reached gradually and over time. For a better teaching and learning experience, it will be crucial to identify the main technologies that will address the demands of both teachers and students. This will be one of the key elements in the successful implementation of NEP, according to experts. NEP attempts to implement a learner-centric strategy.

The attention of the stakeholders in the National Education Policy 2020 has been impressively increased by the government. The vision and mission of the new policy have been communicated to the stakeholders in a positive manner. One instance of this was a 10-day "ShikshakParv" that featured a number of national-level activities.

In addition to this, a digital content repository will be built, with course material, simulations, and learning games for enjoyable learning. With explicit directions, the content will be created in several languages. Students will receive a backup system for distributing the e-content. If the digital divide is closed by making efforts, the advantages of digital education can be completely realized. To meet the needs of the stakeholders, digital programs are being offered. The drive for a digital India is moving in that direction, and positive outcomes are anticipated.

Collaboration and alliances between business and academic institutions may also be considered a strategy for integrating ICT into the classroom. Faculty that have experience in both industry and research can help with ICT integration.

Without a doubt, NEP 2020 has developed forward-thinking concepts. It has acknowledged how technology may advance education because it is so effective at facilitating teaching and learning. Although many states are in the process of implementing the new policy and many others have already launched it, there is still a long way to go. The New Education Policy, which places a strong emphasis on learning skills and technology, will pave the road for making students future-ready if the federal government and the states work together.

GENDER EQUALITY AND WOMEN EMPOWERMENT

Ms. S. Abinandhini & Mr. E. Gowthaman

II. B.Com FS with DF& IT with AA

Department of Commerce

Rathinam College of Arts and Science, Coimbatore

Abstract

The term gender refers to the economic, social and cultural attributes and opportunities associated with being male or female. In most societies, being a man or a woman is not simply a matter of different biological and physical characteristics. This paper deals with importance of gender equality towards achieving the goal of women empowerment. Gender equality and women's empowerment have been specifically recognized over the past decades as vital not only to the welfare of nations but also to social and economic growth. Globally, women have fewer opportunities for economic participation than men, less access to basic and higher education, greater risks to health and safety, and less representation on the political level. Gender inequalities are still deep-rooted in every society. Women suffer from lack of access to decent work and face occupational segregation and gender wage gaps.

Keywords: Gender, Woman Empowerment, Equality, Economic, Inequality

Introduction

Gender equity is the process of being fair to women and men. Gender equality requires equal enjoyment by women and men of socially-valued goods, opportunities, resources and rewards. Gender equality does not mean that men and women become the same; only that access to opportunities and life changes is neither dependent on, nor constrained by, their sex. Achieving gender equality requires women's empowerment to ensure that decision making at private and public levels and access to resources are no longer weighted in men's favour, so that both women and men can fully participate as equal partners in productive and reproductive life. Women's access to jobs and educational opportunities decreases the probability of household poverty, and women's services provide a variety of beneficial outcomes for household human capital and skills. Women's empowerment and economic growth are closely linked: in one direction, development alone can play a major role in bringing down gender inequality; in the other, empowering women can support development.

Scope of Study

Women should live in a safe and equal society. Have equal access to power, resources and opportunities be treated with dignity, respect and fairness. Gender equality is when people of all genders have equal rights, responsibilities and opportunities. Everyone is affected by gender inequality - women, men, Trans and

gender diverse people, children and families. It impacts people of all ages and backgrounds. Women's studies not only focus on concepts such as domestic violence, discrimination in the workplace, and gender differences in the division of labor at home, but gives a foundation for understanding the root cause of these concepts, which is the first step to making for a better life for women.

Objective of the Study

1. To study the importance of Gender Equality in economic development.
2. To identify the key issues and challenges for women empowerment and Gender Equality.

Research Methodology

For the purpose of the present study data has been collected from secondary sources. It is collected from Journals, Magazines, including the reports. The aim of the study is to know the awareness of women empowerment and its impact on the quality of a women's life, and to examine the awareness of women empowerment and its impact on the quality of a women's life. How they have faced discrimination and how discrimination gives impact in their empowerment. So, the present study followed descriptive survey method.

Impact of Gender equality and women Empowerment in India

An analysis of gender equality is very essential to understand the level of women empowerment in Indian society. According to Dijkstra and Hanmer (2000), gender inequality in India refers to health, education, economic and political inequalities between men and women in India. As per the report by Tisdell, Roy and Ghose (2001), various international gender inequality indices rank India differently on each of these factors, as well as on a composite basis, and these indices are controversial. Gender inequalities, and its social causes, impact India's sex ratio, women's health over their lifetimes, their educational attainment, and economic conditions. Child marriage, which is still prevalent in our society, must be stopped. This is because an early age at marriage of women is an indicator of the low status of women in society and also curtails women's access to education. A woman needs to be physically healthy so that she is able to take challenges of equality. Women must have access to comprehensive, affordable and quality health care. Employment, particularly for cash and in the formal sector, can empower women by providing financial independence. Violence against women must be eradicated from the society.

Gender Equality and Women Empowerment in India

Gender equality implies a society in which women and men enjoy the same opportunities, outcomes, rights and obligations in all spheres of life. Equality

between men and women exists when both sexes are able to share equally in the distribution of power and influence; have equal opportunities for financial independence through work or through setting up businesses; enjoy equal access to education and the opportunity to develop personal ambitions. A critical aspect of promoting gender equality is the empowerment of women, with a focus on identifying and redressing power imbalances and giving women more autonomy to manage their own lives. Women's empowerment is vital to sustainable development and the realization of human rights for all. Where women's status is low, family size tends to be large, which makes it more difficult for families to thrive. Population and development and reproductive health programmes are more effective when they address the educational opportunities, status and empowerment of women. When women are empowered, whole families benefit, and these benefits often have ripple effects to future generations. The roles that men and women play in society are not biologically determined they are socially determined, changing and changeable. Although they may be justified as being required by culture or religion, these roles vary widely by locality and change over time.

Conclusion

Gender equality is very essential to achieve the goal of women empowerment. It is observed that women in India have been subjected to various types of discrimination and disabilities towards enjoyment of benefits of development consequent upon disempowerment. Hence the empowerment of women could be possible through attainment of gender equality.

Abstract

Artificial intelligence is a theory. It is the development of computer system that is able to perform tasks that would require human intelligence. Example of these is visual presentation, speech recognition, decision-making, and translation between languages. Machine Learning is an Artificial intelligence where a computer/machine learns from the past experiences (input data) and makes future predictions. The performance of such a system should be at least human level. AI is also being used to develop new drugs and treatments, which can help to improve the lives of millions of people around the world. Another area where AI is making a significant impact is in the field of finance. Machine learning algorithms are being used to detect fraudulent transactions and predict market trends.

Keywords: Artificial Intelligence, Machine Learning

Introduction

AI provides robots with adequate computer vision and motion to better understand the environment and act accordingly. Similarly, machine learning conditions the robots in such a way that with timely evolution, they learn from their own mistakes, thus preventing constant human intervention and parallel effort. In Artificial Intelligence, introduction is commonly used to account for the use of various levels of details in a given representation language or the ability to change from one level to another while preserving usefully properties. Introduction has been mainly studied in problem solving, theorem proving knowledge representation (in particular for and temporal reasoning) and machine learning.

Artificial Intelligence

Artificial intelligence is the simulation of human intelligence processes by machines, especially computer system. Specific application of AI includes expert system, nature languages processing, speech recognition and machine vision.

John McCarthy (September 4, 1927- October 24, 2011) was an American Computer Scientist and cognitive scientist. He is the Father of AI. He was one of the founders of the discipline of Artificial Intelligence.

AI can be described as “the ability of algorithms encoded in technology to learn from data so that they can perform automated tasks without every step in the process having to be programmed explicitly by a human”. AI has become a catchall term for applications that perform complex tasks that once require human input, such as communicating with customers online or bank transactions.

AI works by combining large amounts of data with fast, iterative processing and intelligence algorithms, allowing the software to learn automatically from patterns or features in the data. The term is often used interchangeably with its subfields, which include machine learning (ML) and deep learning.

Examples of AI

Google Assistant, Google Maps, Apple's Siri, Amazon's Alexa, Microsoft's Cortana, Instagram, Self-driving car, etc.

Machine Language

Machine Language is a type of Artificial Intelligence and is based on the use of statistical and mathematical modelling techniques to define and analyse data, algorithms are trained to recognize patterns or to make estimations or predictions without human interferences.

The four main categories in Machine Learning are Supervised Learning, Unsupervised Learning, Semi-supervised Learning and Reinforcement Learning.

The term “Machine Learning” was coined by Arthur Samuel, a computer scientist at IBM and a pioneer in AI and computer gaming. Python is the most popular and widely used programming language for machine learning. Machine Learning is important because it gives enterprises a view of trends in customer behaviour and business operational patterns, as well as supports the development of new products.

Implications of Artificial Intelligence

- Artificial Intelligence has the potential to bring about numerous positive changes in society, including enhanced productivity, improved healthcare, and increased access to education.
- AI-Powered technologies can also help solve complex problems and make our daily lives easier and more convenient.

- AI replaces tedious or dangerous tasks, the human workforce is liberated to focus on tasks for which they are more equipped, such as those requiring creativity and empathy.
- AI has played a major role in the digitalization of society, as it has enabled us to collect, process, and analyse large amounts of data at a faster rate than ever before. This has led to the creation of new technologies, improved business processes, and greater efficiency in many industries.
- AI has had a significant impact on various forms of media, from text to video and 3D. AI-powered technologies such as natural language processing, image and audio recognition, and computer vision have revolutionized the way we interact with and consume media.
- With AI, we are able to process and analyse vast amounts of data quickly, making it easier to find and access the information we need. The use of AI in smartphone technology has grown rapidly in recent years.
- AI-powered personal assistants, such as Siri and Google Assistant, have become a staple of many people's daily lives.
- AI-powered technologies are also being used to improve the user experience and to offer more personalized recommendations and services.

Applications of Artificial Intelligence

AI in Healthcare

The unique benefit of AI Technology allows healthcare professional to scan pre-existing medicines and use them to redesign medication in a way that allows them to fight against specific disease. Also AI algorithms can monitor patient health data over time and provide recommendations for lifestyle changes and treatment options that can help manage their conditions. This can lead to better patient outcomes, improved quality of life, and reduced health care costs.

AI in Business

AI refers to the ability of machines to learn and make decisions based on data and analytics. When used strategically, AI has the potential to make a tremendous difference in the way we go about our work. An AI-Powered system can clarify the importance of each datapoint on a granular level, and help human operators understand how that data can translate into real business decisions. For Example: Amazon uses AI to track customers spending behaviour and to determine how many units of a specific product it anticipates customer to buy, according to feedvisor.

AI in Education

AI enables adapting to a students learning process as it unfolds step-by-step, not simply providing feedback on right or wrong answers. AI can help each individual separately by giving them separate curriculum based on their interest and skills assessment.

AI in Social Media

Social media AI has been trained to go through numbers, clicks, user interest, age, regions, internet profiles, user preferences, and purchase habits. All this data helps digital marketers take proper action when it comes to creating content that fits different audience needs and interests.

AI in Tourism

Software powered by AI can help travel and tourism industry customers to better understand fluctuations in prices. Also AI assistants for travel booking, Travellers no longer need to visit travel agencies to book flights or search for recommendation. AI assistants and intelligent chat bots have now taken the place of travel agents allowing travellers to book flights and accommodations and hire vehicle online.

Implications of Machine Learning

- Machine Learning is an important part of our daily lives; it provides high-value predictions that can guide decisions and smart actions in real time without human intervention.
- Machine learning is a fast-growing field of study and research, which means that the demand for machine learning professionals is also growing. And also this demand is only going to increase in the future as more people become interested in learning about computer algorithms and how they work.
- Machine learning in education transforms the learning process and gives new tools for educational institutions to track and improve students' performance and engagement.
- The Machine Learning-enabled personalized approach helps to make education more inclusive, accessible, and engaging.
- Machine learning can help organizations boost their operational efficiency. Approximately 45% of operations in the workplace can be automated using existing technology, according to the McKinsey Global Institute, with 80% of it due to machine learning capabilities.
- Over time, machine learning also optimizes the processes, finding more efficient ways to complete tasks.

- Ideally, machines accomplish their goals without direct human input. This technology has transformed and reinvented many industries.
- Machine learning is revolutionizing multiple sectors of modern society, including healthcare, finance, and transportation.
- The technology provides advanced data analysis that improves decision-making, leads to better predictions, and creates new innovations.
- Machine learning helps to make decisions and adjust to changing road conditions in real-time, machine learning algorithms are employed to interpret data from sensors and cameras.
- Self-driving cars have the potential to reduce traffic congestion and increase fuel efficiency in addition to boosting safety.
- Machine learning enables faster software delivery, more automated, efficient software testing, and better operational performance.
- Launchable's Predictive Test Selection machine learning model helps our team only run the most relevant tests.
- A good example for this is Anti-virus software; they can learn to filter new threats as they are recognized. Machine Learning is also good at recognizing spam.
- Machine Learning is widely used by various e-commerce and entertainment companies such as Amazon, Netflix, etc., for product recommendation to the user.

Applications of Machine Learning

- Image Recognition.
- Speech Recognition.
- Traffic Prediction.
- Product Recommendations.
- Self-driving cars.
- Email Spam and Malware Filtering.
- Virtual Personal Assistant.
- Online Fraud Detection.
- Stock Market Trading.
- Medical Diagnosis.
- Automatic Language Translation.

These are the most trending real-world applications of Machine Learning.

Image Recognition:

Image recognition is one of the most common applications of machine learning. It is used to identify objects, persons, places, digital images, etc. The popular use case of image recognition and face detection is, Automatic friend tagging suggestion.

Speech Recognition:

While using Google, we get an option of "Search by voice," it comes under speech recognition, and it's a popular application of machine learning. Speech recognition is a process of converting voice instructions into text, and it is also known as "Speech to text", or "Computer speech recognition." At present, machine learning algorithms are widely used by various applications of speech recognition. Google assistant, Siri, Cortana, and Alexa are using speech recognition technology to follow the voice instructions.

Traffic Predictions:

If we want to visit a new place, we take help of Google Maps, which shows us the correct path with the shortest route and predicts the traffic conditions. It predicts the traffic conditions such as whether traffic is cleared, slow-moving, or heavily congested with the help of two ways: Real Time location of the vehicle from Google Map app and sensors Average time has taken on past days at the same time.

Product Recommendations:

Machine learning is widely used by various e-commerce and entertainment companies such as Amazon, Netflix, etc., for product recommendation to the user. Whenever we search for some product on Amazon, then we started getting an advertisement for the same product while internet surfing on the same browser and this is because of machine learning. Google understands the user interest using various machine learning algorithms and suggests the product as per customer interest.

Self-Driving Cars:

One of the most exciting applications of machine learning is self-driving cars. Machine learning plays a significant role in self-driving cars. Tesla, the most popular car manufacturing company is working on self-driving car. It is using unsupervised learning method to train the car models to detect people and objects while driving.

Conclusion

One of the most obvious ways AI is shaping the future is through automation. With the help of machine learning, computers can now perform tasks that were once only possible for humans to complete. This includes tasks such as data entry,

customer service and even driving cars. The future of AI is promising, with continuous advancements in machine learning, natural language processing, and computer vision. AI will enhance various industries and transform the way we live and work. Machine Learning offers growth opportunities and revolutionizes numerous industries by enabling more informed decisions, helping developers analyse problems with an innovative approach, and delivering information faster and with greater accuracy.

Abstract

Cloud computing has emerged as a prominent paradigm in the field of information technology, offering scalable and on-demand access to a variety of resources and services. This review of literature aims to provide an overview of the key concepts, technologies, benefits, risks and adoption strategy in cloud computing. By examining a wide range of scholarly articles, books, and reports, this review highlights the evolution of cloud computing, its underlying technologies, deployment models, security concerns, and the impact it has had on various industries. Additionally, it discusses of adopting strategy cloud computing and explores future research directions in this dynamic and rapidly evolving field.

Keywords: Cloud computing, Benefits, Adoption strategy, Information technology, Risks.

Introduction

The term "the cloud" describes the software and databases that run on servers that may be accessed via the Internet. Data centers all throughout the world house cloud servers. Cloud computing is used for anything that involves storing and processing massive amounts of data quickly and needs more storage and computing power than the majority of businesses can or want to invest in and implement on-premises. Cloud computing is the on-demand availability of computer system resources, especially data storage (cloud storage) and computing power, without direct active management by the user. Cloud Computing is the delivery of computing services such as servers, storage, databases, networking, software, analytics, intelligence, and more, over the Cloud (Internet). Moreover, cloud computing offers a high level of redundancy and backup at a reasonable price. The technology provides banking organizations with all the components they need to be future-proof. Depending on the level of service, cloud can be classified into a number of different levels.

- BPAAS (Business Process-as-a-Service)
- SAAS (Software-as-a-Service)
- PAAS (Platform-as-a-Service)
- IAAS (Infrastructure-as-a-service)

Review of Literature

- Cloud Computing Architecture: “Above the Clouds: A Berkeley View of Cloud Computing” by Armbrust et al. (2009) provides a comprehensive overview of cloud computing architecture, challenges, and opportunities.
- “Cloud Computing Security: A Systematic Literature Review” by Raza et al. (2015) presents a systematic review of cloud computing security research and identifies emerging trends and research gaps.
- “A Survey of Security Issues in Cloud Computing” by Subashini and Kavitha (2011) discusses various security concerns and challenges in cloud computing.
- “Big Data Analytics in Cloud Computing: A Comprehensive Review and a Framework” by Zhang et al. (2015) reviews the state-of-the-art big data analytics techniques and frameworks in cloud computing environments.

Evolution of Cloud Computing

One day in a speech at MIT around in 1960 John McCarthy indicated that likethrough a convenient website. Amazon Web Services were started by Amazon in 2002 and they were providing the services of storage and computation. In around 2009 big companies Hire Google, Microsoft, HP, Oracle had started to provide cloud computing services. Nowadays each and every person is using the services of cloud computing in their daily life. For example Google Photos, Google Drive, and Cloud etc. In future cloud computing will become the basic need of IT Industries water and electricity, computing can also be sold like a utility. And in 1999, the Salesforce Company started distributing the applications to the customers.

Types of Cloud Computing

1. Public cloud: The public cloud is a computing service supplied by the third party providers atop the public internet. These services are available for any user who wants to use them and they have to pay only for the services they consumed.
2. Private cloud: The computing services provided over the internet or private network come under the private cloud and these services are offered only to the selected users in place of common people. A higher security and privacy is delegated by private clouds through the firewall and internal hosting

3. Hybrid cloud: Hybrid cloud is the combination of public cloud and private cloud. In the hybrid cloud, each cloud can be managed independently but data and applications can be shared among the clouds in the hybrid cloud.

Types of Cloud Computing Services

1. Business process as a service (BPAAS): Business process as a service, is a type of business process outsourcing (BPO) delivered based on a cloud services model. BPAAS is connected to other services, including SaaS, PaaS and IaaS, and is fully configurable. Technology they need to operate as a pay-per-use service by making use of the availability and efficiency of a cloud-based system.
2. Software as a service (SAAS): This cloud service consists of crucial business software and the data that goes with it, which end users can access using web browsers. Customer relationship management, content management, accounting & invoicing, and service desk administration are among the systems hosted by SAAS solutions.
3. Platform as a service (PAAS): A complete environment for development and deployment is provided by this service delivery paradigm. For hosting enterprise program that are cloud-enabled, it often involves database development, web servers, operating systems, interfaces, and software and hardware tools. The creation, upkeep, and support of customized apps are made easier by PAAS.
4. Infrastructure as a service (IAAS): Many computing resources are provided by the IaaS in the form of storage, network, operating system, hardware, and storage devices on demand. IaaS users can access the services using a wide area network, such as the internet. For example, a user can create virtual machines by login to the IaaS platform.

Benefits of Cloud Computing

1. Faster time to market: Cloud computing supports new innovations by making it easy to test new ideas and design new applications without hardware limitations or slow procurement processes.
2. Scalability and Flexibility: Cloud computing gives your business more flexibility. You can quickly scale resources and storage up to meet business demands without having to invest in physical infrastructure.
3. Cost savings: Whatever cloud service model you choose, you only pay for the resources you actually use. This helps you avoid overbuilding and overprovisioning your data center and gives your IT teams back valuable time to focus on more strategic work.

4. **Advanced Security:** Despite popular perceptions, cloud computing can actually strengthen your security posture because of the depth and breadth of security features, automatic maintenance, and centralized management. Reputable cloud providers also hire top security experts and employ the most advanced solutions, providing more robust protection.
5. **Data loss prevention:** Cloud providers offer backup and disaster recovery features. Storing data in the cloud rather than locally can help prevent data loss in the event of an emergency, such as hardware malfunction, malicious threats, or even simple user error.
6. **Quality Control:** In a cloud-based system, all documents are stored in one place and in a single format. With everyone accessing the same information, you can maintain consistency in data, avoid human error, and have a clear record of any revisions or updates.

Risks of the Cloud Computing

1. **Limited visibility into network operations:** When moving workloads and assets to the cloud, organizations forfeit a certain level of visibility into network operations. This is because the responsibility of managing some of the systems and policies shifts to the cloud service provider. As a result, organizations must be able to monitor their network infrastructure without the use of network-based monitoring and logging.
2. **Malware:** By moving large amounts of sensitive data to an internet-connected cloud environment, organizations are opening themselves up to additional cyber threats. Malware attacks are a common threat to cloud security, with studies showing that nearly 90% of organizations are more likely to experience data breaches as cloud usage increases.
3. **Compliance:** Data privacy is becoming a growing concern, and as a result, compliance regulations and industry standards such as GDPR, HIPAA, and PCI DSS are becoming more stringent. Cloud systems typically allow for large-scale user access, so if the proper security measures aren't in place, it can be difficult to monitor access across the network.
4. **Data Leakage:** Data leakage is a growing concern for organizations, with over 60% citing it as their biggest cloud security concern. If the cloud service provider experiences a breach or attack, your organization will not only lose its data and intellectual property but will also be held responsible for any resulting damages.
5. **Data breaches:** One of the most impactful security risks the cloud faces is the potential for a data breach. These are a result of poor security measures that

allow malicious actors to gain access to sensitive data across cloud servers. One breach could cost an organization millions of dollars.

Developing a Cloud Adoption Strategy

1. **Assess your current IT environment:** Begin by evaluating your existing IT systems, applications, and infrastructure. Identify any pain points, limitations, and areas that could benefit from cloud computing.
2. **Set clear objectives:** Define your organization's goals and objectives for adopting cloud computing. Common objectives include cost savings, scalability, flexibility, improved performance, increased security, and enhanced collaboration.
3. **Plan for migration:** Develop a comprehensive migration plan to transition your existing applications, data, and infrastructure to the cloud. Identify critical applications and prioritize their migration based on business impact and complexity. Consider factors such as data transfer methods, potential downtime, and necessary training for your IT staff during the migration process.
4. **Train and educate employees:** Provide comprehensive training and education programs to familiarize your employees with cloud technologies and best practices. Help them understand the benefits, address concerns, and develop the necessary skills to leverage cloud services effectively.
5. **Address security and compliance:** Establish robust security measures and compliance practices to protect your data and meet regulatory requirements. Implement encryption, access controls, and threat detection mechanisms to safeguard your information in the cloud. Consider compliance certifications specific to your industry or geographical region.
6. **Develop a governance framework:** Define policies and procedures for cloud usage within your organization. Establish guidelines for data governance, access controls, service-level agreements, and vendor management. Regularly review and update these policies to adapt to changing needs and technological advancements.

Conclusion

In conclusion, cloud computing offers a transformative approach to computing, providing flexible and scalable access to computing resources. It enables organizations and individuals to optimize resource utilization, achieve cost savings, and enhance collaboration. Furthermore, cloud computing provides enhanced data security and disaster recovery capabilities. Cloud service providers often implement robust security measures, such as data encryption, regular backups, and

redundancy, ensuring that data is protected from unauthorized access, loss, or damage. This gives organizations peace of mind and enables them to focus on their core business activities.

GENDER EQUALITY AND WOMEN'S EMPOWERMENT

Mr. N. Eswara Moorthy

Student, Department of Commerce with Computer Application (PG)
Kovai Kalaimagal College of Arts and Science, Coimbatore
a20bcm012@kkcas.edu.in

Abstract

Gender equality between women and men refers to the equal rights, responsibilities and opportunities for women and men and girls and boys. Equality does not mean that women and men will become the same but that women's and men's rights, responsibilities and opportunities will not depend on whether they are born male or female. Gender equality implies that the interests, needs and priorities of both women and men are taken into consideration recognizing the diversity of different groups of women and men. Gender equity that provides a level playing field for men & women so that they have a fair chance to realize equal outcomes are a precondition for ensuring gender equality and human rights. The ultimate goal in gender equality is to ensure that women and men have equitable access to, and benefit from society's resources, opportunities and rewards. Gender equality, also known as sexual equality or equality of the sexes, is the state of equal ease of access to resources and opportunities regardless of gender, including economic participation and decision-making; and the state of valuing different behaviors, aspirations and needs equally, regardless of gender. Sex equality/gender equality addresses the different interpretations that are given to the claim that men and women are equal or ought to be treated equally and the arguments used to advance claims for sex equality. This article examines some key interpretations and arguments. Sex equality raises a number of issues in applied ethics, feminist philosophy, and political theory. Because of liberalism's concern with equality and equal rights, discussion of sex equality is of particular interest to liberal political philosophy and ethics. Liberal theory views justice, or 'treating equals equally,' as a central concern; sex equality, then, involves discussion of just treatment.

Keywords: Gender equality, Inequality, Development, Education

Introduction

Gender equality is the situation in which both male and female has equal opportunity. Both Genders are equivalent intellectual and psychological competencies except in physical strengths. The equivalence in competencies is observed in academics, IT sector and in almost every area. Yet, the psychological barrier in accepting this equivalence or accepting ladies in higher positions. The refusal opportunities by authorities or self-denial of opportunities are of equal effect. But, refusal or denial of opportunities to those who are willing to take challenges for vague excuses is called glass ceiling. The bills for ensuring right proportion of reservation for ladies in appointments and positions. The bills ensure, equal pay, Women have the right to dignity and decency, Women have the right against

workplace harassment, Gender equality is a fundamental human right. Yet despite progress, women and girls around the world do not fully experience equal rights and their potential as economic, social and sustainable development change-agents remains untapped. It will currently take over 267 years to achieve equality in terms of women's economic empowerment and participation. Gender equality is a fundamental human right. Yet despite progress, women and girls around the world do not fully experience equal rights and their potential as economic, social and sustainable development change-agents remains untapped. It will currently take over 267 years to achieve equality in terms of women's economic empowerment and participation. Gender equality is a fundamental human right. Yet despite progress, women and girls around the world do not fully experience equal rights and their potential as economic, social and sustainable development change-agents remains untapped. It will currently take over 267 years to achieve equality in terms of women's economic empowerment and participation. Women are underrepresented across business. They receive unequal pay for equal work and they continue to be targets of physical and sexual abuse.

Objectives

- To achieve Equal career opportunities for women and men
- To achieve Fair distribution of unpaid and paid work among women and men, wages and salaries that women and men can live on independently
- To achieve Equality of women and men with regard to political representation and participation
- To achieve broadly equal opportunities and outcomes for women and men.

Impact on Gender Equality

- India has some of the highest levels of sex discrimination at birth. According to a 2017 analysis According to demographic data, India will still have the worst sex ratio in South Asia in 2050. 918 girls for 1000 boys (2011) called on the government to take action in the form of "betibachao, beti the padhao program which provides survival, safety and education to the girl child.
- It can shrink countries the ability to compete in international competition – especially for countries with export potential in goods and services in addition, with high female employment, gender inequality can damage a country's international standing.
- All factors strengthen the incentives for policy action aimed at gender equality worldwide. But in the absence of public policy, globalization alone cannot reduce gender inequality.

- New powers associated with globalization - understood as a combination of economic integration, tech dissemination and better access to information worked through markets, formal institutions and informal institutions to remove some of the constraints for greater equality between women and men.
- The openness of trade and the spread of new information and communication technologies have translated into more jobs and stronger connections to markets for many women, increasing their access to economic opportunities.
- Greater access to information allowed many people to learn about life and customs in other parts, can affect attitude and behavior.

Inequity

Gender inequality is the social phenomenon in which people are not treated equally on the basis of gender. The treatment may arise from distinctions regarding biology, psychology, or cultural norms prevalent in the society. Some of these distinctions are empirically grounded, while others appear to be social constructs. While current policies around the world cause inequality among individuals, it is women who are most affected. Gender inequality weakens women in many areas such as health, education, and business life.

Impact of Gender Inequality

- The biggest problem we're facing is that a lot of people still see gender inequality as a women's issue. However, by gender, we refer to all genders including male, female, transgender and others.
- When we empower all genders especially the marginalized ones, they can lead their lives freely. Moreover, gender inequality results in not letting people speak their minds. Ultimately, it hampers their future and compromises it.
- In addition, they also get objectified and receive socioeconomic inequality. All of this ultimately results in severe anxiety, depression and even low self-esteem. Therefore, we must all recognize that gender inequality harms genders of all kinds. We must work collectively to stop these long-lasting consequences and this gender inequality essay will tell you how.
- The gender inequality essay tells us that gender inequality impacts us badly. It takes away opportunities from deserving people. Moreover, it results in discriminatory Behaviour towards people of a certain gender. Finally, it also puts people of a certain gender in dangerous situations.

Gender and Development

Gender equality is considered a critical element in achieving Decent Work for All Women and Men, in order to effect social and institutional change that leads to sustainable development with equity and growth. Gender equality refers to equal rights, responsibilities and opportunities that all persons should enjoy, regardless of whether one is born male or female.

In the context of the world of work, equality between women and men includes the following elements:

1. Equality of opportunity and treatment in employment.
2. Equal remuneration for work of equal value.
3. Equal access to safe and healthy working environments and to social security.
4. Equality in association and collective bargaining.
5. Equality in obtaining meaningful career development.
6. A balance between work and home life that is fair to both women and men.
7. Equal participation in decision-making at all levels.

Given that women are usually in a disadvantaged position in the workplace compared to men, promotion of gender equality implies explicit attention to women's needs and perspectives. At the same time, there are also significant negative effects of unequal power relations and expectations on men and boys due to stereotyping about what it means to be a male. Instead, both women and men, and boys and girls, should be free to develop their abilities and make choices – without limitations set by rigid gender roles and prejudices – based on personal interests and capacities.

Empowerment of Women through Entrepreneurship

Instrument of women empowerment is self-employment or entrepreneurship. Why women are choosing self-employment or entrepreneurship? One study revealed that Autonomy was rated high as a means to obtain personal freedom. This level of autonomy provides the opportunities to: (1) Able to make their own decisions:-decision making indicates the choice which is the basis of empowerment. (2) Able to do preferable work-Work in non:- traditional fields implies opening to more powerful networks, which leads directly to the empowerment. (3) Attain financial independence:- financial independence is a major contributing factor in the empowerment of women. The following are the impact of ED on Empowerment.

Educational Equality

Another area in which women's equality has shown a major development as an effect of adult literacy programs is the area of enrolment of boys and girls in schools. As a result of superior contribution of women in literacy campaigns, the gender gap

in literacy levels is regularly getting reduced. Even more important information that gap in enrolment of boys and girls in neo-literate households is much lowered compared to the non-literate householders. The world has achieved equal opportunity in primary education between girls and boys. But few countries have achieved that target at all levels of education. The political contribution of women keeps rising. In January 2014, in 46 countries more than 30% of members of parliament in at least one chamber were women. In many countries, Gender in equality persists and women carry on facing bias in contact to education, work and economic assets, and contribution in government. Women and girls face barriers and disadvantages in every division in which we have worked. Around the world 62 million girls are not in school.

Conclusion

The paper attempted at raising some of the issues relating to gender equality e.g. women entrepreneurship and empowerment. It provided a brief discussion as well as Literature survey covering these important aspects of economic empowerment, including a feminist perspective as how the women themselves look at the problem of discrimination and the fact of entrepreneurial subordination. UNIDO's framework approach for development of women entrepreneurship, especially, the rural women entrepreneurship, in the developing economies like India was also described. The discussion derives an important conclusion that women's empowerment, entrepreneurship. Accelerating entrepreneurship and self-employment is also critical for large-scale job creation in India. The key to encouraging self-employment among Indian women is a skill development project that focuses on specific demands and issues experienced by developing businesses.

Abstract

The change of social texture of the Indian culture, as far as expanded educational status of women and fluctuated desires for better living, required an adjustment in the way of life of Indian women. Entrepreneurs assume a key job in any economy. Entrepreneurs are the general population who have the skills and activity important to take great new plans to market and settle on the correct choices to make the thought gainful. The reward for the dangers taken is the potential economic benefits the entrepreneur could acquire. Entrepreneurship for Women development is a fundamental piece of human resource. In Comparison to different nations, the development of women entrepreneurship is low in India, particularly in rustic territories. Women entrepreneurship is picking up significance in India in the current economic condition. It has been distinguished as a powerful advance toward destitution mitigation in the nation. There exists a rundown of successful business people entrepreneurs both in social and economic fields in India. In fact, a women entrepreneur is any women who arranges and deals with any undertaking, as a rule with significant activity and hazard. The present investigation has been an endeavor to produce mindfulness and to comprehend meaning justification for broadening. A broad writing survey is done on women entrepreneur in India.

Keywords : Women entrepreneurs, Economic development, Economicfield, Development, Benefits, etc.

Introduction

“Women are the largest untapped reservoir of talent in the world.” Well said by Hilary Clinton. Women’s entrepreneurs is the economic activity that has to maintain the profit and to develop the new beginnings. The essential requisite of the successful entrepreneurs is risk bearing. An entrepreneur is an innovator brings new product to the product. An entrepreneurs is an agent of change.

A women entrepreneur is an individual who takes the initiative to establish, manage, and operate a business venture. This emerging trend reflects the increasing presence of women in the entrepreneurial landscape. Women entrepreneurs play a pivotal role in driving economic growth, innovation, and social change. They often navigate challenges such as access to funding, gender biases, and work-life balance while striving to build successful enterprises. Recognizing the potential of women entrepreneurs is crucial for fostering inclusive economies and empowering women to contribute significantly to various industries and societies at large.

Objectives of the Study

- To study about to realize potential of the women
- To enhances one's logical and analytical skills towards the field of the Entrepreneurship

Literature Review

ZethembeMseleku University of Kwa-Zulu Natal.(2020) in their study discussed about E-learning and E-Teaching about in the Era of Covid-19 pandemic. The user satisfaction is found to be related to E-learning and E-Teaching outcomes, challenges and opportunities in the era of Covid-19 pandemic. The literature presented a number of learning and teaching challenges faced by the academics and student. The rural area people faced the difficulties by low income, associated stress, depression and anxiety

Deepashree Chatterjee.(2019) In their provides the review of a step towards prosperity. The learner reviews that innovations and indispensable for development of the nation. This paper briefly discussed about the various plans and schemes which the government initiated through the scheme of started-up India. And discussed various steps taken by the start-ups to become successful and profitable. The challenges faced by the stand-ups are mentoring, politics, culture, hiring etc.

RitwikSaraswat and Remya Lathabahvan. (2020) In their article provides a review of the Women Entrepreneurship in India. In this factor the educated women standing tall from the rest of the crowd. Women facing many challenges towards the society. These people should have the various skills and innovative ideas. In the golden age of Digitalization and Start-up booms, India is clearly saw the revolution via women entrepreneurs. Today the women entrepreneurs established with the higher income sections. Women entrepreneurs provides the effective leadership in the all aspects of the business

FaternaKapadia (2021) aimed to analyze the Clean India, Green India .The learner found the people should see the cleanliness can impact everyone's life. Cleanliness is important in workplace, home, public places etc. Our surroundings plays a major role in our health and wellness. As a responsible citizen of our society we should keep our surroundings clean and it also beneficial for others. Swachh Bharat Abhiyan is the most impactful cleanliness campaign of the government of India. The government raised many schemes towards the cleanliness. The freedom fighter Mahatma Gandhiji's ambition of the clean and hygienic India. The reason behind processes, clean disposal, recycling and reuse of solid waste.

Problems Faced by Women Entrepreneurs in India

1. Lack of Education

The main reason of the barriers for lack of education are lack of economic conditions etc. But now a days Indian government expressed a strong commitment towards the education, however India still has one of the lowest female literacy rates in Asia.

2. Safety concern

Now a days the women facing many problems through the gender discrimination, sexual abuse, harassment, etc. so, the parents more concentrate on the women safety. Safety in educational settings is a barriers to equality for women. From the safety concern the women getting child marriage.

3. Poor Funding Prospects

In India the banks and financial institutions consider the women as less credit worthy. And many womens don't have the assets in their name. Women facing the problem of applying for collateral loans or private financing.

4. Lack of Social and Institutional Support

One of the major problem that women entrepreneurs faces lack of social and Institutional support. Due to the lack of proper guidance most women entrepreneurs lost their direction. In the lack of social support, the socio-culture of the ecosystem of India has traditionally placed men in the dominant role.

5. Balancing Responsibilities between Family & Business

Family as an opportunities. When the women belonging from the business family can give the career opportunity to the women. When the women without from the business background it is difficult to achieve their goals. when the married women enter into motherhood plays a major role in rearing their children. So its leads to take a small break. When the conflict with their family commitments that makes feel guilty about grade their business

Government Schemes to Develop Women Entrepreneurs

BharathiyaMahila Bank Business Loan

BharathiyaMahila Bank was establishes for the women to develop their career. And the government offers loan upto 20 crores to female entrepreneurs to start their business. The loan program that began in 2017 coalesce with State Bank Of India.

Mudra Yojana Scheme

Mudra Yojana is a scheme that beneficial to develop the business. This scheme is develop the small business. The loan ranging from 50000 to 10 lakh. The example of small business are beautyparlour, tailor shop, fancy store etc.

Dena Shakthi Scheme

Dena Shakthi Scheme is provides economic opportunities to women. The scheme is focused with the Agriculture, education, housing, micro and small manufacturing enterprises etc. This scheme provides loan upto 20 lakh.

Udyogini Scheme

Udyogini scheme is implemented for the women development. This scheme aims to build overall growth of the country. This scheme provides loan upto 3 lakh. This scheme is started in 2014 with the mission to make easier for women entrepreneurs to start the business.

Cent Kalyani Scheme

Cent Kalyani Scheme is to encourage the women entrepreneurs. It is the purpose to meet capital expenditure. The main objectives of the scheme is sustainable employment opportunities. It is started in the year 2006 accordance with the MSME Act .Under the scheme loans provide upto 100 lakh.

MahilaUdyamNidhi Scheme

MahilaUdyamNidhi Scheme is launched by the Punjab National Bank. This scheme aims to empowering the women entrepreneurs. Small industrial Development Bank of India(SIDBI) launched the MahilaUdyamNidhi Scheme. Which provides credit facilities who are into the production and service related industries. This scheme provides loan upto 10 lakh

Women Entrepreneurship Platform(WEP)

The government of India through NITI Aayog has started an initiative call the Women Entrepreneurship Platform. The benefits of the WEP is funding and financial assistance. WEB offers incubation and accelation support to women entrepreneurs. This scheme is provide necessary support to help them start and scale-up.

Facts about Women Entrepreneurs

- Women first started the businesses in 1972.what's more, women in America start 1,817 businesses every day
- Average employment per establishment per establishment for women owned establishment is 1.67.
- Total establishment owned by females, provide employment to 13.45 million people
- 47% of women started the business in the last year, compared to 44% of men.
- 88% of all women-owned businesses generate less than \$100000 yearly.

Conclusion

Women Entrepreneurs makes a significant contribution to economic growth and poverty reduction around the world. Women participating in the field of Entrepreneurship is increasing considerable rate, efforts and to enhance the women's involvement in the enterprise sector. Creativity results in value, and value provides a competitive advantage.

Successful entrepreneurs are those who have high tolerance to withstand a stressful world with courage. Entrepreneurs are the important part of the free enterprise system. All these theories provides a useful insight in understanding and explaining entrepreneurs.

The above characteristics are related to the entrepreneur. Identifying entrepreneurs success is an important task. So when women enter into the field of entrepreneurs to clash all the obstacles.

GENDER EQUALITY AND WOMEN'S EMPOWERMENT

**Ms. R. Kalaivani, Ms. S.Krithikadevi
& Ms. B.Santhiya**

II M.Com CA, PG Department of Commerce-CA
Nallamuthu Gounder Mahalingam College
Pollachi, Tamil Nadu, India

Abstract

This Paper deals with "Women Empowerment" a burning issue all over the world. "Women empowerment" and "women equality with men" is a universal issue. Women Empowerment refers to the creation of an environment for women where they can make decisions of their own for their personal benefits as well as for the society. Gender equality, besides being a fundamental human right, is essential to achieve peaceful societies, with full human potential and sustainable development. Moreover, it has been shown that empowering women spurs productivity and economic growth.

Keywords: Gender, Equality, Women Empowerment.

Introduction

Women's empowerment in India has a long history. Great social reformers in the past like Raja Ram Mohan Roy, Swami Vivekananda, Acharya Vinobha Bhave and Ishwar Chandra Vidyasagar etc abolished ghastly practices like sati and child marriage and worked relentlessly in the past for the upliftment of women in India. The Indian National Congress, one of the first political parties of India, raised its voice to demand political rights for women in the year 1917.

The policy of women's empowerment is incorporated well into the constitution of India which became effective in the year 1950. Article 14 ensures the right to equality for women; Article 15(1) prohibits gender discrimination; Article 15(3) empowers the state to take affirmative steps in favour of women, to name a few.

The United Nations Development Programme's (UNDP) Gender Equality Strategy 2022-2025 has been created during turbulent times. Multiple crises and risks are threatening the world and we are witnessing an alarming backlash against women's rights and gender equality. Since the COVID-19 pandemic hit, women have been nearly twice as likely to lose their jobs compared to men. Yet less than 20 percent of policy measures implemented by countries across the world addressed women's economic insecurity. Gender inequality also takes a toll on men and other affected groups. For men, rigid gender norms can result in risky behaviour resulting in violence, poor health, and lower life expectancy.

At a time when progress towards achieving gender equality is often stalling or even reversing, this ambitious new Gender Equality Strategy will guide UNDP in its

efforts to assist countries to move beyond piecemeal efforts towards portfolio approaches that shift power structures and the economic, social, and political systems that perpetuate discrimination.

Principles

- Principle 1: Establish high-level corporate leadership for gender equality
- Principle 2: Treat all women and men fairly at work – respect and support human rights and non-discrimination
- Principle 3: Ensure the health, safety and well-being of all women and men workers
- Principle 4: Promote education, training and professional development for women
- Principle 5: Implement enterprise development, supply chain and marketing practices that empower women
- Principle 6: Promote equality through community initiatives and advocacy
- Principle 7: Measure and publicly report on progress to achieve gender equality

Importance:

- Giving women equal position as men.
- There's no difference between men and women.
- Women empowerment means allowing them to do everything that men do.
- Rights and laws shall be fair for all without gender bias.

Some people also defined Women Empowerment by mentioning the success and pride women have brought to India. We applaud all such achievements and rewards of women but there's a fair difference between Women Achievement and Women Empowerment.

- Gender Equality prevents violence against women/girls.
- Gender Equality in India is good for the economy of the Nation.
- Gender equality in India is also fundamental, as well as the human right of women.
- Gender Equality in India makes our society safer and healthier.

Need For Women Empowerment and Gender Equality

Women's empowerment is not simply a trendy idea; it is essential in today's society. Despite considerable advancements in women's rights as well as gender equality, there are still many obstacles and problems that prevent women from contributing fully to society and reaching their full potential. The following are some strong arguments in favour of women's empowerment:

Gender Equality

The empowerment of women is necessary to achieve gender equality. Social conventions, cultural practices, as well as discriminatory attitudes that restrict women's prospects and undercut their rights are at the heart of gender disparity. By empowering women, we question these expectations and work to create a society where men and women are afforded the same rights, opportunities, and obligations.

Economic Development

Economic growth and the empowerment of women are intimately related. Half of the world's population is made up of women, and economic sustainability depends on their active engagement. Whenever women have the same opportunity for education, work, and entrepreneurship, they make a substantial contribution to economic production, the eradication of poverty, and general development.

Violence and Discrimination

In order to overcome violence and prejudice against women, women must be empowered. Domestic abuse, sexual harassment, as well as human trafficking are just a few of the violent crimes against women that they still have to deal with. Challenges to these harmful practices, safer settings, and the advancement of a culture of equality and respect are made possible by the empowerment of women via education, awareness, & legal protection.

Leadership and Decision-Making

In order to create effective policies, strategies, as well as decision-making processes, women's voices and views are crucial. For inclusive governance to be promoted and to fulfill the many demands and objectives of society, gender parity in leadership roles must be attained in the private as well as public sectors. Women's empowerment ensures that they have an equal voice in decisions that impact their communities and way of life.

Schemes for Women Empowerment and Gender Equality

- Working Women Hostel Scheme
- One- stop centre scheme
- Women helpline scheme
- Mahila police volunteers scheme
- SWADHAR Greh
- STEP
- Mahila Shakti kendras(MSK)

Conclusion

The main emphasis is given to the indicators like women's household decision making power, financial autonomy, freedom of movement, women's acceptance of unequal gender roles, exposure to media, access to education, women's experience of domestic violence etc. Women's political participation is also analyzed by using indicators like percentage of women voters and women MPs. After analyzing the data it is found that household decision making power and freedom of movement of women vary considerably with age, education and employment. Freedom of movement of widow or divorcee is more than ever married or never married women. Similarly it is found that in the society the acceptance of unequal gender norms by women themselves are still prevailing. More than half of the women believe that wife beating is justified for any of the specific reasons like not cooking properly, not taking proper care of household and children, refuse to have sex with husband, showing disrespect to in-laws etc. However, this attitude is not varying much with age or household structure but decline sharply with education and places of residence. While studying women's access to education and employment it is found that gender gap exist in both the situations. A large gender gap in literacy exists and participation of girls at all stages of education is below 50%. Similarly less than 50% of women are employed and a significant portion of them are not paid for their work. However, having access to employment does not mean that women have full control over their earnings.

MAKE IN INDIA, PROMOTING AND GROWTH - AN OVERVIEW

Ms.S. Abinaya

Student, B.Com-Banking and Insurance
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

The development of manufacturing sector is must for employment generation and development of economy of any country's. The manufacturing sector is required to play a crucial role for India economy to achieve its goal of employment generation and economic development of the country. In view of the requirement of the time, Make in India was launched by the Honorable Prime Minister India's on Aug 15, 2014. The Prime Minister invited to both domestic and international industrialists, Make in India campaign is aimed to make the country a manufacturing hub that will help boost jobs and growth. The Govt. is ensuring a smooth sailing for investors, by setting up a dedicated cell to answer queries of business entities within 72 hours. The Make-in-India campaign will help in boosting economic growth, in job creation and revival of investment cycle in Asia's one of the largest economy. This study will attempt to study the objectives and the efforts being made by the Indian Government. The study will also assess the initiative, bottlenecks and effectiveness of Make in India campaign and the achievements so far.

Keywords: Make in India, Employment Generation, Business Growth.

Introduction

'Make in India' initiative was launched globally in September 2014 as a part of India's renewed focus on Manufacturing. The objective of the Initiative is to promote India as the most preferred global manufacturing destination. Since the launch of this landmark initiative, the Government of India has taken several reform initiatives to create an enabling environment for providing an impetus to manufacturing, design, innovation and startups. India has emerged as the fastest growing economy globally. India's rate of growth of 7.5% is accelerating and it remains an oasis of growth in the midst of a subdued economic landscape across the world. The Hon'ble Prime Minister has given impetus to growth with several innovative initiatives such as "Make in India", "Digital India", "100 Smart Cities" and "Skill India". The Make in India initiative aims to make India an integral part of the global supply chain. It is about making Indian companies excel in a globalized workspace. India has vigorously opened up its economy – Defence, Railways, Construction, Insurance, Pension Funds, Medical Devices have all been rapidly opened up for Foreign Direct Investment. India today is one of the most open economies of the world.

In order to achieve this, the Government of India has taken up a series of measures to radically improve Ease of Doing Business. Its objective – make the

regulatory environment easy and simple for business to flourish. It has effectively used technology to converge and integrate departments. 14 services are integrated with eBiz portal which will function as a single window portal for obtaining clearances from various government agencies.

Make in India – Vision

Manufacturing currently accounts for slightly more than 15% of national GDP. This program aims to increase this to a 25% contribution, as observed in other Asian developing countries. The government intends to create jobs, attract significant foreign direct investment, and transform India into a favored manufacturing hub worldwide. The Make In India campaign logo is an exquisite lion inspired by the Ashoka Chakra and intended to reflect India's achievement in many areas. The Prime Minister dedicated the campaign to the famous patriot, philosopher, and political leader Pandit Deen Dayal Upadhyaya, born on the same date in 1916.

Make in India – Objectives:

The Make in India project has numerous objectives. They are as follows:

- Increase annual manufacturing sector growth to 12-14 percent.
- Increase the number of manufacturing jobs by 100 million by 2022.
- Increase the manufacturing sector's contribution to GDP to 25% by 2022.
- Developing necessary skill sets among urban poor and rural migrants to promote inclusive growth.
- Domestic value addition and technological depth in the manufacturing sector have increased.
- The growth is environmentally sustainable.
- Increasing the Indian manufacturing sector's global competitiveness.

Make in India – Advantages

The Make in India program has resulted in several positive outcomes for the country. The following are some additional benefits that have resulted from this trip.

- Creating new job opportunities.
- Increasing GDP via accelerating economic growth.
- The rupee will rise as FDI inflows increase.
- Small manufacturers will benefit, mainly if foreign investors invest in them.
- When countries invest in India, they bring with them cutting-edge technology in a variety of industries.
- As a result of the Mission's many initiatives, India has risen in the EoDB index.

- Setting up manufacturing centers and companies in rural areas can also help these communities thrive.

Make in India – Schemes

Several initiatives have been undertaken to assist the Make in India initiative. These plans are described more below:

- This initiative intends to train 10 million people in diverse sectors in India each year. To make 'Make in India' a reality, the vast human resource must be upskilled. This is significant because India's formally skilled workforce accounts for barely 2% of the population.
- The primary goal behind this initiative is to create an ecosystem that promotes the growth of startups while also driving long-term economic growth and producing large-scale employment.
- The goal is to make India a knowledge-based and digitally enabled economy.
- This is a quest to make India cleaner and to promote basic sanitation and hygiene.
- The purpose of this strategy is to enhance ports and promote port-led growth in the country.
- The ISA is an alliance of 121 countries, most of which are sunshine countries that lie entirely or partially between the Tropics of Cancer and Capricorn.
- This is India's initiative to promote solar technology research and development and formulate policies in this area.
- AGNII, or Accelerating Growth of New India's Innovation, was established to propel the country's innovation ecosystem by linking people and supporting the commercialization of innovations.

Make in India – Challenges, Criticisms & Concerns

Despite the campaign's success in some circles, there have been some complaints. There are other hurdles that the country must overcome to meet the ambitious goals set by the establishment. Some of the complaints are listed below:

- India has over 60% cultivable land. The emphasis on the industry is thought to have a negative impact on agriculture. It has the potential to destabilize fertile land permanently.
- It is also claimed that fast industrialization (even with the emphasis on "becoming green") might contribute to natural resource depletion.
- Local farmers and small entrepreneurs may be unable to compete with foreign players due to welcoming large-scale FDI.

- The campaign's emphasis on manufacturing may result in pollution and adverse environmental effects.
- There are significant gaps in the country's physical infrastructure facilities. For the campaign to be effective, it is vital to improve the country's infrastructure while simultaneously addressing issues such as corruption at the grassroots level.
- India may learn from China, which increased its share of global manufacturing from 2.6 percent in the 1990s to 24.9 percent in 2013. China rapidly expanded its physical infrastructures, such as railways, roads, power, and airports.

Conclusion

The make in India initiative was launched to encourage manufacturing in India and ultimately transform India into a global hub for the same. This would result in increased economic growth as well as employment generation, and also increase the FDI in India. Various sub-schemes has been envisioned under this initiative that would help in the development of various sectors. This program is an absolute necessity if we are to eradicate unemployment in India while also fostering economic growth. We can significantly reduce poverty by addressing the issue of youth unemployment. A strong economy is inevitable following the success of the "Make in India" initiative. By doing so, various socio-economic problems in the country may be addressed. Make in India has the potential to make India a \$5 trillion economy. If measures are not taken by the Indian government to improve the FDI inflow and creating a favourable environment for the manufacturing sector, it may only be a distant dream.

Abstract

The World Bank provides ten factors which form the basis of its ranking to different countries in respect of Ease of Doing Business (EODB). It is generally understood that this ranking affects the inflow of FDIs in the countries. Higher ranking carries higher chances of FDI inflows and vice versa. The present paper attempts to look into the comparative weightage of the factors of ranking and their applicability in different sets of economic developments stages. Other traits which responsible for ease of doing business on overall basis are also looked into influencing the investment flow. The basic plan of the paper is to consult the papers available on the topic and chalk out the different factors and their outcomes. Based on the literature survey, it is opined that improved rankings in general favours FDI inflow but not all the parameters are equally effective and their weightage vary on case to case basis. Extra commercial considerations are also bound to get priorities when it comes to serve strategic interests of the investors. Over prioritizing the EODB rankings also diverts specially underdeveloped countries from taking up their structural reforms as they try to value few one over those more vital aspects need to be looked into.

Keywords: The Ease of Doing Business (EoDB) index - ranking system by the World Bank Group - Inflow of FDI.

Introduction

Ease of doing Business may be defined as combined outcome of the simplified laws, rules and regulations, taxation process etc. facilitating the smooth business operations with proper back up of developed infrastructural facilities like transportation, law and order position, banking and financial system along with the presence of conducive equality population having the role, both as consumers and human resources for the business. A favourable business environment is a pre-requisite for the growth of a nation. A country like India which is among the fastest developing countries in the world has the potential to surpass the leading countries in terms of business. The Make in India initiative which has been launched by the government in 2014 with a vision of transforming India into a manufacturing hub has lead down its efforts towards easing out the process of doing business in India by attracting more domestic and international companies to invest and do business in India, which will boost the FDI the country and the will also be essential in updating the overall economic growth of the country.

Ease of Doing Business

The term has been introduced and defined by the World Bank, to indicate the positive and negative aspects in economic life of any country which contribute and hinder the development of healthy business environment there. It underlines the necessary steps that need to be taken to maximise those positive aspects and minimise the negative ones. Based on these aspects, the World Bank also declares annual rankings of various countries, thus acknowledging their business environment globally. It's a general opinion that the higher rank holders become the preferred choices of global investors for their stakes. From the investors' point of view, analyses of factors of EODB are vital phenomena which will suggest the safety and viability of their investment. Another aspect is that how the host country is able to guide these investments according to its specific needs which cannot always be related to profitability only. Parallely, it should not be forgotten that around the globe, there are so many contenders who are trying to woo these foreign investors with various reforms on their domestic fronts. In fact, in modern era's global economy, every country tries to get higher on the ladder of scale on EODB standards in the eyes of World Bank. Under these circumstances, huge young population, training institutions, growing economy etc. are of course giving India an edge over its other global contenders, but to be very frank these factors alone cannot turn the scales on board. Further massive efforts are mandatory to bring more ease in doing the business in this country in order to motivate the investors to zero in on India as their favourable destination. We can see the much publicised news about the India's improvement in the latest EODB rankings from 100 in 2017 to 77 in the year 2018 with further jump to 63rd position 2020 World Bank Report. It's all about giving new hopes and impetus to slowing down Indian economy. It also generates the positive feelings among the masses about the reform measures being undertaken by the Government. It is further helpful for the latter to pursue such policies to push the reforms more aggressively while calming down the opposition from many quarters. Of course, it also offers more favourable terms for the government's persuasiveness for the potential investors around the world. World Bank has identified ten factors to determine the rankings on EODB such as Starting a business, Dealing with construction permits, Getting electricity, Registering property, Getting credit, Protecting minority investors, Paying taxes, Trading across borders, Enforcing contracts and Resolving insolvency. that second, fourth, sixth, ninth and tenth one i.e. five out of total ten factors, relate to legal aspects. Appropriate changes and reforms in laws and their implementation can ensure the proper functioning of these five factors. These include Arbitration and Adjudication process, Dispute settlement mechanisms, labour laws and other

related statutes, entry and exit procedures for the business etc. In modern era, time consumed in these legal processes are very important for the business firms and is considered as very effective tool in attracting or frustrating the investors. The Legislature and Lawmakers have to take care of these aspects along with the bureaucratic ranks and files of the land. The rest i.e. seventh factor relates to one of the most important aspect i.e. paying taxes. Kautilya (Chanakya) has said in Arthashastra that wise people get the fruits only up to certain limit but never harm the trees so that they can bear the fruits for a long time to come. Similarly, a wise king never harms the taxpayers, but facilitates them for paying their taxes in foreseeable futures to come. Here fruits are the taxes and trees are the taxpayers. High rates of taxes beyond certain limits will only be counterproductive to economic activities of the country. Besides rate of taxes, their compliance cost and procedural formalities along with the attitude of the government and tax department towards taxpayers plays a very important role in the hardships or ease to them. All countries which are striving for FDI are trying to reform their tax structures, simplify them and ensuring the removal of compliance procedural bottlenecks. If we go around the world, several countries, especially Asian countries are very busy in revamping their tax structures. As per the different research papers, World bank reports, articles, books some of the major constructs has been playing vital role to promote foreign investment. First factor i.e. "Starting a business" relates to smooth functioning of Government departments and steps like time taken in various clearances, land acquisition, single window systems, maintenance of law and order situation, attitude of general public as well as those of administration etc. Fifth one i.e. Getting Credit owes its effectiveness in healthy functioning of the financial systems of the country. Though the law of the land has the role to play here but strengthening of the financial institutions are long drawn procedures and take a considerable period of time. Third and eighth factor relates to infrastructure developments in power sector, transportation in all forms i.e. surface, air and water so that the products and services are ready on time and to be delivered on time at proper destination

Starting a Business

In India starting a business was a very complicated affair but after the launch of make in India campaign things have become much more easier for the people to start their own venture a lot of changes has been made in order to ease out the life of the people interested in having their own firm. The topic measures the minimum paid up capital requirements, no of procedures involved and cost for a small-to-medium-sized limited liability company to start up and formally operate in the economy's

largest business city. Earlier India's rank was 164 but now there is an improvement due to which it has climbed up the ladder and has acquired the 156th spot in the current ease of doing business ranking by the world bank.

Getting Credit

This indicator is basically concerned with measuring the legal rights of borrowers and lenders concerned with secured transactions and the reporting of credit information. India witnessed an improvement of 15 ranks this year, from 44 to 29.

Dealing with Construction Permits

This indicator is concerned with recording procedures which are required for a business in the construction industry in order to build a warehouse along with the time and cost to complete each procedure. It is also concerned with studying quality control indices, evaluating the quality of building evaluation, insurance regimes, safety mechanism and certified professional requirements. Earlier India's rank was 185 and now it is at 181 spot which depicts an improvement of 4 ranks this year.

Trading Across Borders

This indicator is concerned with recording time and cost associated with the process of exporting and importing goods and related with other things such as documentary compliance border compliance and domestic transport. The ranking shows a decline of 3 ranks from 143 in 2016 to 146 in 2015 compared to last year which means more changes needs to be done to climb up the ladder in the rankings.

Protecting Minority Investors

This indicator is concerned with measuring the protection of minority interest from conflict of interest and shareholders rights in corporate governance. Many amendments have been made to the Companies Act which has strengthened the minority investor protection in India. India has made an improvement of 9 ranks i.e. from 13 to 4, making it to top 5 economies in the world.

Getting Electricity

The indicator is concerned with recording all the procedures required by the business in acquiring permanent electricity connection and supply for a standardized warehouse. This indicator has shown a major improvement from being at 99 spot in 2015 it has climbed up to the spot 26 in 2016 but a drop of 3 ranks in its ranking in 2017 has put it down to 29th rank which means more initiatives needs to be taken to improve the overall condition.

Enforcing Contracts

This indicator measures the time and cost involved for resolving a commercial dispute through a local first-instance court, the quality of judicial processes index and evaluate whether each economy has adopted practices that promote good quality and efficiency in the court system. India has shown an improvement of 8 ranks this year from 172 to 164.

1. Paying Taxes

The indicator records the taxes and mandatory contribution which has to be made by firms in a given year. It is also concerned with the firm's administrative burden of payment of taxes, contributions and complying with post-filing procedures. India recorded a major improvement of 53 ranks this year from 172 to 119.

2. Resolving Insolvency

This indicator is basically concerned with the time, cost and recovery rate under the bankruptcy proceeding. It also takes into consideration the outcome of insolvency proceedings which involves domestic entities and the strength of the legal framework which is applicable to judicial liquidation and reorganization proceedings. India's rank has improved from 136-103.

3. Registering Property

This indicator measures the procedures, time and cost which is needed to register the commercial real estate. This indicator has not shown much improvement it was at the 138th spot in 2015 & 2016 and has further dropped down in its rank to 154.

Challenges in Ease of Doing Business in India

In the World Bank Doing Business report of 2018 India is at 100 spot out of 190 countries making an improvement of 30 spots in one year, it has earned a lot of glory for India making it the fastest improving economy in the world still there are lots of challenges to tackle down in the road of achieving India's dream of being at the 50th rank in the ease of doing business ranking of the world and withholding its position.

The challenges are as follow:

- The starting of a business indicator has shown a dip of one rank from 155 to 156 which indicates that steps taken to ease out the process are still not sufficient the reason behind it is the cost involved in starting a business in India is sky high as compared to other countries. The no of procedures required to set up a business is still cumbersome which takes almost a month (27 days) to complete which is above the OECD average of 12 days.

- The trading across border is one such indicator which is showing a continuous dip in the ranking from 133 in 2015 to 143 in 2016 and now 146 in 2017 which clearly indicates that steps taken to improve its ranking are not sufficient still there is something which is lacking which the government is not able to identify which worsens even further as the thick layers of bureaucracy are making it very challenging for India in efficiently moving the goods. Despite opening its doors for international trade, still there are lots of hurdles to overcome in exporting and importing of goods and the fulfillment of long list of documents before moving goods is making it even worse.
- The cost of getting electricity which shows a dip of three ranks compared to last year from 26 to 29 clearly indicates more improvement is required in uplifting this indicator though the cost of getting electricity is cheap in comparison to other countries, it is the no of procedures involved which has led to a dip in its ranking because each procedure itself is time consuming which requires around 8 days for site inspection and around three weeks to get externally connected which further delays the start of a business.

Suggestion to Improve Ease of Doing Business Rank in India

India one of the fastest improving countries has shown a tremendous growth in its rank compared to previous years still a lot needs to be done though it has introduced major reforms that enables entrepreneur in starting and operating their small and medium- sized business faster and simpler. The ways by which India can improve its ease of doing business ranking are as follows:

- Implementing e-governance will result in filling the procedures online which means no visiting government officials, reduce case of bribery and corruption.
- There are various platforms for collecting feedback of users who are impacted by the regulatory measures which has been implemented it will be beneficial in knowing the opinion of users and what further improvements need to be made.
- It is essential to speed up the process of dealing with construction permits for which there should be a specific manufacturing zone and central business district having their own government body to cooperate with other government bodies.

Conclusion

In 2016 India was at 130th rank due to which the government faced a lot criticism for its policies as India was lagging behind in the rankings compared to its counterparts of BRICS nations. Within a year India has reached the 100th rank which

indicates an improvement of 30 ranks a result of the improvement made by the government in its policies launched under the Make in India campaign that targets creating more than 100 million jobs by the year 2022, making India a manufacturing hub and raising the contribution of manufacturing sector's share to GDP to 25%. The hopes are high with the backing of the government India will be able to enter the top 50 rank in the ease of doing business rank. Although various steps have been taken to improve the rankings especially GST the impact of which will be factored in the 2018 ranking which is going to improve India's ranking further. The government needs to concentrate more on weak areas such as starting a business, dealing with construction permits, trading across borders, registering property these are some indicators which need special attention because these are the main reason India is lagging behind in the world bank ranking so it is essential to make sure that it is not the job of one department but for everyone concerned with the regulatory process. India needs to run faster to further improve its ranking. Through sheer hard work and perseverance India can achieve its target of top 50 in ease of doing business rank.

Abstract

A blockchain is essentially a distributed database of records or public ledger of all transactions or digital events that have been executed and shared among participating parties. Each transaction in the public ledger is verified by consensus of a majority of the participants in the system. And, once entered, information can never be erased. The block chain contains a certain and verifiable record of every single transaction ever made. Bitcoin, the decentralized peertopeer digital currency, is the most popular example that uses blockchain technology. The digital currency bitcoin itself is highly controversial but the underlying blockchain technology has worked flawlessly and found wide range of applications in both financial and nonfinancial world. This paper describes blockchain technology and some compelling specific in innovation, opportunities and benefits. We then look at the challenges ahead and business opportunities in this fundamental technology that is all set to revolutionize our digital world.

Keywords: Bitcoin, Transaction, Digital currency, Fundamental technology

Introduction

Blockchain is a public ledger that makes it nearly difficult to change a transaction. a decentralised database where transactions are transparent and there is no middleman. The digital money (bitcoin) was the first application of blockchain technology. Other applications for this technology, however, have not yet been investigated. Cyber security, the internet of things, supply chain management, market forecasting, governance, information management, financial transactions, and other application fields are anticipated to be impacted. Due to blockchain's efficacy, particularly in terms of security, it has changed how individuals manage their money up to this point. Therefore, research into blockchain technology in a variety of application domains is essential from the perspective of data analytics.

Type of Blockchain

1. Public Blockchain:

These networks allow anyone to join the network and execute transactions visible to every network user. There is no trust relationship among the network users before

joining the network. Transaction can be verified by any node. All nodes participate in the transaction consensus process. Bitcoin and Ethereum belong to the class of public block chain.

2. Private Blockchain:

These networks are permission based. These are also referred to as “permissioned ledgers” and are constructed using Hyper ledger Fabric which is hosted by Linux Foundation. The digital records can be encrypted and are visible only to authorized users, thus privacy requirements of the data are fulfilled. The main difference between private and public networks is user verification and authentication mechanism. In public block chain networks, there is no trust relationship among the network nodes. Before any transaction can be performed, there is computing overhead involved in user validation which increases the time for each transaction. Contrarily, in private block chain networks, permission based trust is involved before any transaction is made. It significantly reduces the computation overhead for running the authentication and validation algorithms. Consequently, thousands of transactions can be performed per seconds on private blockchain networks as compared to a few transactions per second in public networks. The blockchain network can be owned by a single network provider or multiple consumers. The owner of the network determines whether it is public or private in nature

3. Consortium Blockchain :

In consortium networks, block authentication is performed by a set of specific nodes. It is categorized as semi private and permissioned blockchain. It is a partially centralized system controlled by a few selector nodes, contrary to public blockchain (decentralized) and private blockchain (centralized). Network nodes having authority can configure the data in blockchain to be public or private. R3CEV and Hyperledger are examples of Consortium Blockchain networks

Innovation of Blockchain Technology

Blockchain technology has the potential to significantly contribute to the integration of renewables by automating procedures, enhancing power system flexibility, and lowering transaction costs. It can speed up the adoption of other technologies at the same time, such as storage and electric vehicles (EVs), which will improve grid management and system performance.

With the relatively recent increase in power sector complexity comes a need for greater intelligence and transparency. Surging numbers of smart devices coming online are generating vast amounts of granular data – important fuel for burgeoning

technologies, such as artificial intelligence, to increase the efficiency of power systems and reduce energy usage. New tools to manage all this data in a secure, efficient and transparent manner are being sought, and blockchain technology is already proving useful. New business models in the energy sector enabled by blockchain technology continue to emerge and evolve, with the spotlight currently on local peer-to-peer (P2P) and wholesale power trading as well as innovative means of project financing in developing countries, among others.

How Blockchain will Change the World

- **Banking and Payments:** Not only does blockchain allow anyone to exchange money faster, more efficiently and more securely (see bitcoin currency), but many banks are already working on adopting blockchain technology to improve their transactions.
- **Cyber security:** All data is verified and encrypted in blockchain using advanced cryptography, making it resistant to unauthorized changes and hacks. Centralized servers can be very susceptible to data loss, corruption, and human error and hacking. Just look at the many hacks we've seen in the past few years with Target, Verizon, Deloitte and Equifax. Using a blockchain decentralized, distributed system would allow data storage in the cloud to be more robust and protected against attacks.
- **Internet of Things:** Today the Internet of Things (IoT) includes cars, buildings, doorbells and even refrigerators that are embedded with software, network connectivity and sensors. However, because these devices operate from a central location that handles communications, hackers can gain access to the car you're driving or to your home. According to Kamil Przeorski, an expert in Bitcoin and Ethereum capabilities, Blockchain has the potential to address these critical security concerns because it decentralizes all of the information and data. This is increasingly more important as IoT capabilities increase.
- **Unified Communications:** Blockchains can enable faster, safer and more reliable automated communication. Automated or digital communication based on pre-built algorithms is already occurring at scale in some industries. Examples of this include emails, system alerts and call notifications. Matt Peterson, co-founder of Jive Communications and an early adopter and miner of Bitcoin told me that while a lot of communication is currently automated, this type of communication is generally non-critical and asynchronous. He said that "Blockchains can shift the playing field to allow authorized, bi-directional communications and transactions that occur more freely in an

automated environment and produce an immutable record of communication.” This will greatly enhance the safety and reliability of our communications.

- **Government:** If corrupt politicians and long lines at the DMV give you a headache, you’re not alone. With blockchain, we could reduce bureaucracy and increase security, efficiency and transparency. Welfare and unemployment benefits could also be more easily verified and distributed and votes could be counted and verified for legitimacy.
- **Crowdfunding and Donating to Charities:** Donating to a worthy cause is never a bad idea. But what percentage of your donation is actually being given to those it’s meant for? Blockchains can help ensure that your money gets exactly where you need it to go. Bitcoin-based charities are already creating trust through smart contracts and online reputation systems and allowing donors to see where their donations go through a secure and transparent ledger. The United Nations’ World Food Programme is currently implementing blockchain technology to allow refugees to purchase food by using Iris scans instead of vouchers, cash or credit cards.
- **Healthcare:** Wouldn’t it be great if doctors did not have to “fax over referrals” anymore? Why can’t all of our medical information be stored in a central database? The centralization of such sensitive information makes it very vulnerable. With all of the private patient data that hospitals collect, a secure platform is necessary. With the advent of blockchain, hospitals and other healthcare organizations could create a centralized and secure database, store medical records and share them strictly with authorized doctors and patients.
- **Rentals and Ride-sharing:** Uber and Airbnb may seem like decentralized networks, but the platform owners are in complete control of the network and naturally take a fee for their service. Blockchain can create decentralized peer-to-peer ride-sharing apps and can allow car owners to auto pay for things like parking, tolls and fuel.

While blockchain is still relatively new and many experiments will fail before they succeed, the possibilities for innovation are endless. Along with the eight points listed, it will affect retail, energy management, online music, supply chain management, forecasting, consulting, real estate, insurance and much more.

Opportunities of Blockchain Technology

Gaming

The online gaming community participating in pay-to-play or play-to-win platforms is one of the biggest untapped markets. They extract money out of their

pockets with no rewards. The face of these models can be changed through blockchain by establishing a pay-to-earn model

Identity Check

Our lives are ruled by ID cards, Aadhar cards, voter IDs, etc. Unfortunately, these can be easily forged by miscreants. With blockchain technology, using QRC to verify the authenticity of any identification becomes possible. All that is required is a blockchain log to store ID details that can be verified at any point at the click of a button.

Managing a Retail Business

Extensive development is not required for setting up a retail operation using blockchain. Most countries already have a framework in place in the private sector that allow customers to handle their grocery shopping using their smart devices. These existing technologies can be integrated into the coding of blockchain technology, making it possible for business owners to make conversions.

Notaries

Transferring ownership of goods and assets through notaries is a common feature. It is usually done in front of a law officer by signing a piece of paper and normally involves a monetary transaction. Blockchain can ensure that these digital records of notaries be maintained in a tamper-proof manner.

Digital Voting

Blockchain can ensure fair elections. When the electronic voting systems are integrated with blockchain technology they would become fraud-proof and the results can be made public without any human intervention.

Digital Assets or Services

The ICO (Initial Coin Offering) structure can work really well for any smallbusiness that needs crowdfunding. A participating role may be offered to the investors, offer them some sort of asset related to the business initiative, or a tokenized utility.

Gambling

Starting a casino using crypto assets is possible in countries where gambling is permitted.

Blockchain technology is poised to dramatically transform commerce across every sector, including financial, legal, agriculture, healthcare, and more. Currently, the most prevalent example of Blockchain technology is Bitcoin. But, the technology that underpins Bitcoin is encountering applicability across a wide spectrum of use cases.

Here are four innovative ways companies using Blockchain technology can pioneer new solutions to old problems.

Financial Sector

Banks are using outdated systems with modern updates, workarounds are modifications are just grafted on. For businesses, this puts the entrepreneurs at risk from phishing, social engineering, and cyberattacks. The financial details can be used to make fraudulent payments, or you could unknowingly send a payment to a cybercriminal, with little hope of getting the money back. This is where the Blockchain technology makes its way through. Now, the banks need to find a way to implement Blockchain solutions within a complex technology stack, to improve the speed and security of financial transactions for everyone.

Asset Management and Tracking

Several sectors that own, manage, and maintain valuable assets are starting to realize that Blockchain features are worth looking into further because, with the use of traditional software, the records can be modified too easily.

Replacing Traditional Contracts

Contracts are another area where Blockchain could prove to be advantageous. Enforceability is automatic and requires the confirmation of all parties in the smart contract. Terms and conditions must be met, with the relevant proof, before a contract could be enacted. Failure to adhere to terms would mean payment can be withheld by the other party.

A smart contract, as opposed to traditional contracts, have numerous advantages, and the tech sector liaising with law firms, need to look into this more closely. Businesses everywhere would benefit from this.

Improving Security

Cyberattacks are increasing by the minute. Businesses of every size are at risk. Blockchain is considerably safer and more secure than traditional security systems. One significant advantage is that the data stored in the blockchain is decentralized with multiple computers and nodes, storing pieces of important information. Unlike traditional servers and data stores, where everything is in the same place. Once a cyber-attacker infiltrates a traditional data store, everything is a huge risk. This is not the case with Blockchain technology, hacking and destroying an entire network is nearly impossible, that means confidential data is safer in a distributed network.

Challenges on Blockchain Technology

Security issues:

As the blockchain ecosystem develops and new use-cases materialise, businesses across all industry sectors will encounter a complex and possibly divisive range of challenges as well as new dependencies. The architecture of various blockchain technology concepts, for instance, varies. Certain are safer than others. For instance, 51% assaults are more likely to succeed against decentralised blockchains than centralised ones. For crypto aficionados who like to store their money on decentralised chains, this has led to a few issues.

A closer look at 51% attacks reveals that they take use of a flaw in decentralised systems that lets users take control of a chain by controlling 51% of the computing power. On networks using the proof-of-work (PoW) protocol, this frequently occurs.

Interoperability and Low Scalability issues with Blockchain Technology:

As use-cases expand, blockchain technology has developed over time to become more scalable. Satoshi Nakamoto created the first blockchain network to support the Bitcoin network. The Ethereum network, established by Vitalik Buterin, was the second decentralised network.

Because programmable money existed on the Ethereum blockchain, it was a step ahead of the Bitcoin network. The network was designed to facilitate decentralised apps while also handling a significant volume of crypto transactions. However, both the Ethereum and Bitcoin networks are experiencing scalability problems. The Ethereum network currently enjoys greater popularity among blockchain developers.

Low job Availability

The blockchain industry has experienced an explosion in the number of non-repairable tokens and DeFi projects over the past year, which has created problems in the job market. According to the latest statistics, the demand for blockchain talent has increased by more than 300%, as both established companies and startups are looking for top talent.

Blockchain Challenges Energy Consumption

Bitcoin and Ethereum blockchain systems are the most popular. But these are energy-intensive proof-of-concept systems that rely on mining to confirm blocks and transactions. Considering the amount of power they consume, the concept is a bit weak. BTC mining alone is estimated to consume around 100 terawatt hours of electricity per year. This is more than the energy consumed in countries like Finland.

Conclusion

Distributed ledgers, called blockchains, can securely digitize many current economic functions and financial, legal and government services. Blockchain can be defined as a decentralized public ledger that records transactions between users in a permanent, secure and auditable manner. The most important thing is this Blockchain can be programmed to record not only financial transactions, but also anything of value. Growth is there understand that blockchain technology will bring a radical change especially regarding financial assets. There is no doubt about it. The financial sector is a pioneer in adopting blockchain technology. Blockchain is rapidly revolutionizing world economy The potential impact of blockchain technology - decentralized ledgers - on society and world economy are very important because they promise to always be optimistic. The benefits of blockchain are more than just financial, and the technical capability of blockchain already exists which certain groups have applied to solve real problems.

DIGITAL PAYMENT AND FINANCIAL INCLUSION

Ms.V. Keerthana

Student, B.Com Banking and Insurance
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

The paper defines digital financial inclusion, and highlights the goal of digital financial inclusion, the components of digital financial inclusion, the providers of digital financial services, the instruments for digital financial inclusion, the benefits of digital financial inclusion, the risks of digital financial inclusion, and the regulatory issues associated with digital financial inclusion. It also suggests ways to make digital financial inclusion work for the good of all. The paper concludes by offering some implications for policy making and practice in the digital finance ecosystem.

Keywords: Financial inclusion, Revolution, Digital Payment.

Introduction

Digital financial inclusion involves the deployment of the cost-saving digital means to reach currently financially excluded and underserved populations with a range of formal financial services suited to their needs that are responsibly delivered at a cost affordable to customers and sustainable for providers.

While the years of experience with digital financial services often give providers significant advantages, the particular risks introduced by the new services result from, among other things:

- introduction of non-financial firms deploying new technologies;
- new contractual relationships between financial institutions and third parties, including the use of agent networks and other outsourcing arrangements;
- different regulatory treatment of deposit-like products (compared to deposits);
- unknown and as-yet unpredictable costs to inexperienced and vulnerable consumers

Access to Formal Financial Services

- Payments, transfers, savings, credit, insurance, securities, etc. Migration to account-based services typically expands over time as customers gain familiarity with and trust in a digital transactional platform. Government-to-person payments, such as conditional cash transfers, that can enable digital stored-value accounts may provide a path for the financially excluded into the financial system
- typically lower costs of digital transactional platforms both to the provider and thereby the customer allow customers to transact locally in irregular, tiny amounts, helping them to manage their characteristically uneven income and expenses

Using Digital Payments to Push Financial Inclusion

- Digital payment systems are emerging catalysts in the push for financial inclusion in Latin America and the Caribbean
- Access to digital transactions creates new financial linkages for the unbanked and underbanked. Additionally, connectivity to digital payment systems has an undeniable positive impact on the resilience and growth of small businesses and access to formal financial services by women.
- According to the World Bank's 2021 Global Findex Database, areas with access to digital payments and mobile money, women were 9% less likely to be in poverty and their consumption was 18.5% higher than those areas with limited access to digital payment services. Similarly, Micro, Small and Medium Sized Enterprises (MSMEs), which make up approximately 99% of businesses in LAC, that were connected to digital payment systems during the pandemic
- were more resilient to economic shocks and were even able to increase sales by 20-30%.
- A significant unbanked population exists throughout LAC as approximately 26% of adults did not have a bank account in 2021. This, compounded by the fact that cash transactions remain dominant in the region, has led to significant funding gaps and the deepening of financial vulnerabilities.
- In a region of socio-economic inequalities and significant levels of crime, the high prevalence of cash transactions lends to the passage of corruption, evasion of taxes and anonymity in criminal activities.

About NPCI Backbone of Digital Payment Revolution

- The domestic economy has been witnessing a rapid rise in digital payments that saw an influx of more users during demonetisation and the various lockdowns announced during the surge of the Covid-19 pandemic.
- The backbone of the digital payment revolution is the National Payments Corporation of India which operates retail payments and related settlement systems. It is responsible for the infrastructure to support digital payments.
- The NPCI was established in 2008 by the RBI along with the India banks association.
- It launched various digital payments products like UPI, BHIM, Bharat NACH, IMPS, NETC

Digital Payments Features and Benefits

- This payment mode offers convenience, is safe to use, and allows instant payments. Some of the features of the digital payment products are
- Person-to-person money transfers
- Person-to-business transactions such as local stores, petrol stations, e-commerce
- Business-to-business transfers
- Business-to-person transfers including salary, refund, reimbursement, claims
- Government to person for direct benefit transfers.

Digital Payment Ecosystem in India

- The promotion of digital payments has been accorded the highest priority by the Government of India to bring each and every segment of our country under the formal fold of digital payment services.
- The vision is to provide the facility of seamless digital payment to all citizens of India in a convenient, easy, affordable, quick and secured manner.
- During the last three years, digital payment transactions have registered unprecedented growth in India.
- All these facilities together have created a robust ecosystem for a digital finance economy.

Revolutionizing Digital Payments

- UPI has been termed a revolutionary product in the payment ecosystem.
- Launched in 2016 it has emerged as one of the most popular tools in the country for carrying out digital transactions. UPI is an instant payment system developed by the National Payments Corporation of India
- UPI has gone a long way in making digital payments a habit, and in firmly placing India on the track toward a cashless economy. In the month of August 2022 alone, 346 banks were live on the UPI interface, with **6.58 billion financial transactions** being carried out for a total **value of nearly 10.73 lakh crores**.

Revenue model of Payment Banks

- People from low-income households, migrant labor workforce, small businesses and other unorganized sector entities and other similar users travel distant places to get access for the basic banking services like deposits, fees, and transfer money.

- People should be encouraged to join the digital economy by migrating cash-based customers into digital networks by offering digital payment transactions for free or rock bottom digital charges; this will lead to rapid uptake and usage of payment banks.
- It will also enable high volume-low value transactions in deposit and payment/ remittance services in a technology driven atmosphere.
- This will help people to less depend on cash and encourage to use mobile wallet as a bank account soon enough.

Challenges

- Although Indian economic growth looks but the living standards of most citizens have not changed, with and digital payments still gaining ground in India; which is primarily still a cash based society, suffers from irregularity in digital infrastructure technology adaptation would be a key feature in this scheme for financial inclusion.
- The other challenge would also of customer acquisition as some of these customers who are using mobile banking services might not be willing to migrate to a new bank.
- As banks already have infrastructure for mobile

Conclusion

India is an emerging growing market where the usage of smartphone are rapidly catching up but largely a huge unbanked market where Payment Banks can play an important role in emphasizing the growth of financial inclusion and tapping all the corners of the country progressively. Here adaptation of the infrastructure and technology would definitely be the key features in this scheme for financial inclusion. It would be interesting to see how Payment Banks will change the living standards of people and boosting businesses of millions of MSME¹⁰ and the coming entrepreneurs in the near future.

Abstract

Information and Communication Technology (ICT) has revolutionized the business landscape, reshaping the way organizations operate, communicate, and thrive in the digital age. This abstract provides an overview of the multifaceted role of ICT in modern businesses. It explores how ICT enables seamless communication, efficient data management, process automation, and enhanced customer engagement. Additionally, the abstract highlights the significance of e-commerce, marketing, and supply chain management through ICT adoption. Furthermore, it delves into the transformative potential of mobile technologies, virtual collaboration, and data analytics in driving business growth. Lastly, the abstract touches upon the importance of cyber security in safeguarding digital assets amidst the evolving technological landscape. In conclusion, this abstract sheds light on the pivotal role of ICT in empowering businesses to adapt, innovate, and flourish in an increasingly interconnected and fast-paced world.

Keywords: ICT - Information and Communication Technology, BT - Business Technology, DT - Digital Transformation, E-Com -E-Commerce, CC -Cloud Computing, BDA -Big Data Analytics , BI – Business Intelligence

Introduction about ICT

Information and Communication Technology (ICT) refers to the use of digital technologies to process, store, and exchange information. It includes tools and applications such as computers, smartphones, internet, social media, email, and software.

Some examples of ICTs are intranet, extranet, website, mobile apps, e-commerce websites, software robots, servers, cloud technologies, digital communication apps, and technology to facilitate work from home.

Types of ICT used in Business

Types of information and communication technology used in business:

1. **Intranet:** A network used by employees of a business to communicate privately is called an intranet. Intranet is used to share 'inside' information on the company that the company does not want to go public. This may include training videos, employee information, or plans of the company.
2. **Extranet:** Also a private network. Along with employees, other stakeholders like suppliers and wholesalers can also access the extranet of the company. Using the extranet, suppliers can communicate with employees about stocks or dealers can order the required quantity of goods.
3. **Website:** Websites are now the 'storefronts' of a business. A commonly repeated factoid is that there are as many websites as the number of people in the world. The website lets the business talk to its customers directly and receive feedback.

4. **E-commerce website:** Along with using a website for communication, businesses use their websites to sell their products. The buying or selling of goods using the internet is called e-commerce.
5. **Software robots:** Chatbots are the most widely used software robots. Do you remember surfing on a random website when a pop-up comes up asking you if you need any help finding particular information? If you go ahead and reply, you communicate with a 'software robot' that helps you navigate better. Software robots are special software created to work as a virtual workforce.
6. **Servers:** Servers are computers or programs that help client computers with the required information. Servers usually are ultrafast processing computers with a large storage capacity.
7. **Cloud technologies:** Cloud servers let businesses store their data on the server of another company. If a company is using cloud service, then they don't have to invest a huge amount of money in setting up their server.
8. **Digital communication apps:** Many businesses use mobile applications to communicate internally. There are some apps like Slack or Google Workspace that help communication while working remotely feasible.

Role of ICT in Business

ICT technologies impact businesses in recent times. The role of ICT in business is to provide tools and systems that enable efficient communication, data management, analysis, and decision-making processes, as well as to enhance productivity, customer engagement, and competitive advantage. ICT can support various aspects of businesses like the location of employees, collecting, storing, and analyzing information, e-commerce, and digital communication.

Advantages of ICT

1. **Fast communication:** Emails are quick, but chat on platforms like WhatsApp are quicker. ICT lets businesses communicate anywhere on the globe within a fraction of a second.
2. **Cost-effectiveness:** working from home simply saves money and time. Efficient technologies reduce the time required to complete the task. For example, a tractor will plow better and faster as compared to the old way of using various practical tools.
3. **Better information security:** private data can be better protected by ICT in comparison to paper files. Sensitive information can be protected using a high level of encryption. This tool can also save customers from fraudsters and identity thieves.
4. **Overcome cultural barriers:** Technology does not differentiate between users based on religion, race, or gender. Technology also helps people understand different views and opinions.

Disadvantages of ICT:

1. **Lack of security:** Even though IT provides better security than traditional ways, it is still susceptible to external attacks like hacking or software viruses.
2. **Unemployment:** Many information and communication technologies are replacing human employees. It is making many jobs such as customer support redundant. For instance, recent driverless car technology may replace all taxi drivers in the future.
3. **The initial cost of implementation and maintenance:** It may cost a lot to implement and maintain a secure and user-friendly website. Also, businesses have to comply with new laws and regulations that are introduced.
4. **No human touch:** Working from home has increased mental health concerns within individuals. Many businesses worry about their employees lacking human interaction. When it comes to chatbots, many customers wish to talk to a real person who can understand and solve problems faster rather than the software.

Models of Access to ICT :

There are various models of access to ICT:

1. Appropriateness of technology
2. Social-cultural factors
3. Local economic environment
4. Physical access to technology
5. Affordability of technology and technology use
6. Political will and public support
7. Locally relevant content, applications, and services
8. Human capacity and training

ICT and Business Intelligence

Business intelligence (BI) is a set of techniques that takes business data and creates information from those data so that managers can make decisions. In that way, organizations create business intelligence. We see many vendors offering BI solutions, which come in many varieties, including stand-alone solutions and solutions that are additions to larger suites of business applications. What is common across all BI solutions is that they utilize business data to support ad hoc and planned reporting and thus managerial decision making. Analyzing sales trends and customer buying patterns are just two examples of analysis that can be done using BI software. Another defining attribute of all BI software solutions is that they need ICT to enable them.

It is difficult for organizations to determine when and why ICT infrastructure should be design and built , and creating BI is just one reason to do so. The ICT value proposition is elusive, and, ironically, an organization needs to create business intelligence in order to understand when and why ICT infrastructure should be built. This book offers tools for organizations to use to determine ICT value to support the organizational value proposition. These tools include methods for creating BI.

Using ICT Improves Business Processes

ICT is one of the most critical investments in all business today. These technologies can bring many benefits, including helping to optimize services and operations. They allow to increase productivity and profits, improving customer experience, saving money and time. Automating various work processes makes life easier for employees and managers, allowing them to spend less time and energy on various daily tasks.

It's a great chance to improve the customer support system. In addition, ICT enables managers to improve planning and allocate resources more efficiently. ICT infrastructure can significantly improve and optimize the work of an enterprise. Companies should take advantage of today's innovations to stay competitive.

The introduction of technology allows businesses to become more mobile. Thanks to scanners, customers and companies can find out where their cargo is in real-time mode. Employees can work anywhere with the help of mobile internet. Mobile payments enable small businesses to accept credit cards digitally. It allows you to reduce the cost of additional equipment significantly.

Conclusion

The role of ICT in business is to provide tools and system that enable efficient communication, data management ,analysis and decision making process as well as to enhance productivity customer engagement and competitive advantages. From corporate data, managers and other employees receive valuable information to quickly make effective decisions and respond on time to various changes, opportunities, and threats to the business. In addition, communication networks play an essential role in joint decision-making, facilitating the work process. Information and communication technologies bring significant changes to services, products, and competitive conditions in various industries.

AN ANALYSIS OF THE CONTRIBUTION OF THE CENTRAL COOPERATIVE BANK TOWARDS THE GROWTH AND EMPOWERMENT OF SELF-HELP GROUPS IN THE PERIYANAICKENPALAYAM BLOCK, COIMBATORE DISTRICT

Dr.P.Velusamy

Assistant Professor, Department of Cooperation,
Sri Ramakrishna Mission Vidyalyaya College of Arts and Science.

Mr.S.ArunKumar

Ph.D. Research Scholar, Department of Cooperation,
Sri Ramakrishna Mission Vidyalyaya College of Arts and Science.

Abstract

This study aims to analyze the significant role played by the Central Cooperative Bank in promoting and developing Self-Help Groups (SHGs) with in the Periyanaickenpalayam Block of Coimbatore District. SHGs have emerged as vital entities in empowering individuals, particularly women, by fostering financial inclusion, skill development, and social cohesion. The Central Cooperative Bank's support of these SHGs is essential in nurturing their growth and enhancing their capabilities. The research investigates the various financial and non-financial services provided by the Central Cooperative Bank to the SHGs. It examines the impact of these services on the SHGs' economic sustainability, empowerment of members, and their ability to engage in entrepreneurial activities. Additionally, the study deals in to the challenges faced by the SHGs and the Bank's efforts to address these obstacles effectively. The primary data collected from the members of (SHGs) and Bank records have also been collected to make a mixed-method approach to insights from interviews with SHG members and bankofficials employed for comprehensive analysis. The findings highlight the crucial role of the Central Cooperative Bank in fostering a supportive ecosystem for SHGs, empowering local communities, and driving socio-economic development in the Periyanaickenpalayam Block. Self Help Groups (SHGs) form the basic constituent unit of the micro finance movement in India. SHGs play a crucial role in the social and economic empowerment of poor people in rural areas. SHGs provide enough opportunities for the overall development of women in rural areas. The study reveals that the SHG activities helped build self-confidence, self-independence, and social welfare among the group members. The Central Cooperative Bank has an important role for the developed SHG members, particularly in rural areas.

Keywords: Self-Help Groups, District Central Cooperative Bank, Business of SHGs, Empowerment.

Introduction

Self Help Groups (SHGs) are in formal and small associations comprised mainly of economically disadvantaged individuals who come together to utilize the economic benefits provided by the Government through cooperation and individual responsibility. India has a significant number of SHGs, with approximately 70 Lakhs of them across the country, and Tamil Nadu alone has 21454 SHGs, ranking second in the nation. The SHG-Bank Linkage Programme (SBLP), launched by NABARD in 1992, plays a crucial role in this regard. The involvement of SHGs with banks has proven beneficial in overcoming the challenge of high transaction costs associated with providing credit to the poor. By sharing some banking responsibilities, such as loan appraisal, follow-up, and recovery, with the

members, SHGs facilitate easier access to credit for the under privileged. Additionally, the voluntary nature of the association and the strong rapport among members allow them to bypass hurdles like collateral requirements, excessive documentation, and physical distance, which typically hinder formal financial institutions' ability to serve the poor. SHGs consist of like-minded individuals with a common objective of achieving socio-economic development. These groups have a membership ranging from 12 to 25 members, primarily composed of the impoverished population. The members are usually at least 18 years old and preferably married. To ensure broad representation, only one member of a family can enroll in the SHG, and they must be a resident. In summary, Self Help Groups are grassroots-level organizations that empower the disadvantaged and foster financial inclusion by working in collaboration with banks, offering available solution to the challenges faced by the formal financial system in serving the economically vulnerable sections of society.

The Significance of Self-Help Groups (SHGs)

Self-Help Groups (SHGs) play a vital role in instilling confidence among rural women who lack a regular source of income and heavily rely on their husbands to meet their basic needs. These SHGs act as a catalyst for mobilizing financial resources among their members, leading to collective socio-economic development. Moreover, they foster a culture of savings and thrift, enabling the efficient utilization of local resources. By harnessing the individual skills of its members for the greater good of the group, SHGs contribute to the overall socio-economic progress of the village. Additionally, participation in SHGs cultivates a sense of responsibility and leadership among its members.

SHGs in Coimbatore District

S.No	Location	Number of SHGs
1	Anaimalai	170
2	Annur	134
3	Karamadai	259
4	Kinathukadavu	123
5	Madukkarai	70
6	Periyanakeyanpalayam	159
7	Pollachi North	200
8	Pollachi South	52
9	S.S Kulam	35

11	Sulur	113
12	Thondamuthur	67
13	Valparai	30
	Total	1599

Statement of problem

The present study is designed to delve into the personal profiles of women participants within Self Help Groups (SHGs) operating in the study area. This investigation aims to understand key demographic characteristics, such as age, educational background, occupation, and household composition, which can shed light on the diverse backgrounds and circumstances of the SHG members. Moreover, the research will focus on exploring the socio-economic benefits that these women derive from their participation in the selected SHGs. By analyzing changes in their income levels, livelihood opportunities, and overall well-being, the study seeks to gauge the extent to which SHGs have contributed to their socio-economic empowerment and enhanced quality of life. Furthermore, the study will closely examine the role played by cooperative banks in the promotion and support of SHGs. It will explore the mechanisms through which cooperative banks facilitate the formation and growth of SHGs, provide financial resources, and offer technical assistance. Additionally, the research will investigate how cooperative banks encourage and strengthen accountability among SHG members regarding financial transactions and decision-making processes.

Objectives of the study

- To examine the demographic characteristics and background of female participants engaged in Self Help Groups (SHGs) within the research region.
- To investigate the socio-economic advantages and positive outcomes experienced by members actively involved in the chosen Self Help Groups.
- To assess and detail the active contributions of cooperative banks in fostering the establishment and growth of SHGs, while also promoting transparency and responsibility among the SHG members.

Methodology

The current research is a combination of both primary and secondary data. To collect primary data, a comprehensive interview schedule was formulated, enabling the collection of essential information. The survey sampling technique was adopted, selecting ten SHGs operating under the control of the Cooperative Bank in Periyanaickenpalayam Block as the study sample. A total of 50 SHG members were interviewed to investigate the advantageous services provided by the Cooperative Bank in fostering the growth and development of the SHGs. In addition to the primary data, secondary data was obtained from the Periyanaickenpalayam Central Cooperative Bank Branch, which contains valuable information regarding the members of the SHG groups. This combined approach of using primary and secondary data aims to offer a comprehensive and in-depth understanding of the role played by the Cooperative Bank in supporting and empowering the SHGs in the study area.

Analysis of Data

The data analysis was conducted on a group of 10 self-help group members sponsored by Cooperative Bank in the Periyanaickenpalayam block of Coimbatore District. A total of 50SHG members were randomly selected and interviewed using a structured interview schedule. The study exclusively focused on female participants.

Analysis and Interpretation

Table - I
Personal Profile of Respondents

S. No	Characteristics	No. of Respondents	Percentage
1.	Age(in Years)		
1.	20-30Years	9	18
2.	30-40Years	12	24
3.	40-50Years	21	42
4.	Above50Years	8	16
2.	Community		
1.	BC	21	42
2.	MBC	14	28
3.	SC/ST	10	20
4.	Others	5	10
3.	Education Qualifications		
1.	None	3	6
2.	School	12	24
3.	Secondary	20	40
4.	College	15	30
4.	Marital Status		
1.	Married	44	88
2.	Unmarried	6	12

Source of Data: Data Collected from Self Help Group Members

The table presents the personal profile of respondents based on various characteristics. The data is collected from a sample of individuals who are part of Self Help Groups (SHGs) sponsored by Cooperative Bank in the Periyanaickenpalayam block of Coimbatore District.

Age (in Years): The majority of the respondents (42%) fall in the age group of 40-50 years, indicating that this age bracket is well-represented among the SHG members. However, the sample also includes a significant number of respondents in the age group of 30-40 years (24%) and above 50 years (16%).

Community: The majority of the respondents (42%) belong to the BC category, followed by MBC (28%) and SC/ST (20%) categories. This suggests that BCs are more actively involved in the SHGs compared to other communities.

Educational Qualifications: The data shows that a significant portion of the respondents (40%) have completed their secondary education, and 30% have attended college. This indicates that a considerable number of SHG members have received at least a basic level of formal education.

Marital Status: The vast majority of the respondents (88%) are married, while a smaller proportion (12%) are unmarried. This suggests that the SHGs primarily comprise married individuals.

Table-2
Socio and Economic Profile of the Respondents

S. No	Characteristics	No.of Respondents	Percentage
1.	Occupation		
1.	Self-Employed	14	28
2.	Employees	4	8
3.	Housewife	25	50
4.	Entrepreneur	7	14

1.	Below 25,000	8	16
2.	25,000-50,000	24	48
3.	50,000-75,000	12	24
4.	Above 75,000	6	12
3.	Monthly Expenses of the Family		
1.	Below 20,000	6	12
2.	20,000-30,000	8	16
3.	30,000-40,000	15	30
4.	Above 40,000	21	42
4.	Monthly Savings of Family		
1.	Below 10,000	31	62
2.	10,000-20,000	8	16
3.	20,000-30,000	5	10
4.	Above 30,000	6	12
5.	Family Size		
1.	1-3 Members	10	20
2.	3-5 Members	26	52
3.	Above 5 members	14	28
6.	Type of Family		
1.	Nuclear	38	76
2.	Joint	12	24
7.	Social Participate		
1.	Panchayat	8	16
2.	Cooperatives	12	24
3.	Politics	9	18
4.	Nil	21	42

Source of Data: Data Collected from Self Help Group Members

The table provides the socio-economic profile of the respondents who are members of Self Help Groups (SHGs). The data is collected from a sample of individuals from the Periyanaickenpalayam block in Coimbatore District.

Occupation: The majority of the respondents (50%) are housewives, indicating that SHGs are significantly contributing to the empowerment and involvement of homemakers. A notable percentage of respondents are self-employed (28%), and a smaller proportion are entrepreneurs (14%).

Monthly Income of the Family: A significant portion of the families (48%) falls in the income bracket of 25,000 to 50,000, suggesting that a considerable number of SHG members belong to the middle-income category. There are also some families (12%) with a higher income above 75,000.

Monthly Expenses of the Family: A significant proportion of families (42%) have monthly expenses above 40,000, indicating that they may have higher financial commitments. On the other hand, there are also families (12%) with relatively lower expenses below 20,000.

Monthly Savings of Family: The majority of the families (62%) have relatively lower monthly savings, below 10,000. This could indicate financial challenges and limited disposable income. However, it's encouraging to see that some families (12%) manage to save higher amounts above 30,000 per month.

Family Size: Most families (52%) have a family size of 3-5 members, which is typical for an average-sized family. There are also families (28%) with more than 5 members, which might indicate larger extended families.

Type of Family: The majority of the families (76%) are nuclear families, while a smaller proportion (24%) are joint families. This suggests that the nuclear family system is more prevalent among the SHG members.

Social Participation: The data shows that a considerable number of respondents (42%) do not participate in any of the mentioned social activities. However, some respondents are actively engaged in Panchayat activities (16%), cooperatives (24%), and politics (18%), which indicates their involvement in community affairs.

Socio Empowerment of SHG members

Table-3
SHG's Group Activities

S. No	Characteristics	No. of Respondents	Percentage
1.	Garments Manufacturing	5	10
2.	Craft Works and Gift Items	21	42
3.	Goat Farm	4	8
4.	Canteen	9	18
5.	Beauty Parlor	11	22
Total		50	100

Source of Data: Data Collected from Self Help Group Members

The table illustrates the various group activities undertaken by the members of the Self-Help Group (SHG). It shows that 42 percent of the respondents engage in craftwork and gift items, while 22 percent of the respondents are involved in beauty parlor services. Only 8 percent of the respondents are engaged in the goat farming business.

Empowerment of Women through SHG's

Self Help Groups (SHGs) play a significant role in empowering women. One of the key benefits is the enhancement of members' confidence and self-esteem. Through SHGs, women gain valuable knowledge about banking and financial matters, enabling them to become more financially literate and independent. Moreover, these groups equip them to tackle new challenges that arise in their lives. All the 10 SHGs surveyed in this study reported that their members experienced increased confidence through their participation. The mutual financial support and camaraderie among the members foster the social and economic empowerment of women in the village.

Table-4
Social benefits derived by women SHG's

S. No	SocialBenefits	Yes	No
1.	Source of Income	50	0
2.	Social Belongingness	35	15
3.	Banking Knowledge	40	10
4.	Decision-Making Skills	35	15
5.	Self Confidence	45	5
6.	Self-dependence	40	10

Source of Data: Data Collected from Self Help Group Members

The table presents the responses of Self Help Group (SHG) members regarding the social benefits they have gained from their participation in the groups. The data is based on the number of respondents who answered "Yes" or "No" to each of the social benefits.

Source of Income: 100% of the respondents (50outof50) confirmed that SHGs have provided them with a source of income.

Social Belongingness: 70% of the respondents (35 out of 50) expressed that they feel a sense of social belongingness due to their involvement in SHGs. 30% of the respondents (15outof50) stated that they do not feel a sense of social belongingness through SHGs.

Banking Knowledge: 80% of the respondents (40 out of 50) reported that they have gained banking knowledge as a result of their participation in SHGs. 20% of the respondents (10 out of 50) stated that they have not gained banking knowledgethroughSHGs.

Decision-Making Skills: 70% of the respondents (35 out of 50) indicated that their decision-making skills have improved through their involvement in SHGs. 30% of the respondents (15outof50) mentioned that their decision-making skills have not improved through SHGs.

Self-Confidence: 90% of the respondents (45 out of 50) reported that their self-confidence has increased due to their participation in SHGs 10% of the respondents (5 out of 50) stated that their self-confidence has not improved through SHGs.

Self-Dependence: 80% of the respondents (40 out of 50) expressed that they have become more self-dependent through their involvement in SHGs. 20% of the respondents (10 out of 50) mentioned that their self-dependence has not improved through SHGs.

Role of Central Cooperative Bank in Developing SHGs.

The Central Cooperative Bank plays a crucial role in the development and promotion of SelfHelp Groups (SHGs). One of its primary functions is to encourage the formation of SHGs and instill a culture of saving among their members. Over time, the bank facilitates access to loans for these groups to support various entrepreneurial and business endeavors. The table below provides an overview of the loans offered by the Central Cooperative Bank to the members of Self Help Groups.

Table-5
Bank Linkage with SHG's

S. No	Characteristics	No.of Respondents	Percentage

Source of Data: Data Collected from Self Help Group Members

Savings Amount Paid by Members:

Period of Amount Collected:

From the study, it was found that a significant majority of respondents, representing 80% of the total, respondent have deposited their savings every week. Additionally, 14% of the participants follow a bi-weekly savings routine, depositing money once every 15 days. Another 6% of respondents prefer a monthly approach, saving their money once a month. This data highlights the diverse saving habits of the participants, with a majority leaning towards more frequent and consistent contributions to their savings accounts, while others choose less frequent intervals for their financial planning.

Amount Paid to Bank:

The respondents, representing 22% of the total, make savings deposits below 5000 units, indicating a more conservative approach to saving. On the other hand, a majority of 52% participants fall within the range of paying an amount between 5000 and 10000 units, demonstrating a moderately sized group that maintains a balanced approach to their savings. Furthermore, 26% of the respondents contribute an amount ranging between 10000 and 15000 units, suggesting a relatively smaller yet substantial group of individuals who are more committed to saving higher sums. The data showcases a diverse range of saving habits among the respondents, reflecting varying financial priorities and strategies.

Period of Amount Paid to Bank:

100% of respondents pay the amount to the bank monthly once. No respondents reported paying the amount every 2 months.

Bank Approach to Avail of Loan:

The data revealed that a small portion of respondents, comprising 8% of the total, sought to avail of loans from Public Banks. Similarly, an even smaller percentage of 4% of participants opted for loans from Private Banks. On the contrary, a significant majority of 88% of respondents chose to approach Cooperative Banks to obtain their loans. This finding indicates

A prevalent preference among the surveyed individuals for Cooperative Banks, potentially due to factors such as better terms, personalized services, or community-based trust. The data underscores the diverse choices made by respondents when it comes to seeking financial assistance, with Cooperative Banks emerging as the most popular option for obtaining loans.

Loan Availed from Central Cooperative Bank:

The survey findings indicated that a considerable number of respondents, accounting for 24% of the total, opted for loans below 1 lakh, reflecting a significant portion of individuals seeking relatively smaller loan amounts. Additionally, a substantial majority of 46% of participants availed of loans ranging from 1 lakh to 2 lakhs, highlighting a prevalent trend of borrowing within this mid-range bracket. Furthermore, 16% of

respondents sought loans between 2 lakhs to 3lakhs, representing a smaller but notable segment of borrowers requiring slightly higher amounts. Lastly, 14% of the surveyed individuals availed of loans above 3 lakhs, indicating a relatively smaller yet noteworthy group of individuals pursuing larger loan sums. The data show cases the diverse loan requirements of the respondents, with different segments of the population availing of loans at various levels, contributing to a comprehensive overview of borrowing patterns in the survey.

Role of Cooperative Bank's Satisfaction level of respondents

Cooperative Banks play a crucial and active role in promoting Self Help Groups within the block. These banks provide essential guidance and supervision to the SHGs under their purview. The officials from cooperative banks regularly visit each group to monitor their activities, ensuring that the groups function effectively. Through this regular interaction and monitoring, the cooperative banks help instill a sense of responsibility among the members of the Self Help Groups. To assess the satisfaction level of group members regarding the services provided by cooperative banks, a study was conducted. The following table presents the satisfaction levels of the respondents.

Table-6

Level of Satisfaction of SHGs with service provided by Central Cooperative Banks

S. No	List of Services	Satisfied	%	Dissatisfied	%
1.	Approach of Members	46	92	4	8
2.	Service rent by bank officials	41	82	9	18
3.	Loan Formalities	45	90	5	10
4.	Sanctioning Amount of Loan	44	88	6	12
5.	Rate of Interest	47	94	3	6
6.	Repayment Installment	42	84	9	16
7.	Mode of Repayment	39	78	11	22
8.	Terms and Conditions	48	96	2	4
9.	Corruption	38	76	12	24
10.	Timely Available of Additional Loan	48	96	2	4
11.	Penalty for Overdue	43	86	7	14
12.	Government Official Support	40	80	10	20
13.	Attitude of Employees	42	84	8	16

Source of Data: Data Collected from Self Help Group Members

The table represents the satisfaction levels of Self Help Groups (SHGs) with the services provided by Central Cooperative Banks. Each row in the table corresponds to a specific service, and the columns show the number of respondents who are either satisfied or dissatisfied, along with the percentage for each category.

1. The approach of Members: The approach of members garnered a high level of satisfaction among 92% of the respondents, while 8% expressed their dissatisfaction with it.

2. Service Rendered by Bank Officials: The service rendered by bank officials

received favorable feedback from 82% of the respondents, indicating a significant level of satisfaction. However, 18% of the respondents expressed their dissatisfaction with the service provided by bank officials.

3. Loan Formalities: The loan formalities proved to be satisfactory for the majority of respondents, as 90% expressed their contentment with the process. Nevertheless, 10% of the respondents reported dissatisfaction with the loan formalities, suggesting that there is room for improvement in this aspect of the lending process.

4. Sanctioning Amount of Loan: The sanctioning amount of the loan received positive feedback from a significant portion of the respondents, with 88% expressing their satisfaction with the approved loan amount. However, 12% of the respondents expressed their dissatisfaction with the sanctioning amount, indicating that a portion of the borrowers may have expected or needed a higher loan amount. It may be worth exploring ways to address the concerns of the dissatisfied respondents and ensure that the loan amount meets the expectations and requirements of a broader customer base.

5. Rate of Interest: The rate of interest on the loans garnered a high level of satisfaction, with 94% of the respondents expressing contentment with the interest rates offered. However, a small proportion of the respondents, accounting for 6%, reported their dissatisfaction with the rate of interest. Addressing the concerns of the dissatisfied respondents and maintaining transparency in interest rate policies can be essential to ensure continued customer satisfaction and trust in the lending process.

6. Repayment Installment: The payment installment process received positive feedback from a significant majority of the respondents, with 84% expressing their satisfaction with the process. However, a notable 16% of the respondents reported their dissatisfaction with the repayment installment process. Addressing the concerns of these dissatisfied respondents and potentially identifying areas of improvement can be crucial in enhancing overall customer experience and ensuring smoother and more convenient loan repayment procedures for all borrowers.

7. Mode of Repayment: The mode of repayment garnered a satisfactory response from 78% of the respondents, indicating a significant majority expressed contentment with the available repayment options. However, a notable 22% of the respondents reported their dissatisfaction with the mode of repayment. It is essential for financial institutions to closely examine the reasons behind this dissatisfaction and explore ways to address their concerns. Offering a diverse range of flexible and user-friendly repayment methods can help improve customer satisfaction and ensure that borrowers have convenient options to meet their loan obligations efficiently. By continuously seeking feedback and adapting to the evolving needs of their customers, financial institutions can enhance the overall repayment experience and build stronger relationships with their borrowers.

8. Terms and Conditions: The terms and conditions of the loan received overwhelming positive feedback, with an impressive 96% of the respondents expressing satisfaction with the stated terms and conditions. However, a small but notable 4% of the respondents reported their dissatisfaction with the terms and conditions. It is crucial for the lending institution to carefully assess the concerns raised by these respondents and

consider whether any adjustments or clarifications are needed to address potential ambiguities or issues. Clear and transparent communication of terms and conditions is vital to ensuring that borrowers fully understand their obligations and rights. By actively listening to customer feedback and making necessary improvements, the institution can further enhance customer satisfaction and foster a trusting and fruitful relationship with its clientele.

9. Corruption: The absence of corruption received positive recognition from a majority of the respondents, with 76% expressing their satisfaction with the perceived lack of corrupt practices. However, a significant 24% of the respondents reported their dissatisfaction, expressing concerns about the presence of corruption. Addressing these concerns is crucial to fostering an environment of trust, fairness, and integrity. Efforts to combat corruption, promote transparency, and implement effective anti-corruption measures can help ensure that the institution or organization operates ethically and responsibly. By actively working to eliminate corruption and establishing a culture of accountability and transparency, the institution can strive to meet the expectations of its stakeholders and build a reputation as a reliable and ethical entity.

10. Timely Availability of Additional Loan: The timely availability of additional loans received overwhelming positive feedback, with an impressive 96% of the respondents expressing satisfaction with the prompt access to further financial assistance. However, a small but notable 4% of the respondents reported their dissatisfaction with the timely availability of additional loans. Addressing the concerns of these dissatisfied respondents and exploring ways to streamline and expedite the loan processing and approval process can be instrumental in enhancing the overall customer experience. By ensuring quick and efficient loan disbursement, the institution can better cater to the diverse financial needs of its customers and strengthen their trust and loyalty. Continuous efforts to improve loan accessibility and responsiveness to customer demands can lead to a more robust and customer-centric financial service experience.

11. Penalty for Overdue: The penalty for overdue payments garnered a favorable response from a significant majority of the respondents, with 86% expressing their satisfaction with the existing penalty system. However, a noteworthy 14% of the respondents reported their dissatisfaction with the penalty for overdue. Addressing the concerns raised by these respondents and reevaluating the penalty structure may be essential to strike a balance between incentivizing timely payments and understanding the challenges faced by borrowers. Implementing a penalty system that is fair, transparent, and takes into account individual circumstances can contribute to fostering a positive borrower-lender relationship. Engaging with customers to understand their concerns and working towards finding solutions that align with their needs can enhance overall satisfaction and compliance with the loan repayment process.

12. Government Official Support: The government official support received positive feedback from 80% of the respondents, indicating a significant majority expressed satisfaction with the assistance provided. However, a notable 20% of the respondents reported their dissatisfaction with the government's official support. Addressing the

concerns of these dissatisfied respondents is crucial to ensuring that government services are effective and responsive to the needs of the public. By actively seeking feedback, identifying areas for improvement, and implementing measures to enhance the quality and efficiency of support services, the government can work towards increasing overall satisfaction and trust among its citizens. Transparent and accountable governance, coupled with open channels of communication, can foster a constructive relationship between the government and its constituents, promoting a sense of collaboration and shared responsibility in achieving societal goals.

13. The attitude of Employees: The attitude of bank employees received positive feedback from a significant majority of the respondents, with 84% expressing their satisfaction with the demeanor and conduct of the bank staff. However, a notable 16% of the respondents reported their dissatisfaction with the attitude of bank employees. Addressing the concerns raised by these dissatisfied respondents and investing in employee training and development can play a crucial role in improving customer interactions and overall service quality. By fostering a culture of customer-centricity and emphasizing the importance of courteous and respect full behavior, the bank can enhance customer satisfaction and loyalty. Regular feedback mechanisms and performance evaluations can also help identify areas for improvement and motivate employees to deliver exceptional service. Striving to maintain a positive and friendly atmosphere within the bank can contribute to building lasting relationships with customers and enhancing the bank's reputation in the financial industry.

Findings

The following is the finding of the field survey on cooperative bank-sponsored SHGs at Periyanaickenpalayam Block in Coimbatore District

- The study reveals that, out of 50 members of SHG, a major proportion was female groups, 100 percent belongs to female groups.
- The majority 88 percent of the respondents were married, and only 12 percent of the respondents were unmarried.
- The occupation background of the SHG members reveals that major share it, 50 percent of respondents are occupied, housewives. Only 8 percent of the respondents are occupied employees in private companies.
- Out of 50 members majority income belongs to Rs.25,000 to Rs.50,000. Only 16 percent of the members' monthly income was below Rs.20,000.
- 42 percent of the respondents are doing business activities of craft work and gift items, and only 8 percent of the respondents were doing goat form.
- The study reveals that SHG activities are motivates banking knowledge and helped them being self confidence and self-dependence.
- Bank linkage with SHGs, Majority of the group members paid to the bank monthly once, and 46 percent of the respondents availed of loans from Rs.1Lakh to Rs.2Lakhs.
- Concerning the services of the cooperative bank towards the SHG members, the

study reveals that the majority of the members are satisfied with the services of the cooperative bank.

- The study shows that the cooperative bank-sponsored SHG is functioning successfully. It has helped to a great extent the empowerment of women in different ways like social, economic, and political.

Conclusion

Self Help Groups (SHGs) are the foundational building blocks of India's microfinance movement, playing a vital role in empowering impoverished communities in rural regions. These groups offer significant opportunities for the holistic development of women residing in these areas. The research highlights that engagement in SHG activities contributes to the enhancement of self-confidence, self-reliance, and societal well-being among the members. Particularly in rural settings, the Central Cooperative Bank assumes a crucial role in supporting the progress of these empowered SHG members

SHATTERING GLASS CEILING: A MODERN HURDLE IN THE ADVANCED ERA OF WOMEN EMPOWERMENT

Ms. T. Narmadha Veronika

*Assistant Professor, Department of Social Work
Nehru Arts and Science College, Coimbatore*

Miss. P. Swathi & Mr. R. Monish

IMSW, Nehru Arts and Science College, Coimbatore

Abstract

The modern world has welcomed the women to succeed in various fields, women empowerment is the key instrument which has supported for the development of women. But the question arises on how far does women empowerment paves way for them to achieve the greatest heights in their career and profession. The principle of gender equality is enshrined in our constitution which guarantees equality to women, but in reality the society fails to uplift the women and the family sets its own boundary which makes women to stop herself from marching forward. Shattering the glass ceiling and practicing the true equality will add more meaning to the term Women Empowerment.

Introduction

In the last five decades, the concept of women empowerment has undergone a major shift from welfare oriented concept to equity concept. Women empowerment is the key to strengthen the woman's participation in the decision- making, socio- economic development and to raise voice against all inequalities and violence. From women being inside the kitchen, the era has developed into a phase where women can be seen in all possible fields, particularly in Asian countries, the trend is changing with fair representation of women in the economic workforce. Women are no longer employed in traditional occupations like nursing and teaching, but their representation in occupations associated with males. In the recent years, various constitutional and legal rights have been implemented by the government of Indian in order to eliminate ill practice and gender discrimination against women. All the physical and seen hurdles are eliminated with the help of law, but the question arises when it comes to hurdles which is unseen. With the help of the government women are getting greater employment opportunities at entry and mid-level positions, but numerous studies have found misrepresentation of women at upper echelon. This under-representation of women at the top position has been termed as "Glass Ceiling". Women comprise of less than 4% of the uppermost ranks of CEO, president, executive vice president, and COO; and less than 3% of top corporate earners. A modern hurdle in the advanced era.

Women Empowerment in 21st Century

According to Sen and Batliwala (2000), women empowerment leads to a growing intrinsic capability- greater self-confidence, and an inner transformation of one's consciousness that enables one to overcome external barrier. We call ourselves the people of modern era which has also made the barriers for women very modern. Indeed Women are provided with high standards of quality education but till date women are facing harassment in all fields. The recent incidents shows Women's are given higher positions in several fields but they are not recognized in their own family. Women are considered as 'Mothers' in our society they provide care, support, and nurturing to their families but they are not even appreciated for it.

Economic opportunities, social equality and personal rights these are the most common problems faced by women in 21st century. Accepting the perspective of women and their opinion in making decisions must be considered as same as men, only then the society is really empowered with women, and this is the main idea of women empowerment. Women also play a significant role in community building and often take on leadership roles in community.

Significance of Women Empowerment

In recent times, everyone is pointing on the empowerment of women. Its right to say that women's empowerment has become the necessity of the time. Women should possess liberty, faith, and self-worth to opt for their needs and demands. Discrimination based on gender is useless and is having zero worth by looking at the growth of women in the last few decades. Women are paid less and are treated as a cook and slave in families, and their real potential fails to get highlighted. Women empowerment in India is required to overcome situations of such types and to provide them with their independent role in Indian society. Empowering women is a necessary right of women. They should have proportional rights to contribute to society, economics, education, and politics. They are approved to gain higher education and receive a similar treatment as men are receiving.

- They can have equal rights to participate in education, society, economics and politics
- They are allowed to have higher education and treated in the way like men
- Diversity in workplaces
- Supporting women-run businesses
- Communicate and educate
- Decision making power
- Economic growth
- Sustainable development
- Enhance the overall development of society

Background of Glass Ceiling

The term was coined by Ann Morrison in the 1980s. Marilyn Loden first coined the phrase "glass ceiling" while speaking as a panellist at the 1978 Women's Exposition in New York. As a fill-in for her employer's only female executive, Loden was invited to discuss how women were to blame for the barriers preventing them from advancing in their careers. Instead, she spoke about deeper, ignored issues that historically kept women from occupying positions of authority: the glass ceiling. Her concept was later popularized in a 1986 Wall Street Journal article discussing the corporate hierarchy and how invisible barriers seemed to prevent women from advancing in their careers past a certain level. The U.S. Department of Labour launched the Glass Ceiling Commission in 1991 in response to the growing concern over barriers preventing women and minorities from advancing.

Glass Ceiling: The Modern Hurdle

According to Morrison (1980), glass ceiling refers to invisible barriers or blockages that create hurdles for women and other minorities from rising to the top leadership positions. Glass ceiling constitutes vertical discrimination within companies against women. Glass ceiling is an irony in the modern era of women empowerment. In all the fields women are given so called higher positions with a glass ceiling. Each time they try to initiate something new in their field women are not put behind the glass ceiling. Few examples of Glass Ceiling would include,

- Neglecting for a promotion to a higher management position because you're pregnant or looking to start a family
- Excluding from important, decision-making executive meetings
- Being reassigned to different projects so male co-workers have better opportunities
- Being subjected to degrading and disrespectful comments based on race, sexual orientation, gender, or class

Factors Involved in Glass Ceiling: the Invisible Barriers

Personal Factors:

- Women's lack of experience
- Women's lack of self-esteem and confidence
- women's little incentives to achieve victory
- Women tend to accept a post with less responsibility (for balance between work, home You work and responsibility)
- Women's physical inability to withstand low pressures of emergent managerial positions Lack of flexibility in women's working programs (because of housing difficulties)
- Women's inability in doing the kind of work that needs being away from family

Organizational Factors

- Lack of equal educational opportunities for women in organizations
- Lack of suitable strategies for women in organizations

- The existence of communication barriers (lack of communication between men and women)
- Lack of equal employment opportunities for women in organizations

Cultural Factors

Managers and supervisors do not believe in women Patriarchy system culture in organizations and society. The stereo typical attitude of the society doesn't allow women to move forward to a higher positions where men may work under the leadership of women, the society always thinks that men should hold all superior and higher positions. Women's managerial positions are seen as a direct threat to men's leadership and development opportunities. Men and women are not accepted as partners in working groups underestimating women's success and achievements in organization.

Social Factors

- Women's dual roles (agreement issues in managerial jobs and maternity life)
- Lack of coordinate groups to support women
- Family satisfaction problems in women's delegation to managerial positions the thinking that men are only the breadwinner of the family
- Women themselves accept the existence of such barriers. In this way, we can say the reason that women don't embrace managerial positions is due to heavy housing and maternity responsibilities
- Probably women think that it's better to spend time and energy for other kinds of jobs, or based on another supposition; women's capability to accept organizational positions is equal to that of men's or even sometimes better than men's capabilities. And the problem is with organizational environments that prevent women to achieve and make use of their capabilities. In other words, the reason of the creation of this invisible barrier mostly refers to gender, and cultural points of view rather than women's inability

Other Factors

- Different pay for comparable work.
- Sexual, ethnic, racial, religious discrimination or harassment in the workplace
- Exclusion from informal networks; Stereotyping and preconceptions of women's roles and abilities; Failure of senior leadership to assume accountability for women's advancement; Lack of role models; Lack of mentoring
- Requiring long hours for advancement, sometimes called the hour-glass ceiling

Shattering the Glass Ceiling

Breaking the glass ceiling means overcoming the barriers set to prevent access to advancement. Breaking the glass ceiling also includes removing barriers for others experiencing the same struggles. Why not women in the top position and what makes them to stay back and what prevents them to march forward in their profession and career.

The combined efforts of the society and family will make women to dream bigger and see herself in the seats of CEO and top positions.

When Hillary Clinton ran for president in 2008 and 2016, she repeatedly spoke of her goal of shattering the “highest, hardest glass ceiling” by becoming America’s first female president. Vice President Kamala Harris shattered the second-highest glass ceiling in the U.S. when she became the first female and first Black and South Asian Vice President on Jan. 20, 2021. She was also the first woman and first Black and South Asian attorney general of California, as well as the first Black woman to be elected district attorney of San Francisco.

- Training and development of women
- Advocate for yourself
- Channelling the frustration into purposeful action
- Take responsibility for your own development
- Stand up for oneself and be eligible to demand such higher positions
- Speak with your family members and make them understand the importance of your career and its development
- Develop awareness of the issue
- Build a better generation who truly see women equal and shatter all the stereo typical attitudes

Conclusion

The Empowerment of women has become one of the most important concerns of 21st century. Society must take initiative to create a climate in which there is no gender discrimination and Women have full opportunities of Self decision making and participating in the Social, Political and Economic life of the Country with a sense of equality. To conclude, there is an urgent need for a sustained, comprehensive effort at all levels to attack this problem of gender bias from all sides in a focused man and other family members towards women. An Empowerment in Women’s Empowerment has to be current concern.

Abstract

Technology is growing, in a fastest and well developed ways in every sectors, and it also creates various developments in the educational sectors also. In this article, we discussing about the "Information & Communication Technology" (ICT), which cause a great part in educational development in the way of introducing smart classes, online courses, web conferences etc., with the internet connection through the smart phones and computers. At the time of pandemic period, business, economy and educational sectors suffers a lot, at that time ICT technologies play a major role and help to tackle the pandemic situation.

Keywords : Technology, Information and Communication MEANING

ICT Stands for "INFORMATION & COMMUNICATION TECHNOLOGY".

That helps to enable modern computing system. It is an extensional term from IT. It plays one of the most important role in the *New educational policies and projects*. It covers all the devices and equipments that helps to connect and store data. It includes *antiquated technological devices like: landline telephones, television, and radio. And cutting edge technologies like: Artificial intelligence(AI), and Robotics* are the advancement in ICT.

Through these communication devices , the informations are passed and informed along with the technologically connected internet and wireless networks.

Objectives of ICT

- Establishment of *smart school*.
- Increase the *capacity of teachers*.
- *Update & Accurate* knowledge.
- Contribution in *extension & research*.
- Richness of learning experiences.
- Professional growth.

Benefits of Ict

- Improved *Learning efficiency*
- Reduce the *burden on teachers*.
- Simplified *information sharing*.

- Increased *student motivation*.
- Improve IT *literacy* of students.

Tools Using in ICT

- Google classroom & Meet.
- Trello.
- Online coding websites.
- Subject specific tools.
 - i. Teaching geography.
 - ii. Teaching Mathematics.
 - iii. Teaching History & Biology.
- Smart class
- E-Resources

Google Classroom and Meet

A virtual classroom that makes learning fun and easy and also entertain the students. Teaching educate their students by giving interacting assignments, by slideshow and also by YouTube videos and some of the online learning games like kahoot. It allows the class to go paperless. It can also conduct PTA meetings, take attendance and can maintain and conduct test and grade the students systematically.

Trello

It is also one of the tools in ICT learning. In this we can keep reminders and settasks for the students and also in working place. It prefer projects based learning for students. In this we can create different board for assignments, test papers, doubts, students attach images and videos. By this students can easily look their deadlines for projects, track their progress in online, etc..

Online coding websites

Some of the online coding websites are:

- Data camp
- Hacker rank
- Coder bytes
- Khan Academy
- Code school
- Code academy
- Edx

This learning sites helps the students in the fields of computer engineering and IT sectors. They can learn at any time by downloading videos and listen to that and sometests are also followed.

Subject Specific Tools

i. Teaching Geography:

Google maps, Google Earth helps the kids to learn the distance between two areas, helps to locate areas, can learn different regions, land masses and water bodies.

ii. Teaching mathematics:

Can figure out geometry, can think helps the students to solve math problems and can know about several theorems and proofs in maths.

iii. Teaching history and biology:

YouTube, Microsoft PowerPoint are many videos available in YouTube about a particular research both in history and biology fields. Slideshows in Microsoft PowerPoint makes the students to understand it easily.

Smart Classrooms

In most of the schools and colleges smart classrooms are available. In this, through the projector the screens are displayed according to their syllabus and this is also an easy and interesting way of learning.

E-Resources

E-books, E-Journals, PDFs, are available in the internet for each and every heading and research work. It is more helpful and makes the students to search in online and get download. It reduces the work of searching in libraries and to buy in shops and we can also tell it as a time management.

Components of Ict

- Software
- Cloud of computing
- Transaction
- Data
- Internet
- Communication technology
- Hardware

Hardware

It denotes physical and tangible electronic systems. It includes: smart phone, laptops, printer, supercomputer, projection system, cameras, telecommunication devices and networks.

Software

It includes computer programmes and application for hardware function. There are two types of software.

- System software
- Application software

Communication Technology

It refers to tools that send , receive and process information. It includes digital television, digital radio, e-mail, GPS, video conferencingplatforms.

Advantages

For Students:

- Improves concentration
- Makes to know to interact with digital gadgets
- Understands the concepts easily and quickly by displaying animationvideos
- Helps to learn more courses at one place
- Encourage critical thinking
- Motivates to study new concepts

For Teachers:

- Improves parent teachers interactions
- Improves creative skills
- Teachers keeps the students interact throughout the class
- Record keeping of students

Disadvantages

For Students

- Reduce human contact, So it reduce friends circle
- Theft of personal data
- May be consumption of false information (lot of true and false informations are available in internet)
- Reduces development of other skills such as writing, public speaking
- Distractions like chats, social networks and web pages and greateraddiction

For Teachers

- Lot of work load like assigning classes and preparing videos for classes
- Lack of network problems in rural areas
- Course material problems
- Teacher reluctant to new technology

Conclusion

- According to UNESCO, ICT in education is a great support for teachers and improve the quality of student learning.
- A report shows , that the students using digital learning tools at schoolis 89% and at outside school is 71%.

Abstract

ICT stands for information and communication technology. ICT include the use of hardware and software for efficient management of information and it also includes communication devices like radio, television, cell phones, computer, satellite systems and many more. It refers to that technology which is used to transmit, store, share, create or exchange information. Innovations in technology and globalization have led to an enlarged the use of ICTs in all sectors. In modern era, the world is moving rapidly towards digitalisation such as e-governance, e- health, e- education etc. 21st century. In the present era, everyone can have access to teaching material at own level and consult many experts by video conferencing from all over the world. Currently, a teacher is been teaching his students through the use of ICT even though they are geographically scattered. We can't imagine a day without ICT. Today, world without ICT means we do not have any information about the events that are occurring around. It has become a part and parcel of life. Thus, present paper will highlight the role of ICT in Education.

Keywords–Technology enhanced learning, schemes, Teacher, Student, and ICT Initiatives.

Introduction

ICT will not only include hardware devices connected to computers, and software applications, but also interactive digital content, internet and other satellite communication devices, radio and television services, web based content repositories, interactive forums, learning management systems, and management information systems. These will also include processes for digitisation, deployment and management of content, development and deployment of platforms and processes for capacity development, and creation of forums for interaction and exchange.

The National Policy on Education 1986 , as modified in 1992, stressed the need to employ educational technology to improve the quality of education.

The policy statement led to two major centrally sponsored schemes, namely,

- a) Educational Technology (ET) and
- b) Computer Literacy and Studies in Schools (CLASS)

Thus, paving the way for a more comprehensive centrally sponsored scheme – Information and Communication Technology at Schools in 2004. The significant role ICT can play in school education has also been highlighted in the National Curriculum Framework 2005 (NCF) 2005.

The ICT Policy in School Education aims at preparing youth to participate creatively in the establishment, sustenance and growth of a knowledge society leading to all round socioeconomic development of the nation and global competitiveness.

Objectives

- To know the importance and role of ICT in Education.
- To study the Importance of Students Engaging with ICT

Review of Literature

Olivier (2014) found that theology took up the challenge to utilise the printing press and should do the same with the new technology. The impact of theology is directly related to the medium used throughout the ages, Tegos et al. (2016) research indicated that the effectiveness of flexible conversational agent in productive online peer dialogue, Barak (2017) from his study found that how teacher integrate web-based technologies and their perceptions of cloud pedagogy. He found that cloud pedagogy framework facilitates individual and collaborative, synchronous and asynchronous active learning, in class.

Methodology

The study has a descriptive nature. Secondary data have been collected in order to prepare this document in a comprehensive manner. Data are obtained through publications in various journals, periodicals, conference papers and websites.

Objectives of using ICT in Education

The objectives of ICT in education include:

- Providing accessibility through online medium of education.
- Improving the quality of teaching, especially in remote areas.
- To increase transparency in the education system.
- To strengthen the policies, rules, and laws in the education system.
- To analyze the learning and participation of the students and measure its effectiveness.
- Measuring and evaluating students' behavior, involvement, and retention in the learning process.
- To analyze students' performance, placement, and application of knowledge.

The Importance and Role of ICT in Education

Online Learning

ICT and its tools had led to the emergence of online learning. Through this, the teachers and the students are learning innovative ways in the education process. Online learning has gained popularity amidst the corona pandemic to ensure that the learning continues. ICTs have looked after that education reaches through it worldwide and even in remote areas. No matter where the students are, but it has ensured that every learner derives its benefits.

Accessible to all

ICT in education allows accessibility to all types of learners. All students can learn through the material provided. Even the special needs students can maximize the benefits through the usage of it. ICT has also covered issues like the “digital divide” and allows even less fortunate people to access the tools for their educational needs and enhance learning.

Higher-Order Thinking & Skill Developments

ICT promotes high order thinking and reasoning skills. These skills enabled the process of evaluation, planning, monitoring, controlling, reflecting, etc. To use ICT tools effectively, one must be able to explain and justify the solutions to the problems. For using ICTs, the students should be able to discuss, test, and evaluate the strategies and methods they use.

Develops ICT Literacy and Capability

Literacy and capability are the 21st-century skills that are needed. One of the best ways to develop these is to equip the subject-matter with purposeful activities.

Encourages Collaboration

ICT fosters collaboration as children work collectively. It also enhances communication skills as they discuss, talk, and learn together. All you need is a laptop, tablet, or desktop computer to understand it's working. ICT tools open up the doors for developing language through fostering communication.

Motivates Learning

ICT motivates children towards learning. Children learn better through the usage of technology. They get mesmerized with technology tools and get motivated to learn effectively in the classroom or at home.

Improves Engagement and Knowledge Retention

With the inclusion of ICT in education and its tools, children get more engaged and show greater participation in learning. It is all because of technology. It has made learning fun-filled with creativity and games. It enhances learning in multiple ways. Because of it, the students learn better, leading to knowledge retention.

A Key Part of the Curriculum

As per the latest curriculum, ICT plays an important part in the education system. So, many governments across the globe have started using ICT as a major part of education and the curriculum.

The rise of the Knowledge Economy

We live in an economy that is a thirst for the production and dissemination of information properly. ICT pervades at all levels and sectors like health, education, environment, or production. So, its use is needed everywhere at all levels.

Therefore, we cannot deny the fact that ICT is an important part of our lives. It fosters collaboration and connectivity around the world. Technology is ever-changing. It is likable due to certain features like growth, creativity, joy, fun, and consumption.

Importance of Students Engaging with ICT

ICT in Education

Students should engage with ICT in order to:

- To develop 21st-century skills like ICT Literacy and capability.
- To improve retention levels.
- Make them prepared for an integrated society that is taking advantage of the ICT developments.
- Adapt ICT tools as a lifelong partner.

Advantages of ICT in Education

Individualization of learning

It means that people learn as an individual and not as the same group. As learners are varied, ICTs provide flexibility so that learners learn according to their own pace.

Interactivity

Through this feature of ICT, learners can learn properly at any point. They do not need to follow a proper sequence. Learners can learn effectively through this feature.

More economical, the higher speed of delivery and wider reach

ICT tools are more economical, and the speed of delivering content is also high. Through ICTs, the number of learners increases, thereby reducing the overhead cost of investment.

Multiple teaching functions and diverse audiences

ICT involves multiple functions like diagnosing and solving problems for accessing information and knowledge about various contents. It can be useful in drills and practices also.

Uniform quality

ICTs act as a great equalizer by producing uniform quality content for the rich and the poor, the urban and rural people. It produces good quality content for all.

Facilitates cooperative learning

ICT facilitates cooperative learning by encouraging dialogue, discussions through a more participative classroom environment.

Act as a motivating tool

ICT tools act as a motivator and encourage children to enhance their learning. Children get fascinated with technology. Teachers should use their skills to arouse interest, fun, and creativity to learn in a better way.

Distance and climate insensitive

- Regardless of the distance and climatic conditions, ICT tools provide access to all.
- These were some advantages of ICT in the education sector.
- Now let's get an insight into certain disadvantages of ICT.

Current Situation of ICT:

1. Online education: Due to Covid-19, there is no option without online education. As lockdowns don't allow to open schools, colleges, so online education is only one option through which education can be continued.
2. Use of apps: Different apps nowadays are used for online education. These apps are helpful for students and teachers to reach. Such type of apps are also used for meetings, online teaching learning process. Ex. Zoom, Google meet, Webex etc.
3. Platforms for online education: There are different platforms available for online education. Through these platforms, online classes can be taken, videos can be uploaded, recorded videos can be send. So these platforms are helpful to the students as well as teachers. Ex. Swayam, Webex, Impartus etc.
4. Use of different e-content : Due to online education there is no time limit as well as place restriction for learning. Anyone can learn from any place and at any time. So many type of education any one can take. And different e-contents are also prepared for students. These are helpful for them to enrich their knowledge.
5. Tools for teachers[iii]: GeoGebra can construct almost every conceivable geometrical object, even in 3D, Object drawing is interactive and can be moved around, modified, measured. PhET Simulations are interactive computer programs which allow a user to change variables and see the effect of the changes on the system. These are very useful in helping students explore the subject, solve problems and can also become a useful self-assessment tool.

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT tools in education make it easier for teachers to use the best strategies to bring out the best in their students. ICT in education sector is beneficial for the students, in addition to this, it is making it possible for schools to impart education in the finest way. Moreover, the technology enables them to manage all the management and administration functions in a seamless manner. Hence, there is no doubt that it is a boon to the education industry.

SIGNIFICANCE OF ICT TOOLS AND THEIR APPLICATIONS IN TEACHING LEARNING PROCESS

Dr. S. Sharmila

Assistant Professor, Department of Computer Science,
NGM College, Pollachi, Coimbatore, TamilNadu, India
mcasharmi2007@gmail.com

Abstract

Information and Communications Technology (ICT) is the use of computing and telecommunication technologies, systems and tools to simplify the way information is created, collected, processed, transmitted and stored. It includes computing technologies like servers, laptop computers and software applications, as well as the wired and wireless communication technologies that support telephones, the Internet, the Internet of Things (IoT). The goal of ICT is to improve access to information and make human-to-human, human-to-machine and machine-to-machine (M2M) communication easier and more efficient. The importance of ICT for teaching and learning process has become significant as it facilitates teaching and learning process, create conducive learning environment, and help learners develop innovative thinking and self confidence. Teachers' well-equipped preparation with ICT tools and facilities is one of the main factors in the success of technology-based teaching and learning. This paper focuses on the use of ICT in schools and colleges by students and teachers to support the processes of learning and teaching.

Keywords: ICT, Technology, ICT tools, Teaching and Learning, Internet, Communication

Introduction

There are different technologies such as radio, television, computer, etc., used in the teaching-learning process. Different ICTs have potentiality to expand the access to education, strengthen the process of education and enhance the quality of education. It has also become essential to the teaching-learning interaction, through such approaches as replacing chalkboards with interactive digital whiteboards, using students' own Smartphone or other devices for learning during class time, and the "flipped classroom" model where students watch lectures at home on the computer and use classroom time for more interactive exercises. ICT in teaching-learning has tremendous potential to serve and help the people connected with the process and product of education in many ways. ICT will help in transitioning from a broadcast model of learning to interactive learning. Thus making the students active and participate in the teaching-learning process. ICT prepares teachers to meet challenges of the teaching-learning task of modern age. It helps teachers in proper execution of their multi-dimensional responsibilities in various areas of education.

Literature Review

Koc mentioned that using ICT enables students to communicate, share, and work collaboratively anywhere, any time. Bransford, J. D., Brown, A. L., & Cocking, R. R reported that, what is now known about learning provides important guidelines for uses of technology that can help students and teachers develop the competencies needed for the twenty-first century. Forcheri, P. & Molfino suggested that ICT can be used to

promote collaborative learning, including role playing, group problem solving activities and articulated projects. **Yusuf** said that the field of education has been affected by ICTs, which have undoubtedly affected teaching and learning. **Yelland, N** integrating of ICTs in education requires establishment of infrastructural facilities, acquisition of technologies and their periodic updating, management and professional support services.

ICT Tools for Teaching Learning Process

Following tools are used in the Teaching learning process in Online- Offline mode of instruction. These ICT tools proved to be a boon for making the teaching learning process easy and accessible to all students.

Learning Management System (MOODLE and Google classroom)

Moodle stands for Modular Object-Oriented Dynamic Learning Environment and statistics. Moodle is free software, a learning management system providing a platform for e-learning and it helps the various teachers considerably in conceptualizing the various courses, course structures and curriculum thus facilitating interaction with online students. RSCOPR has a self-customized MOODLE developed by Digital Content development team. It is a very useful platform to share all learning resources, videos, sharing webpage. It is able to provide automated assessment in the form of quiz, and give immediate detailed feedback to the students. The messaging system allows learners and teachers to communicate easily. Teachers can also communicate with groups of learners via course forums either to provide answers to learners' questions or to just get involved in discussions. The MOODLE mobile app makes students access even easier via smart phone or mobile device.

Google Classroom - Blended Learning Platform

Google Classroom is a free, blended learning platform that offers a variety of benefits for both students and teachers. Google Classroom enhances the productivity and takes workflow management to the next level. It keeps track of assignments coming in with a simple glance making it very easy to know everyone's status and to follow up with students who are missing work. Everything is time stamped, so late work is easily identifiable. Since Google apps are cloud based the work in Google Classroom saves automatically and is accessible from any device. With the app, both students and teachers can enjoy the full functionality of Google Classroom on a mobile device.

Google Forms

Google Forms allows conducting MCQ quizzes online. The information is stored as a spreadsheet automatically records the answers. The spreadsheet then populates the responses from the quiz or survey in real-time. Google forms can be used to give feedback to and receive feedback from students and parents.

Video Conferencing Platforms

During COVID pandemic when the world shifted to Online mode for teaching learning various free videoconferencing platforms like Google meet, Zoom and Cisco webex were used to conduct online classes. All these have varying needs and features. Zoom allows the facility of using its features using a browser also without the need to download the application, the app download is mandatory in case of the other two software. Google Meet allows the maximum on-screen chatting time with respect to the others.

Virtual Labs

The Virtual Labs provides remote-access to simulation-based Labs in various disciplines of science and engineering. This student-centric approach facilitates the absorption of basic and advanced concepts through simulation-based experimentation. Internet-based experimentation further permits use of additional web-resources, video-lectures, animated demonstrations and self-evaluation. Virtual labs are any place, any pace, any-time, any-type labs.

Educational Videos and animations (YouTube and Internet)

Various valuable educational videos of pharmacy subjects available on internet, YouTube provide additional help in better understanding of subject knowledge.

Smart Classroom

Classroom integrated with Smartboards and internet connections provides enhanced and interactive learning and teaching opportunities for students and teachers. The internet-connected to systems in smart classes is stored with abundant information. It is accessible anytime for their teaching and learning process. Teachers can access information from various educational sources for teaching purposes. Smart Classrooms helps in developing critical thinking and problem-solving skills in students.

e-Resources

E- journals from ProquestPharma and DELNET were available for students to access remotely in online mode and enhance their learning experience. e books were uploaded on MOODLE and Google Classroom.

Current Situation and Importance Of Ict Today

The importance of Information Communication Technology are as follows;

1. **Online Education:** Due to Covid-19, there is no option without online education. As lockdowns don't allow opening schools, colleges, and so online education is only one option through which education can be continued.
2. **Use of apps:** Different apps nowadays are used for online education. These apps are helpful for students and teachers to reach. Such type of apps is also used for meetings, online teaching learning process. Ex. Zoom, Google meet, Webex etc.
3. **Platforms for online education:** There are different platforms available for online education. Through these platforms, online classes can be taken, videos can be

uploaded, recorded videos can be send. So these platforms are helpful to the students as well as teachers. Ex. Swayam, Webex, Impartus etc.

4. **Use of different e-content:** Due to online education there is no time limit as well as place restriction for learning. Anyone can learn from any place and at any time. So many type of education any one can take. And different e-contents are also prepared for students. These are helpful for them to enrich their knowledge.
5. **Tools for teachers:** GeoGebra can construct almost every conceivable geometrical object, even in 3D! Object drawing is interactive and can be moved around, modified, and measured. PhET Simulations are interactive computer programs which allow a user to change variables and see the effect of the changes on the system.

The Various Ict Initiatives

Few important initiatives are as given below.

1. **e-pathshala :** The digital India campaign has promoted extensive use of ICTs in the teaching learning process. The ePathshala, a joint initiative of Ministry of Education, Govt. of India and National Council of Educational Research and Training (NCERT), has been developed for showcasing and disseminating all educational e-resources including textbooks, audio, video, periodicals, and a variety of other print and non-print materials for Students, Teachers, Parents, researchers and educators.
2. **NROER:** The National Repository of Open Educational Resources (NROER) is developed by CIET, NCERT. It was launched during the National Conference on ICT for School Education. NROER hosts large number educational resources in many subjects and in different Indian languages for Primary, Secondary and Senior Secondary classes.
3. **Swayam MOOCs:** SWAYAM (Study Webs of Active-Learning for Young Aspiring Minds) is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity and quality. All the courses are interactive, prepared by the best teachers in the country and are available, free of cost to the residents in India.
4. **SwayamPrabha:** SWAYAM Prabha is an initiative of the Ministry of Human Resources Development to provide 32 High Quality Educational Channels through DTH (Direct to Home) across the length and breadth of the country on 24X7 basis.
5. **ICT in education curriculum:** The National Policy on ICT in School Education has set the goal of preparing youth to participate creatively in the establishment, sustenance and growth of knowledge. Teachers and Children must not be treated merely as consumers but also as active producers.
6. **Diksha:** In India, many teachers are creating & using innovative tech-based solutions in their classrooms. Some state governments have also initiated programs to support their teachers digitally. This inspired MHRD and NCTE to coordinate these efforts at a national level and build DIKSHA.

Application of Information and Communication Technology in Education

ICT is being utilized in every part of life. Due to the increasing importance of the computer, students cannot afford to keep themselves distant from this potential medium in education, use of ICT has become imperative to improve the efficiency and effectiveness at all levels and in both formal and non-formal settings. It can be used for the following purposes.

- To broadcast material, online facility or CD-ROM can be used as sources of information in different subjects.
- To facilitate communication for pupils with special needs;
- To use electronic toys to develop spatial awareness and psycho motor control;
- To use the online resource like, email, Chat, discussion forum to support collaborative writing and sharing of information.
- To facilitate video-conferencing or other form of Teleconferencing to involve wide range of students from distant Geographic areas.
- For blended learning by combining conventional classroom learning with E-learning systems
- To process administrative and assessment data.
- To exchange and share ideas -among teachers for the professional growth.
- To carry out internet-based research to enhance, educational process

Figure 1: Six Reasons to use ICT in Education

Advantages of Ict in Education

Some of the advantages of ICT in education are as follows;

- Enhance Teaching Effectiveness
- Ensure Active Participation

- Foster Collaborative Learning
- Easy Student Evaluation
- Better Conceptual Understanding
- Assists Students in Research

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT tools in education make it easier for teachers to use the best strategies to bring out the best in their students. Moreover, the technology enables them to manage all the management and administration functions in a seamless manner. Hence, there is no doubt that it is a boon to the education industry. One of the objectives of this paper is to provide better understanding and appreciation of the importance of ICT in teaching and learning process. Several view points of importance of ICT in teaching and learning system has been discussed.

UNDERSTANDING BLOOM'S TAXONOMY: A STUDENT'S GUIDE TO HIGHER-ORDER THINKING

Dr.N.Chitra

Head and Associate Professor
Department of B.Com(CA)
Sree Saraswathi Thyagaraja College, Pollachi

Mr.K.Dhinesh & Mr.R.Kailash

III B.Com(CA)
Department of B.Com(CA)
Sree Saraswathi Thyagaraja College, Pollachi

Abstract

Outcome-Based Education is an educational approach that focuses on defining specific learning outcomes or competencies that students should achieve by the end of a course or program. OBE emphasizes the development of competencies or skills rather than mere content memorization. It aims to equip students with practical and applicable knowledge. Taxonomies provide a systematic way to categorize and organize the different levels of learning that students are expected to achieve. Bloom's Taxonomy classifies learning objectives into different levels, each representing a progressively higher level of cognitive complexity. The six levels of Bloom's Taxonomy are Remembering, Understanding, Applying, Analyzing, Evaluating and Creating. Taxonomies like Bloom's also assist in creating assessment tools that accurately measure students' mastery of the learning outcomes at different levels, promoting a more comprehensive and effective educational experience.

Keywords: Outcome-Based Education, Students, Bloom's Taxonomy

Introduction

OBE stands for Outcome-Based Education, and it is an educational approach that focuses on defining specific learning outcomes or competencies that students should achieve by the end of a course or program. Instead of focusing solely on the content delivered or the amount of time spent in the classroom, OBE emphasizes the measurable knowledge, skills, and attitudes that students should acquire. Specific, measurable, achievable, relevant, and time-bound (SMART) learning outcomes are established for each course or program. These outcomes guide the design of the curriculum and assessment methods. OBE emphasizes the development of competencies or skills rather than mere content memorization. It aims to equip students with practical and applicable knowledge. Assessment methods are aligned with the defined learning outcomes and focus on measuring students' understanding and application of the knowledge and skills in real-world scenarios. OBE encourages a cyclical process of assessment, feedback, and improvement.

Educators continuously review and revise the curriculum and teaching methods based on assessment data to enhance student learning. OBE emphasizes catering to individual student needs and learning styles. It aims to foster active learning and engagement, allowing students to take responsibility for their own learning. OBE seeks to align

educational programs with the requirements of the job market or industry to ensure graduates are well-prepared for employment or further studies. OBE emphasizes clear communication of learning outcomes and assessment criteria to students. It holds educators accountable for ensuring students achieve the desired outcomes. Implementing OBE may involve the use of rubrics, portfolios, project-based learning, competency exams, and other methods to assess student performance and progression toward achieving the learning outcomes.

Taxonomy in OBE

In Outcome-Based Education (OBE), taxonomy refers to the hierarchical classification of educational objectives or learning outcomes. Taxonomies provide a systematic way to categorize and organize the different levels of learning that students are expected to achieve. The most commonly used taxonomy in OBE is Bloom's Taxonomy, which was originally proposed by Benjamin Bloom in 1956 and later revised by Anderson and Krathwohl in 2001.

Bloom's Taxonomy classifies learning objectives into different levels, each representing a progressively higher level of cognitive complexity. The six levels of Bloom's Taxonomy, in ascending order of complexity, are:

Remembering

It serves as the foundational level of learning. Remembering is the ability to recall facts, information, or concepts, and it lays the groundwork for higher-order thinking skills.

Reasons for including the "Remember" level in OBE:

- Remembering helps students build a strong knowledge base that serves as a prerequisite for more complex learning.
- The "Remember" level helps to establish the framework upon which other learning outcomes can be constructed. It provides students with the basic vocabulary and concepts necessary to engage with more advanced ideas and applications.
- Remembering encourages students to retain and recall information effectively. It ensures that students can access relevant information when needed and apply it to new situations or problem-solving.
- Develops the metacognitive skills, including awareness of their own learning process among students. They become more adept at recognizing gaps in their understanding and seek to fill those gaps through additional learning and study.
- Assessing the "Remember" level is often more straightforward and objective, making it easier to evaluate students' knowledge acquisition and retention. It provides a basis for assessing progress and identifying areas for improvement.

Understanding

Understanding involves making connections between facts and concepts, leading to a deeper level of learning. When students understand the underlying principles and relationships, they are better equipped to apply knowledge in various contexts.

Reasons for including the "Remember" level in OBE:

- The understanding level enables students to analyze information and apply it to solve problems. It provides them with a solid foundation for critical thinking and decision-making.
- Understanding helps students transfer knowledge from one situation to another. They can recognize similarities and apply their understanding in new and unfamiliar contexts.
- By encouraging students to understand concepts rather than just memorizing isolated facts, OBE promotes higher-order thinking and conceptual understanding. This helps them see the bigger picture and recognize the relevance of knowledge to real-world situations.
- It encourages active engagement with the material. Students are more likely to ask questions, seek clarifications, and engage in discussions to deepen their understanding.
- It is a crucial for building upon the foundational knowledge acquired in the "Remember" level. It lays the groundwork for more complex cognitive processes, such as analysis, evaluation, and creation.
- Understanding allows students to articulate their knowledge effectively. They can explain concepts in their own words and communicate their ideas with clarity.

Applying

Applying knowledge and skills in real-world situations helps students develop practical competencies. It prepares them to use their learning effectively in various contexts, including professional settings.

Reasons for including the "Remember" level in OBE:

- The Applying level encourages students to tackle complex problems using the knowledge they have acquired. This level fosters problem-solving skills and the ability to devise solutions to real challenges.
- By applying what they have learned, students can bridge the gap between theoretical knowledge and practical implementation. This integration enhances their understanding of the subject matter.
- Applying knowledge requires active engagement and participation. Students become more involved in the learning process, which can lead to increased motivation and deeper comprehension.

- When students apply their knowledge, they must think critically about how to use the information effectively. This level of thinking strengthens their analytical and evaluative abilities.
- Applying knowledge in one context helps students develop transferable skills that can be utilized in different situations. These skills are valuable for adaptation and flexibility in a rapidly changing world.
- By applying their learning to solve practical problems, students can make a positive impact on their communities and society at large. This level of learning instills a sense of purpose and responsibility.

Analyzing

This level of learning prepares students to approach problems thoughtfully, make well-informed decisions, and contribute to more complex tasks in their academic and professional lives. It is a critical step in nurturing students' abilities to think critically and develop a deeper comprehension of the world around them.

Reasons for including the "Remember" level in OBE:

- Analyzing promotes critical thinking skills as students must assess information, identify patterns, and draw conclusions based on evidence and reasoning.
- Analyzing information is a fundamental aspect of problem-solving. Students must deconstruct problems and data to identify potential solutions effectively.
- The "Analyzing" level encourages students to ask questions and seek deeper insights into the subject matter. It fosters curiosity and a desire to understand the underlying reasons and connections.
- Analyzing information helps students make informed decisions based on a thorough understanding of the factors involved.
- Analyzing is an essential skill for conducting research and inquiry-based learning. It enables students to evaluate sources, synthesize information, and draw meaningful conclusions.
- Analyzing helps students interpret data effectively. They can extract meaningful insights and draw valid conclusions from the information presented.

Evaluating

Using the "Evaluating" level of Bloom's Taxonomy in Outcome-Based Education (OBE) is vital because it focuses on critical assessment, judgment, and decision-making based on established criteria. This level goes beyond analysis and requires students to make informed judgments about the value, validity, and quality of information and ideas.

Reasons

- The "Evaluating" level encourages students to critically assess information, arguments, and evidence. It fosters the ability to differentiate between strong and weak arguments, valid and invalid claims, and reliable and biased sources.

- Students who engage in evaluating develop a reflective approach to their learning. They question assumptions, biases, and underlying assumptions, which leads to deeper understanding and continuous improvement.
- Evaluation requires students to form their judgments rather than accepting information at face value. This level of thinking promotes independent and analytical thinking.
- Evaluation is central to effective decision-making. Students learn to weigh evidence, consider alternatives, and make well-reasoned choices based on the available information.
- Students who can evaluate their own work and progress become self-regulated learners. They identify areas for improvement and actively seek feedback to enhance their performance.
- Encouraging Ethical Considerations: Evaluation involves considering ethical implications and consequences. Students learn to assess the ethical dimensions of various decisions and actions.
- Fostering a Culture of Continuous Improvement: Evaluation is essential for continuous improvement in both learning and professional contexts. It helps students recognize their strengths and weaknesses and identify areas for growth.

Creating

Using the "Creating" level of Bloom's Taxonomy in Outcome-Based Education (OBE) is essential because it focuses on students' ability to generate original ideas, designs, and solutions. This level represents the pinnacle of cognitive complexity and encourages students to apply their knowledge, skills, and understanding to create something new and innovative.

Reasons

- The "Creating" level fosters creativity and innovation. Students are challenged to think outside the box and come up with novel ideas and solutions to problems.
- Creating is a fundamental aspect of entrepreneurship. Students learn to identify opportunities and turn their ideas into tangible products, services, or initiatives.
- Creating often involves collaborative efforts, as students may work together to brainstorm and develop innovative projects. This level of learning fosters teamwork and cooperation.
- When students create something of their own, they take ownership of their learning. This sense of ownership can lead to increased motivation and engagement.
- Creating requires students to solve complex problems and overcome obstacles to bring their ideas to life. This level of thinking strengthens their problem-solving abilities.

Conclusion

Outcome-Based Education is intended to create a more focused, relevant, and learner-centric educational experience, preparing students for success in their chosen fields and addressing the needs of society. By using Bloom's Taxonomy in OBE, educators can design learning experiences and assessments that align with the desired cognitive levels of achievement. It helps ensure that students progress through a well-structured and logical sequence of learning, starting from basic knowledge acquisition and moving towards higher-order thinking skills and application. Taxonomies like Bloom's also assist in creating assessment tools that accurately measure students' mastery of the learning outcomes at different levels, promoting a more comprehensive and effective educational experience.

“IMPACT OF MICROFINANCE ON WOMEN EMPOWERMENT THROUGH KUDUMBASREE UNITS”

Dr.Melbha.D

Assistant Professor, Department of Commerce,
Emmanuel College, Vachichal, Kudappanamoodu, TVM, Kerala,
Melbha25@Gmail.Com

Abstract :

Kudumbashree with its core mission to wipe-out absolute poverty through women empowerment has indeed touched many lives through its integrated, comprehensive approach. Thousands of the poor and the marginalized population are building their lives, their families and their society through these neighbourhood groups. The financial empowerment of women in Kerala through the focused initiative of Kudumbashree has gone long way drawing even International recognition. Since inception Microfinance has been the basic thrust of Kudumbashree to address poverty. It has been proved without doubt that microfinance is the effective tool for development and contributed to the women and economic development of the society to a great extent. The various activities taken up by Kudumbashree under MF are Thrift and Credit, Bank Linkage, Financial literacy Campaign etc. Supporting funds for the community are Community Investment Fund, Revolving Fund, Vulnerability Reduction Fund, Interest Subsidy and Matching Grant. The study related to performance of Kudumbashree units in Poovachal Panchayath, role of Government for their improvement and level of problems in their units help to find out the key factor which enhance this field and give suggestions for betterment. This study was conducted in Kudumbashree unit in Trivandrum District; Kerala. The main aim of this study is to examine the impact of women empowerment through microfinance. The main intention of this study is to understand the level of empowerment achieved by women using microfinance.

Keywords:- Micro finance, income, schemes, savings etc.,

Introduction

“Microfinance” as a branch of economic development for those who lack access to resources has garnered considerably recognition over the last several years, much of it due to the 2006 awarding of the Nobel Peace Prize to Professor Mohammed Yunus, a US trained, Bangladeshi economist who serves as the global figurehead for the microfinance movement. The committee has recognized microfinance as “an important liberating force” and “ever more important instrument in the struggle against poverty”.

Microfinance is a financial service of small quantity provided by Financial Institutions to the poor. These financial services may include savings, credit, insurance, leasing, money transfer, etc. That is any type of financial services, provided to customers to meet their normal financial needs: life cycle, economic opportunity and emergency with the only qualification that transaction value is small and customers are poor. The microfinance was prompted in India to overcome poverty, increase income and enhance well being of the poor. But most of the Indian Microfinance Institutions only focus on microcredit and their high lending rate and loan shark type behaviour credited problems. An alternative to the commercial model of Microfinance is the Kudumbashree programme initiated in 1998 by the Government of Kerala. It focuses for overall development of the family.

Micro finance is that the extension of little loans to entrepreneurs, too poor to qualify for ancient bank loans. It may also be delineate as provision of little –scale monetary services to shoppers World Health Organization square measure economically active in numerous urban and rural areas. in keeping with the accepted definition, microfinance is that the provision of thrift, credit and different monetary services and product of terribly little amounts chiefly to the poor in rural, semi-urban and concrete areas for facultative them to boost their financial gain level and improve living standards. Of late, microfinance has become a key word with Governments, NGOs and international establishments just like the UN agency.

2. Objectives of the study

- To analyze the income earn after joining Kudumbashree.
- To study the kudumbashree microfinance help for uplift financial status.
- To identify problems and constraints of kudumbashree units.

3. Research Methodology

The study is designed on a descriptive study conducted in Poovachal Panchayath based on both secondary and primary data.

a) Source of data

There are two types of data

- Primary data
- Secondary data

Primary data

Primary data collected from members of the Kudumbashree units in Poovachal Panchayath.

Secondary data

Secondary data collected from published books, magazines, journals, websites, reports and periodicals of Kudumbashree units, etc.

b) Sampling Size

A simple random sampling method has been used for selecting the members of Kudumbashree unit as the respondent for purpose of study. The method of sampling used is random sampling. The units are respondent in each unit has been selected by drawing lot. 100 units were selected at random and one respondent from each 100unitswere selected to know the impact of microfinance.

c) Tools and Techniques

The required data for the study has been collected through questionnaire and structured interview schedule.

4. Scope of the Study

Women empowerment is considered as an important responsibility of every government. Till recently very little attention has been given to empowerment and sustainability issues. Women's access to savings and credit gives them greater economic role in decision making, thereby optimising their own and households welfare. It is available from past studies that; kudumbashree is an effective MFI to support economic development. So the poor people can become more empowered especially women by joining kudumbashree programme. It points out that the need of the kudumbashree units in the area where the poor people are reported lower.

5. Data Analysis and Interpretation of Microfinance through Kudumba Shree Units

This chapter deals with analysis and interpretation of data collected with the help of questionnaire and interview schedule. The present study is intended to analyze the impact of microfinance through kudumbashree and problems related with kudumbashree unit in Poovachalpanchayath. The data is analyzed and presented in the form of table with necessary interpretation along side.

1. Collection of savings within the unit per month

The sample units are studied on the basis of savings collected within the group per month. In this study savings collection are categorized as less than 2 times in a month, 2 -3 times in a month, and more than 3 times. The following table shows the classification in this regard.

Table: 1
Collections of savings within the units

Collection of Savings	Number of KDS Units	Percentage
Less than 2 times	10	10
2-3times	30	30
3 times	60	60
Total	100	100

Source: primary data

Interpretation: From the above table, 60% of units collect the savings more than 3 times in a month, 30% of units collect their savings 2-3 times in a month. The remaining 10% collect the savings less than 2 times. The same data shows as picture below.

2. Utilization of Savings Amount

Here, the study is based on the utilization of saving amount. The utilization of saving amount is categorized in the study as:- poor, partly, and fully. The table: 4.11 show the classification of units based on the utilization of saving amount

Table: 2
Utilization of savings in the unit

Utilization of Savings	Number of KDS Units	Percentage
Poor	25	25
Partly	60	60
Fully	15	15
Total	100	100

Source: primary data

Interpretation: From the above table, we can interpret 60% of units are partly utilize their savings, 25% of units are poor in the utilization of savings. Only 15% of units are fully utilizing their savings.

3. Status of loan Recovery

Here, the sample units are studied on the basis of status of loan recovery. The status of loan recovery categorized the study as:-Less than 25%, 25-50%, 50-70%, 70-90%, more than 90%. The following table shows the status of loan recovery in KDS unit.

Table: 3
Status of Loan Recovery

Status of loan recovery	Number of KDS units	Percentage
Less than 25%	3	3
25%-50%	2	2
50%-70%	10	10
70%-90%	25	25
More than 90%	60	60
Total	100	100

Source: primary data

Interpretation: From the above table, 55% of units are very good in status of loan recovery; they recovered more than 90% of loan. 30% of units are in good position, they recovered 70%- 90% loan amount. The remaining 15% of units are unsatisfactory. The figure: 4.1 show the data are graph.

4. Participation of Units in Government Offered Programmes

The participation level is categorized in the study as:-Very low, Low, Medium, High, Very high. The table: 4.13 show the classification of units on the basis of participation of government offered programmes.

Table:4
Participation of units in government offered programmes

Participation Level	Number of KDS Units	Percentage
Very Low	2	2
Low	10	10
Medium	13	13
High	25	25
Very High	50	50
Total	100	100

Source: primary data

Interpretation: From the above table, 50% of units are very high participation in government offered programmes. 25% of units are high participation in government offered programmes. The 10% units are low participation. The figure: 4.13 show the same data.

5. Kudumbashree Microfinance Uplift Financial Status

The sample units are studied on the basis of kudumbashree microfinance has helped me uplift financial status is categorized as:- Strongly disagree, disagree, Agree, Netural, Strongly agree. The following table shows the details.

Table:5
Kudumbashree Micro finance Uplift Financial Status

Option	Number of KDS units	Percentage
Strongly disagree	5	5
disagree	5	5
Neutral	10	10
Agree	60	60
Strongly agree	20	20
Total	100	100

Source :primary data

Interpretation: From the above table, we can interpret 60% of have Agree microfinance uplift financial status and very good position in this regards. 20% of units are good. Only 5% units are strongly disagree and disagree. The following figure shows the graphical presentation of the same data.

6. Income Earn After Joining Kudumbashree

The sample units are studied on the basis of earn income after joining kudumbashree is categorized as:- Strongly disagree, disagree, Agree, Neutral, Strongly agree. The following table shows the details.

Table: 6
Income earn after joining kudumba shree

Option	Number of KDS units	Percentage
Strongly disagree	10	10
disagree,	9	9
Neutral	12	12
Strongly agree	55	55
Agree	14	14
Total	100	100

Source: primary data

Interpretation: From the above table, we can interpret 55% of have Strongly Agree earn income after joining kudumbashree and very good position in this regards. 14% of units are good. Only 9% units are disagree. The following figure shows the graphical presentation of the same data.

7. Problems in Kudumbashree Units

The table: 7 shows the problems in kudumbashree with corresponding rank based on members responses.

Table: 7
Problems in kudumbashree units

Sl.No	Variables	Always (5)	Frequently (4)	Occasionally (3)	Rarely (2)	Never (1)	Score	Rank
1	Lack of capital	9	14	32	23	22	265	I
2	Non availability of loan	-	-	-	13	87	113	VII
3	Lack of basic book keeping and accounting skill	-	-	-	28	72	128	VI
4	Limited awareness	-	-	-	11	89	133	V
5	Time allocation of members	-	-	-	9	91	109	IX
6	Caste/ethic barriers	-	-	-	13	87	113	V
7	Poor management	-	-	-	7	93	107	VIII
8	Highly competition	-	-	-	13	87	113	VII
9	Insufficient government support/poor	-	-	9	32	59	150	II

	relation with local government							
10	Conflict between members of the unit	-	-	3	42	55	148	III
11	Miscellaneous problems	-	-	2	34	64	138	IV

Source: primary data

Interpretation: As per the above table majority of the units faces the problem of lack of capital (rank I). The least problem in the units is time allocation of members.

Conclusion:

This study was conducted statistically of 100 Units. The opinion and findings revealed that socio economic effectiveness and overall empowerment is achieved through Kudumbashree. In this study, it can be concluded that the working system of Neighbourhood Groups are satisfactory, but some initiatives can be taken to improve the performance of the unit. It was also admitted that the socio economic status of semi urban area has improved compared to urban area after joining the unit. In order to improve the socio economic status of urban area, training programmes, promotional activities, awareness programmes can be imparted. Participation in social programmes, meetings can be improved.

Abstract

This Paper deals with "Women Empowerment" a burning issue all over the world. "Women empowerment" and "women equality with men" is a universal issue. Women Empowerment refers to the creation of an environment for women where they can make decisions of their own for their personal benefits as well as for the society. Women Empowerment refers to increasing and improving the social, economic, political and legal strength of the women, to ensure equal- right to women, and to make them confident enough to claim their rights, such as: freely live their life with a sense of self-worth, respect and dignity, have complete control of their life, both within and outside of their home and workplace, to make their own choices and decisions, have equal rights to participate in social, religious and public activities, have equal social status in the society, have equal rights for social and economic justice, determine financial and economic choices, get equal opportunity for education, get equal employment opportunity without any gender bias, get safe and comfortable working environment Women have the rights to get their voices heard. Women population constitutes around 50% of the world population. A large number of women around the world are unemployed. The world economy suffers a lot because of the unequal opportunity for women at workplaces. Women are equally competent. Nowadays, women are even ahead of men in many socio-economic activities. Women Empowerment leads to decrease in domestic violence. Uneducated women are at higher risk for domestic violence than an educated woman.

Introduction

Empowerment of women has been recognized as a central issue in determining the status of women as well as development. The UNO has adopted Convention on Elimination of Discrimination Against Women (CEDAW) in 1979 and in India 1993. The concept "Empowerment" was introduced at the International Women's Conference at Nairobi in 1985. The conference defined empowerment as a redistribution of social power and control of resources in favour of women. Necessarily, emphasis on women empowerment has its origin in their subordinate position in patriarchy and associated ill treatments and non-recognition to their contributions. All over the world women have been suffering from discrimination, violence, exploitation, marginalization, exclusion and so on at various levels. Women have been relegated to a secondary status in the family and the society. So, their status has to be increased. The two aspects of empowerment, status improvement and contribution to development are interrelated. In this regard, development of women can be viewed from two angles, first one is the improvement of status and second one is their participation in development process.

Objectives of the Study

1. The objectives of the study are framed as below – 1.To understand the concept “Empowerment”.
2. To focus on different aspects of Women Empowerment. 3.To discuss about various dimension of Women Empowerment.

Review of Literature

The author **Susena Srivastava** in her book entitled “Women Empowerment” (2008) demonstrates the strategies and initiatives to empower women to overcome discriminations, achieve full equality, well being and participation in decision making that determine their lives and future of the society.

Neeta Tapan (1998) in her book entitled “Needs for Women Empowerment outlines the Schemes adopted by the Government and facilitated by NGO during implementation to improve women’s conditions.” Discuss various forms of gender discrimination in society which hinders the progress of women.

Zairab Rahman’s (2007) book, “Empowerment of Rural Indian Women, a study of Uttarakhand” finds that increasing rate of women’s exploitation in every sphere of life results from their powerlessness in patriarchal society. Hence as she argues, women need empowerment which would be measured in terms of women’s freedom to shape their lives. Their control over resources.

The paper includes in the edited volume entitled “Women Empowerment: Challenges and Strategies” by **M. Lakshmipathi Raju** (2007) discuss various perspectives of Women Empowerment including the issues and problems that confront them.

Some of the Challenges Facing by the Women in India

Discrimination: Women in India often face discrimination in many areas of life, including in the home and in the workplace. This can make it difficult for them to access education and employment opportunities, and can lead to unequal treatment and lower pay.

Lack of access to education and employment: Women in India face significant barriers when it comes to accessing education and employment. For example, data from the World Bank shows that only around 50% of women in India participate in the labour force, compared to around 80% of men. This is due in part to cultural and social barriers that prevent women from participating in the workforce, as well as lack of access to education and training. **Lack of access to education and employment:** Women in India face significant barriers when it comes to accessing education and employment. For example, data from the World Bank shows that only around 50% of women in India participate in the labour force, compared to around 80% of men. This is due in part to cultural and social barriers that prevent women from participating in the workforce, as well as lack of access to education and training. **Gender-based violence** is a major problem in India. The National Crime Records Bureau reports that in 2021, there were over 428,278 reported cases of violence against women in India. This included incidents of physical and sexual

assault, as well as dowry- related violence and female infanticide. The statistics are alarming, with 31,677 reported rapes against women in 2021 alone.

Poverty: Many women in India live in poverty, particularly in rural areas. Poverty can make it difficult for women to access education and employment, and can lead to other challenges such as poor health and malnutrition.

Disparities between urban and rural areas: Women in rural areas of India often face greater challenges when it comes to empowerment. For example, they may have less access to education and health care, and may be more isolated and vulnerable to gender- based violence.

Women in Industry and Startups in Tamilnadu

Women supportive policies are very much part of the social justice mission and cost Vs benefits metrics will not be applied even if these policies are designed for profit oriented industries/startups.

- Tamil Nadu to encourage women Startups, it shall ensure that at least one or more women investors be included in the investment group so that the diversity of gender in the decision-making group and that there is a likelihood that women seekers of funds will get a fairer hearing and possibly receive more favourable decisions.
- Task based work systems instead of time based wherever feasible. \
- Anganwadi attached Creche facility industrially dense areas and urban locales to help women working in small companies and shops - sustainable model to be worked out.
- Government can help setting up kid/women care modules if an establishment has 50 plus women working there. This will be helpful for msme.
- Compulsory off for 2 days per week for women.
- Women entrepreneurs find it difficult to get things done when it comes to every aspect of building a company. A women specific district wise help center/portal to be established preferably with an accountable call center.
- Establishing a women specific equity fund/debt fund by Government and deploying through private investors. Social welfare and Women Empowerment Department
- Subsidized costs in all company establishment services, coworking spaces, incubators etc
- One of the major difficulties women startups face is market access. Government should encourage potential buyers with possible benefits and also providing innovative market access platforms and free tech tools.
- There are very few women founders in high profile scalable businesses. A study to be done on this phenomenon and appropriate action items to be implemented.
- Women getting married with 3 plus years of proper work experience or startup establishment would be given with some additional encouragement incentives by the Government. This will help a decent percentage of women to think of getting into a work/venture mode before getting married.

- During pregnancy/child birth breaks innovative courses and practical learnings can be given to them with the objective of keeping them updated with their line of profession and bouncing back to jobs easily.
- Free / Subsidy in state/national/international exposure with a cap on maximum financial support.
- Women mentors also would be made available who would empathise and understand the challenges faced by women and provide directions and handholding support to the budding entrepreneurs.
- Women focused Think Tank conclaves with the objective of bringing out issues, ideas and connections to work in a collaborative manner would be set up.
- Social entrepreneurs who are working in women centric areas would be offered support.
- To celebrate entrepreneurship, women centric awards on yearly basis to support the women entrepreneurs, startups and the ecosystem would be launched.

Organisations Promoting Women Entrepreneurship in Tamil Nadu

The Integrated Women Development Institute

The institute was set up in 1989 to uplift women and girl children from the distressing situations they encounter, by setting up income generating programmes for deserving women to become self-employed.

The Tamil Nadu Corporation for Development of Women Ltd:

The Corporation was set up on 9th December 1983 under the Companies Act, 1956 to focus on empowerment of women to encourage entrepreneurship among women, to identify trade and industries suitable for women, to undertake marketing activities for products manufactured by women and encourage women to form SHGs through giving training and extending credit facilities.

Women Entrepreneurship Promotional Association (WEPA)

WEPA functioning in Chennai is an association of women entrepreneurs, providing training to women in various fields. The association also conducts exhibitions for the members and assists in marketing of the products of members.

Marketing Organisation of Women Entrepreneurs (Regd) MOOWES provides comprehensive support to women entrepreneurs to achieve success in the business. Its main aim is to ensure women in marketing their products through exhibitions and thus provide an opportunity to tour the country also.

Schemes for Women Entrepreneurship in Tamil Nadu

Indira Mahila Yojana (IMY) is a scheme aims at organizing women at grass root level to facilitate their participation in decision-making and their empowerment. The scheme was launched in 1995 on pilot basis in 200 blocks over a strategy to coordinate and integrated components of sectoral programmes and facilitates their convergence to empower women.

Vocational and Skill Development Programmes

The major focus of the Tamil Nadu Corporation for Development of Women has been to provide support to economically disadvantaged women. The Corporation is funding entrepreneurial programmes, which is opened to all potential women entrepreneurs, preferably first generation. The programme was commenced in 1998-99, which is conducted by the Industry and Commerce at Chennai and Madurai.

Mahalir Thittam a participatory, people centred and process oriented project, was started in which is directed towards empowerment of women and capacity building of poor women in rural areas through SHGs. It covers the entire state of Tamil Nadu. Currently the coverage extends to rural areas of all the 30 districts of Tamil Nadu. It is an unusual long term partnership between three agencies, the state government, non-governmental organizations and banks (including **NABARD**) and other financial institutions

Table No: 1 Commonly Used Dimensions of Women Empowerment

DIMENSIONS	HOUSEHOLD	COMMUNITY	BOARDER AREAS
Economic	Women's control over income, family resources etc.	Women's access to ownership of assets, representation in local association.	Women's representation in high placing jobs, women CEO's etc.
Socio-Cultural	Women's freedom of movement, lack of discrimination etc.	Women's visibility in and access to social space and social network etc.	Women's literacy and access to broad range of educational options etc.
Inter-Personal/Familial	Participation in domestic decision-making, control over sexual relations etc.	Self selection of Spouses, local campaigns against domestic violence.	Options for divorce, safe abortion, reproductive health service etc.
Legal	Knowledge of legal rights, domestic support for exercising rights.	Community modification for rights, Campaigns for rights awareness etc.	Advocacy for rights and legislations, Use of judicial system to redress rights violation etc
Political	Knowledge of political system, exercising right to vote.	Women's involvement in the local political system, representation in local Government etc.	Women's representation in regional and national Govt., Strength as a voting etc.
Psychological	Self esteem, Self-efficacy, Psychological well-being.	Collective awareness of injustice, Potential of mobilization.	Women's sense of inclusion and entitlement etc.

Source: Rowland (1995 & 1997)

In this type of categorization on the basis of aspects of life can consider six common dimensions of Women Empowerment –

- Economic Empowerment.
- Social Empowerment.
- Political Empowerment.
- Physical Empowerment.
- Legal Empowerment.

Psychological Empowerment: These aspects are very significant in conceptual perspective of women empowerment. All these define the scope and nature and at the same time indicate the need for women empowerment in different aspects of life. Such as economic, political, legal etc.

Economic Empowerment: Empowerment is the efficiency of a woman to earn control and manage economic resources. It is the prime factor of empowerment concept. Empowerment in economic field is the best route for achieving overall empowerment. Economic empowerment of women will create environment for reaching social change and provide a necessary weapon for them to challenge injustice and discrimination.

Social Empowerment: Empowerment of women depends upon the status of women inside and outside the home. But patriarchal values reinforced by tradition, customs, media and other socio-political institution play a major role in lowering down the status of women. It should be needed to change the perception of women regarding themselves.

Political Empowerment: Political Empowerment refers to the equitable representation of women in decision-making, both formal and informal and their voice in the formation of policies affecting their society. Political Empowerment of women for it gives women the capacity to influence the decision-making process.

Psychological Empowerment: Women are the foundation upon which the family and society are built. Several studies show that due to cultural views of the low position of women in many societies the women themselves often have a negative image of their potential and importance. The concept of strong determination, assertive nature, motivation etc. determines psychological empowerment of the individual which is very much necessary for the empowerment of women as a whole.

Physical Empowerment: According to the definition of World Health Organization (WHO), Health is a state of complete physical, mental and social well-being. Health is both an important factor in the achievement of status as well as an indicator of social status, particularly of women. Without good physical and mental health of women economic and political empowerment can't be achieved. Several women related studies have shown that women health is not only a manifestation of biology but also a reflection of socio-political, economic and religious context of women lives. There is need to empower the women by bringing changes in the reproductive health of women.

Legal Empowerment: Legal Empowerment is the provision of an effective legal structure which is supportive of women's empowerment. Protection is needed for the women in different issues like health harassment, superstition, cultural barriers,

dominance in patriarchy etc. So it is very much needed of exercising the legal rights whenever necessary to make women aware of civil and political rights. This empowerment has a concern of human rights of women's. The Slogan "Women's rights are human rights" are one which has now taken off worldwide. The concept women empowerment is multidimensional. It expresses at different levels and also in different aspects of life. Significantly the concept takes ideological commitments into its formation and based on gender equality and ability of self-assertion. Ability of self-assertion is not only a challenge to patriarchy power but also an effort for upward mobility or obtaining the psychological health of being powerful.

Conclusion

Primarily, Women Empowerment may be conceptualized as a process and viewed as opposed to a static situation that challenges existing assumptions about power, helping achieving and succeeding relation to women. Consequently, powerless or disempowered gain a greater share of control of resources and decision-making. This is because the most outstanding feature of the term empowerment is that it contains the word "power". Evidently, Empowerment speaks of power relations and their implications across multidimensional areas. It also emphasizes on applications in day to day life of women as an individual community member and national citizen. In other words women empowerment emphasizes theoretical perspective, practical utility and empirical groundings. In view of this empowerment as a theory and praxis has been entwined in development goals. The various dimensions of women empowerment economic, socio-cultural, legal, political, physical and psychological dimensions together present a comprehensive and holistic discourse on power relation in patriarchy, equal rights perspectives, participation and contribution to development process. Each dimension is significant by itself and very crucial for empowering a woman in the context and in a totality covering all functional needs of life. Needless to say, empowerment is more contextual than universal in understanding. Defining the concept is subject to debate. It is easy to define empowerment by its absence but difficult to define in action as it takes on different forms in different people and context.

Abstract

Women empowerment is a crucial aspect of promoting gender equality and social progress worldwide. It involves providing women with the necessary tools, opportunities, and resources to participate fully in economic, social, political, and cultural spheres. One of the primary goals of women empowerment is to break down traditional gender roles and stereotypes that have historically limited women's potential. By challenging societal norms and discriminatory practices, women can achieve equal status with men and access equal opportunities for education, healthcare, and employment. When women are empowered, it leads to significant societal benefits. Studies have shown that empowering women can lead to improvements in maternal and child health, reduction in poverty, and overall economic growth. Women's increased participation in the workforce contributes to greater productivity and diversity, leading to better decision-making and innovation. Women empowerment is not solely about individual development; it also involves collective action. Women's organizations and networks play a vital role in advocating for women's rights, influencing policies, and addressing issues such as violence against women and girls, reproductive rights, and gender-based discrimination. However, achieving women empowerment is an ongoing process, and there are still significant challenges to overcome. These challenges include gender-based violence, limited access to education and healthcare, unequal pay, and underrepresentation in leadership roles. Governments, civil society, and the private sector must collaborate to create an enabling environment that promotes women empowerment. This includes implementing laws and policies that protect women's rights, providing access to quality education and healthcare, ensuring equal pay for equal work, and promoting women's representation in decision-making bodies.

Keywords: *Women Empowerment, Need, Importance, Factors Affecting Women's Empowerment, Holistic Development*

Introduction

Women empowerment refers to the process of empowering women and providing them with the tools, resources, and opportunities to participate fully in all aspects of life. It is about creating an environment where women can make their own choices, exercise their rights, and have access to education, healthcare, and economic opportunities on an equal basis with men. Historically, women have faced various forms of discrimination and inequality, limiting their potential and hindering their progress. Women empowerment seeks to break down these barriers and challenge the traditional gender norms and stereotypes that have held women back. Empowering women is not only a matter of individual rights and justice; it is also essential for achieving sustainable development and building inclusive societies. When women are empowered, they contribute significantly to

social and economic growth, improve family and community well-being, and drive positive change.

Efforts towards women empowerment encompass various areas, including women's political participation, economic empowerment, access to education and healthcare, and the elimination of gender-based violence. Governments, civil society organizations, and the private sector play crucial roles in promoting women empowerment through policy changes, awareness campaigns, and the implementation of programs that uplift women's status in society. While progress has been made in many regions, challenges persist, and there is still much work to be done to achieve true gender equality. Women empowerment remains a global priority and an ongoing journey towards creating a more just, equitable, and inclusive world for all. By empowering women, societies can unlock the full potential of half of their population, leading to more prosperous and harmonious communities. Women empowerment refers to the process of empowering women and providing them with the tools, resources, and opportunities to participate fully in all aspects of life. It is about creating an environment where women can make their own choices, exercise their rights, and have access to education, healthcare, and economic opportunities on an equal basis with men. Historically, women have faced various forms of discrimination and inequality, limiting their potential and hindering their progress.

Women empowerment seeks to break down these barriers and challenge the traditional gender norms and stereotypes that have held women back. Empowering women is not only a matter of individual rights and justice; it is also essential for achieving sustainable development and building inclusive societies. Studies have shown that when women are empowered, they contribute significantly to social and economic growth, improve family and community well-being, and drive positive change. Efforts towards women empowerment encompass various areas, including women's political participation, economic empowerment, access to education and healthcare, and the elimination of gender-based violence. Governments, civil society organizations, and the private sector play crucial roles in promoting women empowerment through policy changes, awareness campaigns, and the implementation of programs that uplift women's status in society. Empowering women is not a standalone effort but requires the collective commitment of Governments, civil society, private sectors, communities, and individuals. When women are empowered, they become agents of positive change, contributing to the progress and betterment of society as a whole.

Need to Women Empowerment

Empowering women is a vital step towards achieving gender equality and fostering a more just and inclusive society. Some key aspects and strategies for women empowerment:

- **Education:** Ensuring equal access to education for girls and women is crucial. Education empowers women with knowledge, skills, and the confidence to pursue their aspirations, contribute to society, and make informed decisions about their lives.

- **Economic Empowerment:** Promoting women's economic participation through fair wages, equal job opportunities, and entrepreneurship support can lead to greater financial independence and improved living standards for women and their families.
- **Healthcare:** Access to quality healthcare, including reproductive health services, is essential for women's well-being. Empowering women to make decisions about their health and family planning positively impacts their overall life choices.
- **Ending Gender-Based Violence:** Combating all forms of violence against women and girls is critical. Implementing laws and policies that protect women from abuse and ensuring access to support services are essential steps in empowering women to live free from fear and violence.
- **Leadership and Representation:** Encouraging and supporting women's representation in decision-making positions in politics, business, and other sectors is vital for challenging gender norms and promoting inclusive policies and practices.
- **Legal Rights and Equality:** Advocating for gender-sensitive laws and policies that protect women's rights and ensure equality in all spheres of life is fundamental to women empowerment.
- **Technology and Digital Inclusion:** Bridging the gender gap in access to technology and digital skills can open up new opportunities for women in education, business, and social connectivity.
- **Changing Attitudes and Cultural Norms:** Challenging harmful stereotypes and promoting gender equality in homes, schools, workplaces, and media is crucial to creating a more inclusive and empowering environment for women.
- **Supportive Networks and Mentorship:** Establishing networks and mentorship programs that empower and support women can help break barriers and provide guidance in personal and professional development.
- **Male Engagement:** Engaging men and boys in discussions about gender equality and women empowerment is essential for building alliances and addressing root causes of gender-based discrimination.

Importance of Women Empowerment

Women empowerment is of paramount importance for various reasons, as it has significant positive impacts on individuals, families, communities, and societies as a whole. Here are some key reasons highlighting the importance of women empowerment:

- **Gender Equality:** Women empowerment promotes gender equality, which is a fundamental human right. When women have equal access to opportunities, resources, and decision-making power, it helps create a fair and just society.
- **Economic Growth:** Empowering women economically leads to greater productivity and economic growth. Women's participation in the labor force can contribute significantly to a country's GDP and overall prosperity.

- **Education and Knowledge Sharing:** Educated and empowered women are more likely to invest in the education of their children, passing on knowledge and values that can break cycles of poverty and lead to generational progress.
- **Health and Well-being:** When women are empowered, they tend to have better access to healthcare and family planning resources. This leads to improved maternal and child health and reduces mortality rates.
- **Family Stability:** Empowered women are more likely to make informed decisions about family planning, leading to smaller, healthier families. This can contribute to family stability, better nutrition, and improved living conditions.
- **Social Development:** Women empowerment plays a crucial role in social development, fostering positive changes in attitudes, behaviors, and cultural practices that perpetuate gender-based discrimination.
- **Community Leadership:** Empowered women often become community leaders and catalysts for change. They can address local issues effectively and advocate for the needs and rights of their communities.
- **Political Representation:** Women's empowerment is essential for increased representation in political and decision-making roles. Women leaders bring diverse perspectives and priorities to the table, contributing to more inclusive governance.
- **Reducing Violence:** Empowered women are better equipped to stand up against violence and abuse. Addressing issues of gender-based violence becomes more effective when women are empowered to assert their rights and seek support.
- **Innovation and Creativity:** Women's empowerment fosters an environment of diversity and inclusivity, leading to more innovative solutions to societal challenges.
- **Global Development Goals:** Advancing women empowerment is crucial to achieving various Sustainable Development Goals, such as gender equality, poverty reduction, and quality education.
- **Human Rights and Dignity:** Women have the right to live with dignity and autonomy. Empowerment ensures that their rights are protected and that they can lead fulfilling lives without discrimination or oppression.

Women empowerment is not just a matter of gender equality; it is a key driver of societal progress and development. When women are empowered, they can contribute more effectively to their families, communities, and the nation, leading to a more equitable and prosperous society for everyone.

Factors Affecting Women's Empowerment in India

Women's empowerment in India is influenced by a complex interplay of social, cultural, economic, and political factors. Despite progress, there are still significant challenges that hinder gender equality and women's empowerment. Here are some key factors affecting women's empowerment in India:

- **Gender Norms and Patriarchy:** Deep-rooted patriarchal norms and traditional gender roles continue to shape societal attitudes, limiting women's access to

- education, decision-making roles, and economic opportunities. These norms perpetuate gender discrimination and restrict women's autonomy.
- **Education:** Lack of access to quality education, especially in rural areas, hampers women's ability to gain knowledge, skills, and self-confidence. Educated women are more likely to challenge social norms, participate in the labor force, and assert their rights.
- **Economic Empowerment:** Women in India often face limited opportunities for economic empowerment, with lower workforce participation rates and unequal pay. The lack of access to financial resources, assets, and credit also inhibits their economic independence.
- **Violence against Women:** Prevalent gender-based violence, including domestic violence, sexual harassment, and dowry-related crimes, deters women from pursuing their aspirations and limits their mobility and safety.
- **Health and Sanitation:** Poor access to healthcare facilities and sanitation disproportionately affect women, impacting their well-being and restricting their participation in economic and social activities.
- **Legal Rights and Implementation:** While legal provisions safeguard women's rights, the effective implementation and enforcement of these laws remain a challenge. Lack of awareness about legal rights and limited access to justice hinder women's empowerment.
- **Child Marriage and Early Pregnancy:** Child marriage is still prevalent in some parts of India, leading to early pregnancies and increased health risks for young girls. This practice curtails educational opportunities and perpetuates cycles of poverty.
- **Technology and Digital Divide:** Limited access to technology and the internet can further marginalize women, hindering their access to information, education, and economic opportunities in the digital age.
- **Caste and Ethnicity:** Intersectionality plays a significant role in women's empowerment, as those from marginalized caste and ethnic groups often face compounded discrimination and limited access to resources.
- **Political Representation:** Despite some progress, women remain underrepresented in political institutions, which affects their ability to influence policies and decisions that impact their lives.
- **Social and Cultural Stigma:** Stigma surrounding certain issues such as menstruation, mental health, and widowhood can have profound effects on women's empowerment and well-being.

Addressing these factors requires a multi-dimensional approach involving changes in social attitudes, policy interventions, legal reforms, and initiatives to promote women's education, health, and economic opportunities. Grassroots movements, government programs, and partnerships with civil society organizations are crucial in advancing women's empowerment in India.

Ensures Holistic Development of Society

Women empowerment is a critical catalyst for the holistic development of society. When women are empowered, they contribute to various aspects of society, fostering comprehensive growth and progress. Here's how women's empowerment ensures holistic development:

- **Education and Knowledge Transfer:** Empowered women are more likely to pursue education and knowledge acquisition. Educated women can then pass on their learning to their children and the community, leading to a more informed and educated society.
- **Health and Well-being:** Empowered women tend to prioritize health, not just for themselves but also for their families. They play a significant role in promoting healthcare awareness, disease prevention, and family planning, leading to healthier communities.
- **Economic Growth and Poverty Alleviation:** Women's economic empowerment has a direct impact on poverty reduction. When women are economically active, they can contribute to household incomes, thus lifting families out of poverty.
- **Sustainable Development:** Empowered women often prioritize sustainable practices, environmental conservation, and resource management. They play a vital role in promoting sustainable development and responsible consumption within their communities.
- **Social Cohesion and Inclusivity:** Women's empowerment fosters a more inclusive and cohesive society. When women are actively involved in decision-making and community leadership, diverse perspectives are considered, leading to better and fairer outcomes.
- **Entrepreneurship and Innovation:** Empowered women are more likely to start businesses and participate in entrepreneurial activities. This drives innovation, economic diversification, and job creation, benefiting society at large.
- **Gender Equality and Social Justice:** Empowerment of women challenges gender norms and stereotypes, promoting gender equality and social justice. A more equal society ensures that everyone's rights and opportunities are respected and upheld.

- **Reduced Gender-based Violence:** As women gain more agency and independence, the prevalence of gender-based violence tends to decrease. Empowered women are more likely to stand up against abuse and advocate for their rights.
- **Political Participation and Good Governance:** When women are empowered and politically active, it leads to better governance and more representative decision-making. Women leaders often prioritize social welfare and human development issues.
- **Cultural and Artistic Contributions:** Empowered women contribute significantly to cultural and artistic expressions in society. Their creativity and talents enrich the cultural fabric of the community.
- **Resilience and Crisis Management:** Women's empowerment enhances resilience within communities, making them better equipped to face challenges such as natural disasters or economic downturns.
- **Inter-generational Impact:** The empowerment of women has a positive ripple effect on future generations. Empowered mothers raise confident and educated children, laying the foundation for a better future.

In conclusion, women's empowerment is not just about advancing the status of women; it is about creating a more inclusive, equitable, and thriving society. When women are empowered, they actively contribute to various aspects of society, leading to its holistic development and progress. Investing in women's empowerment is, therefore, a strategic and essential step towards building a better future for all.

Conclusion

Women empowerment is a fundamental and transformative process that recognizes and upholds the rights, agency, and dignity of women. It involves providing women with equal access to opportunities, resources, and decision-making power, enabling them to participate fully in all aspects of life. The significance of women empowerment extends beyond gender equality; it has far-reaching impacts on the individual, family, community, and societal levels. Empowered women play a pivotal role in fostering holistic development and progress. They contribute to education, health, economic growth, sustainable development, social cohesion, and political representation. By challenging gender norms and stereotypes, women's empowerment paves the way for a more inclusive and just society, where the rights and opportunities of all individuals are respected and protected.

Investing in women's empowerment is not just a moral imperative but also an economic and social necessity. Countries that prioritize and promote women's empowerment tend to experience higher economic growth, improved health outcomes, and greater social cohesion. Empowered women serve as powerful agents of positive change, advocating for gender equality, human rights, and sustainable development. Despite significant progress in recent years, there are still challenges and barriers that hinder women's empowerment in various parts of the world. Addressing these challenges requires a collective effort from governments, civil society organizations, private sectors,

and individuals. By implementing policies, laws, and programs that promote gender equality, providing access to quality education and healthcare, and ensuring women's participation in decision-making processes, societies can foster an environment conducive to women's empowerment.

In summary, women empowerment is a journey towards building a more equitable, inclusive, and prosperous world. It is a journey that benefits not only women but also society as a whole. By empowering women, we unlock their full potential and unleash a force for positive change, leading to a brighter and more sustainable future for everyone.

While progress has been made in many regions, challenges persist, and there is still much work to be done to achieve true gender equality. Women empowerment remains a global priority and an ongoing journey towards creating a more just, equitable, and inclusive world for all. By empowering women, societies can unlock the full potential of half of their population, leading to more prosperous and harmonious communities. Women empowerment refers to the process of empowering women and providing them with the tools, resources, and opportunities to participate fully in all aspects of life. It is about creating an environment where women can make their own choices, exercise their rights, and have access to education, healthcare, and economic opportunities on an equal basis with men.

Historically, women have faced various forms of discrimination and inequality, limiting their potential and hindering their progress. Women empowerment seeks to break down these barriers and challenge the traditional gender norms and stereotypes that have held women back.

Empowering women is not only a matter of individual rights and justice; it is also essential for achieving sustainable development and building inclusive societies. Studies have shown that when women are empowered, they contribute significantly to social and economic growth, improve family and community well-being, and drive positive change.

Efforts towards women empowerment encompass various areas, including women's political participation, economic empowerment, access to education and healthcare, and the elimination of gender-based violence. Governments, civil society organizations, and the private sector play crucial roles in promoting women empowerment through policy changes, awareness campaigns, and the implementation of programs that uplift women's status in society.

While progress has been made in many regions, challenges persist, and there is still much work to be done to achieve true gender equality. Women empowerment remains a global priority and an ongoing journey towards creating a more just, equitable, and inclusive world for all. By empowering women, societies can unlock the full potential of half of their population, leading to more prosperous and harmonious communities.

In conclusion, women empowerment is essential for building inclusive and equitable societies. By empowering women, we unlock their potential to contribute fully to their communities and drive positive change at local, national, and global levels. It is a collective responsibility to work towards a world where women have equal opportunities and can participate without discrimination, ultimately benefiting society as a whole.

IMPACTS OF ICT AND IOT IN SMARTER EDUCATION PARADIGMS - A SPECIAL FOCUS ON STUDENTS WITH DISABILITIES

Dr. T. Sumadhi

Assistant Professor

Department of Computer Applications

NGM College, Pollachi

Abstract

Recent years have seen a surge in the use of new technologies as well as its effects in many areas of life. IoT is playing a bigger and bigger role in special education and training over time. Collaboration between technology and educational specializations involved in the educational teaching of individuals is the key to students' holistic evolution and development. The Internet of Things (IoT) and AI-based techniques work together to create smart and intelligent paradigms, which is a major factor in their development. The treatment of student mental health issues, especially in the setting of physical education, can be advanced by using these strategies extremely effectively in a number of different fields. To calculate a student's stress or depression level and improve abilities and performance in the classroom, clever strategies might be applied. Innovative technologies make it possible to precisely analyze behavioral characteristics and spot any unfavorable patterns, allowing for the early detection of mental health issues. By reducing levels of worry and despair, AI can effectively assist students become more responsible citizens by enhancing their psychological health and mental performance. This article's major objective is to raise awareness of the impact of IoT based on ICT on special education students' education and health promotion, as well as on young people with physical and mental disabilities.

Keywords: Internet of Things; IoT applications; smart devices; Internet of Things (IoT); Education, Educational Technologies; Online Learning; Students with Disabilities.

Introduction

There is a significant impact of mobile technology and the IoT both within and outside of the classroom. Popular IoT education use cases have been highlighted by Insider Intelligence, including remote learning, the future of the internet in education, and IoT applications in higher education. The Internet of Things (IoT), which is the connecting of items to the Internet that are not mainstream products like computers and smartphones, is in the process of changing many aspects of our daily life. Education is included in that list, despite the fact that it may not seem like an obvious use of the IoT. E-learning is now a standard practice in the American school system as a result of the internet's pervasive influence on our classrooms. But the Internet of Things has many educational uses, and this disruption has huge ramifications. Schools may increase the security of their campuses, monitor important resources, and improve information access in the learning environment thanks to the growth of mobile technology and the Internet of Things (IoT). In addition, teachers can use this technology to develop "smart lesson plans" as opposed to the stolid plans of the past.

The combination of IoT and AI-based grounded operations is crucial for the creation of smart and intelligent paradigms. These techniques can be utilized very successfully to improve a number of disciplines, including the treatment of mental health issues affecting students, especially in higher education. The goal of special education is to help the child become an active, autonomous member of society. Everything that is provided to the kid as part of special education is something that should be provided in the setting of the classroom and throughout the course of the child's academic career. ICTs are one tool for managing a person's unique educational requirements. The diagnosis and support of the educational needs of the disabled can be done using ICTs and IoT technologies [1,5] IoT in general and special education can leverage mobile applications in a variety of ways [2,3,4,14].

Impact of IoT & Technology on Special Education

By keeping track on each student's internet usage, ICT-based IoT applications in special education increase user navigation security. Teachers are able to design clever lesson plans. They gain knowledge in data collection and processing, data monitoring, and decision-making on the best study and teaching approach. Teacher and student contact is made possible through the use of technology and IoT devices. Students, for instance, are trained using mobile IPAD / Tablet devices equipped with interactive apps with integrated visuals and simulations, allowing them to escape from books.

Applications for AI and knowledge management can be used in conjunction with IoT and integrated into the IoT design to improve the overall services provided [6,7,8,9, 19], as well as to advance cognitive function, consciousness, and emotional intelligence [12,14-16,18,19]. IoT can also help with neurodevelopment and brain remodeling [17,18]. Additionally, there are numerous ways that serious games can be applied to improve IoT ecosystems [27,28,30,39,44]. The future educational system will be more diverse as a result of the new ideas that this digital transition will bring, which have the potential to alter how students and teachers think and study. According to an eMarketer estimate, 83.2% of all 12- to 17-year-olds have a smartphone. Additionally, 73.0% of parents said their kids had a smartphone between ages 11 to 13, and 31.0% said their kids had one between ages 6 and 10. Students who use these mobile IoT devices in the classroom can automate tasks that they already do now, such as note-taking, schedule checking, and research. As for the schools, the greatest benefits would be increased energy efficiency and reduced operating costs.

Ict Based IOT in Higher Education

The IoT can begin interfering with education as early as kindergarten and can do so until grade 12, although its effects are probably most noticeable in higher education. Particularly at colleges, students are gradually moving away from paper books and toward tablets and laptops. Since they have access to all the necessary materials, students may now learn at their own pace and enjoy a learning experience that is almost identical in the classroom and at home. Students find learning to be more convenient thanks to this

propensity, while professors find teaching to be more successful as a result. Teachers are no longer necessary to hand-grade exams on paper or perform other customary tasks due to the advent of connected technology.

Professors can instead concentrate on the customized instruction that will benefit their students the best. Professors can gather data on their pupils using devices that are cloud-connected, then decide which ones require the most individualized care and attention. These data support teachers in enhancing student engagement and modifying their lecture plans for upcoming classes. Universities may monitor their students, staff, resources, and equipment outside of the classroom using linked devices at a lower operational cost, which saves money for everyone. Additionally, safer campuses should result from these tracking capabilities. Students, for instance, would be able to monitor connected buses and modify their itineraries accordingly, preventing them from wasting time in potentially hazardous regions.

Role of ICT and IOT in Our Intelligent Educational System

It incorporates numerous digital devices into the classroom and uses various technologies to provide an intelligent learning environment and enhance the learning process. Such a concept is applicable in both a virtual and a physical context, which meets the challenges arising during global crises and requirements of the digital generation, the IES provides a smart environment where the learning process is more engaging, adaptive, personalized, and efficient. It is achieved by utilizing a full range of contemporary educational technologies. They include networked interactive devices (e.g., notebooks, smartphones, computers, and tablets), IoT (sensors, actuators, cameras, RFID tags, RFID readers, and wearables), and other innovative technology tools. Furthermore, specialized software is used for monitoring, gathering, processing, analyzing, and managing all educational and environmental data. Also, smart decision making based on intelligent technologies such as learning analytics, artificial intelligence, semantics, ontologies, neural networks, and data mining provides smart resource control and smart management of the educational process.

Figure 1: Block diagram of Intelligent education system

In the context of our IES, IoT has a twofold role – to intelligently control and manage classroom environmental parameters and to enable innovative teaching approaches that make the learning process efficient. It involves the integration of IoT devices within IES – sensors, actuators, wearable devices, cameras, etc. to allow the educational system to remotely monitor and control the physical parameters of the environment and the parameters related to the learning process (students’ behavior, engagement, and concentration).

Table 1 describes in detail the role of IoT in our IES, indicating the location in the smart school, purpose, and educational objectives of every device. Security and safety are a challenge in every public building. In our concept of a smart school, IoT devices (intelligent cameras, temperature, smoke and noise detectors, motion sensors, etc.) help monitor students, teachers, objects, and equipment in smart classrooms and the school as a whole. In such a case, alarms are triggered, and notifications are sent based on rules and events. Thus, the staff quickly can identify potential incidents and accidents, instantly make a proper decision and take the corresponding actions for prevention.

Table 1: List of IOT devices and its objectives

IOT	Purpose	objectives	Users	Place of IoT
Air quality analyzer	Optimal air quality conditions	Providing optimal environment for learning	Students, staffs, teachers, administrators	School classrooms, students work place, libraries, laboratories, Gyms
Temperature sensors, humidity sensors, motion sensors, noise sensors	Energy saving, lighthing, security supporting the educational process	Providing optimal environment for learning and supervising students	Students, teachers and staffs	
cameras	Security enhancing safety	Monitoring students mood and health	Students, teachers and staffs	
RFID tags, RFID Readers	Security access control and enhancing safety supporting students	Checking students presence, tracking tools and belongings locations	Administrators and teachers	
Wearables	Access control enabling security	Checking students presence and checking students mood	Staffs, teachers and administrators	

Automatic checking of students' presence is performed by facial recognition with cameras and wearables with RFID readers. Monitoring students' presence enables teachers and school authorities to check and track the students' attendance. It allows the system to notify the parents or guardians of any absence in a timely manner. IoT wearables can integrate the students' location information, interaction with IES, etc. Wide-angle cameras, noise sensors, and passive infrared sensors on students' desks can measure students' presence, movements, attention, and emotional state. Dedicated software can identify students' moods and monitor their health. These sensors also facilitate teachers to pay individual attention to the learners with special needs when necessary. IoT sensors help keep an appropriate learning atmosphere in classrooms. When an excessive level of noise or fidgeting is identified, an event is registered. Then a notification to the teacher is sent, which means that students' engagement and concentration are low and corresponding intervention is necessary. The appropriate actions involve changing the teaching approach, presentation mode, inclusion of interactive learning materials, simulations and multimedia demonstrations, and playing educational games. IoT devices enable customized learning environments according to the different activities performed (physical education, laboratory work, knowledge delivery, assessment, music). IoT devices gather continuous data about the parameters of a classroom environment and automatically adjust their values to optimal levels for the most efficient learning process. Some environmental parameters can be changed automatically in predefined mode if their value is in appropriate considering recommendations for optimal conditions. Actuators control ventilation, heating, air conditioning, humidifiers, lighting, and other systems to achieve target environmental parameters.

Innovative technologies play a significant role in our concept of smart schools, but privacy and ethical concerns are also considered. There should be strict predefined rules for the usage of applications based on IoT. Further, the IoT applications utilized in an educational context should be secure and reliable. Students and teachers should be aware of protocols for confidentiality and authenticity when using technology tools and devices. They must be familiar with the safe use of these technologies and protect themselves from many potential cyber threats. It is the responsibility of school authorities before employing new technology to inform the school staff and students about the functionalities and how to benefit from those technologies safely. Management of all users' rights and compliance with data protection and other legal regulations have to be taken into consideration.

IoT for Students with Sensory Difficulties

Students with sensory difficulties benefit from IoT applications from a large number of effective assistive technologies. For example, students who have hearing disabilities face challenges every day. The biggest challenge faced by them is communication. Deaf people can use an IoT Application to solve this problem. An App has been created on a system with two ends, at one end there is a normal person and at another end, there is a deaf person. The normal person will speak into the system through speech to the text

module, a deaf person will get the text via Wi-Fi, Bluetooth, or Cloud Server according to the situation.

On the other hand, Deaf and people with hearing impairment face everyday challenges in identifying the occurrence of household sounds like door bell, child crying or phone ringing, simple things but very important. For that reason when the visitor presses the doorbell, captured image is transferred to the wearable device which helps to know the right person at the door or intruder. After transferring the image, the wearable device vibrates to notify. Those simple ways can help deaf people to gain independence and flexibility in different areas. Also, IoT apps have helped blind people and people with optic nerve disorder as a doctor. The eyeglasses can transmit the signals of the eye blood flow sensor and lens color and see the bleeding in the eyes; sending messages to the patient, physician, and the emergency contacts as well as informing the hospital emergency GPS and friends/families of a patient to be aware of the exact location of the patient.

Discussion

Using IoT Cognitive and meta cognitive functions such as memory, attention, self regulation, self-observation were tested and improved. New technologies and in particular IoT applications came to provide solutions in a demanding field with many users and many needs, special education. Internet connects all the people together, whereas the Internet of Things (IoT) connects all the tools together [46, 58]. The Internet of Things can offer people with special needs more independence, a more manageable home environment with only some smart devices that will help them to stay safe and secure. The Internet of Things (IoT) can mean different things to different people, but it undeniably involves many devices and a lot of data. A forecast by International Data Corporation (IDC) estimates that there will be 41.6 billion IoT devices in 2025, capable of generating 79.4 zettabytes (ZB) of data.

Figure 2: chart showing the growth of ICT based IOT in education sector

Wireless technology, the Internet of Things, and internet connectivity are some of the tools that can be used to increase the participation of students with disabilities in education and address problems that arise both within and outside of the classroom. To make sure that the adoption of IoT and other technologies in education takes into account the needs of students with disabilities, it is crucial for disability activists, educational technology developers, academicians, and practitioners to collaborate. According to the findings of this study, IoT in the education of students with disabilities benefits both the individual student and society as a whole.

Conclusion

With the development of technology, including the Internet of Things, colleges may overcome a number of difficulties, including managing vital resources, enhancing information access, developing better planning, and creating safer campuses. IoT systems have the potential to significantly improve higher education by energizing the faculty and staff, encouraging the students, and accelerating the learning process. This study's goal was to determine the potential of IoT in higher education and how to make the most of its advantages while addressing its problems and lowering its risks.

Abstract

Women empowerment is the process of strengthening women's capacity to fully engage in society, exercise their rights, as well as access opportunities on an equal basis with men. It entails confronting and altering the social norms, cultural practices, and power structures that support gender inequality and discrimination. This paper is an attempt to examine women's empowerment in India, their legal rights in India as well as highlights the issues and Challenges of Women Empowerment. This paper is descriptive in nature and is based on secondary data collected from journals, internet, previous conducted research. It is concluded that Government initiatives alone would not be sufficient to achieve this goal. Society must take initiative to create a climate in which there is no gender discrimination and women have full opportunities of self decision-making and participating in social, political and economic life of the country with a sense of equality.

Keywords : Women Empowerment, Legal rights, Progress ,Achievement, Challenges

Introduction to Women Empowerment

“When women prosper, the world Prospers”

- The Prime Minister, Shri Narendra Modi addressed the G20 Ministerial Conference on Women Empowerment held in Gandhinagar, Gujarat .

Women's empowerment is the process of giving them more autonomy and control over their life. This can involve giving women the freedom to make decisions about their own health and well-being, as well as the ability to fully engage in the political and economic processes. Women's empowerment is crucial because it can result in a variety of advantageous outcomes, such as higher economic growth and development, enhanced health and well-being, and more gender equality.

Objectives of the Study

1. To understand women empowerment and its types
2. To examine the position of women in India
3. To identify the legal rights for women in India
4. To be familiar with government schemes for women empowerment
5. To know the challenges facing women in India

Women Empowerment and Gender-based Violence Statistics

Indicators	NFHS-5 (2019-21)		NFHS-4 (2015-16)	
Women's Empowerment (women age 15-49 years)				
119. Currently married women who usually participate in three household decisions ²⁵ (%)	91.0	87.7	88.7	84.0
120. Women who worked in the last 12 months and were paid in cash (%)	25.0	25.6	25.4	24.6
121. Women owning a house and/or land (alone or jointly with others) (%)	38.3	45.7	43.3	38.4
122. Women having a bank or savings account that they themselves use (%)	80.9	77.4	78.6	53.0
123. Women having a mobile phone that they themselves use (%)	69.4	46.6	54.0	45.9
124. Women age 15-24 years who use hygienic methods of protection during their menstrual period ²⁶ (%)	89.4	72.3	77.3	57.6
Gender Based Violence (age 18-49 years)				
125. Ever-married women age 18-49 years who have ever experienced spousal violence ²⁷ (%)	24.2	31.6	29.3	31.2
126. Ever-married women age 18-49 years who have experienced physical violence during any pregnancy (%)	2.5	3.4	3.1	3.9
127. Young women age 18-29 years who experienced sexual violence by age 18 (%)	1.1	1.6	1.5	1.5

Source: National family health survey (NFHS- 5) 2019-21

Despite some progress in recent decades, gender equality for women in India still has a long way to go. These difficulties include gender-based violence, discrimination, and restricted access to jobs and education. About 50% of the people in the country are women, and the majority of them continue to be economically dependent on one another even in the absence of employment. Women are still not allowed to receive a basic education in the majority of Indian villages and semi-urban areas, despite gaining the necessary knowledge. They are also never allowed to pursue higher education. Women are regarded as the foundation of every society since they can perform a variety of duties with ease throughout the course of a single day. Women in communities where men predominate fulfil a variety of roles, including attentive moms, devoted daughters, and competent coworkers.

Types of Women's Empowerment

- **Economic Empowerment of women:** This refers to women's ability to participate in economic activities on an equal basis with men. It includes Poverty Eradication, Micro Credit, Women and Economy, Globalization, Women and Agriculture and Support Services.
- **Social Empowerment of Women :** This type of empowerment refers to women's ability to participate fully in social and cultural life, free from discrimination and violence. It includes access to Education, Health, Nutrition, Drinking Water and Sanitation, Housing and Shelter, Environment, Science and Technology, Women in Difficult Circumstances, Rights of the Girl Child, Violence against women and Mass Media.
- **Political Empowerment:** This sort of empowerment refers to women's participation and equality with males in political life and decision-making. It entails the capacity to cast a ballot and run for office, as well as entry into positions of authority and involvement in the formulation of public policy.

Position of Women in India

In the later Vedic civilisation, the status of women fell from what it was in the Rig-Vedic era. Both education and widow remarriage were forbidden to women. Inheritance and property ownership were forbidden to them. Numerous societal ills emerged and began to affect women, such as child marriage and the dowry system. The condition of women significantly declined during the Gupta era. Sati Pratha rose to prominence while dowry established itself as a social norm. A number of social reformers, including Raja Rammohun Roy, Ishwar Chandra Vidyasagar, and Jyotirao Phule, began agitations for the empowerment of women during the British Raj. The Widow Remarriage Act was created as a result of their efforts, which also saw the elimination of Sati.

Women's rights were later promoted by leaders like Mahatma Gandhi and Pandit Nehru. The status of women in social, economic, and political life started to improve in Indian society as a result of their dedicated efforts. Numerous social, economic, and political measures were integrated into the Indian Constitution on the basis of the theories of women's empowerment backed by our founding fathers. Today, women in India participate in a variety of fields including education, sports, politics, journalism, the arts and culture, the service industry, and science and technology. But women continue to be victimised, humiliated, tortured, and exploited. Women still face discrimination in the social, economic, and educational spheres, some seven decades after the country gained its independence.

Progress and Achievement

India's attempts to empower women have made a lot of progress in recent years. To enhance the health, education, and economic possibilities for women, the government has put in place a number of programmes and initiatives. Women have attained high positions in a variety of professions, including politics, business, and entertainment, and there has been a noticeable increase in the number of women engaged in the workforce.

Legal Rights for Women In India

In India, women have received a number of legislative protections over the years to advance gender equality and advance their own interests. The following are some of the most significant legal rights that Indian women can enjoy:

Right to equality: Article 14 of the Indian Constitution guarantees the right to equality to all citizens, regardless of their gender.

Right to education: The Right of Children to Free and Compulsory Education Act, 2009, makes it mandatory for all children, including girls, between the ages of 6 and 14 to receive education.

Right to work: The Equal Remuneration Act, 1976, ensures that men and women receive equal pay for the same work.

Right against sexual harassment: The Sexual Harassment of Women at Workplace (Prevention, Prohibition, and Redressal) Act, 2013, provides a framework for addressing complaints of sexual harassment at the workplace.

Right to property: The Hindu Succession Act, 1956, was amended in 2005 to give equal inheritance rights to daughters in Hindu families.

Right to marriage and divorce: The Hindu Marriage Act, 1955, gives women the right to seek divorce on various grounds, including cruelty and adultery.

Right to health: The Maternity Benefit Act, 1961, provides women with paid maternity leave and other benefits during pregnancy and childbirth.

Right against domestic violence: The Protection of Women from Domestic Violence Act, 2005, provides legal protection to women from physical, emotional, and verbal abuse by their spouses or relatives.

Government Schemes Related to Women Empowerment

The Government has launched various schemes to empower women which include Beti Bachao Beti Padhao Scheme, Ujjawala Yojna, Swadhar Greh, Pradhan Mantri Matru Vandana Yojana, Pradhan Mantri Mahila Shakti Kendra Scheme and One Stop Centre

Challenges Facing Women Empowerment in India

In a survey conducted in 2022, around 88% of working women said they had to forgo a portion of their pay in order to have more job flexibility in India. Furthermore, about 27 percent of the respondents struggled to convince their bosses. The biggest problems still involve gender discrimination, violence against women, and unequal remuneration. Female foeticide and infanticide continue to be major issues, especially in rural regions. Due to the high number of sexual assault and harassment cases that are recorded each year, women's safety and security is also a major concern. The problems and difficulties are described below:

- **Discrimination:** In India, discrimination against women is a common occurrence in a variety of settings, including the workplace and the family. Because of this, it may be challenging for individuals to take advantage of educational and job possibilities, which may result in unfair treatment and lower compensation.
- **Lack of access to education and employment:** Women in India encounter major obstacles to employment and education. For instance, according to data from the World Bank, only around 50% of women in India are employed, compared to almost 80% of men. This is caused in part by societal and cultural restrictions that keep women from working, as well as a lack of access to education and training.
- **Gender-based violence :** India suffers greatly from gender-based violence. According to the National Crime Records Bureau, India has approximately 428,278 incidences of violence against women that were registered in 2021. Along with dowry-related violence and female infanticide, this also includes instances of physical and sexual assault. 31 677 female rapes were reported in 2021 alone, which is a worrying statistic.
- **Poverty:** Many Indian women, especially those who live in rural regions, are poor. Women who are poor may find it difficult to obtain an education and a job, as well as face additional difficulties like poor health and malnutrition.

- **Disparities between urban and rural areas:** In India, rural women frequently face more obstacles to empowerment. They might be more socially isolated and more susceptible to gender-based violence, for instance, and they might have fewer access to health care and education.
- **Limited Mobility:** Women's empowerment in India may be hampered by a lack of mobility, which includes limitations on their freedom of movement and access to transportation restricted.
- **Lack of Legal and Political Support:** • Women in India also have limited access to legal protections and services, as well as limited political and legal support, including little representation in the government.

Conclusion

Women's empowerment be genuine and effective only when Women are given access to property and money, allowing them to stand on their own two feet and establish their identities in society. Women have been facing lot many hardships to prove their existence and facing uncountable challenges and hardships to overcome inequalities. At both the national and international levels, the empowerment of women has emerged as one of the most pressing issues. Governmental measures by themselves wouldn't be adequate to accomplish this. In order to eliminate gender discrimination and give women equal opportunity to participate in the social, political, and economic life of the nation, society must take the initiative to make these changes.

Abstract

Women empowerment is a critical aspect of achieving gender equality and sustainable development. It refers to the creation of an enabling environment where women can exercise their rights, access equal opportunities, and actively participate in social, economic, and political spheres. This abstract explores the concept of women empowerment, highlighting its importance and the challenges that hinder its progress. It emphasizes the need to address issues such as gender-based discrimination, violence against women, limited access to education and healthcare, and unequal economic opportunities. The abstract also discusses various strategies and initiatives that can contribute to women empowerment, including education and skill development, financial inclusion, gender-responsive policies, and the promotion of women's leadership and decision-making roles. By empowering women, societies can unlock their full potential, promote inclusive development, and foster a more equitable and just world.

Keywords: Women empowerment, Gender equality, Sustainable development, Rights, Equal opportunities

Introduction

Women empowerment is a global movement that seeks to create equal opportunities and rights for women in all aspects of life. It is a crucial step towards achieving gender equality and fostering inclusive societies. Women empowerment encompasses various dimensions, including social, economic, and political empowerment, aiming to dismantle barriers that hinder women's progress and enable them to reach their full potential.

Throughout history, women have faced numerous challenges and systemic discrimination that have limited their opportunities for growth and development. However, in recent years, there has been a growing recognition of the importance of women empowerment as a catalyst for social transformation and sustainable development.

Empowering women goes beyond simply addressing gender disparities; it involves transforming societal norms, attitudes, and structures that perpetuate inequality. It requires creating an enabling environment where women can exercise their rights, make choices freely, and actively participate in decision-making processes that affect their lives.

The benefits of women empowerment are far-reaching. When women are empowered, they become agents of change, driving progress in their communities, and contributing to economic growth. Studies have shown that investing in women's education, healthcare, and economic opportunities leads to improved outcomes for individuals, families, and societies as a whole.

However, achieving women empowerment is not without its challenges. Deep-rooted cultural norms, gender stereotypes, and discriminatory practices continue to hinder

progress. Women still face barriers in accessing education, healthcare, and economic opportunities. Gender-based violence remains a pervasive issue that undermines women's safety and well-being.

To address these challenges, concerted efforts are needed at individual, community, national, and international levels. It requires collaboration among governments, civil society organizations, and the private sector to implement policies and programs that promote gender equality and empower women. It also involves raising awareness, challenging societal norms, and fostering a supportive environment that values and respects women's rights and contributions.

An Overview

Women empowerment is a multifaceted concept that aims to create equal opportunities, rights, and access to resources for women. It encompasses social, economic, and political dimensions, seeking to address the systemic barriers that hinder women's progress and limit their potential. At its core, women empowerment seeks to challenge and transform societal norms, attitudes, and structures that perpetuate gender inequality. It recognizes that gender disparities not only affect women but also hinder overall social and economic development. Social empowerment focuses on promoting gender equality, challenging gender stereotypes, and eliminating discrimination and violence against women. It aims to create a society where women can exercise their rights, make choices freely, and live free from fear and violence. Economic empowerment focuses on providing women with equal access to economic resources, opportunities, and decision-making power. It involves addressing gender-based discrimination in the workplace, promoting entrepreneurship, and ensuring fair wages and working conditions for women. Political empowerment aims to increase women's participation and representation in decision-making processes. It involves advocating for equal political rights, encouraging women's leadership, and creating an enabling environment for women to participate in politics and governance. Women empowerment is not only a matter of justice and human rights but also a key driver of sustainable development. Numerous studies have shown that empowering women has significant positive impacts on poverty reduction, economic growth, health outcomes, and social well-being. To achieve women empowerment, it requires concerted efforts from governments, civil society organizations, the private sector, and individuals. This includes implementing gender-responsive policies, investing in education and skills development for women, promoting women's leadership, and challenging societal norms and stereotypes. While progress has been made in advancing women empowerment, significant challenges still exist. Gender-based violence, limited access to education and healthcare, unequal economic opportunities, and cultural barriers continue to hinder women's empowerment in many societies.

In conclusion, women empowerment is a vital movement that strives for gender equality and the full realization of women's rights. By empowering women, we can create a more inclusive, equitable, and prosperous world for all. It requires collective action, policy reforms, and a shift in societal attitudes to dismantle barriers and create an enabling environment where women can thrive and contribute to society's progress.

Challenges Faced by Women Empowerment

Despite significant progress, women still face numerous challenges that hinder their empowerment. Gender-based discrimination, violence against women, limited access to education and healthcare, and unequal economic opportunities continue to persist in many societies. These barriers not only deny women their basic rights but also impede social progress and economic growth.

1. Education and Skill Development

Education is a powerful tool for empowering women. It provides them with knowledge, skills, and confidence to challenge societal norms and stereotypes. Access to quality education and skill development programs equips women with the necessary tools to participate actively in the workforce, pursue higher education, and become agents of change in their communities.

2. Financial Inclusion

Financial inclusion plays a vital role in empowering women economically. By providing access to financial services, such as banking and microfinance, women can gain control over their finances, start businesses, and become financially independent. Empowered women contribute to poverty reduction, economic growth, and the overall well-being of their families and communities.

3. Gender-Responsive Policies

To support women empowerment, governments and institutions must adopt gender-responsive policies. These policies aim to address gender disparities, promote equal opportunities, and eliminate discrimination. They can include measures such as promoting gender equality in the workplace, implementing laws to prevent violence against women, and ensuring equal representation of women in decision-making roles.

4. Promoting Women's Leadership

Empowering women also involves promoting their leadership and decision-making roles in various spheres of society. Encouraging women to take up leadership positions in politics, business, and community organizations leads to more diverse and inclusive decision-making processes. Women's perspectives and experiences bring new insights and solutions, ultimately benefiting society as a whole.

Problems Faced by Women Empowerment

- 1. Gender-based violence:** Women continue to face various forms of violence, including domestic violence, sexual harassment, and human trafficking. These acts not only violate their basic human rights but also hinder their ability to fully participate in society and pursue their goals.
- 2. Limited access to education:** In many parts of the world, girls still face barriers to accessing quality education. Factors such as poverty, cultural norms, and early

marriage contribute to high dropout rates and limited educational opportunities for girls, preventing them from acquiring the necessary skills and knowledge for empowerment.

3. **Unequal economic opportunities:** Women often face discrimination in the labor market, including lower wages, limited job opportunities, and unequal access to resources and credit. This economic disadvantage hampers their ability to achieve financial independence and contribute to economic growth.
4. **Lack of representation in decision-making:** Women are significantly underrepresented in political and decision-making positions globally. The lack of female representation diminishes their voices, perspectives, and influence in shaping policies and initiatives that affect their lives and rights.
5. **Cultural and societal norms:** Deep-rooted gender norms and stereotypes perpetuate discrimination against women and limit their opportunities. Traditional gender roles, expectations, and biases reinforce inequalities and hinder progress towards women empowerment.
6. **Limited access to healthcare:** Women often face barriers to accessing quality healthcare, including reproductive and maternal health services. Lack of access to healthcare facilities and information can negatively impact their overall well-being and limit their ability to actively participate in society.
7. **Technology and digital divide:** Women face challenges in accessing and utilizing technology, including limited internet access, lower digital literacy rates, and online harassment. The digital divide further exacerbates existing gender inequalities and hampers women's ability to engage in the digital economy and access information and resources.
8. **Intersectionality and multiple forms of discrimination:** Women from marginalized and disadvantaged groups, such as women with disabilities, indigenous women, and LGBTQ+ women, face compounded discrimination. Intersectionality recognizes that women's experiences of discrimination are shaped by multiple factors, and addressing these intersecting forms of discrimination is crucial for comprehensive women empowerment.
5. Addressing these challenges requires a holistic approach that involves legal reforms, policy changes, awareness campaigns, and targeted interventions to dismantle systemic barriers and promote gender equality. By addressing the problems faced by women empowerment, societies can create an inclusive and equitable environment that allows women to thrive, contribute to their communities, and shape a better future for all.

Conclusion

In conclusion, women empowerment is a critical imperative for achieving a more just, equitable, and sustainable world. By empowering women, we unlock their potential, create opportunities for growth and development, and build stronger and more inclusive societies. It is a collective responsibility to work towards dismantling barriers, promoting

gender equality, and ensuring that every woman has the opportunity to thrive and contribute to the betterment of society.

Women empowerment is not just a matter of equality but also a pathway to progress and sustainable development. It requires addressing the challenges faced by women, including discrimination, violence, limited access to education and healthcare, and unequal economic opportunities. By providing quality education, ensuring financial inclusion, implementing gender-responsive policies, and promoting women's leadership, societies can empower women to contribute fully and create a more equitable and prosperous future for all.

Abstract

Information and Communication Technology (ICT) have developed in the common tool for all aspect of life and its impact on Education is a very high in recent days. Students are exposed modern technical gadgets and use various types of ICT and visual culture media outside the classroom. he learning takes place when there is a interaction between to knowledgeable persons. The impact of learning is powerfully imbibed in students when the flow of information is in innovative. The contribution of ICT for the improvement of teaching learning process is higher in school those who have integrated ICT as an innovative factor. This paper is an attempt to disclose the ICT tools used in schools for students and to know the effectiveness of ICT tools used in education.

Introduction

Information and Communication Technologies (ICT) is used in all spheres of life. It has changed the way everything functions, be it learning, solving problems, or working. The tools of ICT such as communications, networked computers, and media have become crucial for the efficient working of all professions. Today, it is almost impossible to imagine the functioning of organizations without these tools. ICT tools have changed the time and space of learning and working, which has been beneficial for the students as well as the working professionals.

The monitoring and measurement of physical ICT system performances are crucial to assess the computer processing unit (CPU) load, the available memory, the used bandwidth, and so on to guarantee the ICT-based services correctly work regarding their expected use. The famous Moore's law states that the number of transistors on a chip tends to double every 18 months; this enabled a rapid growth of digital system performances. However, these technical performances do not provide direct information about the level of quality of the offered services.

The satisfaction of users is then the key of ICT business and must be specified in a service-level agreement (SLA) signed by ICT experts and their customers. By definition, SLA is not a technical document and must be understandable by all stakeholders who are not necessarily aware of ICT terms. Two major issues should be analyzed during the SLA specification: the identification of relationships between the performance indicators defined by the user's application and ICT technical performances and one related to the monitoring of these indicators to be sure that the contract is fulfilled. The purpose of

translation between ICT and the user's application performances covers many types of problems. The translation can be direct such as having the application response time correspond to the time for ICT experts to process and transport the applicative request.

Review of Literature

Simin Ghavifekr et.al, made a study on "Teaching and Learning with ICT Tools: Issues and Challenges from Teachers perception" concludes that that teachers do combine different resources in their teaching, as well as utilizing various modes of ICT with almost two thirds claiming to use technologies (63%) and website (62%). Important technologies for learning such as computers (98%) and educational software (93%) were ranked as the top technologies .

Becta (2004), made a study on "What the research says about using ICT in Geography" found that , ICT resources is not always merely due to the non- availability of the hardware and software or other ICT materials within the school. It may be the result of one of a number of factors such as poor resource organization, poor quality hardware, inappropriate software, or lack of personal access for teachers.

Pelgrum's (2001), in his study "Obstacles to the integration of ICT in education: results from a worldwide educational assessment " have stated that there were not enough training opportunities for teachers in using ICTs in a classroom environment.

Beggs (2000) in his study, "Influences and barriers to the adoption of instructional technology" have found that one of the top three barriers to teachers' use of ICT in teaching was the lack of training and the main problem with implementing new ICT in education was the insufficient amount of in- service training for teachers .

Objectives

- To analyse the ICT tools used in schools
- To know the effectiveness of ICT tools used in education
- To list out the barriers of ICT tools

Research Methodology

The nature of the study is descriptive in nature. The data us based on secondary data that are collected through journals and websites.

ICT Tools Used in Education System

- **Desktop/Laptops** are commonly ICT tools used in education. The teachers used this to present their lessons. Using this devices it is easy to discuss and explain to the students. It is useful because the teachers can get students attention using this. It can be use to show some photos and video clips about their lessons. It is a powerful tool used in education. There are many other uses of this tool such as use for communication, computation, record keeping and other related stuff.
- **Projector** is a tool used to display the photos or images in bigger size. Using computer alone its not easy to see the images or video clips because it is small but because of the projector, you can see and understand the easily. This tool and the desktop/laptop will work together when cables are connected. This is very useful tool in teaching and also when there are meetings held at the school.
- **Digital Camera** is also used in education. It is used for documentation of important events like school elections, contest, meetings and other related stuff.
- **Printer** is also a useful ict tool in education. This is used to print some important documents in the school or printing those activities or projects. Students can use this tool and teachers. You can make more copy of the document in a few minutes.
- **Scanners** are used to scan documents or photos. This is helpful tool because it is easy to make a copy and less hassle.
- **TV** is also used in teaching. Sometimes teachers play movie which are related to their lesson and it is very entertainment ot watch. Also the tv is very useful device to improve the teaching at the class.

Effectiveness of ICT in Education

This dependent variable uncovers that how the understudies can utilize the ICT in their course educational programs to fortify the procedure of advanced education framework in India.

1. Due to ICT, the occupants can upgrade their learning abilities.
2. ICT gives huge online learning storehouse to officeholders by means of computerized library and web.
3. Use of sight and sound frameworks helps the understudies for better learning.
4. Use of video-conferencing system for monitoring the student-teacher activities in the class and generate feedback at personal level.
5. ICT can be utilized to upgrade instructive productivity at the nearby, territorial.

Barriers of ICT Tools

- **Lack of trained teachers-** A major obstacle in the use of ICT in rural education is the lack of knowledge and skills. There is dearth of dynamic teachers formally trained in ICT. Moreover, there is hardly any quality training imparted on a regular basis to teachers involved in ICT education.
- **Unfavourable organizational culture and poor attitude and beliefs-** Often in developing nations, the educational organizations and school management fail to perceive the importance and seriousness of the role of ICT in education enhancement. Also, the teachers attitudes and beliefs are outdated and orthodox.
- **Shortage of time-** In schools, teachers are usually burdened with multiple tasks other than teaching. Moreover, they have to teach all types of subjects along with ICT. They do not have time to design, develop and incorporate technology into teaching and learning.
- **Insufficient funds-** Appropriate and latest hardware and software facility availability determines the effective and efficient usage of technology. In developing countries, technology implementation into education systems is a difficult task as it requires a magnum of funds, infrastructure and support facilities.
- **Lack of technical support-** Rural schools face issues related to technical know-how, absence of ICT service centers, shortage of trained technical personnel. Whether

provided by in-school staff or external service providers, or both, technical support specialists are essential to the continued viability of ICT use in a given school.

- **Resource related issues and internet-** Rural schools usually face trouble with respect to the availability of ICT related resources such as supporting infrastructure, uninterrupted electricity, supplementary resources like multimedia, projectors, scanners, smart boards, and so on. Despite being an integral component of the ICT, internet is lacking in most rural schools.

Advantages of ICT

- ICT is the best tool for increasing the retention, attention and concentration of the Students.
- ICT helps in motivating Students and Teachers which increases their level of confidence,
- ICT helps in enhancing the knowledge of the Students and Teachers
- It also develops the personality of the Students and Teachers.
- It reduces the stress among the Students and Teachers.
- It enhances the Quality Education. 7. It helps in making difficult concepts easier.

Limitations of ICT

- It is limited to the area where the facilities are still lacking.
- It is limited to the teachers and students who lack behind in using the technology.
- Unawareness of upcoming technologies in the techno track world.
- Unavailability of infrastructure Facilities of the school.
- Undeveloped rural areas. 6. Lack of knowledge about the technology.

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT tools in education make it easier for teachers to use the best strategies to bring out the best in their students. ICT in education sector is beneficial for the students, in addition to this, it is making it possible for schools to impart education in the finest way. Moreover, the technology enables them to manage all the management and administration functions in a seamless manner.

Abstract

An information and communication technology (ICT) has turn out to be regular entities in all aspects of human activities. In recent times the use of ICT has primarily changed the practices and procedures of nearly all forms of endeavor within educational institution, industry, research, media and governance. In the field of education sector, ICT has begun to have a presence but the impact has not been as extensive as in other fields. The use of ICT in education lends itself to more student centered learning settings and often this creates some tensions for some teachers and students. The objective of the article is to look at the role of ICT in higher education in Nagaland. It emphasizes computer technology and media because of their availability in educational institutional and their great impact on teaching and learning processes and highlight some changes ICT might have on the role of the teacher in the classroom. The present paper focuses on incorporation of ICTs in educational system in Nagaland and highlights on present educational scenario. The results show that 74.5 per cent of teaching faculties emphasize the need to expand educational opportunities for students in terms of contented interaction and satisfaction in the process of educational activity. This paper is an attempt to draw attention on policies implementation regarding ICT integration and effectiveness of teaching-learning environment. Keywords: Information and communication technology, e-learning and motives

Keywords: Curriculum transaction, Information and communication technology, manipulation, transmission

Introduction

Information and communication technologies (ICT) are an umbrella term that includes all technologies for the management and communication of information (Basargekar and Singhavi, 2015; Mou, 2016; Pulkkinen, 2007; Wood, 1995; Koehler and Mishra, 2009; Hathaway, 1995; Kumar, 1996). ICT considers all the uses of digital technology that already exists to help government, research institute, education, individuals, business and organization. ICT is concern with the storage, repossession, manipulation, broadcast or receipt of digital data (Balanskat et.al, 2006; Owston, 2006; Richardson, 2011). The addition of ICT issues in the curriculum and provision of these telematics in colleges have raised many issues of concern to educators, parents, researchers, policy makers and politicians. Some of the most noteworthy issues are the function of the information technology in the curriculum, and how these issues should be addressed in the curriculum, and most importantly how they impact teaching and learning (Dagdilelis, Satratzemi, and

Evangelidis, 2004; Narula, 2008; McConnell, 2001). The other issue of concern is the repercussions of these technologies in terms of increasing access to high quality education. If one was to compare such fields as medicine, tourism, business, law, banking, insurance etc., the impact of ICT across the past two or three decades has been vast (Rastogi and Malhotra, 2013; Tomei, 2007; Pelgrum, 2001; Williams, 2006; Barak, 2006). A number of people have attempted to discover this lack of action and influence. These have included such determinants as a lack of financial support to purchase ICT technology, require training among the teachers, a lack of motivation among teachers to adopt ICT as teaching tools in class room teaching and demonstration (Collis, 2002). But in recent times, factors have emerged which have strengthened and positive moves to adopt ICTs into classrooms and learning settings.

ICT in Learning - Once a Choice, Now a Necessity

The usage of ICT in the teaching process was a recommendation and an opportunity to innovate and actualize it until only a few months ago. The inevitable change caused by the unexpected circumstances triggered by Covid-19 brought all teachers into a situation where there was no room for consideration and no option to avoid the use of modern technology for learning and teaching purposes. Taking into account current situation that indicates the need for integration ICT into the teaching process, the aim of this paper was to analyze the relevant research, to point out the inevitability of providing additional support to teachers for the use of ICT in teaching. Accordingly, the research objectives was: pedagogical significance and contribution of ICT integration in the teaching process, the importance of the role of teachers in the process of ICT integration in teaching, as well as potential obstacles and difficulties that teachers may face in using ICT in teaching process. The obtained results can contribute to a more comprehensive view of the problems that teachers could face in the implementation of ICT in teaching, which would allow the determination of directions that would affect changes in their opinion related to acceptance and promotion of learning in ICT environment, as well as advantages to innovate teaching process by using ICT in teaching.

The Importance of ICT in Learning

One of the most critical questions asked by educators is: What is the long term impact of the introduction of ICT in the curriculum? Computers, in particular, have positive effects on learning and are motivating for learners (Reeves, 1998). They are accepted by more teachers than other technologies and are widely supported by administrators, parents, politicians, and the public in general. Reeves argue that computers increase equity of access, and reduce the time needed to accomplish a given set of objectives. One of the goals of the Ministry of Education is equity of access to quality education for all; hence this technology is essential if we are to achieve this goal. According to Reeves (1998) computer-based cognitive tools such as databases, spreadsheets, communication software, etc., have been intellectually developed to function as intellectual partners to enable and facilitate critical thinking and higher order learning when using these tools learners are able to

represent and express what they know. They function as designers using the tools for analyzing the world, accessing and interpreting information, organizing their personal knowledge, and representing what they know to others. Hunt (2004) argues that because of the phenomenal rate at which the volume of available information increases, and access to an increasing range of sources, it is becoming clearer than ever that the ability to find appropriate information and use it effectively is of greater value than being able to remember facts. The skills of locating, evaluating and using information effectively from a range of sources constitute the Information Skills which are needed for people to become Information Literate, enabling them to engage in effective decision making, problem-solving and research. Therefore the importance of ICT cannot be over emphasized as it offers the education process one of the most potentially powerful learning tools available. Not only can computers support learning across the whole curriculum, but communication networks also provide the learner with fast and searchable access to vast amounts of information. It also supports a wide range of broader educational objectives including independent learning, collaboration with others and communication skills (Hunt, 2004). It is thus of vital importance that all children in schools have adequate access to ICT and that they develop the necessary skills, taking advantage of the learning capabilities that ICT offers. Primary schools on the other hand are ill-equipped with computers and other important technologies. Computers that are found in some schools were donations and are only used for administrative purposes. The Ministry of Communications, Science and Technology together with the Ministry of Education are embarking on a project of refurbishing obsolete and donating these to primary schools. Although this is a positive move towards providing quality education to pupils at this level, there are challenges in this endeavor. These are:

Physical barriers such as remoteness and lack of : electricity supply: Some primary schools are in very remote areas far away from the power lines. Computers, photocopiers, fax machines, etc. need electricity. The Ministry would have to find ways of providing these with power. One way is equipping such schools with generators. Generators which can supply enough power for these technologies are very expensive! Therefore a lot money running into a couple of millions would be needed.

Lack of funds: Especially for maintenance

Lack of ICT skills for staff: Primary school teachers have no skills whatsoever in ICT, let alone having basic training in computers. The challenge facing the Ministry if it were to include ICT issues in the primary school curriculum is to address lack of ICT skills by teachers. Insufficient and inappropriate software: Suitable software will have to be acquired if desired skills which are in line with curriculum needs are to be developed.

Effective Pedagogical Practices

It is one thing to provide schools with ICTs, and yet another to implement these, that is, uses them effectively in teaching and learning to realize their impact. Teachers require more knowledge of, and confidence with ICT, and a better understanding of its potential to help pupils' learn. This suggests that further substantial support for continuing

professional development is necessary in order that teachers integrate these technologies and infuse ICT issues in the teaching to improve pupil's attainment (Cox et al., 2003).

The pedagogical practices of teachers using ICT can range from only small enhancements of practices using what are essentially traditional methods, to more fundamental changes in their approach to teaching. According to Cox et al (2003) the most effective uses of ICT are those in which the teacher and the software can challenge pupils' understanding and thinking, either through whole-class discussions using an interactive whiteboard or through individual or paired work on a computer. If the teacher has the skills to organize and stimulate the ICT-based activity, then both whole-class and individual work can be equally effective. To effectively infuse and integrate ICT into teaching and learning teachers need to use a range of practices that are essential pedagogical frameworks (Cox et al., 2003). These are: Understanding the relationship between a range of ICT resources and the concepts, processes and skills in their subject using their subject expertise to select appropriate ICT resources which will help them meet the specific learning objectives; this includes subject-specific software as well as more generic resources being aware of the potential of ICT resources both in terms of their contribution to pupils' presentation skills, and their role in challenging pupils' thinking and extending their learning in a subject developing confidence in using a range of ICT resources, via frequent practice and use beyond one or two familiar applications appreciating that some uses of ICT will change the ways in which knowledge is represented, and the way the subject is presented to and engages pupils knowing how to prepare and plan lessons where ICT is used in ways which will challenge pupils' understanding and promote greater thinking and reflection Recognizing which kinds of class organization will be most effective for particular learning tasks with ICT, for example, when pupils should work on their own, how working in pairs and groups should be organized, and when to use ICT for whole-class teaching.

Use of ICT in Teaching

Teaching at School as well as Higher Education, mostly, concentrates on giving information which is not the sole objective of Teaching. Along with giving information, the other objectives are: developing understanding and application of the concepts developing expression power developing reasoning and thinking power development of judgment and decision making ability improving comprehension, speed and vocabulary developing self-concept and value clarification developing proper study habits Developing tolerance and ambiguity, risk taking capacity, scientific temper, etc.

With the present infrastructure, class size, availability of teachers, quality of teachers, training of teachers, etc., it is difficult to achieve all the objectives. Further, most of the teachers use Lecture Method which does not have potentiality of achieving majority of above mentioned objectives. The objectives are multi-dimensional in nature, so for their achievement multiple methods should be used in an integrated fashion. At present ICT may be of some use. It is a well-known fact that not a single teacher is capable of giving up to date and complete information in his own subject. The ICT can fill this gap because it

can provide access to different sources of information. It will provide correct information as comprehensive as possible in different formats with different examples. ICT provides online interaction facility. Students and teachers can exchange their ideas and views, and get clarification on any topic from different experts, practitioners, etc. It helps learners to broaden the information base. ICT provides variety in the presentation of content which helps learners in concentration, better understanding, and long retention of information which is not possible otherwise. The learners can get opportunity to work on any live project with learners and experts from other countries. The super highway and cyber space also help in qualitative improvement of Teaching – Learning Process. ICT provides flexibility to learners which are denied by the traditional process and method. Flexibility is a must for mastery learning and quality learning. On INTERNET many websites are available freely which may be utilized by teachers and students for understanding different concepts, improving vocabulary, developing Reasoning & Thinking, etc. ICT can help in preparing students for SAT, GRE, TOEFL, etc.

Curriculum Transaction

Curriculum transaction is effective implementation of lesson plans in classrooms. A lot of thought goes in planning and preparing the lesson plans. Children will benefit only if the implementation is strong, whether it be circle time, project work, subject time or music time; a teacher's effort should be to reach out effectively to each child in the group. Lesson plans are prepared much in advance and usually there is a gap between preparation and implementation. Children listen to some teachers and are receptive, while the same group of children could respond differently to another teacher. This is also to do with meaningfully engaging children and stimulating their thought processes.

Amongst the information technology computers are the most favored because they have positive effects on learning and are motivating to learners. It also supports a wide range of broader educational objectives including independent learning, collaboration with others and communication skills. The government policy says ICT should be incorporated across the curriculum so as to develop learners ICT capability and provide them with a range of knowledge, skills and attitudes applicable across the curriculum (Pegu, 2014). This paper argues that in order for teacher to effectively integrate ICT into teaching and learning they need to understand the relationship between a range of ICT resources and the concepts, processes and skills in their subject; use their subject expertise to select appropriate ICT resources; develop confidence in using arrange of ICT resources; and know how to prepare and plan lessons where ICT is used in ways which will challenge pupils understanding and promote greater thinking and reflection. It has been found that one of the worst hit by the COVID-19 pandemic has been the education sector. The closure of schools, colleges and universities around the world has affected over 87% of the students globally, according to a UNESCO report. In the meantime, ICT/digital education has emerged as a clear winner during this pandemic around the world (Emami, 2020; Wootton et.al, 2020).

ICT in Evaluation

The introduction of Information and Communication Technologies (ICTs) in mainstream societies affects the way in which the societies interact, communicate, produce, assess, adapt and access vast amount of information at reduced costs. ICTs are not just about technologies, they are more about information transfer and communication. While poor countries grapple with the problem of high investment costs, it is widely acknowledged that convergence of 'old' and 'new' ICTs is still relevant to poor communities, which lack basic infrastructure such as road, water, electricity and telephones. However, there are arguments that with the rapid expansion of these technologies in the western world, the gap between the poor and the rich is widening. It is also recognized that even within the 'information poor' countries, the poor are further marginalized. Despite these arguments, attempts are being made at a global level to empower poor people with access to ICTs and enable them to cope up with the new challenges posed by the increasing competition through globalization. Small and medium enterprises (SMEs) have demonstrated their capabilities to use ICTs to advance their businesses in the recent years. Since the experience of the SMEs is relatively new, it becomes very difficult for them to distance themselves from the ICTs and to study their impact in their day-to-day lives. Impact studies are often based on a simplistic comparison between the pre- and the post- situations of any intervention. The 'before-after' approach can be effective only when impact assessment methodologies are set with correct objectives. The approach otherwise will simply tell us the changes that occurred due to the introduction of the ICTs, but will not tell us how they have occurred and why. These reasons are very important if the impact assessment exercise is to inform policy formulation and decision making processes surrounding new projects involving ICTs. Thorough impact studies will help in devising new strategies for enhancing the role of ICTs in reducing poverty.

Conclusions

It has been found that ICT has a significant role to play in improving the standards in higher education hence its enclosure in the curriculum is a step in the right direction. Both teachers and students in college should acquire ICT knowledge, skills, and awareness if they are to be successful in their futures (Karasavvidis, 2009). As discussed in this paper telematics tools has the potential of promoting employment and entrepreneurship, reducing gender gaps, and raising the standard of living of the state as a whole (Jamir, 2020; Jamir and Ezung, 2017b; Jamir and Ezung 2017a). Therefore, the policy suggest that successful implementation of ICT is more important in influencing and empowering teachers and supporting them in their commitment with students in learning rather than acquiring computer skills and obtaining software and equipment (Jhurree, 2005).

PERSPECTIVE OF ICT TOOLS IN EDUCATION - ICT TOOLS FOR TEACHING AND LEARNING PROCESS

Mr. S. Tamilsenthi M.Sc., M.Phil., (Ph.D)

Assistant Professor, Department of Computer Science
Padmavani Arts and Science College for Women, Salem

Abstract

The 21st century is also called the digital age. Various information and communication technological tools are available to increase the efficacy of teaching and learning process. A review study has been conducted to review the modern information and communication technological (ICT) tools and application of these ICT tools in teaching-learning process. ICT tools significantly improves the teaching-learning process. So, it is essential to apply the ICT tools in teaching- learning process to achieve the desired goals.

Introduction

Information and Communications Technology (ICT) can impact student learning when teachers are digitally literate and understand how to integrate it into curriculum. Schools use a diverse set of ICT tools to communicate, create, disseminate, store, and manage information.

To make ICT teaching and learning more interactive, various platforms and tools have been created and updated over the period of time. Innovative ICT tools used in classroom teaching which helps teachers to integrate in their subject, for teaching-learning and assessment. There are numerous subject specific free/ no cost ICT tools available on online and offline platforms which can be used for teaching, learning and assessment.

Schools use a diverse set of ICT tools to communicate, create, disseminate, store, and manage information. In some contexts, ICT has also become integral to the teaching-learning interaction, through such approaches as replacing chalkboards with interactive digital whiteboards, using students' own smartphones or other devices for learning during class time, and the "flipped classroom" model where students watch lectures at home on the computer and use classroom time for more interactive exercises.

When teachers are digitally literate and trained to use ICT, these approaches can lead to higher order thinking skills, provide creative and individualized options for students to express their understandings, and leave students better prepared to deal with ongoing technological change in society and the workplace.

ICT issues planners must consider include: considering the total cost-benefit equation, supplying and maintaining the requisite infrastructure, and ensuring investments are matched with teacher support and other policies aimed at effective ICT use.

ICT Tools for Teaching Learning and Assessment

1. **Avogadro** is Free and Open Source software, which helps to construct, edit and view the molecules in 3D. Through the Avogadro database, one can explore numerous molecules and see the bond length, bond angle and dihedral angle in a molecule. By using the tool, the learners can benefit from energy minimization to obtain stable conformations.
2. **Vascak** is a Science-based ICT tool. A simulation is the re-creation of a real world process in a controlled environment. The tool is in the form of experiential learning. The tool connects the learner and content in an interactive way, like a role play or in the forms of games.
3. **Kalzium** is an application which will show information about the periodic system of the elements. Kalzium is an open source Chemistry Application for school and college students. This software contains information about chemical elements-mass, charge, picture, discovery information, chemical and energy data and model of the atoms.
4. **Google Earth** formerly known as Keyhole Earth Viewer, provides a 3D representation of Earth based primarily on satellite imagery. This program maps the Earth by superimposing satellite images, aerial photography and GIS data onto a 3D globe, allowing users to see cities and landscapes from various angles. Users can explore the globe by entering addresses and coordinates of the places of their interest.
5. **Google Maps** is a web mapping platform and consumer application offered by Google. It offers satellite imagery, aerial photography, street maps, 360° interactive panoramic views of streets, real-time traffic conditions, and route planning for traveling by foot, car, air and public transportation.
6. **QGIS** earlier known as Quantum GIS, is a free and open source cross platform, Geographic application system application that supports viewing, editing, and analysis of geospatial data. QGIS functions as GIS software, allowing users to analyze and edit spatial information, in addition to composing and exporting graphical maps.
7. **KmPlot** is a mathematical function plotter for the KDE-Desktop. You can plot different functions simultaneously and combine their functions to build new functions. KmPlot supports functions with parameters in polar coordinates. Plots may be printed with high precision in the correct scale. All teachers, students from

higher and senior secondary or graduate, research scholars or anybody who are related to

8. sciences and mathematics or statistics anywhere in the world. It's very close to the Geogebra applet or Graph monkey to trace graphs for different functions.
9. **ANATOMY 3D** It is an online tool used to study human anatomy in an easy and interactive way. Through a simple and intuitive interface it is possible to observe every anatomical structure from any angle. It has detailed 3D models of human body systems such as Musculoskeletal, Cardiovascular, Nervous, Respiratory, Digestive, Urogenital (male and female), Endocrine, Lymphatic, Eye and ear.
10. **Marble** is a virtual globe application which permits the client to pick among the Earth, the Moon, Venus, Mars and different planets to show as a 3-D model. It is free programming under the details of the GNU LGPL, created by KDE for use on PCs and Mobile phones. It is written in C++ and utilizes Qt. Marble is expected to be entirely adaptable; past its cross-stage plan, the center parts can undoubtedly be coordinated into different projects. It is intended to run without the requirement for equipment speed increase, yet it tends to be stretched out to utilize OpenGL.
11. **Socrative** is a formative assessment tool that helps teachers and learners to assess understanding and progress in real time in class through the use of quizzes, questions and reflection questions. It helps in creating personalized activities. Socrative apps are available for download on all major digital devices and platforms. It can be used on smartphones, tablets, laptops, and computers.

Educational Applications of ICT

In many countries, digital literacy is being built through the incorporation of information and communication technology (ICT) into schools. Some common educational applications of ICT include:

- **One laptop per child** : Less expensive laptops have been designed for use in school on a 1:1 basis with features like lower power consumption, a low cost operating system, and special re-programming and mesh network functions. Despite efforts to reduce costs, however, providing one laptop per child may be too costly for some developing countries.
- **Tablets** : Tablets are small personal computers with a touch screen, allowing input without a keyboard or mouse. Inexpensive learning software ("apps") can be downloaded onto tablets, making them a versatile tool for learning. The most effective apps develop higher order thinking skills and provide creative and individualized options for students to express their understandings.
- **Interactive White Boards or Smart Boards** : Interactive white boards allow projected computer images to be displayed, manipulated, dragged, clicked, or copied. Simultaneously, handwritten notes can be taken on the board and saved for later use. Interactive white boards are associated with whole-class instruction rather than student-centred activities. Student engagement is generally higher when ICT is available for student use throughout the classroom.

- **E-readers** : E-readers are electronic devices that can hold hundreds of books in digital form, and they are increasingly utilized in the delivery of reading material. Students both skilled readers and reluctant readers have had positive responses to the use of e-readers for independent reading. Features of e-readers that can contribute to positive use include their portability and long battery life, response to text, and the ability to define unknown words. Additionally, many classic book titles are available free in e-book form.
- **Flipped Classrooms** : The flipped classroom model, involving lecture and practice at home via computer-guided instruction and interactive learning activities in class, can allow for an expanded curriculum. There is little investigation on the student learning outcomes of flipped classrooms. Student perceptions about flipped classrooms are mixed, but generally positive, as they prefer the cooperative learning activities in class over lecture.

ICT and Teacher Professional Development

Teachers need specific professional development opportunities in order to increase their ability to use ICT for formative learning assessments, individualized instruction, accessing online resources, and for fostering student interaction and collaboration. Such training in ICT should positively impact teachers' general attitudes towards ICT in the classroom, but it should also provide specific guidance on ICT teaching and learning within each discipline. Without this support, teachers tend to use ICT for skill-based applications, limiting student academic thinking.

To support teachers as they change their teaching, it is also essential for education managers, supervisors, teacher educators, and decision makers to be trained in ICT use.

Ensuring benefits of ICT investments

To ensure the investments made in ICT benefit students, additional conditions must be met. School policies need to provide schools with the minimum acceptable infrastructure for ICT, including stable and affordable internet connectivity and security measures such as filters and site blockers. Teacher policies need to target basic ICT literacy skills, ICT use in pedagogical settings, and discipline-specific uses. Successful implementation of ICT requires integration of ICT in the curriculum. Finally, digital content needs to be developed in local languages and reflect local culture. Ongoing technical, human, and organizational supports on all of these issues are needed to ensure access and effective use of ICT.

Resource Constrained Contexts

The total cost of ICT ownership is considerable: training of teachers and administrators, connectivity, technical support, and software, amongst others. When bringing ICT into classrooms, policies should use an incremental pathway, establishing infrastructure and bringing in sustainable and easily upgradable ICT. Schools in some countries have begun allowing students to bring their own mobile technology (such as laptop, tablet, or smartphone) into class rather than providing such tools to all students an approach called

Bring Your Own Device. However, not all families can afford devices or service plans for their children. Schools must ensure all students have equitable access to ICT devices for learning.

ICT Enabled Tools for Effective Teaching Learning Process

Following tools are used in the Teaching learning process in Online- Offline mode of instruction. During lockdown these ICT tools proved to be a boon for making the teaching learning process easy and accessible to all students.

1. **Learning management system (MOODLE and Google classroom) :** Moodle stands for Modular Object-Oriented Dynamic Learning Environment and statistics. Moodle is free software, a learning management system providing a platform for e-learning and it helps the various teachers considerably in conceptualizing the various courses, course structures and curriculum thus facilitating interaction with online students. It is configurable, highly-flexible, and feature-rich. RSCOPR has a self-customized MOODLE developed by Digital Content development team. It is a very useful platform to share all learning resources, videos, sharing webpage. Moodle supports a range of media to present or link to learning materials, support the students and to assess their learning. It is able to provide automated assessment in the form of quiz, and give immediate detailed feedback to the students. The messaging system allows learners and teachers to communicate easily. Teachers can also communicate with groups of learners via course forums either to provide answers to learners' questions or to just get involved in discussions. The uploaded learning resources are available to the students whenever they want them. The MOODLE mobile app makes students access even easier via smartphone or mobile device.
2. **Google Classroom - Blended Learning Platform :** Google Classroom is a free, blended learning platform that offers a variety of benefits for both students and teachers. Google Classroom enhances the productivity and take workflow management to the next level. It keeps track of assignments coming in with a simple glance making it very easy to know everyone's status and to follow up with students who are missing work. Everything is time stamped, so late work is easily identifiable. Since Google apps are cloud based the work in Google Classroom saves automatically and is accessible from any device. With the app, both students and teachers can enjoy the full functionality of Google Classroom on a mobile device. Students receive notifications on their phone when assignments and announcements are posted, making it easy for students to stay on top of classroom happenings. As a teacher, the app enables to post from the phone either right from the app or using share-sheet support.
3. **Google Forms:** Google Forms allows to conduct **MCQ quizzes online**. The information is stored as a spreadsheet automatically record the answers. The spreadsheet then populates the responses from the quiz or survey in real-time. Google forms can be used to give feedback to and receive feedback from students and parents.

4. **Videoconferencing Platforms** : During COVID pandemic when the world shifted to Online mode for teaching learning various free videoconferencing platforms like Google meet, Zoom and Cisco webex were used to conduct online classes. All these have varying needs and features. Zoom allows the facility of using its features using a browser also without the need to download the application, the app download is mandatory in case of the other two software. Zoom allows face touch up facility as well which is not present in the other two competing software. Google Meet allows the maximum on-screen chatting time with respect to the others. It has over 60 minute long conferences whereas the time cap of others is only 40 minutes. Zoom has the highest, that is, 49 people that can be viewed on the screen at once.
5. **Virtual Labs** : The Virtual Labs provides remote-access to simulation-based Labs in various disciplines of science and engineering. This student-centric approach facilitates the absorption of basic and advanced concepts through simulation-based experimentation. Internet-based experimentation further permits use of additional web-resources, video-lectures, animated demonstrations and self-evaluation. Virtual labs are any place, any pace, any-time, any-type labs. It is a paradigm shift in student-centric, online education. Virtual labs sessions available on *Virtual labs an MOE Government of India Initiative* for Physical Pharmaceutics, Organic Chemistry and Inorganic chemistry subjects as well as Virtual labs sessions from *Amrita Vlab* portals for Microbiology, Organic chemistry and Inorganic chemistry practical provide helpful tool to teacher during online teaching learning process.
6. **Educational Videos and animations (YouTube and Internet)** : Various valuable educational videos of pharmacy subjects available on internet, YouTube provide additional help in better understanding of subject knowledge.
7. **Smart Classroom**: Classroom integrated with Smartboards and internet connections provides enhanced and interactive learning and teaching opportunities for students and teachers. The internet-connected to systems in smart classes is stored with abundant information. It is accessible anytime for their teaching and learning process. Teachers can access information from various educational sources for teaching purposes. It helps in easy access to online
8. resources. Smart Classrooms helps in developing critical thinking and problem-solving skills in students.
9. **e-Resources** : e- journals from ProQuest Pharma and DELNET were available for students to access remotely in online mode and enhance their learning experience. e books were uploaded on MOODLE and Google Classroom.

Conclusion

ICT tools are important to classroom because it improves learning, make the discussion engaging and fun, use for keeping record, create amazing presentations and make the class happy. Those are some of the ICT tools in education that are very helpful for the students and teachers. Those devices, software's are important to improve the learning and teaching at the classroom.

DISRUPTIVE MODERN EDUCATIONAL TECHNOLOGY IN THE ERA

Mr. S. Dilipkumar

Ph.D Scholar, Department of Computer Science
Government Arts and Science College, Kangeyam
dilipkumarcontact@gmail.com

Dr. K. Jayanthi

Assistant Professor and Head, Department of Computer Science
Government Arts and Science College, Kangeyam
jaysureshlaya@gmail.com

Abstract

Ineducations disruptive technologies plays a vital role to transform the way we teach and learn. AI can personalize learning for individual students, while VR and AR can provide immersive learning experiences. Gamification can make learning more engaging and fun by incorporating game-design elements, and Blockchain can create secure and tamper-proof records of student achievements and credentials. IoT devices can monitor student activity and provide real-time feedback on their progress. By leveraging these technologies, education can become more personalized, effective, and engaging for students. The technologies are Artificial Intelligence (AI), Virtual Reality (VR) and Augmented Reality (AR), Gamification, Blockchain, and Internet of Things (IoT). Personalized learning using AI - Research is being conducted to better understands how AI can be used to personalize learning for individual students. This includes exploring how to develop AI algorithms that can accurately analyze student data and provide personalized recommendations, as well as how to ensure that these recommendations are effective in improving student outcomes.

Keywords: Artificial Intelligence, Block chain, Virtual Reality, Augmented Reality, and Internet of Things

Introduction

Disruptive technology is any innovation that dramatically changes the way consumers, businesses and industries operate. When they're first developed, disruptive technologies often create a new market. They establish their own value network and are often seen as risky outliers when they're introduced. In other cases, disruptive technologies enter an established market but radically change the way business is handled and needs are met. These technologies completely replace their predecessors by offering revolutionary benefits that are notably superior. When a disruptive technology enters an existing market, it can make current items or processes obsolete. To be considered disruptive, technology must be easily accessed by a majority of the population. Revolutionary inventions are often not disruptive because they're too expensive for the common consumer. In many cases, it's not until the technology is refined enough to become affordable that it's considered disruptive to the market. A disruptive technology is one that enters the mainstream and changes the way most people think or behave.

Embracing Digital Transformation in Education

The Rise of Digital Content Delivery

In the digital world, traditional textbooks are giving way to digital content delivery platforms. Publishers in India must adapt to this shift by embracing digital transformation. By investing in digital publishing capabilities, they can produce and distribute content in various digital formats, such as e-books, online courses, and multimedia resources. This will make educational content more accessible, portable, and interactive for learners.

Open Educational Resources (OER) for All

Open Educational Resources (OER) are freely accessible educational materials available online. Indian publishers need to consider the integration of OER into their offerings. They can collaborate with OER providers or develop their own open content. By embracing OER, publishers can cater to the changing needs of educators and learners, ensuring that quality educational resources are available to all, regardless of economic barriers.

Most technology is considered sustaining rather than disruptive. Sustaining technology evolves slowly and steadily over time. Established businesses typically work with sustaining technologies that allow them to refine their production methods and corner a known market. However, over time a disruptive technology can become a sustaining technology as it becomes firmly established. We will explore the future of education in India, focusing on the implications of disruptive technology for Indian publishers

Personalized Learning	Collaboration and Interactive Learning
1. Artificial intelligence to create adaptive learning platforms and tools.	1. Gamification techniques can make learning more enjoyable and interactive.
2. These platforms can provide personalized recommendations, adaptive assessments, and interactive content, allowing students to learn at their own pace and in a style that suits them best.	2. These features can enable students to connect, collaborate, and share knowledge.
3. potential to transform education by creating immersive and interactive learning.	3. Gamification fosters a sense of achievement, making education fun and increasing student involvement

1. Disruptive technology in research fields

Immersive learning experiences using VR and AR - Research are being conducted to better understand the effectiveness of VR and AR in providing immersive learning experiences. This includes exploring how to design virtual environments and scenarios that are engaging and effective in teaching specific concepts, as well as how to ensure that students are able to transfer what they learn in virtual environments to real-world situations.

Gamification and motivation - Research is being conducted to better understand how to effectively use gamification to motivate students and improve learning outcomes. This

includes exploring how to design game elements that are engaging and effective, as well as how to ensure that these elements do not distract from the core learning objectives.

Blockchain and credentialing - Research is being conducted to better understand how blockchain can be used to create secure and tamper-proof records of student achievements and credentials. This includes exploring how to ensure that blockchain-based credentials are widely recognized and accepted by employers and other institutions.

IoT and learning analytics - Research is being conducted to better understand how IoT devices can be used to monitor student activity and provide real-time feedback on their progress. This includes exploring how to design IoT devices and sensors that are unobtrusive and do not interfere with the learning experience, as well as how to ensure that the data collected is accurate and useful for teachers and students.

2. Portals of disruptive technology

Several government agencies provide online portals and resources related to emerging disruptive technologies in education. Here are a few examples:

1. Department of Education's Office of Educational Technology (EdTech)
2. National Science Foundation's Directorate for Education and Human Resources(EHR)
3. National Center for Education Research (NCER)
4. Federal Communications Commission's Education and Digital Learning page (FCC)
5. White House's Office of Science and Technology Policy (OSTP)

Department of Education's Office of Educational Technology: This office provides resources on how to effectively integrate technology into teaching and learning. Their website offers guidance on topics such as personalized learning, edtech procurement, and data privacy.

National Science Foundation's Directorate for Education and Human Resources: This directorate provides funding and support for research on emerging technologies in education. Their website offers information on funding opportunities, as well as resources on topics such as STEM education, teacher professional development, and education research.

National Center for Education Research: This center is part of the Institute of Education Sciences and provides funding and support for education research. Their website offers resources on topics such as early childhood education, literacy, and school leadership.

Federal Communications Commission's Education and Digital Learning page: This page provides information on the FCC's efforts to promote digital learning and broadband access in schools. Their website offers resources on topics such as the E-Rate program, digital equity, and the FCC's broadband deployment initiatives.

White House's Office of Science and Technology Policy: This office provides guidance and support for government initiatives related to science and technology. Their website offers resources on topics such as AI, cybersecurity, and STEM education.

These government portals and agencies can be a valuable resource for educators, school administrators, and policymakers looking to stay up-to-date on emerging disruptive technologies in education and to access resources and support for their use.

3. Different areas of disruptive technologies

Artificial intelligence

Artificial intelligence is a technology that allows computers to problem solve and reason in the same ways that humans do.

- Robots
- Self-driving cars
- Home assistants
- Chatbots found on retail sites
- Digital travel agents

3D Printing

3D printing is used in several industries—primarily the medical and aeronautical fields—and is the process of creating three-dimensional objects from a non-three dimension source, such as a digital source. Objects are created layer by layer in this process and this allows people to print unusual shapes with fewer materials.

Blockchain

Bitcoin and cryptocurrency are examples of currency that are exchanged in digital ledger transactions through what is called a blockchain service. While this process is still evolving and hasn't quite reached the masses yet, it's considered a disruptive technology that is changing the e-commerce industry. It's important because it involves a cashless system that will change how we exchange money.

Smartphones

Smartphones have replaced landlines, traditional cell phones and even computers for many people. As new apps become available, smartphones increase their functionality, disrupting other industries as well. A smartphone can act as a GPS, radio, television, e-reader (which itself replaced printed materials), camera, remote control and more.

E-commerce

E-commerce makes nearly any product accessible via the internet. Shoppers no longer have to leave their homes and shop at brick and mortar stores and startup companies don't need physical retail locations to sell their products. E-commerce disrupted the retail industry by making it possible to shop online and receive anything from shoes to produce in a matter of days or even hours.

Ride-sharing Apps

The advent of ride-sharing apps, customers can now order transportation from individuals rather than a taxi cab company. Customers use an app to arrange where and

when they'd like to be picked up. Ride-sharing changed the industry, both for the consumer and the driver, who can now work independently for ride-sharing companies, setting their own hours and choosing jobs.

GPS Systems

Global Positioning Systems (GPS) have replaced paper maps. Drivers once had to consult paper maps to find their location if they were lost. Modern GPS technology can find users instantaneously by satellite and provide route choices for their destinations. With convenient, turn-by-turn directions, and rerouting options for traffic and road obstacles, the driver is able to focus on driving.

Social Media Networks

Social media networking disrupted traditional social interactions in numerous ways. It made it possible for people to see what friends were doing, without having to call, email or text them. With the ability to check in on friends so quickly via social media channels, some chances for deeper connections were lost. Social media networking has influenced not only personal interactions but also those that take place within businesses.

Streaming Entertainment

The invention of streaming entertainment, cable networks and local programming are no longer necessary for viewers to watch their favorite television series. Consumers don't need to purchase or rent DVDs or Blu-rays to see the latest movies at home. Some films are even available to stream while still in the theater, so customers can stay home and stream them.

Conclusion

The future of education in India is closely intertwined with disruptive technologies. Indian publishers must embrace this transformation to stay relevant and thrive in the evolving educational landscape. By leveraging digital content delivery, open educational resources, personalized learning, augmented and virtual reality, collaboration, and gamification, publishers can create engaging and effective educational experiences. With these advancements, we can look forward to a future where education in India becomes more accessible, inclusive, and impactful for learners of all backgrounds.

EMPOWERING WOMEN THROUGH EDUCATION

Mrs. T.D. Lidya

Research Scholar, PG & Research Dept of Social Work
NASC Nehru Gardens, T.M.Palayam, Coimbatore
lidhianand@gmail.com

Mr. Joe J M Stanny & Ms. Kaviya

IMSW Students, Department of Social Work
Nehru Arts and Science College

Abstract

Education has been identified as a crucial factor in women empowerment, motivating them to participate fully in social, economic, and political spheres. However, women still face significant barriers in accessing education, particularly in developing countries. This paper provides a comprehensive review of the literature on women's access to education and its impact on their empowerment. It examines the various factors that affect women's access to education, including cultural norms, poverty, discrimination, and lack of resources. The paper also highlights the optimistic impacts of education on women's empowerment, such as improved health outcomes, increased economic opportunities, and greater political participation. Finally, the paper discusses the challenges that remain in ensuring women's access to education and the policies and programs that can help overcome these challenges.

Keywords: Education, Social, Economic, Poverty, Discrimination, Opportunities.

Introduction

Educated girls know their rights and are confident to claim them. Educated girls are likely to marry at a mature age and to have smaller and healthier families and are less likely to have mistimed or unintended births. Educated mothers influence their children's educational attainment and the mother's education is usually more influential than the father's in this regard.

However, women's literacy rates are significantly lower than men's in most developing countries including India. Indian government provides low cost education up to high school (12th grade) but college education even though highly subsidized but still beyond the affordability of many families. If the families have to choose between the college education of sons and daughters, usually the sons get the priority. Many girls drop out of the college due to these socio economic reasons.

Objectives of the Study

- To study the socio democratic details of the respondents.
- To study the empowerment of women through education.
- To study the need of education among women.

Significance of the Study

Education is one of the most important means of empowering women with the knowledge, skills and self confidence necessary to participate fully in the development process.

Education is important for everyone, but educating girls and women is especially important because the women education can have ripple effects within the family and across generations. Investing in girls' education is one of the most effective ways to not only women empowerment but overall development of the society as a whole. Hence this study was made to know how education empowers women.

Research Methodology

Research methodology is the blueprint of the research study. Redman and Morry defines research as a 'systematized efforts to gain new knowledge.

Method and Tools of Data Collection

The data was obtained from two sources the primary data and the secondary data. The tool of data collection used for the study was Questionnaire Method. The Questionnaire consists of data of women education and employment.

Sampling Method

The total of 50 respondents were selected from the universe using snowball Sampling Method.

Review of Literature

1, How education empowers women in developing countries Kien Le, My Nguyen

The BE Journal of Economic Analysis & Policy 21 (2), 511-536, 2020

This paper evaluates the impacts of education on women's relational empowerment, within a context of 70 developing countries across the world. Exploiting the variation in educational attainment between biological sisters, we find that education is positively associated with women's intra-household decision making authority in both financial and non-financial domains. Moreover, education reduces relational friction, especially women's exposure to psychological abuse. Our mechanism analyses provide suggestive evidence that these improvements could be attributed to increased access to information, assortative matching, and better labor market outcome.

2, Does education empower women? Evidence from Indonesia Shanika Samarakoon, Rasyad A Parinduri World Development 66, 428-442, 2015

This paper examines whether education empowers women. We exploit an exogenous variation in education induced by a longer school year in Indonesia in 1978, which fits a fuzzy regression discontinuity design. We find education reduces the number of live births, increases contraceptive use, and promotes reproductive health practices. However, except for a few outcome measures, we do not find evidence that education improves women's decision- making authority within households, asset ownership, or community participation. These results suggest that, to some extent, education does empower women in middle-income countries like Indonesia.

3, Women's emancipation through education: A macroeconomic analysisFatih Guvenen, Michelle Rendall

Review of Economic Dynamics 18 (4), 931-956, 2015

We study the role of education as insurance against a bad marriage in light of changing divorce laws during the 1970s. We build and estimate an equilibrium search model with education, marriage/divorce/remarriage, and household labor supply decisions. A key feature of the model is that women bear a larger share of the divorce burden, mainly because they are more closely tied to their children relative to men. Our focus on education is motivated by the fact that divorce laws typically allow spouses to keep the future returns from their human capital

Analysis of the Data

After collecting the data according to the purpose and objectives of the study, the data collected were organized, classified, coded, tabulated and analyzed and interpreted.

Distribution of respondents based on their Age

Age	No. of Respondents	Percentage
20-24	10	20%
25-30	20	40%
30 & above	20	40%
Total	50	100%

The above table indicates that 20% of the respondents belong to the age group of 20-24, 40% of the respondents belong to the age group of 25-30, and 40% of the respondents belong to the age of 30 and above.

Distribution of Respondents Based on Education

Qualification	No. of Respondents	Percentage
UG	20	40%
PG	14	28%
Others(diploma, ITI)	16	32%
Total	50	100%

The above table shows that 40% of the respondents have done UG, 28% of the respondents have done PG and the remaining 32% of the respondents have either diploma or ITI respectively.

Distribution of Respondents Based on Family Support

Family	No: of respondents	Percentage
Parents	12	24%
Spouse	32	64%
Relatives	6	12%
Total	50	100%

From the above table, it shows that 24% of the respondents have support from their parents, 64% of the respondents gets support from spouse, 12% of the respondents gets support from their relatives respectively.

Women's Education in India

In India there are about 200 million of illiterate women even in this modern era. Studies had proved that illiteracy in women causes high rate of ill influence on fertility and infants' health issues which even leads to death at times.

Bihar has the lowest literacy rate in the country at 63.82 percent, followed by Arunachal Pradesh (66.95percent) and Rajasthan (66.95 percent) (67.06 percent).

Girls are less likely to attend school and are more likely to drop out than boys. Women's rights are essential to the advancement of the country. The nation's economic prosperity in the twenty-first century depends on both men and women. The government placed a strong emphasis on education and expanding employment opportunities in order to support women's responsibilities in society. To that end, the Indian government has developed a plethora of plans and programs to aid in their integration into the development process. These actions have improved the economical circumstances of women. After India got independence, women's nationalists were highly regarded.

In modern India our women has placed their feet in almost all the fields. There are so many professional colleges that has a mass number of female students and they achieve great levels in their fields. The professional colleges in India keeps thirty percent of seats reserved for female students. Girls from urbanareas usually gets more educational opportunities than the girls from rural parts of India. This state of low access to education should change in rural areas for the development of the country as well as for the better of their families.

How to Promote Women Education

Following are a few potential motivators for women to pursue higher education:

1. Through distributing parental motivational programs.
2. Parental organizations should be established to promote and support the education of females.
3. State as well as union governments should establish a number of programs and plans to supportgirls' education and should organize programs to raise community awareness.
4. Encourage gender sensitivity in the classroom. Encourage activity-based education.
5. Give the right counselling at the right moment.
6. Appoint school counsellors.

Challenges

In India, there are a number of obstacles preventing women from being fully empowered. In underdeveloped nations like India, social conventions and family structures show and maintain women's inferior status. One of the standards is that practically all societies and communities continue to prefer the birth of sons over the birth of a girl. When it comes to possibilities for education, nutrition, and other factors, society is more prejudiced in favour of male children. The idea that male children inherit the clan in India, with the exception of Meghalaya, is the primary reason of this mind-set. Women frequently absorb the idea of their conventional position as natural, which does them an injustice. Living in poverty is a fact of life for the vast majority of people in India, poverty is a fact of life. It is just another element that makes achieving women's emancipation difficult. The problems with women's rights in India are caused by a number of factors. The empowerment of women in India will immediately benefit from addressing these concerns.

- Gender Discrimination
- Domestic duties are a young girl's child's occupation
- Financial exploitation
- Less interested in academics
- Marriage at a young age
- Working on their family assets (farms, cottage business)

Suggestions and Recommendations

1. Women should be given awareness about the need of education.
2. Marriage approval should be given only if a woman holds at least an UG degree.
3. Basic awareness should be given about the bad influence of social media on women.
4. Women should be conscious about the latest laws that are in favour to them.
5. They should know to defend themselves at their precarious hours.

Conclusion

In the world of computer era acquiring knowledge for women is not restricted. They have to take the initiative to understand the process of acquiring knowledge. Throughout the history we could find women had struggled to get education but being in computer era it could be easier than olden days. There are great personalities like Dr. Ida Sophia Scudder, founder of CMS, Vellore who had started one of the most reputed hospitals in Asia. Women empowerment not just learning the books but it is stepping out of the threshold of the house and leading and guiding the world with their infinitive knowledge. Education is a milestone of women empowerment because it enables them to respond to the challenges, to confront their traditional role and change their life. It assists in bringing equality and works as a means to improve their status within family, society and politico-economic system. Moreover women are considered as Goddess and mother in our country. Let us support our mothers and Goddesses to be more empowered through education.

Hence this study covered the importance of emotional maturity of the survivors in the society where the women of our society are much suppressed.

Abstract

Women empowerment refers to the process of empowering women and promoting gender equality to ensure that women have equal rights, opportunities and participation in various aspects of life. It involves empowering women economically, socially, politically and emotionally. so they can make their own choices, have control over their lives, and actively contribute to society. The perception of women empowerment recognizes that women, like men, are entitled to equal rights and opportunities and should not face discrimination based on their gender. women empowerment is essential for creating a more inclusive and equitable society. When women are empowered, they can contribute to economic growth, poverty reduction, improved education and enhanced overall well-being for communities and nations. it's not just about empowering women but also about transforming systems and structures to ensure gender equality and social justice.

Keywords: Education, Economic empowerment, Health and Reproductive rights, Political participation, Legal rights, Social and Cultural change.

Introduction

Women empowerment is a critical and transformative movement that aims to bring about gender equality and equal opportunities for women in all aspects of life. It acknowledges the historical and systemic discrimination and challenges that women have faced and advocates for their rights, agency and participation in decision-making processes. By empowering women economically, socially and politically, societies can benefit from the full potential and contributions of half of their population.

The benefits of women empowerment extend far beyond individual women. When women are empowered, they become agents of positive change in their families, communities and nations. They contribute to economic growth, poverty reduction and social development. Studies show that when women are given an equal say in decision making, communities are more likely to experience improved governance, peace and sustainable development.

However, challenges persist and the fight for women empowerment is an ongoing journey. Gender-based violence, unequal pay, and limited representation in leadership roles are just some of the issues that still need to be addressed. To achieve true women

empowerment, it requires collective efforts from governments, civil society, businesses, and individuals.

Empowering women is not just a matter of justice; it is an investment in a better, more equal and prosperous future for all. By standing together and promoting women empowerment we can create a world where every woman has the opportunity to shine and make a positive impact on society.

Problems Faced by Women Cadets

Women face various challenges and issues in different parts of the world. It's important to note that the experiences and problems faced by women can vary depending on cultural, social, economic, and political contexts. Here are some of the problems faced by women globally.

- **Gender Inequality:** Women often face discrimination and inequality in various spheres on life including education, employment and political representation. Gender pay gaps and limited access to leadership positions are examples of this inequality.
- **Limited Access to Education:** In certain regions, girls and women may have restricted access to education due to cultural norms, poverty or lack of educational opportunities.
- **Violence Against Women:** Domestic violence, sexual harassment, human trafficking and other forms of violence disproportionately affect women. Such violence not only causes physical harm but also affects women's mental health and well-being.
- **Health Disparities:** Women's health needs may be overlooked or underfunded, leading to disparities in access to healthcare, maternal mortality rates and limited access to family planning and reproductive health service.
- **Works-Life Balance:** Balancing work, family responsibilities and personal life can be particularly challenging for women, leading to issues like burnout and the "motherhood penalty" in career advancement.
- **Forced Marriage and Child Marriage :** Forced marriage and child marriages continue to be issues in some parts of the world, affecting girl's education and well-being.
- **Online Harassment:** Women may face online harassment and abuse, including cyberbullying and threats which can have severe emotional and psychological consequences.
- **Intersectional Discrimination:** Women belonging to marginalized communities may face compounded discrimination due to their gender, race, ethnicity, religion or other identify factors.

Objectives

The objectives of this study is based on the

- To find out the socio – economic profile of women cadets
- To determine the challenges and problems of women empowerment.

Methodology

- The primary details are collected from the 75 women from Coimbatore district.
- Questionnaire method is used to collect data
- The statistical tools used in the study are
 - Simple percentage analysis
 - Chi – Square test

Table No.1: Age of The Respondence

AGE OF THE RESPONDENCE	CHALLENGES AND PROBLEM OF WOMEN EMPOWERMENT			Total
	LOW	MEDIUM	HIGH	
Below 25 Years	3	11	1	15
26-30 Years	4	29	8	41
31-40 Years	2	4	4	10
Above 41 Years	3	5	1	9
Total	12	49	14	75

	Value	df	Asymp.Sig.(2-sided)
Pearson Chi-Square	1.823 ^a	2	.080
Likelihood Ratio	1.866	2	.077
Linear-by-Linear Association	1.636	1	.035
No of Valid Cases	75		

a.0 cells(.0%) have expected count less than 5. The minimum expected count is 5.83.

Table No.2: Challenges and Problem of Women Empowerment

MARITAL STATUS	CHALLENGES AND PROBLEM OF WOMEN EMPOWERMENT			Total
	LOW	MEDIUM	HIGH	
Married	6	24	5	35
Unmarried	6	25	9	40
Total	12	49	14	75

	Value	df	Asymp.Sig.(2-sided)
Pearson Chi-Square	12.700 ^a	4	.013

Review of Literature

1. Rashmi Rani Agnihotri H.R and Malipatil, K.S.(2017)- in their paper entitled,, A Study On Women Empowerment Schemes In India" express that "Women"s' empowerment has become a significant topic of discussion in development and economics. It can also point to approaches regarding other trivialized genders in a particular political or social context. Empowering women to participate fully in economic life across all sectors is essential to build stronger economies, achieve

internationally agreed goals for development and sustainability, and improve the quality of life for women, men, families and communities.

2. Esther Duflo(2012)-in their paper entitled „Women’s Empowerment and Economic Development” opined that “Women’s empowerment and economic development are closely related: in one direction, development alone can play a major role in driving down inequality between men and women; in the other direction, empowering women may benefit development.
3. Rama Devi(2017)found that, “Gender equality is a human right which entitles all persons irrespective of their gender to live with dignity and with freedom. Gender equality is also a precondition for all round development and reducing poverty. Empowered women make invaluable contribution to the improvement of health conditions and educational status and productivity of whole families and communities, which in turn improve prospects for the next generation. Keeping the status of women empowerment and its determinants in India, an attempt is made in this paper to present some of the key determinants of inequalities that exist in our country so as to have an idea about to what extent the women are empowered”.
4. Ahmad Reshi, & Dr.T.Sudha.(2022). in their paper entitled Women Empowerment A Literature Review Women empowerment is a critical issue in today's world, as it aims to increase women's economic, social, and political power. This literature review provides an overview of the concept of women's empowerment, its historical evolution, and its importance in achieving sustainable development goals. The review highlights the various factors that hinder women's empowerment and identifies successful strategies for empowering women, such as education, access to resources, and political participation. Finally, the review concludes with recommendations for policymakers, civil society organizations, and researchers to advance the cause of women empowerment.
5. F. HasinUniversiti, A. K. M. B. Hasan & H.Musa (2018) entitled their study "Women Empowerment model: Strategies to overcome challenges". The purpose of this study is to explore the vital points of women empowerment challenges through exploring previous research literatures and survey reports and to develop a hypothetical strategic women empowerment model. Women Empowerment is the most challenging step and surmounting the hindrance in a woman’s life may enhances her quality to contour her life and society. The proposed strategic women empowerment model is a multidimensional process, which will enable women to enhance their confidence, personality and power in all spheres of life. The methodology of this study is a systematic literature review of qualitative literatures. This study will demonstrate women’s vital role in socio-economic development to materialize the positive effects on sustainable global development

Abstract

In society, teaching has a prestigious place. ICT enables teachers to keep up with new information and techniques for utilizing cutting-edge digital tools and resources. Teachers will become successful teachers by using and learning about ICT. ICT is one of the key elements causing our society to develop so quickly. It may alter the nature of education and the roles that students and teachers play in the transmission of knowledge. Technology is now being used in the classroom by teachers. Common media includes laptops, LCD projectors, desktop computers, EDUCOM, Smart classrooms, and memory sticks. Since teachers are currently the only ones who can create a bright future, teaching community must

Keywords: *ICT, Professional Development, Effects, Higher Education.*

The dramatic developments brought about by information and communication technology (ICT) have improved teacher professional development. Computers, smart phones, laptops, tablets, LCD screens, multimedia players, and projectors are just a few of the ICT-related educational tools that are being employed in classrooms to make teaching and learning more engaging and effective. Information and communication technology (ICT) is a key component of teacher preparation programs that teach educators how to improve both their subject and pedagogical skills. ICT expertise helps teachers create effective lesson plans for both teaching and learning.

ICT contributes to our information and communication processes and the results in the same way that other technologies do in enhancing our quality of life. ICT in education has a great deal of potential to benefit and assist those involved in the process and outcome of education in a variety of ways.

- ICT use has the potential to transform conventional ideas and approaches to the teaching-learning process. Here are a few of the changes:
- It will aid in the changeover to an interactive learning approach from a broadcast model. Thus, the teaching-learning process involves the pupils actively.
- Aids in the process of changing instruction from being teacher-centered to being learner-centered. Students develop self-reliance and self-direction in their knowledge and skill acquisition and application.
- Changes the focus from teaching to learning, making the learning process more dynamic and interesting for both teachers and students.

- Helps teachers transition from being merely knowledge transmitters to being learning facilitators, knowledge navigators, and active co-learners alongside their students.
- ICT has the power to integrate the current educational system with the knowledge-based, information-rich society by giving it access to high-end tools, approaches, and methodologies

Information and communication technology (ICT) is a field that includes cutting-edge computer software used in education and training to improve teachers' professional competence and students' capacity for learning. The retrieval, processing, creation, and transfer of instructional technological information fall under this category of information technology. At the moment, all teaching, administrative, and supporting staff members, as well as students, use ICT resources to successfully accomplish educational goals and carry out their daily tasks more effectively. Teachers employ a variety of ICT-related educational tools in the classroom, such as computers, LCDs, projectors, laptops, multimedia, smart phones, etc., to enhance students' learning.

All these expectations may be met only through need-based, goal-oriented and meaningful in-house discussion, conferences, symposia, workshops, refresher and orientation courses, crash courses, capsule courses and subject-based courses, interdisciplinary and holistic approaches to education and quality research and by enriching the existing libraries and making use of the user-friendly ICT with contextually appropriate and firm pedagogical scaffolding. The teacher educators and individual teacher ought to sincerely and persistently work hard toward this goal. By the latest developments in the information and communication technology the role of teacher in the process of teaching and learning has increased many fold and has become more complex as such teachers are to equip themselves with latest technology then only they cope up the new challenges in the field.

ICT is extremely useful for professional development of teachers and helps the teacher in the following ways:

- The use of ICTs as presentation tools (through overhead and LCD projectors, television, electronic whiteboards, guided “web-tours”, where students simultaneously view the same resources on computer screens) is seen to be of mixed effectiveness. While it may promote class understanding of and discussion about difficult concepts (especially through the display of simulations), such uses of ICTs can re-enforce traditional pedagogical practices and divert focus from the content of what is being discussed or displayed to the tool being utilized.
- In OECD experience, the use of technology in everyday teaching and learning activities appears to be more important than specific instruction in “computer classes”. While the development of technology skills is seen to have a role in the teaching and learning process, it is more important as an enabler of other teaching and learning practices, and not too important in and of itself. Schools that report the highest levels of student ICT-related skills and experience are often not those with heavy computer course requirements, but rather ones that made use of ICTs on a

routine basis throughout the teacher professional development and the teaching and learning process.

- Effective ICT use in education increases teachers' training and professional development needs. However, ICTs can be important tools to help meet such increased needs, by helping to provide access to more and better educational content, aid in routine administrative tasks, provide models and simulations of effective teaching practices, and enable learner support networks, both in face to face and distance learning environments, and in real time or asynchronously.
- Effective teacher professional development should approximate the classroom environment as much as possible. "Hands-on" instruction on ICT use is necessary where ICTs are deemed to be vital components of the teaching and learning process. In addition, professional development activities should model effective practices and behaviors and encourage and support collaboration between teachers. On-going professional development at the school level, using available ICT facilities, is seen as a key driver for success, especially when focused on the resources and skills directly relevant to teacher's everyday needs and practices.
- ICT enriches teaching by enhancing the initial preparation by providing good teaching and training materials, simulators, recording and feedback mechanisms.
- ICT has removed the barriers of space, time and place between teacher and learner.
- It has established a healthy and interactive relationship between teachers, schools, institutions, and universities and enabled teachers to expertise rich resources in cyber space.
- Pedagogical practices of teachers using ICTs can range from only small enhancements of teaching practices, using what are essentially traditional methods, to more fundamental changes in their approach to teaching. ICTs can be used to reinforce existing pedagogical practices as well as to change the way teachers and students interact.
- The cost of teacher training has been reduced by the didactic software and intelligent tutoring systems.
- ICT provides lifelong professional development by providing courses in a virtual situation, training in demand, orientation and refresher courses through video conferencing and online.
- By the exchange of materials through virtual communities, sharing of ideas and experiences and collaborating on projects the ICT can revolutionize the whole teaching profession.

Role of ICT in Curriculum and Teacher Development

Technological development and the changing competencies required in the present scenario for both students and their teachers, it is necessary to design a state-of-the-art curriculum and appropriate teacher development. Teachers need to be adequately prepared to implement a state-of-the-art ICT curriculum. Indeed, introducing any new curriculum calls for careful preparation, management, resourcing, and continuing support.

In the case of an ICT curriculum, even more concerns have to be considered. Educational research studies show that programmes of professional development for teachers are most effective if directed to the stage of ICT development reached by professional students. The implications of these research findings are that teacher development is best conceived as an ongoing process, with many professional development activities conducted in professional colleges. In any educational system, the level of available resources places a restriction on the degree to which any new subject can be introduced into the college curriculum, especially where only the most basic facilities have so far been provided. But ICT is of such importance to the future industrial and commercial health of a country that investment in the equipment, teacher education, and support services necessary for the effective delivery of an ICT-based curriculum should rank high in any set of government priorities. The curriculum proposed takes account of these resource issues and specifies minimum requirements for effective delivery in different circumstances. Information and communication technology, or ICT, is defined as the combination of informatics technology with other, related technologies, specifically communication technology.

Recent Trends in Teacher Education

Based on various changing needs of our society now emphasis is also given to the various educational theory and educational practices. According to these theories and practices changes are also undergo in teacher education also. It is natural that teacher education must include new technology. Teachers should also know the right attitudes and values, besides being proficient in skills related to teaching. As we know the minimum requirement of any training programme is that it should help the trainee to acquire the basic skills and competencies of a good teacher. Now-a-days new trends in teacher education are Inter-disciplinary Approach, Correspondence courses, orientation courses etc. Simulated Teaching, Micro Teaching, Programmed Instruction, Team Teaching are also used in teacher education. Now-a-day Action Research also implemented in Teacher Education. ICT acts as the gateway to the world of information and helps teachers to be updated. It creates awareness of innovative trends in instructional methodologies, evaluation mechanism etc. for professional development.

The Various ICT Initiatives

- **E-pathshala:** The digital India campaign has promoted extensive use of ICTs in the teaching learning process. The **E-pathshala**, a joint initiative of Ministry of Education, Govt. of India and National Council of Educational Research and Training (NCERT), has been developed for showcasing and disseminating all educational e-resources including textbooks, audio, video, periodicals, and a variety of other print and non-print materials for Students, Teachers, Parents, researchers and educators. It provides access to digital textbooks for all classes, graded learning materials and enables participation in exhibitions, contests, festivals, workshops, etc.
- **NROER:** The National Repository of Open Educational Resources (NROER) is developed by CIET, NCERT. It was launched during the National Conference

on ICT for School Education. NROER hosts large number educational resources in many subjects and in different Indian languages for Primary, Secondary and Senior Secondary classes. Resources are available in different formats like Video, Image, Audio, Document and Interactive. Apart from this all NCERT books are available in Flip book format. NROER is an collaborative platform, intend to reached the un-reached and institutions like SCERT, SIERT, SIE, Vigyan Prasar, CCERT, Gujarat Institute of Educational Technology (GIET),

- **Swayam MOOCs:** SWAYAM (Study Webs of Active-Learning for Young Aspiring Minds) is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity and quality. SWAYAM seeks to bridge the digital divide for students who have hitherto remained untouched by the digital revolution and have not been able to join the mainstream of the knowledge economy. This is done through an indigenous developed IT platform that facilitates hosting of all the courses taught in classrooms to be accessed by anyone, anywhere at any time. All the courses are interactive, prepared by the best teachers in the country and are available, free of cost to the residents in India.
- SWAYAM platform is developed by Ministry of Human Resource Development (MHRD) and NPTEL, IIT Madras with the help of Google Inc. and Persistent Systems Ltd. It would be ultimately capable of hosting 2000 courses and 80000 hours of learning: covering school, under-graduate, post-graduate, engineering, law and other professional courses.
- **Swayam Prabha:** SWAYAM Prabha is an initiative of the Ministry of Human Resources Development to provide 32 High Quality Educational Channels through DTH (Direct to Home) across the length and breadth of the country on 24X7 basis. It has curriculum-based course content covering diverse disciplines. This is primarily aimed at making quality learning resources accessible to remote areas where internet availability is still a challenge. The DTH channels are using the GSAT-15 satellite for programme telecasts.
- **ICT in education curriculum:** The National Policy on ICT in School Education has set the goal of preparing youth to participate creatively in the establishment, sustenance and growth of knowledge. Teachers and Children must not be treated merely as consumers but also as active producers.

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT tools in education make it easier for teachers to use the best strategies to bring out the best in their students. ICT in education sector is beneficial for the students, in addition to this, it is making it possible for schools to impart education in the finest way. Moreover, the technology enables them to manage all the management and administration functions in a seamless manner. Hence, there is no doubt that it is a boon to the education industry.

Teachers are the national builders responsible to train future generation to be able for facing challenges of present era, but this is not possible without having full command in utilization of ICT instructional devices properly. It is a fact that knowledge of ICT helps teachers to keep knowledge updated to use modern instructional technology in classrooms. Recently, ICT has become a basic need of human life across the world and no field can work effectively without its support. In education and training, it plays vital role to uplift teaching and learning process. The use of ICT facilities in teacher training programs has become necessary in classrooms and teachers are considering it most important pillar for better students' learning.

Abstract

Information and Communication Technology (ICT) is an extensional term for Information Technology (IT) that emphasizes role of unified communications and the integration of telecommunications (telephone lines and wireless signals) and computers, as well as necessary enterprise software, middleware, storage and audiovisual, that enables users to access, store, transmit, understand and make uses of the information. ICT is an umbrella term that includes any communication device, encompassing radio, television, cell phones, computer and network hardware, satellite system and so on, as well as various services and appliances with them such as video conferencing and distance learning. ICT is a broad subject and the concept is still evolving. It covers any product that will store, retrieve, manipulate, transmit or receive information electronically in digital form (e.g., personal computers, smart phones, digital television, e-mails, and robots). Use of ICT Tools is all pervasive in our everyday life, and use of ICT tools has almost revolutionized the way teachers impart knowledge to students and students receive knowledge from their teachers, Not only that, by making accessible entire bookshelf and whole of library to students and teachers on a click of their smart phones and laptops have made education simple, much more efficient and have enhanced their productivity enormously.

Keywords: ICT tool, Technology in Education, Teaching and Learning.

Introduction

Information and Communication Technology (ICT) includes computers, the Internet, and electronic delivery systems such as radios, televisions, and projectors among others, and is widely used in today's education field. Kent and Facer (2004) indicated that school is an important environment in which students participate in a wide range of computer activities, while the home serves as a complementary site for regular engagement in a narrower set of computer activities. Increasingly, ICT is being applied successfully in instruction, learning, and assessment. ICT is considered a powerful tool for educational change and reform. A number of previous studies have shown that an appropriate use of ICT can raise educational quality and connect learning to real-life situations. Learning is an ongoing lifelong activity where learners change their expectations by seeking knowledge, which departs from traditional approaches. As time goes by, they will have to expect and be willing to seek out new sources of knowledge. Skills in using ICT will be an indispensable prerequisite for these learners.

What is ICT?

- ICT stands for Information and Communication Technology.
- ICT are basically information handling tools, a varied set of equipment, applications and services that are used to produce, store, and process, distribute and exchange information.
- Old ICT include radio, television, telephone, tapes, cassettes etc.
- New ICT include computers, satellite, wireless technology and internet.
- Definition of ICT.
- As per IBM Glossary, "ICT is the use of computer based information systems and communication systems to transmit and store data and information".

Importance of ICT in Education

- No nation can develop without ICT based education. It is regarded as fuel for development.
- ICT based education is the essential ingredient in developing new ideas, in course content and curriculum and in creation of materials and methods of learning and teaching.
- Students need ICT for pursuing academic studies whereas teachers need ICT based information for teaching.
- ICT has made it easier to process and disseminate knowledge. It has increased the efficiency of the knowledge professionals in organizing and managing knowledge.
- It has saved the space of library by creating library on digital platforms and further by uploading them onto the servers or clouds. And thus making retrieval of information much easier for everyone.
- ICT Tools prevalent in colleges for imparting education to students.
- Nowadays teachers use well equipped classrooms with permanently installed and operational projectors. Teachers utilize these for purpose of teaching through presentations, videos and other relevant materials.
- Students are also encouraged to put up presentations and explain the topics to the teachers, while students are continuously evaluated during the process.
- During present pandemic time, teachers make extensive uses of ICT tools for teaching their students online thru Zoom and Google Meet. This could be possible only with such ICT tools, that includes smart phones, laptops, relevant software etc. During this pandemic scenario students and teaching faculties remained continuously in touch over whatsapp and Google Classroom (yet another example of ICT Tools).

ICT Tools in Vogue in Colleges

- Desktop
- Wifi
- Email
- MS Powerpoint

- Laptop
- Scanner
- Smart Board
- MS Office
- Printer
- Google Classroom
- Interactive Whiteboard
- Pen Drive
- Zoom
- MS Word
- USB
- WhatsApp
- MS Excel

Classification of ICT Tools

ICT could be classified in three categories:

1. Physical ICT hardware or Gadgets:

It include audio-visuals, telephone and computers

- Television
- Cell phones
- Modems: A modem is a device that translates signals to and from between two computer devices in a network.
- Computers: There is numerous things that computers can do as far as device connectivity, task processing, data management and storage is concerned. The computer connects us to the internet and helps us share information in a network. Other physical communication technologies (ICT gadgets or hardware) in digital devices include remote controls, keyless entry devices, walkie-talkies, Bluetooth earpieces, GPS Satellites, CD's DVD's, flash drives, tape, compact memory chips.

2. Non-Physical ICT Software (Virtual Communication Technology):

Software and Wireless Network represent ICT Software: Software is a program that direct smooth running of a computer system. It can be system software (such as Microsoft operating system) or application software (such as MS Internet Explorer, MS Word, MS Exceletc.).

3. Communication Technology Services (ICT Services):

Internet and Email services are examples of ICT services.

ICT Equipment for Every Classroom:

Ideally, following 10 ICT items, should be features of every classrooms in our educational institutions. While majority of university colleges do possess majority of them but some of them are still just pipedream for many!

1. A social media output channel to connect with students, parents and fellow classrooms.
2. A desktop computer to access online resources.
3. USB or Wifi access for document sharing and device connectivity.
4. A projector with interactive whiteboard functionality or television screen connectivity.
5. A presentation clicker for classroom mobility. The best one I've found is Logitech which i use for keynotes.
6. A visualiser or document camera for displaying student work, or presenting live feedback.
7. Tablet devices for teacher and student e.g. iPad.
8. Recording hardware/software for podcasting e.g. microphone, headphone and speakers.
9. A digital camera for showcasing work in film or photographs.
10. A few show-off gizmos; e.g. data-logging; remote control vehicles/robots/buzzers and lights.

ICT Tools being used normally by academicians

Applications of ICT in Education

- Enablement of employment of innovative educational resources
- Continuous renewal of methods of learning
- Sets up more active collaboration from students
- Makes possible simultaneous acquisition of technological knowledge
- It facilitates refinement in educational processes

Major applications of ICT

- Internet the miraculous all pervading medium
- Intranet
- E-mail
- E-group
- Mobile phone
- Fax
- Video conference
- Telecommunications and digital telephone exchanges

Everyday applications of ICT:

Banking, Education, Transport, Medicine, Agriculture, E-commerce, E-governance.

ICT is playing a pivotal role in today's world:

- ICT has made the whole world a global village.
- It is accelerating the information explosion.
- This has led to better information management and bibliographical control for digital content.

The job of library and information professionals is becoming tougher day by day and ICT comes to the aid by providing even ways to deal with scattered and unorganized information and avoid information pollution or misleading information some examples of ICT tools,

- Digital library.
- Greenstone.
- Dspace.
- UGC-Infonet: E-Journals Consortium Greenstone and DSpace are open source software for content creation to maintain an institutional repository UGC-Infonet is a country wide network for improving the education system with state-of-the-art technology.

Advantages of using ICT

Communication :

Speed / time – money can be saved because it's much quicker to move information around. With the help of ICT it has become quicker and more efficient.

Globalization :

Video conferencing saves money on flights and accommodation. ICT has brought the countries and people closer together.

Cost effectiveness :

It feels free to send an email which is definitely cheaper than phone calls.

Bridging the cultural gap :

Greater access to technology has helped to bridge the cultural gap by helping people from different cultures to communicate with one another, and allow for the exchange of views and ideas, thus increasing awareness and reducing prejudice.

Education

Computer's along with their programs and the Internet have created educational opportunities not available to previous generations. Through ICT, images can easily be used in teaching and improving the retentive memory of student.

Disadvantages of using ICT

Lack of job security

Experts in a wide variety of fields believe that ICT has made job security a big issue, since technology keeps on changing nearly every day. This means that individuals need to be constantly studying or at least keeping up with changes in their profession, if they want to feel secure in their jobs to be secure.

Overriding Cultures

While ICT may have made the world a global village, it has also contributed to one culture consuming another weaker one. For example, it is now argued that teenagers in the US influence how most young teenagers all over the world now act, dress, and behave.

Privacy

Though information technology may have made communication quicker, easier, and more convenient, it has also brought along privacy issues. From cell phone signal interceptions to e-mail hacking, people are now worried about their once private information becoming public knowledge.

Reliance on Technology

Professor Ian Robertson, a neuropsychology expert based at Trinity College Dublin who carried out the study, said: "People have more to remember these days, and they are relying on technology for their memory but the less you use your memory, the poorer it becomes. People don't bother learning to spell because they use spell-checker, or need a calculator do perform minor addition or subtraction.

Reliability of Information

Anyone with access to a computer and an internet connection internet can start a blog or post something up on a website, so just because something's on the web doesn't mean it's reliable. A prime example of this is the open source encyclopedia, Wikipedia, although considered a good source of information it is not recognized by academic institutions as a trustworthy reference.

Computer Viruses

Computer viruses, worms, Trojans, malware, spam, phishing- any or all can cause chaos and disrupt our daily lives.

Expensive:

Too expensive to afford.

Conclusion

It is true that with advent of numerous ICT tools our lives have changed drastically and it has revolutionized our education methodology, communication ways, as well as our business processes. Overall, we cannot imagine our world without ICT tools & gadgets. We cannot survive for even an hour without our smart phones, laptops, digital devices etc. etc. ICT has enabled revolutionary changes in creation, processing, handling, storage and dissemination of digital information through communication network. Millions and millions of digital information products are coming up day by day. There is an information explosion and bibliographical control is a tough nut to crack. Library and information professionals need training, orientation and awareness to face the big challenges of future.

CHALLENGES OF WOMEN ENTREPRENEURS

K. Thivakar

II – M.Com IB

Nallamuthu Gounder Mahalingam College

Pollachi

Abstract

Entrepreneurship is the core of economic development. In present time women are an emerging economic force. Women constitute the family, which leads to society and family. Social and economic development of women is necessary for development of any country. Though they are facing problems range from mobilizing various resources including problem of capital, marketing, raw material, sales, labor, technical, competition, new technology, problem of land/ Shed/ water/ power/ taxes, lack of family support as well as lack of government support. This paper focuses on the challenges of Women entrepreneur. To overcome these challenges, women entrepreneurs often create their own support systems, overcome their insecurities, and reach out to other women entrepreneurs. In India, various Initiatives have been taken by the government from time to time for entrepreneurship development in the country.

Keywords: Women Entrepreneur, Challenges, family, society, Development, problems

Introduction to Women Entrepreneur

Entrepreneurship plays a significant role in the economic development of any country. Entrepreneurship acts as a pillar for the economic Prosperity of a nation as it leads to generation of Employment, contribution in national income, rural Development, industrialization, technological Development, export promotion etc. Entrepreneurship refers to setting a new business to take Advantages from new opportunities. Entrepreneur is the Key factor of entrepreneurship and now women are Successful in this as they have qualities desirable for Entrepreneurship development. Entrepreneurship is a Suitable profession for women than regular employment. Women are taking interest in the Entrepreneurship in Present years than past. The women have achieved immense development in their mind. With increasing Dependency on services sectors, many opportunities are there for women. Women Entrepreneur is a person who accepts challenging role to meet her personal needs and become economically independent. Many women have this quality but they never got a platform to showcase their talents and hence they don't know their real abilities. Women entrepreneurs are those women who think of a business enterprise, initiate it, organize and combine factors of production, operate the enterprise and undertake risks and handle economic uncertainty involved in running it. According to Government of India, "A Woman enterprise is the one owned and controlled by a woman having minimum financial interest of 51% of the capital and giving at least minimum 51% of generated employment to women.

Challenges of Women Entrepreneurs

Even though female entrepreneurship and the formation of female-owned business networks is steadily rising, there are a number of challenges and obstacles that female

entrepreneurs face. One major challenge for female entrepreneurs faces traditional gender roles that are structurally internalized by society. Entrepreneurship is still considered as a male-dominated field, and it may be difficult to surpass these conventional views. Other than dealing with the dominant stereotype, female entrepreneurs are facing several obstacles related to their businesses.

- Tough competition against male counterparts:
- For a long time, entrepreneurship has been a field dominated by men. And while the scenarios are changing, there is still a long way to go. Limited funding:

Funding is crucial in order to start a business. However, a large number of Indian women do not have property or assets to their name. Hence, they encounter a problem while applying for loans due to lack of collateral. This isn't just a problem in India but across the world. A report by Bloomberg showed that women who own and run businesses receive a lot less funding as compared to what men get.

Work-life balance

Women, across the world, are expected to play a larger part in handling a household and taking care of their family. Owning and running a business means long hours and thus, for women work-life balance can become a problem. In the case of working mothers, taking care of their children takes up a lot of time and energy, thereby often forcing them to give less priority to their business. Men, on the other hand, generally play a secondary role when it comes to household responsibilities. However, this situation seems to be changing now as more men are stepping forward to contribute to the household responsibilities.

Lack of education:

Women form 68% of the country's illiterate population, says UNESCO's education report. Female entrepreneurs without formal education can face numerous problems when it comes to issues such as business development, maintaining accounts, understanding money matters or even day-to-day running of the company. Lack of skills, information and the necessary resources to run a business can reduce their chances of turning their business into a success.

Minimal support:

In many cases, women find themselves on their own with no one to guide them. In this day and age, it is almost necessary to have experienced mentors and role models. For women, managing their business becomes even more difficult if their family and friends don't step up to take some household and family responsibilities. As a result, it can be tough to make a mark in an arena that is already dominated by men.

Fewer sectors are Women friendly:

Despite the policies and measures to promote gender equality, men still dominate India's entrepreneurial ecosystem. According to a recent report, most women-owned businesses in the country operate in low-revenue sectors, while men control the more

profitable sectors like manufacturing, construction, and the like. The male-centric nature of many industries also forces women entrepreneurs to operate in sectors that are historically called “women-friendly”, such as education, apparel, and beauty care, among others. It limits their experience, opportunities, and capabilities to a significant extent.

Lack of Social and Institutional Support:

Most women business owners don't get the social support they require to kick start their business from families, peers, and immediate ecosystems. Lack of mentorship from the business community is also one of the main challenges faced by women entrepreneurs in the country. The case is no different when it comes to institutional support. Though there are schemes for promoting female entrepreneurship, many women don't receive timely guidance or help from authorities. The absence of a proper support network adversely impacts their confidence and ability to take risks.

Poor Funding Prospects:

As unfair as it might sound, the funding scene in India has massive gender biases. Women-led businesses in the country lack access to capital due to the prejudices of investors and other factors. According to a report by Innoven Capital, of all the companies that received funding in 2019, only 12% had at least one female founder. Many VC firms and angel investors are reluctant to invest in women-led businesses, while banks and financial institutions consider women less credit-worthy. Moreover, many Indian women don't have property or assets in their name, which comes up as a problem while applying for collateral loans or private financing.

Lack of Access to Professional Networks:

Limited access to professional networks is another one of the basic problems of women entrepreneurs in India. According to the Google-Bain survey, female business owners are less integrated with formal and informal networks. The survey further indicates that over 45% of urban small business owners suffer due to insufficient avenues of network development. Studies also show that most of the existing professional networks are dominated by men, making it difficult for women to access or navigate such spaces. Consequently, they miss out on opportunities to grow their business, find collaborators and vendors, and build social capital.

Pressure to Stick to Traditional Gender Roles:

Patriarchy conditions both men and women to play certain defined gender roles. Women are expected to cook, do domestic chores, raise kids, care for the elderly, and the like. Juggling familial and professional responsibilities is a challenge in itself, and even more so when you set out to build a brand. The pressure to stick to traditional gender roles is among the main challenges faced by women entrepreneurs. Often, they are asked to give up entrepreneurship and take up an “easy” profession that helps them focus more on family and kids.

Conclusion

Women entrepreneurs often face challenges in accessing funding, feeling respected as business owners, and building a support system. To overcome these challenges, women entrepreneurs often create their own support systems, overcome their insecurities, and reach out to other women entrepreneurs. Women today are the proud owners of giant business chains which they are managing extremely well moving abreast with their male counterparts and, undoubtedly outshining them. Women entrepreneurs make significant contributions to economic growth and to poverty reduction around the world.

Abstract

ICT is a wide term represents Data Correspondence Innovation. ICT instruments for instructing and gaining cover everything from computerized frameworks like printers, Computers, workstations, tablets, and so on, to programming devices, for example, Google Meet, Google Bookkeeping sheets, and so on. In conventional study halls, an educator's fundamental educational devices for showing data are blackboards, multipurpose sheets, notice sheets and diagrams. In any case, in the present current situation, apparatuses of numerous callings are changing at a fantastic rate and that schooling is no exemption. The effect of innovation has prompted the expanded utilization of PCs for detesting data in large numbers of the present study halls. To make ICT instructing and learning more intuitive, different stages and apparatuses have been made and refreshed over the timeframe.

Keywords: Information Communication Technology, Teaching-Learning, Visual Information, Online Platforms.

Introduction

In the present globalized world the Data and Correspondence Advancements (ICTs) have become well established in instructive settings. Imaginative ICT devices utilized in homeroom training which assists educators with coordinating in their subject, for instructing learning and evaluation. There are various subjects explicit liberated from cost ICT apparatuses accessible on the web and disconnected stages which can be utilized for instructing, learning and appraisal. They are utilized by educators to energize cooperation and connect with learning in their study halls. ICT can likewise be utilized by instructors to advance cooperative work and imagination across a great many subjects. This study targets featuring the predominance of ICT instruments for working with understudy learning, maintenance and mentalities. Their utilization has encouraged subjective changes in how educating is drawn closer, particularly as far as introducing the items sound outwardly. Despite the fact that there has been a lot of conversation over various techniques to show understudies, addresses are not prone to quit being utilized. To underscore specific focuses, many talks utilize composed material introduced on a blackboard, whiteboard, or by transparencies on an above projector. However, over the

most recent 10 years, one more technique for giving visual data addresses has acquired conspicuousness which is projecting data straightforwardly from a PC onto a screen for example PowerPoint introductions. As a matter of fact, numerous schools and colleges have rooms outfitted with innovation vital for any educator to show data thusly. Moreover, a few organizations are pushing the educators to involve different innovations for imaginative instructing and learning.

1. **Information Communication Technology:** The ICT devices means to computerized foundations like PCs, PCs, printers, scanners, programming programs, information projectors, and intuitive educating box.
2. **Teaching-Learning:** Teaching can be characterized as commitment with students to empower their comprehension and use of information, ideas and cycles while learning is the obtaining of information or abilities through study, insight, or being instructed.
3. **Visual Information:** It is utilization of at least one of the different visual media regardless of sound. By and large, visual data incorporates still photography, film photography, video or sound recording, realistic expressions, visual guides, models, show, visual show administrations, and the help processes.
4. **Online Platforms:** A web-based stage is a computerized administration that utilizes the Web to work with communications between at least two separate yet reliant clients.

Literature Review

Simin Ghavifekr, Thanusha Kunjappan, Logeswary Ramasamy and Annreetha Anthony, in their examination paper, "Educating and Learning with ICT Devices: Issues and Difficulties from Educators' Discernments (2020)", uncovered that their review is more connected with recognizing the insights in carrying out ICT apparatuses in instructing and learning in the homeroom among teachers. It looks at the difficulties of utilizing ICT devices in educating and learning in the study hall among teachers and perceives the viability of the degree of ICT apparatuses in supporting homeroom instructing and learning.

D. Sakthivel, Dr. B. Radha, in their review "ICT Devices for Current Training (2021)", thought that Innovation can be a very significant apparatus, however it is just an instrument and innovation "can't supplant an educator" and isn't planned to supplant the educator. A decent instructor should carefully be in a real sense and should know the powerful method for coordinating innovation into the educational program with the goal that educators can keep the understudies committed.

Marta Ferragut Martorell, in her review, "Utilization of ICT apparatuses in the EFL homeroom and their effect on understudies' inspiration", expressed that, ICT has transformed into one of the underpinnings of our cutting edge society. Accordingly, the comprehension and dominance of ICT have turned into a fundamental piece of the present instruction, close by numeracy, composing and perusing and it is normal to change the manner in which understudies learn.

Objectives & Limitations

This study means to examine whether utilizing ICT apparatuses would be more useful for understanding the Blackboard instructing. It likewise expects to evaluate the adequacy of ICT apparatuses in aiding the understudies in understanding and holding the data. One of the significant impediments of the review was that absolutely subject to optional information may not be completely confirmed. Likewise the time used for the review was extremely restricted which confined the extent of the review.

Research Methodology

The review depends on auxiliary information. Important information are benefited from different wellsprings of data like Books and Different sites.

ICT Enabled Tools for Effective Teaching Learning Process: Most educators feel good in utilizing address technique, which isn't equipped for accomplishing different targets of homeroom guidance. ICT might be of extraordinary use in accomplishing different targets of educating - growing experience. It gives right data in an extensive way with various models. It assists students with widening their data base. ICT gives assortment in the introduction of content, which assists students with picking up as per their own speed. It helps in better comprehension, and long maintenance of data. Following apparatuses are utilized in the Showing educational experience in Online-Disconnected method of guidance.

Learning Management System (MOODLE): Moodle represents Particular Article Arranged Unique Learning Climate and insights. Moodle is free programming, a learning the board framework giving a stage to e-learning and it helps the different instructors significantly in conceptualizing the different courses, course designs and educational plan in this way working with collaboration with online understudies. Moodle upholds a scope of media to present or connection to learning materials, support the understudies and to evaluate their learning. It can give robotized evaluation as test, and give quick point by point criticism to the understudies.

Google Classroom: Google Homeroom is a free, mixed learning stage that offers various advantages for the two understudies and instructors. Google Study hall improves the efficiency and take work process the board to a higher level. It monitors tasks coming in with a straightforward look making it extremely simple to know everybody's status and to circle back to understudies who are missing work. Everything is time stepped, so late work is effectively recognizable. Since Google applications are cloud based the work in Google Study hall saves consequently and is available from any gadget. With the application, the two understudies and educators can partake in the full usefulness of Google Homeroom on a cell phone.

Google Forms: Google Forms allows directing MCQ tests on the web. The data is put away as a calculation sheet consequently records the responses. The calculation sheet then, at that point, populates the reactions from the test or review progressively. Google structures can be utilized to give input to and get criticism from understudies and guardians.

Video conferencing Platforms: During Corona virus pandemic when the world moved to Online mode for showing learning different free videoconferencing stages like Google meet, Zoom and Cisco WebEx and so on, were utilized to direct web-based classes. Every one of these has fluctuating requirements and highlights for working with intuitive educating and learning.

Virtual Labs: The Virtual Labs gives remote-admittance to recreation based Labs in different disciplines of science and designing. This understudy driven approach works with the assimilation of fundamental and high level ideas through recreation based trial and error. Web based trial and error further allows utilization of extra web-assets, video-addresses, energized exhibitions and self-assessment. Virtual labs are any spot, any speed, any-time, and any sort labs. It is a change in outlook in understudy's driven, online training.

Educational Videos and animations (YouTube and Internet): Different significant instructive recordings of different subjects accessible on web likewise have an incredible effect. YouTube give extra assistance in better comprehension of subject information.

Smart Classroom: Classroom incorporated with Smart board and web connections gives upgraded and intuitive learning and showing open doors for understudies and educators. The web connection with frameworks in brilliant classes is put away with plentiful data. It is open whenever for their instructing and educational experience. Educators can get to data from different instructive hotspots for the end goal of educating. It helps in simple admittance to online assets. Brilliant Homerooms helps in creating decisive reasoning and critical thinking abilities in understudies. There are a lot more ICT instruments that work with imaginative showing educational experience.

Advantages of Using ICT tools Inteaching learning Process

1. **Teaching Makes Easier:** Educators are individuals with one of profoundly benefited of having ICT in schooling. Using it, it makes the instructing more straightforward. At the point when an instructor shows the understudy on another example it makes for them simple to illuminate and to assess what they maintain that they should be aware. Making records documents, pdf records or power point show using PC or PC for them to show the subjects that they will going to handle is an extraordinary way for instructing.
2. **Lesson can be seen and heard:** The advantage of data correspondence innovation is the illustrations should be visible and be hear. Dissimilar to on the books you can simply see it, seeing those pages with sections and brimming with text and at some point we can see the photos. Sound coming from the recordings or music that being utilized will be played again and again that makes it to recall well.
3. **Easier to Understand:** At the point when the understudies see pictures showing up on the white screen utilizing a projector they comprehend it effectively what it truly implies.
4. **Improves Communication:** Having an innovation in the school conversation further develops correspondence. Since through that medium the educators as well as the understudy find out increasingly more jargon words. The legitimate approach to saying a word or words, the right punctuation and the significance of the words gets to the next level.
5. **Enjoying While Learning:** Images, music and recordings are one of the wellsprings of diversion. At the point when individuals see that they are cheerful and appreciate. Dissimilar to from the articles that simply make out of loaded with text

it is exhausting. Through the bright pictures, understudies appreciate paying attention to the music and envision what it truly implies.

6. **Students Perform Better:** What is great and significance of ICT in educating and learning is the understudies perform better. At the point when an educator train before the class and begin to have a visual guide like projector, the understudies are drawing in. Pictures project on the screen and the understudy will see what that is. The understudies perform better when it is alluring.
7. **Know More Information:** The web is one of the quickest approaches to getting data on the grounds that only one touch can get what is required. In training the more we search and read the more data we will get. The educator and the understudies both get more data by the manner in which they use it.
8. **Improves Visual Skill:** At the point when understudies are learning with the utilization of pictures, or recordings their visual ability gets to the next level. A few educators use questions utilizing photographs that will further develop their reasoning expertise and mental ability. What's more, in view of that understudies are partaking in the lesson.

Conclusion

ICT tools are exceptionally strong in educating and learning. ICT instruments enable the two educators and students. They change the educating and educational experiences from being exceptionally educator ruled to becoming understudy driven and this change brings about expanded learning gains for understudies, setting out and considering open doors for students. Also, they are cost-productive and take out the utilization of paper. Close by limiting expense, they additionally save time during class addresses empowering quick and dynamic transmission of content. They give admittance to dynamic instructing and learning strategies and work with simple understudy the executives. ICT is an incredible asset for instructive change and change. Fitting utilization of ICT has assisted the school with raising the interest levels among the understudies and has associated figuring out how to genuine circumstances. Understudies appreciate while learning and perform better.

Abstract

This Paper deals with "Women Empowerment" a burning issue all over the world. "Women empowerment" and "women equality with men" is a universal issue. Women Empowerment refers to the creation of an environment for women where they can make decisions of their own for their personal benefits as well as for the society. Women Empowerment refers to increasing and improving the social, economic, political and legal strength of the women, to ensure equal-right to women, and to make them confident enough to claim their rights, such as: freely live their life with a sense of self-worth, respect and dignity, have complete control of their life, both within and outside of their home and workplace, to make their own choices and decisions, have equal rights to participate in social, religious and public activities, have equal social status in the society, have equal rights for social and economic justice, determine financial and economic choices, get equal opportunity for education, get equal employment opportunity without any gender bias, get safe and comfortable working environment Women have the rights to get their voices heard.

India with a current female population of 48.4% (with men at 51.6%) is on the threshold of growth and women have a big role to play when it comes to the economy. Indian women are still fighting patriarchy and gender inequality.

The need for inclusivity of women is also of paramount importance when it comes to the job market in India.

If it is top positions and decision making power that the urban women is fighting for in the corporate world, the rural women still have to battle for their freedom, basic amenities and equal opportunities. The literacy rate of the adult male population in India is 80.95% whereas that of the female population is a disappointing low of 62.84%.

Women in rural India lack basic formal education and are mostly dependent on their husbands for financial support and lack financial independence for the majority of their lifespan. Apart from that women in rural India are prone to more domestic abuse and violence than their urban counterparts.

Types of Women's Empowerment

There are different ways to categorize women's empowerment, but here are five common types:

- **Economic Empowerment:** This refers to women's ability to participate in economic activities on an equal basis with men. It includes access to education, training, employment, and entrepreneurship opportunities, as well as fair wages, equal pay, and access to credit and financial services.
- **Social Empowerment:** This type of empowerment refers to women's ability to participate fully in social and cultural life, free from discrimination and violence. It includes access to education, healthcare, and legal services, as well as the ability to exercise their rights and freedoms.
- **Political Empowerment:** This type of empowerment refers to women's ability to participate in political life and decision-making on an equal basis with men. It includes the ability to vote and run for office, as well as access to leadership positions and participation in policy-making processes.
- **Educational Empowerment:** This refers to women's ability to access education and develop skills and knowledge that enable them to make informed decisions, pursue their goals, and contribute to society. It includes access to quality education at all levels and opportunities for lifelong learning.
- **Health Empowerment:** This refers to women's ability to access healthcare and make decisions about their health and well-being. It includes access to information, services, and resources that promote reproductive health, maternal health, and overall well-being.

Barriers of Women Empowerment

Women's economic empowerment is not a "women's issue" – it affects everyone. Evidence indicates that when women are excluded from the formal economies of low-income countries, rates of poverty reduction and economic growth suffer. With over 50 years of work supporting women's economic empowerment around the world, here are four substantial barriers that TechnoServe has determined limit women's economic

advancement. A group of women who are a part of TechnoServe's kitchen garden program, gather for a training in a house in Bamanwali village, Bikaner, Rajasthan, India on October 24th, 2016.

Lack of access to resources

Around the world, women are significantly less likely than men to have access to productiveresources such as land, finance, and information. For instance:

- **Only 68% of women in low-income countries have access to a formal bank account**, compared to 74% of men
- Globally, women are paid less than men, with an estimated wage gap of about 23%
- **Women make up only about 12.8% of agricultural landholders worldwide**, leavingthe majority of women lacking access to an immensely important economic asset

In Peru, for instance, where many rural women in particular struggle to access finance, Techno Serve **helped women coffee farmers find new solutions**. This expanded financing helped them double their monthly coffee production and improve their incomes.

"[We] are happy and are working together towards the shared goal of being able to save, invest, access low-interest loans, obtain capital and bring our earnings home to improve the quality of life of our families," said Karen Guevara Sánchez, one of the farmers.

Women work in Ethiopia, District: Limu Kossa, Village: Wolensu, Zone: Jimma, Cooperative: Wolensu, 10 January 2010:

Discriminatory Societal Norms

Gender-based discrimination presents an entrenched barrier to women's economic empowerment. Deeply held beliefs about what women should and should not do exist in many different contexts—in their homes, their communities, and their workplaces, restrictive social norms can affect every aspect of women's lives. Gender-based discrimination and prohibitive societal norms both limit women's access to decent

employment and directly affect their experiences in the workplace. For instance, gender-based harassment at work costs the globaleconomy an **estimated \$12 trillion** every year. In many developing economies, women are specifically prohibited from holding certain jobs, or from working in roles where they must mix with men. Globally, **2.7 billion women are restricted from having the same employment choices as men.**

Unequal Domestic Responsibilities

Women are more likely to be unemployed than men, and the COVID-19 pandemic has only exacerbated this gap—as of **February 2022**, the global labor force participation rate amongmen was 72%. For women, it was only 47%. What’s more, many women around the world, employed and unemployed, bear heavy, unequal domestic workloads.

Around the world, women shoulder disproportionate responsibility for domestic work and unpaidcare-tasks essential to the functioning of the economy. It has been estimated that if women’s unpaid domestic labor were assigned a monetary value, it would make up **between 10 and 39%** of the GDP. This unequal divide in domestic labor is perpetuated by laws restricting what work women can do outside of the home, as well as by social expectations. For example, **recent qualitative studies** from East Africa found that, while attitudes towards “women’s work” were changing somewhat, criticism of the perceived quality of working women’s domestic skills persisted, and the idea that undertaking domestic responsibilities made men “unmanly” remained common

Gender-Based Violence

According to Human Rights Watch, **millions of women workers** around the world are subjected to intimidating, hostile, or humiliating work environments where they experience manydifferent forms of unwelcome sexual conduct. Though sexual harassment at work is a widespread and relatively well-known issue, many women are unable to report this behavior due to fear of social or professional retaliation, civil or criminal consequences or backlash, loss of immigration status, and fear of being disbelieved or blamed for their own experiences. Fear of experiencing gender-based violence in the workplace is yet another factor constraining women’s economic opportunities and contributing to gendered job segregation. In collaboration with the

Ford Foundation, TechnoServe is leading a study to gain a clearer understanding of the relationship between gender based violence (GBV) and women’s economic empowerment in Ghana, Nigeria, and Senegal and provide recommendations to create safer working conditionsfor women entrepreneurs and workers.

Conclusion

Despite progress toward women's empowerment, there is still a long way to go. Making women aware of their potential has now become a need of the times, and the government should implement measures such as health, education, employment,women's awareness, and so on. It is vital to raise societal awareness and establish public attitudes encouraging women's empowerment. Many women have even absorbed patriarchal

conventions to assert their authority over other women, such as the mother-in-power law's over her daughter-in-law

Abstract

The purpose of this essay is to examine the value of women's empowerment in a collegiate environment and the steps that can be taken to advance gender equality, create opportunities, and support female leadership. The empowerment of women is a crucial component of societal advancement, and educational institutions are crucial in establishing a more just future. In order to foster an inclusive and empowering atmosphere, this presentation explores a range of issues that affect women's empowerment, the difficulties they confront, and the efforts colleges can put in place.

Keywords: gender equality, societal advancement, adaptive.

Introduction

The idea of women's empowerment has come to be seen as a strong force for change in the effort to create a more equal and just society. Women's empowerment is the process of giving them the power to take charge of their life, reach their full potential, and actively engage in all facets of society. It attempts to question and eliminate the obstacles and gender-based discrimination that have historically restricted the opportunities and contributions of women.

Women have experienced numerous difficulties throughout history, including social, economic, and political exclusion as well as limited access to healthcare and education. However, as civilizations advance, there has been a rising appreciation of the need of empowering women, not only for their own gain but also for the development and prosperity of communities generally.

Comprehending Women's Empowerment

The process of giving women the authority to take charge of their life, actively engage in decision-making, and get equal opportunities in leadership, education, and work is referred to as "women's empowerment." It entails removing gender-based restrictions, dispelling conventional preconceptions, and promoting an environment where women can thrive.

The Results of Women's Empowerment:

Economic Growth and Poverty Alleviation:

The empowerment of women and their equitable access to educational and professional opportunities have a favourable impact on economic growth. In both industrialized and developing nations, the presence of women in the workforce and in entrepreneurship fosters creativity, boosts productivity, and lowers levels of poverty.

Health and Well-Being:

Women who are empowered are more likely to be able to make valuable contributions to society. Women who receive an education are more likely to effect change, end poverty cycles, and have a beneficial influence on future generations.

Social and Political Involvement:

Women's active participation in politics and decision-making procedures encourages the development of more inclusive laws and systems of government. It makes sure that many viewpoints are taken into account, which produces better results and a more solid democratic foundation.

Obstacles to women's empowerment:

Access to Education and work Women are prevented from reaching their full potential and making a positive impact on the economy by a lack of access to high-quality education and work opportunities.

Violence and Abuse:

Gender-based violence and abuse continue to be widespread problems that impede women's advancement and threaten their wellbeing.

Women's Empowerment Strategies:

In order to end the cycle of poverty and ensure long-term empowerment, it is crucial to invest in the education and skill development of girls.

Economic Empowerment:

Women's economic empowerment depends on encouraging female entrepreneurship, granting them access to resources and financing, and fostering a positive business climate.

Legal and Policy Reforms:

It is crucial to pass and enforce laws that safeguard women's rights, such as those that prohibit discrimination and gender-based violence.

Women's empowerment is a concept that seeks to create an environment in which women can access the same opportunities, resources and rights as men, allowing them to make their own decisions, participate in society and take control of their lives. This concept seeks to break down the barriers of gender identity, stereotypes and culture that impede women's progress. Key components of women's empowerment include education,

economic participation, health and well-being, political participation, and legal rights. Education is essential for women's empowerment, as it provides them with the knowledge and skills they need to find employment, become financially independent and gain greater self-assurance. Economic participation and entrepreneurship are also essential, as they provide women with the opportunity to participate in the workforce. Health and well-being is also essential, as it provides access to quality healthcare and reproductive rights. Finally, political participation is essential, as it allows women to be better represented in government and to be protected from discrimination, violence and abuse.

Importance of Women Empowerment

Throughout history, women have faced a multitude of challenges, from limited access to education and health care to social, economic and political marginalization. However, as societies develop, there is increasing recognition of the importance of women's empowerment, not only for the benefit of women themselves but also for the advancement and common prosperity of the community. Women's empowerment is multidimensional, encompassing economic, social, political and cultural dimensions. Women who are economically empowered are more likely to become financially independent, lift their families out of poverty and contribute to economic growth. Socially empowered women can challenge harmful norms and stereotypes, promoting a more inclusive and tolerant society. Politically empowered women can support policies that promote gender equality and drive transformative change at all levels of governance. Culturally empowered women can preserve and honour their heritage while challenging traditional practices that perpetuate discrimination. It is important to note that women's empowerment does not seek to uplift women at the expense of men; instead, it recognizes that achieving gender equality benefits everyone. It calls for creating enabling environments where men and women can thrive, while respecting each person's rights and choices.

In recent years, significant progress has been made in advancing women's empowerment, with numerous global initiatives, grassroots movements and legal reforms promoting gender equality. However, challenges remain and much work remains to be done.

Essay (or discussion) will explore the importance of women's empowerment, the barriers women face, the benefits of gender equality, and the different strategies and measures that can promote it. promote a more inclusive and empowered society. That way, we can continue to drive momentum towards a world where every woman is free to reach her full potential and contribute meaningfully to a better and more prosperous future. for everyone.

There are five elements to women's empowerment:

- The worthiness of women their freedom to make decisions and exercise choice;
To their right to access resources and opportunities;

- Their right to possess authority over both have personal autonomy both within and without the home;
- And their capacity to sway social change in order to build a more equitable social and economic system on a global scale.

Brief Principles of Women's Empowerment

- Create a strong business leadership structure for gender equality.
- Treat all employees equally at work; uphold and respect nondiscrimination and human rights.
- Ensure the health, safety, and welfare of both male and female employees.
- Encourage women to pursue careers in education, training, and development.
- Introduce supply chain, marketing, and company growth strategies that support women's entrepreneurship.
- Advocate for equality in your community by starting new projects.
- Track and publicly report on the development of gender equality.
- First principle: Gender equality is promoted by leadership
- Confirm high-level support for gender equality and human rights and guide top-level policies in these areas.
- Establish company-wide objectives and benchmarks for gender equality, and take progress into account when evaluating managers' performance.
- Involve both internal and external stakeholders in the creation of organizational policies, initiatives, and implementation strategies that promote equality.
- Ensure that company culture promotes equality and inclusion and that all policies are gender-sensitive, identifying elements that have distinct effects on men and women.

Second guiding principle: nondiscrimination, inclusion, and equal opportunity

- Strive to pay both men and women a living wage and offer equal pay, benefits included, for labor of equal worth.
- Make sure there is no discrimination against women in workplace policies and procedures.
- Actively seek out and appoint women to managerial, executive, and corporate board of director roles.
- 4. Implement gender-sensitive hiring and retention procedures.
- 5. Make sure there are enough women participating in governance and decision-making at all levels and in all business areas, ideally 30% or more.
- Provide opportunities for leave and re-entry from positions with equal pay and status, as well as flexible work arrangements.
- Support equal access to services for caring for children and dependents by assisting both men and women with services, resources, and knowledge.

Principle 3: Safety, health, and absence of violence

- Provide safe working conditions, shield employees from hazardous materials exposure, and disclose potential dangers, including those to reproductive health, while taking into account the varied effects on men and women.
- Create a policy of complete non-acceptance for any type of workplace violence, including verbal and/or physical abuse, and stop sexual harassment.
- Make an effort to provide health insurance or other necessary services, especially for survivors of domestic abuse, and to provide equal access for all staff members.
- Respect both men and women employees' access to time off for personal and family counseling and medical care.
- Identify security issues and deal with them, including the security of women traveling to and from work and while conducting business on behalf of the company, in consultation with the staff.

Conclusion

Thus, while being engaged in historical and local lore work and finding ways to solve problem situations during research and research, mastering the skills of creative search, young people study their own creative potential, and at the same time personal growth and development. It must be taken into consideration the fact that the development of creative potential of the individual in the process of historical and local lore work requires pedagogically purposeful activity of both teachers and parents.

EMERGING DISRUPTIVE TECHNOLOGIES IN EDUCATION: TRANSFORMING LEARNING FOR THE FUTURE

P. Sutheksa, K. Aswatha &

R. PlasinaJenifer

Student, Department of B.Com (E-Commerce)

KPR College of Arts Science and Research

Abstract

This publication explores the rapid advancements in technology that have disrupted traditional educational practices, revolutionizing the way we teach and learn. Emerging disruptive technologies are reshaping classrooms and learning environments, fostering personalized education, enhancing collaboration, and bridging the gap between learners and educators. This paper discusses the key technologies driving this transformation, their impact on education, potential challenges, and the implications for the future of learning.

Introduction

The digital revolution has led to an explosion of innovative technologies that are reshaping every aspect of our lives, including education. In this paper, we delve into the realm of emerging disruptive technologies that have the potential to redefine education, making it more engaging, accessible, and effective.

Augmented Reality(AR) And Virtual Reality(VR)

AR and VR are transforming the educational landscape by creating immersive learning experiences. Virtual simulations enable students to interact with complex concepts, visit historical sites, explore distant planets, and conduct experiments in virtual labs. These technologies enhance comprehension, retention, and motivation in learners.

Artificial Intelligence(AI) and Machine Learning(ML)

AI and ML are revolutionizing the way educators analyze student data, personalize learning paths, and provide timely feedback. Smart tutoring systems, powered by AI, can adapt to individual learning styles and pace, ensuring a more tailored learning experience for every student.

Internet of Things(IOT) in Education

The IoT enables a connected educational ecosystem where smart devices and sensors track student progress, monitor classroom environments, and optimize resource allocation. Real-time data can be utilized to improve learning outcomes and streamline administrative processes.

Gamification in Education

Gamification incorporates game elements and mechanics into educational activities to enhance motivation, engagement, and learning outcomes. By transforming mundane tasks into interactive challenges, students become active participants in their learning journey.

Blockchain Technology and Credentials

Blockchain technology provides a secure and transparent way to verify credentials, certificates, and academic achievements. This decentralized system ensures the authenticity of educational records, making it easier for employers and institutions to trust the qualifications of potential candidates.

Robotics and Automation in Education

Robotics introduces students to coding, engineering, and problem-solving skills in a fun and interactive manner. Educational robots enhance the learning experience, especially in STEM (Science, Technology, Engineering, and Mathematics) subjects.

Cloud Computing in Education

Cloud-based platforms facilitate seamless collaboration, data storage, and accessibility of educational resources. Educators and students can access materials from anywhere, fostering a flexible and inclusive learning environment.

Big Data Analytics for Educational Insights

Big data analytics helps educators gain valuable insights into student performance and learning patterns. These data-driven insights aid in identifying areas for improvement and developing targeted interventions.

Challenges and Consideration

While disruptive technologies offer immense potential, they also bring challenges such as data privacy concerns, digital inequality, and the need for effective teacher training. Addressing these challenges is crucial to harnessing the full potential of these technologies in education.

The Future of Learning

The publication concludes with a look into the future, exploring how the integration of these disruptive technologies may shape the education landscape. It emphasizes the importance of a balanced approach, combining technological innovations with effective pedagogical practices.

Conclusion

Emerging disruptive technologies are paving the way for a more inclusive, interactive, and dynamic educational experience. As we embrace these advancements, it is vital to navigate the challenges responsibly, ensuring that education remains a powerful force in shaping a brighter future for generations to come.

In conclusion, the rapid emergence of disruptive technologies in education marks a transformative phase in the way we teach and learn. From augmented and virtual reality creating immersive educational experiences to artificial intelligence personalizing learning paths, these technologies hold immense promise for enhancing student engagement, knowledge retention, and overall educational outcomes.

The incorporation of Internet of Things, gamification, blockchain, robotics, cloud computing, and big data analytics further broadens the horizons of education, fostering interconnected and data-driven learning environments. However, we must acknowledge the challenges that accompany these advancements, including data privacy concerns, digital inequality, and the need for comprehensive teacher training.

To fully realize the potential of these disruptive technologies, it is essential for educational institutions, policymakers, and stakeholders to collaborate and develop robust frameworks that prioritize student well-being, equity, and academic achievement. An inclusive approach to technology integration, combined with effective pedagogical practices, can ensure that education continues to be a powerful catalyst for societal progress.

As we look to the future, we must remain open to embracing innovation responsibly, leveraging these technologies to empower learners, educators, and communities alike. By embracing emerging disruptive technologies in education, we embark on a journey to create a more dynamic, adaptive, and inclusive learning ecosystem that prepares individuals to thrive in an ever-evolving world. Let us embrace this transformative potential and collectively shape a brighter and more equitable future for generations to come.

WOMEN SENSE OF SELF WORTH IN WOMEN EMPOWERMENT

Dr. P. Nathiya

HOD & Associate Professor, Department of Social Work
Nehru Arts and Science College, Coimbatore

Roshini Raveendran & K. Anila Das

IMSW, Nehru Arts and Science College, Coimbatore

Abstract

In the present scenario women empowerment is a concept that give fragrance to the life of women who having variables of problems. Social life of a women is dealing with several critical situations and per day by day its increasing. This concept undertaking several measures and it equips, allows women to make life determining decisions in their own way. For full filling all the goals of women empowerment, every women want to sense themselves that they are worth and they can achieve the harder things. Financial issues of the family leads to the illiteracy, unemployment, low paying, poverty...etc. By sensing their self-worth each women can eradicate problems that occupied in every sector. Government of India providing so many opportunities for women to become independent and overcome all the challenges in our societies from the national, state and local levels.

Introduction

Women empowerment as a concept was introduced at the UN's third world conference on women in Nairobi in 1985, which defined it as redistribution of social and economic powers and control of resources in favor of women. The history of women empowerment does not starts from exact date, it is a cumulative process. However, there are certain movements, protests, revolutions that furthered the cause of women empowerment much more speedily. Women empowerment mainly refer to the practice of making women independent. So that they can make their own decisions as well as handle their live without any formal or societal restrictions. Almost all countries, regardless of progressive, have a history of mistreating women.

There is a wide range of approaches and methods to empower women. Individuals and government must work together to achieve this. Empower women means promoting women sense of self- worth. This means promoting and helping them to decide their ability to identify their weaknesses and overcome them. Empowering women leads them to take a step for themselves in society. Women empowerment is used to give the power of equal opportunity in all caste, creeds and color. Day by day crimes against the women is furtherly increasing in our nation. In this present condition of the society women empowerment is considered to make them powerful so that they can decide what is right and wrong for them. A women self-worth is valued more than her sex appeal. Government of India has taken various step to assure empowerment of women through this social, educational, economic and political uplifting through various interventions. No matter where the women is born either in rural or urban areas, they should be given basic

education and then the liberty to choose her life decisions. It is not necessary for oneself, but also for the society.

Women Empowerment in India

The concept of empowerment of women has become a burning issue all over the world including India since last few decades. Inequalities between men and women discrimination against women have also been age-old issues all over the world. The women quest for equality with man is a universal phenomenon. Globally renowned for its culture and heritage, India is a country filled with diverse cultures. But the Indian society has always been a patriarchal one which is why women have been continuously denied basic such as education and equality. For a country like India, women empowerment will be a greater role in its growth and development.

Need For Women Empowerment in India

Women from all over the world have been defiant to achieve their current standing. While western nations continue to make progress, third world countries such as India continue to lag behind in terms of women empowerment. Women empowerment is more important than ever in India. India is one of the countries where women are not safe due to various factors. Not only that but horrific crimes against women such as rape, acid attacks, the dowry system, honor killings, domestic violence and other form of violence against women continues to occur through out India. The education and freedom scenario extremely regressive in this situation women are not permitted to continue their education and are married off at a young age. That's why they can't full fill their goals in their life. Due to all these problems, they become dependent for the whole life. Women empowerment equip these women with the tools they need to stand up for themselves and never be victims of injustice.

Status of Women in India

Women have been an integral part of India's culture and society since ancient times. Women should account for 50% of the entire popularity. In present situation still prevailing in rural and underprivileged sections of the Indian societies practicing female feticide. But they are the backbone of the families and are crucial to the growth and development of communities. Yet for centuries women have been relegated to the sideling subjected to discrimination and marginalization. In recent years however, there has been growing awareness of the important of women in society.

Importance of Women in the Society

The important of women in society

1) Contribution to the economy

Women are essential contribution to the economy. They play a significant role in the labour force and contribute to the growth and development of business. Women have also been proven to be successful entrepreneur and are starting their own business at higher rate than men.

2) Education

Education is a crucial factor in the development of society. Women's education is particularly important because it is to improved health outcomes, increased economic growth and poverty reduction, educate women are also livelier to invest in their families and communities, resulting in a ripple effect that benefits overgone.

3) Empowerment

Empowering women is crucial to creating a more just and equitable society. When women are empowered, they are livelier to take leadership roles and contribute to decision making process that impact their lives and the lines of those around them women empowerment also leads to improved health outcomes increased economic growth and poverty reduction.

4) Political participation

Women participants in politics is essential for the development of democratic societies. When women are represented to political leadership, they bring diverse perspective and experience to the table, resulting in more informed decision-making women's political participation also leads to policies that are more inclusive and address the needs of the entire population

5) Family and community

Women are the backbone of families and communities. They provide care, support and nurturing to their families and are essential to the development of children. Women also play a significant role in community building and often take on leadership role in community organization.

Importance of Women Sense of Self Worth:

In today's society, women are constantly being subjected to expectations about beauty relationships, career and more. It's hard to find and maintain self-worth when we live in fear of whether were meeting social standards of what it means to be a woman. Self-worth will set rules that tell other how to treat you. It will show other what you seen in yourself and what you except from them with self -worth comes confidence, esteem and personal growth.

A woman is not dependent upon anyone else to make her feel good about herself, because she already knows. She is confident and aware of her strengths and abilities. She wants to share them with others. This does not mean she is conceited.

- Know yourself
- Care for yourself
- Respect yourself
- Accept yourself
- Love yourself
- Know yourself

Challenges Faced by Woman

Empowering women means promoting women sense of self-worth. But there were lot of challenges that hinder their ability to contribute fully. Some of the challenges are

- Gender discriminations
- Violence against women
- Lack of access to education
- Lack of access of health care

In recent years there have been many positive developments in India efforts to empower women. The government has implemented several programs and policies aimed at improving women health, education and economic opportunities. There has been a significant increase in the number of women participating in the workforce have achieved high positions in various fields, including politics, business and entertainment. Despite these achievements, women in India still face significant challenges. Gender discrimination, violence against women, unequal pay continues to be major issues female feticides and infanticides, particularly in rural areas, remains a significant concern. Women safety and security are also a significant issue, with many incidents of sexual harassment and assaults reported each year.

Factors Affecting the Confidence of Women

Self-esteem comes from the inside out. It means that a woman is not depend upon anyone else to make her good about herself. Because she already knows shine fine just the way she is. She is confident and & aware of her strength and abilities. She wants to share them with others. This does not mean she is conceited. She is also aware of area needing work and growth. By self we want to understand our strength and weakness & improve ourselves.

Self-esteem is a core identity issues essential to personal validation and our ability to experience joy. Once achieved it comes from the inside out. But it can be assaulted or stunted does not feel good from the outside in. A woman with low esteem does not feel good about herself because she has absorbed negative challenge about women from culture &or relationship. Appearance is a factor that everyone considers as the medium of confidence starting with the youth period beauty and thinness on our society doom every woman to eventual failure. Beauty is not a matter to become confident. Magazines, models, are air brushed to perfection and anorectic. "Beautiful" Movie stars are whipped in to perfect shape by personal trainer and use surgery. Body shaming is becoming as a more sensitive issues in our societies and it affect teenager and matured people also in great manner. Our beauty is inside of us not between the colors of the skin. The mother is modeling what women is she also she also modeling, for her son, what a wife is that's why the future our generation will follows some ethics & respect each other. By knowing our self- worth, we should like ourselves, feel positive about yourself & respect your own worth. Feeling positive about your self can determine how you perform "Wollstonecraft was basically saying that should be working towards goals that will showcase abilities dream they worthy of intellect so that stand beside their made that they have at least the equal amount of it.

Just avoiding the body shaming and go with your own goals help to achieve the header things. Female teenagers may feel ashamed of their maturing and with that their development would speed up. This feeling loss of self-confidence and it affect the education, career future also.

Importance of Women Education

Women have demanded equality with men in matters of education, employment, inheritance, marriage, politics and recently in the field of religion also to serve as cleric. A long struggle going back over a century has brought women the property rights, voting right, equality in civil rights before the law in matter of marriage and employment. We all know that girls are now doing better at school than boys. The annual results of secondary and higher secondary board exam reveal this fact more women are getting degrees than men and are filling men jobs in every field. There was a time when women's education was not a priority over among the elite. Since the last quarter of the 20th century and more so after the opening up of die economy post 1991 a growing number of women have been entering into the economical field, seeing paid work outside family.

Educated women now feel that there is more to life than marriage. They can get most of the things they went without marriage, where they find it harder to find a suitable accomplished mate. This is why their marriage is delayed. With increasing literacy among women in India their entry in too many types of work through they're the paternalistic attitude of the male has not undergone much change. For well educate women provides the skills knowledge and self-assurance necessary to be a better mom, worker, and citizen. A well-educated women will also be more predicative and well paid at work. Indeed, the return on investment in education is often higher for women than for males.

Legal Rights of Women in India

Here are some of the most important legal rights that women in India have

- Right to equality [article 14]
- Right to education-The right children to free and compulsory education[act,2009]
- Right to work – The equal remuneration [act 1976]
- Right against sexual harassment [act 2013]
- Right to property – The Hindu succession [act 1956]was amended in[2005]
- Right to marriage and divorce – The Hindu marriage [act 1955]
- Right to health – The maternity benefit [act 1961]
- Right against domestic violence [act 2005]

Conclusion

Women empowerment and the promotion of gender equality are essential for the development of a just equitable society. Empowering women leads to improve health outcome, increased economic growth and poverty reduction. However women continue to face numerous challenges hinder their ability to contribute fully to society.

Female teenagers may feel ashamed of their maturing bodies and wish that their development would speed up. The perceptions has been that female have a underlying lack of trust in their own merit and this gender based diminished self- esteem has restraint female success. Government of India providing several schemes, development programmes, job opportunities, financial support and our constitution includes several legal rights to protect us.

Body shaming is one of the sensitive issues all over the world. It destroys the self-confidence of the young people. So don't depend on the beauty which having in the external part just know your self-worth and by ourselves provide some self- love, self- care, self- motivation in our life. While providing all these things we can able to use some resources and utilities the available facilities to grown up and full fill the goals of women empowerment by sensing our self -worth. Black or white is not a matter, know yourself , be yourself, do yourself and respect others value also.

IMPACT OF ICT TOOLS IN ENHANCEMENT OF TEACHING AND LEARNING IN RURAL AREAS USING VIRTUAL REALITY

Mrs. M. Dhavapriya

Assistant Professor, Department of Computer Science (SF)
Nallamuthu Gounder Mahalingam College, Pollachi
dhavapriyaj@gmail.com

Abstract

The usage of ICT tools has contributed significantly to improving the quality of educational programs offered by institutions rural areas. In this increasingly varying technologically advanced world, educators must cope with the inventions and advancements to provide to the students of this generation. With the help of ICT, one can generate awareness amongst students apart from augmenting their knowledge level in different aspects. Education is one of the notable sectors that is affected by the pandemic. The world is after ICT tools like remote meeting applications, online exams, Virtual Reality, Augmented Reality, etc., to improve the quality of education. Information communications technology has become an integral part of our life, and it is one of the necessities of the modern education system. However, teachers have a mixed opinion to adopt ICT or integrate Virtual Reality or Augmented reality in their routine. Several pieces of research have been carried out to highlight the significance of the use of ICT, VR, or AR tools in education. At the same time, it is difficult for the students in rural areas to acquaint themselves with the technology. So, it is necessary to enhance the usage of advanced tools to increase the outcome the teachers must agree and welcome the integration of Virtual Reality and Augmented reality to enhance the quality of education. A key benefit of using VR in education is that you learn through experience. VR allows us to bring 2D objects to life and makes visualization a reality, enabling us to experience real scenarios or fabricated experiences over and over, and learn in an immersive way.

Keywords: ICT, ICT Tools, Educational inequality, Rural Children, Virtual Reality (VR), VR for education.

Introduction

Although education is a fundamental human right for global citizens, educational inequality still exists within and among countries. Still today, many students struggle to access and receive quality education. Therefore, the value of using immersive technology to increase social competence and perceived social support for children who live in remote areas of the world, reduce inequality, and improve the quality of education requires much attention to address the lacuna between urban and rural education systems. Based on three representative pedagogies (Pedagogy of Technology, Play-based Learning, and Traditional Pedagogy), we designed three social competence educational approaches – virtual reality (VR) assisted social competence education, Lego social competence education, and traditional classroom learning – and applied them to interventions in two rural schools in Southwest China. Our results showed that VR and Lego social competence education prompted children's social competence and perceived social support with elementary school children [1]. Furthermore, VR social competence education resulted in substantially greater social competencies and subjective sense of social support than

traditional classroom learning with middle school children. The results suggest that VR-assisted social competence education could be a potential tool to reduce educational inequalities in underdeveloped countries and regions.

The Concept of Social Competence

The concept of *social competence* refers to an individual's ability to appropriately engage in social occasions and develop meaningful interactions with others. It usually incorporates additional components, such as social communication, social interaction, and social inference. Social competence manifests in a child's emotions, behaviors, and ability to interact with others. The development of social competence is essential for future functioning in society, emotional adjustment, and behavioral management. For example, children who get along with others are more likely to rate themselves as happier and have better academic performance [2]. Socially competent children are also more likely to grow into adults with better health and adults with appropriate social skills gain more prosperous reciprocal interpersonal relationships and function better in society.

A. Current Status of Rural Children and the Importance of Social Competence Education

The global rural population is now close to 3.4 billion. Therefore, rural children's educational development is vital for global human sustainability. Growing evidence suggests that a higher quality of education positively influences children's social competence development. For instance, research has indicated that children from disadvantaged rural regions who experience higher levels of classroom learning have better social skills and fewer behavior problems than children who have not been provided with the same. Thus, it is essential to ensure that as many children as possible can obtain quality social competence education, which can boost their chances for future success and reduce inequality in underdeveloped rural regions [3].

Social Competence Education (SCE) is the concept of teaching particular social skills for students' development, future success, and social well-being. It has also been used in various pedagogies to train rural children's social skills at school. Here we review the most popular and widely used SCE pedagogies from previous and ongoing studies, categorizing them into three categories: the traditional pedagogy - traditional classroom learning; the student-centered pedagogy - play-based learning and a novel pedagogy - the pedagogy of technology (i.e., virtual reality).

B. SCE-related pedagogies

1. Traditional Classroom Learning

It is a highly teacher-centered activity. The classroom usually consists of rows of desks and chairs, allowing students to easily observe and listen to the teacher and watch PowerPoint slides or transparencies. Many schools in rural areas are small and geographically isolated, with inadequate infrastructure, limited educational offerings, and continuous student absence. Therefore, over the past decades, traditional classroom

learning has been employed as the primary approach in many rural schools. It can be effective despite being seen as rigorous and unprogressive. For example, research has demonstrated that students learning in a conventional setting may have higher social skills scores than those in an online environment [4].

2. Play-based Learning

It is a student-centered pedagogy that highlights learning through play as a valuable method for a child's development of social and emotional skills. As a representative of play-based learning, Lego playing has provided a practical approach to encouraging children's genuine interest in strategic play and motivating their socio-behavioral improvement by embedding social interactions through its construction activities. Research has illustrated that Lego may have a powerful potential to engage children and young adults in interactive and collaborative activities. Also, Lego has been harnessed globally to support many rural regions' educational sustainability and to help children's social skills education. However, although many practitioners have endorsed that play-based learning is a practical pedagogy that benefits children's learning, students might be distracted by it more than what they can gain from its learning activities [4].

3. Play-based Learning

It is a student-centered pedagogy that highlights learning through play as a valuable method for a child's development of social and emotional skills. As a representative of play-based learning, Lego playing has provided a practical approach to encouraging children's genuine interest in strategic play and motivating their socio-behavioral improvement by embedding social interactions through its construction activities. Research has illustrated that Lego may have a powerful potential to engage children and young adults in interactive and collaborative activities. Also, Lego has been harnessed globally to support many rural regions' educational sustainability and to help children's social skills education. However, although many practitioners have endorsed that play-based learning is a practical pedagogy that benefits children's learning, students might be distracted by it more than what they can gain from its learning activities[4].

C. Deepening Understanding through Experiential Learning

For years, teachers have provided students field trip opportunities to deepen the learning experience. Moreover, field trips tend to be limited to the local area of the school. Experiential learning through AR/VR serves as an extension to curriculum and encourages students to connect learning with real-world situations and natural phenomena [5]. At Taylorville High School, where AR/VR lessons for Social Studies are being implemented, a survey showed 87% of 9th, 10th, and 11th graders using zSpace confidently felt that AR/VR created a positive learning experience, with 89% of them reporting excellent quality and flow of AR/VR lesson content. Schools in rural communities often face obstacles to providing equitable learning experiences for their students as a result of underfunding in rural schools and districts, poor infrastructure (e.g., slow or no Internet),

and/or less access to technology and professional development to integrate technology for teachers [7]. Barriers to equitable learning across the country - AR/VR helps level that playing field. Using AR/VR, students far away from bodies of water can still study the causes and effects of beach and river erosion, global water distribution and the water cycle, as well as fish structure and function. With content ranging from microscopic (e.g., atoms and cells) to macroscopic (e.g., planets and stars), the possibilities with AR/VR are virtually endless and bring great value to rural students.

Impacts of VR System in Education

A. VR - Assisted Social Competence Education

The main benefit of using VR as a social competence education tool is the possibility of displaying real-life social situations while maintaining control over what is happening. VR can provide simulated scenarios with the exact physical and behavioral mechanism as users' real-life environment, supporting increased standardizations of procedures. When conducting an intervention in a VR scenario, it is possible to create interactive social situations and manipulate all the presented variables simultaneously. Sophisticated VR technology offers a high level of interactivity with stimulating environments, which can motivate children to learn and practice social skills. For example, VR interventions can combine delivering social knowledge, emotional regulation, social interaction, and attention practice, while allowing students to practice social skills in a multi-sensorial, safe, realistic simulated, controllable, and interactive setting.

With the rapid development of VR education, VR-assisted SCE has emerged with related social support programs that may have the potential to help students develop social competence traits for today's world [6]. Research also indicates that VR-based social competence training is as effective for the general population as for special education samples, and most studies related to VR-assisted SCE have focused on special education and clinical interventions. Investigating VR-assisted SCE in mainstream education used VR as an educational training tool to enhance learners' competence in behavioral health and motivational interviewing skills.

B. VR in Rural Areas

The Indian Institute of Technology-Madras (IIT Madras) researchers are developing an AR/VR-enabled (Augmented reality/Virtual Reality) learning for schools in rural areas. The researchers are using digital technologies to develop teaching-learning models for the secondary-school subjects. The initiative's goal is to develop VR-enabled immersive and experiential environments where students get opportunities to learn social science, history, sciences and languages. Through AR/VR, the world-building, digital storytelling and games, the learning process becomes efficient helping students prepare even better [7]. By developing pedagogic tools using AR/VR technology, the project could potentially revolutionize education in rural areas by enabling virtual access and mobility through portable platforms.

C. VR system as a substitute for school laboratories

Rather than building biology, chemical, and physics laboratories, a computer laboratory equipped with VR system can replace them all. This is because VR system can generate various environments virtually, including all school laboratories [8]. Besides replacing standard functionality of those school laboratories, VR system can also add a new functionality to each laboratory. For example in standard biology laboratory, a student observes cells using a microscope, with this method a student can only observe the cells in flat visual or 2D visual. However, using VR system a student can virtually becomes smaller as little as a cell and walk through the observed cells, observing cells from the inside in full 3D visual. The use of VR system to replace school laboratories can also cut school expenditures. Besides cutting the initial cost of building all those laboratories, annual expenses can also be reduced because there will be no cost for disposable lab items such as chemical substances used in chemical laboratory – all experiments are done in virtual environment with virtual items.

D. VR system supports active learning method

Active learning is a method where a student performs certain actions according to what he/she is currently learning. It is totally different with passive traditional classes where students come to class, sit down, listen to their teacher, watch slides, or read their book. VR system can reach the 90% level by allowing the students to simulate the real experience by themselves[9]. Using VR system, students can interact with their learning subject and make their own conclusions based on actions they do in the overall learning process.

Fig 1: VR Device for Prototype Implementation

It is also possible to design VR system where future learning conditions are made from students' past conclusions, this will allow each student to have his/her own current learning condition based on what he/she has learned before, thus generating a specific personal experience for each of them. To maintain an adequate immersion level, minimum devices required are a head-mounted display (HMD), a data glove, a head tracker and a hand tracker. We use eMagin Z800 [1] for the HMD, which uses a separate OLED displays and comes with an integrated head tracker, and P5 [8] for the data glove, which is also

comes with an integrated hand tracker. It is a good thing that both the HMD and the data glove have trackers integrated into them, this will save us some money since most trackers are available with high prices. Unfortunately, the minus point of P5 is its tracker which uses an infrared system so the precision level is not so good. As addition, we will also use a joystick to move our character around. All the devices used in this prototype implementation can be seen in Fig 3[10].

Conclusion

VR system delivers positive impacts for education where it can deliver a fun yet informative edutainment, substitute school equipments and facilities, substitute destructive experiments, support active learning and support constructivism. Those positive impacts also support the fact that VR system is very suitable for education in rural areas where schools there are lack of equipments and facilities needed by their students. By bringing VR system for education in rural areas, students there can have equal education level with students in big cities. It is also possible to make a low cost VR system without sacrificing much of its immersion level[10]. Using various sub-engines available in the internet and low cost VR devices we can develop and run VR system suitable for education.

Abstract

Entrepreneurs play a crucial role in any economy. The economic progress of any country or society will be impossible unless female population is encouraged to engage in entrepreneurship. Entrepreneurs are those who come out with innovative ideas which play a significant role in the growth of a business. Women empowerment refers to the practice of making women independent, so that they can make their own decisions as well as handle their lives without any familial or societal restrictions. Women are known for delivering multiple roles effortlessly. Women are empowered when they have an unrestricted access to education, training, profession to help them improve their position. In a male chauvinistic society, they were confined to four walls. In the present scenario, due to changing trends in industrial sector because of globalisation, rural women empowerment is given more attention to flourish rural entrepreneurship. Rural women entrepreneurs are not only participating in the upliftment of rural economy but also generating rural employment. It reveals that the major challenges faced by the rural women entrepreneurs are competition from urban markets, lack of family support, difficulty in availing Government grants, marketing issue, shortage of resources, lack of transportation, lack of entrepreneurship skill, and lack of training. Despite of all these difficulties, there is a gradual increase in the recognition of rural women entrepreneurs in India. A proper analysis of rural locations and determining the strengths favouring rural women entrepreneurs would encourage more young people to shop in rural areas. Women entrepreneurship must be moulded properly with entrepreneurial traits and skills to meet the changes in trends, challenges in global markets and also be competent enough to continue and struggle for excellence in the entrepreneurial arena. This paper brings out the role played by women entrepreneurs in rural area and their importance in India.

Keywords: Entrepreneurship, Empowerment, Rural women entrepreneurs, Male chauvinism, Economic progress.

Introduction

An entrepreneur is a person who is motivated to satisfy a high need for achievement in innovative and creative activities. This creative behaviour and innovative spirit forms a process of an endless chain and is termed as entrepreneurship. Entrepreneurship acts as a crucial pillar for the economic prosperity of a nation, as it leads to generation of employment, contribution to national income, rural development, industrialisation, technological development, export promotion, etc. For, decades, we have been witnessing changes that have been taken place in terms of roles and statuses among human beings. There have been an enormous evolution in the status of women in past two decades. For centuries, women haven't been provided with proper education from

the initial stage and empowerment of women has been just limited to mere participation in the formal system. Women's development has been considered the key to the overall sustainable development of a nation. A female who plays an intriguing role by frequently interacting and actively adjusting herself with socio-economic, financial and support spheres in society has been defined as woman entrepreneur. Women plays a holistic role in rural empowerment. Rural empowerment can be achieved through rural women entrepreneurs to eliminate social illness like poverty, unemployment and food – insecurity.

As of 2022, in the Indian MSME sector, women-led businesses are about 20.37% and contribute around 23.3% of the labour force. There are 13.5 to 15.7 million businesses owned by women that provide employment to 22-27 million people. According to statistics women in India 2010, proportion of female main workers to total population in percentage is 16.65 in rural areas and 9.42 in urban areas this shows overall less contribution of women in work but more percentage of women workers in rural areas.

Objectives of the Study:

- To depict the current status of rural women entrepreneurship in India.
- To discuss the development of women through entrepreneurship.
- To study the government initiatives to boost women entrepreneurship.

Need for Women Empowerment in India

The need for women's empowerment has been felt because of the status women have in society since the beginning. There is a need to redefine the status of women in the society. A change can be brought through the constitution and supportive legislations. The Constitution of India gives women status equal to men. There have been attempts to reserve seats for women in political bodies. Women have the ability to judge for themselves and take right decisions. However, merely allowing for reservation of women in Panchayat and legislative bodies without empowering women individually falls short of actual emancipation. Women have been excluded from centers of power as a result of systematic conspiracy by patriarchal thought most common in Indian Khap Panchayat that has relegated women to an allotted and confined space. A reorientation of our attitudes towards women has to be carefully guided for their real liberation from the patriarchal domination

The impoverished and illiterate status of most women in society is due to their inability to attain sufficient levels of economic power. To sustain any level of empowerment women have to be educated so that they are aware of their rights and privileges in the modern society. It is only when they become aware of their status in society that they will be able to take full advantage of the concessions offered to them as a corrective measure. Another factor which stresses women empowerment in India is pay disparity. Women in India have not been paid equivalent to their male counterparts in various sectors. According to a study, women in India with same years of experience and qualification are paid 20% less than their male counterparts having same credentials.

Women empowerment has to begin with women's active participation in both urban and rural areas. Unless women throw off the shackles that ignore their talent, skill and spirit women through education and economic self-reliance, women cannot be empowered. Unless they are empowered to take a decisive part in the social, political and economic life of the country, the very development of the country will be lopsided.

Importance of Women Empowerment in India:

Women are generally recognized as home makers with little to do with economy or commerce. In Modern India, more and more women are taking up entrepreneurial activity especially in medium and small scale enterprises. Even women are receiving education, they face the prospect of unemployment. In this background, self-employment has been regarded as a cure to generate income. The Planning commission as well as the Indian government recognizes the need for women to be part of the mainstream of economic development. Rural Women empowerment through entrepreneurship has been seen as an effective strategy to solve the problems of rural poverty.

Women are successful not only in the fields of law, science, medical, aeronautics and space exploration and even in the defence sector, but now they have been showing their potential even in business and industry. Women entrepreneurs are performing excellently and exceeding market expectations. They have proved that they are no less than men in the efficiency, hard work and intelligence. The importance of women entrepreneurs may be ascertained from the study of the functions they perform. These functions are,

- Exploring aspects for starting new business ventures.
- Undertaking risks and handling economic uncertainties.
- Introduction of innovations.
- Function of co-ordination in administration and control.
- Routine supervision.

Empowering women in India through equal opportunities would allow them to contribute to the economy as productive citizens. With higher literacy rates and equal pay for equal work, women will be able to thrive economically and rise out of poverty. In this era of digitalization, globalization, and start-up booms, India has bright prospects in women's entrepreneurship. Women give much importance to communicational, networking and organizational skills in their journey of entrepreneurship. Furthermore, they are good at maintaining a work balance in life. An ideal woman entrepreneur can create a livelihood for at least 10 more women. In the last two decades, Indian women are becoming more and more economically independent in a gradual manner.

Statistics on Women Entrepreneurship in India:

- In India, 58.5 million entrepreneurs, nearly 14% are women.
- The businesses that are women-owned in India provide employment for 45 million.
- Only 2% of the start-up funding went to a woman founder in the year 2017.
- According to a recent report, there are currently about 13.5 to 15.7 million women-owned enterprises in India. Although this number is huge, it only represents 20% of all enterprises.
- Women-owned enterprises are increasing. Over the past decade, women-owned enterprises increased from **14 to 20%**, as per government sources.
- 8% of the women are the operators of small rural non-farm local businesses.
- 38% of the women are involved in rural entrepreneurship solely.
- 16% of the women are rural entrepreneurs (agripreneurship).

Evolution of Women Entrepreneur in India:

Ancient period to Modern period 1950s

In this period, women entrepreneurs fall into two categories. One set to create and manage entrepreneurial activity where there was no income creating male in the family. The women gave up her education and other aspirations and became the income generating member of the family. The second category was the one who lived by social rules and took charge of business in where husband had left. However, in both category, emergence of women entrepreneurs are few. Either the business is taken away by relatives or they become dependent on others.

1970s

This was the decade where women started entering into work force as professionals. They were prepared to maintain balance between their professional and personal life, taking up household responsibilities and managing their occupation well. The decade of 1970s saw the emergence of second wave of feminism and feminist voices against problems of gender disparity, sexual assault, divorce laws, dowry, unequal political representation of women and domestic violence faced by women. This time period witnessed women demanding for their rights and the concept of women entrepreneurship came into being. One of the remarkable events happened with the setting up of Biocon, which is Indian biopharmaceutical company headed by Kiran Mazumdar Shaw. There was significant rise in women workforce, women entrepreneurs during this decade. Crime rate against women increased and this time period witnessed working women, balancing their personal and professional spheres well.

1980s

This decade witnessed new age technology and emphasis on professional education training. One of the most remarkable events of this decade was work done by Mary Roy, a women activist who championed a lawsuit demanding equal rights to

a girl child in her parent's property as a male counterpart. Despite competition in marketplace, Vandana Luthra Curls and Curves (VLCC), which is one of the largest wellness enterprises headed by Vandana Luthra, currently spread across fifteen countries.

1990s

Women in this decade has gain confidence and became more goal driven. Women in this era were capable, competent, confident, assertive. They knew what choices to make as they were clear to what they wanted to do. Women entered as entrepreneurs to expand their family business while others wanted to do something on their own, to create their own niche, and some started to finish their family debts. Ela Bhatt, founder of SEWA, played a major role in empowering employment among rural women in Bihar. Recognising her excellent work in the field of microfinance and labour, she has been awarded with the Padmashri, the Padmabhushan as well as the Ramon Magsaysay Award.

2000s

This is the era of telecom, IT and financial institutions. Women expertise in all these industries. Women have broken through barriers by finding success with start-ups or beginning on a road to become independent consultants. With the spread of education and awareness, women shifted to non-traditional higher level professional activities. Even the government has laid some emphasis on the need for conducting special entrepreneurial training programs for women to start their new ventures.

Obstacles Faced by Rural Women Entrepreneurs:

- To be women and to do something on their own becomes quite difficult because of lack of access to funds as women do not process any tangibles securities.
- Self-motivation attitude to take up risk and behaviour towards the business society, family support, financial assistance from public and private institutions and also environmental not suitable for women to establish business unit.
- The family structure is generally male dominated in India; hence the male members think it a big risk financing the ventures run by women. Greatest demerit to women entrepreneurs is that they are women.
- The financial institutions are doubtful about the abilities of women entrepreneur. They thought funding to women as higher risk comparison to funding to men. That's why bankers put unreasonable securities to get loan to women entrepreneurs.
- Family obligations also the biggest barrier for women entrepreneurs from becoming successful entrepreneurs. They have lots of work like children care, daily home duties, old family member's work etc. Some women entrepreneurs can handle both of duties.

- In current scenario, there is male-female competition in every field and this is also a hurdle for women entrepreneur. Women want to prove themselves and they have ability but also lack support and organizational skill compared to male.
- In India, illiteracy is the root cause of socio-economic barriers. Due to lack of qualitative education, women are not aware of business, technology and market knowledge.
- Women mobility in India is highly limited and has become a problem due to traditional values and inability to drive vehicles. Moving alone and asking for a room to stay out in the night for business purposes are still looked upon with suspicious eyes.

Women Entrepreneur Associations in India:

- FIWE- Federation of Indian Women Entrepreneurs
- CWEI- Consortium of Women Entrepreneurs
- ALEA- Association of Lady Entrepreneurs of Andhra Pradesh
- AWEK Association of Women Entrepreneurs of Karnataka
- SEWA- Self-Employed Women's Association
- WEPA- Women Entrepreneurs Promotion Association
- MOOWE- The Marketing Organization of Women Enterprises
- BMUS- Bihar Mahila Udyog Sangh
- SAARC Chamber Women Entrepreneurship Council
- WEAT- Women Entrepreneurs Association of Tamil Nadu
- TSS- Tie Stree Shakti
- WEC- Women Empowerment Corporation
- MAWE-Mahakaushal Association of Woman Entrepreneurs

Policies and Schemes for Women Entrepreneurs in India:

Overnment of India has implemented many programs for the empowerment of women.

Many of these programs are for providing employment, education, health accessible to the masses. These programs have been especially incorporated keeping in mind the needs and conditions of Indian women, to ensure their participation. Some of these programs are – MNREGA (Mahatma Gandhi National Rural Employment Guarantee Scheme), Sarva Siksha Abhiyaan, janani surakshyojana (reduce maternal mortality) etc. The Ministry of Women and Child Development, Government of India has implemented various new schemes specifically aimed at the empowerment of Indian women. Some of those significant schemes are given below

1) Beti Bachao Beti Padhao Scheme

The scheme focuses on eradicating female infanticide and also on the education of girl child.

It aims for changing the mindset of people towards a girl, by providing financial support and also by strict enforcement of laws and acts.

2) Women Helpline Scheme

This scheme aims for providing 24 hours emergency support help line for women who are subjected to any kind of violence or crime. The scheme provides a universal emergency number -181 across the country for women in distress. The number also provides information on women related schemes in the country.

3) Ujjawala Scheme

A scheme aiming at the rescue of women affected by trafficking and commercial sexual exploitation and their rehabilitation and welfare.

4) Support to Training and Employment Programme for Women (STEP)

The STEP scheme aims at imparting skills to women, making them employable as well as to become self employed. Various sectors like agriculture, horticulture, handloom, tailoring and fisheries etc are covered under the scheme.

5) Mahila Shakti Kendras

The scheme focuses on empowering rural women through community participation.

Community volunteers like students, professional etc will teach the rural women about their rights and welfare schemes.

6) Reservation for Women in Panchayati Raj Institutions

In 2009 the Union Cabinet of the Government of India instituted 50% reservation for the women in Panchayati Raj Institutions. It is aimed mainly at improving the social status of women in rural India. The states of Bihar, Jharkhand, Orissa, and Andhra Pradesh among various others have majority of women as elected head of gram panchayats overnment of India has implemented many programs for the empowerment of women. Many of these programs are for providing employment, education, health accessible to the masses. These programs have been especially incorporated keeping in mind the needs and conditions of Indian women, to ensure their participation. Some of these programs are – MNREGA (Mahatma Gandhi National Rural Employment Guarantee Scheme), Sarva Siksha Abhiyaan, janani suraksh yojana (reduce maternal mortality) etc. The Ministry of Women and Child Development, Government of India has implemented various new schemes specifically aimed at the empowerment of Indian women. Some of those significant schemes are given below

It is aimed mainly at improving the social status of women in rural India. The states of Bihar, Jharkhand, Orissa, and Andhra Pradesh among various others have majority of women as elected head of gram panchayats.

Conclusion

Women play an imperative role in making a nation progressive and guide it towards development. The education of women is the most powerful tool for uplifting a woman and it brings reduction in inequality in gender. For rural women empowerment through entrepreneurship, there is a need for multi-dimensional approach in business. Present situation is much better than past situation in India. In present India, due to globalisation, women play numerous roles and manage those roles efficiently in both personal and professional life. Despite progress toward women empowerment, there is still a long way to go. Making women aware of their potential has now become a need of the hour and government plays a crucial role in promoting women empowerment. Women have the potential and determination to setup, uphold and supervise their own enterprise in a systematic manner, appropriate support and encouragement from society, family, government can make these women entrepreneurs a part of mainstream of national economy and they can contribute to the economic progress of India.

Abstract

Learning occurs when people communicate their expertise to one another. The impact of learning is effective in students when the information flow is in a interesting way. ICT tools can also help in making students attentive and interested .These factors urge the educational system to integrate information and communication technologies into the classroom. Due to the influence of technology, more classrooms today are using computers to present content. Over time, a number of platforms and technologies have been developed and upgraded to make ICT teaching and learning more engaging. Innovative ICT tools that support instructors' integration of their subject matter for teaching-learning and assessment are employed in the classroom. On both online and offline platforms, there are many subject-specific free ICT tools that can be utilised for teaching, learning, and assessment. Teachers utilises them to promote engagement and include students in the learning process in their classes. Teachers can utilises ICT to encourage group projects and creativity in a variety of topic areas. The purpose of this study is to demonstrate how effective ICT tools are at enhancing student learning, retention, and attitudes. As a result, this review paper addresses the functions of ICTs as well as their promises, constraints, and major integration issues with educational systems.

Keywords: Classroom, Assessment, Instructor, Learning Process, Innovative ICT Tools, Creativity.

Introduction:

Information and communication technologies (ICTs) have a stronghold in educational settings in today's globalised society. Their use has encouraged qualitative changes in the way that education is done, particularly when it comes to audio-visual presentation of the material. Even though there has been significant discussion about alternative teaching strategies for college students, lectures are probably not going anywhere. Many lectures use written content that is shown on a chalkboard, whiteboard, or through transparencies on an overhead projector to highlight key topics. But in the last ten years, a different approach to integrating visual content into lectures—namely, projecting data straight from a computer onto a screen—has become more popular. Actually, a lot of colleges and institutions have classrooms that are outfitted with the equipment required for any teacher to present knowledge in this way. Additionally, certain administrative bodies are pressuring the adoption of additional technologies by the instructors for innovative teaching and learning.

Information Communication Technology (ICT) tools include digital tools like computers, laptops, printers, scanners, software, data projectors, and interactive teaching boxes.

Teaching and learning are two different processes. Teaching involves interacting with students to help them understand and put concepts and procedures into practise, whereas learning is the process of acquiring knowledge or skills through reading, doing, or being taught.

Visual information is any information conveyed through one or more visual medium, either with or without sound. Visual information is typically defined as still photography, motion picture photography, video or audio recording, graphic arts, visual aids, models, display, visual presentation services, and support procedures.

Online platforms are digital services that make use of the Internet to enable communication between two or more distinct but related users.

E learning is a learning program that makes use of an information network- such as the internet, an intranet (LAN) or extranet (WAN) whether wholly or in part, for course delivery, interaction and/or facilitation. Web-based learning is a subset of e learning and refers to learning using a internet browser such as the moodle, blackboard or internet explorer.

Blended Learning refers to learning models that combines the face-to-face classroom practice with e-learning solutions. For example, a teacher may facilitate student learning in class contact and uses the moodle (modular oriented dynamic learning environment) to facilitate out of class learning.

Constructivism is a paradigm of learning that assumes learning as a process individuals "construct" meaning or new knowledge based on their prior knowledge and experience (Johassen, 1991). Educators also call it the emerging pedagogy in contrast to the long existing behaviourism view of learning.

Learner- centred learning environment is a learning environment that pays attention to knowledge, skills, attitudes, and beliefs that learners bring with them to the learning process where its impetus is derived from a paradigm of learning called constructivism. In the context of this article, it means students personal engagement to the learning task using the computer and or the internet connection.

ICT Education Benefits

The utilization of Information and Communication Technology (ICT) is leading to significant transformations in both student learning and teaching approaches. Over the past two decades, schools in the Western World have made substantial investments in ICT infrastructures, enabling students to use computers more frequently and for a broader spectrum of applications. Various studies have demonstrated that students who make use of ICT facilities tend to exhibit higher learning gains compared to their counterparts who do not use them.

The integration of Information and Communication Technologies (ICTs) in education has brought about a shift in learning approaches. There is a widespread belief that incorporating ICTs in education fosters a more constructivist learning environment, encouraging increased activity and greater responsibility among students. Consequently, the role of the teacher shifts from being a mere transmitter of knowledge to a supporter, advisor, and coach for students.

The gradual progression of using computers in education evolves from learning about computers to learning how to use computers, and eventually to learning with computers.

ICTs impact on education

Firstly, we should examine student outcomes, which include improved scores in school subjects and the acquisition of new skills crucial for a developing economy. Secondly, it is essential to take into account teacher and classroom outcomes, such as the enhancement of teachers' technology skills, knowledge of innovative pedagogic approaches, and improved attitudes towards teaching. Lastly, other outcomes worth considering involve an increase in innovativeness within schools and improved access to adult education and literacy for community members. The table below provides a comparison between traditional pedagogy and the emerging pedagogy of constructivism, specifically tailored to leverage ICT (especially computers and the internet) to enhance student engagement in learning. The term "emerging pedagogy" refers to the fresh perspective of constructivist learning when contrasted with the long-standing behaviorist view of learning.

Active learning: ICT-enhanced learning harnesses tools for information examination, calculation, and analysis, providing a platform for students to inquire, analyze, and construct new knowledge. Learners are encouraged to engage with real-life problems in-depth, making the learning process more relevant and less abstract, compared to traditional pedagogy focused on memorization and rote learning. As a result, ICT-enhanced learning fosters increased learner engagement and allows for 'just-in-time' learning, where students choose what to learn when they need it.

Collaborative learning: ICT-supported learning facilitates interaction and cooperation among students, teachers, and experts, regardless of their location. It not only models real-world interactions but also offers opportunities to collaborate with students from diverse cultures, thereby enhancing learners' teaming, communication skills, and global awareness. This approach mirrors lifelong learning by expanding the learning network to include not only peers but also mentors and experts from various fields.

Creative learning: ICT-supported learning encourages students to manipulate existing information and create real-world products instead of simply duplicating received information.

Integrative learning: ICT-enhanced learning fosters a thematic integrative approach to teaching and learning. This method eliminates artificial barriers between different disciplines and between theory and practice, which are often characteristic of traditional approaches.

Evaluative learning: - ICT-enhanced learning is student-directed and diagnostic. Unlike static, text or print-based education, ICT-enhanced learning recognizes the presence of different learning pathways to explore and discover rather than merely listen and remember.

In building a new society, the increasing presence of ICTs in all aspects of life - work, learning, leisure, and health - necessitates the acquisition of new skills. The upcoming generation must become proficient in utilizing ICTs as they offer exceptional tools for

information processing. Access to computers and networks while in school becomes crucial for developing these competencies

Given that schools are information and knowledge repositories, incorporating ICT as a fundamental information management tool should be a priority at all levels of the educational system, from classrooms to ministries.

To achieve quality learning outcomes, schools must undertake a profound revision of current teaching practices and resources. This is essential to create effective learning environments that foster lifelong learning skills and habits in students. Embracing ICTs as versatile and powerful tools can greatly contribute to this goal, making their presence in every classroom, library, and teacher room necessary. However, despite the promises and potential, so far, ICTs have not yet led to significant large-scale improvements in learning outcomes. Nonetheless, the prospects for such advancements remain promising.

ICT in Indian Classroom Teaching

The integration of technology in the classroom entails utilizing various technological resources such as computers, smartphones, tablets, digital cameras, social media platforms, software applications, and the internet to foster a deeper understanding of the subject matter among students. With the increasing availability of mobile devices, internet connectivity, and digital infrastructure throughout the country, Indian teachers are becoming more adept at incorporating technology into their teaching practices. They are moving beyond traditional linear, text-based learning methods and adopting more interactive and meaningful approaches to engage their students.

A study conducted by the Central Square Foundation on the adoption of EdTech by Indian teachers revealed a high willingness to use technology regardless of the school type. Computers and mobile phones were the most commonly used digital devices, with adoption rates of 94% and 86%, respectively. The role of technology has evolved from mere computer setups in classrooms to a more integrated approach, where technology is incorporated into the teaching and assessment of concepts. EdTech provides educators with effective tools to cater to different learning styles and assess students' understanding through various methods. This shift also encourages students to explore technology-related platforms and collaborate with one another, thereby making the learning process more student-driven.

Lesson Plan

Teachers are increasingly leveraging a variety of technological tools and platforms to create tailored lessons that cater to the diverse learning levels of students in their classrooms. The availability of numerous app and web-based resources, both from public and private sources, has empowered teachers to design lessons enriched with multimedia content.

National platforms like DIKSHA offer a vast array of multimedia resources, such as images, audio, and videos, enabling teachers to access a pool of content that aligns with the syllabus. Moreover, some platforms provide teachers with pre-designed, syllabus-aligned

lesson plans that are ready for immediate use. These plans often include resources like videos, worksheets, and quizzes.

Additionally, teachers are finding support through platforms that facilitate collaboration with others to co-create lesson plans. This collaboration allows them to receive real-time feedback on their ideas and plans, thereby making the teacher's life a little easier in terms of lesson preparation and execution. Teachers are also exploring platforms providing them with differential lesson plans that are automatically created according to student's progress data and learning levels.

Lesson Delivery

For lesson delivery, the availability of platforms like SWAYAM Prabha is empowering teachers to utilize pre-set content and act as instructors in the classroom. WhatsApp has emerged as a potential platform for delivering lessons to students through text-based services. Google Classroom and Zoom are widely used platforms that enable teachers to deliver content through live tutoring and virtual classrooms. These free web services designed for schools aid in creating, distributing, and grading assignments on a large scale. Moreover, students can ask questions and receive answers on the same platforms, making them highly popular for remote learning.

Such platforms have proven instrumental in helping teachers personalize the content and take on the role of coaches and guides for students. This process has facilitated teachers in simplifying and organizing their lessons while delivering them in a multimedia-rich manner.

Assessment

Technology is playing a crucial role in customizing assessments for the classroom as needed. With the presence of various platforms that check students' responses and provide performance summaries and feedback, teachers are finding it easier to create engaging assessments. They are utilizing multiple platforms that facilitate the assignment and correction of both objective and text-based assessments.

For instance, platforms like Mindspark12, a computer-based adaptive learning program, are proving beneficial in enhancing students' skills in Maths and English. Additionally, the DIKSHA platform offers valuable resources for assessments, including worksheets and question banks.

To make assessments more appealing and less overwhelming for students, teachers are turning to gamified versions. Kahoot13, one such platform, is a game-based learning platform that aids in formative assessment and provides insights into the class's progress.

These platforms are significantly assisting teachers in creating both subjective and objective assessments in interactive formats. Moreover, they provide real-time student performance data at a deeper level, including identifying instances when students are guessing and uncovering key misconceptions.

Conclusion

Indian teachers are embracing various EdTech integrations in their classroom teaching to explore the potential for improving students' learning outcomes. In the present time, technology is considered a vital tool that enables teachers to deliver effective classroom instruction. These technological advancements are empowering teachers to enhance existing pedagogical practices in innovative ways, enabling the creation and dissemination of high-quality lesson plans. As a result, the role of teachers is shifting from being mere instructors to becoming guides that support their students' learning journeys. However, certain challenges hinder teachers from fully harnessing the potential of technology, including infrastructural limitations, lack of digital content, time constraints, non-teaching responsibilities, and the need for contextualized resources. To address these challenges, the Indian government must tackle issues like poor connectivity and inadequate infrastructure. Encouraging blended forms of training that combine online and offline resources would pave the way for sustainable models of continuous teacher development. Furthermore, the availability of mobile-based applications offering resources for teachers would enhance easy access to these tools. A strong foundation for investment in educational technology lies in providing teachers with sustained technical and pedagogical support through comprehensive training programs. To achieve this, collaboration among teachers, policymakers, administrators, and other stakeholders is crucial in the decision-making, design, and implementation of professional development programs. By fostering a positive perception of technology among teachers and encouraging its optimization in the classroom, education can be enriched and further empowered by these advancements.

PERSPECTIVE OF ICT TOOLS IN EDUCATION: ICT TOOLS FOR MODERN EDUCATION

MS. S. Shanthi

*Assistant Professor in Computer Science
Nallamuthu Gounder Mahalingam College, Pollachi*

N.Rajeshkumar & B.Suresh

*II- M.sc Computer Science
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

The present era is the era of technology, with information and communication technology (ICT) being the most important of the technologies. The influence of ICT on the teaching and learning process has become very important as it facilitates the teaching process, creates a favorable learning environment and helps learners to develop creative thinking and self-confidence. It is a force that plays a vital role in all aspects of human life. It integrates the world and changes the entire global economic, social, political and educational landscape. Global growth and development as a whole depend to a large extent on the skilled workforce achieved through quality education. ICT is an educational product, but it is mainly used by business subjects. It gradually transformed education from traditional to higher education, influencing teaching methods, learning methods, scientific research and information gathering. Therefore, this article suggests that the effective introduction of ICT into the teaching process and modern tools for blended learning and teaching are indispensable means to improve it, to develop students, teachers and end-users and to explore potential for future growth and development.

Keywords: *ICT, Teaching, Learning, Education, Tools*

Introduction

IT and ICTs are very often interchangeably used in the context of modern technology infrastructure. ICT is a broad and comprehensive term, which comprises information technology and communication technology. Information technology includes radio, television, computer and internet, teleconferencing and mobile technology. All these information technologies are powered by mainly two types of communication technologies. These are satellite based communication and terrestrial based communication. Satellite based communication is the communication, which takes place between sender and receiver through a communication satellite whereas terrestrial based communication is the communication, which takes place through a network of transmitters spread across a geographical area, a country, or a state. This type of communication is used in the transmission of radio and television in India. However, with the launch of a series of satellites by Indian Space Research Organization (ISRO), satellite based communication is being used for telecommunication.

Ict for Teaching and Learning

The ICTs are needed at school and college level for the following activities :

- Teaching-learning
- Diagnostic Testing and Remedial teaching
- Evaluation activities
- Psychological analysis of learners
- Development of reasoning and thinking abilities among students
- Instructional material development

1. ICT in Teaching-Learning Process

Most teachers feel comfortable in using lecture method, which is not capable of achieving various objectives of classroom instruction. **ICT** may be of great use in achieving various objectives of teaching –learning process. It provides correct information in a comprehensive manner with different examples. It helps learners to broaden their information base. **ICT** provides variety in the presentation of content, which helps learners to learn according to their own pace. It helps in better understanding, and long retention of information.

2. ICT for Diagnostic Testing and Remedial Teaching

Being a teacher, you must have experienced that there are some students who fail to understand certain concepts or retain certain information for a long time. Due to large class size, non-availability of diagnostic tests in different subjects, lack of training, resources and desire on the part of teacher, etc. teachers do not conduct diagnostic tests and provide remedial teaching. Here **ICT** can help the teachers as well as students in identifying the problem area. Tests can be made available on the website of the school and students can access them from home also. These practices can be monitored by parents also. It is not easy to organize remedial programme for individual students as problems identified may be of varied nature. For this, **ICT** can be used for developing, preparing and delivering individual Remedial Programme. These programmes may be online or off-line. The instructional materials, if designed specifically for meeting the individual needs of students, and are uploaded on the School website, would definitely benefit students. In this way, **ICT** can be used for providing remedial teaching to students.

3. ICT in Evaluation

The objective of school examination system is to assess the academic performance of students. **ICT** can be used in educational evaluation. Online tests can be used by individual student to evaluate his/ her learning. Students can instantaneously get the feedback about the status of his/ her understanding. If the answer is wrong, he/ she even can get the correct answer. Not only students, even teachers, can also use it to assess their own understanding of the subject.

4. ICT in Psychological Testing

There are individual differences. Schools do not have a trained psychologist who can assess students on some of the correlates of academic achievement. It is easy to digitalize all the psychological tests including the scoring process and evaluation. The same may be available on the website and students and teachers can use them, whenever required. Even student can use it individually and can share the results with the teacher who can help him/ her to improve his/ her academic performance. Thus ICT can be used in psychological testing also.

5. ICT for Developing Reasoning and Thinking Abilities among Students

ICT can be used in many subjects. ICT provides students a variety of instructional materials and they can choose those that suit them the best. ICT can be used for developing reasoning and thinking abilities among students belonging to different age groups. This is important in the present context as most educational institutions do not pay attention to development of reasoning and thinking abilities among students.

6. ICT for Developing Instructional Materials

At present there is a shortage of qualified and competent teachers in almost all subjects at all levels. Sometimes, instructional materials available in the print form are not of quality and updated. The text book reading is very often not enjoyable and does not help students in understanding the concepts and retaining the information. There are many teachers who are well known in different subject areas. Their lectures should be recorded in CD-ROM, or should be made available to all the users through broadcast on radio and television. It enhances the quality of instruction in the classrooms. The teacher can also use them to organize discussion after their presentation or broadcast. Teachers can even directly download those lectures. It makes teaching effective, participatory and enjoyable. Digitalized lectures can be uploaded on websites and student teachers can access them as per their needs.

Modern Tools for ICT

Information and Communications Technology plays a prominent role in student learning when only the teachers are efficient at incorporating them into curriculum . ICT has also become integral to the teaching-learning interaction, through such approaches as replacing chalkboards with interactive digital whiteboards, using students' own smartphones or other devices for learning during class time. When teachers are digitally literate and trained to use ICT, these approaches can lead to higher order thinking skills, provide creative and individualized options for students to express their understandings, and leave students better prepared to deal with ongoing technological change in society and the workplace. Survey was also conducted to identify the list of ICT Tools used by teachers frequently for Classroom Teaching-Learning . Lot of ICT tools are available for Building courses, creating exams, preparing MCQs, getting feedback from students and making assessments. Maximum of the ICT Tools are very user friendly and provide

numerous options to make it as personalized as possible, enabling the teacher to create our own contents. Students can listen to / follow the lessons once prepared by teachers and do their homework also. When ICT Tools are used by the teacher properly, they can understand, what are the struggles faced by the students, which kind of students struggle the most.

ICT Tools used for Presentations

- **Buncee** - Make Learning Fun Your creation and presentation tool.
- **Google Slides** - Work on the same presentation at the same time
- **Lesson Up** - Create fun and engaging digital lessons
- **Mentimeter** - Create graphics at an instant using students' input
- **Nearpod** - Create interactive slideshows, using questions, quizzes, images & text.
- **Peardeck** - Create beautiful interactive lessons, presentations, and assessments to engage every student .
- **Prezi** - Create an online slideshow.
- **Prowise** - Together we can create a learning environment which is more engaging and inspiring and elevate collaboration in your schools.
- **SlideShare** - Share what you know and love through presentations, info graphics, documents and more
- **Sutori** - Presentations for the classroom in a unique timeline format
- **Wooclap** -Rather than fighting smartphones, Wooclap turns them into an exceptional learning tool.

ICT Tools Used for Online Collaboration

- **Asana** - Asana is the easiest way for teams to track their work –and get results.
- **Edmodo** - The safest and easiest way for educators to connect and collaborate with students, parents, and each other.
- **Google Docs** - Work on the same document at the same time
- **Google Slides** - Work on the same presentation at the same time
- **Google Spreadsheets** - Work on the same spreadsheet at the same time
- **MeisterTask** - MeisterTask is the most intuitive task management tool on the web. Combine it with MindMeister for a complete workflow from first idea to finished project.
- **Seesaw** - Seesaw is a student-driven digital portfolio. We make it simple to get student work in one place and share with parents.

Learning Management System

LMS is a software that enables teachers to create, manage and deliver eLearning Courses. **LMS** provides an eLearning Environment and it consists of two parts. A server component which provides main functionality for creating, managing and delivering courses, sending notifications, authentication and more. A Users interface which is inside the browser used by students, teachers and administrators.

Moodle

Moodle is a most popular, flexible, free and open Source Learning Management System. This software is written in PHP and used for flipped classrooms and distance education in universities and schools. Moodle is a user friendly eLearning platform and distributed under GNU General Public License, anyone can create their online learning sites in minutes. Moodle was developed by Martin Dougiamas in the 1970s. Nowadays Moodle is used by maximum of the organizations outside of the education community such as online training, business, corporations, hospitals etc. Moodle is the World's Best LMS, because the users of Moodle grow every day, it is highly flexible, well supported, user-friendly, customizable and featurerich. Moodle enables schools and universities to offer options for flexible learning to their course from their location without any interruption. Using Moodle LMS, teachers can Build their site easily, select various activities and educational tools, include assessments, communicate with their students with video conference tools, add custom certificates and students can learn lessons from their mobile phones.

Google Classroom

Google Classroom is a free LMS tool frequently used by maximum of the teachers. Using Google Classroom, teachers can create an online classroom by submitting the Course Class details and invite students to join by sharing the class id. Using Google classroom, teachers can share the Course Plan, Course Material, eContent, videos for the lesson topic and assignment link so that students can listen to the videos shared by teachers, read the course materials, and submit the assignments. Teachers can also track the student progress and conversation between students.

Conclusion

Class technology allows teachers to experiment more in pedagogy and get frequent feedback, educate students with more fun and efficiency. Improved student learning participation, makes many boring work of teachers simple. When a teacher uses technology in class, students can have immediate access to lessons / tutorials / video assignments. Although technology in teaching and in class learning offers many advantages, there are some disadvantages of using technology. Technology allows students to disconnect from social interactions, encourage the trap in class and tasks. All students may not have equal access to online resources. But the benefits of using technology in teaching and learning prevail over the counter. The incorporation of technology in learning of teaching and class will certainly improve the student report, which is the fundamental cause of good education. Technology can be an extremely valuable tool, but it is only a tool and technology "cannot replace a teacher" and is not intended to replace the teacher. A good teacher must digitally be literally and must know the effective way to integrate technology into the curriculum so that teachers can keep the students committed. The use of technology in teaching can be frustrating and opinion, but at the end of the day, the use of technology in education can create new doors, provide new experiences, lead to new discoveries and, finally, new ways to learn and Collaborate.

WOMEN EMPOWERMENT

**R. Sudharshini, S. Fathima Banu
& K. Jagadeesh**

Student of 2nd M. Com (CA) NGM College
Pollachi, Tamil Nadu

Abstract

Women's empowerment is the process of enabling women to act independently for both their own interests and those of society as a whole. Women's empowerment is the process of enhancing and strengthening the social, economic, political, and legal power of women in order to ensure their equality and give them the self-assurance to assert their rights, including the freedom to live their lives with a sense of self-worth, respect, and dignity, full control over their lives both inside and outside of the home and workplace, the ability to make their own decisions, and the same rights to participate in social, religious and public activities. This Paper deals with "Women Empowerment" a burning issue all over the world. "Women empowerment" and "women equality with men" is a universal issue. Women Empowerment refers to the creation of an environment for women where they can make decisions of their own for their personal benefits as well as for the society. The ability to speak up is a right for women. Around 50% of the world's population is made up of women. Worldwide, there are a lot of unemployed women. Due to the unequal opportunities for women at work, the global economy suffers greatly. workplaces. Equally capable are men and women. In several fields today, women even outpace males socioeconomic pursuits. Domestic violence decreases as a result of the empowerment of women. Domestic violence is more likely to occur to uneducated women than to educated women. Women's empowerment and participation are important women's rights that allow women to have control over their life and exert influence in society. Women are frequently subjected to discrimination and gender inequality, with some women facing numerous forms of discrimination and exclusion due to factors such as their ethnicity or caste.

Introduction

Approximately 48% of all people in the nation are women. According to the constitution of India, women are recognized as full citizens with the same rights as men. The unacceptability of the male-dominated society causes Indian women immense suffering. Women give birth, yet they are unhealthy and undernourished. In addition to being busy at home, women are also overworked in the fields. Indian women are largely uneducated. Women's empowerment is defined by several guiding ideas, one of which is that in order to be empowered, one must first be disempowered. Instead of having it granted to them by a third party, they must obtain empowerment. According to other studies, people are seen to be empowered when they are capable of making significant decisions about their lives and being able to follow through on those decisions. At one point in time, empowerment and disempowerment were related to one another; empowerment is a process rather than a finished good. Women's empowerment has grown in importance as a conversation issue in economics and development. Women can control their resources, possessions, and income when they are economically empowered. Additionally, it enhances women's wellbeing and helps them manage risk. In a specific political or social context, it may lead to efforts to support genders that have been

devalued. Although the terms are frequently used interchangeably, gender empowerment emphasizes the distinction between biological and gender as a role and is more inclusive of all people. Through literacy, education, training, and awareness raising, women's empowerment raises the status of women. Additionally, the term "women's empowerment" alludes to women's newfound freedom to make deliberate life decisions. Programs and policies that adopt the idea of female empowerment may be beneficial for nations, businesses, communities, and other groups. Empowering women raises the standard and quantity of human resources that are available for development. When discussing human rights and development, empowerment is one of the primary procedural issues.

Objectives

Changing the public's negative attitudes, actions, and perceptions that they are the main hurdles to women's peace, women's role and contribution in the political process, decision making, development, and women's engagement in peace building. Increase public knowledge and education on women's peace, the peace building process, women's rights, women's roles, and women's contributions to peace building. Sharing of experience, exchange of best practices, and mutual learning among local and international actors, public officials' representatives, activist women, and women's union executives. Promoting anti-discrimination and gender equality concepts in the actions of governments and organizations. Strengthen women's groups and organizations through capacity building and leadership development to provide excellent governance, services, and justice for the exploited, ethnic minorities, and severely poor people. Increase rural people's capacity to protect their cultural heritage and customs, including ethnic minorities and women. Foster women's groups' accommodating capability, democratic practices, principles, and development framework to ensure the long-term viability of their activities, programs, and management. Building professional women's awareness-raising and advocacy campaign capacities by enhancing their theoretical backgrounds, educating them on the relevant legal framework, assessing instances of effective practices, and encouraging them to take action. Improve the livelihoods and small-scale income-generating activities of disadvantaged women, particularly women with disabilities, women who lead families, IDPs, and refugee women, to secure their participation in family and community life. Creating synergies of collaboration across women's institutions for networking, knowledge exchange, and best practices. Advocate for women's groups to participate in many activities related to rights-based livelihood development and the sustainability of natural ecological issues (Socioeconomic, culture, food and nutrition, health, education). Researching and mapping cases of multiple discrimination, as well as developing qualitative and research-based knowledge for advocacy actions. Organize a community-based campaign against discrimination and violence against women in order to establish women's rights and dignity in the family and society.

Principles of Women Empowerment

The Women's Empowerment Principles, developed in partnership between the UN Global Compact and UN Women, are used to empower women in the community, the workplace, and the market.

- Establish high-level corporate leadership for gender equality.
- Respect and uphold non-discrimination and human rights, and treat everyone equitably at work.
- Ensure the health, happiness, and safety of all employees, male or female.
- Encourage women to pursue careers in education, training, and other fields.
- Implement supply chain, marketing, and business growth strategies that support the emancipation of women.
- Promote equality through grassroots campaigns and campaigning.
- Track and publicly report on gender equality development.

Concept of Women Empowerment

Empowerment is the process of increasing an individual's or a group's ability to make choices and translate those choices into desired actions and outcomes. Women's empowerment entails raising them to be more conscious persons who are politically active, economically productive, and self-sufficient, and who can hold educated discussions about issues that impact them. Women empowerment was defined as the redistribution of social power and control over resources in favor of women. The United Nations Development Fund for Women (UNDFW) defines women empowerment as acquiring knowledge and understanding of gender relations and how these relations can be changed and developing a sense of self worth, a belief in one's ability to succeed.

Women Empowerment in India

The Indian Constitution not only grants women equality, but also authorizes the state to implement measures of positive discrimination in favor of women in order for women to enhance their living. Our laws, development strategies, plans, and programs have all attempted to advance women in many fields within the context of a democratic democracy. From the Fifth Five Year Plan (1974-78), there was a notable shift in the approach to women's issues from welfare to development, and from the Eighth Five Year Plan, the emphasis was shifted from development to empowerment. Declaring 2001 as the Year of Women's Empowerment (Swashakti), the Government of India (GOI) enacted the National Policy for Women's Empowerment, with the purpose of bringing about the growth, development, and empowerment of women. The Government of India launched the National Mission for Empowerment of Women (NMEW) with the goal of strengthening broad processes that enhance women's overall development. Its goal is to improve inter-sector convergence and to facilitate the process of coordinating all women's welfare and socioeconomic development programs across ministries and agencies. One of NMEW's primary objectives is investing in skill and entrepreneurial development, microcredit, vocational training, and SHG development for women's economic

empowerment. This effectively indicates that simply teaching reading is insufficient; women also require occupational training or skills to be able to stand on their own and be earning members of the family. In recent years, women have shown a rising interest in income-generating activities such as self-employment.

Need for Women Empowerment

Women's equality is not just a current trend; it is crucial to modern society. Women still face several challenges and issues that impede them from fully participating to society and realizing their potential despite significant gains in women's rights and gender equality. Strong justifications for empowering women include the following:

- **Gender Equality:** Achieving gender equality requires the empowerment of women. The root causes of gender inequality are social norms, cultural practices, and discriminatory attitudes that limit women's opportunities and undermine their rights. By empowering women, we challenge these norms and aim to build a society in which men and women have equal access to opportunities, rights, and duties.
- **Economic Development:** There is a close link between economic expansion and women's emancipation. Women make about half of the world's population, and they must actively participate in the economy for it to be sustainable. When women have equal access to education, employment, and entrepreneurship, they significantly increase economic output, contribute to the eradication of poverty, and advance society as a whole.
- **Knowledge and Education:** Empowering women via education is a powerful technique for transforming civilizations. Education helps women to challenge gender stereotypes and actively participate in social, economic, and political spheres because it increases their knowledge, competence, and confidence. A woman's tendency to invest in her family's welfare especially in the health and education of her children increases with education, which benefits future generations and breaks the cycle of poverty.
- **Health and Well-Being:** The physical and mental well-being of women is closely linked to their economic and political suffrage. Access to quality medical treatment, the freedom to get an abortion, and ownership of one's own body are necessary for women to be empowered. Women who are empowered are better equipped to take good care of their health, get medical help when necessary, and make choices that will enhance their wellbeing.
- **Leadership and decision-making:** Women's voices and perspectives are essential in the development of successful policies, strategies, and decision-making procedures. Gender parity in leadership positions must be accomplished in both the public and private sectors in order to support inclusive governance and fulfill the many expectations and goals of society. By empowering women, we can ensure that they participate equally in decisions that affect their communities and way of life.

- **Social and Cultural Change:** It is critical to empower women in order to confront cultural and societal norms that sustain gender inequality. By empowering women, we combat discrimination, remove barriers, and develop a culture that values and respects the contributions made by women outside of the boundaries of traditional gender roles. A more hospitable and diverse society is created as a result, which is to everyone's advantage.
