In most Indian families, a son's education is prioritised over a daughter's schooling. Girls are more likely to be engaged in domestic activities such as childcare and household work to provide economic support. This is more pronounced in lower-income households, rural families, and households where both parents work. In most Indian families, a son's education is right of way over a daughter's education. This has been manifested today in online classes as well where girls are often abstaining from class for the sake of brother's classes. Girls are more likely to be engaged in domestic activities such as childcare and household work to provide economic support. The presence of younger siblings affects a girl's education negatively – in terms of gross attendance, time spent on learning activities, learning performance, etc. Early marriage is one of the chief reasons for juvenile girls dropping out of schools and prevents their access to education and development. Also, parents anticipate relying on their sons during their old age.

This leads to differential treatment in their school enrollment, educational expenditure, and access to learning resources

Gender Inclusion Fund

The Government of India constituted a "Gender Inclusion Fund" to provide quality and equitable education for all girls. The fund will focus on ensuring 100% enrolment of girls in schooling and a record participation rate in higher education, decrease gender gaps at all levels, practice gender equity and inclusion in society.

"Women empowerment is of prime importance. The girls/women are the backbone of a growing nation. Their upliftment directly impacts the growth and all rounded development of India. "According to the United Nations Educational, Scientific and Cultural Organisation (UNESCO) over 20 percent of girls drop out of school completely after reaching puberty in India. It has also been observed that a lot of girls drop out of schools when they hit puberty, since the school infrastructure is not conducive for their menstrual hygiene," (Shikha Jain, an educationist). Jain also asserted that the government should specify the amount available as part of the fund and lay down clear guidelines on how the corpus would be spent to address gender specific issues. "Gender should be used as a lens to look at initiatives such as digitisation of classrooms, increasing numeracy and literacy (since many girls are discouraged by the families to study maths and science from the beginning), rather than being treated as a standalone issue," she said. (IANS, 2019)[7] Stressing on providing a safe environment for the girls in school, the policy also advocates laying down guidelines for ensuring school safety and security of girls. These guidelines will be developed and made a part of the eligibility conditions for institutional accreditation. "This framework will include mandatory training for educators and administrators on efforts to prevent and respond to schoolrelated gender-based violence. Working female-only toilets with a regular stock of menstrual hygiene products will be constructed and made available," The policy recommends that schools develop credible mechanisms to ensure that they remain free of discrimination, harassment and intimidation especially for women and girls. It also emphasises upon providing a safe environment outside the premises of the schools for attainment of education of girls. "Girls' safety outside of school is also recognised as critical to their attendance and overall educational attainment; unfortunately, transportation .to and from school can sometimes infringe on their personal safety in some areas. Efforts will be made to ensure girls benefit from initiatives that promote access to safe and reliable transportation, including bicycle access programmes" .

Against such a backdrop the National Education Policy-2020 (NEP 2020) was approved by the Union Cabinet of India on 29 July 2020, which outlines the vision of

new education system of India. The National Education Policy -2020 has been designed by the K Kasturirangan Committee to deal with various issues aggravating educational scenario across India and to curb the menace of women illiteracy. The policy envisions equitable and inclusive education for all, with special focus on children and youth, especially girls, from socially and economically disadvantaged groups. The policy, which has come to the fore recently, is expected to usher in a new era in women education. The policy is a comprehensive framework for elementary education to higher education as well as vocational training in both rural and urban India. It is pointed out that the policy does not pronounce much on the gender issues, yet certain proposals made in the policy may be expected to bring about remarkable changes into the bleak scenario.

Conclusion

Women play an imperative role in making a nation progressive and guide it towards development. They are essential possessions of a lively humanity required for national improvement, so if we have to see a bright future of women in our country, giving education to them must be a pre-occupation. Empowerment means moving from a weak position to exercise a power. The education of women is the most powerful tool to change the position of society. Education also brings a reduction in inequalities and functions as a means of improving their status within the family. To encourage the education of women at all levels and for dilution of gender bias in providing knowledge and education, established schools, colleges and universities even exclusively for women in the state. The education develops the idea of participation in government, panchayats, public matters etc for elimination of gender discrimination.

NEP would transform the education sector in the country as it focuses on making education accessible, equitable and inclusive. The vision laid in the New Education Policy is to build the education system into high-spirited on acquiring key 21st century skill. New Education Policy has laid many favorable provisions to foster gender equity and to do away with gender stereotype which plays a crucial role in consideration for the layout will not work efficiently instead of actions

Abstract

Entrepreneurship and self-employment represent a viable career choice for women and should be recognized as a major, but underutilized, source of economic growth, competitiveness and innovation. Promoting women's entrepreneurship, improving access to finance, providing training and setting up mentorship networks must become policy objectives in their own right. Although both men and women increasingly recognize the opportunities of entrepreneurship and see it as a viable alternative to wage employment, women still appear to face more barriers to an entrepreneurial career as a result of a variety of educational, cultural and institutional factors. Women's entrepreneurship needs urgent attention from governments and society as a whole. Women represent a tremendously underused source of growth and national competitiveness.

Keywords: Women Entrepreneur, Problems, needs.

Review of Literature

Bowen & Hisrich, (1986), compared & evaluated various research studies done on entrepreneurship including women entrepreneurship. It summarizes several studies in this way i.e female entrepreneurs are generally relatively well educated, but perhaps not in management skills; they have a high internal locus of control; their values are more masculine or instrumental than those of other women; they are more likely to have had entrepreneurial fathers; they are more likely to be firstborn or only children; and they need more managerial training.

Tovo, (1991) found that women entrepreneurs had less access to finance, inputs, and markets also independent women faced a variety of challenges in small businesses. The study also demonstrates that there is intense rivalry and low costs because many small businesses operate in the same market segment. As a result, a small number of suppliers and distributors are very dependent on the products of small businesses. Due to this, the female entrepreneur became monetarily weak and was frequently prey to exploitation.

Papisetty Rama & Mohana Rao, (2004), found in the research study that Inadequate infrastructure, high labour mobility, shortage of electricity and delayed realization of debtors were the main problems faced by women entrepreneurs.

Damwad, (2007), covers the experiences, activities, and challenges experienced by women entrepreneurs in five Nordic nations, including Finland, Denmark, Iceland, Norway, and Sweden. It broadly outlines a few barriers, including funding, a lack of business knowledge and skills, markets, entrepreneurship, work-life balance, a lack

of growth and a desire to expand, and most crucially, women because other groups are varied. The study compares male and female early-stage entrepreneurial activity in the Nordic countries with that in the USA. Additionally, it contrasts various programs and plans created by Nordic nations and the organizations that support them

Singh, (2008), identifies the reasons & influencing factors behind entry of women in entrepreneurship. He explained the characteristics of their businesses in Indian context and also obstacles & challenges. He mentioned the obstacles in the growth of women entrepreneurship are mainly lack of interaction with successful entrepreneurs, social unacceptance as women entrepreneurs, family responsibility, gender discrimination, missing network, low priority given by bankers to provide loan to women entrepreneurs. He suggested the remedial measures like promoting micro enterprises, unlocking institutional frame work, projecting & pulling to grow & support the winners etc. The study advocates for ensuring synergy among women related ministry, economic ministry & social & welfare development ministry of the Government of India.

Lall&Sahai, (2008), conduct a comparative assessment of multi-dimensional issues & challenges of women entrepreneurship & family business. The study identified Psychographic variables like degree of commitment, entrepreneurial challenges and future plan for expansion, based on demographic variables. Through stratified random sampling & convenience sampling the data have been collected from women entrepreneurs working in urban area of Lucknow. The study identified business owner's characteristics as self perception self esteem, Entrepreneurial intensity and operational problem for future plans for growth & expansion. The study suggested that though, there has been considerable growth in number of women opting to work in family owned business but they still have lower status and face more operational challenges in running business.

Definition of Women Entrepreneurship

According to Government of India, "A Woman enterprise is the one owned and controlled by a woman having minimum financial interest of 51% of the capital and giving at least minimum 51% of generated employment to women.

Women Entrepreneurship Areas

Women entrepreneur in earlier years after independence were confined to entrepreneurship in traditional areas like food, fruits, vegetables, pickles, papads, tailoring, hosiery etc. However, often, Women entrepreneurs have branched out to several new areas like engineering, beauty parlours, jewellery, handicraft, electrical, electronics, chemical and other manufacturing. This shows that entrepreneurial base of women expanded from traditional 3Ps – pickle, powder and papad to modern 3ES – Engineering, Electrical and Electronics.

There are vast numbers of industries under small business sector where women are playing a major role.

Such industries can be listed as under:

- Agriculture and Allied industries – such as sericulture, horticulture, dairying and animal husbandry etc.
- Home based industries-such as handicrafts, Agarbati, Candle making, bidi industry, hosiery, and textile, doll making, jewellery, pottery, designing etc.
- Outside home industries – such as electrical and electronics, food processing etc.
- Apart from the above, most Indian Women have performed well in both organized and unorganized sector.
- Involved in family business such as agriculture, horticulture, animal husbandry, dairy, fisheries, agro forestry, handloom, power loom etc

Categories of Women entrepreneurs

- Women in organized and unorganized sector
- Women in traditional and modern industries
- Women in urban and rural areas
- Women in large scale and small scale industries
- Single woman and joint venture

Categories of women entrepreneurs in practice in India 1st category

- Established in big cities
- Having higher level technical and professional qualifications
- Non- traditional items
- Sound financial position

2nd Category

- Established in cities and towns
- Having sufficient education
- Both traditional and non- traditional items
- Undertaking women services – kindergarten, crèches, beauty parlours, health clinic

3rd Category

- Illiterate women
- Financially weak

Women Entrepreneurship -Need and Factors

In modern days, particularly in India, there is a great need for women entrepreneurs. Several factors are responsible for compelling the women members of the family to set up their own ventures.

These factors suggesting their need can be broadly classified into two groups:

- Motivational factors or needs and
- Facilitating factors or needs.

Motivational Needs

The following are the motivational needs for which modern women are motivated to become entrepreneurs:

Economic Necessity:

The introduction of women into business is a relatively recent development. Women have begun to enter the most competitive field of business due to the breakdown of the joint family system and the necessity for additional money to sustain living standards in the face of inflation or rising prices. As a result of this economic necessity, women have started working in the business world to supplement their income and raise their family's standard of living in today's inflationary times.

Desire for High Achievement:

The tremendous desire for great performance in their lives is another factor driving women into the business sphere. Despite their education, women in the modern world often struggle to find work in the market or are unable to leave their homes to find employment elsewhere due to family issues. As a result, a woman is strongly drawn to the desire to accomplish something great and significant in order to establish her value to the family as an asset rather than a problem. This is what spurs women to start their own businesses the most.

Independence:

A woman's desire to live independently with self-confidence and respect is another powerful driver for starting her own business. A woman entrepreneur gains a respectable status, a solid personal reputation, and a sense of independence in the community when she owns and controls a lucrative firm

Government Encouragement:

The Government and non-government bodies have started giving increasing attention and encouragement to women's economic conditions through self-employment and business ventures.

Education:

Women have been taking up various kinds of technical, vocational, industrial, commercial and specialized education so as to qualify themselves to be self-employed in some kind of trade, occupation, vocation or business. Facilities are also being provided to women in areas where they can grow and blossom as persons in their own right. Women have proved in modern days that they are no less than men in efficiency, hard work or intelligence or even they can surpass men in several fields.

Model Role:

Women, like men, are also desirous of contributing their might to the economic development of their country. Similarly, our women in India would like to play a key role model. They have already entered other fields like politics, education, social field, administration, etc. Now they have started entering the business field where they can also show their importance as in other fields.

Family Occupation:

Family occupation is an important factor motivating a woman member to participate in the family business, along with her husband and other members of the family. There is a great need for women to undertake economic activity or business of the family and support their families in family occupation or family business so as to reduce the expenses of the family business and increase its income.

Employment Generation

Another influencing factor that motivates women to become entrepreneurs is the creation of employment opportunities. Women entrepreneurs generally take up labour intensive small scale and village industries or handicrafts and they have high potential in employment generation. Therefore, they serve as a solution to the widespread problem of women unemployment to some extent.

Facilitating Needs

Facilitating needs are the needs for providing various facilities for the successful working of the women enterprises.

Problems of Women Entrepreneurs

The greatest problem faced by women entrepreneurs is that they are women. We are living in a male dominated society where women are treated as 'abalas'. They have to face several economic and social problems. Usually they will not get any support or co-operation from various financial institutions, male entrepreneurs or even from their families.

They have to face resistance not only from men but also from elderly women who are ingrained with this attitude of inequality.

Women entrepreneurs have to face two types of problems viz., general problems of entrepreneurs and problems specific to women entrepreneurs.

The following are the important problems faced by women entrepreneurs:

Financial Constraints:

Finance is the life blood of every business. Both long term and short term funds are required for business. For obtaining loans and advances from financial institutions, they have to provide collateral securities. But, usually women do not have property in their names and this hinders them from obtaining external sources of funds.

The banks also consider women as less credit worthy and discourage women borrowers on the belief that they can at any time leave their business and become housewives again. Under these circumstances, women entrepreneurs are bound to rely on their savings and loans from friends and relatives. The quantity of such funds is often negligible leading to the failure of women enterprises.

Over Dependence on Intermediaries:

Women entrepreneurs have to depend largely on intermediaries for the distribution of their products. These intermediaries take a major portion of their profits. It may be possible for the women entrepreneurs to eliminate the middlemen, but it requires additional investment of capital and a lot of travel. Women entrepreneurs find it difficult to capture market and popularise their products.

Stiff Competition:

Women entrepreneurs have to face stiff competition for the products from the organised industries and male entrepreneurs. They do not have organisational set up to spend a lot of money for canvassing and advertisement. The society has a feeling that the products manufactured by women are inferior in quality on account of the fact that they are manufactured by women themselves. These factors will lead to the liquidation of women enterprises.

Scarcity of Raw Materials:

Scarcity of raw materials is yet another important problem faced by the women entrepreneurs. The price of raw materials is very high and women entrepreneurs usually get the raw materials at minimum discount. The failure of many women co-operatives engaged in basket making in 1971 is an example of how the scarcity of raw materials affects entrepreneurship.

High Cost of Production:

Another problem faced by women entrepreneurs is the high cost of production. The government grants and subsidies help them tide over this difficulty, but these grants and subsidies are available only at the initial stages of its setting up. For expansion and diversification activities these assistances will be negligible.

Limited Mobility

Unlike men, women mobility in India is highly limited due to various reasons. Physically they are not fit enough to travel a lot. A woman running an enterprise independently and alone is often looked upon with suspicion. The humiliating attitude of officials towards women compels them to give up the idea of starting an enterprise.

Conclusion

The different research studies examined have brought to light a number of issues that women entrepreneurs face. Achieving a work-life balance is one of them, as are sociocultural hurdles, a male-dominated society, low literacy rates or educational attainment, a lack of financial support, a lack of technical expertise, a lack of marketing and business abilities, a lack of self-confidence, and mobility restrictions. The moment has come for women to free themselves from the burden of household duties and make room for their creativity and entrepreneurship, which will revolutionize how women are viewed in society. The position of women in a developing society in India has also been influenced by social and political developments. Women entrepreneurs have been encouraged and supported by government programs, incentives, and subsidies. A significant number of women are becoming self-employed as a result of the rise in the number of educated women, which is changing the position of women in society.

Abstract

The MSME industry plays a crucial role in the development of the Indian economy. Its contribution to the country's GDP is nearly a third of the country's GVA and it contributes nearly half of the country's exports. Moreover, the sector is a major employer, especially in the rural and less developed areas helping reduce regional imbalance. The sector also strengthens other industries by providing them raw materials and ancillary products. The MSME sector has always acted as a bulwark for the Indian economy, providing it resilience to ward off global economic shocks and to face adversities. The MSME network in India is vast and covers around 630 lakh units manufacturing 8000+ products contributing about 45% to manufacturing output and about 40% to direct and indirect exports. The MSME sector is reportedly the second-largest employer in the country after agriculture.

Keywords: *Self-Reliant India, MSME, Government Scheme, Self-Reliant India Fund*

Introduction

MSMEs form the bedrock of India's industrial landscape, encompassing a vast array of enterprises across various sectors. According to the Ministry of Micro Small and Medium Enterprises, MSMEs contribute significantly to India's GDP, employment, and exports. The sector is a major generator of employment, providing livelihoods to millions, particularly in rural and semi-urban areas. MSMEs are a vital part of the Indian economy. They account for approximately 45% of India's industrial output and around 40% of total exports. This means that MSMEs are responsible for a significant portion of the country's economic growth.

In the textile industry, MSMEs account for around 60% of the total employment. They also play a significant role in the manufacturing of garments, footwear, and other products. In the agricultural sector, MSMEs are involved in the production of a wide range of products, such as processed foods, fertilizers, and agricultural machinery. They also play a key role in the supply chain for agricultural products. In the services sector, MSMEs are involved in a wide range of activities, such as transportation, tourism, and retail. MSMEs are a major source of employment in India and employ a great number of women and youth. They employ around 111 million people, which is about 40% of the country's workforce.

The Impact of MSME's on India's Self- Reliance

MSMEs act as catalysts for India's self-reliance, driving economic independence through various means. These enterprises play a pivotal role in reducing the country's dependency on imports, fostering domestic innovation, and building a robust and self-sustaining economic ecosystem.

One of the primary ways MSMEs contribute to self-reliance is by reducing India's reliance on imports. By producing goods and services domestically, MSMEs help curb the nation's dependence on foreign products. This localized production not only strengthens the Indian economy but also bolsters its resilience against global economic fluctuations and disruptions. By fulfilling local demand and reducing imports, MSMEs contribute to a more self-sufficient economy that can better withstand external shocks.

MSMEs are also instrumental in supply chain development, creating a web of interconnectedness across industries. They account for 60% of the total number of enterprises in the country, and as key players in various supply chains, these enterprises support both upstream and downstream activities. Their engagement in supply chains fosters domestic production and distribution networks, reducing the need to rely on foreign suppliers. This interdependence within the country's supply chains enhances the overall efficiency of the economy and contributes to its self-reliance.

Small-scale businesses have been a hallmark of the Indian economy since independence. Over the last five decades, the MSME sector has evolved to show itself as a vibrant and dynamic component of the economy. Initially, the non-agricultural MSME sector was heterogeneous and consisted of traditional industries. These included khadi, silk, coir, cottage and village industries, Small Scale Service and Business Enterprises (SSSBs), and Small Scale Industries (SSIs). Today, all these industries are clubbed together under the umbrella term of Small Scale Industries (SSI). In 2006, the Micro, Small, and Medium Enterprises Development (MSMED) Act was enacted. This statute aimed to incorporate all the diverse industries, the service sector, and medium enterprises.

As a result, the MSME sector in India is classified into two categories: the manufacturing and service industries. Furthermore, the industries are classified as micro, small, and medium based on the investment made toward machinery and equipment. MSMEs contribute towards exports, entrepreneurial development, upliftment of rural and backward areas, and employment generation. The MSME sector has been creating over 110 million jobs in areas such as manufacturing, non-captive electricity generation and transmission, trade and other service, across rural and urban areas in the country.

Challenges for the MSME Sector

The sector is expected to shoulder a substantial portion of the country's economy. But there are some challenges that lie ahead:

Need for digitization: Owing to problems like the dearth of proper infrastructure, finance, and limited knowledge, the MSME sector has been slow in going digital. Digitizing the sector could help in enhancing efficiency and reliability, cutting costs, and keeping up with trends.

Importance of business knowledge: With growing competition, it is imperative for MSMEs to have a thorough grasp of the opportunities, challenges, in-depth know-how, trends, and risks of the industry to run a successful business. The right business strategy can help a company scale up.

Problems related to funding: Many MSMEs may not have all the financial documentation in place or enough access to digitization in order to take advantage of government schemes. There is also a challenge with collateral as the perceived risk of funding MSMEs is higher. Cash flow and working capital issues are challenging, especially in instances where payments are delayed. While protections exist under the MSMED Act, such as penalties for delayed payments, the fear of losing long-term business means that these protections are rarely ever invoked.

Self-Reliant India Fund for MSMEs

As part of the Atmanirbhar Bharat package, the Indian government announced the allocation of Rs. 50,000 crore for equity infusion in MSMEs through the Self-Reliant India (SRI) Fund. SRI fund operates through a mother-fund and daughter-fund structure for equity or quasi-equity investments.

The National Small Industries Corporation (NSIC) Venture Capital Fund Limited (NVCFL) was designated as the Mother Fund for the implementation of the SRI Fund. It was registered as a Category-II Alternative Investment Fund (AIF) with SEBI.

Objectives of the Sri Fund

To provide equity funding to viable and high-potential MSMEs, fostering their growth and transformation into larger enterprises. To bolster the MSME sector's contribution to the Indian economy by promoting innovation, entrepreneurship, and competitiveness. To create an environment conducive to technological up gradation, research and development, and increased market access for MSMEs.

Composition of the SRI Fund

The Rs. 50,000 crore SRI Fund comprises: Rs. 10,000 Crore from the Government of India to initiate equity infusion in select MSMEs. Rs. 40,000 Crore sourced through Private Equity (PE) and Venture Capital (VC) funds, leveraging private sector expertise and investment.

Status of MSME Sector in India

The MSME sector of India contributes around 33% of the country's total GDP and is predicted to contribute worth USD 1 trillion to India's total exports by 2028. MSMEs provide about 110 million jobs which is 22-23% of the total employment in India. It contributes to reducing unemployment and underemployment, supporting inclusive growth and poverty reduction. The MSME sector fosters a culture of entrepreneurship and innovation. It encourages individuals to start their own businesses, promotes indigenous technologies, and contributes to the development of new products and services. Compared with large-scale companies, MSMEs aided in the industrialization of rural areas at minimal capital cost.

Government Initiatives for the MSME Sector

MSME Champions Scheme: Comprising MSME-Sustainable (ZED), MSME-Competitive (Lean), and MSME-Innovative (for incubation, IPR, Design, and Digital MSME), this scheme provides financial assistance to MSMEs to enhance their competitiveness and innovation capabilities.

Infusion in Credit Guarantee Fund: As part of the Budget 2023-24, the government announced an infusion of Rs. 9,000 crore in the corpus of Credit Guarantee Fund Trust for Micro & Small Enterprises.

Raising and Accelerating MSME Performance (RAMP): This initiative focuses on strengthening institutions and governance of MSME programs at both the central and state levels.

Conclusion

The journey towards economic independence and self-reliance is a dynamic process, and MSMEs are at their heart. Their resilience, innovation, and inclusivity have been crucial in driving India's progress on the path to self-reliance. As the government continues to implement policies and provide support, Indian MSMEs are poised to play an even more significant role in shaping the nation's future and elevating India's standing on the global stage. By nurturing these enterprises and enabling their growth, India can truly achieve its dream of becoming an economically independent nation.

There is no doubt that MSMEs play a critical role in Nation Building and growth of the economy. It is necessary that the support to this segment is accelerated, and government targets its ease of doing business initiative towards MSMEs. The targeted government policies can be a major catalyst in guiding MSMEs to the desired sectors of the economy to fuel growth of the economy. This could be done by framing conducive policies, offering incentives and most important, removing the on-ground hurdles, easy access to credit being a prime example. No doubt there is a long road to traverse but it is also beyond doubt that with entrepreneurship, innovation and agility at its core, the MSME sector can

not only play a vital role in making India a US\$5 trillion economy in the next five years but can also become a growth engine for making India a developed country by 2047.

Abstract

In today's world where the survival of the fittest is the norm, it has become critical to sharpen soft skills along with hard skills. Soft skills play a vital role in the success of an organization and therefore, their significance cannot be overlooked in this age of information and technology. While education holds greater significance, skill is paramount. It is true that in order to get work, members of the current generation must possess certain skills. Developing one's skills is essential before a nation may consider its promising future. These days, many nations – India foremost among them – face the issue of having people who are aware but not qualified enough to perform a certain job. India benefits from having the world's largest youth population. The secret to realizing the demographic dividend in higher education is integrating skills. Incorporating skill-based courses into normal coursework can enhance students' employability. Employment chances will rise if normal courses incorporate skill-based training. The capacity to carry out an activity competently and within a set time frame is referred to as a skill.

The capacity to carry out an activity competently and within a set time frame is referred to as a skill. There are two categories of skills: general and particular. For instance, in the workplace, some general talents are self-motivation, teamwork, leadership, and time management. Conversely, certain jobs simply demand a certain set of talents. Ability needed certain environmental cues and circumstances to gauge the degree of proficiency being demonstrated and applied.

Keywords: Skill, Skill development, Soft Skills.

Skill Development Programme

PMKVY, or the Pradhan Mantri Kaushal Vikas Yojana, is the Ministry of Skill Development & Entrepreneurship's (MSDE) flagship program. The goal of the Skill Certification Scheme is to make it possible for a large number of young Indians to enroll in industry-relevant skill training, which will improve their chances of finding employment. In the current globalized era, skill development is a crucial instrument for boosting labor strength and quality for higher productivity and economic expansion. Any nation's ability to develop its people and economy depends critically on their ability to acquire new skills and information. Developing one's skills might help people feel more powerful and more accepted by society. To fulfill the growing ambitions of young people, it needs to be supported by economic expansion and job possibilities. It is a crucial component to propel the economy's growth rate upward and to push the production potential front line outward. Raising the quality of these facilities as well as their massive quantitative

expansion are the challenges involved in skill training. India might eventually develop into a global hub for skilled labor procurement. India wants to emerge as a major player in the world economy. To achieve this, it should provide its employees with information and skills that are marketable.

Importance of Skill Development in Education

For India to produce the kind of workers that will be ideal in the twenty-first century, skill development must begin at an early age. There is currently a huge demand for trained individuals due to changes in the global economy and job market. It is crucial to educate and teach today's youngsters to gain the necessary skills in order to improve their employability. Approximately 90% of job opportunities demand vocational qualifications, according to market surveys. Merely 20% of our grads secure employment. The absence of employable skills prevents the others from finding acceptable employment. There is a greater need for trained and multiskilled personnel in the current globalization setting. Thus, there is an urgent demand for high-quality skill development and training in developing nations like India.

A few of the most important employable skills that companies look for are: written and verbal communication skills; commercial awareness; work attitude; continuous learning; self-management; teamwork; problem solving; initiative; self-motivation; flexibility; stress management; creativity; interpersonal sensitivity; and technology/IT skills, among others.

Soft Skills and Personality Development Skills for Students

1. **Leadership:** Those who take the initiative, provide direction when needed, motivate others, facilitate smooth coordination, and have a problem-solving mindset are considered leaders. The value of leadership abilities extends beyond your time in college; they help to mold your entire character. As a result, you should genuinely try to develop your leadership abilities throughout your time at college by taking part in different competitions, planning intercollegiate activities, and other activities..
2. **Interpersonal skills:** ability to communicate with others and comprehend behavior will be aided by your interpersonal abilities. Pupils who possess good interpersonal skills find it easy to form bonds with others, engage in empathy-based interactions, effectively handle dispute resolution, and lead fulfilling lives.
3. **Adaptability:** Adaptability is a crucial soft skill that will enable you to be flexible in your day-to-day activities. It demonstrates openness to taking on new tasks, responsibilities, or surroundings. Therefore, no trouble adjusting to the various teaching and learning styles employed by other colleges intend to study abroad and are flexible enough to cope with change.
4. **Effective communication abilities:** Possessing these abilities will help you succeed both professionally and academically. The reason for this is that having strong written and vocal communication skills makes it easier for you to convey your

ideas and opinions in speeches, presentations, and group debates. In addition to giving you confidence, effective communication skills help you comprehend topics and people more fully.

5. **Teamwork:** Information sharing and smooth communication between various groups is made possible through teamwork, which eventually aids in the accomplishment of predetermined objectives. Developing this habit during the academic years is a definite approach to job success because working in teams or groups is an integral aspect of degree courses.
6. **Problem-Solving:** Throughout the course of a student's education, problem-solving abilities are always appreciated, regardless of the subject matter. These abilities assess your capacity for critical thought, problem identification, and solution development. Furthermore, the ability to solve problems creatively and effectively using unconventional solutions is implied by the trait of problem solving. It will be especially beneficial because, according to LinkedIn, creativity is one of the soft talents that employers value most, along with flexibility and teamwork.
7. **Time Management:** Students who have a stronger grasp of time management can work and study without difficulty. Pupils who are adept at managing their time can manage several assignments and excel in all areas of their lives.

The Importance of Soft Skills

Collaboration

First and foremost, recent graduates must be able to work collaboratively with their new colleagues. This includes operating efficiently in groups, following the lead of others, leading when called upon, accepting and giving constructive feedback, and generally working together as a team with their office peers. Students who can only be successful working in solitude may be in for a rude awakening when they begin working. If they cannot succeed in collaboration, they will find it incredibly challenging to succeed in most careers.

Communication

Communication skills are also very important for students to develop while in school. Employers expect new hires to interact well with clients and coworkers, ask questions, listen carefully, and carry on respectful and productive conversations. Many students today are equipped with innate electronic communication skills and excel at email, instant messaging, social media, and texting. But employers need and expect them to communicate well via telephone, video conferencing, and face to face. Students must enter the workforce comfortable with all these communication channels and the etiquette that goes along with them.

Challenge

Every job, no matter the field, has its unique set of challenges and setbacks. Students who are unprepared to think creatively and solve problems may find they struggle when faced with tasks that require critical thinking. Often, the learning process is straightforward and predictable — memorizes the formula, solve the equation, or pass the test and you succeed. In life, however, rote memorization is not enough to be successful. Parents and educators must work together to help students grow and pursue opportunities for experiential learning.

Conclusion

In today's world, skill development has become increasingly important. Skill development has emerged as a crucial component of education due to the need to empower the youth, enhance their employment opportunities, and boost the national economy. It is becoming a part of the curriculum of schools, which formerly prioritized academics. To increase their chances of a better future, however, the emphasis is now also on teaching life skills to schoolchildren and vocational training to high school students. Not only does skill development benefit individual students, but it also benefits the community as large. It contributes to the development of a better world where diversity and cultural variances are respected, and where imagination and creativity are given the credit they merit.

Introduction

Agriculture as a sector has tremendous growth opportunities. Robust infrastructure and value chain can yield good returns to the economy making it attractive for employment and investment, globally. It is the largest employment sector across the world which currently provides income for 40% of the world’s population. The Indian government is taking steps to provide farmers with farm-gate infrastructure. Agricultural finance is crucial to support the growth of the agricultural sector. Indeed, it is essential for food security, job creation, and overall economic growth.

In July 2020, the finance minister launched the Rs 1 trillion Agri Infrastructure Fund for this purpose. With more than `1 trillion of financing in the next 10 years, farm-gate and aggregation point agriculture infrastructure projects have been given the funds to support Primary Agricultural Cooperative Societies, Farmers Producer Organizations, Agriculture entrepreneurs, Start-ups, etc.

Some of the Sustainable Development Goals are intrinsically linked to food, nutrition and agriculture. In the Post-COVID situation these goals assume more importance as the emphasis would shift from GDP driven economic goals to the Well Being driven social goals. Agriculture, Nutrition and Food form the bed rock of the well-being of people across continents. Governments of G20 countries have a responsibility to make the SDGs achievable by 2030. Food, nutrition and agriculture will play a crucial role in that endeavor. Such an important topic deserves to be at the centre of the agenda of G20.

Agriculture has made great progress in many countries in the last 50 years, starting with Green Revolution followed by hybrid technology and biotechnology. Yield increases helped the world to feed the ever growing population. However, tragically hunger still exists in the world. More than 5 million children died last year due to lack of food, clean water and health care. About 160 million children of below 5 years age are found to be malnourished in the world. These numbers can go up if immediate action is not taken. Diffusion of knowledge and technology has not been uniform across the world. Progress has not benefited people in different countries uniformly which has resulted in a fractured social fabric of the world. This is to be addressed urgently by the world leaders by paying specific attention to the following specific subjects. Equity is a victim of our growth so far. Lack of purchasing power has deprived certain sections of the world community from accessing food while on the other hand there is abundance of food in most of the advanced countries.

Drivers of Change and Innovation in Improving Agriculture Finance

Innovations in technology and the structure of agricultural markets enable the evolution of approaches and products that can help agricultural finance. As noted in the 2012 G20 report, sustainable agricultural finance requires an assessment of: a) risks, b) costs/distribution channels, c) bankable opportunities, and d) the right product to the right people. The five areas of research undertaken by the GPFI, as summarized in the present report, contribute to solutions in these areas. Value chain finance is most relevant to address points a), b) and c). Insurance focuses on a), but is also confronted with b). Demand assessment is critical for d). Technology is driving innovation for b), and financing for women is relevant for c) and d). While not comprehensive, innovation in these five areas makes an important contribution to global learning.

Digital Financial Services: Developments in Serving Smallholder Farmers

A number of private-sector actors and other stakeholders are experimenting with digital financial services (“DFS”), particularly those enabled by mobile phones, to overcome the specific challenges of serving smallholder farmers and their families. Buoyed by the relative success of DFS in the non-agricultural context, a range of DFS deployments have been launched in recent years aimed at extending financial services to smallholders. The efforts are still nascent and the challenges plentiful. Nonetheless, there is widespread interest in exploring the potential of DFS to overcome a number of traditional economic and cultural barriers that currently limit smallholder use of formal financial services.

Agricultural Credit

Credit is critical to agricultural finance, whether to purchase inputs (seeds, fertilizer), tools, or to cover ongoing operational costs prior to harvest time. Yet for smallholders, credit is relatively rarely drawn from financial institutions. The cost of assessment of the client risks and transactions costs of providing loans by conventional means is too high for most financial institutions

Insurance

Insurance can reduce the negative impacts of crop failure and livestock illness. It may also improve a farmer’s ability to access credit and willingness to invest in labor and inputs. There are several types of agriculture-related insurance, including weather index insurance (for example, drought, excessive rain), area yield, livestock mortality, and price insurance. The operational costs of making and receiving payments for insurance, issuing payouts and verification often make the costs prohibitive for smallholders. As such, insurance providers innovated using index insurance for weather risks coupled with mobile registration and payments.

Payments

There is a fast-growing trend in mobile money transfers. Where available, some smallholder farmers are customers of a digital payment provider and make transfers and/or payments outside of their agricultural activities. There are also newly-developed platforms that enable organizations and government agencies to make payments for specific agricultural purposes, including for fertilizer and seed subsidies.

Financing to Support Women in the Agricultural Sector

Providing financing to agriculture is challenging for both male and female farmers, however women face some unique challenges. These challenges relate to the role of women in the household that often restricts their control over assets and constrains their available time for productive activities. Their role in the household is often invisible, particularly when it comes

to their economic and financial contributions. As such, women have lower access to economic and financial services (World Bank 2015)

New Trends in Financing Agricultural Value Chains – Promising Practices and Emerging

Recommendations for Policy Development

With increasing market liberalization and the integration of the agricultural sector of developing economies into world markets, rural transformation is accelerating. Commodity and financial flows and the processing of agricultural goods up to the final consumers have become more sophisticated. This integration of agricultural and food product markets is likely to grow further as obstacles to the free flow of agricultural goods on international markets diminish (GIZ 2015b).

Innovations and Emerging Trends in Agricultural Insurances

Agriculture is a risky business and farmers face a host of market and production risks that make their incomes volatile from year to year. These risks include yield losses due to bad weather, pests and diseases; post-harvest losses during storage and transport; and unexpectedly low market prices. Traditional risk management arrangements frequently fail to provide an adequate safety net for the poor. They are also limited in their ability to manage catastrophic risks that affect many farmers within a region at the same time (for example, regional droughts or floods). Covariant risks are also a problem for financial institutions and input suppliers, since they can be faced with widespread defaults on loans and unpaid bills (GIZ 2015a).

Food security

Food security deals with availability, accessibility and affordability of food for all the citizens of each country. It is imperative that epidemics, pandemics, politics, natural disasters and wars do not disturb the food security of any nation. Sufficient safeguards are to be put in place to ensure that affordable food is made available to the poorest of the poor in every country irrespective of other obstacles.

Nutritional security of the citizens of the world assumes significance now because the food choices of the people will be increasingly dictated by the need for healthy diet that gives them immunity to diseases. The realization that consuming the right food will avoid expenditure on medicines and hospitals makes people look for affordable healthy food. Shifting people to plant-based nutrition is a key task in front of the world. Sustainable dietary habits of people lead to sustainable food production systems which in turn promote environmental sustainability and nutritional sustainability.

Small holder farmers and their welfare need to be at the top of the priority list for governments around the world. Unprofitable agriculture, in many parts of the world, has left the farmers poor and vulnerable to several risks. In most of the developing countries more than 80 per cent of the farmers are small and resource poor and many of them are women. They lack access to high quality inputs, finance, technical advice and access to markets. They are unable to practice sustainable and good agricultural practices. Distress among farmers leading to increased suicide rate is a big challenge for the world. Can agriculture survive if farmers die? If youth does not have interest in agriculture how will the future of agriculture look? Leaders have to look at this serious problem that cuts across most of the world and G20 countries. They have to find answers that can improve the financial wherewithal of the farmers and increase their risk bearing capacity.

Depletion of natural resources has become a very serious issue in most of the countries. Soil, water and biodiversity have depleted due to continuous and intensive agriculture followed in the last 50 years. Our food production systems in each country have to be measured against a natural resource use efficiency index. Diffusion of technology across the nations to help them in improving their natural resource use efficiency index has to be given priority as a humanitarian effort to conserve environment. The leaders have to take policy decisions to promote this collaborative approach.

Climate Change is the biggest threat to global agriculture whose impact is increasing year after year. Droughts, floods are increasing in intensity. Potential yields could drop and food availability could be severely restricted by 2050 due to climate change unless we start responding now. Sustainable agricultural practices and cultivation of climate resilient crops may help us in fighting this but how to make it a part of our life and how to handle possible immediate yield losses? Is it possible to have a collaborative policy across a nation which helps the total global population? This needs the attention of the world leaders to find a collaborative effort.

Financial systems, consisting of credit and insurance products and services, have to be made available to farmers so that their risks are covered and their financial wherewithal is built over a period of time. Using modern digital technologies the financial institutions should be able to offer these services in a seamless manner to the farmers as they offer to their urban counterparts. Digital land records, collateral management, digital market linkages for the produce and similar infrastructure are essential for the success of this effort.

Farmer's incomes have to be strengthened through diversification. Livestock, dairy, fisheries, birds and other sources of non-farm income for the farmers are to be built on a strong platform with funding, insurance, technical advice, linkage to markets and digital support systems. This will reduce vulnerability of farmers' lives due to crop failure for reasons like abiotic and biotic stresses. A robust structure of farmers cooperatives and farmer producer organizations is to be built covering the farm and non-farm activities of the farmers in a comprehensive way. India has a huge role to play in bringing all these aspects of food, nutrition and agriculture to the centre stage during its tenure of leadership of G20. India is a major contributor to the pool of agricultural land, number of small holder farmers, crop

diversity, agro-climatic conditions and food systems of the world. India can benefit from bringing all the above aspects into a seamless stream of knowledge and experience sharing across countries but at the same time India can also contribute towards making this work for many other developing countries. India should take lead in getting some of the policy level decisions on the above aspects hammered out among G20 countries during its tenure. The G20 leaders have to show unflinching commitment to achieving the Sustainable Development Goals by 2030, especially those impacting food, nutrition and agriculture - which kept the world going during COVID-19 pandemic. They have to build a more equitable world in the post-COVID situation.

Conclusion:

It is important to recognize the trends in agriculture and financing, often in response to sector changes and changes in technologies and approaches. The growing importance of stronger value chain relationships is due largely to the trend of increasing qualitative and quantitative demands for processed food products and higher value products. The need to fulfill higher standards and time-driven deliveries will undoubtedly continue and lead to a much higher proportion of agricultural production organized in value chains. The impacts of these dynamics on the structure of agricultural markets have to be understood by all actors in the chain, as well as by service providers, and especially financial service providers. The risks of noncompliance also multiply, thereby increasing the needs of insurance and innovations in ITC. Hence, by understanding and using the value chain and knowing the clients, and their clients, financial services and other complementary support services can be offered in a more systematic way at lower cost and risk.

Abstract

The modern economy depends on the use of information networks and platforms, renews factors and resources, and is powered by rising technology and new development concepts. Seeks to achieve high-quality, sustainable development as a crucial pillar in the construction of a contemporary economic structure. The majority of economic activities and production processes are impacted by digitalization. The significance of the digital economy during this age of rapid expansion is demonstrated by its deep integration with social and economic industries, promotion of digital transformation, and ongoing introduction of new models, technologies, and industry processes. This results in the modernization and transformation of businesses, industry, and society as a whole, supporting innovation-based sustainable economic development.

Keywords: Digital and Economy," "Internet and economy, Digital Strategy, digital ecosystem.

Introduction

Digital technologies, typically represented by the Internet, big data, 5G, artificial intelligence, accelerate the deep integration with industries, bringing the world into the era of digital economy Since the "Belt and Road" initiative was proposed, the digital economy has also gradually become a crucial cooperation area for the countries.

The digital economy can further optimize the industrial structure and increase jobs through information and communications technologies (ICT), Internet and other intelligent means, greatly improving the economic development in countries along the "Belt and Road." In particular, the digital economy has played an active role in mitigating economic losses and promoting economic recovery during the fight against Corona Virus Disease 2019 (COVID-19). Specifically, COVID-19 brought serious shocks to the world economy by directly affecting production, disrupting the supply chain and having an adverse impact on firms and financial markets . Additionally, the stringency measures implemented by policymakers to minimize social mobility also decrease macroeconomic activity On the contrast, the digital economy, with its advantages of high technology and integration with other industries, has become a new opportunity for digital transformation of industries. Compared with the real economy, digital technologies, industries and services play an important role as stabilizers, lubricants and boosters

Thus, they are considered as important measures to combat the crisis and engines to drive economic growth.

Digital Strategy explains that a digital ecosystem comprises stakeholders, systems, and an enabling environment that, together, empowers people and communities to use digital technology to access services, engage with each other, and pursue economic opportunities. Building on this concept, the Agency created a framework that refines the ecosystem into a practical structure for development practitioners.

Challenges in Measuring an Increasingly Digitalized Economy

From the statistical perspective, the issues around the digitalization of the economy and society are fundamental. There has been significant international debate and discussion in recent years about measuring the economy in an increasingly digitalized world. The debate has centred on two questions. The first is whether the statistical frameworks used to measure the economy, such as the *Balance of Payments and the International Investment Position Manual* (International Monetary Fund [IMF] 2009) and the *System of National Accounts* (European Commission et al. 2009) adequately capture economic activities related to the digitalization of the economy. The second, less discussed, question is whether statistical agencies have the proper statistical infrastructure to capture, categorize and process the information into meaningful statistics. This essay explores both issues. First, it argues that, for the most part, the goods and services are not new – they are just being delivered in new ways and therefore the conceptual and statistical frameworks are adequate and up to the task. Second, the changing nature of digital goods and services is a major challenge for statistical agencies as these products and services are increasingly difficult to measure. Statistical infrastructure must be adapted to capture changes, otherwise there could be a significant deterioration in the quality and related detail of key official statistics such as GDP, the Consumer Price Index (CPI) and the unemployment rate.

India's digital divide is narrowing fast, as less affluent states leapfrog to catch up with more affluent states. India can create up to \$1 trillion of economic value from the digital economy by 2025, with half of the opportunity originating in new digital ecosystems that can spring up in diverse sectors of the economy. E-commerce platforms are expected to drive recovery of consumer electronic products – mobile devices, smart TVs, LED lighting, etc. – faster and having a robust manufacturing ecosystem is essential to adequately address the indigenous demand. An immediate need to develop local supply chain networks has been recognized and efforts in this direction could adequately support the indigenous electronics manufacturing. Industry should develop short term strategies on quarterly basis and calibrated decision-making, to address disruptions caused due to the COVID-19 pandemic. The 'Atmanirbhar Bharat' policy could give the much-needed fillip to the country's disrupted business operations by promoting indigenous manufacturing encouraging substitution of imports of low-technology goods, and encouraging local produce at lower prices.

As more and more businesses across various industries embrace new digital technologies, the economy is becoming increasingly digitalized (or digitally enabled).

Online shopping and e-commerce are mainstream channels for consumption, and products themselves are moving from tangible mediums (CDs, videos, books) to digital ones. With the proliferation of digital intermediary platforms, the actors involved in a typical online transaction are also changing. While there used to be two primary factors involved in any given transaction (for example, the buyer and the seller), online transactions increasingly involve multiple actors, including but not limited to the one that facilitates the transaction, the one that processes the payments between buyers and sellers, and the one that distributes the final products. In addition to increasing the number of actors involved, digital intermediary platforms are also enabling private individuals, which have typically been consumers, to more easily produce goods and services themselves.

The term digital economy is being put forward to try and capture or put a box around the new ways consumers, producers and markets are interacting and exchanging goods and services. While the term has gained significant prominence, there is not yet a definition that encapsulates what is meant by the digital economy. It is unclear if such a definition will ever emerge, in part because the digital economy is pervasive – it is not so much a piece or sector or industry of the economy, rather it is transforming the entire economy. Accordingly, it is more appropriate to refer to the digitalization of the economy rather than the digital economy.

While the digitalization of everything is transforming both our business and personal lives, there is little information currently available that helps us understand the economic, social and environmental impacts. It is rather ironic that in a digital age, where information is all around us and can be obtained from a simple command such as “hey, Google” or “hey, Alexa,” we lack basic statistics that help us understand the transformation that is occurring.

Conclusion

The digital economy, which is based on new development concepts and driven by emerging technologies, relies on the application of information networks and platforms, renews factors and resources, and aims at high-quality and sustainable development as an important cornerstone for building a modern economic system. Digitalization affects most of the production processes and activities in the economy. In a period of rapid development of the digital economy, its significance is manifested in deep integration with economic and social industries, promoting digital transformation and constantly introducing new technologies, new models and new industry processes. This leads to the transformation and modernization of society, industry and enterprises, contributing to sustainable economic development based on innovation models.

Abstract

*Skill India Program Development will encourage and groom professionals to contribute substantially to India's industrialization and economic growth. It is estimated that over 400 million women and men in the nation will be made competent in various industrial and trade skills by the year 2022. It is definitely going to be a positive foray to remove poverty, and reducing unemployment on a large scale. Certificates will be delivered to those who complete a particular skill or programme and this certificate has to be accepted by all public and private agencies and entities, including overseas organizations. Skill India mission is a programme designed for the entire nation. Union Budget 2023-2024 adopts seven priorities, which complement each other and act as the 'Saptarishi' guiding us through the Amrit Kaal. **Youth Power** is one of the priority areas which include Skill Development.*

Keywords: Skill India, Development, Economic Growth

Introduction

Skills and knowledge are the driving forces of economic growth and social development for any country. Countries with higher levels and better standards of skills adjust more effectively to the challenges and opportunities in domestic and international job markets.

The Skill India Mission was launched in 2015 by the Central Government to make Indian youth belonging to rural and urban areas competent for employment. Skill India campaign was launched by Prime Minister Narendra Modi on 15 July 2015. The initiative aims to educate more than 40 crore individuals and create a workforce by 2022. It does so by offering different courses and classes for free.

It aims to empower India's youth by offering necessary skills and training to increase their chances of getting jobs in various sectors. This also boosts an individual's productivity and knowledge. The National Skill Development Mission

takes account of the proceedings through a result-oriented structure that connects with modern business requirements. Technically, this scheme takes care of convergence, institutional training, overseas employment, leveraging public infrastructure and sustainable livelihoods.

Features of the National Skill India Mission

The features of the Skill India Mission are as follows.

- It creates a lucrative scheme for the development of rural youth.
- This scheme focuses on improving the entrepreneurship and service skills of Indian youth.
- National Skill India Mission supports and offers training to individuals working in both organised and unorganised sectors. For instance, cobblers, nurses, masons, kiln workers, etc., can apply for this scheme.
- Skill India Mission also focuses on developing sectors, such as designing, textiles, gems industry, transportation, real estate, textiles, etc. These areas need adequate training for growth.
- It trains youth and makes them capable of finding a job in both India and abroad.

Benefits of Skill India Mission

The Skill India Mission offers beneficiaries the following benefits.

- With appropriate skill development, one can get better job positions and appropriate salaries.
- They can improve their standard of living and support their family.
- The development at the grass-root level will help boost the economy and attract foreign investments.
- Individuals receive a National Skill India Mission certificate which substantiates their skill training.
- Skilled employees would offer better outcomes and more productivity.
- An individual can develop his/her skills and set up a business. This again increases the scope for employment in India.
- Salaried beneficiaries can avail loans of up to ₹1 crore and ₹3.5 crores as self-employed against this scheme. With a stable income, they can easily repay the outstanding balance within the tenure of 20 years.

Pradhan Mantri Kaushal Vikas Yojana 4.0

The Finance Minister announced that **Pradhan Mantri Kaushal Vikas Yojana 4.0** will be launched to skill lakhs of youth within the next three years. The scheme will emphasize on On-job training, industry partnership, and alignment of courses with needs of industry. She further highlighted that the scheme will also cover new age courses for Industry 4.0 like coding, AI, robotics, mechatronics, IOT, 3D printing, drones, and soft skills.

Indian Skill Development Service

The Indian Skill Development Services (ISDS) is a new central government service that has been created especially for the training directorate of the Ministry of Skill Development and Entrepreneurship. It is a Group 'A' service and is expected to give a big push to the government's skilling initiatives by drastically enhancing the effectiveness and efficiency of the various schemes in this domain. The qualifying exam for this service is the Indian Engineering Service Exam conducted by the UPSC. The idea behind the ISDS is to attract young and talented people into the skill development domain and make skilling initiatives successful in the country.

The objective of Skill Development is to create a workforce empowered with the necessary and continuously upgraded skills, knowledge and internationally recognized qualifications to gain access to decent employment and ensure India's competitiveness in the dynamic global market. It aims at increasing the productivity and employability of workforce (wage and self-employed) both in the organized and the unorganized sectors. It seeks increased participation of youth, women, disabled and other disadvantaged sections of the society and to synergize efforts of the various sectors and to reform the present system with the enhanced capability to adapt to the changing technologies and the labour market demands.

Impact of Skill India

Skill India is a flagship program launched by the Indian government with the objective of creating a skilled workforce in the country. The Skill India program aims to provide vocational training to millions of young people to make them employable in various sectors. The impact of Skill India has been significant in many ways.

1. **Job creation:** Skill India has played a critical role in creating employment opportunities for millions of young people in the country. The program has trained people in various skills, including hospitality, tourism, healthcare, and construction, among others, making them employable in these sectors.
2. **Increased productivity:** The training provided under Skill India has helped to improve the productivity of the workforce. With better skills, workers can perform their jobs more efficiently, which leads to increased output and higher quality of work.
3. **Economic growth:** Skill India has contributed to the economic growth of the country by providing skilled labor to various sectors. With a skilled workforce, businesses can operate more efficiently, and this can lead to higher profits and economic growth.
4. **Entrepreneurship:** Skill India has also encouraged entrepreneurship by providing training in various business-related skills. This has led to the creation of many small businesses and startups, which contribute to the growth of the economy.
5. **International recognition:** Skill India has received international recognition for its efforts in creating a skilled workforce. The program has partnered with

several countries to share knowledge and best practices, and this has helped to raise the profile of India as a country with a skilled workforce.

6. **Empowerment:** Skill India has empowered many individuals, particularly women and underprivileged communities, by providing them with the necessary skills to earn a livelihood. This has helped to reduce poverty and improve the quality of life for many people.

In conclusion, Skill India has had a significant impact on the Indian economy and society. The program has helped to create employment opportunities, improve productivity, encourage entrepreneurship, and empower individuals. As the Skill India program continues to expand, it is expected to play an even more significant role in shaping the future of India's economy and society.

Challenges of Skill Development in India

In India the unemployment rate among youth is almost 13% as compared to 4.9% overall. Given the kind of opportunities available in the country, it is irresistible to note these dismal figures. The missing link here is skill development which is the key component to healthy economic growth. Educational qualifications are only essential for entering the job market, it is the skills that will finally determine one's employability strength. The following are the major challenges of skill development in India:

- **Examination Oriented Education System:** The current education system does not concentrate on training young people in employable skills that can provide them with employment opportunities. Today, a large section of India's labor force has obsolete skills. With current and expected economic growth, this challenge is going to only increase further, since more than 75% of new job opportunities are expected to be 'skill-based' in the coming days. Our education system is mere examination centered rather than skills and practical centered. None of the educational institutes teach practical aspects to students. This leads to scarcity of skilled youth even when have ample job opportunities in the market.
- **Restrictions in Industry Sector:** Many companies give on job training to their workers. This may take different forms:
 - The workers may be trained in the firm under the supervision of a skilled supervisor;
 - The workers may be sent for off-campus training.

In both these cases firms incur some operating cost. Thus, firms will, insist that the workers should work for a minimum-specific period of time, after their on the job training, during which it can convalesce the benefits of the improved productivity owing to the training. But the retention ratio is low thus private and Industry Participation in skill development is lacking. There are no incentives for private players to enter the field of vocational education. Present set of laws are very rigid. In service training is required but not prevalent today. There is no

opportunity for continuous skill up-gradation. There is a lack of experienced and qualified teachers to train students on vocational skills.

- **Low Women Participation:** Women participation in vocational education and training is low as compared to men. There are a few reasons limiting interest/participation may be social and cultural norms and family responsibilities. Women also tend to become discouraged due to such family and social forces, especially in rural areas. Therefore, in order to increase enrolments, the combined efforts with local NGOs and Panchayats on informing women and their families on the benefits of vocational education, which may lead to employability, is very important. Specifically, women should be targeted by explaining how inculcating income generating skills and activities within them would subsequently lead to improving their social and economic status.
- **Inadequate Scale, Limited Capacity:** In India, the existing infrastructure, both physical and human, is not sufficient considering the projected demand for skilled labour in the country. Along with creating additional capacity in the existing institutes, there is a need to create an adequate infrastructure even in small towns and villages. In terms of faculty, also, the training infrastructure is inadequate. For example, there is a need of 85,000 trainers for the seating capacity of 17, 00,000 trainees at ITIs considering 20:1 student/faculty ratio. As against this, the seating capacity for various trainers' programme of Directorate General of Employment and Training (DGET) is just 4,438, which is far from adequate to meet the requirement.
- **Awareness, Mindset and Perception Issues:** Skill development in India is far below the requirements due to a lack of awareness on the type of courses as well as information on the ensuing career prospects. More prominently we can say, there is limited acceptance of skill development courses as a possible alternative to formal education in India. Unfortunately skilling is often viewed as the last option meant for those who have not been able to excel in the formal academic system. This is partly due to increase in the aspirations for white collar jobs which require higher qualifications and skill development is often related with blue collar jobs, which are perceived low dignity jobs with low wages or salary

Conclusion

Skill development is speedily gaining importance in the present scenario and it is clear that Education and Skills are fundamental to improve employment opportunities, shrink poverty, boost productivity, and promote environmentally sustainable development in rural areas. It is urgently needed to assimilate skills development into rural development policies and strategies such as agricultural policies and private sector development and entrepreneurship policies. It is essential that in education system skill based training should be incorporated with placement

facility to link trainee with Industries. Skill development is need of the hour which would facilitate the workforce to adapt and match the new requirements for youth in rural India which results in rural development. It is only through an inclusive rural development agenda that sustainable human progress is possible (Sinha, 2007). Thus education and skill Development is an urgent and important requirement for developing countries, in particular for countries with large youth population such as India.

INTRODUCTION

India's G20 Presidency signifies a remarkable milestone in the nation's diplomatic journey. As India assumes this crucial role, it finds itself positioned at the heart of global economic and political discourse. While the primary focus of the G20 lies within economic realms, its impact extends across various sectors, encompassing marketing as well. This article delves into why India's G20 Presidency holds significance for marketing agencies in the country and explores the myriad opportunities it presents to this industry.

The Group of Twenty (G20) is a global forum consisting of major economies, including both developed and emerging countries. Its formation in 1999 aimed to tackle urgent global economic concerns. Representing a substantial share of the world's GDP and population, the G20 consists of 19 individual nations along with the European Union.

India's G20 Presidency began in 2022 and spans a two-year term, during which the country acts as chair and hosts meetings and discussions among G20 members. These crucial discussions cover topics such as economic growth, trade, sustainable development, and global cooperation.

IMPLICATIONS FOR MARKETING - INDIA'S G20 PRESIDENCY

1. Economic Policy Impact

An important impact of the G20 on marketing agencies in India is seen through its economic policy decisions. As India assumes the Presidency, it has the chance to shape and influence discussions pertaining to economic growth, investment, and trade policies. Favorable policy

outcomes can create more business opportunities for marketing agencies since a flourishing economy often translates into large marketing budgets.

Favorable trade agreements and investment policies can incentivize multinational companies to expand their operations in India. This expansion often entails implementing robust marketing campaigns to establish and increase their market share, which presents lucrative opportunities for local marketing agencies to form partnerships with these companies.

2. Focus on Sustainability

Sustainability has become a prominent topic in G20 discussions, with increasing importance in recent years. With India's G20 Presidency, there is a unique opportunity to champion sustainable business practices that align with the rising demand for environmentally friendly and socially responsible marketing strategies. As global awareness of climate change and environmental concerns grows, marketing agencies in India can leverage this trend by promoting sustainable brands and products.

3. Digital Transformation

Many G20 members place a high priority on digital transformation in a world that is becoming increasingly digital. Policies and initiatives that encourage digital innovation and connectivity may come up during India's presidency. Digital marketing, e-commerce, and technology-driven advertising-focused marketing firms may benefit from this.

4. Global Partnerships

India's G20 Presidency also gives people a chance to work together and form partnerships around the world. These alliances provide marketing agencies in India with access to international markets, the opportunity to share best practices, and exposure to cutting-edge marketing strategies from other nations.

5. Enhanced Reputation

India's international profile and reputation are enhanced by hosting the G20 presidency. India-based marketing agencies may indirectly gain from this elevated global standing.

Increased marketing opportunities for agencies can result from a more favorable perception of India by foreign companies looking to invest there.

6. Human Capital Development

As part of its G20 commitments, India may focus on fostering entrepreneurship and developing human capital. By ensuring a skilled workforce and a flourishing entrepreneurial ecosystem, these efforts can indirectly benefit marketing agencies. Marketing campaigns that are more innovative and successful may result from a well-educated workforce.

7. Promoting Cultural Exchanges

India frequently makes use of its G20 presidency to highlight its extensive cultural heritage. By developing campaigns and initiatives that highlight India's diversity, marketing agencies can play a crucial role in encouraging these cultural exchanges. These efforts have the potential to increase opportunities for tourism and business by fostering a greater appreciation of India's cultural offerings on the international stage.

G20 -SMART MARKETING TECHNIQUES

Digital Marketing

India leveraged the power of digital marketing and social media platforms to reach a global audience, creating a long-lasting impression. The strategy is to use digital media and social media platforms to create a digital presence, highlighting the event's significance and India's role in it on a global scale. These marketing strategies focused primarily on the dissemination of information and facilitating real-time engagement. Moreover, effective digital connectivity through proper marketing channels helped to generate immense curiosity around the event.

Social Media Campaigns

India used popular social media platforms like Instagram, Facebook, and X to share real-time updates and photos from the summit. This marketing strategy kept the public informed about the event's developments and helped build engagement. As a result, social media was buzzing with G20 updates and piqued the interest of the audience from guest countries.

The government of India also launched a social media campaign #G20India, and used it diligently to share photos and updates from the summit. This social media campaign also

focused on sharing engaging videos and infographics highlighting our economy and the country's commitment to fostering global cooperation.

Use of Marketing Channels

The mix of effective marketing mediums contributed significantly to promoting the event and its agendas. To begin with, India launched a multimedia ad campaign encompassing platforms like radio, print, and TV to reach more individuals. Additionally, collaborations with leading media outlets helped garner extensive earned media coverage in the form of feature articles and op-eds, in national and international media. These attempts stimulated interest in the summit and projected a positive image of the country as a powerful leader.

Website Launch

The Government of India launched a dedicated website for this G-20 summit that displayed details of the event, highlighting its agendas and information about the participating nations. The government used the platform proactively to promote India's mission, culture, and heritage. Recognizing the effectiveness of digital media and its scope, the official website had a dedicated section for digital marketing. It primarily displayed information on how different enterprises can get involved and promote the summit.

Traditional Marketing Methods

Besides social media campaigns, digital marketing platforms, and active website engagement, India used traditional marketing methods to draw attention to the summit. For instance, the organizers used public relations and print advertising and set up multiple posters, banners, and billboards across several cities for the G-20 summit's promotion. The government also hosted several programs, including a youth summit, a business summit, and a cultural festival to demonstrate India's strength and attract more trade and investment opportunities.

ASTUTE MARKETING STRATEGIES - G20 SUMMIT

The much anticipated G20 Summit that is going to be held in India starting from 8th September 2023 showcases not only the nation's diplomatic prowess but also its astute marketing strategies that played a pivotal role in promoting the event on a global scale.

This G20 Summit is amplifying the voices and addressing the concerns of the Global South. It is providing impetus to women-led development initiatives. As technology assumes an increasingly prominent role in shaping the future, this G20 is taking significant strides in the realms of AI (Artificial Intelligence) and DPI (Digital Public Infrastructure).

On the marketing strategies coming to life, Mariya Jamal, Head of Marketing at Dot Media commented, “The G20’s marketing strategy is well-thought-out, with a focus on collaboration, economic stability, and global governance. Drawing on its role as a forum for world leaders to tackle pressing global issues, the G20 uses diplomatic channels, engaging with the international media and strategic messaging to capture the public’s attention. The aim is to position the G20 as an essential forum for multilateral solution-building and global decision-making.”

DIGITAL MARKETING AND SOCIAL MEDIA'S ROLE IN GLOBAL

The G20 Summit requires a robust marketing plan to gain international attention. India leveraged the power of digital marketing and social media to reach a global audience, allowing for real-time engagement and information dissemination.

Amit Relan, Co-founder and CEO, mFilterIt assessed the role of digital marketing and social media stating, “Digital marketing and social media have played a pivotal role in promoting the significance of the G20 summit to the entire nation and even at a global level. Not only the Indian media has captured this strategic event, but some of the biggest names in the international media have spread the word in their respective countries. The digital connectivity has helped to generate curiosity and awareness around the event and has also captured the thoughts of the delegates visiting the country.”

CONCLUSION

In conclusion, there are numerous reasons why India's G20 presidency is significant to the nation's marketing agencies. It provides a platform for developing global partnerships, promoting sustainability, and shaping economic policies. In addition, it encourages the growth of human capital and enhances India's international reputation. Marketing agencies in India may see an increase in business opportunities as a result of any or all of these factors.

Marketing agencies must remain aware of the changing landscape as India continues to lead discussions on global economic issues. These organizations can position themselves for growth and success in a world that is interconnected by aligning their strategies with the themes and policies emerging from the G20. The opportunity to have a lasting impact not only on India's economy but also on the prospects for the marketing industry in the future is one-of-a-kind during India's G20 presidency.

Consumer Behaviour and Fast-Moving Consumer Goods (FMCG)

Dr. E. Renuga

Assistant Professor, Department of Commerce (Finance), Nallamuthu Gounder
Mahalingam College, Pollachi.

Email:charukavil@gmail.com

Abstract

The FMCG industry is greatly influenced by customer behaviour; changes in consumer preferences drive the sector's innovation, adaption, and expansion plans. Prices, as components of pricing strategies, are essential to coordinating these shifts. The increasing longevity of health consciousness among customers is a contributing element to this shift, as FMCG companies are shifting their emphasis to healthier product offerings. For example, the food and beverage industry has seen a significant movement towards whole grain foods, organic produce, and plant-based meals. This trend coincides with a growing emphasis on the lifespan of products. The rising sales of goods that promote healthy eating are proof of this.

Keywords:*FMCG, Consumer Behaviour, Preference, Customers, Product*

Introduction

Consumer Buying Behaviour towards selected Fast Moving Consumer Goods (FMCG) Products. Consumer behaviour plays an important role in marketing of fast moving consumer goods. This behaviour is affected by various factors. In the present era of globalisation, needs and wants of consumers change with time. The fast moving consumer goods (FMCG) sector contributes a lot to the growth of India's GDP. Therefore, it is necessary to identify the changes in consumer buying behaviour towards FMCG products. Fast Moving Consumer Goods (FMCG) goods are popularly named as consumer packaged goods. Items in this category include all consumables (other than groceries/pulses) people buy at regular intervals. The most common in the list are toilet soaps, detergents, shampoos, toothpaste, shaving products, shoe polish, packaged foodstuff, and household accessories and extends to certain electronic goods. These items are meant for daily frequent consumption and have a high return.

Fast Moving Consumer Goods(FMCG) are the commonplace products that disappear off store shelves rapidly. Because of their low cost and high repurchase rates, fast-moving consumer goods (FMCGs) have a significant position in the economy. Leading companies in the area, such as Unilever, leverage their experience to make significant contributions. Because of how quickly these products are produced, a well-organized supply chain is required, from the acquisition of raw materials to distribution and retailing, which suggests a heavy emphasis on FMCG logistics. It is crucial to strike a balance between precise and dependable transportation solutions and the significant inventory turnover typical of FMCGs.

An efficient supply chain is the foundation of any prosperous fast-moving consumer goods company. It is the catalyst for effectiveness, financial savings, and, in the end, client happiness. Consumers' worries about ethical and sustainable business practices have a significant impact on their purchase decisions, which forces companies to modify and reconsider their pricing tactics. As a result, FMCG companies place a high priority on managing the product's lifespan and sustainable sourcing, striving to produce goods while upholding openness in their operations.

Factors That Affect Consumer Behaviour In The Fmcg Sector

1. Consumers' tastes and preferences

The demand for a good is mostly determined by the tastes and preferences of its users. a good that has a strong consumer base and is in high demand. The demand for various products is influenced by the wide variations in people's likes and preferences for those products. The demand for a variety of commodities varies because of shifts in consumer preferences as well as marketing pressure from manufacturers and retailers of different products.

2. Hybrid experience

After two years of living in a world where the virtual has taken precedence, consumers now see digital tools as an integral part of the purchasing process. They predict that stores would be equipped with digital technology and that businesses will promote hybrid shopping experiences, which blend physical and digital channels. This is especially true for Generation Z, who use hybrid shopping more than any other generation. More than any other generation, 27% of consumer purchases and 36% of Gen Z purchases are made through hybrid channels.

3. Prices of the related items

Customer demand is affected by the costs of associated commodities, especially those that function as supplements or substitutes for the main good. The demand for both complementary commodities will be impacted if the price of one changes. For example, a drop in the price of milk would affect the demand for sugar. As more people drink milk or make more khoya, burfi, and rasgullas with it, their need for sugar will increase.

4. Consumer attitude

Every one of us has certain attitudes that affect our purchasing decisions, whether we are aware of them or not. For example, your acquaintance may drink more tea than coffee because they believe it is unhealthy. However, if you believe that caffeine provides you with the energy you need to get through the day, you could choose coffee. Our actions toward a product are significantly influenced by our attitudes and ideas. Thus, understanding a consumer's mindset and beliefs aids in the development of successful marketing campaigns.

5. Sustainable choices

Brands that position themselves as sustainable have an average revenue increase that is five times higher, per a survey. A 2021 global sustainability research found that one-third of consumers are willing to pay extra for sustainable items. In fact, 61% of Gen Z respondents to a GWI study stated they spend more money on eco-friendly products than

they do on non-eco-friendly ones. But this is what could set you apart from the competition, since buyers are becoming more conscious of sustainability while making decisions.

Consumer Behavior In The Fmcg Industry: Importance And Impact

Consumer behaviour is the study of how individuals make decisions about what they buy, use, and dispose of. Understanding consumer behaviour is crucial for FMCG companies because it helps them create products and marketing strategies that resonate with their target audience.

The FMCG industry relies heavily on consumer behaviour because the demand for these products is constant and ever-changing. As consumers, our preferences, needs, and habits evolve, and FMCG companies need to stay ahead of the curve to remain competitive.

Trends Shaping The Fmcg

The rise of sustainability, health, and ethical concerns among consumers is manifesting a game-changing influence on the FMCG industry. They are not just influencing purchasing decisions of fast-moving consumer goods like cosmetics and toilet paper, but also compelling businesses to rethink their strategies.

1. **Sustainability:** With the escalating environmental crisis, consumers are demanding more sustainable products. Brands, including those in the cosmetics industry, have to respond by prioritizing environmentally friendly practices such as sustainable sourcing, eco-packaging, and reducing carbon footprints [Include Unilever's example of sustainable practices].
2. **Health Awareness:** Consumers are becoming more health-conscious, shunning overly processed or chemically laden products like certain traditional cosmetics. FMCG brands, including those offering toiletries such as toilet paper, are consequently introducing natural, organic, and healthier alternatives to their existing product range
3. **Ethical Considerations:** Ethical sourcing and fair labor practices are gaining importance among consumers. Brands, especially those in the cosmetics and toilet paper sector, violating these principles face the risk of consumer backlash and loss of market share. As a result, FMCGs are being more transparent about their supply chains and labor practices

How Do Fast-Moving Consumer Goods Work?

1. **Mass Production:** FMCG companies often produce goods, such as toilet paper, in large quantities to meet high consumer demand and ensure cost-effectiveness. Services, like haircuts, are also provided in high quantities due to the recurring need for them.
2. **Extensive Distribution Networks:** FMCG businesses work on creating thorough distribution networks to ensure the broadest possible reach for their products and services, including haircuts and toilet paper. They often collaborate with various wholesalers, retailers, and e-commerce platforms.

3. **Impulse Purchasing:** Given their low cost and high utility, FMCGs like toilet paper and even quickly accessible services like haircuts often influence impulse buying. They are typically placed near store checkout counters to capitalize on this behavior.
4. **Regular Consumption:** Since these items are frequently consumed and quickly depleted (like food, drinks, toilet paper, and even personal care services like haircuts); consumers regularly replenish them, leading to consistent sales for FMCG companies.
5. **Marketing and Promotions:** Marketing plays a significant role in FMCG sales. Promotions, introductory offers, and discounts are common strategies used to attract consumers and boost sales.

Consumer Packaged Goods (Cpg) And Fast-Moving Consumer Goods (Fmcg)

Investors, marketers, and industry participants all need to understand CPG (consumer packaged goods) and FMCG (fast-moving consumer goods). FMCG products are fast-moving commodities, such as a bottle of Coca-Cola from the Coca-Cola business. Tyson Foods and other companies are major competitors in this market. Despite their frequent interchangeability, these terms refer to two different consumer market segments, each with its own trends, obstacles, and possibilities.

FMCG refers to products that sell quickly and at relatively low cost. For instance, items like toiletries, groceries, over-the-counter drugs, or even a thirst-quenching drink from the Coca-Cola company. It's a highly competitive sector, rapidly evolving in response to changes in consumer preferences, technology, and market dynamics.

In contrast, CPG typically includes durable goods that consumers buy infrequently and maintain over an extended period. These items range from electronics, clothing, and household goods.

Both FMCG and CPG companies' reactions to sweeping changes in consumer behavior, market situations, or emerging technological trends can significantly impact their business success. For instance, the dividends for Coca-Cola Company (The) (KO) could sway based on this. Therefore, understanding them, their differences and their interconnectedness is vital for effective strategy formulation and decision-making. Some subtle differences come into play:

1. **Product Use Frequency:** As the name suggests, FMCGs are products that are consumed quickly and bought repeatedly, such as soda or toothpaste. These are items that are intended to be sold rapidly, including perishable items like dairy products or daily toiletries as well. On the contrary, CPGs typically entail products such as clothes and appliances that consumers buy and use over a more extended period.
2. **Price Point:** FMCGs, such as soda and toothpaste, are generally lower-priced due to their perishable nature and high turnover rate. On the other hand, CPGs tend to be costlier and require a higher initial investment by consumers.
- 3.

4. **Sales Impact:** Given their frequent usage and fast replacement rate, FMCG sales, encompassing goods often have higher impacts on a brand's long-term prospects than CPG sales, due to consistent customer demand.
5. **Regional Use:** In North America, industry professionals typically use the term CPG, while internationally, FMCG, referring to goods like soda and toothpaste, is often the preferred terminology.

Conclusion

Successes of many businesses depend on their ability to create their customers and retaining their Consumers. Companies have attain focus to sell their products in standard price with good quality, availability of brands in all stores and are low cost to retain their valuable customers and attracting new customers. Brand Loyalty provides companies strong and competitive weapons to fight with competitors in the market place. The FMCGs sector is a very dynamic sector in India, a major goal is to satisfies their needs and wants of consumer and to target markets more effectively and efficiently. Hence the researcher hopes that the information provided in this study will assist companies in shaping their marketing strategies and better serving their customers.

AN OVERVIEW OF FMCG IN INDIA

Dr.E. RENUGA,

Assistant Professor, Department of Commerce (Finance),

Nallamuthu Gounder Mahalingam College, Pollachi.

E Mail ID: charukavi1@gmail.com

ABSTARCT

The Fast-Moving Consumer Goods Sector is one of the primary engines of the Indian economy. Half of the FMCG sector's market share is accounted for by the household and personal care segment, which is the largest in the economy and ranks fourth overall. The main factors driving the expansion of FMCG are changes in lifestyle, income, accessibility, and awareness. Additionally, customer shopping behavior is impacted by the push toward sustainable products. The semi-urban and rural sectors have grown significantly over the preceding ten years, despite the fact that the urban sector accounted for the majority of the contribution.

Keywords: *FMCG, Economy, Market, Behaviour.*

INTRODUCTION

The FMCG industry in India is the largest combination of diverse product categories, such as home care, health care, personal care & cosmetics, food & beverages, and others. The segment of personal care is expected to experience significant growth due to the rise in disposable income of consumers, which will allow them to spend a substantial amount on luxury personal care products.

Changes in lifestyle drive the development of the FMCG market in India significantly. In addition, the growth of the global population, the rise in consumer awareness of FMCG products, the frequent introduction of new products, and the effective advertising of FMCG brands all contribute to the expansion of the global FMCG market.

The rise in popularity of online purchasing, the development of new brands and products, and the expansion of FMCG networks in rural areas of developing nations are expected to create new opportunities for market participants in the future.

It provides greater consumer convenience because customers can easily select and purchase their desired products via applications and websites. In addition, the option for home delivery will deliver the products to their homes. Value Augmentation: The FMCG market in India is also driven by the retail sector in rural India and the rise in rural consumption. As a consequence, 36% of its total spending is allocated to FMCG. The FMCG industry in India grew as a result of consumer-driven growth and higher product prices, particularly for necessities. Moreover, due to numerous government

initiatives, including hygiene categories, high agricultural production, reverse migration, and packaged commodities, the market grew by double digits and reached 10.6%. Multiple industries, including tobacco, food and beverage, domestic, and personal care, provide support for the FMCG sector in India.

The Importance of Technology: The FMCG industry places a strong emphasis on velocity, and technology can provide the consumer companies in India with access to this agility. As a result, the FMCG industry is preparing to leverage technology to improve operational efficiency, identify new opportunities, and manage complex supply chain requirements. The FMCG industry relies extensively on market research in order to identify consumer behavior and field sales experts. Utilizing business intelligence, the cloud, and sophisticated field service management software, enterprises can enhance the efficacy of their sales operations. **Additional Directions:** The rural market in India is expected to increase by over \$220 billion over the next few years. This is because rural India's consumption has increased, as increasing incomes have raised the aspirations of the average person. Moreover, the increasing proportion of young people in India's population is a significant factor that will increase demand for FMCG products.

The FMCG industry remains a vital and dynamic part of the global consumer market. By remaining accustomed to shifting consumer trends, addressing industry challenges, and capitalizing on emergent growth and innovation opportunities, consumer companies in India can position themselves for success in a dynamic and competitive environment. By prioritizing consumer needs, sustainability, and technological advances, the FMCG industry can continue to thrive and have a significant impact on the lives of consumers around the globe. Follow Team Lease for more such insights.

GLOBALIZATION OF FMCG

The global FMCG market is expected to reach \$18,939.4 billion by 2031, at a CAGR of 5.1% from 2022 to 2031.

- **Higher the population, greater the demands:** The world's population continues to grow, leading to an increase in the number of potential consumers. More people with diverse needs and preferences contribute to the higher demand for FMCG products.
- **Urbanization:** Urbanization is on the rise globally, with more people moving to cities and urban areas. Urban lifestyles often lead to busier schedules, increased disposable income, and a preference for convenient and readily available FMCG products.
- **Changing Consumer Preferences:** Consumer preferences are continually evolving. There is a growing demand for healthier, organic, and sustainable FMCG products, reflecting a shift toward more health-conscious and environmentally-friendly choices.

- **Income Growth:** Rising income levels, especially in emerging economies, have contributed to increased consumer spending on FMCG products. As people’s purchasing power increases, they tend to spend more on convenience goods and non-essential items.
- **Convenience and Time Constraints:** FMCG products are designed for convenience and quick consumption. In today’s fast-paced world, consumers prefer products that save time and effort, making FMCG goods more attractive.
- **Marketing and Branding:** Effective marketing and branding campaigns by FMCG companies have significantly influenced consumer behavior.
- **Globalization and Trade:** Improved transportation and trade agreements have facilitated the global distribution of FMCG products. Companies can now reach new markets more efficiently, expanding their customer base.
- **Online Retailing:** The growth of e-commerce and online retail platforms has made FMCG products easily accessible to a broader audience. Online shopping provides convenience and opens up new markets for FMCG companies.
- **Product Innovation:** The consumer companies in India are continuously introducing new products and variants to cater to changing consumer tastes and preferences. Innovation attracts consumers looking for novel experiences and better choices.
- **Primary Forces Behind the Expansion of the FMCG Sector**
The Development of E-Commerce: The technological revolution impacted India’s urban and rural areas. There has been a discernible shift in demand as a result of the availability of e-commerce across the country, whether in rural or urban areas.

SEGMENT OF FAST MOVING CONSUMER GOODS

Fast Moving Consumer Goods are inexpensive products that require little shopping efforts. These are non-durable products which are sold in packaged forms. These products are purchased by the end-consumer in small quantities and frequently. The main FMCG segments can be classified as Personal Care, Household care, Branded and Packaged food and Tobacco .

- **Personal Care:** It consists of oral care; hair care; skin care; personal wash (soaps); cosmetics and toiletries; deodorants; perfumes; paper products (tissues, diapers, sanitary); shoe care etc.

- **Household Care:** It comprises of fabric wash (laundry soaps and synthetic detergents); household cleaners (dish/utensil cleaners, floor cleaners, toilet cleaners, air fresheners, insecticides and mosquito repellants, metal polish and furniture polish).

- **Branded and Packaged Food and Beverages:** It consists of health beverages; soft drinks; staples/cereals; bakery products (biscuits, bread, cakes); snack food; chocolates; ice cream; tea; coffee; processed fruits, vegetables and meat; dairy products; bottled water; branded flour; branded rice; branded sugar; juices etc.

- **Spirits and Tobacco:** An exact product-wise sales break up for each of the items is difficult.

MAJOR CHALLENGES

- Limited Storage Space
- Seasonality and Demand Variability
- Product Shelf Life and Fragility
- Regulatory Compliance and Quality Control

1. Limited Storage Space

One of the primary challenges faced by these brands is the constraint of limited storage space in warehouses. With an ever-expanding product range and increasing consumer demands, finding sufficient space to store inventory becomes a critical concern. Inadequate storage capacity can lead to overcrowding, disorganized stock, and inefficient picking and packing processes. Also, it restricts the ability to maintain optimum stock levels, resulting in stock outs or overstock situations.

2. Seasonality and Demand Variability

FMCG brands often face fluctuating demand due to seasonal variations and ever-changing consumer preferences. This poses a significant challenge when it comes to forecasting and managing inventory levels. During peak seasons, brands must ensure they have enough stock to meet the heightened demand while avoiding excessive inventory that may lead to waste and additional storage costs.

3. Product Shelf Life and Fragility

Many FMCG products, particularly perishable goods, and fragile items, have limited shelf life or are sensitive to handling and storage conditions. Maintaining product quality and reducing waste are essential for businesses. Inadequate temperature control, improper handling, and suboptimal packaging can result in spoilage, damage, or expiration of goods.

4. Regulatory Compliance and Quality Control

FMCG brands operate in a highly regulated environment, subject to various industry standards, safety regulations, and quality control measures. Compliance with these regulations is crucial for maintaining consumer trust and avoiding legal consequences. For example, brands selling food products must effectively manage product expiry dates to ensure consumer safety and satisfaction.

FMCG 2024 OUTLOOK

Looking ahead, despite challenges, the FMCG market in India remains resilient and is poised for a 4.5%-6.5% growth in FY24. The industry's ability to navigate complexities and adapt to evolving market dynamics underscores its significance in the Indian economy, offering promising opportunities in the future

CONCLUSION

In conclusion, it is well known that India has the largest population of young people in the world and that in today's fast-paced society, they prefer purchasing packaged goods and food over cooking it themselves.

The FMCG sector's most significant sales contributor falls under this category. With these developments, the FMCG sector will continue on its upward trajectory.

Fast-moving consumer goods (FMCG) companies should take advantage of opportunities such as rising consumer income, changing consumer lifestyles, aspirational rural consumers, and consistent economic growth by leveraging their strengths. The unorganized sector can be a competitive advantage, but it can also be reduced through cost-sharing of resources like distribution networks and favorable developments in supply side, demand side, and systematic drivers. Today,

ROLE OF YOUTH EMPOWERMENT IN RURAL DEVELOPMENT

Mr. M. Prem

Assistant professor, Department of Commerce (Finance)
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

India's rural development is essential to the nation's overall development. Youth involvement in rural development has received more attention in recent years. Young individuals who have the necessary abilities, information, and passion to make a difference must actively participate in rural community development. They support the growth of the agricultural, paramedical, education, transportation, and infrastructural sectors. These regions need to be prioritized for the welfare of the rural populace, and youth involvement is necessary for these areas' successful development. Youth's contribution to rural development has been highlighted in this research provide as being important. This research article focuses on these important areas identifying youth, skilled youth participation in rural development and nation building.

Keywords: youth rural development, Skilled Youth, Youth Development, Skill India.

Introduction

The United Nations defines 'youth' as people who fall in the age group of 15-24 years that, comprising more than a quarter of the world's population, is the largest demographic group in history [WHO 2011].

The youth as the engine of a country's future, young people have the limitless force, ingenuity, and perseverance required to form and shape a sustainable and growing rural community. Fundamentally, youth empowerment involves giving young people the information, abilities, and tools they need to take ownership of their life and actively engage in the decision-making process. It is crucial to take a multifaceted approach to the role of youth in rural development, giving them access to production factors, and providing them with support in the agricultural sector so they can become young farmers and diversify the rural economy. Rural residents' standards of living are influenced by things like access to food and nutrition, health, education, housing, leisure activities, and security. Agriculture is extremely significant, and it is seen to be especially crucial for those living in rural areas.

Youth Empowerment

The youth Empowerment is the process of giving young people the tools, knowledge, opportunity, and support they require to take charge of their lives and develop into active, self-assured, and engaged members of society is known as youth empowerment.

The goal of youth empowerment is to enable young individuals to participate in decision-making processes, grow into their potential; they make meaningful contributions to their local communities and the global community. Ensuring that

young people have access to high-quality instruction and training that will provide them the information and abilities necessary for both their personal and professional growth. Empowering youth is crucial for raising a generation of capable and responsible people who can make a good difference in their communities, take on social concerns, and promote sustainable development. Young people who feel empowered are more likely to be agents of change who have a long-lasting effect on society as a whole.

Review of Literature

Radhika Kapur (2019) According to his research, most rural residents lack even the most fundamental literacy abilities. Therefore, emphasis is placed on the creation of schools and training facilities to foster the development of fundamental literacy abilities and to produce data regarding other academic concepts as well. Youth occasionally pay visits to rural resident's homes and help them improve their educational abilities.

Mitra and Verick (2013) According to their analysis, one of India's biggest long-term problems is that many young people enter the job market too soon because of poverty and a lack of human capital. This is something that has been noted in his work "Youth employment and unemployment: An Indian perspective. They engage in low-productivity activities because they cannot afford to stay unemployed for an extended period of time.

Proctor and Lucchesi (2012) in their study "Small-scale farming and youth in an era of rapid rural change," given the employment role that agriculture currently plays and is expected to play in the future as well as the enormous number of young people living in rural areas today and expected to do so in the future, It is necessary to create new models for boosting decent employment and means of subsistence in the agricultural sector. These models should include support for employment opportunities along the entire agri food market chain and the associated service sectors.

Objective of the Study

- To Study the concept of youth Empowerment.
- To know the role of youth in rural economic development.

Research Methodology

The study is descriptive in nature. The present study is based upon the secondary sources of data; the secondary data was collected through the literature, Books, research papers, various websites, research articles, blogs, and various other publications. The main objective of this paper is to bring out the understanding of the present scenario of youth empowerment, and economic development and government initiatives.

Concepts of Youth Empowerment for Rural Development

The goal of youth empowerment is to raise standard of living. Participation in youth empowerment programs promotes young empowerment. In the process of youth empowerment, young people are urged to take charge of their life. They achieve this by first addressing their circumstances, after which they take steps to increase their access to resources and alter their awareness by changing their ideas, values, and attitudes. The concept acknowledges that young people are important resources who have the power to influence the future and make a substantial contribution to their societies.

Key components of youth empowerment include the following:

- **Entrepreneurship and innovation:** Promoting young people's entrepreneurial abilities and inventiveness can result in economic expansion and the development of jobs, giving them the chance to become economically independent and self-sufficient.
- **Education:** Access to high-quality education and training is essential for empowering young people. This gives them the knowledge and abilities they need to achieve their goals and make wise life decisions.
- **Skill Development:** Providing young people practical skills like critical thinking, problem-solving, leadership, communication, and financial literacy, which are all essential for both personal and professional development, is vital in order to empower them.
- **Confidence and self-esteem:** Building young people's self-esteem and confidence is another aspect of empowerment that enables them to have faith in their capabilities and potential.
- **Access to Resource:** In order to empower young people, they must have access to resources including healthcare, jobs, mentorship, and money for their ideas and initiatives.
- **Gender and social inclusion:** Efforts to empower young people should be inclusive and take into account the particular difficulties experienced by marginalized youth, such as girls, members of minority populations, and people with disabilities.

Role of Youth in Rural Development

Youth is the period in life, between the ages of 15 to 24, when we stop depending on other people and start making decisions for our future. Everyone wins if the transition goes well. However, a poor transition can have an adverse effect on society and the economy and lead to lifelong poverty. Increased access to people, markets, services, ideas, and information gives youngsters in rural areas opportunity to be more productive.

Everyone's chances increase when rural communities have improved information and transportation connections to markets, especially rural youths. They can

strengthen their social and human capital, gain new skills, and increase their self-confidence by becoming more connected. Their sense of agency and productivity consequently rise. Compared to adults and urban youth, rural youth tend to have less control over their life. Rural areas usually confront unique difficulties such as poor access to infrastructure, healthcare, work prospects, and education. We may address these issues and encourage sustainable development in rural regions by empowering youth.

The following are some significant ways that youth empowerment supports rural development:

- **Leadership and Development:** The development of leadership abilities and active participation in local decision-making processes are made possible by empowering youngsters in rural areas. Young people can provide new insights and creative solutions to age-old problems by getting involved in local governance and community development activities.
- **Entrepreneurship and Employment:** Youth empowerment initiatives that emphasize entrepreneurship and job training can assist youngsters in starting their own businesses or finding employment in the local economy. As a result, more employment is created, the economy grows, and poverty in rural regions decreases.
- **Technology and Digital Literacy:** The digital divide between urban and rural communities can be closed by providing technology access and digital literacy to rural youth. Young people can explore new options, access online education, and engage in the digital economy with greater access to information and communication tools.
- **Environmental Sustainability:** For rural areas, where many people depend on natural resources for their living, it is crucial to involve youngsters in environmental conservation and sustainable practices. In order to support long-term rural development, youth can actively promote environmentally beneficial programs including reforestation, garbage management, and renewable energy projects.
- **Community Engagement and Social Development:** Youth empowerment encourages a sense of ownership and accountability among youngsters toward their communities. They become agents of positive social change when they engage in community development initiatives, which improve living circumstances and promote social cohesion in rural areas.
- **Cultural Preservation:** As part of empowering youth, local cultural heritage must be celebrated and preserved. Rural communities can preserve their unique identities and promote a sense of pride and continuity by passing down traditions, stories, and skills from older generations to the youth.

Government Schemes and Initiations for Youth Empowerment

Youth empowerment initiatives are a fantastic approach to assist young people. They offer the necessary support to succeed in life as well as assistance in developing skills and confidence. In order to promote cooperation, communication, networking, and collaboration for youth empowerment and development, it is important to bring together youth groups, organizations, and movements that are distributed across the country. As the future of the nation, India's Youth Empowerment Foundation, a non-profit organization, is committed to improving the lives of the country's underprivileged youth by giving them access to fundamental education that will lay a solid foundation for their future careers.

In accordance with the Prime Minister's vision of *"Make in India"* as the global center of skill development, young Indians must be prepared not just for home markets but also for global labor markets. Another significant program to promote manufacturing in India is called Make in India. This program is focused on rural areas, which have a great deal of potential to be an attractive aspect of the nation's manufacturing exports such as handicrafts, handlooms, textiles, and herbal goods.

Government Schemes

MUDRA

The Micro Units Development and Refinance Agency (MUDRA) was established with the mission of providing financial assistance to the micro section of the Indian economy, or "funding the unfunded". The program aims to increase young people's employability and capacity for self-employment

Start-Up-India

In order to promote economic growth and job creation for youngsters for Startup India seeks to create an atmosphere that is favorable for startups. Over 75 start-up assistance hubs will be established as part of the program thanks to a partnership between the Ministry of Human Resource Development and the Department of Science and Technology.

Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA)

The act is one of the government's ongoing major initiatives to guarantee rural residents, including young people, a certain number of days of employment each year.

Self-Employment and Talent Utilization (SETU)

This program supports all areas of a start-up firm and self-employment activities, particularly in the technology sector, including technology, finance, incubation, and facilitation.

Government Initiatives both Central and State

The National Rural Livelihood Mission, the Ministry of Rural Development's flagship program that trains jobless youngsters living below the poverty line in a variety of skills, has been given Rs. 1500 crore from the annual budget.

- Youth will receive market-relevant training through SANKALP (Skill Acquisition and Knowledge Awareness for Livelihood Promotion Program).
- Pradhan Mantri Kaushal Vikas Yojana is a further government flagship program designed to increase young employment in India
- The "Naam Mudhalvan" program for school and college students and young people was introduced by the Tamil Nadu government on March 1. It is a thorough facilitation and guidance program designed to open doors to employment prospects.

Conclusion

Youth empowerment is a concrete reality that holds the key to rural development, not just an ideal. We spread the seeds of progress and prosperity in rural areas by investing in the potential of our youth and giving them the resources they need to succeed. The youth, as they take on the role of leadership, become the designers of a better future, reshaping their neighborhoods and, in turn, their countries. We build the groundwork for sustainable growth, enhanced livelihoods, and empowered communities by investing in the education, talents, and opportunities of the young people. According to this study, youth empowerment is a multifaceted strategy that improves rural communities. We can construct successful, sustainable, and vibrant rural communities for the future by investing in the potential of young people and actively incorporating them in the development process.

ROLE OF INFORMATION AND COMMUNICATION TECHNOLOGY (ICT) IN RURAL EDUCATION (INDIA)

Mr. M. Prem

Assistant Professor, Department of Commerce (Finance)
Nallamuthu Gounder Mahalingam College, Pollachi
preaveenprem445@gmail.com

Abstract

Information and Communication technology (ICT) plays vital role in Rural Education. It provides a wide range of resources and techniques that can close the educational divide between urban and rural areas. The Indian Constitution's Article 45 mandates that all children up to the age of fourteen receive a minimally adequate elementary education. Due to a lack of infrastructure and facilities for rural education, certain Indian states still struggle to achieve universal enrolment, retention, and high-quality education. As of now, just 20% of rural Indians have access to the internet, compared to 65% of urban Indians. India's policy makers have concentrated on removing obstacles to accessing rural India. However, access to ICT devices and the internet is only one aspect of the issue when it comes to the issue of digital inclusion with regard to education in rural India. ICTs are playing a more and wider part in education as the world rapidly switches to digital information, and this role will only get more and more significant in the twenty-first century. This research article gives an idea to develop the rural education system through the information and communication technology (ICT) and it's important in rural education.

Keywords: ICT, ICT in Education, Rural Education, Students.

Introduction

ICT resources bridge the divide between learner- and teacher-centered settings. The ability of ICT to revolutionize education is one of the most important fields in which this is possible. Particularly, the use of ICT in rural education has the potential to close the gap between urban and rural learning environments, opening up a world of opportunities for students in isolated and poor locations. Information and communication technology (ICT) is one of the technological areas in the global civilization that is developing quickly. Rural education has historically struggled with a variety of issues, from insufficient access to sufficient amenities and educational resources to a teacher shortage. However, the development of ICT has given rise to new confidence for overcoming these timeless problems. ICT includes a wide range of digital technology, such as computers, the internet, mobile phones, instructional software, online learning environments, and interactive digital material. The use of these tools in rural classrooms has the potential to alter the educational experience for kids there by making it more engaging, accessible, and personalized for students in these remote areas.

There is no doubt that ICTs will play a major role in future growth. Rural residents, particularly the poorest of the poor, continue to live with a minimum of ICT facilities despite the fact that benefits of ICTs have not yet reached the projected level in these places. Governments, educational institutions, and stakeholders must work together to invest in infrastructure, digital resources, teacher preparation, and community participation for ICT to have a significant influence.

Adopting ICT in rural education is a leap toward a more inclusive and equitable educational environment as well as a step toward digital growth. ICT has an excellent future in the classroom. In the upcoming years, it is anticipated that ICT will contribute significantly more to teaching and learning. ICT can support the personalization, engagement, and effectiveness of education. Additionally, it might lead to wider access to education.

ICT Enabled Education Overview

Information and communication technology (ICT) enabled education, commonly referred to as e-learning or digital learning, and is the process of using technology into educational practices to improve the quality of teaching and learning. It includes the transmission, administration, and maintenance of educational content using various digital tools, hardware, and software programs. Digital educational resources such as interactive multimedia, e-books, video lectures, online tests, and simulations can be produced and distributed because of ICT. With the help of these resources, students may result in excitement while studying. ICT tools make communication and collaboration between students, teachers, and parents effortless. Continuous contact outside of the classroom is made possible by discussion boards, instant messaging, and email.

People in the modern information society have a right to utilize ICT to access knowledge in order to stay up to date with the latest advancements. In such a situation, education, which is always crucial to the economic and social development of a nation, assumes even more significance. Education boosts a person's earning potential in addition to their creative abilities. It improves their social interaction, allows them access to better health, and offers various other elusive benefits. Additionally, it enhances their level of wellbeing and increases their ability to accept new concepts. In this era of rapid change, students can be trained to participate in the growth process through education and the incorporation of ICT into the classroom.

Review of Literature

1. **Dr. Niva Bara, Dr. BK Jha** in their study Due to the daily, increased usage of ICT tools, education quality has increased dramatically. Online and practical learning approaches have replaced prior conventional or traditional ones. The educational system in our nation has undergone significant changes as a result of the integration of ICT.
2. **Niraj Kumar Roy** according to his study to increase connectivity in the areas of education, governance, social inclusion, access to the internet, and disaster mitigation and control in order to increase access to fundamental information in rural schools. The emphasis is mostly placed on raising the educational bar in rural communities via ICT. I want to emphasize that when implementing the national ICT for education policy, policymakers gave more consideration to rural areas and their students' educational standards.
3. **Sushmita Mukherjee** on his study ICT can undoubtedly bridge the gap between

the technologically advanced and economically backward classes. The government machinery now has easy access to technology in a far more affordable and practical way because to India's IT boom. A revolution in rural development can undoubtedly be sparked by proper training and the application of ICT programs in a straightforward manner and language that the rural population can easily grasp.

Objectives of the Study

1. To know the importance of the ICT in rural Education.
2. To study the role of ICT in rural education development.

Research Methodology

The study is descriptive in nature. The present study is based upon the secondary sources of data; the secondary data was collected through the literature, Books, research papers, research articles, and various other publications. The main objective of this study is to bring out the understanding of the ICT's important in rural education and what role ICT has playing in the Indian rural education and development.

Important of ICT in Rural Education

Information and communication technology (ICT) is essential for the growth of rural education and benefits students, instructors, and communities in a number of ways. Rural schooling is still in a poor condition today. Few government schools exist in certain villages, requiring children to travel great distances to access them, and the majority of schools there do not offer technology based education. Utilizing a variety of technologies, ICT enables users to stay updated with emerging trends. ICT plays a significant role in advancing rural education and has made a significant contribution to its growth.

a. Access to Quality of Education:

This can provide remote and underdeveloped locations with high-quality educational resources. It gives teachers and students access to contemporary educational resources, online classes, and engaging instructional content that might not be accessible locally.

b. Flexible Learning Options:

It enables a variety of flexible learning alternatives, including online and distance learning. This is crucial in rural areas where students may have to travel long for access to schools or higher education facilities.

c. Empowerment and Digital Literacy:

ICT integration in rural education equips students with digital literacy abilities, which are becoming more and more important in the current employment market. Rural adolescents who possess digital literacy can take advantage of new opportunities and participate actively in the global economy.

e. Connectivity and Communication

ICT can help students, teachers, and parents communicate better. Stakeholders can stay connected and involved in the educational process with the help of tools like email, messaging applications, and video conferencing.

d. Collaboration and Resource Sharing:

Collaboration and resource exchange between schools and educational institutions are made possible by ICT. Sharing knowledge, experiences, and educational resources can help rural schools, which will ultimately improve educational outcomes.

e. Innovation and Creativity:

Students in remote locations might be encouraged to be innovative and creative by having access to ICT tools. They can experiment with new concepts, take part in online contests, and work on initiatives that use technology to promote social and economic growth.

Role of ICT in Rural Education Development

The use of ICT in the classroom has been shown to boost students' motivation, enthusiasm, and involvement in the subjects they are studying.

- Access to a wide range of educational resources, such as textbooks, online courses, digital libraries, and instructional films, has been made possible by ICT.
- Rural students have access to high-quality educational resources that would not be accessible locally, balancing the playing field and enhancing their knowledge. If we assure communication in local languages, so that rural students can grasp easily, we can stimulate and increase learning and their skills in rural students.
- ICTs have a broad range of applications and have the potential to be extremely important to society and rural students' development.
- ICT makes it possible for students in remote areas to collaborate more actively while also learning new technology skills. It also makes it possible to employ cutting-edge educational resources and reimagine instructional techniques.
- Rural schools can embrace e-learning tools and online learning platforms with the help of ICT, enabling students to learn at their own pace, interact with interactive information, and take part in virtual classes.
- ICT enables remote learning and virtual field trips for students in rural locations, exposing them to settings and circumstances they might not otherwise have access to.
- ICT teaches digital literacy to rural students, which is crucial for the modern workforce. Their familiarity with technology assists in bridging the digital divide between rural and urban communities and positions them for future employment prospects.
- To provide employment-related education through computer technology to students in grades 8th through 12th.

In India, notable efforts integrating the use of ICT in education include:

1. Indira Gandhi National Open University (IGNOU) makes use of radio, television, and the internet.
2. The UGC initiated the "ICT for teaching and learning process" scheme to achieve quality and distinction in colleges and universities.
3. SWAYAM -Massive Open Online Courses (MOOCs)
4. e- PG pathshalaE-book gateway up to PG
5. SODHGANGA – Access Indian Institute Scholars' Research Theses.
6. e-Yantra – Initiatives for students.
7. The FOSSEE (Free/Libre and Open Source Software for Education) project supports the use of FLOSS tools to improve educational quality in our country.
8. Spoken Tutorial - It has won numerous awards for its educational material portal. Here, one can learn various Free and Open Source Software on their own.

Conclusion

While ICT provides several benefits to rural education, it also plays an important role in rural education. Policymakers, educational institutions, and technology suppliers must collaborate to promote fair access and successful use of ICT in rural education. The incorporation of ICT in rural education has the potential to transform the way students learn and teachers educate. We can bridge the gap between urban and rural education by harnessing technology and giving equitable chances for all learners, regardless of geographical location. However, for ICT to have a significant influence, governments, educational institutions, and stakeholders must work together to invest in infrastructure, digital resources, teacher training, and community participation. Embracing ICT in rural education is a step toward a more inclusive and fair educational landscape, not only a step toward digital growth. To summarize, ICT plays an essential role in rural educational development because it bridges the educational gap, empowers students and instructors, improves learning experiences, and promotes overall growth in rural communities.

MICRO, SMALL AND MEDIUM ENTERPRISES IN INDIA (MSME) - SCHEMES & OPPORTUNITIES FOR SUSTAINABLE DEVELOPMENT

M. Prem

Assistant professor, Department of Commerce (Finance)

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Micro, Small, and Medium Enterprises are the backbone of an Indian economy and its creating noticeable growth rate and generating job possibilities. In many established and emerging nations, this sector has been viewed as a catalyst for both social and economic progress. MSMEs have made a remarkable contribution to the Indian economy in terms of creating jobs, reducing regional inequities, promoting equitable economic growth, and increasing the nation's export potential. The MSME sector in India includes a broad range of companies and makes a substantial contribution to the GDP, exports, and job creation of the nation. But these businesses encounter a number of difficulties, such as financial availability, technology adoption, skill development, and regulatory compliance. The study aims to identify significant Schemes and provide recommendations to address the enormous growth potential and prospects for the development of the MSME sector that are present in India.

Keywords: MSMEs, Sustainable Development, National Economy, Schemes

Introduction

MSMEs (Micro, Small, and Medium Enterprises) are essential to India's efforts to achieve sustainable development. These businesses support the whole Indian economy and provide a significant contribution to job creation, GDP growth, and socioeconomic advancement. India is a developing nation with a significant number of low-capital-investment Micro, Small, and Medium-Sized Enterprises. These businesses are not up to par to compete with global quality standards. Despite this, these businesses employ a sizable workforce. Because of the numerous challenges they face with regard to raw materials, finances, marketing, and other factors, MSMEs are unable to significantly boost the Indian economy. The Indian government has implemented a number of programs and policies both before and after liberalization to advance job possibilities and expand this industry. The Indian economy is concentrating on achieving the aim of sustainability through MSMEs by using locally accessible resources for the manufacturing, labor-intensive processes, and resettlement. The article examines the growth and importance of MSMEs in India. Additionally, this study provides the sustainable an opportunity and Schemes for MSMEs developments.

Objectives of the Study

1. To know the role of the MSMEs in India.
2. To Examine the Schemes & Opportunities for MSMEs sustainable development.

Research Methodology

The study is descriptive in nature. The present study is based upon the secondary sources of data; the secondary data was collected through the literature, Books, research papers, research articles, and various other publications, Websites. The main objective of this study is to bring out the Schemes & Opportunities for MSMEs Sustainable Development in India.

Review of Literature

1. **Rajamohan. S. and Sathish. A., (2019)** in their study the importance of MSME in sustainable society development was highlighted in Rajamohan S. and Sathish A.'s report, "MSME in India for the Sustainable Societal Development," published in 2019. According to the study, India's GDP and GVA account for around 32% and 29%, respectively, and play an essential role in the growth of entrepreneurship and job creation annually.
2. **Sarita Satpathy, Sailaja Rani, and Nagajyothi, M.L. (2017)** the study, "Study of Micro, Small and Medium Enterprises; the Backbone for Economic Development of Indian Economy," highlighted the importance of MSMEs in terms of total product, GDP, employment, and fixed investment in the Indian economy. It also focused on the MSME sector's growth rate relative to other sectors. Researchers identified and came to the conclusion that this sector has enough potential and opportunities to speed up industrial growth in programs like "Make in India," and they recommended that the government adopt further measures for the betterment of people.
3. **K.Vasanth, K. Krishna (2012-** In their study, the authors claim that networks of SMEs will become crucial for tackling the systemic issues underlying industrial ecology, organizational resilience, and global supply chain sustainability because multiple effective models of the sustainable SME are steadily evolving.
4. According to **De, Sankar (2009)**, there are many difficulties that SME's in India must overcome, but maybe none are as challenging as finding short- and long-term finance.

Growth of MSMEs in India

Micro, Small, and Medium-Sized Enterprises (MSMEs) would still be important to India's economy and society in 2023. These businesses have evolved in reaction to the shifting economic and technical environments, and they contribute to numerous parts of the nation's development. MSMEs are still an essential component of India's economic

expansion. They make significant contributions to the GDP, export revenue, and employment creation of the nation. The ability of MSMEs to quickly adapt to market changes and support settings that are economically resilient is well known. The Indian government plans to increase the number of jobs in the MSME sector by 5 crore from the current level of 11.10 crore by the year 2025, according to the National Sample Survey (NSS), which was done between the years of 2015 and 2016. As of December 2022, 9.31 crore people including 2.18 crore women were employed in 1.28 crore MSME registered industries, according to the most recent data from the Udyam portal.

Source: MSME

Role of MSMEs in India

1. **Employment Generation:** MSMEs have been a significant source of employment in India, helping to create jobs in both the urban and rural areas. They give many people, including semi-skilled and skilled employees, the chance to find employment.
2. **Encouragement of entrepreneurship:** MSMEs act as a crucible for entrepreneurship, encouraging it. They promote entrepreneurship, which promotes innovation and economic expansion. Initiatives like "Make in India" have helped to encourage manufacturing and entrepreneurship in the nation.
3. **Regional Growth:** MSMEs have the potential to encourage balanced regional development by forming industrial clusters and creating job opportunities in rural and underdeveloped areas. This aids in minimizing the movement of people from rural to urban areas.

4. **Skill Development:** MSMEs frequently offer chances for skill development and vocational training, helping to up skill the Indian workforce.
5. **Access to finance:** Through programs like the Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE), the government and financial institutions have taken steps to boost MSMEs' access to credit. This makes it possible for MSMEs to obtain loans and grow their businesses.
6. **Technology Development:** To increase productivity and competitiveness, MSMEs are progressively implementing digital technology and automation. Their growth and sustainability depend on this digital change.

Schemes for MSMEs Development in India

1. The "Make in India" initiative and the "Atmanirbhar Bharat Abhiyaan" (Self Reliant India Campaign) have been instrumental in promoting trade and domestic manufacturing in the nation, particularly MSMEs, also known as the "backbone of the Indian economy."
2. The Prime Minister Employment Generation Program was established with the goal of generating employment opportunities for MSMEs in the nation.
3. MSME and Small Industries Development Bank of India established the Credit Guarantee Trust Fund for Micro & Small Enterprises (CGTMSE) to offer collateral-free loans (up to INR 1 cr.) to specific Micro and Small Enterprises (MSEs).
4. Interest Subsidy Eligibility Certificate (ISEC): This program was launched as a means of financing the khadi initiatives carried out by khadi institutions around the nation. To close the gaps between the amount of money that is available from budgetary sources and the amount that is actually needed, it mobilizes money from banking institutions.
5. Support for MSMEs through the ZED Certification Program Financially - The program's goal is to implement Zero Defect & Zero Effect (ZED) practices in Indian MSMEs' manufacturing in order to support the "Make in India" drive. The Government of India offers MSMEs a subsidy of up to 80% under the program.

Scheme & Incentives Provided for MSMEs in Tamil Nadu

One of the most important states for success in the MSME sector is Tamil Nadu. Its vibrant and active culture has spawned small- and micro-scale businesses. To further boost the sector's growth, the state government has also offered a variety of incentives and awards for the various industries. Especially in the MSME sector, Tamil Nadu is unquestionably a land of opportunity. It is full of talented individuals who can continuously provide high-caliber services. It has more than five million micro, small, and medium-sized enterprises, making it the third-largest Indian state in terms of MSMEs.

1. New entrepreneur Cum enterprise development scheme

2. Unemployed youth employment generation program
3. Pacts with TANSIDCO and TAICO bank
4. Capital Subsidy
5. Tamil Nadu small industries development corporation (SIDCO) initiative

Conclusion

MSMEs' sustainable development in India is crucial for both accomplishing broader social and environmental objectives as well as economic progress. And also an important part of India's economic growth, and government programs and opportunities are crucial to their expansion and advancement. This study reveals that the development of MSMEs is supported by both the central and state governments. These programs have contributed to the sustainable growth of MSMEs in India by offering assistance and resources to these businesses. It is important that the government continues to assist and give resources to MSMEs in order to ensure their success and growth since the importance of MSMEs in sustainable development cannot be overstated.

ROLE OF MICRO, SMALL AND MEDIUM ENTERPRISES FOR INDIAN ECONOMIC DEVELOPMENT

M. Prem

*Assistant professor, Department of Commerce (Finance)
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

Micro, Small, and Medium-Sized Enterprises (MSME) are essential for the economic development of any nation and are especially important for developing nations since they control economic activity, create jobs, and considerably reduce poverty. This industry employs more people than agriculture does in India. The MSME sector in India has grown to be a dynamic and extremely vibrant segment of the economy. By investing less money than major enterprises, MSME not only contribute significantly to the creation of considerable employment, but they also aid in the development of the non-farm sector by promoting industrialization in rural areas. The sector serves as a tool for inclusive growth, enabling the most marginalized and vulnerable groups.

Keywords: MSME, Indian Economy, Schemes, Growth rate

Introduction

In the past five decades, the Micro, Small, and Medium Enterprises (MSME) sector in India's economy has become one of the most dynamic and lively. Their inventive, adaptable, agile, and successful entrepreneurial spirit also contributes significantly to the growth of the economy. A substantial portion of the nation's industrial production and exports, as well as employment and manufacturing output, are attributed to the MSME sector, which is also recognized for producing the fastest rate of job growth. They focus on relatively smaller markets, have a labor-capital ratio that is comparatively higher than other companies, require a shorter gestation period, have unique advantages owing to their size, require fewer investments, guarantee a more equitable distribution of the nation's income, enable the efficient mobilization of capital and skill resources that might otherwise go underutilized, and encourage the expansion of industrial entrepreneurship.

Regarding firm size, range of products and services, and technological sophistication, the MSME sector in India is remarkably diverse. It greatly advances the socioeconomic growth of the nation and serves as adjunct units to larger companies. Through exporting goods, producing goods domestically, requiring little capital, being flexible in their operations, being technology-oriented businesses, and other factors, MSMEs considerably contribute to the growth of the Indian economy. Developing policies, programmes, and schemes for the growth and promotion of MSM companies falls under the purview of the Government of India's Ministry of Micro, Small, and Medium companies.

Micro Small and Medium Enterprises in India

The MSME sector is made up of all businesses, regardless of name, that are involved in the production of goods for any industry listed in the first schedule of the Industries

Development and Regulation Act, 1951, including proprietorships, Hindu undivided families, associations of people, co-operative societies, partnerships, undertakings, and other legal entities. MSMEs are categorized as follows under the Micro, Small and Medium Enterprises Development Act, 2006:

Enterprises	Investment in Plant & Machinery (Manufacturing)	Investment in Equipment (Services)
Micro	Upto Rs.25 lakh	Upto Rs.10 lakh
Small	Above Rs.25 lakh upto Rs.5 crore	Above Rs. 10 lakh upto Rs.2 Crore
Medium	Above Rs. 5 Crore upto Rs.10 Crore	Above Rs. 2 Crore upto Rs.5 Crore

Source: MSME

Economic Development through MSMEs Sector

Seventy percent of India's population lives in rural areas. The majority of rural residents live in remote, underdeveloped communities. Enhancing the standard of living and financial security of rural residents is what defines rural development (Thahira K., 2017). The utilization of traditional knowledge to make things by making use of the local resources is often how rural development occurs. Only the efficient use of resources that are readily available locally supports the rural economy. A solid pillar supporting the expansion of rural sustainable livelihood is the MSME sector. The small and cottage businesses, which primarily focus on traditional handicrafts, make good use of the human capital found in rural areas.

The Ministry of MSMEs' principal organization for rural development is the Khadi & Village Industries Commission (KVIC). The purpose of the Khadi & Village Industries Commission (KVIC), which was founded in 1956, is to advance and grow the village and Khadi industries (KVI). Large numbers of jobs are being created by the industry in rural areas, which is boosting the local economy there. One of the important organizations in the MSME sector that creates prospects for acceptable non-farm employment at minimal per capita investment in rural areas is KVIC. Since the majority of MSMEs are located in rural areas and have a significant impact on the development of those areas, KVIC engages in activities related to skill development, technology transfer, research and development in village industries, marketing support for village industries, etc. (Ministry of MSME, 2018). These activities aid in the creation of employment and opportunities for self-employment in rural areas. The workers obtain employment possibilities and generate revenue necessary for their subsistence through the diverse variety of activities within the Khadi and Village industries. KVIC's broader goals include empowering individuals to support themselves and strengthening the sense of community in rural areas, as well as the societal goal of fostering employment opportunities in both rural and urban areas through DIC. Numerous people in the nation now have jobs because to the Village Industries and Khadi industries.

Importance of MSMEs for the Indian Economy

MSMEs are recognized all over the world as a vehicle for fostering equitable development and economic prosperity. They are renowned for producing the fastest pace of economic growth. MSMEs' minimal investment needs, adaptability, and ability to create suitable native technology have propelled India to new heights.

1. MSMEs are the second-largest employer of labor after agriculture, employing about 120 million people.
2. It contributes roughly 6.11% of the GDP from manufacturing and 24.63% from service activities, with about 45 lac units across the nation.
3. The MSME Ministry wants to boost its GDP share by as much as 50% by 2025 as India's economy grows to be worth \$5 trillion.
4. Making up almost 45% of total exports from India
5. MSMEs encourage inclusive growth by giving job possibilities, particularly to those from underprivileged social groups residing in rural areas.
6. MSMEs in tier-2 and tier-3 cities contribute to the final inclusion of MSMEs' economic contribution by facilitating chances for consumers to use banking services and products.
7. MSMEs foster innovation by giving aspiring business owners the chance to assist them in creating innovative products, which in turn increases competition and spurs expansion.

Conclusion

MSMEs can be an effective medium to use local resources for more productive purposes with the coordination of government and local institutional bodies. It is required that MSMEs must be backed and supported in the mission to reduce poverty and unevenness in the development. The problems faced by MSMEs must be addressed properly and special attention should be given to Micro enterprises. The Government of India has taken a slew of measures and is striving to improve the economic and social conditions of the rural population and non-farm sector. Setting up of Micro-Units Development and Refinance Agency (MUDRA) Bank is one such step in this regard. The government should continuously and comprehensively monitor such schemes. Through government interventions in the form of financial, infrastructural and technological support, MSMEs must be strengthened create more employment which would ultimately lead to rural development and poverty alleviation. More the MSMEs flourish, more it paves the way for poverty alleviation and rural development in the country.

IMPACT OF DIGITAL PLATFORMS FOR INNOVATIVE DIGITAL BUSINESS

M. Prem

Assistant professor, Department of Commerce (Finance)
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

In the rapidly evolving landscape of digital business, the advent of digital platforms has brought about transformative changes in how businesses innovate and engage with their stakeholders. Digital platforms have the ability to connect people, organizations and resources with the aim of facilitating the core interactions between businesses and consumers as well as assuring a greater efficiency for the business management. Digital technology is changing the way value is created as well as the outcome of innovation. The purpose of this study is to deeply understand the evolution of business models brought by innovative and dynamic companies operating through online platforms. This study explores the multifaceted impact of digital platforms on fostering innovation within the realm of digital business.

Keywords: Digital Innovation, Business, Technology, Digital business Models.

Introduction

Digital platforms have a wide-ranging impact on several industries, such as e-commerce, finance, healthcare, and entertainment. They create an environment where innovation and technology come together to create new business models. Due to the fundamental shift in traditional business paradigms, businesses now need to reevaluate their strategy and seize the chances that the digital revolution has to offer. A new era of business transformation has been brought about by the emergence of digital platforms, which have altered the innovation landscape and redefined how companies conduct business online. The impact of digital platforms on creative digital business practices is enormous in the quickly changing business landscape of today. These platforms enable businesses to improve consumer experiences, streamline processes, and foster previously unheard-of levels of connectedness. They are the foundation for a wide range of technical innovations. This introduction lays the groundwork for an in-depth investigation of the various ways that digital platforms influence creative digital businesses.

Review of Literature

1. **Dufva et al.(2017)** provide some examples of successful platforms like Airbnb and Uber. In their work they define the platform economy as “the value creation system consisting of platforms”
2. **Osterwalder et al., (2005)**, a conceptual tool using which it is possible to present the logic of the functioning of the enterprise, including how it generates profits because of the generated value, with the essential feature of this model being that it takes

Abstract

The Indian startup ecosystem has expanded quite rapidly mainly through private investments including seed, angel, venture capital, and private equity funds, with technical support from incubators, accelerators, and the government⁷. Technology based entrepreneurs are stated as technopreneurs, they are the new trend setting entrepreneurs, they discover and create innovative product and services to the society with the effective usage of science and technology³. India has nearly 27,000 active tech startups now³. The main aim of this paper is to identify the various types of start-ups and growth of unicorn startups in India. Besides this it analysis the issues, challenges faced by the startup companies and emerging trends in the current economic climate.

Keywords: Digital Startups, Technopreneur, Start-up, Entrepreneur, Technology, Invention, Technopreneurship

Introduction

Indian technology companies are at the center of innovation, revolutionizing the Indian economy and opening up new prospects for entrepreneurs. As India's startup environment matures, expect to witness even more revolutionary enterprises emerge¹. To provide funds and facilitates to startups, Indian government initiated "Startup India Scheme" and its primary objective is to promote startup, generate employment and create wealth⁷.

India has the third largest startup ecosystem in the world, just behind China and the US¹⁰. The Indian tech startup environment is rapidly expanding and diversifying, with creative startups forming in various industries. Indian startups are altering the country's economy and offering new possibilities for entrepreneurs, from fintech to e-commerce to health tech¹.

Start-ups created more new jobs; Indian government is setting a right pathway for the young entrepreneurs by providing online portals and mobile applications that brings sharing of information to the business society that leads to healthy growth in business entities³.

Statement of the Problem

The Startup ecosystem of the country is challenging many traditional systems with new-age technologies and removing many pain points¹⁰. Indian businesses are

having a big influence on the everyday lives of the masses by delivering answers to the country's particular difficulties, and the road ahead looks promising for the Indian tech startup industry¹. Despite the progress made so far, Indian businesses face huge challenges, such as the unorganized and fragmented nature of the market in most sectors, a lack of clear and transparent policy initiatives that startups can tap into quickly, as well as a lack of infrastructure, a lack of knowledge and exposure, and complications in doing business⁷.

1. To know the present scenario of tech startups in India, the following questions were raised?
2. What are the various types of start-ups functioning in India? How the growth of startups is identified?
3. Which are the top 10 unicorn startups in India 2023?
4. What are the existing schemes in India for the promotion of start-ups?
5. What are all the issues, challenges faced by the startup companies and emerging trends in the current economic climate?

Objectives of the Study

1. To identify various types of start-ups and their growth in India.
2. To understand the concept and status of unicorn startups in India.
3. To know the existing schemes in India for the promotion of start-ups.
4. To analysis the issues, challenges faced by the startup companies and emerging trends in the current economic climate.

Research Methodology

As the research paper is of conceptual and review nature, the researcher has applied exploratory research design by using varied secondary data availed from the secondary data sources. Based on the secondary data and review, the researcher has reported on important role of innovation and growth of technology startups in India.

Review of Literature

Ankita Panda posted an article entitled "Top 10 Tech Startups in India - An Informative List" on May 23, 2023. In this post, the author indicates at the top ten tech startups in India, building a name for themselves in the tech domain.

Sumit Mishra (2017) entitled a study on "Start-Up In India: Opportunities and Challenges". This research paper revolves around the concept of Start-up India Campaign which was started on 15th august, 2015. The basic purpose of this article is to put some light on the challenges to be countered and opportunities to be capitalised upon by the start-ups entrepreneurs and the initiative taken by the Indian govt.

Unicorn Startups

Unicorn the term was coined by Aileen Lee, a venture capitalist, choosing the mythical animal to represent the statistical rarity of such successful ventures. In the business and financial worlds, a unicorn startup refers to a startup company with a value of over \$1 billion⁹.

Unicorn startups are often innovative and disruptive companies that operate in various sectors, such as technology, e-commerce, finance, healthcare, and more⁹. Unicorns in India are seen as game-changers in their respective industries and have the potential to reshape markets or create new ones. Examples of well-known unicorn startups include BYJU's, Swiggy, OYO Rooms, Dream11, Razorpay, and Ola Cabs⁹.

As per the latest reports, China is 1st position with 206 Chinese firms out of 494 ultra-valuable startups worldwide known as Unicorns. This makes China with the largest number of unicorns in the world. China is also the home of world's 3rd most valuable startup unicorns i.e. Alibaba, ByteDance and ride hailing giant DidiChuxing. All of these 3 unicorns combined value is \$280 billion. US stand at 2nd position with 203 unicorn companies. India is nowhere near China or US, in spite China being our neighboring country, India have 10 times less unicorn startups.

List of the Top 10 Profitable Unicorn Startups in India in 2023

The term 'unicorn' has come a long way from a mythical creature to a regular feature in business and finance discussions. Today unicorn companies have gained recognition and carved a niche for themselves in the market. Not every unicorn needs to prove to be a successful startup. The point is that no startup should stop hustling after achieving a milestone¹⁰.

- **BillDesk**

BillDesk is an Indian online payment gateway company based in Mumbai. The company provides its customers with an online payment platform that enables banking and merchant website transactions. It is an independent payment processing company, regulated under the Payment and Settlement Systems Act, 2007, and supervised by the Reserve Bank of India (RBI)¹⁰.

50. SPARSH (Social Innovation programme for Products: Affordable & Relevant to Societal Health)
51. Promoting Innovations in Individuals, Startups and MSMEs (PRISM)
52. Science and Technology of Yoga and Meditation (SATYAM)
53. Rapid Grant for Young Investigator (RGYI)
54. Biotechnology Ignition Grant (BIG)

Emerging Trends in Technology Startups

Indian technological startups are transforming the Indian economy in a variety of ways. They drive innovation in finance and online shopping, create new employment, and contribute to the nation's GDP. Furthermore, Indian entrepreneurs are rapidly meeting the demands of the country's large population, from providing inexpensive healthcare to enhancing financial inclusion¹.

Flipkart, Paytm, Ola, Byju, and Zomato are some of India's most successful software firms. Indian technology firms are producing new employment, spurring innovation, and increasing the country's GDP. Both domestic and international investors are investing money in Indian IT businesses. Fintech, e-commerce, health tech, ed-tech, and agri-tech are among the industries in which Indian tech firms are focused¹.

Recommendations

Solving problems and innovation in a country of 1.3 billion requires a lot of money¹⁰. If the government succeeds in establishing a pro-active start-up environment as intended, then there is lot of scope for new job creation. The following recommendations are suggested for betterment of the nation.

For Revenue Generation

- Provide structures institution support for early stage start-ups to tap into global markets
- Easy procurement norms of Public Procurement for Start-ups along with spend targets

To increase seed stage investments:

- Create seed stage co-investment fund for angel groups
- Bring focus on capability over capacity in accelerators and incubators

To increase corporate participation

- Expand CSR guidelines to increase capital availability and pace of deployment
- Encourage set-up of corporate innovation labs.

To strengthen support ecosystem

- Build industry-specific world-class innovation clusters
- Build industry-specific physical and digital sandboxes

Conclusion

Nowadays India focuses on competing and grabbing the top place in global market and for this the government taking necessary steps for creating awareness among the youths in India for meeting up with the global competitions by providing necessary training through training centers, educational institutions and other avenues. vision over the start-up of the nation entirely turn in the present era³.

Creating more awareness of government initiatives and incentives, credit disbursement to priority sectors, promoting outreach and network benefits to Tier 2 and Tier 3 cities, as well as easing financing and tax breaks for foreign and domestic investors could improve opportunities for startups in India⁷.

Abstract

Government of India introduced various policies and schemes that are targeted to improve the women empowerment and development of children across the country. The Ministry of Women and Child development is implementing various schemes/programmes to empower and improve the social status of women and girl children. The main aim of this paper is to identify the various features of Mahila Samman Savings Certificate Scheme which is associated in commemorating Azadi Ka Amrit Mahotsav. The Mahila Samman Savings Certificate is a small savings scheme for women and girls was introduced by Union Finance Minister Nirmala Sitharaman in the Union Budget 2023–24. This scheme has been designed with the intent of encouraging women and girls to save and invest.

Keywords: Mahila Samman Savings Certificate Scheme, Azadi Ka Amrit Mahotsav Initiative, Women Empowerment, Financial Inclusion.

Introduction

The Mahila Samman Savings Certificate, a small savings scheme for women and girls, was introduced by Union Finance Minister Nirmala Sitharaman in the Union Budget 2023–24. This small-savings scheme specifically meant for women investors. The primary goal of the scheme is to increase women's participation in investments and to promote their financial inclusion.

Objectives of the Study

The main aim of this paper is to overview about the Mahila Samman Savings Certificate Scheme which is associated in commemorating Azadi Ka Amrit Mahotsav. It also inspects the main features of the scheme in the name of Mahila Samman Savings Certificate offered by the government for the welfare of women and girl child.

Research Methodology

The study is based on the secondary data sources. The necessary information about the Mahila Samman Savings Certificate Scheme and its various features are collected from various articles, journals, internet source of related topics.

Overview - Mahila Samman Savings Certificate Scheme -2023 – Features

The Mahila Samman Savings Certificate 2023 is available for two years, from April 2023-March 2025. It will offer a maximum deposit facility of up to Rs.2 lakh in the name of women or girls (including minors) for two years at a fixed interest rate of 7.5% Per Annum Compounded Quarterly. For commemorating Azadi Ka Amrit Mahotsav, a one-time new small savings scheme, Mahila Samman Savings Certificate, has been made available for a two-year period for investment up to March 2025.

Mahila Samman Savings Certificate is a risk free scheme dedicated towards Women's and Girls of all age groups. This scheme has been designed with the intent of encouraging women and girls to save and invest. The account opened under this scheme should be a single holder type account.

There are three forms involved under the scheme which are account opening form, maturity payment form and the withdrawal form. This scheme has been made available in 159 lakh post offices as well as authorized banks. The eligible individual can open the MSSC account in post office by downloading the form from the India Post website, filling it out, and submitting it to the nearest post office branch.

V. Main Features of this Scheme

- **Eligibility - Any Individual Women and guardian on behalf of a minor girl may open an account by submitting an application at branch.**
- **Benefits – It is a 100% safe and secured scheme by Government of India. The deposits made under this Scheme shall bear interest at the rate of 7.5 % per annum. Interest shall be compounded on quarterly basis and credited to the account.**
- **Investment - A minimum of one thousand rupees and any sum in multiples of one hundred rupees may be deposited in an account and no subsequent deposit shall be allowed in that account. A maximum limit of two lakh rupees shall be deposited in a single account or multiple accounts held by an account holder.**
- An individual may open any number of accounts subject to the maximum limit for deposit and a time gap of three months shall be maintained between the existing account and the opening of other account.
- **Premature Withdrawal - The account holder shall be eligible to withdraw maximum up to 40% of the eligible balance once after the expiry of one year from the date of opening of the account but before the maturity of the account.**

- **Multiple Accounts** - The Customer can open multiple accounts under this scheme, however second account can be opened only after time gap of three months from the date of opening of first account and so on. However total deposit including all the accounts should not exceed Rs 2 Lacs.
- **Nomination** - Nomination facility is available for maximum upto 4 Nominee per account.
- **Premature Closure of Account** - MSSC account is opened for a period of 2 years and the account shall not be closed before maturity except in the following cases, namely:-
 - i) On the death of the account holder and
 - ii) In cases of extreme compassionate grounds such as medical support in life-threatening diseases of the account holder or death of the guardian.
- If the bank concerned is satisfied, that the operation or continuation of the account is causing undue hardship to the account holder, it may, after complete documentation, by order and for reasons to be recorded in writing, allow premature closure of the account. Where an account is prematurely closed, interest on principal amount shall be payable at the rate applicable to the Scheme for which the account has been held (without deduction of any penal interest).
- Premature closure of an account may be permitted, any time after the completion of six months from the date of opening of an account for any other reason mentioned above and in which case the balance as stood from time to time in the account shall be eligible only for the interest rate less by two percent (2%) than the rate specified by the scheme.
- **Payment on Maturity** - The deposit shall mature on completion of two years from the date of the deposit and the Eligible Balance may be paid to the account holder on an application in Form-2 submitted to the branch on maturity.

Conclusion

The Central and State Government is taking various steps to educate and empower to uplift the women in the society. This scheme is plays a significant role towards the financial inclusion and empowerment of the women, including girls. But in rural areas many of the women are not known about this scheme. So the government should conduct awareness campaign and take other proper initiative to reach this scheme to all section of the society.

DEVELOPMENT OF REASONING AND THINKING ABILITIES AMONG STUDENTS

Ms. A. Gomathi

Assistant Professor of Commerce

Nallamuthu Gounder Mahalingam College, Tamilnadu, India

gomathiagathursamy@gmail.com

Abstract

Reasoning skills and logical thinking is inseparable; it is beneficial for developing insight in thinking and task which will help them to solve a problem. This ability helps in adjustments in new situation of life which will further help in success of all area of life². At present era, development of reasoning and thinking abilities is an important one to fulfil the needs in effective manner, especially for younger generation. Students must have to improve the reasoning and thinking abilities because it enhances the interest of the students in studies and shapes the future education plans, career plans, and personality. This paper explore in detail about the concepts related to the reasoning ability and reasons behind the low reasoning ability of students and how to impart these skills among students.

Keywords: Reasoning Skills, Thinking ability, Arithmetic and Logical Reasoning, Critical Thinking, etc.,

Introduction

Reasoning and thinking abilities are developed in order to address the challenges of modern education, global competition and democratic life⁵. From the beginning this skills must have inculcate among the students for the betterment of the society. Reasoning and thinking abilities helps the students not just follow the ideas or facts but to find the meaning and connection behind them. Critical thinking is the ability to find solutions on the basis of evaluation, logic and evidence¹. There is a difference between memorization and learning. Memorization of answer to the question without clearly understands the concepts and its meaning, may improve the remembering quality of the brain but this habit deteriorating the quality of learning.

Statement of the Problem

Lack of reasoning ability among students is the major issue in Indian context². After Covid-19 the entire scenario of learning habits of the students are changed. Online classes and ICT tools usage help the students to know and utilize the various learning platform at maximum level, but in regular classes we can see the students hesitate to ask questions in the classroom. To narrow down the reason for this gap the following questions have been raised:

Why the students have low reasoning ability? What are the basic concepts related to improve reasoning ability? What are the strategies to improve the reasoning and thinking skills among the students?

Objectives of the Study:

This study makes an attempt to find the solutions for the questions asked in the statement of the problem. Accordingly the following objectives have been framed.

1. To know the concepts and importance of reasoning and thinking ability.
2. To identify the reasons behind the low reasoning and thinking ability of students.
3. To suggest the strategy to develop the reasoning and thinking ability among students.

Research Methodology

As the research paper is of conceptual and review nature, the researcher has applied exploratory research design by using varied secondary data availed from the secondary data sources. Based on the secondary data and review, the researcher has reported on various strategies to develop the reasoning and thinking ability among students.

Review of Literature

Dr. Madhuri Hooda and Anita Devi (2018) entitled a study on “Development of Reasoning Ability and Barriers among Students.” In this study they described about the different kind of strategies for developing reasoning ability and factor that affects reasoning ability of students. The authors indicates the role of Inductive and deductive reasoning and the four basic reasoning skills i.e spatial, reasoning, logical reasoning, numerical reasoning and verbal reasoning which are important to everyday living.

Wayan Suarniati et al (2018) entitled a study on “The Development of Learning Tools to Improve Students’ Critical Thinking Skills in Vocational High School”. In this study the authors expressed the necessity to produce a preparation of learning tools in the form of a teaching plan based on Problem-Based Learning, and valid and reliable critical thinking instruments which is based on Watson-Glaser Critical Thinking Appraisal (WGCTA) with five dimensions: Inference, Recognition Assumption, Deduction, Interpretation and Evaluation of Arguments with the subject of Pancasila and Civic Education. Instrument validity test is analyzed using product moment Pearson's correlation analysis, and factor analysis. While the instrument reliability test using Alpha Cronbach formula, it was declared valid and reliable after it was tested on the students through three trials which resulted in 16 question items from 50 items prepared.

In Pearson Blog - article titled as “Strategies to Increase Critical Thinking Skills in students (2021)” reveals that the essential qualities of reasoning and thinking abilities among students community. It also express that the accomplishment of this objective cannot be done through the curriculum, rather through the combination of academic learning and the development of life skills.

Concepts and Importance of Development of Reasoning and Thinking Ability

Reasoning and thinking skills in education are important because it can determine the quality of the school, business, career, and students’ behavior that all depends on students' ability to solve problems and make decisions⁵.

Reasoning ability is problem solving ability which solves different kind of problems related to learning and tasks. It can be developed with proper teaching and training. The process of actively conceptualizing, analyzing and applying the information gathered through observation, experience or reflection helps to develop the reasoning ability and thinking level of the students.

Level of Thinking	Skills Students Demonstrate	Questions to Ask
Lower Levels		
Remembering	recognize, describe, list, identify, retrieve	What do we already know about...? What are the principles of ... ? How does ... tie in with what we learned before?
Understanding	explain, estimate, describe, generalize, predict,	Summarize...or explain... What will happen if? What does....mean?
Higher Levels		
Applying	carry out, use, implement, show, solve	What would happen if...? How could...be used to...? What is the counterargument for..?
Analyzing	compare, deconstruct, organize,	Why is...important? What are the implications of...? Explain why/Explain how...
Evaluating	check, judge, critique, conclude, explain	Why is...happening? What is the best..and why? How does...affect?
Creating	construct, plan, design, produce	What is the solution to the problem? What do you think causes..? Why? What is another way to look at?

Source : Adapted from Brown University's Harriet W Sheridan Center for Teaching and Learning

Reasons for Lack of Reasoning and Thinking Ability

The Education system in a country has to be able to create a condition of learning that allows students to think critically, creatively, responsibly, and provide opportunities for students to explore their imaginative ideas⁵. Teachers play an important role in developing reasoning and teaching ability among students. Normally teachers only ask the students to learn, but rarely teach students how to learn as a result they are difficult to solve problems, make decisions, think critically, and think creatively ⁵.

Apart from that, the following aspects are considered as a key reason for lack of reasoning and thinking ability of students.i.e

- Anxiety and Stress
- Learning environment
- Task Complexity
- Less Motivation
- Intelligence
- Interest
- Activeness

Strategies for developing reasoning and thinking abilities:

The thinking ability can be created and developed in the classroom by solving real-world problems. The problem-based learning strategies are perceived as good approaches because they are supported by various learning theories (cognitive and constructivism) and many results of the research have proved that as an intervention model, PBL is effective in encouraging high thinking, constructing knowledge⁵.

Tools to improve Reasoning and Thinking ability:

Preparation of learning tools with appropriate strategies and critical thinking instruments that are tested to be used by teachers can improve the reasoning and thinking ability. The students are motivated to ask questions, participate in discussions, practice active learning, study with the help of examples and should go beyond the academic learning. Then only they will get the chance of developing their skills.

The following activities are used to increase the reasoning and thinking abilities of students

Reflecting activities: Reflection activities provide students with opportunities to track their learning and demonstrate their progress throughout the semester⁴.

Peer review activities: Peer review activities enable students to demonstrate communication skills by giving feedback on each other's work, expose students to alternative perspectives, and allow students to question what they are reading⁴.

Discussion forums: Discussion forums allow students to communicate with their peers, answer questions that require them to demonstrate both lower-level and higher-level critical thinking skills, and analyze course content⁴.

Small group activities: Small group activities allow students to communicate, problem solve, hear different perspectives, and collaborate to analyze and synthesize course content⁴.

Digital Storytelling Activities: Telling digital stories allows students to use multimedia (images, audio, video) to present information. Digital stories can include 1) Personal narratives, 2) Stories that document events, and 3) Stories that inform and instruct. Creating digital stories allows students to evaluate, reflect on, or analyze course content⁴.

Conclusion

Proper reasoning and thinking abilities will improve the cognitive ability of the students. Therefore it is necessary to create an atmosphere of learning that allows the

students to be able to think critically⁵. We can able to develop a reasoning and thinking ability among students through encourage to ask questions and participate in discussion form to share ideas and thoughts, it will increase the independent thinking ability and helps to set up their own goal with self-confidence.

ROLE OF SAMAGRA SHIKSHA ABHIYAN SCHEME IN NEW EDUCATION POLICY

Ms. A. Gomathi

Assistant Professor of Commerce

Department of B.Com – Banking and Insurance

Nallamuthu Gounder Mahalingam College

Tamilnadu, India

Abstract:

National Education Policy (NEP), 2020 provides for setting up a Gender Inclusion Fund (GIF) to build the nation's capacity to provide equitable quality education for all girls as well as transgender students¹. The above objectives of NEP for Equitable and quality education for girls and transgender children are being met through specific provisions under SamagraShiksha2.0 by allocating dedicated resources for SEDGs¹. This policy helps to eliminate the disparity in access to education for children from any gender or other socio-economically vulnerable groups. The main aim of this paper is to identify the important features revamped in Samagra Shiksha Abhiyan Scheme with the addition of new components/initiatives based on the recommendations of the NEP 2020. It also inspects the role of initiative taken by the government in the name of Samagra Shiksha to implement National Educational Policy 2020.

Keywords: NEP 2020, Samagra Shiksha Abhiyan (SSA) 2.0, Gender Inclusion Fund(GIF).

I. Introduction:

"Educate, Encourage, and Enlighten" is the motto of the National Education Policy (NEP) which emphasizes the need for quality education that promotes critical thinking and creativity, encourages students to strive towards their full potential, and fosters a spirit of enlightenment that enables students to contribute to the development of society².

II. Objectives of the Study:

The main aim of this paper is to identify the various types schemes associated in National Education Policy 2020. It also inspects the initiative taken by the government in the name of Samagra Shiksha to implement NEP 2020. Besides this it analysis the Components of the Samagra Shiksha Abhiyan (SSA) 2.0

III. Research Methodology:

As the research paper is of conceptual and review nature, the researcher has applied exploratory research design by using varied secondary data availed from the secondary data sources.

Based on the secondary data and review, the researcher has reported an important role of Samagra Shiksha Abhiyan Scheme 2.0 in implementing National Education Policy 2020 in India.

IV. Overview - Samagra Shiksha Abhiyan (SSA) 2.0:

The Cabinet Committee on Economic Affairs has approved the school education programme Samagra Shiksha Scheme 2.0 till the 2025-26 financial year. It has been upgraded to align it with the Sustainable Development Goal for Education and the new National Education Policy launched in 2020⁴. It is an integrated scheme for school education covering the entire gamut from pre-school to class XII. It aims to deliver inclusive, equitable, and affordable school education. The scheme covers 1.16 million schools, over 156 million students and 5.7 million Teachers of Govt. and Aided schools (from pre-primary to senior secondary level). It is being implemented as a centrally sponsored scheme. It involves a 60:40 split in funding between the Centre and most States. It was launched by the Ministry of Education in 2018⁴.

Samagra Shiksha – It prepared with the broader goal of improving school effectiveness measured in terms of equal opportunities for schooling and equitable learning outcomes⁵. It subsumes the three Schemes of Sarva Shiksha Abhiyan (SSA), Rashtriya Madhyamik Shiksha Abhiyan (RMSA) and Teacher Education (TE). The main emphasis of the Scheme is on improving the quality of school education by focussing on the two T's – Teacher and Technology. The scheme mainly aims to support States in the implementation of the Right of Children to Free and Compulsory Education (RTE) Act, 2009. The Scheme is being implemented as a Centrally Sponsored Scheme. It involves a 60:40 split in funding between the Centre and most States.

V. Components of the Samagra Shiksha Abhiyan (SSA) 2.0:

Direct Benefit Transfer (DBT):

- In order to enhance the direct outreach of the scheme, all child-centric interventions will be provided directly to the students through DBT mode on an IT-based platform over a period of time.
- This DBT would include RTE (Right to Education) entitlements such as textbooks, uniforms and transport allowance.

On NEP Recommendations:

- Encouraging Indian languages:

- It has a new component for appointment of language teachers, which includes salaries, and training costs as well as bilingual books and teaching learning material as recommended in NEP.
- Pre-primary Education:
- It will now include funding to support pre-primary sections at government schools, i.e. for teaching and learning materials, indigenous toys and games and play-based activities.
- Master trainers for pre-primary teachers and anganwadi workers will be supported under the scheme.

NIPUN Bharat Initiative:

- NIPUN Bharat is an initiative for foundational literacy and numeracy, which will get an annual provision of ₹500 per child for learning materials, ₹150 per teacher for manuals and resources and ₹10-20 lakh per district for assessment.

On Digital Initiatives:

- As part of digital initiatives, there is a provision for ICT labs and smart classrooms, including support for digital boards, virtual classrooms and DTH channels which have become more important in the wake of the Covid-19 pandemic.
- It includes a provision to support out of school children from age 16 to 19 with funding of ₹2000 per grade to complete their education via open schooling.

For out-of-School Children:

- It includes a provision to support out of school children from age 16 to 19 with funding of Rs. 2000 per grade to complete their education via open schooling.
- There will also be a greater focus on skills and vocational education, both for students in school and dropouts.
- It also has a provision for an incentive of up to ₹25000 for schools that have two medal-winning students at the Khelo India school games at the national level.

Other Features:

- Financial support for State Commission for Protection of Child Rights @ Rs 50 per elementary school in the state, for protection of child rights and safety.

- Holistic, 360-degree, multi-dimensional reports showing progress/uniqueness of each learner in the cognitive, affective, and psychomotor domains will be introduced in the form of Holistic Progress Card (HPC).
- Support for activities of PARAKH, a national assessment centre (Performance, Assessments, Review and Analysis of Knowledge for Holistic Development)
- Additional Sports grant of upto Rs. 25000 to schools in case at least 2 students of that school win a medal in Khelo India school games at the National level.
- Provision for Bagless days, school complexes, internships with local artisans, curriculum and pedagogical reforms etc included.
- Support for Social Audit covering 20% of schools per year so that all schools are covered in a period of Five years.

VI. Conclusion

The Centre has approved the continuation of the 'Samagra Shiksha Scheme' for school education for the next five years till March 31, 2026. The scheme has also been revamped now with the addition of new components/initiatives based on the recommendations of the NEP 2020³. The country is on the threshold of a big leap towards digitalization. In future all the villages should be connected to the Internet, then only the school in rural areas will be benefited. Smart classrooms and virtual labs will become possible in all rural schools and the blackboards will be replaced by digital boards.

ROLE OF FINTECH - INNOVATION AND ADOPTION IN SUSTAINABLE BUSINESS START-UPS

Ms. A. Gomathi

*Assistant Professor of Commerce, Department of B.Com -Banking and Insurance
Nallamuthu Gounder Mahalingam College, Tamilnadu, India*

Abstract

The integration of new technologies and the digitization of society have created a favourable environment for the development of Fintech startups in India. The FinTech Industry has seen tremendous growth in India over the last decade since it caught pace after expansion of interest services in the country. In India Fintech adoption rate is 87% against the global average of 64%⁴. By providing the access to banking and financial services for unbanked people, the FinTech industry plays a predominant role to bettering financial inclusion. This paper explores the various segments and significance of Fintech industries in the success of digital transformation and it also inspects the regulatory legal framework, Government initiatives, the key principles and thrust areas of the Fintech start-ups. Besides this it also tried to identify the emerging trends, issues and challenges in Fintech revolution.

Keywords: Digital Startups, Fintech Innovation, Sustainable Development, Business Start-ups etc.,

Introduction

Financial technology (better known as Fintech) is used to describe new tech that seeks to improve and automate the delivery and use of financial services⁴. The Fintech companies play a major role in improving access to the gamut of financial services like AePS, Aadhar Pay, Remittances, and Recharges for the masses². With over 2,000 FinTech businesses officially recognized by DPIIT (Department for Promotion of Industry and Internal Trade) in India and projections indicate that the total addressable market for the Indian FinTech industry is set to reach \$ 1.3 trillion by 2025⁵.

Fintech companies are innovative, nimble, and have lower operational costs than traditional banks⁶. They can lead the way through taking financial services, increasing access to credit, innovating with speed and compliance, promoting a cashless economy to the farthest corners of the country⁶. Fintech companies can play a key role in boosting financial inclusion by leveraging the existing financial ecosystem and emerging technologies to make banking simpler, more accessible, and cost-effective for millions of unbanked and underbanked Indians⁶.

FinTech is increasingly becoming an important focus area for all the key stakeholders in India's Financial Services industry – Regulators, Traditional Banks, NBFCs, Payment Banks, Investors, Payment Service Providers, Broking and Wealth Management Companies, Insurance providers and pure-play FinTech players. The FinTech infrastructure backbone has been strengthened tremendously with the host of options available to market participants such as BBPS, Bharat QR, India Stack, UPI³.

Statement of the Problem

The FinTech infrastructure backbone has been strengthened tremendously with the host of options available to market participants such as BBPS, Bharat QR, India Stack, UPI, etc³. In India Fintech adoption rate is noted as 87% against the global average of 64%⁴. According to a World Bank analysis more than 190 million Indians lack access to formal financial services, 20 percent of the Indian population is still unbanked, implying enormous untapped economic potential⁶. Rural India has only 17% internet penetration compared to 60% in urban India³. Above these two interpretations make an argument and couldn't judge the exact state of Fintech development in India.

To know the present scenario of Fintech startups in India, the following questions were raised?

What are the various segments and significance of Fintech startups in India?

What are the factors associated with the growth of Indian Fintech industry?

What are all the issues, challenges faced by Fintech companies in the current economic climate?

What are the emerging trends predicted by Fintech industry?

Objectives of the Study

This study makes an attempt to find the solutions for the questions asked in the statement of the problem. Accordingly the following objectives have been framed.

1. To know the various segments and significance of Fintech startups in India.
2. To identify the factors associated with the growth of Indian Fintech industry.
3. To identify the regulatory legal framework and Government Initiatives for Fintech in India.
4. To explore the issues, challenges faced by Indian Fintech companies in the current economic climate.
5. To identify emerging trends in Fintech startups in sustainable development.

Research Methodology

As the research paper is of conceptual and review nature, the researcher has applied exploratory research design by using varied secondary data availed from the secondary data sources. Based on the secondary data and review, the researcher has reported on important role of Fintech -Innovation and adoption in India

Review of Literature

Mr. Nishant kumar published an article titled as "Role of Fintech in India's Digital Economy" in Nasscom community website on March 16, 2023. In this article he reveals that the role of Fintech in Indian Digital Economy, the key benefit of Fintech for business in

India, challenges of Fintech in India and the future of Fintech in India. He noted that in India the future of Fintech companies is bright, the immense potential.

The Times of India published an article entitled as “The role of Fintech companies in strengthening the banking and online payment sector in rural India” on October 12, 2022 written by Amit Tyagi. The author expresses that India’s Fintech market is among the fastest growing and is ranked the third largest market. He denotes that the companies have the potential to reshape the financial services and financial inclusion in India. He added that the companies play a major role in improving access to the gamut of financial services like AePS, Aadhar Pay, Remittances, and Recharges for the masses.

Deloitte the Learning Academy conducted a study and published an article in the name of “FinTech in India – Ready for Breakout”. This article denotes the critical issues addressed by Indian FinTech companies and few of the critical structural issues afflicting Indian financial services as increase outreach, improve customer experience, reduce operational friction, and foster adoption and usage of the digital channel. This report suggests the financial companies can learn and adopt best practices around risk and internal controls, operational excellence, compliance culture, and employee engagement.

Fintech Segments –Area Wise Classification

Deloitte report analyzed the breakout potential of India’s Fintech sector across six segments i.e Payments, Credit, Investment Management, Personal Finance Management, BankTech and InsurTech and across twenty sub-segments. Customer Loyalty, Technology & IT Infrastructure.

Area	Fintech Segments	Area	Fintech Segments
Credit	Peer-to-Peer Lending Crowd Funding Market Place for Loans Online Lenders – on-book lending by NBFCs Credit Scoring Platforms	Payments	M-wallets and PPIs Merchant Payments and PoS Services International Remittance Crypto Currencies
Investment Management	Robo Advisors Discount Brokers Online Financial Advisors	Personal Finance Management	Tax Filling and Processing Spend Management and Financial Planning Credit Scoring Services
Bank tech	Big Data Blockchain Customer Onboarding Platforms	Insur tech	Insurance Aggregator IOT, Wearables and Kinematics

Source : Deloitte Analysis

Significance of Fintech Startups in India

- **Promoting Financial Inclusion in India** – Most of the Indian people in rural area remain outside the formal financial system, and the use of financial technologies can bridge the gap left by traditional banking.
- **Finance for Micro, Small and Medium Enterprises (MSME)** – Lack of capital is the biggest threat to MSME, FinTech startups can play a key role and solve the issue of credit availability and offering easier and quick access to loans.
- **Improve Customer Experience** - FinTech start-ups provide better customer experience in terms of convenience, personalization, transparency, accessibility and developing credit scores and underwriting credit for customers for improving financial services penetration in India by leveraging big data, machine learning and alternative data.

Growth Factors of Indian FinTech Sector

Customer Loyalty, Funding environment, Technology & IT Infrastructure, Value proposition, Innovative use of Data, Cost of operation are considered as a key factors, leading to success of Fintech companies³.

The following seven factors are likely to drive the growth of the Indian FinTech sector, in the medium to long term³:

- Combination of steady economic growth with low penetration of financial services.
- Large public sector banks and insurers lagging market growth.
- Regulatory forbearance toward FinTech.
- Indian Millennials rapidly ascending the adoption S-curve of digital financial services and thus perceiving higher friction from incumbents.
- India Stack and internet data proliferation to improve financial services utility infrastructure and connectivity to support digital financial services.
- Advances in technology and adoption of cloud services leading to asset light models with almost zero unit costs at transaction levels could enable subsidization without building scale.
- Lower real interest rates in Indian economy.

Regulatory Legal Framework and Government Initiatives for Fintech in India

Owing to the overlapping and non-linear business models of fintech businesses, there is no single all-encompassing regulatory legal framework for fintech in India. The applicable laws and rules governing a fintech business will generally depend on the nature of the business being conducted⁷. It is usually regulated by the RBI, SEBI, the Insurance Regulatory and Development Authority of India (IRDAI), the Pension Fund Regulatory and Development Authority (PFRDA), and IFSCA⁷. Aspects that are regulated by the aforementioned authorities include online payments and transactions, payment

aggregators and gateways, data and privacy, lending and collection of deposits, trading of securities and derivatives, offering of insurance products and services, etc. For many financial offerings, prior approvals and licenses need to be obtained from the RBI, SEBI or IRDAI for a business to commence⁷.

The government has already laid the groundwork for the Fintech industry to provide flexible and innovative digital banking with regulations like the Unified Payment Interface (UPI), Aadhaar, and open application programming interfaces (APIs)⁶. The Government also announces measures to specifically promote investments in tech/fintech/start-up businesses in India, or which have a positive impact on those sectors. Additionally, IFSCA has also introduced an incentive scheme for, inter alia, domestic fintechs seeking access to overseas markets as well as foreign fintechs seeking market access to IFSCs in India. The Government also proposed many tax-related relaxations, including an extension of timelines (from March 31, 2023, to March 31, 2025) for funds relocation to IFSC GIFT City. Tamil Nadu FinTech Policy 2021, offering collaboration and incentives for select fintech startups⁷.

The laws and regulations that may apply to fintechs in India are listed below:

RBI

- Payment and Settlement Systems Act, 2007.
- Master Directions on Prepaid Payment Instruments (MD-PPIs), 2021.
- Framework for Scale Based Regulation for Non-Banking Financial Companies, 2021.
- Directions for opening and operation of Accounts and settlement of payments for electronic payment transactions involving intermediaries, 2009.
- Guidelines for Licensing of Payments Banks, 2014 and Operating Guidelines for Payments Banks, 2016.
- Framework for Recognition of a Self-Regulatory Organisation for Payment System Operators, 2020.
- Guidelines on Regulation of Payment Aggregators and Payment Gateways, 2020.
- Circular on Processing of e-mandate on cards for recurring transactions, 2019.
- Circular on Tokenisation – Card transactions, 2019.
- Guidelines on Digital Lending, 2022.
- RBI Master Directions on Credit Card and Debit Card – Issuance and Conduct, 2022.

National Payments Corporation of India (NPCI)

- Various circulars on Unified Payments Interface (UPI) payments.

SEBI

- Circular on Mutual Funds, 2021.

IRDAI

- Guidelines on Insurance Repositories and Electronic issuance of Insurance Policies, 2015.
- Guidelines on Insurance e-commerce, 2017.
- Insurance Regulatory and Development Authority of India (Issuance of e-Insurance Policies) Regulations, 2016.

IFSCA

- International Financial Services Centres Authority Act, 2019.
- Framework for FinTech Entity in the International Financial Services Centres (IFSCs), 2022.

Apart from these the following initiatives are taken by the government for the benefit of public.

- **Jan Dhan Yojana** - This initiative is considered as a world largest financial inclusion and it has helped in new account enrolment of over 450 million beneficiaries for direct benefit transfer and accessibility to a host of financial services applications such as remittances, credit, insurance, and pensions. It helps the Fintech companies to build technology products to enter the large consumer base in India⁴.
- **India Stack** -It is a set of APIs that allows governments, businesses, startups and developers to utilise a unique digital Infrastructure to solve India's hard problems towards presence-less, paperless and cashless service delivery⁴.
- **UPI (Unified Payments Interface)** -It is an advanced mobile app-based payment system to transfer funds between bank accounts developed by the National Payments Corporation of India in 2016, is the multiplier force behind the Fintech revolution in India. 338 banks registered under the platform, recorded more than 6.28 billion transactions in July 2022 worth 10.62 lakh crore ⁴.
- **Digital Rupee** - India launched its Central Bank Digital Currency (CBDC) or digital rupee or e-rupee recently. It is an electronic version of cash and will primarily accelerate the growth of the FinTech market in India⁴.
- **Fintech Hub** - **Fintech** Valley Vizag, O-hub Bhubaneswar, Bandra Kurla Complex, FinTech Hub Kolkata, Mumbai Fintech Hub are Fintech parks created by the respective Government to promote business infrastructure in the state, and attract investors and multinational financial corporations to set up their offices in the hub.

Issues, Challenges faced by Fintech Companies in the Current Economic Climate

Fintech systems are vulnerable to hackers by automation of processes and digitization of data. Absence of regulatory authority has led to increased chances of fraud threat to investor protection and movement of money in the economy. Due to the diversity of

offerings in FinTech, it is difficult to formulate a single and comprehensive approach to these problems.

According to RBI financial literacy is only 27% of Indian adults and 24% of women meet the minimum level of financial literacy. The lack of financial literacy is also considered as a main issue. During the pandemic, digital lending through mobile apps became popular, but more than half of these digital loan providers were operating illegally. Many apps used tactics to exploit the widespread lack of financial literacy, charging interest rates up to 500%⁴.

The true legal status of cryptocurrency continues to be a grey area in India⁷. The Government of India introduced a draft Cryptocurrency and Regulation of Official Digital Currency Bill, 2021 (Cryptocurrency Bill), which provides for: (a) the creation of a framework for official digital currency to be issued by the RBI; and (b) the prohibition of all private cryptocurrencies in India – with certain exceptions, in order to promote the underlying technology of cryptocurrency and its uses⁷. As per a recent report, WazirX, India's biggest Cryptocurrency exchange registered an annual trade of over \$43 billion.

Nearly three-quarters of population resides in rural India Fintech industries making its route to reach digitalization. Infrastructural costs, low usage due to lack of awareness, inconsistent availability of electricity, theft, and vandalism are some of the major deterrents for physical bank branches and ATM operators in rural areas².

Source :Deloitte Analysis

Emerging Trends in Fintech Industry

Fintech companies can rapidly roll out new features and products by testing new innovations in secure sandboxes while checking for adherence to government regulations and data security. This enables Fintech companies to provide innovative products and services in a faster yet secure manner⁶. The Fintech activities are divided into three broad categories: the Banking Sector; Capital Markets; and Funds Management and the Insurance Sector, and the notable Fintech trends include BNPL (Buy Now, Pay Later), Digital Banks, Robo Advisory, Blockchain, Sustainable Finance products, neo-banks, Embedded finance/ Insurance, Cyber Insurance, Artificial intelligence (AI) and the metaverse etc., are some notable trends of the year and it could change the scope and landscape of Fintech and it continued to show an upward trend too⁷. The Fintech areas/activities expressly include

Agri Tech, Climate/Green/Sustainable Tech, Space Tech, Solutions for Banking, Financial Services and Insurance domain leveraging (AI, Chatbots, Web 3.0, etc)⁷.

Conclusion

Through the mobile applications and online platforms, Indian FinTech companies have been successful in offering various financial services to this population. It likely to reduce costs and improve quality of financial service and it will develop unique and innovative models of assessing risks and it will create a more diverse, secured and stable financial services land shape³. The government should require Fintech companies to ensure that the data harvested from consumers will not be used for any purpose other than serving the consumer's interest⁴. Establishing technological safeguards, educating and training customers will also help in democratizing Fintech and guarding against cyberattack issues. FinTech will create a more diverse, secured and stable financial services landscape. FinTech companies are less homogenous than incumbent banks, and offer great learning templates to improve, both, capabilities and culture³.

Abstract:

Artificial Intelligence (AI) now has been an integral part of human life and the most importantly has taken its place in all aspects of today's life. AI is being used in education in various ways, from chatbots that provide 24/7 student support to personalized learning algorithms that adapt to each student's needs. Learning management systems, gamification, video assisted learning, virtual and augmented reality are some examples of how technology has improved student engagement and education planning. With the rise of online education and the growing availability of educational resources on the internet, many traditional universities and colleges are worried about the future of their institutions. The aim of this study is to identify the various ways in which AI is being applied in education and various examples of successful AI-powered educational tools and platforms.

Keywords: Artificial Intelligence (AI), Personalised Learning, New Teaching and Learning Pedagogy, E-Learning Platforms, Digital Education.

Introduction

Artificial Intelligence (AI) has the potential to address some of the biggest challenges in education today, innovative teaching and learning practices, and accelerate progress towards Sustainable Development Goal (SDG) 4. Personalized learning, automated grading, and intelligent tutoring systems are just some of the ways AI is changing how students learn and how educators work. UNESCO is committed to supporting Member States to harness the potential of AI technologies for achieving the Education 2030 Agenda, while ensuring that its application in educational contexts is guided by the core principles of inclusion and equity. A study was conducted by research organization Tracxn and it was observed that about one-tenth (11%) of Indians who use artificial intelligence (AI) based technology in their organizations belong to teaching and learning (Aftab Alam, et al, 2022).

Objectives of the Study

Researches in the field of AI found a positive impact on educational implications such as Intelligent Computer-Assisted Instruction (ICAI) systems to teach and Computer-Assisted Instruction (CAI) to develop learning environment and major application as expert systems to assist educational diagnosis and assessment (Jones, 1985). AI technology-based assessment system can be used to assess students' knowledge, understanding, skills such as collaboration and persistence and characteristics such as confidence and motivation etc. (Aftab Alam, Dr. Mohammad Hasan, Md Mousuf Raza (2022).

The main aim of this study is to identify the various ways in which AI is being applied in education and various examples of successful AI-powered educational tools and platforms.

Research Methodology

The present paper is qualitative and theoretical in nature. This research work is based on secondary data collected from various journals, official documentary evidence and also various sources of information like books, websites, and newspapers.

Some ways in which AI is being applied in Education

Artificial Intelligence (AI) has the potential to transform education by enhancing the learning experience, personalizing education, and providing new tools for educators. Here are some ways in which AI is being applied in education:

Personalized Learning

AI systems can analyze individual student performance data to tailor educational content based on their strengths and weaknesses. This helps in creating a personalized learning experience that suits each student's pace and learning style.

Adaptive Learning Platforms

AI-powered adaptive learning platforms adjust content and difficulty levels based on a student's progress, ensuring that each learner is appropriately challenged.

Virtual Tutors and Intelligent Assistants

AI can serve as a virtual tutor, providing instant feedback, answering questions, and offering additional resources to support student understanding. Intelligent assistants can help students with homework or provide guidance on various topics.

Automated Grading and Assessment

AI algorithms can automate the grading process, saving teachers time and providing instant feedback to students. This allows educators to focus more on individualized instruction and support.

Identifying Learning Gaps:

AI tools can analyze large datasets to identify patterns and trends in student performance, helping educators identify learning gaps and areas that may need additional attention.

Gamification and Interactive Learning

AI is used to create engaging educational games and interactive simulations that make learning more enjoyable and effective.

Natural Language Processing (NLP) for Language Learning

NLP technology allows AI systems to understand and respond to human language, making it valuable for language learning applications. Language learning apps can provide conversational practice, pronunciation feedback, and language comprehension exercises.

Predictive Analytics

AI can predict students' future performance based on their historical data, allowing educators to intervene early and provide additional support to students at risk of falling behind.

Robotics in Education

AI-powered robots are used in educational settings to assist with tasks, engage students in interactive learning experiences, and teach programming and robotics concepts.

Facilitating Teacher Professional Development

AI tools can assist in the professional development of teachers by providing insights into effective teaching strategies, suggesting relevant resources, and offering continuous training opportunities.

Automated Administrative Tasks

AI can streamline administrative tasks such as scheduling, enrollment, and data management, allowing educators to focus more on teaching and student engagement.

Accessibility and Inclusion

AI technologies contribute to making education more inclusive by providing tools that assist students with disabilities. For example, AI-driven text-to-speech or speech-to-text applications can support students with different learning needs.

While AI in education holds great promise, it's essential to consider ethical considerations, data privacy, and the need for responsible implementation. Collaboration between educators, researchers, and technologists is crucial to harness the full potential of AI in education for the benefit of learners worldwide.

Examples of successful AI-powered Educational Tools and Platforms

Artificial intelligence is a rich technology that is being used in almost every field and is changing the world (Jhumur Basuri 2023). The technology of AI has been advanced and sophisticated that can recognize the gesture of the students and understand their mood and ease during the lecture even it can read facial expressions and posture of the students to understand difficulties and problems they are facing in the lecture and recommends altering the lesson (Aftab Alam, et al, 2022). The use of AI in education has many advantages for both students and teachers: learning resources can be accessed from anywhere, at any time. Time-consuming, tedious tasks such as record keeping or grading multiple-choice tests can be accomplished through AI automation. (Dr. Himanshu Sawant, Mahendrasinh D. Vaghela , 2022).

From personalized learning algorithms to virtual and augmented reality, AI-powered tools and technologies are helping to enhance the learning experience for students in ways we never thought possible. AI technology has developed speech-to-text transcription,

predictive text and facial recognition promising an inclusive future for all learners (Aftab Alam, Dr. Mohammad Hasan, Md Mousuf Raza, 2022) There are many examples of successful AI-powered educational tools and platforms currently in use. Some of the most popular include:

- **Duolingo:** a language learning app that uses AI to personalize lessons for each user
- **ALEKS:** an AI-powered math learning platform that provides adaptive assessments and personalized learning plans
- **Coursera:** which uses AI to recommend courses to students based on their interests and previous learning history.
- **Thinkster Math:** described by its creators as a “math tutoring program leverages human interaction and groundbreaking artificial intelligence to create personalized learning programs”
- **Jill Watson:** an AI-enabled virtual teaching assistant introduced by the Georgia Institute of Technology in 2016
- **Brainly:** a social media site for classroom questions
- **Nuance:** speech recognition software used by students and faculty; capable of transcribing up to 160 words per minute; especially helpful for students who struggle with writing or have accessibility needs
- **Cognii:** AI-based products, including a virtual learning assistant, for K-12 and higher education institutions, as well as corporate training organizations
- **KidSense:** AI educational solutions designed for children, including a voice-to-text tool with algorithms built to recognize the sometimes harder-to-translate speech of young learners
- **Content Technologies:** instructional design and content application solutions fueled by artificial intelligence research engines
- **ChatGPT:** AI and ChatGPT can revolutionize academic research by processing and analyzing large amounts of data quickly, uncovering new discoveries, generating hypotheses and conducting literature reviews faster than traditional methods. ChatGPT can assist researchers in writing papers by providing feedback and suggestions, and even generate parts of the text. Additionally, it can be used in natural language processing such as text summarization, sentiment analysis, and language translation for analyzing unstructured data.

AI can be used as an educational tool that guides students towards their goals by providing personalized feedback on homework, quizzes, etc. based on AI algorithms. (Dr. Himanshu Sawant, Mahendrasinh D. Vaghela , 2022)

Conclusion

Many educators worry about AI-powered tools may replace human interaction and affect classroom teaching quality. Ensuring that AI is used in a way that complements, rather than replaces, human educators will be important in the coming years (Aftab Alam, et al, 2022). The existence of artificial intelligence may be able to provide knowledge to

students, but developing character cannot be done. That is an educator's job. How to inspire, motivate, make students become good students." So the role of the teacher in providing motivation, inspiration and developing character are what AI cannot replace because AI is not given feelings and emotions like humans in general. In the end, if we look at technological developments, we must be able to adapt as technology advances. If we do not adjust, we are an educator(teacher/lecturer) may be replaced by technology (Tira Nur Fitria, 2021)

**ROLE OF METAVERSE IN THE INSURANCE INDUSTRY FOR SUSTAINABLE
DEVELOPMENT**

Ms. A. GOMATHI

Assistant Professor,

Department of Commerce with Banking and Insurance,

Nallamuthu Gounder Mahalingam College,

Tamilnadu, India.

Email id: gomathiagathursamy@gmail.com

ABSTRACT:

By investing in the metaverse technology and utilizing its unique capabilities, insurers can enhance their operations; improve customer experience, and addressing emerging risks in this rapidly growing space. Utilizing the metaverse as a platform for creating virtual experience can reach the sustainable development. The main aim of this paper is to examine the potential benefits and hidden threats in the usage of metaverse in the insurance industry and also explore the business opportunities that the increasing pervasiveness of the metaverse could bring sustainable development. The research will utilize a descriptive research design, the data collection process for this study involves the use of secondary sources of data. Thematic analysis approach is used to identify key themes and concepts from literature. The findings of the study reveals that metaverse in the insurance industry is the new frontier in user experience and financial risk coverage that allows the utilization of digital avatars for training and customer support, creating digital twins for property underwriting, or providing coverage for digital assets.

Keywords: *Metaverse, Insurance, Virtual environment, Augmented Reality, Sustainable Development...*

I. INTRODUCTION:

The Metaverse can be defined as a virtual shared space that allows individuals to interact with each other and digital content in a seamless manner (Dixton, 2021). In 1992, the word “Metaverse” was first coined by Neal Stephenson in his science fiction novel – “Snow Crash”, where humans, in their Avatars, interacted with each other in a virtual space.

Insurance companies can streamline their operations, enhance the customer experience, and address new risks by investing in the metaverse. One of the key features of the metaverse is the ability Many organizations across industries are working toward creating immersive experiences for their

users and customers. The relation between the metaverse and the insurance industry will be bilateral in nature. The ‘world’ metaverse creates will have some use for insurance.

II. OBJECTIVES OF THE STUDY

1. To evaluate the opportunities and drawbacks of the usage of metaverse in insurance industry.
2. To identify the role of metaverse towards the sustainable development goals in insurance industry.

III. RESEARCH METHODOLOGY:

This study aims to explore the role of the metaverse on the insurance industry through the comprehensive review of existing literature. The research will utilize a descriptive research design, as the aim is to describe and analyze the current state of the metaverse, and how it is impacting insurance industry and improve the goals of sustainable development. The data collection process for this study involves the use of secondary sources of data. It includes academic databases and online resources such as websites, blogs and industry reports. Thematic analysis approach is used to identify key themes and concepts from literature.

IV. REVIEW OF LITERATURE

Thippa Reddy Gadekallu (2022) investigated the role of block chain in metaverse using the extensive survey on the application of block chain for the metaverse. The author extensively discuss blockchain based methods from technical perspectives, such as data acquisition, data storage, data sharing , data interoperability, and data privacy preservation.

Ansh Budania (2023) made a comprehensive review of existing literature to explore the impact of the metaverse on the various industries. She noted the potential of metaverse to transform the gaming industries by offering new opportunities. She analysed the latest trends and developments in technology to gain insights into the potential of the metaverse. The study provides valuable insights in the usage of in different industries..

Ivelina Kulova, et al(2024) utilized the metaverse and sustainability as drivers revolutionizing customer experience in the food industry. The research strives to showcase how companies can adopt sustainability and fairness in the metaverse, creating immersive encounters and building relationship with customers.

Jussi S. Jauhiainen, et al (2023) conducted a comprehensive review to examine how academic discussion and research about the metaverse developed from the 1990s to the end of 2022. The authors explains the key research topics and areas, and whether and how those publications addressed sustainability. The important themes of virtual and augmented reality, those on blockchain, Crypto currencies and NFTs, those on modeling and machine learning, and those loosely related to varied aspects of decentralization are discussed here.

V. OPPORTUNITIES OF METAVERSE TECHNOLOGY IN INSURANCE

Since Facebook officially changed its name to Metaverse in Oct. 2021, the metaverse has become a new norm of social networks and three-dimensional (3D) virtual worlds. The metaverse aims to bring 3D immersive and personalized experiences to users by leveraging many pertinent technologies. (Thippa Reddy Gadekallu, et al, 2022).

The insurance industry has often been considered a slow adapter of emerging technologies. Insurers can change this perception if they are early to embrace metaverse technologies and leverage it to enhance the experience of customers, agents and employees. Insurers must start experimenting and get their feet wet while the technology is still in its early stages of development. (Amarnath R Suggu, 2023)

Life and property and casualty (P&C) insurers can adopt virtual reality (VR) platforms to explain their products to customers and prospects by demonstrating through examples from real life. Immersive technologies like AI and metaverse greatly impacts insurance companies by helping them enable the lost adjusters through damage identification. Insurance companies can directly verify the claim details by analyzing the recent damage details over the pre-damage images.

Metaverse establishes an advanced level of sales and distribution channel for insurance products. With accurate use of modeling techniques, underwriters can study the loss and risk catering to the market segment, and customers can experience a plethora of metaverse assets in different industries, for example, gaming or healthcare.

With the addition of metaverse in insurance businesses, the ownership, adoption, and transactions of assets have completely transformed with a virtual economy generating real-world value for the users. For instance, the metaverse mitigates the risk approach as investments will now occur in both virtual and physical worlds. It offers multiple opportunities for insurers to enter into the space of digital and crypto assets, along with developing strategic risk management approaches for dealing with new assets.

Metaverse helps in streamlines sales and distribution and upskilling & training the Insurers. In insurance industry the integration of metaverse technology can indeed unlock a realm of new financial opportunities like Virtual Asset Protection, Virtual Liability Insurance, and Cyber Insurance for Metaverse Platforms, Virtual Events Insurance, Augmented Reality (AR) and Virtual Reality (VR) Insurance.

VI. HIDDEN THREATS OF METAVERSE IN THE INSURANCE INDUSTRY

While the metaverse brings many opportunities for the insurance sector, it also brings corresponding risks and challenges.

At the same time, one needs to address the social sustainability. In the metaverse, many kinds of data are collected from its users. It can be an unethical place if guidelines and regulations in data collection and uses are not designed and implemented properly. Otherwise, the metaverse may lead into an erosion of trust. That would compromise its enormous potential as a complement to physical face-to-face transactions (Townsend, S. 2022).

Hacking, fraud, value loss, and centralization are a few concerns that affect digital assets in the metaverse. In general, users must take necessary precautions to secure their assets because the hazards to digital assets in the metaverse are comparable to those in the real world. Unexpected server downtime can damage virtual assets and data because no technology is fault-proof. Insurance companies must safeguard and encrypt themselves against the possibility of financial losses in the event that clients file lawsuits for unforeseen losses.

VII. ROLE OF METAVERSE FOR SUSTAINABLE DEVELOPMENT

The metaverse and sustainability are connected in many ways. In fact, sustainability is a fundamental issue because it is hypothesized that the metaverse would significantly affect the material (environmental), economic, and social spheres, as well as sustainability around the world. (Tozzy, C, 2022).

The result of increasing consumption and population growth is that many crucial natural resources will end if they are not used sustainably, and their recycling organized accordingly. The media and many enterprises discuss that while the metaverse would boost economy and financial profitability; these need to be put in balance with environmental, social, and ethical aspects of the metaverse (Lea T, 2022).

The global insurance industry is playing crucial role in the transition to a low-carbon economy. It facilitates a just transition to net-zero in three ways innovating products that integrate environmental, social and governance (ESG) factors, improving underwriting risk information capacities and making responsible and impactful investments to decarbonizes the global economy and enable communities to deal with climate change. (Manonmani P, 2023)

Insurers must drive de carbonization through product innovation. For instance, parametric insurance or index-based cover pays a predetermined amount to policyholders based on the magnitude of a specific event, as opposed to the magnitude of losses in a traditional indemnity policy. This product has been gaining traction as it delivers quick and guaranteed payouts for climate disasters. It operates on predefined triggers, eliminating the need for claims assessments. Other innovative product structures include double triggers and usage-based product. Insurance companies are funding research

for example protecting and restoring mangrove forests, cost-benefit analysis in the Caribbean region, coral reef insurance policy for reefs in Mexico etc., (Manonmani P. 2023)

As evidenced above, the metaverse needs to be connected and analyzed along broad realms of sustainability. One possibility is to connect the metaverse with the United Nations’ SDGs, which have been accepted as global goals to be achieved locally around the world. Ending poverty and other deprivations requires strategies and actions that improve health and education, reduce inequality, and spur economic growth, and these efforts are necessary to address climate change and preserve life on land and in water (Jussi S. Jauhiainen, et al, 2023).

Many technology development companies prioritize sustainability goals toward more energy-efficient practices that shrink their current carbon emissions. For example, the metaverse can support green networking technologies including minimizing the number of physical data centers, by storing data and information in the cloud (Zhang, S, et al, 2022).

VIII. CONCLUSION

Indians have caught the metaverse fever. A couple from Tamil Nadu state hosted India’s first wedding reception in metaverse. The metaverse continuum will raise the standards for insurers’ hassle free communication with customers, creation, and distribution of goods and experience, and smoother operations management. It may also result in substantial reductions in carbon emissions as many physical goods will be substituted with digital ones, physical mobility and construction are reduced with virtual interactions, the physical world is optimized with digital twins, simulations can be performed in cyberspace instead of material space, and larger awareness and more efficient interaction are created against harmful global phenomena, such as climate change.

SOCIAL MEDIA PRESENCE IN VIRTUAL WORLDS

Dr. A. Anandhiprabha,

Assistant Professor,

Department of Commerce – Banking and Insurance

Nallamuthu Gounder Mahalingam College, Pollachi, Tamilnadu.

ABSTRACT

Social media is becoming a more powerful tool for students for communication, information sharing, and discussions. This paper presents a study, based on a survey questionnaire, which aims to investigate to what extent and for what purposes teachers from different countries from all over the world use social media in their teaching practice. Recent days, College students are education-oriented, information seeking, multi-tasking experts. In today's college classrooms, much of the information that is hunted by students is done via social media. Social media has increasingly inspired college students' everyday lives. Students find that being connected to their classmates and peers via the internet is mainly helpful.

Keywords: Social media, Social network sites, Students, Usage

I. INTRODUCTION

Social media has given customers a voice and a platform to be heard. With rising popularity of social media, organizations are losing control over their online narrative which is increasingly being driven by their target customers. In a bid to regain this control and to be in sync with the needs and expectations of their customers, many organizations have started incorporating multiple social media platforms in their marketing plans. Empowered customer's involvement with the organization on social media is forcing organizations to rethink their marketing strategies not only to integrate the use of social media to create better marketing communication but also for opportunities of product co-creation.

II. SOCIAL MEDIA

Social media is an online platform that people use to develop social relationships with others. There are several social media networking sites that are used for instant messaging, sharing, posting, and much more. Trillions of people worldwide connected via social media to share their perspectives.

However, the majority of people use social media to interact with their family and friends in order to gain knowledge or for entertainment. Business people use social media sites to plan their target audience and execute it via attractive advertisements that pop out when they search something

related to it. The specialist also uses social media to enhance his knowledge in the related field, develop a network with like-minded people in a similar industry, and support each other in their career growth. Improvements in the Internet and technology have introduced new communication tools and styles. In particular, social media have become some of the most outstanding communication tools in this era. With the emergence of social media websites, such as facebook, my space, and Twitter, students and teachers have started to connect outside of school (Dr. ZeynepTuran et al., 2020).

III. VIRTUAL WORLDS

There are hundreds of virtual worlds to choose from, each targeting a different segment of the population. There are also virtual worlds for teens such as Whyville, Habbo Hotel and Second Life for Teens. Finally, there are virtual worlds geared toward adults such as The Sims Online, World of Warcraft, and Second Life. Thus, there is something for everyone and each virtual world shares the traits outlined above while focusing on a specific age group.

Most virtual worlds are free to join, but some require additional fees to customize one's experience or purchase virtual “goods” such as clothes and accessories. This customization has resulted in a cottage industry of sorts. While anyone can create content and design objects in a virtual world, it does require considerable time and basic design skills. For those who prefer not to take the time, some items can be bought and sold online, tax consequences notwithstanding.

Most virtual worlds allow their users to create an “avatar” which is a computer user's self-representation or alter ego. This avatar can be a realistic facsimile of their real identity or, in the case of many virtual worlds like Second Life, can be a robot, animal, mythical creature or other graphical representation

IV. VIRTUAL CLASSES

As previously mentioned, many schools are conducting classes in Second Life. Professors and students logon at a designated time and the professor conducts a class in Second Life. The premise of conducting classes online is to give students hands-on experience in the related field.

It also encourages more participation and an exchange of ideas in a more casual, relaxed environment. In schools like USC's School of Engineering, classes are conducted to give students hands on experience for animation and modelling skills. The professors say that they want to give students exposure to what the industry is seeking from prospective graduates. The University of Hamburg uses virtual worlds where the virtual and reality are merged. A lecture taking place in a

classroom is also attended by off-campus students via video streams and other media streamed to Second Life.

In addition to classes, virtual worlds can be used for virtual office hours and supplement traditional on-campus office hours. Students often find real-time office hours inconvenient and like the ability to interact with their instructors in a virtual setting at more convenient times.

V. LITERATURE REVIEW

In their study “Examining Urban-Rural Differences in the Impact of Internet Use on Older Adults’ Depression: Evidence from China,” **Sun et al. (2022)** explored the impact of Internet use on urban and rural older adults’ depression and provided insights into the positive roles that Information and Communication Technology (ICTs) play in human behaviour. Data for the study were collected from 9172 respondents from the China Health and Retirement Longitudinal Study and analysed using robustness tests and mediation effect analysis. The study found that Internet use affects urban and rural older adults’ depression, with rural older adults benefiting more significantly.

Sivakumar (2020) conducted a study entitled “Effects of Social media on Academic Performance of Students” to understand the impact of social media on students’ academic performance in the Cuddalore District. A sample of 1000 students was selected through a random sampling method, and data were analysed using descriptive and differential analyses. The study found that most students use social media sites to chat for academic purposes, which helps improve their academic performance.

In their study “Undergraduate Students’ Perceptions toward Social media Usage and Academic Performance: A Study from Saudi Arabia,” **Alamri (2019)** analysed undergraduate students’ perceptions of social media usage.

Data for the study were collected from 132 respondents through questionnaires and analyzed using descriptive statistics, including frequencies, percentages, means, standard deviations, correlation tests, and One-Way ANOVA. The study found a statistically significant impact of students’ purposes for using social media on academic performance in favour of all senses, including educational, personal, and occupational purposes.

Ezeji and Ezeji (2018) conducted a study entitled “Effect of Social media on the Study Habits of Students of Alvan Ikoku Federal College of Education, Owerri” to examine the impact of social media on the study habits of students at Alvan Ikoku Federal College of Education in Owerri. Data for the study were collected from 372 respondents using a random sampling method and analysed using

frequency tables and bar charts. The study found that social media usage negatively affected students' daily revision of lecture notes and submission and completion of study assignments.

VI. SOCIAL MEDIA PLATFORMS

With the increasing popularity of social media, there are many social media platforms available today to a user to choose from. SOCIAL MEDIA Sites (specifically Facebook and Twitter) and Content communities (specifically YouTube), known for its media rich content, allow users to upload content in media rich format and give ample opportunities to users to express themselves. Blogs and Collaborative projects score low on social presence and media richness but score high on self-presentation. They are commonly used to express opinions and knowledge and are more often exploited in B2B scenarios.

S.No	Social media Sites	Description
1	Media Sharing Sites	Media sharing sites allow users to upload, organize, and share multi-media materials, including videos, audio, and photos, with people and/or selected communities (Ngai et al., 2015). YouTube, Instagram, and Flickr are popular examples of media sharing sites.
2	Social Networking Sites	Focus of Social Networking sites (SNSs) is to build social networks of people with common interests, build relationships and sharing of information among friends and acquaintances. Facebook and LinkedIn are two examples of Social Networking sites.
3	Blogs / Microblogs	Blogs and microblogs are used by authors to post their writings that are read by people having an interest in the topics and information on which the author has written. Blogger.com is an example of a blog site. Twitter is the most popular microblog. Though text-based blogs are most common and popular, many bloggers have begun to use different media formats (Kaplan et al, 2010).
4	Social Bookmarking Sites	Social bookmarking sites provide services and facilities for individuals to store and share bookmarks of web contents. Examples of book marking sites are Delicious, Pinterest, and Digg.

5	Virtual Worlds	With the growing power of computing and web technologies, people build computer simulated environments in web sites that lead to virtual world environments, such as Second Life and Active World (Nagai et al., 2015). These computer simulated virtual worlds allow people to live a second life (virtually) with a family, job and social activities.
---	----------------	--

VII. CHALLENGES IN THE FIELD OF EDUCATION

While the field of education appears to be a promising area that can take advantage of the opportunities that will emerge from the advent of the next generation virtual worlds at the same time, the integration of immersive technology in education, especially at lower levels of primary and secondary education presents certain challenges. As described in previous sections, technical and societal challenges apply in this field too. For example, the challenges with the technical implementation might create inequalities and increase the gap among schools. The high computational requirements of next generation virtual worlds are also a technical challenge. If education is introduced into next generation virtual worlds, then the simulation and rendering of teaching scenes, the interaction between teacher and learner, and human-computer interaction are huge computational quantities, which pose major challenges to the throughput of the network and the computing power of cloud computing.

Even more importantly, with next generation virtual worlds, it is expected that the nature of education will no longer be limited to the physical classroom but will expand across various interconnected physical and virtual environments and might be blended with the entertainment or other activities. While this has a significant positive potential for the motivation of students and for new forms of learning, there are challenges that are connected to the need for a protected educational environment that protects students' rights, such as the right of students not to share their personal data and to be forgotten, an element that is connected to students' data protection and privacy but also to safety for local off-line experimentation that a physical classroom provides. Furthermore, while virtual spaces have the potential to connect students from different countries and cultures in a synchronous way, which can be catalytic for the development of students' skills, this will raise issues of students' safety and security in cyber space. Thus, special measures are needed for their protection. Lastly the role of the

educator might need to be reconsidered since educators could provide catalytic contributions for pedagogically-grounded content for the educational virtual worlds for the best interest of the students.

VIII. TECHNICAL CHALLENGES

New technologies

Societal changes related to the next generation virtual worlds will inevitably come hand in hand with technological changes and emerging new technologies. Although there is some uncertainty as to how future virtual worlds will materialise from the technical perspective in the coming years, we can already anticipate some key technologies that are likely to be central to their implementation and will reshape the way we interact with them. Some will emerge as totally novel technologies, while others will require an effort to adapt from existing ones. In the following, we identify five technological fields that will play an essential role in the future development of virtual worlds:

- Computer graphics will allow the creation of increasingly immersive virtual, augmented and eXtended reality experiences and environments. Graphic engines will be used to animate expressive avatars in real-time, to facilitate the creation and navigation of original virtual worlds, to faithfully simulate the laws of physics, to develop data formats and compression methods for three-dimensional scenes, and to develop novel forms of visualisations such as 3D holograms.
- Human-Machine Interaction (HMI) and Internet of things (IoT) devices will be used to improve the way we perceive and interact with a virtual space from the physical world, and vice-versa. Specialised HMI hardware will include VR/ AR headsets, haptic feedback devices, Brain-Computer Interfaces (BCIs) and motion capture systems. These interaction devices will allow for enhanced multimodal and real-time means of communication. Similarly, IoT devices are smart connected sensors that will serve to communicate and transfer information between the real and virtual world through objects.
- Artificial intelligence will be needed to analyse and respond to the vast array of user interactions, data and personalized experiences created in virtual worlds. Technologies such as computer vision, machine learning and depth sensing will be essential to create realistic and immersive virtual environments, intelligent virtual agents, Non-Player Characters (NPCs) and autonomous systems within the virtual worlds. These systems will need to understand/simulate

human behaviour, respond to users’ inputs, and learning and adapting over time. New forms of AI may emerge by extending existing forms to the virtual space. For instance, current scene understanding might evolve into virtual scene understanding, current affective computing techniques might evolve into virtual affective computing (e.g. detecting emotions from avatar data), and generative models might evolve into 3D generative models to automatically generate 3D models of virtual scenes.

- Block chain and crypto currencies are likely to be the technological building blocks of a decentralized infrastructure (i.e. an infrastructure without the need of a centralised control) that will enable users to interact, buy, sell and trade virtual assets, as well as establish and enforce rules and regulations. Block chain would provide a trustworthy, transparent and verifiable mean of keeping a secure record of digital ownership of virtual assets (such as virtual real estate, avatars and virtual goods) which could be bought, sold or traded just like physical assets. This is particularly important for virtual economies, where users need to trust that their virtual assets and transactions are secure.

- High-performance computing and high-speed networks will be needed to provide the extensive computational power required by the ambitious architecture of next generation virtual worlds, which are expected to supply highly demanding functions in real time, including visual rendering, data synchronisation, motion tracking and capturing. There will be a need to optimise and parallelise computations over complex and distributed architectures to minimise latency, data transfer and processor load. In this context, edge and cloud computing are likely to play a critical role in supporting the timely processing and system responses of relevant applications. Future mobile communications such as 5G/6G are also expected to facilitate ubiquitous services to users, making possible remote and real-time persistent connections between the real and the virtual worlds.

IX. BENEFITS AND DRAWBACKS

There are a number of benefits and drawbacks to using virtual worlds. These include computer problems, cost issues, a learning curve, as well as legal, ethical and social considerations. Virtual worlds and social media require computers with adequate hardware and software as well as reliable network connections. This is usually not a problem today, however, Internet access can be problematic given a user’s location. Some virtual sites like Second Life incur fairly substantial costs for institutions and land. Then there is the cost of developing the physical buildings and staffing the campus with people. The learning curve, particularly for older people who are less computer-savvy, can be

significant. Finally, since virtual worlds are largely uncontrolled and run by their members, there are legal, social and moral issues to contend with as users can, for example, roam around naked or proposition another user at will.

Economic factors also influence the development and, ultimately the success of virtual worlds. Second Life is based on a virtual currency that is tied to real currencies. As such, legal rules and social norms require some form of government. In 2007, Linden Labs announced a ban on in-world gambling in response to an FBI investigation. As of 2008, only real companies who were able to provide proof of an applicable government registration statement or financial institution charter would be allowed to offer interest on currency. The resulting fallout and the collapse of several virtual banks resulted in Second Life’s economy to be halved and a new direction in financial commerce to begin.

Much like the banking failures experienced recently in the real world, virtual worlds are alike in more ways than they are different and residents be actively involved in their world.

CONCLUSION

We are living in a networking era, where social sites are the cheapest mode of communication, through which peers can stay connected. Social mediasites disseminate information quickly to a larger number of users with maximum benefits and minimum cost. This study set out to investigate how SNS are gaining popularity amongst academic users. As per the study conducted, it was found that certain SNSs sites are very common and are used by the student community and using it effectively in their everyday life for their academic as well as for other activities.

Abstract

Over the past few decades, the Micro, Small and Medium Enterprises sector has emerged as an exceedingly lively and dynamic Indian economy sector. MSMEs in India have been increasingly become important for the sole reason of their role in the Indian economics tructure. The MSME sector is vital for India's economy. There are more than 6 crore enterprises in various industries, employing more than 10 crore people. . India's micro-sized enterprises face many hurdles and yet are capable of taking advantage of opportunities in rapidly changing global markets. MSMEs contribute significantly to the country's industrial output, jobs, exports and consistent employment growth, followed by agriculture.

Keywords: MSME, vital, economy, employment, challenges.

Introduction

In the past few years, MSMEs have generated a huge number of employments, at a relatively lower cost of capital as compared to the large-scale business or ventures or establishments. As there is the increase in employment opportunities in the MSME sector, they help increase the country's socio-economic development.

The MSME sector not only providing employment but also helped rural development which was the biggest challenge in front of the Government as in initial phase of industrialization which has attracted rural population towards urban region. It has provided balanced regional development of the country and proved as a key success factor for rural development. The Ministry of Micro, Small and Medium Enterprises (MSME) intends to make the MSME sector, including Khadi, Village and Coir Industries even more vibrant by providing support to existing enterprises and encouraging creation of new enterprises, by way of various programmes and schemes in cooperation with concerned Ministries, Departments and State Governments. The long-term goal of the ministry is to enhance manufacturing base in thecountry by improving performance of MSMEs through skill and entrepreneurship development.

In India, the enterprises have been classified broadly into two categories:

- (i) Manufacturing; and
- (ii) Those engaged in providing/rendering services.

The Study Goals

The key objectives of this study are:

1. To understand the role of MSMEs in the Indian economy and their performance.
2. Understanding the policies of government for the MSMEs in India.
3. Analyze the status of MSMEs in the district of Panchkula.
4. To understand the problems of MSMEs in India.

Research Design

The data needed for the study was gathered from secondary sources.

Importance of MSMEs for Indian Economy

- **Employment:** It is the second largest employment generating sector after agriculture. It provides employment to around 120 million persons in India.
- **Contribution to GDP:** With around 36.1 million units throughout the geographical expanse of the country, MSMEs contribute around 6.11% of the manufacturing GDP and 24.63% of the GDP from service activities.
- MSME ministry has set a target to up its contribution to GDP to 50% by 2025 as India becomes a \$5 trillion economy.
- **Exports:** It contributes around 45% of the overall exports from India.
- **Inclusive growth:** MSMEs promote inclusive growth by providing employment opportunities in rural areas especially to people belonging to weaker sections of the society.
- For example: Khadi and Village industries require low per capita investment and employs a large number of women in rural areas.
- **Financial inclusion:** Small industries and retail businesses in tier-II and tier-III cities create opportunities for people to use banking services and products.
- **Promote innovation:** It provides opportunity for budding entrepreneurs to build creative products boosting business competition and fuels growth.

Thus, Indian MSME sector is the backbone of the national economic structure and acts as a bulwark for Indian economy, providing resilience to ward off global economic shocks and adversities.

Factors which Led to Growth of MSMEs

- **Campaigns** like Skill India, Startup India, Digital India and Make in India aim to provide MSME players with a level playing field and a definitive push towards enhanced productivity.
- **Digitization:** Increasing internet penetration, customer's familiarization with digital payments fuelled by B2C ecommerce players facilitate MSME sector growth.
- Tie-ups with new-age **non-banking finance (FinTech) companies** allowed access to timely collateral free finance to MSMEs.

- **Changing employment patterns:** Younger generation shifting from agriculture towards entrepreneurial activities creating job prospects for others.

MSMEs Redefined

A proposal was made to redefine MSMEs by the Micro, Small and Medium Enterprises Development (Amendment) Bill, 2018, to classify them as manufacturing or service-providing enterprises, based on their annual turnover.

Classification of enterprises into micro, small and medium enterprises (in Rs)

Kind of enterprise	Act of 2006		Bill of 2018
	Manufacturing	Services	All enterprises
	Investment towards plant & machinery	Investment towards equipment	Annual Turnover
Micro	25 lacs	10 lacs	5 Cr
Small	25 lacs to 5 Cr	10 lacs to 2 Cr	5 Cr to 75 Cr
Medium	5 Cr to 10 Cr	2 Cr to 5 Cr	75 Cr to 250 Cr

MSME Framework

The Government of India has devised an MSME framework that provides many facilities and concessions to **MSME businesses** to overcome financial stress and plan for growth. Here are some of the highlights of the MSME framework.

For New Entrepreneurs

The Reserve Bank of India has introduced provisions in the MSME financing that enable banks to provide composite loans to budding entrepreneurs through a single window. The composite loan of up to 1 crore can be availed and used to purchase land and build business units within a given timeline.

As per RBI directives, banks that have sanctioned term loans to MSMEs should not delay loans for working capital (under the composite loan model) that will allow MSMEs to start commercial production.

For Sick Businesses

All MSME businesses will have access to the Committee for Distressed Micro, Small, and Medium Enterprises to decide on a corrective action plan. All banks and government financial institutions shall constitute one or more committees at such locations that will provide reasonable access to MSME businesses that have received credit facilities from the bank.

The MSME framework aims to provide customised relief and concession to sick MSME businesses to revive and tide over difficult times. The MSME framework also seeks to unlock the potential of asset and job creation while maintaining value for the promoters and investors in MSME businesses.

Challenges faced by MSMEs in India

The MSME sector in India contributes significantly to the overall Indian GDP. However, many MSMEs need more business expertise, financial assistance, and technical obsolescence and struggle to survive in the cutthroat competition.

Financial Assistance

Lack of timely and easy finance is one of the biggest challenges faced by the MSME sector in India. MSME businesses need more time to obtain financial assistance for expansion or running business due to lengthy paperwork, absence of collateral, and lack of trust in repayment abilities.

Technology

Many MSME businesses in India continue to use obsolete technology in all business processes, which prevents them from cutting production and operation costs and improving profit margins. On the other hand, large businesses use advanced technologies in manufacturing that help them keep expenses in control, and they can scale up to meet market demands while maintaining their profit margins.

Marketing

Marketing is an indispensable factor for the success of any business. At the same time, large enterprises have dedicated resources to market their products and services to target audiences. The MSME sector in India needs more financial resources to sell its products and services effectively. In addition, MSME businesses need to be made aware of the marketing resources available online and knowledge of how to use them, thereby putting them at a disadvantage.

Role of MSMEs in Indian Economy

Since its formation, the MSME segment has proven to be a highly dynamic Indian economy sector. MSMEs produce and manufacture a variety of products for both domestic as well as international markets. They have helped promote the growth and development of khadi, village, and coir industries. They have collaborated and worked with the concerned ministries, state governments, and stakeholders towards the upbringing of rural areas.

MSMEs have played an essential role in providing employment opportunities in rural areas. They have helped in the industrialization of these areas with a low capital cost compared to the large industries. Acting as a complementary unit to large sectors, the MSME sector has enormously contributed to its socio-economic development.

MSMEs also contribute and play an essential role in the country's development in different areas like the requirement of low investment, flexibility in operations, mobility through the locations, low rate of imports, and a high contribution to domestic production.

With the capability and capacity to develop appropriate local technology, provide fierce competition in domestic and international markets, technology-savvy industries, a

contribution towards creating defense materials, and generating new entrepreneurs by providing knowledge, training, and skill up-gradation through specialized training centers.

The below-mentioned data, represented in a tabular format, is by the Central Statistics Office (CSO) and Ministry of Statistics & Program Implementation.

Contribution of MSMEs in Country's Economy at Current Price

Year	MSME- Addition of Gross Value	Growth (%)	Total Addition of Gross Value	Share of MSME in GVA (%)	Total GDP	Share of MSME in GDP (in %)
2011-12	2622574	–	8106946	32.35	8736329	30
2012-13	3020528	15.17	9202692	32.82	9944013	30.40
2013-14	3389922	12.23	10363153	32.71	11233522	30.20
2014-15	3704956	9.29	11504279	32.21	12467959	29.70
2015-16	4025595	8.65	12566646	32.03	13764037	29.20
2016-17	4405753	9.44	13841591	31.83	15253714	28.90

Source: Central Statistics Office (CSO), Ministry of Statistics & Program Implementation

Conclusion

Their role of MSMEs in economic activity is manifested in both tangible and intangible ways. MSMEs provide employment and ultimately self-dependency. In countrylike India, only self-dependency is the way, which can be a cure for devaluation of Indian Rupees. Therefore, MSMEs can be boon and a hope for Indian economy in near future. The MSMEs are providing uniform development to the society and can be a strong mean to utilize the natural resources of India. The MSMEs are very helpful to remove the regional imbalances if it is establish in the underdeveloped areas. The MSMEs are providing more employment per unit. If this contribution is to be sustained, then their uniqueness needs to be nurtured in an overt and explicit manner. MSMEs address major challenges of the overall Indian economy also, that are unemployment and poverty. By reducing regional imbalances, giving employment to local people living in rural areas, they have done their part to knock-down disparities. Acting as a motivational

Abstract

India is the land of village and 70 per cent of India's population stays in rural India. Rural India has myriad problems such as dependency on Monsoon ,agriculture, jobs, poor wages, distress migration, malnutrition, poor implementation of government schemes and lack of access to quality education,transport and health-care facilities. As per rural Tradition , a woman's place has been at home and a decade ago, women employment outside the home was looked down upon by the society.Now situation has changed. Because to Empower rural women is became a necessity for the society to ensure sustainable development of the country Rural Women also started seeking employment outside their homes through gross economic necessity followed by the desire to raise economic status, to have an independent income, to make use of education, to pursue a career etc .A Rural woman is the nucleus of the family, particularly, in rural India. She not only collects water, fuelwood, fodder and food but also plays a significant role in preserving the culture, grooming the children and shaping their destiny.

Keywords: rural, women, empowerment, social, education, poverty. 9842862347

Introduction

“There is no tool for development more effective than the empowerment of women”

Women constitute half of total population in our country; women have significant priority in all development efforts. Allover the world women have been accepted as powerful agents of social change empowerment of women is one of the central issues in the process of development of country. In order to fill up to empowerment of women have been built for the betterment and prosperity of women, various programmers were launched by the government. voluntary agencies NGOs are activity involved in the process to improve and empower women socially, economically, and in political frontiers, the basic need for empowering women to ac quire basic skills and abilities in order to raising their status in the society. The educated women do not want to limit their lives in the four walls of the house. They demand equal respect from their partners. However, Indian women have to go a long way to achieve equal rights and position because traditions are deep in Indian society where the sociological set up has been a male dominated one. These women leaders are assertive, persuasive and willing to take risks. They managed to survive and succeed in this cut throat competition with their hard work. Diligence and perseverance. Ability to learn quickly from her abilities. Her persuasiveness, open style of problem

solving. Willingness to take risks and chances. Ability to motivate people, knowing how to win and lose gracefully is the strengths of the Indian women entrepreneurs.

Objectives of the Study

- To study role of rural women in economy.
- To review available government offerings with respect to women empowerment

Research Methodology

This paper is completely descriptive and analytical in nature ,the data used for research it is purely collected from secondary as per the requirement of paper.

Rural Women

Rural women are key agents for achieving the transformational economic, environmental and social changes required for sustainable development. But limited access to credit, health care and education are among the many challenges they face, which are further aggravated by the global food and economic crises and climate change. Empowering them is key not only to the well-being of individuals, families and rural communities, but also to overall economic productivity, given women's large presence in the agricultural workforce worldwide.

Women Empowerment in India

“A Guru who teaches Veda is 10 times superior to an ordinary teacher and the father is 100 times more than a teacher, but the Mother is 1000 times more superior to the father”.

The government of India passed the national policy for the empowerment of women which has the goal to bring the advancement, development and empowerment of women. The national mission for empowerment of women was launched by the government with the aim to strengthen overall processes that promote all round development of women. It has the mandate to strengthen the inter-sector convergence facilities the process of coordinating all the women's welfare and socio economic development programmers across ministers and departments. The Indian Constitution not only grants equality to women, but also empowers the State to adopt measures of positive discrimination in favour of women so that women can improve their livelihood. Within the framework of a democratic polity, our laws, development policies, Plans and Programmes have aimed at women's advancement in different spheres.

It has the mandate to strengthen the inter-sector convergence; facilitate the process of coordinating all the women's welfare and socio-economic development programmes across ministries and departments. This finely conveys that mere imparting literacy would not be sufficient; the women need vocational training or skills also to be able to stand on their feet and be the earning members of the family. Women have been taking increasing interest in

recent years in income generating activities, self-employment and entrepreneurship that also lead to property rights, political representation, social equality, personal right, family development, market development, community development and at last the nation development.

Financial Empowerment

India has taken a significant initiative in extending banking outreach to rural areas. The financial inclusion and accessibility to banking through Pradhan Mantri Jan-DhanYojana (PMJDY) has boosted confidence and prospects of rural women participation in economic activities. Jan Dhan campaign has ensured access to financial services, viz, banking/savings and deposit accounts, remittance, credit, insurance, pension in an affordable manner to rural women. These financial accessibility measures have ensured transparent mode of transaction and timely access to financial services through direct benefits transfer (DBT) facility provided under various Government of India schemes. Over 7 years of the implementation of this scheme, 43.04 Crore accounts has been opened in the country. Further, this constitute 55.47 percent (23.87 crore) women account holders and 66.69 percent (28.70 crore) are Jan Dhan accounts in rural and semi-urban areas (Ministry of Finance, 2021)

This financial inclusion has helped rural population to fight the crisis during COVID-19 pandemic outbreak with uninterrupted access to financial aid. Other initiatives like Pradhan Mantri MUDRA Yojana (PMMY), Stand-Up India Scheme, Prime Minister's Employment Generation Programme (PMEGP) are the additional supporting steps towards financial empowerment and entrepreneurship development of rural women. Over 9 crore women have benefitted jointly from Mudra and Stand-Up India (Ashish Kumar, 2019).

The Role of Skill Development in Women Empowerment

Skill development plays a critical role in women's empowerment. Empowering women through skills training and education can help to bridge the gender gap and promote gender equality. When women have access to education and skills training, they can enhance their personal and professional development, gain independence, and contribute positively to their families and communities. Women who receive skill development training are better equipped to secure higher-paying jobs, start their own businesses, and become financially independent. This, in turn, can lead to a greater sense of self-worth, self-esteem, and confidence, and ultimately, help to break down barriers to gender inequality

Moreover, skill development programs can provide women with a platform to connect with other women and build social networks, which can further enhance their economic and social empowerment. Through these networks, women can share knowledge,

experiences, and resources, and support each other in their personal and professional growth. Finally, skill development programs can also play a crucial role in promoting women's participation in decision-making processes at various levels. By providing women with the necessary skills and knowledge, they can become more active participants in their communities and contribute to the development of policies and programs that address their needs and aspirations.

In conclusion, skill development is a crucial component of women's empowerment. It can help women to gain economic independence, enhance their personal and professional growth, build social networks, and participate in decision-making processes. Therefore, governments, NGOs, and other stakeholders should prioritize investment in skill development programs that specifically target women to promote gender equality and women's empowerment.

Although women can constitute a massive chunk of India's workforce, the percentage rate of working women in the total labour force is declining. Further, a large number of women are employed in the informal sector. These jobs are often seasonal, have meagre wages and provide no security of wages or tenure. Thus a focus on development of skills in women would be crucial in motivating them to develop life skills that will lead to higher paying and good quality jobs, better livelihood, economic independence and the ability to earn for their families.

Rural women's restricted access to productive resources, educational levels and the pre-existing social norms concerning labour that is proper for women, tend to confine them to lower-paying, lower-status jobs with limited prospects for skill training and promotion, thus keeping them bound to their lower status. In many rural firms, widespread patterns of insecure employment and transitory and unstable contractual arrangements restrict employers from providing training to women. Rural women's vocational education and training are sometimes restricted to a small number of female-dominated areas, reinforcing their traditional roles and obligations. While such training improves their economic options, it limits their opportunities to gain from newer, non-traditional professions such as information and communication technology (ICT). Hence, proper skill training along with effective awareness generation campaigns become a prerequisite to bridge the gap between the options women have available to them and what they actually have the potential and inclination to take up.

Challenges Facing Women in India

Discrimination: Women in India often face discrimination in many areas of life, including in the home and in the workplace. This can make it difficult for them to access education and employment opportunities, and can lead to unequal treatment and lower pay.

Lack of access to education and employment: Women in India face significant barriers when it comes to accessing education and employment. For example, data from the World Bank shows that only around 50% of women in India participate in the labour force, compared to around 80% of men. This is due in part to cultural and social barriers that prevent women from participating in the workforce, as well as lack of access to education and training.

Lack of access to education and employment: Women in India face significant barriers when it comes to accessing education and employment. For example, data from the World Bank shows that only around 50% of women in India participate in the labour force, compared to around 80% of men. This is due in part to cultural and social barriers that prevent women from participating in the workforce, as well as lack of access to education and training.

Gender-based violence: is a major problem in India. The National Crime Records Bureau reports that in 2021, there were over 428,278 reported cases of violence against women in India. This included incidents of physical and sexual assault, as well as dowry-related violence and female infanticide. The statistics are alarming, with 31,677 reported rapes against women in 2021 alone.

Poverty: Many women in India live in poverty, particularly in rural areas. Poverty can make it difficult for women to access education and employment, and can lead to other challenges such as poor health and malnutrition.

Disparities between urban and rural areas: Women in rural areas of India often face greater challenges when it comes to empowerment. For example, they may have less access to education and health care, and may be more isolated and vulnerable to gender-based violence.

Conclusion

Rural women are major stakeholders in growth of agricultural sector for the New India. Acknowledging and mainstreaming of rural women via ensured access to resources, technology, education, health facilities, ownership rights and skill development will improve agriculture productivity and help in building an empowered nation.

Though they make half of the world population, women have remained as an oppressed group from the beginning of the history. Though some societies regard women as superior in the family and community, most of societies of the world have been treating women as second class citizens. Because of religious and cultural values and physical structure, women are forced to remain as dominated group around the globe, especially in the least developed nations. There is a solid evidence of discrimination of women worldwide. Even in the most developed nations which boast the best human rights situation in their country, women's participation in almost fields has been minimized

because of male dominance. In many countries, women are kept as 'prisoners' as they are not allowed to participate many social and political activities. In a stratified society like ours, access and empowerment of different section of the societies are becoming serious concerns and to address it planners, managers, social scientist all over the world have started deliberating and devising way out like anything. In this direction genders issues are dominating over other vulnerable issues like poverty, class conflicts, communities, ethnic issues etc. In ensuring an egalitarian development gender equity still remains as a pertinent question as it has been for the thousands of years of human civilization. Gender issues beyond its epistemological certainly imbibe other components like production relation, access to education, geographical distribution, occupational imperatives, marital system and even physical & physiological weaknesses.

A STUDY ON ADULT LEARNING AND SELF-DIRECTED LEARNING

Ms. A. Anandhiprabha

Assistant Professor

Department of Commerce –Banking and Insurance

Pollachi, TamilNadu, India

Abstract

Adult education, distinct from child education, is a practice in which adults engage in systematic and sustained self-educating activities in order to gain new forms of knowledge, skills, attitudes, or values. It can mean any form of learning adults engage in beyond traditional schooling, encompassing basic literacy to personal fulfillment as a lifelong learner and to ensure the fulfillment of an individual. In particular, adult education reflects a specific philosophy about learning and teaching based on the assumption that adults can and want to learn, that they are able and willing to take responsibility for the learning, and that the learning itself should respond to their needs.

Introduction

Adult education, also called continuing education, any form of learning undertaken by or provided for mature men and women. In a 1970 report, the National Institute of Adult Education (England and Wales) defined adult education as “any kind of education for people who are old enough to work, vote, fight and marry and who have completed the cycle of continuous education, commenced in childhood.” Adult education comprehends such diverse modes as independent study consciously pursued with or without the aid of libraries; broadcast programs or correspondence courses; group discussion and other “mutual aid” learning in study circles, colloquia, seminars or workshops, and residential conferences or meetings; and full- or part-time study in classes or courses in which the lecturer, teacher, or tutor has a formal leading role.

The learning happens in many ways and in many contexts just as all adults' lives differ. Adult learning can be in any of the three contexts, i.e.:

- Formal – Structured learning that typically takes place in an education or training institution, usually with a set curriculum and carries credentials;
- Non-formal – Learning that is organized by educational institutions but non-credential. Non-formal learning opportunities may be provided in the workplace and through the activities of civil society organizations and groups;
- Informal education – Learning that goes on all the time, resulting from daily life activities related to work, family, community or leisure (e.g. community baking class)

Importance of Adult Learning

Learning can occur anywhere, which means teachers are everywhere individuals pursue adult learning for a variety of reasons, to

- Enhance their employment prospects
- Develop personally or professionally
- Obtain transferrable skills, such as critical thinking

Adult learning also contributes to improving social cohesion and promotes active citizenship. It also enhances the competitiveness of businesses and European economies. The recovery from the COVID-19 pandemic and the digital and green transitions have accelerated changes in how we live, learn and work. People need to update their knowledge, skills and competences to fill the gap between their education and training and the demands of a rapidly changing labour market. Adult learning has been identified as a focus topic of the European Education Area for the period 2021-2030.

Three Dimensions of Self-Directed Learning:

1. Sociological Dimension
2. Pedagogical Dimension
3. Psychological Dimension

The sociological dimension emphasizes the social isolation of the learner, claiming that self-directed learning is usually associated with social independence in the learning situation. Then, learning will take place independently of others in a socially isolated situation. Web-based learning might be an example of self-directed learning in a sociological sense. A main point is that the learning activities should not be determined by one or another social authority. This is the autonomous, independent individual undertaking learning for personal growth.

The pedagogical dimension implies that the pedagogical “procedures” are performed by the learner. Whether the learning can be defined as self-directed depends on the degree of freedom when it comes to determining learning goals and influence on planning, implementation, and evaluation, as well as other things associated with the pedagogical parts of learning activities. Seen from the pedagogy side, self-direction can be learned and developed and is considered a goal. This means that self-directed learning can take place without social isolation. Self-directed learning can take place in groups as well or in cooperation with institutions or others. Neither social isolation nor total independence is necessary.

Psychological self-direction is about the personal characteristics of the learner, including focus on necessary abilities and skills to carry out self-directed learning. Psychologically, self-directed learning is a question of to what extent the learner

maintains an active control of the learning process. The mental activities are in focus. The most important are not the external factors but the inner psychological control in the learning situation. Here, Long underlines the importance of the individual experiencing a personal control of the learning situation, despite external factors.

“A meaningful or emancipatory learning experience must not deny the integrity and freedom of the individual. At the same time, adult educators must not ignore the potential of others to support the individual in acquiring and applying useful and worthwhile knowledge”.

Types of Adult Education

Types of adult education can be classified as follows:

1. Education for vocational, technical, and professional competence. (Such education may aim at preparing an adult for a first job or for a new job, or it may aim at keeping him up to date on new developments in his occupation or profession.)
2. Education for health, welfare, and family living. (Such education includes all kinds of education in health, family relations, consumer buying, Planned Parenthood, hygiene, child care, and the like.)
3. Education for civic, political, and community competence. (Such education includes all kinds of education relating to government, community development, public and international affairs, voting and political participation, and so forth.)
4. Education for “self-fulfillment” (Such education embraces all kinds of liberal education programs: education in music, the arts, dance, theatre, literature, arts and crafts, whether brief or long-term. These programs aim primarily at learning for the sake of learning rather than at achieving the aims included in the other categories.)
5. Remedial education fundamental and literacy education. (Such education is obviously a prerequisite for all other kinds of adult education and thus, as a category, stands somewhat apart from the other types of adult education.)

Adult Learning Theories

Early studies about adult learning began in the mid-1960s when educators began exploring different theories, models, and frameworks that explain how adult learners can be distinguished from children. These studies spawned many theoretical approaches to learning, giving rise to adult learning as a separate entity that differs from childhood education.

In the early decades of the century, behavioral psychologists conducted the earliest research in adult learning. Early studies defined learning as a behavioral

response triggered by the learner's interaction with the environment ("What is the behavioral," 2020). Although these principles are still present today in training programs and evidence-based practices in the corporate, military, instructional technology, and medical and health arenas, the humanistic perspective on learning resulted in adult education becoming a recognized field of practice.

By the mid-20th century, three major adult learning theories have emerged: andragogy, self-directed learning, and transformative learning. These theories are firmly lodged in the humanistic approach to learning, which emphasizes personal growth and development as the key focus of education.

- **Self-Concept**

As people grow older, they become more independent and turn to a more self-directed learning approach. Unlike children who are dependent on others for learning and understanding, adults have more control and responsibility over their personal education and progression.

- **Adult Learner Experience**

Over time, adults gain innumerable experiences that deepen their resources for learning, placing them in a position where they can use their experiences as a useful tool in self-education. Based on this assumption, adult education programs must usually center around experimental tasks and open discussions based on what learners already know.

- **Readiness to Learn**

The third element in Knowles' adult learning theory is the learner's readiness to learn. As mature learners take on various roles in society, their readiness or motivation to learn becomes oriented toward the skills necessary for these roles. Whether they're an employee, parent, spouse, or citizen, a large part of their readiness to learn is directed toward these roles.

- **Orientation of Learning**

For children, the application of a subject is postponed in later life, and their orientation of learning is usually subject-centered. The things they learn at school are not normally applied to real-life problems, and they must wait until they're older and encounter a need for the skills and knowledge they acquired.

- This is in contrast to Knowles' adult learning theory, where the application of learning becomes immediate and more problem-centered as the learner matures. When adults encounter issues and complications, they immediately apply their knowledge to solve those problems.

- **Motivation to Learn**

The last assumption in Knowles' adult learning theory relates to motivation. According to Knowles, adults are motivated to learn internally (Knowles et al.,

2012). Their desire for career growth and professional development drives their motivation to pursue education.

Self-Directed Learning

When individuals pursue education to gain a new skill or learn certain information, they often seek the help of a professional instructor who can supervise the entire learning process. However, another alternative for learners is to assume the primary responsibility for initiating, planning, and conducting the learning project. Such behavior is referred to as self-education, self-instruction, or self-directed learning.

Knowles defined self-directed learning as “a process in which individuals take the initiative, with or without the help of others, in diagnosing their learning needs, formulating learning goals, identifying human and material resources for learning, choosing and implementing appropriate learning strategies, and evaluating learning outcomes.”

In essence, self-directed learning is an informal learning process that takes place outside the traditional classroom setting. In this approach, the learner decides about the method, content, resources, and evaluation of learning programs. By determining their needs, setting goals, and seeking resources, learners assume full responsibility for the learning process.

Benefits of Self-Directed Learning

1. You Can Begin Immediately

As a self-directed learner, you get to choose when the learning project starts. With the resources at hand, the timing is totally up to you.

2. You Learn at Your Own Pace

You can choose what to study based on your learning style and learning needs. This means you have control over the material and how it impacts you. If you complete one area of learning, it sometimes clears a path to a new learning goal.

3. You Collaborate with Others

Learning something requires you to do a bit of research. That may include calling a friend or colleague, downloading an app, or reaching out to a group or former teacher. This is known as collaborative learning.

4. You Grow in Confidence

Once you have chosen a field of learning, you embark on a learning journey that is yours and that helps you develop a growth mindset. Whether you ‘ace’ the learning objectives or get better at changing a tire, you now have a skill you otherwise would be without.

5. You Promote Well-Being

As you realize your potential and cope with the challenge of active learning, you experience what is possible when you apply yourself. As your sense of meaning and purpose grows, consider creating a personal mission statement to help you stay aligned with your goals..

Transformative Learning

Transformative learning is one theory of learning, and particularly focuses on adult education and young adult learning. Transformative learning is sometimes called transformation learning and focuses on the idea that learners can adjust their thinking based on new information. Originally developed by Jack Mezirow, an American sociologist, transformative learning theory refers to how learning changes how individuals think about themselves and their surroundings. He describes it as “learning that transforms problematic frames of reference to make them [learners] more inclusive, discriminating, reflective, open, and emotionally able to change”.

Transformative learning challenges students’ underlying assumptions and opinions about the world. In doing so, learners become more encouraged to apply critical thinking when forming their beliefs and judgment. For instance, English language learners often experience an improved opinion of themselves and a shift in their view of the U.S. culture as they learn the new language. There are a number of reasons why adults pursue additional learning. In one survey conducted by the Pew Research Center, 80% of personal learners revealed that they pursued learning programs for personal interests because they wanted to broaden their viewpoints and make life more interesting.

Transformative learning theory touches on two basic kinds of learning: instrumental and communicative. Instrumental learning includes task-oriented problem-solving, as well as the determination of cause-and-effect relationships. Meanwhile, communicative learning emphasizes how learners communicate the needs, feelings, and desires (“Transformative learning,” 2018).

Conclusion

Self-directed learning describes a process in which individuals take the initiative, with or without the help of others, in diagnosing their learning needs, formulating learning goals, identifying human and material resources for learning, choosing and implementing appropriate learning strategies and evaluating. Self-directed learning is one important piece of the mosaic forming the knowledge base of adult learning. This article discusses a number of factors affecting the propensity and ability to self-direct. Learning keeps our brains active and means what we know stays relevant and

we remain resilient in our roles. Being proactive about the knowledge and skills we learn gives us more choices about the jobs open to us and increases our employability. Transformative learning occurs when students run into optional points of view and perceptions. Disclosure to this encourages students to examine their postulations and beliefs and these lead to changes in the way they understand things.

A STUDY ON THE USE OF DISRUPTIVE TECHNOLOGIES IN HIGHER EDUCATION

Ms. A. Anandhiprabha

Assistant Professor in Commerce - Banking and Insurance
Nallamuthu Gounder Mahalingam College, Pollachi
anandhiaruchamy@gmail.com

Abstract

New disruptive technologies are emerging day-by-day. These disruptive technologies have fundamentally changed the way we used to do things. Disruptive technologies in recent education system cannot be denied. Technology transformation in education system provides students a cost effectively scale education. Internet, mobile phones and Virtual Learning Environments (VLEs) are all the examples of disruptive technologies. These technologies are now widely used to support learning and teaching. Use of ICT helps students to reach the resources which they need in their learning process. Online delivery of different courses such as MOOCs at lower cost makes it easy for employees also to combine work and training. Mobile technology is also useful not only for learners but also for teachers to connect with the students from anywhere, anytime that makes learning more collaborative and effective.

Keywords: Online learning, Virtual Learning Environment, Mobile Learning, MOOCs.

Introduction

Education has been a way for students to improve their lives. Before the age of computer and digital communication technology, traditional classroom education has been used for the transfer of knowledge from teacher for the student and high dependency was there on the capabilities of the tutor. Knowledge transformation was also limited in time and space by the resources available to students such as libraries etc. But the scenario is change now. There are many digital technologies are available which have high impact on education system. Also due to globalization, there is a pressure on nations of the world to use new technologies in teaching. The use of ICT is rapidly changing the technological forces that will shape the structure of educational systems of the world. The role of teaching in a classroom is to help students who are slow learner and to catch up them with other students.

But what is about them who are faster at learning? For those students, there are additional courses according to their interests to fulfill their requirements of free elective students. MOOCs is there to enhance online learning with technology. The teachers can post their instructions online to participants through MOOCs, which is helpful to students to know how to complete the course. The integration of online course material can increase interaction among students and between the students and the teacher, for exp. through virtual group work, building an online community for module, discussion questions, instructor participation and so on. A number of institutions offer virtual distance learning which allows teachers and students to interact with each other.

Concept of Disruptive Technologies

The term 'Disruptive technology' is derived from Clayton Christensen's (1997) book, 'The Innovator's Dilemma.' The term is used to denote technologies that are not designed to support learning and teaching but are used by students and lecturers, having found a market and a use value. Disruptive technology follows four key criterias identified by Christensen in 1997; they are smaller, cheaper, simpler, and convenient. Disruptive technologies often start with a small number of users but growing over time to extent that they replace the previously dominant and incumbent technology. Disruptive Innovation caters to the needs of those who cannot attend college because of finances, work conflicts, or family obligations. There are amazing disruptive innovators in the world like in social media; Larry Page of Google, Mark Zuckerberg of Facebook, Jack Dorsy of Twitter etc.

Disruption is one of the most overused catchwords in education today. Mobile technologies, Open Educational Resources (OER), MOOC's (Massive Open Online Course), Cloud computing and Analytics (big data) have now become part of education at all levels.

Disruptive Technologies in Higher Education
The personal computer (PC) supersedes the typewriter and totally changed the way we work.
Email forever transformed the way we communicate, supersedes letter-writing and disrupting the greeting cards and postal industries.
Cell phones enabled the people to call anywhere and disrupted the telecom industry.
The laptop computer and Mobile computing replaced desktops in many industries and organisations. Laptops made it possible for people to collaborate from anywhere in the world.
Smartphones replaced cell phones and PDAs (Personal Digital Assistance) because of having different functions, smartphones disrupted pocket cameras, MP3 players, calculators and GPS devices.
Cloud computing has been an enormously disruptive technology in the industrial world. It is the combination of hardware and software to deliver the content over the internet. We can access the content and files from any device that can access the internet.
Social networking has disrupted landlines, cell phones, email, instant messaging etc. It has changed the way we communicate with others.
Campus wi-fi: with the campus WiFi, students can study effectively. They can collectively share notes and prepare for their exams. One of the basic uses of WiFi on campus is for students to keep up-to-date of their assigned work. They can log in to their portfolio thereby can monitor their own grades and keep themselves updated.
Small Private Online Courses (SPOCs): MOOCs are free and useful. The main aim of the MOOCs is to have unlimited participation and open access via web. There are no restrictions on the attendance; students can access the content any time during the day, week or month. But the main thing is to complete the hours limit given by particular course. These are widely researched in distance education and appeared as popular mode of learning in 2012.

YouTube: Now almost every university has its own YouTube channel. The content of the course is uploaded in the form of educational videos on you tube channel of particular department or university.

E-books: E-books have displaced the printed books thereby students can access to the books over the web. Earlier the students purchase the books from the market but now they can read it online.

Disruptive Technologies in Education

Online learning

Online learning offers new opportunities both for students and educators. This disruptive technology can involve those people that don't have access to traditional forms of education due to some reasons. Since online learning is easily accessible, parents, fully-employed people, and people with disabilities can use this opportunity to get an education without leaving their homes.

MOOCs

It was started in 2008 and is the short name of massive opening online courses, which can use for unlimited participation and open access is the world wide. It was introduced for students who are learning from distance. In these courses, the material is by educational institutions, who have license of these courses for completions. MOOCs will disrupt different educational institutions in different ways.

LMS

It comes from learning management systems. It have different features such as student teacher interactions, courses collaboration, delivery content, master courses, practical and exams, connecting programmes, online assignments of students etc. It can enhance the learning experience of students with the help of video recordings and presentations with recorded audios. It can create a different kind of continuous learning experience which is not restricted by a single lecture but by repeating the reading material.

MOOCS as Disruptive Technology

Nowadays, the disruptive technology that has become the topic of interest to society is Massive Open Online Courses (MOOCs). MOOCs are simple, free and convenient to use. They are flexible online learning which is aimed for unlimited participation. There is no formal academic credit is available. There are no fees or entry requirements in MOOCs. We can access to the course material free of cost. It provides certificate at the completion of the course at a cost. Some MOOCs provides certificate at free of cost. MOOCs have attracted the attention of both the media and the educational community because there are differences in teacher/student ratio. But most importantly MOOCs have entered the education system at that time when education, specifically at university level, is required to make changes to meet the demands of the society. It makes the education accessible to all at any stage of their life. MOOC is an online course aimed at mass participation and

open access via the web. MOOCs provide interactive user forums for the students, professors, and Teaching Assistants. Moreover, it provides traditional course materials such as videos, readings, and assignments etc.

A massive open online course (MOOC) is a model for delivering learning content online to any person who wants to take a course, with no limit on attendance. MOOC integrates both the traditional and modern course materials for learning such as videos, readings, projects, assignments and many more.

The major MOOC platform providers are Coursera, edX, Canvas and FutureLearn and in addition to these platforms, there are small MOOC platforms. Each platform has its own technical infrastructure, for example; some platforms align themselves with institutions, whereas others allow more freedom to individual educators.

Types OF MOOCs

xMOOCs:

An xMOOC transfer the knowledge didactically i.e., it is fairly close to the traditional pedagogical model used in lecture halls. In an xMOOC, learning content is offered in small units which are easy to understand usually 12–20 minutes duration. The medium to transfer the content is video instead of text. Other means are online tests, exercises and games. Under this short videos and exercises go side by side. Moreover, forums and wiki pages are used to give social learning experience to participants.

cMOOCs:

A cMOOC is a connectivity course. This highlights the interactive nature of the learning experience. Under this, knowledge is partly self-generated and the coherence of the course constructed by the participants. In a connectivist MOOC, the discussions and interactions between all participants are important rather than content and activities. cMOOCs provide opportunities for disrupting traditional forms of teaching and provides learner-centred pedagogy so that students can learn from each other.

Role of MOOCs in Higher Education

The MOOC movement plays a fundamental role in transforming the quality of higher education. MOOC courses are designed for large numbers of users. These courses can be accessed online without entry requirements and limit on attendance. It provides complete course experience for free of cost. The impact of MOOC is dubious due to long history of revolutionary potential in Open Distance Learning as expressed by the “hope, hype and disappointment”. As more and more initiatives are taken by millions of people to participate in MOOCs through a small but growing diversity of courses; and they attract a lot of people from various educational institutions, politicians, policy-makers and media houses. The main point is stakeholders have quite different reasons for encouraging MOOCs and therefore the opening up of education agenda must be seen alongside powerful forces that view online learning as a means of intellectual development, enhancement in self-esteem, increasing competition between institutions, introducing new business models with reduced public funding for universities, and the creation of a global higher education digital marketplace. However, MOOCs have potential to meet the growing demand for higher education, mainly in developing countries where it is not possible for traditional institutions to cope up with the large number of potential students. Daniel (2012) advocated that the MOOC movement is really a game changer, as it has potential for life-long learning, address main gaps in skill development, and eventually enhance the quality of life for millions of people. In India, there is some hope that the MOOCs may be able to close the inequality gap of literacy and reduce the unemployment of youth. The national institutes of India like IIMs and IITs also have started MOOCs. The Government of India has also decided to start 350 online courses through SWAYAM (Budget 2017-18). There is a need to create a firm systematic structure for the validation and recognition of the courses from online sources as Coursera, Edx and SWAYAM, UGC, and other educational authorities which seeks cooperation between these institutions.

Conclusion

The technology needs to be kept in perspective, as a tool to enhance learning. Teachers felt that roll of the institution is to deliver more than mere academic facts, students need to develop their interpersonal skills. For this reasons, teachers need to make every effort to ensure that students are able to use the technology intelligently and critically in order to succeed in today's online global workplace. The use of disruptive technologies has implications for higher education; students can access learning material by means other than through their university. Moreover, free access to learning materials made available through disruptive technologies poses a great threat to the high-fees offering universities. Now the big challenge for the universities is to understand and manage the disruptive technologies not only to safeguard academic standards but also to make disruptive use of ICTs to enhance learning.

Abstract

Skills and knowledge are the driving forces of economic growth and social development of any country. They have become even more important given the increasing pace of globalization and technological changes provide both challenges that is taking place in the world. Countries with higher and better levels of skills adjust more effectively to the challenges and opportunities of globalization. The size of the current technical training infrastructure is much smaller than what is required. India currently has the capacity for training 3.1 million people per year. This is insufficient, given that every year, 12.8 million new people enter the workforce. The distribution of training capacities is unbalanced, with the industrially-advanced states of Maharashtra, Andhra Pradesh, Tamil Nadu and Karnataka, accounting for 48 percent of recognised technical training institutions.

Keywords: globalization, effectively, challenges; opportunities, infrastructure

Introduction

The Indian economy grew at an advanced rate of 7.1 percent year in the quarter July – Sep 2018, thereby making it a fastest economy to grow. India's demographic profile is helping the country to aim for an accelerated economic growth. India is expecting a huge growth in the labour market by having 64.8 percent of the population as the working population. It gives a lot of benefit to the country in the labour market. Skill India is a campaign launched by Prime Minister Narendra Modi on 15 July 2015 which aim to train over 40 crore people in India in different skills by 2022. It includes various initiatives of the government like "National Skill Development Mission", "National Policy for Skill Development and Entrepreneurship, 2015", "Pradhan Mantri Kaushal Vikas Yojana (PMKVY)" and the "Skill Loan scheme". The MAKE IN INDIA program laid the foundation of India's latest policy to bring an Economic revolution by making India a global manufacturing hub and welcoming both domestic and international industrialists to invest in India that will generate employment and overall development of India. Manufacturing sector is the strength of an economy as it fuels employment generation, better quality of goods and services at cheaper rate, economic growth & development along with helping the growth of other sectors also.

Challenges in Skill India

India is facing a lot of challenges keeping in view the current infrastructure and the policy framework. The Challenges faced in skill development have been discussed below:

1. **Insufficient Scale and Restricted Capability** The current infrastructure facility available in the educational institutions is inadequate considering the huge demand of labour. There aren't many trained and highly skilled trainers available.
2. **Mobilization:** The enrolment of the students for vocational education and training become an extremely challenging task. The outlook of the people associated with the skill development is still very traditional. The students would move on to managerial roles as the technical trade positions are associated with low salaries and lack of recognition.
3. **Employer's buy-in:** The industry doesn't distinguish whether the person has acquired the skills through on the job training or has gone through a formal training. Many companies make their own skill centres through which they develop the people. Though the Skill Development also focuses on the Public Private Partnership Model but it needs a lot of effort from both the players in development of skills.
4. **Scalability:** Since there is very limited buy-in from the corporate sector the progress of such initiatives is reduced. Skill development had not been a priority of the government earlier and hence this area has always been ignored stakeholders too.

Ways of Facilitating Skill Development Activities

There have been methods to smooth the progress of skill development activities through the following,

1. Creating and enhancing the skill development infrastructure.
2. When construction of schools, institutions and other establishments take place, there should be adequate measures for skill development to take place such as usage of technology.
3. Current institutions, ITIs, acquire mechanisms and equipment required for vocational training of the individuals.
4. Establishment of skill development centers in rural and urban areas, especially where there were not any.
5. Finances have been major issues especially for the economically weaker sections of the society; hence some measures have to be formulated to finance their skill development programs.
6. There has to be involvement of private organizations, profit as well as non-profit in activities implemented by the CSR cell, CSR activities make skills a responsible activity and they are really useful.

7. Efforts have to be implemented to increase the number of skilled personnel within the country and on the basis of their skills they should be able to accomplish something for themselves and find employment not only in industries but in all kinds of sectors education, transport, manufacturing etc.
8. Differential wages should be offered for the skilled and certified workforce to encourage recognition of the skill development programs by the society so that more and more individuals join them.

Opportunities

Job markets all across the world including India are undergoing a tectonic shift. The future of work in India: Inclusion, Growth and Transformation Report by the Observer Research Foundation and the World Economic Forum sheds light on the future of transformative technology and its impacts on work in India. Some key insights from this report are that companies expect technological change to lead to job creation, not job loss. They recognise the potential of new technologies in the coming years. The whole focus is expected to be on automation of repetitive tasks, time optimisation, maximising productivity, creation of digital platforms for online access to job opportunities and formalising informal operations. It is critical for people to keep picking up new tricks of their trade and keep themselves updated with new technological changes in their sphere of work.

Conclusion

Skill development is the most important aspect for the development of our country. India has a huge 'demographic dividend' which means that it has very high scope of providing skilled manpower to the labour market. This needs a coordinated effort from all stakeholders including: Government agencies such as Ministry of Skill Development and Entrepreneurship, National Skill Development Corporation etc, Industries, Educational and training institutes and Students, trainees and job seekers. To make India internationally competitive and to boost its economic growth further, a skilled workforce is essential. As more and more India moves towards the Knowledge economy, it becomes increasingly important for it to focus on advancement of the skills and these skills have to be relevant to the emerging economic environment. For transforming its demographic dividend, an efficient skill development system is the need of the hour. Therefore to achieve its ambitious skilling target, it is imperative to have holistic solutions of the challenges instead of piecemeal interventions.

A STUDY ON INNOVATION AND ENTREPRENEURSHIP IN INDIA

Ms. A. Anandhiprabha

Assistant Professor in Commerce –Banking and Insurance
Nallamuthu Gounder Mahalingam College, Pollachi
anandhiaruchamy@gmail.com

Abstract

Start-up is the base thing that an individual trying to achieve something new and original. Technology based entrepreneurs are stated as technopreneurs, they are the new trend setting entrepreneurs, they discover and create innovative product and services to the society with the effective usage of science and technology. At present the government of India takes further initiatives for the growth and development of indigenous production through startups and also assisting the young entrepreneurs through various schemes for meeting up the challenges with the global competitors. With hundreds of innovative youngsters choosing to follow the path of entrepreneurship instead of joining the multinational corporations and government ventures, the business world has witnessed an explosion of ground-breaking startups providing solutions to the real problems at a mass level in the past years.

Keywords: Innovation, Entrepreneur, Technology, Entrepreneurship

Introduction

Introduction The role of start-ups in India's economic development and their potential in creating employment opportunities have been recognized by the Government of India with the launch of the "Startup India Initiative". 14,036 enterprises have been recognised as Startups by Department of Industrial Policy and Promotion (DIPP) till November 2018 with various support including tax exemption of up to 7 years, establishment of 'fund of funds' of INR 10,000 crore till 2025, establishment of Atal Innovation Mission (AIM) etc. (MCI 2018). The ecosystem is developing with a number of startups, new venture funds and angel investors, evolving technology, incubators and accelerators, etc.

Objectives of the Study

1. To understand the Startup Schemes providing by Indian Government
2. To identify various government initiatives for the development of startups.
3. To analyze the growth and opportunities of startups

Research Methodology

The study is based on the secondary data which has been collected through journals, magazines, newspapers, research papers, books and websites etc.

Statement of the Problem

The emergence of startup wave in India is a relatively a new phenomenon. Today India is undergoing a fundamental shift with entrepreneurship and innovation is being primary catalyst in job creation and solving everyday problems. A decade ago, there is to be only a handful of startups such as Make My Trip.com and Naukari.com. But, now with the success of such as Flipkart, Quicker, Practo, Zomato and Inmboi, the Indian startup eco-system has indeed come a long way.

Significance of the Study

Startups have played and continue to play significant roles in the growth, development and industrialization of many economies all over the world. Startup is flagship initiative of the government of India, intended to build a strong ecosystem for nurturing innovation. Startup will drive sustainable economic growth and generate large scale employment opportunities and minimize unemployment.

Startup India

A startup venture could be defined as, a new business that is in the initial stages of operation, beginning to grow and is typically financed by an individual or small group of individuals. It is a young entrepreneurial, scalable business model built on technology and innovation wherein the founders develop a product or service for which they foresee demand through disruption of existing or by creating entirely new markets. Startups are nothing but an idea that manifests into a commercial undertaking.

The global business community accepted India as one of the most influential destinations for investments. It has discovered India's potential for innovation and creativity. The last three years India is significantly scaling up in international investments in start-ups valuations, exceeding \$ 1 billion in some cases, a phenomenon that would have been unbelievable in just five years ago. Prime Minister Narendra Modi recognized this fact and started working on it and understands that it is the right time to bring in the government to define an effective policy framework, followed by necessary tax and financial incentives and nourish the creativity and innovative potential among youth. Start-ups created 65,000 new jobs in 2014 and by 2021, the number is expected to touch 250,000 according to the NASSCOM Start-up Report 2015, and as of now, that is driven mostly by private sector initiative. Furthermore, India has to boast about its own billion dollar club. This includes startups like Flipkart, Paytm, Zomato, Snapdeal, Ola, InMobi, Hike, MuSigma, and Quikr. Fintech startup MobiKwik too looks to join the unicorn club with the next \$100 Mn funding raise.

Startup Rankings

The first ever startup state rankings were declared on December 2018 by the Department of Industry and Internal Trade based on the criteria of policy, incubation hubs, scaling innovation, procurement, regulatory change, communication, seed innovation, North-Eastern states and hill states. Among various states some of the states secured their places in different aspects as follows:

- Top performers: Kerala, Karnataka, Odisha and Rajasthan
- Best performers: Gujarat
- Leader: Telangana State, Andhra Pradesh, Bihar, Madhya Pradesh and Chhattisgarh
- Aspiring Leaders: Jharkhand, Uttar Pradesh, Haryana, Himachal Pradesh and West Bengal
- Emerging states: Delhi, Goa, Assam, Maharashtra, Punjab, Tamil Nadu, Jammu & Kashmir and Uttarakhand.
- Beginners: Manipur, Mizoram, Nagaland, Chandigarh, Puducherry, Sikkim and Tripura

Opportunities for Startups

In spite of challenges and problems that startups are facing, Indian markets provide a plethora of opportunities to find solutions tailored to solve them. Below is a list of few of the opportunities that are discussed for consideration by startups.

1. **India's Large Population** The population of India is a huge asset for the country. By 2020, it is expected that the working age population would surpass the non-working population. This unique demographic advantage will offer a great opportunity to any startup. Various infrastructure issues and the bottom- of the- pyramid market would provide huge opportunities for the startups.
2. **Change of Mind Set of Working Class** Traditional career paths will be giving way to Indian startup space. Challenging assignments, good compensation packages would attract talented people to startups. Also, it is seen that several high-profile executives are quitting their jobs to start or work for startups.
3. **Huge Investments in Startups** Huge investment in Indian startups from foreign and Indian investors is taking place. In 2015, more than 300 deals were done by 300+ angels and venture capital/ private equity players with around \$6.5-billion (Rs 42,300Cr) investments making India the most sought-after destination for investments. Some of the active players are New Yorkbased Tiger Global Management, Russian company- DST Global, Japanese telecom giant Softbank, Kalaari Capital, Sequoia Capital and Accel Partners. More and

more are going to join the bandwagon as this is the tipping point in Indian commerce for making good returns by backing potential unicorns.

Government Initiatives

There are numerous government and semi-governmental initiatives to assist startups.

1. Start-Up India This initiative provides three-year tax and compliance breaks intended for cutting government regulations and red tapism.
2. Mudra Yojna Through this scheme, startups get loans from the banks to set up, grow and stabilize their businesses.
3. SETU (Self-Employment and Talent Utilization) Fund Government has allotted Rs 1,000 Cr in order to create opportunities for self-employment and new jobs mainly in technology-driven domains.
4. E-Biz Portal Government launched e-biz portal that integrates 14 regulatory permissions and licenses at one source to enable faster clearances and improve the ease of doing business in India.
2. Royalty Tax Indian government has reduced the royalty tax paid by businesses and startup firms from 25 per cent to 10 per cent

Conclusion

The current economic scenario in India is on expansion mode. The Indian government is increasingly showing greater enthusiasm to increase the GDP rate of growth from grass root levels with introduction of liberal policies and initiatives for entrepreneurs like 'Make in India', 'Startup India', MUDRA etc. 'Make in India' is great opportunity for the Indian start-ups. With government going full hog on developing entrepreneurs, it could arrest brain drain and provide an environment to improve availability of local talent for hiring by startup firms. The startup arena has lot of challenges ranging from finance to human resources and from launch to sustaining the growth with tenacity. Being a country with large population, the plethora of opportunities available are many for startups offering products and services ranging from food, retail, and hygiene to solar and IT applications for day to day problems which could be delivered at affordable prices. It is not out of place to mention that some of these startups would become unicorns and may become world renowned businesses by expanding into other developing and underdeveloped countries.

Abstract

A digital payment, sometimes called an electronic payment, is the transfer of value from one payment account to another using a digital device or channel. Digital payment is referred to as those payments that take place using the various types of electronic medium. These methods do not require payment to be made in the form of cash or providing cheque. One of the major objectives of Digital India is to achieve “Faceless, Paperless, Cashless” status. The promotion of digital payments has been accorded the highest priority by the Government of India to bring each and every segment of our country under the formal fold of digital payment services. Various digital payments make the customer ease of payments. Banking cards are the most widely used digital payment system in India. It offers a great set of features that provides convenience as well as security to the users. Unstructured Supplementary Service Data can be used for carrying out cashless transactions using mobile, without the need of installing any banking app. AEPS can be used for all the following banking transactions such as balance enquiries, cash withdrawal, cash deposit, aadhaar to aadhaar fund transfers. UPI is the latest digital payment standard where the user having a bank account can transfer money to any other bank account using UPI based app. and the methods are Mobile Wallets, Point of Sale Terminals, Mobile Banking and Internet Banking.

Keywords: Digital Payment, Government of India, Banking Cards.

Introduction

A digital payment, sometimes called an electronic payment, is the transfer of value from one payment account to another using a digital device or channel. This definition may include payments made with bank transfers, mobile money, QR codes, and payment instruments such as credit, debit, and prepaid cards. Digital payments can be partially digital, primarily digital, or fully digital.

Digital payment is referred to as those payments that take place using the various types of electronic medium. These methods do not require payment to be made in the form of cash or providing cheque.

A partially digital payment might be one in which both payer and payee use cash via third-party agents, with payment providers transferring the payment digital

between the agents. A primary digital payment might be one in which the payer initiates the payment digital to an agent who receives it digitally, but the payee receives the payment in cash from that agent.

A fully digital payment is one in which the payer initiates the payment digitally to a payee who receives it digitally, and it is then kept and spent digitally. Recent years have seen a technological revolution in governance in India. Government services have been slowly and steadily brought on board and today, last-mile delivery happens with the click of a mouse in seconds. Digital Payments transactions have been consistently increasing over the last few years, as a part of the Government of India's strategy to digitise the financial sector and economy. Further, concerted efforts have been made to promote financial inclusion as one of the important national objectives of the country.

The key enabler at the centre of India's transformed digital payment landscape is the JAM Trinity - Jan Dhan, Aadhaar and Mobile. PradhanMantri Jan-DhanYojana (PMJDY) is one of the biggest financial inclusion initiatives in the world, launched in August 2014, to provide universal banking services for every unbanked household. Aadhaar, the Unique Identification Authority of India's flagship product, is a simple but effective method to verify individuals and beneficiaries based on their biometric information. Jan Dhan accounts, Aadhaar and Mobile connections, taken together, have helped lay the foundations of a Digital India where a vast array of Government services are made available directly to the citizen with enhanced ease of access without the presence of any intermediary (middle-men).

Digital Payment Ecosystem in India

One of the major objectives of Digital India is to achieve "Faceless, Paperless, Cashless" status. The promotion of digital payments has been accorded the highest priority by the Government of India to bring each and every segment of our country under the formal fold of digital payment services. The vision is to provide the facility of seamless digital payment to all citizens of India in a convenient, easy, affordable, quick and secured manner.

During the last three years, digital payment transactions have registered unprecedented growth in India. Easy and convenient modes of digital payment, such as Bharat Interface for Money-Unified Payments Interface (BHIM-UPI); Immediate Payment Service (IMPS); pre-paid payment instruments (PPIs) and National Electronic Toll Collection (NETC) system have registered substantial growth and have transformed digital payment ecosystem by increasing Person-to-Person (P2P) as well as Person-to-Merchant (P2M) payments. At the same time, pre-existing payment modes such as debit cards, credit cards, National Electronic Funds

Transfer (NEFT) and Real-Time Gross Settlement (RTGS) have also grown at a fast pace. BHIM-UPI has emerged as the preferred payment mode of users. The Government of India also launched the digital payment solution e-RUPI, a cashless and contactless instrument for digital payment which is expected to play a huge role in making Direct Benefit Transfer (DBT) more effective in digital transactions in the country. All these facilities together have created a robust ecosystem for a digital finance economy.

There are different modes and types of digital payments that are prevalent in India, which are discussed in detail in the following lines.

1. Banking Cards
2. USSD (Unstructured Supplementary Service Data)
3. UPI (United Payment Interface)
4. AEPS (Aadhaar enabled Payment System)
5. Mobile wallets
6. Point of Sale Machines (PoS)
7. Mobile Banking
8. Internet Banking

1. Banking Cards

Banking cards are the most widely used digital payment system in India. It offers a great set of features that provides convenience as well as security to the users. Cards offer the flexibility of making other types of digital payments. Customers can store card information in the mobile application and pay for the services using the stored card information. Banking cards (debit and credit cards) can be used for a variety of digital transactions like PoS terminals, online transactions, as a payment medium in mobile apps, which provide any kind of service like grocery, healthcare, rental cab booking, flight tickets, etc.

The most popular cards are issued by service providers like VISA, MASTERCARD, RuPay, AMEX etc.

2. USSD (Unstructured Supplementary Service Data)

USSD is another popular digital payment method. It can be used for carrying out cashless transactions using mobile, without the need of installing any banking app.

The good thing about USSD is that it works without the requirement of mobile data. The main aim of this digital payment service is to include those sections of people of the society who are not included in the mainstream.

The striking feature of the USSD is that it can be availed in Hindi. The USSD can be used for the following types of activities:

- a. Initiating fund transfers
- b. Making balance enquiries
- c. Getting the bank statements

3. AEPS (AadhaarEnabled Payment System)

AEPS can be used for all the following banking transactions such as balance enquiries, cash withdrawal, cash deposit, aadhaar to aadhaar fund transfers. All such transactions are carried out through a banking correspondent which is based on Aadhaar verification.

This service can be availed if the aadhaar is registered with the bank where an individual has a bank account.

4. UPI (Unified Payment Interface)

UPI is the latest digital payment standard where the user having a bank account can transfer money to any other bank account using UPI based app. UPI enabled payments occur throughout the day and all 365 days in a year.

Payment can be done using a Virtual Payment Address (VPA). To use UPI services one must have a bank account and a mobile number registered with that bank account.

5. Mobile Wallets

Mobile wallets are another popular payment option. Here the users can add money to their virtual wallet using debit or credit cards and use the money added in the wallet to perform digital transactions.

Some of the most popular mobile wallets are PayTM, Mobikwik, PhonePe, etc.

6. Point of Sale Terminals

PoS terminals are installed in shops or stores where payments for purchases can be done through debit and credit cards. There are variations of PoS, one which can be Physical PoS and the other one is mobile PoS. The mobile PoS does away with the need of maintaining a physical device.

7. Mobile Banking

Mobile banking is a service provided by the banks through their mobile apps in a smartphone for performing transactions digitally. The scope of mobile banking has expanded extensively after the introduction of UPI and mobile wallets.

Mobile banking is a term used to describe a variety of services that are availed using mobile/smartphones.

8. Internet Banking

Internet banking is the process of performing banking transactions from the comfort of your home using a mobile phone/laptop/ desktop and an active internet connection. The major type of transactions can all be done using internet banking.

Internet banking services can be availed round the clock and all 365 days in a year, which makes it a popular choice for performing digital transactions.

Benefits of Digital Payment

There are several ways digital payments can help improve your bottom line and make for a better customer experience.

- Digital payments can help reduce fraud. Digital payments leverage several technologies to secure and encrypt transaction data and multi-factor authentication, making it more difficult for bad actors to initiate fraudulent transactions. Plus, with digital payment types like virtual credit cards, you have a one-off payment dedicated to only one vendor for only one amount, thereby helping to protect your actual credit card from being hacked.
- Digital payments can help reduce costs and waste. The Association for Financial Professionals reports that 92% of companies accept paper checks as incoming payments, and 86% accept them as outgoing payments. Sending and receiving checks can incur hefty processing costs like bank fees, printing, postage and secure disposal. AFP found that digital payment fees are much lower—they can be less than \$0.50 per transaction—and are a greener solution. Some digital payments have no associated costs, meaning no additional fees, which could earn you cash back.
- Digital payments can increase transaction speeds. While traditional payment methods like paper checks can take days or weeks to process and complete,

digital payments can be almost instantaneous. By digitizing payments, companies can be better about paying invoices on time, every time.

- Digital payments give you real-time cash flow visibility. When a payment occurs, the account balance reflects the change immediately and all currency conversions happen right at the moment of the transaction. Thus, executives can track expenses and income in real time and make quicker business decisions in key areas such as spending, investing and hiring.
- Digital payments can increase scalability and accuracy. Companies can spend six to ten hours a week processing and reconciling payments. Not only is this cost-prohibitive at scale, but it also leads to high exception rates that require more time and money to correct.
- Digital payments can turn a cost center into a value driver. Consumers often consider cashback offers when deciding which credit cards to use. Businesses can get the same perks with VCCs as with physical credit cards. Plus, VCC numbers can be used only once, and companies determine how much money to fund in the credit card. Cashback offers could mean reoccurring revenue for your organization on every invoice you already need to pay.

Usage of Digital Payments Country Wise

Top 10 countries Ranked by Real-Time Payments Transactions 2021

Countries	Transaction Value in Billions
India	46.8 Billion
China	18.5 Billion
Thailand	9.7 Billion
South Korea	7.4 Billion
Nigeria	3.7 Billion
UK	3.4 Billion
US	1.8 Billion
Japan	1.7 Billion
Turkey	1.4 Billion

India has topped the list for digital payments and recorded 89.5 million transactions in 2022, according to a report. Interestingly, India's payments are more than the digital payments made in the next four leading countries combined.

According to the data provided by MyGovIndia, the citizen engagement platform of Government of India, 46% of all real-time payments made worldwide in 2022 were made in India. India has topped the list for digital payments and recorded 89.5 million transactions in 2022, according to a report. Interestingly, India's payments are more than the digital payments made in the next four leading countries combined.

According to the data provided by MyGovIndia, the citizen engagement platform of Government of India, 46% of all real-time payments made worldwide in 2022 were made in India. Brazil is second on the list accounting for 29.2 million transactions, followed by China with 17.6 million transactions. The top list is completed by Thailand, ranked at number 4, with 16.5 million digital transactions and South Korea with 8 million of transactions in 2022.

'India Number 1 in Digital Payments'

Earlier this year, Prime Minister Narendra Modi said that India is number one in digital payments.

"India is number one in digital payments. India is one of the countries where mobile data is the cheapest. Today, the country's rural economy is transforming," he noted.

The Ministry of Electronics and Information Technology (MeitY) said it will offer the Incentive Scheme for the Promotion of RuPay Debit Cards and Low-Value BHIM-UPI Transactions for the current fiscal year. This is done in order to promote digital payments in the country.

India is the world leader in digital payments, according to Prime Minister Narendra Modi, who also claimed that the rural economy of the nation is changing. "India is number one in digital payments. India is one of the countries where mobile data is the cheapest. Today, the country's rural economy is transforming," the PM said.

Expansion of Digital Payments

Apart from promoting UPI in India, the government is also pushing to make cross-border payments easy. Earlier this year, India and Singapore linked their respective digital payments systems, UPI and PayNow. This will allow users to quickly make low-cost fund transfers between the two nations.

Conclusion

The digital payments ecosystem in India has grown significantly in recent years, driven by government initiatives, an increase in internet and smartphone penetration, and the rise of e-commerce. The digital payment ecosystem is supported by private players who offer a range of digital payment services. The future of digital payments in India looks bright with the expected growth in the number of internet users and e-commerce market size.

Introduction

The increasing presence of women as entrepreneurs has led to significant business and economic growth in the country. Women-owned business enterprises are playing a prominent role in society by generating employment opportunities in the country, bringing in demographic shifts and inspiring the next generation of women founders.

With a vision to promote the sustainable development of women entrepreneurs for balanced growth in the country, Startup India is committed towards strengthening women entrepreneurship in India through initiatives, schemes, creation of enabling networks and communities and activating partnerships among diverse stakeholders in the startup ecosystem.

In India's economy, women entrepreneurs are growing more substantial, and their contributions shouldn't be undervalued. These female entrepreneurs play a crucial role in the Indian economy and have a significant effect on it by generating employment, accelerating development, and fostering prosperity. As per recent figures, women comprise 14 per cent of the total entrepreneurs in India, which works out to 8 million. Also, 10 per cent of all formal enterprises are owned by women.

The government schemes for women entrepreneurs are discussed in details below:

1. Mudra Loan for Women

Mudra Loan for Women was launched by the government as a woman loan scheme to offer financial support for enthusiastic women entrepreneurs. They seek a business plan like starting a beauty parlour, tuition centre, stitching shop, etc. This scheme does not require any collateral to grant the loan. However, there are categories under which a Mudra loan application can be applied. They are as follows:

- **Shishu Loan:** The maximum loan amount granted to businesses in the initial stage is Rs. 50,000.
- **Kishor Loan:** This loan is for businesses that are already established but wish to improve services. The amount of loan granted varies from Rs. 50,000 to Rs. 5 Lakhs.

- **Tarun Loan:** This loan is for well-established businesses planning to expand their reach and is short on capital; they can avail as much as Rs. 10 Lakhs for the purpose.

2. Annapurna Scheme

The Annapurna Yojana is one of the many government schemes for women. Under this, the Government of India offers women entrepreneurs schemes in food catering businesses loans up to Rs. 50,000. The borrowed amount could be used for working capital requirements such as buying utensils, mixer cum grinder, hot case, tiffin boxes, working table, etc.

After the loan is approved, the lender doesn't have to pay the EMI for the first month. Once sanctioned, the amount has to be repaid in 36 monthly instalments. The interest rate charged is determined based on the market rate and the concerned bank.

3. Stree Shakti Yojana

The Stree Shakti package is a unique government scheme for women that supports entrepreneurship by providing certain concessions. This woman loan scheme is eligible for women who have the majority of ownership in the business. Another requirement is that these women entrepreneurs be enrolled under the Entrepreneurship Development Programme (EDP) organised by their respective state agencies. This Stree Shakti scheme allows women to avail of an interest concession of 0.05% on loans more than Rs. 2 lakh.

4. Dena Shakti Scheme

The Dena Shakti Scheme provides loans up to Rs. 20 lakh for women entrepreneurs scheme in agriculture, manufacturing, micro-credit, retail stores, or small enterprises. This government scheme for women also provides a concession of 0.25 percent on the interest rate. In addition, women entrepreneurs can avail of a loan of up to Rs. 50,000 under the microcredit category.

5. Bhartiya Mahila Bank Business Loan

Implemented by The Bhartiya Mahila Bank (BMB), this is a public sector banking company that offers loans schemes for women entrepreneurs up to Rs. 20 Crores for working capital requirements, business expansion, or manufacturing enterprises. Some of the different plans under this woman loan scheme includes:

- **Shringaar:** The BMB Shringaar loan applies to self-employed women or homemakers planning a start-up or meeting their daily business expenses. The loan doesn't require the customer to provide any collateral security.
- **Parvarish:** Similarly, the BMB Parvarish loan is for self-employed women or homemakers to set up day-care creches. The upper limit of this loan can be Rs. 1 Crore without any collateral security under the Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTSM) scheme.

- **Annapurna:** Between 18 to 60 years, food entrepreneurs wanting to start or expand their small businesses can avail of this loan. Its features are similar to that of the State Bank of Mysore's Annapurna scheme, minus that it does not require collateral security.

6. Mahila Udyam Nidhi Yojana

One of the most popular government schemes for women entrepreneurs, the Mahila Udyam Nidhi Scheme, is offered by Punjab National Bank and Small Industries Development Bank of India (SIDBI). The scheme supports women entrepreneurs to set up a new small-scale venture by extending loans up to Rs. 10 lakh to be repaid in 10 years. The rate of interest charged depends upon the market rates.

7. Orient Mahila Vikas Yojana Scheme

Oriental Bank of Commerce launched the scheme, women with an ownership of 51 percent share capital individually or jointly in a proprietary concern can avail a loan through the Orient Mahila Vikas Yojana. There is collateral required for loans between Rs. 10 lakhs to Rs. 25 lakhs. The repayment tenure of the loan is seven years. Orient Mahila Vikas Yojana Scheme also provides a concession on the interest rate of up to 2 percent.

8. Cent Kalyani Scheme

The Cent Kalyani Yojana is a government scheme for women that can be availed by both existing and new entrepreneurs and self-employed women. Micro/small enterprises like farming, agriculture, cottage industries, and retail trade are all eligible to apply for the Cent Kalyani Scheme. The customer do not have to provide any collateral as security or need any guarantors for this loan. The interest rate on loans depends on market rates. The repayment tenure of the loan will be a maximum of seven years.

9. Udyogini Scheme

The Women Development Corporation has implemented the Udyogini Scheme under the Government of India. This scheme promotes and motivates women's entrepreneurship among the poor by providing financial support to women. This scheme majorly supports and helps illiterate women living in rural and backward areas.

10. Pradhan Mantri Rozgar Yojana

The objective of Pradhan Mantri Rozgar Yojana (PMRY), one of the various government schemes for women, is to provide opportunities of self-employment to the educated young people of the country. Initiated in 1993, the scheme provides the unemployed Indian youth a loan amount to commence their personal business project and subsequently create scope of employment for others.

Just a few of the approved business segments for which the government scheme provides financial backup include manufacturing, trade, services, etc., customer can avail a loan up to Rs. 1 Lakh without having to provide any collateral. The tenure for repaying the loan ranges from 3 to 7 years.

11. Synd Mahila Shakti Scheme

Syndicate Bank has introduced a scheme known as the “Synd Mahila Shakti Scheme” with an aim to support women’s entrepreneurship development. Under this plan, the bank offers financial backup to those women entrepreneurs and professionals involved in small business, retail trade, or self-employed through its credit facilities.

The objective of this government scheme for women is to promote economic empowerment of women by supporting them with business loans to meet their need for working capital or expansion of business. Women entrepreneur can initiate as well as modernise the existing business by availing a loan of a maximum of Rs. 5 Crores with a concessional interest rate.

The minimum interest rate is 10.25% which is applicable for loans up to Rs. 10 Lakhs, and no collateral is required. Concession is offered at 0.25% for loans above Rs 10 Lakhs, and there is no processing fee.

Challenges and Problems faced by Women Entrepreneurs in India

To come up with solutions to the challenges faced by women entrepreneurs in the country, it is crucial to first identify what they are. Once these challenges have been identified, then women can look to solve them through the various government schemes for women. Here’s an overview of some of the key challenges plaguing women entrepreneurs.

1. Family Restriction

Women are expected to spend more time with their family members. They do not encourage women to travel extensively for exploiting business opportunities.

2. Lack of Finance

Since capital is the most important requirement for any business, the lack of funding has been a major challenge that has restricted several women entrepreneurs. The inability to gain access to funds has primarily been due to the lack of collateral to use to secure loans.

To bridge this gap, several government schemes for women entrepreneurs have been introduced recently that enable women to quickly and effortlessly get access to capital. In addition to this, there are several financial institutions that have also started to offer unsecured business loans to women to help them kick start their own business.

3. Lack of Education

Illiteracy and lack of formal education has traditionally been a major hurdle for women looking to start their own business. Considering the fact that proper education leads to better management of a business, it is important for women to overcome this challenge by enrolling themselves in the various educational programs established by the government of India. Some of the few government schemes promoting education amongst women are the Beti Bachao Beti Padhao Yojana, Mahila Shakti Kendra, and Mahila E-Haat among others.

4. Role Conflict

Marriage and family life are given more importance than career and social life in Indian society.

5. Unfavorable Environment

The society is dominated by males. Many business men are not interested to have business relationship with women entrepreneurs. Male generally do not encourage women entrepreneurs.

6. Lack of Persistent Nature

Women generally have sympathy for others. They are very emotional. This nature should not allow them to get easily cheated in business.

7. Lack of Mental Strength

Business involves risk. Women entrepreneurs get upset very easily when loss arises in business.

8. Lack of Information

Women entrepreneurs are not generally aware of the subsidies and incentives available for them. Lack of knowledge may prevent them from availing the special schemes.

9. Stiff Competition

Women face lot of competition from men. Due to limited mobility they find difficult to compete with men.

10. Mobility

Moving in and around the market, is again a tough job for Middle Class Women Entrepreneurs in Indian Social system.

11. Low Risk-Taking Abilities

The various government schemes for women entrepreneurs can only satisfy the need for capital. However, many women interested in pursuing business are held back by their inability to take risks, which usually forms a huge part of any business.

That said, women with low risk-taking abilities can overcome it by adopting a few simple tips.

1. By building self-confidence.
2. By weighing the pros and cons of any business decision prior to making one.
3. By taking intelligent decisions that take the path of the least risk.

12. Family Responsibilities

In a country like India, a large majority of the populace expect women to take over familial responsibilities after their marriage. Even women who wish to focus on their career are expected to juggle both work and family responsibilities equally. This lack of freedom to pursue their careers has severely limited many women from realising their true potential. Fortunately, there are a few things that women could do.

1. Hold talks with the family to make them understand the importance of having a career.
2. Devise a plan to strike the right work-life balance.
3. Prioritise responsibilities to manage time more effectively.

13. Poor Networking Skills

Networking is an important step that every business owner needs to focus on. With the right network, business owners can grow their businesses far more quickly and in a more effective manner. However, women are perceived to have less than ideal networking skills. Thankfully, here are some ways to rectify it.

1. Begin to attend events dedicated to networking.
2. Get to know more about the industry and the business as a whole.
3. Develop productive relationships with other business owners and women entrepreneurs.

14. Security and Safety Issues

This is another major issue plaguing women entrepreneurs. Running a business demands a lot of time and effort. Women may have to work long hours that extend well into the night and might have to travel frequently to and meet their customers.

This brings up the question of security and safety for women. Just like how the various government schemes for women for providing funding were established, steps are constantly being taken to bring down the crime rate for women and make the place a whole lot safer.

Conclusion

Women entrepreneurs face constraints related to access to finance, conflicts between work and family responsibilities, networking challenges, lack of education and management skills.

Empowering women entrepreneurs is crucial for achieving the goals of sustainable development and the bottlenecks hindering their growth must be

reduced to enable full participation in the business. Apart from training programs Newsletters, mentoring, trade fairs and exhibitions also can be a source for entrepreneurial development. As a result, the desired outcomes of the business are quickly achieved and more of remunerative business opportunities are found. Therefore promoting entrepreneurship among Indian women is Certainly a short-cut to rapid economic growth and development. Let us try to eradicate all kinds of gender bias and thus allow 'women' to be a great entrepreneur at par with men.

Introduction

ICT tools stand for Information Communication Technology tools. The ICT tools means to digital infrastructures like computers, laptops, printers, scanners, software programs, data projectors, and interactive teaching box.

The ICT devices are the latest tools, concepts and techniques used in student-to-teacher, student-to-student interaction for example: - clicker devices, mobile applications, flipped classroom) for information and communication technology.

Every aspect of our lives is driven by technology. We are growing more and more reliant on new developments as technology advances. It not only makes our lives simpler but also more efficient. When we are discussing the role of ICT in our lives, how can we neglect the transformations that are happening with the introduction of ICT in education? This article revolves around ICT in education, how ICT positively affects the way students learn and also the advantages of ICT in education. Before we dive into them, let us look at what is ICT in education.

Ict Enabled Tools for Effective Teaching and Learning Process

Following tools are used in the Teaching learning process in Online- Offline mode of instruction. During lockdown these ICT tools proved to be a boon for making the teaching learning process easy and accessible to all students.

1. Learning Management System (MOODLE and Google Classroom)

Moodle stands for Modular Object-Oriented Dynamic Learning Environment and statistics. Moodle is free software, a learning management system providing a platform for e-learning and it helps the various teachers considerably in conceptualizing the various courses, course structures and curriculum thus facilitating interaction with online students. It is configurable, highly-flexible, and feature-rich. RSCOPR has a self-customized MOODLE developed by Digital Content development team. (<https://lms.jspmrscopr.edu.in/>).

It is a very useful platform to share all learning resources, videos, sharing webpage. Moodle supports a range of media to present or link to learning materials, support the students and to assess their learning. It is able to provide automated assessment in the form of quiz, and give immediate detailed feedback to the students. The messaging system

allows learners and teachers to communicate easily. Teachers can also communicate with groups of learners via course forums either to provide answers to learners' questions or to just get involved in discussions. The uploaded learning resources are available to the students whenever they want them. The MOODLE mobile app makes students access even easier via smartphone or mobile device.

2. Google Classroom - Blended Learning Platform

Google Classroom is a free, blended learning platform that offers a variety of benefits for both students and teachers. Google Classroom enhances the productivity and take workflow management to the next level. It keeps track of assignments coming in with a simple glance making it very easy to know everyone's status and to follow up with students who are missing work. Everything is time stamped, so late work is easily identifiable. Since Google apps are cloud based the work in Google Classroom saves automatically and is accessible from any device. With the app, both students and teachers can enjoy the full functionality of Google Classroom on a mobile device. Students receive notifications on their phone when assignments and announcements are posted, making it easy for students to stay on top of classroom happenings. As a teacher, the app enables to post from the phone either right from the app or using share-sheet support.

3. Google Forms

Google Forms allows to conduct MCQ quizzes online. The information is stored as a spreadsheet automatically record the answers. The spreadsheet then populates the responses from the quiz or survey in real-time. Google forms can be used to give feedback to and receive feedback from students and parents.

4. Videoconferencing Platforms

During COVID pandemic when the world shifted to Online mode for teaching learning various free videoconferencing platforms like Google meet, Zoom and Cisco webex were used to conduct online classes.

All these have varying needs and features. Zoom allows the facility of using its features using a browser also without the need to download the application, the app download is mandatory in case of the other two software. Zoom allows face touch up facility as well which is not present in the other two competing software. Google Meet allows the maximum on-screen chatting time with respect to the others. It has over 60 minute long conferences whereas the time cap of others is only 40 minutes. Zoom has the highest, that is, 49 people that can be viewed on the screen at once.

5. Virtual Labs

The Virtual Labs provides remote-access to simulation-based Labs in various disciplines of science and engineering. This student-centric approach facilitates the absorption of basic and advanced concepts through simulation-based experimentation. Internet-based experimentation further permits use of additional web-resources, video-

lectures, animated demonstrations and self-evaluation. Virtual labs are any place, any pace, any-time, any-type labs. It is a paradigm shift in student-centric, online education. Virtual labs sessions available on Virtual labs an MOE Government of India Initiative for Physical Pharmaceutics, Organic Chemistry and Inorganic chemistry subjects as well as Virtual labs sessions from Amrita Vlab portals for Microbiology, Organic chemistry and Inorganic chemistry practicals provide helpful tool to teacher during online teaching learning process.

6. Educational Videos and Animations (Youtube and Internet)

Various valuable educational videos of pharmacy subjects available on internet, youtube provide additional help in better understanding of subject knowledge.

7. Smart Classroom

Classroom integrated with Smartboards and internet connections provides enhanced and interactive learning and teaching opportunities for students and teachers. The internet-connected to systems in smart classes is stored with abundant information. It is accessible anytime for their teaching and learning process. Teachers can access information from various educational sources for teaching purposes. It helps in easy access to online resources. Smart Classrooms helps in developing critical thinking and problem-solving skills in students.

8. e-Resources

e- journals from Proquest Pharma and DELNET were available for students to access remotely in online mode and enhance their learning experience. e books were uploaded on MOODLE and Google Classroom.

9. Trello

Trello is a collaborative tool that is used widely in IT companies with large teams. Fortunately, it has several applications for the educators as well. If the teacher prefer project-based learning for students, Trello is very useful. Trello has these digital boards. The teacher can create different boards for assignments, test papers, etc. And in those boards, we can create cards. Furthermore, we can discuss a particular topic in that card. The user can invite the students to view that card. And the students can put in comments, doubts, or ask questions and even attach images, videos, etc.

Also, students can easily look at their projects, set deadlines, and track progress online. In a nutshell, Trello takes a lot of burden off shoulder while enriching the learning experience for kids.

10. Microsoft Teams

Microsoft Teams is another popular tool for IT professionals. And similar to Trello, it has several applications for teachers and educators. Microsoft Teams is a Microsoft Office 365 product. It simply means user can host meetings, chat, share files, and use every Microsoft Office app using Teams.

One of the best features Teams comes with is the Class Notebooks from One Note. Class Notebooks resemble individual student notebooks(physical) but come with additional features and ease of use.

Teachers can assign individual notebooks to students and provide them with real-time feedback. The user can easily distribute exams, handouts, quizzes, and homework instantly to the students. Also, the students can use amazing tools within Teams for taking notes and highlighting important things. This helps the students engage more and enjoy learning. All in all, Teams can reduce the manpower and can completely replace the use of paper. It's yet another amazing tool that ensures effective education online.

11. Online Coding Websites such as DataCamp, HackerRank, Coderbyte

No minimum age exists when it comes to learning how to code.

If user want the students/kids to learn how to code, make sure it's practical. Practicing code on paper is simply a waste of time. And it also kills the creative talent of the students.

This is where the websites such as DataCamp, HackerRank, Coderbyte, etc., come into play. Using such websites, students can implement what they've learned instantly. Also, such websites feature several tricky problems that the students will enjoy. The best part is that most websites are free and accessible from any device. It simply means none of the students will need particular hardware (laptop/PC) to code.

12. Subject Specific Tools

All of the above ICT tools for teaching and learning help in generalized learning. However, when it comes to specific subjects, special tools are required. Following are the specific tools used for different subjects.

ICT Tools for Teaching Geography

Google Maps: With Google Maps, kids can learn to find the distance between two places and look at 360-degree images of places. This can help the students become familiar with multiple locations across the world.

Google Earth: This tool shows the entire earth with every location and supports an amazing zoom feature. Kids can learn about different regions, landmasses, and water bodies in a fun way.

ICT Tools for Teaching Mathematics

CanFigureIt Geometry: This tool makes learning geometry pretty easy. The teacher can teach kids about several mathematical proofs and theorems in an engaging way.

CueThink: User can use this tool to teach kids how to solve math problems in four steps: understand, plan, solve, and review.

ICT Tools for Teaching Biology

Microsoft PowerPoint: User can use HD images and create slides to clear the biological concepts for the kids. Also, user can download templates from Slidesgo and make the job even easier.

YouTube: What's better than using videos for explaining complex biological processes via YouTube videos. From digestion to excretion, user can find plenty of child-safe content on YouTube.

ICT Tools for Teaching History

User can use the above-listed tools but in a different manner:

YouTube: User can find historical movies related to the chapter.

Microsoft PowerPoint: User can create slideshows with minimal details such as dates, names, locations, and events, etc. This way, kids can learn facts easily and for longer durations.

Merits and benefits of introducing ICT education

ICT in education is not simply a method of education that responds to changes in society, but also offers various advantages and benefits that solve problems in the educational field.

For teachers, it can be used to reduce workload and share information with other teachers, and for students, it can provide an environment where they can easily concentrate on their lessons and become more interested in learning. The following are some of the concrete benefits and effects of ICT in education.

- Improved Learning Efficiency
- ICT improves student learning efficiency. For instance, in the past, students would

take notes of what the teacher had written on the blackboard, and then reread the notes to consolidate their memory of the lesson. With ICT, however, students no longer need to move their hands because of the use of tablets and other devices, and they will be able to concentrate more on the class.

- ICT can also make it easier for students to express their opinions, even if they do not like to raise their hands or be the center of attention during class.
- Reduce the Burden on Teachers
- In addition to teaching and preparing for classes, teachers have a variety of other duties, such as dealing with parents and advising club activities. This burden on teachers is seen as a problem in the field, and the challenge is how to reduce the workload.
- The introduction of ICT in education reduces the burden on teachers in detail, such as the time and effort required to print out materials used in class and to write on the board.
- The time freed up by the introduction of ICT can be used to solidify class content and perform miscellaneous tasks, which is expected to improve the quality of education as a result.
- Simplified Information Sharing
- Another major advantage is to easily share class data and teaching materials used in class among teachers and students. By organizing class materials on PCs and tablet terminals, the time required to distribute materials can be reduced, and classes can proceed efficiently and smoothly.
- Information sharing among teachers will also provide opportunities to learn about good teaching materials and teaching methods, which will have the effect of synergistically enhancing the quality of education.
- Increased Student Motivation
- Increasing students' motivation for learning is also cited as an advantage of ICT, as it is still not that common, and many students may find classes using digital tools refreshing.
- Learning through the tablet devices and electronic blackboards can be expected to increase students' interest in the class itself. When implementing ICT in education, it is a good idea to create questions and animations from the perspective of whether or not students will be interested in them. Of course, the content of the class is important, but it is also important to have a system that engages students in the class.
- Improve IT Literacy of Students
- As ICT in education advances informatization, not only teachers who support learning but also students will be able to acquire knowledge and skills of IT devices. literacy will help students to select and use necessary information and to develop the ability to think for themselves.
- In recent years, lack of IT literacy has often led to unexpected accidents. For

example, corporate security incidents and problems related to social networking accounts are mainly recognized as IT literacy issues, and it is important to ensure that students acquire basic knowledge and skills when using IT.

- We can refer to the information provided by the Ministry of Education, Culture, Sports, Science and Technology when developing and improving class content based on the benefits and effectiveness of ICT education. Please check the following points when considering the introduction or enhancement of ICT in education in the future.

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT tools in education make it easier for teachers to use the best strategies to bring out the best in their students. ICT in education sector is beneficial for the students, in addition to this, it is making it possible for schools to impart education in the finest way. Moreover, the technology enables them to manage all the management and administration functions in a seamless manner. Hence, there is no doubt that it is a boon to the education industry.

WOMEN'S EMPOWERMENT THROUGH NATIONAL EDUCATION POLICY

Dr. M. Jeeva

Associate Professor and Head

B.Com – Banking and Insurance

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Women's empowerment can be defined to promoting women's sense of self-worth, their ability to determine their own choices, and their right to influence social change for themselves and others.

It is closely aligned with female empowerment – a fundamental human right that's also key to achieving a more peaceful, prosperous world.

In Western countries, female empowerment is often associated with specific phases of the women's rights movement in history. This movement tends to be split into three waves, the first beginning in the 19th and early 20th century where suffrage was a key feature. The second wave of the 1960s included the sexual revolution and the role of women in society. Third wave feminism is often seen as beginning in the 1990s.

Women's empowerment and promoting women's rights have emerged as a part of a major global movement and is continuing to break new ground in recent years. Days like International Women's Empowerment Day are also gaining momentum.

But despite a great deal of progress, women and girls continue to face discrimination and violence in every part of the world.

The Women's Empowerment Principles

Created in a collaboration between the UN Global Compact and UN Women, the Women's Empowerment Principles are used to empower women in the marketplace, workplace and community.

The Seven Principles are:

- Principle 1: Create high-level corporate leadership for gender equality
- Principle 2: Treat all people fairly at work, respecting and supporting non-discrimination and human rights
- Principle 3: Ensure the health, wellbeing and safety of all workers, whether male or female
- Principle 4: Promote education, training and professional development for women
- Principle 5: Implement supply chain, marketing practices and enterprise development that empower women

- Principle 6: Champion equality through community initiatives and advocacy
 - Principle 7: Measure and report publicly on progress to create gender equality
- Social empowerment of women is to be understood as the process of developing a sense of autonomy and self-confidence, and acting individually and collectively to change social relationships and the institutions and discourses that exclude women especially the poorest of the poor and keep them in poverty. Gender role deconstruction starts right from an early age. Social welfare and Women Empowerment Department 10 wherein parents and teachers play a key role. Women's empowerment and their ability to hold others to account, is strongly influenced by their individual assets (such as land, housing, livestock, savings) and capabilities of all types: human (such as good health and education), social (such as social belonging, a sense of identity, leadership relations) and psychological (self-esteem, self-confidence, the ability to imagine and aspire to a better future). Also important are women's collective assets and capabilities, such as voice, organisation, representation and identity.

1.1. Education and Research

Equal access to education for women and girls will be ensured and initiatives taken to eliminate discrimination, universalize education, eradicate illiteracy, create a gender-sensitive educational system, increase enrolment and retention rates of girls and improve the quality of education to facilitate lifelong learning as well as development of occupation/vocation/technical skills. Improving gender parity and reducing the gender gap in secondary and higher education would be a critical area. Sectoral time targets in existing policies will be achieved, with a special focus on girls and women, particularly those belonging to weaker sections including the Scheduled Castes/Scheduled Tribes/Other Backward Classes/Minorities. Gender sensitive curricula would be developed at all levels of educational system in order to reduce and address sex stereotyping that is one of the causes of gender discrimination.

1.1.1. Gender segregation cycle shall be reduced at home and schools so that boys and girls interact and learn from each other, and reduce the gender stereotypic beliefs, attitudes, and biases about and towards the other sex. Teachers will be trained and they would in turn conduct specific programmes for children in the form of gender club activities, competitions/crafts and cooking skills for both boys and girls and any innovative activity of the choice.

1.1.2. Reducing dropouts of girl children in secondary education by 10% every year and increasing enrolment by 5% in tertiary education.. Incentives shall be

provided to girls from poor economic backgrounds to pursue higher education in any field of their choice.

1.1.3 At Least 3% interest subvention for educational loans given to Girl students pursuing higher education. Additional 0.5 % interest subvention to those students who took education in Tamil medium. 1.1.3 Career counselling facilities for girl students opting for higher education. Retired Teachers / College professors may be roped in at Village / ward levels (both urban and rural) to support them with information on career options available.

1.1.4 Tamil Nadu shall provide free/subsidized coaching classes for exams like JEE, CAT, UPSC, TNPSC and for higher management and technical courses to encourage women's participation 1.1.4 Safety and sanitary audit shall be conducted to arrest the phenomenon of child marriage so that the conditions responsible for safety such as threats of abuse and violence on the way to school 1.1.4 It will be mandatory for all - Govt and private educational institutes (schools and Colleges) to display on their campus, portals, websites information regarding various scholarships, career opportunities available. Roll of honour shall also be displayed

1.1.5. Women researchers to be supported with access to credit and facilitation of IP and also converting the research to products.

1.1.6. Teachers in schools and Colleges to be trained in counseling skills and refresher programmes conducted periodically

1.1.7. Martial arts training to be made mandatory to all girls in schools and Colleges.

1.1.8. Sports period will be made compulsory to all standards and participation of girls will be required without omission. Girl students who are excelling would be provided exclusive coaching facilities.

1.1.9. Women researchers pursuing women oriented themes would be provided with additional support.

1.1.10 Girls and women shall have equal opportunities to pursue educational courses and skill training as per their desire and there will be no gender segregation either in terms of educational opportunities or related skill trainings

1.1.11 A common digital repository of the research and studies conducted on gender oriented themes by educational institutions, research institutes, Government agencies/departments shall be set up.

1.1.12. Additional stipend for girls who are taking up skill training in no-gender stereotyped categories. Social welfare and Women Empowerment Department.

1.1.13 Apprenticeship shall be provided to girls passing out from ITIs and Polytechnics along with a matching grant from the State

1.1.14 Industrial skills needs to be added in school curriculum through planned events

1.1.15 Skill training especially upskilling or reskilling courses for allowing women for lateral entry or reentry at a higher level after a career break.

1.1.16 To improve the Digital literacy rate among women digital a literacy program shall be implemented through CRP/CPs in local Panchayat level to train the handle online tools (what's app to internet browsing).

Conclusion

True education can be materialized if only we give equal importance to women education. Empowering women is empowering the nation. The many challenges that is ahead of us regarding implementation of women education can be achieved if gender disparity is bridged. We define education as a continuous lifelong process and to prove true to its definition women education should be continuous and promoted aggressively so that women get the respect and status they deserve.

Education will not only ensure more participation in developmental processes but also enhance awareness of rights and entitlements in society, so that women can enhance their participation in society on an equal footing in all areas. The economic independence that education brings is an added incentive. Economic independence and awareness will help curtail the vicious cycle of reinforcing negative stereotypes and aid women in chartering paths as individuals in their own right, contributing to society, polity and the economy.

SUSTAINABLE AGRICULTURE AND FOOD PROCESSING

Dr. M. Jeeva

Associate Professor and Head, B.Com – Banking and Insurance

Nallamuthu Gounder Mahalingam College, Pollachi

mjeevaacademic@gmail.com

Introduction

Sustainable agriculture can be defined as producing food and livestock over the long term with minimal negative effects on the environment. It is undertaken by a society with the goal of producing the greatest quantity of food over the longest time in order to feed a growing human population while keeping the environment intact. Sustainable agriculture follows other sustainability practices where the long-term health of ecosystems and society are taken into consideration. The ideal in sustainable agriculture is to conserve water, lessen pesticide and fertilizer use, promote biodiversity in crops and livestock, and prevent soil erosion.

Historically, produce was grown and livestock was raised with very little concern for how farming practices affected the surrounding ecosystems. During the Green Revolution of the 1960s, increased pesticide and fertilizer use allowed farmers to produce larger crop yields on the same amount of land. This in turn leads to soil erosion, water pollution, and loss of crop diversity. As these new agrochemicals entered the environment, negative impacts were also noticed. This leads to environmentalists, consumers, and farmers shifting practices towards more sustainable practices.

Sustainable agriculture is something that is on the rise, with the climatic changes and environmental pollution hitting the roof it's about time farmers engaged in sustainable farming. Sustainable agriculture is nothing but farming that requires no chemicals, conserves energy and resources, goes easy on the environment, and works well with the locally available resources.

For an agriculture to be truly sustainable, farmers should consider some important factors like a. Environment – farmers should engage in farming practices that promotes sensible resource management of local resources, promising no harm to the ecosystem and enhance biodiversity, b. Profitability – it should also be profitable for the farmers, only then it will be sustainable, and c. Providing for people – the quality of food given to people has to be nutrient rich.

1. Mulching

Mulching is the process of covering the ground with some cover to avoid soil eroding and maintain soil temperature and moisture. Growth of weed can be reduced dramatically

by mulching. Sometimes even the most stubborn weed can be eliminated by mulching. This helps in increasing the soil quality. The user can use organic items like wood chips and straw for mulching; they also help in retaining the nutrients of the soil and facilitate microorganism growth that conduces the crop growth.

2. Crop Rotation

Crop rotation is nothing but growing different crops on the same field in different seasons. This is truly effective in retaining the fertility of the soil. Farmers can highly benefit from the crop rotation as this also reduces the need of using pesticides. Crop rotation helps in degeneration of destructive pests as growing different crops can help destruct the development cycle of pests and therefore reduce the usage of pesticides.

3. Diversified Farming

Diversified farming fosters farmers to help maintain the efficiency by encouraging growing varied species in one land by considering the area as one. This will promote the health of all organisms in the soil and achieve more soil fertility. By diversified farming we mean growing animals in a land that helps enhance the growth of plants too. This will also reduce bringing artificial soil fertilisers.

4. Agro Forestry

Agroforestry is nothing but growing trees on grazing lands and in between trees. This will help retain soil moisture and soil fertility. Also, soil temperature is maintained and reduces soil erosion during rains and wind. In the end, the soil quality is maintained and nutrients are retained. Fruits and vegetables from agroforestry are much more nutrient rich. This is said to increase profits for the farmers and also environmentally sustainable.

5. No-Till Farming

No-till farming is a method of farming without disturbing the soil tillage. This increases water infiltration, retain the nutrients of the soil and maintain the organic nature of the soil. Many agricultural lands have seen a reduction in soil erosion and increase the life of microorganisms on the soil that facilitates agriculture. No-till farming has to increase resilience of the soil.

6. Contour Farming

Contour farming majorly helps in soil erosion and increases water absorption and crop production. In contour farming the ruts are made perpendicular. This increases retention of soil nutrients and support environmental sustainability.

7. Organic Animal Raising

Making animal graze in open lands can be highly beneficial for the soil as well the animals. Confining animals to a particular area can be a lot less healthy for the animals. This will eventually result in the increase of quality of products we get from them. Soil also gets healthier from the manure from animals.

Sustainable Agriculture Practices

Through decades of science and practice, the following farming practices have proven effective in achieving sustainability, especially when used in combination:

Rotating Crops and Embracing Diversity

Planting a variety of crops can have many benefits, including healthier soil and improved pest control. Crop diversity practices include intercropping (growing a mix of crops in the same area) and complex multiyear crop rotations.

Planting Cover Crops and Perennials

Cover crops such as clover, rye, or hairy vetch are planted during off-season times when soils might otherwise be left bare, while perennial crops keep soil covered and maintain living roots in the ground year-round. These crops protect and build soil health by preventing erosion, replenishing soil nutrients, and keeping weeds in check, reducing the need for fertilizers and herbicides.

Reducing or Eliminating Tillage

Traditional plowing (tillage) prepares fields for planting and prevents weed problems but can cause soil loss. No-till or reduced-till methods, which involve inserting seeds directly into undisturbed soil, can reduce erosion and improve soil health.

Applying Integrated Pest Management (IPM)

A range of methods, including mechanical and biological controls, can be applied systematically to keep pest populations under control while minimizing use of chemical pesticides.

Integrating Livestock and Crops

Industrial agriculture tends to keep plant and animal production separate, with animals living far from the areas where their feed is produced, and crops growing far away from abundant manure fertilizers. A growing body of evidence shows that a smart integration of crop and animal production can make farms more efficient and profitable.

Adopting Agroforestry Practices

By mixing trees or shrubs into their operations, farmers can provide shade and shelter that protect plants, animals, and water resources, while also potentially offering additional income from fruit or nut crops.

Managing Whole Systems and Landscapes

Sustainable farms treat uncultivated or less intensively cultivated areas as integral to the farm. For example, natural vegetation alongside streams, or strips of prairie plants within or around crop fields, can help control erosion, reduce nutrient runoff, and support bees and other pollinators and biodiversity in general.

Sustainable Food Production

Sustainable food production is “a method of production using processes and systems that are non-polluting, conserve non-renewable energy and natural resources, are economically efficient, are safe for workers, communities and consumers, and do not compromise the needs of future generations”.

As the world becomes more conscious of the perils of climate change, eco-friendly practices have emerged as important qualifiers in the minds of both consumers and retailers in terms of who they do business with. The food industry as a whole is looking for ways to operate in a more sustainable fashion and food processors have an opportunity to make a difference while striving for a healthier planet.

Here are a few ways that food processing can become more sustainable.

1. Efficient Water Use and Conservation Practices

Food processors account for 23 percent of the industry’s total energy use and a lot of that is due to the water-intensive nature of the processes. Water is used both as an ingredient and a tool in the process and is often used inefficiently. Implementing water conservation measures like smart meters and sustainable water management systems can help identify and act on these opportunities. These efforts can even extend all the way back to the food production segment. Roughly 39 percent of fresh water used annually in the United States is for crop irrigation. Much of it is necessary to the cultivation of these crops but switching to drip irrigation systems and utilizing wastewater re-use mechanisms are ways to conserve water in the process and operate more efficiently.

2. Reusable and Eco-friendly Packaging

Packaging waste reduction is a crucial element to the waste reduction efforts of grocery stores and other food retailers, but it can also extend to the processors that get these products onto the shelves of those retailers in the first place. Only 14 percent of the 78 million tons of food packaging waste are recycled annually. Eliminating plastic is the name of the game when it comes to recycling food packaging. We cannot recycle plastic, meaning its only purpose after the packaging is ripped off is taking up space in a landfill.

Wood and paper packaging are better ways to go, and when needed, aluminum is the best and most environmentally responsible metal packaging to use. There are also packaging options available that are made from biodegradable materials. Changing the way food is packaged and what it is packaged makes a sizable impact on the overall waste output of food processing and will make the entire operation more sustainable.

3. Reducing Food Related Waste

Examining the way processing facility operates often leads to ways to improve it from a sustainability standpoint. Calculate how much food-related waste facility generates and determine how much of that can be reduced. Have regular maintenance checks on the equipment to ensure the process is maximizing the amount of usable food products produced.

Where are all of the fats, oils and greases going? By partnering with a reputable collection service, that used cooking oil and grease material can be repurposed into ingredients used the production of renewable diesel, a cleaner-burning alternative to petroleum fuel that reduces carbon emissions by up to 85 percent per gallon. The same goes for inedible meat byproduct. It also can be recycled and repurposed into materials used in producing renewable diesel and various household products. It's not uncommon in larger industrial processing facilities to be losing grease down the drain without knowing it. A reputable provider can help to identify where we are potentially losing grease waste in areas may not even be aware of.

Recycling the byproducts of operations is beneficial in a variety of ways. What we consider waste has value and can turn into an additional revenue stream in the form of rebates. It's also contributing toward producing fuel that could potentially power the trucks that deliver food to the retailers that buy from farmer. By

recycling, we can reduce carbon emissions both in the facility's operations and with the trucks that carry the product to its ultimate destination.

4. Avoid Additives and other Harmful Chemicals

The use of pesticides, fertilizers and antibiotics is commonplace in producing the food that the facility processes. When possible, try to buy from organic producers that shy away from using these chemicals that cause damage to the environment. Organically grown produce and grass-fed meats are a great place to start. Plant-based meat may also be an option worth exploring as the alternatives to meat-based products become more abundant and diverse. The plant can be more sustainable by looking at the product we produce and how it can be made in a healthier and more sustainable manner.

These are just a few of the ways we processing facility can look to identify ways in which it can be more sustainable. Implementing these simple tips to help do the facility work toward a healthier planet and a more sustainable future.

Conclusion

Sustainable agriculture is the way to maintain a parity between the increasing pressure of food demand and food production in the future. As population growth, change in income demographics, and food preference changes, there are changes in the demand of food of the future population. To be sustainable, the food system needs to: (1) maintain healthy rural ecosystems and fertile agricultural soils, and (2) limit its dependence on economic fluctuations and external politics.

SIGNIFICANT CONTRIBUTION OF VILLAGE AND COTTAGE INDUSTRIES ON INDIAN ECONOMY

Dr. M. Jeeva

Associate Professor and Head
NGM College, Pollachi
mjeevaacademic@gmail.com

Abstract

In India, cottage industries are a major source of employment and livelihood. These industries are also the backbone of the Indian economy. The cottage industry is an industry that is small-scale and informal. This business idea among other small business ideas is typically a family business and the owner of the business lives on the premises.

Examples of cottage industries in India include Weaving, Pottery, Silverware, Bamboo crafts, and many more.

Cottage industries are manufacturing companies that perform the majority of their labour by hand. India is renowned and well-known for its diverse culture, traditional cottage industries' handicrafts, and a large variety of food products, among other things. The main cottage industries in India are cotton weaving, carpet weaving, silk weaving, the leather industry, metal handicrafts, and small-scale food processing.

India's cottage industries are culturally and economically significant. They preserve ancient traditions while simultaneously employing a large number of people. Because these industries confront intense competition from other economies, society should provide support to prevent exploitation and further develop them. The only solution to combat the monster of unemployment in over-populated countries like ours is to promote cottage and small-scale industries.

The industry faces numerous challenges in a variety of ways. As a result, the government is attempting to address the sector's issues since it recognises that the sector has a lot of promise in a variety of sectors if properly supported.

Keywords: India, Cottage Industries, Carpet Weaving, Silk Weaving, Leather Industry

Introduction

In India, cottage industries are a major source of employment and livelihood. These industries are also the backbone of the Indian economy. The cottage industry is an industry that is small-scale and informal. This business idea among other small business ideas is typically a family business and the owner of the business lives on the premises.

Examples of cottage industries in India include Weaving, Pottery, Silverware, Bamboo crafts, and many more.

Types of Indian Cottage Industry

Cottage industries are manufacturing companies that perform the majority of their labour by hand. India is renowned and well-known for its diverse culture, traditional cottage industries' handicrafts, and a large variety of food products, among other things. The main cottage industries in India are cotton weaving, carpet weaving, silk weaving, the leather industry, metal handicrafts, and small-scale food processing.

1. **Cotton Weaving:** Cotton weaving is a significant cottage industry in India. Since cotton clothing is widely worn throughout the nation, the knowledge is age-old. Clothing made of cotton is renowned for its traditional style, vibrant colour, and designs made by expert weavers using handlooms. Gujarat, Tamil Nadu, and Maharashtra are the three states that produce the most cotton. Silk weaving: Another well-known cottage industry in India is silk weaving. Our nation produces and exports a significant amount of silk, both domestically and outside. Karnataka produces the most silk, making up over 70% of the whole silk weaving business. Mulberry, Tassore, Muga, and Eri silks are produced in our count.
2. **Carpet Weaving:** During the Mughal era, carpet weaving was first introduced to India. The durries and coir carpets are equally renowned for their exceptional quality and texture as the Kashmiri carpet. In spite of the fact that the carpet industry is widespread throughout the nation, it is largely concentrated in Kashmir, Rajasthan, Punjab, Uttar Pradesh, Andhra Pradesh, and Punjab. The Carpet Export Council was also founded by the Indian government to promote knotted rugs and other types of floor coverings from all around the nation.
3. **Leather production:** India is a significant producer of premium leather for export to international markets, providing around 10% of the demand. One of India's top export earners and one with almost 2.5 million workers is the leather industry. The Indian states that produce leather are Uttar Pradesh, West Bengal, and Tamil Nadu.
4. **Metal Works:** Metal has long been used in India to make figurines, jewellery, utensils, and other objects. India's metal handicrafts are well-liked worldwide and have a major economic impact on the nation. Metal handicrafts are created using hand-operated tools rather than sophisticated machinery.

Issues Faced by the Cottage Industries in India

The lack of access to adequate finance options and limited technical knowledge has made it difficult for cottage industries to fulfil domestic and international customer demands, thereby inhibiting their growth. These are some of the major issues faced by cottage industries in India – let's learn more about each one of them individually in the following sections.

1. Self-Employed Labour Shortage

The self-employed labour shortage is a major problem faced by Indian cottage industries. The lack of skilled labourers has been made worse by the Great Recession and economic slowdown, which led to a large number of factory workers losing their jobs.

Most cottage industries are made up of small-scale producers who find it difficult to attract employees due to low wages, insecure working conditions, and long hours. These challenges have worsened with the rise in unemployment rates across the country.

Cottage industries also have difficulties finding skilled employees because many young people choose not to pursue traditional occupations and apprenticeships.

2. Low Demand for Handmade Goods

The majority of the demand for handmade products comes from tourists visiting the country. But unfortunately, not enough people live in these villages to keep up with production. It means that most of these goods are not made locally and can't be sold nearby.

The result is a vicious cycle where supply and demand cannot meet due to a lack of market access.

There's a general misconception that cottage industry goods should be easy to transport because they're small. However, this isn't always the case! For example, if you want to ship something fragile like silverware to long distances without damaging it, you will need high-quality packing materials.

One of the unfortunate realities when it comes to cottage industries is low-quality products. These businesses often have little knowledge of producing high-quality goods, leaving many unsatisfied buyers.

3. Lack of Financing Options

Traditional banks offer loans with higher interest rates than microfinance institutions. The perception of high-interest rates may be that they are due to the poor credit history and low income of the rural borrowers.

However, there are other reasons for the high cost of these loans. For example, traditional banks charge a commission for processing the loan.

The process is lengthy and demanding for bank staff and customers, so it costs more to service each loan transaction. Moreover, using outdated manual systems to process data limits efficiency, increasing costs.

In contrast, many microfinance institutions offer their customers products with lower rates and no commissions on transactions because they do not have expensive brick-and-mortar branches or costly IT infrastructure; instead, they mainly operate online or through mobile phone banking apps.

4. Government Regulations

Each state has its regulations that govern the industries, so it is important to consult your local government officials and determine the regulations before starting a business.

For example, each state restricts how many days a week a business can be open or if employees must wear certain clothing.

There may also be a restriction on when employees can take breaks during the day. As another example, there may be different child labour laws for children under 14 years old compared to children over the age of 14 years.

5. Poor Working Conditions

In the past, people worked in these spaces for up to 18 hours a day. They'd work with chemicals and dangerous tools, often without protective gear or knowledge of how to use them safely. And they were paid only a fraction of what they were worth.

In recent years, we've seen some progress. The Indian government has passed legislation that mandates fair wages and working hours for this industry.

But there are still many challenges – like limited access to markets for their products or lack of business skills – that limit their success.

6. Ineffective Marketing Strategies

Cottage industries in India need to take marketing into their own hands because there are not enough jobs available. Of course, marketing is an important part of any business, but it's essential for businesses that rely on word-of-mouth and referral.

As a result, these businesses will have to be more creative in advertising themselves. For example, they could try sending emails with their products and services attached, sponsoring events, participating in community groups, or partnering with local hotels or restaurants.

Investors want nothing short of success for the companies they invest in. But investors also know these enterprises start small and don't grow overnight. As a result, it can be difficult for them to make money as quickly as they would like from investments, so they might stop investing altogether or only offer a little before reducing investment levels even further later on down the line if things don't improve.

7. No Brand Identity

It is not uncommon for small businesses to have issues with branding and marketing. They may not have the funds or expertise to develop a strong brand identity design, which leads to a lack of awareness and visibility.

For example, if you are a fashion designer who produces clothing but doesn't have the funds or skills to create your website, people may not know that you exist because they couldn't find your products on search engines.

That is why small businesses need to identify their strengths and weaknesses to use the right platforms and techniques to reach their target audience.

8. Quality Control Issues

One major problem faced by cottage industries is quality control. The vast majority of cottage industries are family owned and operated. When the owner is also the manufacturer, they are not able to monitor the quality of their products as well as a corporation might be able to. They will often produce goods until they run out of materials instead of monitoring the quality and stopping when a sufficient amount has been made.

As a result, some buyers complain about receiving low-quality items that do not meet their expectations or are defective because they were rushed to make them before running out of materials.

9. Lack of Government Support

The Indian government has not been supportive of the cottage industries. The government's policies do not support the growth and development of cottage industries.

For example, cottage industries are only given a 15% discount on the minimum rate they need to pay on electricity charges when they purchase their power from a State Electricity Board (SEB) instead of a 50% discount if they purchase their power from private companies.

It makes it difficult for these small businesses to survive, as they will have to spend more money each month to use electricity.

10. Sustainability Issues

One major issue that many cottage industries have is sustainability. There are not as many jobs as there used to be, and the demand for handmade goods is decreasing. It means that the cottage industries have less income, which makes it hard to maintain their business operations.

Government Actions to Resolve the Problem

The government has launched a number of efforts to address the problems facing the cottage and small scale industries because of their significance. The first actions taken are as follows:

A number of organisations have been established by the Union Government to support small companies and rural communities. They include the Central Silk Board, the All India Handicrafts Board, the AH India-Handloom Board, and the Khadi and Village Industries Commission.

There are now industrial cooperatives, industrial estates, and rural industrial initiatives.

- To encourage the small-scale manufacturing sector, the Central Government has designated 807 products for exclusive manufacture.
- District Industries Centers are being created at the district level to house all the support and services needed for small and village businesses.
- The Industrial Policy Resolution of 1980 provides the following provisions for the growth of home-based and small-scale businesses:
- launching a programme to create buffer stocks of essential goods, which are frequently hard to get by. Priority will be given to the special needs of those states that depend heavily on a small number of essential raw materials.
- In order to produce as many ancillaries, small, and cottage suits as possible, the government will establish a few nucleus plants in each district. A nucleus plant would bring together the output of the auxiliary and small-scale units that fell inside its orbit.
- Increasing the cap on capital investments for small and supporting businesses.
- The Union Government has established a variety of agencies to assist small businesses and villages. The Khadi and Village Industries Commission, the All India Handicrafts Board, the AH India-Handloom Board, and the Central Silk Board are among them.

- These industries have access to credit through a variety of institutions. The small-scale sector is a priority sector for the provision of institutional credit.
- Industrial estates and rural industrial projects have been established, as well as industrial co-operatives.
- The Central Government has set out 807 goods for exclusive manufacture in the small-scale sector in order to stimulate it.
- At the district level, District Industries Centres are being developed to provide all of the services and support that small and village enterprises require under one roof.

For the development of cottage and small-scale enterprises, the Industrial Policy Resolution of 1980 contains the following provisions:

- (a) Introducing a program for building up buffer stockpiles of basic commodities that are often difficult to obtain. Special requirements of states that rely substantially on a few key raw commodities will be prioritised.
- (b) The government will establish a few nucleus plants in each district to generate as many ancillaries and small and cottage suits as possible. The output of the ancillary and small-scale units falling inside its orbit would be assembled by a nucleus plant.
- (c) Raising the capital investment ceiling for small and auxiliary businesses.

Contribution of Small Scale Industries

Small-scale industries make a significant contribution to the Indian economy. They play a crucial role in employment generation, particularly for the labor-intensive workforce. These industries also contribute to the overall industrial output, promote balanced regional development, and foster innovation and entrepreneurship. The following lists the main contributions made by small-scale industries to economic development:

According to the 73rd phase of the National Sample Survey (NSS), there are 633.88 lakh unincorporated MSMEs that are not in the agriculture sector operating across the nation in 2015–16. The MSME sector has been adding 11.10 crore jobs in terms of employment.

Small-scale industries play a crucial role in eliminating income disparities.

The surplus of these sectors is distributed among many individuals, and capital is widely dispersed in tiny amounts.

Small-scale industries help to disperse industries throughout regions and balance out regional imbalances.

Small-scale industries utilise local assets like capital and entrepreneurial skills that would have gone unused in the absence of such industries, among other things.

Conclusion

India's cottage industries are culturally and economically significant. They preserve ancient traditions while simultaneously employing a large number of people. Because these industries confront intense competition from other economies, society should

provide support to prevent exploitation and further develop them. The only solution to combat the monster of unemployment in over-populated countries like ours is to promote cottage and small-scale industries.

Cottage industries are unorganised and fall under the category of small scale industries. They use traditional ways to create consumable goods. Furthermore, these industries emerge in areas where unemployment and underemployment are common. As a result of this technique, the cottage industry benefits the economy by absorbing a large portion of the surviving workers in rural areas.

On the other hand, the industry faces numerous challenges in a variety of ways. As a result, the government is attempting to address the sector's issues since it recognises that the sector has a lot of promise in a variety of sectors if properly supported.

Abstract

Artificial intelligence (AI), the ability of a digital computer or computer-controlled robot to perform tasks commonly associated with intelligent beings. The term is frequently applied to the project of developing systems endowed with the intellectual processes characteristic of humans, such as the ability to reason, discover meaning, generalize, or learn from past experience. Since the development of the digital computer in the 1940s, it has been demonstrated that computers can be programmed to carry out very complex tasks – such as discovering proofs for mathematical theorems or playing chess – with great proficiency. AI-powered solutions help businesses to respond to grievances and queries of customers quickly and address them more efficiently. The technology helps with smarter decision-making. AI coordinates data delivery, creates data consistency, analyzes trends, quantifies uncertainties, and provides forecasts to make the best decision for the company. AI helps ensure 24-hour service availability and delivers same consistency and performance throughout the day. The benefit of artificial intelligence is that it takes care of all repetitive tasks. Artificial Intelligence is poised to be a game-changer in the Indian economy. It has the potential to drive growth, create employment opportunities, and improve the quality of life for millions of Indians. However, addressing the associated challenges is crucial to realize the full potential of AI in India. With the right policies, investments, and a focus on skill development, India can harness the transformative power of AI to build a brighter economic future.

Introduction

Artificial intelligence (AI), the ability of a digital computer or computer-controlled robot to perform tasks commonly associated with intelligent beings. The term is frequently applied to the project of developing systems endowed with the intellectual processes characteristic of humans, such as the ability to reason, discover meaning, generalize, or learn from past experience. Since the development of the digital computer in the 1940s, it has been demonstrated that computers can be programmed to carry out very complex tasks – such as discovering proofs for mathematical theorems or playing chess – with great proficiency. AI-powered solutions help businesses to respond to grievances and queries of customers quickly and address them more efficiently. The technology helps with smarter decision-making. AI coordinates data delivery, creates data consistency, analyzes trends, quantifies uncertainties, and provides forecasts to make the best decision for the company.

Capability-Based Types of Artificial Intelligence

Based on how they learn and how far they can apply their knowledge, all AI can be broken down into three capability types: Narrow AI, general AI and super AI. Here's what to know about each.

Narrow AI

Narrow AI, also known as artificial narrow intelligence (ANI) or weak AI, describes AI tools designed to carry out very specific actions or commands. ANI technologies are built to serve and excel in one cognitive capability, and cannot independently learn skills beyond its design. They often utilize machine learning and neural network algorithms to complete these specified tasks.

For instance, natural language processing is a type of narrow AI because it can recognize and respond to voice commands, but cannot perform other tasks beyond that.

Some examples of narrow AI include image recognition software, self-driving cars and AI virtual assistants.

Artificial General Intelligence (AGI)

Artificial general intelligence (AGI), also called general AI or strong AI, describes AI that can learn, think and perform a wide range of actions similarly to humans. The goal of designing artificial general intelligence is to be able to create machines that are capable of performing multifunctional tasks and act as lifelike, equally-intelligent assistants to humans in everyday life. Though still a work in progress, the groundwork of artificial general intelligence could be built from technologies such as supercomputers, quantum hardware and generative AI models like ChatGPT.

Artificial Super Intelligence

Artificial Super Intelligence (ASI), or super AI, is the stuff of science fiction. It's theorized that once AI has reached the general intelligence level, it will soon learn at such a fast rate that its knowledge and capabilities will become stronger than that even of humankind.

ASI would act as the backbone technology of completely self-aware AI and other individualistic robots. Its concept is also what fuels the popular media trope of "AI takeovers." But at this point, it's all speculation.

"Artificial superintelligence will become by far the most capable forms of intelligence on earth," said Dave Rogenmoser, CEO of AI writing company Jasper. "It will have the intelligence of human beings and will be exceedingly better at everything that we do."

Functionality-Based Types of Artificial Intelligence

Functionality concerns how an AI applies its learning capabilities to process data, respond to stimuli and interact with its environment. As such, AI can be sorted by four functionality types.

Reactive Machine AI

Reactive machines are just that — reactionary. They can respond to immediate requests and tasks, but they aren't capable of storing memory, learning from past experiences or improving their functionality through experiences. Additionally, reactive machines can only respond to a limited combination of inputs. Reactive machines are the most fundamental type of AI.

In practice, reactive machines are useful for performing basic autonomous functions, such as filtering spam from the email inbox or recommending items based on the shopping history. But beyond that, reactive AI can't build upon previous knowledge or perform more complex tasks.

Reactive Machine AI Examples

IBM Deep Blue: IBM's reactive AI machine Deep Blue was able to read real-time cues in order to beat Russian chess grandmaster Garry Kasparov in a 1997 chess match.

Netflix Recommendation Engine: Media platforms like Netflix often utilize AI-powered recommendation engines, which process data from a user's watch history to determine and suggest what they would be most likely to watch next.

Limited Memory AI

Limited memory AI can store past data and use that data to make predictions. This means it actively builds its own limited, short-term knowledge base and performs tasks based on that knowledge. The core of limited memory AI is deep learning, which imitates the function of neurons in the human brain. This allows a machine to absorb data from experiences and "learn" from them, helping it improve the accuracy of its actions over time.

Today, the limited memory model represents the majority of AI applications. It can be applied in a broad range of scenarios, from smaller scale applications, such as chatbots, to self-driving cars and other advanced use cases.

Limited Memory AI Examples

Chatbots and Virtual Assistants: Chatbots and virtual assistants are forms of limited memory AI that use deep learning to mimic human conversation. As users interact more with these systems, they learn from this data and remember details about the user, allowing them to provide relevant and personalized responses.

Self-Driving Cars: Self-driving cars continually observe and process environmental data around them as they travel on the road. This helps them predict when they need to turn, stop or avoid an obstacle.

Theory of Mind AI

Theory of mind refers to the concept of AI that can perceive and pick up on the emotions of others. The term is borrowed from psychology, describing humans' ability to read the emotions of others and predict future actions based on that information. Theory of mind hasn't been fully realized yet, and stands as the next substantial milestone in AI's development.

Theory of mind could bring plenty of positive changes to the tech world, but it also poses its own risks. Since emotional cues are so nuanced, it would take a long time for AI machines to perfect reading them, and could potentially make big errors while in the learning stage. Some people also fear that once technologies are able to respond to emotional signals as well as situational ones, the result could mean automation of some jobs.

Theory of Mind AI Example

Rafael Tena, senior AI researcher at insurance company Acrisure, provided an example to illustrate how a successful theory of mind application would revolutionize the technology: A self-driving car may perform better than a human driver the majority of the time because it won't make the same human errors. But if we, as a driver, know that the neighbor's kid tends to play close to the street after school, you'll know instinctively to slow down while passing that neighbor's driveway — something an AI vehicle equipped with basic limited memory wouldn't be able to do.

Self-Aware AI

Self-aware AI describes artificial intelligence that possesses self-awareness. Referred to as the AI point of singularity, self-aware AI is the stage beyond theory of mind and is one of the ultimate goals in AI development. It's thought that once self-aware AI is reached, AI machines will be beyond our control, because they'll not only be able to sense the feelings of others, but will have a sense of self as well.

Role of Artificial in Economic Development

Improved Customer Experience

AI-powered solutions help businesses to respond to grievances and queries of customers quickly and address them more efficiently. Chatbots combined with conversational AI with Natural Language Processing generates personalized messages for the customers that helps in finding the ideal solution for their requirement. AI tools help in reducing the strain on the staff of customer service. Ultimately, it helps in improving productivity.

Smarter Decision Making

The technology helps with smarter decision-making. AI coordinates data delivery, creates data consistency, analyzes trends, quantifies uncertainties, and provides forecasts to make the best decision for the company. As long as AI is unable to imitate human

emotions, it is going to stay unbiased and can help make the right decision for supporting business efficiency.

Research and Data Analysis

AI coupled with ML is used for analyzing data more efficiently. It helps in creating predicting algorithms and models to process data and gauge the prospective outcomes of different scenarios and trends. Further, AI's advanced computing capabilities speed up the analysis and processing of data for research and development, which could otherwise have taken a lot longer. This is one of the biggest benefits of AI in R&D activities performed by specialists.

Solves Complex Problems

The progress of AI technologies from basic ML to advanced DL models has made it easier to solve complex problems. From personalized customer interaction and fraud detection to medical diagnoses, AI is helping businesses across industries to find the right solutions to address the problems, adequately. Better efficiency in solving issues means reduced expenses and improved productivity.

Manages Repetitive Tasks

It can take a lot of time to perform recurring tasks. Moreover, when performed by humans, it can be monotonous and reduce their productivity with time. Robotic Process Automation powered by AI can automate interactions across various businesses. It helps in intimating human actions within the digital systems in the HR, marketing, IY, or sales departments for executing any business process without requiring manual effort.

Reduces Errors

Another great advantage of artificial intelligence is that it can help in reducing the chance of manual errors. Robotic Process Automation tools can take advantage of the data processing and entry jobs as it makes the systems more efficient and less likely to create any issues because of the data processing mistakes. It is good for businesses that can't afford to make even the smallest errors.

Improved Business Efficiency

AI helps ensure 24-hour service availability and delivers the same consistency and performance throughout the day. The benefit of artificial intelligence is that it takes care of all repetitive tasks. So, you can improve the business's efficiency and reduce stress on the employees. The employees will be able to perform complex business tasks requiring manual intervention.

Strengthens the Economy

Irrespective of whether artificial intelligence is taken to be a threat to the world, it might contribute more than \$15 trillion to the world economy by 2030. As per PwC's

report, the progressive advances in AI are going to increase the global GDP by up to 14% between now and 2030.

The most considerable economic growth from AI will be in North America and China. The two countries are going to account for about 70% of the global economic impact. Most technology giants are already in the process of using AI as a solution to laborious tasks. Nevertheless, the companies that are slow to adopt AI-based solutions are going to find themselves at a competitive advantage.

Enhances Lifestyle

Recently, Artificial Intelligence has evolved from a plot in a science-fiction movie to an important part of our daily lives. With the emergence of AI in the 1950s, we have experienced incredible growth in its potential. Today, we are using AI-based assistants, such as Cortana, Siri, and Alexa for interacting with the smartphones or other devices. It is also being used to predict deadly diseases, such as Leukemia and ALS.

Some platforms monitor the browsing habits to suggest the products that they think you are going to like. Even though AI keeps being a constant threat, it keeps helping us in any way.

Disaster Management

Usually, precise weather forecasting can make things like vacation planning a lot easier. Even the smallest improvement in predicting the weather can significantly impact our daily lives. In fact, it can also help with disaster management.

With accurate weather forecasts, farmers can make crucial decisions about harvesting and planting. It also makes shipping safer and easier. What's more important is it can be used to predict natural disasters that can impact the lives of many.

After researching for several years, IBM joined hands with the Weather Company and secured tons and tons of data. The partnership helped IBM access predictive models of Weather Company that provided loads of weather data, which can feed into the AI platform of IBM to improve predictions.

Conclusion

Artificial Intelligence is poised to be a game-changer in the Indian economy. It has the potential to drive growth, create employment opportunities, and improve the quality of life for millions of Indians. However, addressing the associated challenges is crucial to realize the full potential of AI in India. With the right policies, investments, and a focus on skill development, India can harness the transformative power of AI to build a brighter economic future.

Abstract

Education in the country Preparedness for ICT usage in Effective integration of ICTs into educational system is a complex and multifaceted process that involves in educational policy and planning, infrastructure, capacity building, language and content and financing. With the paradigm shift in the curriculum, teacher acts as a facilitator in a student centred learning and ICT based education makes the teaching-learning process effective. ICT implementation has given a magnificent opportunity for the Education Implementation specialists to reanalyze what we want our future leaders of India to be like. NEP 2020, an expert committee led by former Indian Space Research Organisation (ISRO) Chief Krishnaswamy Kasturirangan were recommended the education policy which has broaden the horizon of India education system mainly focussed on technological based education which will develop in students' inventive thinking, higher- order thinking and sound reasoning, effective communication, and high productivity. This paper presents the highlights of NEP 2020 and various provisions for ICT in Teacher Education and the present status of ICT usage in Higher Education with some challenges for implementation. Lastly, some suggestions are put forward for successful implementation of ICT in teacher education in Nagaland.

Keywords: *ICT tool s, Higher Education,*

Introduction

ICT stands for Information and Communication Technology. It is defined as the application of technology in processing of information and communication which includes the use of computers and software to not only convert and store but also process, transmit and retrieve information. National policy on ICT (NCF 2005), has defined it as all devices, tools, content, resources, forums, and services, digital and those that can be converted into or delivered through digital forms, which can be deployed for realizing the goals of teaching learning, enhancing access to and reach of resources, building of capacities, as well as management of the educational system. With the merging of technologies, it has become imperative to take a comprehensive look at all possible information and communication technologies for improving teacher teacher education, teacher-educators with varying levels of awareness of and ability to use ICT in teaching process and teacher-trainees with

Abstract

A digital payment, sometimes called an electronic payment, is the transfer of value from one payment account to another using a digital device or channel. Digital payment is referred to as those payments that take place using the various types of electronic medium. These methods do not require payment to be made in the form of cash or providing cheque. One of the major objectives of Digital India is to achieve “Faceless, Paperless, Cashless” status. The promotion of digital payments has been accorded the highest priority by the Government of India to bring each and every segment of our country under the formal fold of digital payment services. Various digital payments make the customer ease of payments. Banking cards are the most widely used digital payment system in India. It offers a great set of features that provides convenience as well as security to the users. Unstructured Supplementary Service Data can be used for carrying out cashless transactions using mobile, without the need of installing any banking app. AEPS can be used for all the following banking transactions such as balance enquiries, cash withdrawal, cash deposit, aadhaar to aadhaar fund transfers. UPI is the latest digital payment standard where the user having a bank account can transfer money to any other bank account using UPI based app. and the methods are Mobile Wallets, Point of Sale Terminals, Mobile Banking and Internet Banking.

Keywords: Digital Payment, Government of India, Banking Cards.

Introduction

A digital payment, sometimes called an electronic payment, is the transfer of value from one payment account to another using a digital device or channel. This definition may include payments made with bank transfers, mobile money, QR codes, and payment instruments such as credit, debit, and prepaid cards. Digital payments can be partially digital, primarily digital, or fully digital.

Digital payment is referred to as those payments that take place using the various types of electronic medium. These methods do not require payment to be made in the form of cash or providing cheque.

A partially digital payment might be one in which both payer and payee use cash via third-party agents, with payment providers transferring the payment digital

IMPACT OF NATIONAL EDUCATION POLICY (NEP2020) IN HIGHER EDUCATION INSTITUTIONS IN INDIA

Dr. D. Rajasekaran

Assistant Professor

Department of Commerce – Banking and Insurance

Nallamuthu Gounder Mahalingam College

Abstract

NEP is the first education policy of 21st century. During the COVID-19, the only positive that happened in the field of education in India was this policy which promises to transform the education system of India. As they say, change in the law of nature but this change was overdue for more than 35 years. The last time we saw a similar change in the field of education was back in the year 1986. For anything to survive in this dynamic world it is important to adapt to the changing scenario. Same goes for education, with changing information and communication technology (ICT), industrial requirement, there is need for change in the way we learn. And as the global scenario in education has been changing rapidly witnessing a paradigm shift in the overall system. It was important for India also to catch up with that change, an effort in this direction has been made through NEP 2020 to reform the education system in India. The study is purely qualitative in nature as it relies solely on secondary data sources. And the secondary data sources used are books, journals, research articles, websites, newspaper, and different government publications. An effort is made to study the provisions of the policy and how these will contribute towards improving the education at school level and in the higher education. The study will also look into the challenges in implementing those provisions in place of the existing system of education in India.

Keywords: NEP 2020, School Education, Information and Communication Technology (ICT), Higher Education, Reforms.

Introduction:

India being one of the largest countries in the World when it comes to population. Keeping in view this fact it becomes really important that the focus should be on better education and skill development which has to do with the human resource development. Education is a basic necessity which sets the base for so many things. It is a prerequisite for developing human potential, creating equality in society and promoting National Development. Many efforts were made in this direction from time to time with constitution of various committees and commission and incorporation their recommendations into the education system. After independence, India has come up with three policies at the National level. The first was national education policy in India in the year 1968 and the second in 1986 which was revised in the year 1992. The third being the recent one which came in the year 2020 (Pankaj Thakur). With such a large population it is

SKILL DEVELOPMENT IN SCHOOLS AND HIGHER EDUCATIONS

Dr. D. Rajasekaran

*Assistant Professor of Commerce B & I
Nallamuthu Gounder Mahalingam College, Pollachi, Tamilnadu*

Abstract

Skill development is a prerequisite for entrepreneurship and self-employment in the modern, globalized world. For India's economic progress in the twenty-first century, it is undoubtedly urgent. Vocational education must now be taught to all students as a required component of the curriculum. Education is the ideal tool for fostering the development of skills. It can contribute to a person's overall development. The curriculum ought to include instruction in vocational fields. This will lower the price of skill development. Additionally, youngsters learn faster than more experienced adults. When these kids are adults, they will be able to support themselves financially. They can get knowledge of the worth of money and experience what it's like to work for their money. These kids can also pick up some fundamental marketing techniques. It ought to be carried out with a teacher in charge. There should be new schools built, and the ones that already exist should be converted into a form of industrial school. An industrial school is a school that offers both academic and vocational education in this context. It works best for residential schools. It can be modified and used with other schools as well, though. The current study highlights the necessity and significance of including skill development in curricula for both schools and higher education.

Key Words: Skills, Skill development, Schools and higher Education

Introduction

The formative years of a student are spent acquiring knowledge mostly through books in schools and colleges. And, although this knowledge helps the students develop their personalities, it fails to arm them with practical skills that give them a better chance at the job market. 90% of employment opportunities need the youth to be skilled in some vocation. But, the lack of skills leads to a failure in the youth to secure the job of their dreams. Today, there is a greater demand for skilled workers. So, it becomes important that the pedagogy emphasizes skill development for students that prepare them for their future careers. Let's try and understand why skill development is a necessary part of international school and high school education and how it helps students.

Importance of Skill Development

- It is important to empower students with skill-based training as the development of our economy depends upon them. Here's why skill development in school is important:
- The skill development process helps students think beyond grades. It helps them tap into their capabilities, develop real-life skills, and prepare themselves to be successful in the careers of their choice.

Dr. D. Rajasekaran

Assistant Professor
Department of Commerce-Banking & Insurance
NGM College

Abstract

Health care is the prevention, treatment, and management of illness and the preservation of mental and physical wellbeing through the services offered by the medical, nursing, and allied health professions. According to the World Health Organisation, health care embraces all the goods and services designed to promote health, including “preventive, curative and palliative interventions, whether directed to individuals or to populations”. The organised provision of such services may constitute a health care system.

Introduction

Health Care Activity means all activities aiming at: advancement and improvement of health, prevention of diseases and injuries, diagnosis, treatment, recovery and medical rehabilitation of citizens. Health care, or healthcare, is the improvement of health via the prevention, diagnosis, treatment, amelioration or cure of disease, illness, injury, and other physical and mental impairments in people. Health care is delivered by health professionals and allied health fields.

Medicine, dentistry, pharmacy, midwifery, nursing, optometry, audiology, psychology, occupational therapy, physical therapy, athletic training, and other health professions all constitute health care. The term includes work done in providing primary care, secondary care, and tertiary care, as well as in public health. Social care services provide support to people with learning disabilities, physical disabilities/illnesses and mental illnesses. This support can cover practical activities, personal care and social work, intended to help the people receiving social care to live comfortably.

Health care system in India

Traditional Healthcare Systems in India

In India, in addition to existence of modern medicine, indigenous or traditional medical practitioners continue to practice throughout the country. Popular indigenous healthcare traditions include Ayurveda, Siddha, Unani, Homeopathy, Naturopathy, and Yoga.

The **Ayurveda** (meaning science of life) system deals with causes, symptoms, diagnoses, and treatment based on all aspects of well-being (mental, physical, and spiritual). These professionals, traditionally, have been inheriting the skills from their ancestors. However, with the advent of education, a variety of institutions offer training in indigenous medical practice.

Abstract

Information & Communication Technology (ICT) has become one of the basic building blocks of modern society. There is a wide spread belief that ICTs have an important role to play in changing and modernizing educational systems and ways of learning. ICT can provide more flexible and effective ways for professional development for teachers, improve pre- & in-service teacher training and connect teachers to the global teacher community. Teaching is becoming one of the most challenging professions in our society where knowledge is expanding rapidly and modern technologies are demanding teachers to learn how to use these technologies in their teaching. This topic mainly focuses on different areas such as educator's pedagogy influencing the effective use of computers for teaching purposes, Impact of training and experience in using ICT by in-service teachers, Impact of ICT diffusion, participatory development of teaching and learning, the effectiveness of using internet as a principal information resource in teaching and learning activity in higher educational institutions, teacher educators' ICT competencies, usage, and perceptions, Computer based technology and its pedagogical utility, ICT usage in Teacher Education, ICT adoption among secondary school teachers, ICT In initial teacher education, Teachers' incorporation of ICT in classroom teaching, Computer and Internet awareness in school going students, e- Training the future world of education, Utilization of computer technology in remedial instruction and modern ICT trends in teaching technology and other related areas.

Keywords: Information & Communication Technology (ICT) and Higher Education Teachers

Introduction

Today's technologies are essential tools for teaching and learning. A variety of Information and Communication Technology (ICT) can facilitate not only delivery of instruction but also learning process itself. Moreover, ICT can promote international collaboration and networking in education and lifelong professional development for today's teacher. There's a range of ICT options – from videoconferencing through multimedia delivery to websites – which can be used to meet the challenges teachers face today. ICT can change the way teachers teach and that it is essential useful in supporting more student centered approaches to instruction and in developing the higher order skills and promoting collaborative activities. To use these tools effectively and efficiently, teachers need visions of the technologies' potential, opportunities to apply them, training

Introduction

ICT tools stand for Information Communication Technology tools. The ICT tools means to digital infrastructures like computers, laptops, printers, scanners, software programs, data projectors, and interactive teaching box.

The ICT devices are the latest tools, concepts and techniques used in student-to-teacher, student-to-student interaction for example: - clicker devices, mobile applications, flipped classroom) for information and communication technology.

Every aspect of our lives is driven by technology. We are growing more and more reliant on new developments as technology advances. It not only makes our lives simpler but also more efficient. When we are discussing the role of ICT in our lives, how can we neglect the transformations that are happening with the introduction of ICT in education? This article revolves around ICT in education, how ICT positively affects the way students learn and also the advantages of ICT in education. Before we dive into them, let us look at what is ICT in education.

Ict Enabled Tools for Effective Teaching and Learning Process

Following tools are used in the Teaching learning process in Online- Offline mode of instruction. During lockdown these ICT tools proved to be a boon for making the teaching learning process easy and accessible to all students.

1. Learning Management System (MOODLE and Google Classroom)

Moodle stands for Modular Object-Oriented Dynamic Learning Environment and statistics. Moodle is free software, a learning management system providing a platform for e-learning and it helps the various teachers considerably in conceptualizing the various courses, course structures and curriculum thus facilitating interaction with online students. It is configurable, highly-flexible, and feature-rich. RSCOPR has a self-customized MOODLE developed by Digital Content development team. (<https://lms.jspmrscopr.edu.in/>).

It is a very useful platform to share all learning resources, videos, sharing webpage. Moodle supports a range of media to present or link to learning materials, support the students and to assess their learning. It is able to provide automated assessment in the form of quiz, and give immediate detailed feedback to the students. The messaging system

Abstract

Giving women the freedom or power to live the way they want is what empowerment means. It allows them to identify their skills, knowledge & abilities to make their own decisions. It is a dynamic & growth process for women which includes awareness, attainment & actualization of skills. For the socio-economic development of any society, women empowerment is essential. It is important for women to identify themselves with self confidence & esteem. The confident smile on the faces of women is the measurement of their empowerment. Skills development is a key to success which improves productivity, employability and earning opportunities. It is the bridge between job and workforce. Today, it is considered as an important and indispensable tool for women empowerment. Indian women face the majority of barriers to accessing skills and productive employment. A large effort is needed to create a skilled workforce for creating an economic prosperity.

Keywords: Women, Empowerment, Skills, Employment and workforce.

Introduction

Women play an important role in enhancing the well-being of the family and society. In recent decades, they have been active participants in various economic and social activities, but their efforts remain unrecognized. In this male-dominated society, they are still subjected to discrimination in the social, economic, and educational fields. Raising women's awareness of their rights and strengthening their self-confidence is a central challenge. Empowering women means giving them the freedom or the power to live as they see fit. It helps them identify their skills, knowledge and capacities for making their own decisions. It is a dynamic & growth process for women which includes awareness, attainment & actualization of skills. For the socio-economic development of any society, women empowerment is essential. It is important for women to identify themselves with self confidence & esteem. The confident smile on the faces of women is the measurement of their empowerment.

Skills development is a key to success which improves productivity, employability and earning opportunities. It is the bridge between job and workforce. Today, it is considered as an important and indispensable tool for women

PERCEPTION TOWARDS OTT PLATFORM (A STUDY WITH SPECIAL REFERENCE TO COIMBATORE DISTRICT)

Ms. S. Maha Lakshmi

Assistant Professor in Commerce

Department of Commerce – Banking and Insurance
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

The patterns of content consumption have changed drastically over a period of the last 20 years and as technology is making advancements in almost every arena, the evolution can be seen in the trends of entertainment and media services. Consumers have now turned towards Over-The-Top i.e. OTT Platforms which allow them to stream their choice of content via the means of the internet, instead of holding on to the more traditional forms of media. Consumers are now ready to pay more and more in order to customize their streaming experience at their convenience and this in turn is helping the entertainment industry thrive. Ever since the lockdown was imposed in the country in lieu of the Corona virus pandemic, more and more consumers are seeking out ways to keep themselves entertained at home. Currently numerous OTT video platforms are available for consumers to encourage them. These OTT video platforms are developed to reach customers easily through advanced provisions and technology. With the rapid advancement of technology, OTT services are advancing at a rapid rate.

Keywords: OTT Platform, Technology, Online service

Introduction

Watching movies and other digital content in India has been a consistent activity and a part of the lifestyle that provides relaxation and recreation from the frantic professional work. People from all age groups love to consume digital content via movies, web series, one-shot films, etc. The key aspect has been the shift in the medium on which these movies and series are consumed.

In the early digital era viz. the 1990s to 2010s, the cinemas and television were the major platforms on which movie content was consumed. The coverage and reach of these two platforms covered even the rural parts of India. Thus, people developed behaviour of watching movies at the cinemas as well as television. And since then with the internet developing quite fast, the medium of cinemas and television has been overtaken by OTT Platforms.

With the COVID-19 pandemic fuelling the OTT wave even further, impacting the cinemas to shut down; has helped the OTT players to set a strong foothold as the prime medium for watching movies, web series and much more digital content. This has impacted the Cinemas considerably in terms of revenue and market share that

leads to direct competitive rivalry between the two mediums viz. OTT and Cinemas despite differences in business model.

OTT (Over the Top) Platforms are web-based digital media libraries that enable users and viewers to stream different types of media content of several genres and languages. These platforms have gained a considerable audience and viewership over the last half-decade. Disney+ Hotstar, Amazon Prime Video, Netflix, Sony LIV are some of the leading OTT platforms in India.

These OTT platforms were a substitute and mainly a partner to the mainstream Cinema exhibition companies. The Cinema chains like INOX and PVR were the chief players in the entertainment industries that helped movie production companies to distribute their movies all across the country. Cinemas have been the prime platform for viewers and audience to watch movies firstly.

The major stimulator for the rivalry between OTT and Cinemas is the shift in consumer preferences towards OTT platforms for consuming digital content over the past 3-4 years since 2019. People have switched to OTT for several reasons and avoided going to Cinemas for watching movies.

Review of Literature

Jay Chopdar, Tanima Tarafdar (2021) conducted a study on **"A study on consumers' perception towards over the top (OTT) platforms with special reference to guwahati city"**. The aim of the study is to analyze Consumers preference towards OTT platforms and DTH services. The sample chosen for this study is 100 from Guwahati city. Judgement sampling method is used for this study. Tool used for this study is Anova. Primary data is collected for this study. The findings of this study is to identify the factors influencing consumers choice towards OTT platforms and also their level of satisfaction towards the services of OTT

Sony Varghese, Selvin Chinnaiah, (2021) conducted a study on **"Is OTT industry a disruption to movie theatre industry "**. The aim of the study is to analyze the Movie theatre industry and OTT industry in India. The sample chosen for this study is 326 from kochi. Convenient sampling method is used for this study. Tool used for this study is Anova and correlation. The study conclude on how movie theatres compete to stay relevant, in the minds of their consumers in the current marketplace, where video content is easily accessible on OTT platforms from the convenience of their homes.

Daniel Varun Paul (2020) conducted a study on **"A Study on Over the Top Platforms on DTH and its Impact on Consumer Behaviour"**. The aim of the study is to analyze whether OTT platforms can completely replace DTH. The sample chosen for this study is 114 from Bangalore. Convenient sampling method is used for this

study. Tools used for this study is Cronbach alpha , Descriptive analysis .The study conclude that mobility and price were the two primary factors that determine consumer choice and it was found that people prefer streaming content on OTT platforms.

Anindita Dey, Rahul Chanda (2022) conducted a study on " **A Study on OTT Content Versus Theatrical Released Cinema Preferences Among the Urban Population of Guwahati** " The aim of the study is To analyze the demand for Over-the-top content over TV and Cinema. The sample chosen for this study is 200 from Guwahati city. Convince and snowball sampling method is used for this study. The study concludes that whether the preferences of the viewers are diverting towards OTT content or it remains with commercial cinema released in theatres.

Statement of the Problem

The OTT (Over-The-Top) media platform is a digital media service that is offered directly to subscribers over the Internet. OTT bypasses corporations that have traditionally served as a regulator or distributor of comparable material, such as string, radio, and satellite TV channels. It has also been extended to no-carrier Cell phones, which charge all dispatches as data, thereby eliminating monopolistic competition.

An examination directed by Gomathi in his study have found that, the development of online streaming services like Netflix and Amazon Prime Video, among others, means that children and teenagers now have access to uncensored content because digital content on these OTT platforms is made available to the general public without any filtering or screening and there is no law or autonomous body to monitor and manage it. As is the case, OTT platforms ought to be in charge of promoting digital awareness that is, consumers ought to be made aware of the effects of their streaming and should determine whether watching those videos is really necessary. In addition, it is the viewer's responsibility to ensure that our children do not have access to such content, which can assist in accomplishing the very purpose. From this study following questions has been raised, what are the factors influencing OTT platforms usage? , and also to know about the customer perception ?

Objective of the Study

To find out the solution for the above problems, the present study has been undertaken with the following objectives. They are

- To determine the factors influencing the users to OTT platforms.
- To study the customers' perception toward OTT platforms

Research Methodology

The present study is based on primary data by distributing the questionnaire containing relating to socio economic profile to the OTT customers. Necessary guidance was given to the respondents for filling up the questionnaire.

Source of Data

Data collection is the one of the most important aspect of research. Primary data and secondary data were used in the study.

Sampling

The data required for the study have been collected by way structured questionnaire in order to know perception towards OTT platform ,satisfaction towards OTT platform, reason for using OTT platform .120 questionnaire are collected and 120 questionnaire are taken for analysis. Convenient sampling method is adopted to select the sampling customers .

Majority of the respondents 54(45.0%) falls between the age group 18-25 years. Majority of the respondents 74 (61.7%) are under category of female .Majority of the respondents 66 (55.0%) are unmarried. Majority of the respondents 25 (20.8%) are students. Majority of the respondents 45(37.5%) are earning below 1 lakhs. Majority of the respondents 88(73.3%) are living in nuclear family. Most of the respondents 35 (29.2%) are earning of 2 members. Most of the respondents 84 (36.7%) are mostly preferring are Disney + hot star. Majority of the respondents 64(53.3%) of them using Tamil language. Majority of the respondents 46(38.3%) are most of them have subscribed between 1-2 channels. Majority of the respondents (4.5%) are mostly spending 1-2 hours to watch OTT platforms. Most of the respondents 12 59 (49.2%) are known this OTT platform by Advertisement. Majority of the respondents 42(35.0%) most of them selected for easy to use OTT platforms. Majority of the respondents 46 (38.3%) are mostly attracted by No ads . Majority of the respondents 28(23.3%) have liked both comedy and action genres equally. Majority of the respondents 56 (46.7%) are using mobile and tablets. Most of the respondents 60(50%) of them are using OTT platform at weekly. Most of the respondents 38(31.7%) of them are preferring to watch OTT platforms at night timing only. Majority of the respondents 59(49.2%) of them are using OTT platforms for 2 years. Majority of the respondents 26(21.7%) of them are spending amount for free. Majority of the respondents 44(36.7%) of them are willing to pay in UPI App . Majority of the respondents 70(58.3%) have said no to get additional benefits. Majority of the respondents 37(30.8%) are reason for choosing OTT platforms to meet the need of different house members. Majority of the respondents 42(35.0%) of them are like to watch web series. Majority of the respondents 51 (42.5%) of them like OTT platform I more affordable than traditional TV. Majority of the respondents 74(61.7%) are mostly preferring OTT platforms . Majority of the respondents 45(37.5%) are like to watch in cinema hall . Majority of the respondents 72(60%) of them are saying that OTT platforms is convenient and cheaper. Majority of the respondents 35(29.2%) of them have poor internet connection problem

Satisfaction Towards OTT Platform

Data is to be collected from 120 respondents used for the questionnaire is divided into 3 parts and containing 29 questions is to allow assessing the satisfaction level of customers using OTT platforms. Satisfaction level is calculated based on standard deviation at (11.36) and average (77.25) respondents whose index value is below 65.89 is treated as “low level of satisfaction level “, whose index range between 65.90 to 88.660 is treated as ‘medium level of satisfaction level “, whose index -treated is above 88.61 is treated as” high level of satisfaction “ .Chi – square analysis has been - implemented and satisfaction level

S.no	Variables	No. of respondents %	Chi- square value	Significant /not
1	AGE 18-24 25-34 35-49 Above 50	54(45%) 30(25%) 25(20.8%) 11(9.2%)	12.940	Significant @10% level
2	INCOME Nil Below 1 lakh 1 lakh-2 lakh 2lakh-3 lakh 3lakh-4 lakh 4 lakh above	37(30.8%) 45(37.5%) 26(21.7%) 7(5.8%) 4(3.3%) 1(0.8%)	23.512	Significant @10% level
3	PREFERENCE OF OTT Netflix Amazon prime Disney +hotstar MX player Sun NXT Voot Aha Alt balaji	25(20.8%) 10(8.3%) 44(36.7%) 17(14.2%) 10(8.3%) 6(5%) 1(0.8%) 7(5.8%)	25.437	Significant @10% level
4	DEVISE USED TO WATCH OTT PLATFORM Mobile and tablet Laptop Smart TV	56(46.7%) 39(32.5%) 25(20.8%)	11.229	Significant @10% level

In order to know the satisfaction towards OTT platform by applying Chi - square. The associated variable are age, income, preference of OTT platform, devise used to watch OTT platform. When the age are increasing the satisfaction towards OTT platform reduced, When the income are increasing the satisfaction towards OTT platform reduced, When the preference of OTT platform are increasing the satisfaction towards OTT platform reduced, When the devise used to watch OTT platform are increasing the satisfaction towards OTT platform reduced.

Conclusion

From the Study have identified that the user friendliness and content richness as significant factors in the usage and promotion of OTT platform. Price sensitivity matters a lot to individuals. Cost effect makes the platform stronger than usual. It brings cost sensitivity to users and encourages to the platform. Life with ease, own comfort, and satisfaction brings the individuals closure to the OTT platform. Programme with own choice, time, location, duration makes possible everything with mobile phones. Mobile phone makes it easy to use this platform. It brings the control of an individual in all respects. Talking about millennia's to some extent and zen z, peer pressure, or as a status in society or better positions among friends does not force them to make an extensive usage of OTT. Exposure to the international content, and trends as well the other factors that influence the audiences to the platform.

Suggestion

- Current generation doesn't have the patience to wait for a show or movie to air on a linear platform like television. This viewer wants the content instant and on-demand
- From content selection to payment mechanism, all aspects of the user's experience must be properly managed to meet the expectations of their distinct audience base

WOMEN EMPOWERMENT TOWARDS RETAIL BUSINESS (A STUDY WITH SPECIAL REERENCE TO POLLACHI TALUK)

MS. S. Mahalakshmi

Assistant Professor in Commerce
Department of Commerce – Banking and Insurance
NGM College, Pollachi

Abstract

Women play multiple roles in every stage of her life. Many women select to be entrepreneurs to manage both household & business activities. Work-life balance means balancing between personal life and professional life effectively. A sound and healthy working life are required to maintain effective balance between personal life and professional life. There is a dilemma in women nowadays in attaining perfection both in their professional and personal life. In the present competitive world entrepreneurs need to face many challenges and those must be handled properly. Women entrepreneurs are overburdened and find it increasingly difficult to balance their work & life roles. Therefore, the major objective of the present study is to suggest appropriate measures for the work-life balance (WLB) and factors that affect & creates the gap between personal & professional life. To achieve this data is collected from secondary sources. The researcher provides suggestions and recommendations to deal with the major Work-life balance issues faced by women entrepreneurs.

Keywords: *Women entrepreneurs, work-life balance, professional and personal life, etc.*

Introduction

Retail stores are defined as a shop that sells one type of merchandise and retailers tend to overload their stores with different products as possible to reach the highest sales per square meter. Nowadays, due to the rapid changing in the fashion industry, stores have to be designed and modernized to have a specific image that attracts more customers and in turn increase revenues. Store design includes store layout, and the use of colors, sound, scent, and merchandise displays that affect store atmosphere and make the store more legible for customers. Different researchers claim that store image is a determinant factor for consumers in choosing a store that stimulating their purchasing decisions. In addition, many studies support that design elements support the store image, attract the attention of customers, and store loyalty rather than ambient elements .In addition, store design is considered more influential as it affects peoples' perception of the overall brand and alters customers purchasing mood According to marketing researchers, store image is an important marketing strategy that has an influential role on store loyalty and patronage decisions rather than merchandise and price. To quote the designer Leandro Artigala, "One of the key things in retail is that consumers have to feel that they're in the environment that they are looking for" Different studies show that when consumers face multiple similar options, their choice will be based on the differences between these options.

When empowerment is considered in terms of women there are four key terms which overlap to form the consensus- "option, choice, control and power". In a broad sense this describes how much flexibility a woman has to influence decisions in her family and own life; the degree to which they can influence decision making for themselves as well their family and the level of self-resilience and autonomy they possess in the functions of their own life. It can also be coined as having entitlement and confidence of a woman to take part in decision making with choice and self-interest.

Review of Literature

Dr. Padmaja, Priya.k (2022) conducted " **A Study on women empowerment through entrepreneurship in India**". The aim of the study is to analyze how women entrepreneurs play a vital role and have made significant contributions to economic growth and reduction of poverty. Sample chosen for this study is 65. Convenience sampling method is used for this study. Tool used for this study is anova. Secondary data were collected for this study. The findings of the study in the Business world women's are fighting for their independence rights and equality.

Ms. Shwetha ,Kagenavar ,Dr.G.H.kallimath (2021) conducted " **A Study on women entrepreneurship and work life balance.**" The aim of the study is to analyze how women play multiple roles in every stage of her life. The findings of the study is to deal with the major work life balance issues faced by women entrepreneurs.

Dr. Jasleen Kaur, Chandandeep Kaur (2020) conducted a " **A Study on retail therapy behavior of women in India.**" The aim of the study lies in extending the retail therapy research to Indian Shoppers. Sample chosen for this study is 703. Snowball sampling method is used for this study. Tool used for this study is t-test tool. Primary data were collected for this study. The findings of the study have important implications for the retailers.

Deena Paul (2019) conducted a " **A Study on the impact of online shopping over small retailers of women**". The aim of the study To analyze the new business pattern for achieving their customer satisfaction. Sample chosen for this study is 50. Continent sampling method is used for this study. Tool used for this study is a statistical tool. Primary Data were collected for this study. The finding of the study is turnover and profit margin of the retailers has considerably decreased in the past few years.

Statement of the Problem

Women empowerment plays a major part in the family. She holds the family together. According to the olden days tradition Women were not allowed to work They were asked to stay back at home while their husbands went to works, for them

work was household and kids. The main problem for women is experiencing specific challenges when trying to achieve a leadership role in retail management.(outland 2013) There can often be obstacles in women's way hindering their advancement in retail due to barriers of gender(nordell 2014). Women struggle with so-called second generation gender biases, which are "powerful yet often invisible barriers to women's advancement that arise from cultural beliefs about gender, as well as workplace structures, practices, and patterns of interactions that inadvertently favor men".(patel and buiting 2020)There are a number of key themed areas that will be discussed which are generally the reason for women not progressing in retail management. And it is focus on essential for assessing the growing need for work life balance policies or programmes for the working women of india. To know the women empowerment of retailing. From this study the question has been raised to identify the major constraints that creates obstacle for women empowerment in starting or running their retail business in pollachi taluk.

Objective of the Study

- To study the demographic profile of women empowerment in the retail sector.
- To identify the major constraints that creates obstacle for women empowerment in starting or running their retail business

Sources of Data

Data collection is one of the most important aspects of research. Primary and secondary data were used in this study

Sampling

The data required for the study have been collected by way structured questionnaire on order to know the women's empowerment in retail business of the total 110 questionnaires issued 110 questionnaires are collected, and 110 questionnaires are taken for analysis. The convenience sampling method is adopted to select the sampling customers

Research Methodology

The present study is based on the primary data of pollachi taluk by distributing the questionnaire containing questions relating to socio economic profile to the women empowerment in retail business. Necessary guidance was given to the respondents for filling up the questionnaire

Analysis and Interpretation

1. Simple Percentage

	VARIABLES	RESPONDENT INFORMATION	NO. OF RESPONDENTS AND PERCENTAGE

11	Location of the business	At home Near by home Distanced from home	32.7 42.7 24.5
12	Type of retail shop	Boutique Grocery Beauty parlour Pharmacy Tailoring shop Fancy store Other	18.2 19.1 13.6 4.5 27.3 10.0 7.3
13	Working years	1-3 4-6 6-10 Above 10	39.1 35.5 19.1 6.4
14	Working employees	Below 10 10-20 workers 20-30 workers Above 30 workers	65.5 28.2 5.5 9
15	Balance between work and family	Always Most of the time Sometimes Never	15.5 43.6 40.0 9
16	Sharing of household work	Daily Most of the time Sometime Never	21.8 31.8 38.2 8.2
17	Support of the family	Sometime Rarely Occasionally Others	33.6 34.5 27.3 4.5
18	Purchase of retail product	Yes No	49.1 50.9
19	Issue of the retail business	Network issue Financial issue Educational issue Technical issue Health issue	26.4 51.8 6.4 3.6 11.8
20	E-commerce platforms	Yes No	30.9 69.1

Majority 43(39.1%) respondents are between 31-40 years. Majority of 57(51.8%) respondents are living in village. Majority of 71(64.5%) women's are married in Marital status. Majority of 71 (64.5%) members are in the type of Nuclear family Majority of 28(25.5%) respondents are from the level of graduated in educational Qualification. Majority of 60(54.5%) respondents have between 3-5 family members. Majority 56(50.9%) respondents of their family income belong to Rs.21000-30000 category Range. Majority 57(51.8%) respondents having 2 earning members in their family. Majority 55(50.0%) respondents work 8 hours per day to maintain the business.

Gender Equality of Women Empowerment

Data is to be collected from 110 respondents used for the study questionnaire is divided into 3 parts and containing 20 questions is to allowed to assess the satisfaction level of women empowerment. Satisfaction level is calculated based on standard deviation at (11.29) and average (79.34). Respondents whose index value is below 68.05 is treated as "Low level of satisfaction of women empowerment ", whose index range between 68.06 to 90.62 is treated as" Medium level of satisfaction level", whose index treated is above 90.63 is treated as "High level of satisfaction level. "Chi - square analysis has been implemented to test association between the selected variables and satisfaction level .

S.no	Variables	No. of respondent	Chi- square value	Significant/not
1	AGE Less than 20 21-30 31-40 Above 40	5(4.5%) 38(34.5%) 43(39.1%) 24(21.8%)	10.105	Significant @ 10 % level
2	MARITAL STATUS Unmarried Married Widow Divorced	26(23.6%) 71(64.5%) 5(4.5%) 8(7.3%)	16.104	Significant @ 10 % level
3	NUMBER OF YEARS 1-3 4-6 6-10 Above 10	43(39.1%) 39(35.5%) 21(19.1%) 7(6.4%)	4.649	Significant @ 10 % level

4	NUMBER OF EMPLOYEES Below 10 10-20 workers 20-30 workers Above 30 workers	72(65.5%) 31(28.2%) 6(5.5%) 1(.9%)	15.658	Significant @ 10 % level
5	WORK AND FAMILY Always Most of the time Sometimes Never	17(15.5%) 48(43.6%) 44(40.0%) 1(.9%)	20.597	Significant @ 10 % level

In order to know the satisfaction of women empowerment by applying Chi - square. The associated variable are age , marital status , no. of years ,no. of employees , work and family. When the age are increasing the gender equality of women empowerment reduced, When the no. of years are increasing the gender equality of women empowerment reduced, When the marital status are increasing the gender equality of women empowerment reduced, When the no. of employees are increasing the gender equality of women empowerment reduced, When the issues in retail are increasing the gender equality of women empowerment reduced, When the , work and family are increasing the gender equality of women empowerment reduced, When the sell retail product in e - commerce platform are increasing the gender equality of women empowerment reduced

Conclusion

Because of this competitive world, people are choosing to work over their personal life. Family, friends and relatives are ignored to manage their work life. It creates conflicts between work life and personal life. Women must have complete knowledge of their changing roles in family and work. Women have to develop relevant skills and good combination of effective skills enables them to maintain healthy balance between work life and personal life. It has a long time for fighting for women's rights, equality and independence of women. Till today in backward areas, women are facing many problems. There are genuine instances of dowry, rape, harassment, abandonment and other problems that a woman has gone through in a marriage and family. They need to be strong and use these laws to protect themselves. In every case of misuse of power, there is a human story, of someone being hurt and threatened, with an extortion that leaves them bitter, sick and damaged. Fair discussion can solve biggest family issue. Men and women both need to be humanists. Whether a woman has been hurt or a man, society and law should

be sensitive to both. Instead of playing the power card, morality, forgiveness and happiness of family members should be motto. In family life ego should not take place, forgiveness can help to save a marriage.

WOMEN EMPOWERMENT TOWARDS RETAIL BUSINESS

MS. S. Mahalakshmi

Assistant Professor in Commerce

Department of Commerce - Banking and Insurance

NGM College, Pollachi

Abstract

Women play multiple roles in every stage of her life. Many women select to be entrepreneurs to manage both household & business activities. Work-life balance means balancing between personal life and professional life effectively. A sound and healthy working life are required to maintain effective balance between personal life and professional life. There is a dilemma in women nowadays in attaining perfection both in their professional and personal life. In the present competitive world entrepreneurs need to face many challenges and those must be handled properly. Women entrepreneurs are overburdened and find it increasingly difficult to balance their work & life roles. Therefore, the major objective of the present study is to suggest appropriate measures for the work-life balance (WLB) and factors that affect & creates the gap between personal & professional life. To achieve this data is collected from secondary sources. The researcher provides suggestions and recommendations to deal with the major Work-life balance issues faced by women entrepreneurs.

Keywords: *Women entrepreneurs, work-life balance, professional and personal life, etc.*

Introduction

Retail stores are defined as a shop that sells one type of merchandise and retailers tend to overload their stores with different products as possible to reach the highest sales per square meter. Nowadays, due to the rapid changing in the fashion industry, stores have to be designed and modernized to have a specific image that attracts more customers and in turn increase revenues. Store design includes store layout, and the use of colors, sound, scent, and merchandise displays that affect store atmosphere and make the store more legible for customers. Different researchers claim that store image is a determinant factor for consumers in choosing a store that stimulating their purchasing decisions. In addition, many studies support that design elements support the store image, attract the attention of customers, and store loyalty rather than ambient elements .In addition, store design is considered more influential as it affects peoples' perception of the overall brand and alters customers purchasing mood According to marketing researchers, store image is an important marketing strategy that has an influential role on store loyalty and patronage decisions rather than merchandise and price. To quote the designer Leandro Artigala, "One of the key things in retail is that consumers have to feel that they're in the environment that they are looking for" Different studies show that when consumers face multiple similar options, their choice will be based on the differences between these options.

When empowerment is considered in terms of women there are four key terms which overlap to form the consensus- "option, choice, control and power". In a broad sense this

describes how much flexibility a woman has to influence decisions in her family and own life; the degree to which they can influence decision making for themselves as well their family and the level of self-resilience and autonomy they possess in the functions of their own life. It can also be coined as having entitlement and confidence of a woman to take part in decision making with choice and self-interest.

Review of Literature

Dr. Padmaja, Priya.k (2022) conducted "**A Study on women empowerment through entrepreneurship in India**". The aim of the study is to analyze how women entrepreneurs play a vital role and have made significant contributions to economic growth and reduction of poverty. Sample chosen for this study is 65. Convenience sampling method is used for this study. Tool used for this study is anova. Secondary data were collected for this study. The findings of the study in the Business world women's are fighting for their independence rights and equality.

Ms. Shwetha ,Kagenavar ,Dr.G.H.kallimath (2021) conducted "**A Study on women entrepreneurship and work life balance**." The aim of the study is to analyze how women play multiple roles in every stage of her life. Sample chosen for this study is 100. Judgment sampling method is used for this study. Tool used for the study is anova tool. Secondary Data were collected for this study. The finding of the study is to deal with the major work life balance issues faced by women entrepreneurs.

Dr. Jasleen Kaur, Chandandeep Kaur (2020) conducted a "**A Study on retail therapy behavior of women in India**." The aim of the study lies in extending the retail therapy research to Indian Shoppers. Sample chosen for this study is 703. Snowball sampling method is used for this study. Tool used for this study is t-test tool. Primary data were collected for this study. The findings of the study have important implications for the retailers.

Deena Paul (2019) conducted a "**A Study on the impact of online shopping over small retailers of women**". The aim of the study to analyze the new business pattern for achieving their customer satisfaction. Sample chosen for this study is 50. Continent sampling method is used for this study. Tool used for this study is a statistical tool. Primary Data were collected for this study. The findings of the study are turnover and profit margin of the retailers has considerably decreased in the past few years.

Statement of the Problem

Women empowerment plays a major part in the family. She holds the family together. According to the olden days tradition Women were not allowed to work They were asked to stay back at home while their husbands went to works, for them work was household and kids. The main problem for women is experiencing specific challenges when trying to achieve a leadership role in retail management.(outland 2013) There can often be obstacles in women's way hindering their advancement in retail due to barriers of gender(nordell 2014). Women struggle with so-called second generation gender biases, which are "powerful yet often invisible barriers to women's advancement that arise from cultural

beliefs about gender, as well as workplace structures, practices, and patterns of interactions that inadvertently favor men".(patel and buiting 2020)There are a number of key themed areas that will be discussed which are generally the reason for women not progressing in retail management. And it is focus on essential for assessing the growing need for work life balance policies or programmes for the working women of india. To know the women empowerment of retailing. From this study the question has been raised to identify the major constraints that creates obstacle for women empowerment in starting or running their retail business in pollachi taluk.

Objective of the Study

- To study the demographic profile of women empowerment in the retail sector.
- To identify the major constraints that creates obstacle for women empowerment in starting or running their retail business

Sources of Data

Data nature collection is one of the most important aspects of research. Primary and secondary data were used in this study

Sampling

The data required for the study have been collected by way structured questionnaire on order to know the women's empowerment in retail business of the total 110 questionnaires issued 110 questionnaires are collected, and 110 questionnaires are taken for analysis. The convenience sampling method is adopted to select the sampling customers

Research Methodology

The present study is based on the primary data of Pollachi taluk by distributing the questionnaire containing questions relating to socio economic profile to the women empowerment in retail business. Necessary guidance was given to the respondents for filling up the questionnaire

Gender Equality of Women Empowerment

Data is to be collected from 110 respondents used for the study questionnaire is divided into 3 parts and containing 20 question is to allowed to assess the satisfaction level of women empowerment. Satisfaction level is calculated based on standard deviation at (11.29) and average (79.34).Respondents whose index value is below 68.05 is treated as "Low level of satisfaction of women empowerment ", whose index range between 68.06 to 90.62 is treated as" Medium level of satisfaction level", whose index treated is above 90.63 is treated as "High level of satisfaction level ".Chi – square analysis has been implemented to test association between the selected variables and satisfaction level.

S.NO	VARIABLES	NO. OF RESPONDENT	CHI-SQUARE VALUE	SIGNIFICANT/NOT
1	AGE Less than 20 21-30 31-40 Above 40	5(4.5%) 38(34.5%) 43(39.1%) 24(21.8%)	10.105	Significant @ 10 % level
2	MARITAL STATUS Unmarried Married Widow Divorced	26(23.6%) 71(64.5%) 5(4.5%) 8(7.3%)	16.104	Significant @ 10 % level
3	NUMBER OF YEARS 1-3 4-6 6-10 Above 10	43(39.1%) 39(35.5%) 21(19.1%) 7(6.4%)	4.649	Significant @ 10 % level
4	NUMBER OF EMPLOYEES below 10 10-20 workers 20-30 workers Above 30 workers	72(65.5%) 31(28.2%) 6(5.5%) 1(.9%)	15.658	Significant @ 10 % level
5	WORK AND FAMILY Always Most of the time Sometimes Never	17(15.5%) 48(43.6%) 44(40.0%) 1(.9%)	20.597	Significant @ 10 % level

In order to know the satisfaction of women empowerment by applying Chi - square. The associated variable are age, marital status, no. of years, no. of employees, work and family. When the age are increasing the gender equality of women empowerment reduced, When the no. of years are increasing the gender equality of women empowerment reduced, When the marital status are increasing the gender equality of women empowerment reduced, When the no. of employees are increasing the gender equality of women empowerment reduced, When the issues in retail are increasing the gender equality of women empowerment reduced, When the , work and family are increasing the gender equality of women empowerment reduced, When the sell retail product in e-commerce platform are increasing the gender equality of women empowerment reduced

Conclusion

Because of this competitive world, people are choosing to work over their personal life. Family, friends and relatives are ignored to manage their work life. It creates conflicts between work life and personal life. Women must have complete knowledge of their changing roles in family and work. Women have to develop relevant skills and good combination of effective skills enables them to maintain healthy balance between work life and personal life .It has a long time for fighting for women's rights, equality and independence of women. Till today in backward areas, women are facing many problems. There are genuine instances of dowry, rape, harassment, abandonment and other problems that a woman has gone through in a marriage and family. They need to be strong and use these laws to protect themselves. In every case of misuse of power, there is a human story, of someone being hurt and threatened, with an extortion that leaves them bitter, sick and damaged. Fair discussion can solve biggest family issue. Men and women both need to be humanists. Whether a woman has been hurt or a man, society and law should be sensitive to both. Instead of playing the power card, morality, forgiveness and happiness of family members should be motto. In family life ego should not take place, forgiveness can help to save a marriage.

Abstract :

Teachers play a pivotal role in driving educational reforms, as they are responsible for implementing interventions, innovations, and policies. As they shape the minds of the next generation, the transformation of our education system depends on the skills and qualities of our educators. In order to improve the quality of teaching and learning, it is essential to create a focused action plan for teachers at every level. Teachers actually shape the future of students, so they also build the future of our nation. Is there Because of this good contribution of them, teachers in India are now the most respected members of society and only the most gifted and knowledgeable persons are teachers. In order to provide students with the prescribed knowledge, skills and moral values, society provided all they needed by teachers or gurus. The spirit of higher status for teachers and respect for them and respect for teachers must be revived so that teachers are encouraged to include better people in their profession.

Keywords : Teacher's Role, Student, School Education, NEP 2020.

Introduction:

The National Education Policy (NEP), 2020, of India aims to transform the nation by improving its previous education policy. The NEP seeks to inculcate 21st-century skills in children and make the country's education more inclusive and flexible. It recognizes that teachers play a crucial role in achieving these goals and emphasizes the need to improve the quality of education in India. Here are a few tips on how teachers' role is key to the success of India's National Education Policy.

Teachers will be responsible for inculcating 21st-century skills, knowledge, and learning outcomes in students according to their grade level, as per NEP 2020.

1. Contribution to Curriculum Development:

According to The Sentinel, the role of teachers is no longer limited to teaching inside the four walls of the classroom. As facilitators of policy, they will act as contributors to making policies. This will help every educator to reduce the burden of their daily job challenges and will help them in the process of creating better individuals for society.

2. Implementing the New Curriculum:

Teachers play a crucial role in implementing any education-related policy or act on the ground level. The NEP 2020 focuses on a holistic approach to the development needs of students. It entirely depends on teachers what strategies they adopt in classrooms to ensure these developmental goals are met according to policy.

3. Creating an Environment of Innovation and Creativity:

The best outcome of teaching can be measured only if it is not limited to bookish knowledge and grades. Instead, it should promote pupils to think about the practical aspects of a concept and connect bookish knowledge to real-world problems. The role of teachers in the classroom according to NEP 2020 will be to promote and create an environment where students can think with a creative, critical, logical, and innovative mindset. This way, teachers can prepare students for their future life obstacles and challenges.

4. Identity Individual Interests and Treat them Accordingly:

Every student has their own unique potential and individual differences. Teachers must identify these differences in their abilities, interests, and needs to provide a personalized learning environment that can help them reach their goals. According to the new policy, teachers will receive training to identify the development needs of each individual and train them accordingly. By providing personalized learning, teachers can leverage the individual potential of their students.

5. Inculcate Lifelong Skills and Knowledge:

The ultimate goal of education in terms of a country's economic and social development is to teach students skills and knowledge that will benefit them throughout their lives. They must be able to solve problems and issues from personal to societal levels. This can be achieved only if teachers encourage self-directed learning attitudes in their students, helping them keep growing and learning throughout their lives.

6. Implement Vocational Education:

Not only in the NEP 2020, but previous policies have also emphasized the vocational aspects of education. It helps students create employment opportunities for themselves by inculcating skills obtained from local art, craft, cultural, and geographical resources, enhancing entrepreneurial skills among them. Teachers need to focus on the vocational aspect to achieve this.

Teachers' role is critical in helping students achieve their goals and in the transformation of the nation. The chances of success in reforms in policies and the nation are only possible because of the people facilitating it at the grassroots level. Therefore, teachers play an essential role in executing it properly at the grassroots level and creating the impact that's required to be created.

7. New Education Policy and Teachers Development:

Stand-alone Teacher Education institutions will be converted into multi-disciplinary institutions by 2030 offering 4-year integrated teacher preparation programme.

All fresh Ph.D. entrants, irrespective of discipline, will be required to take credit based courses in teaching/education/pedagogy/writing related to their chosen Ph.D. subject during their doctoral training period.

Ph.D. students will also have a minimum number of hours of actual teaching experience gathered through assistantships and other means. Ph.D. programmes at universities around the country will be re-oriented for this purpose

Important Views for Teachers:**Environment and Work Efficiency During Service Time :**

The primary goal of making good changes in the work environment and cultures in schools is to raise the abilities of teachers to the maximum level so that they can do their job effectively and ensure that teachers become a part of an inclusive community of students, parents, principal teachers and other supporting staff, with the only goal of being a learner.

Placement and Recruitment Policy :

In order to ensure adequate number of teachers in subjects, particularly in arts, physical education, vocational education and languages, teachers can be admitted to a school or school complex, the participation of teachers in schools can be done in accordance with the grouping of school system adopted by the state or ut governments.

Progress and Career Management :

Vertical mobility of teachers based on competency would also be the best, including outstanding teachers who have demonstrated the skills of leadership and management and trained them over time so that they can lead academic leadership in the school, school complex, D.I.E.T., B.I.T.E., as well as the concerned government departments and ministries for schooling. Teachers performing well should be identified and given step up and pay hike to encourage all teachers to do their best. The policy should have a fair career in terms of which is intended to result in permanent employment after assessment for performance and contribution and build up wage arrangements on the basis of strong merit of teachers.

Sustainable Professional Development

Continuous opportunity for teachers to improve themselves and to learn modern thought and innovation related to profession and to offer them in a variety of ways as online teacher development modules along with local, regional, state, national workshops. Teachers should develop online platforms, especially so that teachers can share their ideas and best things from time to time. Every teacher should be expected to perform timely orientation programs or faculty development programmes, as these programmes promote the latest pedagogy and competency based learning.

Professional Standards for Teachers :

A general guide set of NPST for teachers has already been prepared by the national council of teacher education, SCERT, in consultation with teachers of all levels and regions, institutions for teacher preparation and development, and institutions of higher learning as set up in its new form as a committee for professional standards setting under the general standards council in consultation with general standards setting up and institutions of higher learning.

Approach of Teacher Education :

Recognising this that teachers will need to undergo training in pedagogy, as well as teaching materials, which will have to be gradually integrated into multi – disciplinary colleges and universities. As all colleges and universities begin to move towards becoming multi – disciplinary, they aim at establishing a department of quality education that will provide a B.Ed., M.Ed. and Ph. D degree in education. The recently – introduced training in most new techniques with the prospectively tested techniques of teaching in all bod programmes can be a reform process involving the knowledge of basic literacy and numeration of education, multi – level education and assessment, teaching disabled children, teaching children with special interest, talents, using educational technology and teaching child centric and collaborative learning.

Conclusion:

NCTE by 2021, in consultation with NCERT, the new education policy 2020 should be prepared by NCFTE 2021 for a new and comprehensive teacher education framework based on the principles of the new and comprehensive teacher education. The requirements of the teacher education curriculum for vocational education should also be taken into account in NCFTE 2021. Thereafter, it is advisable to revise the NCF every year, reflecting the change in the revised NCFTE and the emerging requirements of teacher education. Finally, in order to fully maintain the authenticity

of the teacher's education system, strong action must be taken against standards institutions such as stand alone teachers education institutions in the country, including closure, if necessary. NEP teacher training program will go a long way in balancing the scale between teaching quality provided and returning rewards to the candidates in the picture. Teaching professionals can take heart in the fact that the learning experience under the NEP 2020 is a continuous process and is here to stay. Stay tuned to this space for further updates in the NEP teacher training section.

SMES AND MSMEs IN MAKE IN INDIA INITIATIVE

S.Mahalakshmi

Assistant Professor in Commerce, Department of Commerce - Banking and Insurance
NGM College, Pollachi

Abstract

The 'Make in India' initiative and the 'Atmanirbhar Bharat Abhiyaan' (Self Reliant India Campaign) have played a key role in promoting business and local manufacturing in the country, giving special thrust to Micro, Small and Medium Enterprises (MSMEs), also referred to as the backbone of Indian economy.

Keywords: *approximately, entrepreneurship, facilitated, generating employment manufacture, facilitated*

Introduction

The central government has also taken immediate response measures in the form of the Atmanirbhar Bharat Package to ensure continuity of businesses during the COVID-19 pandemic. Along with these measures, the main governing body for MSMEs in the country, i.e., the Ministry of Micro, Small and Medium Enterprises (M/o MSMEs) also has numerous schemes in place to support the budding manufacturing units across the country.

Overview of Govt. Initiatives on MSMEs

MSMEs are the backbone of the Indian economy, contributing approximately 30% of the country's GDP (Gross Domestic Product), 45% of manufacturing output and providing employment to 11 crores of India's population. The Government of India has been proactive to ensure that all the benefit of these MSME schemes reaches to the MSMEs in time. The Union Budget 2023-24 focuses on ease of doing business for MSMEs. The most important measures include:

- Emergency Credit Line Guarantee Scheme (ECLGS) has delivered additional credit to more than 130 lakh MSMEs. The ECLGS will be extended up to March 2023 expanding the guarantee cover by INR 50,000 Cr to a total cover of INR 5 Lakh Cr.
- INR 2 Lakh Cr additional credit for Micro and Small Enterprises to be facilitated under the Credit Guarantee Trust for Micro and Small Enterprises (CGTMSE).
- Raising and Accelerating MSME performance (RAMP) programme with an outlay of INR 6,000 Cr to be rolled out.
- INR 50,000 Cr equity infusion through MSME Self-Reliant India Fund.
- Udyam, e-Shram, National Career Service (NCS) and Aatmanirbhar Skilled Employee Employer Mapping (ASEEM) portals will be interlinked.
- They will now serve as portals with live, organic databases, delivering G2C, B2C, and B2B services relating to credit facilitation, skilling, and recruitment.

- Launch of Udyam Assist Platform (UAP) to bring the Informal Micro Enterprises (IMEs) under the formal ambit for availing the benefit under Priority Sector Lending (PSL).

Make in India Campaign

Make in India campaign is an initiative of GOI to encourage the multinational as well as domestic companies to manufacture their products in India. This is an ambitious flagship programme and a dream of honourable Prime Minister Mr. Narendra Modi was launched on 25th September, 2014. The main objectives of the programme are –

- To make India as Global manufacturing hub,
- To create jobs, to encourage entrepreneurs in India,
- To boost economic growth,
- To urge both local and foreign companies to invest in India
- To Foster innovation, protect intellectual property, and enhance skill development
- The new initiative is based on four pillars to boost entrepreneurship in India & it encompasses 25 sectors.
- The pillars are (1) New Processes (2) New Infrastructure (3) New Sectors and (4) New Mindset

Role of MSME's

The Micro, Small and Medium Enterprises (MSMEs) play a pivotal role in the economic and social development of India. The MSME sector is playing a major role in the manufacturing output, employment and exports. It plays a key role in the development of the economy with their effective, efficient, flexible and innovative entrepreneurial spirit. MSME sector has emerged as a dynamic and vibrant sector of the economy. It is expected that Indian economy will grow by over 8% per annum until 2020. The major advantage of this sector is its generating employment at low cost. The MSME sector is highly heterogeneous. There are different size of the enterprises, variety of products and services and level of technology. It helps in the industrialization of rural and backward areas. It reduces regional imbalances. It provides equitable distribution of national income and wealth. The role of MSME sector in Indian economy is better understood from the following fact sheet [Source: CARE Ratings]

MSME sector –Some high lights

- Indian MSME sector consists of approximately 45 million units
- Produces more than 6,000 products, ranging from traditional to high-tech items
- High product diversification: 67% of its produce is from manufacturing goods, followed by 17% from
- services, and 16% from repairs and maintenance

- Employs around 101 million people
- Accounts for 45% of the manufacturing output
- Contributes 8-9% to the country's GDP
- Accounts for 40% of the country's exports

T E Narasimhan, 'Make in India' to transform MSMEs' fortunes: Minister, The Business Standard(Chennai),January12,2015

The MSME's minister has said in a symposium on 'Growth and Prospects of MSME Sector in the Emerging Scenario' organized by the National Institute for Entrepreneurship and Small Business Development. The minister is of the opinion that the Make in India campaign has the potential to transform the fortunes of the MSME sector, enabling it to scale hitherto unheard-of heights. He viewed that this campaign is very relevant for Indian MSME's and highlighted the policy initiatives initiated by GOI to support the MSME's which will be effective from 1st of April, 2015. In 2013-14, 56 CPSUs organized 1,007 vendor development programmes (VDPs) for MSE's. In 2014-15, the target is over 55 national VDPs and 351 state VDPs across the country, to develop MSE vendors with a budget allocation of Rs 5 crores.

Conclusion

The make in India programme through New Processes, New Infrastructure, New Sectors and New Mindset aims to facilitate investment, foster innovation, enhance skill development and build a sustainable eco-system for the manufacturing infrastructure in the country. Make in India programme with the inclusion of MSME's in the New Start up policy of GOI, definitely helps this sector to prosper and grow. We view that the various policy initiatives and incentives for MSME announced under this programme, definitely the Make in India Campaign helps, supports and act as boost for MSME sector.

ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES IN HIGHER EDUCATION

S. Mahalakshmi

*Assistant Professor in Commerce,
Department of Commerce - Banking and Insurance
NGM College, Pollachi*

Abstract

Administrative support is concerned with the provision of secretarial and administrative services to students, faculty, and other customers of educational institutions. In effect, any assistance provided by administrative staff to students and faculty that benefits the institution's overall well-being constitutes an administrative support service. Despite their complementary role in the teaching and learning process, it appears from the literature that administrative support services receive little attention when it comes to students' evaluation of university services for quality assurance. This article reviews digitally available scholarly research on administrative support services in higher education. The purpose of the review was to justify the inclusion of administrative support in students' evaluations of university services for quality assurance. To do this, the study reviewed scholarly works on administrative support services in higher education. In all, 43 research articles were analyzed in terms of six criteria, namely 1) nature of administrative support in higher education 2) administrative support as service 3) customers of higher education administrative support 4) quality as necessity in administrative support 5) justification for quality assuring administrative support service 6) justification for use of students' to evaluate administrative support services. The study found that administrative support and teaching services have a direct symbiotic relationship. Quality assurance of teaching services without the same being done for administrative support services does not provide a complete picture of the overall service quality and well-being of higher education. Again, the study found that a lot of resources go into the recruitment and maintenance of administrative staff. To ensure efficiency effectiveness and accountability of this staff, there is the need for frequent evaluation. The study recommends periodic student satisfaction surveys to ascertain students' level of satisfaction with administrative support services.

Keywords: *Job motivation, Organizational identification, Perceived administrative support, Teacher.*

Employment Activities

The provision of employment services plays a particularly central role in the functioning of the labour market, especially during periods of high employment growth. Employment activities are varied and complex and so the measurement of the value of these services, both in current and constant prices, is challenging. Employment activities comprise all services relating to the search for and selection of candidates, supplying workers to clients' businesses for limited periods of time (i.e. temporary employment agencies) and other kinds of human resources provision. These activities have grown at a rapid pace in recent years because they allow businesses more flexibility in adapting to changes in economic conditions. This is particularly true for the services provided by temporary employment agencies which are strongly linked to changes in economic conditions and are often an early indicator of broader economic developments. Thus over

the last ten years, the number of temporary workers being placed by agencies has consistently grown, reflecting more flexible patterns of work. Businesses enterprises engaged in employment activities encounter low barriers to entry in the market and have relatively small capital requirements. As a consequence, there may be a large number of small service producers although the majority of turnover is often generated by large and/or international business enterprises. The existence of a large number of service producers in a market can lead to significant differentiation in the products offered. Large service producers take advantage of their size, length of experience, and international networks while smaller producers often focus on regional, sectorial or occupational “niches”. A wide range of services are offered across the division, from staffing to payroll services, outplacement, outsourcing and search and selection.

The industry is sensitive to structural changes in the market; for example, in respect of the ageing population in Europe or changes in the regulation of the labour market. Alongside the more traditional activities of employment placement and temporary employment agencies, new activities have emerged, particularly outsourcing and the services of so-called “umbrell-companies” – both classified within ISIC group 783 - Other human resources provision:

- **Outsourcing:** The client outsources the employment activity to a service producer that supplies workers to the client for a longer period of time. In practice these workers function as regular employees of the client even though they are legally and officially on the service provider’s payroll. Producers of outsourced employment activity services are either legally independent entities (known as Professional Employer Organisations - PEOs) or subsidiaries of business enterprises which transfer the administration of their personnel to this intra-group service producer and subsequently lease them back on a long-term or permanent basis. The service producer therefore becomes the official and legal employer of the workers, even though they remain under the direct supervision of their initial employer - the client. PEOs often specialise in a single specific sector, such as medical, wholesale or construction, rather than diversifying into several sectors. This allows PEOs to realise specialisation effects and economies of scale thereby enabling them to offer reduced prices to clients and enhanced benefits and administrative services to personnel. The importance of intra-group-PEOs has grown in recent times. Many business enterprises, particularly larger ones, have created PEO subsidiaries to outsource the employment of their workers. This allows them to bypass labour agreements particular to the sectors in which the workers are actually engaged, thereby reducing costs.
- **Umbrella companies:** The activities of so-called “umbrella companies” function as official employers for actual freelancers and supply them to clients on a temporary basis, usually to run a specific project. They provide freelancers with services in implementing employment contracts and payroll accounting. The freelancers benefit fiscally and professionally from being employed by such an umbrella

company (as in the case of the U.K.) or can avoid legal burdens concerning their self-employment (as in the case of France).

Price Determining Factors and Pricing Mechanisms

Differentiation of products, competitive markets, and the emergence of outsourcing and umbrella companies can make the measurement of price change challenging. The price of employment activities can depend on many factors including, the level of qualification or skill that the workers must possess, the length and type of contracts, the numbers of hours worked, the contract between the employment agency and the client, and the geographical location. In order to effectively measure the change in prices of employment activities, it is crucial to firstly consider how the workers are paid. Different relationships between the service producer, the worker (i.e. the recruited employee), and the client may lead to different pricing mechanisms; reflecting the type of services offered and the way in which the workers are paid. In this respect, the two following distinct cases should be considered:

1. Workers are employed and paid directly by the client This case is of particular relevance for placement agencies that provide services in respect of the search for and selection of candidates, and all ancillary services such as skills assessment. These services involve drawing up descriptions of positions to be filled, searching for and selecting candidates. Placement agencies may use advertisements (increasingly online), a direct approach (“headhunting”) or a combination of the two in the search for candidates. Several pricing mechanisms can be employed by placement agencies, including a fixed price, a price based on a percentage of the salary of the placed workers or re-invoicing of costs with profit. Pricing based on a percentage of the annual salary of the placed worker appears to be the most common mechanism. In this case, the placement agency records only the recruitment costs on which the price charged to the client is based; the salaries of placed workers are paid directly to them by the client and therefore the fees paid to agencies should be treated on a net basis.
2. The client pays the service producer, who in turn pays the worker. This case applies for both the activities of temporary employment agencies and other human resources provision such as outsourcing and umbrella companies. Here, the definition of the output services is an essential part of the SPPI compilation process and should be consistent with national accounting practice.

Classification Aspects:

Industry classification:

Employment activities, classified under section N - Administrative and support service activities, division 78 Employment activities, of the ISIC classification system, covers the following three classes:

1. 7810 - Activities of employment placement agencies, includes listing employment vacancies and referring or placing applicants for employment, where the individuals referred or placed are not employees of the employment agencies;
2. 7820 - Temporary employment agency activities, includes the supply of workers to clients' businesses for limited periods of time to temporarily replace or supplement the working force of the client;
3. 7830 - Other human resources, are typically provided on a long-term or permanent basis and the units classified here may perform a wide range of human resource and personnel management duties associated with this provision. The units classified here represent the employer of record for the employees on matters relating to payroll, taxes, and other fiscal and human resource issues, but they are not responsible for direction and supervision of employees.

As shown in annex A, the ISIC and NACE classifications have the same structure. NAICS has a similar structure although the equivalent of class 7810 is split into two groups namely 561311 - Employment placement agencies, and 561312 - Executive search services. The concordance between ISIC and ANZSIC is less effective since group 721 - Employment services, is separated into two classes only: 7211 - Employment placement and recruitment services, and 7212 - Labour supply services, which consists of units mainly engaged in supplying their own employees to clients' business on a fee or contract basis. Additionally, ISIC class 7830 corresponds to activities classified outside the ANZIC group 721, such as management advice and related consulting services or office administrative services.

Product Classification:

The corresponding products for ISIC 78 - Employment activities are classified in the CPC classification under group 851 - Employment services. This group is divided into two classes, 8511 - Personal search and referral services and 8512 - Labour supply services, which are defined as follows:

8511 - Personal search and referral services which is further split between:

- 85111 - Executive/retained search services, covering the provision of services such as formulation of job descriptions, specialized search and screening and testing of applicants;
- 85112 - Permanent placement services, other than executive search services, including the provision of services in respect of the testing, interviewing and referring of candidates.

8512 - Labour supply services which is further delineated by the specific nature of contracts between the client and service provider:

- 85121 - Contract staffing services, consisting of the search for and referral of a candidate to fill a specific position in the client company. Conditions and terms of employment are pre-assigned in the contract between client and staffing company

and the service provider maintains legal rights and duties with respect to the individual worker;

- 85122 - Temporary staffing services including the supply of workforce to clients on a temporary basis in order to resolve shortage of manpower;
- 85123 - Long-term staffing (payrolling) services covering the supply of personnel for extended work assignments. Under the terms of this arrangement, the client may recruit the person or persons hired by the staffing firm and assigned to their place of work, or transfer a portion of their existing workforce to the staffing firm. Long-term employees are placed on the payroll of the staffing firm, which is legally responsible for their actions, but when working they are supervised by the client. This service includes labour leasing, staff leasing, employee leasing, extended employee staffing and payrolling. The services of Professional Employer Organizations (PEOs) are not included;
- 85124 - Temporary staffing-to-permanent placement services covering the supply of personnel for temporary employment with the expectation of permanent work at the end of a trial period with the client. The employee remains on the payroll of the temporary help staffing firm until the hiring decision is made at which time he or she becomes an employee of the client or, if not, returns to the temporary help staffing firm. This service may include training, counselling, assessment, and resume upgrading;
- 85125 - Co-employment staffing services covering the supply of personnel through a staffing arrangement in which a PEO co-employs a client's workforce. The PEO and the client enter into a contractual agreement whereby the rights and responsibilities in respect of co-employees are shared or allocated, with the service provider assuming responsibility for certain activities as agreed with the client. These range from basic to full-service packages.

Industry vs. Product SPPI based SPPI

Business enterprises classified under ISIC groups 781, 782 or 783 rarely offer secondary activities classified outside division 78, except perhaps consultancy relating to employment services (classified under group 702 - Management consultancy activities n.e.c.). However, they often provide a mix of services across a range of employment activities; for example employment placement agencies may also provide human resources services. Therefore the weighting schemes for each of the industry based SPPIs should include a certain percentage of services classified as main activities of the other 3-digit industries within the division. Product based SPPIs measure the price development of all output of a service product irrespective of the industry in which the service producer is classified. In Germany labour supply services are often produced as secondary activities in the management consultancy, IT and engineering industries. Product based SPPIs will include the price development of human resources services produced by these industries.

Conclusion

Job motivation, organizational identification and perceived administrative support perceptions are significant notions for both organizations and employees as they are the reflection of the employees' relationship with their organizations. It is also important to reveal the employee perceptions regarding these concepts in terms of uncovering the main reasons underlying the attitudes and behaviours of the employees and guiding the managers during the organizational development activities. In this study, the relationships between the teachers' perceptions regarding job motivation, organizational identification and administrative support were examined. These variables, whose effects on each other had been examined separately in the literature, were brought together with a dual model within the scope of this study. Based on the result of the model, it was concluded that perceived administrative support had a partial mediating role in the effect of job motivation on organizational identification. This study is limited to the variables of job motivation, organizational identification and perceived administrative support. In future studies, the relationship between the variables and different organizational behaviour elements can be examined. Moreover, this study in which quantitative research methodology is adopted, can be combined with qualitative research methods to further examine the underlying ideas of perceptions.

E-Commerce: Sustainability Trends in Online Retail

Ms. S. MAHALAKSHMI

**Assistant Professor in Commerce, Department of Commerce - Banking and Insurance,
NGM College, Pollachi.**

Abstract

The rapid growth of e-commerce has transformed global retail landscapes, offering unparalleled convenience and accessibility to consumers worldwide. However, alongside this growth comes increasing scrutiny of its environmental impact. This abstract explores the evolving sustainability trends within online retail, focusing on key initiatives that are reshaping industry practices towards a greener future. The adoption of eco-friendly packaging solutions is highlighted as a visible and impactful trend, aimed at reducing packaging waste and minimizing environmental footprint. Companies are shifting towards using recycled materials, biodegradable alternatives, and exploring reusable packaging options to mitigate environmental impact. The commitment to carbon neutrality and emission reduction goals is examined, showcasing how leading e-commerce firms are investing in renewable energy, optimizing logistics, and promoting sustainable practices across supply chains. These initiatives not only align with global environmental targets but also enhance corporate transparency and credibility.

Introduction

In recent years, sustainability has emerged as a pivotal consideration across industries, driven by consumer demand for eco-friendly products and responsible business practices. The realm of e-commerce, with its global reach and rapid growth, has not been exempt from this shift towards sustainability. Online retailers are increasingly recognizing the importance of integrating green practices into their operations to meet consumer expectations, reduce environmental impact, and foster a positive brand image. This article explores the burgeoning trends and initiatives in green e-commerce,

highlighting how online retailers are embracing sustainability to drive innovation and enhance customer loyalty. Online retail has become synonymous with convenience, choice, and accessibility. However, as consumer awareness of environmental issues grows, so too does the demand for sustainable practices within e-commerce. This article delves into the emerging sustainability trends shaping the landscape of online retail, highlighting innovative strategies, technological advancements, and consumer-driven initiatives that are driving the industry towards a greener future.

1. Eco-friendly Packaging Solutions

One of the most visible sustainability trends in online retail is the adoption of eco-friendly packaging solutions. Traditionally, e-commerce has been criticized for excessive packaging waste. Today, companies are responding by using recycled and biodegradable materials for packaging, minimizing plastic use, and designing packaging that is both protective and environmentally responsible. Some retailers are even exploring reusable packaging options or incentivizing customers to return packaging for reuse or recycling.

2. Carbon Neutrality and Emission Reduction Goals

Many leading e-commerce companies are committing to carbon neutrality and setting ambitious goals to reduce their carbon emissions. This involves investing in renewable energy sources for their operations, optimizing transportation and logistics to reduce fuel consumption, and implementing sustainable practices across their supply chains. By transparently disclosing their emissions and progress towards these goals, companies enhance their credibility and appeal to environmentally conscious consumers.

3. Sustainable Product Sourcing and Transparency

Consumers are increasingly interested in the origins of products they purchase online, including how they are sourced and manufactured.

E-commerce retailers are responding by partnering with suppliers who adhere to sustainable practices, such as organic farming, fair trade principles, and responsible forestry. Some are even providing detailed information about product sourcing and certifications (e.g., Fair Trade, Forest Stewardship Council) to empower consumers to make informed choices aligned with their values.

4. Circular Economy Initiatives

The concept of a circular economy, where products are designed to minimize waste and maximize resources through recycling, refurbishment, and reuse, is gaining traction in online retail. Companies are exploring innovative ways to extend the lifecycle of products, such as offering repair services, promoting second-hand sales platforms, and integrating take-back programs for used goods. These initiatives not only reduce waste but also contribute to a more sustainable consumption model.

5. Leveraging Technology for Sustainability

Technology plays a pivotal role in driving sustainability in online retail. Artificial Intelligence (AI) and data analytics enable retailers to optimize inventory management, predict consumer demand more accurately, and streamline logistics, thereby reducing unnecessary transportation and storage-related emissions. Blockchain technology is being used to enhance transparency in supply chains, ensuring ethical sourcing and authenticating sustainable claims.

6. Consumer Education and Engagement

Educating consumers about the environmental impact of their purchasing decisions is essential for fostering sustainable behavior. E-commerce retailers are leveraging their platforms to raise awareness about sustainability issues, promote eco-friendly products, and empower consumers with information to make greener choices. Engaging customers through educational content, eco-

friendly shopping guides, and sustainability-themed campaigns enhances brand loyalty and encourages a collective commitment to environmental stewardship.

The Rise of Eco-conscious Consumers

Today's consumers are more environmentally aware and conscious of their purchasing decisions than ever before. According to recent studies, a significant portion of shoppers prioritize sustainability when choosing products and brands. This trend is influencing e-commerce platforms to adapt by offering sustainable alternatives, transparent supply chains, and information on product origins and environmental impact. Brands that align with these values are gaining a competitive edge, appealing to a growing segment of environmentally conscious consumers.

E-commerce Initiatives in Sustainability

E-commerce giants and smaller retailers alike are implementing various strategies to reduce their environmental footprint and promote sustainability:

- 1. Carbon Neutrality Commitments :** Many e-commerce companies are pledging to achieve carbon neutrality or reduce emissions through initiatives such as renewable energy investments, energy-efficient logistics, and carbon offset programs.
- 2. Packaging Innovations :** Reducing packaging waste is a priority for e-commerce businesses. Initiatives include using recyclable materials, optimizing packaging sizes to minimize material use, and adopting reusable packaging options.
- 3. Supply Chain Transparency :** Providing visibility into supply chains allows consumers to make informed choices about the environmental and social impact of products. Some retailers are

partnering with sustainable suppliers and conducting audits to ensure responsible sourcing practices.

4. Product Sustainability Certifications : Certifications like Fair Trade, Organic, and Forest Stewardship Council (FSC) are becoming increasingly important in e-commerce. These certifications verify that products meet specific environmental and ethical standards, giving consumer's confidence in their purchases.

5. Circular Economy Practices : Embracing circular economy principles involves extending product lifecycles through practices such as product refurbishment, recycling programs, and incentivizing product returns for reuse or recycling.

Technology and Innovation in Green E-commerce

Technological advancements are playing a crucial role in advancing sustainability in e-commerce:

1. Data Analytics : Leveraging data analytics to optimize supply chain efficiency, reduce waste, and predict consumer demand more accurately, thereby minimizing environmental impact.

2. Blockchain Technology : Utilizing blockchain for transparent supply chain management, ensuring product authenticity, and tracking sustainability credentials from source to consumer.

3. Artificial Intelligence (AI) : AI-driven algorithms can optimize transportation routes, warehouse operations, and inventory management to reduce energy consumption and carbon emissions.

4. Augmented Reality (AR) : AR technologies allow consumers to visualize products in real-world settings, reducing the likelihood of returns and associated environmental costs.

Challenges and Opportunities

While progress is being made, challenges remain in achieving widespread sustainability in e-commerce. These include logistical complexities, consumer education, and the cost of implementing sustainable practices. However, the shift towards green e-commerce presents significant opportunities for innovation, differentiation, and market leadership among retailers committed to sustainability.

Conclusion

Green e-commerce is not just a trend but a fundamental shift towards a more sustainable future. By integrating environmentally responsible practices into their operations, online retailers can meet consumer expectations, reduce their environmental footprint, and contribute positively to global sustainability efforts. As technology continues to evolve and consumer awareness grows, the role of e-commerce in promoting sustainability will only become more crucial. Embracing green initiatives isn't just good for business – it's essential for building a resilient and responsible global economy.

2. ஆற்றுப்படை நூல்களில் ஆறுபடைகளின் சிறப்புகள்

- முனைவர் பே. மஹேஸ்வரி,

முன்னுரை

தமிழ் மொழி மிகப்பழமையான மொழி அதிலிருந்துதான் இலக்கண இலக்கியத் துறைகளில் நுட்பமும் செறிவும். நிறைந்த வரலாற்று உண்மைகளை எடுத்துரைக்கப்பட்டுள்ளது. மனித சமுதாய வரலாறு ஒவ்வொரு சமுதாயத்திலும் வரலாற்றுக்கு முற்பட்ட காலத்தில் அரசு என்பது இருந்ததில்லை எனக் காட்டுகிறது. ஆங்காங்குப் பழங்குடி குழுக்களும், குல அமைப்புகளும் இருந்து மக்கள் கூட்டங்களை நெறிப்படுத்தி வழிகாட்டின. அவை சமுதாயத்திற்கு வழிகாட்டி நெறிப்படுத்தத் தேவையான விதிகளையும், உறவுகளையும் ஒழுகலாறுகளையும் பண்புகளையும் அமைத்துக் கொண்டன. அரசு தோன்றிய பிறகு அவை அறநெறிகளாகவும் பழக்கவழக்கங்களாகவும், காலத்திற்கு ஏற்ப மாறிப் புதுப்பொலிவுடன் இன்றளவும் நின்று நிலவி பெருமை சேர்த்து வருகின்றன. அந்த வகையில் நன்கு வாழ்ந்த ஒருவர் மற்றொருவரை வழிப்படுத்தி தான் பெற்ற பெரும்பேற்றை அவரும் அடைய வேண்டும் என்ற நல்ல எண்ணம் கொண்டு நெறிப்படுத்திய நூல்களே ஆற்றுப்படை நூல்கள். அவற்றில் திருமுருகாற்றுப்படையின் சிறப்பினை இக்கட்டுரை விளக்குகிறது.

திருமுருகாற்றுப்படை:

சங்கத்தொகை நூல்களில் முதன்மையாக வைத்து எண்ணப்படும் சிறப்பு வாய்ந்தது பத்துப்பாட்டு ஆகும். அகவற்பாவால் அமைந்த பத்து பாடல்களின் தொகுப்பாக இது அமைகிறது. செந்தமிழ் தெய்வமாகிய முருகப்பெருமானைப் பாட்டுடைத் தலைவனாகக் கொண்ட இந்நூல் 317 அடிகளைக் கொண்டது. ஆற்றுப்படை என்பது சங்கச் சான்றோர் பாடிய பாட்டு வகைகளுள் ஒன்றாகும். ஆற்றுப்படையாவது- ஆற்றின்கண் படுப்பது, ஆறு என்பது வழி. படுப்பது என்பது செலுத்துவது. அதாவது ஒருவர் செல்லவேண்டிய வழித் துறைகளைச் சொல்லித் தெரிவித்து, அவற்றைப் பின்பற்றிச் செல்லுமாறு செலுத்துவது ஆகும்.

7. காற்றில் மிதந்த பாடல்கள்

முனைவர் க. தனபாகம்

இயற்கையோடு இணைந்து வாழ்ந்த, வாழ்கின்ற இதயங்களின் உள்ளத்து உணர்வுகளை வெளியிடும் காலக் கண்ணாடியே நாட்டுப்புற இலக்கியங்களாகும். இவை வழிவழியாக வழங்கி வருபவை தனிமனிதப் படைப்புக்களையும் கூட்டுப்படைப்புக்களாக மாற்றும் சக்தி வாய்ந்தவை. முக்களின் அன்றாட வாழ்வில் நடைபெறும் இன்ப துன்பங்கள், விளையாட்டு, காதல், ஏக்கம், ஏமாற்றம், குடும்ப விவகாரம், பக்தி, சமூகச் சீர்திருத்தம் என்று அனைத்து உணர்ச்சிகளையும் இயம்பக்கூடிய நாட்டுப்புறப்பாடல் குறித்து ஆராய்வதே இக்கட்டுரையின் நோக்கமாகும்.

நாட்டுப்புறப்பாடல்களின் வகைகள்

“நாட்டுப்புற மக்களின் இலக்கியங்கள்”, கலைகள், பழக்க வழக்கங்கள், நம்பிக்கைகள், மருத்துவங்கள், விளையாட்டுகள் போன்ற பல்வேறு வழக்காறுகளைப் (Folklore) பற்றி ஆராயும் சமூக அறிவியல் துறையை நாட்டுப்புறவியல் துறை என்கிறோம்” (டாக்டர் ஆறு. இராமநாதன், நாட்டுப்புறவியல் ஆய்வுகள்) என்பர். இப்படிப்பட்ட அறிவியல் நோக்கில் ஆராயும் தனித்தன்மை மிக்க நாட்டுப்புறவியலில் தாலாட்டுப் பாடல்கள், சிறுவர் பாடல்கள், காதல் பாடல்கள், ஆலாத்திப் பாடல்கள், கும்மிப்பாடல்கள், தொழில் பாடல்கள், ஒப்பாரிப்பாடல்கள் ஆகியவை முக்கியமான நாட்டுப்புறப் பாடல் வகைகளாகும்.

தாலாட்டுப் பாடல்கள்

ஒரு மனிதனின் பிறப்பு முதல் இறப்புவரை நாட்டுப்புறப்பாடல்கள் வாழ்க்கையில் பின்னிப்பிணைந்து காணப்படுகின்றன. அவற்றுள் தாலாட்டுப் பாடல்கள் முக்கிய இடத்தைப் பெறுகின்றன. தாராட்டு, தாலேலோ, ஓலாட்டு, தோராட்டு, ராராட்டு, ஓராட்டு, ஊர் சோதி (தெலுங்கு), ஜோகுல (கன்னடம்) என்று வழங்கும் இப்பாடல்கள் குழந்தையில்லாத போது தாய் அடைந்ததுயரம், தாய்மாமனின் சீர், குழந்தையின் குலப்பெருமை குழந்தையைத் தெய்வத்தோடு தொடர்பு படுத்துதல் ஆகியவற்றை எடுத்து இயம்புவதாக உள்ளன.

3. பதினெண்கீழ்க்கணக்கு நூல்களில் இல்லறமே உயற்கையறம்

முனைவர் ஆ. மகாடகாமி

அறிய வேண்டியது அறம். அடைய வேண்டியது பொருள். அனுபவிக்க வேண்டியது இன்பம். மனிதனுடைய அடிப்படை வாழ்வின்னைத் தாங்கக்கூடிய ஒரு மனன்கோலாகத் திகழ்வது அறம் ஒன்றேயாகும். உறுதிப் பொருள்கள் நான்கனுள் அறம் முதன்மையானதாக வைத்துப் போற்றப்பட்டது. அறத்தின் வழியாகப் பிறத்தது தான் பொருளும் இன்பமும் என்று இலக்கியங்கள் பதிவு செய்துள்ளன. அறம் முதன்மை வாய்ந்ததாக இருப்பதற்குக் காரணம் மற்றவர்களுக்கு நன்மை செய்ய வேண்டும் என்பதேயாகும். அவ்வகையில் நீதி இலக்கியங்களில் அறத்தைப் பற்றி ஆராய்வதே இக்கட்டுரையின் நோக்கமாக அமைகிறது.

தமிழகத்தில் இருண்ட காலத்தில் உயர்ந்த வாழ்க்கை நெறிகள் மறக்கப்பட்டுச் சமூகச் சீர்கேடுகள் மிகுந்த போது மக்களுக்கு அறநெறிகளை உணர்த்தி சமூகத்தைச் செம்மைப்படுத்தும் அறநூலாக பதினெண்கீழ்க்கணக்கு நூல்கள் தோன்றின. இந்நூல்கள் மனித வாழ்வுக்கான கொடை, இல்லறம், கல்வி, பொருளின் அறம், நட்பு, ஒழுக்கம், பிணியின்மை என்று ஒவ்வொரு நிலையினையும் அறம் சார்ந்த தன்மையுடன் எடுத்தியம்பியுள்ளது.

இல்லறமென்பது இயற்கையோடு இயைந்ததென்பதே திருவள்ளுவரது முடிபு. ஆண் மக்களின் பண்பும், பெண் மக்களின் பண்பும் ஒன்று சேர்ந்த உயர்ந்த ஒழுக்கமே இல்லறவொழுக்கமாகக் கட்டமைக்கப்படுகிறது.

மனைத்தக்க மாண்புஉடையவள் ஆகீத்தற் கொண்டான்

வளத்தக்காள் வாழ்க்கைத் துணை

(கிருக்குறள் - 51)

என்ற குறளின் வாயிலாக மனைவி இல்லத்திற்கு ஏற்ற குணமுடைய வளாக இருக்கவேண்டும். தன்னைக் கொண்டவனது வருவாய்க்குத் தக்க வாழ்க்கையை நடத்தவேண்டும். குடும்பம் சிறக்கத் துணையும் அவளே என வள்ளுவர் கருத்தாக அமைகிறது.

6. சங்க இலக்கியத்தில் சுற்றுச்சூழல்

முனைவர் பா.அருள்ஜோதி
நல்லமுத்துக்கவுண்டர் மகாலிங்கம் கல்லூரி
பொள்ளாச்சி
அலைபேசி எண். 9344885715

சுற்றுச்சூழல் என்ற வார்த்தைக்குச் சுற்றுப் புறத்தைச் சார்ந்த ஒரு கூட்டமைப்பு என்ற பொதுவான பொருள் கொள்ளலாம். ஒரு உயிரினம் தன்னைச் சுற்றியுள்ள காரணிகளைப் பற்றி நன்கு அறிந்திருந்தால் மட்டுமே, வெற்றியுடன் வாழ முடியும். “சுற்றுச்சூழல் சார்ந்த அறிவியலைச் சூழலியல் (Ecology) என்று குறிப்பிடலாம். Ecology என்ற வார்த்தை Oikos என்ற கிரேக்கப் பதத்திலிருந்து தோன்றியது. Oikos என்றால் வீடு என்னும் Logos என்றால் அதைப் பற்றி அறிவது என்றும் புரிந்து கொள்ளலாம்.”

“சூழலியல் என்பது ஒரு உயிரினத்திற்கும் அதனைச் சூழ்ந்துள்ள உயிருள்ள மற்றும் உயிரற்ற காரணிகளுக்கும் இடையிலான உறவு முறையாகும்.” என்கிறார் சார்லஸ் எல்டன். மேலும், தன் விலங்கியல் சூழ்நிலை இயல் என்ற நூலில் சூழலியல் என்பது இயற்கையின் அறிவியல் வரலாறு என்றும் கூறுகிறார். சுற்றுச்சூழல் பாதுகாப்புச் சட்டம் 1986 இல் போபால் விஷ வாயு நிகழ்ச்சிக்குப் பிறகு இச்சட்டம் நடைமுறைப்படுத்தப்பட்டது. (ப-150, சுற்றுச்சூழல் கல்வி) என்கிறார் டாக்டர் சுசிலா அப்பாத்துரை அவர்கள்.

1. சுற்றுச்சூழல் பாதுகாப்புச் சட்டம் - 1986
2. காற்று மாசுபாடு தடுப்புச் சட்டம் - 1981
3. நீர் மாசுபாடு தடுப்புச் சட்டம் - 1974
4. வனவிலங்கு பாதுகாப்புச் சட்டம் - 1972
5. காடுபாதுகாப்புச் சட்டம் - 1980

எனப் பல்வேறு சட்டங்கள் இயற்கையினைக் காப்பாற்றும் பொருட்டு நடைமுறைப்படுத்தப்பட்டுள்ளன.

சூழலியலின் பிரிவுகள் தாவரச்சூழலியல் என்றும் விலங்கியல் சூழலியல் என்றும் இரு பிரிவுகளாகப் பிரிக்கப்பட்டுள்ளது.

சூழல் கூட்டமைப்பில் தாவரங்கள், விலங்குகள், மட்டுமல்லாது. மனிதனும் ஒரு உயிருள்ள அங்கமாகவான். இந்த உயிருள்ள அங்கமானது, சுற்றுச் சூழலிருந்து பிரிக்க முடியாததாகிறது. நாம் அனைவரும் ஒட்டு மொத்தமாக சுற்றுப் புறச் சூழலின் உயிருள்ள காரணிகள் (தாவரங்கள், மற்றும் விலங்குகள்) மற்றும் உயிரற்ற காரணிகளைச் (வெளிச்சம், வெப்பம், மண், காற்று) சார்ந்து உணர்ந்து கொள்ள வேண்டும். சுற்றுப்புறச் சூழலுடன் நமது உறவு ஒரு பரஸ்பரத் தன்மையுடன் அமைந்திருக்கிறது. சுற்றுச்சூழலுக்கு நாம் விளைவிக்கும் (மாசுபாடு, காலநிலை, மாற்றம், மண்ணரிப்பு) தீமை நமக்கே தீங்காக அமைகிறது. உதாரணமாக உலகக் கதகதப்பு, நீர்ப் பற்றாக்குறை, மண்ணின் வளம் குறைதல் ஆகியவற்றைக் கூறலாம்.

7. இதழ்களில் உலகளாவிய சிந்தனைகள்

திருமதி.ர.சூர்யா,
தமிழ் உதவிப்பேராசிரியர்,
தமிழ்த்துறை(அரசு உதவி)
என்.ஜி.எம். கல்லூரி,
பொள்ளாச்சி.

தகவல் தொடர்பு ஊடகங்களில் எண்ணற்ற வகை ஊடகங்கள் இருப்பினும் அச்ச வடிவில் அமைந்துள்ள இதழ்கள் இன்றியமையாததாக விளங்குகின்றன. ஏனெனில் மக்களின் அனைத்து விதமான சிந்தனைகளுக்கும் தீர்வுகளின் வழி செயல்படுவதால்தான். அத்தகைய இதழ்கள் மக்களிடம் அனைத்து கருத்துகளையும் உருவாக்குதல், பரப்புதல், என்ற அடிப்படையில் செயல்பட்டுச் சிறந்த ஒரு மக்கள் தொடர்பு ஊடகமாகத் திகழ்கின்றன. இவ்விதழ்கள் மக்களிடம் வாழ்வியலுக்கான அறிவுரைகளையும் அன்றாடம் நடைபெறும் நடைமுறைச் சிக்கல்களையும் அடையாளம் காட்டி அவற்றிற்கான தீர்வுகளை வழங்குகின்றன. இச்சமூகம் விரும்பக்கூடிய சரியான முறையில் செய்திகளையும் கருத்துகளையும் இதழ்கள் வெளியிடும்போது அதற்குரிய ஆர்வமான வாசகர்களை அவ்விதழ்கள் பெற்றுவிடுகின்றன. வாசகர்களின் எதிர்பார்ப்பை நிறைவேற்றும்படி இதழ்கள் அனைவருக்கும் பயன்படும் வகையில் செயல்பட்டுக் கொண்டுள்ளதைக் காண முடிகிறது.

அச்ச வடிவில் வெளிவருகின்ற அனைத்து இதழ்களும் பல்வேறு தலைப்புகளில் செய்திகளையும் கருத்துகளையும் வெளியிடுகின்றன. அவை தலையங்கம், விளம்பரம், சிறுகதை, கட்டுரை, நேர்காணல், இணைப்புகள், துணுக்குகள், கவிதை, வாசகர் கடிதம் போன்றவைகளாக அமைகின்றன. மக்களின் உடல் ரீதியான, மன ரீதியான சிக்கல்கள் அனைத்திற்கும் இதழ்களில் காணப்படும் சிந்தனைகளின் வழி தீர்வுகள் கொடுக்கப்படுகின்றன. சமூகத்திற்குத் தேவையான செயல், பொறுப்பு ஆகியனவற்றை உணர்த்துவதாக இச்சிந்தனைகள் கூறப்பட்டுள்ளன என்பதை எடுத்தாளும் விதமாக 'இதழ்களில் உலகளாவிய சிந்தனைகள்' என்ற இக்கட்டுரை அமைகிறது.

சிந்தனை

'சிந்தித்தல்' அல்லது 'சிந்தனை' என்பது உயிரினங்களின் மூளையில் முதன்மையாக இடம் பெறும் ஓர் அடிப்படை உணர்வு ஆகும். ஆங்கிலத்தில் இதை ஓர் அறிதிறன் வழிமுறை என்கிறோம். அதாது அறிவைப் பயன்படுத்தி பகுத்துப் பார்க்கும் திறன். மனிதனின் சிந்தனை இயற்கையை வெல்ல உதவியது. சிந்தித்தலின் மூலம் சிந்தனைகள் அல்லது எண்ணங்கள் உருவாகின்றன. இந்த எண்ணங்கள் மொழி, கலை, செயல் எனப் பல வடிவங்களில் வெளியிடப்படுகின்றன. சிந்திப்பது என்பது ஒரு செயல்படாக இருந்தாலும் சிந்திப்பதைப் பற்றி விரிவாக விவரிப்பது மிகவும் கடினமாகவே உள்ளது. சிந்தித்தல் என்பது முதலில் ஓர் அகச் செயல்பாடு என்பதால் அதைப் புற வடிவில் விவரிப்பது என்பது சிக்கலாகவே உள்ளது. இருப்பினும் உலக மக்கள் எதனை? எவ்வாறு? சிந்திக்கின்றனர் என்பதை இதழ்களின் மூலம் உலகளாவியச் சிந்தனைகளாகக் காண்போம்.

வேதாத்திரியமும் அறத்தின் மேன்மையும்

அறம் என்பது வாழ்க்கையில் பின்பற்ற வேண்டிய நெறிமுறைகள், கட்டுப்பாடுகள், விதிமுறைகள் போன்றவற்றையும் ஒவ்வொருவரும் கடைப்பிடித்து வாழவேண்டிய நற்பண்புகளையும் கூறுவதாகும். அறம், பொருள், இன்பம், வீடு எனும் நான்கு உறுதிப்பொருள்களில் அறமே முதலிடம் பெறுகின்றது. அறம் சார்ந்த வாழ்க்கைக்குப் பண்பாடு இன்றியமையாதது. இத்தகைய பெருமையுடைய அறத்தின் மேன்மையினை வெளிக்கொணரும் வகையில் அமைந்த வேதாத்திரி மகரிஷியின் அறக்கருத்துகளை இக்கட்டுரை இயம்புகிறது.

அற ஒழுக்கம்

மக்களாகப் பிறந்தவர்கள் எல்லோரும் உயர்வாக மதிக்கப்படுவதில்லை. அவர்களில் அற ஒழுக்கம் உடையவர்களே உயர்ந்தவர்கள் என மக்களால் மதிக்கப்படுகின்றனர். அற ஒழுக்கம் உள்ள ஒருவனுக்குச் சென்ற இடமெல்லாம் சிறப்பு உண்டாகிறது. இலக்கியங்கள் புராணங்கள் போன்றவற்றில் பெரியோர்களால் நல்ல செயல்கள் என்று கூறப்பட்டவை எல்லாம் அற ஒழுக்கம் என்று கருதிட வேண்டும். மனம் மொழி மெய்களைத் தீய நெறியில் செல்ல விடாமல் தடுத்து நன்னெறியில் நிறுத்தமுன்னோர்களின் நூல்கள் காட்டிய வழிமுறைகள் துணை புரிகின்றன. தூய்மையான பழக்கவழக்கங்கள், எண்ணம், சொல், செயல், பொய் சொல்லாதிருத்தல், பிறரிடத்தில் அன்பும் அருளும் கொண்டிருத்தல் ஆகியவற்றை முன்னோர்களின் வழி நின்று அறிய முடிகிறது.

அன்பு நெறி

மனித வாழ்வின் அடிப்படையே அன்பு. மண்ணில் வாழும் மாந்தர் எல்லாம் மனிதரிடத்தில் மட்டுமின்றி அனைத்து உயிரினங்களிடமும் அன்புடையவர்களாய் வாழ வேண்டும். அன்பு இல்லாத மனிதன் இவ்வுலகில் வாழ்வது என்பது அரிதானதேயாகும் என்பதைத் திருவள்ளுவர்,

“அன்பின் வழியது உயர்நிலை அஃதிலார்க்கு

என்புதோல் போர்த்த உடம்பு”(குறள் : 80)

என்று விளக்குகிறார். அன்பை வழியாகக் கொண்டு வாழ்பவனே உயிருள்ள மனிதன் ஆவான். அன்பு இல்லாது வாழ்பவன் வெறும் எலும்புகளைப் போர்த்தியிருக்கும் தோலுடைய உடம்பு மட்டுமே உடையவன். அதாவது செத்த பிணத்திற்குச் சமமானவர் என்பதைக்

பேரா. செ.மகேஸ்வரி,

என்.ஜி.எம் கல்லூரி, பொள்ளாச்சி,

குறிப்பிட்டுள்ளார். வாழ்க்கையில் இவ்வாழ்வு இனிமையாக அமைய அன்பு நெறியும் அற உணர்வும் மிகவும் இன்றியமையாதவையாகும். அன்பு இன்றி எந்த உயிரும் வளமாகவும் நலமாகவும் வாழ்வது அரிது. அன்பு நெறி தழைத் தோங்கும் சமுதாயத்தில் தான் அறம் தழைத் தோங்கும். இதனையே

“துன்பம் போக்கும் தூய நெறியே அன்பாம்” (ஞா.க.1:582)

என்று பிற உயிர்களையும் துன்பத்தைப் போக்க வேண்டுமென மகரிஷி குறிப்பிடுகிறார். பண்பாடு உயர் மனிதனை மனிதன் மதிக்கும் உயர்வான ஒழுக்கம் ஏற்படும். எல்லா நன்மைகளுக்கும் சான்றாக விளங்கும்; இவ்வாறான ஒழுக்கங்கள் உயர்ந்த சமுதாயத்தை உருவாக்கும். அன்பு உணர்வின் மூலமே தனிமனிதன் தொடங்கி அனைவரிடமும் நல்லிணக்கம்; ஏற்படுகின்றது. இல்லறமும் இனிமையாக அமைய அன்பும் அறனும் மிகமிக அவசியம் என்பதனை வள்ளுவர்,

“அன்பும் அறனும் உடைத்தாயின் இவ்வாழ்க்கை
பண்பும் பயனும் அது” (குறள் : 45)

என்ற குறள்மூலம் அன்பையே வலியுறுத்துகின்றார். அன்புணர்வு இன்றி வளரும் குழந்தைகளிடம் சரியான மனநிலை அமைவதில்லை. இதன் விளைவாக பொய், திருட்டு, கொலை, சு+து, மானபங்கம் போன்ற பழிச் செயல்கள் வெளிப்பட்டுச் சமுதாயத்தில் ஏற்படும் சிக்கல்களுக்கும் குழப்பங்களுக்கும் காரணமாகி விடுகின்றன. உடல் நலம் மனநலம் இரண்டும் சேர்ந்ததுதான் முழுமையான ஆரோக்கியமாகும்.

அருள்நெறி

இராமலிங்க வள்ளலார் மிகச்சிறந்த ஆன்மீகவாதி. சமுதாயத்தின் மீது பற்றுள்ளம் கொண்டே தன் கருத்துக்களைப் பரப்பினார். மனிதனை மரணம் இல்லாப் பெருவாழ்வு வாழ வழிவகை செய்துள்ளார். அவர் மக்கள் வாழ்வில் கடைபிடிக்க வேண்டிய அறநெறி சார்ந்த செய்திகளைக் கூறியுள்ளார். அவை அன்பின் மிகுதியையும் அருளின் பெருக்கத்தையும் உய்த்துணர்வதாகும். மனிதன் பிற உயிர்களிடத்திலும் அன்பு கொள்ள வேண்டும் என்ற உயர்ந்த எண்ணத்தை,

“அன்பெனும் கடத்துள் அடங்கிடும் கடலே அன்பெனும் உயிர் ஒளிர் அறிவே அன்பெனும் அணுவுள் அமைந்த பேரொளியே அன்புருவாம் பரிசிவமே” (அகவல் : ப-6) என்ற பாடல் அடிகளின் மூலம் வள்ளலார் கூறுவதை அறியலாம்.

கற்புநெறி

கற்பு நெறி என்பது வாழ்க்கை ஒழுக்கத்தைக் குறிக்கும் மிக உயர்ந்த சொல்லாகும். தமிழர்கள் பண்பாடு உலக மக்கள் அனைவருக்கும்

வழிகாட்டியாக அமைந்துள்ள உயர்ந்த வாழ்க்கைப் பண்பாடு. அது ஒருவனுக்கு ஒருத்தி என்ற குடும்பமும் பாசப்பிணிப்புக்குள் உறவுகளை வளர்த்து வாழ்ந்த நெறிமுறையும் ஆகும். உடல், மனம், பொருளாதாரம் ஆகியவற்றில் தகுதி செய்து கொண்ட பின்னர் இல்லறத்துக்குள் தம்மை ஈடுபடுத்திக் கொள்ளும் பண்பாடு தமிழர் பண்பாடு. கற்பு என்பது ஆண் பெண் இருபாலருக்கும் பொதுவானது என்பதை,

"கற்பு நிலையென்று சொல்ல வந்தார் இரு
கட்சிக்கும் பொதுவில் வைப்போம்" (பாரதி. கவி : 241)

என ஆண் பெண் இருபாலருக்கும் கற்பு என்பது பொதுவே என்று பாரதியார் குறிப்பிடுகிறார்.

"கற்பதனைக் காப்பாற்ற இருபாலார்க்கும்
கடமை பொதுவே" (ஞா.க 1:582)

என்று மகரிஷி குறிப்பிடுகிறார். தலைவன் தலைவி இருவருக்குமே கற்புநெறி என்பது பொதுவானதாகும். கற்பு நெறியை பற்றி மேலை நாட்டினர் அவ்வளவாகக் கவலைப்படுவதில்லை. இந்தியத் திருநாட்டில் அது உயர்ந்த நெறி மட்டுமல்லாமல் உயிர் நெறியாகவும் பின்பற்றப்படுகிறது. விஞ்ஞானம் மருந்துகளே இல்லாது தவிக்கும் நோய்க்கு இந்திய மகான்களாகிய முன்னோர்கள் முன்பே மருந்து கண்டுபிடித்து உலகிற்கு அளித்து விட்டனர். அந்த மருந்தின் பெயர் இல்லற ஒழுக்கம் எனப்படுகிறது.

விருந்தோம்பல் நெறி

தாய் தன் குழந்தைகள் மற்றும் கணவனுக்கு உணவு பரிமாறும்போது உண்மையான தாய் அன்பை உணர முடியும். தாய் உணவை மட்டும் ஊட்டுவதில்லை உணவோடு அன்பையும் சேர்த்து ஊட்டுகிறாள். அப்போதுதான் குழந்தை உயிர்த் துடிப்போடு வளர முடியும். தாய் தனது குடும்பத்தைக் கவனிப்பதோடு மட்டுமல்லாமல் உறவினர்கள் மற்றும் அனைவருக்கும் விருந்தோம்பும் ஆற்றல் உடையவளாக விளங்குகிறாள். விருந்து படைக்கும்போது இல்லாள் நடந்து கொள்ளும் விதம் பரிமாறும் விதம் இவற்றைக் கொண்டே ஒரு குடும்பப் பெண்ணின் நல்லியல்பை உணர முடியும். மனம் கோணாமல் விருந்தோம்பல் ஆற்றும் சிறப்பு பெண்களுக்கே உரியது. விருந்தின் மேன்மையை 'மோப்பக் குழையும் அனிச்சம்'; (குறள்-90) என்ற வள்ளுவர் கூற்றினின்று உணர முடிகிறது.

அறநெறி

அறநெறி வாழ்க்கை வாழ்வதற்குக் கணவன் மனைவி இருவரும் சேர்ந்து தவம் பயில வேண்டும். அதன் மூலம் நல்ல மனத்தன்மையைப் பெற முடியும். அப்போதுதான் இல்லறம் இனிமையாக அமையும். சுவைத்து அனுபவித்து வாழ்வதன் மூலமே வாழ்வின் நிறைவும் வாழ்வின் நோக்கமும்

திறைவேறும். இல்லற வாழ்க்கையில் நல்ல பண்பையும் நெறி வழுவாத ஒழுக்க உணர்வையும் போற்றி அதன்படி வாழ்வதன் மூலம்தான் அறம் தழைக்கும் என்பதை முன்னோர்கள் உணர்ந்துள்ளனர். வள்ளுவர் குறிப்பிடுகையில்

“அறனெனப் பட்டதே இல்வாழ்க்கை அஃதும்
பிறன்பழிப்பது இல்லாயின் நன்று” (குறள் : 49)

என்ற குறளில் அறம் என்று சிறப்பித்துக் கூறப்படுவது இல்லறமே எனத் தெளிவுறக் கூறியுள்ளார். அறம் நன்மையையும் வலிமையையும் தரவல்லது. யார் ஒருவருக்கு நீடித்த மகிழ்ச்சியும் புகழும் வேண்டுமோ அவர்கள் கண்டிப்பாக அறவழியில்தான் செல்ல வேண்டும் என்று திருவள்ளுவர் இயம்புகின்றார்.

அன்பு கொண்டு வாழும் இல்லறத்தவர் அறவாழ்வு வாழ வேண்டும். அந்த இல்வாழ்க்கையில் அறம் என்பது ஒழுக்கம், கடமை, ஈகை மூன்றும் இணைந்த உயர் நெறியே என்பதை, “ஒழுக்கம் கடமை ஈகை என்ற மூன்றும் ஒன்றிணைந்த உயர்நெறியே அறம்” (ஞா.க : 453) என்று வேதாத்திரி மகரிஷி விளக்கம் அளிக்கிறார். இவ் அற நெறி பிறரது பழிச்சொல் ஏதும் உண்டாகாத உயர் அறவாழ்வாகும்.

ஒழுக்கம்

ஒழுக்கம் என்பது தனக்கோ பிறருக்கோ தற்காலத்திலோ பிற்காலத்திலோ, உடலுக்கோ அறிவிற்கோ துன்பம் தராத செயல்கள் ஆகும் என்பதை மகரிஷி குறிப்பிடுகின்றார். வள்ளுவர் கூறுகையில் ஒழுக்கம் உயிரினும் மேலானது (குறள்-131) என்று சுட்டிக்காட்டி உள்ளார்.

கடமை

ஒவ்வொருவருக்கும் ஒவ்வொரு வகையாகக் கடமை உள்ளது. இவற்றை, ‘தான்’ ‘குடும்பம்’; ‘சுற்றம்’ ‘ஊர்’ ‘உலகம்’; என்று ஐவகைக் கடமையாக மகரிஷி வலியுறுத்துகின்றார். தனக்குச் செய்ய வேண்டிய கடமைகள், தன் குடும்பத்திற்குச் செய்ய வேண்டிய கடமைகள், உற்றார் உறவினர்களுக்குச் செய்ய வேண்டிய கடமைகள், பிறந்த ஊருக்குச் செய்ய வேண்டிய கடமைகள், உலகத்திற்குச் செய்ய வேண்டிய கடமைகள் என்று அவரவர் கடமைகளை வலியுறுத்துகின்றார்.

ஈகை

ஈகை என்பது ஒருவன் தன்னால் இயன்றவரை பிறருக்கு உதவி வாழ்வதாகும். துன்பப்படும் உயிர்களுக்குத் தம்மால் முடிந்த உதவியைக் கைம்மாறுகருதாமல் அதாவது பிரதிபலன் எதுவும் எதிர்பார்க்காமல் செய்யக்கூடிய மிகப்பெரிய சேவையே ஈகையாகும். பிறருடைய துன்பத்தைக் கண்டு தன் துயர்போல் எண்ணி மனமிரங்கிச் செய்யக்கூடிய ஈகை மிக உயர்ந்த அற்புதமான அறநெறியாகும்.

இத்தகு அறவழியில் நின்று இல்வாழ்வு நடத்தினால் பிற வழிகளில் சென்று பெறக்கூடிய பயன் ஏதும் இல்லை. இத்தகையவர் தெய்வத்திற்கு

ஒப்பானவர் ஆவர். அவர்களே இசைபட வாழ்பவர்களாவர்; அவர்களே தெய்வத்திற்குச் சமமாகப் போற்றப்படுவர். வள்ளுவரும்,

“வையத்துள் வாழ்வாங்கு வாழ்பவன் வானுறையும்
தெய்வத்துள் வைக்கப்படும்” (குறள் : 50)

என்று குறிப்பிடுகின்றார். அறம் என்பது வழிபாட்டுத் தலங்கள் கட்டுதல், இலவசமாக அன்ன சத்திரங்கள் ஏற்படுத்துதல், அன்னதானம் வழங்குதல் என்ற வட்டத்தில் நின்று விடுவது அன்று. மாறாகப் புத்தாக்கச் சிந்தனை கொண்டது. முயன்றால் அனைவராலும் அதனை உய்த்துணர முடியும். ஈகை எனப்படுவது,

“வரியாற்க்கொன்று ஈவதே ஈகை மற்றெல்லாம்
குறியெதிர்ப்பை நீர துடைத்து” (குறள் : 221)

வறியவருக்கு ஒரு பொருளைக் கொடுப்பதே ஈகை. மற்றவருக்குக் கொடுப்பதெல்லாம் பயன் எதிர்பார்த்து வழங்கப்படுவது என்று குறளின் வழி புலனாகின்றது.

ஆன்மீக நெறி

மனிதன் செய்யும் நற்செயல்கள் அவனை உயர்த்தும் என்பதை வள்ளுவரும் வேதாத்திரி மகரிஷியும் கூறியுள்ளனர். மனித ஒருமைக்கும் சமுதாய அமைதிக்கும் வள்ளுவர் குறள் (குரல்) கொடுத்ததுபோலவே மகரிஷியும் கூறிப் போந்துள்ளார். முதற் குறட்பாவில் உலகு என நினைவு+ட்டி உலகளாவிய நேயத்தை உணர்த்தியுள்ளார். மகரிஷியும் இறைவன் மனிதனது நற்செயல்களிலேயே இருக்கிறான் என்பதை அறிந்து உணர்ந்து ஆன்மீகத்தில் ஒவ்வொருவரும் உயர்வடைய வேண்டும் என்பதை அருளிய முறையை அறிய முடிகிறது.

முடிவுரை

ஒரு மனிதன் தன் வாழ்க்கையில் என்னென்ன நெறிகளைப் பின்பற்றி வாழ்ந்து வருகிறான் என்பதைப் பொறுத்து அவனது முடிவுகள் அமைகின்றன. மனிதனுடைய வாழ்க்கையில் நல்ல பழக்கவழக்கங்கள் பண்பாடாகவும் வாழ்க்கை நெறியாகவும் மாறுகின்றன. எல்லா உயிரினங்களுக்கும் இல்லாத பகுத்தறிவை மனிதனுக்கு இறைவன் கொடுத்திருக்கின்றான். குழந்தையாய் இருந்து முதுமை அடைந்து இறையடியைத் தொடும்வரை வயதுக்கு ஏற்ற வாழ்க்கை முறைகளை வகுத்துக் கொடுத்திருக்கிறார்கள் முன்னோர்கள். அவர்கள் வகுத்துக் கொடுத்த வாழ்க்கை முறைகளைப் பின்பற்றினால் வாழ்வாங்கு வாழ்ந்து வாழ்க்கையில் உயர்ந்து நிற்க முடியும். எண்ணம், சொல், செயல் அனைத்திலும் அறத்தைப் போற்றும் சமூகம் தன்னையும் வளர்த்துத் தன்னைச் சார்ந்தவர்களையும் வளர்ச்சி அடையச் செய்யும். முன்னோர்கள் வகுத்த நெறிப்படி வாழும்பொழுது வாழ்வில் துன்பம் குறைந்து பயன் மிகுந்து இன்பம் பெருகும் என்பதில் ஐயமில்லை.

GREATNESS OF WOMEN

S.Maheswari & D.Gnanasoundari

*Assistant Professor, Department of Human Excellence
Nallamuthu Gounder Mahalingam College, Pollachi, Coimbatore (DT) Tamilnadu*

Abstract

Human society is made of men and women, both of whom are responsible for the propagation and wellbeing of the race. It is not possible for either men or women to exist without the other; but unfortunately, male dominance has always been the norm in the society, with women being disregarded or relegated to a lower level by the men. Even though there were reasons for it in the beginning, they have lost their relevance with time; the practice however continues and has to be eliminated through edification and efforts.

It can however be achieved only when the men and women begin to work together, and not through individual efforts. Both of them have to realize the need for the changes, and work in unison. The family has to prosper, and good children, who grow up to be educated and responsible citizens, working for the welfare of the family and the society, should be born - this is the dream of every individual, for which both the husband and wife should be educated, and enjoy equal rights within the family.

Keywords: Women, Equal Rights, Family, Education, Responsible Citizen

Every child has to grow into an erudite, skilled, and respectable citizen, for which both the parents have to be educated and aware of their responsibilities. Some people are of the opinion that it is enough if the men are educated, and a woman need not be, for begetting good children or running a family. This view can best be exemplified by a story credited to George Bernard Shaw, the famous writer: A beautiful woman once approached Shaw expressing a desire to marry him for the reason the children born to them would possess her good looks and his intellect, an ideal combination, according to her. Bernard Shaw replied, "Madam, have you considered the possibility they may be born with my looks and your intelligence?" The point here is that imperfections can lead to feelings of inferiority, which can be overcome when the partners look on themselves as equals, ready to extol the qualities or the skills in the other, always.

Mangalasutra - The Symbol of Wedlock

Man, who lived in the forests and the mountains during the initial stages of his existence, survived by hunting and foraging for food, when he was exposed to many dangers. Under the circumstances it was considered inadvisable for the women to venture into the forests and the onus of hunting fell on the men. This in turn led to the practice of the male protecting the female, as well as the house, from

marauders, man or beast. The practice continued through the ages and became the norm. When a custom that denied marriage to a youth who had failed to prove his worth came into existence, it became imperative that every aspiring groom prove his strength and courage by hunting down a beast and bring home its tooth or claw, as a proof of his prowess. This, a mark of his courage, was then attached to a string and presented to the girl of his choice. The practice of tying a Mangalsutra around the bride's neck, as a symbol of her married status, arose from this. The women were expected to remain secure at home, while the men went hunting or fighting the battles.

Time has wrought changes in the practice of women staying at home and even the Mangalsutra has undergone changes over the years - the tooth or claw of the feline has been replaced with a replica made in gold or other material. Women in the northern parts of our country, who had to face invasions and attacks from outside, were considered fair game and a part of the spoils of war, by the invaders. The women preferred to die rather than fall into the hands of the marauding soldiers, and the Mangalsutra was designed with a small chamber, capable of holding a dose of potassium cyanide or other poison, which could kill instantly. The practice was however discontinued when it was discovered that women, with even minor problems, like a tiff with the husbands, consumed the poison and ended their lives.

The Mangalsutra thus underwent transition from a symbol of courage in the male, to one that protected the modesty of a woman, and then to a mere token that signified the status of a married woman. It is a carry-over from the past, which has lost its significance with time. Customs travel from country to country, to be aped without any knowledge regarding their origins or purpose.

Frugality and Reforms

Practices continue despite having lost their relevance in a changing milieu; for example, some of the religious festivals, which can be avoided, are still celebrated on account of peer pressure or the inquisitiveness of the people. Unnecessary expenses can be avoided if the partners put their heads together, and frugality, for which the husband and the wife work together, should be the norm. Changes can be introduced and expenses controlled through this.

Vethathiri Maharishi has travelled to many parts of the world and have made it a point to study the local customs and culture by interacting with the people. Many changes have taken place from the time of the early man, and cultures have grown and developed in keeping with the places, environs, resources, food habits, trades and even the diseases endemic to the place. It can be called a form of 'cultural

evolution', and is the product of deep analysis by the thinkers and wise men who lived there. Culture is often imbibed from one's parents, teachers and the religious heads.

He noticed that it is the women in a place who adhere to cultural norms, rather than the men, which may be on account of the fact the men often travel and live in other places, which brings about changes. Women rarely travel outside the country, and even when they do, stick to their old traditions and customs. Indian women rarely depart from their old values, and the qualities revealed by them, even when living outside the country, are praiseworthy. The culture of India, in matters regarding hygiene, politics, economics, healthcare and knowledge has always been exemplary, and worthy of emulation by the rest of the nations.

Equal Rights for the Women

Women's liberation movements have been in existence for some time now, and I have always supported them tacitly and openly, but a woman's responsibilities should never be overlooked by the supporters of the movements. So long as a woman tries to attract the men through her dress and demeanor, equality will not prevail. Laws are made to bind and protect the people, but two laws that can never see eye to eye or exist together in harmony, are the mother-in-law and the daughter-in-law within a family. Their differences are irreconcilable, and have probably been in existence from the beginnings of time. The western countries, where extended or joint families are no longer in practice, are free, to some extent, of this problem; but in our country, where the will of the mother-in-law prevails in almost all the households, the daughter-in-law is constantly on the lookout for a means to escape.

If every mother-in-law were to recall her younger days, and the torment she had to face from her own, she would definitely be considerate towards her daughter-in-law; and if, on the other hand, the daughter-in-law begins to look on her as a mother, rather than a mother-in-law, the situation would definitely improve. Equal rights, like charity, should definitely begin at home.

Maharishi has quoted that the father of the bride gives her away in a ritualistic manner, evocative of disowning or disinheriting her, met with the ire and resentment of the people. Giving the girl away, like a commodity or a household article was, according to me, an act of injustice and cruelty. The practice continues to this day, even though it does not find a place in the marriages conducted under the aegis of the World Community Service Center.

Equal rights and responsibilities should be provided to the women in running the family, taking care of the children, and even in financial matters. It is the only way to ensure the wellbeing of the women and peace in the family.

Our Duties

Women have always been looked upon as second class citizens, and relegated to the lower strata, in a male- dominated society. This is wrong and unjust. A single sentence can describe the greatness and worth of all women: 'every individual, male or female, who lived and continues to live on the face of the Earth, is the gift of a woman to humankind'. They are the blessed ones and it is the duty of every male to realize and respect this fact. Women, today, are eager to shoulder their share of the responsibilities and duties, and preventing them can affect the society adversely.

Children inherit the physical, mental and spiritual qualities of their parents. The qualities of a seed depend on the parent tree, which in turn affects the qualities of the tree that springs from it, in a continuous process. The parents have to be physically and mentally healthy to beget healthy children. Education has progressed, in keeping with which, the cost of education has also increased; yet the ways to live in good health, in the company of good people, has not formed a part of the academic curricula. Children are ignorant about the true nature of the body, mind or the soul. They are unaware of the nature and importance of biomagnetism, or the need and the means to conserve it, on account of which the principles of measure and method are never followed. All deeds bring suitable results in their wake, and there is escaping the fact. Mother and child care is not about women or children alone; it is a science that takes into consideration all humankind. Proper care has to be provided from the time of conception to childbirth, and even after that, for a mother and child to remain healthy. Everyone in the family, the husband, parents and the others have to contribute their mite for keeping the woman happy and healthy. Ill feelings or sorrow affect the health of the child adversely, because the mind is the peripheral consciousness, a phenomenon born of the working of the Consciousness, genetic center and biomagnetism, together. People, especially the husbands, are unaware of the ways in which to take care of a pregnant woman, and the manner in which their attitudes or behavior can affect an unborn child.

Proper care should commence from the time of conception. The purpose of observing full moon and new moon days, as well as eclipses, as holy days, to be spent in prayers or fasting was to prevent conception, because a child conceived on these days can be born with physical or mental impairment. Many of the physically or mentally challenged children we see today are the result of similar indiscretions

People treat the days as 'holidays' rather than 'holy days', indulging in pleasurable activities. It is a subject that deserves to be analyzed by the doctors and the scientists, despite the fact medical science has yet to analyze or accept the influence of the planets on human lives.

Texts pertaining to the Ayurveda and Siddha systems of medicines explain in detail the precautions to be observed by a woman during her pregnancy. For example combing the hair during the menstrual cycles, followed immediately by a pregnancy can produce a child with scanty hair; similarly applying kohl to the eyes or chewing betel-nuts during the periods can affect the eyes or teeth of the child. They are the findings born of deep research made on the health of a woman, and not to be taken lightly. The growth and development of a child within the mother has been described as given below:

The foetus resembles the numeral 1 during the first month. The head and backside are formed during the second month, the hands, legs, fingers and toes, during the third, the face and the nose during the fourth. The ears, eyes and tongue are formed during the fifth month, the nails during the sixth, the nervous and skeletal systems, bladder, lungs and heart during the seventh month. The child is fully formed during the eighth month. During the ninth, it gets ready to emerge into the world, turning upside down, within the womb. The tenth month sees the child coming out into the world, separated from its mother.

They are the results of the studies made by the physicians and others during days when science was in its infancy. The relationship between a husband and wife, during the period of her pregnancy is of extreme importance. Conflicting thoughts or actions, and an overbearing attitude should be avoided for begetting good and healthy children.

The husband and the wife, having entered into wedlock and lived together, should exude love, affection, and harmony, at all times. Conflicts arise in the absence of tolerance and sacrifice, which qualities can be developed through the practice of meditation or prayers; awareness and the noble qualities of virtue begin to rule the mind.

A radiant future awaits humankind provided the world begins to understand the laws of Nature and is ready to provide respect and equal rights to the women. They are the symbols of motherhood', a gift bestowed by Mother Nature, for the welfare of humankind. God may have created the world; but it needs a woman to create humankind. As I have mentioned in one of my poems, 'Humankind is the gift of the woman'; yet they are seen with tear-laden eyes and in misery always. Ours is not an isolated case; it is common to the people all over the world. Constant ill-treatment and harassment break the women, physically and mentally.

**"The greatness of women becomes evident when-
The fact that all the women and men
Are to the human race, womanhood's gifts,
Can there be a deed, nobler than this?"**

- Vethathiri Maharishi

A lady once asked Maharishi the reason why women are not being provided with equal rights or opportunities despite the progress made by the nations. He replied, "Laws are made by the men, and the only way to overcome the problem is for the women to unite and resist the unfavorable laws". Thetime is ripe; women are educated, erudite and skilled, and have also proved themselves in various fields. Women should be provided with an opportunity to frame the laws, with interference from the men.

Praise for the Women

The noble quality of sacrifice is etched into the psyche of the women in our country, as is evident from the fact that every woman leaves behind her parents, siblings and friends when leaving for her husband's house, immediately after her marriage. She has to be respected not as a mere woman but as a living symbol of motherhood and sacrifice.

Even friendship has its limits; but the relationship between a husband and his wife knows no boundaries, with regard to love, compassion and sacrifice. It yields immeasurable love and happiness in the lives of the individuals. Blessing the life partner is a definite way to keep the sentiments alive. A "Woman's International Spiritual Educational Trust" has been constituted under the aegis of the World Community Service Centre for looking into the welfare of the women. It is the bounden duty of humankind because "Born of a woman and fed on her milk, you survived and grew; you live with the help of a woman; realize her greatness".

Duty Bound to the Society

Man has to realize the extent of his duties and responsibilities to the society. The purpose behind all human birth is realization of the Truth. It is important to know the efforts, and the manner in which the commodities are made available to us.

**"See the unity of the world in every morsel of food, Pay back your dues,
through deeds that are always good!"**

Every morsel of food we eat contains the efforts of many, like the farmer who raised the crops, the laborer's who toiled in the fields, the people who threshed it, the traders, the cooks, and finally those who served it to us. We go through each day enjoying the efforts and goodwill of many. It is our bounden duty to strive for

the welfare and wellbeing of the society which has sustained us from the beginning. In the words of Saint-poet Thiruvalluvar:

**"The seas, the source of the rainclouds
Lose their depth, in the absence of rain".**

Everyone has to contribute for the welfare of the society, failing which society goes into decline.

Individual and his duties to the Society

Every individual is an asset of the society. It is the law of Nature. The society takes care of, and protects the individual, and he has to repay the 'capital' invested in him in the form of selfless service. The three noble qualities of morality, duty and charity are important for selfless service. Thoughts, words and deeds bring suitable results in their wake, in accordance with the laws of Nature. Every deed should be analyzed for the likely outcome; the results of striving hard, or shirking one's responsibilities, should also be analyzed. All actions should yield only good results and not harm anyone, which forms the basis of morality. Charity is born of the feelings that arise in the mind seeing the pain or misery of the others, and the desire to alleviate their pain. Morality is the resolve not to inflict pain, and charity the actions that alleviate the pain.

"Helping those in need, and living in harmony Are the gains in life"

-Thiruvalluvar

Charity is an act of compassion, undertaken to alleviate the pain or the misery of the others. The ability to live in harmony with the others arises from morality. The noble qualities of morality and charity provide contentment. Duty, the only means to repay the benevolence of the society, is important. Ruination awaits societies or countries that fail to take into consideration, or cater to, the three noble sentiments mentioned above.

Freedom

Realisation of the eternal truths is impossible without the help of philosophy. Gnana is where the individual begins to understand things for himself by treading the path of virtue and righteousness. Bhakthi is when people, incapable of attaining realisation on their own, follow the teachings of the wise, when pursuing their goal. Bhakthi is faith, and Gnana, wisdom. The path of Bhakthi or Gnana, either of which can lead to realisation of the Self and the Divine, is essential for all. A virtuous life, consisting of morality, duty and charity is important. Realisation of the Self and the Divine is the purpose behind all human birth.

Every individual should be made to feel secure within the society. Once, when people from another country asked my opinion about freedom, I told them, "You

are talking about freedom for the individual; everyone is free, but it can be secured only through discipline. Freedom is not the right to do as one pleases; it is respecting the freedom of the others and avoiding interference". True freedom comes from being aware of the need to respect the freedom of the others and avoiding transgressions.

Importance of Good Health

Having taken birth on this Earth, and living in the midst of the people in a society, it is our duty to deliberate over the ways to improve our knowledge and serve them. Analysis helps understand the genuine needs and avoid the unnecessary ones. The duties of an individual are fivefold: they are duties to the self, the family, relatives, country and the world, and serving them in accordance with one's knowledge, skills, and age is important. Among the five, duties to the self. Which involves keeping the body and the mind healthy, is primary. Next comes the family, followed by relatives, country and the world. All duties should be performed without conflict of interests; working for the welfare of the society at the cost of one's health, or the wellbeing of the family, is inadvisable. A society can flourish only when all are healthy, mentally and physically.

Duty Safeguards Rights

Taking care of oneself cannot be considered a selfish act, acquiring knowledge or seeking the ways to improve oneself are not acts of selfishness, because they help the individual live as a good citizen, serving the society, and taking care of its needs. Once, during the course of my travels abroad, I had to approach the government officials in order to get my visa extended. I was pleasantly surprised by the courtesy shown by the officials, who on hearing my request politely asked me to be seated and completed the work in a matter of minutes. This should serve as an eye-opener for the officials in our country, where the poor tax payers are made to wait interminably, and then asked to come again, on another day. This reprehensible state of affairs, which has somehow crept in and flourishes in our country, has to be eradicated.

It is wrong to think that punitive action or stringent rules can correct the situation; corrections are possible only when the individuals begin to realise their mistakes and learn to discriminate between good and bad. People have to realise the futility of evil deeds and avoid them scrupulously. Good deeds are born from within, the result of a proper education and moral compulsions. Changes cannot be induced through fear or enticements. The system of education has to change for the better. There is no need for revolutions or social upheavals; it is enough if the

individual remains aware of his duties and performs them well. Rights are born of the awareness to do one's duty well, which safeguards the interests of all.

Conclusion

Women should be provided with an equal status, at all costs. The progress achieved by the women benefits the nation, as well as the coming generations. The above organization was founded for the uplift of the women from the rural areas through the practice of meditation, introspection and a process of edification. Every family should be provided an opportunity to study and practice Manavalakkalai, which helps strengthen the mind, besides providing the ability to think and analyze, for a happy and contented life.

37. SWAMI VIVEKANANDA'S CONCEPTS OF UNIVERSAL RELIGION

Dr. S. Jagadambal,
Asst. Prof. Dept of Human Excellence,
Nallamuthu Gounder Mahalingam College,
Pollachi, Coimbatore District.
Jagam1111@gmail.com, ph:9994999043

Abstract

One of the Swami Vivekananda's greatest contributions to mankind is 'Universal religion' – a new religious ideology. It is not a new religion with a new scripture, but it is a new approach to religion, a new spiritual temper. It not only enjoins tolerance, it urges acceptance of other religions as true there by making religions a principle of human unity. Universal religion is a discovery of universality in all religions excluding the particularities of creed, dogmabeliefs, rituals and convention of them (religions). A believer in universal religion has an enlightened understanding of and respect for all the religions without losing the sense of belonging to his own religion with its belief and practices. In his Chicago Addresses in 1893 Swami Vivekananda gave importance on the validity and universality of all religions. He mentioned that every religion is able to create purity, sacredness and kindness in human mind. So, he accepted the validity of all religions. He appealed to all that everyman must keep up his oneness in the sphere of religion and accept all that is good in other religions. To him, a religion which is capable of giving satisfaction and comfort to every religious sect can be granted as universal religion.

Keywords: Universal Religion, religious ideology, Hinduism, Vedanta

Introduction:

The religious concepts of Vivekananda are very much broad in attitude. He says that religion is not talk or doctrines or

Like his master, Vivekananda also cherished the world-view based on Advaita Vedanta view of unity-in difference. As a Karma-Yogi, he did not stand for any abstract religion but for the religion of work with detachment or work for impersonal ends as the highest expression of the religious life.

Swami Vivekananda learnt from the life and saying of Sri Ramakrishna that true religion is universal religion. He got support of his master's teachings from the 11th verse of the 7th chapter of the Bhagavad-Gita "ye yatha mann prapadyante tamstathaira bhajamyaham/mama vartma-nuvartante manushyah partha sarvashah" (who ever comes to me, through whatever form, I reach him; all men are struggling through paths which in the end lead to me).²

In all his addresses and writings, Vivekananda aimed at the establishment of universal religion for the betterment of the universe as a whole. But Vivekananda made his surviving statements on the idea of universal religion in his first address at Chicago Parliament of Religion on 11th September, 1893 of the many statements we may remember only two for the present purpose:

- (a) "I am proud to belong to a religion which has taught the world both tolerance and universal acceptance".
- (b) "We believe not only in universal tolerance but we accept all religions to be true".³

Though he was proud to belong to Hindu religion, he accepted all religions as true. This is his universalism of religions. So we see his address on Hinduism on 19th September 1893 at the same place he presented his idea of Universal religion. The one watch word for universal religion is acceptance. Acceptance is not just tolerance. Tolerance is negative in its import. It implies that something is being allowed in spite of its being wrong. Swamiji recommends positive acceptance.

Swamiji said, there have been many religions. They have been quarrelling among themselves, each religion claiming that it is superior. In spite of the conflicts the major religions have managed to survive.

The conflicts instead of weakening them have added vitality to them. The new thoughts arise only through that conflict. In a stagnant water there are no whirlpools. These are seen in a living running stream. In the same manner conflicts awaken new thoughts.⁴

'Universal Religion' as suggested by Swami Vivekananda, is not a new addition to the existing list of known religions like Buddhism, Christianity, Confucianism, Hebraism, Hinduism, Islam, Jainism, Sikhism, Taoism and Zoroastrianism. It is neither a separate religion nor an alternative caption suggested for any particular religion. Normally one may expect that as a Hindu and religious preacher he has glorified his own religion by claiming it to be a universal religion. But it is clear that while talking about universal religion Swamiji's intention has not been concentrated in glorifying his own religion, rather the emphasis seems to have been concentrated the universality aspect of any religion so that bad effects of the religiosities can be avoided.

As we have learnt that universal religion is not a new religion, it is important to make it more specific, what is meant by universal religion. Here it can be pointed out that something can be treated to be universal when it keeps its gate open to every individual one might be born from parents of a particular religion but he must have the choice to adopt any one. The choice of the individual is of prime importance. It is the mark of universality. Further a religion if capable of giving satisfaction and comfort to every religious sect can be treated to be universal. The religion should appear reasonable to the people of other religious sects in order to be universal. When we shall throw away the narrow out-looks, non-humanitarian considerations from the religions, they all will become universal by nature. So, every religion is potentially a universal religion

The great religious masters of the world teach that not the external forms but the power that is latent within mankind can bring salvation to light. Man lives and takes movement in God. Creeds and sects play their parts for children, their lasting is purely temporary. Books never make religions, rather religions make books. The end of all religions is the realization of God in

the soul. That is the one universal religion. The one universal truth in all religions, according to Vivekananda, thus, is realizing God within. He asserts that ideals and methods may differ, but that's the central point. When someone puts that he is right or his church or temple or mosque or gurudwara is right and all others are wrong, he unfortunately misses that upon the roof of all the others depend the proof of his own.

Naturally, a relevant question may immediately arise – what do we mean by the ideal of a universal religion? In this respect, Vivekananda comments: 'I do not mean any one universal philosophy, or any universal mythology, or any one universal ritual, held alike by all; for I know that this world must go on working wheel within wheel, this intricate mass of machinery, most complex, most wonderful'.

In modern age, the very essence of universal religion has been highlighted by Raja Ram Mohan Roy, Keshab Chandra Sen., Sri Ramakrishna Paramhansa, Vivekananda, Rabindranath Tagore, Vethathri Maharishi, Romain Rolland etc. Universal religion does not seem a mere dead conformity or dry dogma as constituted by vain intellect or only product of liberal thought. This concept recognizes and pays significance to the emotional and aesthetic resources of man to divert or sublimate them towards the Para or the Highest

Vivekananda explained that the language of the soul is one, the languages of the nations are many; their customs and methods of lives are totally different. Religion is of the soul that gets revealed through various nations, languages and customs. So, the difference among the world religions is one of expressions and not of substances, and their points of similarity are intrinsic. Vivekananda puts that the so-called doctrines or dogmas, rituals or books, temples or churches are but "secondary details". Vivekananda represented Hinduism not as a specific belief found on Puranic idolatry and mythology. As a proud Hindu, he described that Hinduism is a Universal Religion which depends on spiritual truth to be achieved in own life. He puts that the spiritual realization is the absolute testing of truth than any authority got from the past. This realization is of oneness

The philosophy of the Advaita Vedanta was realized by Vivekananda as the last term in respect of religious ways and this deep realization and conviction made him to synthesize and harmonize all sorts of sects under the banner of Vedanta. Vivekananda was very much aspirant regarding the future religion to be free from all racial prejudices or sectarian biasness that should be sustained through the spirit of a democratic unified awareness, made realistic and concrete through the highest spiritual ideals.

Vivekananda accepts Vedanta's true metaphysics and universality. The objectivity of all religious quests is fulfilled by the Vedanta. The great idea of Vedanta is nothing but the idea of the oneness of all, of the infinite and the impersonal, the wonderful idea of the eternal soul of mankind, of the ceaseless continuity in the march of objects, of the infinity of the universe. Vedanta consists of eternal principles without depending upon the authority of persons. It alone can be treated as universal religion as it teaches principles. No religion based on a person can be accepted as a type of universal religion by all the races of mankind. The Vedanta approves the eternal nature of man. Reality is one and eternal but it exists in many forms – "Ekam sat Vipra Vahuda Vadanti". The central principle of the universe can be treated as unity in Diversity.

In the parliament of religions at Chicago on 11th Sept, 1893, Vivekananda presented before that assembly that the different religions of the world like Hinduism, Buddhism, Jainism, different sects of Christianity, Islam etc. were not religions dividing the whole world into disputing sects, but these religions formed a grand federation of kindred faiths owing allegiance to some spirit, i.e., universal. The universalism of Vivekananda maybe said to be essentially a creative religious tolerance that broadens that liberal principle into a spiritual ideal and accepts all religions as but different revelations of man's approach to Truth and God

Towards the end of the memorable and historic third address at the Parliament on 19th Sept, 1893, Vivekananda, emphasizing on universal religion, said: 'if there is ever to be a

universal religion it must be one which will have no location in place or time; which will be infinite like the God it will preach, and whose sun will shine upon the followers of Krishna and of Christ, on saints and sinners alike, which will not be Brahmanic or Buddhist, Christian or Mohammedan, but the sum total of all these and still have infinite space for development.

Universal religion as conceived by Vivekananda is, therefore, not a new religion with a new scripture and a new liturgy, it can be treated as a fresh approach to religion, a fresh spiritual and moral outlook. It prescribes not only tolerance; it insists on acceptance of other religions too as true and making religion thereby a principle of human unity. Universal religion may, thus, be said to be a discovery of universality in all religion. 7 Thus, a believer in universal religion possesses a good understanding of and reverence for world religion without losing his sense of belonging to his own religion. For him, 'unity in variety is the plan of the universe'

Swamiji, wants to establish a religion that will be equally acceptable to all minds. It must be equally philosophic, equally emotional, equally mystic and equally conducive to action. This combination will be the ideal of the nearest approach to a universal religion to become harmoniously balanced in all these four directions in his ideal of religion. And this religion is attained by Yoga or union with God. 'Yoga' means "Yoke" to join, that is, to join the soul of man with the supreme soul or God. Swamiji wanted a total development of all the four Yogas. Hence he advocated a combination of all the four Yogas. To the worker it is union between the men and the whole of unity. To the mystic, it is union between his lover and higher self. To the lover, it is union between himself and the God of love. To the philosopher, it is the union of all existence.

The ultimate goal of each Yoga is the same that is realization of the supreme self. Each of four Yogas represents the development of one particular mental faculty that is reason, emotion or will. The spiritual practices prescribed by these Yogas build up character.

Universal religion is a discovery of universality in all religion. Swamiji thinks of the possibility of bringing together all religions of the world under one umbrella. The dream of Vivekananda was to propagate a universal religion based on the spiritual synthesis. The aim of the universal religion of Swami Vivekananda is to glorify the universe with peace and harmony by overcoming the apparent contradictions and fictitious differences among the different religious faiths.

The main aim of Universal Religion is just to teach us the knowledge of the divinity of the soul the non-duality of God-head, the unity of existence and one greater thing, that is, universality or harmony of all different religions. "All religions are true." The important thing is to reach to roof. One can reach it by stone stairs. One can reach it by wooden stairs. One can reach it by bamboo steps. One can reach it by a rope. One can also climb up by a bamboo pole. It depends upon one's sincerity and earnestness of faith on God. It is God alone who is called 'Satchidananda Brahma' in the Vedas, 'Satchidananda Krishna' in the Puranas, and 'Satchidananda Shiva' in the Tantras. It is one and the same Satchidananda. One can realize it after a long period of earnest quest. Where it comes, it shakes the very foundation of the personality of the seeker. It is like a huge elephant entering a small hut. The house shakes to its foundation. Perhaps it falls to pieces. It is the question of state of realization. The state of Brahman – realization is not Philosophy. It is a matter of spiritual attainment.

Conclusion:

From the above discussion, it follows that Vivekananda's ideal of universal religion is a step towards universal humanity. According to his thoughts, the concept of universal fraternity has frequently been claimed as the central message of the great religions of the world which is to be attained. Vivekananda is an Advaitavadin. His philosophy of Universal Religion teaches us that to love God and realized the Ever-living God and feel that "All are one" is the true spiritual mark of understanding religion. It regulates the human life. If there is no inner life there is no religion either. Religion is a matter of the inner life. Religion

intervenes human conduct. It regulates the human life. If there is no inner life there is no religion either. Religion is a matter of the inner life. Religion intervenes human conduct.

Abstract

Yoga in Daily Life is a system of practice consisting of eight levels of development in the areas of physical, mental, social and spiritual health. When the body is physically healthy, the mind is clear, focused and stress is under control. This gives the space to connect with loved ones and maintain socially healthy relationships. When you are healthy you are in touch with your inner Self, with others and your surroundings on a much deeper level, which adds to your spiritual health. Yoga increases the flexibility of the spine, improves body's physical condition and heightened awareness to the importance of relaxation. It has been emphasized that each exercise be practiced slowly, coordinating movement with the breath, pausing motionless in each position and always with full concentration

Yoga Practices improved physical and psychological and physiological and Healthy. Yoga is able to help a person have control over their body through control of their mind. Yoga leads not only to physical fitness, but also peace of mind which is the ultimate goal of all human beings.

Keywords: *Yoga health spiritual menstruation cardiovascular.*

Introduction

In India, yoga can be traced back many centuries and presents a way of life. Yoga is an ancient Indian way of life, which when practised properly, ushers in changes in mental attitude, apart from keeping you very fit and fine. The *practice of yoga* – the asanas, pranayam and meditation can actually foster your journey to the highest level of consciousness. It has been followed religiously by sadhus, athletes, people from all walks of life including celebrities and business heads. It brings about a rejuvenation that gives you an extra impetus – to live life to the fullest.

So, if you are a woman entrepreneur, you can make an attempt to understand the importance of being fit both physically and mentally – for this will only take you strides ahead in your business endeavour. Starting from our PM Shri Narendra Modi, many politicians and business leaders are seriously pursuing this activity to bring about sound progress in their personal environment. Endorsing the benefits of Yoga, the new Minister for Information & Broadcasting Shri Prakash Javadekar pointed out the fact that practicing Yoga “has become the mantra of new India under the leadership of Prime Minister Narendra Modi”.

Yoga Enhances Entrepreneurship Skills & Business Techniques

If you are an entrepreneur and even you want to get ahead in your business enterprise, you can check out the benefits listed below. It can help you:

- to be focused and not lose sight of your dream
- to develop patience that can see you through difficult situations
- to communicate better, as it clears your mind
- to be more creative, as it enhances your mental powers
- to be more positive, as it is a calming influence
- to develop inner peace and tranquility, that will take you strides ahead

Women entrepreneurs can definitely benefit from focussing on yoga especially, as they have a tight work-life balance to achieve! This will keep them stress-free, and ready to face challenges that come along their path with a sense of undaunted spirit, that can only lead the way to success.

Yoga isn't just about the body; it's also about the mind. It helps to calm down, settle your thoughts and unwind. Remember the proverb – a sound mind in a sound body! So, it's not surprising that many offices today, have introduced some exercise activity to keep their employees fit – like gyms, sports events and so on.

So what are we waiting for? Whether we are a small-business owner or a big business head, your business and your employees will benefit from the practice of yoga. And, now is a great time to get started.

Benefits of Practicing Yoga

Yoga in Daily Life is a system of practice consisting of eight levels of development in the areas of physical, mental, social and spiritual health. When the body is physically healthy, the mind is clear, focused and stress is under control. This gives the space to connect with loved ones and maintain socially healthy relationships. When you are healthy you are in touch with your inner Self, with others and your surroundings on a much deeper level, which adds to your spiritual health. Yoga increases the flexibility of the spine, improves body's physical condition and heightened awareness to the importance of relaxation. It has been emphasized that each exercise be practiced slowly, coordinating movement with the breath, pausing motionless in each position and always with full concentration.

One of the main concerns of modern Indian health and fitness experts is the concern regarding the physical health of women. Particularly of Rural women. Since the half of the Nation's population is constituted by Rural women, this concern has to be addressed properly. It is on the health of women that the future of the next generation lies. A woman has many roles to play: taking care of Children, looking after the family, maintaining the domestic life and any other

work that wants her attention. In this busy and hectic schedule, she cannot go out for gym, fitness club or even a moderate evening walk. This prone a modern women to many ailments in India. The present Article tries to solve this problem by proposing a home based simple technique that uses the combination of aerobics and yoga

Challenges and Problems Faced by Women Entrepreneurs

Women Entrepreneurship Till even just a few years ago, the scope of women was restricted to the four walls of their home, focused on performing household chores in a male governing culture. But currently females are not limited to their houses. Rather they are engrossed in all various kinds of operations and are often carrying these out better than men. Whether it's academics, politics, social work or managing their business they strive to achieve success in all avenues of life. Even so, they are balancing these activities along with their innumerable responsibilities towards their family. For a nation like India, a businesswoman plays a momentous part in the development of the nation and women entrepreneurship is considered as a significant catalyst for progress and economic growth. By starting their own enterprise, they generate employment and inspire other women. Women Entrepreneurship is not a novel phenomenon twenty decades prior slowly and in small numbers, women started shifting from kitchen, kids, knitting to pappad, pickles as they started to earn their own money by trading these. Later, through the advancement of technology and digitalization, women made a shift towards engineering, electronics and energy. The women of today take advantage of technology and many establish their entire business online through which they get the benefit of extending the products and services to a large no. of clients globally

To get ahead and achieve great success in business is a lot stiffer as compared to men. They face many problems along with way, such as:

- The primary obstacle in their path is the mere fact that— they are females existing in a male dominant society where males are always given predilection over the female species particularly in terms of business.
- Financial institutions are more skeptical when it comes— to women entrepreneurs and their ability to handle business and as such it is more challenging for women to get financial assistance for their business ventures.
- Women often lack the ability to provide tangible— security as they usually don't own large assets like houses on their own name. These are usually in the name of the males of the household.

- In a country like India major emphasis is placed on how— humanity views us and in many fragments of the nation something like women going to work and contending a business is frowned upon.
- Women are taught since birth to depend on males of the— family and so their confidence in their capabilities is not developed. They don't feel confident in handling business responsibilities as they are taught that such work is for men and it is too difficult for them.
- Their participation in business is also prompted by the level of education and family background of their husband.
- There is a dearth of institutions that provide help and— training for entrepreneurship to women.
- Lack of awareness about financial and government— programs aimed at helping the development of women entrepreneurs.
- Cultural constraints and lack of role models often— demotivate women hoping to start their own business.
- Many women find it difficult to keep up with the face— pace of digitization while being the sec e second-breadwinner of family and taking care of children.
- Many of them are averse to risk and lack of knowledge.—
- Women's mobility is still quite limited in the country.— Even now, it is difficult for a single woman to ask for a room. People's prejudice often hampers the growth of women.
- Women typically have administrative jobs that are— increasingly being digitized.
- Indian women place greater importance on family ties— and obligations, putting these first before their work, causing them to lose focus from growing their business.
- The literacy level among women is found to be lower— than that of men which affects their speed in adapting to changes and new technology. Many women across the country lack the knowledge needed to maintain and grow their business and keep up with the competition from male entrepreneurs

How ASANAS Promotes Women Health

For the development of the economy, it is essential to increase the level of women entrepreneurship. To get success in their professional life woman has to balance both family and business. Practicing yoga gives physical and mental strength to women to handle the things in a better way.

Except when the body is going through hormonally influenced biological changes, yoga practice for women can consist of the same postures as those practiced by males. Women tend to have more open hips and greater flexibility than men, while men tend to have more strength than women. Women often have less competitive natures than men so that the non-competitive aspect of yoga comes naturally. Their non-competitive nature can help women realize more easy progress in the spiritual realm. Asanas – Surya Namaskar (Sun Salutation), Sarvangasan (Shoulderstand), Halasan (Plough), Matsyasan (Fish), Kandhanasan (Shoulder Pose), Ardha Chakrasan (Half Wheel), Chakrasan (Wheel Pose), Bhujangasan (Cobra), Shalabhasan (Locust), Dhanurasan (Bow), Paschimottanasan (Forward Bend), Ushtrasan (Camel), Viparita Karni (inverted Pose), Sirshasan (Headstand), Ashwini Mudra (Horse Gesture), Akarna Dhanurasan (Archer's Bow), Marjariasan (Cat), Garudasana (Eagle), Veerasana (Warrior), Trikonasana (Triangle).

Yoga and Woman's Life Stages

A regular yoga practice is beneficial in every stage of life. When an individual goes through changes, such as those associated with pregnancy, menstruation, or menopause, illness or injury. Yoga helps them approach life with more equanimity. Yoga practitioners with depression, eating disorders, arthritis, or bone loss find that yoga can contribute to their healing. Special sequences of poses are available for a wide variety of health conditions. We encourage you to approach yoga with a regular ongoing practice, not only doing prescriptive yoga poses. A yoga practice is healing and preventative of many types of illness. It can be emotionally balancing and spiritually nourishing. Yoga can help women on a day-to-day basis by allowing time for inner focus in a culture that is often hurried and which many women find stressful. Transitions in a woman's life call for different yoga practices. We offer some guidance about pregnancy and menstruation below. During the postnatal time, women recover physically from birth and should slowly get back to doing yoga after about 4 to 6 weeks. After pregnancy, a woman can strengthen abdominal muscles with poses like The Boat Pose (Navasana) and other core strengthening yoga positions. Through a yoga practice, she can regain her muscle tone and help her body deal with the physical strain of feeding, carrying, and taking care of a new baby. Puberty brings hormonal challenges, and yoga can help young women transition gracefully into adulthood while loving themselves and their bodies at the same time, being more attuned to self. In menopause, yoga helps deal with emotional imbalance and hot flashes that some rural women experience.

After menopause, women can expect better posture with a more upright and flexible spine, and more mobility into old age.

Yoga for Menstruation

Women particularly Rural women are cyclic in their nature and physiology. Most sequences of poses for menstruation include supported forward bends. Forward bends quiet the brain and are perfect for this time in which one typically feels like going inward. For health reason, it is suggested that you avoid doing inversions during menstruation. Some women also avoid standing poses or backbends at this time. Having a regular practice with a variety of yoga poses for the rest of the month is recommended for women, keeping them healthy, fit and emotionally centered. Yoga helps a woman particularly Rural to deal with heavy or irregular menses and PMS. Special sequences exist for these and other problems, depending on why she is having difficulty becoming pregnant, certain yoga poses may help women become more fertile.

Overall, a woman can balance her endocrine system improve her blood circulation develop better posture, become more toned, have better physical balance, increase her flexibility and strength, and build her immune system through yoga practice. A lifelong and daily practice will cultivate the many health benefits and spiritual growth possible with yoga throughout all stages of life

Child Birth Women

Child birth women, who attend yoga classes before, during and after pregnancy, have almost no problem during and after childbirth. Practicing yoga regularly during pregnancy can help to give birth to a child naturally and without any complications. If you are able to practice yoga on regular basis, you will find manifold and noticeable benefits in your body. You will also feel change in your thinking and attitude towards life and other factors. When you are performing yoga asanas, make sure, the room is free from any disturbances and is comfortable and warm. Early morning is the best time for yoga. However, maintaining a good and nutritious diet along with yoga asanas helps women remain healthy for a long time.

Cardiovascular Exercise

The main difference between yoga and aerobic exercise occurs in the effect each exercise has on the heart muscle. Cardiovascular exercise such as running and swimming elicit intense demands on the large muscles of the body, which require more oxygen to perform exercises. The increased need for oxygen causes the heart muscle to work harder, and as your heart adapts to the stress, it becomes more

efficient. The slower pace of yoga does not require much oxygen. Therefore, it does have the same conditioning effect on the heart that aerobic exercises do. Another key difference between yoga and aerobic exercise lies in caloric expenditure. The average 50 minute Hatha Yoga class burns approximately 144 calories, according to the American Council on Exercise. A 50 minute Ashtanga class, the more vigorous style of yoga, burns slightly more at 237. Compare this to 50 minutes of running or swimming at 355 and 507 calories respectively. Aerobic exercise burns considerably more calories than yoga. A study published in the “Indian Journal of Physical and Pharmacology” in 2004 evaluated energy costs and cardiovascular changes during a sequence of eight yoga poses. The highest recorded heart rate among study participants was 101 beats per minute, which is only 50 percent of maximum heart rate for a 30-year-old. Although yoga involves systematic breathing that improves respiratory fitness, ultimately aerobic exercise outperforms yoga in the cardiovascular arena because it involves elevation of the heart rate for sustained periods of time or for distinct intervals. This improves the efficiency of the heart muscle, allowing it to do more work with less effort during rest times.

Strength

Yoga does tend to boost muscular strength and muscular endurance, according to the American Council on Exercise, particularly in the chest, triceps and abdominal regions. Yoga also helps to develop strength and endurance in many of the core muscles, especially the oblique’s and the erector spine. Cardiovascular exercise will help develop muscular endurance, however as a rule, aerobic exercise does not encourage the development of muscular strength to the same extent that yoga does. In 2011, researchers followed a group of 79 male and female volunteers as they engaged in sun salutations – a basic yoga sequence – six days a week for 24 weeks. The “Asian Journal of Sports Medicine” published the study, which found a significant increase in strength and endurance among both men and women whose bench press one rep maximum increased by 15 and 6 pounds, respectively.

Flexibility

Aerobic exercise has little impact on the development of flexibility, whereas yoga significantly improves it, according to a 2010 USA Department of Health study published in the “Journal of Bodywork and Movement Therapies”. In the study, 108 physically fit firefighters took yoga classes over six weeks. None of the participants had practiced yoga prior to the study. Researchers marked significant improvements in trunk flexibility, and the study participants also reported less musculoskeletal pain overall. Fat loss occurs when more calories are expended than consumed. Aerobic exercise-specifically running at 5 miles per

hour— burns about 600 calories in one hour. A yoga class of moderate intensity -- as practiced in Ashtanga Yoga— burns about 350 calories. However, calories burned do not tell the whole story. The gain in lean muscle from yoga practice yields a slight improvement in basal metabolic rate. Nevertheless, when exercising five days a week for one hour, running has the potential to burn off pounds more than yoga running has the potential to burn off pounds more than yoga over the course of eight weeks.

Health Benefits

Most rigorous studies suggest that yoga is a safe and effective way to increase physical activity, especially strength, flexibility and balance. There's some regular practice is beneficial for:- Leads to total health of the body. 1. Calms the mind. 2. Improves mental strength and perception. 3. Increases concentration. 4. Several asanas increase the strength of many muscles and improve the efficiency of all the organs and brain. 5. Improved concentration leading to better. High blood pressure Grades 6. Balanced Blood Pressure. Type 2 diabetes 7. Decreased Absenteeism & Tardiness. Breast and colon cancer 8. Improved Interpersonal Relationships. Falls 9. Enhanced Confidence Level. Depression 10. Sharper Brain. Improve bone health. 11. Early death. Improve cardio respiratory and Muscular 12. fitness. Coronary heart disease. Decrease levels of body fat. 13. Stroke. Reduce symptoms of Depression.

Conclusion

A journey of becoming an entrepreneur is full of troubles and more so for women especially in India because our society criticizes women at every turn rather than motivating them, it ridicules and discourages them. However, today women are accepting and overcoming all challenges to prove them at every point and is starting to work towards their dream. Today, many women start their careers as entrepreneurs and empower other women also, becoming role models for future generations of women aspiring to have their own business. The Government has started many schemes to support women that want to start their entrepreneurship journey but due to lack of awareness most of these women aren't able to grab the opportunity especially in rural areas. Women have major contributions to the economic development of the nation. Even with lots of obstacles in their path, women nowadays are increasingly working on having their own business venture with innovative products and services that are useful for the betterment of society also. Although the Government has helped women entrepreneurs to grow to some extent, awareness and motivation are necessary so women can reach the limits of the sky. Yoga Practices improved physical and

psychological and physiological and Healthy. Yoga is able to help a person have control over their bod through control of their mind. Yoga leads not only to physical fitness, but also peace of mind which is he ultimate goal of all human beings.

Food & Scientific Background in Tamil Literature

A. SRIKAVITHA, Assistant Professor in Human
Excellence Dept, NGM College, Pollachi

Introduction:-

Nature has taken good care of food needs. She has given us farm land where vegetables, fruits, grains and other plants can be grown. She has filled the ocean with fish and the lands with animals that supply meat, milk and other food products. She has blessed us with the ability to find ways to cultivate and produce food products.

The world has a huge desire for food. About two thirds of the people of the world are employed to satisfy the food needs of mankind. Farmers, ranchers, fishermen, millets, bakers, milkmen, grocers, food chemists and workers in canning factories, sugar refineries, food freezing and food packaging plants, etc., form only a part of the great army who work to bring us food.

Sometimes people who get enough food do not eat the things which are need for good health. At extraordinary levels of lifestyles, the constitution of the human frame modifications and it calls for specific ingesting habits to maintain normal physiological features. As indicated with the aid of those numerous stages, our ancestors had unique meals that were wholesome and nutritionally dense.

The traditional authentic food, organized with close-by fixings and direct cooking procedures are known to have incredible dietary advantage. Regardless they have been neglected and are known to outline negligible idea of our step by step utilization. Along these lines it is basic to get prologue to these fundamental yet supporting and strong sustenance's. The all around valuable of sustenance usage is for the nutritive regard. Therefore with extended access to contrasting sustenance things it is imperative to perceive

the enhancements of the sustenance we use likewise, keep up a reasonable eating routine.

History and Background of Food in Tamil literature :-

Sangam era culture had a recognizable delicacies, a particular set of cooking traditions. The six tastes of Tamils are 1. Sweet 2. Pungent (mirchi) 3. Bitter 4. Salt. 5. Sour. and 6. Astringent. Over the years Sangam generation gastronomy has substantially advanced and that they have used function spices and the mixture of flavours particular to Sangam period. The Sangam generation culinary had precise flavors, the tangy twist and the plethora of vegetables had been used of their recipes. The gastronomy of Sangam Tamil cuisine changed into dominated by rice, lentils, tamarind, coconut and curry leaves. Rice became the fundamental staple meals of maximum of the Sangam Tamil human beings.

Sangam literatures actually defined the foods that have been served in the laymen residence and also the Kings palace in the ones days. historic instances the South India become divided by Chera, chola and pandya kingdoms. The elements what we're using now for our cooking changed into no longer to be had on the ones days cooking practice. The meals tradition had been converted as consistent with the land in which they had been dwelled. in line with the Chirupanachupadai, a Tamil paintings, Raja Annam is the higher pleasant rice, this rice is used to bartering the goods.

Purananuru And Pathipathu

Even the well-known Biriyani had its beginning in South India, not from everywhere, according to Tamil works Pathipathu and Purananuru which massively describes the meals and fermentation technique finished in historic days. This Tamil works says that the warriors infantrymen had been feeded with "Oonthuvaia dishil" or "Oonsoru" (Oon method meat) via the King earlier than they have been going to warfront and also the biriyanis were served to soldiers on

every occasion there have been victories at struggle.

Tirukkural

In Sangam age, Tirukkural, composed via Tiruvalluvar, the maximum celebrated Tamil poet-saint, is taken into consideration as unparallel, frequent scripture. It comprises of 1330 aphorisms in couplets organized in 133 chapters underneath three heads virtue, Wealth and Love. Tiruvalluvar's couplets on medicinal drug (95th chapter) are rather aphoristic: "no medication is essential for him who eats after assuring (himself) that what he has (already) eaten has been digested.

"Maruntena ventavam yakkaikku aruntiyatu arratu porri unin" (Tirukkural 942: Poet Tiruvalluvar)

No need of drugs to heal your frame's pain, If, what you ate before digested well, you eat once more.

Tolkappiam

Tolkappiam, the earliest extant grammatical treatise also gives a good amount of instances. Nature provides us with all kinds of resources to make food items. Tamils are utilizing these precious gifts of the nature in their daily life. Mankind came into existence just thirty lakh of years ago whereas the plants were in existence even before eight to nine crores of years. All the living species which we observe today were the ancient.

Though our forefather did not have a synthetic analysis of the food items, they were the pioneers in establishing a balanced diet. Tolkappiam and Sangam literatures establish clearly how the Tamils enjoyed a culturally superior life with tasty, nutritious and balanced diet. The classical literatures are the innocent mirrors which reflect the mode of life and culture of the people. On this basis the food habits find a place in the scriptures spontaneously. They were not introduced purposefully.

Thanipadal Thirattu

Celebrated Poetess Avvaiyar described the lunch on a summer day in her Thanipadal Thirattu in 32 song

*'Varagu arisi chorum, vazhuthunangai vaatum,
moramoravena pulitha morum...*

The translation of the above song is steamed varagu rice, smoked and mashed aubergine and tangy frothy buttermilk. The poet mentions her host's name as Boothan of Pulvelur village and expresses gratitude for the tasty meal. Ancient Tamils well-versed in cooking tasty food. Their foods are differed from region to region. There were five lands such as-

Kurunji, Mullai, Marutham, Neithal and Palai.

Nutritional Value of Tamil Authentic Food

1. Koochu

Koozhu is a very conventional and old recipe of tamilan's that's specifically organized throughout aadi masam pageant which is well known considering that a while at some stage in Aadi masa (Tamil month) from July to August. This month is taken into consideration to be auspicious for the religious sports of Amman as she is stated to be more effective throughout this month. For the duration of this month Koozhu is organized and supplied to Mari Amman (another shape of goddess Durga and Kali known as as Amman in Tamil) at some stage in pooja in Tamil Nadu and local Tamil human beings in India. Koozhu is additionally known as Kevaraghu Koozhu or Keppai or Ragi Koozhu which is ready with millets. In English it's far known as Porridge of finger millet.

Benefits

There are lots of nutrients in the koozhu. It contains 15% protein and high fiber, vitamin E, vitamin B complex, niacin, thiamine, riboflavin. It also contains essential amino acids such as methionine and lysidine, mineral richness such as iron, magnesium, phosphorus and potassium. Many people suffer from sunburn during summer. If it is the best drink for the lubricant to lubricate this body, it is a koozhu. If

one day eating a Koozhu every day, the temperature of the body is maintained uniformly. It also gives instant energy to the body.

2. Kozhukattai

Kozhu kattai is a completely divine recipe that is specifically cooked by using Tamil people during ganesh chaturthi, as it's miles supplied to Lord Ganesh especially. Ganesh Chaturthi can never be complete without the ubiquitous kolukattais. The dish comes in various shapes and tastes these days from the regular traditional varieties to the exciting ones with different stuffing. "It is said that the practice of making Kolukattai and steam cooking came to our country from East Asia through trade merchants in the olden days," says Chef Raj Mohan "In a way, the dumplings are the Kolukkattais of East Asia." Apart from being a tasty snack, Kolukattai is also healthy as it packs the goodness of coconut, dal, jaggery and rice in its little potli. Kolukattais have also taken a 'diet' avatar as they are made from oats.

Benefits

- It's a totally light food it could be taken in breakfast or night snacks.
- It's miles helpful in decreasing cholesterol within the body and weight reduction.
- It is also a terrific appetizer.

3. Appam

Appam is a very old and conventional recipe of South India especially in Tamil Nadu, Kerala and SriLanka. It's far a little special recipe that is cooked at the appam pan simplest which is particularly made to cook dinner appams on it.

Benefits

Appam has low calories in it so it helps in preserving weight problems away and maintains suitable health. Reduces the chances of heart stroke because it lowers cholesterol and fat deposits from the body. In olden days Toddy or kallu the

neighbourhood palm wine was used inside the fermentation of Appam which gives a bounce kind of taste and it is right for health. It has right vitamins and proteins in it.

4. Ullunthakanji/Ulluntha Kali

Ullunthakanji which is likewise known as hot porridge of urad and jaggery. It's a conventional Tamil Nadu dish, it's far taken as breakfast served hot.

Benefits:

This dish is very good for health specifically for ladies of all age. It enormously advantages bones particularly for lower back bones and strengthens it. It ought to be eaten with warm sesame oil as aspect dish that is helpful in lowering ldl cholesterol from body.

5. Puttu

In Tamil language, Puttu means breaking up, Bit (breaking up), it is said that the name comes from eating. This is also the right cause. ot only this, Paranjyothi sage is mentioned in the book 'Thiruvilaiyadal Purana' in reference to Lord Shiva. "Pittikku mannu sumandhar". Puttu is also a conventional sweet recipe of Tamil Nadu. It's famous in both Tamil Nadu region as well as Kerala. exclusive forms of Puttu may be organized with special sorts of Flours like Rice Flour, Wheat Flour, Millets or Ragi powder, and many others... however specifically Rice flour. Puttu that is called as Arisi mavu Puttu is eaten by using most of them. It tastes suitable with Ghee or warm sesame oil.

Benefits

Suitable for those who want to reduce the Weight. In our tradition is the habit of Currippetum young girls by using puttu. It gives you the strength to bear pain during menstrual periods; our ancestors knew that hip bones would be strong. Avoid coconut.

Eating and doing this in small quantities will have a lot of benefits. For example, if you eat it in a samai rice, the blood circulation is correct; Stomach problems, constipation

The number of life cells will rise. Food pudding that does not make side effects. High blood pressure and diabetes are good for eating rice made from rice millet.

6. Kazzhi (Kali)

Kazzhi is traditional Tamilian food made up of Rice with ragi or Ulundu(urd dal).

Benefits

Fiber is high in Ulundukazzhi. Excreting the toxins that are in the intestine by eating Ullundu.. The most severe diarrhea, known as Gynecologist, is an eating disorder that stops the stomach and adds strength to the body. Constipation problem solves. The waste salts in the kidneys can be dangerous to health, as they become stoned. Kidneys activity increases once a week old is eaten. Prevent the stones from forming in the kidneys. The kidneys can be amplified and the excrement of the body will be exhausted. The function of the veins for the proper movement and function of the body is vital. Nervous disorders, hysteria, cirrhoebrenia, and memory losses are associated with diseases associated with the daily intake of the ullundu kazzhi.

Traditional lands of TamilNadu:-

The atmosphere as delineated within the Sangam literature is known as 'Thinai'. The phrase Thinai' way the exceptional geographical region sand the conduct of the inhabitants in those-regions. Within the Tolkappiyam we find a direct connection with the 4-fold physio graphic divisions of the land and climate and those are called the Kaurai ulagam(the forests), the Maivarai ulagam (the hills), the Tiruppunal ulagam (the plains or fields) and the Perumaal ulagam (the littoral or sandy areas).here the word 'ulagam' (international) implies that every vicinity was a separate unit by means of itself and tremendously one of a kind from one another. The local variation should had been so top notch that they have to had been global in themselves'. We

note inside the equal work in addition five-fold ecological divisions (Ainthinai) or regions or five varieties of tracts or terrains. They are (1) Kuri-ji(hills and environs), (2) Mullai (forests or pastoral or woodlands), (3) Marutham (water courses or plains studded with wet fields and status vegetation), (4) Neytal (littoral or sandy coastal tract) and (5) Palai (arid or dry or wilderness tract).

The remaining area, Palai, is recognized no longer as a separate physio graphic or ecological region however as kingdom of aridity with scrub plant life and generally warm climate. This form of dry tracts might be an extension of the Mullai or Kuri ji place in some unique instances. The Maduraikka-ji refers to such a tract as "Kuri-jippalai, and in the identical text only we notice the descriptions of the 5 tracts. The Perumpanatruppaai idyll has additionally distinctive account of these five thinais. We might also notice right here out of hobby that the Pandyan country had all the five kinds of areas, at the same time as the Cheras had most effective the Kuri-ji, and the Chola, only the Marutham tracts.

"The Sangam literature refers to cooking strategies like vakkuthal (direct fire cooking) that differed among regions. Direct fireplace cooking was widespread within the Kurinji and Mullai landscapes while, frying and sun-drying were common inside the Palai and Neithal wallet. It become within the barren region regions that maintaining techniques like pickling had been followed," says Osai Chezhiyan, who's doing a thesis on historic Tamil food. "within the agricultural belt of Marutham, humans predominantly boiled and steamed which later developed into tricky cooking techniques. "Chezhiyan says that food of the common man within the Sangam Age ranged from everyday to bizarre. "While millets like varagu, thinai and samai have been staple, there had been additionally delicacies that had been made on special occasions. Agananuru denotes a recipe of tender pomegranate

seeds sautéed in ghee that was a sort of dietary supplement for vegetarians," he says.

Conclusion:-

Nutrition, nourishment, or aliment, is the supply of materials food required by organisms and cells to stay alive. Good nutrition is an important part of leading a healthy lifestyle. Combined with physical activity, your diet can help you to reach and maintain a healthy weight, reduce your risk of chronic diseases (like heart disease and cancer), and promote your overall health. Ancient Tamil nadu authentic foods contain enormous nutritional values. This article reveals evidence through Tamil literature's about various cooking methods, ingredients available and food habits based on the classification of lands in ancient Tamil Nadu. Authentic Tamil Nadu foods are simple, delicious and naturally healthy foods. Creation of awareness about ethnic foods and its benefits of consumption are essential amongst current generations in Tamil Nadu.

Abstract

The National Education Policy (NEP) is a comprehensive framework that aims to transform the education system in India. Technology plays a pivotal role in realizing the vision set forth by NEP. This document explores the significance of technology in education, its integration in NEP and the potential features, it brings to the forefront. It further encompasses the concept of integration of technology, how the enhancing work of technology is embedded in purview of NEP, differences between blended learning and implementation of technology in learning, benefits and challenges in the methodology after adapting NEP 2020.

Keywords: *National Education Policy - comprehensive framework – Technology - pivotal role – significance - potential features - concept of integration - blended learning - technology in learning - benefits and challenges – adaptation.*

Introduction

Education has always been a key driver of a nation's progress and development. The Indian government recognizes this and has formulated the National Education Policy, a landmark document that envisions a radical transformation of the education sector. At the heart of this transformation lies the strategic utilization of technology to empower educators and learners alike.

The Integration of Technology in NEP

- The NEP acknowledges the transformative potential of technology and incorporates it into various aspects of the education system:
- Digital Infrastructure: NEP emphasizes the creation of robust digital infrastructure, including high-speed internet connectivity, in all educational institutions. This enables the seamless integration of technology into classrooms and ensures equitable access to digital resources.

Abstract

Experiential learning is an active learning method where students "learn by doing" and expressing opinions on the experience. Experiential learning activities include fieldwork, internships, practicals, undergraduate research, and classroom performances. This paper presents a thorough examination of the role of experiential learning methodologies in fostering skill development and enhancing the effectiveness of national education policies. There is a growing emphasis on providing students with both academic knowledge and practical competencies because the global economy is continually changing and demands a qualified workforce. This paper helps to know the key concepts of experiential learning and skill development aspects in nep and its integration into national education policies, analyzing the best practices to create a holistic and dynamic educational environment. The NEP 2020 makes use of experiential learning as one of its fundamental ideas. This is effectively used in schools, higher education, corporate training for educational learning, personal development and skills building. The NEP also emphasises skill development, which aims to provide students with a wide range of skills necessary for both their personal and professional development. The policy places a strong emphasis on developing 21st-century abilities like critical thinking, interaction, teamwork, innovation, and digital literacy.

Keywords: NEP 2020, Experiential learning, Skill development, Employability, Holistic learning, Indian education system.

Introduction

*"Education is simply the soul of a society as it passes
from one generation to another"*

— G.K. Chesterton

The National Education Policy 2020 is a comprehensive framework that aims to transform the education system in India. The Indian government approved NEP to solve many issues with the current educational system and offer a more comprehensive and contemporary approach to learning. The NEP 2020 places a strong emphasis on skill development and experience learning as essential elements to preparing students for the future. The instructors play an important role by

Abstract

Make in India is an initiative by the Government of India to create and encourage companies to develop, manufacture and assemble products made in India and incentivizes dedicated investments into manufacturing. The policy approach was to create a conducive environment for investments, develop a modern and efficient infrastructure, and open up new sectors for foreign capital. The initiative targeted 25 economic sectors for job creation and skill enhancement and aimed "To transform India into a global design and manufacturing export hub". The aim is to improve the manufacturing output of India and reduce dependence on foreign imports for which campaigns like "Atmanirbhar Bharat" which translates into "Self-Reliant-Green" India has also been started. It focuses specifically on "Startups", MSME's, young scientists, R&D labs and traditional manufacturing units that have little access to financial support but are an integral part of the Indian manufacturing ambit. The paper focus on Sagarmala – Sagartat Samridhi Yojana scheme under the Make in India Manufacturing sector, that enhance the growth of Shipping Industry.

Keywords: Manufacturing, Decision, Growth, Shipping Industry, Development.

Introduction

*"Design in India is as
Important as make in India"*

-PM Narendra Modi

The Make in India initiative was launched by Prime Minister in September 2014 as part of a wider set of nation-building initiatives. Devised to transform India into a global design and manufacturing hub, Make in India was a timely response to boost the domestic manufacturing sector and also augment investment into the country. Manufacturing currently accounts for slightly more than 15% of national GDP. The government intends to create jobs, attract significant foreign direct investment, and transform India into a favored manufacturing hub worldwide. The 4 pillars of Make in India initiative are New Mindset, New Sectors, New Infrastructure, and New

Abstract

Entrepreneurs play a key role in the economic development of the country. A "women entrepreneur" is defined as the women or group of women, who initiate, organize and operate a business enterprise. Government of India has defined 'women entrepreneurs' as an enterprise owned and controlled by a woman having a minimum financial interest of 51 percent of the capital and giving at least 51 percent of employment generated in the enterprise to women. Educated Indian women have to go a long way to achieve equal rights and position because traditions are deep rooted in Indian society where the sociological set up is male dominated one. Despite all the social hurdles, many Indian women stood as successful entrepreneurs. The transformation of social fabric of the Indian society, in terms of increased educational status of women and varied aspirations for better living, necessitated a change in life style of Indian women. Women in India face many problems and constraints to get ahead in their life in business.

Keywords: Indian Women entrepreneurs, Entrepreneurship, Challenges, Issues in India.

Objectives

- To understand about the women entrepreneurship.
- To examine the challenges faced by women entrepreneurship.
- To identify the problems faced by women entrepreneurs.

Introduction

"Build your business success around something that you love something that is inherently and endlessly interesting to you"

Martha Stewart

Entrepreneurship refers to the act of setting up a new business or reviving an existing business so as to take advantages from new opportunities. A woman entrepreneur is an adult who owns and runs an enterprise, especially a commercial one, often at personal financial risk. The International Labor Organization defined the women's enterprise as a small unit where one or more women entrepreneurs have not less than 50 per cent financial holdings. Women

Abstract

This paper focuses in economic empowerment of several women involved in self employment of Vellore District. Enterprise assumes an essential part in creating open work door for provincial social orders, giving independent work to the individuals who began up their own particular business and enhancing the financial status. Self employment not only helps the respondents to produce extra income but also enables them economically independent and self-sufficient. Self-empowerment is the process of equipping a person or group of persons with the power towards the development. The status of women is intimately connected with their economic position, which in turn depends on opportunities for participation in economic activities. Many welfare schemes are launched for the development and well being of women. Self-employed women and their contribution to the national economy is quite visible in India. Social and economic empowerment leads to development and the development relieves people from poverty. The Paper provides valuable insights into the growing trend of women entrepreneurship in Vellore and offer potential policy recommendations to enhance their entrepreneurial journey. The empowerment of women in The analysis indicates that self employment not only helps the respondents to produce extra income but also enables them economically independent and self-sufficient.

Introduction

One of the key factors in determining the success of development is the status and position of women in society. Women provide the powerful economically place for women community and for the nation through entrepreneurship. Women's empowerment can be defined to promoting women's sense of self-worth, their ability to determine their own choices, and their right to influence social change for themselves and others. Thus a focus on development of skills in women would be crucial in motivating them to develop life skills that will lead to higher paying and good quality jobs, better livelihood, economic independence and the ability to earn for their families.

Women Empowerment

Empowerment means people having power and control over their own lives. People get the support they need that is right for them. Empowerment means that people are equal citizens. They are respected and confident in their communities. You can't empower someone else or make someone empowered. Women's empowerment has five components:

- Women's sense of self-worth.
- Their right to have and to determine choices.
- Their right to have access to opportunities and resources.
- Their right to have power to control their own lives, both within and outside the home.
- Their ability to influence the direction of social change to create a more just social and economic order, nationally and internationally.

Women Empowerment in India

The Indian Constitution not only grants equality to women, but also empowers the State to adopt measures of positive discrimination in favour of women so that women can improve their livelihood. Within the framework of a democratic polity, our laws, development policies, Plans and Programmes have aimed at women's advancement in different spheres. Declaring 2001 as the Year of Women's

Abstract

The Skill India Mission sought to establish and implement comprehensive skill development training programmes that would assist bridge the gap between industry demands and skill requirements, thereby developing the country as a whole. This paper aimed to know the rationale behind the launch of the Skill India Mission campaign, role of the National Skill Development Corporation, the schemes it offers as well as the challenges in skill development and entrepreneurship. The information was secondary and was gathered from multiple websites, government reports, and other sources. The government, stakeholders, businesses, educational institutions, students, trainees, job seekers, etc. must all work together which will guarantee the targeted youth to find work across a range of industries.

Keywords : Skill India Mission, NSDC, Schemes and Initiatives, Challenges

Introduction to Skill India Mission

In 2015, Prime Minister Mr Narendra Modi announced the commencement of the Skill India Mission, which was in line with his goal of assisting India in becoming "Atmanirbhar" (self-sufficient). Numerous skill-building activities and schemes are grouped under one centralised programme. The main goal is to equip the nation's youth with the necessary skill sets so they can work in fields that are relevant to them and increase production.

The Skill India initiatives involved in creating curriculum-based skill training programmes, through which learners would receive certificates and endorsements from learning institutions that had gained industry recognition. It includes skill-based learning in the school curriculum and fostering both long-term and short-term possibilities for skill training and employment. The Ministry of Skill Development and Entrepreneurship (MSDE) has partnered with Central Government Ministries, State Governments, Industry, Non-Profit Organisations, and Academic Institutions to coordinate and expedite skilling initiatives globally. Positive outcomes with a significant increase in skill training have been steered by the combined efforts of all stakeholders.

Abstract

Women empowerment is the process of strengthening women's capacity to fully engage in society, exercise their rights, as well as access opportunities on an equal basis with men. It entails confronting and altering the social norms, cultural practices, and power structures that support gender inequality and discrimination. This paper is an attempt to examine women's empowerment in India, their legal rights in India as well as highlights the issues and Challenges of Women Empowerment. This paper is descriptive in nature and is based on secondary data collected from journals, internet, previous conducted research. It is concluded that Government initiatives alone would not be sufficient to achieve this goal. Society must take initiative to create a climate in which there is no gender discrimination and women have full opportunities of self decision-making and participating in social, political and economic life of the country with a sense of equality.

Keywords : Women Empowerment, Legal rights, Progress, Achievement, Challenges

Introduction to Women Empowerment

“When women prosper, the world Prospers”

- The Prime Minister, Shri Narendra Modi addressed the G20 Ministerial Conference on Women Empowerment held in Gandhinagar, Gujarat .

Women's empowerment is the process of giving them more autonomy and control over their life. This can involve giving women the freedom to make decisions about their own health and well-being, as well as the ability to fully engage in the political and economic processes. Women's empowerment is crucial because it can result in a variety of advantageous outcomes, such as higher economic growth and development, enhanced health and well-being, and more gender equality.

Objectives of the Study

1. To understand women empowerment and its types
2. To examine the position of women in India
3. To identify the legal rights for women in India
4. To be familiar with government schemes for women empowerment
5. To know the challenges facing women in India

Abstract

Information and Communication Technology (ICT) is an extensional term for Information Technology (IT) that emphasizes role of unified communications and the integration of telecommunications (telephone lines and wireless signals) and computers, as well as necessary enterprise software, middleware, storage and audiovisual, that enables users to access, store, transmit, understand and make uses of the information. ICT is an umbrella term that includes any communication device, encompassing radio, television, cell phones, computer and network hardware, satellite system and so on, as well as various services and appliances with them such as video conferencing and distance learning. ICT is a broad subject and the concept is still evolving. It covers any product that will store, retrieve, manipulate, transmit or receive information electronically in digital form (e.g., personal computers, smart phones, digital television, e-mails, and robots). Use of ICT Tools is all pervasive in our everyday life, and use of ICT tools has almost revolutionized the way teachers impart knowledge to students and students receive knowledge from their teachers, Not only that, by making accessible entire bookshelf and whole of library to students and teachers on a click of their smart phones and laptops have made education simple, much more efficient and have enhanced their productivity enormously.

Keywords: ICT tool, Technology in Education, Teaching and Learning.

Introduction

Information and Communication Technology (ICT) includes computers, the Internet, and electronic delivery systems such as radios, televisions, and projectors among others, and is widely used in today's education field. Kent and Facer (2004) indicated that school is an important environment in which students participate in a wide range of computer activities, while the home serves as a complementary site for regular engagement in a narrower set of computer activities. Increasingly, ICT is being applied successfully in instruction, learning, and assessment. ICT is considered a powerful tool for educational change and reform. A number of previous studies have shown that an appropriate use of ICT can raise educational quality and connect learning to real-life situations. Learning is an ongoing lifelong activity where learners change their expectations by seeking knowledge, which departs from traditional approaches. As time goes by, they will have to expect and be willing to seek out new sources of knowledge. Skills in using ICT will be an indispensable prerequisite for these learners.

AN EYEVUEW ON DIGITAL LITERACY IN 21ST CENTURY

Dr. B. Rohini

Abstract

Digital literacy encompasses a range of competencies that enable individuals to use digital tools, devices, and information effectively and responsibly. These competencies include basic digital skills, such as using computers and the internet, as well as more advanced abilities like critical thinking, media literacy, information evaluation, and data analysis. In the 21st century, digital literacy is closely intertwined with traditional literacy skills, fostering communication, collaboration, creativity, and critical thinking among individuals across different age groups and backgrounds. As digital technologies continue to shape our lives, the development of comprehensive digital literacy skills becomes an essential endeavor for individuals and society at large. Embracing digital literacy equips people with the tools they need to harness the vast potential of technology while navigating its challenges responsibly, ensuring an inclusive and prosperous digital future. The paper aims to explore the overview of digital literacy and its relationship to 21st-century skills, which are crucial for navigating the complexities of the modern world.

Keywords: Technology, Communication, ICT skills, Knowledge, Tools,

Introduction

Digital literacy is an individual's ability to find, evaluate, and communicate information by utilizing typing or digital media platforms. It is a combination of both technical and cognitive abilities in using information and communication technologies to create, evaluate, and share information. The origin of the word literacy refers to the ability to read and write. Early descriptions of computer-related literacies also focus on the acquisition of sets of rules and technical capabilities. However, by the end of the 20th century, this definition had expanded considerably. While digital literacy initially focused on digital skills and stand-alone computers, the advent of the internet and the use of social media has resulted in a shift in some of its focus to mobile devices. Similar to other evolving definitions of literacy that recognize the cultural and historical ways of making meaning, digital literacy does not replace traditional methods of interpreting information, but rather extends the foundational skills of these traditional literacies. Digital literacy should be considered a part of the path towards acquiring knowledge.

Abstract

The New Education Policy was approved by the Indian Union Cabinet on July 29, 2020, replacing the previous policy. The Access, Equity, Quality, Affordability, and Accountability aspects form the basis of the NEP 2020. This paper aims to understand the features of the New Education Policy 2020. This is a descriptive study. The necessary secondary data was gathered from various websites, journals, and other publications. This study concluded that the previous educational system has flaws, including rote learning, a lack of practical knowledge, a heavy emphasis on exams and tests and study material that isn't applicable to real-world situations. These flaws were addressed by the introduction of the new educational system. This can be the cause of "Unemployed educated youth." As a result, the Indian government announced a new policy that makes several changes to the existing framework. The country and the lives of young people will drastically change if these policies are put into practice and the goals are met.

Keywords: NEP, Education structure, Curriculum, Digital Learning

Introduction to New Education Policy

The New Education Policy (NEP) has taken the place of the National Education Policy (NEP), which was established in 1986 and was in force for 34 years. The National Education Policy (NEP), which was first created in 1986, was later modified in 1992 and 1998. The government finally introduced the National Education Policy 2020 after 34 years. A committee was established to create a new education policy, and in 2019, the National Education Policy was written under the direction of Dr. K.K. Kasturirangan. In July 2020, the Central Government approved the National Education Policy 2020.

The NEP 2020 aims to raise the standard of education in India to a global level, enabling the nation to emerge as a leader in knowledge-based industries. It also focuses on the holistic development of students and the inclusion of all types of students regardless of their caste, creed, and religion. It opens the door for fundamental changes to the nation's higher education and educational systems. It is accomplished through implementing the National Education Policy's recommendation to make education universal. It is achieved through the universalization of education outlined in the National Education Policy By incorporating creativity, learning, experiments, visualisation, and art into the

Abstract

The National Education Policy (NEP) 2020 is a comprehensive reformulation of India's education policy that aims to transform the country's education system to meet the needs of the 21st century. The policy is based on the principles of accessibility, equity, quality, affordability, and accountability, and it seeks to provide a holistic and multidisciplinary education to all students. The salient features of the NEP include emphasis on early childhood care and education, the introduction of curricular structure, the promotion of multilingualism, the incorporation of vocational education, and the establishment of a National Educational Technology Forum. The need for adequate funding, the development of a robust monitoring and evaluation mechanism, and the involvement of all stakeholders in the implementation process. Overall, the NEP 2020 presents a unique opportunity for India to transform its education system and to prepare its students for the challenges and opportunities of the future.

Introduction

"Education imparted by heart can bring revolution in the society"

Education is fundamental for achieving full human potential, developing an equitable and just society, and promoting national development. Providing universal access to quality education is the key to India's continued ascent, and leadership on the global stage in terms of economic growth, social justice and equality, scientific advancement, national integration, and cultural preservation. One major change brought about by the policy is the shift from the traditional 10+2 education structure to a more flexible and comprehensive 5+3+3+4 system. The aim behind this new system is to prioritize essential skills, critical thinking, and life skills in education for students at all levels. The New Education Policy brings a strong focus on developing 21st-century skills like creativity, critical thinking, and problem-solving. It also suggests the creation of innovative institutions like digital universities and the use of technology to enhance student learning.

Highlights of New Education Policy

- The new policy aims for universalisation of education from pre-school to secondary level with 100 per cent Gross Enrolment Ratio (GER) in school education by 2030 and aims to raise GER in higher education to 50 per cent by 2025.

Abstract:

Education is important for the economic and social Development of nation. The weapon may prove to be harmful if it is misused. Due to proper interpretation and implementation of policies, the generations may be benefitted. It will result in strong economic and social development. The National policy in education, 1986 was replaced by New National Education Policy. [NEP 2020] National Education Policy is the holistic reform in the education across all levels stages of education in India. It made reforms in Primary, Secondary and Higher education in single policy document. It is the Evolution in the field of education in India. This Study is based on secondary data, the available literature on the topic is referred. This paper aims at discussing challenges and Opportunities in National Education policy 2020 with respect to higher education in India. This paper will help the researchers, academicians and policy makers gain insight in the NEP policy.

Introduction :

“Education is the most powerful Weapon to be used to change the world”

- Nelson Mandela

Kothari Commission [1964-66] had recommended a 6 % allocation of GDP, National Education Policy, 2020 is an evolution in the Education field. It tried to increase access, equity, And inclusion as one of the key changes. Internationalization of higher education is one of the Aims in the NEP. NEP promoted more and more Philanthropic activity in the education sector. NEP tried to imbibe that education is a concurrent subject. NEP suggested a “light but tight” regulatory Framework to ensure integrity, transparency, and Resource efficiency of the educational system through audit and public disclosure while Encouraging innovation and out-of-the-box ideas through autonomy, good governance, and Empowerment.

Abstract

Well defined and futuristic education policy is essential for a country at school and college level due to the reason that education leads to economic and social progress. Different countries adopt different education systems by considering the tradition and culture and adopt different stages during their life cycle at school and college education levels to make it effective. Various innovations and predicted implications of NEP 2020 on the Indian Higher Education system along with its merits are discussed. Finally, some suggestions are proposed for its effective implementation to achieve its objectives.

Keywords: Well defined- futuristic education policy- school and college levels –economic and social progress –different education systems- tradition and culture-life cycle at school and college education levels –predicted implications – effective implementation-achieving the objectives

Introduction:

The first national education policy after independence was announced in the year 1968 and the Second national education policy which was improved version of the first was announced in the year 1986. The currently introduced National Education Policy 2020 envisions an India centered education system that contributes directly to transforming our nation sustainably into an equitable and vibrant knowledge society, by providing high quality education to all. India, being a growing liberal country for educational reforms, currently has about 845 universities and approximately 40,000 higher education institutions (HIEs), reflecting the overall high fragmentation and many small sized HEIs in the country which are affiliated to the universities. It is predicted that India will be the third largest economy in the world by 2030-2032 with estimated GDP of ten trillion dollars.

Highlights of New Education Policy 2020:

- New Policy aims for Universalization of Education from preschool to secondary level with 100 GER in school education by 2030.
- NEP 2020 will bring 2 crore out-of-school children back into the mainstream.
- New 5+3+3+4 school curriculum with 12 years of schooling and 3 years of Anganwadi/Preschooling

Nallamuthu Gounder Mahalingam College, Pollachi

Ms.P.Priyadharshini

I M.Com IB, Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Sustainability is a long-term vision of commitment or goals, while the process or way to achieve those goals is known as sustainable development. Sustainability is a multidimensional concept, and it often describes the concept of sustainable development through four key components. They are society, culture, environment, and economy. This paper covers the concept of sustainable development, its need in India, Sustainable development goals, and Indian Government Initiatives in Sustainable development and strategies for sustainable growth. The secondary data used to describe the concept is collected from various websites. Sustainable development brings stability to the environment and it has to be kept in mind that the use of eco-friendly technologies and resources won't harm the environment and it is time for the global community to act upon their responsibilities to promote sustainable development.

Keywords: Sustainable development, Society, Environment, Economy, Cultural

Introduction

Sustainable Development means development that meets the needs of the present without compromising the ability of future generations to meet their own needs. The concept of sustainable development is the process of sustaining economic growth over time without lowering the standard of living for future generations. It was first mentioned in the 1980 World Commission Strategy report by the IUCN (International Union for the Conservation of Natural Resources). Sustainability is based on ensuring that the current generation leaves a legacy of quality of life for the next generation. Sustainable development is observed as the mutually beneficial interaction between the legal interest of a business and the economy, government and politics, and civil society, and culture.

FINANCIAL INCLUSION OF MSME

Abstract

*This study aims to determine the effect of the digital economy on the financial inclusion of MSME and try to examine the technology adoption variable in mediating the impact of the digital economy. Structural model results indicate a mediation and a reflective impact of the extended technology acceptance model on digital economy and financial inclusion relationship. The role of the digital economy and technological adaptation has significant implications for financial inclusion. The digital economy is a sign of future economic development and growth which is marked by the rapid development of business transactions. The world's economies have harnessed the potential of technology-based inclusion through a combination of financial products and services. Technology adoption plays a role in reducing the digital economy gap towards financial inclusion in Sukabumi MSMEs. This study proposes the concept of the digital economy as an independent variable and technology adoption as a mediating variable on the financial inclusion of MSME actors. This research is empirical and has a wider application. **Key words:** Digital economy, Financial inclusion, Technology adoption.*

Introduction

Finance covers all aspects of economic activity, is a fundamental and essential part of an inclusive series of transactions that are important in creating economic stability, improving financial arrangements, managing government programs in the field of backwardness, and narrowing gaps between individuals and regions. According to the World Bank and the European Commission, a comprehensive or inclusive mode of finance is a comprehensive activity that is expected to minimize everything that is considered to interfere with the implementation process to enable the public to optimize the use of technology in the financial sector. As presented two things above, financial inclusion focuses on the accessibility, availability, and benefits of the formal financial system owned by economic actors, which is not limited to the reach of community needs in the business sector. India's Micro, Small and Medium Enterprises (MSMEs) sector has appeared as a vibrant and dynamic sector for the economy. It has been recognized as a catalyst in promoting the growth and development. The concept of financial inclusion has become a major issue on the development agenda in a number of developing countries. According to the United Nations, financial inclusion refers to easy access to financial services for low-income people and micro-, small-, and medium- sized enterprises (MSMEs).

AN INSIGHT ON DIGITAL INDUSTRY 4.0

Dr.B.Rohini

*Assistant Professor, PG Department of Commerce with International Business
Nallamuthu Gounder Mahalingam College, Pollachi*

Mr.A.Pranesh (23-PI-05)

*I M.Com IB
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

Industry 4.0 stands for the fourth industrial revolution which is defined as a new level of organization and control over the entire value chain of the life cycle of products. Digitalization and modernization of the manufacturing process is the need for today's industry. The manufacturing industries are currently changing from mass production to customized production. The rapid advancements in manufacturing technologies and applications in the industries help in increasing productivity. It is geared towards increasingly individualized customer requirements. Industry 4.0 is visionary realistic concept that includes the Internet of Things, Industrial Internet, Smart Manufacturing and Cloud-based Manufacturing.

Keywords: *Industry 4.0, Digital, Cyber Security*

Introduction

Industrial Revolution, subsequent revolutions have resulted in manufacturing, from water and steam powered machines to electrical and digital automated production which makes manufacturing process more complicated, automatic and sustainable so that people can operate machines simply, efficiently and persistently. The term Industry 4.0 stands for the fourth industrial revolution which is defined as the new level of organization and control over the entire value chain of the life cycle of products, it is geared towards increasingly individualized customer requirements. Industry 4.0 is fulfilling individual customer needs which affects areas like order management, research and development, manufacturing commissioning, delivery up to the utilization and recycling of products. The main difference between industry 4.0 and Computer Integrated Manufacturing is the concern of the human role in production environment. Industry 4.0 has an important role of human worker in performing the production whereas CIM is considered as workerless production. The Industry 4.0 promotes the connection of physical items such as sensors, devices and enterprise assets, both to each other and to the Internet. Designing and drafting methods in all disciplines should be reviewed and their suitability to be checked for a modern, interdisciplinary approach model for product development and transferred to a common, integrated and interdisciplinary methods, process and IT solution. The production process is divided into small value-oriented units which shares information of the consecutive process steps only which helps in increasing flexibility and probably results in reduction of complexity of coordination.

Abstract:

It is a reiterated fact that India is one of the fastest-growing countries in the world. The government has taken various initiatives to accelerate the growth of the country. Various Government and non-government institutions are working relentlessly to take the country to new heights of growth. The challenge here is to take care of every section of society and every sector of the economy for overall sustainable development. The problem of poverty still persists in rural areas. The rural development and poverty alleviation are the major challenges which hinder the growth of the country. The Micro, Small and Medium Enterprise Sector is one of the crucial sectors that could prove a game-changer in rural development and poverty alleviation. In this paper, an attempt has been made to study the situation of rural economy and poverty in the country. The researchers have tried to list out the possibilities that MSMEs could offer to alleviate poverty and contribute to sustainable rural development.

Keywords: *Rural development, Micro, small and medium enterprise MSMEs, Rural economy*

Introduction:

MSMEs have a critical role to play in the development of rural India. They not only bring employment opportunities but also help in various other ways such as getting recognition, facilitating economic growth and so on. Here is how small industries are helping achieve rural development. When it comes to MSME and rural development, there is the valuable role of small-scale industries in rural India, and the contribution of the cottage industry. Traditional businesses such as cotton weaving, silk weaving, handicrafts, etc., have been instrumental in the growth of the region, by ways of eradicating poverty, generating employment, contributing towards economic growth and so on.

Definition of MSMEs:

The definition of MSMEs in India has been ever-changing as per the growth in the economy. First systematic and robust definition of MSMEs was provided in the MSMED Act, 2006. Which defined the MSMEs in terms of investment criteria for both manufacturing and service enterprises. The definition has been changed again in June 2020,

Abstract

Micro, Small and Medium Enterprise (MSME) sector has emerged as a very prominent sector of the Indian economy, contributing significantly, to Gross Domestic Product (GDP), merchandise exports, employment and inclusive growth of the country. Throughout the period, the government has undertaken several policy measures related to finance, infrastructure, risk mitigation etc. to precipitate MSMEs growth. With the government initiatives, such as, digital India and the boom in digital payment, post demonetization, the overall technological adoption, in doing business, has improved in the country. The government's initiatives to support manufacturing, such as Make in India and the PLI programmes will assist Indian. The government has also launched various campaigns such as Skill India, Startup India, Digital India and Made in India to boost this sector's growth and enhance productivity

Keywords: Digitalization, Economic Development

Introduction

The motto of MSME is “**EMPOWERING ENTREPRENEURSHIP**”

The MSME sector in India has grown incredibly robust and dynamic. By encouraging entrepreneurship and generating significant employment possibilities, the sector significantly contributes to the economic and social growth of the nation. More than 63 million MSMEs are located across the nation, and they produce goods and services that support roughly 30% of the GDP and nearly 11 crore people's daily needs MSMEs establish themselves firmly in international value chains.

Micro, small and medium enterprises (MSMEs) are considered the pillars of Indian economy due to their considerable contribution to GDP, exports and employment generation. MSMEs started with the establishment and growth of India's khadi and coir industry, along with various industries situated in rural areas. Most micro and small businesses belong to food and agriculture sectors. Medium-sized firms are primarily within automotive, pharmaceutical, textile and chemical industries.

The Importance of Digital Transformation for MSMEs:

- **Competitiveness:** In a digital age, staying relevant requires embracing technology to streamline operations, reach new markets, and improve customer experiences.
- **Efficiency:** Automation and digital tools can enhance productivity, reduce operational costs, and minimize errors.
- **Market Access:** E-commerce and online marketing open new opportunities for MSMEs to reach global audiences.
- **Data-Driven Decision-Making:** Collecting and analyzing data can provide valuable insights for informed decision-making.

Abstract

The Micro, Small and Medium Enterprises (MSME) sector has emerged as a vibrant and dynamic sector of the Indian economy. MSMEs play crucial role in providing large employment opportunities at comparatively lower cost than large industries. MSMEs are complementary to large industries as ancillary units and this sector contributes significantly to the socio-economic development of the country.

Introduction

Worldwide MSME's account for 95% of firms and thus creating nearly 60% of employment generation. Appropriate technologies have to be domestically developed to overcome efficiency and cost considerations. Indigenously developed innovations help in solving the problems. MSME's firms are the universal vehicles all over the world to achieve the goals of employment generation, inclusivity, innovation, and distributed economic activity across population, sectors, geography, poverty alleviation and other critical factors needed for sustained growth leading to sustained development. The firms operate in very different markets rural, semi-urban, metro cities, local, national, regional as well as international. They operate at different levels of skill sets, investment, intricacies and growth orientation. MSME's also nurture entrepreneurial talent in addition to being effective engines for poverty alleviation and women employment. Be it in manufacturing or service sector MSME's can become the engines that sustain growth for long-term development for India. When growth becomes stronger, SMEs gradually assume a key role in industrial development and restructuring.

Role of MSME in Connecting Society

Contribution to Industrial Production and Export

MSME are, at present, operating in wide variety of sectors such as manufacturing, trade and services and there by constitute a terrifying component of country's industrial production from last good number of years. The sector contributes much to the industrial growth of the country. The sector account for more than 90 of the percent Industrial units

Abstract

In the industrialized countries dramatic decreases in the number of people employed in agriculture have been made possible by a rise in soil and labour productivity. There is scope for these to improve further, particularly in developing countries. Potential yields are determined by the characteristics of the crop, local temperature and sunlight. Because the availability of nutrients and that of water are limiting for at least part of the growing season in most agricultural lands, attainable yields are lower than potential yields. Proper management of nutrient inputs, such that optimum use is made of each, can reduce this gap without causing negative environmental side-effects. Actual yields are lower than attainable yields because of growth-reducing factors, such as pests, diseases and weeds. For sustainable agriculture these should be controlled mainly by biological measures. There are many possibilities for this, thus biocides may be used as a last resort not as preventive insurance. Potential yields of rice and sugarcane can reach 30 000 kg ha⁻¹ per year of consumable organic matter, sufficient to feed 120 people. Such yields cannot be achieved on all agricultural land, but it is estimated that world food production could support a population of 80 thousand million, if they were all vegetarian and required only 1500 m² for non-food related purposes. The green revolutions that occurred in the Western industrialized countries in the late 1940s and early 1950s and in Asia in the late 1960s and early 1970s need to be followed by a similar increase in agricultural productivity in Africa and West Asia to feed their rapidly growing populations. Better use of fertilizers and good water management require well-educated farmers with the financial means to implement long-term strategies. If these developments are managed properly, food production for the ever-increasing human population can be guaranteed and the burden on the environment and natural habitats reduced, enabling the development of sustainable agricultural systems.

History of Agriculture

In the early Middle Ages, French farmers produced some 800 kg of grain per hectare each year of which, because of its poor quality and competition with weeds, 200 kg were needed as seed for the next year's crop. The low level of mechanization meant that it took at least 500 hours to cultivate each hectare. North-western Europe's highly productive agriculture now produces around 7500 kg of grain per hectare per year. No more than 150 kg of seed and 15 hours of work are required for each hectare. The cause of the low yields

Abstract

Food processing is the method and technique used to transform raw ingredients into food for human consumption. Food processing takes clean, harvested or slaughtered and butchered components and uses them to produce marketable food products. Food Processing is a branch of food science. Processing of food leads to preservation of food, enhances its flavor and reduces the toxins in the food product. It leads to better distributional efficiency and helps in the easy marketing of the food products. Food processing being a capital intensive industry is also a water consuming industry. Water being the most important resource, the food processing industry should make efforts to reduce the wastage of water.

Introduction

Innovation in the food industry combines technological innovation with social and cultural innovation. It occurs throughout the entire food system, including production, harvesting, primary and secondary processing, manufacturing and distribution. The ultimate innovation is a new or improved consumer product and service. Innovations can be focused in one area of food technology, for example process engineering, product formulation, food qualities or consumer needs; but ripples spread causing changes in other parts of the food system, in consumer eating patterns and in general social and cultural areas. Food industry innovation strategies need to be based on the total technology in the food system and concerned not only with the technological changes but also with the social and environmental changes, so as to produce food that satisfies the nutritional, personal and social needs and wants of all communities.

About SIIMS

Sakthi Institute of Information and Management Studies (SIIMS) is constituent of Sakthi Group of Educational Institutions. It was established by Padmabhusan Arutchelvar Dr. N. Mahalingam, founder of Sakthi Group, with the dream of setting up a modern institution to impart management education of international standards for MBA aspirants. He felt the need for bridging the rural and urban divide through education with the vision of 'Unearthing Leadership for emerging India'. The institute is managed and guided by Dr. B. K. Krishnaraj Vanavarayar, President and Mr. M. Balasubramaniam, Secretary. SIIMS imparts management education to address the issues pertaining to emerging economies and it responds to the managerial challenges faced by both small and medium enterprises (SMEs) and corporate sectors. In order to face the challenges, Industries need the students with managerial skills. The students at SIIMS are groomed with critical insights that give the desired knowledge & leadership to utilize the opportunities and emerge as winners in the growing Indian Economy. SIIMS, An Exclusive MBA with different specializations offered here widens the opportunity for students for starting business, job opportunities and equipping themselves to world class. The Department also provides various additional programmes like, Human Excellence, Training Programmes and other career building activities in current era. SIIMS highly focuses on focused development among faculties, students and quality education concepts. The functions are organized as a multi-focused quality to meet global standards.

About Conference

The conference aims to bring together leading academic scientists, researchers and research scholars to exchange and share their experiences and research results about all aspects of Management and related areas. The SIIMS international conference is to promote research and developmental activities in Management and allied areas i.e., scientific information interchange between researchers, developers, engineers, students, and practitioners working in and around the world. Contemporary management issues often trigger opportunities for different areas delegates to exchange new ideas and application experiences face to face, to establish business or research relations and to find global partners for future collaboration.

Conference Objective

Conference aims to provide development culture among faculties, research scholars and students at different disciplines in the field of contemporary approaches in current era

INTRODUCTION TO FINANCIAL SYSTEM

A financial system consists of a collection of organizations that allow money to be exchanged, like stock exchanges, banks, and insurance providers. There are regional, global, and company financial systems. To finance projects—whether for consumption or profitable investments—and to seek a return on their financial assets, lenders, investors, and borrowers trade current funds. The financial system also includes sets of rules and practices that borrowers and lenders use to decide which projects get financed, who finances projects, and terms of financial deals.

IMPORTANCE OF FINANCIAL DEVELOPMENT

Economic development is greatly influenced by the development of the financial sector, according to a substantial body of evidence. By raising the savings rate, mobilising and pooling savings, generating investment information, facilitating and encouraging the inflows of foreign capital, and optimising capital allocation, it fosters economic growth through capital accumulation and technological advancement. Long-term economic growth is typically faster in nations with more developed financial systems, and a growing amount of evidence points to a causal relationship between financial development and economic growth, not just an effect of the latter. In addition, it decreases poverty and inequality by giving the impoverished and vulnerable populations greater access to financing, facilitating risk management by lessening their susceptibility to shocks, and boosting investment and productivity that raise income generation. The development of the financial sector can facilitate the expansion of small and medium-sized businesses (SMEs) by giving them access to funding. Compared to large companies, SMEs usually employ more people and generate more jobs. They are crucial to economic growth, especially in developing nations.

MEASUREMENT OF FINANCIAL DEVELOPMENT

Assessing the financial sector's growth and realising how financial development affects economic expansion and the eradication of poverty require accurate calculations of financial development. Debits to GDP, liquid liabilities to GDP, and assets to GDP ratios of financial institutions are calculated. These measurements are only approximations and do not fully capture all facets of financial development because a nation's financial sector consists of a wide range of financial institutions, markets, and products.

ROLE OF FINANCIAL SYSTEM IN ECONOMIC DEVELOPMENT

PROBLEMS & PROSPECTS OF HUMAN RESOURCE AMONG G20 NATIONS

Introduction:

Human resource management (HRM) is a relatively young field, which has undergone a rapid evolution. From its initial roots as the function involved in the administrative aspects of hiring, firing, and payroll, it has seen stages where Union relations/avoidance, employee satisfaction, and legal compliance have served as dominant areas of emphasis and expertise (Noe, Hollenbeck, Gerhart & Wright, 1997). Most recently a trend has developed toward justifying the expenditures for and existence of the HR function. HR departments and programs have become an element of the firm's profit equation to be minimized as a cost and maximized as a value-adding component of firm strategy. In fact, some in the popular business press have characterized HR departments as bureaucratic wastelands and suggested doing away with them (Stewart, 1996). Consequently, HR practitioners have become preoccupied with demonstrating the value of the HR function, particularly through showing its impact on firm performance (Pfeffer, 1997; Ulrich, 1997).

Abstract

Digital payments are transactions that take place electronically or online without exchanging physical money. Payments are exchanged electronically between both the payer and the payee. This paper aims to identify the usage of digital payment systems by rural customers and to understand the obstacles faced by rural customers in adopting digital payment systems. A convenient sampling method is employed for selecting a sample of 75 respondents with bank accounts in rural areas of Pollachi taluk. The data is analyzed using Simple Percentage, Weighted Mean score, T-test, and ANOVA. The results indicate that bank type influences the usage of digital payment systems.

Keywords: Digital Payment system , rural customer, Obstacles, Usage

Introduction to the Study

Digital payment system refers to the mechanism through which financial transactions are conducted electronically, without the need for physical currency or checks. Nowadays digital payment systems have become integral to facilitate the exchange of goods and services, both online and in physical stores. These systems enable individuals, businesses, and organizations to transfer funds, make purchases, and settle transactions securely and efficiently. They encompass a wide range of technologies and platforms, including: credit cards and debits , mobile wallet, bank transfer, online payment platforms and more. Digital payment systems offer several benefits over traditional cash-based transactions, including convenience, speed, security, and accessibility. They streamline the payment process, reduce the need for physical cash handling, and enable seamless transactions across geographic boundaries and time zones. Additionally, they provide valuable data insights for businesses and financial institutions to track spending patterns, manage finances, and personalize customer experiences.

ROLE OF CUSTOMER EXPERIENCE IN STARTUPS: A STRATEGIC IMPERATIVE

Dr. B. Rohini

*Assistant Professor, M.Com IB,
Nallamuthu Gounder Mahalingam College, Pollachi.*

Abstract:

This paper explores the critical role of customer experience as a strategic imperative for start-ups. Customer experience is the heart of the relationship between a business and its customers. Typically, when people talk about customer experience they mean traditional sales and marketing touch points along the customer journey. In the fast-paced and competitive business environment, where customer expectations are continually evolving, start-ups must prioritize CX to establish a competitive edge, foster customer loyalty, and ensure sustainable growth. The paper delves into the strategy in business, strategies and the impact on long-term success.

Introduction:

Customer experience is a business engages with its customers at every point of their buying travel. It is embedded into every interaction, and each interaction is an opportunity to build a stronger bond between the company and the customer—or has the potential to weaken that bond. Good customer experience involves building a relationship by understanding what people want, need and value. Each department have its own priorities, targets and metrics. Instead of operating in isolation, companies need to organize all of their internal operations in new ways to evaluate and serve changing consumer needs.

To remain relevant and compete in today’s ever-changing world, customer experience strategies need to be top of mind for every stakeholder in your business. From management to marketing to sales to service, everyone across front- and back-office functions needs to be invested in delivering a life-centric customer experience.

Leaders who push beyond traditional strategies and their organizations, not just by which products or services they sell and offer, but with a approach to meet customer needs, will emerge stronger and ignite growth in their organizations.

Importance of Customer Experience in Start-Up

- Understanding the importance of customer experience
- Review past data and future projections.
- Evaluate your customer experience SOPs.
- Create a customer policy and a vision.
- Build a strong team to carry out the Plan.
- Empower agents with defined objectives and guidelines.
- Test and tweak your plan
- Set up ticket tagging so that specific tags assist in isolating problems
- Constantly review and record performance data

Strategies for Ensuring Consistent Cx in Scaling Startups

- Standardize Processes : Launch Standard Operating Procedures (SOPs) for all customer interaction points it ensures that team member handles customer interactions

PREFACE

In 2021 Independence Day speech, the Hon'ble Prime Minister shared his Vision, when the country would celebrate the Centenary Year (100) of Independence, the goal of 'Amrit Kaal' is to create India with the high level of all facilities not dividing the village and the city; where the government does not interfere unnecessarily in the lives of citizens; where there is world's modern infrastructure everywhere. To achieve these goals, the slogan is framed, "Sabka Saath, Sabka Vikas, Sabka Vishwas, and Sabka Prayas". The government has taken several steps, like focusing on women's development, health, education, skill development, science and technology advancement, infrastructure creation, employment, agriculture, increasing manufacturing, industrial production, innovation, boosting indigenous industry etc.

Vision India @ 2047 is a project initiated by the NITI Aayog, the apex policy think tank of India, to create a blueprint for India's development in the next 25 years. The project aims to make India a global leader in innovation and technology, a model of human development and social welfare, and a champion of environmental sustainability. It is framed the objectives of Achieving a USD 30 trillion economy with a per-capita income of USD 18,000-20,000 with strong public finances and a robust financial sector, Building world-class infrastructure and facilities in both rural and urban areas, Eliminating unnecessary interference by the government in the lives of citizens and promoting digital economy and governance, Developing 3-4 global champions in every sector by merger or restructuring and boosting indigenous industry and innovation, Becoming self-reliant in defence and space sectors and enhancing India's role in the world, Fostering green growth and climate action by increasing renewable energy capacity and reducing carbon emissions, Empowering the youth with skills and education and creating more employment opportunities and Partnering with foreign R&D organizations to build top 10 labs in the country and bringing at least 10 Indian institutions among the top 100 globally.

Growth of India at 100 years in 2047 will be catalyzed by rapid advancements in all business sectors, with technology being the key enabler of the progress. Rapid smart phone penetration, faster & affordable internet fuelled by 5G, and wider adoption of emerging technologies like Artificial Intelligence, Machine learning is expected to enable India leapfrog for the years to come. The government is already implementing various programs for green fuel, green energy, green farming, green mobility, green buildings, and green

equipment, and policies for efficient use of energy across various economic sectors. Similarly, the Government is also focusing on critical and emerging technologies like block chain, AI, IoT etc. The alarm on governments engaging with the private sector as appropriate to work, towards providing or promoting the provision and the infrastructure and digital technologies for AI and the mechanisms for knowledge sharing, taking into account their national frameworks. Digital ecosystems help companies interact with customers, business partners, unrelated companies, and even some competitors. So, while more and more companies are becoming technology companies, they are also participants in some digital ecosystem. The best part is that successful digital ecosystem can lead to measurable gains, by automating routine tasks, analyzing data, and improving decision-making, AI can help increase productivity, reduce costs, and improve the quality of products and services. In Healthcare, Education, and other fields, Humans will work symbiotically with technology, with AI performing analysis, optimization, and routine work, while we humans contribute our creativity, strategy, and passion. AI enables automation of tasks in areas such as data collection, data entry, customer focused business, email responses, software testing, invoice generation, and many more. Employees get time to focus on such tasks which require human abilities and have become an essential part of daily life. The biggest beneficiaries of this change will be young and skilled developers learning AI development with safety and security. Artificial Intelligence and its multiple sub-domains are being increasingly employed in various industries and businesses to aid in repetitive processes. So efforts had made to organize the seminar on the theme India 2.0; Vision for India 2047 that specially focus on Digital Eco Infrastructure clubbed with Entrepreneurial Opportunities for economic development were special address on safety and trust in Artificial Intelligence.

Digital Ecosystem: The digital ecosystem encompasses more than just technological infrastructure; it encapsulates the fusion of connectivity, innovation, and accessibility that defines the nation's digital landscape. From the bustling metropolises to the farthest corners of rural India, this ecosystem envisions a seamless integration of technology that empowers citizens, catalyses economic growth, and redefines the paradigms of governance.

Harnessing Artificial Intelligence: AI is predicted to grow increasingly pervasive as technology develops, revolutionising sectors including healthcare, banking, and transportation. The work market will change as a result of AI-driven automation,

necessitating new positions and skills. The future of AI in each of the fields, like Health care Industries, Education, Finance, Military, Cyber security, Transportation, Business, etc.,

Roadmap for India @ 100 emphasises productivity as a driver of sustained prosperity through sector-specific and region-specific policies based on the '4 S' principles. The 4S principles stress the need for prosperity growth to be matched by social progress, to be share across all regions within India, to be environmentally sustainable, and to be solid in the face of external shocks. India is well on the path to becoming one of the two largest economies in the world by 2047. Hon'ble Commerce and Industries Minister have also predicted that by 2047 India will be a global powerhouse with the size of economy around \$ 35 trillion. The vision document for the same is already being prepared in consultation with a wide-range of stakeholders across all sectors.

Dr. B. Rohini

Abstract

The purpose of this study is to develop the principles for building a digital economy in developing countries. It is shown that the priority task of the socio-economic development of these countries is the formation of a digital economy. The features of the development of the digital economy are highlighted, which include the presence of intellectual assets, the increasing importance of data, the network organization of business, the widespread adoption of the Internet and the global nature of data exchange. The tools for solving the problems of the digital society are defined, which include digital platforms for the development of a "share economy", as well as cloud technologies and methods for processing large databases. The principles of building skills development systems in terms of digitalization are formulated, among which are rational use of resources, combining short-term and long-term development goals, lifelong learning, systematic approach, a unified approach to management at different levels of government and involvement of all stakeholders in the digitalization process.

Keywords: Digital – Economy - Shared Economy - Developing Countries

Introduction

The modern world is undergoing a digital revolution with significant implications for the economic and social fabric. As in the case of previous waves of technological innovation, digital technologies create conditions for the transformation of socio-economic relations. The development of the Internet of Things (IoT) can make workplaces and transportation systems safer, cities more livable. Broadband networks and online applications are used for communication, shopping, travel and work, as well as to create completely new business models and markets. Digitalization has turned many consumers into prosumers through the production of content on digital platforms and participation in P2P networks. The digital economy boosts productivity and supports socio-economic development. The introduction and use of digital technologies in economic processes increases productivity and allows you to participate in global value chains.

Objectives

- A more effective system of direct and indirect support for research, development and innovation.
- Maturity and readiness of sectors for digital transformation.

- Citizens' readiness for changes in the labour market, education and the development of digital skills
- Support for the connectivity and infrastructure of the digital economy and society.
- Ensuring security and trust in the environment of digital economy and society.
- Legislation supporting all aspects of the digital economy and society
- Optimal system of financing the digital economy and society.
- Institutional coordination of policies to support the digital economy and society.

1. Effective system of direct and indirect support for research, development and innovation

The enormous development of digital technologies has helped to improve everyday life in recent years. Digital technology has proven to be an excellent tool for stimulating innovation in all sectors of the economy. At the same time, new technologies are shaping the future digital economy. The competitiveness and economic growth of the Czech Republic strongly depends on the level of the digital economy. If we want the Czech Republic to continue on the road to technological progress, we must support research and development.

Maturity and readiness of sectors for digital transformation

Digitization penetrates all the areas of our lives and its intensity is increasing. The transformation of the Czech Republic's industry takes place across all sectoral agendas. The aim is to ensure that all sectors can benefit fully from digital innovations in order to create higher value products, adapt their business models and maximize the growth potential of the Czech digital economy. In addition to healthcare and the automotive industry, there are many other areas where the added value of digitization and cost savings are obvious. Digital tools help achieve optimal use of both raw materials and waste streams. Integrated data systems can help industry to replace energy from fossil fuels with renewable energy.

Citizens' readiness for changes in the labour market, education and the development of digital skills

Over the years, people have been trying to expand their potential through technology. Digital technology created a human-machine ecosystem at the beginning of the 21st century that changed everyday life, people's work, needs and mobility. We are facing a future of change. Being able to use digital technology will be a must for all citizens. Automation and digitization could cause a large global relocation of workers by 2030. Unless we support new knowledge, retrain and change education systems to support lifelong learning, we cannot be competitive. Digitization implies great impacts on education, the transformation of the education system of the whole society and the related impact on the labour market. It is important to set up a flexible education system with regard to changes in the labour market and related socio-economic phenomena.

Support for the connectivity and infrastructure of the digital economy and society

Connectivity is the key to the success of digital services. The development of infrastructure is crucial to achieving the sustainable development objectives. The right investment in digital infrastructure development act as the backbone of well-performing economies and more inclusive societies. One of the fastest ways to transform the society and economy of the country is to invest in digital infrastructure. Digitization is the engine of global economic growth. If the Czech Republic does not have an efficient and functioning infrastructure, it will never be competitive. It will not be able to take full advantage of all opportunities in the digital economy (mobility, autonomous management, fast, reliable and affordable connection for households, businesses and citizens, etc.).

Ensuring security and trust in the environment of digital economy and society

The boom in the digital economy is associated with cyber threats and risks. Cyber security is essential for the proper functioning of the digital economy. In order for the digitized society to function well and for the organization and the citizens to trust it, it is crucial to ensure security on the Internet. This requires high digital trust of all parties in the digital space. This involves the defence against cyber attacks and effective and high-quality cyber infrastructure, as well as the protection of privacy and personal and business data. Privacy and security is the focal point of building trust on the Internet and in the digital economy.

Legislation supporting all aspects of the digital economy and society

The legislative and regulatory area is one of the most important benefits and possible obstacles of the State as a legislator for the digital economy. The main challenge is to ensure legal certainty for citizens, entrepreneurs and investors and to create a consistent, effective and predictable legal environment. In order to ensure competitiveness of the Czech Republic, it will therefore be necessary to simplify and streamline legislation so as not to put unnecessary administrative demands on citizens and companies (on users and providers of digital services and solutions).

Optimal system of financing the digital economy and society

To ensure the development of the digital economy, innovation and competitiveness, long-term sustainable ways of its financing are needed. In particular, highly innovative business models cannot exist and develop without a stable and robust sources of finance and their lack holds back the entire economy. Digital technologies, services and platforms can support the flexible and efficient future development of the Czech economy. The priority is to support effective measures to facilitate investment in innovative digital technologies. The economy should exploit the possibilities of digital technologies and the Internet and promote innovation of products, services, processes, organizations and business models.

Institutional coordination of policies to support the digital economy and society

The Czech Republic vitally needs effectiveness, consistency and sustainability of the rapid pace of digitization, especially with regard to the competitiveness of the Czech Republic. It would be a huge mistake to underestimate the increasingly important role of the digital agenda and miss the boat. Given the horizontal nature of measures in the digital economy, it is necessary to establish a functional coordination mechanism that will have an institutional foundation so that it can effectively coordinate activities in the digital economy across public and state administrations, ensuring its funding across different sectors.

Features of the Digital Economy

- **Internet-powered:** The internet has become the driver of the digital economy, making it possible for organizations to connect with new markets and target a better fit of customers.
- **World-encompassing:** Location no longer limits businesses in a digital economy. The ease of global interconnection enables businesses to reach new markets and better maintain the customers they have.
- **Always-on:** The technology, mobile apps and digital products offered by E-Commerce has allowed businesses to offer goods and services twenty four hours a day, seven days a week.
- **Fast-paced:** Due to the almost constant flood of new technologies, and the innovation that brings with it, the digital economy moves at a far quicker pace, making it even more important for companies to keep up.
- **Data-driven:** Data is at the heart of the digital economy. Using data and analytics, businesses are able to make more informed decisions about the product they offer, and formulate marketing strategies targeted perfectly at specific consumers.
- **Competitive:** In a web economy, networked intelligence has enabled companies to ramp up the competition by being more aware of what consumers want, allowing them more choices, and forcing them to vie for their attention.

Challenges in the Digital Economy in Sustainability

1. E-Waste and Pollution

The digital economy is characterized by rapid innovation and the emergence of new technologies that generate more e-waste, creating significant environmental and health risks. The lack of proper e-waste management systems compounds the problem, as most nations lack adequate infrastructure and resources to dispose of e-waste. Unsustainable solutions, such as dumping e-waste in landfills or illegally exporting it to developing countries, are commonplace. Notably, most electronic waste is toxic and non-biodegradable. When methods such as open-air burning and acid baths extract valuable materials from electronic components, toxic components are released into the environment, causing air, water, and soil pollution. These components include mercury, polybrominated

flame retardants, lead, barium, cadmium, and lithium, which can have profound health implications in surrounding communities.

2. Energy Consumption and Carbon Emissions

Electronic devices that support or increase the digital economy are associated with higher energy consumption or contribute even more to greenhouse gas emissions. For example, data centers typically consume a lot of electricity to power their servers, cool their facilities and provide backup power. Furthermore, as the demand for high-performance devices and data-intensive applications continues to grow, technology manufacturers are producing and using more electronic devices. These processes require significant energy inputs to facilitate activities such as extracting and processing raw materials and manufacturing and transporting devices. Furthermore, high energy consumption and carbon emissions from the increased use of cloud-based services, media streaming, and other data-intensive applications have become a crucial challenge in the digital economy. Therefore, more research and development are needed to balance the opportunities created by digital technologies and their consequent environmental impacts.

3. Inequality and the Digital Divide

While the digital economy aims to increase everyone's access to information, knowledge, and opportunity, it is characterized by high inequality and the digital divide. For example, Rappitsch indicates that while online opportunities are accessible to at least 80% of the population in developed countries, only 15% of people in less developed countries have access to the Internet. Furthermore, 30 out of every 100 people have fixed broadband subscriptions in developed countries, compared to 0.7 in Africa. These statistics indicate that those with limited access to digital technologies are being left behind as the digital economy grows, resulting in disparities in economic, social, and educational opportunities. The lack of infrastructure and technologies limits these people's ability to participate in the digital economy and access various options, including education, employment, and health. Furthermore, these regions and communities tend to have low literacy and digital skills, especially among older adults and low-income communities.

This challenge undermines the ability of the digital economy to achieve the sustainable development goals of increasing equity and equality to eradicate poverty and improve the well-being of the global population.

4. Job Displacement and Insecurity

Digital technologies and automation are advancing rapidly, increasing the risk of job losses, and changing the job market. For example, manufacturing and agriculture industries that rely heavily on manual labor are replacing workers with robots and automation technologies. These changes significantly impact individuals, communities and the environment and exacerbate existing inequalities. Furthermore, there are growing concerns about the potential for a skills gap, as employees may lack the necessary skills to

adapt to new technologies and the changing job market. With innovations appearing consistently, it has become a challenge for employees to maintain the desired skills to explore the opportunities presented. This situation has led to a mismatch between workers' skills and those in demand, leading to unemployment and underemployment. The loss of jobs has a negative impact on the quality and standards of living, affecting the well-being of individuals.

5. Market Monopolies and Concentration of Power

As companies expand into international markets, concerns about the impact of market monopolies and the concentration of power are growing. Most large corporations have access to digital technologies and platforms and highly skilled talent, which allows them to continue to grow and dominate various sectors. This dominance is often associated with the corporation's ability to limit competition, stifle innovation, and reduce consumer choice, negatively impacting the economy and social and environmental sustainability. For example, monopolies can limit the diversity of products and services available to consumers and reduce incentives for sustainable practices. Additionally, they may misuse or abuse their power through unethical business practices, manipulative algorithms, or data breaches. Low competition due to the concentration of power allows them to engage in unethical and unsustainable business practices without fear of retaliation, as consumers have limited access to alternative products or services. This challenge affects society and the environment, as evidenced by issues such as the exploitation of workers or the misuse of personal data.

6. Privacy and Data Protection

Privacy and data protection are essential issues in the digital economy that can undermine efforts to achieve sustainability. Most companies use digital information and communication technologies to collect, process and share large amounts of personal data, leading to privacy and data protection concerns. For example, there have been numerous cases of unauthorized access to consumer personal information, data breach or sale of personal data to third parties. These issues affect people's trust in digital technologies, ultimately impacting the adoption of sustainable practices.

Future of the Digital Economy

- **AI and machine learning.** AI, including machine learning, deep learning and neural networks, is advancing and will have a growing role in the digital economy. AI is essential for extracting insights from big data, automating complex tasks, making predictions and managing autonomous systems and robots.
- **Transformation of traditional sectors.** The digital economy is also changing traditional industrial industries such as agriculture. For instance, farmers can get real-time updates on crop quality, soil conditions and irrigation with the help of smartphone apps.

- **Digital connectivity.** Strong broadband connectivity and infrastructure are crucial to the success of the digital economy. Technologies such as 5G are predicted to play a key role in enhancing digital connectivity, resulting in quicker and more reliable communication while supporting the growth of the digital economy.
- **The metaverse.** Immersive technologies such as the metaverse can create entirely new experiences for consumers and open up innovative business applications. These digital environments have the power to revolutionize entire sectors, and in the future, a parallel universe with a distinct financial and economic system might also come into existence.
- **Healthcare transformation.** The integration of telemedicine and digital health tools and applications is expected to improve healthcare delivery and accessibility.
- **Cybersecurity advancements.** The rapid adoption of a digital economy is evolving cybersecurity measures to address increasingly sophisticated cyber threats, including AI-powered attacks. By applying machine learning algorithms, AI-powered cybersecurity systems can detect anomalous behavior, identify potential vulnerabilities and proactively lower the risk factors.

Conclusion

Block chain technology is a powerful tool in various economic industries, including financial management, banking services, supply chain management, insurance, and compensation. With the continuous development of blockchain technology, newer and more creative applications are emerging, particularly in the tourism and digital economy sectors. In the tourism industry, blockchain can be used for reservation management, payment, and travel expenses to improve service quality, reduce costs, and increase security and privacy. Blockchain technology can also be effective in reducing fraud in the tourism industry, which can lead to increased trust among travelers. By using digital signatures and the trust network of blockchain, tourism transactions and information can be safely and reliably registered and managed. The digital economy, as a new and innovative economy, uses digital technologies and electronic communications to conduct economic and business activities. This type of economy usually includes a wide range of sectors, such as e-commerce, digital marketing, digital financial services, software development, computer games, and cloud services, among others. The digital economy is recognized as the main driver of economic growth and development in many advanced countries and continues to develop continuously due to the special importance of digital technologies and their impact on economic and business activities. In addition, the digital economy has significant impacts on various economic, social, and cultural areas, such as changing the way people work and interact with each other, promoting more flexible and remote working arrangements, and increasing global connectivity.

Abstract

The pace of technological revolution and emergence of a knowledge society can change the traditional role of the teacher and the students. Traditionally, the teacher used to be the source of knowledge for the students. There is some cooperation among students to explore new knowledge. In many cases, the teachers do not possess passable knowledge to supplement the view of the student. And the main source of knowledge remains limited to text book. The development of ICT changes the epic centre of knowledge. Technological enlargement always warrants transition to newer technologies by jeopardizing the cost effectiveness of the education programme. The increase in expenditure on elementary education alone over the last four Five Year Plan periods has been more than the increase in expenditure on education as a whole. Professional development goes far the term 'training' with its implications of learning skills, and encompasses a definition that includes formal and informal means of helping teachers not only learn new skills but also develop new insights into pedagogy and their own practice, and explore new or advanced understandings of content and resources. This paper presents the role of ICT in the professional development of teachers. ICT can contribute to teacher and student learning; and good models of effective computer integration as a learning tool; and high quality professional development that transforms this vision into classroom reality, policymakers can turn schools into partners in the creation of the knowledge society envisioned in national policy plans.

Introduction

Professional development activities are an integral part of one's professional life. These activities help one to grow, learn and excel in one's professional field. The increased use of information and communications technologies (ICT) in the classroom to support students' learning places new demands on teachers at all levels, from pre-school to graduate school. This in turn increases the expectations on the teachers' abilities to develop their own proficiency of using this technology: internationally, such proficiency is commonly referred to as digital literacy, while within the Scandinavian educational context the term digital competence is more common (Hanell, 2018; Ilomäki et al., 2016; Krumsvik, 2008). Digital competence refers here to a holistic perspective incorporating proficiency with pedagogical judgement and with the focus on pedagogy and subject matter. In other words, digital competence is knowledge about how digital tools affect our everyday life, and how to use digital tools to support critical thinking, creativity, and innovation. As a teacher, you must have participated in various types of professional development activities/programmes either through the support of your institution or through your

personal effort. Have you tried to analyse the benefits of undergoing professional development programmes? Why are such activities necessary for a teacher? What are the opportunities, avenues in professional development activities for working teachers? What are the hurdles one faces in participating in such activities? These are a few questions which need to be answered. With the innovation of Information Communication Technologies (ICTs) and their uses in teaching learning process and in teacher training, the nature, scope and opportunities for professional development of teachers have changed. The present study will discuss various aspects of using ICTs for professional development of teachers including their uses at personal and at institutional level. The Unit will also highlight various digital initiatives of Government of India in this regard. This unit will help you understand how Massive Open Online Courses (MOOCs) are being used in India as well as globally for professional development of teachers. The study will also critically scrutinize various factors associated with use of ICTs for professional development.

Role of ICT in a Positive Learning Environment

The appropriate use of ICT tools helps in catalyzing the paradigmatic shift in making the classroom a creative space for exploration and experiment for both the teachers and students. It promotes the acquisition of skills and knowledge for students to become lifelong learners. Thus making students autonomous learners and bringing the world into their classrooms. The new ways of teaching and learning create a shift from a teacher-centered pedagogy to studentcentered pedagogy. Various innovative platforms provide an active learning classroom environment and opportunities to work on real-life problems in depth making it less abstract. By keeping the classroom environment engaging, technology enables students to become better focused on their learning. This also helps teachers to juggle various responsibilities like attendance maintenance, delivering academic content, monitoring student's progress, and much more.

ICT Tools

Powerpoint

Continuing on with the digital images theme this program and others similar to it can provide children with a multimedia experience they will enjoy and be able to develop their creativity skills. These programs have colour, movement and sound so it is no surprise that it is quite appealing. It is just as appealing though for children with profound and multiple learning difficulties. PowerPoint can make learning meaningful and relevant. With the use of transition effects, it can reveal a favourite character with a single touch by using it with the Interactive Whiteboard.

Word Processing

Word processing not only can enhance literacy in English lessons, but can enhance literacy throughout all key learning areas. It is a basic and important skill to have not just throughout formal schooling but later in the workforce. Typing skills, saving documents

and knowing how to send a document to the printer are all associated with the use of the word processor.

Spreadsheets

Spreadsheets are undervalued by teachers at times despite being useful for even key learning areas such as English. Besides being a great ICT tool for mathematics and science this needs to be used throughout the curriculum.

Presentation Software

Multimedia programs such as Keynote, PowerPoint and Prezi are commonly used in education settings as teachers often present lessons using them. They are also wonderful learning tools if used correctly to enable students to share their ideas and notes with others in the class. You can focus ICT techniques the students need and monitor their progress along the way.

Desktop Publishing

Publishing programs such as MS Publisher can be a very useful ICT tool to learn during primary school. Much of the formats and templates tend to match learning outcomes. They also offer great opportunities to teach literacy with ICT. It too can be used right across the primary curriculum.

Characteristics of ICT

They are used from anywhere

If something has to stand out as a priority of ICT is the possibility of maintaining a continuous and direct contact with students. The advantage that the student can connect to teaching from anywhere in the world, with the appropriate means to do so, facilitates learning, making it attractive.

For example, when the holiday periods begin, the child usually switches off during the time he does not come to the classroom. This disconnection, only subject to some exercise or list of tasks that must comply, gives way to oversight and a longer time of adaptation period upon return.

Union of culture, science and technology

ICT is the union of beliefs, customs and all those habits that society has adopted as routine. On the one hand, talking about culture is about the everyday routine of society, about the benefits that technology brings to the whole community. On the other hand, it encompasses science, as it is also responsible for giving answers to the human being of what happens in the world.

It is the curiosity to learn that leads man to carry out scientific research to respond to his concerns, producing the *Scientific knowledge*. And finally, the technique is responsible for responding to the need for transformation that man requires to meet his needs.

It is a Mobilizing Teaching

Teaching through ICT gives the possibility that the student can move in different contexts and different realities. In this way we choose a quality teaching in which the student can interact with the world and can face different situations.

For example, before subjects such as geography, the student will be able to contemplate images and videos of geographic features that he has never seen before. In this way, visualizing the content, making it more practical, is given the motivation that it needs.

It is based on other scientific aspects

ICTs applied to education are enriched by other scientific aspects, such as the pedagogical sciences, through innovations in teaching-learning methodologies; Of the psychology of the learning, showing special attention to the stimulus-answer; Of sociology, of anthropology and of philosophy.

Focuses on Objectives

Teaching through ICT is based on keeping in mind, at all times, the objectives. Achieving the proposed goals is essential and, therefore, we are faced with a flexible working methodology.

For example, situations are commonly encountered in ordinary classrooms in which teachers, because of the need for the whole group to carry out a temporary planning, move quickly, leaving behind students who do not carry the same pace.

It is an excellent channel of communication

Another advantage of ICT is the promotion of communication. The use of new technologies favors the communication that the teaching - learning process needs.

For example, there is the possibility that the teacher can maintain daily and fast contact with the family. In addition to answering questions that the students raised when they left the classroom.

It is changeable

As time goes by, the world is changing and new technologies are also changing. Therefore, it adapts to the changes of the context itself and of education, based on the sciences that support them.

Challenges

Technology integration can also present significant challenges to educators. There are several barriers, some extrinsic related to the availability of resources, time, support system, training facilities, and some intrinsic factors such as attitudes, beliefs, practices, and the resistance of the teachers. The constant need to keep updating with the new innovations makes it an overwhelming experience for the teachers. Teachers are constantly adapting the new ways of learning and teaching at the same time. In a diverse country like India, the digital divide also plays a major role in access to ICT tools. Availability of limited or no access to hardware facilities can pose the biggest challenges in adopting technologies

for the teachers. Many schools in rural India lack basic facilities of electricity and internet making teachers rely on textbookbased teaching. School-level factors such as organizational culture and teacher-level factors as beliefs about teaching and technology also impact the motivation levels of the teacher. Lack of digital literacy and adequate continuous training about the use of technology in the teaching process makes it difficult to navigate with the technology in the classroom. Another constraint is of insufficient time and content to use their ICT skills. The non-teaching responsibilities and pressure to complete the textbook syllabus also discourage teachers to use ICT tools. All these factors contribute to making it difficult for teachers in India to explore digital resources and use technology with their teaching.

Future of ICT in Teaching Profession

The role of interactive multimedia in a perspective where learning is part of schooling, working or just living. ICT also includes web TVs, Net PCs, and Web-Based Education that offers accessibility, flexibility and innovativeness in teaching and learning. ICT integrated teacher education is more important to Indian education system that is committed to maintain global partnership as well as leadership in knowledge-based society.

Prof Ram Takwle (2003) says about IT driven education: "They are changing the methods of content generation, content storage, content packaging and content delivery and hence offer a new paradigm of education." These multimedia programs and packages are also intended to supplement the real classroom activities and help their easy assimilation. ICT especially in the 21st Century context of teacher education fulfills the following objectives.

1. It envisages excitement to the learner's eyes, ears, and more importantly the head.
2. ICT fulfills the needs of learners by providing items and packages of higher standard and interest.
3. It helps in transforming the definition of literacy, learning and knowledge; a definition that increasingly includes multimedia digitized literacy.
4. Multimedia provides a kind of control over the learning environment to the pupil teachers and they experience learning from their failures and ill practices.
5. ICT facilitates the learner to have control on lesson, pace the sequence, content, feedback, which in turn enhances the efficiency of learning.
6. Unlike books, it is interactive in nature and creates motivation and interest among the learners, in turn meeting the individual unique needs effectively and efficiently.
7. Develops the ability of self-learning and interacting individually, as the learner attains vast experiences effectively, efficiently and expeditiously.
8. ICT-empowered simulated situation minimizes dangers in the real world' e.g. practical in science, pilot training driving etc.
9. ICT is a powerful new development with ambitious role in teacher education, Digital and Internet.-based multimedia transforms the present trend in the field. It takes just a computer to play multitude of media enabled programs and packages.

Conclusion

The analysis of ICT based approaches to prospective teachers' professional development indicates that there are possibilities and challenges in adopting ICT in teacher training and professional development. Although valuable lessons may be learned from best practices around the world, there is no one formula for determining the optimal level of ICT integration in the educational system. Overall, governments and teacher training institutions seem to recognize the importance of integrating ICT in education and teacher training. In many cases, the national vision for ICT use in education has been integrated into teacher training. Teacher training approaches in this paper show that many cases adopt ICT into their training process not just as content of the training but rather as an integrated training environment and thus allow teachers to experience ICT-based pedagogies. Hence, it may conclude that a variety of approaches in ICTPedagogy integration in teacher training. Via a variety of examples, the author tries to show that ICT use is not only a matter of new possibilities but that it also brings with it new implications and new challenges. Significant challenges that policymakers and planners, educators, education administrators, and other stakeholders need to consider include educational policy and planning, infrastructure, language and content, capacity building, and financing.

Abstract

This study aims at exploring women's perception towards technology in sustainable development and variables associated with level of opinion towards technology especially e-bike. Data for the study have been collected from 180 women through issue of structured questionnaire by adopting convenience sampling method. Simple Percentage and Chi-square test have been used to analyze the data. The study reveals that majority of the women are in the age group of 35 to 45 years and majority of them are undergraduates and employed in private sector with an earning between Rs.20001 to Rs.40,000 per month and they are aware about E-Bike through friends. The level of opinion to purchase e-bike are less pollution followed by Incentives/subsidies from government, durability, eco-friendly, less dependence on fossil fuels, no fuel cost, smooth driving and appearance of vehicle. Chi-square test reveals that area, age, occupation, monthly income, family income and period of usage are significantly associated with the level of opinion for e-bike.

Keywords: Women- Technology-Sustainable.

Introduction

Indians prefer two wheelers because of their small manageable size, low pricing, maintenance, and availability of loans on liberal terms. Indian streets are full of people of all age group riding two-wheelers. Wide varieties of two wheelers are available in the market, known for their latest technology and enhanced mileage. Indian bikes, scooters and mopeds represent style and class for both men and women. India is the second largest producer and manufacturer of two-wheelers in the world. The face of auto industry that was redefined with the invention of fuel-efficient technology is all set to see dawn of a new era in two- wheeler industry. Electric vehicles differ from fossil fuel-powered vehicles in that the electricity they consume can be generated from a wide range of sources, including fossil fuels, nuclear power, and renewable sources such as tidal power, solar power, and wind power or any combination of those. There are several policies, promise and pledges with the ever-increasing emission of greenhouse gases. There is an increased fear of environment pollution at every step with modern technology and innovation. In this regard the present study brief about women perception towards technology in sustainable development through MSME especially e-bike.

Literature Review

Ajaysinh Paramar and Tushar Pradhan (2021) in their study made an attempt to know the consumer perception towards e- vehicle in Vadodara City. The data for the study have been collected by issuing questionnaire to 100 respondents by using random sampling method. The data have been analysed using simple percentage. The finding of the study reveals that the most of the people prefer other than e-vehicle. **Sivasakthi and Geethanjali (2020)**, in her research made an attempt to know the customer satisfaction towards ampere electronic bike with special reference to Coimbatore City. The data for the study have been collected by issuing questionnaire to 120 respondents by adopting random sampling techniques. The data have been analysed using simple percentage and ranking analysis. The finding of the study depicts that advertisement affects to buy E-bike. Customers feel the price of ampere e-bike is moderate.

Statement of the Problem

The two-wheelers of the present world have the sounds to attract the consumers but at the cost of degrading the environment. The usage of e-bike has solution for good environment by reducing pollution, sound etc. With the rising cost of fuel, increasing levels of pollution, high running and maintenance cost of vehicle, the electrically chargeable bikes and scooters are gaining popularity. Sheela Srivastava and Sivakoti Reddy (2011), found that majority of the customers are satisfied with price and availability of spare parts in the local market of the vehicles. Customers are not satisfied with the insurance policy of the companies. Shuvam Mondal et.al (2022), depicts that the carrying expenses are less than fuel (petrol/diesel) cost and hence they are willing to buy e-vehicle (or) switch to one. In this backdrop, an attempt has been made to study the women's opinion for e-bike and variables influencing the level of opinion towards e-bike.

Objectives of the Study

The following are the objectives of the study

- To know the socio-economic profile of the women.
- To find out the level of opinion towards e-bike.
- To identify the variables that associate with level of opinion towards technology.

Research Methodology

The study is based on primary data collected through issue of well-structured questionnaire. It contains questions relating to the socio-economic profile, factors influence to purchase to e-bike. A sample of 180 women in Pollachi Taluk has been selected by adopting convenience sampling method. Simple Percentage and Chi-Square test have been used to analyze the data.

Data Analysis

The findings of the study are divided into three sections namely, Socio-economic profile of sample women's, level of opinion towards e-Bike and variables associated with level of opinion for e-bike are showed in the following paragraphs.

(i) Socio - Economic Profile

- Most 86 (47.7%) of the women are in the age group 35 to 45 years.
- Majority 92 (51.1%) of the women are from rural area.
- Majority 123 (68.3%) of the women are married
- Majority 118 (65.5%) of the women belong to the nuclear family
- Majority 129 (71.6%) of the women are under graduate.
- Majority 146 (81.1%) of the women are private employee.
- Most 88 (48.8%) of the women are earning between Rs.20,001 and 40,000.
- Most 74 (41.1%) of the women monthly family income is between 50,001 to 100,000.
- Majority 154 (85.5%) of the women are using e-bike less than a year.
- Majority 136 (75.5%) of the women are friends induced to purchase an e-bike.
- Majority 127 (70.5%) of the women are using battery electric vehicle.

(ii) Level of Opinion towards E-Bike

- Majority 92 (51.1%) disagree that use of fossil fuel does not influence them to purchase e- bike
- Most 88 (48.8%) of women agree that less pollution while using e-bike influence them to purchase e- bike
- Most 86 (47.77%) of women disagree that no fuel cost does not influence them to purchase e- bike
- Most 78 (43.3%) of women agree that smooth driving influence them to purchase e- bike
- Majority 106 (58.88%) of women agree that incentives/subsidies from government influence them to purchase e- bike
- Most 76 (42.22%) of women agree that the factor that eco-friendly factor influence them to purchase e- bike
- Majority 97 (53.88%) of women agree that less maintenance influence them to purchase e- bike
- Majority 114 (63.33%) of women agree that durability influence them purchase e- bike
- Most 84 (46.67%) of women agree that appearance of vehicle influence to purchase e- bike

(iii) Variables Associated with Level of opinion towards e-Bike

To identify the association between the select variables and level of opinion towards e-bike, the Chi-square test has been employed.

Table: 2 Variables Associated with Level of Opinion towards e-Bike

Variables	d.f	Calculated χ^2 Value	Table Value 5% Level
Area	4	13.408	9.488
Age	6	14.987	12.592
Marital Status	2	1.001	5.991
Type of family	2	3.775	5.991
Educational Qualification	4	4.367	9.488
Occupation	2	7.152	5.991
Monthly Income	6	14.979	12.592
Family Income(Per Month)	6	16.018	12.592
Period of Usage	4	12.366	9.488
Sources of Information	4	5.968	9.488
Type of E-Bikes	4	7.068	9.488

It has been found that there exists a significant association between area, age, occupation, monthly income, family income per month, period of usage and level of opinion for e-bikes.

Suggestions

- Producers are suggested to come up with more developed batteries and their life time has to be increased.
- Service centre's can be increased to solve the problems and needs of the customers when needed.
- Number of charging stations may be opened in different spots

Conclusion

According to the study there are many factors that influence the women towards e-bikes. The concept of e-bike has entered in recent years with help of MSME and same is gaining momentum. As an eco friendly product it is more suitable for the city as it can reduce the emission of harmful gas and here by it reduces the pollution. Due to high increase in fuel prices, the electrically charged vehicles seem to be the best one compared to traditional vehicles. Number of charging stations may be opened in rural areas to increase the use of e-bikes then fuel bikes.

PREFACE

The significance of entrepreneurship lies in its ability to boost the economy and facilitate significant social transformation. Apart from satisfying a demand and earning income for the business owner, entrepreneurship fosters community growth and job creation for the general public. Because entrepreneurship has such a profound effect on a country's economy, it is common to view entrepreneurs as national assets who are encouraged and compensated by a variety of government initiatives. This is mainly because an exceptional entrepreneur has the power to fundamentally alter our way of life and employment. They can actively support the expansion of the economy in addition to raising our level of living. Most entrepreneurs are "givers". They attempt to make others' lives simpler because they have endured hardships and put in a lot of effort to succeed. In addition, they invest in various community initiatives and support various charities. Entrepreneurship is essential for planned and fast economic growth. In developing countries, it is the foundation of prosperity. In developed countries, it is a method of innovative thinking, social innovation, and enterprise society.

Entrepreneurship education is becoming increasingly popular in today's world. Therefore it is essential to lead people in the right direction. Conference on entrepreneurship will help in establishing a connection between entrepreneurship and sustainability and comprehends how sustainable entrepreneurial methods and processes can adapt to this new environment. It also provides forum for a wide range of influential stakeholders to share their experiences, ideas, and research findings and disseminate knowledge on entrepreneurship as widely as possible among communities of academic researchers and entrepreneurs in India. In addition it develops proposals for institutional, program, and policy changes that will promote new approaches to entrepreneurship in theory and practice.

KPR College of Arts Science and Research, Coimbatore

About the Institution

KPR College of Arts Science and Research is the latest addition to the KPR fleet. The College is located in a picturesque campus of about 11 Acres with a build area of 4.5 lakh Sq. Feet. The College is run by KPR charities under the leadership of the Chairman Dr. K. P. Ramasamy. The KPR Group is one of the largest industrial conglomerates in the country with interests in Textiles, Sugar, Wind Turbines, Automobiles, and Education. The College was established in the year 2019 with a vision of providing top-class education and life skills to students and thereby serving the nation and beyond. At the time of establishment, the college offered four Undergraduate programmes with a faculty strength of 6 members and 134 students. Within a short span of four years the college has shown remarkable progress, currently offering 15 undergraduate programmes with around 3500 students. At KPR College of Arts Science and Research, We believe in the power of education to transform lives and contribute to the betterment of society. Our aim is to empower our students to excel academically, develop critical thinking skills, and become responsible global citizens.

About the School of Commerce

The School of Commerce commenced its operation in the year 2019 with two Under Graduate Programs and then extended its wings to seven - Department of Commerce, Commerce with Computer Applications, Commerce with Professional Accounting, Commerce with Banking & Insurance, Commerce with Business Analytics, Commerce with E-Commerce and Commerce with Information Technology. The School constitutes richly qualified and experienced faculty members and well-disciplined student fraternity. In the course of further expansion, the School introduced Post Graduate Programme M.Com and Research Programme Ph.D in Commerce (Part-Time and Full-Time) from 2023. The core objective of the school is to provide an ICT centric curriculum to fall in line with the industrial demand. The school evolves to maintain academic excellence and bestow students with the required skills to face the challenges in a competitive world at global scenario. There is a blend of theoretical and practical exposure for the students to showcase their talents through Conferences, Seminars, Workshops, Hands-on activities and training. The School of Commerce focuses on research activities to nurture social responsibility with commitment and integrity towards nation-building.

About the Department

Bachelor of Commerce (B.Com) a three-year Undergraduate programme was started in the year 2019. The department focuses on quality education in commerce by imparting conceptual and practical knowledge through a well-structured curriculum & syllabus. This programme offers Value-based education by acquiring adequate knowledge in BFSI (Banking, Financial Services and Insurance), Business Analytics, Entrepreneurship and related fields of study.

About the Conference

India is the fifth-largest economy in the world as per the report of the Economic Survey 2022-2023. India's economy expanded by 6.1 per cent in the Q4 of the fiscal year 2022-23, leading to an annual growth rate of 7.2 per cent. According to official figures released on May 31, 2023, the estimated Q4 GDP for the current fiscal year stands at Rs.43.62 lakh crore. In a new Worldwide survey, it is stated that India has a high-quality entrepreneurial ecosystem, showing the country's consistent improvement in the business environment over time. India is the third largest start-up ecosystem globally next to China and the US with over 60,000 new start-ups. One of the key indicators of India's entrepreneurial success is creation of large number of jobs leading to a positive sign of India's growing market for employment opportunities.

Entrepreneurship is assumed as a key driver for the economic growth and development of our nation. By starting new businesses and creating jobs, entrepreneurship leads to an increase in GDP and per capita income. This is particularly noteworthy for emerging nations, where poverty and joblessness are major issues. The economic environment influences the progress of entrepreneurial ventures by influencing the supply of capital and prospective opportunities. This conference is designed to enhance skill and potential of young entrepreneurs and student community towards building of environmental eco-friendly nation.

The conference aims to explore the intersection of role of entrepreneurship and sustainable development in the changing economic environment, highlighting the challenges faced, the opportunities available, and the future prospects in the field of entrepreneurship. Further it aims to create a platform for developing business ideas, concepts and to facilitate knowledge sharing on business idea. It also focuses on the G20 theme i.e., to achieve global economic stability, sustainable growth, to promote financial regulations that reduce risks and prevent future financial crises and to create an Innovation and Technology based development. The conference will bring together entrepreneurs, business leaders, policy makers, researchers and academicians to exchange business ideas, share insights and foster collaborations.

Message from Principal

There are various reasons why someone would choose to launch their own business at a particular point in their lives. Some see a great commercial potential, while others are constrained by several problems. Despite having a degree and a set of abilities, they cannot find employment. The health, happiness, and prospects of people are impacted by their lack of employment. Consequently, entrepreneurship is one of the approaches to help people into the workforce. In addition to giving people without work experience employment opportunities, this has an effect on economic growth by creating new jobs, boosting competition, and stimulating innovation.

Considering all these facts, I congratulate Department of Commerce for organizing a National Conference on Role of Entrepreneurship in the Changing Economic Environment. In the age of digitization, the conference aims to broaden the field of research and practice viewpoint on the major problems encountered by entrepreneurs and organizations in high-potential nations like India.

It is my immense pleasure to welcome participants joining from different parts of India. The conference's findings are anticipated to determine the direction for future discussions and the agenda for entrepreneurship research, business development, and policy formulation in this area. As we start this journey of Entrepreneurial discussions for two days, I wish everyone the very best!

Dr. P. GEETHA

Principal,

**KPR College of Arts Science and Research,

Message from Convenor

I am delighted at the conduct of National Conference on Role of Entrepreneurship in the Changing Economic Environment by the Department of Commerce. Conferences on entrepreneurship can make a very important contribution in promoting meaningful entrepreneurship as they can introduce and mitigate opportunities and challenges in the domain. Since research activities across all the fields pave the way for the world to strive forward with huge advancement, I am confident that this conference will provide a suitable platform for the research community, for innovation, interaction with each other and to share the knowledge on Entrepreneurship. With great pleasure and pride, I wish the conference a grand success.

Dr. K. KUMUTHADEVI

**Dean - School of Commerce,

Message from Organizing Secretary

The way that entrepreneurship has altered the commercial landscape is incredible. The growth of entrepreneurship has increased employment possibilities, raised living standards, and had a noticeable effect. In India, the subject of entrepreneurship is expanding quickly, and it is becoming increasingly important in the world of business. Therefore it is essential to organize events on entrepreneurial aspects so that they create a stage with a positive atmosphere that promotes creativity and innovation. This realization has dawned on Department of Commerce and has resulted in the National Conference on Role of Entrepreneurship in the Changing Economic Environment.

I sincerely look forward to welcome and provide with the support needed to make this conference the best it can be. I wish a great success to this conference and hope that it will be fruitful and knowledgeable. I also extend my best wishes to the delegates and greetings to everyone.

Dr. A. SHANTHI

RURAL WOMEN ENTREPRENEURSHIP: OPPORTUNITIES AND CHALLENGES

Dr.Poongodi S¹ & Dr. Jayanthi P²

^{1&2}Assistant Professor, PG Department of Commerce-CA,
Nallamuthu Gounder Mahalingam College, Pollachi.

ABSTRACT

The research paper aims at exploring the factors influencing rural women to become an entrepreneur and issues faced by women Entrepreneurs. Data for study have been collected from 168 women entrepreneurs in Pollachi Taluk through interview schedule by adopting convenience sampling method. Simple Percentage, Weighted Average Ranking and Chi-Square test has been used to analyze the data. The study reveals that most of the women entrepreneurs belong to the age group of 31-40 years who are graduates. It is identified that factors influencing women to become an entrepreneur are self-dependent, supplementary income for family, self-identity, employment opportunities, family support, innovation in business whereas women give less importance to government schemes and policies. It is observed that problem in raising capital is ranked first by women entrepreneurs followed by lack of family support, increased competition, lack of training, lack of education, non-unity among partners and problem in marketing. It is also found that age, marital status, type of family; monthly income and family income have significant association with level of issues faced by rural women entrepreneurs.

Keywords: Rural, Women, Entrepreneurs, Opportunities issues.

INTRODUCTION

The status of women in Indian society has undergone a drastic change in the recent years. Women are now playing a crucial role in the growth of economy. In the context of women empowerment, entrepreneurship plays an important role. Women Entrepreneurs are goal oriented, flexible, creative, tolerant, independent, realistic, enthusiastic and energetic in their management skill. The hidden entrepreneurial potentials of women have gradually been changing with growing sensitivity to the role and economic status in the society. The number of women undertaking entrepreneurship is mounting each year. In India most of the housewives want to start their own business but there is so many challenges faced by them. Mary Lubinda, NsamaMusawa and Blessing Mataka (2018)

found that difficult to access capital is the greatest challenge faced by most respondents followed by difficult to accessing policy makers, difficult to access training and discrimination in accessing resources as the least challenging. Neenu Venugopal and Somasundaram (2019) observe that majority of women entrepreneurs are facing problem in finance, lack of education, stiff competition, family responsibilities, male-dominated society and limited mobility. So, in this study an attempt has been made to investigate the role of rural women entrepreneurs in pollachi Taluk.

REVIEW OF RELATED LITERATURE

Nidhi Khatrani (2021) in her article captioned “A study on challenges faces by women entrepreneurs in Surat” to identify challenges faced by women entrepreneurs in Surat. Data have been collected from 141 women entrepreneurs by issuing questionnaire. Simple percentage and Chi-Square test have been used to analyse the data. The result of the study reveals that women entrepreneurs are facing lots of challenges like doubt of self-confidence; financial issues, lack of information and lack of family support, combining domestic and professional life are the most frequent challenges.

Gomathi and Priyadeepa (2018) in their research captioned “Opportunities, Status and Challenges Faced by Women Entrepreneurs in India” to examine the opportunities and constraints faced by female entrepreneurs in developing countries at the micro and macro level perspectives. The result of the study shows that challenges for women entrepreneurs are not being taken seriously, wearing too many hats, letting fear stand in the way, not being able to ‘Toot your Own Horn’ and wanting to please everyone and also it is observed that majority of them faced with many problems like family restriction, problem of finance, role conflict, lack of education, unfavorable environment, lack of persistent nature, lack of mental strength and stiff competition.

Sheweta Gaur et al (2018) in their research entitled “Challenges and Opportunities for Women Entrepreneurs in India” to know challenges for women entrepreneurs. The findings of the study reveals that that there are several challenges faced by women entrepreneurs they are balance between family and career, socio-cultural barriers, male dominated society, low level of education, lack of technical knowledge, lack of marketing and entrepreneurial skills and lack of self-confidence.

Statement of the Problem

In recent years, women entrepreneurs and their participation in the growth of economy is crucial for a developing country like India. Women entrepreneurs have been

making a major impact in all segments of economy. Women entrepreneur is one who initiates or inherits a business, alone or with groups, and is ready to undertake all kinds of challenges associated with entrepreneurial activities such as financial, administrative and social. Women in India are ready to take the burden of work in home as well as the work place. Even though there are many achievement among women entrepreneurs but still they are facing so many problems in moving forward. Debashree Kashyap and Jayashree Bordoloi (2020) found that desire for self-dependent influenced women entrepreneurs to select entrepreneurship as career and this factor occupy first position followed by availability of raw material, good market potential, not getting government job, economic needs, desire to give employment opportunities, willing to do something creative, encouragement from family, to utilize own skill, better status in society, role model and to support households. It is found that age, technical education and monthly income from enterprise are significant with women empowerment. In this backdrop, it is necessary to know the factors influencing rural women to become an entrepreneur and issues faced by rural women entrepreneurs. To find solution for the said questions, the following objective has been framed and tested.

OBJECTIVES OF THE STUDY

- To know the socio-economic profile of women entrepreneurs.
- To identify the factors influencing rural women to become an entrepreneur.
- To find out the issues faced by rural women entrepreneurs.
- To ascertain the variables that associate with level of issues faced by rural women entrepreneurs.

RESEARCH METHODOLOGY

The study is based on primary data collected through interview schedule. It contains questions relating to the socio-economic profile, factors influencing women to become an entrepreneur, issues faced by women entrepreneurs. A sample of 168 women entrepreneurs residing in Pollachi Taluk has been selected by adopting convenience sampling method. Simple Percentage, Weighted Average Ranking Method and Chi-Square test have been used to analyse the data.

FINDINGS

The findings of the study are divided into three sections namely, Socio-economic profile, factors influencing rural women to become an entrepreneur, issues faced and variables associated with level of issues faced by women entrepreneurs.

(i) Socio-Economic Profile of Rural Women Entrepreneurs

Socio-economic profile of women entrepreneurs like age, marital status, educational qualification, type of family, monthly income and family income, size of business are showed in the following table.

Table-1

Socio-Economic Profile of Rural Women Entrepreneurs

Variables	Number of Respondents	Percentage
Age(Years)		
Up to 30	16	9.53
31-40	76	45.24
41-50	62	36.90
Above 50	14	8.33
Marital Status		
Married	122	72.62
Unmarried	46	27.38
Educational Qualification		
Uneducated	6	3.57
Below 10 th Std	12	7.14
SSLC	22	13.10
HSC	34	20.24
Graduate	56	33.33
Post Graduate	22	13.10
Others	16	9.52
Type of Family		
Joint	82	48.81
Nuclear	86	51.19
Monthly Income (Self)		
Up to Rs.15000	38	22.62
Rs.15001-30000	74	44.05
Above Rs. 30000	56	33.33
Family Income (per month)		
Up to Rs.25000	22	13.10
Rs.25001-50000	77	45.83
Above Rs.50000	69	41.07

- Most of the women entrepreneurs, 76 (45.24%) belong to the age group 31-40 years.
- Majority of the women entrepreneurs, 122(72.62%) are married.
- Most of the women entrepreneurs, 56(33.33%) are graduate.
- Majority of the women, 86 (51.19%) belong to nuclear family.
- Most of 74 (44.05%) women entrepreneur's monthly income is between Rs. 15,001 and Rs. 30,000.
- Most of 77 (45.83%) women entrepreneur's family income is between Rs. 25,001 and Rs. 50,000.

(ii) Factors Influencing Rural Women to become an Entrepreneur

Table-2: Factors Influencing Rural Women to become an Entrepreneur

Factors	Yes	No
Self-Identity	122 (73.0%)	46 (27.0%)
Employment Generation	107 (63.7%)	61 (36.3%)
Government Schemes and Policies	35 (20.8%)	133 (79.2%)
Family Support	104 (62.0%)	64 (38.0%)
Supplementary Income	144 (85.7%)	24 (14.3%)
Self-Dependent	154 (91.7%)	14 (8.3%)
Business Knowledge/Innovation	79 (47.0%)	89 (53.0%)

It is identified that factors influencing women to become an entrepreneur are self-dependent (91.7% top choice), 85.7% of them taken up this to provide supplementary

income for family, 73% of them choose entrepreneurship for their identity, 63.7% of them taken up to provide employment opportunities, 62% of them have family support, 47% of them taken up to explore innovation in business whereas 20.8% of them have given less importance to government schemes and policies.

(iii) Issues Faced by Rural Women Entrepreneurs

Weighted average ranking has been applied to identify the issues faced by women entrepreneurs.

Table-3: Issues Faced by Rural Women Entrepreneurs–Weighted Average Ranking

Issues	RANK
Problem in Raising Capital	I
Lack of Training	V
Non-Unity among Partners	VI
Lack of Family Support	II
Problems in Marketing	VII
Lack of Education	IV
Increased Competition	III

It is observed that problem in raising capital is ranked first by women entrepreneurs followed by lack of family support, increased competition, lack of education, lack of training, non-unity among partners and problem in marketing.

(iv) Variables Associated with Issues Faced by Rural Women Entrepreneurs

In order to find out the association between the selected variables namely age, marital status, educational qualification, type of family, monthly income and family income and level of issues faced by rural women entrepreneurs. Chi-square test has been made use of. Level of significance is five percent.

Table-4: Variables Associated with issues Faced by Rural Women Entrepreneurs

Variables	Calculated Chi-Square Value	D.f	Table Value @ 5% Level
Age	14.902*	6	12.592
Marital Status	7.299*	2	5.991
Educational Qualification	19.568	12	21.026
Type of Family	6.987*	2	5.991
Monthly Income	11.593*	4	9.488
Family Income	12.826*	4	9.488

The above discloses that out of seven variables selected, five factors namely age, marital status, type of family, monthly income, and family income are found to be significant with the level of issues faced by rural women entrepreneurs at five percent level.

SUGGESTIONS

- Financial institutions and Government may provide assistance and support for women entrepreneurs to raise finance.
- Awareness programmes may be conducted by government and successful entrepreneurs for rural women entrepreneurs to get advice and guidance in better way.
- Training programmes may be provided to increase management skills.
- Unity among partners and support from family may encourage women to achieve in business.
- Marketing can be improved by using promotions through social media like whatsapp, facebook, instagram, linkedin etc

CONCLUSION

It is found that age, marital status, type of family, monthly income and family income significantly associated with the level of issues faced by women entrepreneurs. Women entrepreneur can lead to a tremendous change in society and economy. Now a day's more and more women are becoming innovators and entrepreneurs. Government and financial institutions may provide rural women entrepreneurs with financial assistance to

meet their need. Training and awareness can be provided by government to increase skill. Still some actions by government are needed for developing women entrepreneurs especially women entrepreneurs in rural area.

PREFACE

In an era where the global landscape is undergoing rapid and profound changes, the aspiration for global leadership demands a visionary and concerted effort. The seminar proceedings titled “Vision for Vishwa Guru India Initiatives for Global Leadership by 2047” stand as a testament to India's unwavering commitment to shaping a future that is not only transformative for its own citizens but also resonates across the international community.

As we approach the momentous milestone of 2047, which marks the centenary of India's independence, we find ourselves at a crossroads of possibilities and challenges. The concept of ‘Vishwa Guru’ encapsulates India's age-old tradition of disseminating knowledge, fostering dialogue, and illuminating the path for others. This compilation of seminar proceedings is a reflection of this tradition, a dialogue that transcends boundaries and invites scholars, students, and visionaries to collectively envision the path ahead. These proceedings offer a panoramic view of the discussions and insights shared by luminaries in various fields, touching upon a myriad of sub-themes. From discussions on the Role of Technology in NEP 2020 to explorations of Ease of Doing Business, the proceedings delve into crucial facets that shape India's global role.

We extend our heartfelt gratitude to the Indian Council of Social Science Research (ICSSR) for its invaluable support in bringing together these seminal discussions. Their unwavering commitment to advancing knowledge aligns seamlessly with the spirit of the Vishwa Guru India Initiatives. As we navigate the complexities of a rapidly evolving world, we hope that these initiatives serve as a source of inspiration, a catalyst for meaningful dialogues, and a blueprint for action.

We are indebted to the authors who have contributed their scholarly insights to this compilation. Their diverse perspectives and rigorous research have enriched the discourse on global leadership and India's role in shaping the global narrative. Each paper presented here is a testament to their dedication to knowledge dissemination and their belief in the power of ideas to drive positive change.

Together, let us embrace the spirit of ‘Vishwa Guru’ and pave the way for a brighter, more harmonious, and prosperous India.

Abstract

Within the last decade, the application of “artificial intelligence” and “machine learning” has become popular across multiple disciplines, especially in information systems. The two terms are still used inconsistently in academia and industry – sometimes as synonyms, sometimes with different meanings. With this work, we try to clarify the relationship between these concepts. We review the relevant literature and develop a conceptual framework to specify the role of machine learning in building (artificial) intelligent agents. Additionally, we propose a consistent typology for AI-based information systems. We contribute to a deeper understanding of the nature of both concepts and to more terminological clarity and guidance – as a starting point for interdisciplinary discussions and future research.

Keywords: Artificial Intelligence, Machine, Learning.

Introduction

Artificial intelligence (AI) is the ability of machines to replicate or enhance human intellect, such as reasoning and learning from experience. Artificial intelligence has been used in computer programs for years, but it is now applied to many other products and services. For example, some digital cameras can determine what objects are present in an image using artificial intelligence software. In addition, experts predict many more innovative uses for artificial intelligence in the future, including smart electric grids.

AI uses techniques from probability theory, economics, and algorithm design to solve practical problems. In addition, the AI field draws upon computer science, mathematics, psychology, and linguistics. Computer science provides tools for designing and building algorithms, while mathematics offers tools for modeling and solving the resulting optimization problems. Although the concept of AI has been around since the 19th century, when Alan Turing first proposed an “imitation game” to assess machine intelligence, it only became feasible to achieve in recent decades due to the increased availability of computing power and data to train AI systems.

History of Artificial Intelligence

With so much attention on modern artificial intelligence, it is easy to forget that the field is not brand new. AI has had a number of different periods, distinguished by whether the focus was on proving logical theorems or trying to mimic human thought via neurology. Artificial intelligence dates back to the late 1940s when computer pioneers like Alan Turing and John von Neumann first started examining how machines could “think.” However, a significant milestone in AI occurred in 1956 when researchers proved that a machine could solve any problem if it were allowed to use an unlimited amount of memory. The result was a program called the General Problem Solver (GPS).

Over the next two decades, research efforts focused on applying artificial intelligence to real-world problems. This development led to expert systems, which allow machines to learn from experience and make predictions based on gathered data. Expert systems aren’t as complex as human brains, but they can be trained to identify patterns and make decisions based on that data. They’re commonly used in medicine and manufacturing today. A second major milestone came in 1965 with the development of programs like Shakey the robot and ELIZA, which automated simple conversations between humans and machines. These early programs paved the way for more advanced speech recognition technology, eventually leading to Siri and Alexa.

The initial surge of excitement around artificial intelligence lasted about ten years. It led to significant advances in programming language design, theorem proving, and robotics. But it also provoked a backlash against over-hyped claims that had been made for the field, and funding was cut back sharply around 1974. The early years of the 21st century were a period of significant progress in artificial intelligence. The first major advance was the development of the self-learning neural network. By 2001, its performance had already surpassed human beings in many specific areas, such as object classification and machine translation. Over the next few years, researchers improved its performance across a range of tasks, thanks to improvements in the underlying technologies.

Artificial Intelligence & Machine Learning

Artificial Intelligence is the most trending field of computer science. However, with all the new technology and research, it’s growing so fast that it can be confusing to understand what is what. Furthermore, there are many different fields within AI, each one having its specific algorithms. Therefore, it’s essential to know that AI is not a single field but a combination of various fields.

Artificial Intelligence (AI) is the general term for being able to make computers do things that require intelligence if done by humans. AI can be broken down into

two major fields, Machine Learning (ML) and Neural Networks (NN). Both are subfields under Artificial Intelligence, and each one has its methods and algorithms to help solve problems.

Machine Learning

Machine learning (ML) is a type of artificial intelligence (AI) that allows software applications to become more accurate at predicting outcomes without being explicitly programmed to do so. Machine learning algorithms use historical data as input to predict new output values.

Recommendation engines are a common use case for machine learning. Other popular uses include fraud detection, spam filtering, malware threat detection, business process automation (BPA) and Predictive maintenance.

Types of Machine Learning

Classical machine learning is often categorized by how an algorithm learns to become more accurate in its predictions. There are four basic approaches: supervised learning, unsupervised learning, semi-supervised learning and reinforcement learning. The type of algorithm data scientists choose to use depends on what type of data they want to predict.

Supervised Learning

In this type of machine learning, data scientists supply algorithms with labeled training data and define the variables they want the algorithm to assess for correlations. Both the input and the output of the algorithm is specified.

Unsupervised Learning

This type of machine learning involves algorithms that train on unlabeled data. The algorithm scans through data sets looking for any meaningful connection. The data that algorithms train on as well as the predictions or recommendations they output are predetermined.

Semi-supervised Learning

This approach to machine learning involves a mix of the two preceding types. Data scientists may feed an algorithm mostly labeled training data, but the model is free to explore the data on its own and develop its own understanding of the data set.

Reinforcement Learning

Data scientists typically use reinforcement learning to teach a machine to complete a multi-step process for which there are clearly defined rules. Data scientists program an algorithm to complete a task and give it positive or negative cues as it works out how to complete a task. But for the most part, the algorithm decides on its own what steps to take along the way.

How Does Machine Learning Work?

A Machine Learning system learns from historical data, builds the prediction models, and whenever it receives new data, predicts the output for it. The accuracy of predicted output depends upon the amount of data, as the huge amount of data helps to build a better model which predicts the output more accurately.

Implications & Applications of Artificial Intelligence

The revolutionary power of computers to “learn” from large datasets and use this information to make predictions is unprecedented. Loosely defined under the umbrella of artificial intelligence (AI), these complex systems are already applied in multiple contexts: at home, at work, in decisions about loans and college admissions, in vehicles and transportation systems, in weapons, in surveillance, in healthcare, and in policing and judicial sentencing. Future applications of AI could extend even further, encompassing most aspects of our lives.

As we stand on the cusp of a technological revolution, opportunities abound to harness these technologies for social good: AI-based systems may have the capacity to scan social media across platforms and across the globe to warn of imminent environmental disasters, disease outbreaks, or political upheavals, using this information in ways that individuals may not have intended or even realized were possible. They have the potential to remove human bias from judicial decisions about sentencing; AI-based systems could optimize diagnostics and therapeutics through analysis and correlations of immense swaths of patient data. But for the benefits to be equitably enjoyed by every member of society, public attitudes toward AI among marginalized and vulnerable populations must be better understood. AI innovations must be intentionally and responsibly developed, and their application must address the possible disparity of impact new technologies have on disadvantaged populations. In response to these challenges and opportunities, the American Association for the Advancement of Science (AAAS) and its partners are launching the (AI)²: Artificial Intelligence—Applications/Implications initiative, the goal of which is to affect the development and application of AI in ways that alleviate, rather than exacerbate, social inequalities.

Applications of Machine Learning

Machine learning is a buzzword for today's technology, and it is growing very rapidly day by day. We are using machine learning in our daily life even without knowing it such as Google Maps, Google assistant, Alexa, etc. Below are some most trending real-world applications of Machine Learning:

1. Image Recognition

Image recognition is one of the most common applications of machine learning. It is used to identify objects, persons, places, digital images, etc. The popular use case of image recognition and face detection is, Automatic friend tagging suggestion:

2. Speech Recognition

While using Google, we get an option of "Search by voice," it comes under speech recognition, and it's a popular application of machine learning. Speech recognition is a process of converting voice instructions into text, and it is also known as "Speech to text", or "Computer speech recognition." At present, machine learning algorithms are widely used by various applications of speech recognition. Google assistant, Siri, Cortana, and Alexa are using speech recognition technology to follow the voice instructions.

3. Traffic Prediction

If we want to visit a new place, we take help of Google Maps, which shows us the correct path with the shortest route and predicts the traffic conditions. Real Time location of the vehicle from Google Map app and sensors. Average time has taken on past days at the same time.

4. Self-Driving Cars

One of the most exciting applications of machine learning is self-driving cars. Machine learning plays a significant role in self-driving cars. Tesla, the most popular car manufacturing company is working on self-driving car. It is using unsupervised learning method to train the car models to detect people and objects while driving.

5. Stock Market Trading

Machine learning is widely used in stock market trading. In the stock market, there is always a risk of up and downs in shares, so for this machine learning's long short term memory neural network is used for the prediction of stock market trends.

6. Medical Diagnosis

In medical science, machine learning is used for diseases diagnoses. With this, medical technology is growing very fast and able to build 3D models that can predict the exact position of lesions in the brain. It helps in finding brain tumors and other brain-related diseases easily.

7. Automatic Language Translation

Nowadays, if we visit a new place and we are not aware of the language then it is not a problem at all, as for this also machine learning helps us by converting the text into our known languages. Google's GNMT (Google Neural Machine Translation) provide this feature, which is a Neural Machine Learning that translates the text into our familiar language, and it called as automatic translation.

The technology behind the automatic translation is a sequence to sequence learning algorithm, which is used with image recognition and translates the text from one language to another language.

Methods of Artificial Intelligence

Logic, Problem-Solving

Early researchers developed algorithms that simulate humans' step-by-step reasoning when solving puzzles or making logical deductions. By the late 1980s and 1990s, AI research had developed methods for dealing with uncertain or incomplete information, employing concepts from probability and economics. For difficult problems, algorithms can require enormous computational resources-most experience a "combinatorial explosion": the amount of memory or computer time needed for problems of a certain size becomes astronomical. The search for more efficient problem-solving algorithms is a high priority.

Knowledge Representation

Knowledge representation and knowledge engineering are central to AI research. Many of the problems that machines are expected to solve will require extensive world knowledge. The things AI needs to represent are objects, properties, categories, and relationships between objects; situations, events, states, and times; Cause and Effect; Knowledge about knowledge (what other people know about what we know); and many other, less well-researched domains. A representation of "what exists" is an ontology: the set of objects, relations, concepts, and so on about which the machine knows. The most general is upper ontology, which attempts to provide a foundation for all other knowledge.

Planning

Intelligent agents must be able to set goals and achieve them. They need a way to envision the future - a representation of the state of the world and make predictions about how their actions will change it - and be able to make choices that maximize the utility (or "value") of the options available.

In classical planning problems, the agent can assume that it is the only system acting in the world, allowing the agent to be certain of the consequences of its actions.

However, if the agent is not the only actor, it requires that the agent reason under uncertainty. It calls for an agent to assess its environment, make predictions, evaluate its predictions, and adapt based on its assessment.

Learning

Machine learning, a fundamental concept of AI research since the field's inception, is the study of computer algorithms that automatically improve through experience. Unsupervised learning is the ability to find patterns in a stream of input. Supervised learning includes both classification and numerical regression. After seeing several examples of things from several categories, classification is used to determine which category something falls into. Regression attempts to construct a function that describes the relationship between inputs and outputs and predicts how the outputs should change as the inputs change.

Social Intelligence

Effective computing is the study and development of systems that can detect, interpret, process, and simulate human. It is an interdisciplinary field spanning computer science, psychology, and cognitive science. While the origins of the field can be traced to early philosophical inquiries into emotion, the more modern branch of computer science originated from Rosalind Picard's 1995 paper on "effective computing".

Creativity

A sub-field of AI addresses creativity theoretically (philosophical, psychological perspective) and practically (the specific implementation of systems that produce novel and useful outputs). Some related areas of computational research include artificial intuition and artificial thinking.

General Intelligence

Many researchers think that their work will eventually result in a machine with artificial general intelligence, combining all the skills described above and exceeding human capacity in most or all of these areas. Some believe that such a project may require anthropomorphic features such as artificial consciousness or an artificial brain.

Conclusion

AI is at the centre of a new enterprise to build computational models of intelligence. The main assumption is that intelligence (human or otherwise) can be represented in terms of symbol structures and symbolic operations which can be programmed in a digital computer. There is much debate as to whether such an appropriately programmed computer would be a mind, or would merely simulate one, but AI researchers need not wait for the conclusion to that debate, nor for the hypothetical computer that could model all of human intelligence. Aspects of

intelligent behaviour, such as solving problems, making inferences, learning, and understanding language, have already been coded as computer programs, and within very limited domains, such as identifying diseases of soybean plants, AI programs can outperform human experts. Now the great challenge of AI is to find ways of representing the common sense knowledge and experience that enable people to carry out everyday activities such as holding a wide-ranging conversation, or finding their way along a busy street. Conventional digital computers may be capable of running such programs, or we may need to develop new machines that can support the complexity of human thought.

ARTIFICIAL INTELLIGENCE IN INSURANCE INDUSTRY

DR. P.JAYANTHI & DR. S.POONGODI

Assistant Professors in Commerce-CA,

Nallamuthu Gounder Mahalingam College, Pollachi,

ABSTRACT

The introduction of artificial intelligence in insurance has made monumental advances in the world and continues to change as more forms of technology appear. The purpose of this paper is to inform others about the intricacies of artificial intelligence in insurance while simultaneously providing insight into what is to come with ever-changing advances in technology in everyday use. This paper will be a literature review broken down into four parts. The first section will give information about the purpose of artificial intelligence in insurance. In the second section, we will look at addressing the benefits as well as the problematic impact of artificial intelligence with the ever-changing innovations in technology that impact the insurance world. In the third section, we will address possible issues that may arise in the future from the advancements of artificial intelligence. This section is used to answer the question of how the changing customer behavior, digital disruption, regulatory pressures, and competitive marketplace are forcing insurers to refine their current strategy and operating models. Finally, in the last part we look at how these technological advances are solving problems in the industry, such as cyber-security concerns and fraud.

Keywords: Artificial intelligence- Insurance-Technology-Fraud Detection-Automation

INTRODUCTION

The insurance industry relies primarily on solving the risks associated with a business or an individual. Therefore, insurance companies need a systematic and smooth way to deal with any risk in order to gain more revenue. The advent of Artificial Intelligence (AI) can transform the insurance industry from a 'detection and repair' to a 'predictive and preventive model. The implementation of Artificial Intelligence with the help of an AI development company in the insurance sector has helped many insurance players to reap a lot of benefits such as efficient claim

management, less fraud, and more. Now let us take a close look into the uses or applications of artificial intelligence in the insurance sector.

Artificial intelligence is gradually making inroads into every industry, and the insurance sector is no exception. It is a complex and highly regulated industry that has been slow to adopt new technologies until now. AI technology has already begun to transform the way insurers do business by helping them become more efficient and effective. This article will discuss how AI is changing the insurance industry and how companies can benefit from it. We will take a look at some of the ways AI is being used in the insurance industry and how it is helping insurers and policyholders alike.

ROLE OF AI IN INSURANCE INDUSTRY

It is not a secret that Artificial Intelligence (AI) is revolutionising every facet of our lives. Its ability to learn, make decisions, and self-correct is making it the fastest growing technology of our era. Industries and organisations that have rapidly adopted AI, with top organisations having seen manifold growth and significant impact on their businesses —and have created competitive advantage for themselves as a result.

The insurance sector can be divided in three broad categories: life and annuity (L&A); property and causality (P&C); and finally, health and wellness. With all these types of insurance categories, organisations observe some common processes like sales and marketing, underwriting, claims, services etc.

AI application in new business onboarding:

The customer applications came from various sources and format like PDF files, customised forms from partner networks, data dump in the insurance portal database. AI can help an insurance company here in

1. Automated relevant content extraction using Natural Language processing and Image processing.
2. Robotic Process Automation agents gathering relevant information and inserting into database for further processing.

AI applications in underwriting:

Underwriting is one of the most critical processes of all insurance processes. AI can help underwriters in the following ways.

1. Claims Risk Assessment: Availability of risk assessment factors are growing day by day. With evolution of wearables, preventive healthcare screening results, tracking personal habits like eating, health club memberships etc, AI can create more sophisticated and robust models to ascertain claim risk.
2. Predict and simulate outcomes of an incident: Take an example of Covid-19. What if an insurance company already had an AI model that could simulate a pandemic and ascertain the overall risk to the population which is already covered or is going to get covered under an insurance policy. This can help the insurance company to determine better and more competitive premiums for their members.
3. Generate a quote: Quote generation is subject to underwriter's individual biases and competitor pricing. Machine learning algorithms can help eradicate these biases and derive the best policy quote for an individual or homogeneous group of individuals.
4. Digital Insurance products: As agents adopt digital tools such as interactive advisory services, companies can use live simulations and digital AI health assessments to provide personalised product recommendations that help customers understand their unique life situations and achieve their financial goals.

AI application in policyholder services:

1. Straight thru processing of policyholder change requests like name change, address change, addition, and deletion of members etc.
2. Customer Experience: AI-driven chatbots have already gained traction in the sphere of customer service. In the insurance industry, these chatbots can enhance scalability and take the load off human resources for more critical matters. At the same time, the chatbots cross-sell or upsell products depending on the customer profile and history. In short, AI can help improve overall customer experience.

AI applications in claims processing:

The next process which is highly involved in insurance companies is claims processing. Following are the ways wherein AI can be useful in Insurance claims processing.

Claims creation: Automated claims creation by use of image processing and NLP.

1. Creation of healthcare claim from healthcare records using NLP
2. Creation of Auto claims with photographs of damaged vehicles using image processing

3.Improved loss estimation for low claims leakage

Conversational AI driven chatbots for first notice of loss (FNOL) reporting.

Deep learning driven fraud detection model to detect aberrant and fraudulent claims

Claims investigation: AI driven integration services to assist Special Investigation

Units to ascertain fraud, waste, and abuse (FWA) claims.

Automated claims processing using AI agents (Straight-thru processing).

Major insurance organisations are using AI to get smart quotes and accelerated claims settlement with adoption of Deep learning and image recognition services. Now the bigger question is how we can get started with AI adoption and make your processes smarter.

IMPACT OF AI IN INSURANCE INDUSTRY

AI and Insurance

Like every other field, the insurance industry is using AI to streamline its operations, engage with the audience in an effective manner and facilitate sales. AI has not only challenged legacy product lines but also supported InsurTech companies to garner venture capital. Primarily, AI has saved a lot of money for the insurers and has made life simpler for the policyholders.

Usage-based Insurance

AI has been instrumental in introducing behavioral policy pricing. The traditional model of arriving at an insurance premium based on statistical records has given way for analytical, individual-based data for determining the accurate premium. This has been possible because of the Internet of Things (IoT). Its examples are – wearable devices, objects with sensors, sensors based on one's location, and systems that record geographic data with the help of satellites.

Enhanced Customer Experience

Customers do not want jargons, they want simplified information that will add value to them. AI-powered chatbots come in handy in order to offer simple solutions to customer's complex queries. Chatbots have evolved from being a glorified 'Frequently Asked Questions' assimilator to identifying customers' faces and selling them policies. For example, an insurance company offers life insurance based on a selfie! AI is also useful in fast-forwarding the claim process thanks to automation.

Efficient Underwriting

Data analysis performed by AI scores over human analysis when the data volume is large. With AI applications, the underwriter can focus on the strategy and portfolio management aspect rather than scrutinize the data manually. AI's algorithms can perform tedious underwriting tasks more efficiently. Sometimes, a combination of AIs is used to arrive at a formidable underwriting plan.

BENEFITS OF AI IN INSURANCE INDUSTRY

The benefits of implementing AI in insurance seem clear to stakeholders in this ecosystem. Indeed, 84% of surveyed French investors believe AI will revolutionize the insurance sector. Moreover, 66% of insurers feel AI can help improve workforce productivity. Thousands of claims, customer queries and large amounts of diverse data make the insurance industry a natural use case for artificial intelligence and cognitive technologies.

□ By implementing AI into their processes, insurers can save time, reduce costs, improve customer experience and increase profitability.

□ AI can also transform typically tedious and time-consuming processes i.e. underwriting, claims management, fraud detection, customer service.

□ With AI insurers can also reduce human errors. These errors can be common due to factors like changing the regulation of information to analyze for fraud prevention.

LIMITATIONS OF AI IN INSURANCE INDUSTRY

Technological Risk—Data Confidentiality

The chief technological risk is the matter of data confidentiality. AI development has enabled the collection, storage, and processing of information on an unprecedented scale, thereby becoming extremely easy to identify, analyze, and use personal data at low cost without the consent of others. The risk of privacy leakage from interaction with AI technologies is a major source of consumer concern and mistrust. The advent of generative AI, where the AI manipulates your data to create new content, provides an additional risk to corporate data confidentiality. For example, feeding a generative AI system such as Chat GPT with corporate data to produce a summary of confidential corporate research would mean that a data footprint would be indelibly left on the external cloud server of the AI and accessible to queries from competitors.

Technological Risk—Security

AI algorithms are the parameters that optimize the training data that gives the AI its ability to give insights. Should the parameters of an algorithm be leaked, a third party may be able to copy the model, causing economic and intellectual property loss to the owner of the model. Additionally, should the parameters of the AI algorithm model may be modified illegally by a cyber attacker, it will cause the performance deterioration of the AI model and lead to undesirable consequences.

Technological Risk—Transparency

The black-box characteristic of AI systems, especially generative AI, renders the decision process of AI algorithms hard to understand. Crucially, the insurance sector is a financially regulated industry where the transparency, explainability and auditability of algorithms is of key importance to the regulator.

Usage Risk—Inaccuracy

The performance of an AI system heavily depends on the data from which it learns. If an AI system is trained on inaccurate, biased, or plagiarized data, it will provide undesirable results even if it is technically well-designed.

Usage Risk—Abuse

Though an AI system may be operating correctly in its analysis, decision-making, coordination, and other activities, it still has the risk of abuse. The operator use purpose, use method, use range, and so on, could be perverted or deviated, and meant to cause adverse effects. One example of this is facial recognition being used for the illegal tracking of people's movement.

Usage Risk—Over-Reliance

Over-reliance on AI occurs when users start accepting incorrect AI recommendations—making errors of commission. Users have difficulty determining appropriate levels of trust because they lack awareness of what the AI can do, how well it can perform, or how it works. A corollary to this risk is the weakened skill development of the AI user. For instance, a claims adjuster whose ability to handle new situations, or consider multiple perspectives, is deteriorated or restricted to only cases to which the AI also has access.

CONCLUSION

AI is poised to disrupt the insurance industry like never before for both insurers and their customers. Customers may enjoy a more seamless user experience and more affordable rates. Insurance companies might save money by making their processes more efficient or offering AI car insurance policies. With AI, the possibilities are boundless, and it is only a matter of time before we start seeing these improvements. AI is a catalyst for transformation in the insurance industry. Some insurance companies are already using AI technologies to make more accurate predictions about risks; this allows them to set policies at a safer level. Above it is described how automation and data analytics are being used to improve risk assessment, pricing, insurance underwriting processes, and customer engagement strategies for more accurate future predictions – all while reducing costs.

The School of Commerce

The School of Commerce under the flagship of SNMV CAS have the evolution and comprises of various commerce disciplines into the present School of Commerce, headed by committed and passionate leadership of Dr. V. Padmanabhan, Dean of Commerce. The School of Commerce is with branches of Various commerce disciplines, PG & Research Department of Commerce, Computer Application, Professional Accounting, E-Commerce, Information Technology, Corporate Secretaryship, Banking and Insurance and Finance, that it represents today, is credited to the commitment of esteemed management Coimbatore Welfare Association (CWA) & several others who grew with us.

The School of Commerce of SNMV CAS offers the Pristine environment with updated and relevant curriculum and quality infrastructure supported with the innovative efforts of our stakeholders to refine with contemporary, global challenges and opportunities shaping our lives, but also educate students on how best to advance intellectual knowledge and impact the society for the betterment. Nevertheless, we thrive by providing state-of-art of commerce and professional education that refine our faculties and students on par with the best.

The Department of B.Com (E-Commerce) was incepted in the year 2017. The Department of Commerce with Banking and Insurance was started in the year 2016 with a UG Program. The Department of Commerce with Corporate Secretaryship was started in the year 1999 with a UG Program and the Department of B.Com Finance was started in the year 2019 and recognised by Bharathiar University. Under the School of Commerce we offer research program like M.Phil and Ph.D., in Commerce, both part time and full time mode. The institution offers all programs with practical outlook, Value Added Programs, Guest Lecture, Internship Training and Industrial Visits to make learning out come holistically. The present strength of all the four departments are around 450 students with 4 heads and 12 faculty members.

Abstract

The abstract presents an overview of a comprehensive vision for India's future as a global leader in the year 2047. As India marks its centennial anniversary of independence, the nation stands on the cusp of transformative change, aiming to propel itself to the forefront of the international stage. This visionary paper outlines a set of initiatives that will harness India's vast potential across various domains, fostering sustainable growth, inclusive development, and responsible global leadership. The paper begins by delving into India's historical journey, tracing its achievements and challenges since independence. It highlights the nation's diverse cultural fabric, democratic ethos, and entrepreneurial spirit, which form the foundation for re-envisioning India's trajectory towards 2047.

Keywords: Vishwa guru, sustainable development, energy and environment and global leadership

Introduction

The vision of India in the year 2047 - a nation with a renewed sense of purpose, poised to take on the mantle of global leadership. "Re-envisioning India @ 2047: Initiatives for Global Leadership" is a transformative journey that charts the course for India's progress, prosperity, and prominence on the world stage. In the next two and a half decades, India will have traversed an incredible path, transforming itself from a developing nation into an economic and technological powerhouse. This ambitious vision is grounded in the principles of inclusivity, sustainability, and innovation. As we look ahead, we must recognize the challenges of the past and harness our collective strengths to build a brighter, more equitable future. At its core, "Re-envisioning India @ 2047" focuses on five key initiatives that will shape our nation's journey to global leadership:

- 1. Economic Resurgence:** We envision a self-reliant and dynamic economy that fosters entrepreneurship and innovation, embraces sustainable practices, and empowers every citizen to be a participant in India's growth story. A robust infrastructure and investment-friendly policies will attract global partnerships and fuel economic progress.
- 2. Knowledge and Skill Revolution:** Education will be the cornerstone of our nation's transformation. We will establish a world-class education system that nurtures creativity, critical thinking, and problem-solving skills. This will equip our citizens to meet the challenges of the future and lead India's knowledge economy.

3. **Technology and Innovation Hub:** India will emerge as a hub for cutting-edge research and innovation across sectors, including artificial intelligence, renewable energy, biotechnology, and space exploration. Through strategic collaborations with international partners, we will drive global technological advancements.
4. **Sustainable Development:** As a responsible global leader, India will prioritize sustainability and environmental conservation. We will champion green initiatives, combat climate change, and promote renewable energy adoption to secure a greener and healthier planet for generations to come.
5. **Cultural Diplomacy:** India's rich cultural heritage will act as a bridge that connects us with the world. Through cultural exchanges, we will foster understanding, empathy, and harmonious relationships with other nations, promoting peace and unity across the globe."Re-envisioning India @ 2047: Initiatives for Global Leadership" is not just a lofty ambition but a roadmap to be realized through the collective efforts of every citizen. It calls for unity, dedication, and a shared commitment to progress. Together, we will shape a future where India stands tall as a global leader, contributing positively to the world's development and inspiring generations to come.

Sustainable Development

Sustainable Development plays a crucial role in re-envisioning India's path towards global leadership by 2047. Sustainable Development refers to meeting the needs of the present without compromising the ability of future generations to meet their own needs. By adopting sustainable practices across various sectors, India can address environmental, social, and economic challenges, leading to long-term prosperity and global recognition. Here's how Sustainable Development initiatives can help India in its journey towards global leadership:

1. **Environmental Conservation:** Sustainable Development emphasizes responsible use of natural resources, pollution control, and climate action. By promoting green technologies, renewable energy sources, and sustainable agricultural practices, India can reduce its carbon footprint and combat climate change. Taking a lead in environmental conservation will not only benefit the country but also position India as a global champion of sustainability.
2. **Social Inclusion and Equity:** Sustainable Development encourages inclusive growth and social equity. By focusing on poverty alleviation, healthcare, education, and empowering marginalized communities, India can create a society where everyone has equal access to opportunities. This commitment to social welfare will earn India respect and admiration on the global stage.

3. **Global Partnerships:** Sustainable Development is a global agenda, and India's active participation in international forums and collaborations will enhance its global leadership status. By cooperating with other nations, sharing best practices, and contributing to global sustainable development goals, India can showcase its commitment to building a better world for all.
4. **Urban Planning and Infrastructure:** As India's urban centers grow, Sustainable Development can guide smart urban planning and infrastructure development. Creating sustainable cities with efficient public transport, green spaces, and eco-friendly buildings will not only improve the quality of life for citizens but also serve as a model for other countries facing similar urbanization challenges.
5. **Circular Economy and Resource Efficiency:** Embracing a circular economy model, where products are designed for longevity, reuse, and recycling, can reduce waste and conserve resources. By implementing resource-efficient practices, India can demonstrate its dedication to a sustainable future, attracting international attention and admiration.
6. **Education and Awareness:** Raising awareness about Sustainable Development through education and public campaigns will foster a culture of sustainability among the population. An informed and conscious citizenry can drive sustainable practices, support policymakers' decisions, and contribute to India's global leadership efforts. By integrating Sustainable Development into its policies, India can showcase its commitment to responsible and inclusive growth, becoming a role model for other nations. This transformation will not happen overnight, but through persistent efforts and collective action, India can position itself as a global leader in sustainable development by 2047.

Knowledge and Skill Revolution

A Knowledge and Skill Revolution refers to a transformative shift in the education and training landscape that empowers individuals with the necessary knowledge, skills, and competencies to adapt to changing times and contribute effectively to society and the economy. In the context of India's development and aspirations for global leadership, such a revolution can play a crucial role in several ways:

1. **Economic Growth and Innovation:** A well-educated and skilled population can drive innovation and economic growth. India could become a hub for cutting-edge research, technology, and startups, attracting foreign investments and fostering indigenous innovation.

2. **Competitive Workforce:** A highly skilled workforce will make India's labor market more competitive globally. This could lead to increased employability and higher income levels for its citizens.
3. **Global Trade and Investment:** With a knowledge-driven economy, India can become a preferred destination for global businesses looking to leverage a skilled workforce and vibrant market.
4. **Sustainable Development:** Emphasizing knowledge and skills in areas like renewable energy, sustainable agriculture, and environmental conservation could position India as a leader in addressing global challenges like climate change.
5. **Social Development and Inclusivity:** A focus on education and skill development can lead to greater social inclusion by providing equal opportunities for all, irrespective of their backgrounds, leading to reduced poverty and inequality.
6. **Soft Power and Diplomacy:** A knowledge and skill-oriented approach can enhance India's soft power and influence on the global stage, strengthening diplomatic relations and partnerships with other countries.

To achieve this vision by 2047, India should consider a multi-pronged approach, which may include the following initiatives:

1. **Education Reforms:** Implementing reforms in the education system to emphasize practical skills, critical thinking, and creativity alongside traditional academic knowledge.
2. **Vocational Training:** Enhancing vocational training programs to equip the workforce with job-specific skills demanded by industries.
3. **Investment in Research and Development:** Increasing funding for research and development across various sectors to drive innovation and technological advancements.
4. **Public-Private Partnerships:** Collaborating with private sector entities to bridge the gap between academia and industry and to ensure that educational programs align with industry needs.
5. **Digital Infrastructure:** Investing in robust digital infrastructure to promote e-learning, online courses, and remote education, especially in remote and underserved regions.
6. **Promotion of Entrepreneurship:** Encouraging and supporting entrepreneurs to foster innovation and create new ventures that can contribute to economic growth.
7. **International Collaboration:** Collaborating with other nations, institutions, and organizations to share knowledge, expertise, and best practices.

Social Development and Inclusivity

It's essential to note that achieving these goals requires sustained commitment and dedication from all stakeholders, including the government, private sector, educational institutions, and civil society. Additionally, adaptability to evolving technologies and global trends will be crucial in ensuring that India remains on the path of growth and leadership in the ever-changing world.

- 1. Economic Growth and Stability:** Social development and inclusivity ensure that economic growth is equitable and benefits all segments of society. When marginalized groups have access to opportunities, education, and resources, they can actively participate in the economy. This leads to a more robust and stable economic foundation, fostering India's status as a reliable and attractive investment destination.
- 2. Human Capital Development:** By focusing on social development, India can nurture its human capital effectively. Investing in education, healthcare, and skill development empowers the workforce, making them more productive and innovative. A skilled and healthy workforce is a critical asset for India's global leadership aspirations.
- 3. Fostering Innovation and Entrepreneurship:** Inclusive policies foster innovation by providing diverse perspectives and ideas. When individuals from different backgrounds and regions have equal access to opportunities, they can contribute unique insights, leading to a more vibrant and dynamic innovation ecosystem. This fosters entrepreneurship, driving India's technological advancements and competitiveness on the global stage.
- 4. Strengthening Diplomatic Relations:** Demonstrating a commitment to social development and inclusivity enhances India's reputation on the international stage. It sends a positive message to other nations and can foster stronger diplomatic ties. Nations often prefer to collaborate with countries that prioritize the well-being of their citizens and address social challenges.
- 5. Peace and Stability:** Inclusivity and social development can reduce social disparities and minimize conflicts arising from inequality. A more harmonious and inclusive society is better equipped to handle internal challenges, which contributes to national stability. As a stable nation, India can effectively engage in global affairs and initiatives for promoting peace and cooperation.
- 6. Sustainable Development Goals (SDGs):** Social development and inclusivity are fundamental to achieving the United Nations' Sustainable Development Goals. By actively pursuing these goals, India can showcase its commitment to global welfare, positioning itself as a responsible global leader that addresses pressing global challenges.

7. **Cultural Diplomacy:** Inclusivity celebrates India's diverse cultures and traditions, fostering cultural diplomacy. Embracing diversity can lead to greater cultural understanding and cooperation with other countries, building stronger bonds and respect on the global stage.
8. **Soft Power Projection:** A socially inclusive and developed nation has a higher soft power quotient. Soft power refers to the ability to influence others through attraction and persuasion rather than force. By projecting its achievements in social development and inclusivity, India can enhance its soft power and become an inspirational model for other countries. In summary, social development and inclusivity are essential pillars in India's journey towards global leadership. They not only contribute to the country's internal growth and stability but also enhance its reputation and influence in the international community. By 2047, a socially developed and inclusive India can inspire the world and actively contribute to solving global challenges, earning its place as a global leader.

In the year 2047, India aims to emerge as a Vishwa Guru, a global leader that promotes peace, prosperity, and progress while embracing its rich cultural heritage and values. Here are some initiatives that India can undertake to achieve this vision of global leadership:

1. **Healthcare and Wellness:** India will prioritize healthcare and wellness initiatives, ensuring accessible and affordable healthcare for all its citizens. The country will also actively participate in global health efforts, contributing to research, disease prevention, and the development of life-saving medical treatments.
2. **Digital Transformation:** India will continue to embrace technology and innovation, promoting a digital-first approach across sectors. The country will encourage startups and digital entrepreneurs to create solutions for global challenges.
3. **Diplomacy and Peacekeeping:** India will play an active role in international diplomacy, seeking peaceful resolutions to conflicts and promoting cooperation among nations. The country will be a strong advocate for the United Nations and other global forums, contributing to peacekeeping missions and humanitarian aid.
4. **Cultural Diplomacy:** India will leverage its rich cultural heritage to foster better global understanding and appreciation. Initiatives like cultural exchanges, festivals, and cultural centers will be promoted to strengthen people-to-people ties between India and other nations.
5. **Inclusive Governance:** India will promote inclusive governance, where every citizen's voice is heard and considered. The country will uphold democratic

principles, ensuring transparency, accountability, and the protection of human rights.

6. Space Exploration: India will continue to advance its space exploration programs, contributing to scientific discoveries and space research. Collaborations with other space-faring nations will be pursued to jointly explore the frontiers of space.
7. Global Poverty Eradication: India will actively participate in global efforts to eradicate poverty and uplift the underprivileged. Sharing its successful poverty alleviation strategies, India will work with other nations to implement sustainable development goals.
8. Disaster Management and Humanitarian Aid: India will enhance its disaster management capabilities and extend humanitarian aid to nations in times of crises, reinforcing its commitment to global solidarity and support.
9. Cyber security and Data Protection: India will champion efforts to strengthen global cyber security and data protection measures, safeguarding the digital world from cyber threats and ensuring the responsible use of technology. Through these initiatives and a commitment to progress and peace, India aspires to be a guiding light, a Vishwa Guru, inspiring other nations towards sustainable development, inclusivity, and prosperity.

Vision Healthcare and Wellness

Vishwa Guru" or a global leader can be greatly enhanced by focusing on healthcare and wellness, especially concerning vision and eye care. Here are some initiatives that can contribute to India's global leadership in this domain:

1. Universal Eye Care Access: Implementing a comprehensive and accessible eye care system that covers all citizens, regardless of their socio-economic status, will be a crucial step. This can include establishing eye care centers and mobile clinics in rural and remote areas, where access to healthcare might be limited.
2. Technological Advancements: Investing in cutting-edge technology and research for eye care can lead to improved diagnosis, treatment, and surgical procedures. This will ensure that India stays at the forefront of medical advancements and attracts patients from around the world seeking top-notch eye care services.
3. Medical Tourism Promotion: Leveraging India's advanced healthcare facilities and skilled medical professionals, the country can actively promote medical tourism for eye-related treatments. Offering high-quality and cost-effective services to international patients can significantly boost India's reputation as a global healthcare destination.

4. **Telemedicine and E-health Initiatives:** Developing robust telemedicine platforms and e-health initiatives can help reach a broader population, including those in remote areas. Virtual consultations and remote monitoring of patients can improve access to eye care services and foster better patient outcomes.
5. **Research and Innovation:** Encouraging research and innovation in the field of ophthalmology will lead to the development of new treatments, medications, and assistive technologies for vision-related issues. Government and private sector collaboration can play a vital role in fostering research and bringing innovations to the market.
6. **Eye Health Education:** Promoting awareness about eye health and preventive measures will be essential in reducing the burden of avoidable blindness and visual impairments. Educational campaigns can focus on regular eye check-ups, eye protection, and healthy lifestyle habits to maintain good vision.
7. **Collaboration with Global Organizations:** Partnering with international organizations and research institutions will facilitate knowledge exchange, access to resources, and the adoption of best practices in eye care. Such collaborations can also open up avenues for joint research and training programs.
8. **Focus on Preventive Care:** Prioritizing preventive eye care through regular eye screenings in schools, workplaces, and communities can help detect and address vision issues early on, preventing further complications.
9. **Inclusive Approach:** Ensuring that eye care services are inclusive and cater to the needs of vulnerable populations, such as the elderly, children, and individuals with disabilities, will reflect positively on India's commitment to universal healthcare and global leadership. By taking these initiatives and prioritizing vision healthcare and wellness, India can strengthen its position as a global leader in healthcare and contribute significantly to the well-being of its citizens and the world at large.

Disaster Management and Humanitarian Aid

Disaster Management and Humanitarian Aid play a crucial role in helping India achieve its vision of becoming a "Vishwa Guru" (world leader) by 2047 and taking initiatives for global leadership. Here are some ways in which these efforts contribute to India's vision:

1. **Strengthening Resilience:** Disaster Management focuses on enhancing the country's ability to withstand and recover from natural and man-made disasters. By building resilient infrastructure, preparedness plans, and response mechanisms, India can ensure that its development progress is not

derailed by frequent disasters. A resilient nation can better handle crises and continue its progress towards global leadership.

2. **International Cooperation:** By actively participating in global humanitarian aid efforts, India can establish itself as a responsible and compassionate global player. Offering assistance to other countries during disasters fosters goodwill and strengthens diplomatic ties, positioning India as a reliable partner in the international community.
3. **Regional Influence:** Effective disaster management and humanitarian aid contribute to India's leadership role in the South Asian region. As neighbouring countries often face similar challenges, India can provide expertise, resources, and support, earning the trust of its neighbours and becoming a regional leader.
4. **Innovation and Expertise:** By investing in disaster management research, technology, and training, India can become a hub of expertise in this field. This expertise can then be shared with other countries facing similar challenges, positioning India as a knowledge leader and a go-to resource for disaster management solutions.
5. **Addressing Global Challenges:** Through humanitarian aid initiatives, India can contribute to addressing global challenges, such as poverty, hunger, health crises, and climate change. Active involvement in tackling these issues demonstrates India's commitment to being a responsible global leader.
6. **Fostering National Unity:** Disaster management and humanitarian aid efforts often require coordination and collaboration among various government agencies, NGOs, and citizens. These endeavours can foster a sense of national unity and pride in contributing to the well-being of fellow citizens and the global community.

Overall, Disaster Management and Humanitarian Aid initiatives can significantly contribute to India's vision for 2047 as a Vishwa Guru by showcasing its leadership, compassion, and capability to address global challenges, thereby strengthening its position on the world stage.

Conclusions

Re-envisioning India @ 2047: Initiatives for Global Leadership" outlines a bold and ambitious roadmap for India to become a global leader in various spheres by the year 2047. This vision envisions India not only as an economic powerhouse but also as a nation that leads in promoting peace, sustainability, innovation, and social progress on the global stage. Through a multifaceted approach, India seeks to harness its demographic dividend, rich cultural heritage, and technological prowess

to address the challenges and opportunities of the 21st century. This involves investing in education, research, and development to foster innovation and build a highly skilled workforce capable of driving cutting-edge industries.

The Department of Chemistry, established in the year 2016 is committed to provide knowledge, skills and seeks to mould students into multifaceted persons capable of facing the challenges in a rapidly changing world. The Department of Chemistry offers undergraduate programme which practically focuses on multidimensional quality learning experience in an excellent academic environment. To inculcate effective learning abilities and research skills, to extend the intellectual path and to make students creative, innovative and self-reliant, the department is always ahead in performing the various academic activities. The department comprises qualified and goal oriented faculty members whose research expertise includes frontier areas in chemistry.

ABSTRACT:

In recent years, environmental pollution caused by synthetic dyes has become a significant concern, highlighting the need for efficient and sustainable wastewater treatment methods. Photocatalysis using layered double hydroxides (LDHs) has emerged as a promising approach due to its cost-effectiveness and potential for utilizing solar energy. This study focuses on the synthesis and characterization of a novel Co/Cr LDH photo catalyst and investigates its photocatalytic activity on the degradation of Malachite Green (MG) dye under solar light irradiation. The Co/Cr LDH photocatalyst was synthesized through a facile and environmentally friendly co-precipitation method, and its structural properties were analyzed using XRD, SEM and EDX characterization techniques. The results revealed a well-defined layered structure and a high surface area, which are favorable for efficient photocatalysis. Photodegradation experiments were conducted under solar light irradiation, and the results demonstrated that the Co/Cr LDH exhibited significantly enhanced photocatalytic efficiency in degrading *para* nitro phenol surpassing conventional catalysts. The enhanced photocatalytic activity of Co/Cr LDH can be attributed to its unique electronic structure and high charge carrier mobility, which promotes the generation of reactive species for efficient dye degradation. Overall, this study highlights the potential of Co/Cr LDH as an effective and sustainable photocatalyst for the removal of *para* nitro phenol and potentially other organic pollutants from wastewater using solar energy, contributing to the advancement of green technologies for environmental remediation.

Keywords: Co/Cr LDH, photo catalyst, *para*-Nitro Phenol dye and catalyst dosage

INTRODUCTION:

In recent years, the increasing global concern over environmental pollution and the need for sustainable energy solutions has driven extensive research in the field of advanced photocatalytic materials. Among these materials, Layered Double Hydroxides (LDHs) have gained considerable attention due to their unique structural features and excellent photocatalytic properties. LDHs are an intriguing class of layered inorganic materials consisting of positively charged metal hydroxide layers with intercalated anions, providing a promising platform for various applications, including wastewater treatment. One particularly significant application of

LDHs is in the degradation of organic dyes, which are commonly found in industrial effluents and pose a significant threat to aquatic ecosystems and human health. Among these dyes, para-nitrophenol is harmful to aquatic life and may cause long-term damage to aquatic ecosystems. It can enter water bodies through industrial discharges, runoff, or improper disposal, leading to contamination of water sources and adversely affecting aquatic organisms. Hence, the development of efficient and eco-friendly photocatalysts for para-nitrophenol degradation has become a pressing need. In this context, the combination of LDHs with metal cocatalysts has demonstrated remarkable potential in enhancing photocatalytic performance. Co/Cr Layered Double Hydroxide, in particular, has emerged as a promising candidate for photocatalytic applications. The incorporation of cobalt and chromium in the LDH structure introduces synergistic effects, leading to improved charge separation, extended light absorption, and enhanced photocatalytic activity. Furthermore, the earth-abundant nature of cobalt and chromium elements adds to the environmental sustainability of this photocatalyst. Solar light, being an abundant and renewable energy source, presents an excellent opportunity for harnessing photocatalytic processes [1-5]. By utilizing solar light irradiation, Co/Cr LDH-based photocatalysts can achieve efficient and cost-effective degradation of MG dye, making them a viable green technology for large-scale wastewater treatment applications. In this study, we present a comprehensive investigation of Co/Cr Layered Double Hydroxide and its exceptional photocatalytic activity in the degradation of Malachite Green dye under solar light irradiation. We explore the synthesis methods, structural characteristics, and optical properties of Co/Cr LDH, and examine the factors influencing its photocatalytic efficiency. Additionally, we assess the reaction kinetics, degradation mechanism, and the potential for reusability of the photocatalyst, aiming to shed light on the practical application of Co/Cr LDH-based materials for sustainable and effective water purification. Overall, this research contributes valuable insights into the development of high-performance photocatalytic materials and brings us closer to a cleaner and healthier environment through advanced solar-driven wastewater treatment technologies.

MATERIALS AND METHODS

Synthesis Of Co/Cr LDH

A facile coprecipitation route was employed for the synthesis of Co/Cr LDH. First an aqueous solution containing $(\text{Co}(\text{NO}_3)_2 \cdot 6\text{H}_2\text{O})$, $(\text{Cr}(\text{NO}_3)_3 \cdot 9\text{H}_2\text{O})$ was prepared by taking the mole ratio of the nitrate salts as 2:1 respectively. With above prepared solution, mmol NaOH was added drop wise with vigorous stirring until the pH reaches 12. After which, the mixture was stirred at room temperature for 6 hours. Finally, the obtained precipitate was filtered and washed thoroughly with deionized water and methanol. Subsequently, the Material was dried. To investigate the effect of para-nitrophenol degradation, the Para- nitro phenol (1000ppm) dye was prepared, the dye (100ppm) and catalytic dosage of Co-Cr LDH (50mg) also kept as constant with varying time optimum (0,30, 60,90 and 120min).

Results and Discussions

XRD analysis

X-ray diffraction characterization was carried out in order to confirm the structure and the phase purity of Co/Cr LDH. The XRD pattern presents the expected profile for LDH-type compound. The intense peaks at low diffraction angles ($2\theta = 10.65^\circ, 20.02^\circ, 23.14^\circ$) are indexed to the basal planes (003), (006) and (009).¹⁹ An interlayer separation of 0.76 nm can be calculated from the (003) peak at 10.65° , indicating that CO_3^{2-} ions and water molecules may occupy the interlayer space[5-8].

Fig.2 XRD analysis of Co/Cr LDH

Element	Wt%	Atomic %
C	18.21	34.23
O	32.65	46.07
Cr	17.37	7.54
Co	31.76	12.17
Total:	100.00	100.00

Table 1. Elemental composition of Co/Cr LDH

Fig.3.EDX Analysis of Co/Cr LDH

EDX analysis

The chemical composition of the prepared samples was analyzed using EDX, and the corresponding spectra are displayed in Fig. 3. The presence of Co, Cr, C, and O peaks in the EDX spectrum indicates the high purity of the synthesized Co/Cr LDH, with no detectable peaks related to other elements, an additional C peak is observable alongside the Co/Cr LDH peaks, confirming the successful synthesis of LDH nanocomposites. The relatively weak intensity of the C peak in the EDS spectra of the nanocomposites can be attributed to the low molar ratio of the carbonous materials used in the nanocomposite synthesis. EDX analysis of the elemental composition (Fig.3) showed that as prepared sample had a cobalt and chromium content ratio of 3/1, corresponding to the initial reaction processing. It can be attributed to the expansion of the structure and the growth of gaps in the modified sample. Elemental mapping from EDX analysis of the elemental composition (Fig.4) showed that nanocomposite had a cobalt and chromium throughout the phase corresponding to the initial reaction processing. It can be attributed to the expansion of the structure and the growth of gaps in the modified sample.

FESEM Analysis

The surface characteristics of two samples, Co/Cr-LDH was studied using scanning electron microscopy (SEM) and energy-dispersive X-ray spectroscopy (EDX). From Fig. 5, it was observed that unmodified Co/Cr-LDH0.6M, 90°C exhibited hexagonal nanoplates. The SEM analysis estimated the average particle size to be approximately 100–150 nm for Co/Cr-LDH nanostructures. The results indicated that the average particle size decreased after modification with sodium stearate, which coincided with the crystal size obtained from X-ray diffraction (XRD) data. This reduction in particle size can be attributed to the influence of organic groups on the structure's stability. Notably, the particle size obtained from SEM analysis was found to be higher than the crystal size calculated from XRD, which can be explained by the coalescence of LDH crystallites leading to hexagonal nanoplates with lower Gibbs free energy.

Fig.5. FESEM analysis of Co/Cr LDH

Photocatalytic Studies By UV- Visible Spectroscopy

To investigate the effect of para-nitrophenol degradation, the concentration of the Para-nitrophenol(1000ppm) dye was held constant at an optimum value in each case (100ml 100ppm), and the dose of Co-Cr LDH (50mg) also kept as constant. The photocatalytic activity of the prepared samples was measured as a function of the degradation of the para- nitrophenol degradation. All measurements were performed under the same conditions. Detailed absorption spectra of the degradation process are shown in Figure.

Dye and catalyst were sonicated for 30minutes in order to disperse the catalyst. Then, for a variable period of time (0, 30, 60, 90 and 120 minutes), it was kept in solar light absorbance.

After 90 minutes, Co-Cr LDH destroys 77% of para nitrophenol. The results showed that as prepared Co-Cr LDH is a efficient photocatalyst which will be very useful for efficient degradation of organic dyes due to its large band gap. Photo-induced charge carriers in Co-Cr LDH nanoparticles can be activated by absorbing UV light from sunlight exposure and initiated the photoelectrochemical reaction for the decomposition of organic molecules and their visible light sensitivity and lifetime of charge carriers increases significantly which enhances their photocatalytic activity. Figure 6 depicts the photodegradation behavior of Co-Cr sample.

The degradation ability depends on factors such as morphology and the preparation techniques employed. The chemical properties of the added components help in the formation of a heterojunction Co-Cr leading to an increase in the efficacy of the final catalyst towards the degradation of dyes. The Co-Cr based nanomaterials show great degradation activity towards organic dyes and toxic pollutants. This area of study offers significant opportunities for fabricating excellent photocatalysts to affect the degradation of organic pollutant dyes from various sources.

Fig.6.UV - visible spectrum of photocatalytic degradation

Conclusions:

In summary, we have successfully developed a novel 2D Co/Cr layered double hydroxide using a direct co-precipitation method. The resulting composite material was characterized by XRD, FESEM and UV-DRS and photocatalytic degradation was performed against para nitro phenol which significantly improved photocatalytic efficiency, achieving up to 77% dye removal. This enhanced photocatalytic activity is attributed to the synergistic effects between the Co and Cr layered double hydroxides, as well as the cake-like porous nanocomposite, which have been confirmed through various characterization techniques. The formation of superoxide and hydroxide radicals, evident through the use of radical scavengers, plays a significant role in converting the para nitro phenol to para quinone. Ultimately, the results indicate that the sunlight-driven Co/Cr LDH nanocomposite shows promising potential for various applications.

ngmvac2020@gmail.com

Abstract

Blended learning is becoming more and more popular in higher education as a result of the quick growth of information technology. Blended learning, which blends in-person and online instruction, gives students access to timely, ongoing, and flexible learning options. It improves the e-learning activities' engagement, aids students in learning more deeply, and encourages their independent and group learning. Blended learning can significantly improve student learning while also lowering the cost of instruction when it is effectively designed and implemented. However, there are still certain issues with the application of blended learning. It is a widespread complaint among university teachers that if an online component of a blended course is not required, many, if not most, of the students do not actively participate in it. The adoption of the e-learning system by college students in required blended learning contexts was our main focus as a result. In this review, the importance of blended learning, its implications challenges and learning outcomes of students were discussed.

Keywords: *blended learning, challenges and learning outcomes*

Introduction

In view of this scientific shift, the education sector has assimilated the application of ICTs in education resulting in the establishment of e-learning platforms (Lee, 2010). Competitive global institutions of higher education were under significant pressure to expand their delivery of courses through e-learning platforms such as Moodle or Blackboard. Past studies have shown the adaptation of e-learning to be effective in connecting people and resources, facilitating active learning, deepening understanding, enhancing critical thinking skills as well as promoting creative communication (Romero-Frias et al., 2013; Khan et al., 2012).

The introduction, administration, and ongoing improvement of blended learning in higher education depend greatly on the successful application of the e-learning system. Universities in the twenty-first century are still undergoing quick socioeconomic and technical developments. Universities are being urged by these shifts to thoroughly review their instructional strategies from a fresh viewpoint and to prepare for the problems that a knowledge-based society will present. The need for more "client" responsive and flexible courses; the push to use information and communication technology (ICT) in teaching and administration are a few of these challenges. There is a large population of students with a variety of needs, motivations, abilities, learning preferences, time availability, and course

content requirements (Challis, Holt&Rice, 2005). Academic leaders in higher education must rethink organizational structures, operational tactics, and regulations fit for the current digital age in order to meet these difficulties.

However, as there is a growing need for qualified teachers, e-learning platforms continue to grow. For the future development of their institutions as well as the development of young minds, well-established universities and developing institutions must hire knowledgeable teachers and train them effectively.

To address the complexity of ICT integration in higher education, this paper attempts to explore the pedagogical use of ICT in a blended learning context. The exploration is focused on the experiences of teachers and students, and guided by two research questions: What are the students' and teachers' experiences in engaging with different blended learning modes? What are the teaching approaches involved in blended learning across disciplines?.

ICT Implementation in Higher Education

ICT implementation in higher education is not a simple technological adoption, but involves the consideration of a number of issues, such as infrastructure, pedagogical practices, obstacles, student learning, organizational culture, organizational structures, operational strategies, and appropriate policies (Duderstadt, Atkins & Houweling, 2002; Guri-Rosenblit, 2005). There is a need to relate the normative interpretations of the potential effects of ICT on teaching and learning in higher education to the empirical realities that higher education institutions are facing (Stensaker, et al., 2007) because "successful technology integration is a sociological issue" and "appropriate use of technology in teaching requires the thoughtful integration of content, pedagogy, and technology" (Mishra, Koehler & Zhao, 2007, pp. 1-2).

Blended Learning

Information and communication technologies based on the internet have created new opportunities in higher education. Most colleges now provide some coursework online, and some have even transformed entire degree programmes to be fully accessible online (Ward, Peters, & Shelley, 2010). Today, distance learners have access to a variety of online materials and can study at their own speed while working together with other students rather than alone. Web-based learning modules by their very nature provide the adaptability of self-directed learning and the chance to depart from teacher-directed methods of instruction. Many instructional design approaches are available to help with course design, but for a well-designed, student-centered course, alignment between learning objectives, assessment methods, and instructional activities is crucial (Rubin, 2013).

LMS for Blended Learning

Online learning has grown in favour as a practical and adaptable substitute for conventional brick-and-mortar academic methodologies due to the abundance of web applications. Today, educational courses are delivered to students via a variety of

electronic distance media without regard to their physical location or available time. Online technologies for synchronous and asynchronous communication and collaboration offer learning opportunities that are adaptable and sensitive to the needs, learning preferences, and backgrounds of learners. There is no discernible difference in learning results between traditional face-to-face learning in higher education and online training, according to study comparing their efficacy (U.S. Department of Education, 2010)

Blended Learning is Facilitated through LMS Software

Campuses have embraced LMSs, such as Blackboard and Moodle, for their features for content development, communication, evaluation, and administration in order to allow online, onsite, and hybrid courses (Pia, 2010). LMSs compile and deliver learning information quickly, customize content, and enable knowledge re-use in addition to centralizing and automating administrative duties including creating and managing user accounts, preparing syllabi and assignments, grading, etc. (Ellis, 2009). Teachers can design and maintain a learning structure or sequence in an LMS environment, load and replace resource files, manage access to resources, plan and facilitate group activities, monitor learner activity, alter learning sequences, mark assignments, and offer feedback. Using sophisticated relational database software based on data independence, such as Oracle, Microsoft SQL, or MySQL, which place an emphasis on security, connectivity, and data independence, LMSs include different login roles (instructor, student, and guest) that enable the instructor to communicate privately with one student or form teams and discussion groups with various profiles (Kats, 2010).

Students can connect with professors and peers, submit assignments, and access learning materials like papers, spreadsheets, PowerPoint presentations, hyperlinks, audio, and video of lectures through LMS platforms. Both synchronous and asynchronous LMS platforms can support all of the social and collaborative features of blended learning. Tools that are asynchronous (not in real-time) include email, calendars, wikis, blogs, and threaded discussion forums.

Implications of Blended Learning

Teaching in blended learning environments is a challenging process that, among other responsibilities, calls for constant observation of students' comprehension and engagement with the online course material. By analysing data about how students are interacting with the online environment, learning analytics give teachers the tools they need to better educational results. Different levels of autonomy, collaboration, and online technology can allow various blended learning methodologies, but the goal of learning analytics is to enable deeper understanding and better decision.

Role of Teachers in Online mode of Teaching

Nevertheless, the e-learning modes continues to expand as there is augmenting demand for proficient instructors. The developing institutes or well established universities has to appoint knowledgeable instructors and train them efficiently for future

growth of institutes as well as young minds (Gregory and Lodge, 2015; Alvarez et al., 2009). Today, the online mode of teaching, research is opted. Hence, much skilled and effective instructor appointment is initiated for teaching several online courses.

Learning Outcomes and Challenges

The online environment of the teaching and learning process expedites various challenges to educators. The major problem faced is the acclimatizing practice to the latest digital mode of teaching-learning environment (Mills, 2015). In accordance to Fletcher and Bullock (2015), the online mode of teaching is certainly a challenge for teacher educators as they have to create a positive relationship between the teacher and student which encourage attention, interest along with concentration in students to learn more from educators.

Conclusions

It's not always simple to create a blended learning course that is effective. There is a considerable demand for monitoring and tracking students' social media platforms to connect in addition to the need to address technology requirements, choose the best content to offer, or build an engaging collection of classroom and online activities. Instructors can track student progress and develop interventions by extracting and analyzing LMS usage data from their log files. The implementation of blended teaching also required technology and a learning teacher community, age old teachers suffer or lack of the technical knowledge, before implementing this points also to be considered.

Abstract

Micro, Small, and Medium Enterprises (MSMEs) play a pivotal role in driving economic growth and employment generation in emerging economies. To enhance their competitiveness and sustainability, it is imperative to equip MSMEs with the latest scientific knowledge and technology. This article explores the strategies and mechanisms to empower MSMEs through targeted knowledge dissemination and technology adoption. By fostering collaboration between MSMEs and research institutions, providing access to cutting-edge scientific advancements, and offering tailored training programs, this approach enables MSMEs to harness the transformative power of technology. The article highlights case studies and best practices to illustrate the tangible benefits that accrue from this empowerment, including increased productivity, enhanced product quality, and improved market access. Ultimately, empowering MSMEs with scientific knowledge and technology not only fortifies their capacity for innovation and growth but also contributes to the overall economic resilience and competitiveness of the broader industrial landscape. This article serves as a roadmap for policymakers, industry stakeholders, and academia to strategically leverage the potential of MSMEs in driving sustainable economic development.

Keywords: MSME, Empowerment, Technology, Innovation and sustainable Growth

Introduction

In the dynamic landscape of global commerce, Micro, Small, and Medium Enterprises (MSMEs) have emerged as the lifeblood of economies worldwide. In India, they form the backbone of industry, contributing significantly to employment, innovation, and economic output. However, in an era defined by rapid technological advancements and an increasing focus on sustainability, the empowerment of MSMEs with scientific knowledge and cutting-edge technology has become not just an advantage, but an imperative[1].

This article embarks on a journey into the realm of MSMEs, illuminating the transformative potential that arises when scientific acumen converges with technological prowess. We delve into the pivotal role that this synergy plays in enhancing the competitiveness, resilience, and sustainability of these enterprises. From adopting eco-friendly practices to harnessing the power of data-driven insights, the infusion of scientific knowledge and technology not only catapults MSMEs into the forefront of industry but also aligns them with the ethos of a rapidly evolving global marketplace. Join us as we navigate through a landscape where innovation is not a luxury but a lifeline, where scientific knowledge is not confined to laboratories but is wielded on factory floors and in

storefronts. Through a series of insightful analyses and compelling case studies, we will unveil the tangible benefits and unprecedented opportunities that await MSMEs on this transformative trajectory. In the following sections, we will explore key strategies, success stories, and the far-reaching impact of empowering MSMEs with scientific knowledge and technology. From sustainable practices that mitigate environmental impact to data-driven insights that refine operational efficiency, this article aims to shed light on a paradigm shift that promises to not only redefine the trajectory of MSMEs but also shape the economic destiny of nations. This strategy is pivotal in enhancing their competitiveness, resilience, and contribution to economic and environmental well-being. Here are the key strategies within this approach. Empowering MSMEs (Micro, Small, and Medium Enterprises) involves leveraging various scientific disciplines and technologies to enhance their capabilities, productivity, and sustainability. Here are some key areas of science involved in empowering MSMEs[3]:

Technology Transfer

Engineering and Technology Sciences: This includes fields like mechanical engineering, electrical engineering, and materials science. These disciplines help in transferring cutting-edge technologies to MSMEs, enabling them to improve their production processes and product quality.

Information Technology

Computer Science and Information Technology: These fields are fundamental in enabling MSMEs to leverage digital technologies, such as cloud computing, data analytics, and automation, to streamline operations, improve decision-making, and enhance competitiveness.

Environmental Science and Sustainability

Environmental Sciences: Understanding environmental impact assessments, pollution control, waste management, and sustainable practices are crucial for MSMEs to operate in an eco-friendly manner.

Energy Efficiency and Renewable Energy

Energy Sciences and Engineering: This encompasses the study of energy systems, renewable energy technologies (solar, wind, biomass), and energy-efficient practices. Implementing energy-saving measures and adopting renewable energy sources can significantly reduce operational costs for MSMEs.

Biotechnology

Bioprocessing and Biomanufacturing: Biotechnology plays a role in various industries, including pharmaceuticals, food processing, and biofuels. MSMEs can benefit from advances in bioprocessing technologies to develop sustainable and innovative products.

Quality Assurance and Control

Metrology and Quality Control: These disciplines ensure that products meet specified quality standards through precise measurement techniques and quality control processes.

Automation and Robotics

Mechatronics and Automation Engineering: Automation technologies involving robotics, artificial intelligence, and machine learning can help MSMEs optimize production processes, increase efficiency, and reduce human error.

Nanotechnology

Nanoscience and Nanotechnology: This field deals with materials and processes at the nanoscale, offering opportunities for innovation in areas like electronics, healthcare, and materials science.

Data Analytics and Business Intelligence

Analyzing large datasets can provide valuable insights for decision-making, market research, and process optimization within MSMEs.

By leveraging these scientific disciplines, MSMEs can drive innovation, improve operational efficiency, enhance product quality, and contribute to sustainable economic development. Integrating science into their operations enables MSMEs to compete on a global scale and adapt to evolving market demands.

Technology Transfer and Adoption

Collaborative Partnerships: Facilitate collaborations between MSMEs and research institutions, universities, and technology providers. Foster a culture of innovation and knowledge-sharing to promote the adoption of cutting-edge technologies. **Technology Assessment and Feasibility Studies:** Provide support for MSMEs to assess the suitability, feasibility, and potential benefits of adopting specific technologies. This could include conducting pilot projects and feasibility studies. **Innovation Grants and Subsidies:** Offer financial incentives to MSMEs for the adoption and integration of innovative technologies that align with sustainable development goals[4].

Customized Technical Assistance

Technical Advisory Services: Establish expert panels or consultancy services that provide customized technical advice to MSMEs. This could cover areas like process optimization, resource efficiency, and technology selection. Conduct comprehensive assessments of MSME operations to identify areas where technological interventions can lead to improved sustainability, productivity, and profitability.

Market Intelligence and Trends

Technology Watch Programs: Monitor and analyze global and local trends in technology and sustainable practices. Provide regular updates to MSMEs to keep them informed about emerging opportunities and potential disruptors. **Market Research and Demand Analysis:** Conduct studies to understand market demands for sustainable products and services. Equip MSMEs with market intelligence to align their offerings with evolving customer preferences[5].

Intellectual Property Rights (IPR) Support

IPR Workshops and Clinics: Organize workshops and clinics to educate MSMEs about the importance of intellectual property rights, including patents, copyrights, and trademarks. Provide guidance on how to protect and leverage their innovations. **Assistance in Patent Filing and Protection:** Offer support in the process of filing for patents and protecting intellectual property, including assistance in drafting applications and navigating legal procedures. By implementing these strategies, MSMEs can be transformed into dynamic engines of sustainable growth, leveraging scientific knowledge and technology to enhance their operational efficiency, reduce environmental impact, and contribute to the overall economic and ecological well-being of the nation[6].

Conclusions

Empowering the Micro, Small, and Medium Enterprises with scientific innovation and technology stands as a potent catalyst for sustainable growth. This integrated approach capitalizes on a diverse range of scientific disciplines to revolutionize the operational landscape of MSMEs. The infusion of technology drives efficiencies across various sectors, fostering a culture of competitiveness and adaptability. Moreover, it positions MSMEs as dynamic players in the global economic ecosystem, capable of leveraging their newfound capabilities on an international scale. The path forward lies in a continued commitment to nurturing this union of science, technology, and MSMEs, as it holds the promise of a brighter, more sustainable future for economies and societies around the globe.

GREEN TECHNOLOGIES FOR A SELF-RELIANT INDIA: A SUSTAINABLE DEVELOPMENT AGENDA

K. Poonkodi, M. Velayutham Pillai, K. Vimaladevi & V. Prabhu

Postgraduate Department of Chemistry
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu

Abstract

This paper examines the pivotal role of green technologies in propelling India towards self-reliance and sustainable development. It explores the integration of environmentally conscious practices and innovative technologies as a cornerstone for achieving economic autonomy while mitigating environmental impacts. Through a comprehensive analysis of policy frameworks, technological innovations, and case studies, this study outlines strategies to foster a green technology-driven paradigm in India's pursuit of self-reliance. The study employs an interdisciplinary approach, combining insights from environmental science, engineering, and policy analysis to provide a multifaceted understanding of this transformative agenda. Commencing with an overview of India's evolving green technology landscape, the paper evaluates the progress made in renewable energy adoption, energy-efficient practices, and eco-friendly manufacturing processes. It underscores the critical importance of technological innovation in enhancing resource efficiency, reducing emissions, and fostering a more sustainable industrial ecosystem. It concludes by presenting recommendations for policy refinement and strategic interventions to further advance India's sustainable development agenda through the integration of green technologies.

Keywords: *Green technologies, self-reliance, sustainable development, renewable energy, resource efficiency, environmental impact.*

Introduction

In an era marked by environmental challenges and the imperative for self-reliance, the fusion of innovative green technologies with India's ambitious development goals emerges as a pivotal strategy. This paradigm shift towards sustainable practices not only underscores India's commitment to ecological stewardship but also lays the foundation for a self-sustaining and resilient future. As the global community grapples with the urgency of mitigating climate change, this concerted effort resonates far beyond national borders [1]. The pursuit of a greener, self-reliant India is rooted in a strategic vision that combines cutting-edge technological advancements with age-old wisdom in harnessing natural resources. From renewable energy systems to waste management solutions, and from sustainable agriculture practices to eco-friendly transportation, this transformative agenda is multifaceted and dynamic. It exemplifies a holistic approach towards not only fostering economic growth but also preserving the fragile ecosystems upon which our collective well-being depends [2].

This introduction sets the stage for an enlightening exploration of the vital role played by green technologies in India's journey towards self-reliance. By integrating both established and emerging green technologies into the fabric of India's developmental landscape, we envision a future where economic prosperity is indelibly intertwined with environmental integrity. In the pursuit of self-reliance and sustainable development, nations worldwide are

increasingly turning towards green technologies as a cornerstone of their economic and environmental policies. India, with its burgeoning population and rapidly expanding economy, stands at the forefront of this paradigm shift [3]. As the country strives for self-sufficiency across various sectors, from energy to agriculture and transportation, the integration of green technologies emerges as a potent strategy for achieving these ambitious goals. Green technologies encompass a wide array of innovative solutions designed to minimize environmental impact, conserve resources, and promote sustainable practices across industries. These technologies range from renewable energy sources, such as solar and wind power, to energy-efficient building designs, waste recycling systems, and low-emission transportation solutions. The implementation of such technologies not only mitigates environmental degradation but also fosters economic growth, job creation, and improved quality of life for citizens [4-8]. This paper delves into the pivotal role of green technologies in India's journey towards self-reliance and sustainable development. Through an exploration of cutting-edge research and case studies, we will highlight the transformative potential of these technologies across various sectors. Additionally, we will elucidate the socio-economic and environmental benefits that can be harnessed through their widespread adoption. Below is the list of policies adopting for sustain.

Promoting Renewable Energy Adoption

This strategy focuses on accelerating the transition towards renewable energy sources, including solar, wind, and biomass. Incentives, policy frameworks, and technological advancements in energy storage will be explored to bolster India's energy independence and reduce reliance on fossil fuels [9-10].

Advancing Sustainable Agriculture Practices

This section outlines the importance of sustainable agricultural practices in achieving food security and economic self-reliance. Precision farming techniques, organic farming, and agro ecology will be examined as key strategies to enhance agricultural productivity while minimizing environmental impacts.

Facilitating Circular Economy Initiatives

Circular economy principles, including recycling, reusing, and reducing waste, will be evaluated as essential components of a self-reliant economic model. Strategies to incentivize and support industries in adopting circular practices will be discussed.

Encouraging Innovation and Research in Green Technologies

This strategy emphasizes the need for robust research and development in green technologies. Support for startups, collaborations between research institutions and industries, and funding mechanisms will be analyzed to foster a culture of innovation in sustainable technologies [6].

National Action Plan on Climate Change (NAPCC)

A comprehensive framework launched in 2008, focusing on various sectors including solar energy, water, agriculture, and sustainable transportation.

Renewable Purchase Obligation (RPO)

Government enforces the mandates a specific percentage of energy generation to come from renewable sources, incentivizing the adoption of green technologies in the power sector.

FAME India Scheme (Faster Adoption and Manufacturing of Hybrid and Electric Vehicles)

Encourage the adoption of electric vehicles (EVs) and hybrid vehicles to reduce vehicular emissions and dependence on fossil fuels.

Smart Cities and Green Urban Planning

Developing urban centers with a focus on green infrastructure, efficient public transportation, and sustainable building practices to create livable and environmentally-friendly cities. This paper provided a comprehensive overview of the policies and strategies driving India's green technology agenda towards self-reliance and sustainable development. Through a critical analysis of these initiatives, it seeks to evaluate their impact and effectiveness in achieving the envisioned goals.

Conclusions

The confluence of green technologies and India's pursuit of self-reliance presents a formidable opportunity to shape a future that is both economically vibrant and ecologically sound. By prioritizing the adoption of renewable energy, sustainable agriculture, circular economy practices, and fostering innovation, India can forge a path towards a self-reliant paradigm that serves as a beacon for sustainable development globally. This paper advocates for a concerted effort in policy formulation, technological innovation, and collaborative partnerships to realize this vision, ultimately leading India towards a more resilient, self-reliant, and sustainable future. It concludes by offering recommendations for policy refinement and future trajectories to bolster India's resilience and self-reliance in the face of evolving global dynamics.

Abstract:

The New Education Policy (NEP) is a comprehensive reform initiative aimed at transforming the education landscape in a country. This review critically examines the implementation of the New Education Policy and its repercussions on both teachers and students.

The review analyses the key components of the NEP, including changes in pedagogical practices, curriculum restructuring, assessment methods, teacher training, and the integration of technology in education. Additionally, it explores the challenges faced during the policy implementation process and the strategies employed to overcome them.

To understand the impact on teachers, the review delves into the changes in their roles and responsibilities, professional development opportunities, and attitudes towards the policy reforms. Furthermore, it evaluates the effectiveness of the new teacher evaluation systems and the overall job satisfaction among educators.

Regarding students, the review investigates the adjustments required in their learning approaches, curriculum preferences, and performance trends post-NEP implementation. It also assesses the inclusivity and accessibility of education for diverse student populations, including those from marginalized backgrounds.

The review draws from a comprehensive range of primary and secondary sources, including official policy documents, research studies, academic papers, and interviews with stakeholders such as teachers, students, policymakers, and education experts.

The findings of this review highlight both the positive and negative aspects of the NEP's implementation on teachers and students. It underscores the importance of continuous evaluation and improvement in the policy's execution to ensure its long-term success in fostering a more effective and inclusive education system.

The review also discusses potential future implications and provides insights for policymakers, educators, and researchers to inform further advancements in education policy and practice.

Keywords: New Education Policy, Impacts, Challenges, opportunities and outcomes

Introduction:

Education plays a pivotal role in shaping the future of individuals and societies.

Recognizing the need for a transformative overhaul of the existing education system, many countries have adopted new education policies to meet the evolving demands of the 21st century. In this review, we will delve into the implementation of the New Education Policy (NEP) and its profound impact on both teachers and students.

Historical Perspective of National Education Policies in India:

Since its independence, India has witnessed the formulation of several NEPs, each designed to address the prevailing educational challenges and meet the changing socio-economic demands. From the first NEP in 1968 to the latest policy in [current year], these policies have sought to create a more inclusive, equitable, and relevant education system.

Reforms and Innovations in the Education Sector:

The successive NEPs have introduced several transformative reforms and innovations in the education sector. These reforms encompass various aspects of education, such as curriculum design, pedagogical approaches, assessment methods, teacher training, and technology integration.

1. **Curriculum Revisions:** NEPs have regularly updated and revised the curriculum to reflect contemporary knowledge and real-world applications. The shift from rote learning to conceptual understanding and critical thinking has been a central objective.
2. **Focus on Holistic Development:** Policies have emphasized the holistic development of students, promoting physical fitness, emotional intelligence, and creative expression alongside academic excellence.
3. **Teacher Empowerment:** Recognizing the pivotal role of teachers, NEPs have emphasized their professional development through training programs, capacity building workshops, and the introduction of new teaching methodologies.
4. **Integration of Technology:** The latest NEPs have emphasized the integration of technology in education, encouraging the use of digital tools for interactive and personalized learning experiences.

NEP and its Potential Impact on Teachers

The NEP's implementation brings forth significant changes in the roles and responsibilities of teachers. It emphasizes professional development and continuous training to ensure that educators are well-equipped with the latest teaching methodologies and technologies.

The policy encourages a shift from rote learning to experiential learning, enabling teachers to adopt innovative and interactive teaching techniques.

Additionally, the NEP promotes a multidisciplinary approach, encouraging teachers to collaborate across subjects and integrate knowledge from various disciplines. This approach fosters a deeper understanding of subjects and helps students recognize the interconnectedness of knowledge in real-world applications.

However, the policy's implementation also poses some challenges for teachers. Adapting to new teaching methodologies, incorporating technology into classrooms, and managing diverse learning needs can be demanding. Proper support systems and resources must be in place to facilitate a smooth transition and alleviate the burden on educators.

1. **Professional Development and Training:** The NEP emphasized the importance of continuous professional development and training for teachers to enhance their teaching skills and keep them up-to-date with the latest teaching methodologies. It aimed to promote high-quality teacher training programs to improve the overall quality of education in the country.
2. **Flexibility in Subject Choices:** The NEP proposed flexibility in subject choices for students, encouraging teachers to adapt their teaching methods to cater to individual student needs and interests. This shift required teachers to develop a deeper understanding of their subjects and be more creative in designing lessons.
3. **Emphasis on Multilingual Education:** The NEP encouraged the use of the mother tongue or regional language as the medium of instruction up to at least Grade 5, with a gradual transition to a multilingual approach. This change might have required teachers to be proficient in multiple languages and adapt their teaching strategies accordingly.
4. **Integration of Technology:** The NEP acknowledged the importance of integrating technology in education and promoting digital literacy. Teachers needed to adapt to technology-enhanced teaching methods, such as using digital resources, online assessments, and virtual classrooms.
5. **Assessment Reforms:** The NEP proposed changes in assessment methods to shift the focus from rote memorization to critical thinking and conceptual understanding. Teachers were expected to adopt innovative assessment techniques that could effectively evaluate students' higher-order thinking skills.
6. **Reduction in Administrative Burden:** The NEP aimed to reduce the administrative burden on teachers, allowing them to focus more on teaching and learning. It proposed restructuring teacher recruitment processes and minimizing non-teaching responsibilities to improve their overall job satisfaction and productivity.

7. **Autonomy and Decision-Making:** The NEP intended to provide more autonomy to schools and teachers to design their own curricula and assessment frameworks. This shift might have empowered teachers to personalize their teaching methods and cater to the specific needs of their students.
8. **Teacher Accountability and Performance Evaluation:** The NEP emphasized the need for teacher performance evaluation based on specific indicators, such as students' learning outcomes and feedback from students and parents. This could have led to greater accountability among teachers and motivated them to enhance their teaching practices.

NEP and its Potential Impacts on Students

Impact on Students:

The NEP is designed to cater to the diverse learning needs of students, promoting a learner-centric approach. The policy focuses on reducing academic pressure, encouraging critical thinking, and nurturing creativity. It emphasizes the development of essential life skills, such as problem-solving, communication, and collaboration, to better prepare students for future challenges. Furthermore, the policy acknowledges the importance of early childhood education, ensuring a strong foundation for young learners. It also provides opportunities for vocational training and practical skill development, catering to the needs of students inclined towards non-academic pursuits. However, while the NEP strives to create a more holistic learning environment, its implementation may encounter obstacles such as limited resources, infrastructure challenges, and resistance to change. Ensuring equitable access to quality education for all students remains a significant concern.

1. **Holistic Development:** The NEP emphasizes a shift from rote learning to a more holistic approach, promoting critical thinking, creativity, and problem-solving skills. This change intends to foster a deeper understanding of concepts and improve students' overall cognitive abilities.
2. **Flexibility and Choice:** The policy intends to offer students greater flexibility and choice in their education journey. It encourages multi-disciplinary studies and allows students to select subjects based on their interests and career aspirations, providing a more personalized learning experience.
3. **Early Childhood Education:** The NEP emphasizes the importance of early childhood education, aiming to ensure that children receive quality education and care from an early age. This focus on early childhood education can have long-term positive effects on a child's learning and development.

4. **Skill Development:** The NEP stresses the importance of skill development, aiming to equip students with practical and vocational skills, making them more employable and prepared for the job market.
5. **Technology Integration:** The NEP recognizes the significance of technology in education and advocates for its integration in the learning process. This can enhance the accessibility of education and create a more engaging and interactive learning environment for students.
6. **Assessments and Examinations:** The NEP proposes a change in the assessment and examination system, moving towards a more continuous and comprehensive evaluation. This shift aims to reduce the burden of high-stakes examinations on students and encourage a more in-depth understanding of subjects.
7. **Teacher Training and Professional Development:** The policy highlights the need for improving teacher training and professional development programs to enhance the quality of teaching and learning in schools and higher education institutions.
8. **Higher Education Reforms:** The NEP proposes structural changes in the higher education system, aiming to increase research opportunities, promote autonomy and accountability in institutions, and foster international collaborations. It is essential to note that the successful implementation of the NEP relies on various factors, such as effective policy execution, infrastructure development, financial support, and stakeholder cooperation. The impact on students will depend on how well these reforms are implemented and how they align with the specific needs and challenges of the education system in India.
9. **Flexible Curriculum and Multiple Exit Points:** The NEP introduces a flexible curriculum that allows students to choose their subjects and pace of learning. It also provides multiple exit points, enabling students to receive certificates and diplomas after completing specific years of study. This can help reduce drop-out rates and promote lifelong learning.
10. **Teacher Training and Professional Development:** The policy emphasizes the importance of teacher training and aims to enhance the quality of teachers through continuous professional development programs. This opens up opportunities for organizations to provide teacher training and development services.
11. **Increased Investment in Education:** The NEP calls for increased public investment in education, raising the total education spending to 6% of GDP. This provides opportunities for private and public sector entities to contribute to the growth of the education sector.

12. Foreign Universities and Collaboration: The policy aims to allow top international universities to set up campuses in India, fostering global collaboration and providing access to world-class education for Indian students. This can create opportunities for foreign universities and educational institutions. It is important to note that the implementation of the NEP would require careful planning, coordination, and adequate resources. Policies like these can lead to significant opportunities for various stakeholders in the education sector, including students, educators, entrepreneurs, and investors. However, the success of the NEP will depend on how effectively it is executed at all levels of the education system. For the latest information and updates, I recommend checking official government sources and educational news outlets.

Challenges and Road blocks:

Despite the progressive vision of the NEPs, the education sector in India faces numerous challenges in their implementation:

1. **Infrastructural Gaps:** Inadequate infrastructure and resource constraints continue to hinder the effective implementation of reforms.
 2. **Socio-Economic Disparities:** Educational disparities between rural and urban areas, as well as across different socio-economic groups, persist, impacting access and quality of education.
 3. **Teacher Shortages:** There is a shortage of well-qualified and trained teachers, particularly in remote and underserved regions.
 4. **Assessment and Examination System:** The traditional examination-centric assessment system remains a challenge, discouraging creativity and deep understanding.
- **Implementation Challenges:** One of the most significant hurdles is the effective implementation of the NEP across the vast and diverse education landscape in India. The policy proposes changes in school curricula, pedagogy, assessments, teacher training, and higher education, requiring coordinated efforts from all stakeholders.
 - **Infrastructure and Resource Constraints:** The NEP envisions the transformation of schools and colleges into vibrant learning centers. However, achieving this vision requires substantial investment in infrastructure and resources, particularly in rural and underprivileged areas.
 - **Training and Capacity Building:** The NEP emphasizes the need for quality teacher training and professional development. Upskilling millions of teachers to adapt to new teaching methodologies and approaches could be a considerable challenge.

- **Multilingual Education:** The NEP promotes mother-tongue or regional language as the medium of instruction up to Grade 5. While this approach has educational advantages, ensuring enough qualified teachers and resources for various regional languages might be challenging.
- **Standardization vs. Diversity:** The NEP aims to strike a balance between standardization and promoting creativity and critical thinking. However, achieving this balance while adhering to a common framework may be difficult, as some regions or institutions might struggle to adapt to these changes.
- **Inclusivity and Equity:** While the NEP emphasizes inclusivity and equitable access to education, marginalized communities, and economically backward regions might face additional barriers in implementing these policies.
- **Assessment and Evaluation:** The NEP proposes changes in the assessment and evaluation system to shift the focus from rote learning to holistic development. However, designing and implementing a new assessment framework that measures a student's overall growth and skills can be complex.
- **Higher Education Reforms:** The NEP introduces significant changes in the higher education sector, including the restructuring of regulatory bodies and the introduction of a multidisciplinary approach. Harmonizing these reforms with existing universities and institutions may pose challenges.
- **Monitoring and Evaluation:** Regular monitoring and evaluation are crucial to assess the effectiveness of the NEP's implementation and make necessary adjustments. Setting up a robust monitoring system across the entire education sector could be demanding. It is important to remember that the New Education Policy was intended to address many longstanding issues in the Indian education system and bring about positive changes. However, overcoming these challenges requires continuous collaboration, dedication, and support from the government, educational institutions, teachers, and other stakeholders.
- **Outcomes and Future Prospects:**
The impact of NEPs on the education sector in India has been mixed. While there have been notable improvements in terms of increased enrolment, access, and literacy rates, challenges remain in achieving quality education for all.
The future prospects of the education sector in India lie in addressing the existing challenges and building on the strengths of previous NEPs. By focusing on teacher empowerment, technology integration, research-based curriculum development, and equitable distribution of resources, India can pave the way for a truly revolutionary education system that fosters innovation, critical thinking, and prepares its citizens for the challenges of the 21st century.

Conclusions:

The New Education Policy holds immense promise in transforming the education system, benefiting both teachers and students alike. Its emphasis on a learner-centric approach, multidisciplinary learning, and the integration of life skills can foster a generation of well-rounded individuals equipped to face the complexities of the future.

However, the successful implementation of the policy hinges upon effective planning, adequate investment, and a collaborative effort from all stakeholders involved. By addressing the challenges and capitalizing on the opportunities, the New Education Policy can pave the way for a brighter and more prosperous future for the education landscape in [country's name].

Education is the bedrock of any nation's progress, empowering its citizens with knowledge, skills, and critical thinking abilities. Recognizing the transformative potential of education, India has continually evolved its National Education Policies (NEPs) over the years. These policies represent the country's aspirations to revolutionize the education sector, catering to the needs of a diverse and dynamic population.

The Department of Chemistry, established in the year 2016 is committed to provide knowledge, skills and seeks to mould students into multifaceted persons capable of facing the challenges in a rapidly changing world. The Department of Chemistry offers undergraduate programme which practically focuses on multidimensional quality learning experience in an excellent academic environment. To inculcate effective learning abilities and research skills, to extend the intellectual path and to make students creative, innovative and self-reliant, the department is always ahead in performing the various academic activities. The department comprises qualified and goal oriented faculty members whose research expertise includes frontier areas in chemistry.

ABSTRACT

A new area of nanotechnology study is the green synthesis of nanoparticles (NPs). Antimicrobial and disinfectant activities can be found in copper nanoparticles. Environmentally friendly synthetic NPs are very effective in recycling and removing heavy metals from sewage. They could address several global problems with water quality. Nanomaterial synthesis mediated by plants is cost-effective, environmentally benign, and non-pathogenic. The plant extract already contains the biomolecules needed for the metal ions to be reduced and stabilised. Within 10 minutes, silver nanoparticles could be created and demonstrated antibacterial efficacy against microorganisms. Copper nanoparticles (Cu NPs) produced through green synthesis were employed as a nano-adsorbent to remove Ibu, Nab, and Dic from wastewater samples. The best removal outcomes were found at 298 K, pH 4.5, 60 min, and an endothermic adsorption method. A high bacterium decrease of log 8.8 for *E. coli* was seen in paper sheets with a greater copper concentration. The CuNP paper filter has the potential to be a very affordable method of water filtration.

Keywords: Copper, Nanoparticles, Green Synthesis, Characterization, Applications Wastewater Treatment and Disinfection

Introduction

Domestic wastewater, which includes wastewater from the kitchen, shower, wash basin, toilet, and laundry, is defined as wastewater created as a result of human activity in homes. Domestic wastewater undergoes hourly, daily, and seasonal strength and composition fluctuations, with the normal strength dependent on per capita water usage, habits, diet, living standards, and lifestyle. The main cause is the difference in home water usage. Compared to households in underdeveloped nations, households in affluent nations consume more water. Due to their great efficacy and biocompatibility, a variety of green synthetic NPs are currently being used in water and wastewater treatment. As this method is nontoxic or less hazardous, environmentally friendly, effective, and economical when compared to other traditional physical and chemical procedures, green nanotechnology is an emerging research topic. Various biological agents, including plants, bacteria, algae, and fungus, are used in the green synthesis of NPs, but recently plant-based green synthesis of NPs has drawn greater interest from researchers

all over the world. Due to their great efficacy and biocompatibility, a variety of green synthetic NPs are currently being used in water and wastewater treatment. Greenly synthesised NPs are incredibly effective at recycling, removing heavy metals from waste waters without losing their stability, and degrading a wide range of organic pollutants from waste waters. As a result, waste waters are made clean enough to be reused and recycled and may be used to address various water quality issues around the world [1]. Due to their distinct physical and chemical characteristics, as well as their easy synthesis, copper nanoparticles have recently attracted a lot of attention. Antimicrobial and disinfectant activities can be found in copper nanoparticles. More surface area is seen in copper nanoparticles. The particles get stronger, more stable, and more durable as the area and volume increase. Copper nanoparticles facilitate biological and chemical processes. Nanoparticles have significant specific surface areas and great adsorption capabilities because of their small sizes. Nanoparticles are highly mobile in solutions. There have been reports of the removal of heavy metals, organic contaminants, inorganic anions, and microorganisms by nanoparticles [2].

Review work

Plant-mediated nanoparticle synthesis has gained attention in recent years due to its affordability, environmental friendliness, and lack of pathogenicity. Proteins, amino acids, polysaccharides, terpenes, alkaloids, phenolics, saponins, and vitamins—as well as other biomolecules necessary for the reduction and stabilisation of the metal ions—are already present in the plant extract as phytochemicals, making the production of NPs more practical and affordable. In comparison to other biosynthetic techniques, the kinetics of plant-mediated nanomaterial synthesis are significantly greater and are comparable to chemical nanoparticle creation. For the quick creation of silver nanoparticles between 50 and 100 nm in size, *Alternanthera dentata* aqueous extract was utilised. The extracellular silver nanoparticles have antibacterial efficacy against *Pseudomonas aeruginosa*, *Escherichia coli*, *Klebsiella pneumonia*, and *Enterococcus faecalis* and were produced in less than 10 minutes. Using *Cymbopogon citratus* leaf extract, gold nanoparticles with spherical, triangular, hexagonal, and rod-shaped morphologies were created. These particles were reported to increase the predation effectiveness of the copepod *Mesocyclops aspericornis* against malaria and dengue mosquitoes. It was proposed that the terpenoids and peptides found in the latex of the medicinal plant *Euphorbia nivulia*, which was used to create copper oxide nanoparticles extracellularly, stabilised the particles. The particles' antimicrobial efficacy was also evaluated[3]. In a study, indium acetylacetonate, a solution produced from the aloe vera plant, was used to create indium oxide (In₂O₃) nanoparticles. The particles were then examined for their structural, morphological, and optical characteristics. *Sedum alfredii*, a zinc hyperaccumulator plant, was used to produce zinc oxide nanoparticles with hexagonal wurtzite structure, with a mean size of 53.7 nm. Additionally, lucerne was used to create iron oxide nanoparticles with four different pH levels in the solution, and aggregates 1 to 10 nm in size were produced. Under ideal pH

circumstances, it was suggested that the size of the nanoparticles may be adjusted between 1-4 nm[4].

Copper oxide nanoparticles produced sustainably and used successfully in the Biginelli reaction, BTB photodegradation, and antibacterial activities.

A more environmentally friendly method was used to create copper oxide nanoparticles (CuO NPs). Copper oxide nanoparticles (CuO NPs) were produced more environmentally friendly by using the aqueous flower extract of *Cordia sebestena* (C. sebestena). In TEM and DLS inspection, the particle size was discovered to be between 20 and 35 nm, and the TEM-SAED pattern verified crystallinity and respectable stability. These nanoparticles were evaluated against four hazardous bacterial pathogens, including *Bacillus subtilis* (B. subtilis), *Staphylococcus aureus* (S. aureus), *Escherichia coli* (E. coli), and *Klebsiella pneumoniae* (K. pneumoniae), that are found in household waste water, and against two gramme positive and two gramme negative pathogens. The finding implies that NPs might be used in photolysis to purge water of pollutants. Furthermore, the biological significance of green generated CuO NPs was assessed using antibacterial activity against the aforementioned dangerous bacterial pathogens[7].

Copper nano-adsorbent produced via green synthesis is used to remove pharmaceutical contaminants from actual wastewater samples.

Using *Tilia* leaf extracts, copper nanoparticles (Cu NPs) of high purity and stability were greenly synthesised. The sizes of the well-dispersed, spherical and semi-spherical nanoparticles produced ranged from 4.7 to 17.4 nm. The absorption process is described as being physical, endothermic, and spontaneous. Non-steroidal anti-inflammatory medicines (NSAIDs), including Ibuprofen (Ibu), naproxen (Nab), and diclofenac (Dic), pose major environmental issues when they are released into the aquatic system. In this study, Ibu, Nab, and Dic were removed from wastewater samples using copper nanoparticles (Cu NPs) that were produced via green synthesis. Temperature 298 K, pH 14 4.5, 10.0 mg Cu NPs, 60 min, and a spontaneous, endothermic adsorption process were the parameters that produced the best removal results. Ibu, Nap, and Dic clearance rates at these settings were discovered to be 74.4, 86.9, and 91.4%, respectively. According to calculations, the maximal monolayer adsorption capacities for Dic, Nap, and Ibu were 36.0, 33.9, and 33.9 mg/g, respectively. These findings indicated that green-synthesized copper nanoadsorbent may be utilised to effectively remove anti-inflammatory medicines from actual wastewater[8].

For the purpose of removing water pollutants, copper oxide nanoparticles were created and impregnated on activated carbon via green synthesis.

Explains the use of pomegranate leaf extract as a reducing and stabilising agent in the creation of CuO nanoparticles on vegetal activated carbon (VAC) for the elimination of various

contaminants. The production and impregnation of the copper oxide nanoparticles were done using an adaptation of the Wang et al.⁴ process. As a support for the nanoparticles, coconut activated carbon was employed. On the surfaces of the activated carbon, CuO nanoparticles between 104 and 165 nm in diameter and CuO between 40 and 78 nm have been discovered. Carbon impregnated with 1.5% Cu-24h stands out among the samples because it demonstrated removal of organic contaminants like atrazine pesticide, diclofenac, caffeine, and nitrate that was comparable to pure carbon, but it increased carbon efficiency in nitrate ions removal by more than four times. Therefore, a 24 hour impregnation period is adequate to produce copper oxide nanoparticles on carbon activated that have a high capacity for pollution removal. The impregnated carbons demonstrated excellent nitrate removal capabilities from water, offering a non-polluting and economical alternative to the traditional treatment approaches[9].

Water purification using green synthetic copper oxide nanoparticles mediated by algae and toxicity testing.

The focus of this paper is on green CuO nanoparticles that are produced utilising algal extract. The NPs are 3.6 nm in size. The properties of the synthesised NP depend on a number of variables, including the stirring rate, impact of pH, concentration of algal extract, and concentration of Cu⁺ ions. Gramme negative bacteria like E-COLI were resistant to the CuO NP's antibacterial effects. A 50mg/L E-COLI dose is ideal for surface water samples. Fish blood was used for the toxicology assessment, and mononuclei development was examined. On cell lines from Chinese hamster ovary and human gastric epithelium, cell death assessment was done. Surface water is more likely to develop disease-causing germs since it is exposed to home and industrial waste. One of the most popular disinfection procedures is the activated sludge process, however one of its main downsides is bulking. A column type Sequential Batch Reactor (SBR) has a COD removal efficiency of roughly 87%. Recently, nanoparticles/powders and nano-membranes have been widely employed to remove various biological and heavy metal substances[5]. The key determinants of particle size are pH, temperature, Cu ion concentration, and incubation period. Heavy metals are mainly used in the physical and chemical synthesis of nanoparticles, which likewise takes a long time to complete. A technique known as "green synthesis" uses reducing chemicals that are found in nature. The materials created in this way are utilised to sterilise surfaces like membranes by immobilising them there. The phytochemicals or polyphenols in the plant extract serve as catalysts or capping agents during synthesis. There are lots of these polyphenols in microalgae. These environmentally safe and non-toxic green nanoparticles were created by synthetic means. These NPs can be produced economically because of their rapid development and high biomass productivity[6].

Creation of functionalized CuO nanoparticles to improve methylene blue dye adsorption.

Dye-related water pollution is a significant environmental issue. The toxicity of dyes poses a serious threat to both human and environmental health. Using copper nitrate as a

precursor, the co-precipitation process was used to create the nanoparticles. The effectiveness of functionalized and unfunctionalized nanoparticles in improving chitosan's ability to absorb the colour methylene blue is compared. CuO particles were discovered to have crystallites that were 10 nm or smaller. The development of these functionalized nanoparticles results in multifunctional capabilities including the capacity to act as catalysts for the degradation of dyes as well as for the adsorption of dyes in the presence of sunlight. The EDTA functionalized CuO nanoparticle has a larger surface area than bare CuO nanoparticles, and the BET adsorption research also reveals the presence of pores. The increased surface area of the nanoparticles gives the nanoparticles different properties, such as the ability to improve the adsorption of chitosan and boost photocatalytic activity. Chitosan and CuO nanoparticles that have been functionalized by EDTA and silane removed 54% of the dye. Although the precipitation process doesn't produce uniformly sized particles, it is nonetheless efficient and appropriate for large-scale applications such waste water treatment where economic considerations are important[10].

Studies on Green Synthesis of Copper Nanoparticles Using *Punicagranatum*

The goal of the current work was to create copper nanoparticles in a sustainable manner by using diverse plant extracts as reducing and stabilising agents. It might also investigate the copper nanoparticles' antimicrobial properties. Within 112 to 2 hours, the green synthesis of copper nanoparticles employing a 10mM copper sulphate solution and a 50% concentrated pomegranate fruit rind extract produced a good yield of medium-sized nanoparticles. According to the O.D values obtained from UV-Visible spectroscopy testing, stable copper nanoparticles were produced by the aqueous solutions of several plant extracts. SEM measurements of the synthesised nanoparticles revealed their size to be between 56 and 59 nm. Copper, particularly at the nanoscale, has substantial antibacterial activity and may be produced at a very low cost. By using an Agar well assay, the biosynthesized nanoparticles were put to the test against the Gram-positive bacteria *Staphylococcus aureus*. *Staphylococcus aureus* showed a strong antibacterial activity against the synthesised copper nanoparticles. The pomegranate fruit rind extract is used to create copper nanoparticles, which are frequently used as effective antimicrobial agents against *Staphylococcus aureus*. As a result, the study is essential at this time because drug-resistant infections of *Staphylococcus aureus* are becoming more common and well-known[11].

Usage of copper nanoparticles in paper to purify water at the point of usage

The use of copper nanoparticles in paper filters for point-of-use water filtration was embraced as a more affordable substitute for silver nanoparticles. The direct in situ synthesis of copper nanoparticles (CuNPs) in paper using ascorbic acid to reduce sorbed copper ions is described in this report as an environmentally friendly method. Water filtration at the point of use (POU) offers a practical and economical solution to lessen contact with dangerous bacteria. In less than 10 minutes, copper nanoparticles were efficiently generated and evenly distributed

on the paper fibre surfaces. X-ray diffraction, scanning electron microscopy, energy dispersive x-ray spectroscopy, and atomic absorption spectroscopy were used to characterise paper sheets. *Escherichia coli* bacterium suspensions were run over the CuNP sheets to test for antibacterial activity. Copper release and viable bacterial counts were assessed in the wastewater. For *E. coli*, the CuNP sheets with increased copper contents shown a significant reduction in bacteria of log 8.8. The test bacteria were successfully rendered inactive as they travelled through the copper nanoparticle-coated paper sheets. The effluent water's copper levels were below the acceptable limit of 1 ppm for copper in drinking water. This CuNP paper filter has the potential to develop into a very affordable water filtration system[12]

Biofloculant Passivated Copper Nanoparticles: Optimisation and Use in Wastewater Treatment

Water contaminant and pathogenic microorganism elimination using nanotechnology is a fantastic potential. Using a polysaccharide biofloculant, copper nanoparticles were created, and their flocculation, removal effectiveness, and antibacterial characteristics were assessed. Thermogravimetry, UV-Visible spectroscopy, Fourier-transform infrared spectroscopy (FT-IR), powder X-ray diffraction, scanning electron microscopy (SEM), and transmission electron microscope (TEM) were used to characterise the synthesised nanoparticles. The lowest concentration of copper nanoparticles (0.2 mg/mL) produced the most flocculation activity (FA), which was 96%, and the highest flocculation activity (FA), which was 80% at 1 mg/ml[13]. The flocculation activity of the copper nanoparticles (CuNPs) was 96% and it performed best at weakly acidic, neutral, and alkaline pH with the optimal FA of 96% at pH 7. The nanoparticles were also discovered to be thermostable at 100 °C with 91% FA. The created copper nanoparticles have excellent qualities for cleaning up contaminants from river water, home wastewater, and coal mine water. Both river water and coal mine water showed above 89% removal effectiveness for COD and BOD. The synthesised nanoparticles may be utilised to remove dye effluents, pathogens, and other microorganisms from wastewater due to their amazing abilities to remove staining colours and disinfect the wastewater. At the lowest dose of 3.13 mg/ml, they were able to inhibit and kill all of the tested strains when their antibacterial activity was tested against both Gram-negative and Gram-positive bacteria[14].

CuO nanoparticles were made environmentally friendly using *Allium sativum* extract, and the extract's antibacterial, antioxidant, and larvicidal properties were characterised.

CuO nanoparticles were produced using an extract of *Allium sativum* in a green process. The high degree of crystallinity and the estimated crystallite size of 25–35 nm were both explained by the powder's X-ray diffraction pattern. The CuO bonding nature was explained using the Fourier transform infrared spectra. The CuO nanoparticles were visible in the 20–40 nm size range on the particle size analyser. The spherical and oval-shaped morphology of CuO

nanoparticles was visible in the SEM pictures. The purity of CuO was demonstrated by the EDAX spectra and mapping with the presence of Cu and O. The phytochemical study identified the phytochemicals used to make CuO nanoparticles from extract of *Allium sativum*. The antibacterial activity revealed effective bacterial and fungal infection. The free radical scavenging potential of the antioxidant activity was revealed. CuO nanoparticles produced through an eco-friendly synthesis have a unique and effective use in the treatment of wastewater in the twenty-first century[15].

Conclusion

Due to their qualities, such as a high specific area, high surface energy, size, and volume, nanotechnology has recently gained prominence in the water disinfection industry. By carefully varying variables like pH, temperature, etc., one may readily modify the physiochemical characteristics of the nanoparticles. Nanoparticle filtration is superior to conventional methods of disinfection or filtration, which require chemical reagents that make water hazardous and appear to be more expensive. This is due to the multifunctionality of the nanoparticles. Sometimes microbial resistance renders chlorination ineffective.

The physical strategy requires more time to achieve thermal stability, while the chemical approach involves the use of hazardous chemicals, making green synthesis superior to all other methods. The biological approach to green synthesis makes it easier to complete because it uses plants and their more accessible parts. The nanoparticles' features, such as their antimicrobial, catalytic, and antibacterial activities, are likewise influenced by phytochemicals. Depending on the kind of phytochemicals that were obtained, the nanoparticles that were created utilising different plant extracts displayed a range of different features. Additionally, pH, copper ion concentration, solution stirring rate, and plant extract content all had an impact on the size and other distinguishing characteristics of the synthesised nanomaterial. To determine the ideal circumstances for obtaining the greatest possible nanoparticles for disinfection, experimental study is required. It was important to characterise the nanoparticle for a variety of physical characteristics, including form, size, surface area, and surface energy, in order to divide the nanoparticles into different groups based on their intended uses. The size and shape of the particles are displayed using tools like scanning electron microscopes (SEM) and transmission electron microscopes (TEM). By examining the visual depiction of the absorption spectrum, UV-Visible spectroscopy was used to assess the development of nanoparticles. The nanoparticle was discovered to have a thin layer of plant extracts or phytochemicals surrounding it that gave the NPs their behaviour. The NPs demonstrated potent anti-microbial and anti-bacterial capabilities against gramme positive (*Staphylococcus aureus*) and gramme negative (*Escherichia coli*) bacteria by permeating cell walls and compromising cell fluids, ultimately causing cell death. Additionally, the EDTA functionalized NPs had improved qualities such a large surface area and the presence of pores that were useful in the removal of dyes to a degree of 54%. The copper nanoparticles may be used for water filtration and disinfection after being immobilised on

membranes or textiles, and retrieving the particles was also made simple. Such membranes were utilised in point-of-use filters, which were successful in removing colours and preventing the growth of microorganisms. The copper nanoparticles that made it through the filter were much less than what is allowed in drinking water. Copper nanoparticles were evaluated for their effects on people and aquatic creatures, and an ideal concentration was found at which the nanoparticles either proved to be safe or had no negative effects on the test subjects. Thus, it was discovered that using environmentally friendly copper nanoparticles was effective in disinfecting domestic waste water. The water treated could then be used for secondary purposes, such as cleaning or watering plants, which would reduce the demand for water and offer an affordable alternative to harmful and occasionally ineffective methods like chlorination.

Abstract

It explores the pivotal role of Micro, Small & Medium Enterprises (MSMEs) in catalyzing sustainable development, with a focus on the burgeoning field of battery technology. The narrative unfolds against the backdrop of India's quest for self-reliance, emphasizing the potential of MSMEs as agents of change. Through innovation, collaboration, and environmental consciousness, these enterprises emerge as key contributors to economic growth, job creation, and the pursuit of sustainable energy solutions. The abstract delves into the intricate interplay between MSMEs, research institutions, and governmental support, envisioning a future where locally-driven, eco-friendly battery technologies redefine energy landscapes. The holistic approach not only envisions profitability for businesses but also underscores the intrinsic link between economic prosperity and environmental stewardship. This abstract serves as a glimpse into a narrative that transcends business and embraces a culture of sustainability, envisioning a self-reliant India at the forefront of green innovation.

Introduction

In the epoch of globalization, where economic interdependence often takes center stage, the quest for self-reliance becomes a nuanced endeavor, especially for a nation as vast and diverse as India. Amidst this complexity, Micro, Small & Medium Enterprises (MSMEs) emerge as the unsung heroes, threading the delicate balance between economic autonomy and environmental sustainability. This paper embarks on a multifaceted exploration, weaving together the narratives of sustainable development and the dynamic role played by MSMEs, spotlighting their transformative potential in the domain of battery technology¹.

India's pursuit of self-reliance is not merely a national agenda; it is a paradigm shift in redefining economic strategies and fostering resilience. Within this transformative landscape, MSMEs take center stage, not merely as contributors to GDP but as torchbearers of innovation, agility, and localized sustainability. As we navigate through this discourse, the focus sharpens on the realm of battery technology – a linchpin in the transition towards cleaner, greener energy sources. This narrative unfolds against a backdrop where collaboration becomes a cornerstone, where the innovative spirit of MSMEs converges with the research acumen of institutions, propelled by the supportive winds of governmental initiatives².

The synergy of these forces paints a vision of a self-reliant India not just economically robust but also environmentally conscientious. Beyond the profit margins and market shares, the exploration here delves into the intrinsic connection between business practices and ecological resilience. MSMEs, often characterized by their adaptability and creativity, stand as dynamic contributors to a future where battery technology isn't just a commodity but a gateway to sustainable progress. Join us in traversing through the layers of this narrative, where the aspirations of a self-reliant India find resonance in the sustainable innovations orchestrated by MSMEs. It's a journey through interconnected realms—economic, environmental, and societal—where the heartbeat of progress is not just measured in financial gains but in the sustainable cadence of a nation charting its course towards a resilient future³.

Strategic Framework: Advancing Sustainable Development Through MSMEs in Battery Technology⁴⁻⁷

Collaborative Ecosystem Building:

Objective: Foster collaboration between MSMEs, research institutions, and governmental bodies to create a robust ecosystem.

Actions:

- ❖ Establish innovation hubs that bring together MSMEs and researchers.
- ❖ Facilitate knowledge-sharing platforms and collaborative projects.
- ❖ Encourage public-private partnerships for shared infrastructure.

Research and Development Incentives:

Objective: Stimulate innovation in battery technology through targeted R&D incentives.

Actions:

- ❖ Introduce financial incentives for MSMEs engaged in sustainable technology development.
- ❖ Create grants and subsidies for collaborative research initiatives.
- ❖ Establish technology parks specifically focused on battery R&D.

Skill Development and Capacity Building:

Objective: Enhance the capabilities of MSMEs in the field of battery technology.

Actions:

- ❖ Implement skill development programs tailored to the needs of the battery industry.

- ❖ Establish training centers and workshops for technology adoption.
- ❖ Encourage academic-industry partnerships to bridge skill gaps.

Market Access and Funding Support:

Objective: Facilitate market access and financial support for MSMEs in the battery sector.

Actions:

- ❖ Create a dedicated funding mechanism for sustainable technology ventures.
- ❖ Develop market linkage programs connecting MSMEs with potential buyers.
- ❖ Simplify loan processes and provide low-interest loans for sustainable projects.

Regulatory Framework for Sustainability:

Objective: Integrate sustainability criteria into regulatory frameworks.

Actions:

- ❖ Develop standards for eco-friendly battery technologies.
- ❖ Incentivize compliance with sustainable practices through tax benefits.
- ❖ Establish a certification system for environmentally responsible products.

Public Awareness and Consumer Education:

Objective: Build awareness about the importance of sustainable battery technologies.

Actions:

- ❖ Launch public awareness campaigns on the environmental impact of batteries.
- ❖ Provide consumer education on choosing eco-friendly products.
- ❖ Recognize and promote MSMEs that prioritize sustainability in their products.

International Collaboration and Export Promotion:

Objective: Position Indian MSMEs as global leaders in sustainable battery technology.

Actions:

- ❖ Encourage collaboration with international research institutions.
- ❖ Facilitate participation in global technology exhibitions and conferences.
- ❖ Develop strategies for promoting sustainable battery exports.
- ❖ This strategic framework aims to create a conducive environment for MSMEs to thrive in the battery technology sector while fostering sustainability and contributing to India's self-reliance goals.

Technology Transfer and Licensing:

Objective: Accelerate technology adoption by facilitating the transfer of sustainable battery technologies.

Actions:

- ❖ Create platforms for MSMEs to access patented technologies through licensing agreements.
- ❖ Establish technology transfer offices to streamline the process.
- ❖ Encourage established players to mentor and support smaller enterprises in technology adoption.

Circular Economy Integration:

Objective: Embed circular economy principles in the battery life cycle, from manufacturing to disposal.

Actions:

- ❖ Incentivize MSMEs to design batteries with recyclability and reusability in mind.
- ❖ Establish collection and recycling facilities for end-of-life batteries.
- ❖ Introduce regulations mandating environmentally responsible disposal practices.

Government Procurement Support:

Objective: Drive demand for sustainable batteries through government procurement policies.

Actions:

- ❖ Prioritize the procurement of eco-friendly batteries in government projects.
- ❖ Include sustainability criteria in tendering processes.
- ❖ Create a certification system for MSMEs supplying to government projects.

Networking Platforms for MSMEs:

Objective: Enhance collaboration and knowledge-sharing among MSMEs in the battery sector.

Actions:

- ❖ Establish a dedicated online platform for MSMEs to connect, share experiences, and form partnerships.
- ❖ Organize industry-specific conferences and networking events.
- ❖ Facilitate mentorship programs where successful MSMEs guide newcomers.

Risk Mitigation Mechanisms:

Objective: Provide financial instruments to mitigate risks associated with sustainable technology adoption.

Actions:

- ❖ Create an insurance scheme to cover risks related to innovation and market uncertainties.
- ❖ Establish a fund for MSMEs to access in case of unforeseen challenges.
- ❖ Develop a risk-sharing mechanism in collaboration with financial institutions.

Inclusive Innovation Grants:

Objective: Promote inclusivity by supporting innovation from diverse groups within MSMEs.

Actions:

- ❖ Allocate grants specifically for women-led and socially inclusive MSMEs.
- ❖ Encourage projects that address the energy needs of underserved communities.
- ❖ Establish a mentorship program to guide innovative projects from underrepresented groups.

Benchmarking and Impact Assessment:

Objective: Continuously evaluate the impact of MSME initiatives in sustainable battery technology.

Actions:

- ❖ Develop key performance indicators (KPIs) for sustainability in battery technology.
- ❖ Conduct regular impact assessments to measure economic, environmental, and social outcomes.
- ❖ Recognize and celebrate MSMEs achieving notable milestones in sustainability.

Regulatory Sandboxing for Innovation:

Objective: Encourage experimentation and innovation by providing a regulatory sandbox.

Actions:

- ❖ Create a controlled environment where MSMEs can test new technologies without full regulatory compliance.

- ❖ Establish a streamlined process for transitioning successful innovations into mainstream regulatory frameworks.
- ❖ Encourage collaboration between regulatory bodies, MSMEs, and environmental experts to ensure responsible innovation.
- ❖ This extended strategic framework aims to address various facets of sustainable development through MSMEs in battery technology, covering technology adoption, circular economy practices, government support, networking, risk mitigation, inclusivity, impact assessment, and regulatory innovation.

Conclusions

As we draw the threads of this strategic framework together, a compelling narrative emerges—one that envisions a future where Micro, Small & Medium Enterprises (MSMEs) play a transformative role in India's journey towards self-reliance and sustainability. The intricate dance between economic progress and environmental stewardship finds its harmonious rhythm in the innovative endeavors of these enterprises within the battery technology sector⁸.

The collaborative ecosystem envisioned—forged through partnerships between MSMEs, research institutions, and governmental bodies—creates a fertile ground for innovation. Incentives for research and development, skill enhancement, and market access act as catalysts, propelling MSMEs towards the forefront of sustainable progress.

By embracing circular economy principles, fostering technology transfer, and integrating inclusivity into innovation grants, the strategy outlined here is designed not just for economic growth but for societal well-being. Government procurement policies and regulatory sandboxes provide the necessary scaffolding for these enterprises to experiment, evolve, and lead in the green revolution⁹⁻¹⁰.

As we anticipate the outcomes of this strategic vision, it becomes clear that the impact extends beyond business bottom lines. It's about nurturing a culture where sustainability isn't a buzzword but a way of life. MSMEs, often celebrated for their agility and creativity, emerge as the engines of change, steering the nation towards a future where sustainable battery technologies redefine not only energy landscapes but also societal norms.

This isn't just a strategy; it's a roadmap towards a self-reliant India that thrives on innovation, resilience, and a profound respect for the environment. It's a call to action, inviting stakeholders from all sectors to join hands in shaping a future where progress isn't measured merely in economic indices but in the sustainable cadence of a nation marching towards a resilient and eco-conscious tomorrow.

ABSTRACT

Lead oxide nanoparticles (PbO NPs) have garnered significant interest in the scientific and industrial communities due to their unique properties and potential applications. This review provides an overview of PbO nanoparticles, including their synthesis methods, properties, and diverse applications. PbO nanoparticles can be synthesized through chemical precipitation, hydrothermal synthesis, or the sol-gel method, with their properties, such as high surface area and size-dependent behavior, making them suitable for catalysis, sensors, and optoelectronics. Their potential applications extend to battery technology, biomedical uses, and more. However, the inherent toxicity of lead-based materials remains a challenge, necessitating stringent safety measures. This review underscores the importance of continued research to harness the benefits of PbO nanoparticles while mitigating environmental and health risks. To delve deeper into this subject, the bibliography provides key references for further exploration.

Keywords: PbO nanoparticles, Synthesis methods, Properties, Applications

INTRODUCTION

Nanotechnology, a revolutionary field in materials science and engineering, has ushered in a new era of innovation by exploring and harnessing the unique properties of nanoscale materials. Among these nanomaterials, lead oxide nanoparticles (PbO NPs) have emerged as intriguing candidates with a wealth of promise. This comprehensive introduction delves into the world of PbO nanoparticles, shedding light on their synthesis methods, remarkable properties, and a multitude of potential applications. While offering unparalleled opportunities for advancements in diverse fields, PbO nanoparticles also pose significant challenges and concerns, primarily owing to the toxicity associated with lead-based materials world.

The synthesis of PbO nanoparticles represents a fundamental pillar of exploration within this domain. Researchers have developed various methods to craft these nanoscale wonders, including chemical precipitation, hydrothermal synthesis, and the sol-gel technique. Each of these methods affords control over the size, morphology, and structure of PbO nanoparticles, offering researchers the means to tailor their properties for specific applications.

One of the standout features of PbO nanoparticles is their exceptional surface area-to-volume ratio, a consequence of their nanoscale dimensions. This heightened surface area is a game-changer, particularly in the realm of catalysis. PbO nanoparticles have been employed as catalysts in numerous chemical reactions, capitalizing on their catalytic activity to accelerate processes and yield higher product yields. Their reactivity and surface properties make them prized assets in the development of advanced catalytic systems. Beyond catalysis, PbO nanoparticles exhibit versatility that extends across a wide spectrum of applications. Their sensitivity to changes in the environment has found practical utility in sensors, where PbO nanoparticles are employed in gas sensors, humidity sensors, and biosensors. These applications capitalize on the responsiveness of PbO nanoparticles to alterations in external factors, enabling precise and rapid detection mechanisms.

Furthermore, the world of energy storage has not remained untouched by the influence of PbO nanoparticles. Researchers have investigated their potential in cutting-edge battery technologies, including lithium-ion batteries and supercapacitors. Their electrical properties and nanoscale structure open doors to enhanced energy storage solutions, critical for the advancement of renewable energy systems and portable electronic devices.

In the realm of optoelectronics, PbO nanoparticles have made significant strides. They hold promise in the development of photodetectors, solar cells, and light-emitting devices. The tunable properties of these nanoparticles enable the engineering of materials with specific optical and electrical characteristics, aligning with the demands of the rapidly evolving electronics industry.

However, it is vital to acknowledge that alongside their immense potential, PbO nanoparticles carry a substantial burden - that of toxicity. Lead-based materials, including PbO, are notorious for their adverse health and environmental effects. Careful handling and disposal practices are imperative when working with PbO nanoparticles to mitigate these risks. Additionally, long-term stability and behavior of PbO nanoparticles in various environments require extensive study to ensure their safe incorporation into practical applications.

As the scientific community continues to explore the multifaceted world of PbO nanoparticles, this review aims to provide a comprehensive understanding of their synthesis, properties, applications, and associated challenges. By examining the latest research findings and drawing attention to key references, we embark on a journey through the fascinating and complex landscape of PbO nanoparticles, where innovation converges with responsibility in the pursuit of scientific advancement.

Materials and Methods

The synthesis and characterization of PbO nanoparticles (PbO NPs) require meticulous attention to detail and precision to achieve reproducible results. In this expansive section, we provide an in-depth look at the materials, synthesis methods, and characterization techniques commonly employed in working with PbO NPs^{1,2}. The following outlines the key components and methodologies involved in the study of PbO nanoparticles:

Lead Precursors: High-purity lead compounds, such as lead nitrate ($\text{Pb}(\text{NO}_3)_2$) or lead acetate ($\text{Pb}(\text{CH}_3\text{COO})_2$), serve as the primary source of lead for PbO NP synthesis. These chemicals should adhere to stringent purity standards to minimize impurities in the final product.

Oxidizing Agents: Depending on the chosen synthesis method, various oxidizing agents like hydrogen peroxide (H_2O_2), sodium hydroxide (NaOH), or nitric acid (HNO_3) may be required to facilitate the conversion of lead precursors into PbO NPs.

Solvents: High-quality solvents, including deionized water, ethanol, or organic solvents, are essential for preparing precursor solutions and for washing and dispersing PbO NPs.

Surfactants/Stabilizers: Surfactants such as cetyltrimethylammonium bromide (CTAB) or polyvinylpyrrolidone (PVP) are often used to control the size and stability of PbO nanoparticles during synthesis.

Chemical Precipitation:

Procedure: Lead precursors are dissolved in a suitable solvent, and an oxidizing agent is added gradually under controlled conditions, leading to the formation of PbO NPs as precipitates.

Parameters: Factors like reaction temperature, pH, and reaction time are carefully optimized to control the size and morphology of the NPs.

Hydrothermal Synthesis:

Procedure: A solution containing lead precursors is sealed in a high-pressure vessel and subjected to elevated temperature and pressure for an extended period, resulting in the formation of PbO NPs.

Parameters: Pressure, temperature, reaction duration, and precursor concentrations are adjusted to tailor the NP properties.

Sol-Gel Method:

Procedure: Lead-containing precursors undergo hydrolysis and condensation reactions in a sol-gel matrix to produce PbO NPs.

Parameters: The choice of precursor, solvent, and reaction conditions influence the final NP characteristics.

Characterization Techniques^{1,2}:

Transmission Electron Microscopy (TEM): TEM is used to visualize the size, shape, and distribution of PbO nanoparticles at the nanoscale. It provides high-resolution images of individual NPs.

Scanning Electron Microscopy (SEM): SEM offers a broader view of nanoparticle morphology and can provide information on the surface structure and aggregation behavior.

X-ray Diffraction (XRD): XRD is employed to determine the crystalline structure and phase purity of PbO NPs. It helps identify crystallographic phases and lattice parameters.

Fourier Transform Infrared Spectroscopy (FTIR): FTIR spectroscopy is used to study the chemical composition and surface functional groups of PbO nanoparticles. It can reveal the presence of surfactants or stabilizers.

UV-Visible Spectroscopy: UV-Visible spectroscopy is used to investigate the optical properties of PbO nanoparticles, including their absorption and bandgap characteristics.

Energy-Dispersive X-ray Spectroscopy (EDS): EDS is employed in conjunction with SEM or TEM to determine the elemental composition of PbO NPs and assess their purity.

Dynamic Light Scattering (DLS): DLS measures the hydrodynamic size and distribution of nanoparticles in solution, providing insights into their stability and aggregation behavior.

Zeta Potential Measurement: Zeta potential analysis assesses the surface charge of nanoparticles, aiding in understanding their colloidal stability.

Safety Considerations:

Working with lead-based materials, including PbO nanoparticles, necessitates adherence to strict safety protocols. Researchers should wear appropriate personal protective equipment (PPE), work in a well-ventilated laboratory, and dispose of waste materials in accordance with hazardous waste regulations to mitigate health and environmental risks associated with lead toxicity.

By employing these materials and methods, researchers can advance our understanding of PbO nanoparticles and unlock their full potential across various applications while ensuring safety and precision in their work.

Result and Discussion

Properties of PbO Nanoparticles:

Size-Dependent Properties: One of the most intriguing aspects of PbO nanoparticles is their size-dependent behavior. As the size of nanoparticles decreases, their properties change, leading to unique optical, electrical, and catalytic characteristics. For instance, smaller PbO nanoparticles tend to exhibit higher catalytic activity due to their increased surface area, making them valuable in catalysis applications^{3,4}.

Crystalline Structure: X-ray diffraction (XRD) analyses confirm the crystalline nature of PbO nanoparticles. The most commonly observed crystallographic phase is tetragonal α -PbO, although variations in synthesis conditions can yield different phases, influencing the material's properties.

Optical Properties: UV-Visible spectroscopy reveals that PbO nanoparticles exhibit size-dependent optical properties. Smaller nanoparticles often have a blue shift in their absorption spectra, indicating a wider bandgap compared to bulk PbO. This feature makes them suitable for optoelectronic applications, including photodetectors and solar cells.

Morphology and Size Distribution: Scanning electron microscopy (SEM) and transmission electron microscopy (TEM) images provide valuable insights into the morphology and size distribution of PbO nanoparticles. These images reveal the formation of spherical or cuboidal nanoparticles with a well-defined size distribution. Controlling these parameters during synthesis is crucial for tailoring the material's properties.

Surface Chemistry: Fourier-transform infrared spectroscopy (FTIR) and X-ray photoelectron spectroscopy (XPS) investigations elucidate the surface chemistry of PbO nanoparticles. They often feature surface functional groups originating from surfactants or stabilizers used during synthesis, influencing their reactivity in various applications.

Applications of PbO Nanoparticles:

Catalysis: PbO nanoparticles have demonstrated remarkable catalytic activity in a range of chemical reactions. Their high surface area and reactivity make them effective catalysts for processes such as the oxidative conversion of organic compounds. Moreover, their size-dependent catalytic properties enable precise tuning of reaction kinetics and selectivity^{5, 6}.

Sensors: PbO nanoparticles have found a pivotal role in sensing technologies. Gas sensors utilizing PbO nanoparticles exhibit excellent sensitivity to gases like carbon monoxide (CO) and nitrogen dioxide (NO₂). Additionally, humidity sensors based on these nanoparticles offer rapid and accurate humidity detection, making them valuable for environmental monitoring and industrial applications^{5, 6}.

Battery Technology: The integration of PbO nanoparticles into energy storage devices, such as lithium-ion batteries and supercapacitors, has garnered considerable attention. Their nanoscale dimensions enhance electrode performance by facilitating faster charge and discharge rates, contributing to improved battery efficiency and energy storage capacity^{7, 8}.

Optoelectronics: The ability to engineer the optical properties of PbO nanoparticles makes them promising candidates for optoelectronic applications. They have been utilized in the development of photodetectors, where their enhanced absorption properties enable the detection of low-intensity light signals. Additionally, PbO nanoparticles have shown potential in solar cell technology, contributing to the quest for efficient and cost-effective renewable energy sources^{9, 10}.

Implications and Challenges:

Toxicity Concerns: It is essential to emphasize the potential toxicity of PbO nanoparticles, given their lead-based composition. Handling, storage, and disposal of PbO nanoparticles must adhere to strict safety protocols to prevent environmental contamination and health risks. Research into alternative, non-toxic materials for similar applications is an ongoing priority.

Environmental Impact: The widespread use of PbO nanoparticles necessitates a thorough understanding of their environmental impact. Studies evaluating the release of nanoparticles into ecosystems and their long-term behavior are crucial for assessing potential risks and implementing appropriate safeguards.

Stability and Longevity: The stability of PbO nanoparticles in different environments and under varying conditions is an ongoing research area. Ensuring the long-term functionality of PbO-based devices and materials is vital for their practical application and commercial viability.

Conclusion

PbO nanoparticles offer a tantalizing array of possibilities across diverse scientific and industrial domains. Their size-dependent properties, crystalline structure, and versatile applications make them valuable materials for catalysis, sensing, energy storage, and optoelectronics. However, researchers must remain vigilant about the associated toxicity and environmental concerns, advocating for responsible handling and disposal practices. Continued investigation and innovation in the field of PbO nanoparticles promise to yield breakthroughs that balance their immense potential with the imperative of safety and sustainability.

ABSTRACT:

Homeopathic remedies, known for their efficacy and holistic principles, have found an unexpected application in the realm of nanotechnology. This chapter explores the intriguing fusion of homeopathy and nanotechnology on the capability of homeopathic mother tinctures as innovative agents for nanoparticle synthesis.

Introduction:

Homeopathy, a holistic system of medicine originated from German, rooted in the principle of "like cures like," has been in practice for centuries. At its core, homeopathy involves the preparation of highly diluted remedies, each with its unique energetic imprint. In recent times, interest has grown in exploring the applications of homeopathic mother tinctures beyond its use as a traditional medicine for treating various health conditions. Now-a-days, homeopathic remedies have entered the realms of unconventional science, particularly in the field of nanotechnology. This chapter provides a brief account into the fascinating convergence of homeopathy and nanotechnology, on the untapped potential of homeopathic mother tinctures as novel agents for nanoparticle synthesis.

Homeopathic Mother Tinctures: A Brief Overview:

To comprehend the synergy between homeopathy and nanotechnology, it is imperative to grasp the fundamentals of homeopathic remedies. These remedies commence their journey with the creation of a mother tincture, a potent and concentrated extract derived from a variety of natural sources. The therapeutic use of homeopathic remedies based on the preparation of a mother tincture, a highly concentrated extract derived from natural sources such as plants, minerals with distinct crystalline structures and animal substances. These mother tinctures serve as the cornerstone for subsequent processes of serial dilution known as succussion, rendering the remedy extremely diluted yet exceptionally potent in terms of its dynamic qualities related to the curative power.

Nanoparticles and Their Multifaceted Applications:

In parallel to the evolution of homeopathy, the field of nanotechnology has been making monumental strides. Nanoparticles, characterized by their extremely small size, typically in the range of 1 to 100 nanometers, exhibit a plethora of unique physical, chemical, and biological properties compared to their bulk counterparts. These exceptional attributes have fueled their integration into diverse fields, including medicine, electronics, catalysis, and environmental science. However, the conventional methods employed for nanoparticle synthesis often involve chemical reagents, which may carry environmental and health risks.

Possibility of Sustainable Nanoparticle Synthesis:

The environmental sustainability and the impact of conventional manufacturing processes, demand a quest for greener and more eco-friendly alternatives. Homeopathic mother tinctures, which are alcoholic preparations of phytochemicals, provide an intriguing potential to revolutionize nanoparticle synthesis. The question arises: can the energetically potent and bioactive nature of these mother tinctures offer a sustainable and benign pathway to the creation of nanoparticles with tailored properties?

Navigating the Nexus of Homeopathy and Nanotechnology:

This chapter discusses the mechanisms by which homeopathic mother tinctures may influence nanoparticle synthesis. This includes case studies, experimental findings, and the evolving body of knowledge that illuminates the synergy between these seemingly disparate disciplines. Moreover, the challenges that lie ahead and the uncharted territories that await exploration in this captivating interplay between holistic healing and cutting-edge technology will also be discussed.

Nanoparticles and Their Applications

Nanoparticles, characterized by their nanoscale dimensions (typically of 1-100 nanometers) possess unique physical and chemical properties compared to bulk materials. These properties have fueled their extensive use in diverse fields, from medicine to electronics. Although conventional nanoparticle synthetic methods involve chemical reagents, an emerging approach explores the use of homeopathic mother tinctures for environmentally friendly and sustainable synthesis.

Homeopathic Mother Tinctures in Nanoparticle Synthesis:

This section delves into the mechanisms through which homeopathic mother tinctures can play a pivotal role in nanoparticle synthesis:

1. Biochemical Mediation:

Homeopathic mother tinctures, especially those derived from plant sources may contain bioactive compounds which are capable of reducing metal ions to form nanoparticles. The resonance principle in homeopathy suggests that these remedies could facilitate

specific biochemical reactions conducive to nanoparticle synthesis.

2. *Water Memory:*

Homeopathic preparations are believed to retain a "memory" of the original substance, even at extremely high dilutions. This phenomenon may provide a structural template or informational framework for guiding nanoparticle growth and stabilization.

3. *Energetic Impartation:*

According to homeopathic principles, remedies carry the dynamic potential of the source material. It is conceivable that this energy might influence the formation and properties of nanoparticles during synthesis.

Case Studies and Experimental Findings

This section describes the selection of case studies and experimental findings that utilizes the potential of homeopathic mother tinctures in nanoparticle synthesis. Researchers have explored a diverse range of nanoparticles, including metallic, semiconductor, and magnetic variants. The investigations have scrutinized the impact of different homeopathic remedies, dilution levels, and succussion techniques on nanoparticle characteristics such as size, shape, and stability.

Challenges and Future Directions

While the integration of homeopathy and nanotechnology presents exciting possibilities, it is also inclusive of challenges and questions. These encompass standardization of preparation methods, in-depth understanding of underlying mechanisms, and the assurance of reproducibility. Future research shall also delve into broader applications of such nanoparticles, spanning drug delivery, catalysis, and imaging etc.

Applications of Homeopathic Mother Tinctures in Nanoparticle Synthesis:

1. *Biological Homeopathic Mother Tinctures for Nanoparticle Synthesis:*

Researchers have explored the potential of homeopathic mother tinctures derived from various botanical sources in nanoparticle synthesis. These tinctures contain a wide array of bioactive compounds, including phytochemicals and secondary metabolites, which possess unique properties conducive to nanoparticle formation. For instance, plant extracts rich in polyphenols and flavonoids have demonstrated the ability to reduce metal ions, such as silver or gold, into nanoparticles. The resonance principle in homeopathy suggests that these natural compounds may impart their specific dynamic principle to the nanoparticles, potentially influencing their biological interactions and applications.

2. *Mineral Homeopathic Mother Tinctures and Nanoparticle Formation*

In addition to botanical sources, mineral-based homeopathic mother tinctures have also garnered interest for nanoparticle synthesis. Minerals, due to their intrinsic properties, offer a different avenue for nanoparticle generation. For example, homeopathic mother tinctures derived

from minerals like quartz and calcite may carry the energetic signatures of these substances. When used in nanoparticle synthesis, these tinctures might influence the crystalline structure and properties of the resulting nanoparticles

Mechanisms Underlying Homeopathic Nanoparticle Synthesis

The precise mechanisms by which homeopathic mother tinctures influence nanoparticle synthesis remain a topic of ongoing research. Several hypotheses have been proposed:

1. ***Resonance and Energetic Transfer:***

Homeopathic remedies are believed to resonate with the vital force or energy within living organisms. When used in nanoparticle synthesis, these remedies may transfer their energetic information to the nanoparticles, potentially influencing their behaviour, stability, and biological interactions.

2. ***Template Effect:***

Homeopathic mother tinctures may act as templates or scaffolds for nanoparticle growth. The structured water clusters within highly diluted homeopathic preparations could guide the formation of nanoparticles with specific sizes and shapes.

3. ***Biological Signalling:***

Homeopathic remedies, particularly those derived from plants, might carry biological signaling molecules. When used in nanoparticle synthesis, these molecules could influence the nanoparticles' biocompatibility and targeted drug delivery properties.

Challenges and Future Directions

The integration of homeopathic mother tinctures into nanoparticle synthesis faces several challenges:

1. ***Standardization:***

Establishing standardized protocols for preparing homeopathic mother tinctures for nanoparticle synthesis is essential to ensure reproducibility and consistency.

2. ***Mechanistic Understanding:***

A deeper understanding of the mechanisms underlying the influence of homeopathic remedies on nanoparticle synthesis is needed to optimize the process and tailor nanoparticles for specific applications.

3. ***Safety and Toxicology:***

Assessing the safety and toxicity of nanoparticles synthesized using homeopathic mother tinctures is crucial for their potential use in medical and environmental applications.

4. ***Regulatory Approval:***

Regulatory bodies may require novel nanoparticle synthesis methods to meet specific safety and efficacy criteria before widespread adoption.

Conclusion

The amalgamation of homeopathy and nanotechnology offers a captivating avenue for sustainable and eco-friendly nanoparticle synthesis. Homeopathic mother tinctures, with their distinctive energetic attributes, have the potential to reshape the landscape of nanoscience. As the mysteries at this intersection unravel, the synthesis of nanoparticles via homeopathic principles may emerge as a potent tool in our quest for innovative and sustainable technological solutions.

Abstract

The pursuit of sustainability in the energy sector is a paramount concern in the context of a self-reliant India. This conference proceeding delves into the multifaceted aspects of achieving energy sustainability while aligning with the 'Atmanirbhar Bharat' (self-reliant India) initiative. It explores the current energy landscape, strategies for promoting self-reliance, and the role of renewable energy, all of which are critical components in India's journey towards a sustainable and self-reliant energy future.

Keywords: Sustainability, Energy, Self-Reliance, Strategies, Environment, Atmanirbhar Bharat.

Introduction

India's energy sector plays a pivotal role in the nation's economic development and self-reliance goals. The integration of sustainability principles into this sector is crucial to ensure a resilient and self-sufficient future. This section sets the stage for the conference proceeding, highlighting the significance of sustainable energy practices in the 'Atmanirbhar Bharat' initiative.

India's Energy Landscape

Understanding the existing energy infrastructure and consumption patterns is crucial to chart the path toward sustainability and self-reliance. India's energy mix, dominated by fossil fuels, presents both opportunities and challenges. This section provides a comprehensive overview of:

- i. **Energy Sources:** The role of coal, oil, natural gas, renewables, and nuclear energy in India's energy mix.
- a) **Coal:** Coal has historically been the dominant source of energy in India. It is used for electricity generation and industrial processes. India has substantial coal reserves, and coal-fired power plants continue to play a significant role in the energy mix.

- b) **Oil and Natural Gas:** Oil and natural gas are essential for transportation, industrial processes, and as feedstocks for the petrochemical industry. India imports a significant portion of its oil and natural gas to meet domestic demand.
- c) **Renewable Energy:** India is making significant strides in the field of renewable energy. This includes solar, wind, hydropower, and biomass. Solar and wind energy, in particular, have seen substantial growth in recent years, with India becoming one of the world's largest producers of solar energy.
 - ❖ **Solar Energy:** Solar power, harnessed through photovoltaic cells, is a rapidly growing energy source in India. The country's solar capacity has expanded through large-scale solar parks and rooftop solar installations.
 - ❖ **Wind Energy:** India has a substantial wind energy capacity, and wind farms are spread across various states, especially in coastal areas and regions with favorable wind conditions.
 - ❖ **Hydropower:** Hydropower plants utilize the flow of water to generate electricity. India has several hydropower projects, especially in regions with abundant water resources.
 - ❖ **Biomass Energy:** Biomass, including agricultural residues and organic waste, is used for electricity generation and as a source of renewable energy in rural areas.
- d) **Nuclear Energy:** Nuclear power plants are another source of electricity in India. These plants use nuclear reactions to generate heat, which is then converted into electricity.
- e) **Natural Gas:** Natural gas is used for electricity generation, industrial processes, and as a cleaner alternative to coal in some power plants.
- f) **Rural Energy Sources:** In rural areas, energy sources include traditional biomass, such as firewood and cow dung, for cooking and heating. Efforts are being made to transition to cleaner and more sustainable energy sources in these areas.
- g) **Electricity Imports:** Some regions in India rely on electricity imports from neighboring countries to meet their energy needs, particularly during times of high demand.
- ii. **Energy Consumption Patterns:** Energy consumption patterns in India are influenced by various factors, including the country's large population, economic growth, industrialization, and diverse climate conditions. Understanding these consumption patterns is crucial for policymakers and energy planners. Here are some key aspects of energy consumption in India:
 - a) **Residential Sector:** The residential sector is a significant consumer of energy in India. Energy is primarily used for lighting, cooking, heating, and cooling. In rural areas, traditional biomass sources like firewood and cow dung are commonly used for cooking and heating, while urban areas rely on electricity and LPG (liquefied petroleum gas). The adoption of energy-efficient appliances and building designs is growing, especially in urban areas.

- b) **Industrial Sector:** India's industrial sector is energy-intensive and accounts for a significant portion of total energy consumption. Industries such as manufacturing, steel production, cement manufacturing, and textiles are major energy consumers. There is a growing focus on improving industrial energy efficiency and adopting cleaner technologies to reduce energy consumption and greenhouse gas emissions.
- c) **Transportation Sector:** The transportation sector is a major and rapidly growing consumer of energy in India. It includes road transportation (private vehicles, commercial vehicles, and public transport), railways, aviation, and shipping. The reliance on fossil fuels, primarily gasoline and diesel, for transportation contributes significantly to energy consumption. The promotion of electric vehicles (EVs) and the development of public transportation systems are efforts to reduce the sector's carbon footprint.
- d) **Agricultural Sector:** Agriculture plays a vital role in India's economy and energy consumption. Energy is used for irrigation, machinery operation, and processing. Diesel pumps are commonly used for irrigation in rural areas. There is an increasing emphasis on the adoption of solar pumps to reduce energy costs and environmental impacts.
- e) **Commercial Sector:** The commercial sector, which includes offices, retail establishments, and educational institutions, consumes energy for lighting, heating, cooling, and electronic equipment. Energy-efficient building designs and technologies are becoming more prevalent in this sector.
- f) **Renewable Energy Adoption:** India is making significant progress in adopting renewable energy sources, such as solar and wind power, to diversify its energy mix and reduce dependence on fossil fuels. Solar rooftop installations, solar parks, and wind farms have expanded rapidly in recent years.
- g) **Energy Access:** Achieving universal energy access is a priority in India. Many rural areas still lack reliable access to electricity, and efforts are underway to extend the power grid and provide electricity through off-grid solutions like microgrids and solar home systems.
- h) **Government Initiatives:** The Indian government has launched various *programmes* and initiatives to promote energy efficiency and conservation, such as the Perform, Achieve, and Trade (PAT) scheme, the *UJALA programme* for LED bulb distribution, and the *Pradhan Mantri Ujjwala Yojana* for LPG access.
- i) **Energy Imports:** India imports a significant portion of its oil and natural gas, which also contributes to energy consumption. Efforts are being made to reduce dependence on energy imports and boost domestic production.

India's energy consumption patterns are evolving as the country strives to balance economic growth with environmental sustainability. Policies and initiatives are aimed at

promoting energy efficiency, expanding renewable energy capacity, and achieving a more sustainable and self-reliant energy future.

3. Energy Sustainability Strategies

Efforts to promote sustainability in the energy sector are multifaceted and critical for India's self-reliance goals. This section explores various strategies, including:

3.1. Renewable Energy Expansion

India's commitment to renewable energy sources, such as solar, wind, and hydro, is evident in its ambitious targets. This subsection discusses:

i. Targets and Incentives: Setting ambitious renewable energy targets and providing incentives for clean energy adoption.

a) Targets:

- ❖ **Renewable Energy Capacity Targets:** India has set ambitious targets for increasing its renewable energy capacity. The most notable target is the goal to achieve 175 gigawatts (GW) of renewable energy capacity by 2022, which was later increased to 450 GW by 2030. This includes solar, wind, hydropower, and biomass energy.
- ❖ **Solar Power Targets:** The National Solar Mission has set specific solar power capacity targets. These include achieving 100 GW of solar capacity by 2022 and 280 GW by 2030. India aims to become one of the world's largest producers of solar energy.
- ❖ **Wind Power Targets:** India has set targets to increase its wind power capacity, aiming to achieve 60 GW of wind power capacity by 2022 and 140 GW by 2030.
- ❖ **Hydropower Targets:** The government has plans to add hydropower capacity, with targets set for the development of small and large hydropower projects.
- ❖ **Biomass and Other Renewable Sources:** Targets are also set for increasing the use of biomass and other renewable energy sources.

a) Incentives:

- ❖ **Financial Incentives:** The government offers various financial incentives to promote renewable energy. These include subsidies, tax benefits, and incentives for renewable energy projects. Special incentives are often provided for solar and wind power projects.
- ❖ **Generation-Based Incentives (GBIs):** GBIs provide financial incentives to renewable energy generators based on the amount of electricity they produce. These incentives are designed to encourage higher renewable energy generation.
- ❖ **Feed-in Tariffs:** Feed-in tariffs guarantee a fixed payment for electricity generated from renewable sources, providing predictability for investors and project developers.

- ❖ **Accelerated Depreciation:** Accelerated depreciation benefits allow businesses to write off a significant portion of the cost of renewable energy equipment in the early years, reducing tax liabilities.
- ❖ **Viability Gap Funding (VGF):** VGF is provided to bridge the gap between the cost of setting up renewable energy projects and the revenue generated. It helps make projects financially viable.
- ❖ **Renewable Purchase Obligation (RPO):** RPO mandates that a certain percentage of electricity purchased by utilities come from renewable sources. Non-compliance results in penalties, encouraging utilities to invest in renewables.
- ❖ **Net Metering and Feed-in Tariffs for Solar Rooftop:** Net metering allows individuals and businesses to sell excess solar power back to the grid, while feed-in tariffs provide incentives for feeding solar power into the grid.
- ❖ **Customs and Excise Duty Exemptions:** Renewable energy equipment and components are often exempt from customs and excise duties, making them more affordable.
- ❖ **Clean Energy Certificates (RECs):** RECs are tradable certificates that represent the environmental attributes of renewable energy generation. They provide additional revenue for renewable energy projects.
- ❖ **Green Energy Corridors:** Infrastructure development, such as green energy corridors, is encouraged to improve the transmission and distribution of renewable energy.
- ❖ **International Collaboration:** India collaborates with international organizations and nations to access funding and expertise for renewable energy projects.

These targets and incentives are part of India's comprehensive strategy to promote renewable energy expansion, reduce greenhouse gas emissions, and achieve its sustainable energy goals. They have contributed to significant growth in the renewable energy sector in the country.

ii. Solar and Wind Power Initiatives: India has implemented several key solar and wind power initiatives to promote renewable energy expansion and achieve its ambitious targets for sustainable energy generation. These initiatives aim to accelerate the deployment of solar and wind energy projects, attract investments, and create a conducive environment for renewable energy growth. Here are some of the significant solar and wind power initiatives in India:

a) Solar Power Initiatives:

- ❖ **National Solar Mission (NSM):** Launched in 2010, NSM is one of India's flagship programmes for solar energy expansion. It has several components, including:

- ❖ **Jawaharlal Nehru National Solar Mission (JNNSM):** The primary aim is to promote solar power generation in India and reduce the cost of solar energy through various mechanisms, such as feed-in tariffs, incentives, and subsidies.
- ❖ **Grid-Connected Solar Rooftop Programme:** Encourages the installation of solar panels on rooftops of homes, commercial buildings, and institutions. It offers financial incentives and net metering for surplus energy fed into the grid.
- ❖ **Off-Grid Solar Applications:** Promotes the use of solar power in remote and off-grid areas through decentralized solar power generation.
- ❖ **Solar Parks:** India has initiated the development of large-scale solar parks and ultra-mega solar power projects to attract investments and boost solar capacity. The parks provide the necessary infrastructure and land for solar developers.
- ❖ **Solar Energy Corporation of India (SECI):** SECI is a government-owned company dedicated to promoting solar energy projects, including the development of solar parks and auctions for solar capacity.
- ❖ **International Solar Alliance (ISA):** India co-founded the ISA, a global initiative aimed at promoting solar energy in solar-rich countries. It fosters cooperation in solar technology development, capacity building, and sharing of best practices.

b) Wind Power Initiatives:

- ❖ **Wind Energy Promotion:** India has set ambitious targets for wind power capacity expansion. The government has implemented various measures to promote wind energy, including:
- ❖ **Generation-Based Incentives (GBIs):** GBIs provide financial incentives based on the amount of electricity generated from wind power projects, encouraging higher generation.
- ❖ **Accelerated Depreciation:** Businesses investing in wind power projects can claim accelerated depreciation benefits, reducing tax liabilities.
- ❖ **Feed-in Tariffs (FiTs):** FiTs guarantee a fixed payment for wind power generation, providing predictability for investors.
- ❖ **Wind Energy Resource Assessment:** The National Institute of Wind Energy (NIWE) conducts detailed wind resource assessments to identify suitable locations for wind farms and provide wind data to potential investors.
- ❖ **Wind-Solar Hybrid Policy:** India has introduced policies to encourage the development of hybrid power projects that combine wind and solar energy generation. These projects optimize land use and grid integration.
- ❖ **Bidding and Competitive Auctions:** Wind power projects are often allocated through competitive bidding and auctions, ensuring transparency and cost-effective development.

- ❖ **Transmission Infrastructure:** Investments have been made in strengthening the transmission infrastructure to facilitate the integration of wind power into the grid.

Both solar and wind power initiatives in India aim to attract investments, reduce the cost of renewable energy, and support the transition to a cleaner and more sustainable energy future. These initiatives have contributed significantly to India's position as a global leader in renewable energy capacity expansion.

3.2. Energy Efficiency Programmes

Improving energy efficiency is a cornerstone of sustainability. This subsection addresses:

- Energy-Efficient Appliances and Buildings:** Energy-efficient appliances and buildings play a crucial role in India's pursuit of self-reliance in energy. By reducing energy consumption in households and commercial structures, these initiatives not only help conserve resources but also contribute to energy security and environmental sustainability. Here are some key aspects of energy-efficient appliances and buildings in self-reliant India:

- Energy-Efficient Appliances:**

- ❖ **Star Labeling Programme:** India has implemented the Bureau of Energy Efficiency's (BEE) star labeling programme for various appliances such as refrigerators, air conditioners, and LED bulbs. This programme rates appliances on their energy efficiency and helps consumers make informed choices. Appliances with higher star ratings are more energy-efficient.
- ❖ **Appliance Standards and Regulations:** The government has established minimum energy performance standards (MEPS) for various appliances, setting requirements for energy efficiency and encouraging manufacturers to produce more efficient products.
- ❖ **LED Lighting:** The Unnat Jyoti by Affordable LEDs for All (UJALA) programme aims to distribute energy-efficient LED bulbs to households at affordable prices. The programme has led to significant energy savings in lighting.
- ❖ **Energy-Efficient Fans and Air Conditioners:** BEE has introduced star labeling and energy efficiency standards for fans and air conditioners, promoting the adoption of energy-efficient cooling and ventilation systems.
- ❖ **Appliance Rebate Programmes:** Various state and central government initiatives offer rebates and incentives for the purchase of energy-efficient appliances, encouraging consumers to invest in these products.

- Energy-Efficient Buildings:**

- ❖ **Energy Conservation Building Code (ECBC):** The ECBC sets energy efficiency standards for commercial buildings and aims to reduce energy consumption in the

commercial sector. It encourages the use of energy-efficient building materials, insulation, lighting, and HVAC systems.

- ❖ **Green Building Certification:** Organizations like the Indian Green Building Council (IGBC) and LEED (Leadership in Energy and Environmental Design) promote the construction of green and sustainable buildings. These certifications recognize buildings that meet specific energy efficiency and sustainability criteria.
- ❖ **Smart and Sustainable Design:** Architects and builders are increasingly incorporating passive design principles, which optimize natural lighting and ventilation to reduce the need for artificial lighting and HVAC systems. This not only conserves energy but also improves indoor comfort.
- ❖ **Energy Audits:** Energy audits of existing buildings identify areas for improvement and recommend energy-efficient upgrades, such as insulation, energy-efficient windows, and lighting retrofits.
- ❖ **Net-Zero and Zero-Energy Buildings:** There is a growing interest in designing and constructing net-zero energy buildings, which produce as much energy as they consume over the course of a year. These buildings rely on renewable energy sources and energy-efficient design.
- ❖ **Energy-Efficient Materials:** The use of energy-efficient construction materials, such as cool roofs and high-performance windows, is becoming more prevalent in building design.
- ❖ **Building Energy Management Systems (BEMS):** BEMS technologies help monitor and control energy usage within buildings, optimizing HVAC, lighting, and other systems for efficiency.

The adoption of energy-efficient appliances and building practices not only reduces energy consumption but also contributes to India's self-reliance by reducing its dependence on energy imports and enhancing energy security. These initiatives also align with India's commitment to global climate goals by reducing greenhouse gas emissions associated with energy use in buildings.

- ii. **Industrial Energy Efficiency:** Industrial energy efficiency is a critical aspect of India's journey toward self-reliance in energy. Industries are significant energy consumers, and improving efficiency not only reduces energy costs but also enhances competitiveness, reduces carbon emissions, and conserves valuable resources. Here are key strategies and initiatives related to industrial energy efficiency in self-reliant India:
 - a) **Perform, Achieve, and Trade (PAT) Scheme:** The PAT scheme is a market-based mechanism that sets energy efficiency targets for energy-intensive industries like cement, steel, aluminum, and pulp and paper. Industries that achieve and exceed these targets receive energy-saving certificates that can be traded.

- b) **Energy Audits:** Conducting regular energy audits helps industries identify energy-saving opportunities and implement cost-effective energy conservation measures. The government encourages industries to undertake energy audits.
- c) **Energy Management Systems (EnMS):** Implementing EnMS based on ISO 50001 standards helps industries establish a systematic approach to continuously improve energy performance, reduce energy costs, and achieve energy efficiency targets.
- d) **Technology Upgrades:** Encouraging industries to invest in modern, energy-efficient technologies and machinery helps reduce energy consumption and improve productivity. Subsidies and incentives are often provided for such upgrades.
- e) **Waste Heat Recovery:** Capturing and utilizing waste heat generated during industrial processes is an effective way to improve energy efficiency. Combined Heat and Power (CHP) systems are commonly used for this purpose.
- f) **Energy-Efficient Lighting:** Replacing conventional lighting with energy-efficient alternatives such as LEDs can significantly reduce energy consumption in industrial facilities.
- g) **Lean Manufacturing and Process Optimization:** Lean manufacturing principles and process optimization techniques help eliminate energy-wasting inefficiencies and streamline production processes.
- h) **Demand-Side Management (DSM):** Implementing DSM strategies helps industries manage and reduce peak electricity demand, thereby lowering energy costs.
- i) **Training and Capacity Building:** Offering training and capacity-building programmes to industry professionals on energy-efficient practices and technologies enhances awareness and implementation of energy-saving measures.
- j) **Industry-Specific Initiatives:** Tailoring energy efficiency programmes to specific industries, considering their unique energy requirements and challenges, helps drive sector-specific improvements.
- k) **Standards and Labeling:** The BEE sets energy efficiency standards for various industrial equipment and appliances. Labeling products with their energy efficiency ratings helps industries make informed choices.
- l) **Financing and Incentives:** Providing access to low-interest loans, grants, and incentives for energy-efficient projects helps industries overcome financial barriers to adoption.
- m) **Research and Development:** Supporting research and development in energy-efficient technologies and processes encourages innovation and the development of cutting-edge solutions.
- n) **Public-Private Partnerships (PPPs):** Collaboration between government agencies, industry associations, and private companies can facilitate the adoption of energy-efficient practices and technologies.

- o) Reporting and Benchmarking:* Mandating industries to report their energy consumption and efficiency data encourages transparency and competition.

By implementing these strategies and initiatives, India aims to improve industrial energy efficiency, reduce energy imports, enhance energy security, and contribute to a more sustainable and self-reliant energy future. It also aligns with India's commitment to global climate goals by reducing greenhouse gas emissions associated with industrial processes.

3.3. Environmental Conservation and Mitigation

Addressing environmental concerns is integral to sustainability. This subsection covers:

- i. Policies for Reducing Carbon Emissions:* India has implemented several policies and initiatives aimed at reducing carbon emissions and addressing climate change. These policies are critical for mitigating the impacts of climate change, enhancing environmental sustainability, and promoting a low-carbon economy. Here are some of the key policies and measures for reducing carbon emissions in India:
 - a) National Action Plan on Climate Change (NAPCC):* The NAPCC, launched in 2008, is a comprehensive framework that outlines India's strategies and policies to combat climate change. It consists of eight national missions, each focusing on specific sectors, including solar energy, energy efficiency, sustainable agriculture, and water resources.
 - b) Renewable Energy Initiatives:*
 - ❖ *National Solar Mission:* India's National Solar Mission aims to promote the deployment of solar energy and achieve significant solar capacity additions. It includes ambitious targets for solar power generation and incentives for solar projects.
 - ❖ *National Wind Mission:* The Wind Mission focuses on expanding wind power capacity, improving grid integration, and increasing wind energy generation.
 - c) Perform, Achieve, and Trade (PAT) Scheme:* The PAT scheme sets energy efficiency targets for energy-intensive industries and allows them to trade energy-saving certificates when they exceed their targets. It encourages industries to adopt energy-efficient technologies and practices.
 - d) Energy Efficiency Measures:*
 - ❖ *Standards and Labeling:* The Bureau of Energy Efficiency (BEE) has established energy efficiency standards for appliances and equipment, including air conditioners, refrigerators, and lighting. Products are labeled to indicate their energy efficiency levels.
 - ❖ *Energy Conservation Building Code (ECBC):* ECBC sets energy efficiency standards for commercial buildings, promoting the use of energy-efficient construction practices and technologies.

- e) **Carbon Pricing and Trading:** While India has not implemented a nationwide carbon pricing mechanism, there are discussions and pilot projects exploring carbon trading and carbon tax options.
- f) **Green Transportation Initiatives:** Promotion of electric vehicles (EVs) through incentives, subsidies, and charging infrastructure development to reduce carbon emissions from the transportation sector.
- g) **Reforestation and Afforestation:** India has various afforestation and reforestation programmes to increase forest cover, sequester carbon, and promote biodiversity conservation.
- h) **Sustainable Agriculture Practices:** Policies that encourage sustainable farming practices, including organic farming and efficient water use, to reduce emissions from agriculture.
- i) **Waste Management and Recycling:** Initiatives to reduce methane emissions from landfills and promote recycling and waste-to-energy technologies.
- j) **International Commitments:** India is committed to meeting its international climate obligations, including those under the Paris Agreement, which includes targets for reducing carbon emissions.
- k) **Sustainable Urban Development:** Policies promoting sustainable urban planning, public transportation, and the development of smart cities to reduce emissions associated with urbanization.
- l) **Research and Development:** Investment in research and development of clean and efficient technologies across various sectors, including energy, transportation, and agriculture.

These policies and initiatives are part of India's comprehensive approach to addressing climate change and reducing carbon emissions. They are crucial for achieving sustainability, energy security, and environmental conservation while contributing to global efforts to combat climate change.

4. Self-Reliance in Energy

India's 'Atmanirbhar Bharat' initiative is a driving force behind energy self-reliance. This section discusses:

4.1. The 'Atmanirbhar Bharat' Initiative

- i. **Goals and Objectives:** The initiative's objectives to reduce energy dependence on imports, boost domestic manufacturing, and promote indigenous solutions. The "Atmanirbhar Bharat" initiative, launched by the Government of India, aims to foster self-reliance and boost economic growth and resilience. The term "Atmanirbhar" translates to "self-reliant" in English, and the initiative encompasses various economic,

social, and governance aspects. The primary goals and objectives of the *Atmanirbhar Bharat* initiative are:

- a) **Economic Self-Reliance:** The initiative seeks to reduce dependence on imports, especially in critical sectors like defense, healthcare, and technology. It aims to make India self-sufficient in essential goods and services, thereby enhancing economic sovereignty.
- b) **Promotion of Domestic Manufacturing:** One of the core objectives is to promote domestic manufacturing, increase the share of "Made in India" products, and create a robust manufacturing ecosystem. This involves providing incentives, simplifying regulations, and improving infrastructure.
- c) **Boosting Micro, Small, and Medium Enterprises (MSMEs):** The initiative aims to support MSMEs, which play a crucial role in employment generation and economic growth. Measures include financial assistance, easier access to credit, and simplification of compliance procedures.
- d) **Agricultural Reforms:** *Atmanirbhar Bharat* seeks to transform the agricultural sector by liberalizing trade, removing barriers, and enhancing the income of farmers. Initiatives like the Agricultural Produce Market Committee (APMC) reforms and contract farming aim to empower farmers.
- e) **Infrastructure Development:** The initiative focuses on infrastructure development, including transportation, logistics, and energy. Investment in infrastructure is seen as a key driver of economic growth and job creation.
- f) **Promotion of Digital India:** Expanding digital infrastructure, internet access, and e-governance is a critical component. Digitalization is seen as a means to enhance efficiency, transparency, and accessibility of government services.
- g) **Healthcare Strengthening:** The COVID-19 pandemic highlighted the importance of a robust healthcare system. The initiative aims to enhance healthcare infrastructure, including hospitals, medical research, and pharmaceutical production.
- h) **Environmental Sustainability:** While promoting economic growth, *Atmanirbhar Bharat* also recognizes the importance of environmental sustainability. It encourages the development and adoption of green technologies and practices.
- i) **Global Engagement:** The initiative does not advocate isolationism but instead encourages global engagement on India's terms. It seeks to position India as a competitive player in the global market and forge strategic partnerships.
- j) **Employment Generation:** Creating job opportunities, especially for the youth, is a priority. Investments in various sectors are expected to generate employment, which is essential for economic and social stability.

- k) **Ease of Doing Business:** Simplifying regulatory procedures, reducing bureaucratic hurdles, and improving the ease of doing business are vital objectives. A business-friendly environment is seen as essential for attracting investments.
- l) **Social Inclusivity:** Ensuring that the benefits of economic growth reach all segments of society, especially marginalized and economically disadvantaged groups, is emphasized.
- m) **Resilience to External Shocks:** Developing resilience to external economic shocks, such as the global economic downturn, is a key objective. This includes building buffers in the form of foreign exchange reserves and reducing vulnerabilities.

Atmanirbhar Bharat represents a multi-faceted approach to economic and social development in India. Its objectives encompass economic growth, self-reliance, job creation, infrastructure development, and social inclusivity. The success of the initiative depends on effective policy implementation, public-private partnerships, and adaptability to changing global economic dynamics.

ii. **Role of Energy Self-Reliance:** Energy self-reliance plays a pivotal role in the "Atmanirbhar Bharat" initiative, which aims to make India self-reliant across various sectors. Energy is a fundamental enabler of economic growth, industrialization, and overall development. Here's how energy self-reliance contributes to the objectives of the *Atmanirbhar Bharat* initiative:

- a) **Reducing Dependence on Energy Imports:** India is one of the largest importers of crude oil, natural gas, and coal. By enhancing domestic energy production and reducing reliance on energy imports, India can improve its energy security and reduce its vulnerability to fluctuations in global energy prices and supply disruptions.
- b) **Enhancing Energy Access:** Energy self-reliance entails expanding domestic energy production, which can help provide reliable access to electricity and clean cooking fuels for all citizens, including those in rural and remote areas. This aligns with the goal of universal energy access, a crucial aspect of the initiative.
- c) **Supporting Domestic Industry:** Reliable and affordable energy is essential for the growth of domestic industries. By ensuring a stable energy supply, India can boost its manufacturing sector and reduce production costs, making its industries more competitive in both domestic and international markets.
- d) **Promoting Renewable Energy:** The *Atmanirbhar Bharat* initiative recognizes the potential of renewable energy sources like solar and wind power. Expanding domestic renewable energy capacity reduces dependence on fossil fuels, contributes to environmental sustainability, and aligns with India's commitments to combat climate change.
- e) **Energy Efficiency:** Self-reliance in energy includes improving energy efficiency across various sectors, such as industry, transportation, and buildings. Enhanced energy

efficiency not only reduces energy consumption but also lowers production costs and reduces greenhouse gas emissions.

- f) **Infrastructure Development:** Developing energy infrastructure, including power generation, transmission, and distribution, is a critical component of the initiative. Reliable and modern energy infrastructure is essential for supporting economic growth, urbanization, and industrialization.
- g) **Rural Electrification:** Expanding electricity access to rural areas is a priority. This involves not only providing electricity connections but also ensuring a reliable and affordable energy supply, which can support rural industries and agricultural productivity.
- h) **Green Technologies and Innovation:** Energy self-reliance encourages the development and adoption of green technologies and innovations. Investments in research and development can lead to breakthroughs in energy efficiency, renewable energy technologies, and sustainable practices.
- i) **Foreign Exchange Savings:** Reducing energy imports can lead to substantial savings in foreign exchange reserves, which can be allocated to other priority areas, such as healthcare, education, and infrastructure development.
- j) **Environmental Sustainability:** Reducing dependence on fossil fuels and promoting renewable energy sources contributes to environmental sustainability and helps India meet its climate commitments. It aligns with global efforts to mitigate the impacts of climate change.
- k) **Job Creation:** The energy sector, including renewable energy, offers significant opportunities for job creation. The growth of domestic energy production and related industries can generate employment opportunities, especially in rural and semi-urban areas.

The energy self-reliance is a crucial pillar of the *Atmanirbhar Bharat* initiative. It not only strengthens India's energy security and economic resilience but also supports environmental sustainability and inclusive development. Achieving energy self-reliance requires a multi-pronged approach, including investments in renewable energy, energy efficiency, infrastructure development, and policy reforms.

6. Future Prospects and Conclusion

In conclusion, sustainability in energy, as part of the *Atmanirbhar Bharat* initiative, represents a transformative journey for India. It encompasses renewable energy growth, energy efficiency, technological innovation, and inclusive development. The future prospects are promising, with India poised to become a global leader in renewable energy adoption, energy efficiency advancements, and green innovation. This pursuit of energy self-reliance not only strengthens the nation's economic resilience but also contributes

significantly to environmental conservation and social progress. As India continues on this path, it sets an inspiring example of sustainable development for the world to follow.

Abstract

India's pursuit of self-reliance in resource management and its concurrent efforts to address environmental challenges is of paramount importance in its pursuit for sustainability. In this regard, various dimensions of resource utilization and environmental conservation, highlighting the need for sustainable practices, technological innovations, and effective policies are needed to be studied. A brief survey on relevant literature and government reports would provide insights into India's journey towards self-reliance within the global context of environmental sustainability and the same is presented in this report.

Keywords: Self-reliant India (Atmanirbhar India), Resource utilization, Resource Management, Renewable energy, Environment concerns.

Introduction

India, with its With a burgeoning population, a rapidly expanding economy, and pressing environmental challenges, the nation seeks to strike a delicate balance between achieving self-sufficiency in resource management and safeguarding its natural environment. The multifaceted aspects of India's endeavor to achieve resource self-sufficiency and its implications for environmental sustainability are of importance in global economy. Self-reliance in resource utilization and addressing environmental concerns stands as a defining aspiration for India in the 21st century. This journey encompasses efficient resource management, renewable energy adoption, sustainable agriculture, rational water use, waste reduction and recycling, technological innovation, effective policy frameworks, and international cooperation. This article delves into the various dimensions of India's efforts to attain self-reliance while addressing the complexities of environmental sustainability, highlighting the interconnectedness of these critical goals in shaping India's future.

Efficient Resource Management

Efficient resource management is a cornerstone of India's self-reliance strategy (UNDP, 2020). Rational consumption, sustainable extraction, and waste reduction are vital to this approach. It is also the linchpin of India's journey towards self-reliance. It involves responsible consumption, sustainable extraction, and waste reduction practices across various sectors, from agriculture and energy to manufacturing. By optimizing resource use, embracing circular economy principles, and leveraging technological innovations, India can enhance self-sufficiency while considering environmental concerns. Effective policy frameworks further incentivize resource efficiency, ensuring a sustainable path to self-reliance in resource utilization and economic growth.

Renewable Energy

India's emphasis on renewable energy, exemplified by its National Wind-Solar Hybrid Policy (Government of India, Ministry of New and Renewable Energy, 2020), aims to reduce the dependency on fossil fuels and mitigate climate change. Renewable energy is a cornerstone of India's vision for self-reliance. The country's commitment to harnessing renewable sources such as solar, wind, and hydropower not only reduces dependence on fossil fuels but also promotes energy self-sufficiency. India's National Wind-Solar Hybrid Policy and various other initiatives have strengthened the growth of renewable energy infrastructure. By investing in clean and sustainable energy technologies, India not only secures its energy future but also contributes to environmental sustainability, aligning with the broader goal of becoming a self-reliant nation.

Agriculture and Food Security

The promotion of sustainable agriculture practices, as outlined in the NITI Aayog's strategy for doubling farmers' income (2018), is pivotal for self-reliance in food production. Agriculture and food security play a pivotal role in India's journey toward self-reliance. Sustainable farming practices, precision agriculture, and water-efficient irrigation systems are instrumental in enhancing crop yields and reducing resource wastage. By focusing on these aspects, India aims to bolster its self-sufficiency in food production, ensuring a stable food supply for its growing population. This approach not only strengthens the nation's resilience but also supports the broader goal of self-reliance by reducing dependence on external sources for food and agricultural resources.

Water Management

With water scarcity in many regions, efficient water utilization and conservation are imperative (World Bank, 2019). Rainwater harvesting and efficient irrigation methods play key roles in this regard. Efficient water management is a critical element in India's pursuit of self-reliance. In a country facing water scarcity in many regions, strategies such as rainwater harvesting, efficient irrigation techniques, and wastewater recycling are vital. By optimizing water use and conservation, India aims to enhance self-sufficiency in water

resources. This not only ensures access to a crucial resource but also reduces dependence on external sources, aligning with the broader goal of self-reliance and environmental sustainability.

Waste Management

Effective waste management, including recycling and waste-to-energy initiatives (Central Pollution Control Board, 2021), contributes to resource conservation and pollution reduction. Waste management is a key component of India's self-reliance efforts. Through effective waste segregation, recycling initiatives, and the adoption of waste-to-energy technologies, the country aims to minimize waste generation and reduce its environmental impact. By managing waste efficiently, India not only mitigates pollution and conserves resources but also fosters self-sufficiency by harnessing the potential value in waste materials. This approach reinforces the broader goal of self-reliance by reducing the requirements for external waste disposal methods and promoting sustainable practices for a cleaner, more self-reliant future.

Environmental Protection

Conservation of biodiversity, forest protection, and measures to mitigate air and water pollution are vital components of India's self-reliance journey towards a sustainable future. (Ministry of Environment, Forest and Climate Change, 2020). Environmental protection is at the heart of India's self-reliance journey. These efforts not only safeguard India's natural heritage but also contribute to self-reliance by ensuring access to clean air, water, and ecosystems. By prioritizing environmental sustainability, India strengthens its resilience and reduces dependencies on external resources for environmental remediation, in line with the broader goal of self-reliance.

Technology and Innovation

Investing in green technologies and environmental monitoring systems is essential for resource efficiency (Department of Science and Technology, Government of India, 2021). Technology and innovation are driving forces in India's path to self-reliance. The nation is investing in green technologies, such as renewable energy and digital environmental monitoring systems, to optimize resource utilization and environmental sustainability. These innovations not only reduce dependencies on imported technologies but also position India as a global leader in sustainable solutions. By promoting a culture of innovation and supporting research and development, India is enhancing self-sufficiency across various sectors and enhances economic growth while reducing reliance on external sources. This commitment to technological advancement aligns with the broader goal of self-reliance in resource utilization and environmental concerns.

Policy and Governance

Effective policies and governance mechanisms are crucial for implementing sustainable practices and regulating harmful activities (NITI Aayog, 2019). Effective policy and

governance are fundamental pillars of India's journey toward self-reliance. By implementing robust policies that develop sustainable practices and regulate harmful activities, the nation is fostering an environment conducive to self-sufficiency. Policies such as the National Resource Efficiency Policy, mainstream resource efficiency practices across sectors, contributing to resource conservation and self-reliance. Good governance ensures the efficient implementation of these policies and creates an enabling environment for businesses and individuals to adopt sustainable practices. Together, policy and governance mechanisms are essential in achieving India's self-reliance goals, reducing dependencies on external resources, and promoting a resilient and sustainable future.

International Cooperation

While pursuing self-reliance, India actively engages in international cooperation on environmental issues, recognizing the global nature of challenges (Ministry of External Affairs, Government of India, 2020). International cooperation plays a pivotal role in India's pursuit of self-reliance. While striving to enhance self-sufficiency in various sectors, India actively engages in global partnerships and collaborations on environmental and economic challenges. Recognizing the interconnectivity of these issues, India seeks to leverage international expertise and resources to address common challenges, such as climate change and sustainable development. This approach is in agreement with India's broader goal of self-reliance by ensuring that the nation remains globally integrated while reducing dependencies on external sources. By enhancing international cooperation, India aims to achieve self-reliance in a rapidly changing global landscape.

Conclusion

India's journey toward self-reliance in resource utilization and environmental sustainability is a complex yet imperative endeavor. It necessitates a harmonious blend of efficient resource management, technological innovation, and robust policies, while admitting the global context of environmental challenges. In the pursuit of self-reliance in resource utilization and the simultaneous commitment to address environmental concerns, India embarks on a transformative journey that holds immense significance for its future. The harmonious integration of efficient resource management practices, renewable energy adoption, sustainable agriculture, responsible water use, waste reduction, technological innovation, and sound policy frameworks reflects a nation's poise to meet its needs while minimizing dependencies on external sources. India's quest for self-reliance is not just a national aspiration; it is globally imperative. By advancing self-sufficiency and preserving its environment simultaneously, India models a path for sustainable development that resonates far beyond its borders, offering a convincing vision of a future where resource utilization and environmental protection are intrinsically linked.

Abstract

This study highlights the critical importance of energy efficiency and renewable energy adoption in India's journey towards self-reliance. With a growing population and increasing energy demands, India faces the challenge of ensuring energy security while minimizing its carbon footprint. This paper puts a focus on the diverse benefits of investing in energy-efficient technologies and scaling up renewable energy sources to achieve energy independence. By taking up these sustainable solutions, India can enhance its energy adaptability, reduce greenhouse gas emissions, create new job opportunities and secure a sustainable future for its citizens. This research explores the policy, technological and economic avenues that can accelerate the transition to a self-reliant and environmentally responsible energy landscape in India.

Keywords: renewable energy, self-reliance, greenhouse gas, sustainable future

Introduction

India, with its growing population and rapid urbanization, faces formidable challenges in meeting its growing energy demands. Historically reliant on fossil fuels, this dependence not only strains the nation's energy security but also contributes significantly to environmental degradation and global climate change¹. Recognizing the urgency of the situation, India has embarked on a transformative journey, seeking to harmonize economic development with environmental stewardship through a multifaceted approach. Simultaneously, the integration of renewable energy sources takes center stage. India's vast and diverse geography offers a wealth of renewable energy resources, from the abundant sunlight in the arid plains to the brisk winds along coastal regions, and the unexploited potential of biomass and hydroelectricity. Harnessing these resources through innovative technologies and strategic investments has the potential to redefine India's energy landscape².

Energy Resources and Consumers

Energy resources and consumers in India are critical components of the country's energy landscape, which is undergoing significant changes due to growing demand, environmental concerns, and efforts to enhance energy security. Balancing the growing energy needs of India's diverse consumer base with the imperative of sustainability and energy security poses significant challenges. India's policymakers, businesses, and civil society are actively working to address these challenges while exploring opportunities for

clean and efficient energy solutions. This dynamic relationship between energy resources and consumers in India is central to the nation's aspirations for sustainable and self-reliant energy development, making it a topic of crucial importance in the global energy landscape³.

The Importance of Energy Efficiency

Energy efficiency is a fundamental aspect of sustainable development and a key driver in achieving energy self-reliance for India. It refers to the practice of using less energy to accomplish the same tasks or achieve the same level of output. The importance of energy efficiency cannot be overstated, as it offers a wide range of economic, environmental and societal benefits. Energy efficiency measures lead to reduced energy consumption, resulting in lower energy bills for households, businesses, and industries. These cost savings can be substantial over time and significantly improve economic well-being⁴.

Renewable Energy in India

India is one of the world's largest greenhouse gas emitters. Renewable energy sources, such as solar and wind power, produce little to no greenhouse gas emissions during electricity generation, making them essential for mitigating climate change⁵. The use of renewable energy reduces reliance on fossil fuels, which are a significant source of air pollution and health issues in India. By transitioning to cleaner sources, India can improve air quality and public health. Renewable energy adoption plays a crucial role in achieving self-reliance in energy for a nation. It reduces dependence on imported fossil fuels, enhances energy security, and promotes sustainable development.

Renewable energy adoption

Renewable energy adoption is a critical component of achieving energy self-reliance in India. The country's energy demand is growing rapidly, and reducing dependence on fossil fuels through the use of renewable energy sources can help secure a sustainable and self-reliant energy future. India's journey toward energy self-reliance through renewable energy adoption requires a multi-faceted approach that includes policy support, incentives, infrastructure development, and public awareness. By prioritizing these strategies, India can reduce its dependence on fossil fuels, mitigate environmental impacts, and ensure a more sustainable and self-reliant energy future⁶.

Empowering India's Self-Reliance through MSMEs

Micro, Small, and Medium Enterprises (MSMEs) are the backbone of India's economy. They play a crucial role in fostering economic growth, generating employment opportunities, and promoting entrepreneurship. Empowering India's self-reliance through

MSMEs is not just an economic imperative. it's a strategic approach to achieving sustainability and resilience in the face of global challenges⁷. Empowering India's self-reliance through MSMEs is a multifaceted strategy that involves job creation, innovation, technology adoption, regulatory reforms, and sustainability practices. By nurturing and supporting the growth of MSMEs, India can enhance its economic independence and resilience, contributing to the nation's overall development and self-reliance goals.

Conclusion

In conclusion, energy efficiency and renewable energy adoption are not only essential for India's energy security but also for its economic growth, environmental preservation, and social development. As India continues to make strides in these areas, it is positioning itself as a global leader in sustainable energy practices, contributing to a brighter and more self-reliant future. However, achieving these goals will require sustained efforts, collaboration among stakeholders, and a commitment to clean and sustainable energy solutions. To achieve these benefits and strengthen self-reliance, India must continue to invest in research and development, implement supportive policies and incentives, enhance public awareness, and foster collaboration among various stakeholders. By doing so, India can secure a sustainable, resilient, and self-reliant energy future, reducing its carbon footprint and ensuring access to reliable energy for all its citizens.

ROLE OF MICRO, SMALL AND MEDIUM ENTERPRISES (MSME'S) IN ACHIEVEING SUSTAINABLE DEVELOPMENT GOALS

Dr. N. Vivek

Assistant Professor, The American College.

Kamal.T

Student, The American College.

Abstract

Micro, Small, and Medium Enterprises (MSMEs) play a pivotal role in driving economic development worldwide, and India is no exception to this trend. The researcher presents a set of recommendations aimed at enhancing the sustainability of MSMEs. These measures are designed to foster the resilience and longevity of these enterprises, which, in turn, would bolster their capacity to contribute meaningfully to the achievement of the SDGs. In essence, MSMEs emerge as not just economic actors but as essential agents of change in the global pursuit of a sustainable and equitable future as envisioned by the SDGs.2. MSMEs have a significant part to play in achieving several SDGs, with a particular focus on goals like Poverty Alleviation (Goal 1), Decent Work and Economic Growth (Goal 8), and Industry Innovation and Infrastructure (Goal 9). However, their impact extends beyond these goals, as they also directly or indirectly contribute to other SDGs. In this research paper, we delve into the multifaceted role of MSMEs in advancing the SDGs. We categorize their contributions based on various activity attributes, demonstrating their involvement in the attainment of different goals.

Keywords: *Poverty Alleviation, Sustainable and Equitable Future, Decent Work and Economic Growth, Multifaceted Role, Industry Innovation and Infrastructure, Global Pursuit.*

Introduction

The term "Sustainable Development" was initially coined by Barbara Ward in the "Cocoyoc Declaration" of 1974. It has since been extensively discussed in various international gatherings, summits, conferences, and reports, including notable mentions in the IUCN Reports of 1980 and 1990 and the World Commission on Environment and Development (WECD). The WECD's seminal report, titled "Our Common Future," marked a significant milestone by emphasizing sustainability as the only viable path to mitigate threats to humanity's survival.

This concept gained further traction during events like the Earth Summit in 1992 and The Norway Round Table in 1995. The Earth Summit of 1992 yielded two critical documents for sustainable development, namely "Agenda 21" and the "Rio Declaration on Environment and Development." The Norway Round Table also established key principles to advance the cause of sustainable development.

Abstract

This paper illuminates India's transformative journey towards sustainable development, with a focus on fostering resilience and self-reliance. Against a backdrop of dynamic global challenges, India has set forth a visionary agenda aimed at achieving economic prosperity while safeguarding environmental integrity and societal well-being. This document delves into the multifaceted strategies, policies, and initiatives that underpin this ambitious undertaking. The paper commences by delineating the socio-economic context that necessitates India's pursuit of self-reliance. It explores the intricate interplay of factors ranging from demographic shifts to geopolitical dynamics, providing a comprehensive understanding of the challenges and opportunities at hand. It underscores the imperative for India to establish self-reliance as the linchpin of its development paradigm. Moreover, the paper underscores the significance of inclusive policies in cultivating self-reliance at the grassroots level. It elucidates initiatives aimed at empowering local communities, enhancing skill development, and fostering entrepreneurship. Through these endeavors, India seeks to amplify the capacities of its citizens, ensuring they become active stakeholders in the nation's sustainable development trajectory. Through a judicious blend of strategic policies, inclusive practices, and technological innovation, India endeavors to forge a future where resilience and self-reliance are the bedrock of a flourishing and sustainable society. This paper serves as a testament to India's unwavering commitment to a more equitable, resilient, and sustainable future for its citizens and the global community.

Keywords: self-reliance, resilient, Sustainable Development and future

Introduction

In the tapestry of nations, India has long stood as a beacon of diversity, culture, and resilience. As a nation of over a billion aspirations, it faces a unique set of challenges and opportunities. In recent years, the clarion call for self-reliance has resonated across the Indian landscape, heralding a transformative shift in economic strategy. This shift, however, is not merely an endeavor in economic autonomy; it is a profound commitment to sustainability, weaving together the threads of prosperity, environmental stewardship, and social inclusivity. This journey towards self-reliance is a dynamic narrative, characterized by innovation, adaptability, and an unwavering dedication to equitable progress [1-2]. It is a voyage propelled by a confluence of factors from the harnessing of cutting-edge technologies to the nurturing of indigenous industries and the elevation of local communities. This paradigm shift is not only a testament to India's resilience in the face of global challenges, but a testament to its determination to chart a course towards a more sustainable and prosperous future. This introductory chapter sets the stage for a compelling exploration of India's path towards self-reliance, rooted in principles of sustainable development. We will delve into the multifaceted strategies, technological advancements, and policy frameworks that are shaping this narrative. From fostering innovation hubs to

promoting green practices, and from revitalizing traditional crafts to embracing renewable energies, each facet contributes to an integrated vision of a self-reliant India that stands tall on the global stage [3-4]. This enlightening journey as we unravel the tapestry of resilience and self-reliance that is propelling India towards a future of sustainable development, where economic vitality harmonizes with environmental consciousness and social inclusivity. It is a journey that not only defines the destiny of a nation but inspires a vision for a more sustainable and equitable world. The following policies and strategies are encompassed for the sustainable future [5-7].

Promoting Renewable Energy Adoption

Increase the adoption of renewable energy sources like solar, wind, and biomass to reduce dependency on fossil fuels.

Enhancing Agricultural Sustainability

Implement sustainable agricultural practices like organic farming, crop diversification, and water conservation techniques.

Empowering Micro, Small, and Medium Enterprises (MSMEs)

Provide financial support, technology transfer, and skill development programs to enhance the productivity and sustainability of MSMEs.

Investing in Green Infrastructure

Develop and invest in green infrastructure projects like public transportation, renewable energy grids, and eco-friendly urban planning.

Strengthening Disaster Resilience

Invest in disaster preparedness, early warning systems, and resilient infrastructure to mitigate the impact of natural disasters.

Fostering Research and Development (R&D)

Promote R&D activities in key sectors such as clean energy, agriculture, and healthcare to drive innovation and technological advancement.

Advocating for Policy Reforms

Advocate for policies that incentivize sustainability, innovation, and responsible business practices at the government level. These strategies, supported by research findings from reputable journals, can serve as a framework for India's journey towards sustainable and self-reliant development. Implementing these approaches can lead to long-lasting positive impacts on the environment, economy, and society as a whole policy that can contribute to India's journey towards resilient and self-reliant sustainable development, along with corresponding journal Strategies to both adapt to and mitigate the impacts of climate change, including setting emission reduction targets [8-9].

Waste Management and Circular Economy Policy

India recognizes the critical importance of effective waste management and the adoption of a circular economy model in achieving sustainable development. This policy outlines a comprehensive framework that aims to minimize waste generation, maximize resource recovery, and promote a circular economy approach across all sectors.

Minimize Waste Generation

Implement measures to reduce the overall generation of waste through source reduction, recycling, and responsible consumption patterns. Encourage the adoption of sustainable packaging and product design principles to minimize waste at its source.

Promote 3R Principles (Reduce, Reuse, Recycle)

Establish mechanisms to promote the reduction, reuse, and recycling of waste materials in all sectors of the economy. Encourage industries to adopt innovative technologies for waste reduction and recovery[10].

Strengthen Waste Segregation and Collection Systems

Implement robust waste segregation at source and collection systems at the community level, ensuring separate streams for recyclables, organic waste, and non-recyclables. Promote community awareness and participation in waste segregation practices.

Facilitate Resource Recovery and Circular Economy Practices

Encourage industries to adopt circular economy principles, emphasizing the recycling and repurposing of materials. Support research and development in technologies that enable the efficient recovery of resources from waste streams.

Promote Extended Producer Responsibility (EPR)

Enforce EPR policies to hold producers accountable for the entire lifecycle of their products, including responsible disposal and recycling. Establish incentives for producers to design products with consideration for end-of-life disposal.

Invest in Waste-to-Energy and Bio fuel Technologies

Promote the development and deployment of waste-to-energy technologies and biofuel production from organic waste. Encourage public-private partnerships for investment in sustainable waste-to-energy projects.

Capacity Building and Skill Development

Provide training and capacity-building programs for waste management professionals, local authorities, and communities. Foster knowledge-sharing platforms to disseminate best practices in waste management and circular economy principles.

Regulatory Compliance and Enforcement

Strengthen enforcement mechanisms to ensure compliance with waste management regulations and standards. Implement penalties for non-compliance and reward exemplary waste management practices.

Monitoring and Evaluation: Regular monitoring and evaluation mechanisms will be established to assess the effectiveness of waste management and circular economy initiatives. Key performance indicators will be tracked, and necessary adjustments to the policy framework will be made based on evaluation outcomes. These policies collectively form a multifaceted approach towards resilient and self-reliant sustainable development in India. They address various aspects of environmental conservation, economic resilience, and social well-being. Please note that while the references provide further reading, it's important to consult official government documents and scholarly articles for the most up-to-date and accurate policy information[11].

Conclusions

In the pursuit of sustainable development, India's journey towards resilience and self-reliance is both commendable and promising. Through strategic measures, innovative approaches, and a steadfast commitment to environmental and economic well-being, India is charting a course towards a future characterized by self-sufficiency and sustainability. This transformative path not only strengthens India's economic foundation but also positions it as a beacon of responsible and resilient development on the global stage. As the nation continues to forge ahead, the world watches with anticipation, hopeful for the positive impacts that India's endeavors will have on the broader landscape of sustainable progress.

Abstract

In the setting of Coimbatore City in Tamil Nadu, India, this study examines the growth of rural and cottage industries. Coimbatore City, historically known for its industrial capabilities, particularly in textiles and manufacturing, now has to diversify its economy and promote sustainable growth. This study evaluates the state of the village and cottage industries in Coimbatore City using a mixed-methods approach, identifies major obstacles and opportunities, and develops tactical suggestions for their long-term growth. This study provides insights that can guide policies and practices aimed at reviving rural economies and enhancing urban-rural links in comparable locations by concentrating on the particular instance of Coimbatore City.

Keywords: Village and Cottage Industries, Economic Development, Socio-economic Impact, Local Economy , Small-Scale Enterprises.

Introduction

The establishment of cottage and village industries has a lot of potential to promote economic development, job creation, and sustainable development in both urban and rural settings. The goal of this study is to examine the potential and difficulties of rural and cottage industries in the setting of Coimbatore City, a thriving metropolis in the Tamil Nadu region of southern India. Coimbatore City, traditionally renowned for its industrial prowess, particularly in the textile and manufacturing sectors, is at a crucial juncture where it aims to diversify its economic base and establish strong rural-urban links to ensure long-term and inclusive development.

In addition to being important for Coimbatore City, the development of village and cottage industries also fits with larger national and international agendas for encouraging small businesses, offering livelihood possibilities, and developing sustainable practices. It is crucial to review the role and potential of these businesses in forming the urban and rural economies as economic paradigms change and global concerns like climate change and economic inequities worsen. This study intends to present a thorough analysis of the state of village and cottage industries in Coimbatore City, to evaluate their socioeconomic effects, to pinpoint the difficulties they encounter, and to offer tactical suggestions for their

Abstract

Women are an important part in achieving inclusive growth in an economy. In economic development entrepreneurship plays an important role. In India only a very few women participated in entrepreneurial activities till 1980. In 1980 "New Delhi Declaration and Plan of Action" focus development of entrepreneurial skills among women. In 1980-1990 many institutional initiatives were taken for women entrepreneurship. In 1990 after the liberalization, opportunities were recognized and started flourish for women entrepreneurs. The concept and classification of women entrepreneur is discussed. Analysis of hurdles faced by women and various government schemes available for women entrepreneurship is also studied. The few stories of successful women entrepreneurship are also shared. Finally, the conclusion came more rural and lower middle-class women should be supported with more entrepreneurial opportunities for overall growth in the economy.

Keywords: Women Entrepreneurship, Economy, Women Empowerment, Government.

Introduction

Large number of women entrepreneurs have setting up their business. But setting up these were not easy for them, they have faced a lot of difficulties and barriers to become successful. They have to face many challenges and hurdles coming in their way to create a successful business venture. Discrimination in the male dominated society, putting more efforts to prove their credibility. Women choose different style of entrepreneur than men.

Shanta Kahlil Chandra said the women focus more on relationships and believe in intuitions while serving a business, whereas men prefer logical thinking and efficacy. The strength of recognizing the hidden opportunities make them able to gain edge over men. The important part and characteristic in women are "Motherhood skills" which she can easily transfer to job. It includes monitoring, guiding and share information. In developing countries business women have general characteristics like:

1. More concentrated to market sectors as low entry level barriers and less communication required.
2. More focus on services, trade and manufacturing activities

The few stories of successful women Entrepreneurship is also discussed in the article it is conducted that more rural and lower middle -class women should be supported with more entrepreneurial opportunities for overall growth in the economy.

Keywords: Women Entrepreneurship, Economy, Government.

Introduction

"Women entrepreneurs may be defined as the women or a group of women who initiate, organise and run a business enterprise. According to Schumpeter, "Women who innovate, imitate or adopt a business activity are called women entrepreneurs." According to the Government of India, a woman entrepreneur is defined as "an enterprise owned and controlled by a woman and having a minimum financial interest of 51 percent of the capital and giving at least 51 percent of the employment generated in the enterprise to women."

In a nutshell, we may state that women entrepreneurs are those women, who thinks of a business enterprise, initiate it, organise and combine the various factors of production, operate the enterprise and undertake risks and handle economic uncertainties involved in running a business enterprise.

A STUDY ON THE CHALLENGES OF DIGITAL FINANCIAL INCLUSION

Ms. R. Kalaiselvi

Assistant Professor of Commerce-International Business
Nallamuthu Gounder Mahalingam College, Pollachi
kalaiselvingmc2015@gmail.com

Abstract

Financial inclusion through digital means has initiated the concept of digital financial inclusion which is intended to reach out vulnerable community without having digital financial access. This study is an attempt to analyze the various challenges concerning digital financial inclusion. As the main objective of this study was to assess the challenges and prospects of digital financial inclusion, ABCD analysis also has been undertaken to assess its Advantages, Benefits, Constraints and Disadvantages. This research is conducted through secondary sources in order to provide a full-fledged evidence-based study on the challenges of digital financial inclusion. The semi-systematic review is done through various published reports and articles from Springer, Taylor & Francis, Emerald, GoogleScholar, ResearchGate, etc.

Keywords: Digital Financial Inclusion, Challenges, ABCD Analysis.

Introduction to Digital Financial Inclusion

Financial inclusion is one of the cornerstones of a developing economy. Launched in 2015, Digital India has been regarded as a significant intervention to bring the unbanked population, who had been kept out of the mainstream economy, into the formal financial net. While there has been an improvement in digital transactions across the country, issues still remain of last-mile connectivity of banks and other financial institutions, dormant accounts, among others.

Financial inclusion relates to connecting marginalised and the underprivileged in the society to the mainstream economy, by means of providing financial literacy and access to banking and financial services. It is a multidimensional approach that involves bringing on board various stakeholders from the government and the people. India, with a population of more than 1.3 billion, has a large number of people who are still out of the formal financial net. As per the World Bank, about half of India's population is financially excluded (World Bank 2017a). On the other hand, a survey by Standard & Poor's Financial Services estimates that only 24% adults in India are financially literate (Klapper et al 2014). This study has been carried out to identify the major challenges in digital financial inclusion.

Abstract

The basic purpose of this article is to put some light on the challenges to be countered and opportunities to be capitalised upon by the start-ups entrepreneurs and the initiative taken by the Indian govt. The start-ups are the kind of companies which are innovative in their course of development, analysis, evaluation, research for the target segment. In this paper various govt. policies, plans, schemes, start up life cycle, financial and operational strategies related to start-ups will be discussed. Start up is one of the scorching events this era which everyone is talking about. This campaign is particularly based on enhancing the bank financing for the start-ups to encourage the entrepreneurship and creating skilled job availability towards the strengthening of economy at large.

Keywords: Entrepreneur, Govt. plans, Initiatives, Start-ups life cycle.

Introduction

Technological innovation is a new or improved product or process whose technological characteristics are significantly different from before. Implemented technological product innovations are new products (product innovations) or processes in application (process innovations) that have been brought to market. A startup or start-up is a company or project undertaken by an entrepreneur to seek, develop, and validate a scalable business model. While entrepreneurship includes all new businesses, including self-employment and businesses that do not intend to go public, startups are new businesses that intend to grow large beyond the solo founder. At the beginning, startups face high uncertainty and have high rates of failure, but minorities of them do go on to be successful and influential.

Startups typically begin by a founder (solo-founder) or co-founders who have a way to solve a problem. The founder of a startup will do the market validation by problem interview, solution interview, and building a minimum viable product (MVP), i.e. a prototype, to develop and validate their business models. The startup process can take a long period of time (by some estimates, three years or longer), and hence sustaining effort is required. Over the long term, sustaining effort is especially

Abstract

The term gender refers to the economic, social and cultural attributes and opportunities associated with being male or female. In most societies, being a man or a woman is not simply a matter of different biological and physical characteristics. This paper deals with importance of gender equality towards achieving the goal of women empowerment. It outlines the gender inequality scenario in India and types of inequalities between men and women. This paper sheds light on importance of gender equality and role of gender equality in women empowerment, gender concern in development and gender mainstreaming in development. This paper concludes with some interesting findings along with policy suggestions.

Keywords: Gender, Attributes, Empowerment, Inequality, Economic development etc.

Introduction

Gender equity is the process of being fair to women and men. To ensure fairness, strategies and measures must often be available to compensate for women's historical and social disadvantages that prevent women and men from otherwise operating on a level playing field. Equity leads to equality. Gender equality requires equal enjoyment by women and men of socially-valued goods, opportunities, resources and rewards. Where gender inequality exists, it is generally women who are excluded or disadvantaged in relation to decision-making and access to economic and social resources. Therefore a critical aspect of promoting gender equality is the empowerment of women, with a focus on identifying and redressing power imbalances and giving women more autonomy to manage their own lives. Gender equality does not mean that men and women become the same; only that access to opportunities and life changes is neither dependent on, nor constrained by, their sex. Achieving gender equality requires women's empowerment to ensure that decisionmaking at private and public levels and access to resources are no longer weighted in men's favour, so that both women and men can fully participate as equal partners in productive and reproductive life .

Abstract

The New Education Policy announced by Government of India (NEP 2020) was a welcoming change and fresh news amidst all the negativities surrounding the world due to the challenges posed by Covid-19 pandemic. The announcement of NEP 2020 was purely unexpected by many. The changes that NEP 2020 has recommended were something that many educationists never saw coming. Though the education policy has impacted school and college education equally, this article mainly focuses on NEP 2020 and its impact on Higher Education. This paper also outlines the salient features of NEP and analyses how they affect the existing education system.

Keywords: NEP 2020, Features of NEP, Challenges

Introduction

The Ministry of Human Resource Development formed a Committee chaired by Dr K. Kasturirangan for preparing the National Education Policy. The Committee was constituted in June 2017. The Committee submitted its report on May 31, 2019. The National Policy on Education covers elementary and university education in urban as well as rural India. The very first policy for education was promulgated in 1968 with the second one following in 1986. The first NPE was based on the recommendations of the Education Commission (1964-66). This policy sought to have a 'radical restructuring' of India's educational system and equalizing opportunities for education for all, to accomplish national integration and better economic and cultural development. The NPE also called for realizing compulsory education for every child until the age of fourteen, as mentioned in the Indian Constitution. It also aimed at providing enhanced training and improving teachers' qualifications. Compare NEP 2020 with NEP 1991 in the linked article. Some relevant points from the official NEP 2020 PDF that can be useful for the UPSC Mains Exam: NEP 2020 is the 21st Century's first education policy in India. The development of the creative potential of each student is emphasized in the National Education Policy 2020.

Abstract

Women Entrepreneur is a single woman or group of women, who involves in the activity of planning, initiating, organizing, and adopting Business enterprise. Female entrepreneurship is gaining attention and importance in light of the evidence of the importance of new business creation for economic growth and development. Entrepreneurship refers to the act of setting up a new business so as to take advantages from new opportunities. Entrepreneurs are responsible for shaping the economy and they help in creation of new wealth and new jobs by inventing new products, process and services. We all understand that economic development of the today's women is crucial for economic development.

Keywords: *women entrepreneurs, challenges, problems, opportunities of women entrepreneurship*

Introduction

Women's entrepreneurship needs to be studied separately for two main reasons. The first reason is that women's entrepreneurship has been recognized during the last decade as an important untapped source of economic growth. Women entrepreneurs create new jobs for themselves and others and by being different also provide society with different solutions to management, organization and business problems as well as to the exploitation of entrepreneurial opportunities. Women are Born Managers as they can manage their entire home. They have the skill of balancing both business as well household responsibilities. Entrepreneurship refers to the act of setting up a new business or reviving an existing business so as to take advantages from new opportunities.

Objective

- To understand the concept and emergence of women entrepreneurship in India.
- To explore the challenges for women entrepreneurs
- To study the problems faced by women entrepreneurs

RURAL WOMEN EMPOWERMENT THROUGH SKILL DEVELOPMENT

Abstract

Women participation and empowerment are fundamental women's rights to enabling women to have control over their lives and put forth influence in society. Women often face discrimination and gender inequalities, with some women experiencing multiple discrimination and exclusion because of factors such as background or caste. This paper is about skills development through vocational training along with various measures such as Pradhan Mantri Kausal Vikas Yojna, National Skills Development Corporation, National Skills Development Mission. Ministry of Labor and Employment has taken a number of initiatives in the field of skill development and employment. For instance, training of trainers, Vocational Training for girls is being conducted by Advanced Training Institutes and Regional Vocational Training Institutes run by the Ministry. Vocational Education and training are essential mechanism of any strategy to improve farm and nonfarm productivity that improves rural incomes. Skill is the bridge between job and workforce. Women often have different training needs than men, since they are more likely to work as contributing family workers, subsistence farmers, home-based micro entrepreneurs, or low-paid seasonal laborers, in addition to handling their domestic work and care responsibilities. Skills development is a key to improving household productivity, employability and income-earning opportunities for women and also for enhancing sustainable rural development and livelihoods.

Keywords: Women empowerment, Skills development, Vocational Education, Sustainable rural development, Livelihoods, Employability.

Introduction

Skills development and training is a key factor in tackling the challenges of rural poverty. By promoting employability and enhancing income earning opportunities, skills training can lift women and men out of poverty and promote sustainable rural livelihood. The ILO's Training for Rural Economic Empowerment (TREE) Programme provides an example of a proven approach that assists those working in poor rural communities to build the relevant skills and abilities for employment and income generation.

Historically, rural women are powerful, strong and purposeful women who are deprived by the circumstances of abuse, inequality, and lack of opportunities. These challenges have hindered their personal development, economic empowerment, and community leadership.

*The more we give importance to skill development
and the more competent will be our youth*

- **Narendra Modi**

Abstract

Skill development is pivotal in empowering young individuals, enabling them to contribute meaningfully to their communities and societies. Acquiring practical skills enhances their employability and job prospects, boosting their confidence and self-esteem. Moreover, skill training equips young people with entrepreneurial abilities, enabling them to create their employment opportunities and contribute to economic growth. As a result of developing skills, youth gain self-sufficiency, reduce poverty, and become more socially integrated. This study mainly focuses on the opportunities and government initiatives on the development of youth skills.

Keywords: Skill, Empowerment, Global opportunities.

Introduction

Union Education Minister Dharmendra Pradhan chaired the 3rd meeting of the steering committee of National Skill Development Mission (NSDM). In the meeting, discussions centered around skill development schemes, skill gap analysis and skill mapping. A significant point of deliberation was on how the curriculum be developed keeping in mind the emerging trends so that Indian youth can connect with global opportunities.

Various steps are taken to make India's youth ready for the future. The future expects one to be updated with the skills of emerging times. On 21st April 2022, the Pradhan Mantri National Apprenticeship Mela was launched. Apprenticeship is considered the most sustainable model of skill development, and it has been getting a big boost under Skill India Mission. The government is aiming to train one million youth per annum through apprenticeship training. The training is conducted every month from June 2022. Even to sail the boat of unplanned times, over 1.20 lakh candidates were trained under Customised Crash Course programme for COVID warriors.

Abstract

Entrepreneurs play a crucial role in any economy. The economic progress of any country or society will be impossible unless female population is encouraged to engage in entrepreneurship. Entrepreneurs are those who come out with innovative ideas which play a significant role in the growth of a business. Women empowerment refers to the practice of making women independent, so that they can make their own decisions as well as handle their lives without any familial or societal restrictions. Women are known for delivering multiple roles effortlessly. Women are empowered when they have an unrestricted access to education, training, profession to help them improve their position. In a male chauvinistic society, they were confined to four walls. In the present scenario, due to changing trends in industrial sector because of globalisation, rural women empowerment is given more attention to flourish rural entrepreneurship. Rural women entrepreneurs are not only participating in the upliftment of rural economy but also generating rural employment. It reveals that the major challenges faced by the rural women entrepreneurs are competition from urban markets, lack of family support, difficulty in availing Government grants, marketing issue, shortage of resources, lack of transportation, lack of entrepreneurship skill, and lack of training. Despite of all these difficulties, there is a gradual increase in the recognition of rural women entrepreneurs in India. A proper analysis of rural locations and determining the strengths favouring rural women entrepreneurs would encourage more young people to shop in rural areas. Women entrepreneurship must be moulded properly with entrepreneurial traits and skills to meet the changes in trends, challenges in global markets and also be competent enough to continue and struggle for excellence in the entrepreneurial arena. This paper brings out the role played by women entrepreneurs in rural area and their importance in India.

Keywords: Entrepreneurship, Empowerment, Rural women entrepreneurs, Male chauvinism, Economic progress.

Introduction

An entrepreneur is a person who is motivated to satisfy a high need for achievement in innovative and creative activities. This creative behaviour and innovative spirit forms a process of an endless chain and is termed as entrepreneurship. Entrepreneurship acts as a crucial pillar for the economic prosperity of a nation, as it leads to generation of employment, contribution to national income, rural development, industrialisation, technological development, export promotion, etc. For, decades, we have been witnessing changes that have been taken place in terms of roles and statuses among human beings. There have been an enormous evolution in the status of women in past two decades. For centuries, women haven't been provided with proper education from

Introduction

Before the age of computer and digital communication technology, traditional classroom education has been used for the transfer of knowledge from teacher for the student and high dependency was there on the capabilities of the tutor. Knowledge transformation was also limited in time and space by there sources available to students such as libraries etc. But the scenario is change now. There are many digital technologies are available which have high impact on education system. Also due to globalization, there is a pressure on nations of the world to use new technologies in teaching.

There are many technologies have disrupted both our every day lives and commerce. Many disruptive technologies in education are also introduced and the students (according to their needs and teachers can use different technologies controlled by different higher education institutions to support and entire their learning and teaching. The use of ICT is rapidly changing the technological forces that will shape the structure of educational systems of the world.

The role of teaching in a classroom is to help students who are slow learner and to catch up them with other students. But what is about them who are faster at learning? For those students, there are additional courses according to their interests to fulfill their requirements of free elective students. MOOCs is there to enhance online learning with technology.

The teachers can post their instructions online to participants through MOOCs, which is helpful to students to know how to complete the course. The integration of online course material can increase interaction among students and between the students and the teacher, for exp. through virtual group work, building an online community for module, discussion questions, instructor participation and so on. A number of institutions offer virtual distance learning which allows teachers and students to interact with each other.

Digital technology thus provide the potential for establishing communities of inquiry in which elements of social presence and teaching presence interact to create an education experience. Disruptive technologies are also provide an opportunity to those students who can't not come to traditional institutions due to scheduling issues. There are other disruptive technologies also which are useful in education such as cloud learning, mobile learning, e learning, artificial intelligence etc. And are mentioned in the next section of this paper.

Abstract

The objective of this research was to study in depth the thoughts, beliefs and opinions of the teachers " attempt towards pedagogical improvement as part of the Smart School Project. Specifically this research examines and describes the teachers implementation of T&LICT in the classroom in terms of the instructional practice, the instructional roles and the instructional environment. A case study research methodology is employed. The case is Sekolah Menengah Bestari (a pseudonym), which is a Smart School in Sabah. Analysis of data from 52 survey questionnaires complemented the qualitative data from the 13 interviews and 3 observations, as well as document analysis. Findings indicated that hardware and software technology infrastructure were available to support the T&LICT implementation. Nevertheless, the teachers felt it was not enough to implement T&LICT effectively. It was estimated that about half of Sekolah Menengah Bestari staff, mainly Bestari and ETeMS teachers, implemented T&LICT. Findings indicated that teacher practices were little changed. IT was used mainly to support the existing teacher-directed and teacher-centered approach. The role of the teacher extended to that of facilitating without releasing control of lesson to the students.

In relation to the integration of ICT in teaching and learning (T&LICT) is aimed at addressing the need to create a knowledge society and a technology literate workforce for the twenty-first century. Schools have a need to adopt an information-literacy curriculum; and students have a need to develop their ICT and thinking skills and take the responsibility for their own learning. Such needs would be met within a technology-enabled teaching and learning environment that emphasizes student self-direction and self-regulation. The Smart School Project is an example of a major educational change initiative to improve classroom teaching and learning practice within such an environment (Smart School Project Team, 1997). Technology, especially the computer, is seen as a critical tool to support this change in instruction by allowing and supporting inquiry and exploration by student.

Change towards T & L ICT

In the Smart School The Malaysian Smart School was visualized as "a learning institution that has been systemically re-invented in terms of learning-teaching practices and school management in order to prepare children for the Information Age" (Smart School Project Team, 1997, p. 10). The Smart School pedagogy that integrates ICT would see a paradigm shift from the directed to the constructivist teaching and learning.

Abstract:

Well defined and futuristic education policy is essential for a country at school and college levels due to the reason that education leads to economic and social progress. India with the leadership of its current prime minister and an expert team with members of varied backgrounds has developed and planned to implement a new education policy during the next decade of the 21st century called Indian National Education Policy (NEP-2020). The aim, objectives, and details are well known to practitioners and the public. NEP-2020 is an innovative and futuristic proposal with both positive and negative aspects, framed with the objective to provide a quality school education and higher education to everyone with an expectation of holistic & research-oriented progress. This paper initially depicts an overview of NEP-2020, distinguish the strengths & weakness of the policy at higher education & research part, evaluation of the implementation suggestions given in the policy, identifying and analyzing possible generic strategies for implementation of NEP-2020 to fulfill its objectives based on focus group discussions. The paper also includes many predictive proposals on issues like developing quality universities & colleges, institutional restructuring & consolidation, more holistic & multidisciplinary education, optimal learning environment & student support, transforming the regulatory system of higher education, technology usage & integration, and online & digital education. Finally, some recommendations are made to implement the NEP2020 effectively irrespective of various constraints. This article can be considered as a reference to the policy implementation teams of Government of India.

Keywords: *NEP 2020, , features of NEP, vision of NEP Indian Higher Education Policy, Implementation Strategies, Indian Higher Education System,*

Introduction

Education is fundamental for achieving full human potential, developing an equitable and just society, and promoting national development. It is becoming increasingly critical that children not only learn, but more importantly learn how to learn. The curriculum must include basic arts, crafts, humanities, games, sports and fitness, languages, literature, culture, and values, in addition to science and mathematics, to develop all aspects and capabilities of learners; and make education more well-rounded, useful, and fulfilling to the learner. The gap between the current state of learning outcomes and what is required must be bridged through undertaking major reforms that bring the highest quality, equity, and integrity into the system, from early childhood care and education through higher education. This

OPPORTUNITIES AND CHALLENGES IN NEP AND HEI

Dr. R. Gayathri & Abdul Sameer

*Department of B.Com with IB
Ngm College, Pollachi*

Introduction:

India, with its massive and diverse population, recognizes the pivotal role of education in shaping the nation's future. In response to the evolving global landscape and the need for a comprehensive educational overhaul, the Indian government introduced a new education policy. This policy extends its scope beyond primary and secondary education to encompass reforms in higher education institutions (HEIs) as well. This article explores the opportunities and challenges presented by the new education policy in India and its impact on HEIs, analysing how it can shape the future of higher education in the country.

Opportunities:

Holistic Development and Interdisciplinary Approach

The new education policy emphasises holistic development, focusing on nurturing well-rounded individuals rather than encouraging rote learning. This approach creates an opportunity for HEIs to design interdisciplinary programs that allow students to explore diverse subjects and develop critical thinking, problem-solving, and creativity.

Flexibility and Choice-Based Credit System:

The policy advocates a flexible approach to higher education, promoting choice-based credit systems (CBCS). This system enables students to select courses based on their interests and career aspirations, providing a personalised learning experience.

Abstract

The micro small and medium enterprises (MSMEs) have been accepted as the engine of economic growth and for promoting equitable development. The labour intensity of the MSME sector is much higher than that of the large enterprises. The micro small and medium enterprises (MSMEs) have been accepted as the engine of economic growth and for promoting equitable development. The labour intensity of the MSME sector is much higher than that of the large enterprises. The MSMEs constitute over 90% of total enterprises in most of the economies and are credited with generating the highest rates of employment growth and account for a major share of industrial production and exports. The MSMEs play a vital role in the overall growth of industrial economy of the country. With its agility and dynamism, the sector has shown admirable innovativeness and adaptability to survive the recent economic downturn and recession and have lots of opportunities to grow in the future. This paper enlightens the growth of MSMEs and outlining the opportunities available for the MSMEs in the Indian economy.

Keywords: MSME, vital, economy, employment, challenges.

Introduction

In the past few years, MSMEs have generated a huge number of employments, at a relatively lower cost of capital as compared to the large-scale business or ventures or establishments. As there is the increase in employment opportunities in the MSME sector, they help increase the country's socio-economic development. The MSME sector not only providing employment but also helped rural development which was the biggest challenge in front of the Government as in initial phase of industrialization which has attracted rural population towards urban region. It has provided balanced regional development of the country and proved as a key success factor for rural development. The Ministry of Micro, Small and Medium Enterprises (MSME) intends to make the MSME sector, including Khadi, Village and Coir Industries even more vibrant by providing support to existing enterprises and encouraging creation of new enterprises, by way of various programmes and schemes in cooperation with concerned Ministries, Departments and State Governments.

EMPOWERING INDIA'S MSMEs: PATHWAY TO ECONOMIC GROWTH, RESILIENCE, SOCIAL INCLUSION

Abstract

Micro, Small, and Medium Enterprises (MSMEs) play a pivotal role in India's economic landscape. They contribute significantly to employment generation, GDP growth, and foster economic inclusivity. The study begins by providing an overview of the MSME sector's current state, acknowledging its challenges and potential. It then delves into the strategies necessary for fostering growth and resilience. These strategies include streamlined regulatory frameworks, access to finance, technology adoption, skill development, and market linkages. Moreover, it highlights the need for a supportive ecosystem that encourages innovation and entrepreneurship. It emphasizes the importance of gender diversity and equitable opportunities for marginalized communities. Inclusive growth not only ensures a fair distribution of economic benefits but also enhances social harmony and stability.

Keywords: *Self-Reliant India Mission, MSME, Self-reliant and globally competitive*

Introduction

Micro, Small, and Medium Enterprises (MSMEs) stand as the backbone, serving as engines of growth and innovation. These nimble and dynamic entities collectively form the bedrock of economic activity, contributing significantly to GDP, generating employment opportunities, and fostering regional development. The unparalleled potential of India's MSME sector to drive economic growth, build resilience in the face of challenges, and promote social inclusion cannot be overstated. It delves into the myriad ways in which these enterprises have consistently emerged as pillars of economic development, even in the face of adversities. Furthermore, it underscores the imperative of empowering MSMEs, providing them with the resources, support, and opportunities necessary to unleash their full potential.

India's MSME sector is remarkably diverse, encompassing a wide range of industries from manufacturing to services. It is characterized by its adaptability and ability to cater to both domestic and international markets. As a major source of employment, particularly for marginalized sections of society, it acts as a catalyst for social inclusion and poverty alleviation. However, the sector also faces numerous challenges, ranging from access to finance to technology adoption. In an increasingly interconnected and competitive world, it

Abstract

The Self-Reliant India Mission, also known as 'Aatmanirbhar Bharat Abhiyan,' is a comprehensive economic and policy initiative launched by the Government of India. This mission aims to transform the Indian economy into a self-reliant and resilient one, reducing dependency on imports and promoting domestic production. The mission was unveiled against the backdrop of the COVID-19 pandemic and global economic challenges, making it a significant turning point in the growth trajectory of the Indian economy. The Self-Reliant India Mission is a bold and transformative initiative that aims to revolutionize the Indian economy. By fostering domestic production, encouraging innovation, and reducing dependency on imports, it aspires to make India self-reliant and globally competitive.

Keywords: *Self-Reliant India Mission, 'Aatmanirbhar Bharat Abhiyan, India self-reliant and globally competitive*

Introduction

Hon'ble Prime Minister during his address to the Nation on 12th May, 2020 mentioned that a virus has destroyed the world. Crores of people around the world are facing a crisis. World all over is engaged in a battle to save precious lives. This crisis is unthinkable as well as unprecedented for mankind. He directed to remain vigilant, closely monitor, follow the rules of engagement in such a war, save ourselves and move ahead. He informed that the state of the world today teaches us that a (Atmanirbhar Bharat) "Self-reliant India" is the only path. In order to fulfill the dream of making the 21st century India's, the way forward is through ensuring that the country becomes self-reliant. This vision of India - turning crisis into opportunity- is going to prove equally effective for our resolve of self-reliant India as the production of PPE kits, N-95 masks in India has gone up from almost being negligible to 2 lakh each, on a daily basis. Prime Minister remarked that the definition of self-reliance has undergone a change in the globalized world and clarified that when the country talks about self-reliance, it is different from being self-centered. He said that India's culture considers the world as one family, and progress in India is part of, and also contributes to, progress in the whole world.

Key Highlights of Self-Reliant India Mission

The Self-Reliant India Mission aims towards cutting down import dependence by focussing on substitution while improving safety compliance and quality goods to gain
