Constraints of Women Empowerment

In order for women's empowerment to become a reality, structures in the home or in governance must be set up in a way that enables women to make decisions that affect them, to promote gender equality, parity, and social justice, and to contribute to the sustainable development of the country. The situation is made worse by the fact that women frequently accept the treatment as usual due to their upbringing and societal expectations. Culture and religion are the two main factors that influence women's empowerment. These two fundamental problems that underlie how things are done hinder women. The society is based on ideals that have their origins in culture and religion, particularly Christianity, which holds that the male is the woman's superior and that she should obey him as a result. Although it is claimed that women are taking increasingly active roles in politics, government, and leadership, what they are actually permitted to accomplish is an extension of their gender roles. Women automatically get the welfare secretary post in an association rather than the chairperson. They typically focus on women's issues in their capacities as state leaders. This prevents progress and establishes barriers for women, such as glass ceilings. Education has been proven to be a useful instrument for the emancipation and empowerment of women since it may raise women's status in any society by enabling them to explore their abilities, talents, and efforts to make a difference and build a society that is balanced and conducive to good policy. Women can learn more about the world through education, and it also gives them the status, self-assurance, and conviction in their own skills that they need to face life's challenges with courage and inner fortitude.

Act for Women Empowerment

The Parliament passed a number of particular laws to carry out the Constitution's mandate for women's empowerment, including

- The Equal Remuneration Act, 1976.
- The Dowry Prohibition Act, 1961.
- The Immoral Traffic (Prevention) Act, 1956.
- The Maternity Benefit Act, 1961.
- The Medical termination of Pregnancy Act, 1971.
- The Commission of Sati (Prevention) Act, 1987.
- The Prohibition of Child Marriage Act, 2006.
- The Pre-Conception & Pre-Natal Diagnostic Techniques (Regulation and Prevention of Misuse) Act, 1994.

- The Sexual Harassment of Women at Work Place (Prevention, Protection and) Act, 2013.

Fundamental Rights

- Article 14 ensures to women the right to equality.
- Article 15(1) specifically prohibits discrimination on the basis of sex.
- Article 15(3) empowers the State to take affirmative actions in favour of women.
- Article 16 provides for equality of opportunity for all citizens in matters relating to employment or appointment to any office.

Fundamental Duties

Article 51 (A) (e) expects from the citizen of the country to promote harmony and the spirit of common brotherhood amongst all the people of India and to renounce practices derogatory to the dignity of women.

Conclusion

Despite advancements, there is still more work to be done in the area of women's empowerment. The government should put policies in place related to women's awareness, employment, health, education, and other areas since it is now crucial to help women realize their full potential. Creating public attitudes that support women's empowerment and increasing society understanding are essential. Many women have even adopted patriarchal norms in order to dominate other women, such the mother-in-law's dominance over her daughter-in-law. To fulfill their aspirations for emancipation, women must finally take the initiative. Women's empowerment is the best tool available for their progress. Even while we have made progress toward women's emancipation, there is still a long way to go. Today, it is necessary for the government to take action in the areas of health, education, employment, and understanding of women's potential. In order to foster women's empowerment, society needs to be made aware of the issue and public values must be established. Many women even internalized patriarchal conventions to assert their authority over other women, such as the mother-in-law's dominance over her daughter-in-law. It is necessary to study this kind of culture. As prominent sociologist Andre Bettel puts it, "The law only determines the direction that society should adopt, its culture determines the actual direction of society." In the end, women must take the lead. Finally, for women to achieve their goals for empowerment, they must take action. Kofi Annan asserts that the empowerment of women is the best tool available for their advancement. According to Manusmriti, "Yatra Naryastu Pujyante Ramante Tatra Deity," gods reside in places where women are honored. Even after performing all forms of worship, God does not exist in any of the homes where women are degraded.

THE SIGNIFICANCE OF ICT IN HIGHER EDUCATION TO ENHANCE TEACHING AND LEARNING PROCESS

N. Arul Kumar

Assistant Professor, Department of Computer Science
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu, India

Abstract

Information and Communication Technology (ICT) is the mode of education that uses information and communication technology to support, enhance and optimize the knowledge of students on global level. Increasing the use of ICT in higher education with integrative technology has found positive impact on student achievements.

The implementation of various ICT related tools has made the overall teaching and learning process more efficient. The rate of interaction between the students and the teachers are also enhanced with the help of this process. The secondary mode of data collection has been used in this study to understand the main concept and related information. The implementation of various ICT tools also ensures that the students are able to learn on their own. With the rise in technology and internet, it can be stated that the implementation of various ICT tools will be beneficial for the overall teaching and learning process.

Technologies in ICT include:

- *Access of course material.*
- *Online digital repositories for lecture, course material and digital library.*
- *Flipped classroom.*
- *Audio-Video devices, projector, online presentations are useful in enhancing students understanding level.*

Keywords: *ICT, ICT tools, Teaching and Learning Process, E-learning*

Introduction

The teaching and learning environment is embracing a number of innovations and some of these involve the use of technology through ICT integration in education. This innovative pedagogical approach has been embraced rapidly though it goes through a process. In higher education, with the rise of the internet and usage of various technologies towards the learning process, usage of ICT will be beneficial. ICT also has the potential to increase the level of interaction between the teacher and the student, which will increase efficiency of the entire process of learning. The interest of the student also increases as there are multiple audio and visual methods of learning associated with the ICT process. In the past few years, the world has witnessed a phenomenal growth in communication technology, computer network and information technology. The growth of these communication systems, their ease of use, the power and diversity of information transfer allow teachers and students to have access to a world beyond the classroom. It has the potential to transform the nature and process of teaching and learning environment and envision a new learning culture.

Literature Review

A research of (2012) asserted that ICT is reducing the cost per students and expanding the enrolments and makes the provisions for students and supports enduring learners. Lalitbhushan S. Waghmare, et-al (2014) studied “Role of Information and communication technology in Higher education: learners perspective in rural medical schools”. They concluded that there is a need to foresee the role of technology in education which helps in encouraging students towards learning .Information and communication technology in higher education in India: challenges and opportunities (2014). The study revealed that ICT enabled education will ultimately lead to the democratization of education and it has the potential for transforming higher education in India. Mahisa, Anju studied “The role of ICT in higher education in India” (2014) .The study revealed that ICT play vital role as a strong agent for change among many educational practices.

The role of science and technology in the overall process of education has significantly increased over the past two decades. According to the statement of Agarwal and Mittal (2018), education in the 21st century is going through drastic changes and information and communications technology can be used as an alternative for this purpose. ICT can be defined as a set of resources or various technological tools. These tools are used for the purpose of sharing or exchanging information along with creating new segments of resources (Unesco, 2021). These tools can consist of a number of different equipment such as the internet or various broadcasting technologies.

The learning technology that ICT provides can be defined as a self paced learning process. As mentioned earlier, there are various segments associated with the overall process. With the effective use of these segments, the process of teaching or learning can be done in a more productive method. From the perspective of the learning process, the interaction between the teachers and the students can also be enhanced. As stated by Zia et al. (2018), the students are being updated, the capacity of teachers are also enhanced. The implementation of the process in this segment ensures that an open and interactive channel of communication is being established between the teacher and the student.

It is a known fact that education nowadays is no longer confined into books or other reading materials. The learning of new technologies is also essential with the presence of new literacy's into the segment. As per the views of Park (2018), the rate of digital literacy should also be considered as a part of the learning process, which can be significantly improved. These new set of technologies can be used towards the traditional ways of learning so that things can be done in a more engaging way. This can also present itself as a challenge for the teachers as they need to integrate these technological advancements in their teaching processes. By doing so, it can be ensured that student engagement is increased towards the technological literacy.

Incorporation of ICT tools into the teaching segment also points out the fact that the teaching style of the teachers will also change. The overall learning process is transforming and with that, the roles of the teacher will also change (Rodriguez et al. 2018). However, implementing the technological advancements into the learning process is a complex process. If the ICT based teaching methods are compared to the traditional ways of teaching, the enhanced learning process is way ahead in terms of efficiency.

Implementation of ICT can bring various advantages towards the way of teaching and learning. In the overall education segment, the presence of ICT opens up new ways of providing knowledge towards the students. The teachers are also positively impacted by these scenarios as they are able to provide new guidelines or teaching methods towards the students. As stated by Asabere et al. (2017), implementing the ICT model will also be beneficial for the overall process of integrated teaching. Online learning or online education is starting to become an essential part of our lives.

Especially after the pandemic, it can be mentioned that ICT opens up a new horizon of opportunities for the schools. Furthermore, the students will have more options available to gather knowledge from. As compared to previous methods of teaching and learning, studying and gathering knowledge are not only restricted to the classrooms anymore. With the help of the ICT tools, students can continue the process of learning and gathering knowledge as per his wish. This will ensure that the learning process is a lot more fluid.

Curriculum materials, which are a common part of classroom education, can also be benefited from ICT inclusion. Along with that, the students that are displaying a comparatively slower rate of learning and growth can also be targeted with this process. As stated by Zimic and Gadzo (2017), advanced technologies can be used in an innovative way so that more innovative approaches can be created and utilized. However, it can be stated on a contradictory note that the students from the backward class of economy may not get the entire ICT benefits. It is important for the schools and educational institutions to look for strategies that can mitigate these scenarios. Otherwise, there are chances of a digital divide, restricting students from getting the full advantage.

More knowledge is always beneficial for the student base. As per the views of Popkova (2019), it is absolutely essential to gain the ability for effective usage of the information. The recent times can be stated as a platform for pervasive use of ICT so that more effective outputs can be produced. It is important to mention that the implementation of ICT is not restricted to the educational sector only. It impacts all the other segments of society as well. This is why digital technologies should be considered as an integral part of the overall national curriculum as it is already a trend among various economies.

With the implementation of the ICT in the educational scenarios, there are often questions with the acceptability of the entire process. However, it can be mentioned that students or younger adults are often attracted towards the technological advancements. These characteristics should be emphasized so that collaboration can be encouraged. This will also ensure the increase in the rate of subject learning. From the perspective of the teacher, there are also multiple benefits associated.

Method

Various initiatives in the recent past portrayed the significant role that ICT plays in the realm of higher education development. Several projects have reduced the costs, and it also has increased transparency. India has taken up major initiatives in terms of content delivery and furthering education through Information and Communication technology. For example Gyan Darshan was launched in 2000 in broadcast educational programs for

school kids, university students and adults. Similarly Gyan Vani was another such important step with broadcast programs contributed by institution such as IGNOU and IITs. Under the UGC country wise classroom initiative, education programs are broadcast on Gyan Darshan and Doordarshan national channel every day. E-Gyankosh which aims at preserving digital learning resources is a knowledge repository launched by IGNOU in 2005. Almost 95% of IGNOU's printed material has been digitized by uploaded on the repository.

The national programme for technology enhanced learning (NPTEL) launched in 2001 is another joint initiative of IITS and IISC which education through technology. Sristi, the society for research and initiatives for sustainable technologies and institutions is facilitating the use of ICT for strengthening the capacity of grass roots inventors, innovations and entrepreneurs engaged in conserving bio diversity and developing eco-friendly solutions to local problems.

Result and Discussion

Use of ICT in education presents a unique opportunity to solve multitude of challenges quickly as well as at low rate. Here is an overview of advantages of an ICT

Motivating Factor

The internet can act as a motivating tool for many students. Young people are very captivated with technology. Educators must capitalize on this interest excitement and enthusiasm about the Internet for the purpose enhancing learning. For already enthusiastic learners, the internet provides them with additional learning activities not readily available in the classroom.

Fast Communication

The internet promotes fast communication across geographical barriers. Students can join collaborative projects that involve students from different states, countries or continents.

Co-operative Learning

The internet facilitates co-operative learning, encourages dialogue and creates a more engaging classroom. For example, a LISTER V for our class will allow students to get involved in class discussions through e-mails in a way not possible within four walls of classroom.

Locating Research Materials

Apart from communication, research is what takes many people to the internet. There are many resources on the internet than the school library can provide.

Acquiring Varied Writing Skills

If students are required to publish their work on the internet, they have to develop hypertext skills. These skills help students gain experience in non sequential writings.

Recommendations

The quality of programs as measured by fitness for purpose should continue to grow, if the stakeholders perceive the various educational programs as meeting their needs and expectations. ICTs serve to provide the means for activities to realize the potential in human resources. Furthermore, adequate funds must be provided to initiate, develop, promote, review and implement ICT policies in the educational sector to bring about an improvement on ICT utilization, through computer apprentices courses taught in vigerian tertiary institutions. In this period after covid-19 the price of ICT equipment and materials will continue to the astronomical. It becomes highly imperative for all stakeholders of education to entice industrial establishments, politicians, big businessman and entrepreneurs, non-governmental organizations and the community at large to assist the institutions in the provision of ICT equipment and materials and well finished computer laboratories

Conclusion

With the rise in technology and the growth of the internet, various technological tools are being implemented towards the teaching and learning process. It can be mentioned that ICT tools can be used as a viable tool towards providing effective higher education for the students. ICT also ensures that the interaction and feedback process increases, so that more student centric approaches can be incorporated into the process of teaching and learning.

ICT play vital role as a strong agent for change among many educational practices ,conducting online exam, pay online fees, accessing online books and journals. Thus ICT in Higher education improves teaching learning process, provides the facility of online learning to thousands to thousands of learners who cannot avail the benefits of higher education due to several checks, such a time, cost, geographical location etc.

PERSPECTIVE OF ICT TOOLS IN EDUCATION- BRAINSTORMING IN ICT

Ms. S.S. Shanthi

Assistant Professor in Computer Science
NGM College, Pollachi

S. Arthy & C.Kaviya

II - M.Sc. Computer Science
NGM College, Pollachi

Abstract

Abstract Innovation is the key to initiate writing. Learners in classrooms have very little time to think and come up with new ideas for the writing process. Blank page syndrome is a common problem teacher's face in writing classes. Technological brainstorming will facilitate the thinking process and provide sufficient content for the learners. Above all teachers need to familiarize themselves with technological tools available for brainstorming, and enable the learners achieve the learning objectives.

- Conclusion

Introduction

ICT tools have opened up new possibilities for brainstorming, enabling enhanced creativity, efficiency, and inclusivity in the idea generation process. With a wide array of applications and platforms designed explicitly for brainstorming, teams can now leverage technology to harness the collective intelligence of their members effectively.

In this era of virtual collaboration, ICT tools provide diverse functionalities, such as real-time collaboration, multimedia integration, data visualization, and artificial intelligence-powered assistance. These tools empower participants to contribute, share insights, and build upon each other's ideas, fostering a dynamic and iterative brainstorming process.

Uses in Brainstorming

1. **Virtual Brainstorming Sessions:** ICT tools enable geographically dispersed authors, reviewers, and editorial teams to come together for virtual brainstorming sessions. Video conferencing platforms like Zoom or Microsoft Teams facilitate real-time discussions and idea sharing, replicating the in-person brainstorming experience.

2. **Online Collaborative Whiteboards:** Platforms like Miro and MURAL provide virtual whiteboards where participants can simultaneously add, organize, and categorize ideas. This digital alternative to traditional sticky notes encourages interactive brainstorming in a visually engaging manner.
3. **Online Idea Management Platforms:** Idea management tools like Ideanote or IdeaScale allow journal teams to collect, evaluate, and prioritize ideas submitted by various stakeholders. It ensures that valuable suggestions are not lost and can be revisited for future consideration.
4. **Collaborative Document Editing:** ICT tools like Google Docs or Microsoft 365 facilitate real-time collaborative writing and editing of manuscripts, enabling multiple authors to work together seamlessly on journal articles.
5. **Reference Management Software:** Tools like Zotero, Mendeley, or EndNote assist in managing references and citations during brainstorming sessions, ensuring that ideas are appropriately supported by relevant literature.
6. **Mind Mapping Software:** Applications such as Mind Meister or XMind allow teams to create interactive mind maps to visualize and connect ideas. Mind maps help in exploring relationships between concepts and provide a structured framework for journal content.
7. **AI-Based Content Analysis:** AI-powered tools like Word Clouds or Text Analytics help in analyzing and visualizing the frequency of specific keywords or themes within brainstorming notes, aiding in identifying key areas of focus.
8. **Online Surveys and Polls:** ICT tools like Survey Monkey or Type form enable journals to collect feedback and ideas from a broader audience, including authors, reviewers, and readers
9. **Version Control and Revision Tracking:** Version control systems like GitHub or GitLab assist in tracking changes and revisions during brainstorming and writing processes, ensuring transparency and accountability.
10. **Automated Idea Evaluation:** Utilizing AI algorithms, journals can implement tools that assess the feasibility, novelty, and impact of generated ideas, guiding the selection of the most promising ones for further development.
11. **Data Visualization Tools:** Platforms like Tableau or Datawrapper help in presenting complex data and research findings in a visually appealing manner during brainstorming sessions.
12. **Digital Workspace Platforms:** Tools like Trello or Asana provide a digital workspace for managing brainstorming tasks, setting deadlines, and assigning responsibilities to team members.

Tools and Techinques for Brainstorming

- Brainwriting Techniques
- Virtual Reality (VR) Brainstorming
- Idea Management Platforms
- Mind Mapping Software

- Data Analytics and Visualization
- AI-Powered Idea Generation

1. *Brainwriting Techniques*

Online brainwriting tools and platforms, such as GroupMap or Stormboard, support collaborative idea generation without the need for verbal communication. Participants can contribute ideas in written form, promoting inclusivity and reducing dominant personalities' influence.

2. *Virtual Reality (VR) Brainstorming*

Video conferencing tools such as Zoom, Microsoft Teams, or Google Meet enable virtual meetings where participants can brainstorm face-to-face in real-time, regardless of geographic constraints.

3. *Idea Management Platforms*

Idea management software like Ideanote, IdeaScale, or Aha! allow organizations to collect and evaluate ideas from employees, customers, or stakeholders. These platforms facilitate the review, rating, and tracking of ideas throughout the brainstorming process.

4. *Mind Mapping Software*

Tools like MindMeister, XMind, and Coggle assist in creating visual representations of ideas and concepts. Mind maps provide a structured overview of interconnected ideas, aiding in idea generation and organization.

5. *Data Analytics and Visualization*

Analytical tools like Excel, Tableau, or Power BI help extract insights from data, aiding decision-making and idea generation based on data-driven approaches.

6. *AI-Powered Idea Generation*

AI-driven tools, such as IdeaGlow or IdeaFlip, can suggest ideas based on existing data, trends, and user preferences. These algorithms provide creative prompts and inspire out-of-the-box thinking.

Six Thinking Hats

Idea Generation Tool

- The six thinking hats model was developed by Edward de Bono.
- It helps you approach the problem from six different perspectives, allowing you to reduce bias in your brainstorming

The six hats include:

- The factual hat (white hat) – at this stage, you are thinking about what you already know or need to find out;
- The creative hat (green hat) – at this stage, you are thinking about alternatives,

ideas, possibilities that can help you generate solutions to your challenge in focus

- The optimist's hat (yellow hat) – at this stage, you are thinking about the solutions or issues from the most positive perspective; try to identify benefits and value added;
- The judge's hat (black hat) – at this stage, you are exploring the risks and critically appraising any concerns you may have;
- The hat for the heart (red hat) – at this stage, you consider the feelings you have about the solution or the challenge you're trying to solve; think about fears and likes;
- The conductor's hat (blue hat) – at this stage, you're controlling the decision-making process and you organise the entire process to make sure you followed the six thinking hats guidelines.

Mind Mapping Tool

1. Flow map

- This is particularly useful at the design of the experiment stage of your research or general planning stage.
- A flow map is one of the most useful mind maps that you can use as a brainstorming technique. You can see this mind map as a flow chart that lets you visualize your concept as a logical flow of information or steps.

Here are 3 steps that you can follow to create a flow map for your research:

- break down the entire process into small steps
- order these steps in a logical order
- connect the small steps with arrows

2. Circle map

- It often evaluate the relationships between the core concepts and the wider environment.
- This is particularly useful for exploring how related ideas are connected to the core idea we're investigating.
- A circle map is a useful mind map. It clearly shows how each additional layer of understanding connects to the main idea. And these are really simple to create too.

Here are the 4 steps that you can follow to create a circle map:

- Draw a circle in the middle of the page and write the core idea or concept in the middle;
- Draw another circle the core circle and fill it with categories that you want to evaluate a category can be a specific challenge to investigate;
- Draw another circle around the previous one and for each category defined previously determine viable solutions
- Continue drawing circles and gain more insight into specific aspects the research area

3. Bubble maps

- In foreign language, a teacher wrote a word in the middle of the blackboard and then drew small bubbles around it that would describe that word.
- A bubble map is a great brainstorming tool that can help to explain a specific theme or topic with descriptions.

Here is a simple 2-step process you can use to prepare a bubble map

- Define the theme and write it down in the middle of the page
- Write down any idea/challenge/solution in the bubbles around the word

4. Tree map

A tree map is a kind of mind map that breaks down the subject into categories, sub-categories and so on. It can help you understand the fine detail of the research area and represent them in a graphical way for easier brainstorming.

To use this mind mapping tool, follow this process

- Write down the research area or challenge to investigate
- Determine key trends or categories in your research area
- Break categories into sub-categories
- Determine key challenges in each sub-category
- Define potential solutions for each challenge
- Identify the most viable route for your research

5. Multi-flow map

- A multi-flow map can help to graphically represent the problem for investigation and help to determine its causes and effects.
- Simply write down the event in the middle of the page and then write down the potential causes on the left-hand side and the effects on the right-hand side.

Problem Solving

- Blind writing
- Starbursting method
- Trigger statements
- Fill-in-the-gaps method
- What-if method

Conclusion

Hyland remarks, "Technology will only accommodate and not dictate our teaching desires" (2002). Through this study, it is concluded that, technology should be balanced judiciously in the pre-writing stages. Conventional methods cannot be totally ignored as it has its own advantages. A good teacher should balance and blend the methods. In the contemporary scenario, it is necessary to have access to a variety of technological assistance to foster an interactive classroom atmosphere and achieve our educational goals.

Abstract

Women's empowerment can be defined as promoting women's sense of self-worth, their ability to determine their own choices, and their right to influence social change for themselves and others. Women empowerment refers to the empowerment of women to take all decisions of their choice. So that she can take all of the decisions for her social and economic development. Empowerment of women will surely encourage all women to stand for their education and the life of their own choice.

Keywords: Empower women -components-bitter facts-benefits.

Introduction

Women empowerment refers to increasing the spiritual, social, educational, gender, or economic strength of individuals and communities of women. Empowerment is the process of increasing the authority and responsibility of individuals or groups to make choices and to transfer those choices into desired actions and outcomes. Women's empowerment and safety are two closely related and very important issues. Women have the right to feel safe and secure in their daily lives. Unfortunately, many women face harassment and violence regularly. This can make it difficult for them to feel empowered and confident.

The Main Problems Faced by the Women:

- Low confidence.
- Lack of unity.
- Traditional barriers.
- Poverty and ignorance.
- Female infanticide.
- Dowry.
- Gender discrimination.
- Marriage in the same caste.
- Child marriage.
- Harassment etc.,

Importance of Women's Safety

- Women have the right to be free from violence, harassment, and discrimination, and removing the barriers of an unsafe environment can help women their potential as individuals and as contributors to work, communities, and economies.
- Raising awareness around the causes of poor health and well-being that are related to gender. Empowering women and girls through water, sanitation, and hygiene; health and nutrition; livelihoods training; and education programs to increase their opportunities and ability to reach their full potential.

Ways to Empower Women

- Changes in women's mobility and social interaction.
- Changes in women's access and control over resources.
- Changes in women's control over decision-making.
- Providing education
- Self-employment and self-help group.
- Other than society should change the mentality towards the word "Women".
- Encouraging women to develop in the fields they are good at and make a carrier.

Women empowerment has Five Components

- Women's sense of self-worth.
- Their rights to have & to determine choices.
- Their rights to have access to opportunities & resources.
- Their rights to have the power to control their own lives, both within & outside the home.
- And Their ability to influence the direction of social change to create a more social and economic order.

Facts:

- A woman is raped once every 20 min and 10% of all crimes are reported to be of.
- According to the 2021, United Nations Development Programme (UNDP) report on Human Development Index (HDI),

Censes:

- According to the Census which was taken on 22nd of Mar 2022.
- Total population: 1405.2 million.
- Women population: 682 million (48.04%).
- Literacy rate of India in 2021 is 74.04%. The male literacy rate is 82.14% and the Female literacy rate is 65.46% according to the census.
- Total empowerment 36.6 million.
- Male 19.2 million.
- Female 17.4 million. Asian countries except Afghanistan were better for women than India.

Benefits of Women's Empowerment

- Women empowerment adds to the confidence of women in their ability to lead meaningful and purposeful lives. It removes their dependence on others and makes them individuals in their own right.
- They are able to lead their lives with dignity and freedom
- It adds to their self-esteem
- It gives them a distinct identity
- They are able to gain positions of respect in society
- As they are financially independent they are able to spend on all their needs and desires
- They are able to make meaningful contributions to the well-being of society
- They act as capable citizens to make the country achieve enhanced Gross Domestic Product (GDP) growth
- They get fair and equitable access to resources of the country.

Means of Women's Empowerment:

- **Education:** Without proper and adequate education, women cannot become empowered individuals. They need to be encouraged to go for higher studies so that they can contribute significantly to the creation of a knowledge society
- **Communication Skills:** Without developing skills for effective communication, women cannot make their voices heard. It is essential for them to communicate effectively to become successful. As leaders, they need to put across their points to the people so that a family, team, or company can be effectively managed.
- **Disposable Income:** Women need to earn well to have their say in important financial decisions governing their lives. Being financially independent gives women power over their lives and also contributes to the growth of businesses.
- **Power of the Internet:** Access to the Internet has opened the floodgates of knowledge and awareness and increased social interaction reach and influence of women. The liberalizing influence of the World Wide Web has broken all taboos, myths, and misconceptions regarding women.

Conclusion

Women's Empowerment helps to make the society and world a better place to live in and march forward on the way to inclusive participation. It means increase happiness for the family and the organizations where women make a difference. The most significant insight that has come out of this inquiry is that gender-responsive e-government constitutes a normative shift in the idea of governance. E-government can bring women new citizenship rights and opportunities. Its gender transformative potential hinges on measures to translate the vision of gender equality through rules and practices that make governance and democracy work for women.

WOMEN'S EMPOWERMENT IN INDIA : ISSUES AND CHALLENGES

Abstract

The ultimate goal of women's empowerment is to establish a society in which women are empowered and free to conduct their lives without facing prejudice or restrictions because of their gender. Women who are empowered are better equipped to support initiatives to address environmental issues, combat poverty, and advance social justice. Promoting gender equality and empowering women to fully participate in society can be accomplished by providing equal opportunities for women in all spheres of society, including leadership roles, employment, and education. women are financially secure and able to stand on their own two feet and establish their identities in society will there be true and lasting female empowerment.

Keywords: Women's empowerment, education, training, employment, and entrepreneurship.

Introduction

Women's empowerment is the process of giving women the ability to take charge of their own life, make decisions for themselves, and have equal access to opportunities and resources. It requires establishing a setting where women can engage in society and the economy on an equal basis with men, where their views are heard and their rights are upheld. Empowering women can take many different aspects, including social, political, economic, and educational. The ultimate goal of women's empowerment is to establish a society in which women are empowered and free to conduct their lives without facing prejudice or restrictions because of their gender.

Types of Women's Empowerment

There are different ways to categorize women's empowerment, but here are five common types:

- **Economic empowerment** is the ability of women to engage in economic activity on an equal footing with men. Fair salaries, equal pay, and access to credit and financial services are all included, as are chances for education, training, employment, and entrepreneurship.
- **Social empowerment** is the ability of women to actively engage in social and cultural life without facing violence or prejudice. It encompasses the ability to exercise one's rights and freedoms as well as access to legal, medical, and educational resources.
- **Political Empowerment:** This kind of empowerment entails women having the same access to political participation and decision-making as males. Access to leadership roles, voting, and running for office are all part of it, and participation in policy-making processes.
- **Educational Empowerment:** This refers to women's access to education and the acquisition of knowledge and skills that allow them to pursue their goals, make informed decisions, and contribute to society. It provides chances for lifelong learning and access to high-quality education at all levels.
- **Health Empowerment:** Women's ability to obtain healthcare and make decisions about their health and wellbeing is referred to as "health empowerment." It entails having access to data, services, and tools that support maternal health, reproductive health, and general wellbeing.

Importance of Women's Empowerment

Women's empowerment is important for several reasons, including

- **Gender Equality:** Achieving gender equality, a fundamental human right, depends on the empowerment of women. Gender equality refers to the idea that men and

women are entitled to the same opportunities, resources, and participation in all spheres of life.

- **Economic Development:** Women's Empowerment is Vital for Economic Development and Growth. Women are better equipped to contribute to the economy and society as a whole when they have equal access to education, work, and other opportunities.
- **Social Justice:** Achieving social justice also requires women's empowerment. Because of their gender, women and girls are frequently the targets of discrimination, assault, and other types of oppression. Women's empowerment contributes to the development of a society that is more fair and just for everybody.
- **Wellness:** Women's empowerment is crucial for fostering both health and wellbeing. Women who have access to healthcare and education are better able to look after their children and themselves.
- **Sustainable Development:** Achieving sustainable development depends on the empowerment of women. Women who are empowered are better equipped to support initiatives to address environmental issues, combat poverty, and advance social justice.

Factors that Encourage Women's Empowerment

- **Education** is a key component in empowering women because education gives them the information, abilities, and resources they need to make wise decisions, participate in society, and accomplish their objectives.
- **Opportunities for employment and business** can also economically enfranchise women, enabling them to take charge of their lives and make a positive impact on their communities.
- **Participation in Politics, Defence, Sports, and Games:** Women's involvement in a variety of fields, such as politics, defence, sports, and games, can help dispel gender

stereotypes, give women the confidence to assume leadership roles, and combat prejudice on the basis of gender.

- **Equal Opportunities in Society:** Promoting gender equality and empowering women to fully participate in society can be accomplished by providing equal opportunities for women in all spheres of society, including leadership roles, employment, and education.
- **Exposure to the media:** Women who have access to the media and information can use it to advocate for their rights, stay informed about pressing topics, and take part in decision-making processes.
- **Freedom of Expression:** Women's empowerment and involvement in society depend on their being able to express themselves freely and without worrying about prejudice or retaliation.
- **Freedom of Movement:** Women's engagement in society and empowerment depend on their ability to move freely, including the freedom to work, travel, and take part in activities in their communities.
- **Access to good nutrition and sanitation:** Women's health and well-being depend on having access to proper nutrition and sanitation, which enables them to fully engage in society and pursue their goals.
- **Decision-Making Power:** Women's empowerment and involvement in society depend on their ability to make decisions for themselves, including decisions regarding their health, education, and careers.
- **Introduction of Self-Help Groups:** The establishment of self-help groups can give women a network of support and tools to help them fight gender-based discrimination.
- **Changes in women's labour patterns,** such as the acknowledgment and support of women's unpaid care work, can help advance gender equality and economically empower women.

Factors that Prohibit Women's Empowerment

Unfortunately, there are several factors that inhibit women's empowerment in India, including

- **Patriarchal ideas:** Many aspects of Indian society continue to be firmly engrained with patriarchal ideas that place males above women. Women may therefore face prejudice in settings like school, employment, and political engagement as a result of this.
- **Due to poverty, cultural norms, and a lack of infrastructure,** many girls and women in India still have limited access to education, despite the fact that it is a crucial component of women's empowerment.
- **Economic Disparity:** Women in India frequently experience economic disadvantage due to lower pay, fewer work options, and unequal access to resources and financial services.

- **Violence and Discrimination:** In India, gender-based discrimination, sexual harassment, and other forms of violence against women continue to be important roadblocks to women's empowerment.
- **Traditional Gender Roles:** The options and choices available to women, notably in relation to marriage, families, and careers, might be constrained by traditional gender roles and expectations.
- **Lack of Legal and Political Support:** Women in India also experience restricted access to legal services and safeguards, as well as little representation in government.
- **Limited Mobility:** Women's empowerment in India may be hampered by limited mobility, which includes limitations on women's freedom of movement and access to transportation.

Objectives of the Study

1. To know the concepts of women empowerment.
2. To study the violence against women in India.
3. To identify the challenges in the path of women empowerment.

Research Methodology

The purpose of this study is to examine the many forms of women's empowerment. The study is analytical and descriptive in nature. According to the needs of this study, only secondary sources were employed to get the data used in this. Secondary information that is gathered from a variety of national and international agency reports, reliable websites, publications, and online content about women's empowerment.

Violence against Women in India

Physical or sexual abuse of women, particularly by men, is considered violence against women in India. Domestic abuse, sexual assault, and murder are common types of violence against women in India. Because the victim is a woman, this action must be taken solely to raise awareness about violence against women. These behaviours are frequently committed by men who have gendered roles. A crime against a woman is committed every three minutes, according to India's National Crime Records Bureau, which reports an upsurge in such incidents.

Table 1: Proportion of Crime against women (IPC) Towards Total IPC Crimes

S.No.	Year	Total IPC Crimes	Crime Against women	Percentage to total IPC Crimes
1	2009	2121345	203804	9.2
2	2010	2224831	213585	9.6
3	2011	2325575	228649	9.4
4	2012	2387188	244270	10.2
5	2013	2647722	309546	11.2

Source : Crime in India – 2013

- Murders:-** A married lady who commits suicide or is killed because of a dowry dispute. In some instances, the wife has committed herself or there will be an exchange of presents, money, or property during the daughter's wedding in the family. In other instances, the husband and father-in-law persistently try to collect extra dowries through harassment. The majority of these suicides have been carried out by hanging, poisoning, or setting oneself on fire. It is referred to as "burning the bride" when the bride is burned in order to obtain the dowry. The bride's murder is frequently presented to be a suicide or accident, and occasionally the victim is burned alive in a way that makes it appear as though she started a fire while cooking on a kerosene stove. Even though dowager is forbidden in India, lavish gifts are frequently given to the bride and her family at weddings that the bride's family plans. Murdering a family member is known as a "honour killing," because it is an offence against the family's honour. Honour killings can result from declining to enter a scheduled marriage, engaging in adultery, picking an unpopular family member, or experiencing rape. Caste councils frequently execute people in some Indian villages who break the laws of their caste or tribe. Indian women suspected of witchcraft are still being killed today. Women of lower social classes, widows, and income levels are especially at risk from this kind of murder.
- Sexual crimes:-** When it comes to sexual violence against women, India is regarded as the most hazardous nation in the world. In India, rape is one of the most frequent crimes. According to the Criminal Law (Amendment) Act of 2013, rape is the act of a male approaching a woman's physical beauty without her consent and without being penalised. The National Crime Records Bureau estimates that one woman is raped in India every 20 minutes. In India, raping a spouse is not a crime. One of the fifty nations that has not yet outlawed marital rape is India. 20% of Indian men admit to pressuring their partners or spouses into sexual activity. Human trafficking in India, although illegal under Indian law, is a major problem.

People are often smuggled through India for the purpose of commercial sexual exploit at and forced / enslaved labor.

- **Domestic violence:-**Domestic violence is the abuse of one partner by the other in a close relationship, such as a marriage, dating, or close familial relationships. Domestic abuse is another name for it, as are assault, domestic violence, dating abuse, and violence against intimate partners. Physical, emotional, verbal, financial, and sexual abuse are all examples of domestic violence. Domestic abuse can be coercive, aggressive, or subtle. According to politician Renuka Chaudhary, domestic abuse affects 70% of Indian women.
- **Forced marriage and child brides:** Girls who run the risk of being forced into early marriage run a double risk of being both a kid and a woman. Both boys and girls frequently lack an understanding of the purpose and obligations of marriage. Girls involved in these marriages are burdened by their parents and are afraid of losing their sanctity before marriage.
- **Acid throwing:-**Acid throwing is a sort of violent assault against women in India and is sometimes referred to as acid attack, vitriol attack, or vitriolage. Using "acid seeds or other alternative corrosive substances" to deform, maim, torture, or kill someone is referred to as "throwing acid." Acid assaults frequently target the victim's face, where they cause skin damage and frequently expose or shatter the bone. Attacks with acid can result in blindness, lasting scars, as well as social, psychological, and financial issues. The selling of acid seeds has been regulated by the Indian legislature. Compared to other countries, India has a greater rate of acid attacks against women. At least 72% of acid attacks in India that have been documented involve women. The number of acid assaults has increased in India for the past decade.

Challenges of Women Empowerment

There are many challenges facing women's rights issues in India. Targeting these issues will directly benefit women's empowerment in India.

- **Education:-**Since gaining its independence, the nation has advanced significantly, and concern over education has increased. There is a significant gender discrepancy. In India, just 65.46% of adult females are regarded as literate, compared to 82.14% of adult males who have a good education. Higher education has a gender bias, and specialised vocational training has a negative impact on women's employment and ability to rise to the top in any profession.
- **Poverty:** Because it is thought to be the biggest threat to world peace, eliminating poverty should rank right up there with eliminating illiteracy as a national priority. This results in the use of women as domestic workers.
- **Women's health and safety issues** are of utmost importance to the nation and play a significant role in the evaluation of women's empowerment in the country. However, there are worrying concerns where mothers are concerned.

- **Professional Inequality:-**Professional inequality: Employment and promotion are two areas where it is pervasive. Women encounter numerous obstacles in environments that are male-dominated and dominated in both government agencies and the business sector.
- **Household Inequality:** Gender disparities are present in family connections in very subtle but significant ways all around the world, but particularly in India. Sharing small tasks from the 'division of labour' like homework, child care, and household chores.
- **Unemployment:** Women are finding it harder and harder to find the proper jobs for them. They become more open to harassment and exploitation at work. Unbearable Factors: Women who lack education are more prone to be divorced and separate from their husbands at any stage of their lives. They will be forced to live in constant fear of becoming divorced. Sometimes they must come to an end their lives due to unbearable circumstances.

Conclusion

When a woman is in charge of the family, progress is made in the community and the country. This is essential because of how their beliefs and moral code shape a good family, good society, and eventually a good country. Incorporating women into the mainstream of development is the best approach to give them more influence. Only when women are financially secure and able to stand on their own two feet and establish their identities in society will there be true and lasting female empowerment. One of the most pressing issues of the twenty-first century, both nationally and internationally, is the empowerment of women. Government programmes by themselves are insufficient to accomplish these objectives. Gender discrimination should not exist, and society should take the effort to establish such a climate where women have full access to self-determination and can participate equally in the social, political, and economic life of the nation.

ROLE OF ICT IN THE PROCESS OF TEACHING AND LEARNING

Dr. Santosh Kumar

(Post Doc)

drsantoshrana@gmail.com

Abstract

ICT enables self-paced learning through various tools such as assignment, computer etc as a result of this the teaching learning enterprise has become more productive and meaningful. ICT helps facilitate the transaction between producers and users by keeping the students updated and enhancing teachers capacity and ability fostering a live contact between the teacher and the student through e-mail, chalk session, elearning, web-based learning including internet, intranet, extranet, CD-ROM, TV audio-videotape. Edusat technology has become very powerful media for interactive participation of experts and learners and it reaches the unreachable. Emerging learning Technology (ELT) of blogging, Integrated Learning Modules, a pod cast, Wikis, Enhancement of Browsers, e-learning, M-learning, U-learning have started making rapid strides in teaching learning processes. Information and interchanges innovation (ICT) alludes to all the innovation used to deal with media communications, communicate media, smart building the executives frameworks, varying media handling and transmission frameworks, and system based control and observing capacities .Although ICT is regularly viewed as an all-inclusive equivalent word for data innovation (IT), its degree is more broad. ICT has all the more as of late been utilized to depict the assembly of a few advancements and the utilization of basic transmission lines conveying exceptionally different information and correspondence types and organizations. ICT is a nonexclusive term alluding to advancements which are being utilized for gathering, putting away, altering and passing on data in different structures.

Keywords: Web Browsers, Technology enhanced learning, Self paced learning, Interactive learning.

Introduction

The world that awaits us is a world of huge technical change presently the world is inhabited by very large number of scientists and technologists and they are more than the scientist and technologist that have lived on it during the history of mankind. All developments mainly on the economic growth of the nation are based on updated knowledge and information into economic activity has resulted in a profound structural and qualitative change. There is a window of opportunity for Indian because youth power in India is 59 % in the age group of 15-59 %. Japan is the most ageing nation in Asia, over 10 lac citizens are over the age of 90 years. Finland which is known as the proud nation of producing NOKIA mobile and earning over 40 billion dollars per year from it is the most ageing nation of Europe.

Dr Kastusiranjana demonstrated that the central role of advances in science and technology and their applications in the social economic and cultural transformation of the world is tremendous. Human experience with technology is constantly evolving and is finding expression in myriad dimension. Technology has been affecting every part of human endeavor.

India has 550 million below the age of 25 offers an excellent opportunity to become technical force. It is huge opportunity which unfortunately we have not fully tapped and transform our learning and teaching through ICT's in the knowledge based economy. The new ICT enables self-paced learning through various tools such as assignments, computer etc. as a result of this the teaching learning enterprise has become more productive and meaningful. ICT helps facilitate the transaction between producers and users by keeping the students updated and enhancing teacher's capacity and ability fostering a live contact between the teacher and the student through e-mail, chat session etc. This promotes active learning, sharing of ideas, discussion and also provides immediate feed back. This activates paced learning and allows effective mapping of learning path ways. This requires high quality meaningful digital content to be made available to teacher and student. Teachers particularly should possess updated knowledge and skills to use the new digital tools and resources to help students achieve high academic standards. We definitely need a vision to equip our students to meet the emerging trends. The present high tech and competitive society will sustain only through the knowledge of ICT. ICT has the capacity to store, retrieve and process e-content both fast as well as accurate. ICT represents one of the current applications of technology towards teaching- learning processes. According to UNESCO: ICT is a scientific technological and engineering discipline and management technique used in handling information in application and association with social, economic and cultural aspects. Various agencies like NCTE, SCERT, and IASES are being equipped with necessary hardware. NCTE is in the process of developing ICT based instructional packages for teacher educators. It would use ICT enabled learning which would bring in several innovations in teacher education.

Appropriate use of ICT can transform the whole teaching-learning processes leading to paradigm shift in both content and teaching methodology. ICT has the potential to transcend the barrier and space. ICT integration in the field of education has impacted hugely in improving the quality of education. It is widely believed that ICT integration will help us in making education more accessible and affordable. Increasing role of ICT will make education more democratic that is improving the quality education services available to even students sitting in far- flung remotest corners of the country.

The new environment of interactive learner-centered approach of ICT has completely meta-morphosised the process of education i.e delivery and dissemination. The technological creativity learner will help generate sharing of knowledge to perform tasks in a better way and to develop their capacity and skills to keep pace with the rapid changes but the pace of change is so fast that what was avant-garde few years ago is just a thing of past. We must not allow the ICT related opportunities to slip out of our hands. We must empower our youth with the latest technology to tap the latest skills and hidden potential of our youth population. There is considerable hope that technology can expand and improve education in all levels with special reference to design and content of instructional materials, delivery, and assessment and feedback.

In technology enhanced learning (TEL) teacher's role will be more challenging and definitely different from what is presently the traditional class room teaching. In the new

role he will be more a director/coach or a facilitator, because the ET enhances the quality of teaching and learning by arousing inquiry, curiosity and exploration. ICT will afford opportunity to the individual for self-paced learning, which caters to learner's abilities and aptitude. The paper attempts to discuss the role of ICT to meet the challenges of knowledge economy and to explain the development of new methodology of learning and teaching aptitude in the changing context i.e. privatization, liberalization and globalization.

One of the major advantages of using ICT's in the class room has been to prepare. The present and next generation of students for a workplace where ICT's particularly computers internet and others related technologies are becoming more and more important. These computer savvy and technologically literate students possess the desired competencies to use ICT's effectively. These knowledgeable persons possess the competitive edge in an increasingly uncertain globalizing job market. Along with the technology literacy development of specificity skills are also required. For well paying jobs specifically of skill is of the primary importance. ICT which includes radio and television as well as other high technology newer digital devices such as computers and Internet have been treated as generally powerful enabling tools for educational change and reform. On-line teaching as innovative teaching has been accepted widely, which includes on-line net working, role of e-moderator, e-learning? Web -sites which are very popular with teachers and students are Google, Yahoo, Gmail, Rediffmail, Wickipedia. The modern concepts of ICT have helped professionals to cope the challenges for digital information and technology through the development of digital literacy resources. This can be built by:

- (a) Acquiring Digital Media
- (b) Buying Access etc

The role of computers in Education computers is generally helpful for educational activity which requires significant interaction for that instructional software should be highly interactive. Interactive learning environments are called Intelligent Testing System. Because of their interactive capability computers provide individualized and self-paced learning. SW may be customized to meet the specific requirements of the individuals depending upon their diverse background and abilities.

Role of Emerging Learning Technologies

ICT helps facilitate the transaction between producers and users by keeping the students updated and enhancing teachers capacity and ability fostering a live contact between the teacher and the student through e-mail, chalk session, e- learning, web-based learning including internet, intranet, extranet, CD-ROM, TV .

1. **Blogging:** A blog (a blend of the term web log) is a type of website or part of a website. Blogs are usually maintained by an individual with regular entries of commentary, descriptions of events, or other material such as graphics or video. Most blogs are interactive, allowing visitors to leave comments. The ability of readers to leave comments in an interactive format is an important part of many blogs. Most blogs are primarily textual, although some focus on art photographs, videos, music and audio.

2. **Integrated Learning Modules:-** Availability of open source software has enabled development of content management system and learning management system such as a Module. Integrated Learning Module (ILM) is thematically focused classes, delivered primarily over Internet. The course content is integrated and comprehensive creating a unique perspective on course themes without the potentially repetitive requirements of separate stand-alone courses. Content and language integrated learning is an approach for learning content through an additional language (foreign or second language) thus teaching both the subject and the language.
3. **A podcast :** A podcast (or non-streamed web cast) is a series of media files (either audio or video) that are released episodically and often downloaded through web syndication. The mode of delivery differentiates podcasting from other means of accessing media files over the Internet, such as direct download, or streamed web casting. A list of all the audio or video files currently associated with a given series is maintained centrally on the distributor's server as a web feed, and the listener or viewer employs special client application software known as a pod catcher that can access this web feed, check it for updates, and download any new files in the series.
4. **Wikis:-** Ebers bach et al (2006) note that the following basic features are common in wikis:-
5. **Editing:** - Most of the wikis use the same basic page editing function such as Text editing and image, table list hyperlink and file insertion.
6. **Links:** - Each article can be linked to other articles and thus form a new network structure.
7. Improved Teaching and Learning Experience.
8. One of the biggest benefits of ICT training for teachers is the improvement in the teaching and learning experience. With the use of technology, teachers can create more interactive and engaging lessons that cater to different learning styles. This can lead to better retention of information and improved academic performance for students. Additionally, ICT training can help teachers stay up-to-date with the latest teaching methods and tools, allowing them to provide a more effective and efficient learning experience for their students.
9. **Increased Student Engagement and Participation:** One of the most significant benefits of ICT training for teachers is the increased engagement and participation of students in the classroom. With the use of technology, teachers can create more interactive and dynamic lessons that capture the attention of students and keep them engaged throughout the class. This can lead to better retention of information and improved academic performance for students. Additionally, technology can provide opportunities for students to collaborate and communicate with each other, which can enhance their social and communication skills. Overall, ICT training for teachers can have a positive impact on the learning experience of students and help them achieve their academic goals.

- 10. Access to a Wide Range of Educational Resources:** Another benefit of ICT training for teachers is access to a wide range of educational resources. With technology, teachers can easily access online databases, educational websites, and digital libraries that provide a wealth of information and resources for their lessons. This can help teachers to create more diverse and engaging lessons that cater to the different learning styles and abilities of their students. Additionally, technology can provide opportunities for teachers to collaborate with other educators and share resources and ideas, which can enhance their teaching practices and improve the overall quality of education.
- 11. Improved Communication and Collaboration.:** ICT training for teachers can also improve communication and collaboration between teachers and their students. With the use of technology, teachers can easily communicate with their students through email, messaging apps, and online discussion forums. This can help to create a more interactive and engaging learning environment, where students can ask questions and receive feedback in real-time. Additionally, technology can facilitate collaboration between students, allowing them to work together on projects and assignments, even if they are not in the same physical location. This can help to develop important teamwork and communication skills that are essential for success in the modern workplace.
- 12. Utilize Technology to Facilitate Student Learning.:** Technology is a powerful tool for teachers to help facilitate student learning. By utilizing technology such as interactive whiteboards, collaborative software, and other digital resources, teachers can create engaging and stimulating learning experiences for students. Additionally, these technologies can help make more complex topics easier to understand by providing visuals and audio feedback. Technology can be used in both the classroom and remotely to enhance student collaboration, comprehension, and communication.
- 13. Learn the Best Practices for Classroom Integration:** To ensure the successful integration of ICT into the classroom, teachers should become familiar with best practices for teaching with technology. This includes understanding different student learning styles and designing appropriate lesson plans to incorporate ICT tools. Additionally, teachers should be comfortable using the hardware and software needed to effectively teach ICT lessons. Taking part in ICT training for teachers can help provide teachers with the confidence and skills they need to effectively use technology in the classroom.
- 14. History & Recent change** - A function which saves all previous version or modifications of any single page. It allows tracking of the editing processes of an article since all changes have been documented. The features can provide a current overview of a certain number of recent changes to wiki pages or all changes within a predefined time period. Search function: - Most wikis also offer a classic full text or title search for wiki pages. A well known wiki is wikipedia ([http:// www.Wikipedia.org](http://www.Wikipedia.org)) online collaborative encyclopedias where anybody can edit update

the site content as they see fit. The homepage of wikipedia can be accessed easily on browsing the website. Journal of Education and Practice www.iistxcel, Access,

15. **Enhancement for browsers:** Web browsers are adding functionality for their uses. Del.icio.us is a programme which helps you to favorite online and then access in another computer instead of a dedicated computer. Thus these are all additional plug ins that add functionality to the browser. Now it is an information technological era. The students are willing to learn new technologies like mobile phones, i-pod, i-phone, computer and internet. This is an era of technological creativity. To keep pace with latest trends one should make use of electronic technology in teaching learning processes. The recent technology of our world is all pervasive and omnipresent and is developing at a higher speed. Let us encourage the use of ICT in teaching-learning processes in our educational institutions. Now U-Learning (ubiquitous) is making another leap-frog progress emerging through the concept of ubiquitous computing. After the use of computer in education the use of e-learning and mobile learning has made a transformative progress in the field of education. U-learning means every where, every time, every content learning (the, internet etc). Various devices retrieve the information in appropriate format (PDA, cell-phone lap top or any other technological gadgets). U- Learning consists of two components e-learning and m-learning. E-learning includes a wide range of application and processes including computer based learning, web-based learning, virtual class room, digital content. Delivery of content through e- learning is via all electronic media including internet, intranet, extranet, CD-ROM, interactive TV audio-videotape. Edusat's technology has an-in-built-mechanism for many of the existing inter related problem felt during teleconferencing. Time will not be a problem anymore with the off line access to the tele lectures. Through these interactive participation it-reaches the unreachable in the remotest corner and to far flung areas.

Challenges in using ICT in Teaching and Learning

Integrating ICT into teaching and learning is a complex process and one that may encounter a number of difficulties. These difficulties are known as "challenges" (Schoepp, 2005). A challenge is defined as "any condition that makes it difficult to make progress or to achieve an objective" (WordNet, 1997, as cited in Schoepp, 2005, p. 2). The following are some of the key challenges that have been identified in the literature regarding teachers' use of ICT tools in classroom.

1. **Limited accessibility and network connection:** Several research studies indicate that lack of access to resources, including home access, is another complex challenge that prevent teachers from integrating new technologies into education variousresearch studiesindicated several reasonsfor the lack of accessto technology.
2. **School with limited technical support:** Without both good technical supports in the classroom and whole-school resources, teachers cannot be expected to overcome the obstacles preventing them from using ICT (Lewis, 2003). Pelgrum

(2001) found that in the view of primary and secondary teachers, one of the top barriers to ICT use in education was lack of technical assistance.

3. In Sicilia's study (2005), technical problems were found to be a major barrier for teachers. These technical barriers included waiting for websites to open, failing to connect to the Internet, printers not printing, malfunctioning computers, and teachers having to work on old computers. "Technical barriers impeded the smooth delivery of the lesson or the natural flow of the classroom activity" (Sicilia, 2005, p. 43).
4. **Lack of effective training:** The challenge most frequently referred to in the literature is lack of effective training one finding of Pelgrum's (2001) study was that there were not enough training opportunities for teachers in using ICTs in a classroom environment. Similarly, Beggs (2000) found that one of the top three barriers to teachers' use of ICT in teaching was the lack of training. Recent research in Turkey found that the main problem with implementing new ICT in education was the insufficient amount of in-service training for teachers (Özden, 2007), and Toprakci (2006) concluded that limited teacher training in ICT use in Turkish schools is an obstacle.

Conclusion

ICT provide diverse options for taking in and processing information, making sense of ideas, and expressing learning. Over 87% of students learn best through visual and tactile modalities, and ICT can help these students 'experience' the information instead of just reading and hearing it.(20)(37) Mobile devices can also offer programmes ("apps") that provide extra support to students with special needs, with features such as simplified screens and instructions, consistent placement of menus and control features, graphics combined with text, audio feedback, ability to set pace and level of difficulty, appropriate and unambiguous feedback, and easy error correction.

EMERGING DISRUPTIVE TECHNOLOGIES IN EDUCATION: TRANSFORMING LEARNING FOR THE FUTURE

P. Sutheksa, K. Aswatha

& R. PlasinaJenifer

Student, Department of B.Com (E-Commerce)

KPR College of Arts Science and Research

Abstract

This publication explores the rapid advancements in technology that have disrupted traditional educational practices, revolutionizing the way we teach and learn. Emerging disruptive technologies are reshaping classrooms and learning environments, fostering personalized education, enhancing collaboration, and bridging the gap between learners and educators. This paper discusses the key technologies driving this transformation, their impact on education, potential challenges, and the implications for the future of learning.

Introduction

The digital revolution has led to an explosion of innovative technologies that are reshaping every aspect of our lives, including education. In this paper, we delve into the realm of emerging disruptive technologies that have the potential to redefine education, making it more engaging, accessible, and effective.

Augmented Reality (AR) and Virtual Reality (VR)

AR and VR are transforming the educational landscape by creating immersive learning experiences. Virtual simulations enable students to interact with complex concepts, visit historical sites, explore distant planets, and conduct experiments in virtual labs. These technologies enhance comprehension, retention, and motivation in learners.

Artificial Intelligence (AI) and Machine Learning (ML)

AI and ML are revolutionizing the way educators analyze student data, personalize learning paths, and provide timely feedback. Smart tutoring systems, powered by AI, can adapt to individual learning styles and pace, ensuring a more tailored learning experience for every student.

Internet of Things (IOT) in Education

The IoT enables a connected educational ecosystem where smart devices and sensors track student progress, monitor classroom environments, and optimize resource allocation. Real-time data can be utilized to improve learning outcomes and streamline administrative processes.

Gamification in Education

Gamification incorporates game elements and mechanics into educational activities to enhance motivation, engagement, and learning outcomes. By transforming mundane tasks into interactive challenges, students become active participants in their learning journey.

Blockchain Technology and Credentials

Blockchain technology provides a secure and transparent way to verify credentials, certificates, and academic achievements. This decentralized system ensures the authenticity of educational records, making it easier for employers and institutions to trust the qualifications of potential candidates.

Robotics and Automation in Education

Robotics introduces students to coding, engineering, and problem-solving skills in a fun and interactive manner. Educational robots enhance the learning experience, especially in STEM (Science, Technology, Engineering, and Mathematics) subjects.

Cloud Computing in Education

Cloud-based platforms facilitate seamless collaboration, data storage, and accessibility of educational resources. Educators and students can access materials from anywhere, fostering a flexible and inclusive learning environment.

Big Data Analytics for Educational Insights

Big data analytics helps educators gain valuable insights into student performance and learning patterns. These data-driven insights aid in identifying areas for improvement and developing targeted interventions.

Challenges and Consideration

While disruptive technologies offer immense potential, they also bring challenges such as data privacy concerns, digital inequality, and the need for effective teacher training. Addressing these challenges is crucial to harnessing the full potential of these technologies in education.

The Future of Learning

The publication concludes with a look into the future, exploring how the integration of these disruptive technologies may shape the education landscape. It emphasizes the importance of a balanced approach, combining technological innovations with effective pedagogical practices.

Conclusion

Emerging disruptive technologies are paving the way for a more inclusive, interactive, and dynamic educational experience. As we embrace these advancements, it is vital to navigate the challenges responsibly, ensuring that education remains a powerful force in shaping a brighter future for generations to come.

In conclusion, the rapid emergence of disruptive technologies in education marks a transformative phase in the way we teach and learn. From augmented and virtual reality creating immersive educational experiences to artificial intelligence personalizing learning paths, these technologies hold immense promise for enhancing student engagement, knowledge retention, and overall educational outcomes.

The incorporation of Internet of Things, gamification, blockchain, robotics, cloud computing, and big data analytics further broadens the horizons of education, fostering interconnected and data-driven learning environments. However, we must acknowledge the challenges that accompany these advancements, including data privacy concerns, digital inequality, and the need for comprehensive teacher training.

To fully realize the potential of these disruptive technologies, it is essential for educational institutions, policymakers, and stakeholders to collaborate and develop robust frameworks that prioritize student well-being, equity, and academic achievement. An inclusive approach to technology integration, combined with effective pedagogical practices, can ensure that education continues to be a powerful catalyst for societal progress.

As we look to the future, we must remain open to embracing innovation responsibly, leveraging these technologies to empower learners, educators, and communities alike. By embracing emerging disruptive technologies in education, we embark on a journey to create a more dynamic, adaptive, and inclusive learning ecosystem that prepares individuals to thrive in an ever-evolving world. Let us embrace this transformative potential and collectively shape a brighter and more equitable future for generations to come.

WOMEN EMPOWERMENT TOWARDS RETAIL BUSINESS

MS. S. Mahalakshmi

Assistant Professor in Commerce

Department of Commerce - Banking and Insurance

NGM College, Pollachi

Abstract

Women play multiple roles in every stage of her life. Many women select to be entrepreneurs to manage both household & business activities. Work-life balance means balancing between personal life and professional life effectively. A sound and healthy working life are required to maintain effective balance between personal life and professional life. There is a dilemma in women nowadays in attaining perfection both in their professional and personal life. In the present competitive world entrepreneurs need to face many challenges and those must be handled properly. Women entrepreneurs are overburdened and find it increasingly difficult to balance their work & life roles. Therefore, the major objective of the present study is to suggest appropriate measures for the work-life balance (WLB) and factors that affect & creates the gap between personal & professional life. To achieve this data is collected from secondary sources. The researcher provides suggestions and recommendations to deal with the major Work-life balance issues faced by women entrepreneurs.

Keywords: *Women entrepreneurs, work-life balance, professional and personal life, etc.*

Introduction

Retail stores are defined as a shop that sells one type of merchandise and retailers tend to overload their stores with different products as possible to reach the highest sales per square meter. Nowadays, due to the rapid changing in the fashion industry, stores have to be designed and modernized to have a specific image that attracts more customers and in turn increase revenues. Store design includes store layout, and the use of colors, sound, scent, and merchandise displays that affect store atmosphere and make the store more legible for customers. Different researchers claim that store image is a determinant factor for consumers in choosing a store that stimulating their purchasing decisions. In addition, many studies support that design elements support the store image, attract the attention of customers, and store loyalty rather than ambient elements .In addition, store design is considered more influential as it affects peoples' perception of the overall brand and alters customers purchasing mood According to marketing researchers, store image is an important marketing strategy that has an influential role on store loyalty and patronage decisions rather than merchandise and price. To quote the designer Leandro Artigala, "One of the key things in retail is that consumers have to feel that they're in the environment that they are looking for" Different studies show that when consumers face multiple similar options, their choice will be based on the differences between these options.

When empowerment is considered in terms of women there are four key terms which overlap to form the consensus- "option, choice, control and power". In a broad sense this

describes how much flexibility a woman has to influence decisions in her family and own life; the degree to which they can influence decision making for themselves as well their family and the level of self-resilience and autonomy they possess in the functions of their own life. It can also be coined as having entitlement and confidence of a woman to take part in decision making with choice and self-interest.

Review of Literature

Dr. Padmaja, Priya.k (2022) conducted "**A Study on women empowerment through entrepreneurship in India**". The aim of the study is to analyze how women entrepreneurs play a vital role and have made significant contributions to economic growth and reduction of poverty. Sample chosen for this study is 65. Convenience sampling method is used for this study. Tool used for this study is anova. Secondary data were collected for this study. The findings of the study in the Business world women's are fighting for their independence rights and equality.

Ms. Shwetha ,Kagenavar ,Dr.G.H.kallimath (2021) conducted "**A Study on women entrepreneurship and work life balance.**" The aim of the study is to analyze how women play multiple roles in every stage of her life. Sample chosen for this study is 100. Judgment sampling method is used for this study. Tool used for the study is anova tool. Secondary Data were collected for this study. The finding of the study is to deal with the major work life balance issues faced by women entrepreneurs.

Dr. Jasleen Kaur, Chandandeep Kaur (2020) conducted a "**A Study on retail therapy behavior of women in India.**" The aim of the study lies in extending the retail therapy research to Indian Shoppers. Sample chosen for this study is 703. Snowball sampling method is used for this study. Tool used for this study is t-test tool. Primary data were collected for this study. The findings of the study have important implications for the retailers.

Deena Paul (2019) conducted a "**A Study on the impact of online shopping over small retailers of women**". The aim of the study to analyze the new business pattern for achieving their customer satisfaction. Sample chosen for this study is 50. Continent sampling method is used for this study. Tool used for this study is a statistical tool. Primary Data were collected for this study. The findings of the study are turnover and profit margin of the retailers has considerably decreased in the past few years.

Statement of the Problem

Women empowerment plays a major part in the family. She holds the family together. According to the olden days tradition Women were not allowed to work They were asked to stay back at home while their husbands went to works, for them work was household and kids. The main problem for women is experiencing specific challenges when trying to achieve a leadership role in retail management.(outland 2013) There can often be obstacles in women's way hindering their advancement in retail due to barriers of gender(nordell 2014). Women struggle with so-called second generation gender biases, which are "powerful yet often invisible barriers to women's advancement that arise from cultural

beliefs about gender, as well as workplace structures, practices, and patterns of interactions that inadvertently favor men".(patel and buiting 2020)There are a number of key themed areas that will be discussed which are generally the reason for women not progressing in retail management. And it is focus on essential for assessing the growing need for work life balance policies or programmes for the working women of india. To know the women empowerment of retailing. From this study the question has been raised to identify the major constraints that creates obstacle for women empowerment in starting or running their retail business in pollachi taluk.

Objective of the Study

- To study the demographic profile of women empowerment in the retail sector.
- To identify the major constraints that creates obstacle for women empowerment in starting or running their retail business

Sources of Data

Data nature collection is one of the most important aspects of research. Primary and secondary data were used in this study

Sampling

The data required for the study have been collected by way structured questionnaire on order to know the women's empowerment in retail business of the total 110 questionnaires issued 110 questionnaires are collected, and 110 questionnaires are taken for analysis. The convenience sampling method is adopted to select the sampling customers

Research Methodology

The present study is based on the primary data of Pollachi taluk by distributing the questionnaire containing questions relating to socio economic profile to the women empowerment in retail business. Necessary guidance was given to the respondents for filling up the questionnaire

Gender Equality of Women Empowerment

Data is to be collected from 110 respondents used for the study questionnaire is divided into 3 parts and containing 20 question is to allowed to assess the satisfaction level of women empowerment. Satisfaction level is calculated based on standard deviation at (11.29) and average (79.34).Respondents whose index value is below 68.05 is treated as "Low level of satisfaction of women empowerment ", whose index range between 68.06 to 90.62 is treated as" Medium level of satisfaction level", whose index treated is above 90.63 is treated as "High level of satisfaction level ".Chi – square analysis has been implemented to test association between the selected variables and satisfaction level.

S.NO	VARIABLES	NO. OF RESPONDENT	CHI-SQUARE VALUE	SIGNIFICANT/NOT
1	AGE Less than 20 21-30 31-40 Above 40	5(4.5%) 38(34.5%) 43(39.1%) 24(21.8%)	10.105	Significant @ 10 % level
2	MARITAL STATUS Unmarried Married Widow Divorced	26(23.6%) 71(64.5%) 5(4.5%) 8(7.3%)	16.104	Significant @ 10 % level
3	NUMBER OF YEARS 1-3 4-6 6-10 Above 10	43(39.1%) 39(35.5%) 21(19.1%) 7(6.4%)	4.649	Significant @ 10 % level
4	NUMBER OF EMPLOYEES below 10 10-20 workers 20-30 workers Above 30 workers	72(65.5%) 31(28.2%) 6(5.5%) 1(.9%)	15.658	Significant @ 10 % level
5	WORK AND FAMILY Always Most of the time Sometimes Never	17(15.5%) 48(43.6%) 44(40.0%) 1(.9%)	20.597	Significant @ 10 % level

In order to know the satisfaction of women empowerment by applying Chi - square. The associated variable are age, marital status, no. of years, no. of employees, work and family. When the age are increasing the gender equality of women empowerment reduced, When the no. of years are increasing the gender equality of women empowerment reduced, When the marital status are increasing the gender equality of women empowerment reduced, When the no. of employees are increasing the gender equality of women empowerment reduced, When the issues in retail are increasing the gender equality of women empowerment reduced, When the , work and family are increasing the gender equality of women empowerment reduced, When the sell retail product in e-commerce platform are increasing the gender equality of women empowerment reduced

Conclusion

Because of this competitive world, people are choosing to work over their personal life. Family, friends and relatives are ignored to manage their work life. It creates conflicts between work life and personal life. Women must have complete knowledge of their changing roles in family and work. Women have to develop relevant skills and good combination of effective skills enables them to maintain healthy balance between work life and personal life .It has a long time for fighting for women's rights, equality and independence of women. Till today in backward areas, women are facing many problems. There are genuine instances of dowry, rape, harassment, abandonment and other problems that a woman has gone through in a marriage and family. They need to be strong and use these laws to protect themselves. In every case of misuse of power, there is a human story, of someone being hurt and threatened, with an extortion that leaves them bitter, sick and damaged. Fair discussion can solve biggest family issue. Men and women both need to be humanists. Whether a woman has been hurt or a man, society and law should be sensitive to both. Instead of playing the power card, morality, forgiveness and happiness of family members should be motto. In family life ego should not take place, forgiveness can help to save a marriage.

INFORMATION COMMUNICATION TECHNOLOGY TOOLS IN EDUCATION

Mrs. M. Ragaprabha

Assistant Professor, PG Department of Commerce with International Business
Nallamuthu Gounder Mahalingam College, Pollachi

Mr. M. Gowtham

II M.Com IB (22-PI-01)
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Information and Communication Technology (ICT) is an extensional term for Information Technology (IT) that emphasizes role of unified communications and the integration of telecommunications (telephone lines and wireless signals) and computers, as well as necessary enterprise software, middleware, storage and audiovisual, that enables users to access, store, transmit, understand and make uses of the information. ICT is an umbrella term that includes any communication device, encompassing radio, television, cell phones, computer and network hardware, satellite system and so on, as well as various services and appliances with them such as video conferencing and distance learning. ICT is a broad subject and the concept is still evolving. It covers any product that will store, retrieve, manipulate, transmit or receive information electronically in digital form (e.g., personal computers, smart phones, digital television, e-mails, and robots). Use of ICT Tools is all pervasive in our everyday life, and use of ICT tools has almost revolutionized the way teachers impart knowledge to students and students receive knowledge from their teachers, Not only that, by making accessible entire bookshelf and whole of library to students and teachers on a click of their smart phones and laptops have made education simple, much more efficient and have enhanced their productivity enormously.

Keywords: ICT tool, Technology in Education, Teaching and Learning.

Introduction

Information and Communication Technology (ICT) includes computers, the Internet, and electronic delivery systems such as radios, televisions, and projectors among others, and is widely used in today's education field. Kent and Facer (2004) indicated that school is an important environment in which students participate in a wide range of computer activities, while the home serves as a complementary site for regular engagement in a narrower set of computer activities. Increasingly, ICT is being applied successfully in instruction, learning, and assessment. ICT is considered a powerful tool for educational change and reform. A number of previous studies have shown that an appropriate use of ICT can raise educational quality and connect learning to real-life situations. Learning is an ongoing lifelong activity where learners change their expectations by seeking knowledge, which departs from traditional approaches. As time goes by, they will have to expect and be willing to seek out new sources of knowledge. Skills in using ICT will be an indispensable prerequisite for these learners.

What is ICT?

- ICT stands for Information and Communication Technology.
- ICT are basically information handling tools, a varied set of equipment, applications and services that are used to produce, store, and process, distribute and exchange information.
- Old ICT include radio, television, telephone, tapes, cassettes etc.
- New ICT include computers, satellite, wireless technology and internet.
- Definition of ICT.
- As per IBM Glossary, "ICT is the use of computer based information systems and communication systems to transmit and store data and information".

Importance of ICT in Education

- No nation can develop without ICT based education. It is regarded as fuel for development.
- ICT based education is the essential ingredient in developing new ideas, in course content and curriculum and in creation of materials and methods of learning and teaching.
- Students need ICT for pursuing academic studies whereas teachers need ICT based information for teaching.
- ICT has made it easier to process and disseminate knowledge. It has increased the efficiency of the knowledge professionals in organizing and managing knowledge.
- It has saved the space of library by creating library on digital platforms and further by uploading them onto the servers or clouds. And thus making retrieval of information much easier for everyone.
- ICT Tools prevalent in colleges for imparting education to students.
- Nowadays teachers use well equipped classrooms with permanently installed and operational projectors. Teachers utilize these for purpose of teaching through presentations, videos and other relevant materials.
- Students are also encouraged to put up presentations and explain the topics to the teachers, while students are continuously evaluated during the process.
- During present pandemic time, teachers make extensive uses of ICT tools for teaching their students online thru Zoom and Google Meet. This could be possible only with such ICT tools, that includes smart phones, laptops, relevant software etc. During this pandemic scenario students and teaching faculties remained continuously in touch over whatsapp and Google Classroom (yet another example of ICT Tools).

ICT Tools in Vogue in Colleges

- Desktop
- Wifi
- Email
- MS Powerpoint

- Laptop
- Scanner
- Smart Board
- MS Office
- Printer
- Google Classroom
- Interactive Whiteboard
- Pen Drive
- Zoom
- MS Word
- USB
- WhatsApp
- MS Excel

Classification of ICT Tools

ICT could be classified in three categories:

1. Physical ICT hardware or Gadgets:

It include audio-visuals, telephone and computers

- Television
- Cell phones
- Modems: A modem is a device that translates signals to and from between two computer devices in a network.
- Computers: There is numerous things that computers can do as far as device connectivity, task processing, data management and storage is concerned. The computer connects us to the internet and helps us share information in a network. Other physical communication technologies (ICT gadgets or hardware) in digital devices include remote controls, keyless entry devices, walkie-talkies, Bluetooth earpieces, GPS Satellites, CD's DVD's, flash drives, tape, compact memory chips.

2. Non-Physical ICT Software (Virtual Communication Technology):

Software and Wireless Network represent ICT Software : Software is a program that direct smooth running of a computer system. It can be system software (such as Microsoft operating system) or application software (such as MS Internet Explorer, MS Word, MS Excel etc.).

3. Communication Technology Services (ICT Services):

Internet and Email services are examples of ICT services.

ICT Equipment for Every Classroom:

Ideally, following 10 ICT items, should be features of every classrooms in our educational institutions. While majority of university colleges do possess majority of them but some of them are still just pipedream for many!

1. A social media output channel to connect with students, parents and fellow classrooms.
2. A desktop computer to access online resources.
3. USB or Wifi access for document sharing and device connectivity.
4. A projector with interactive whiteboard functionality or television screen connectivity.
5. A presentation clicker for classroom mobility. The best one I've found is Logitech which i use for keynotes.
6. A visualiser or document camera for displaying student work, or presenting live feedback.
7. Tablet devices for teacher and student e.g. i Pad.
8. Recording hardware/software for podcasting e.g. microphone, headphone and speakers.
9. A digital camera for showcasing work in film or photographs.
10. A few show-off gizmos; e.g. data-logging; remote control vehicles/robots/buzzers and lights.

ICT Tools being used normally by academicians

Applications of ICT in Education

- Enablement of employment of innovative educational resources
- Continuous renewal of methods of learning
- Sets up more active collaboration from students
- Makes possible simultaneous acquisition of technological knowledge
- It facilitates refinement in educational processes

Major applications of ICT

- Internet the miraculous all pervading medium
- Intranet
- E-mail

- E-group
- Mobile phone
- Fax
- Video conference
- Telecommunications and digital telephone exchanges

Everyday applications of ICT:

Banking, Education, Transport, Medicine, Agriculture, E-commerce, E-governance.

ICT is playing a pivotal role in today's world:

- ICT has made the whole world a global village.
- It is accelerating the information explosion.
- This has led to better information management and bibliographical control for digital content.

The job of library and information professionals is becoming tougher day by day and ICT comes to the aid by providing even ways to deal with scattered and unorganized information and avoid information pollution or misleading information some examples of ICT tools,

- Digital library.
- Greenstone.
- D space.
- UGC-Info net: E-Journals Consortium Greenstone and D Space are open source software for content creation to maintain an institutional repository UGC-Info net is a country wide network for improving the education system with state-of-the-art technology.

Advantages of using ICT

Communication

Speed / time – money can be saved because it's much quicker to move information around. With the help of ICT it has become quicker and more efficient.

Globalization :

Video conferencing saves money on flights and accommodation. ICT has brought the countries and people closer together.

Cost effectiveness

It feels free to send an email which is definitely cheaper than phone calls.

Bridging the cultural gap

Greater access to technology has helped to bridge the cultural gap by helping people from different cultures to communicate with one another, and allow for the exchange of views and ideas, thus increasing awareness and reducing prejudice.

Education:

Computer's along with their programs and the Internet have created educational opportunities not available to previous generations. Through ICT, images can easily be used in teaching and improving the retentive memory of student.

Disadvantages of using ICT**Lack of job security :**

Experts in a wide variety of fields believe that ICT has made job security a big issue, since technology keeps on changing nearly every day. This means that individuals need to be constantly studying or at least keeping up with changes in their profession, if they want to feel secure in their jobs to be secure.

Overriding Cultures :

While ICT may have made the world a global village, it has also contributed to one culture consuming another weaker one. For example, it is now argued that teenagers in the US influence how most young teenagers all over the world now act, dress, and behave.

Privacy

Though information technology may have made communication quicker, easier, and more convenient, it has also brought along privacy issues. From cell phone signal interceptions to e-mail hacking, people are now worried about their once private information becoming public knowledge.

Reliance on Technology

Professor Ian Robertson, a neuropsychology expert based at Trinity College Dublin who carried out the study, said: "People have more to remember these days, and they are relying on technology for their memory but the less you use your memory, the poorer it becomes. People don't bother learning to spell because they use spell-checker, or need a calculator do perform minor addition or subtraction.

Reliability of Information

Anyone with access to a computer and an internet connection internet can start a blog or post something up on a website, so just because something's on the web doesn't mean it's reliable. A prime example of this is the open source encyclopedia, Wikipedia, although considered a good source of information it is not recognized by academic institutions as a trustworthy reference.

Computer Viruses

Computer viruses, worms, Trojans, malware, spam, phishing- any or all can cause chaos and disrupt our daily lives.

Expensive:

Too expensive to afford.

Conclusion

It is true that with advent of numerous ICT tools our lives have changed drastically and it has revolutionized our education methodology, communication ways, as well as our business processes. Overall, we cannot imagine our world without ICT tools & gadgets. We cannot survive for even an hour without our smart phones, laptops, digital devices etc. etc. ICT has enabled revolutionary changes in creation, processing, handling, storage and dissemination of digital information through communication network. Millions and millions of digital information products are coming up day by day. There is an information explosion and bibliographical control is a tough nut to crack. Library and information professionals need training, orientation and awareness to face the big challenges of future.

IMPACTS OF ICT AND IOT IN SMARTER EDUCATION PARADIGMS - A SPECIAL FOCUS ON STUDENTS WITH DISABILITIES

Dr. T.Sumadhi

Assistant Professor, Department of Computer Applications
NGM College, Pollachi

Abstract

Recent years have seen a surge in the use of new technologies as well as its effects in many areas of life. IoT is playing a bigger and bigger role in special education and training over time. Collaboration between technology and educational specializations involved in the educational teaching of individuals is the key to students' holistic evolution and development. The Internet of Things (IoT) and AI-based techniques work together to create smart and intelligent paradigms, which is a major factor in their development. The treatment of student mental health issues, especially in the setting of physical education, can be advanced by using these strategies extremely effectively in a number of different fields. To calculate a student's stress or depression level and improve abilities and performance in the classroom, clever strategies might be applied. Innovative technologies make it possible to precisely analyze behavioral characteristics and spot any unfavorable patterns, allowing for the early detection of mental health issues. By reducing levels of worry and despair, AI can effectively assist students become more responsible citizens by enhancing their psychological health and mental performance. This article's major objective is to raise awareness of the impact of IoT based on ICT on special education students' education and health promotion, as well as on young people with physical and mental disabilities.

Keywords: Internet of Things; IoT applications; smart devices; Internet of Things (IoT); Education, Educational Technologies; Online Learning; Students with Disabilities.

Introduction

There is a significant impact of mobile technology and the IoT both within and outside of the classroom. Popular IoT education use cases have been highlighted by Insider Intelligence, including remote learning, the future of the internet in education, and IoT applications in higher education. The Internet of Things (IoT), which is the connecting of items to the Internet that are not mainstream products like computers and smartphones, is in the process of changing many aspects of our daily life. Education is included in that list, despite the fact that it may not seem like an obvious use of the IoT. E-learning is now a standard practice in the American school system as a result of the internet's pervasive influence on our classrooms. But the Internet of Things has many educational uses, and this disruption has huge ramifications. Schools may increase the security of their campuses, monitor important resources, and improve information access in the learning environment thanks to the growth of mobile technology and the Internet of Things (IoT). In addition, teachers can use this technology to develop "smart lesson plans" as opposed to the stolid plans of the past.

The combination of IoT and AI-based grounded operations is crucial for the creation of smart and intelligent paradigms. These techniques can be utilized very successfully to

improve a number of disciplines, including the treatment of mental health issues affecting students, especially in higher education. The goal of special education is to help the child become an active, autonomous member of society. Everything that is provided to the kid as part of special education is something that should be provided in the setting of the classroom and throughout the course of the child's academic career. ICTs are one tool for managing a person's unique educational requirements. The diagnosis and support of the educational needs of the disabled can be done using ICTs and IoT technologies [1,5]IoT in general and special education can leverage mobile applications in a variety of ways [2,3,4,14].

Impact of IoT& Technology on Special Education

By keeping track on each student's internet usage, ICT-based IoT applications in special education increase user navigation security. Teachers are able to design clever lesson plans. They gain knowledge in data collection and processing, data monitoring, and decision-making on the best study and teaching approach. Teacher and student contact is made possible through the use of technology and IoT devices. Students, for instance, are trained using mobile IPAD / Tablet devices equipped with interactive apps with integrated visuals and simulations, allowing them to escape from books.

Applications for AI and knowledge management can be used in conjunction with IoT and integrated into the IoT design to improve the overall services provided [6,7,8,9, 19], as well as to advance cognitive function, consciousness, and emotional intelligence [12,14-16,18,19]. IoT can also help with neurodevelopment and brain remodeling [17,18]. Additionally, there are numerous ways that serious games can be applied to improve IoT ecosystems [27,28,30,39,44]. The future educational system will be more diverse as a result of the new ideas that this digital transition will bring, which have the potential to alter how students and teachers think and study. According to an eMarketer estimate, 83.2% of all 12- to 17-year-olds have a smartphone. Additionally, 73.0% of parents said their kids had a smartphone between ages 11 to 13, and 31.0% said their kids had one between ages 6 and 10. Students who use these mobile IoT devices in the classroom can automate tasks that they already do now, such as note-taking, schedule checking, and research. As for the schools, the greatest benefits would be increased energy efficiency and reduced operating costs.

Ict Based Iot in Higher Education

The IoT can begin interfering with education as early as kindergarten and can do so until grade 12, although its effects are probably most noticeable in higher education. Particularly at colleges, students are gradually moving away from paper books and toward tablets and laptops. Since they have access to all the necessary materials, students may now learn at their own pace and enjoy a learning experience that is almost identical in the classroom and at home. Students find learning to be more convenient thanks to this propensity, while professors find teaching to be more successful as a result. Teachers are no longer necessary to hand-grade exams on paper or perform other customary tasks due to the advent of connected technology.

Professors can instead concentrate on the customized instruction that will benefit their students the best. Professors can gather data on their pupils using devices that are cloud-connected, then decide which ones require the most individualized care and attention. These data support teachers in enhancing student engagement and modifying their lecture plans for upcoming classes. Universities may monitor their students, staff, resources, and equipment outside of the classroom using linked devices at a lower operational cost, which saves money for everyone. Additionally, safer campuses should result from these tracking capabilities. Students, for instance, would be able to monitor connected buses and modify their itineraries accordingly, preventing them from wasting time in potentially hazardous regions.

Role of Ict And Iot in Our Intelligent Educational System

It incorporates numerous digital devices into the classroom and uses various technologies to provide an intelligent learning environment and enhance the learning process. Such a concept is applicable in both a virtual and a physical context, which meets the challenges arising during global crises and requirements of the digital generation, the IES provides a smart environment where the learning process is more engaging, adaptive, personalized, and efficient. It is achieved by utilizing a full range of contemporary educational technologies. They include networked interactive devices (e.g., notebooks, smart phones, computers, and tablets), IoT (sensors, actuators, cameras, RFID tags, RFID readers, and wearables), and other innovative technology tools. Furthermore, specialized software is used for monitoring, gathering, processing, analyzing, and managing all educational and environmental data. Also, smart decision making based on intelligent technologies such as learning analytics, artificial intelligence, semantics, on to logics, neural networks, and data mining provides smart resource control and smart management of the educational process.

Figure 1: Block diagram of Intelligent education system

In the context of our IES, IoT has a twofold role – to intelligently control and manage classroom environmental parameters and to enable innovative teaching approaches that make the learning process efficient. It involves the integration of IoT devices within IES – sensors, actuators, wearable devices, cameras, etc. to allow the educational system to remotely monitor and control the physical parameters of the environment and the parameters related to the learning process (students’ behavior, engagement, and concentration).

Table 1 describes in detail the role of IoT in our IES, indicating the location in the smart school, purpose, and educational objectives of every device. Security and safety are a challenge in every public building. In our concept of a smart school, IoT devices (intelligent cameras, temperature, smoke and noise detectors, motion sensors, etc.) help monitor students, teachers, objects, and equipment in smart classrooms and the school as a whole. In such a case, alarms are triggered, and notifications are sent based on rules and events. Thus, the staff quickly can identify potential incidents and accidents, instantly make a proper decision and take the corresponding actions for prevention.

Table 1: List of IOT devices and its objectives

IOT	Purpose	objectives	Users	Place of IoT
Air quality analyzer	Optimal air quality conditions	Providing optimal environment for learning	Students, staffs, teachers, administrators	School classrooms, students work place, libraries, laboratories, Gyms
Temperature sensors, humidity sensors, motion sensors, noise sensors	Energy saving, lighthing, security supporting the educational process	Providing optimal environment for learning and supervising students	Students, teachers and staffs	
cameras	Security enhancing safety	Monitoring students mood and health	Students, teachers and staffs	
RFID tags, RFID Readers	Security access control and enhancing safety supporting students	Checking students presence, tracking tools and belongings locations	Administrators and teachers	
Wearables	Access control enabling security	Checking students presence and checking students mood	Staffs, teachers and administrators	

Automatic checking of students' presence is performed by facial recognition with cameras and wearables with RFID readers. Monitoring students' presence enables teachers and school authorities to check and track the students' attendance. It allows the system to notify the parents or guardians of any absence in a timely manner. IoT wearables can integrate the students' location information, interaction with IES, etc. Wide-angle cameras, noise sensors, and passive infrared sensors on students' desks can measure students' presence, movements, attention, and emotional state. Dedicated software can identify students' moods and monitor their health. These sensors also facilitate teachers to pay individual attention to the learners with special needs when necessary. IoT sensors help keep an appropriate learning atmosphere in classrooms. When an excessive level of noise or fidgeting is identified, an event is registered. Then a notification to the teacher is sent, which means that students' engagement and concentration are low and corresponding intervention is necessary. The appropriate actions involve changing the teaching approach, presentation mode, inclusion of interactive learning materials, simulations and multimedia demonstrations, and playing educational games. IoT devices enable customized learning environments according to the different activities performed (physical education, laboratory work, knowledge delivery, assessment, music). IoT devices gather continuous data about the parameters of a classroom environment and automatically adjust their values to optimal levels for the most efficient learning process. Some environmental parameters can be changed automatically in predefined mode if their value is inappropriate considering recommendations for optimal conditions. Actuators control ventilation, heating, air conditioning, humidifiers, lighting, and other systems to achieve target environmental parameters.

Innovative technologies play a significant role in our concept of smart schools, but privacy and ethical concerns are also considered. There should be strict predefined rules for the usage of applications based on IoT. Further, the IoT applications utilized in an educational context should be secure and reliable. Students and teachers should be aware of protocols for confidentiality and authenticity when using technology tools and devices. They must be familiar with the safe use of these technologies and protect themselves from any potential cyber threats. It is the responsibility of school authorities before employing new technology to inform the school staff and students about the functionalities and how to benefit from those technologies safely. Management of all users' rights and compliance with data protection and other legal regulations have to be taken into consideration.

IoT for Students with Sensory Difficulties

Students with sensory difficulties benefit from IoT applications from a large number of effective assistive technologies. For example, students who have hearing disabilities face challenges every day. The biggest challenge faced by them is communication. Deaf people can use an IoT Application to solve this problem. An App has been created on a system with two ends, at one end there is a normal person and at another end, there is a deaf person. The normal person will speak into the system through speech to the text module, a deaf person will get the text via Wi-Fi, Bluetooth, or Cloud Server according to the situation.

On the other hand, Deaf and people with hearing impairment face everyday challenges in identifying the occurrence of household sounds like door bell, child crying or phone ringing, simple things but very important. For that reason when the visitor presses the doorbell, capture image is transferred to the wearable device which helps to know the right person at the door or intruder. After transferring the image, the wearable device vibrates to notify. Those simple ways can help deaf people to gain independence and flexibility in different areas. Also, IoT apps have helped blind people and people with optic nerve disorder as a doctor. The eyeglasses can transmit the signals of the eye blood flow sensor and lens color and see the bleeding in the eyes; sending messages to the patient, physician, and the emergency contacts as well as informing the hospital emergency GPS and friends/families of a patient to be aware of the exact location of the patient.

Discussion

Using IoT Cognitive and meta cognitive functions such as memory, attention, self regulation, self-observation were tested and improved. New technologies and in particular IoT applications came to provide solutions in a demanding field with many users and many needs, special education. Internet connects all the people together, whereas the Internet of Things (IoT) connects all the tools together [46, 58]. The Internet of Things can offer people with special needs more independence, a more manageable home environment with only some smart devices that will help them to stay safe and secure. The Internet of Things (IoT) can mean different things to different people, but it undeniably involves many devices and a lot of data. A forecast by International Data Corporation (IDC) estimates that there will be 41.6 billion IoT devices in 2025, capable of generating 79.4 zetta bytes (ZB) of data.

Figure 2: chart showing the growth of ICT based IOT in education sector

Wireless technology, the Internet of Things, and internet connectivity are some of the tools that can be used to increase the participation of students with disabilities in education

and address problems that arise both within and outside of the classroom. To make sure that the adoption of IoT and other technologies in education takes into account the needs of students with disabilities, it is crucial for disability activists, educational technology developers, academicians, and practitioners to collaborate. According to the findings of this study, IoT in the education of students with disabilities benefits both the individual student and society as a whole.

Conclusion

With the development of technology, including the Internet of Things, colleges may overcome a number of difficulties, including managing vital resources, enhancing information access, developing better planning, and creating safer campuses. IoT systems have the potential to significantly improve higher education by energizing the faculty and staff, encouraging the students, and accelerating the learning process. This study's goal was to determine the potential of IoT in higher education and how to make the most of its advantages while addressing its problems and lowering its risks.

TEACHING AND LEARNING WITH ICT TOOLS: ISSUES AND CHALLENGES FROM TEACHERS' PERCEPTIONS

M. Marimuthu

UG Department of Computer Science [SF],
Nallamuthu Gounder Mahalingam College, Pollachi
marimuthumcs24@gmail.com

Abstract

In this digital era, ICT use in the classroom is important for giving students opportunities to learn and apply the required 21st century skills. Hence studying the issues and challenges related to ICT use in teaching and learning can assist teachers in overcoming the obstacles and become successful technology users. Therefore, the main purpose of this study is to analyze teachers' perceptions of the challenges faced in using ICT tools in classrooms. Evidence has been collected through distribution of a modified- adopted survey questionnaire. Overall, the key issues and challenges found to be significant in using ICT tools by teachers were: limited accessibility and network connection, limited technical support, lack of effective training, limited time and lack of teachers' competency.

Keywords: ICT, teaching-learning, higher education, & Teachers' Perceptions.

Introduction

Information and Communication Technology (ICT) includes computers, the Internet, and electronic delivery systems such as radios, televisions, and projectors among others, and is widely used in today's education field. Kent and Facer (2004) indicated that school is an important environment in which students participate in a wide range of computer activities, while the home serves as a complementary site for regular engagement in a narrower set of computer activities. Increasingly, ICT is being applied successfully in instruction, learning, and assessment. ICT is considered a powerful tool for educational change and reform. A number of previous studies have shown that an appropriate use of ICT tends to expand access to education. Through ICT, learning can occur any time and anywhere. Online course materials, for example, can be accessible 24 hours a day, seven days a week. Teleconferencing classrooms allow both learner and teacher to interact simultaneously with ease and convenience. Based on ICT, learning and teaching no longer depend exclusively on printed materials. Multiple resources are abundant on the Internet, and knowledge can be acquired through video clips, audio sounds, visual presentation and so on. Current research has indicated that ICT assists in transforming a teaching environment

There were some challenges: lack of knowledge, confidence, enough experience, training, interest and access to ICT tools, lack of technical support, lack of genuine ICT Software and unstable and unreliable internet connection at the schools. Due to these challenges, teachers did not use ICT in the classroom. Therefore, teachers should learn more to improve their knowledge and skills in ICT. The government should focus on management strategies and policies to reduce the challenges faced by teachers in mathematics classrooms. By these policies, they can use the ICT tools in the classroom. the

current study presents teachers' perceptions regarding technology integration in their teaching-learning practices at all educational levels in light of the previous studies performed in the last 5 years. By knowing teachers' experiences and perceptions, this study would help teachers make the best use of ICT in teaching and learning activities by sorting out the challenges and assisting concerned authorities in formulating policies accordingly..

Literature Review

Challenges in using ICT in teaching and learning Integrating ICT into teaching and learning is a complex process and one that may encounter a number of difficulties. These difficulties are known as "challenges" A challenge is defined as "any condition that makes it difficult to make progress or to achieve an objective" The following are some of the key challenges that have been identified in the literature regarding teachers' use of ICT tools in classroom.

Limited Accessibility and Network Connection

Several research studies indicate that lack of access to resources, including home access, is another complex challenge that prevent teachers from integrating new technologies into education. Various research studies indicated several reasons for the lack of access to technology. In Sicilia's study (2005), teachers complained about how difficult it was to always have access to computers.

Providing continuity of learning in low and intermittent connectivity scenarios Millions of students have limited access to the internet at home, leaving them struggling to access interactive online lessons and forcing them to find offline workarounds on devices lacking storage for video and other resources. Today, devices and education technology tools are more integrated into education than ever before, and learning opportunities happen not just at school, but at home and everywhere in between. In this landscape, the ability to work online and offline is key so that learning can continue regardless of a student's ability to connect to the internet

School with Limited Technical Support

When teachers dwell on textbooks alone. The generation of students today learned how to use devices at a very young age, which is comparatively faster than other age groups. With that in mind, it is obvious that traditional teaching styles can hardly capture their interest. Because of that, most institutions began to eliminate the antiquated ways of teaching and started to inject technology into their curriculum and school processes.

From the blackboard method of teaching, schools integrated the use of different types of devices to facilitate student learning. The use of these devices, with proper administration from teachers and educators, encourages participation and collaboration.

Lack of Effective Training

Lack of trained teachers- A major obstacle in the use of ICT in rural education is the lack of knowledge and skills. There is dearth of dynamic teachers formally trained in ICT. Moreover, there is hardly any quality training imparted on a regular basis to teachers involved in ICT education.

Limited time

lack of time exists for teachers in many aspects of their work as it affects their ability to complete tasks. Some of the teachers who participated specifically mentioned that they need time to locate internet information, prepare lessons, explore and practice using the technology, deal with technical problems, and receive adequate training. Recent studies show that lack of time is an important factor affecting the application of new technologies in

ICT Education

Lack of Teachers' Competency

Teachers often worry that their knowledge level does not match those of their 'digitally native' students. This distracts from one of the main advantages of ICT skills for educators: being able to facilitate lessons more effectively using digital technologies. Another challenge directly related to teacher confidence is teachers' competence in integrating ICT into pedagogical practice (Becta, 2004). In Australian research, Newhouse (2002) found that many teachers lacked the knowledge and skills to use computers and were unenthusiastic about the changes

Methodology

The central objective of this systematic analysis was to present a succinct account of representative literature dealing with the teachers' perceptions and experiences while integrating ICT in their teaching-learning practices. The best literature review provides a full reflection, which helps develop theory

Research Design

In this research, quantitative methodology was used to collect and analyze the data obtained from all the respondents. A questionnaire was self-developed and finalized by the researchers before being distributed to the targeted group of respondents. The questionnaire was designed specifically to address research objectives with regard to teachers' perception on use of ICT tools

Data Collection Procedures

Data collection defines the procedure for collecting data by the researcher. The questionnaire has been distributed to 120 teachers randomly. They were given one week to fill in the questionnaire and return it to the researcher. All of the participants volunteered themselves in the research. Some questionnaires were with missing information that the details could not be used as a contribution in this research.

Data Analysis

Process The data collected from the respondents were gathered together to be analyzed using the Statistical Packages for the Social Sciences (SPSS) version 22. The analysis includes both descriptive and inferential analysis. The researchers used descriptive analysis to analyze the frequency and percentage of the overall population in the demographic background. Besides, it is also used to determine the mean, standard deviation, frequency and percentage

Validity & Reliability

Internal consistency is measured in this research using the Cronbach's coefficient alpha (α). This method is used to identify the correlation between scores of each item in the test and the total score for all items in the test or is known as test index score. Items with high correlation with the test index score have high reliability, and those with low correlation values with the test index score have low reliability and will be deleted from the test.

Discussion of Findings

In this chapter, I discuss the findings presented the challenges the six key participants faced

Perceptions

What are teachers' perceptions of using ICT in teaching?" Perceptions are discussed in relation to the two main components of the Technology Acceptance Model (TAM),

Ease of Use

Perceived ease of use has been shown to influence positive attitudes towards using computers which in turn influence behavioural intention to use ICT in teaching (Davis, 1986; In the below figure Table shows that 141 (77%) of the questionnaire respondents perceived computers as easy to use

Statements	Agree	Disagree	Not sure	Missing	Mean
I find the computer easy to use	141 (77%)	24 (13%)	14 (8%)	4 (2%)	1.73
It takes up too much time for me to find things on the computer	57 (31%)	102 (56%)	19 (10%)	5(3%)	2.17
I find the computer difficult to use	23 (12%)	132 (73%)	14 (8%)	14 (8%)	2.01
I find it easy to get the computer to do what I want to do	143 (78%)	19 (10%)	16 (9%)	5 (3%)	2.17

In the present study, teachers' general positive attitudes do not appear to reflect actual use and, even less so, their confidence in using computers for teaching. An overwhelming majority (170 or 93%) of questionnaire respondents enjoyed using the computer and 160 (87%) thought it was fun but only 128 (70%) claimed to use computers daily to a few times a week

Usefulness

Teachers perceived computers as useful for reducing their workload as teachers and for preparing lessons rather than for meaningful use in the classroom. Quantitative findings show that questionnaire respondents generally perceived computers as useful or administration and lesson planning or preparation rather than classroom use. For example, questionnaire respondent number 112 said, "...presentations, administration work such as schedules, reports can be done through them [computers]" while ACE-ICT student teacher 16 said, "this year I am doing the in-service ACE-iCT

Experiences

"What are teachers' first experiences using ICT in the classroom?" Positive perceptions towards ICT are an important determinant of the kind of experience a user will have while using ICT (Elwood et al., 2006). Given the generally positive perceptions reported above, the expectation for the six key participants was that they would have positive experiences of teaching with computers in the classroom.

Subject

Such use of ICT was a surprising finding as these teachers had completed in-service qualifications that focused on cross curriculum ICT integration (the ACE-ICT and the BE-ICT courses) in which learning theories and their implications for teachers as they integrate ICT into their teaching were discussed. In particular, teachers were taught to develop activities that promote higher order

Tools

Using ICT as a combination of different tools is an effective strategy for ICT integration and it is crucial to know when to use what. In the two classrooms where ICTs were used with learners, teachers used ICT as more than one too

Use of ICT tools in classroom

Items	Always	Often	Sometimes	Rarely	Mean	SD
Produces a text using a word processing program	39 (39%)	24 (24%)	30 (30%)	7 (7%)	2.05	.989
Use emails to communicate with other	26 (26%)	26 (26%)	38 (38%)	10 (10%)	2.32	0.973

Capture and edit digital photos, movies or other Graphics	39 (39%)	24 (24%)	30 (30%)	7 (7%)	2.05	.989
Edit text online containing internet links and images	26 (26%)	26 (26%)	38 (38%)	10 (10%)	2.32	0.973
Create a database	38 (38%)	27 (27%)	30 (30%)	5 (5%)	2.02	.943

Discussion & Conclusion

This study is more related to identifying the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers. Furthermore, it examines the challenges of using ICT tools in teaching and learning in the classroom among school teachers and recognizes the effectiveness of the extent of ICT tools in supporting classroom teaching and learning. Based on the study the findings indicate that average level of the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers, high level of challenges of using ICT tools in teaching and learning in the classroom among school teachers and recognizing the effectiveness of the extent of ICT tools in supporting teaching and learning in the classroom.

Study showed that teachers do combine different resources in their teaching, as well as utilizing various modes of ICT with almost two-thirds claiming to use technologies (63%) and website (62%). Anyway, it is also evident that textbooks are still considered fundamental in the educational systems. Nearly two thirds of our respondents (64%) always or often follow textbooks in their teaching.

Important technologies for learning such as computers (98%) and educational software (93%) were ranked as the top technologies the rate of ICT use among teachers in school is average. However, the finding shows that more teachers used computer with teaching software in the classroom to present or demonstrate examples to students. They also like to use the computer to access students' results and keep track of their progress.

ICT contribution to the teaching-learning process. Since the attitude and perceptions of the teachers are critical to how effectively an innovation is implemented, it is important to gauge how teachers perceive this innovation and its efficacy as a tool for enhanced teaching and learning. It is also hoped that this study will contribute to the growing knowledge base and 21st century generation regarding the use of ICT in education

In future studies more focus should be given on management strategies and policies to address the barriers faced by teachers in using ICT tools in teaching and learning. If the barriers faced by teachers can be overcome, it is a step forward to enhance our students' learning outcome. The studies done with the same gender distribution could give more appropriate analysis whereby the gender perceptions could be analyzed.

A STUDY ON THE SEQUEL OF DIGITALIZATION IN EDUCATION

P. Mahesh Kumar & N.P. Shanthi

MA Economics

PSG College of Arts & Science, Coimbatore

Introduction

Education plays vital role in one's life as well as in an economy. Education is digitalization by the means of online classes, smart classrooms, artificial intelligence. Not only for student's learning but also for the teacher's to improve the ways of providing education like analytics. It has lots of problems to setup in schools which includes lack of up-to-date system. It is the major issue faced by most of the schools in India. Also no digitalization strategy, schemes to improve digitalization is more in economy but the strategies are not given clearly and also not in practice. Internet is the major source for digitalization but is not available in all the areas. Before pandemic period maximum of the students don't aware of digital education but in pandemic every students are compelled to access online classes. The problems they faced during pandemic and also sequel faced by them after pandemic is lot.

Objectives

- To analysis student's physical and mental health after digitalization in education.
- To examine technical knowledge in rural and semi urban areas.
- To find the usage of digitalization by people.

Limitations

- Primary data has its own limitations.
- The study cannot be generalized.

Statement of Problem

The study aims to analyse the problem faced by the students and the impact of digitalization in education. The reason for many problems is that lack of awareness in rural and in semi urban areas about digitalization in education. So, we must induced to bring knowledge about the schemes and how to use the technologies. On the contrary it does not mean that it do not possess any demerits. It means that the transformation however designed it brings long term benefits by knowing and adopting digital education.

Research Methodology

The study is analytical and descriptive in nature. The study on the digitalization in education conducted using a convenient sampling among students from various localities. We collected the information using google forms. The active participants are certain known persons that we identified to bring justification to our study. The study aims to concentrate the volume of students who used digital classes in pandemic situations.

Analysis and Interpretation

- The availability of quality technological infrastructure such that high speed network, personal computer system, software can have great impact over ability of students to integrate technology in learning activities.
- The availability of technically upgraded facilities may induce the students towards active learning process
- Acknowledge about digital education, during the pandemic situation where most of them shifted.
- Major problem of digital education are eye defection and mental depression.
- Usage of digital mode are internship, training programs, workshops, and distance mode of education.
- Keen interest attraction towards learning process and distraction in education.

Summary and Findings

1. Majority of respondents (64.3%) were convenient in using digital apps for fees payment whereas 36.7% reported that it was inconvenient.
2. Among 42 respondents, 50% reported that online classes have led to eye defection whereas 40.5% respondent reported reduced the level of learning in online classes.
3. Out of 42 respondents, 57% were easily accessible to internet facilities whereas 42.9% faced issues in accessing of internet.
4. Among 42 respondents, 54.8% using digital mode for internship and secondly 23.8% for training programme and 11.9% for workshops and only 9.5% have used distance mode of education.
5. Out of 42 respondents, 69% of them reported that there has been distraction in digital platform whereas 31% disagreed to the above statement.
6. Lack of adaptability and knowledge about digital platforms are the important feature in transformation of digital education as it acts as a barrier whose representation accounts to more than 70% collectively.
7. Since most of the respondent belongs to the age category of 18 – 30. They are the students and hence the other groups contribution is comparatively different.
8. Last among 42 respondents nearly half of the population sample lies with rural and semi urban areas.
9. Usage of digital education during pandemic is 72%, after pandemic is 21.2% and before pandemic 6.8%

Suggestions

- The study suggests to provide government and non – government organization can bring awareness about the free availability of online classes and its outcome.
- Also, availability of resources in affordable manner.
- Digital platforms are not beneficial to the students below the age of 16.
- It gives maximum advantage to the students above the age of 16.

EMPOWERING WOMEN; BASIC RIGHT FOR BEING AN INDIVIDUAL

P. Jayapriya

Assistant Professor, Department of Computer Science
Nallamuthu Goundar Mahalingam College, Pollachi, India
jayapriyamca@gmail.com

Abstract

Concept Women empowerment emerges from the middle of 20th century and now recognize globally. Empower the women from discrimination; inequality and injustice are the basic aspects of this approach. Gender equality, economic empowerment, social empowerment, political empowerment and education are all the integral of women empowerment which provide the safe space where they have rights for education, equal opportunities in social, economic and political status.

Keywords: *Battered Women, Abusive Relationship, Women's Mental Health.*

Introduction

Women empowerment is an essential aspect of socioeconomic development globally [1]. Empowering women through equal access to education, employment opportunities, and leadership positions can lead to gender equality and promote economic growth [2]. Therefore, this paper aims to investigate women's empowerment by employing a mixed-method approach. The study examines both qualitative and quantitative data to provide a comprehensive understanding of the subject matter.

The literature review focuses on the previous research works on women's empowerment. The review summarizes the existing literature on the topic, identifying the gaps in knowledge that this study aims to address. The literature review explores the various dimensions of women's empowerment, including economic, social, and political. The review also highlights the challenges to women's empowerment, including cultural and societal barriers, inadequate education and training, and discriminatory policies [3].

Women empowerment is the process of enhancing women's economic, social, and political status in society. It involves creating an environment where women have equal opportunities and access to resources to make decisions that affect their lives positively. Women's empowerment is essential for promoting gender equality, improving women's health and well-being, reducing poverty, and promoting economic growth [4,5]. Historically, women have been subjected to discrimination, oppression, and inequality. They have been denied basic human rights such as the right to education, health, and the right to own property. Women have also been excluded from participating in decision-making processes that affect their lives. However, over the years, there has been a significant shift towards promoting women's empowerment [6].

Methodology

This study employs a mixed-method approach to investigate women's empowerment. The study collects both qualitative and quantitative data to provide a comprehensive understanding of the subject matter. The quantitative data is collected using a questionnaire distributed among women in different regions. The survey questionnaire comprises close-ended questions that provide insights into women's empowerment levels [7]. Qualitative data, on the other hand, is collected through interviews with selected women from different regions. The semi-structured and open-ended interviews allow the participants to provide detailed information about their experiences and views on women's empowerment. To investigate the gaps between the knowledge of empowering women and to found the real struggle of women on daily basis we applied both the quantitative and qualitative data collection procedure, which include the questionnaire with close-ended question and the interviews with selected women from different region [8].

Results

The study's results indicate that women's empowerment levels vary across different regions, with some regions having more empowered women than others. The study also reveals that cultural and societal barriers remain the most significant hindrance to women's empowerment. In contrast, education and training opportunities positively impact women's empowerment levels. The study's qualitative findings reveal that the participants' personal experiences influence their views on women's empowerment, with some participants reporting progress in their empowerment journeys. Women with different background have different approaches and their empowerment vary according to it even though culture and social bouncing's hindering the pathway of empowerment. But it has been noted that the education and training sessions are helpful in bringing change in one's narrative and behavior. Empowering the women; it's not only the concept of girls education right, it also about their social, political and economic stability. Women empowerment is a multi-dimensional concept that involves enhancing women's economic, social, and political status in society. There are several themes that are integral to women's empowerment, and they include:

1. Gender Equality

Gender equality is a fundamental theme in women's empowerment, and it involves creating an environment where women and men have equal rights, opportunities, and access to resources. Gender equality is crucial to promote women's empowerment as it challenges gender norms, stereotypes, and discrimination that limit women's progress in society.

2. Education

Education is another essential theme in women's empowerment. Education provides women with knowledge and skills that enhance their decision-making abilities. Educated

women are more likely to participate in economic activities and become agents of change in their communities. Education also helps to reduce gender inequality, poverty and improve women's health and well-being.

3. Economic Empowerment

Economic empowerment involves providing women access to resources such as credit, financial services, and markets. Economic empowerment enables women to become financially independent, allowing them to make decisions that affect their lives positively. It also helps to reduce their vulnerability to poverty and exploitation.

4. Social Empowerment

Social empowerment involves promoting gender equality, challenging gender norms and stereotypes, and reducing gender-based violence. It involves creating an environment where women have equal access to resources, services, and opportunities. Social empowerment can be achieved through various means, including legislation, awareness campaigns, and community mobilization.

5. Political Empowerment

Political empowerment involves promoting women's participation in decision-making processes at all levels of society. It ensures that women have equal representation in political structures and are actively involved in policy-making processes. Political empowerment can be achieved through affirmative action policies, education and training, and increasing women's representation in decision-making structures.

Discussion

One of the essential aspects of women's empowerment is education. Educating girls and women has a positive impact on their empowerment levels. It helps to increase their knowledge and skills, which, in turn, enhances their decision-making abilities. Educated women are more likely to participate in economic activities, which can improve their economic status and reduce poverty. Education also empowers women to become agents of change in their communities, promoting social and political equality.

Another critical aspect of women's empowerment is economic empowerment. Economic empowerment involves providing women with access to resources such as credit, financial services, and markets. Social empowerment involves promoting gender equality, challenging gender norms and stereotypes, and reducing gender-based violence [9]. It involves creating an environment where women have equal access to resources, services, and opportunities. Social empowerment can be achieved through various means, including legislation, awareness campaigns, and community mobilization [10].

Political empowerment involves promoting women's participation in decision-making processes at all levels of society. It involves ensuring that women have equal representation in political structures and are actively involved in policy-making processes [11, 12]. Political empowerment can be achieved through affirmative action policies,

education and training, and increasing women's representation in decision-making structures.

Precisely, women empowerment is a basic approach in the modern world. It involves enhancing the economic, social, and political status of women in society, promoting gender equality, improving women's health and well-being, reducing poverty, and promoting economic growth. Women's empowerment can be achieved through various means, including education, economic empowerment, social empowerment, and political empowerment [13]. It is essential to promote women's empowerment to create a society where women have equal opportunities and their rights are respected and protected.

The study's findings support the previous research on women's empowerment, highlighting the need for policy changes to remove cultural and societal barriers to women's empowerment. The study's results also emphasize the need for increased education and training opportunities for women, which can have a positive impact on their empowerment levels [14]. However, the study acknowledges the limitations of its sample size and recommends further research on the subject.

Conclusion

In conclusion, women's empowerment is an essential aspect of socioeconomic development globally. This study employs a mixed-method approach to investigate women's empowerment, collecting both qualitative and quantitative data. The study's findings highlight the need for policy changes to remove cultural and societal barriers to women's empowerment and increase education and training opportunities for women. Overall, the study provides a comprehensive understanding of women's empowerment, contributing to the existing knowledge on the subject matter.

NMEICT: A DIGITAL INITIATIVE FOR TEACHING AND LEARNING THROUGH INFORMATION COMMUNICATION TECHNOLOGY TO HEIS

R.Umamageswari

Research Scholar, DLIS

Nallamuthu Gounder Mahlingam College Tamil Nadu

uma.library10680@gmail.com

Dr. S. Vijayakumar

Research Supervisor, DLIS

Nallamuthu Gounder Mahlingam College, Pollachi, Tamil Nadu

Librarian@ngmc.org

Abstract

Digital technology and literacy can heighten the transformation of teaching and learning in higher education institutions (HEIs). This study covers the extent to which digital Initiative have been used to advance the teaching and learning process in HEIs, The Government launch of these digital initiatives has necessitated evolving strategies for effective adoption and utilization in higher educational institutions (HEIs) to achieve the anticipated benefits and outcomes for sustainable change of these digital initiatives. This paper presented an overview on the digital initiatives launched by the government NMEICT to enhance access and promote quality in higher education. Few suggestions for the effective adoption and utilization to achieve the benefits of these digital initiatives in HEIs were also made.

Keyword: Digital Initiative, Teaching and Learning and ,ICT and HEIs

Introduction

Digital age has made strong impact on people's life in all spheres. Teaching and learning in digital era has also grown beyond the boundaries of classroom and books. Today's learners have exposure to various e-learning resources and plenty of information is available at click of mouse. But sadly, current state of affairs in Indian higher education presents a gloomy picture and education sector is struggling with various problems like shortage of trained faculty and lack supporting infrastructure facilities . Govt. of India has initiated a series of programs to improve the quality of education by leveraging the benefits of digital technology. High quality e-content has been created under various digital initiatives rolled out by Govt. of India and disseminated to all stakeholders using information and communication technology (ICT). In this paper, an overview of various learning resources funded by Govt. of India has been carried out.

Need of Digital Initiative

In ancient times, India has been a great center of learning with world famous institutions at Takshashila and Nalanda. But at present time higher education scenario in India does not look so promising. Barring famous IITs and few other elite institutions, most of the colleges and universities have shortage of qualified teachers and lack physical

facilities. Colleges in rural and remote places do not even possess basic facilities for a conducive learning environment for students. It is a mammoth task to improve the quality of higher education in India, as it requires large time-frame and enormous funding. Still it would not be possible to provide educational facilities to colleges and universities in remote areas at par with their urban counterparts by physically expanding the available resources. But by leveraging the power of ICT, the twin concerns of higher education can be addressed adequately.

The Govt. of India has been funding a series of programs under the mentorship of leading academic institutions to raise the quality standards in higher education. The main goal is to create high class e-content based on college curriculum which should be freely available to all stakeholders. As high quality content once created can be transmitted and scaled to any level by using state-of-the-art ICT. Premium Indian Universities and institutions have been assigned the task to create high quality content by recording live lectures of their classroom activities. Thereby giving a chance to students from various universities and colleges to access the education imparted in elite institutions. Under the National mission on Education through Information and Communication Technology (NMEICT), interactive digital content has been created on a large scale by many sciences and engineering institutions. Many other govt. entities are involved in creating e-content for other subjects such as Consortium for Educational Communication (CEC) for PG Level University courses and IGNOU in 17 disciplines of Social Sciences and Humanities

NMEICT

The National Mission for Education through Information and Communication Technology (NME-ICT) an ambitious project of Ministry of Human Resource Development (MHRD) of Government of India was formed in 2009 in order to sustain a high growth rate of Indian economy through the capacity building and knowledge empowerment of the people and for promoting new, upcoming multi-disciplinary fields of knowledge. Three guiding philosophies have been identified with NMEICT:

- a) No talent of the country should be allowed to go waste
- b) All the services available through the content delivery portal all platform should be free.
- c) Freely available material on the web should be used so as to avoid reinventing the wheel.

The main aim of Information and Communication Technologies (ICTs) in education is the implementation of ICT equipment and tools, as a media and methodology, in the teaching and learning process. Ministry of Human Resource Development (MHRD), put forth a set of objectives to be followed by the NMEICT in order to ascertain the success of this endeavor.

- a) Effective utilization of intellectual resources, minimizing wastage of time in scouting for opportunities or desired items of knowledge appropriate to the requirement

- b) Certification of attainments of any kind at any level acquired through formal or non-formal means in conventional or non-conventional fields.
- c) Any-time availability of desired knowledge at appropriate levels of comprehension to all for self-paced learning
- d) Support to all the learners and workers for any of their perceived learning needs
- e) Extensive leveraging of the advancements in the field of ICT for taking the knowledge resources to the doorsteps of the learner.
- f) Multi-lingual content development for the learners more comfortable in those languages
- g) Voice support for educational material delivery and interactivity for the content on the portal
- h) Development of knowledge modules having the right content to take care of the aspirations and to address to the personalized needs of the learners
- i) Standardization and quality assurance of contents to make them world class.
- j) Building connectivity and knowledge network among and within institutions of higher learning in the country with a view of achieving critical mass of researchers in any given field.
- k) Availability of e- knowledge contents, free of cost to Indians.
- l) Experimentation and field trial in the area of performance optimization of low cost access/devices for use of ICT in education

NMEICT - ICT Initiatives

SWAYAM (Study Web of Active Learning for Young Aspiring Minds)

(<https://swayam.gov.in/>)

It was established to provide online learning platforms using information and communication technology for students from high school through higher education courses, as well as skill development courses. It has proven to be a watershed moment in knowledge sharing, and it is a Government of India programme aimed at attaining the cardinal values of education policy of access, equity, and quality, as well as offering the best instructional learning resources to all e-learners. It also serves as a digital divide bridge for learners who have been left out of the knowledge economy's mainstream.

The SWAYAM platform facilitates the hosting of all courses available for students from 9th grade to post-graduation, and can be accessed by anyone, anywhere, at any time. The courses are provided to the learners free of charge, and over 1000 faculty and teachers from across the country assist in the preparation of different courses.

SWAYAM also organises all of the programmes and courses into four quadrants: video lectures, printed text content, self-assessment examinations or quizzes, and online discussion forums. The following national coordinators have been formed to ensure the learners receive the highest quality content: UGC, AICTE, NPTEL, NIOS, IGNOU, IIMB, CEC, and NITTTR

SWAYAM Prabha (<https://www.swayamprabha.gov.in/>)

It's a group of about 32 DTH channels dedicated to educating students by broadcasting higher-quality knowledge-sharing programmes. The channels offered on this platform are linked with the Gandhinagar-based BISAG. UGC, CEC, NPTEL, IITs, NCERT, IGNOU, and NIOS make study content or study material available.

SWAYAM Prabha also provides a learning environment for higher education students via DTH channels. Curriculum-based courses are also available for (UG) undergraduate and (PG) graduate students, and they cover a wide range of subjects including science, art, commerce, social science, engineering and technology, humanities, agriculture, law, and medical. Vageesh, Sanskriti, Prabodh, Saaraswat, Prabandhan, Vidhik, Kautilya, Aryabhata, Spandan, Daksh and channel 11 to 22 for humanities, social science, economics, commerce and finance, science, engineering, and computer field are some of the DTH channels provided by SWAYAM Prabha for higher education learners.

National Digital Library (NDL)(<https://ndl.iitkgp.ac.in/>)

The National Digital Library of India (NDL India) pilot project was launched by the Ministry of Human Resource Development (MHRD) as part of its National Mission on Education through Information and Communication Technology (NMEICT) to develop a framework for a virtual repository of learning resources with a single-window search facility. The MHRD has sanctioned IIT Kharagpur's project "Development of National Digital Library of India, towards Building a National Asset" under NMEICT.

NDL is a single-window platform that collects and collates metadata from prestigious Indian and international educational institutions, as well as other relevant sources. It's a digital library that houses textbooks, articles, films, CDs, lectures, simulations, fiction, and other forms of educational content.

The project's goal is to provide an overarching framework for collecting a significant number of e-contents for school, college, and higher education, as well as an e-content, virtual library that meets the demands of students of various abilities. Design and development of "OAI-PMH" Server for Metadata Harvesting, Indexing, and other functions.

It Serves as a pan-India virtual teaching-learning-evaluation-knowledge platform and for key national asset. Collect resources from other Ministries such as Ministry of Culture, Health, Rural Development, and Department of Science and Technology on this portal.

Virtual Labs(<https://www.vlab.co.in>)

Under the auspices of the National Mission on Education through Information and Communication Technology, the Ministry of Human Resource Development (MHRD) of the Government of India has launched the Virtual Labs project (NMEICT). IIT Delhi is the coordinating institute for this initiative, which is a partnership of twelve collaborating institutes. It's a watershed moment in ICT-based education. For the first time in distant testing, such an endeavour has been taken. Over 100 Virtual Labs with over 700 web-enabled experiments were built for remote operation and viewing as part of the Virtual Labs initiative.

All students and faculty members of Science and Engineering Colleges who do not have access to good lab facilities and/or instruments are the intended beneficiaries of the projects.

- Students in high school, whose curiosity will be piqued, maybe pushing them to pursue higher education. Researchers from a variety of institutions who can work together and exchange resources.
- The curriculum and related teaching resources can be used by a variety of engineering colleges.
- For conducting experiments at the user's location, Virtual Labs do not require any additional infrastructure. The internet can be used to access the simulation-based experiments.

e-PGPathshala(<https://epgp.inflibnet.ac.in/>)

e-PGPathshala is a content-focused internet portal that is open to the public. This portal is an MHRD project being built by a team from the NME-ICT department in accordance with UGC norms. e-PGPathshala is an online course that graduate students from various institutions, organisations, and universities PGPathshala was designed by a group of professionals who worked under various criteria across the country. This effort was initiated by the National Mission of Education through Information and Communication Technology (NME-ICT), which was established by the University of Georgia under the Ministry of Human Resource Development. The Ministry has provided funding to the University of Georgia for the development of online course work for postgraduate students. It offers course content for each of the 77 subjects, organised by disciplines.

It includes high-quality, interactive course materials for a variety of special areas in the social sciences, arts, fine arts & humanities, natural & mathematical sciences, linguistics, and languages, among other disciplines. Anyone, from wherever, can access all of these materials without paying a fee. This project covers the void left by teachers in various institutions and assists students in receiving education and increasing their knowledge of the subject. For all postgraduate courses, it improves the self-learning process, assessment, and updating with other courses. It offers a distinct platform for students as well as a separate platform for content creators. Students can study and learn by downloading a module.

Spoken Tutorial(<https://spoken-tutorial.org/accounts/login/>)

Spoken Tutorial is an educational multimedia platform that has won numerous awards. One can self-learn a variety of Free and Open Source Software here. Our self-paced, multilingual courses allow anybody with a computer and a desire to learn from any location, at any time, and in any language. The Spoken Tutorial project is an initiative of the Ministry of Human Resources and Development's 'Talk to a Teacher' programme of the National Mission on Education via Information and Communication Technology (ICT).

Spoken Tutorial Forum is a welcoming online community. You can join existing debates or initiate new ones, and the Spoken Tutorial community will respond quickly. Forum

registration is absolutely free and takes less than a minute. Even for computer rookies, using forums is quite simple. Formatting forum posts with fonts, colours, and a variety of other options is simple. You can simply attach files to your postings using your PC.

The MHRD has granted a project to IIT Delhi under the NMEICT to establish up a strong 24X7 supported Data Centre, and the activities have been set up at the NIC / NKN Data Centre, and the cloud is known as 'Baadal.' e-e-content Acharya's and video content are hosted on the IIT Delhi cloud.

The Free and Open Source Software for Education (FOSSEE) (<https://fossee.in/>)

The IIT Bombay-sponsored FOSSEE project has promoted the adoption of open source software in educational institutions (<http://fossee.in>). It accomplishes so through educational materials like spoken tutorials, documentation like textbook supplements, and awareness programmes like conferences, training seminars, and internships. The Textbook Companion (TBC) is a library of code for solved textbook examples. Approximately 2,000 college students and professors took part in this exercise, with close to 1,000 TBCs produced solely in Scilab and Python. All of the TBCs have been released open source and are available for free download through FOSSEE. TBCs for Scilab and Python are also on the cloud, so all you need is a browser to access/execute the TBC programmes.

Open FOAM, an alternative to the proprietary programme Fluent for computational fluid dynamics, and DWSIM, an alternative to the proprietary product Aspen Plus for chemical process simulation, are both promoted by FOSSEE. FOSSEE has also taken on several new open source software projects, including raising Scilab toolboxes to Matlab levels, developing eSim, an electronic design automation software that is an alternative to ORCAD, and developing Sandhi, a data acquisition and control software that is an alternative to LabVIEW. The FOSSEE team also contributes to open source hardware projects like Open PLC and Arduino. A vast number of students have been trained around the country as a result of these projects.

e-Yantra (<https://new.e-yantra.org/>)

An MHRD initiative under NMEICT Programme, named “e-Yantra” is implemented to incorporate Robotics into engineering education with the objective of engaging students through exciting hands-on application of mathematics, computer science, and engineering principles. Creation of robotic platforms has been very successfully demonstrated during Phase-I of the project. Presently, e-Yantra has been implemented in 100 colleges.

eYantra is creating skills by setting up lab infrastructure for project based learning and training teachers in these 100 engineering colleges. Going ahead, MHRD sees the core skills developed by IITB as generating, distributing and analysing content to further create manpower with practical skills.

eSkill India (<https://eskillindia.org/>)

The National Skill Development Corporation (NSDC) is a public limited company that was established on July 31, 2008 under Section 25 of the Companies Act, 1956.

(corresponding to section 8 of the Companies Act, 2013). The National Skills Development Corporation (NSDC) strives to encourage skill development by assisting in the establishment of large, high-quality, for-profit vocational institutions. Furthermore, the organisation invests in the development of scalable and profitable vocational training programmes. Its mandate is also to enable support system which focuses on quality assurance, information systems and train the trainer academies either directly or through partnerships. NSDC acts as a catalyst in skill development by providing funding to enterprises, companies and organizations that provide skill training. It also develops appropriate models to enhance, support and coordinate private sector initiatives.

NSDC has created the e-Skill India e-learning aggregator platform to help with this. In the skilling ecosystem, the aggregator brings together B2C e-learning portals that operate via the internet. In a hub-and-spoke model, these portals also develop and source e-learning content. As a result, multiple e-learning players with expertise in specific skilling areas can pool their resources as part of this aggregation effort. While students benefit from the e-learning alternatives available, they should keep an eye out for awards and bonuses for early e-Skilling accomplishments!

Pradhan MantriKaushalVikasYojana (PMKVY) (<https://www.pmkvyofficial.org/>)

The Pradhan MantriKaushalVikasYojana (PMKVY) is the Ministry of Skill Development and Entrepreneurship's flagship scheme (MSDE). This Skill Certification Scheme's goal is to enable a large number of Indian youth to participate in industry-relevant skill training. It will assist them in finding a better way of life. The programme aids in mobilisation, motivation, counselling, reward, and certificate distribution. The implementing agency will engage a third party to assess the training requirements in order to design a consistent skill development methodology. It is significant in the sense that it will aid in the development of skilled labour tailored to the industry's specific needs.

PMKVY objectives of Enable and mobilise a large number of youth to participate in industry-designed quality skill training, become employable, and earn a living; Increase productivity of the existing workforce, and align skill training with the country's actual needs; Encourage standardisation of the Certification process, and lay the groundwork for creating a skills registry.

Conclusion

Digital initiatives of Govt. have given a fillip to higher education in India. Students are getting used to e-content and its acceptability is growing day by day. The academicians engaged in the field of higher education will have to acquaint themselves with the pedagogic orientation as pedagogy in a general and epistemic dimension of the knowledge construction virtually or digitally in higher education institutions. Teachers should be trained to be technology savvy and adapt to incorporate the e-content in university curriculum. Students should be made aware about the free availability of digital content by organizing special campaigns and promotional events. The digital divide in terms of access and equity is still a major challenge in India which needs immediate and stark attention on

behalf of the Government of India to have comprehensive strategies to make a decisive intervention immediately to address the accelerating need for everyone to be digitally connected equitably.

A NEW APPROACH ON E-LEARNING SYSTEM USING WEB MINING APPROACH

Dr. R. Nandhakumar

Assistant Professor, Department of Computer Science
Nallamuthu Gounder Mahalingam College, Pollachi, India
nkumarram@gmail.com

Abstract

The E-Learning has become matured learning paradigm with the advent of web based learning and content management tools, and shifted the focus of entire world from instructor centric learning paradigm to learner centric approach. The Web Mining plays a very important role for the E-learning systems. In personalized E-Learning system, user customizes the learning environment based on personal choices. In a general search process, a hyperlink which is having maximum number of hits will get displayed first. For making a personalized system history of every user need to be saved in the form of user logs. The proposed system provides a new approach with combination of web usage mining, HIT algorithm and web content mining. It combines hits results on user logs and web page contents with a clustering algorithm called as Lingo clustering algorithm. In this paper, we will describe an approach aiming to achieve personalization in e-Learning services using web usage and Content mining. This paper discusses about the benefits and usefulness of web mining in e-learning.

Keywords: Web usage mining; web content mining; web personalization; e-learning system, Lingo; Hilltop Algorithm.

Introduction

The World Wide Web (WWW) is the subset of the Internet. E-Learning refers to the learning in which the learner and instructor are separated by time or space where the gap between two is bridged through the use of online technologies. With the help of web based learning, it is possible for learners to learn from anywhere at any time.

E-learning is a form of electronic teaching that enables people to learn anytime and anywhere. The objective of an online personalization system is to provide users with the information they require, without asking them explicitly. Web Personalization is outlined as any action that adapts the data or services provided by a website to the requirements of a selected user or a collection of users, taking advantage of the information gained from the users guidance behavior and individual interests.

The prominent characteristic of E-learning system is that the students become self-learners and explorers of knowledge. In learning process, learner is the main body but not passive recipient. E-learning system is built on web service related technology and provides all kinds of learning ways to students to realize real-time, interactive and cooperative learning at different places.

It should be able to find the individual differences of learners and construct personalized learning environment to meet their individual needs.

Personalization in E-learning

The personalization include how to find and filter the learning information that fits the user preferences and needs, how to represent it and how to give the user tools to reconfiguration the systems, in consequence, reconfiguration system could be part of personalized environment in some systems.

A core part of the personalization method is generation of interested information to users. It's strictly supported as certain patterns, and ensuing probabilities.

E-Learning systems are grouped in the following approaches:

- Personalization of the learning content, based on learners' preferences, educational background and experience.
- Personalization of the representation manner and the form of the learning content.
- Full personalization, which is a combination of the previous two types.

Distinguishing these changes and adapting to them may be a key goal of personalization. We recommend that the personalization process be taken to a new level, where the user doesn't to be actively attached the personalization method. All that the user has to do is to register to the system, create own profile and once the user logs onto E-learning system, the browser checks for that profile file as it checks for the cookies. The profile file describes the user's area of interest. Since the profile file is in standardized format, the contents are provided according to the profile file. This is able to enhance the user's personalization method while not their active involvement.

In e-learning systems, the challenges are increase of complexity and more interoperability between systems in distributed environment. The lacking is reference architecture in which by reusing web services, reusing learning objects etc

E-learning portal applications need to present data in a tabular format to the users. The functionality provided by the search component is dynamic query generation based on user input, sort order, joins, etc. There are multiple ways to invoke the query service. All are supported by this protocol. The search component of personalized E-learning systems is as shown in figure 1.

Therefore a well-designed customized distance education system might have the subsequent characteristics:

- It will find out the learners' study interest, access habits, learning orientation
- It will change the location map and customize the learners' interface dynamically consistent with the access log.
- It will suggest learning resources by analyzing the learner's interest and learning process.
- It will recommend interested information.

Figure 1: Search Component of ServiceOriented Reference Architecture for Personalized E-Learning System.

Based on the service description and the protocol, new client interfaces can be easily built according to users' preferences. Learners want search the learning object related to Computer Science, then they have to type 'Computer Science'. By activating the link on the query interface, it obtains the extra services exposed by other providers.

There are variations between layout customization and personalization.

In customization, the location is often adjusted to each user's preferences concerning its structure and presentation. Whenever a registered user logs in, his/her customized home page is loaded.

This method is performed either manually or semi-automatically. In personalization system advises in modifications regarding the content or maybe the structure of an online web site is performed dynamically.

Personalized E-Learning Services

Some basic and important e-learning services augmented with personalization (Figure. 2) features are as follows:

Web Mining Applicable To E-Learning

A. Web Mining Techniques

Web mining is one of the important branches in data mining. Extraction of useful information or pattern from the web data is called web mining. It can be classified into three following categories as shown in figure (3).

- Web structure mining
- Web content mining
- Web usage mining
- Web Structure mining:

Figure 3. Structure of Web mining

Web Content mining

Web content mining refers to the extraction of useful information from the Web document's content. The content of the web page consist of text, images, audio, video etc., it includes the techniques like clustering or associating web pages according to the respective branches. It also helps in discovering patterns in web pages to mineuseful data.

- **Web Usage mining**

Web Usage Mining is the type of data mining techniques to discover interesting usage patterns from Web data, in order to understand and better serve the needs of Web based applications. Usage data captures the identity of Web users along with their browsing behavior at a Web site.

Moreover, the most important research initiatives in Web usage mining and personalization area are presented. But this is not as much effective method for personalization.

- **Web structure mining**

Web structure mining targets on analysis of theweb and one of its uses is to identify more preferable documents helps to discover similarities between web sites or discovering significant sites for a specific topic or branch or indiscovering web communities. It is also used to reveal the schema of web pages

Web mining based E-learning System

The E-learning system consist three parts. Teaching resource library, learning platform and user. Education resource library is a storage server to store different types of resource which is related to education. The learner of that web based system is the user.

Web server is the Learning platform that gives web based learning platform to user.

The Proposed System Architecture

Figure 4. Architecture of proposed approach

The objective of this approach is to provide users with the information they want or need, without expecting from them to ask for explicitly. Figure (3) represents proposed architecture for personalized E-learning system combining HITS algorithm on user logs and Lingoclustering algorithm.

Admin is responsible for forming a standard dataset including learning objects. This dataset is preprocessed by removing stop words and stemming. A new user first makes registration to the learning portal. When user login to the

System using his own user name and password and search for a particular topic, at server side user logs are stored for that search. Then HITS algorithm is applied to those logs to increase the weight of that log.

For proposed approach, preprocessed data is given to content mining using Lingo clustering algorithm. Clusters are formed from preprocessed data. Final results are calculated by combining user logs, HITS algorithm and clustering results.

Algorithm of the Proposed System

HillTop Algorithm

The Hilltop algorithm is an algorithm used to find documents relevant to a particular keyword topic. Created by Krishna Bharat while he was at Compaq Systems Research Center and when you enter a query or keyword into the Google search engine, the Hilltop algorithm helps to find relevant keywords whose results are more informative about the query or keyword.

The algorithm operates on a special index of expert documents. These are pages that are about a specific topic and have links to many non-affiliated pages on that topic. Pages are defined as non-affiliated if they are authored by people from non-affiliated organizations. Results are ranked based on the match between the query and relevant descriptive text for hyperlinks on expert pages pointing to a given result page

Clustering Algorithm- LINGO

Figure 5 Overview of the Lingo algorithm's phases.

The performance of the web search engines could be improved by properly clustering the search result documents. Most of the users are not capable to give the appropriate query to get what exactly they wanted to retrieve. So the search engine will retrieve a massive list of data, which are ranked by the page rank algorithm or relevancy algorithm or human judgment algorithm.

Search-results clustering aims to present information about the matching documents. It's like taking a step backward to grasp a bigger picture. They consider no longer care about individual documents, but about some underlying semantic structure capable of explaining why these documents constitute a good result to the query. The user will always find to self with the unrelated information related to the search due to the ambiguity in the query by the user.

Evaluating the performance of the clustering algorithm is not as trivial as counting the number of errors or the precision and recall of a supervised classification

Figure 6.Lingo Clustering Algorithm

3. Results

A. Experimental Analysis

As we see in Figure. 7, this is home page of personalized E-learning system. There are two different logins as user login and Admin login. After registration user can login and search for a particular topic as we see in Figure. 7, this is the admin maintain material page of personalized E- learning system.

Figure 7: Home page of Personalized Learning system

Figure 9. Search results for Map Reduce keyword with combined approach

As shown in Fig. 9, when users search for Map Reduce keyword, he gets different links. When user selects a combined approach, more accurate links are available to user, which results in personalized output.

Conclusion

The performance of the system is evaluated under different settings and in comparison with the previous method which is based only on the usage mining. The application can be used for personalized recommendation to give personalized recommendation based on users browsing history. Throughout this paper we have discussed many aspects of research for personalized E-learning system. Based on existing limitations, in this paper a new web mining approach based on combination of web usage mining and web content mining is presented which is showing the better performance improvement as compared to the existing method.

Future Work

In future we discover the learner's time distribution pattern to realize personalized curriculum organization, discover the learning behavior pattern to build up a series of feedback and motivation system and we will give different training according to different learners' levels.

For future work, research can be done in developing integration strategies for approaches that can accurately predict student performance in courses and approaches that help a select a subject or courses based on student interests.

DISRUPTIVE TECHNOLOGIES IN HIGHER EDUCATION

Mr. T. Sivagnana Selvakumar

Assistant Professor

Sakthi Institute of Information and Management Studies

Pollachi, Coimbatore, India

siva.t@siims.ac.in

Abstract

The function of "disruptive" innovative technology in higher education is examined in this research. Higher education institutions (HEIs) in this country and abroad have made major investments in learning technology, with Virtual Learning Environments (VLEs) being more or less universal, although students and staff have not always adopted and used these technologies. Instead, additional technologies that are not owned or under the authority of HEIs are frequently used to support education. According to Christensen's theory of disruptive innovation, these disruptive technologies have the potential to improve education even though they were not specifically created to help learning and teaching in higher education. Expansive learning and Activity Theory are used in this study to analyze data on the effects of disruptive technology. The information was gathered by a questionnaire survey on technology awareness and use, as well as through participant observation and interviewing to learn more about their real practices. According to the survey results, participants develop meanings for technology through their use rather than in accordance with a designer's goals, supporting the Disruptive Innovation idea. The results of observation show that students use a limited set of technologies to enhance their learning, but they also have a propensity to use resources other than those offered by their HEIs. Participants use easy-to-use tools to help their teaching and learning, according to interviews. This study finds a discrepancy between the learning technologies made available by HEIs and the technology actually in use. There is no proof that numerous technologies are being employed to support teaching and learning. Instead, a limited number of technologies are being employed for several activities. In order to support learning and teaching, students and lecturers are not dependent on their HEIs. Instead, people choose technologies on their own, favoring well-known companies. The monitoring of teaching and learning, as well as the function of HEIs, which are no longer the gatekeepers to information, are all impacted by the usage of technology outside of HEIs.

Keywords: *activity theory, problem-solving, VLEs, informal learning, disruptive innovation, disruptive technology, confronting reality, and expanded learning*

Introduction

Virtual Learning Environments (VLEs) are more or less commonplace in Higher Education Institutions (HEIs) in the United Kingdom (UK). These institutions have made major investments in digital technologies for learning and teaching. In terms of acceptance and utilization, HEI-provided technologies haven't always been a hit (Blin and Munro 2008; Conole et al. 2008; Selwyn 2007). HEIs do not own or control the technologies that students and lecturers use to support and improve their learning and teaching.

Researchers (e.g., Blin and Munro 2008; Sharples 2003) predicted that the use of technologies in learning and teaching will alter traditional methods of instruction in higher education. Digital technologies have, in reality, primarily replicated current instructional

practices rather than changing and disrupting them (Fry and Love 2011; Margaryan, Littlejohn, and Vojt 2011). It is appropriate to investigate how non-institutional technologies affect teaching and learning in higher education as a result. This paper investigates the function of "disruptive technologies" (Christensen 1997) in higher education in order to address this problem.

Disruptive Technologies

Disruptive technologies are ones that alter existing processes; they may begin with a limited user base but over time expand to the point where they supplant an earlier, more established technology. Contrarily, as Christensen (1997) explains, sustaining technologies are those that improve the functionality of established technologies

All sustaining technologies enhance the functionality of existing items, which is something they all have in common. Compared to what was previously accessible, disruptive technologies offer a radically different value proposition to the market. Disruptive technology-based products are frequently more affordable, easier to make, smaller, and more user-friendly. (p. xv)

The term "disruptive technology" was later altered to "disruptive innovation" by Christensen and Raynor (2003), who argued that the disruption is not an inherent characteristic of the technology but rather evolves via practice. For the sake of clarity, I will refer to disruptive technology in this work even though the focus of my research is on educational technologies.

According to Christensen, Horn, and Johnson (2011) and Christensen and Eyring (2011), the American educational system has relied on sustaining technologies. They claim that even when computers were first introduced into classrooms, they were used to supplement rather than replace pre-existing instructional strategies. For instance, computer visuals were added to lectures, but the lectures themselves continued in their basic format" (p. 18). In this way, Christensen's thesis is a reiteration of the conclusions reached by Blin and Munro (2008) in their investigation of a VLE at an Irish campus institution. There is little disruption of teaching procedures as a result of extensive usage of the VLE in universities, according to Blin and Munro's conclusion.

According to Christensen et al.'s argument on page 488, "despite the introduction of computers and other modern technologies," "little change in traditional instructional practices has occurred." (2011, p. 83).

Expansive Learning and Activity Theory

Activity Theory, which was developed from Vygotsky's (1978, 1927/1997) theory of human development, is where Expansive Learning (Engestro m 1987) originates. According to activity theory, human activities are mediated by the employment of (broadly defined) tools rather than being a direct transmission between subject and object.

Because it enables an investigation of how digital technologies effect other parts of higher education, including social relations, Activity Theory is an excellent lens for this paper. At the school level, Hardman (2005) utilized Activity Theory to analyze the impact

of technology in teaching mathematics in underprivileged communities in South Africa. Scanlon and Issroff (2005) previously used Activity Theory to analyze the impact of technologies in higher education. The researchers highlighted the effects of new technologies on the labor allocation in a classroom environment in both instances. The first-generation model of human activity was depicted by Vygotsky (1978) as a straightforward triangle (Figure 1). The model developed by Vygotsky demonstrates his theory that people do not interact with their surroundings directly.

Instead, they act as mediators through the use of tools, such as signs, codes, and physical equipment.

By including social components to Vygotsky's initial model of human activity, Engestrom (1987) created the extended model of human activity (the activity system), which is seen in Figure 2. This model highlights the collaborative character of human action. The rules, the community, and the division of labor are represented as the nodes in the triangle's bottom row (the layer added by Engestrom). The conventions and laws that shape an activity (like testing in a school system) are represented by the rules node. The term "community" refers to individuals who will be impacted by the activity, while the "division of labor" node shows who is responsible for what during an activity, showing both the allocation of tasks and the hierarchy of power.

However, there may be inconsistencies in the way the nodes interact. Engestrom (1987, 2001) identified these discrepancies as important in expansive learning because they might lead to the creation of new knowledge. As an illustration, a professor works with students to ensure high-quality learning. The learning process can be aided by digital technologies (tools). Scanlon and Issroff (2005) noted that if a new tool is accessible and the students (rather than the lecturer) possess expertise, this may necessitate new practices within the activity system in order to achieve the goal of high-quality learning. When digital technologies are used in a learning environment, To promote better learning, the lecturer might need to give up some control (affecting the "rules" and "division of labor" nodes in the process). The study shares similarities with Christensen's Disruptive Technology hypothesis (1997) in that a new technology can challenge established practices (and run the danger of being rejected), but it can also lead to a change in the practice itself.

Tools don't need an instruction manual, according to Engestrom's methodology, because they "always imply more possible uses than the original operations that have given birth to them" (1987) and "the material form and shape of the artifact [sic]" have only a small degree of control over determining its epistemic use" (2007, pp. 34–35). Engestrom comes to the conclusion that "In Expansive Learning... reconfiguration of given technologies by their users is essential" as a result of this. (2007, p. 35). The thesis put up by Engestrom suggests that individuals define the meanings of technology via their use of them. Design does not limit meaning.

Research Techniques

Understanding the impact of disruptive technologies on learning and teaching in higher education is the main goal of this project.

A pilot survey was carried out from November 2010 to March 2011 using a questionnaire with checkbox questions and open-ended inquiries. The following topics were covered by the questionnaire: What technology are participants aware of, and what purposes do they serve? (3) How much do participants use technology for multiple purposes? The poll produced baseline information on technology use, including which technologies were most often employed and for a variety of purposes. Four postgraduate students and one postgraduate researcher were among the 28 respondents, while 13 of the participants were undergraduate students. Six lecturers and four academic staff members were also included in the poll.

Technologies that were not covered in the pilot research questionnaire were added to the original questionnaire. An updated survey was conducted in October–November 2011. The responses to the twenty surveys came from 15 undergraduate students, 1 postgraduate researcher, 2 lecturers, and 2 academic staff members. These responders weren't any of the ones in the first sample.

Seven observation investigations were carried out between October and November 2011. The task, which concerned the identification and storage of information to help learning and teaching, was delivered to the participants (four students and three lecturers), and the researcher recorded their responses.

Five interviews were also conducted between December 2011 and January 2012. Two were semi-structured and mostly concentrated on using particular technologies. The remaining three interviews were organized and focused on a broader examination of technology use.

Results and Analysis

Questionnaire Research

The results of the pilot survey demonstrated that various technologies were being employed for multiple purposes. For instance, 16 individuals used Facebook for leisure, but also for work (seven) and informal learning (three), where informal learning is learning that is not done as part of a formal course. Ten people used Twitter for leisure, but seven also used it for work and five for informal learning. The responses to the pilot questionnaire also revealed how little respondents knew about new technologies; 21 participants had never heard of Wallwisher, Xtranormal, or Prezi, and 13 individuals had never heard of Delicious.

The results of the Wikipedia pilot poll showed how widely utilized it is: 21 people used it for leisure, 20 for informal learning, 15 for formal learning, and 16 for employment. Wikipedia frequently serves as the initial stop for quick research, however owing to its (sic) dependability, I would typically strive to validate any material obtained there, according to one participant. "I wouldn't blindly believe the articles themselves as legitimate sources of information," another participant commented. "I'm always suspicious about the reliability of the content," another participant added. It is significant that Wikipedia's apparent unreliability does not deter people from using it because it is a freely available tool with a purpose, and as such, it has a place in an Activity Theory paradigm.

The pilot poll recommended that people develop their own Wikipedia goals. More established encyclopaedias, which can be categorized as sustaining technologies because they update their knowledge along established lines and within comparable publication formats, have also been challenged by Wikipedia, an alternative online encyclopedia that is free and widely accessible. The main benefit of Wikipedia, according to one participant, is that you can ask a question and get an immediate response without having to flip through pages of text. Like many innovative technologies, Wikipedia is more affordable (free in this case), easier, more compact, and more practical than its more well-established competitors. The results of the second poll revealed that participants tended to rely on well-established technologies and had little knowledge of emerging technologies that may be utilized to help learning and teaching. For instance, 15 of the 20 participants had never heard of Delicious, and 19 of the 20 participants had never heard of Xtranormal, Wordle, or Wallwisher.

The results of the second survey likewise revealed that 10 of the second sample's 17 participants used Wikipedia for formal learning while 15 used it for enjoyment, 12 for job, and 17 for informal learning. In that participants created their own technological goals and used various technologies for various goals, their results were similar to those of the first poll. Participants also used a few technologies.

As one participant put it, "Adding too many tools to help teaching/learning, especially if one or two can do the job adequately, might overload the learner (and the educator!). According to the Activity Theory, a multitude of tools can create conflict between the subject (the learner) and the object (the learning); learners gain from explicit instructions on how to use digital resources to enhance their learning.

Only one participant in each survey had used Second Life. The participant that used Second Life for the second survey did so in their capacity as a research student: once more,

It is important to highlight that the user chose the purpose, not the designer's objectives. The learning curve for Second Life is comparatively severe.

However, practically every participant utilized Wikipedia, which is remarkably simple to use—not least because it is an encyclopedia, a well-known sort of publication. Before consumers can use Second Life, a virtual environment, they must become acclimated to it. Wikipedia meets Christensen's criteria for a disruptive technology, however Second Life does not have the simplicity of Wikipedia.

Interviews

In February 2011, two of the initial survey's participants were each given time to adopt a new technology into their practices after being exposed to it. Ten months later, in December 2011, an interview was conducted with them on how they used the new technology as well as other technologies in general.

The researcher had presented Delicious to the first respondent, a lecturer, but had not provided any instructions on how to utilize it. She had used Delicious frequently throughout the previous ten months, expanding its use to include her family and her larger social network. She compared her experience to Delicious' user-friendliness: "I believe that

adoption happened fairly quickly. Although I wouldn't describe myself as having a natural aptitude for technology, it was a really instinctive environment. Because it is simple to use, Delicious complies with Christensen's definition of a disruptive technology (1997). It is also cost-free and easy.

Three months into the academic year, this respondent was again questioned about how she saw her undergraduate students using technology to promote learning.

They have access to the virtual learning environment at [name of HEI]. Some of them have embraced that fairly quickly. Others still haven't logged in, which is worrying because we even demonstrated how to do it throughout the orientation week. Therefore, some people are not as tech-savvy as we had anticipated. Others are really skilled. They were content to hyperlink to YouTube and other websites when we gave some presentations earlier this week. Additionally, students are more than eager to use their own laptops or iPads to conduct research, preferring to do so even when you remind them that the information is available in the main text. They automatically latch onto what they are more accustomed to.

The students appear to have their own preferred learning technologies, which are not necessarily the learning technologies provided by their HEI, although the interview did not explore theories as to why they were not all accessing the institutional VLE but frequently using other technologies. The second responder, a learning technologist and graduate student, was questioned about using Wallwisher, a free online message board that the researcher had introduced to her. Wallwisher had not been used by the participant since, "as with all of these stuff, unless everyone else is using it, Perhaps it falls short of its potential. She couldn't create a personal meaning for the technology, therefore it sat unused. She was also annoyed by the fact that nobody else was employing the technology. A critical mass may be necessary for a technology to be widely adopted, potentially through marketing that might build a user community. inventive applications of technology to support.

According to Markides' (2006) critique of disruptive innovation, learning may be created.

Observational Research

The identification and storage of information to help learning and teaching were the subjects of the observation investigations. Four of the seven participants were students, and they were tasked with the following:

You have been asked to produce an essay about increasing participation in higher education for evaluation at an H.E. institution. Utilizing nothing but the computer in front of you, identify, collect, and store pertinent information for this article. Spend fifteen minutes doing this.

The following assignment was assigned to the remaining three participants, who were lecturers:

In H.E., you have been tasked with organizing a lesson on emerging types of assessment. Only the computer in front of you will be used to locate, collect, and save the

educational and instructional materials needed for this purpose. Spend fifteen minutes doing this.

Given the limited time they had, it may not be surprised that participants in both groups used a limited number of technologies. The majority of the research was conducted using Google, and five of the participants used this method. The results (text or URLs) were then saved to a blank Word document and saved in My Documents. Four of the participants used the academic journal aggregator provided by their HEI, however only one of them used it after conducting their initial Google search. Five participants copied links to a blank Word document and one participant sent links through email to herself using a feature provided by the academic journal aggregator. Only one participant utilized Delicious to store and tag online links.

Five individuals did not browse past page 1 of Google or Google Scholar results, and the majority of participants did not go past the first two pages of Google results. Users seem to favor accessibility, quick results, and convenience of use (according to Christensen's claim), even though the participants' behaviors may suggest otherwise also have been shaped by the short time allowed for the tasks.

Google Scholar was used by three individuals. Google was used by six of the seven. On the home page of her HEI, one participant typed in search terms. Bing's results were displayed. Without looking at the results, the participant left Bing and ran the same query again on Google. The participant seemed to have a favorite brand and was not eager to test another. Considering technology in terms of brand preferences is related to Markides' (2006) critique of disruptive innovation, which contends that marketing strategies rather than spontaneous creativity have a greater influence on technological advances and disruptions.

All of the participants were able to complete the task, even though the two observation studies only showed persons using a limited set of technologies. The pupils didn't use other technologies because the ones chosen could complete the task. Although the evidence from the observation studies suggests that a limited range of technologies is being used to support learning and teaching, this is also the conclusion reached by Margaryan, Littlejohn, and Vojt (2011) and Jones and Healing (2010) in their studies of students' uses of technologies to support learning. Technologies are being used flexible and, in some ways, disruptively because the user creates a purpose for the technology.

The observation studies demonstrate how technology, as a tool, affects other nodes within the activity system from the standpoint of activity theory. In particular, how technologies are utilized to enhance learning and teaching has an impact on the social nodes in Engeström's activity system triangle (rules, community, and division of labor). Students now use additional sources to supplement their learning rather than relying just on the reading lists provided by instructors. Because information can be accessed at any time and from any location, the HEI's traditional duty as the guardian of knowledge is transformed.

Structured Interviews

In January 2012, three formal interviews took place. Inquiries about how each of the interviewees—a lecturer and two students—uses technology to support learning and teaching included, for the students, "Where do you get the learning materials you use for work you submit for assessment?" and, for the lecturer, "In your opinion, where do students get the resources they use for assessed work?" One participant (the lecturer) claimed that her pupils rarely used an academic journal aggregator and frequently used Google to find their course materials. The graduate student said that in order to support her assigned texts, she used Google and Google Scholar.

The instructor said that she found Google Scholar to be more user-friendly than the academic journal aggregator offered by her HEI, saying, "I don't find it as user-friendly as I find Google." The participant's perception of their HEI as the knowledge gatekeeper is not supported by the interviews, it seems. When participants need information to support learning and teaching, they turn to Google rather than the journal aggregators at their HEIs. The speaker claimed that choosing Google was influenced by its usability. Google might therefore be considered a disruptive technology in and of itself because of how convenient and user-friendly it is compared to a HEI's own resources.

By offering a different way to access knowledge and indirectly contesting the HEI's role as knowledge's custodian, Google in this context also has an impact on the academic community and the division of labor within it.

Conclusion

The surveys and interviews provide no proof that a variety of technologies are being used to support teaching and learning in higher education. Instead, a limited number of tools, including Wikipedia and Google, are being utilized to do a wide range of jobs. People prefer to use technologies that are free and simple to use, as predicted by Christensen's theory. People will use technology more frequently if they are kept simple.

For further information on why specific technologies reach a critical mass of users, consult Markides (2006). According to survey, observation, and interview data presented here, instructors and students each have a favorite technology brand. According to Markides' argument, markets for disruptive technology can be developed by clever use rather than emerging organically. For instance, encyclopedias are a well-established form of publication, but Wikipedia has altered the creation, dissemination, and use of encyclopedias and, perhaps, knowledge more broadly. Markides's theory does not necessarily conflict with Christensen's because people can also create their own uses for technologies via practice, which is a key component of disruption. Disruption is not caused by the inherent characteristics of the technology (Christensen and Raynor 2003); practice is influenced by underlying economic and social issues rather than occurring in a vacuum. Wikipedia is a tool that, according to Activity Theory, breaks the activity triangle's rules and division of labor nodes. Students don't have to get all of their education from their HEI. The function of the professor and the HEI as gatekeepers is allegedly changing, according to activity theory. There are other ways to learn, and they are frequently quick,

handy, and easy to use. When it comes to learning tools offered by HEIs, the same cannot always be said.

Due to the abundance of alternative information pathways that implicitly challenge the function of the lecturer, the disruptive use of technologies has ramifications for the monitoring of learning as well as the labor division within higher education.

As the research has consequences for how knowledge is accessed, further study may be able to inform the strategic development of library services in HEIs. The range of participants' technology preferences and the degree to which participants' decisions in this regard are influenced by the successful marketing of technologies are other topics for future investigation.

EMERGING DISRUPTIVE TECHNOLOGY IN EDUCATION

M. Krishna Prasanth

B.Com International Business

Nallamuthu Gounder Mahalingam College Pollachi

Introduction

Before the age of computer and digital communication technology, traditional classroom education has been used for the transfer of knowledge from teacher for the student and high dependency was there on the capabilities of the tutor. Knowledge transformation was also limited in time and space by there sources available to students such as libraries etc. But the scenario is change now. There are many digital technologies are available which have high impact on education system. Also due to globalization, there is a pressure on nations of the world to use new technologies in teaching.

There are many technologies have disrupted both our every day lives and commerce. Many disruptive technologies in education are also introduced and the students (according to their needs and teachers can use different technologies controlled by different higher education institutions to support and entire their learning and teaching. The use of ICT is rapidly changing the technological forces that will shape the structure of educational systems of the world.

The role of teaching in a classroom is to help students who are slow learner and to catch up them with other students. But what is about them who are faster at learning? For those students, there are additional courses according to their interests to fulfill their requirements of free elective students. MOOCs is there to enhance online learning with technology.

The teachers can post their instructions online to participants through MOOCs, which is helpful to students to know how to complete the course. The integration of online course material can increase interaction among students and between the students and the teacher, for exp. through virtual group work, building an online community for module, discussion questions, instructor participation and so on. A number of institutions offer virtual distance learning which allows teachers and students to interact with each other.

Digital technology thus provide the potential for establishing communities of inquiry in which elements of social presence and teaching presence interact to create an education experience. Disruptive technologies are also provide an opportunity to those students who can't not come to traditional institutions due to scheduling issues. There are other disruptive technologies also which are useful in education such as cloud learning, mobile learning, e learning, artificial intelligence etc. And are mentioned in the next section of this paper.

Objectives

1. To provide education in the use of Information and Communication Technology or ICT.
2. To encourage higher-level thinking and creativity through ICT.
3. To deliver students with a learning experience in instructional technology.
4. To promote computer-based educational resources.
5. To make students aware of Information Technology.
6. To determine the practical use of technology integration.

Disruptive Technology In Education

1. Online Learning Platforms

- Accessible Education: Online learning platforms provide access to education for learners worldwide, overcoming geographical limitations.
- Flexibility and Convenience: Students can learn at their own pace and access resources anytime and anywhere, accommodating various schedules and obligations.
- Diverse Course Offerings: Online platforms offer a vast range of courses and subjects, allowing learners to explore diverse areas of interest.

2. Artificial Intelligence (AI) in Education

- Personalized Learning: AI can analyze student data and adapt learning materials to individual needs, offering personalized learning experiences.
- Real-time Feedback: AI-powered systems can provide immediate feedback and suggestions to students, aiding in their understanding and progress.
- Administrative Efficiency: AI can automate administrative tasks, freeing up teachers' time for more instructional activities.

3. Virtual and Augmented Reality

- Immersive Learning: VR and AR technologies offer immersive simulations, allowing students to experience complex concepts and scenarios.
- Active Learning and Critical Thinking: VR and AR foster active learning by engaging students and encouraging critical thinking and problem-solving skills.
- Inclusive Learning Experiences

4. Blockchain in Education

- Secure and Transparent Credentialing: Blockchain provides secure systems for storing and sharing educational records and credentials, reducing fraud and increasing transparency.
- Self-Verification: Individuals have control over their educational qualifications, allowing them to easily verify and share their credentials.

- **Reliable Digital Records:** Blockchain ensures the tamper-proof nature of educational achievements, providing individuals with a digital, reliable record of their qualifications.

Conclusion

The technology needs to be kept in perspective, as a tool to enhance learning. Teachers felt that roll of the institution is to deliver more than mere academic facts, students need to develop their interpersonal skills. For this reasons, teachers need to make every effort to ensure that students are able to use the technology intelligently and critically in order to succeed in today's online global workplace. Teachers maintain that technology is not to be considered as a finite entity, it need to be carefully integrated in to the culture of the institution. Above all, technology enhanced learning needs to be approached with caution, in order to not lose sight of the basic fundamentals of higher education. Give sufficient training to teachers to use the technology and to be able to pass those skills on the students.

WOMEN EMPOWERMENT

S. Alayavathi

B.Com [International Business]

NGM College

Introduction

“Women empowerment” and “women equality with men” is a universal issue. Women empowerment is a term that is used to encourage, inspire and celebrate women. It is also used to celebrate the strides that women and girls have taken in terms of gender equality, financial independence and high confidence. Women Empowerment today, has become the most discussed topic around the world. In basic terms, it means to diminish the gender gap and providing equal opportunities and rights to men and women. **Women empowerment is all about giving women the power and control of their lives to become anything they want and to do what they want in situations where they were not allowed once upon a time.** It refers to the creation of an environment for women where they can make decisions of their own for their personal benefits as well as for the society.

Need for Women Activism

Women’s empowerment is not simply a trendy idea; it is essential in today’s society. Despite considerable advancements in women’s rights as well as gender equality, there are still many obstacles and problems that prevent women from contributing fully to society and reaching their full potential. The following are some strong arguments in favor of women’s empowerment:

Gender Equality

The empowerment of women is necessary to achieve gender equality. Social conventions, cultural practices, as well as discriminatory attitudes that restrict women’s prospects and undercut their rights are at the heart of gender disparity. By empowering women, we question these expectations and work to create a society where men and women are afforded the same rights, opportunities, and obligations.

Economic Development

Economic growth and the empowerment of women are intimately related. Half of the world’s population is made up of women, and economic sustainability depends on their active engagement. Whenever women have the same opportunity for education, work, and entrepreneurship, they make a substantial contribution to economic production, the eradication of poverty, and general development.

Education and Knowledge

A potent strategy for changing civilizations is educating and empowering women. Women who have received an education are more educated, more competent, and more

self-assured, which empowers them to question gender norms and actively engage in social, economic, and political realms. Education increases a woman's propensity to make investments in her family's welfare, especially the health and education of her children.

Steps for Women Empowerment

Empowerment of women can be done in various ways, through both government schemes and individual levels. The government has come up with various schemes like BetiBachaoBetiPadhaoYojana, Mahila-E-Haat, SukanyaSamriddhiYojana, etc., to empower women. Apart from this, individually, we can work by abolishing social evils like dowry and child marriage. Respecting women and providing equal opportunities can be done individually.

Importants of Women Delegation

Empowering women is important because women aren't getting what they deserve.

Underemployed and unemployed: Women population constitutes around 50% of the world population. A large number of women around the world are unemployed. The world economy suffers a lot because of the unequal opportunity for women at workplaces.

Inspiration for others: There are a lot of women in India who have done exceptionally well in various fields of life. Women like PT Usha, Hima Das, PV Sindhu, SaniaMirza, SainaNehwal, etc. have won various trophies and medals in their respective fields and showed the girl power to Indian people. After looking at them, a lot of girls came out of their houses and showed what actual talent they carry inside them.

Overall development of society: The main advantage of Women Empowerment is that there will be an overall development of the society. The money that women earn does not only help them and or their family, but it also help develop the society.

Economic Benefits: Women Empowerment also leads to more economic benefits not to the individuals but to the society as well. Women empowerment leads to more **financial independence of women and girls**. They are taught on how they can use their skills to get income that they can use to support their families. Women empowerment helps women to stand on their own legs, become independent and also to earn for their family which grows country's economy.

Reduce Poverty: Women Empowerment also reduces poverty. This also **contributes significantly to the family welfare**. This is because their children are more likely to acquire good education and they are also able to save and invest for the benefit of their families.

National Development: Women are increasingly participating in the national development process. They are making the nation proud by their outstanding performances almost every spheres including medical science, social service, engineering, etc. This leads to **more developed economies**. This is because the women are able to work and acquire income which translates to higher levels of a country's GDP. By empowering women, we enable the nation.

Availability of Quality workforce: Large organizations need a large pool of high quality workforce. Empowerment of women would help in increasing the total workforce of quality people.

Educated society: Women empowerment leads to **increased levels of literacy** in the world. This is the case when these girls gain education that can help them better their lives. Many people do want their daughters to study and thus a lot of women remain illiterate. But, girls should be allowed to study till the time she feels it is good for her. This is not only good for her but also from the country's perspective as well.

Gender equality: Empowerment of women is also important in **accomplishing the world goal of gender equality**. By empowering girls, this goal is achieved as they are better able to compete with their male counterparts in places such as government, learning institutions and even leadership positions.

Political representation: Girl empowerment also **contributes to equality in political representation**. This is because the girls have more confidence to compete for leadership and political seats.

Ways to Empower Women

“Empowering women isn’t just the right thing to do, it’s the smart thing to do.”

–Barack Obama

In recent years, there have been many positive developments in India's efforts to empower women. The government has implemented several programs and policies aimed at improving women's health, education, and economic opportunities. There has been a significant increase in the number of women participating in the workforce, and women have achieved high positions in various fields, including politics, business, and entertainment.

- Freely live their life with a sense of self-worth, respect and dignity.
- Have complete control of their life, both within and outside of their home and workplace.
- To make their own choices and decisions (right to choose: to say yes or no)
- Have equal rights to participate in social, religious and public activities.
- Have equal social status in the society.

- Have equal rights for social and economic justice.
- Determine financial and economic choices.
- Get equal opportunity for education.
- Get equal employment opportunity without any gender bias.
- Get safe and comfortable working environment.

The empowerment of women is a very important task that every one of us should undertake. This is because empowering women is equal to empowering the whole community and generations to come. There are many ways in which we can empower girls and women and the task does not solely lay with the government but with everyone in the society.

Rights of Women

A strong woman makes strong nation, teach it to your next generation. Women are to be praised, not to be suppressed. Treat her like a queen and she will make you the king. She will protect you from the world, if you make her empowered.

Right to equality

Article 14 of the Indian Constitution guarantees the right to equality to all citizens, regardless of their gender.

Right to education

The Right of Children to Free and Compulsory Education Act, 2009, makes it mandatory for all children, including girls, between the ages of 6 and 14 to receive education.

Right to work

The Equal Remuneration Act, 1976, ensures that men and women receive equal pay for the same work.

Right against sexual harassment

The Sexual Harassment of Women at Workplace (Prevention, Prohibition, and Redressal) Act, 2013, provides a framework for addressing complaints of sexual harassment at the workplace.

Right to property

The Hindu Succession Act, 1956, was amended in 2005 to give equal inheritance rights to daughters in Hindu families.

Right to marriage and divorce

The Hindu Marriage Act, 1955, gives women the right to seek divorce on various grounds, including cruelty and adultery.

Right against domestic violence

The Protection of Women from Domestic Violence Act, 2005, provides legal protection to women from physical, emotional, and verbal abuse by their spouses or relatives.

Conclusion

Feminism isn't about making women stronger. Women are already strong. it's about changing the way the world perceives that strength."

Despite progress toward women's empowerment, there is still a long way to go.

Making women aware of their potential has now become a need of the times, and the government should implement measures such as health, education, employment, women's awareness, and so on.

It is vital to raise societal awareness and establish public attitudes encouraging women's empowerment.

Many women have even absorbed patriarchal conventions to assert their authority over other women, such as the mother-in-law's over her daughter-in-law.

Finally, women must take the initiative to fulfill their desires for empowerment. There is no better weapon for the development of women than empowerment.

Everything is within your power, and your power is within you." "If you ask a woman who she is, she'll tell you who she serves and sometimes what she does. But that isn't the whole story." "We may encounter many defeats but we must not be defeated."

ROLE OF ICT IN THE PROCESS OF TEACHING AND LEARNING

Ms. M. Shanmugapriya

Assistant Professor, Department of Commerce - BPS
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

ICT enables self-paced learning through various tools such as assignment, computer etc as a result of this the teaching learning enterprise has become more productive and meaningful. ICT helps facilitate the transaction between producers and users by keeping the students updated and enhancing teacher's capacity and ability fostering a live contact between the teacher and the student through e-mail, chalk session, e-learning, web-based learning including internet, intranet, extranet, CD-ROM, TV audio-videotape. Edusat technology has become very powerful media for interactive participation of experts and learners and it reaches the unreachable. Emerging learning Technology (ELT) of blogging, Integrated Learning Modules, a pod cast, Wikis, Enhancement of Browsers, E-learning, M-learning, U-learning have started making rapid strides in teaching learning processes.

Keywords: Web Browsers, Instructional software, Interactive learning, Integrated Learning Module, U-learning, E-learning, M-learning.

Introduction

Huge changes in technology can be observed across the globe on a regular basis. It can also be stated that developments and economic growth resulted in multiple changes in the overall structural foundation. Information and communications technology (ICT) can be used as a viable tool towards the overall learning process. With the rise of the internet and usage of various technologies towards the learning process, usage of ICT will be beneficial. ICT also has the potential to increase the level of interaction between the teacher and the student, which will increase efficiency of the entire process of learning. The interest of the student also increases as there are multiple audio and visual methods of learning associated with the ICT process. In the past few years, the world has witnessed a phenomenal growth in communication technology, computer network and information technology.

Role of ICT in Teaching and Learning

India has made great strides in the utilization of data and correspondence innovation as of late and this is reflected in an energetic and quickly developing economy. It is currently a recognized world pioneer in the information business. Today, every one of our exercises are winding up very information based. There is a move from the mechanical period to the instructive time.

Globalization, progression and a market situated economy have added new flavor to our exercises, with the outcome that learning and aptitudes of each expert, including Teachers should have been ceaselessly refreshed. Anyway the instruction segment, especially the region of educator training, has fallen behind different segments of the Indian economy in profiting from the products of innovative advancement.

The present training framework faces the difficulties to get ready people for the data society in which a standout amongst the most critical points is to deal with data. So as to work in the new world economy, students and their Teachers need to figure out how to explore huge measure of data, to dissect and decide, and to ace new information and to achieve complex errands cooperatively.

Use of Emerging Learning Technologies (ELT)

We may have heard the names of following terms without understanding. Here are few ELT which are in use:

Blogging: A blog (a blend of the term web log) is a type of website or part of a website. Blogs are usually maintained by an individual with regular entries of commentary, descriptions of events, or other material such as graphics or video. Most blogs are interactive, allowing visitors to leave comments. The ability of readers to leave comments in an interactive format is an important part of many blogs. Most blogs are primarily textual, although some focus on art photographs, videos, music and audio.

Integrated Learning Modules:- Availability of open source software has enabled development of content management system and learning management system such as a Module. Integrated Learning Module (ILM) is thematically focused classes, delivered primarily over Internet. The course content is integrated and comprehensive creating a unique perspective on course themes without the potentially repetitive requirements of separate stand-alone courses. Content and language integrated learning is an approach for learning content through an additional language (foreign or second language) thus teaching both the subject and the language.

A podcast :- A podcast (or non-streamed web cast) is a series of media files (either audio or video) that are released episodically and often downloaded through web syndication. The mode of delivery differentiates podcasting from other means of accessing media files over the Internet, such as direct download, or streamed web casting. A list of all the audio or video files currently associated with a given series is maintained centrally on the distributor's server as a web feed, and the listener or viewer employs special client application software known as a pod catcher that can access this web feed, check it for updates, and download any new files in the series.

Wikis:- Ebers bach et al (2006) note that the following basic features are common in wikis:-

Editing: - Most of the wikis use the same basic page editing function such as Text editing and image, table list hyperlink and file insertion.

Links: - Each article can be linked to other articles and thus form a new network structure.

History: - A function which saves all previous version or modifications of any single page. It allows tracking of the editing processes of an article since all changes have been documented.

Recent changes: - The features can provide a current overview of a certain number of recent changes to wiki pages or all changes with in a predefined time period.

Conclusion

Teaching occupies an honorable position in the society. ICT helps the teacher to update the new knowledge, skills to use the new digital tools and resources. By using and acquire the knowledge of ICT, student teacher will become effective teachers. ICT is one of the major factors for producing the rapid changes in our society. It can change the nature of education and roles of students and teacher in teaching learning process. Teachers in India now started using technology in the class room. Laptops, LCD projector, Desktop, EDUCOM, Smart classes, Memory sticks are becoming the common media for teacher education institutions.

Introduction

Information and communication technology (ICT) is an umbrella term that include any communication device or application encompassing mobile phone, computer and network hardware, software, internet, satellite and so on...

ICT in Education is the mode of education that use information and communication technology to support, enhance, and optimize the delivery of information. worldwide

research has shown that ICT can lead to an improvement student learning and better teaching methods.

It can impact student learning when teachers are digitally literate it into curriculum. School use a diverse set of ICT tools to communication, create, disseminate, store and manage information.

Objectives

- To explain the new technologies in teaching-learning process.
- To define the feature of ICT.
- To define concept and needs of e-content.
- To discuss the role of e-content in future classroom.
- Explore various online programs available for professional development
- Critically reflect on effectiveness of professional development programs through MOOC.

Ict in Education

ICT in education improves engagement and knowledge retention: When ICT is integrated into lessons, students become more engaged in their work. This is because technology provides different opportunities to make it more fun and enjoyable in terms of teaching the same things in different ways.

ICT enables the use of innovative educational resources and the renewal of learning methods, establishing a more active collaboration of students and the simultaneous acquisition of technological knowledge.

Electronic textbooks, instructional software, email, chat, and distance learning programs.

Ict Tools for Teaching Learning Process

Following tools are used in the Teaching learning process in Online- Offline mode of instruction. During lockdown these ICT tools proved to be a boon for making the teaching learning process easy and accessible to all students.

1. Learning management system (MOODLE and Google classroom):

Moodle stands for Modular Object-Oriented Dynamic Learning Environment and statistics. Moodle is free software, a learning management system providing a platform for e-learning and it helps the various teachers considerably in conceptualizing the various courses, course structures and curriculum thus facilitating interaction with online students. It is configurable, highly-flexible, and feature-rich. RSCOPR has a self-customized MOODLE developed by Digital Content development team.

2. Google Classroom – Blended Learning Platform:

Google Classroom is a free, blended learning platform that offers a variety of benefits for both students and teachers. Google Classroom enhances the productivity and take workflow management to the next level. It keeps track of assignments coming in with a simple glance making it very easy to know everyone's status and to follow up with students who are missing work. Everything is time stamped, so late work is easily identifiable. Since Google apps are cloud based the work in Google Classroom saves automatically and is accessible from any device. With the app, both students and teachers can enjoy the full functionality of Google Classroom on a mobile device. Students receive notifications on their phone when assignments and announcements are posted, making it easy for students to stay on top of classroom happenings. As a teacher, the app enables you to post from your phone either right from the app or using share-sheet support.

3. Google Forms:

Google Forms allows to conduct MCQ quizzes online. The information is stored as a spreadsheet automatically record the answers. The spreadsheet then populates the responses from the quiz or survey in real-time. Google forms can be used to give feedback to and receive feedback from students and parents.

4. Videoconferencing Platforms:

During COVID pandemic when the world shifted to Online mode for teaching learning various free videoconferencing platforms like Google meet, Zoom and Cisco webex were used to conduct online classes.

5. Virtual Labs:

The Virtual Labs provides remote-access to simulation-based Labs in various disciplines of science and engineering. This student-centric approach facilitates the absorption of basic and advanced concepts through simulation-based experimentation. Internet-based experimentation further permits use of additional web-resources, video-lectures, animated demonstrations and self-evaluation. Virtual labs are any place, any pace, any-time, any-type labs. It is a paradigm shift in student-centric, online education. Virtual labs sessions available on Virtual labs an MOE Government of India Initiative for Physical Pharmaceutics, Organic Chemistry and Inorganic chemistry subjects as well as Virtual labs sessions from Amrita Vlab portals for Microbiology, Organic chemistry and Inorganic chemistry practicals provide helpful tool to teacher during onlineteaching learning process.

6. Educational Videos and animations (Youtube and Internet):

Various valuable educational videos of pharmacy subjects available on internet, youtube provide additional help in better understanding of subject knowledge.

7. Smart Classroom:

Classroom integrated with Smartboards and internet connections provides enhanced and interactive learning and teaching opportunities for students and teachers. The internet-connected to systems in smart classes is stored with abundant information. It is accessible anytime for their teaching and learning process. Teachers can access information from various educational sources for teaching purposes. It helps in easy access to online resources. Smart Classrooms helps in developing critical thinking and problem-solving skills in students.

8. E-Resources:

E- journals from Proquest Pharma and DELNET were available for students to access remotely inonline mode and enhance their learning experience. E books were uploaded on MOODLE and Google Classroom.

Professional Development in Teaching

ICT can be used for training teacher in many ways as structured by Collis and Jung (2003) teacher training can take many forms. The framework has four extreme dimensions core technology, complementary technology, learning How to use ICT and learning via ICT.

ICT helps a teacher to guide his students about the learning materials available on internet, e- books, e-journals-magazines and social sites like linked -in which are helpful in better learning ofsubject skills. 6. ICT also helps him framing curriculum of subjects

Moreover, ICT can promote international collaboration and networking in education and professional development. There's a range of ICT options - from video conferencing through multimedia delivery to web sites - which can be used to meet the challenges teachers face today (Pacey, 1999).

Tools of ICT

Information Communication Technology tools are digital infrastructures such as; computers, laptops, desktops, data projector, software programs, printer's scanners and Interactive teaching box. A set of technological tools used, for example, to store, manage or communicate information.

ICT is the infrastructure and components that help to enable modern computing systems. ICT consists of both the internet as well as the mobile connected which are connected by wireless networks. It also includes all the antiquated technologies such as landline telephones, television and radio

Modern Technology in Ict

Technology has made it possible for people from all walks of life to have access to different resources. Further, technology is also being used to equip people who need a certain type of assistance to improve their quality of life and help them avail opportunities that would otherwise be inaccessible.

In general, modern refers to a hardware device or software program released recently.

COVID-19:

The pandemic caused further shocks to the system with schools forced to shut down during the lockdown period, and the transition of students and teachers to online teaching-learning. In India, around 250 million students were affected due to school closures at the onset of lockdown induced by COVID-19.

Its of poor students do not have access to laptops and computers; all these students are naïve, think there should not be this disparate education. Surely there are lots of disadvantageous factors like there are no exams; students are being given marks by the internals. This may impact their career in the future.

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT tools in education make it easier for teachers to use the best strategies to bring out the best in their students.

Education Creates a Better Society: An educated person is more likely to develop better moral and ethical values as compared to an uneducated person. Education brings equal opportunity for everyone and educated people will be able to create a better society.

For the conclusion, Information Technology is essentially a wide and varied field. Information technology can speed up the time it takes new products to reach the market. From innovations in microprocessors to efficient drug delivery systems, information technology helps businesses respond quickly to changing customer requirements. Other than that, information technology provides a wide range of tools entrepreneurs can use to guide their new companies through the startup and growth stages.

The companies that will succeed and flourish in the 21st century are the companies that will understand what users need and will be able to offer them the experience that can be obtained through technology information systems. Modern information technology has gained popularity rapidly since the mid-twentieth century, and the trend is likely to continue into the future. Simply put, Information Technology has changed the business landscape due to its wide and varied scope.

ICT TOOLS IN TEACHING - LEARNING PROCESS

Dr. N. Giri

*Assistant Professor, Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi*

B. Pavithra & K. Gnanasundari

*Ph.D Research Scholar, PG and Research Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

ICT enables self-paced learning through various tools such as assignment, computer etc as a result of this the teaching learning enterprise has become more productive and meaningful. ICT helps facilitate the transaction between producers and users by keeping the students updated and enhancing teachers capacity and ability fostering a live contact between the teacher and the student through e-mail, chalk session, e-learning, web-based learning including internet, intranet, extranet, CD-ROM, TV audio-videotape. Edusat technology has become very powerful media for interactive participation of experts and learners and it reaches the unreachable.

Keywords: *ICT, learning, Teaching, Student*

Introduction

Education is becoming a major source of competitive advantage when global economic and technological competition is growing sharper. With the passage of time, a lot of changes have taken place in the field of education technology. Good education is seen as a stepping stone to high flying career in life. UNESCO defines ICT as technologies that help to create, propagate and exchange information. This definition includes various tools of communication/multimedia e.g. television, phone, satellite systems, computer network, associate services and equipments such as e-mail, videoconferencing etc. Demand for skilled and competent labour is ever increasing in the contemporary globalized society. The role of ICT in the education and society is becoming more and more important and this importance will continue to grow and develop in the 21st century. ICT contribute in education in many ways such as a collaborative tool, ICT as a tool to support traditional subjects, ICT as an administrative tool and many more. Teachers use ICT for making teaching learning process easy and interesting, A competent teacher has several skills and techniques for providing successful teaching. In modern science and technological societies, education demands more knowledge of teacher regarding ICT and skills to use ICT in teaching learning process. It can make the institution more efficient and productive. This knowledge is essential to develop new, sustainable faculty support solutions. It can be said that the knowledge of ICT will help teachers to know integrated technology with classroom teaching.

Objectives of the Study

- To identify the ICT tools used in teaching-learning process.
- To examine the benefits of using ICT tools

ICT Tools in Teaching-Learning Process

- Learning management system (MOODLE and Google classroom)
- Google Classroom - Blended Learning Platform
- **Google Forms**
- Videoconferencing Platforms
- Virtual Labs
- Educational Videos and animations (YouTube and Internet)
- Smart Classroom
- E-Resources

Learning Management System (MOODLE and Google Classroom)

Moodle stands for Modular Object-Oriented Dynamic Learning Environment and statistics. Moodle is free software, a learning management system providing a platform for e-learning and it helps the various teachers considerably in conceptualizing the various courses, course structures and curriculum thus facilitating interaction with online students. Moodle supports a range of media to present or link to learning materials, support the students and to assess their learning. It is able to provide automated assessment in the form of quiz, and give immediate detailed feedback to the students. The messaging system allows learners and teachers to communicate easily. Teachers can also communicate with groups of learners via course forums either to provide answers to learners' questions or to just get involved in discussions. The uploaded learning resources are available to the students whenever they want them.

Google Classroom - Blended Learning Platform

Google Classroom is a free, blended learning platform that offers a variety of benefits for both students and teachers. Google Classroom enhances the productivity and takes workflow management to the next level. It keeps track of assignments coming in with a simple glance making it very easy to know everyone's status and to follow up with students who are missing work. Everything is time stamped, so late work is easily identifiable. Since Google apps are cloud based the work in Google Classroom saves automatically and is accessible from any device

Google Forms

Google Forms allows to conduct MCQ quizzes online. The information is stored as a spreadsheet automatically record the answers. The spreadsheet then populates the responses from the quiz or survey in real-time.

Videoconferencing Platforms

During COVID pandemic when the world shifted to Online mode for teaching learning various free videoconferencing platforms like Google meet, Zoom and Cisco webex were used to conduct online classes. All these have varying needs and features. Zoom allows the facility of using its features using a browser also without the need to download the application, the app download is mandatory in case of the other two software. Zoom allows face touch up facility as well which is not present in the other two competing software. Google Meet allows the maximum on-screen chatting time with respect to the others.

Virtual Labs

The Virtual Labs provides remote-access to simulation-based Labs in various disciplines of science and engineering. This student-centric approach facilitates the absorption of basic and advanced concepts through simulation-based experimentation. Internet-based experimentation further permits use of additional web-resources, video-lectures, animated demonstrations and self-evaluation. Virtual labs are any place, any pace, any-time, any-type labs

Educational Videos and Animations (YouTube and Internet):

Various valuable educational videos of pharmacy subjects available on internet, youtube provide additional help in better understanding of subject knowledge.

Smart Classroom

Classroom integrated with Smartboards and internet connections provides enhanced and interactive learning and teaching opportunities for students and teachers. The internet-connected to systems in smart classes is stored with abundant information. It is accessible anytime for their teaching and learning process. Teachers can access information from various educational sources for teaching purposes. It helps in easy access to online resources. Smart Classrooms helps in developing critical thinking and problem-solving skills in students.

E-Resources

e- Journals and DELNET were available for students to access remotely in online mode and enhance their learning experience. E books were uploaded on MOODLE and Google Classroom.

Benefits of using ICT Tools

- Enhances interaction and increases student engagement
- Learning is accessible any time, any place
- Offers new learning techniques as classroom tools are constantly evolving

Enhances interaction and increases student engagement

When integrated effectively into a classroom environment, there's no question that technology can increase student engagement and encourage interaction. Teachers are able to present long-established ideas in new and innovative ways.

Learning is accessible any time, any place

The uber-connectivity of smart devices and the emergence of cloud technology means that students have access to their educational ICT tools wherever and whenever they like. Academic development doesn't have to stop in the classroom and collaborative projects can be worked on in real-time through applications.

Offers new learning techniques as classroom tools are constantly evolving

Technology is never one to stand still; it's in a constant state of advancement and evolution - much like the process of teaching and learning. Developers are forever releasing apps to improve the digital learning experience in classrooms — which can only benefit both students and teachers.

Conclusion

Educational systems around the world are under increasing pressure to use the new technologies to teach students the knowledge and skills they need in the twenty first century. The educational institutions have a great opportunity and responsibility to design their educational system leading to the society and nation. Online resources that can be accessed from anywhere at any time from multiple devices are essential for supporting innovations in the teaching learning practices. The idea of interactive learning beyond the classroom, remote learning may really take off due to developing science and technology.

ARTIFICIAL INTELLIGENCE IN EDUCATION (AIED) AND AI AS A DISRUPTIVE TECHNOLOGY IN LEARNING

S. Rajagopalan

Assistant Professor

UG Department of Commerce with Computer Applications

NGM College (Autonomous), Pollachi, Tamilnadu

srajagopalan.ngm@gmail.com

Abstract

At its simplest form, artificial intelligence is a field, which combines computer science and robust datasets, to enable problem-solving. It also encompasses sub-fields of machine learning and deep learning, which are frequently mentioned in conjunction with artificial intelligence. These disciplines are comprised of AI algorithms which seek to create expert systems which make predictions or classifications based on input data. Over the years, artificial intelligence has gone through many cycles of hype, but even to skeptics, the release of OpenAI's ChatGPT seems to mark a turning point. The last time generative AI loomed this large, the breakthroughs were in computer vision, but now the leap forward is in natural language processing. And it's not just language: Generative models can also learn the grammar of software code, molecules, natural images, and a variety of other data types.

Introduction

Artificial Intelligence in Education is developing new solutions for teaching and learning for different situations. Nowadays, AI is being used by different schools and colleges across different countries. AI in education has given a completely new perspective of looking at education to teachers, students, parents, and of course, the educational institutions as well. AI in education is not about humanoid robots as a teacher to replace human teachers, but it is about using computer intelligence to help teachers and students and making the education system much better and effective. In future, the education system will have lots of AI tools that will shape the educational experience of the future. In this topic, we will discuss the impact and application of Artificial Intelligence on Education.

AI in Education

Artificial Intelligence (AI) has the potential to address some of the biggest challenges in education today, innovate teaching and learning practices, and accelerate progress towards SDG 4. However, rapid technological developments inevitably bring multiple risks and challenges, which have so far outpaced policy debates and regulatory frameworks. UNESCO is committed to supporting Member States to harness the potential of AI technologies for achieving the Education 2030 Agenda, while ensuring that its application in educational contexts is guided by the core principles of inclusion and equity.

Education is an important part of life for everyone, and a good education plays a vital role to have a successful life. In order to improve the education system for the students, there are always a lot of changes happening around the world, ranging from the way of teaching to the type of curriculum. Artificial Intelligence is a thriving technology that is being used in almost every field and is changing the world. One place where artificial intelligence is poised to make big changes is (and in some cases already is) in education

Overview of Aied (Artificial Intelligence in Education)

Artificial Intelligence (AI) is a simulation of human intelligence into a computer machine so that it can think and act like a human. It is a technology that helps a computer machine to think like a human. Artificial Intelligence aims to mimic human behaviour. AI has various uses and applications in different sectors, including education. In the 1970s, AIED has occurred as a specialist area to cover new technology to teaching & learning, specifically for higher education. The main aim of AIED is to facilitate the learners with flexible, personalized, and engaging learning along with the basic automated task. Some popular trends in AIED include Intelligent tutor systems, smart classroom technologies, adaptive learning, and pedagogical agents. Below diagram shows the relationship between all these trends:

Applications/Roles of Artificial Intelligence in Education

Automate basic activities in education with AI

In the education system, there are various activities which take lots of time of teachers such as grading tests and home-works. These tasks require lots of time and effort, while this time could be used in interacting with students, letting them know their errors, teaching new things, and many more. To save this time, Artificial Intelligence can be used. With AI tools, it is possible to automate the grading system for nearly all types of MCQ(Multiple choice questions) and fill-in-the-blank, and they are very close to being able to grade written responses.

Additional Support for students with AI tutor

As it is obvious that teachers can't be present with students all the time while they study, as teachers in colleges have fixed timings. But each student is not smart enough to grasp all the things at once, and they need additional supports from someone to help them in the understanding study material. This additional support can be provided by the AI tutors. Currently, there are various AI-driven tutoring programs that can help students in learning the basics of mathematics, writing, and other subjects. With these AI programs, students can learn fundamentals, but still, they are not suitable to learn high-level concepts of any subject

Helpful feedback to students and teachers with AI-driven programs

AI is not only helping the students to learn the customized course as per their requirements, but it can also give feedback to both the teachers and students about the success level of the course. Some online course providers are currently using such feedback-based AI systems to analyse the progress of the student and also alert the professors for the critical performance issue of the student. These type of AI-driven systems enables the student to get the proper support, and professors can determine the areas of teaching where it requires improvement. Instant feedback to students helps them understand where they are going wrong and how they can do it better.

Finding improvement required in course with AI

In the education system, it is very hard to find out the gaps in learning. Teachers have limited time to teach in the classroom, and they may not always know where the students are lacking and what concepts have confused the student. To solve this problem, AI-driven programs can help the education system. Coursera and some other learning platforms are already using AI-driven programs in practice. For example, when a large number of students are found to submit the wrong answer to a homework assignment, the system alerts the teacher and gives future students a customized message that offers hints to the correct answer.

Changing the role of the teacher.

Teachers always have a critical role in the education system, but this role and its requirement may change with the new technologies. As in the above points, we have already discussed that Artificial Intelligence can automate different tasks such as grading, reports, help students while learning, and may also be an option of real-world tutor in some cases. AI can be included in different aspects of teaching. AI systems can be programmed for providing expertise to students, a place where students can ask their doubts and could take the place of teacher for teaching basis course materials.

Personalize education with AI

The main aim of Artificial Intelligence in education is not to completely replace teachers. Instead, it aims to act as helping hands for teachers as well as students. AI

systems can be programmed to provide personalized learning to students. With personalized learning, each student can have their own way of learning as per their level of understanding and need. By understanding the needs of every student, teachers can come up with a tailor-made study plan for every student. As AI is developing day-by-day, it is possible that machines can identify the facial expressions of students while learning the concepts can understand if they are finding any difficulty in learning, and according to that make changes in the way of teaching.

Generating Smart content with AI

With AI, it is possible to generate smart content in three ways:

Digital Lessons	Nowadays, everything is becoming digital, and so the education. Digital learning is being preferred in colleges with customization options, e-books, study guides, bite-sized lessons, and many other things with the help of AI.
Information Visualization	Visualizing things rather than listening is much more efficient to understand in a better way and keep in mind for a long time. With Artificial Intelligence, the study information can be perceived in new ways of visualization, simulation, web-based study environment.
Learning content Updates	Moreover, AI also helps in preparing the content of lessons, keeping information up to date, and make it adaptable as per different learning curves.

Ensure Access to Education for Students with Special Needs

Life is full of challenges for those students who have some learning disabilities such as deaf or hard of hearing, visually impaired, etc. Such students may face various difficulties while learning and studying. Moreover, they also need extra care & time. With the adoption of innovative AI technology, there will be new ways of interacting with such students. AI-enabled tools can be successfully trained to help a group of students with special needs.

Universal Access

One of the great uses of Artificial Intelligence of digital learning in education is universal access to study material. Each student has his own grasping capability, and with the use of universal access, they can learn anywhere and anytime. Students can explore things whenever they want to learn without waiting for the tutor. Moreover, students get the facility of high-quality courses and material from all over the world at their place only without travelling away from their home.

Benefits of AI for Students

24*7 access to Learning

With AI-driven digital Learning, students can learn anywhere, anytime. Every learner is free to plan their schedule, rather than being linked to a specific place only. Everyone can make their learning easier and effective as per their most productive hours.

Better Engagement

With personalized learning, custom tasks, and digital visualisation, the study becomes more interactive and engaging. Personalized learning and great experience with AI-driven programs make students feel much confident and smarter as they can explore many things apart from their syllabus without any hesitation or fear of asking. All these things and new AI technologies are increasing the interest of students in studies.

Less Pressure

With AI-driven programs and personalized learning, students feel less pressure of studies. AI-enabled virtual assistants help the students whenever they ask a question, with a complete explanation. In the traditional learning methods, a student needs to ask queries in class in front of everyone, which might hesitate some students, and these issues can be resolved with the help of virtual assistants. However, all the questions can't be correctly answered by these virtual assistants. But for basic queries, they can be much helpful that can boost the confidence of each learner and reduce the pressure.

Future of AI in Education

As per the researches, in the near future, AI in education will step in three main ways, which are:

Performance personalization

With day-by-day development in AI technology and computing power, it will be possible to create personalized curricula through collecting and generalizing the information. Various new AI solution such as "Brightspace insights" helps the instructor to track, measure, and monitor the progress of learners, and also help them in this learning journey. It provides a complete picture of the learning journey of a learner across the platform.

Violation Bias

Human bias has always remained a hindrance in the education system and also an issue in AI tools. In future, AI in education will find new solutions that can evaluate work and tests exams using established criteria in order to eliminate bias.

Combined Assistance

Professors/teachers in colleges usually have masters in their field and have a degree in specific areas of development. But the administrative work is often a frustrating attempt at rapprochement with students. AI in education can solve this problem in the future with smart classrooms with AI assistance who can provide necessary help to the teachers to give their best.

AI-Guided Learning

Whether the public can see it or not, the education system is undergoing a transformation, and it will look drastically different than what we have known. This change has been in the making for years, with questions arising about the effectiveness of standardized testing, class size, personalized lessons, and much more. However, with the introduction of artificial intelligence (AI) and robotics now making it into the classroom and homes of students, we are just beginning to see the biggest change yet. It is time for a new approach to education and artificial intelligence, with a major focus being put on a new category led by ROYBI in this transformative field: “Self-Guided Learning Through AI.”

A big portion of self-guided learning takes place outside of the official classroom. That is why homework assignments have been used traditionally to allow students to repeat and practice what they have learned in the classroom, and also, develop self-discipline, self-reliance, and independent thinking. Roybi Robot encompasses this new idea of self-guided learning through AI and goes a step further, to use technology to assist students and teachers in a more efficient way. While Roybi Robot is not intended to replace the role of in-person instruction, it can allow any environment to become an extension of the classroom.

Being able to guide oneself through some portion of the learning process is an opportunity that every student would benefit from in our current unequal distribution of academic resources. It also greatly increases the effectiveness that a single instructor can have. For example, through the use of Roybi Robot, a teacher located anywhere around the world can teach any number of students without the restriction of classroom walls. On top of that, teachers can use the technology to track all of the students’ progress in one place.

Educational robots provide a variety of different ways for students to learn STEM disciplines and languages. There are a few main reasons kids learn better from robots than traditional methods, and much research has been done on the topic. The use of educational robots is more likely to elicit from the user beneficial behaviors for learning. They are perceived to be more engaging and enjoyable than virtual agents like tablets and computers. Research has also suggested that users respond and comply much more with physical robots compared to a video representation of the same robot.

Conclusion

Artificial intelligence and its uses in our lives are growing day by day in many segments. In the field of education, AI has started showing its influences and working as a helping tool for both the students and teachers and supporting the learning process. But still, the use of AI in education is not adapted by all the colleges completely, and it will take a long journey to do this. However, studies show that in the near future, AI will have a good impact on the education sector. It is currently transforming the education industry but is yet to show its real potential in education. Further, learning from computer systems can be much helpful, but it is unlikely to fully replacing human teaching in schools and colleges.

A REVIEW ON ROLE OF TEACHERS IN BLENDED LEARNING-ITS CHALLENGES AND LEARNING OUTCOMES

K.Poonkodi, K.Vimaladevi, V. Prabhu

M. Anusuya & M.Velayutham Pillai

Postgraduate Department of Chemistry

Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu

ngmvac2020@gmail.com

Abstract

Blended learning is becoming more and more popular in higher education as a result of the quick growth of information technology. Blended learning, which blends in-person and online instruction, gives students access to timely, ongoing, and flexible learning options. It improves the e-learning activities' engagement, aids students in learning more deeply, and encourages their independent and group learning. Blended learning can significantly improve student learning while also lowering the cost of instruction when it is effectively designed and implemented. However, there are still certain issues with the application of blended learning. It is a widespread complaint among university teachers that if an online component of a blended course is not required, many, if not most, of the students do not actively participate in it. The adoption of the e-learning system by college students in required blended learning contexts was our main focus as a result. In this review, the importance of blended learning, its implications challenges and learning outcomes of students were discussed.

Keywords: *blended learning, challenges and learning outcomes*

Introduction

In view of this scientific shift, the education sector has assimilated the application of ICTs in education resulting in the establishment of e-learning platforms (Lee, 2010). Competitive global institutions of higher education were under significant pressure to expand their delivery of courses through e-learning platforms such as Moodle or Blackboard. Past studies have shown the adaptation of e-learning to be effective in connecting people and resources, facilitating active learning, deepening understanding, enhancing critical thinking skills as well as promoting creative communication (Romero-Frias et al., 2013; Khan et al., 2012).

The introduction, administration, and ongoing improvement of blended learning in higher education depend greatly on the successful application of the e-learning system. Universities in the twenty-first century are still undergoing quick socioeconomic and technical developments. Universities are being urged by these shifts to thoroughly review their instructional strategies from a fresh viewpoint and to prepare for the problems that a knowledge-based society will present. The need for more "client" responsive and flexible courses; the push to use information and communication technology (ICT) in teaching and administration are a few of these challenges. There is a large population of students with a variety of needs, motivations, abilities, learning preferences, time availability, and course

content requirements (Challis, Holt&Rice, 2005). Academic leaders in higher education must rethink organizational structures, operational tactics, and regulations fit for the current digital age in order to meet these difficulties.

However, as there is a growing need for qualified teachers, e-learning platforms continue to grow. For the future development of their institutions as well as the development of young minds, well-established universities and developing institutions must hire knowledgeable teachers and train them effectively.

To address the complexity of ICT integration in higher education, this paper attempts to explore the pedagogical use of ICT in a blended learning context. The exploration is focused on the experiences of teachers and students, and guided by two research questions: What are the students' and teachers' experiences in engaging with different blended learning modes? What are the teaching approaches involved in blended learning across disciplines?.

ICT Implementation in Higher Education

ICT implementation in higher education is not a simple technological adoption, but involves the consideration of a number of issues, such as infrastructure, pedagogical practices, obstacles, student learning, organizational culture, organizational structures, operational strategies, and appropriate policies (Duderstadt, Atkins & Houweling, 2002; Guri-Rosenblit, 2005). There is a need to relate the normative interpretations of the potential effects of ICT on teaching and learning in higher education to the empirical realities that higher education institutions are facing (Stensaker, et al., 2007) because "successful technology integration is a sociological issue" and "appropriate use of technology in teaching requires the thoughtful integration of content, pedagogy, and technology" (Mishra, Koehler & Zhao, 2007, pp. 1-2).

Blended Learning

Information and communication technologies based on the internet have created new opportunities in higher education. Most colleges now provide some coursework online, and some have even transformed entire degree programmes to be fully accessible online (Ward, Peters, & Shelley, 2010). Today, distance learners have access to a variety of online materials and can study at their own speed while working together with other students rather than alone. Web-based learning modules by their very nature provide the adaptability of self-directed learning and the chance to depart from teacher-directed methods of instruction. Many instructional design approaches are available to help with course design, but for a well-designed, student-centered course, alignment between learning objectives, assessment methods, and instructional activities is crucial (Rubin, 2013).

LMS for Blended Learning

Online learning has grown in favour as a practical and adaptable substitute for conventional brick-and-mortar academic methodologies due to the abundance of web applications. Today, educational courses are delivered to students via a variety of

electronic distance media without regard to their physical location or available time. Online technologies for synchronous and asynchronous communication and collaboration offer learning opportunities that are adaptable and sensitive to the needs, learning preferences, and backgrounds of learners. There is no discernible difference in learning results between traditional face-to-face learning in higher education and online training, according to study comparing their efficacy (U.S. Department of Education, 2010)

Blended Learning is Facilitated through LMS Software

Campuses have embraced LMSs, such as Blackboard and Moodle, for their features for content development, communication, evaluation, and administration in order to allow online, onsite, and hybrid courses (Pia, 2010). LMSs compile and deliver learning information quickly, customize content, and enable knowledge re-use in addition to centralizing and automating administrative duties including creating and managing user accounts, preparing syllabi and assignments, grading, etc. (Ellis, 2009). Teachers can design and maintain a learning structure or sequence in an LMS environment, load and replace resource files, manage access to resources, plan and facilitate group activities, monitor learner activity, alter learning sequences, mark assignments, and offer feedback. Using sophisticated relational database software based on data independence, such as Oracle, Microsoft SQL, or MySQL, which place an emphasis on security, connectivity, and data independence, LMSs include different login roles (instructor, student, and guest) that enable the instructor to communicate privately with one student or form teams and discussion groups with various profiles (Kats, 2010).

Students can connect with professors and peers, submit assignments, and access learning materials like papers, spreadsheets, PowerPoint presentations, hyperlinks, audio, and video of lectures through LMS platforms. Both synchronous and asynchronous LMS platforms can support all of the social and collaborative features of blended learning. Tools that are asynchronous (not in real-time) include email, calendars, wikis, blogs, and threaded discussion forums.

Implications of Blended Learning

Teaching in blended learning environments is a challenging process that, among other responsibilities, calls for constant observation of students' comprehension and engagement with the online course material. By analysing data about how students are interacting with the online environment, learning analytics give teachers the tools they need to better educational results. Different levels of autonomy, collaboration, and online technology can allow various blended learning methodologies, but the goal of learning analytics is to enable deeper understanding and better decision.

Role of Teachers in Online mode of Teaching

Nevertheless, the e-learning modes continues to expand as there is augmenting demand for proficient instructors. The developing institutes or well established universities has to appoint knowledgeable instructors and train them efficiently for future

growth of institutes as well as young minds (Gregory and Lodge, 2015; Alvarez et al., 2009). Today, the online mode of teaching, research is opted. Hence, much skilled and effective instructor appointment is initiated for teaching several online courses.

Learning Outcomes and Challenges

The online environment of the teaching and learning process expedites various challenges to educators. The major problem faced is the acclimatizing practice to the latest digital mode of teaching-learning environment (Mills, 2015). In accordance to Fletcher and Bullock (2015), the online mode of teaching is certainly a challenge for teacher educators as they have to create a positive relationship between the teacher and student which encourage attention, interest along with concentration in students to learn more from educators.

Conclusions

It's not always simple to create a blended learning course that is effective. There is a considerable demand for monitoring and tracking students' social media platforms to connect in addition to the need to address technology requirements, choose the best content to offer, or build an engaging collection of classroom and online activities. Instructors can track student progress and develop interventions by extracting and analyzing LMS usage data from their log files. The implementation of blended teaching also required technology and a learning teacher community, age old teachers suffer or lack of the technical knowledge, before implementing this points also to be considered.

Abstract

The purpose of this study is to investigate the effect of using brainstorm strategy in developing creative problem solving skills among male students . The sample of the study consisted of (98) male students. The sample was distributed into two classes, the first represents the experimental group totaling (47) students taught through brainstorming strategy within the course of developing thinking skills in the academic year 2012/2013, and the second represents the control group totaling (51) students. The instruments of this study were a program to use brainstorming strategy and Torrance creative thinking test. Both validity and reliability were checked by the researcher. The findings of the study showed that there are statistical significant differences at the level of ($\alpha = 0.05$) between the experimental group and the control group in the total score and the sub scores of the creative thinking in the favor of the experimental group indicating the effectiveness of using brainstorming strategy in developing creative thinking skills.

Keywords

Brain storming, Problem solving skills, Creative thinking, Thinking skills, Experimental group, Control group.

Introduction

The globe is turning to be a small village, due to the developments in the scientific, economic and social aspects of life as well as the communication revolution results from the knowledge development and globalization. As a response to those developments and challenges it was necessary to prepare a generation that capable of confronting those challenges through changing the traditional methods of learning and teaching as well as focusing on providing students with the suitable training on different thinking styles. Individuals can't be prepared for present and future through pouring information into them through the traditional teaching methods that depend on the teacher in the first place. However, this must be done through guiding students towards achieving knowledge understanding in relation with everyday problems since we live in the era of openness between communities requiring us to employ information and investing it in solving problems in the environment leading to the development of the ability of thinking as well as developing innovation and creativity (Al-daoud, 2004). Brainstorming strategy is one of the most important strategies in provoking creativity and solving problems in the educational, commercial, industrial and political fields. Brainstorming strategy was introduced by Alex Osborn, an American advertisement company manager in 1938 as a

result of his inconvenience of traditional business meetings. Brainstorming means the use of brain to the active problem solving and the brainstorming session aims to develop creative solutions to problems (Jarwan, 2005). On the other hand, creative thinking is known as a compound mental activity aiming to direct a strong desire to look for solutions or reaching original solutions that were not known before (Jarwan, 2008). Hoing (2001) defined it as the multiple thinking that includes the breaking up of old ideas, making new connections, enlarging the limits of knowledge and the onset of wonderful ideas. With regard to creative problem solving it is based on the cognitive theory that adopts the concept of the cognitive structure. It is the mental process of creating a solution to a problem. It is a special form of problem solving in which the solution is independently created rather than learned with assistance. Creative problem solving always involves creativity (Qattami, 2010). It can be defined as a frame of styles designed to help and enhance the problem understanding then generating new and different solution and assessing those solutions using the creative skills (Gardner, 1999; Richard, Angle & Ann, 1999). Due to the importance of both concepts (brainstorming and creative thinking) the current study aims to explore the relationship between them especially in developing creative problem solving skills.

What is Brainstorming?

Madison Avenue advertising executive Alex Osborn developed the original approach and published it in his 1953 book, "Applied Imagination." Since then, researchers have made many improvements to his original technique. The approach described here takes this research into account, so it's subtly different from Osborn's approach. Brainstorming combines a relaxed, informal approach to problem solving with lateral thinking. It encourages people to come up with thoughts and ideas that can, at first, seem a bit crazy. Some of these ideas can be crafted into original, creative solutions to a problem, while others can spark even more ideas. This helps to get people unstuck by "jolting" them out of their normal ways of thinking. Therefore, during brainstorming sessions, people should avoid criticizing or rewarding ideas. You're trying to open up possibilities and break down incorrect assumptions about the problem's limits. Judgment and analysis at this stage stunts idea generation and limit creativity. Evaluate ideas at the end of the session – this is the time to explore solutions further, using conventional approaches.

Why Use Brainstorming?

Conventional group problem solving can often be undermined by unhelpful group behavior. And while it's important to start with a structured, analytical process when solving problems, this can lead a group to develop limited and unimaginative ideas. By contrast, brainstorming provides a free and open environment that encourages everyone to participate. Quirky ideas are welcomed and built upon, and all participants are encouraged to contribute fully, helping them develop a rich array of creative solutions. When used during problem solving, brainstorming brings team members' diverse experience into play. It increases the richness of ideas explored, which means that you can often find better solutions to the problems that you face. It can also help you get buy-in

from team members for the solution chosen – after all, they're likely to be more committed to an approach if they were involved in developing it. What's more, because brainstorming is fun, it helps team members bond, as they solve problems in a positive, rewarding environment. While brainstorming can be effective, it's important to approach it with an open mind and a spirit of non-judgment. If you don't do this, people "clam up," the number and quality of ideas plummets, and morale can suffer.

Individual Brainstorming

While group brainstorming is often more effective at generating ideas than normal group problem solving, several studies have shown that individual brainstorming produces more – and often better – ideas than group brainstorming. This can occur because groups aren't always strict in following the rules of brainstorming, and bad behaviors creep in. Mostly, though, this happens because people pay so much attention to other people that they don't generate ideas of their own – or they forget these ideas while they wait for their turn to speak. This is called "blocking."

When you brainstorm on your own, you don't have to worry about other people's egos or opinions, and you can be freer and more creative. For example, you might find that an idea you'd hesitate to bring up in a group develops into something special when you explore it on your own. However, you may not develop ideas as fully when you're on your own, because you don't have the wider experience of other group members to draw on.

How to Use the Tool (Brainstorming)

Step 1: Prepare the Group

First, set up a comfortable meeting environment for the session. Make sure that the room is well-lit and that you have the tools, resources, and refreshments that you need. How much information or preparation does your team need in order to brainstorm solutions to your problem? Remember that prep is important, but too much can limit – or even destroy – the freewheeling nature of a brainstorming session. Consider who will attend the meeting. A room full of like-minded people won't generate as many creative ideas as a diverse group, so try to include people from a wide range of disciplines, and include people who have a variety of different thinking styles. When everyone is gathered, appoint one person to record the ideas that come from the session. This person shouldn't necessarily be the team manager – it's hard to record and contribute at the same time. Post notes where everyone can see them, such as on flip charts or whiteboards; or use a computer with a data projector. If people aren't used to working together, consider using an appropriate warm-up exercise, or an icebreaker.

Step 2: Present the Problem

Clearly define the problem that you want to solve, and lay out any criteria that you must meet. Make it clear that the meeting's objective is to generate as many ideas as possible. Give people plenty of quiet time at the start of the session to write down as many of their own ideas as they can. Then, ask them to share their ideas, while giving everyone a fair opportunity to contribute.

Step 3: Guide the Discussion

Once everyone has shared their ideas, start a group discussion to develop other people's ideas, and use them to create new ideas. Building on others' ideas is one of the most valuable aspects of group brainstorming. Encourage everyone to contribute and to develop ideas, including the quietest people, and discourage anyone from criticizing ideas. As the group facilitator, you should share ideas if you have them, but spend your time and energy supporting your team and guiding the discussion. Stick to one conversation at a time, and refocus the group if people become sidetracked. Although you're guiding the discussion, remember to let everyone have fun while brainstorming. Welcome creativity, and encourage your team to come up with as many ideas as possible, regardless of whether they're practical or impractical. Use thought experiments such as Provocation or Random Input to generate some unexpected ideas. Don't follow one train of thought for too long. Make sure that you generate a good number of different ideas, and explore individual ideas in detail. If a team member needs to "tune out" to explore an idea alone, allow them the freedom to do this. Also, if the brainstorming session is lengthy, take plenty of breaks so that people can continue to concentrate.

Problem Solving in Brainstorming Session

A-blowy (2006) mentioned for stages that must be followed in problem solving within the brainstorming session, those are:

- a) Phrasing the Problem: The teacher who is responsible on the sessions offers a problem and discusses its various dimensions for students to ensure understanding.
- b) Framing the problem: in this stage the teachers determines the problem accurately by reframing the problem in certain questions. This may offer acceptable solutions without the need for further brainstorming.
- c) Practicing brainstorming for one or more than one statement in problem. This step is very important as many ideas are generated. Al-qarni (2011) mentioned that this step needs:
 1. Conducting warming up session
 2. Receiving ideas even if they were nonsense.
 3. Offering the four principles of brainstorming on the board in order to be seen by students.
 4. Writing and presenting all ideas (Proposed solutions).
 5. Frustration and boring must be avoided.
- d) Offering the ideas: Brainstorming session lead to generate a big number of ideas and therefore, those ideas must be evaluated and select the most suitable and important ones according to novelty, originality, usefulness, duration and cost as well as logic (Bani Hamid, 2006).

Creative Thinking

Scholars and researchers discussed the issue of creative problem solving of problems in general and especially in the field of gifted students. The creative problem solving can be defined within its three components as the solution, this means finding a way to solve the problem. The problem refers to obstacles that present a challenge to the individual to reach the goal. This challenge needs a solution or making a decision. Thus, creative solving is a frame or system including productive thinking tools that can be used to understand problems or generating different ideas that are not traditional then evaluating them to reach new solutions (Mitchell & Kowalik, 1999). Qattami (2010) mentioned many definitions for creative problem solving. As (Barens, Noller & Blondi) stated that it is taking a creative decision through thinking and reflecting and predicting ideas and solutions through deep awareness. Meanwhile, Asaks and Trafinger argued that it is the natural and dynamic system and a way to handle a certain challenge. It is noted that through the steps of creative problem solving model brainstorming strategy has its own importance since the aim is to generate many idea that may be the solution of a problem (Abu Jado and Nawfl, 2007). The creative problem solving approach is the effort by the individual or the group's creative thinking to solve a problem, and can be used in many areas, and provide a framework regulating the use of tools and specific strategies to help generate and develop products that are characterized by novelty and utility, it is a framework of processes with a regulatory function, a system used by the product of the thinking tools in order to understand the problems and opportunities and the generation of many diverse ideas is familiar as well as evaluating, developing and implementing the proposed solutions (Al-asar, 2000).

Conclusion

Based on the findings of the study the researcher recommended, Encouraging Tutors and Teachers to use brainstorming strategy in teaching in the schools and conducting more studies discussing this strategy and its relation to other variables such as critical thinking, and conducting more studies on other samples from different study and age levels and from different environments like Universities or Training Institute.

Abstract

ICT is an expansive term represents Data Correspondence Innovation. ICT apparatuses for educating and learning cover everything from advanced foundations like printers, PCs, PCs, tablets, and so forth., to programming instruments, for example, Google Meet, Google Bookkeeping sheets, and so forth. In customary study halls, an educator's fundamental educational devices for showing data are blackboards, multipurpose sheets, announcement sheets and graphs. In any case, in the present current situation, apparatuses of numerous callings are changing at an fantastic rate and that instruction is no special case. The effect of innovation has prompted the expanded utilization of PCs for introducing data in a significant number of the present homerooms. To make ICT educating and learning more intelligent, different stages also, apparatuses have been made and refreshed over the timeframe. Imaginative ICT devices utilized in homeroom showing which makes a difference educators to coordinate in their subject, for educating learning and evaluation. There are various subject explicit liberated from cost ICT instruments accessible on the web and disconnected stages which can be utilized for educating, learning and evaluation. They are utilized by instructors to energize support and draw in learning in their homerooms. ICT can likewise be utilized by educators to advance cooperative work and imagination across a great many subjects. This study targets featuring the predominance of ICT apparatuses for working with understudy learning, maintenance and mentalities.

Keywords: Data Correspondence Innovation, Instructing Learning, Visual Data, Online Stages

Introduction

In the present globalized world the Data and Correspondence Advancements (ICTs) have become profoundly established in instructive settings. Their utilization has encouraged subjective changes in how educating is drawn nearer, particularly as far as introducing the items sound outwardly. Despite the fact that there has been much conversation over various techniques to instruct school understudies, addresses are not liable to quit being utilized. To under score specific focuses, many talks utilize composed material introduced on a blackboard, whiteboard, or by transparencies on an above projector. In any case, over the most recent 10 years, one more strategy for introducing visual data with addresses has acquired unmistakable quality which is projecting data straightforwardly from a PC onto a screen for example PowerPoint introductions. Numerous schools and, as a matter of fact colleges have rooms outfitted with innovation essential for any educator to show data thusly. Besides, a few organizations are pushing the educators to utilize different different innovations for inventive educating and learning.

1. Data Correspondence Innovation:

The ICT devices means to advanced frameworks like PCs, PCs, printers, scanners, programming programs, information projectors, and intuitive instructing box.

2. Instructing Learning:

Educating can be characterized as commitment with students to empower their understanding and use of information, ideas what's more, processes while learning is the securing of information or abilities through study, insight, or being instructed.

3. Visual Data:

It is utilization of at least one of the different visual media regardless of sound. For the most part, visual data incorporates still photography, movement picture photography, video or sound recording, realistic expressions, visual guides, models, show, visual show administrations, and the help processes.

4. Online Stages:

A web-based stage is a computerized administration that utilizes the Web to work with collaborations between at least two separate yet reliant clients.

Literature Review

1. **Simin Ghavifekr, Thanusha Kunjappan,• Logeswary Ramasamy and Annreetha Anthony**, in their research paper, **“Teaching and Learning with ICT Tools: Issues and Challenges from Teachers’ Perceptions (2020)”**, revealed that their review is more connected with distinguishing the discernments in executing ICT devices in educating and learning in the homeroom among teachers. It looks at the difficulties of utilizing ICT apparatuses in educating and learning in the study hall among teachers and perceives the adequacy of the degree of ICT apparatuses in supporting homeroom educating and learning.
2. **D. Sakthivel, Dr. B. Radha**, in their study **“ICT Tools for Modern Education (2021)”**, believed that Innovation can be an incredibly significant instrument, yet it is just an instrument and innovation "can't supplant an educator" also, isn't expected to supplant the educator. A decent educator should carefully be in a real sense and should know the powerful method for incorporating innovation into the educational plan so instructors can keep the understudy committed.

Objectives of the Study

This study intends to examine whether utilizing ICT devices would be more useful for understudies than Blackboard instructing. It likewise expects to evaluate the adequacy of ICT apparatuses in helping the understudies in getting it and holding the data.

Limitations

One of the significant limits of the review was that it is absolutely subject to auxiliary information that may not be completely verified. Additionally the time used for the review was very restricted which limited the extent of the review.

Research Methodology

The study is based on secondary data. Relevant data are availed from various sources of information such as Books and Various websites.

ICT Empowered Devices for Viable Showing Educational Experience

Most educators feel great in utilizing address strategy, which is not equipped for accomplishing different goals of study hall guidance. ICT might be of extraordinary use in accomplishing different targets of educating - educational experience. It gives right data in a far reaching way with various models. It assists students with expanding their data base. ICT gives assortment in the introduction of content, which helps students to get the hang of as indicated by their own speed. It helps in better understanding, and long maintenance of data. Following devices are utilized in the Showing educational experience in Online and Offline method of guidance.

Learning Management System

Moodle represents Measured Object Oriented Dynamic Learning Climate and insights. Moodle is free programming, a learning the board framework giving a stage to e-learning and it helps the different instructors significantly in conceptualizing the different courses, course designs and educational program in this manner working with communication with online understudies. Moodle upholds a scope of media to present or connection to learning materials, support the understudies and to survey their learning. It can give mechanized appraisal as test, and give quick itemized input to the understudies.

Google Classroom

Google Classroom is a free, mixed learning stage that offers an assortment of benefits for the two understudies and instructors. Google Homeroom improves the efficiency and take work process the executives to a higher level. It keeps track of tasks coming in with a basic look making it extremely simple to know everybody's status and to circle back to understudies who are missing work. Everything is time stepped, so late work is effectively recognizable. Since Google applications are cloud based the work in Google Study hall saves naturally and is open from any gadget. With the application, the two understudies and educators can partake in the full usefulness of Google classroom on a cell phone

Google Forms

Google Structures permits to direct MCQ tests on the web. The data is put away as a book keeping sheet naturally record the responses. The accounting sheet then populates the reactions from the test or overview continuously. Google structures can be utilized to give input to and get criticism from understudies and guardians.

Videoconferencing Stages

During Coronavirus pandemic when the world moved to Online mode for showing learning different free videoconferencing stages like Google meet, Zoom and Cisco Webex and so forth., were utilized to direct on the web classes. Every one of these have differing necessities and elements for working with intelligent educating and learning.

Virtual Labs

The Virtual Labs gives remote access to reenactment based Labs in different disciplines of science and designing. This understudy driven approach works with the assimilation of essential and high level ideas through reenactment based trial and error. Web based trial and error further allows utilization of extra web-assets, video-addresses, vivified shows and self evaluation. Virtual labs are any spot, any speed, any-time, any-type labs.

Educational Videos AND Animations

Different significant instructive recordings of different subjects accessible on web likewise has a incredible effect. YouTube give extra assistance in better comprehension of subject information.

Smart Classroom

Classroom incorporated with Smart boards and web associations gives upgraded and intelligent learning and educating open doors for understudies and educators. The web associated with frameworks in brilliant classes is put away with plentiful data. It is open whenever for their educating and educational experience. Instructors can get to data from different instructive hotspots for educating. It helps in simple access to online assets. Shrewd Homerooms helps in creating decisive reasoning and critical thinking abilities in understudies. There are a lot more ICT instruments that work with creative showing educational experience.

Advantages of Using ICT Tools in Teaching Learning Process

1. Teaching Makes Easier

Educators are individuals with one of exceptionally benefited of having ICT in schooling. Using it, it makes the instructing simpler. At the point when an instructor shows the understudy on another example it makes for them simple to illuminate and to assess what they need them to be aware. Making reports records, pdf documents or power point show using PC or PC for them to show the points that they will going to handle is an extraordinary way for educating.

2. Illustration should be visible and heard

The upside of data correspondence innovation is the illustrations should be visible and be hear. Not at all like on the books you can simply see it, seeing those pages with sections and loaded with text also, at some point we can see the photos. Sound coming from the recordings or music that being utilized will be played again and again that makes it to recall well.

3. More clear

At the point when the understudies see pictures showing up on the white screen utilizing a projector they comprehend it effectively what it truly implies.

4. Further develops Correspondence

Having an innovation in the school conversation gets to the next level correspondence. Since through that medium the instructor as well as the understudy find out increasingly more jargon words. The legitimate approach to saying a word or words, the right language and the importance of the words gets to the next level.

Conclusion

ICT devices are exceptionally strong in educating and learning. ICT apparatuses engage the two educators and students. They change the educating and educational experiences from being profoundly teacher dominated to becoming understudy driven and this change brings about expanded learning gains for understudies, making and taking into consideration valuable open doors for students. Moreover, they are cost efficient and take out the utilization of paper. Close by limiting cost, they additionally save time during class addresses empowering quick and dynamic transmission of content. They give admittance to dynamic educating and learning strategies and work with simple understudy the executives. ICT is an amazing asset for instructive change and change. Proper utilization of ICT has helped the school raise the interest levels among the understudies and has associated figuring out how to genuine circumstances. Understudies appreciate while learning and perform better.

Abstract

The study examines the state of women's empowerment in India and identifies key issues and Women's Empowerment Challenges. One of the most pressing issues of the 21st century is now the empowerment of women. However, in actuality, women's empowerment remains a fantasy. The researchers observed how many societal injustices target women in everyday life. Empowering women is the essential tool for increasing women's access to resources and their capacity to make wise life decisions. Women's empowerment is fundamentally the process of improving the status of traditionally underprivileged women in society on the economic, social, and political fronts. It entails protecting kids from all sorts of assault. The study only used secondary sources for its data. Despite numerous government initiatives, the survey shows that women in India still have a comparatively low level of influence and status compared to men. It has been discovered that women continue to accept gender standards that are not equal in society. The study's conclusion states that women's empowerment is only made possible through access to education, employment, and social structure change.

Keywords: Women Empowerment, Challenges, Underprivileged, Empowering, Government initiatives.

Introduction

In order to empower women, one must first increase their spiritual, political, social, educational, gender, and economic strength. In India, a number of factors, such as physical location (urban vs. rural), educational attainment, social standing (caste and class), and age, have a significant impact on how empowered women are. At the federal, state, and local (Panchayat) levels, policies promoting women's empowerment are in place in a variety of fields, including health, education, economic opportunity, gender-based violence, and political engagement. However, there is a large gap between policy developments and actual community practise. Women's empowerment is fundamentally the process of improving the status of traditionally underprivileged women in society on the economic, social, and political fronts. It entails protecting kids from all sorts of assault.

Review of Literature

- **Dr. Abeda Sultana 2021** in his study states that women empowerment; theory, practice, process and importance Women empowerment is a significant topic of discussion in development and economics. Economic empowerment allows women in controlling and getting benefit from resources, assets and incomes. It also grows ability to manage risks and improves well-being. It refers to women's ability to make strategic life choices which had been previously denied them. The worlds, Nations, businesses, communities and groups may benefit from women empowerment. It enhances the quality and the quantity of human resources available for development.
- **Prof. Seema Singh and Dr. Antra Singh 2020** in their study states that being a traditional patriarchal society, women have been given a secondary status which is reflected in the economic, social and political spheres. However, women equality and empowerment has always remained a priority area and has been taken utmost care by stake holders. The paper critically investigates the Indian status among other countries and tries to find out preparedness to achieve Sustainable development Goal -5 of the United Nations. The paper develops argument on the basis of secondary sources as review of existing literature published in journal, books, reports of various, NGOs, Government and international organisations and websites. The paper critically examines women empowerment in India, various models and dimensions. The paper discusses constitutional safe guards as well as plans and programmes by the government and their implementation, indicators of women empowerment.

The Challenges of Measuring Women's Empowerment

Measures of empowerment have multiplied without being properly assessed throughout time and in many circumstances. One the one hand, women's empowerment is multifaceted and context-dependent from a theoretical standpoint. However, comparable measurements have been created for usage in a variety of settings. Therefore, it is crucial to thoroughly examine these measurements' consistency through time and across situations. I have been pushing for the creation of surveys that enable both comparative and in-depth, context-specific evaluations of women's empowerment. Other items may function well across multiple contexts and survey years, whereas some items may function well in some circumstances but not in others.

Why is measuring women's empowerment important in development work?

Measurement of women's empowerment is crucial because it serves as a constant reminder to staff and programmes of its significance. Although many agricultural development programmes lack a gender or empowerment focus, staff members are prompted to think about women's empowerment as a project aim by the inclusion of metrics of women's empowerment in their monitoring systems. Training staff employees on current injustices, gender and other socioeconomic inequities, and how empowering

practises might improve equity are also crucial. The effects of integrating women's empowerment measures into programme monitoring on norm transformation are also crucial.

Barriers to the Empowerment of Women in India

In India, particularly the women are suppressed in the name of culture and tradition. However, it is time to open the minds and let go of this old way of thinking to empower the women for their own good as well as the overall well-being of our society.

Cultural and Traditional Barriers to Empowerment of Women

The culture and tradition of our country is such that it restricts the women and confines them within the four walls of their houses. The tradition of our country expects a woman to do the household chores, cook for her family, take care of the elders and raise children. It is believed that this is her sole responsibility and this is what she is born for.

A woman who steps out defying the set norms of the society is considered to lack virtue. This is one of the major barriers to the empowerment of women in our society. Though women in the metropolitans and other big cities around the country have joined various professions and are making it big in this male-driven world, people living in the rural areas are still not open about the idea of females seeking education and working. Woman in most parts of our country are dominated by the males. They are not even given the basic right to education and have no say in the family or business matters.

Family Responsibilities Hinders Women Empowerment

Family responsibilities are another hindrance to women empowerment. While men are allowed to act carelessly, women are expected to act responsibly at all times. Taking care of her kids, her husband's parents and household chores is her main responsibility. She needs to fulfil these responsibilities in order to prove that she is a good mother, a good wife and a good daughter or a good daughter in law.

If she doesn't do these tasks properly and tries to concentrate on her profession just like her male counterpart then she is tagged as an irresponsible woman. Many women give up on their jobs and stay financially dependent on the male members of their house as they are not able to handle the stress caused trying to manage both the roles efficiently. Men must share the family responsibilities to stop this injustice against women. They must be held equally responsible for the household chores.

The Mindset of the Male: A Barrier to Women Empowerment

The mindset of the male members of our community is yet another barrier to women empowerment. Women who go out to work or seek education are scared of travelling alone during the late evening hours as it is not safe for them. The male members of our community leave no chance to harass or take advantage of the women.

The growing numbers of rape cases are clear evidence of the same. This serves as yet another barrier to women empowerment. Many families do not allow their daughters/

daughter in laws to go out for the fear they might face problems. A woman is not allowed to work as freely as men. She has to think twice before working overtime or going for an official trip owing to safety issues. This hampers her professional growth.

Obstacles on the Path to Women's Empowerment in India

1. Gender Inequality

In India, women continue to be discriminated against at the gender level. In many areas, women are not even allowed to go out for education and employment. With this, they do not have the freedom to work freely or spread through the family.

Women are considered less than men in all tasks. This type of discrimination worsens the social and economic condition of women and also affects the goal of women's empowerment in a negative way.

2. Inequality in payments

Women in India are paid less than their male counterparts, and the problem is even worse in the unorganized sector, especially in places with daily wages. Women are paid significantly less than men despite doing the same amount of work at the same time.

Such actions demonstrate the disparity of power between women and men. Women working in the organized sector are paid less than men, despite having the same experience and qualifications as their male counterparts.

3. Illiteracy

Problems such as illiteracy among women and the omission of intermediate studies are also important obstacles to the empowerment of women. Although in urban areas, girls are equal to boys in terms of education, in rural areas, they lag far behind in this case.

India's female education rate is 64.5 percent, while men's education rate is 81 percent. Many rural girls who go to school also lose their education and cannot pass even the tenth standard.

4. Child Marriage

Although in recent decades, effective government decisions have reduced the prevalence of **child marriage** in India to a great extent, in 2018 a UNICEF report shows that India still has around 1.5 million girls each year. Marriage takes place before the age of 18, due to early marriage, a woman's development stops and she cannot mature physically and mentally.

5. Social norms

Due to old orthodox ideologies, many areas of India are prohibited from leaving their homes. In such areas, women are not free to leave the house for education or employment. By living in such an environment, women are inferior to men and do not change their current social and economic conditions.

6. Physical abuse in the workplace

Exploitation in the workplace is also a major obstacle to the empowerment of women. Private sectors such as service industries, software industries, educational institutions, and hospitals are the most affected by this problem. This creates more problems for women due to the dominance of male prominence in society. In the recent past, there has been a rapid increase in harassment of women in the workplace and there has been an increase of about 170 percent in recent decades.

7. Female fetish

Feticide or gender-based female abortion is one of the biggest obstacles on the road to women's empowerment in India. Female feticide refers to gender-based feticide, whereby female fetus is aborted without the mother's consent.

Due to female feticide, there has been a big difference in the sex ratio between men and women in states like Jammu and Kashmir and Haryana. These affirmations of our empowerment of women will not come true until we can eradicate the problem of female fetish.

8. Crimes against women

Serious crimes such as dowry, honour killings, and trafficking are seen against Indian women along with much domestic violence. However, it is quite strange that women in urban areas are more prone to criminal attacks than women in rural areas. Even working women do not use public transport late at night due to their safety.

In the true sense, the empowerment of women can only be achieved when the safety of women can be guaranteed, and, like men, they can come freely without any fear.

Government's Role for Women's Empowerment in India

- Mahila Shakti Kendra
- Reservation for women in Panchayati Raj schemes
- Beti Bachao Beti Padhao Yojana
- Women Helpline Scheme
- Ujjwala Scheme

India has always been a male-dominated nation. However, realizing the importance of women in upgrading the nation has transformed the perspective, and we are shifting towards a significant change. 50% of India's population comprises women, and most are economically dependent. Women empowerment in India is based on various factors-geography, class, caste, age and education. Women in India encounter differentiation in most sectors like education, economic opportunities, health and medical assistance and political participation, demonstrating that there are substantial gaps between strategy advancements and real exercise at the community level.

Reasons why you should emphasize women empowerment in India

It's her right:

As per the principles laid down by the United Nations, women empowerment is subject to human rights. Every female is entitled to get empowered by going to school and college, staying safe from violence, accessing adequate health services, making a living for herself and fully participate in her community.

Best way to make Families Healthy:

Women are the backbone of the family. She can focus on making her family healthy when she is empowered with education and finance. She can plan better for her family as she is aware of society's good and bad, the right and wrong. Her empowerment paves the way to not only a healthy family, but a happy family.

Breaking the Poverty Cycle:

In India, most families belong to the middle or low class. However, if women are empowered, they tend to help their families create a better living standard. Educated women can get higher incomes and financially empowered women can educate their children better; thus, breaking the poverty cycle.

Strengthening Economies:

India is becoming world's fastest-growing economy. However, it has a long way to go. Women empowerment can be a significant contributor to strengthening the nation's economy. As per research, increasing the number of women completing secondary education by just 1 percent could increase a country's economic growth by 0.3 percent.

Develops the Society Holistically:

The overall upliftment or development of a society depends on women. Today, women in India are in every field. They are ahead in all spheres and making India proud. They are taking society to the next level.

Conclusion

Women empowerment is a serious issue. Women must be empowered so that they can lead a better life. They must be educated and trained to be financially independent. In addition to it, they must be provided a safe environment to live freely and independently.

Abstract

In order to establish a society, education is crucial. It is crucial and necessary for both a person's and a society's wellbeing. Quality education encourages societal empowerment and fosters growth. The country in all facets. There are numerous strategies to improve the students' Technology and knowledge are the most efficient means. Knowledge and ICT, or information and communication technology, is becoming more and more essential. From the moment we wake up till the moment we leave, the educational system is To go to bed at night. Informational tools and artifacts are all around us. As well as media and computing technology, such as newspapers, radio, television, and computers. Etc. Our lives have changed significantly as a result. These modifications have led to Instructors, administrators, and educational institutions.

Keywords: Information and communications technology, Educators, strategies and outcomes, Professional development.

Introduction

"Education is the most powerful weapon in the world"

In order to establish a society, education is crucial. It is crucial and necessary for both a person's and a society's wellbeing. A good education encourages social empowerment. And therefore advancing the country overall. Numerous methods exist for Expand the understanding of the students, and technology is the most efficient method. The use of information and communication technology (ICT) in education is becoming more and more essential from the moment we get up until we leave for the day. To go to bed at night. Informational tools and artifacts are all around us. As well as media and computing technology, such as newspapers, radio, television, and computers, Etc. Our lives have changed significantly as a result. These modifications have led to Rethinking roles in educational institutions, with administrators, instructors, and teaching Approach, as well as provide their outlook on the future.

Professional development for educators that incorporates ICT (information and communication technology) focuses on utilizing technology to improve teaching methods and student outcomes. Teachers may better engage students, tailor learning experiences, and promote 21st-century skills like critical thinking and digital literacy by incorporating ICT tools and resources into their activities. This introduction lays the groundwork for examining several strategies educators can use to alter their instruction and provide students with memorable learning opportunities.

Review of Literature

Bano (2016) conducted an experimental study to see the effect of smart classroom learning environment on the performance of first-grade students in English. The study was done on 30 students and pre-test post -test design was used. A performance test was constructed for data collection. Data were analysed with the help of t-test. The results revealed that there was a significant effect of classroom learning environment on the performance of first-grade students in English.

Inderpreet Kaur Chachra (2015) studied the effect of smart classroom assisted teaching on the academic achievement of students of different intelligence level in social science. She selected 100 students and categorized them on the basis of intelligence_ below average, average and above average category. It was an experimental study. The result was analysed with the help of t-test.

Chetan Sharma (2014) conducted a case study on e-governance in India. The aim of the study was to draw out learning from ICT based projects implemented in West Bengal. The findings of the study revealed that 98% schools had given a positive response after implementing the project. It had improved the attendance of students.

Hernandez, Ronald M.(2017) discussed the main challenges about the future of ICTs and their connection with education. He stated that teacher training is first priority so that teachers can better use ICT tools in the classroom.

Sood, Manju (2014) has done an evaluative study of ICT in schools of Punjab. It was descriptive survey research. The main objective of the study was to evaluate the provisions made by Punjab government under the ICT program. The findings revealed that the teachers were aware about the LITERATURE REVIEW 50 projects and its implementation. ICT became a compulsory subject for class 6 to 12th. ICT teachers were appointed for implementing the projects in urban and rural schools.

Objectives of the Study

1. To research the numerous ICT-based projects being carried out in various schools.
2. To evaluate how ICT-based projects affect the curriculum.
3. To determine the impact of ICT-based projects on curriculum delivery
4. To examine how ICT-based projects affect students' attitudes toward ICT.

Limitations

While ICT-based professional development for educators offers numerous benefits, it also comes with some limitations that need to be acknowledged and addressed:

Access and Infrastructure: Not all educators and institutions have equal access to technology and reliable internet infrastructure, which can hinder their participation in online courses and access to digital resources.

Digital Literacy: Some educators may have limited experience or confidence in using technology effectively for teaching, which can impact their ability to fully embrace ICT-based strategies.

Costs: Implementing ICT-based strategies often requires investment in hardware, software licenses, and ongoing maintenance, which may strain budget constraints for some educational institutions.

Training Time: Learning to use new digital tools and platforms can take time, and educators may find it challenging to balance their professional development with their teaching responsibilities.

Pedagogical Integration: Integrating technology seamlessly into pedagogical practices requires thoughtful planning and training to avoid superficial use or distraction from learning goals.

Scope

1. **Pedagogical Strategies:** Teachers can investigate cutting-edge pedagogical strategies that smoothly incorporate technology into the educational process. This encompasses project-based learning, gamification, flipped classrooms, and group projects conducted online.
2. **Digital Tools and Resources:** A variety of educational programs, websites, and mobile apps are available that can help with content delivery, student engagement, and evaluation. Teachers can learn how to use these technologies efficiently.
3. **Personalization:** Educators can better meet the requirements and preferences of each student by using ICT to create personalized learning pathways and adaptable content.
4. **Data-Driven Decision Making:** Examining data from technology-integrated exams and learning management systems enables educators to pinpoint areas that need improvement and to make data-driven choices that will maximize their instructional approaches.
5. **Professional Learning Communities (PLCs):** Through online PLCs, webinars, and social media groups, ICT enables educators to cooperate and connect with colleagues around the world, exchanging best practices and experiences.
6. **Global Perspectives:** Through ICT, instructors and students can interact with communities around the world, increasing variety in education and building cross-cultural understanding.
7. **Accessibility and Inclusivity:** ICT can be utilized to generate educational materials that are inclusive of students with a range of requirements.

8. **Continuous Learning:** ICT-enabled professional development enables educators to keep abreast of the newest developments in the field of education, ensuring that they continue to be skilled and informed facilitators.
9. **Online Professional Development Courses:** A variety of online courses and certifications are available that are aimed at improving instructors' ICT proficiency and instructional strategies.
10. **Emerging Technologies:** As technology develops, teachers can investigate cutting-edge innovations like augmented reality, virtual reality, and artificial intelligence, which create new opportunities for interactive and immersive learning experiences.

What is ICT?

Information and communications technology (ICT) is an abbreviation for information technology (IT) that emphasizes the importance of unified communications[1] and the integration of computers and telecommunications (phone lines and wireless signals), as well as the enterprise software, middleware, storage, and audiovisual components that are required to enable users to access, store, transmit, comprehend, and work with information.

Benefits of Using ICT in Education

ICTs are a huge asset in the development of discernment. Some of the most noticeable abilities that students acquire as a result of using ICT are the ability to compare and contrast multiple sources and organize knowledge. But there are more benefits as well:

- Their enthusiasm in learning increases thanks to the usage of resources like movies, internet, graphics, and games, which add excitement to conventional subjects. A great technique to engage pupils in learning is through interesting and comprehensive multimedia content.
- Student cooperation: Thanks to numerous digital instruments, student cooperation is undoubtedly improved. They can work together, develop team projects, and share knowledge much more easily.
- They foster creativity: ICT tools encourage all students' initiative and the growth of their imagination.
- Better communication: More informal and spontaneous intimate communication between students and teachers is promoted through a variety of methods.

Strategies for Educators

- Workshops and Training Sessions: Hold engaging workshops and training sessions to improve instructors' ICT proficiency. These sessions should cover subjects including using educational apps, using online collaboration tools, and making the best use of digital resources.
- Practical application: Encourage educators to practice with ICT technologies in a secure setting to build confidence and competence.
- Personalized Learning Plans: Individual educators' needs and interests in ICT

integration should be taken into account when creating professional development plans.

- **Collaborative Learning Communities:** Establish online discussion boards or groups where teachers can exchange concepts, stories, and best practices around the use of ICT in the classroom.
- **Online Courses and Webinars:** Provide in-depth information about integrating ICT in the classroom through self-paced online courses and webinars to fit educators' busy schedules.

Outcomes of the Training

- **Increased Student Engagement:** By utilizing technology, educators may design engaging, interactive lessons that take into account students' individual learning preferences.
- **Data-Driven Instruction:** By using technology to gather and analyze student data, educators may make more informed decisions that will enhance learning outcomes.
- **Professional Development:** Participating in ICT-based professional development equips educators with new abilities and information, which advances their careers as a whole.
- **Access to a Wide Range of Resources:** When educators use ICT, they have access to a wide range of online resources, which enables them to diversify their lesson plans and cater to the requirements of various learners.
- **Culture of Lifelong Learning:** Supporting ICT-based professional development among educators fosters a culture of lifelong learning that encourages creativity and adaptation.
- **Enhanced Teaching Methods:** Teachers will be better able to successfully use ICT resources into their classes, creating more interactive and interesting lessons.

Tools

1. **Learning management systems (LMS):** LMS platforms act as central hubs for course materials, assignments, quizzes, and conversations, giving teachers the ability to organize and deliver content to students while keeping track of their progress.
2. **Interactive Whiteboards (IWB):** IWBs combine conventional whiteboards with digital technology to give teachers the ability to interactively display and change content, resulting in more dynamic and engaging courses.
3. **Video Conferencing Tools:** These tools enable real-time communication and virtual classrooms, allowing instructors and students from many locations to collaborate and engage in remote learning.
4. **Screen Capture and Recording Software:** Teachers can use these programs to make tutorials, presentations, and instructional videos that can be accessed by students who are learning in an asynchronous fashion.

5. **Online Assessment Tools:** These tools simplify the assessment procedure and give teachers access to automated grading and data analysis for a clearer understanding of student performance.
6. **Virtual reality (VR) and augmented reality (AR):** These immersive technologies provide interactive and experiential learning opportunities, enabling students to investigate challenging subjects in a more compelling manner.
7. **Collaborative Tools:** Websites like Google Workspace (formerly G Suite) and Microsoft 365 provide tools for teamwork like document sharing, in-the-moment editing, and group projects.
8. **Online Discussion Forums and Social Media:** These tools promote peer-to-peer learning and interaction by letting students talk about class material, exchange ideas, and work together outside of the classroom.
9. **Gamification Tools:** To inspire students and improve their learning experience, gamification components can be incorporated into educational activities.
10. **Artificial Intelligence (AI) Tools:** AI-powered adaptive learning systems can modify educational content and exercises in accordance with the requirements and development of each individual student.
11. **Cloud Storage and File Sharing:** Cloud-based services allow instructors and students to easily store and share instructional materials.
12. **Mobile Applications:** Students may learn while on the go with the help of educational apps for smart phones and tablets.

Educational Implications

- The current study emphasizes the value of ICT at all educational levels, but especially at the secondary level. ICT is required in school curricula for creative and successful teaching-learning processes.
- The study strongly supports the use of ICT in current educational system. The report carefully examines the many ongoing ICT based projects and highlights the key components and the implementation procedure.
- Thus It may be useful while creating the best ICT-based projects for classrooms. The report advocates the integration of ICT into the current educational system and provides a full analysis of numerous ICT projects.
- In the current study, the researcher addresses the many initiatives in Depth and identifies the modifications that must be made to the current curriculum Structure for accommodating such initiatives in a suitable manner. Therefore appropriate The curriculum should be altered to better incorporate ICT. Based initiatives.
- The study strongly suggests curriculum and syllabus flexibility for the best possible ICT adoption. The syllabus should be designed such that ICT can be included in the lessons. If necessary, a classroom should be available, with adequate freedom. Its application
- The study grabs the teachers' attention by highlighting the Shortcomings in the curriculum techniques needed for appropriate Using ICT. Therefore, it is evident that it is necessary to create a Changing the way teachers teach ICT usage.

- The present study directs the school organisation that the school Environment should be made more techno-savvy and ICT friendly.
- The researcher, in the present study, encourages the regularity of ICT Based projects in the schools for its successful implementation. Therefore The study suggests the school management should have a regular Monitoring of various projects.

Suggestions for Educators

- Teachers must develop the appropriate ICT skills in order to properly use the ICT-based technologies in the classroom.
- Teachers may brush up on their understanding of the newest ICTs (information and communication technologies).
- Teachers may develop a good attitude regarding the use of ICT in the Classroom.
- They might provide a stimulating environment for creativity and problem-solving so that children develop a positive attitude toward ICT.
- Teachers could gain knowledge from their colleagues who successfully use and manage ICT in the classroom.
- Teachers can use ICT regularly and judiciously in the classroom.

Conclusion

It is possible to draw the conclusion that ICT-based projects have had a substantial impact on the educational process based on research data. Although ICT has been incorporated into the curriculum, the study shows that, The syllabus's material remains unchanged. The syllabus lacked any unique features or revisions that would have encouraged the thoughtful integration of ICT. ICT integration into the curriculum took a variety of forms depending on the organization's rules and the particular school. While some schools have included ICT into the curriculum, others merely use it outside of the classroom or as teaching tools.

The use of interactive whiteboards and technology-integrated material delivery in the classroom has improved the efficiency of the curricular exchange. The majority of instructors have been shown to have positive attitudes toward using ICT, however there are still a significant number whose attitudes are still average or negative. The instructors' reluctance to include ICT into their lesson plans is likely due to their lack of familiarity with the technology and inadequate training in its use. The lack of adequate training facilities, adequate ICT infrastructure, and clearly defined policies surrounding the use of ICT projects in the classroom encourages teachers and students to have negative views toward ICT programs. The development of the curriculum and its delivery have also been impacted by the school administration's confusing policies.

The methods of instruction have also been modified by ICT-based projects. The teachers were able to choose better teaching strategies for a variety of courses thanks to ICT-based programs. The teachers were in agreement that these ICT projects had a good impact on a number of teaching-related areas.

ICT-based programs envisioned unique and new approaches to goal-setting, lesson planning, the choice of instructional methodologies, and even evaluation. The pupils' enactive, figurative, verbal, reproducing, and constructive learning styles were all significantly improved by the ICT projects.

Abstract

Empowerment of women is essentially the process of upliftment of the economic, social, and political status of women in Society. Women equality and Empowerment has always remained a priority area and has been taken utmost care by stake Holders. Women constitute almost 50% of the world's population, but India has shown a disproportionate sex ratio, whereby females' population has been comparatively lower than males. The Paper develops argument on the basis of secondary sources as review of existing literature published in journal, books, reports of various, NGOs, Government and international organizations and websites. The paper critically examines women empowerment in India, various models and dimensions. The paper discusses constitutional safe guards as well as plans and programmers by the government and their implementation, indicators of women empowerment.

Introduction

The concept of "Empowerment" traces its history in the mid 17th century with the legalistic meaning "to invest with authority". Thereafter, this concept was modernized to mean "to enable or permit". Women empowerment is an increasing and improving the social, economic, political and legal strength of the women and ensure the equal right to women, to make them confident, freely live their life with self-respect and self-dignity. This aspect visualizes the full participation of people in the decision-making process that shapes their lives. The goal of inclusive growth and human development cannot be achieved without the development and empowerment of women.

In India, in theory women enjoy a status of equality with the men as per constitutional and legal provisions. Although, our country has taken various steps towards inclusion and empowerment of women in all fields of life but with headlines about dowry killing, female feticides and domestic violence still making the newspapers, put a silent question mark behind the two words. Today, true development and growth can only be achieved by taking successful steps in eliminating deep-rooted ideologies of gender bias and discrimination like the confinement of women to the private domestic realm, restrictions or

their mobility, poor access to health services, nutrition, education and employment and exclusion from the public and political sphere.

Scope

The current study makes an effort to assess women's empowerment, which will be useful in analyzing gaps in a developing economy like India. Additionally, it can be beneficial to investigate some undeveloped regions with development potential. The study would for women's empowerment by creating economic opportunities and strengthening the nation's independence. Because some of the methodologies and procedures used in the study should be useful in conducting more studies of a similar sort, it may also be essential for anyone interested in conducting comparable research in the context of other elements of the notion.

Objectives

- To analyse the importance of women empowerment.
- To evaluate the present status of women in the society.
- To evaluate the role of women empowerment in the overall development of the country.
- To study the necessity of women empowerment.

Research Methodology

In the field of human development, women's roles are now extensively acknowledged and accepted throughout much of the universe. The recent significant prominence that the Indian government has given to this idea makes it necessary to analyze women's empowerment. The Research evaluated the effectiveness of both government and non-government groups in empowering women in India to analyze their roles in these endeavors. The overarching goal of this study is to assess women's empowerment, which eventually contributes to the nation's overall development.

Limitations

- This study focuses only on the Women empowerment in India
- This study is only based on the secondary data.

Review of Literature

When the weak have more influence on ideology and resources, this is referred to as empowerment. It has been linked to concepts like agency, prestige, power, and autonomy. The Indian constitution has made it very clear that women have an equal chance at success and has given authorities the authority to create rules and regulations to protect the right. As the majority of international conferences focused on seizing possibilities, the 1990s may be remembered as an impertinent decade for women's empowerment worldwide. It highlighted concerns about gender inequality, violence against women, and sexual and reproductive rights. Even among the eight the Millennium Development Goals (MDG) of

UN Developed in 2000 was targeting to be achieved by 2015, the Goal three was to promote gender equality and empower women. Women empowerment is the defined as the change in the context of a women's life, which enables her increased capacity for leading a fulfilling human life.

National Commission for Women

The National Commission for Women was set up in 1992 to protect and safeguard the rights of women. The activities of the Commission include receiving complaints or Suo moto enquiring in cases of deprivation of rights of women, providing counseling, conducting Parivarik Lok Adalats and legal awareness programmers and organizing public Hearings. The National Commission for Women being the nodal agency for protection of the rights of women needs to be strengthened. The NCW Act needs to be suitably amended to give the Commission more power. The requirement of funds for the XI Plan for the activities of the Commission is estimated as Rs.35 crore.

Means of Empowerment

- Social Empowerment
- Economic Empowerment
- Political Empowerment
- Legal Empowerment
- Cultural Empowerment

Social Empowerment

Under the social empowerment of women steps needs to be taken to improve the health status of women, reduce maternal mortality rate especially in the arose which do not have good medical facilities. Awareness programmers for diseases need to be launched. Women face high risk of malnutrition hence focus should be given to meet the nutritional needs of women at all stages of their life cycle. Schemes need to introduced for helping women who are victims of marital violence, who are deserted and those engaged in sex protection, Government have to be vigilant for ensuring that there is no discrimination against the girl child and her rights are protected.

Economic Empowerment

Financially empowering women becomes crucial for the nation's long-term growth and development in a fast-growing economy like India. The idea of sustainable development has evolved along with changes in how people view development. As well as modified. We are talking about sustainable development because it has expanded to encompass social responsibility, making women's roles more significant for the growth of the economy.

Political Empowerment

In order to gain any kind of agency over their lives, women need proper political representation that provides them power to bring a change in economic, legal as well social status of their gender. Women's participation in politics can be seen since freedom struggle through examples like Sarojini Naidu, Kamladevi, Hirabai Tata or Begum Shali Nawaz. Even though women are participating in politics since a long time, their percentage is very low when compared to men's. Since the 1950s and 1960s, women's Representation in Panchayat Raj was being discussed among the political leaders of India.

Role of NGOS in Women Empowerment

Governmental organizations are recognized institutions dedicated to empowering women. However, because this job necessitates a multifaceted strategy, a great number of non-profit organizations (NGOs) have seen an increase in interest from the local level to the national and international levels. They play such an impressive role because they are so dedicated and zealous about their missions. NGOs operate in an open, honest, and friendly manner. They are therefore more successful in this regard. For the purpose of enlightening the general public, they arrange seminars, conferences, and workshops on women's rights and the abolition of prejudice.

Special Legislation for Women

- Legal practitioners (women) act, 1923
- Immoral Traffic (Prevention) Act, 1956 Maternity Benefit Act, 1961
- Dowry Prohibition Act, 1961
- Equal Remuneration Act, 1976
- Crimes Identified Under I.P.C
- Indecent Representation of women (Prohibition) Act, 1986
- Commission of sati (Prevention) Act 1987
- Pre-conception and Pre-Natal Diagnostic Techniques Act, 1994
- Protection of women from Domestic Violence Act, 2005
- Prohibition of child marriage Act, 2006
- Protection of children from sexual offences as (POCSO) Act, 2012

Importance of Women Education

According to JAWAHARLAL NEHRU, PT, "Educating a man educates an individual; however, Educating a woman educates an entire family." "When women are empowered, mother India is also Empowered." In India, women's education plays a major role in the country's overall growth. It not only contributes to the development of half of the world's human resources, but also to the improvement of life quality at home and abroad. It will not be incorrect to say that education is the solution to all problems. A lot of definitions of education have been proposed by thinkers, but M.Phule's term is the most important. "Education is that which illustrates the distinction between what is good and what is evil," M. Phule says. If we study the preceding concept, we can see that education is at the heart

of all the revolutions that have occurred throughout our history. Education entails changing one's behaviour in all areas, including thinking, viewpoint, and attitude. Educated women are more likely to encourage their daughters to attend school, as well as provide greater advice to all of their children. Furthermore, educated women can aid in the lowering of new-born mortality and population increase.

Conclusion

Women are crucial in advancing a country and directing it toward growth. Giving women access to education must be a top priority if we want to see a bright future for them in our nation since they are vital components of a vibrant humanity that are needed for national advancement. Moving from a vulnerable position to use a power is empowerment. In conclusion, whether a woman is married or unmarried, financially independent or dependent, her role in the patriarchal family dynamics does not change and she still remains powerless. Defeating the norm-based society's logo centric forces is crucial for women to achieve true empowerment in India. The empowerment of women in India depends on each of them, and when they work together, they make a difference. This implies that every Indian woman has a responsibility towards herself that she is capable of fulfilling if she is to achieve overall empowerment.

Abstract

This study examines the intricate relationship between finance and women's empowerment, highlighting the critical part that financial inclusion also plays an important role in advancing gender equality and elevating women's social standing. According to the report, financial knowledge and access are important factors in empowering women, fostering their economic independence, and advancing social justice. It also makes the case that the financial industry may be crucial in eradicating structural gender inequities, promoting economic growth, and realizing sustainable development objectives. The project is set up to first map the existing situation of women's access to finance on a global and regional scale, identifying major obstacles such as salary inequality, loan availability, and financial literacy. We anticipate that the findings from our study can guide fact-based guidance for policy and decision-makers in the financial sector and beyond. Our research findings could stimulate initiatives to advance gender equity in finance, creating a society that is more inclusive and equitable.

Keywords: *women empowerment, finance, gender inequities, financial inclusion.*

Introduction

In recent years, financial security has gained importance. The gender differences in financial well-being, as well as their causes and effects, have been extensively studied. Financial empowerment and well-being have both been shown to be significantly influenced by financial literacy. As the financial world becomes more complicated, financial literacy is becoming ever more crucial. Therefore, it has become essential to have a better grasp of financial ideas and financial goods in order to build the abilities to make wise financial decisions in order to increase financial well-being and empowerment. Increasing women's financial empowerment is crucial since, in contrast to males, they lack authority over economic resources. The current study suggests a conceptual framework that investigates the contribution of financial socialization and financial literacy to the growth of financial self-efficacy and financial coping. The current study puts out a

conceptual framework that investigates how financial socialization and literacy affect financial self-efficacy, coping mechanisms, and financial empowerment in India. The current study offers a conceptual framework that investigates the contribution of financial socialization and financial literacy to the growth of financial self-efficacy, coping mechanisms, and financial empowerment. We also discovered that financial self-worth and financial means of coping have a constructive influence in the growth of financial empowerment.

The current study puts out a conceptual framework that investigates how financial socialization and literacy affect financial self-efficacy, coping mechanisms, and financial empowerment in India. The current study offers a conceptual framework that investigates the contribution of financial socialization and financial literacy to the growth of financial self-efficacy, coping mechanisms, and financial empowerment. We also discovered that financial self-worth and financial means of coping have a constructive influence in the growth of financial empowerment.

What is Women Empowerment?

Providing women equal rights in all spheres personal, social, economic, political, legal, and so forth means empowering them with the power to make decisions about their personal lives and professions. Women are working side by side with men in places of employment today because of the empowerment of women. A woman also strikes a balance between her dedication to her career and her responsibilities to her home and family. With amazing ease and compatibility, they are juggling several roles at home as a mother, daughter, sister, and wife; and at work as professionals. To be able to properly handle their families while also harmonizing the need to work while helping their families, women have to be empowered. This is crucial for the future development of any nation. Women have also established themselves as equal partners in handling the household's financial needs at the same time. Women have effectively established their unassailable positions both nationally and internationally, yet they still pale in contrast to their male colleagues.

- Women in rural towns and villages are also progressively raising their voices loudly and clearly in society, proving that women's empowerment is not just a phenomenon of metropolitan areas. While it is true that women do not experience discrimination to a major level in society today, many of them nevertheless endure exploitation and harassment, which can take many different forms, including emotional, physical, mental, and sexual. They frequently experience rape, abuse, and other types of mental and physical violence.
- Right to work, right to study, right to make decisions, and other sociopolitical rights are now being asserted by women. The Indian Parliament has also approved a number of laws to protect women from different types of injustice and discrimination. The legislation listed below aim to empower women: Equal Remuneration Act-1976; Dowry Prohibition Act-1961; Immoral Traffic (Prevention) Act-1956, Medical termination of Pregnancy Act-1971; Maternity Benefit Act-1961;

Commission of Sati (Prevention) Act-1987; Prohibition of Child Marriage Act-2006; Pre-Conception & Pre-Natal Diagnostic Techniques (Regulation and Prevention of Misuse) Act-1994; and Sexual Harassment of Women at Work Place (Prevention, Protection and) Act-2013.

- According to the Indian Constitution's provisions, it is permissible to accord women in society the same opportunities that men do in all fields. In India, women have always held a prominent position, but they haven't always been empowered to take part in all activities. In order to develop and flourish, they must always be strong, attentive, and vigilant. The development department's major goal is to empower women since a mother with a kid who is empowered has a bright future for any country.

Review of Literature

- Holloway, K., Z. Niazi, and R. Rouse (2017), says that, there are a number of product design aspects that financial service providers and other stakeholders may use to get around some of these obstacles to women's financial inclusion. More research is required on efficient product-led methods to overcome these obstacles and enhance the outcomes of women's economic empowerment.
- Bardhan K. (1985). includes that the indicators of women's empowerment range significantly amongst the various states and socioeconomic and cultural contexts in India. All four facets of women's empowerment identified as being significantly influenced by the educational attainment of women. Age and media exposure have become key indicators for various aspects of women's empowerment.
- M., Dhanamalar; S., Preethi; and S., Yuvashree (2020), says that beyond having a beneficial effect on women's everyday lives, women's empowerment is essential to the general advancement of any community. Wide-ranging opportunities for women in India and throughout the world have been brought about by the winds of rapid change in the job and information technology areas.
- Yadav, Pratibha (2022), says that the main goal of all governments overseeing improved life standards helpful to mankind is to empower women everywhere. In Indian Vedic tradition, a woman is referred to as "Shakti Swaroopa" and is endowed with the capacity for procreation and multifaceted conduct. In the modern world, digitization has impacted every aspect of society, with a particular focus on the empowerment of women.

Benefits of Women Empowerment

Women's empowerment increases their belief in their potential to live fulfilling lives. They become independent persons after losing their reliance on others. They may live their life with dignity and independence, which boosts their self-esteem and gives them a sense of individuality. They are able to become well-known and make a significant contribution to society's welfare. Due to their financial independence, ability to spend on all of their needs and wants, and fair and equitable access to the nation's resources, women contribute

as capable citizens to the achievement and growth of the Gross Domestic Product (GDP). It's crucial to keep in mind that women's empowerment encompasses more than simply personal achievement or economic production. It concerns respect for human rights, freedom from oppression and violence, and equality. It involves building communities in which every woman has the freedom and power to decide what to do with her life.

Economic Growth: Empowering women can result in higher economic output. Women can participate more successfully to economic activities when they have the same opportunities and resources as men. According to research, gender imbalance in the workplace and society might have a huge financial impact on the entire world.

Enhanced Political Participation: Women who are empowered are more likely to participate in part in social and political decision-making, which ends up resulting in laws and policies that more accurately reflect the desires and requirements of women and girls. This enhances the possibility that equitable and well-balanced policies will be implemented in all spheres of society.

Gender Equality: Empowering women is a necessary initial step in reaching gender equality. Women who are empowered can challenge injustice and traditional conventions, which leads to a society that is fairer and more egalitarian.

Reduction of Violence Against Women: Women who are empowered are more competent to stand by themselves and confront various types of abuse and violence. Further, they can play a crucial role in transforming society attitudes and conventions that support such violence.

The Challenges of Financial Inclusion for Women

Around 1.1 billion women worldwide, or nearly one in three, are not included in the official financial system. Women are 7 percent less likely than males worldwide to hold simple transactional accounts, and this discrepancy is worse among the poor. Women are 28% less likely than males to hold a bank account if their daily income is less than \$2. These women frequently have to keep their cash on hand and rely on personal connections or loan sharks to cover their most basic expenses. This perpetuates the cycle of poverty by leaving people open to theft, loss, and other forms of exploitation. Some of the major challenges includes,

- It's considerably harder to locate excluded women.
- Through conventional approaches that target males as well, it is tougher to reach women.
- A lesser incentive prevails for providers who assist women.
- The requirement for monetary services by women is limited by norms of society.
- Technology is less approachable to women.

Many social conventions and traditions prevent or even ban women from working in the official financial industry in many regions of the world. Women, for example, may not be permitted to possess assets, which are frequently required as security for loans. Many women, particularly in rural and underserved regions, lack access to excellent education

and, as a result, financial literacy. This limits their grasp of money management, saving, investing, and protecting oneself from financial threats. Overcoming these issues will need a collaborative effort from governments, non-governmental organizations (NGOs), financial institutions, and society at large. This involves establishing gender-equal legislation, investing in women's education and financial literacy, developing financial products that are accessible and relevant to women, and utilizing technology to reach women who do not have access to traditional banking services.

Rural Women in the Digital Era

The amazing potential of ICTs must be fully realized in order to solve gender-based and other injustices and imbalances in society and empower women. Inaccessible ICT projects in many regions of humankind have revealed the benefits that such programs may provide for women. According to Vodafone's "linked Women" project, by 2020, mobile technology might help 5.3 million women escape illiteracy. With the use of such technology, violence against women may be reduced and women could pursue novel options, which would raise economic activity by an estimated 3.4 billion US dollars. When attempting to create a sound financial strategy, women sometimes run into unexpected problems. Women face challenges on a daily basis, but women also face challenges that most men cannot imagine. The typical modern woman adheres to various standards, which frequently prohibit her from moving up the corporate ladder.

Impact of Financial Accessibility and Availability For Women

Various aspects of women's empowerment can be strongly impacted by financial accessibility and availability, both on an individual and social level. Women are more capable of participating in the economy when they have access to financial resources and services. This might involve a variety of activities, including as finding work, establishing and expanding a business, and boosting the local and global economy. Women can live more independently and in control of their life if they are financially independent. Their ability to make decisions regarding family size, children's education, and the distribution of household resources may rise as a result. Women who have access to money can afford medical treatment for themselves and their families. Since women can afford routine checkups, required medications, and emergency treatments, having better financial health is frequently associated with having better physical health.

Women may benefit from a safety net against unforeseen economic shocks thanks to financial inclusion. This includes having access to credit, insurance, and savings that can assist in reducing financial risks brought on by unexpected medical expenses, lost income, or natural catastrophes. Women's social standing and self-esteem can be raised by financial access, which increases their propensity to engage in political and social activities. This may strengthen their positions as civic leaders and women's rights supporters. Women can be empowered by financial resources to create and launch their own enterprises. These business possibilities benefit not just the women who take them, but also the local economy and development of the neighbourhood.

Key Policies for Financial Inclusion

Certain national planning documents, programs, and legislation address the use of finances as a development instrument. Here, important policies are examined in light of how they treat the financial inclusion of disadvantaged and vulnerable groups. Although the policies in question seldom make clear how they propose to address the overlapping elements that impact women's economic possibilities, these papers mostly discuss gender equality concerns in the context of women's economic empowerment. Only a few policies address concerns relating to the financial inclusion of underprivileged populations, except than via gender equality.

Five-year Plans

Bangladesh's five-year plans serve as the country's overarching policy texts, from which other policies, initiatives, and rules are derived. A strategic goal of Bangladesh's current 8FYP is to increase women's economic involvement and benefits. Enhancing women's access to and control over productive resources through improved access to financial services is one strategy for attaining this goal.

National Strategy for Social Security

Unshakable dedication to eliminating poverty and vulnerability is shown in the NSSS, which was approved in 2015 (footnote 4). At the same time, Bangladesh strives to promote the social and financial inclusion of underprivileged groups. For instance, the NSSS strives to improve programs for the working-age population, including lowering vulnerability via initiatives like maternity insurance.

National Women Development Policy 2011

A road map for carrying out and coordinating all financial inclusion measures is supposed to be provided by the National Financial Inclusion Strategy-Bangladesh (NFIS-B)³⁰. Owners of cottage, micro, small, and medium-sized companies (CMSMEs), participants in unserved and underserved financial markets who belong to poor and disadvantaged groups, and others are among those excluded from financial services, according to this plan.

Effect of Policies and Laws in Women's Economic Status

The economic standing of women may be strongly impacted by laws and policies. Depending on how they are created and implemented, they can either support women's economic empowerment or obstruct it. Women's economic situation may be dramatically impacted by laws that forbid gender discrimination in the workplace. These regulations support equal compensation for equal labour, provide protection against sexual harassment, and guarantee ethical recruiting and promotion procedures. The "motherhood penalty" that many women experience in the workplace can be lessened by policies that offer paid maternity leave and help for child care. They make sure women don't have to choose between having a family and their employment, allowing them to keep their

economic standing. The economic potential of women may be considerably impacted by policies that support equal access to high-quality education for boys and girls. Such laws can assist females in gaining the information and abilities needed for a successful job. The economic standing of women can be improved through laws and regulations that support their access to financial services including opening bank accounts, getting credit, and owning property. Women's economic security and independence can be strongly impacted by laws that grant them the ability to engage into contracts, inherit and own property, enter into wills, and have equal rights in marriage.

Sugesstions

- It's never too late to master the art of investing if you don't know how.
- Find friends and family who are knowledgeable about investing and money management.
- Be a part of the financial plan and take a more active role in making financial decisions. Seeking support helps people become stronger and conquer their weaknesses.
- Considerable is to be given to the women especially to the entrepreneurs, in financial plans, policies and schemes and institutional training arrangements from both government as well as from private sector's side.
- Financial education should be prioritized related to financial inclusion for women and how to overcome them
- Supporting initiatives are to be taken which promote and ease women's entrepreneurship, such as giving them access to loans and giving them business skills training.

Conclusion

In conclusion, it's critical to acknowledge the relevance of women's financial inclusion and economic empowerment in India. It's time to remove the glass barrier and allow women in India's culture and economy equal opportunity to engage in economic activity and decision-making. Women have historically been sidelined in Indian society and the economy. All interested parties, including the government, financial institutions, civil society groups, and the commercial sector, must work together in unison to accomplish this. The establishment of supportive legislative and regulatory frameworks that promote women's financial inclusion and economic empowerment may be greatly aided by the government. This study would contribute to help policymakers, financial institutions, and other stakeholders develop strategies and interventions that successfully promote women's financial inclusion and empowerment, this study will add to the body of knowledge already available on women's empowerment and financial inclusion.

This study emphasizes the strong connection between women's empowerment and financial accessibility. It shows that boosting women's economic independence, decision-making ability, and overall socioeconomic standing requires financial inclusion as a key trigger. Through increased access to education, healthcare, and business possibilities,

women who have access to financial resources and services are better able to enhance their own and their family' quality of life.

Abstract

E-learning has significantly impacted higher education, revolutionizing the way students' access and engage with learning materials. This critical evaluation examines the advantages and drawbacks of e-learning in the context of higher education. The benefits include enhanced accessibility, flexibility, and cost-effectiveness, enabling a broader range of learners to pursue education. However, challenges such as the digital divide, potential for reduced social interaction, and concerns about academic integrity and quality arise. Despite these issues, e-learning's impact on higher education has been profound, transforming traditional learning environments and shaping the future of education.

Introduction

E-learning in higher education has significantly transformed the traditional learning landscape, offering new opportunities and challenges. This critical evaluation will examine the impact of e-learning on students, educators, institutions, and the overall learning process.

E-learning has revolutionized access to education, enabling students from various geographical locations to access courses and resources remotely. It has also provided flexibility in learning schedules, allowing students to balance their academic pursuits with other commitments. Additionally, the use of multimedia, interactive content, and gamification in e-learning has enhanced student engagement and retention.

However, despite these advantages, e-learning has its share of drawbacks. One major concern is the potential for a digital divide, where students without access to reliable internet and proper devices might be excluded from the educational opportunities e-learning offers. Moreover, the lack of face-to-face interaction can lead to reduced socialization and a sense of isolation among students.

Furthermore, the effectiveness of e-learning largely depends on the quality of course design and the ability of educators to adapt their teaching methods to the digital

environment. Institutions must invest in training and support for educators to ensure they can effectively utilize e-learning tools and platforms.

Another critical aspect to consider is the issue of academic integrity and plagiarism. With online assessments and exams, ensuring the authenticity of students' work becomes more challenging, requiring robust measures to maintain academic standards.

Problem on Hand

E-learning, being the most recent rush of instruction is as of now having a sensible show in spite of posing challenges for the two teachers and understudies. While teachers need to put in escalated work and time to outline the rule, understudies need to furnish themselves with specialized capability to translate the course material. There are 5 standard issues looked by understudies in E-Learning classes and which we try to be understood through appropriate activities by our examination for the understudies' future advantages.

Different Tools for E-Learning

No matter a shakeout inside the market inside the past few years, many authoring tools are to be had that will help you create powerful WBT. These range from standard-motive equipment designed for displays and internet-authoring to dedicated E-mastering packages. The gear cowl a 33 extensive range in terms of charge, sophistication, and the way clean they are to learn.

- **Dreamweaver:** Dreamweaver is an first-rate starter device for WBT and preferred net-page authoring. Basically, Dreamweaver automates the authoring of internet content through generating HTML and JavaScript code thru a WYSIWYG interface. Among its many abilities, Dreamweaver makes it smooth to create animations and show/cover layers for WBT pages. When you have Dreamweaver, you can download loose extensions for E-learning. As soon as installed, those added modules come to be to be had via the Dreamweaver interface. They permit you to create quizzes, along with drag-and-drop exercises, and additionally to music learner consequences and output them to standards-compliant studying management systems (LMS). Dreamweaver is reasonably short to research and expand on. But, it is not as effective for WBT as many other equipment. It's abilities are restrained to what can be supported via the of native HTML and JavaScript functionality of internet browsers.
- **Macromedia Flash:** Although it was initially designed for growing small and rapid-loading web animations, Flash has evolved into an business-energy device for web programs. An increasing number of, it's miles becoming a improvement device of preference for WBT. With Flash, you could do the whole thing you can do in Dreamweaver plus a great deal more. Whilst Dreamweaver's output is limited to what a native internet browser can help, Flash's output is nearly limitless. This is due to the fact Flash creates its very own application file that runs within the browser window but does not depend upon the browser's native talents.

- Flash is extraordinary for creating animations, sporting events, and simulations of a wide variety. It supports rich media, inclusive of audio and video. Delivered to this, its modest rate makes it a totally appealing device for even low-finances WBT initiatives. The 34 handiest drawback of Flash rather than a few other tools is its complexity. The mastering curve may be steep. And, even as many outcomes can be attained via the person interface, you need to jot down code to unleash Flash's complete strength. Flash's ActionScript language may be very much like JavaScript.

Review of Literature

1. **AnejaNeena** [2016] has examined about an arrangement of scholarly review at each progression of the usage of the idea of self-governance ought to be satisfactory to every single concerned gathering. The offices for doing self-governing capacities, for example, advancements in curricular substance, frameworks of examination and assessment, showing techniques, supplementary learning, and so forth require adequate budgetary assets as well as constant preparing and up degree of educators. Independent foundations should, thusly, have the way to activate assets on an anticipated premise.
2. **Desai Swati** [2015] has discussed the function of records and verbal exchange technology . Information and communicate era additionally focuses amendment of the role of instructors. Further to school room coaching, they may produce other competencies and obligations. Instructors will act as digital publications for college students who use digital media.
3. **Chandra Sumitra** [2014] has focused on quality of E-learning learning system and E-learning facilities. The E-learning situation in India is as yet developing at exponential stage. Numerous universities also offer online scholar help services, together with on-line recommendation and registration, E-counselling and on line textbooks.
4. **Iqbal Ahmad** [2014] has focused on the need of development of E-learning system in modern learning system. Also explain how to help teachers and student realize free exploration of knowledge. This thesis show the effects of E-learning and compare it with traditional of learning.

Impact of E-Learning in Higher Education

1. **Enhanced Accessibility:** E-learning enables students from diverse backgrounds to access educational content and resources from anywhere, overcoming geographical barriers and promoting inclusivity.
2. **Flexibility and Personalization:** E-learning platforms offer self-paced learning options and personalized study paths, allowing students to tailor their education to their individual needs and preferences.
3. **Interactive Learning Experiences:** Multimedia tools and interactive content in e-learning foster active engagement, leading to a deeper understanding of complex subjects and increased student motivation.

4. **Cost-Effectiveness:** E-learning can reduce expenses associated with traditional classroom-based learning, such as travel, accommodation, and physical materials, making higher education more affordable for many learners.
5. **Data-Driven Insights:** E-learning platforms generate valuable data on student performance and engagement, enabling educators to identify areas of improvement and personalize their teaching methods for better learning outcomes.
6. **Global Reach and Collaboration:** E-learning breaks down international barriers, allowing students and educators from different parts of the world to collaborate, share ideas, and gain diverse perspectives, enriching the learning experience.
7. **Continuous Learning Opportunities:** E-learning facilitates lifelong learning by providing readily accessible resources and courses, empowering individuals to upgrade their skills and knowledge at any stage of their career.
8. **Adaptive Learning and Personalized Feedback:** E-learning platforms use adaptive algorithms to customize content and assessments based on individual progress, providing timely feedback to help students address their weaknesses and build on strengths.
9. **Innovation in Teaching Methods:** E-learning encourages educators to explore creative approaches, incorporating gamification, virtual reality, and other technologies to make learning more engaging and effective.
10. **Sustainability and Eco-Friendly Practices:** By reducing the need for physical infrastructure and printed materials, e-learning contributes to environmental sustainability, minimizing carbon footprint and resource consumption in higher education.

Technologies Commonly Utilized in E-Learning

1. **Learning Management Systems (LMS):** LMS platforms serve as the central hub for e-learning, hosting course content, assessments, and communication tools. They enable educators to manage and deliver online courses efficiently.
2. **Multimedia Content:** E-learning incorporates multimedia elements such as videos, audio, animations, and interactive simulations to engage learners and present information in a dynamic and appealing manner.
3. **Virtual Reality (VR) and Augmented Reality (AR):** VR and AR technologies create immersive learning experiences, allowing students to explore virtual environments and interact with objects, enhancing understanding and retention of complex concepts.
4. **Mobile Learning (M-Learning):** Mobile apps and responsive websites enable learners to access course materials on smartphones and tablets, promoting flexibility and learning on-the-go.
5. **Gamification:** Gamification techniques, like badges, points, and leaderboards, are integrated into e-learning platforms to incentivize participation, boost motivation, and make the learning process more enjoyable.

6. **Artificial Intelligence (AI):** AI is employed in e-learning for adaptive learning pathways, personalized feedback, and automated assessment grading, tailoring the learning experience to each individual's needs.
7. **Social Learning Tools:** Discussion forums, chat functionalities, and social media integrations facilitate peer-to-peer interaction, collaborative learning, and knowledge sharing among students and instructors.
8. **Cloud Computing:** Cloud-based storage and computing services ensure seamless access to learning resources and allow for easy scalability of e-learning platforms to accommodate a growing number of users.
9. **Big Data and Learning Analytics:** Data analytics tools track and analyze learner performance, engagement, and behavior, providing valuable insights to educators to optimize course design and instructional strategies.
10. **Video Conferencing and Webinars:** Live virtual classrooms and webinars enable real-time interaction between instructors and students, fostering synchronous communication and remote teaching.

Disruptive Innovation

Disruptive innovation is a term coined by Harvard Business School professor Clayton Christensen. It refers to a transformative concept, product, or service that fundamentally alters an industry or market by introducing a new approach that often displaces existing solutions or practices.

Key characteristics of disruptive innovations include:

- Targeting Underserved Markets
- Lower Cost and Simplicity
- Technological Advancements
- Incremental Improvements
- Changing Consumer Behavior
- Challenging Established Players

Challenges to Educational Planners

The ICT change gives new normal open entryways; it significantly modifications what can be mentioned and by whom and furthermore what may be conveyed and given via whom. These capacity adjustments, anyhow, act numerous new problems for academic coordinators. Those troubles may be divided into two massive makes: people who perceive with esteem and those that pick out with pleasant. But, unless educational coordinators respond to those actions and issues with proportionate speed. Esteem even though in numerous Western countries, the bigger pieces of families have computers 42 related to the internet, noteworthy differentiations remain alongside local and class lines. Multiple examinations report that young fellows are more powerful than younger ladies in the use of the new specific gadgets. Except, besides schools in like manner are dynamically all around arranged and related, requirements vacillate inner countries with academic stage

and kind. The same applies to instructor getting equipped and capacities. This raises the extra vast issue of large really worth: internal international locations and moreover among nations, mainly among the industrialized and making global. Without query an extensive variety of computers are offered every 12 months and hundreds of thousands get admission to the net.

Health Related Concerns

E-learning calls for the utilization of a pc and other such gadgets; this means eye fatigue, loathsome stance and different bodily troubles may affect the pupil. Whilst jogging an internet path it is a no longer too bad practice to bring policies approximately right sitting stance, paintings area tallness, and suggestions for general breaks. One of the best longstanding discourses inside the area of mentoring has been whether or now not we can profit by E-acing to break down. It's valid that as people don't all answer to no less than one training strategy inside the same way - a few learn outwardly, and others learn with repetition or maintaining in contact with; some choose to study without all people else, while others need someone to manual them up and down the manner; a few are extroverts and feel secure talking earlier than human beings, while others are introverts and are reluctant to speak brazenly inside the lecture room. E-studying responds to the ones exceptional wishes with the use of different apparatuses and an expansion of substances. For instance, E-learning ordinarily offers various media content material or interactive trying out in a hurry that may be more appealing for younger inexperienced persons than conventional books. E-gaining knowledge of, in examination with traditional studying, altogether reduces the time had to locate data. It likewise offers get right of entry to online resources, databases, periodicals, diaries and different fabric you would not often have get entry from a library.

Suggestions

- Properly train instructors to design and deliver effective e-learning courses, ensuring they can maximize the benefits of digital education.
- Invest in reliable and user-friendly e-learning platforms, providing technical support to both students and educators.
- Implement initiatives to bridge the digital divide, such as providing internet access and devices to students in need.
- Combine e-learning with face-to-face instruction when possible, creating a balanced approach that leverages the advantages of both methods.
- Regularly assess and improve e-learning courses based on feedback from students and faculty to enhance the learning experience.
- Offer online counselling, tutoring, and academic advising to ensure students receive adequate support throughout their e-learning journey.
- Implement robust methods to maintain academic integrity during online assessments, such as proctoring services and alternative evaluation techniques.

- Encourage group projects and virtual team activities to foster collaboration and interpersonal skills among online learners.

Conclusion

E-learning has significantly impacted higher education, presenting both advantages and challenges. The accessibility, flexibility, and personalized learning opportunities offered by e-learning have expanded educational access and improved the learning experience for many students. The availability of engaging multimedia content and interactive features has enhanced the quality of educational materials and fostered active learning.

However, e-learning also faces obstacles, such as student engagement issues, the digital divide, and concerns about assessment integrity. These challenges need to be addressed through faculty training, technological support, and initiatives to bridge the digital gap.

To make the most of e-learning's potential, a balanced approach that incorporates blended learning and regular improvement based on feedback is essential. Supporting services, like online counseling and academic advising, can ensure students receive the necessary assistance throughout their e-learning journey. By taking these steps, higher education institutions can harness the benefits of e-learning while overcoming its challenges, creating a more inclusive and effective educational experience for learners in the digital age.

DEVELOPMENT OF REASONING AND THINKING ABILITIES AMONG STUDENTS

Ms. A. Gomathi

Assistant Professor of Commerce

Nallamuthu Gounder Mahalingam College, Tamilnadu, India

gomathiagathursamy@gmail.com

Abstract

Reasoning skills and logical thinking is inseparable; it is beneficial for developing insight in thinking and task which will help them to solve a problem. This ability helps in adjustments in new situation of life which will further help in success of all area of life². At present era, development of reasoning and thinking abilities is an important one to fulfil the needs in effective manner, especially for younger generation. Students must have to improve the reasoning and thinking abilities because it enhances the interest of the students in studies and shapes the future education plans, career plans, and personality. This paper explore in detail about the concepts related to the reasoning ability and reasons behind the low reasoning ability of students and how to impart these skills among students.

Keywords: Reasoning Skills, Thinking ability, Arithmetic and Logical Reasoning, Critical Thinking, etc.,

Introduction

Reasoning and thinking abilities are developed in order to address the challenges of modern education, global competition and democratic life⁵. From the beginning this skills must have inculcate among the students for the betterment of the society. Reasoning and thinking abilities helps the students not just follow the ideas or facts but to find the meaning and connection behind them. Critical thinking is the ability to find solutions on the basis of evaluation, logic and evidence¹. There is a difference between memorization and learning. Memorization of answer to the question without clearly understands the concepts and its meaning, may improve the remembering quality of the brain but this habit deteriorating the quality of learning.

Statement of the Problem

Lack of reasoning ability among students is the major issue in Indian context². After Covid-19 the entire scenario of learning habits of the students are changed. Online classes and ICT tools usage help the students to know and utilize the various learning platform at maximum level, but in regular classes we can see the students hesitate to ask questions in the classroom. To narrow down the reason for this gap the following questions have been raised:

Why the students have low reasoning ability? What are the basic concepts related to improve reasoning ability? What are the strategies to improve the reasoning and thinking skills among the students?

Objectives of the Study:

This study makes an attempt to find the solutions for the questions asked in the statement of the problem. Accordingly the following objectives have been framed.

1. To know the concepts and importance of reasoning and thinking ability.
2. To identify the reasons behind the low reasoning and thinking ability of students.
3. To suggest the strategy to develop the reasoning and thinking ability among students.

Research Methodology

As the research paper is of conceptual and review nature, the researcher has applied exploratory research design by using varied secondary data availed from the secondary data sources. Based on the secondary data and review, the researcher has reported on various strategies to develop the reasoning and thinking ability among students.

Review of Literature

Dr. Madhuri Hooda and Anita Devi (2018) entitled a study on “Development of Reasoning Ability and Barriers among Students.” In this study they described about the different kind of strategies for developing reasoning ability and factor that affects reasoning ability of students. The authors indicates the role of Inductive and deductive reasoning and the four basic reasoning skills i.e spatial, reasoning, logical reasoning, numerical reasoning and verbal reasoning which are important to everyday living.

Wayan Suarniati et al (2018) entitled a study on “The Development of Learning Tools to Improve Students’ Critical Thinking Skills in Vocational High School”. In this study the authors expressed the necessity to produce a preparation of learning tools in the form of a teaching plan based on Problem-Based Learning, and valid and reliable critical thinking instruments which is based on Watson-Glaser Critical Thinking Appraisal (WGCTA) with five dimensions: Inference, Recognition Assumption, Deduction, Interpretation and Evaluation of Arguments with the subject of Pancasila and Civic Education. Instrument validity test is analyzed using product moment Pearson's correlation analysis, and factor analysis. While the instrument reliability test using Alpha Cronbach formula, it was declared valid and reliable after it was tested on the students through three trials which resulted in 16 question items from 50 items prepared.

In Pearson Blog - article titled as “Strategies to Increase Critical Thinking Skills in students (2021)” reveals that the essential qualities of reasoning and thinking abilities among students community. It also express that the accomplishment of this objective cannot be done through the curriculum, rather through the combination of academic learning and the development of life skills.

Concepts and Importance of Development of Reasoning and Thinking Ability

Reasoning and thinking skills in education are important because it can determine the quality of the school, business, career, and students’ behavior that all depends on students' ability to solve problems and make decisions⁵.

Reasoning ability is problem solving ability which solves different kind of problems related to learning and tasks. It can be developed with proper teaching and training. The process of actively conceptualizing, analyzing and applying the information gathered through observation, experience or reflection helps to develop the reasoning ability and thinking level of the students.

Level of Thinking	Skills Students Demonstrate	Questions to Ask
Lower Levels		
Remembering	recognize, describe, list, identify, retrieve	What do we already know about...? What are the principles of ... ? How does ... tie in with what we learned before?
Understanding	explain, estimate, describe, generalize, predict,	Summarize...or explain... What will happen if? What does....mean?
Higher Levels		
Applying	carry out, use, implement, show, solve	What would happen if...? How could...be used to...? What is the counterargument for..?
Analyzing	compare, deconstruct, organize,	Why is...important? What are the implications of...? Explain why/Explain how...
Evaluating	check, judge, critique, conclude, explain	Why is...happening? What is the best..and why? How does...affect?
Creating	construct, plan, design, produce	What is the solution to the problem? What do you think causes..? Why? What is another way to look at?

Reasons for Lack of Reasoning and Thinking Ability

The Education system in a country has to be able to create a condition of learning that allows students to think critically, creatively, responsibly, and provide opportunities for students to explore their imaginative ideas⁵. Teachers play an important role in developing reasoning and teaching ability among students. Normally teachers only ask the students to learn, but rarely teach students how to learn as a result they are difficult to solve problems, make decisions, think critically, and think creatively ⁵.

Apart from that, the following aspects are considered as a key reason for lack of reasoning and thinking ability of students.i.e

- Anxiety and Stress
- Learning environment
- Task Complexity
- Less Motivation
- Intelligence
- Interest
- Activeness

Strategies for developing reasoning and thinking abilities:

The thinking ability can be created and developed in the classroom by solving real-world problems. The problem-based learning strategies are perceived as good approaches because they are supported by various learning theories (cognitive and constructivism) and many results of the research have proved that as an intervention model, PBL is effective in encouraging high thinking, constructing knowledge⁵.

Tools to improve Reasoning and Thinking ability:

Preparation of learning tools with appropriate strategies and critical thinking instruments that are tested to be used by teachers can improve the reasoning and thinking ability. The students are motivated to ask questions, participate in discussions, practice active learning, study with the help of examples and should go beyond the academic learning. Then only they will get the chance of developing their skills.

The following activities are used to increase the reasoning and thinking abilities of students

Reflecting activities: Reflection activities provide students with opportunities to track their learning and demonstrate their progress throughout the semester⁴.

Peer review activities: Peer review activities enable students to demonstrate communication skills by giving feedback on each other's work, expose students to alternative perspectives, and allow students to question what they are reading⁴.

Discussion forums: Discussion forums allow students to communicate with their peers, answer questions that require them to demonstrate both lower-level and higher-level critical thinking skills, and analyze course content⁴.

Small group activities: Small group activities allow students to communicate, problem solve, hear different perspectives, and collaborate to analyze and synthesize course content⁴.

Digital Storytelling Activities: Telling digital stories allows students to use multimedia (images, audio, video) to present information. Digital stories can include 1) Personal narratives, 2) Stories that document events, and 3) Stories that inform and instruct. Creating digital stories allows students to evaluate, reflect on, or analyze course content⁴.

Conclusion

Proper reasoning and thinking abilities will improve the cognitive ability of the students. Therefore it is necessary to create an atmosphere of learning that allows the

students to be able to think critically⁵. We can able to develop a reasoning and thinking ability among students through encourage to ask questions and participate in discussion form to share ideas and thoughts, it will increase the independent thinking ability and helps to set up their own goal with self-confidence.

INNOVATIVE ICT PEDAGOGIES IN BIOLOGICAL SCIENCE EDUCATION: TRANSFORMING LEARNING EXPERIENCES

R. Rakkimuthu, P. Sathishkumar
A.M. Anandakumar & D. Sowmiya
PG and Research Department of Botany
NGM College
rakkimuthu@ngmc.org

Abstract

Information and communication technologies (ICT) have completely changed the educational landscape and opened up new possibilities for improving teaching and learning. The incorporation of cutting-edge ICT pedagogies has drawn a lot of attention in the area of biological science education because it holds the promise of revolutionising conventional methods and producing more immersive and engaging learning environments. This paper investigates the effects of online collaborative projects, augmented reality, gamification, and virtual labs on biological science education. We investigate the effectiveness of these technologies in raising students' comprehension, critical-thinking abilities, and general engagement with the subject matter through a thorough analysis of empirical evidence and case studies. The results imply that cutting-edge ICT pedagogies have the ability to promote a greater appreciation for biological science while providing students with crucial scientific competencies for their future jobs. To give a more complete picture, problems and factors related to the application of these technologies are also discussed. Teachers may develop dynamic learning environments that motivate a new generation of scientifically literate and motivated students in the field of biological science by embracing these transformative pedagogies.

Key words: Innovative ICT Pedagogies, Biological Science Education, Transforming Learning Experiences, Information and Communication Technologies, Virtual Laboratories, Augmented Reality, Gamification

Introduction

The fast development of information and communication technologies (ICT) in recent years has profoundly changed many facets of our lives, including how we teach and learn. ICT has become a potent weapon in the field of education, changing conventional teaching techniques and creating new opportunities for immersive and interactive learning experiences (Smith *et al.*, 2022). The use of cutting-edge ICT pedagogies has had a particularly revolutionary impact on biological scientific education, providing teachers and students with fresh avenues for investigating challenging ideas, carrying out experiments, and working together on projects.

Biology education has undergone a paradigm shift with the introduction of virtual laboratories, augmented reality, gamification, and online collaboration platforms. These innovative tools give teachers the tools they need to design dynamic, interesting learning environments that pique students' curiosity and enhance their comprehension of biological processes. As a result, students not only acquire practical skills that are crucial for their future professions in the biological sciences, but are also better able to understand scientific theories.

This paper explores the realm of cutting-edge ICT pedagogies in biological science education and their profound influence on the learning process. We intend to emphasise the potential of these technologies to revolutionise the way we teach and learn biology, creating a new generation of scientifically literate and enthusiastic learners. To do this, we will examine the advantages, difficulties, and empirical data supporting the use of these technologies.

Virtual Laboratories and Simulations

Simulations and virtual labs have become essential teaching tools for biological science. Students can conduct experiments and investigate difficult concepts in these controlled virtual worlds. Without the use of tangible objects or equipment, students can obtain practical experience while observing the impacts of variables, making predictions, and drawing conclusions. According to a study by Rutherford *et al.* (2019), students exposed to virtual laboratories performed better on practical exams, proving the effectiveness of this ICT-based education for developing scientific skills.

Augmented Reality (AR) in Fieldwork

The learning experience for students studying biological science can be greatly improved by incorporating augmented reality (AR) into practical activities. Students can discover flora, wildlife, and ecological interactions in a dynamic and engaging way thanks to augmented reality (AR), which overlays digital information onto the real-world environment. This all-encompassing method develops a sense of curiosity, critical thinking, and problem-solving abilities. According to a research by Chen *et al.* (2020), students who engaged in AR-based fieldwork showed greater levels of engagement and a deeper comprehension of ecological topics than those who used more conventional fieldwork techniques.

Gamification for Concept Reinforcement

The incorporation of game aspects into educational activities, or "gamification," has been shown to be a successful method for teaching biological science subjects. Virtual scavenger hunts, instructional games, and interactive quizzes encourage healthy competition among students while encouraging active participation in the learning process. Gamification can be used to build cooperative learning environments that promote cooperation and peer interactions. Gamified learning activities have been shown to increase students' knowledge retention and engagement, according to a Smith *et al.* (2018) study, making them a viable ICT pedagogy for biological science education.

Online Collaborative Projects

ICT enables seamless student collaboration, allowing them to collaborate on biological science projects regardless of distance. Students can interact with various viewpoints, discuss ideas, and jointly create comprehensive answers to real-world problems through online collaborative projects. In a case study, Brown *et al.* (2021) showed how online

collaborative projects can improve students' collaboration and communication abilities while also fostering a better comprehension of biological topics.

Conclusion

Innovative ICT pedagogies in biology classrooms have created exciting new opportunities for teachers and students. Learning experiences have changed, becoming more dynamic, engaging, and accessible because to innovations like virtual laboratories, augmented reality, gamification, and online collaborative projects. By embracing new tools, educators may better enable students to understand biological science topics and to develop the next generation of capable and enthusiastic biologists. In order to ensure that their students have a transformative educational experience, educators must stay current on the newest ICT tools and approaches.

ENHANCE THE SECURITY IN PUBLIC KEY ALGORITHM RSA AND OAEP

Dr. R. Mahendran

Assistant Professor

Department of Computer Science and Engineering

Koneru Lakshmaiah Education Foundation

Green Fields, Vaddeswaram, Andhra Pradesh

mahemtechbdu@gmail.com

Abstract

There square measure few end-users nowadays UN agency create use of real security applications. These applications tend to be too difficult, exposing an excessive amount of detail of the scientific discipline method. Users would like easy inherent security that doesn't need additional of them merely clicking the secure checkbox. Cryptography may be an initial abstraction to separate specific algorithms from generic scientific discipline processes so as to eliminate compatibility and upgradeability issues. The core plan is enhancing the protection of RSA algorithmic rule. This public key algorithmic rule RSA and increased RSA square measure compared analysis is created on time supported execution time.

Key Terms: Public key, Encryption, Decryption, RSA, OAEP

Related work

In [4], Lih-Chung Wang et al., have proposed a new encryption scheme namely A Medium Field Multivariate Public-key encryption Scheme (MFE) belonging to MQ and provided a performance and security review. They presented the classical trapdoors central to PKCs like RSA and ElGamal were relatively slow due to modular exponentiation and discrete logarithm respectively and argued that MQ-Schemes based PKC were usually faster and no known assisted attack on them. In [5], Ding et al. proposed a high order linearization equation attack and resisted HOLE attack on MFE multivariate PKC. Xin Wang [6] et al. have proposed some improved scheme for public-key polynomials of degree four and operated on smaller fields. The security analysis obtained from the proposed scheme proved that it was more security. Yun-Ju Huang [7] studied a new multivariate MQ assumption that could be used to construct public-key encryption schemes. For that they gave two directions viz., asymptotic formulation of MQ problems and provided empirical evidence to confirm the hardness. They proved that the proposed public-key encryption was efficient because only ciphertext length $L + \text{poly}(K)$ was needed to encrypt a message M . In [8], Farshid et al. proposed a multivariate key pre-distribution scheme (MKPS), which was based on the category of threshold schemes for WSNs to improve the security in the MKPS. In that, they assigned d tuples of nonnegative integers to the sensor nodes as their IDs that were used to distribute the shares of multivariate polynomials. Once the network deployment has been done, nodes with $d-1$ common keys were used to shares of polynomials stored in their memories. Rajesh [9] et al. proposed an efficient MKPC based on permutation p -polynomials over finite fields. They proved that decryption was much faster than other multivariate public-key cryptosystems and found that complexity encryption in the proposed MPKC was $O(n^3)$ and for decryption it was $O(n^2)$.

Introduction

Data communication is a very important side of our living. So, protection of information from misuse is important. A cryptosystem defines a combine of information transformations referred to as cryptography and decoding. cryptography is applied to the plain text i.e. the info to be communicated to supply cipher text i.e. encrypted information exploitation cryptography key. decoding uses the decoding key to convert cipher text to plain text i.e. the first information. Now, if the cryptography key and also the decoding secret's an equivalent or one is derived from the opposite then it's aforementioned to be centrosymmetric cryptography. this kind of cryptosystem is simply broken if the key accustomed cipher or decode is found. to boost the protection mechanism Public Key Cryptosystem was introduced in 1976 by Whitfield Diffie and Martin Lillian Hellman of Stanford. It uses a combine of connected keys one for cryptography and alternative for decoding. One key, that is termed the personal key, is unbroken secret and alternative one called public secret's disclosed. The message is encrypted with public key and may solely be decrypted by exploitation the personal key. So, the encrypted message cannot be decrypted by anyone WHO is aware of the general public key and therefore secure communication is feasible. RSA (named once its authors – Rivest, Shamir and Adleman) is that the preferred publickey algorithmic program. In depends on the factorisation downside of arithmetic that indicates that given a really range | sizable amount} it's quite not possible in today's side to seek out 2 prime numbers whose product is that the given number. As we have a tendency to increase the quantity the likelihood for factorization the quantity decreases. So, we want terribly massive numbers for a decent Public Key Cryptosystem. antelope has a superb library referred to as GMP which will handle numbers of impulsive preciseness. we've got used this library to implement RSA algorithmic program. As we've got shown during this paper variety of bits encrypted along employing a public key has vital impact on the decoding time and also the strength of the cryptosystem.

Proposed Algorithm

Optimal uneven secret writing cushioning (OAEP) could be a technique for coding messages developed by Mihir Bellare and Phil Rogaway . The technique of coding a message with OAEP then encrypting it with RSA is incontrovertibly secure within the random oracle model. Informally, this implies that if hash functions are actually random, then associate degree mortal World Health Organization will recover such a message should be ready to break RSA.

An OAEP encoded message consists of a "masked data" string concatenated with a "masked random number". within the simplest type of OAEP, the disguised knowledge is created by taking the XOR of the plaintext message M and therefore the hash G of a random string r . The disguised random variety is that the XOR of r with the hash H of the disguised knowledge. The input to the RSA secret writing perform is then $[M \oplus G(r)] \parallel [r \oplus H(M \oplus G(r))]$

Often, OAEP is used to encode small items such as keys. There are other variations on OAEP (differing only slightly from the above) that include a feature called "plaintext-awareness". This means that to construct a valid OAEP encoded message, an adversary

must know the original plaintext. To accomplish this, the plaintext message M is first padded (for example, with a string of zeroes) before the masked data is formed. OAEP is supported in the ANSI X9.44, IEEE P1363 and SET standards.

The security of RSAES-OAEP depends on the security of the underlying RSA encryption and Decryption primitives, RSAEP and RSADP and the Security of the OAEP encoding method.

The advantage of the technique that is generically known as OAEP (Optimal Asymmetric Encryption Padding) is that under one model of analysis -- the so-called random oracle model -- the security of RSAES-OAEP can be tightly related to the security of RSAEP/RSADP. This allows us to consider the security of RSAES-OAEP

RSA encryption and decryption primitive over the years many different researchers have considered the security of RSAEP/RSADP. Boneh gives an excellent survey of the main attacks which we summarize here. In some cases, the discussion of the private exponent d refers to the inverse of $e \bmod (p-1)(q-1)$ as opposed to the alternative definition given in this document; knowledge of either is of course sufficient to compromise security.

Implementation of RSA Algorithm

Step 1: Create p & q Step 2: Calculate $N=p*q$
 Step 2: Calculate $N1=(p-1)(q-1)$ Step 4: Select Encryption
 $E=D.\text{ModInverse}(N1)$ Step 5: Select Decryption
 $D=\text{Choose 256 bits of random number}$ Step 6: Calculate OAEP
 Padding
 $m=\text{Give any value (random number)}$ Step 7: padding= m -plaintext length
 Padded message M bit length of m $k=\text{give a value (random number)}$ Create new
 random variable r of k bits
 Step 8: Create $G(r)$ which m bit integer from r bit integer $Gofr=r.\text{shiftright}(m-k)$
 Step 9: Create $p1$ & $p2$
 $p1=M.\text{xor}(Gofr)$ $Hofp1=p1.\text{shiftright}(k-m)$ $P2=Hofp1.\text{xor}(r)$
 Step 10: plain=Concatenate $p1$ and $p2$ Step 11: Decryption (OAEP)
 $r=(p1.\text{shiftright}(k-m)).\text{xor}(p2)$
 $M=(r.\text{shiftright}(m-k)).\text{xor}(p1)$
 Plaintext= $M.\text{shiftright}(\text{padding})$
 Step 12: Encryption Cipher= $\text{plain.modpow}(E,N)$ Step 13: Decryption
 Plaintext = $\text{Cipher.modpow}(D,N)$ OAEP Decryption ($p1,p2$)

Step 14: Plaintext=Plain

Result and discussion

RSA and RSA-OAEP square measure enforced in java. These algorithms square measure tested by totally different file size and calculate the coding and cryptography times. The results square measure tabulated as follows

RSA Encryption decryption

Input Size	Encryption Time	Decryption Time	Total Time
14kb	10	52	62
24kb	13	61	74
30kb	16	66	82
39kb	17	101	118
62kb	17	142	159

RSA-OAEP Encryption Decryption

Input Size(kb)	Encryption Time	Decryption Time	Total Time
14kb	15	63	78
24kb	16	76	92
30kb	15	78	93
39kb	15	170	185
62kb	16	190	206

RSA and RSA - OAEP Encryption Decryption

When scrutiny with RSA, RSA - OAEP algorithmic program needs longer for coding. Wherever as RSA-OAEP is a lot of secured cryptography algorithmic program than RSA, as a result of RSA -OEAP includes OAEP construct, which is a lot of problem for the persona non grata to seek out the plain text from the encrypted message. Therefore, it's finalized that RSA -OAEP is secured coding and coding algorithmic program.

Conclusion

A slight modification of the well-known and sensible RSA-OAEP has been enclosed coding. Per this theme it is further benefits, particularly its IND-CCA, security remains extremely associated with hardness of the RSA drawback, even within the multi-query setting. The RSA provides the highest security to the business application. Moreover, this theme will be used for coding of long messages while not using the hybrid and cruciform coding.

APPROACHES AND METHODS OF PEDAGOGY IN TEACHING AND LEARNING PROCESS

Dr. B. Geetha

Assistant Professor, Department of Economics
PSG College of Arts and Science, Coimbatore

Abstract

ICT helps Teacher to communicate properly with their students. ICT helps Teacher to pass information to students within a very little time. ICT helps Teacher to design educational environment. The effective integration of ICT alongside the curriculum is associated with a new pedagogy which changes the role of the teachers and increases students' control of their learning, self-regulation, and collaboration. ICT also helps teachers, students and parents to come together. Continuous and Comprehensive Evaluation (CCE) helps students as well as teachers to use more technology for making teaching learning more attractive for the betterment of our future generation. Teachers must know the use of ICT in their subject areas to help the learners for learning more effectively. So, the knowledge of ICT is very much essential for the both prospective teachers as well as in-service teachers also. This will help teachers to know integrated technology with classroom teaching. Hence ICT bridge the gap between teacher and students.

Keywords: ICT, CCE, IT.

Introduction

Today's age of 21st Century and it is also the age of information and technology (IT). Every aspects of life are related to science and technology. Huge flow of information is emerging in all fields throughout the world. Now information and technology is popularly using in educational field for making teaching learning process successful and interesting for students and teacher both.

Origin of Pedagogy

During an ancient period in Greece, the role of the teacher was first introduced, and teaching was considered an art form. Attending school and getting education was something that only the wealthiest could afford for their kids. The educators weren't the first pedagogues. The rich individuals of the area used slaves to take their children to school. They were considered as the experienced and wise who imparted knowledge to the children they were taking to school. In that way the word pedagogue was created. It is described as the 'leader of children'. They guide the students academically as well as morally.

Meaning of Pedagogy

Pedagogy is a method of teaching in which teachers teach, both in theory and in practice. It is crucial for students to have meaningful classroom relationships in order to build on prior learning. The main aim of pedagogy is to build on previous learning of the students and work on the development of skills and attitudes of the learners. Pedagogy enables the students to get a thorough understanding of the subject and helps them in applying those learning in their daily lives outside of the classroom.

Approaches of Pedagogy

Constructivist

In this approach, the students are permitted to present in the procedure of understanding and gaining knowledge rather than just inactively receiving information. This facilitates critical thinking among the students and gives a learning environment in which they can connect with what they are hearing.

Collaborative

The students form groups of learners that learn together and work to solve a problem, build strategies, ideas, create products or complete a task. This is a joint rational effort by the students among themselves or with the help of the teachers.

Integrative

For the integrative approach, the students are given a learning atmosphere that helps them in connecting with their learning across the curriculum. The four objectives of integration include-

- Understanding the process of learning
- Differentiating issues by relevance
- Making use of the lessons in practical scenarios
- Associating the concepts in regular lives

Reflective

In this approach, the students are expected to evaluate themselves. It means observing the activities of the teachers and other students in the classroom and analyzing reason for occur and the process of work.

Inquiry-Based Learning

The educators are expected to not just answer the queries of the students, but also build a culture where their ideas are explored, challenged, improved, and refined. It aims to take the students from the position of wondering about a question to understanding the answer and then questioning it further.

Importance of Pedagogy in Teaching

1) Improves Quality Of Teaching

The quality of education can show a drastic improvement. This will benefit the students by helping them thoroughly understand the education material, thereby improving the **learning outcomes**.

2) Encourage Cooperative Learning Environment

The implementation of pedagogy in education encourages the students to work together towards completing a task and learn together. This increases their perceptions by understanding and taking views from the other students, thereby implementing the cooperative learning environments making them better leaders in the future.

3) Eliminates Monotonous Learning

Pedagogy helps the student to think in different ways and move beyond the customary methods of memorization and understanding for learning. It invokes complex processes of learning among the students such as analyzing, creative thinking, and appraisal. Further, it makes students more receptive to what the teacher is teaching.

4) Student Can Follow their Ways Of Learning

A well thought pedagogy can help the students to grasp education in various ways. It caters to the learning abilities of different students. Students can follow their preferred ways of learning and stick to them. In this way, the students develop a better understanding of the subject, which eventually improves their skills and learning outcomes.

5) Convenient Learning Approach For All

Students with special needs require different ways of learning and teaching in the institutes. Implementation of a suitable pedagogical approach will help them learn better and encourage them to be a part of the mainstream learning community.

6) Improves Teacher-Student Communication

The teacher understands the student in a better way which helps them to focus on the student's weaknesses and guide them.

Pedagogical Strategies

Case-based learning

In a case-based approach, students look at and investigate an actual series of events and their outcome or a realistic scenario or simulation in order to understand its history, context, and consequences. This approach gives students the opportunity to explore the decision-making process.

Collaborative and cooperative learning

Collaborative learning is a pedagogy that involves groups of students working together to solve a problem, complete a task, understand a concept or undertake a project. Group learning offers a way to help students develop social skills, problem-solving skills, collective decision-making skills and presentation skills.

Critical and transformational pedagogy

The starting point for critical pedagogy is recognition that classrooms are sites of power, opportunity and hierarchy; that teaching is an essentially political act; and that the politics of the classroom are complicated and need to be revealed and critically assessed.

Experiential learning

Effective experiential learning activities must be carefully prepared and supervised; engage meaningful relationships; have visibly defined prospect, goals, responsibilities and actions; and offer opportunities for feedback and manifestation. A student must document clear facts of learning and produce an outcome, normally kind of remarks, a thoughtful essay or a concluded product or project.

Field- and place-based learning

Learning need not take place in a classroom; field-based learning can take place in almost any discipline and give students the opportunity to apply their research skills. A belief that neighboring communities and environments outside the classroom contain assets that can significantly enhance student learning. The students need to formulate a research question undertake background research; collect, process and interpret data; and draw and present conclusion

Gamification

This approach integrates game like elements -- such as interactivity, competition, liveliness and immediate feedback -- into teaching and learning. The use of rewards, appreciation, points and levels helps motivate students and encourages determination.

Global learning

To develop students' ability to participate in a globally interconnected world, this approach examines international relations, complex global challenges, cultural differences and transnational processes (like migration), and gives students the tools to communicate and engage meaningfully and effectively across national and cultural boundaries. 8. Immersive learning.

Inquiry-based learning

Inquiry-based learning is a form of active learning that places students at the center of the learning process. It begins with a question or problem that students must investigate. The students, then, conduct research; identify, analyze and interpret the evidence they uncover; draw conclusions; and present their findings. The inquiries can be structured or more open, and the outcomes can be known in advance or only discovered in a process of investigation.

Research-based learning

Research-based learning gives students hands-on experience in applying the methodologies and modes of distribution of a particular discipline.

Service Learning

Service learning allows students to connect skills and knowledge gained in the classroom to a specific community need or challenge. Rather, it combines specific learning goals with an outcome deemed significant by a particular community client.

Public Scholarship

Public scholarship supports the academy's civic mission by speaking to public issues and collaborating with cultural institutions outside higher education, such as archives, historical societies, libraries, museums, newspapers, performance venues, schools and humanities councils

Technology-Enhanced Learning

Technology is a tool, not pedagogy. On the other hand, new instructional tools have the power to transform education by facilitating new forms of collaboration and interactive learning; Examples abound, and include blogging, concept and network mapping, creating podcasts, data visualization, digital storytelling, etymology, exhibition creation, social annotation, text mining and timeline construction. Students can create and analyze virtual scenarios.

Learning by Making and Doing

The best-known form of learning by doing is project-based learning. It involves more than simply completing a project; to a certain extent, it is the primary way that students master skills and knowledge. Ideally, project-based learning requires students to go through a multistage process of design, planning, execution, a public presentation, critique and revision, and formal assessment. The project outcome need not be a physical product. It can consist of a detailed policy proposal, a teaching resource, a briefing paper or another authentic outcome.

New forms of Assessment

Just because you covered a topic in class does not mean that the students learned it. These include reliable evaluation that mimics expert practice (such as a policy brief, a funding proposal or an environmental impact statement); peer evaluation, in which students develop, apply a rubric and provide beneficial feedback; and project-based assessment, in which a project is subject to accurate evaluation.

Role of Pedagogy in Effective Learning

Improves Teaching Quality

It enhances student contribution in learning and makes them more accessible to what is being taught.

Encourages Different Learning Styles

The main focus is given on the outcomes of courses and the students are free to learn in their styles.

Enables Learning for Students With Special Needs

It encourages the students with special needs to be a part of the mainstream teaching ways and engage with other students.

Clarifies Learning Objectives

The student studies a particular subject with a clear objective of outcomes such as gaining skills and knowledge of the subject.

Different Pedagogical Approaches to Learning

Children have a right to high quality education as this prepares them for their future. The way education is delivered comes in a variety of forms and lots of teachers have their own methods of teaching. A well thought out pedagogy can improve the quality of teaching and the way that students engage in different activities. This increases the likelihood of children achieving their goals as they are more likely to participate in the classroom. Pedagogical approaches can help stimulate a child's development and motivate them to keep learning. This is an important building block for their future as it means they will be excited about the learning process as a whole. Teachers should be aware of the importance of a good pedagogical approach to ensure each and every child receives the best possible learning experience.

Four Learning Styles

The four core learning styles in the VARK model include visual, auditory, reading and writing, and kinesthetic.

Impact of Pedagogy in Learner's Perspective

Student-Centered Approach

Pedagogy is a student-centered approach in which the students take responsibility for learning in their ways.

Continuous Assessment Of Students

Teachers evaluate the students regularly to see if they are improving and moving towards their target outcomes.

Encourages Teamwork

The study methods encourage teamwork and group projects for the students to meet like-minded individuals and work with them

Develops Cognitive Skills

Helps students to develop **cognitive skills** using evaluation, detailed analysis, comprehension, and application of the courses

Conclusion

In this way, the well-thought, modern-day pedagogy is a complete interrelation of the concepts and ideas, along with the ways of teaching the students. It also indicates that these practices have direct involvement with the student's achievements, results, and skills developed after following the approach.

"TRANSFORMATIVE POTENTIAL OF ICT PEDAGOGIES: EMPOWERING LEARNERS IN THE DIGITAL AGE"

Naziya Khanum

Ph.D Research Scholar, Education Department Karnataka State
Akkamahadevi Women's University, Vijayapura Dist, Karnataka.
naziyakhanumnk44@gmail.com

Abstract:

In the digital age, Information and Communication Technology (ICT) has emerged as a powerful tool in education, revolutionizing traditional pedagogical practices. This research explores the transformative potential of ICT pedagogies in empowering learners and enhancing their educational experiences. By leveraging various ICT tools and resources, educators can tailor learning experiences to meet individual students' needs, interests, and learning styles. The study investigates the impact of ICT pedagogies on student engagement, academic performance, and critical thinking skills. Drawing on a comprehensive literature review and case studies, this research examines the effectiveness of personalized learning, blended learning, gamification, online collaborative projects, and other innovative ICT-based approaches. It investigates how these pedagogies foster global connections, cross-cultural understanding, and collaborative problem-solving, preparing learners for the challenges of a connected world. Furthermore, the research delves into the challenges faced by educators in implementing ICT pedagogies, such as digital equity, teacher professional development, and technological infrastructure. Strategies for overcoming these obstacles and optimizing the integration of ICT in education are explored. By shedding light on the theoretical foundations and practical implications of ICT pedagogies, this study contributes to the ongoing dialogue surrounding effective technology integration in education. It aims to provide educators, policymakers, and educational institutions with insights to develop learner-centered, digitally enriched educational environments that empower students to thrive in the ever-evolving landscape of the digital age.

Keywords: ICT pedagogies, Empowering learners, Educational experiences, Student engagement, Digital age

Introduction

In the fast-paced and interconnected world of the digital age, Information and Communication Technology (ICT) has revolutionized various aspects of society, including education. With the ubiquitous presence of digital tools and resources, educators now have an unprecedented opportunity to transform traditional pedagogical practices and create innovative learning experiences that cater to the diverse needs and interests of students. This research delves into the transformative potential of ICT pedagogies, focusing on their capacity to empower learners and enhance their educational journeys.

The integration of ICT in education opens doors to a plethora of possibilities, enabling educators to tailor learning experiences to match the unique learning styles and preferences of individual students. By leveraging a wide array of ICT tools and resources, instructors can engage learners on a more personalized level, creating an environment that fosters active participation, critical thinking, and a deeper understanding of the subject matter.

Central to this research is the investigation of the impact of ICT pedagogies on student engagement, academic performance, and critical thinking skills. Through a comprehensive literature review and analysis of relevant case studies, the study aims to shed light on the efficacy of various ICT-based approaches, such as personalized learning, blended learning, gamification, and online collaborative projects. These innovative pedagogical strategies not only enhance academic outcomes but also cultivate essential 21st-century skills, preparing learners to thrive in a globally connected and technologically advanced world.

ICT (Information and Communication Technology) pedagogies refer to innovative teaching approaches that incorporate digital technologies to enhance the learning experience. These pedagogies leverage various ICT tools and resources to engage students, promote critical thinking, and encourage collaborative learning. Here are some examples of innovative ICT pedagogies:

Flipped Classroom:

In a flipped classroom, students consume educational content (videos, readings, tutorials) outside of class and use class time for interactive activities, discussions, and problem-solving. Teachers can create and share video lectures or interactive online modules, which students can access at home. In the classroom, teachers can then focus on addressing students' questions, facilitating group activities, and providing personalized attention. This approach encourages active learning and helps students take ownership of their learning process.

Example: A high school math teacher creates video tutorials explaining complex mathematical concepts and uploads them to a shared platform. Students watch the videos at home, take notes, and attempt practice problems. In class, the teacher divides students into groups to work on challenging math problems collaboratively, clarifying doubts and providing support as needed.

Project-Based Learning (PBL):

Project-Based Learning is an inquiry-based approach where students work on real-world projects to explore and solve complex problems. ICT tools such as online research, data analysis software, multimedia creation platforms, and virtual collaboration tools can enhance the project's depth and scope.

Example: A science class investigates climate change's impact on their local community. Students use ICT resources like climate data websites, geographical information systems (GIS) software, and digital storytelling tools to analyze data, create presentations, and propose solutions to mitigate the effects of climate change in their area.

Gamification:

Gamification involves incorporating elements of games into the learning process to increase engagement and motivation. ICT allows educators to create interactive and immersive learning experiences that mimic games.

Example: An elementary school teacher uses educational apps that turn math exercises into fun and interactive games. Students earn points, badges, or rewards as they progress through the challenges, motivating them to improve their skills and reach higher levels of achievement.

Online Collaborative Learning

ICT enables students to collaborate with peers and experts beyond the classroom walls. Virtual classrooms, discussion forums, video conferencing, and shared documents facilitate meaningful collaboration and interaction.

Example: Students from different countries collaborate on a digital storytelling project about their cultural heritage. They use video conferencing and online collaboration tools to plan, script, and produce a series of multimedia presentations that showcase their traditions, customs, and history.

Augmented Reality (AR) and Virtual Reality (VR) Learning

AR and VR technologies offer immersive experiences that can bring abstract concepts to life and create interactive simulations, fostering deeper understanding and engagement.

Example: A history teacher uses augmented reality to provide virtual tours of historical sites and events. Students can explore ancient civilizations, walk through historical landmarks, and interact with virtual historical figures, making history more tangible and captivating.

Innovative ICT pedagogies leverage technology to make learning more dynamic, interactive, and accessible, catering to different learning styles and enhancing students' overall educational experience.

Personalized Learning

Purpose: Personalized learning aims to tailor educational experiences to individual students' needs, interests, and learning preferences. It helps students progress at their own pace, fostering greater engagement and understanding.

Example: Adaptive learning software that assesses students' abilities and provides customized learning paths and content based on their performance. Students receive targeted support in areas where they struggle and can advance faster in subjects they excel in.

Blended Learning

Purpose: Blended learning combines traditional face-to-face instruction with online learning experiences. It offers flexibility and allows students to access resources and engage in activities both in the physical classroom and through digital platforms.

Example: A history teacher uses a combination of in-person lectures and online resources, such as virtual museum tours, interactive timelines, and historical documentaries, to create a comprehensive learning experience.

Design Thinking

Purpose: Design thinking is a problem-solving approach that encourages creative and collaborative solutions to real-world issues. It focuses on empathy, defining problems, generating ideas, prototyping, and testing potential solutions.

Example: Students are given a challenge to design a sustainable and energy-efficient school building. They use ICT tools like 3D modeling software to create virtual prototypes, perform energy simulations, and collaborate on innovative design concepts.

Computational Thinking

Purpose: Computational thinking emphasizes problem-solving skills that draw on principles used in computer science. It helps students approach complex problems logically, break them down into smaller parts, and devise algorithms to solve them.

Example: Students apply computational thinking in a science class to analyze environmental data. They use data visualization tools and programming languages to identify patterns, trends, and correlations in the data to draw meaningful conclusions.

Online Collaborative Project-Based Learning

Purpose: This approach combines the benefits of project-based learning and online collaboration. It allows students to work on projects with peers from different locations, fostering global connections and cross-cultural understanding.

Example: Students from different schools in different countries collaborate on a joint research project on climate change. They use online tools like video conferencing, shared documents, and collaborative project management platforms to work together, share resources, and present their findings.

The purpose of these emerging ICT pedagogies is to enhance student engagement, promote critical thinking and problem-solving skills, encourage collaboration, and provide more personalized learning experiences. As technology continues to evolve, educators will likely explore new and innovative ways to integrate ICT into their teaching practices to meet the needs of 21st-century learners.

Challenges Faced by Educators in Implementing ICT Pedagogies

1. Digital Equity:

Digital equity refers to ensuring that all students have access to the necessary technology and internet connectivity to participate fully in digital learning experiences. However, not all students may have equal access to technology outside of the classroom, leading to disparities in their ability to engage with ICT-based pedagogies.

Example: In a school district, some students come from low-income families that cannot afford personal laptops or reliable internet connections at home. As a result, these students may struggle to complete online assignments, access educational resources, or participate in virtual class discussions, putting them at a disadvantage compared to their peers with better access to technology.

2. Teacher Professional Development

Effectively integrating ICT tools into the teaching process requires teachers to be proficient in using the technology and understanding how to leverage it to enhance learning outcomes. However, many educators may lack the necessary training and support to effectively integrate ICT into their teaching methods.

Example: A group of teachers receives a set of tablets for their classrooms, but they have limited experience using these devices in an educational setting. Without proper professional development opportunities, they may feel overwhelmed or uncertain about how to incorporate the tablets into their lessons effectively, leading to underutilization of the technology and missed opportunities for student engagement.

3. Technological Infrastructure

Robust technological infrastructure is essential for successful implementation of ICT pedagogies. Schools need reliable internet connectivity, sufficient bandwidth, and up-to-date hardware to support the use of digital tools and resources in the classroom. Inadequate infrastructure can hinder the smooth integration of ICT into the learning process.

Example: A school invests in a learning management system to facilitate online assignments and assessments. However, the school's internet connection is slow and frequently experiences downtime, causing frustration among both teachers and students. As a result, the platform becomes unreliable and disrupts the continuity of learning activities.

Addressing the Challenges

To overcome these challenges, educators and educational institutions can take various measures:

- 1. Digital Equity:** Schools can explore initiatives to provide technology access to students in need, such as lending laptops or tablets to students for use at home. Additionally, schools can collaborate with community organizations to expand internet access in underserved areas or provide offline access to digital content.
- 2. Teacher Professional Development:** Offering ongoing training and professional development workshops can empower educators to effectively integrate ICT tools into their teaching practices. Peer learning and mentorship programs can also support teachers in gaining confidence and expertise in using technology for pedagogical purposes.
- 3. Technological Infrastructure:** Schools should invest in upgrading their technological infrastructure to ensure reliable internet connectivity and sufficient hardware for both teachers and students. Regular maintenance and technical support can help minimize disruptions caused by technical issues.

By addressing these challenges, educators can create an inclusive and supportive environment for implementing ICT pedagogies, enabling students to benefit from the transformative potential of technology in education.

Addressing the Challenges:

1. Digital Equity:

- a) **Device Loan Programs:** Schools can establish device loan programs to lend laptops or tablets to students in need, allowing them to access technology outside of the classroom.
- b) **Mobile Hotspots:** Providing mobile hotspots or collaborating with internet service providers can offer internet access to students in areas with limited connectivity.
- c) **Community Partnerships:** Schools can partner with local organizations and businesses to secure donations of used devices or funding for technology initiatives, promoting digital inclusion.
- d) **Offline Access:** Curating offline educational resources and materials can benefit students with limited internet access, ensuring they can still engage with educational content.

2. Teacher Professional Development:

- a) **In-Service Training:** Schools should prioritize ongoing professional development programs that focus on ICT integration, catering to teachers with various levels of technological expertise.
- b) **Collaborative Learning Communities:** Establishing peer learning communities where educators share best practices and strategies for integrating technology can foster a supportive learning environment.
- c) **External Experts:** Inviting experts in educational technology to conduct workshops and training sessions can provide fresh insights and inspire teachers to explore innovative approaches.
- d) **Online Courses:** Offering online courses and webinars allows educators to engage in professional development at their convenience, accommodating busy schedules.

3. Technological Infrastructure:

- a) **Infrastructure Assessment:** Conducting regular assessments of the school's technological infrastructure helps identify weaknesses and areas in need of improvement.
- b) **Budget Allocation:** Schools should allocate a portion of their budget to upgrading and maintaining technological resources, ensuring a reliable and up-to-date infrastructure.
- c) **Technical Support Team:** Employing a dedicated technical support team can promptly address any technical issues and provide assistance to teachers and students.
- d) **Pilot Testing:** Before implementing new ICT initiatives on a large scale, schools can conduct pilot tests to identify potential infrastructure challenges and address them beforehand.

By implementing these measures, educators can create an inclusive and supportive environment that fosters the effective integration of ICT pedagogies. Addressing digital

equity, providing professional development opportunities, and ensuring robust technological infrastructure will empower educators to leverage technology effectively, ultimately enhancing the learning experiences and outcomes of students in the digital age.

Conclusion

The transformative potential of ICT pedagogies in education is evident, as these innovative approaches offer unique opportunities to empower learners and enhance their educational experiences in the digital age. By leveraging various ICT tools and resources, educators can create dynamic and personalized learning environments that cater to individual students' needs, interests, and learning styles. The integration of ICT pedagogies has the potential to improve student engagement, academic performance, critical thinking skills, and 21st-century competencies. However, implementing ICT pedagogies comes with its set of challenges that must be addressed to maximize their impact on education. Ensuring digital equity is crucial to provide equal opportunities for all students to access technology and participate fully in digital learning experiences. Schools and educational institutions can take proactive measures, such as device loan programs, mobile hotspots, and community partnerships, to bridge the digital divide and promote inclusivity. Furthermore, teacher professional development plays a vital role in effectively integrating ICT tools into the teaching process. Providing ongoing training and support for educators can equip them with the necessary skills and confidence to leverage technology to enhance teaching and learning. Collaborative learning communities and external experts can complement traditional professional development, fostering a culture of continuous improvement and innovation among educators. In addition to digital equity and teacher development, investing in robust technological infrastructure is essential for successful ICT integration in education. Schools need reliable internet connectivity, adequate bandwidth, and up-to-date hardware to support the use of digital tools and resources effectively. Regular assessments, budget allocation, and technical support teams can help ensure that technological infrastructure remains efficient and accessible. By addressing these challenges proactively, educators can create an inclusive and supportive environment that enables the effective implementation of ICT pedagogies. Through collaborative efforts from schools, policymakers, and the broader educational community, the transformative potential of ICT pedagogies can be harnessed to create learner-centered, digitally enriched educational environments. Ultimately, this will empower students to thrive in the ever-evolving landscape of the digital age, equipping them with the skills and knowledge needed to succeed in a globally connected and technologically advanced world.

Abstract

The integration of Information and Communication Technology (ICT) tools in education has transformed teaching and learning, providing new opportunities for engagement and personalized instruction. However, teachers face various challenges when adopting these innovative approaches. This article aims to explore the issues and obstacles faced by teachers in implementing ICT tools, such as technical difficulties, limited access to technology, resistance to change, and the need for professional development. Understanding these challenges is crucial for developing strategies that support teachers in utilizing ICT tools effectively and ensuring equitable learning opportunities. The study aims to gather teachers' perspectives to inform improvements in professional development and create an enabling environment for successful ICT integration. The research methodology involves a sample of 150 faculty members, and the literature review highlights the importance of ICT in education and its impact on teaching and learning. The findings reveal demographic factors, teaching preferences, and teachers' perceptions on technology-based teaching and learning. Moreover, the study identifies issues and challenges in using ICT tools, emphasizing the lack of pedagogical models as a significant concern.

Keywords: *ICT tools, Challenges, Teachers' perspectives, Professional development, Equitable learning opportunities*

Introduction

The integration of Information and Communication Technology (ICT) tools in education has revolutionized teaching and learning, offering new possibilities for engagement, collaboration, and personalized instruction. With the emergence of new teaching pedagogies that leverage ICT tools, educators have the opportunity to create dynamic and interactive learning environments. However, along with the promises and benefits, there are several issues and challenges that teachers encounter when adopting and implementing these innovative approaches. In this article, we will explore the issues and challenges faced by teachers from their perspective while embracing a new teaching pedagogy using ICT tools. From technical difficulties and limited access to technology to resistance to change and the need for professional development, teachers face a multitude of obstacles that can impact the effectiveness of their teaching practice. Understanding these challenges is crucial to developing strategies and solutions that support teachers in

utilizing ICT tools to their fullest potential and ensuring equitable learning opportunities for all students. By examining the issues and challenges faced by teachers, we can gain insights into the complexities of integrating ICT tools in the classroom and explore ways to address these concerns. Ultimately, the goal is to empower teachers with the necessary support and resources to navigate these challenges effectively and harness the transformative power of technology in education.

Statement of Problem

The integration of ICT tools in education lacks a comprehensive understanding of teachers' perspectives on the specific challenges they face. This research aims to explore teachers' viewpoints, concerns, and experiences to address this gap. The problem lies in the limited understanding of the unique obstacles teachers encounter when incorporating ICT tools in their classrooms. This study investigates these challenges, including technical difficulties, inadequate training, resistance to change, and pedagogical alignment. By gathering teachers' perspectives, valuable insights will inform strategies to enhance professional development and create an enabling environment for successful ICT integration. This research contributes to advancing ICT integration in education, improving learning experiences for students.

Objectives of the Study

- To explore teachers' perspectives on the issues and challenges associated with the implementation of ICT tools in the teaching and learning process.
- To understand the complexities faced by teachers involved in incorporating technology effectively within the classroom.

Research Methodology

Sample Size: 150 faculty members were selected from the specified region

Sampling Technique: Convenient Random Sampling Technique has been used to select the samples.

Limitations

- The geographical area is restricted to Coimbatore, hence the opinions may vary
- The number of the respondents are limited to 150

Review of Literature

AbidHaleem, MohdJavaid, MohdAsimQadri, Rajiv Suman, "Understanding the role of digital technologies in education: A review" this research aims to ensure inclusive and equitable quality education for all. Digital technologies have emerged as an essential tool to achieve this goal. These technologies are simple to detect emissions sources, prevent additional damage through improved energy efficiency and lower-carbon alternatives to fossil fuels, and even remove surplus greenhouse gases from the environment. Digital technologies strive to decrease or eliminate pollution and waste while increasing

production and efficiency. These technologies have shown a powerful impact on the education system. The recent COVID-19 Pandemic has further institutionalized the applications of digital technologies in education. These digital technologies have made a paradigm shift in the entire education system. It is not only a knowledge provider but also a co-creator of information, a mentor, and an assessor. Technological improvements in education have made life easier for students. Instead of using pen and paper, students nowadays use various software and tools to create presentations and projects. When compared to a stack of notebooks, an iPad is relatively light. When opposed to a weighty book, surfing an E-book is easier. These methods aid in increasing interest in research. This paper is brief about the need for digital technologies in education and discusses major applications and challenges in education.

RadhikaKapur(2019), *Use of ICT in Improving Quality of Education*, in this research discussed about the utilization of ICT has rendered a significant contribution in bringing about improvements in the quality of education. In educational institutions at all levels, individuals are required to implement number of tasks and functions. In putting into operation various tasks and functions, the individuals are required to make use of ICT. Through the use of ICT, individuals are able to generate awareness and augment their knowledge in terms of various aspects. When the educators need to enrich the teaching-learning methods and instructional strategies, then they make of ICT. On the other hand, when students need to work on assignments and projects, then they make of ICT to carry out their task in a well-organized manner and in accordance to the desired expectations. The main aspects that are taken into account in this research paper include, ICT as a change agent in learning process, ICT enhancing educational management, factors influencing quality of education through ICT, and role of ICT in improving quality of education.

SiminGhavifekr, Wan Athirah Wan Rosdy(2015), *“Teaching and Learning with Technology: Effectiveness of ICT Integration in Schools”*. This study aims to analyze teachers’ perceptions on effectiveness of ICT integration to support teaching and learning process in classroom. A survey questionnaire was distributed randomly to the total of 101 teachers from 10 public secondary schools in Kuala Lumpur, Malaysia. The data for this quantitative research were analyzed for both descriptive and inferential statistic using SPSS (version 21) software. The results indicate that ICT integration has a great effectiveness for both teachers and the students. Findings indicate that teachers’ well-equipped preparation with ICT tools and facilities is one the main factors in success of technology-based teaching and learning. . It was also found that professional development training programs for teachers also played a key role in enhancing students’ quality learning. For the future studies, there is a need for consideration of other aspects of ICT integration especially from management point of view in regard to strategic planning and policy making.

Demographic Factors

	Category	Frequency	Percentage
Gender	Male	77	51.3
	Female	73	48.7
	Total	150	100
Teaching Experience	< 1 Year	2	1.3
	1-5 Years	21	14
	6-10 Years	98	65.3
	>10 Years	29	19.4
	Total	150	100
Preference of Teaching Style	Conventional /Traditional	97	64.7
	Modern/Contemporary	53	35.3
	Total	150	100.0
The Ability of Handling ICT in Teaching	High	25	16.67
	Medium	76	50.66
	Low	49	32.67
	Total	150	100.0

From the respondents taken for the study, based on Gender, there are majority male(51.3%) respondents and majority(65.3%) of the respondents have a teaching experience between 6-10 years majority (64.7%) respondents who prefers conventional or traditional teaching and learning methods as majority (50.66%) of these faculty has medium level of ability to handle ICT based Classes.

Teachers' Perception on Technology-based Teaching and Learning

Items	Always	Often	Sometimes	Rarely	Never	Mean
Students concentrate more on their learning	38	27	30	5	0	2.02
Students try harder in what they are learning	40	29	26	5	0	1.96
Students feel more autonomous in their learning	39	24	30	7	0	2.05
Students understand more easily what they learn	26	26	38	10	0	2.32
Students remember more easily what they learnt	38	27	30	5	0	2.02
ICT Facilitates collaborative work between students	32	41	25	2	0	1.97
ICT improves the class climate	32	41	25	2	0	1.97
Overall Mean						2.04

From the above table it's clear that highest response towards ICT based teaching learning process where 38% of the students concentrate more on their learning and 40% of the students try harder to learn 38% of the students feels more easy to understand the concepts through ICT and 41 % of the students makes the class room climate cool by facilitating collaborative teaching learning process along with their teachers.

Issues and Challenges in using ICT tools in Teaching & Learning

Items	Always	Often	Sometimes	Rarely	Never	Mean
Lack of adequate content / material for teaching	10	15	15	31	29	3.54
Too difficult to integrate in ICT use into curriculum	33	35	29	3	0	2.02
Lack of pedagogical models on how to use ICT for learning	0	6	9	51	34	4.13
Pressure to prepare students for exam and tests	11	23	16	27	23	3.28
Insufficient bandwidth or network speed	17	31	18	19	15	2.84

From the above table its evident that, highest mean for lack of pedagogical model (4.13) when compared to lack of adequate content (3.54) than that of insufficient bandwidth (2.84) compared to difficulty in integration of ICT usage in curriculum (2.02).

Conclusion

In conclusion, the integration of ICT tools in education has revolutionized teaching and learning, but it is not without challenges. This article has explored the obstacles faced by teachers, including technical difficulties, limited access to technology, resistance to change, and the need for professional development. Understanding these challenges is crucial to support teachers in utilizing ICT tools effectively and ensuring equitable learning opportunities. Through a study involving 150 faculty members and a review of literature, it was found that teachers prefer traditional teaching methods and have a moderate ability to handle ICT-based classes. Teachers perceive that ICT enhances students' concentration, effort, autonomy, understanding, and retention. However, the lack of pedagogical models for ICT usage emerged as a significant concern. To address these challenges, providing adequate resources, integrating ICT into the curriculum, and offering professional development are crucial. By doing so, educators can harness the transformative power of ICT to improve learning experiences and outcomes. Further research and strategic planning are needed to ensure successful integration of ICT in educational institutions.

Abstract

This abstract highlights the role and impact of Information and Communication Technology (ICT) tools in the teaching and learning process. It emphasizes the benefits of integrating ICT tools, such as smart boards, educational apps, and multimedia resources, in education. These tools enhance engagement, interactivity, and personalization, allowing for individualized learning experiences tailored to students' needs and learning styles. Furthermore, the abstract discusses the access to a wide range of educational resources through the internet, promoting critical thinking and global collaboration among students. However, it also acknowledges the challenges of ensuring digital equity and providing adequate training for teachers. The abstract concludes by emphasizing the transformative potential of ICT tools in creating inclusive, student-centered learning environments that foster essential skills for the digital era.

Keywords: ICT tools, Teaching and learning process, Educational technology, Smart boards

Introduction

In today's digital age, Information and Communication Technology (ICT) has revolutionized various aspects of our lives, including education. The integration of ICT tools in the teaching and learning process has opened up new avenues for enhanced engagement, personalized learning, and improved outcomes. This article explores the significant benefits and potential challenges associated with leveraging ICT tools in education.

ICT Tools

ICT tools refer to various technologies and digital resources used in the field of education to enhance teaching and learning processes. These tools encompass a wide range of hardware and software applications that facilitate communication, information retrieval, content creation, collaboration, and interactive learning experiences. Some examples of ICT tools include:

Smart boards and interactive whiteboards: These interactive display boards enable teachers to present multimedia content, annotate lessons, and engage students in collaborative learning activities.

Educational apps and software: These applications and software programs are designed specifically for educational purposes, providing interactive and engaging learning experiences on various subjects.

Learning management systems (LMS): LMS platforms facilitate online course management, content delivery, student assessment, and communication between teachers and students.

Multimedia resources: This includes audio, video, and interactive content that can be used to supplement traditional teaching materials, making lessons more engaging and dynamic.

Online collaboration tools: These tools enable real-time collaboration and communication among students and teachers, promoting teamwork, discussion, and knowledge sharing.

Virtual and augmented reality (VR/AR): VR/AR technologies offer immersive experiences that simulate real-world environments, allowing students to explore concepts and interact with virtual objects.

Online assessment tools: These tools streamline the process of evaluating students' knowledge and performance, providing immediate feedback and generating analytics to monitor progress.

Web-based research tools: These resources include online databases, digital libraries, and search engines that facilitate access to a vast amount of information for research and study purposes.

Digital content creation tools: These tools allow students and teachers to create multimedia presentations, videos, podcasts, blogs, and other digital artifacts to demonstrate knowledge and express creativity.

Cloud storage and collaboration platforms: These platforms enable easy storage, sharing, and collaboration on documents, presentations, and other files, facilitating seamless collaboration among students and teachers.

Online communication tools: These tools include email, video conferencing, instant messaging, and discussion forums, allowing effective communication between students and teachers regardless of geographical distance.

Gamification and educational games: These tools employ game-like elements and mechanics to enhance engagement, motivation, and learning outcomes, making the learning experience more enjoyable and interactive.

Assistive technologies: These tools support students with disabilities by providing accommodations, such as screen readers, speech-to-text software, and adaptive input devices.

Data analytics and learning analytics tools: These tools analyze data generated from students' interactions with ICT tools, helping educators gain insights into student performance, identify areas for improvement, and personalize instruction.

Mobile devices: Tablets, smartphones, and other mobile devices enable access to educational resources, apps, and communication tools, facilitating anytime, anywhere learning.

These ICT tools continue to evolve and offer new opportunities for educators to enhance teaching effectiveness, engage students, and promote 21st-century skills in the digital age.

ICT Tools in Teaching and Learning Process

Enhanced Engagement: ICT tools facilitate interactive and engaging learning experiences, capturing students' attention and fostering active participation.

Personalized Learning: ICT tools allow for individualized instruction, catering to students' diverse needs, learning styles, and pace of learning.

Access to Information: ICT tools provide access to a vast array of digital resources, including educational websites, digital libraries, and online databases, expanding students' knowledge and research capabilities.

Collaboration and Communication: ICT tools enable seamless collaboration and communication among students and teachers, fostering teamwork, discussion, and knowledge sharing.

Multimedia Learning: ICT tools leverage multimedia elements, such as videos, animations, and interactive content, to enhance understanding, visualization, and retention of complex concepts.

Flexibility and Adaptability: ICT tools offer flexibility in terms of time and location, enabling remote and asynchronous learning, as well as adapting to students' individual schedules and preferences.

Assessment and Feedback: ICT tools streamline the assessment process, allowing for online quizzes, automated grading, and immediate feedback, facilitating ongoing monitoring of students' progress.

Differentiation and Inclusion: ICT tools support differentiated instruction, accommodating diverse learning needs, and ensuring inclusion for students with disabilities or special requirements.

Digital Literacy and 21st-century Skills: By utilizing ICT tools, students develop digital literacy skills and are exposed to technology that prepares them for the digital workforce and future career demands.

Teacher Professional Development: The integration of ICT tools necessitates ongoing professional development for teachers to effectively utilize and integrate these tools into their teaching practices.

Cost-effectiveness: ICT tools can provide cost-effective solutions, reducing the need for physical resources and offering scalable learning opportunities.

Continuous Improvement: The use of ICT tools allows for the collection and analysis of data on students' progress and engagement, facilitating continuous improvement in teaching methodologies and learning outcomes.

Global Connections and Cultural Exchange: ICT tools enable students to connect with peers globally, fostering cross-cultural understanding, collaboration, and exposure to diverse perspectives.

Lifelong Learning: ICT tools promote a culture of lifelong learning, encouraging students to engage in self-directed learning, research, and exploration beyond the classroom.

Ethical and Responsible Use: ICT tools provide an opportunity to educate students about responsible and ethical digital citizenship, including topics such as online safety, privacy, and responsible use of technology.

By embracing ICT tools in the teaching and learning process, educators can create dynamic, learner-centered environments that foster engagement, collaboration, and the acquisition of essential 21st-century skills.

Enhanced Engagement and Interactivity:

ICT tools, such as smart boards, educational apps, and multimedia resources, make the learning process more interactive and engaging for students. Visual and auditory aids help to capture students' attention, while interactive platforms allow for active participation, collaboration, and knowledge sharing. These tools create a dynamic learning environment, stimulating students' curiosity and fostering a deeper understanding of complex concepts.

Personalized Learning and Differentiation:

ICT tools enable personalized learning experiences tailored to individual student needs and learning styles. Adaptive learning platforms, virtual simulations, and online assessments provide opportunities for students to learn at their own pace, receive immediate feedback, and access additional resources for reinforcement. This individualized approach promotes self-directed learning, boosts student motivation, and enhances overall academic performance.

Access to a Vast Array of Resources:

The integration of ICT tools in education opens up a wealth of resources that can enrich the learning experience. Through the internet, students can access educational websites, digital libraries, and online databases to explore diverse perspectives, conduct research, and expand their knowledge beyond the boundaries of traditional textbooks. This access to a vast array of resources promotes critical thinking, information literacy, and the development of digital research skills.

Global Collaboration and Cultural Exchange:

ICT tools facilitate global collaboration and cultural exchange among students from different geographic locations. Video conferencing, online discussion forums, and collaborative platforms enable students to connect and collaborate on projects, fostering cross-cultural understanding, teamwork, and communication skills. These interactions broaden students' horizons, expose them to diverse perspectives, and prepare them to thrive in a globalized world.

Challenges and Considerations:

While the integration of ICT tools in education offers significant advantages, it is important to address potential challenges. Access to reliable internet connectivity and necessary hardware devices can be a barrier, particularly in rural or underserved areas. Additionally, teachers require adequate training and professional development to effectively integrate ICT tools into their teaching practices. It is crucial to ensure digital equity, provide technical support, and continuously evaluate the effectiveness of ICT tools to maximize their impact.

Conclusion

The integration of ICT tools in the teaching and learning process has the potential to revolutionize education, providing students with engaging, personalized, and globally connected learning experiences. By leveraging ICT tools, educators can create an inclusive and student-centered learning environment that fosters critical thinking, collaboration, and digital literacy skills. To harness the full potential of ICT tools, it is essential for educational institutions, policymakers, and teachers to embrace these tools, address challenges, and continually adapt to the evolving landscape of technology. Through thoughtful integration, ICT tools can pave the way for a more effective and transformative educational journey for students in the digital era.

ROLE OF ICT TOOLS IN WOMEN EMPOWERMENT

Dr. N. Sumathi & Ms. J. Madhubala

Assistant Professors

Department of Commerce - Professional Accounting

NGM College, Pollachi

Abstract

ICT is playing an important role in changing the attitude and perspective of society towards women. It is creating a psychological comfort level of women at their work place by providing them additional knowledge and skills. Women's economic empowerment is essential for supported progress, reduction in absolute poverty and the acquirement, is about of all the Women's empowerment is about rights and just a fair societies. These ICTs factors include computer, mobile telephony technology, the internet and other facets of the changing methods and means of communication to man today. In the recent past, ICTs have been added to the women and gender equality debate. ICTs are being presented as a tool having potential to benefit women.

Keywords: ICT, Women Empowerment.

Introduction

"The empowered woman is powerful beyond measure and beautiful beyond description." Women in developing countries are facing economic and social hardships and have limited access to ICT, which in turn translate into their lack of skills, lower literacy rate and restricted social engagement. ICT is playing an important role in changing the attitude and perspective of society towards women. It is creating a psychological comfort level of women at their work place by providing them additional knowledge and skills. Psychological empowerment can be at organizational level, personal level or social level. Through Internet, television, radio and mobile phones women are getting information about all the real incidents happening in world and learning skills to tackle situations; it is helping to bring leadership qualities in them

ICT is playing an important role in changing the attitude and perspective of society towards women. It is creating a psychological comfort level of women at their work place by providing them additional knowledge and skills. Psychological empowerment can be at organizational level, personal level or social level. Through Internet, television, radio and mobile phones women are getting information about all the real incidents happening in world and learning skills to tackle situations; it is helping to bring leadership qualities in them.

Women's Economic Empowerment

Women's economic empowerment is essential for supported progress, reduction in absolute poverty and the acquirement, is about of all the Women's empowerment is about rights and just a fair societies. Women's economic empowerment is the volume of women and men to take a part in, accord to and welfare from growth process in ways which identify the advantage of their participation, favor their honor and make it practicable to arrange of equitable distribution of the benefits growth. The women's Economic

empowerment increases the women's achievement to economic resources and chance including jobs, monetary services, depressiveness and other productive assets, skills development and market information.

The Women's economic empowerment is the foundation of women's empower and strength which enable the women to have control on their lives and increase the chance of self-esteem. It is about to increase the equal chance for women in all the activities of the society. Women often bear differences and gender inequalities, with some women experiencing multiple differences and prohibition due to the elements such as origin or project. Women fulfill 66 percent of the world's work, and manufacture 50 percent of the food, still earn only 10 percent of the income and have individual 1 percent of the depressiveness however, the problem is better education in the development world, or fighting global weather change, or addressing nearly any other challenge we face, empowering women is a significant part of the education.

Women's Empowerment and Social Context

Social scientists have been also interested to improve the women's empowerment. Actually the equality of male and female is important for economic growth; to reduce the depressiveness and increase the human welfare, and interest in the ingredient and correspond of women's empowerment has also grown. Unhappily, ignorance over the definition and measurement of this idea remains, universal. Actually the women's social empowerment measures by their years of schooling, employment skilled and age at marriage rest alive, though increasingly called into question on both spiritual and actual aims. The current discussion on that topic is that what is women empowerment, how can we measure it and what are its ingredients. After studying about the spiritual problems, we back to the facts and figures collected in South and Southeast Asia that allow explaining three main factors about the conceptuality and measuring of women's empowerment.

The first point is that power within family circle the particular aspect of women's empowerment on which we meeting point is strongly unfair by social context because it is strongly determined by social institutions rather than by individual characteristics. The second point is that all aspects of women's empowerment are multidimensional and the interrelations among different scope depend on social context. Finally, the socioeconomic proxy for women's empowerment uses in past studies do good job of indexing only some aspect of women's empowerment and power and only in some framework.

Women's Education using ICT Tools

The advances in the use of information and communication technologies for example, mobile, internet, social media and telephone represents a insurrection that people interrelate among each other, communicate, access information, entrance services live by acting as a facilitators for easier and faster work at all levels. These increments have a tough prospective for the empowerment of women, as well as for the society as a whole. At the same time, new challenges come into view in conditions of risks posed, that need to be recognized and addressed properly by strategy maker and humanity as a whole.

The presence of a mobile phone in a household is no guarantee that female household members will have access to it. The June 2013 revisions to the core information and communications technology (ICT) household indicators stipulate that those indicators should refer to household ICT devices that are available for use by any member of the household at any time. Operationally however, this is very hard to determine, as cultural gender bias is difficult to establish in an interview. Householders are unlikely to say that boys and men in the house are given preference in accessing ICT, or that socio cultural differences, such as greater workloads for females, constrain girls and women from having equal access to ICT. This pattern undoubtedly holds true for mobile phone access, particularly when cost-per-use is involved.

Since 2001, access to Internet and mobile phone ownership has increased dramatically in most countries around the world (ITU, 2015) (see figure 5.5). In the developing world more affordable handsets are increasingly available. Despite the progress that has been made in recent years, there are still challenges to be overcome to ensure that women are included in an increasingly connected and Internet-enabled world. Mobile phones are important tools for enhancing the lives of women in low- and middle-income countries. Mobile phones can help women feel safe and more connected, save time and money, and access life-enhancing services such as mobile money or potential education and employment opportunities.

A broad choice of goals have been recognized in key to uphold the empowerment of women in the digital world, such as guarantee entrance to information through the internet; supporting education, training and literacy in ICTs; involving women in the decision-making in the media sector; promoting employment and entrepreneurship of women in the media and ICTs; fighting violence against women through and trafficking in human beings through the internet; countering stereotyping of women in the media and the internet.

To understand the extent of the influence of ICTs education on women's empowerment, an exploratory research was conducted. These ICTs factors include computer, mobile telephony technology, the internet and other facets of the changing methods and means of communication to man today. In the recent past, ICTs have been added to the women and gender equality debate. ICTs are being presented as a tool having potential to benefit women's empowerment and a number of ICT projects that specifically target women have been established in several developed and underdeveloped countries. In spite of constitutional guarantees, legislative provisions, judiciary mandate and administrative efforts, the women empowerment India is still lacking in some areas. Mere enactment of laws and chalking out of schemes are not much effective for women empowerment. Hence education is need for this.

The national curriculum framework of women pointed out, education of women is an important key to improving health, nutrition and education in the family and also empowering them participate in decision making". Moreover education enables women not only to acquire knowledge but also help them to achieve economic security, self-confidence, vocational and technical skills and guidance, good health and safety, courage and inner-strength to face challenges in every spheres of life and enable them to play equal role as men in nation-building. Education can be used as a tool for reduction of inequalities and gender bias so that women can move from weak position to execute their power or capabilities in society.

Conclusion

Digital technology provides an important means for all women to access information and share views, and contributes to promoting their inclusion, participation and rights in society. The women's empowerment as dependent variable and ICT, use of mobile and internet, the gender equality in education, the economic equality as independent variables. That indicates that use of mobile and internet positively affect women's empowerment as use of mobile and internet increase women's empowerment also increase.

WOMEN EMPOWERMENT

S. K. Rithikadevi & B. Santhiya

Student of 2nd M.Com

NGMC, Pollachi

Abstract

This Paper deals with "Women Empowerment" a burning issue all over the world. "Women empowerment" and "women equality with men" is a universal issue. Women Empowerment refers to the creation of an environment for women where they can make decisions of their own for their personal benefits as well as for the society. Women Empowerment refers to increasing and improving the social, economic, political and legal strength of the women, to ensure equal-right to women, and to make them confident enough to claim their rights, such as: freely live their life with a sense of self-worth, respect and dignity, have complete control of their life, both within and outside of their home and workplace, to make their own choices and decisions, have equal rights to participate in social, religious and public activities, have equal social status in the society, have equal rights for social and economic justice, determine financial and economic choices, get equal opportunity for education, get equal employment opportunity without any gender bias, get safe and comfortable working environment Women have the rights to get their voices heard. Women population constitutes around 50% of the world population. A large number of women around the world are unemployed. The world economy suffers a lot because of the unequal opportunity for women at workplaces. Women are equally competent. Nowadays, women are even ahead of men in many socioeconomic activities. Women Empowerment leads to decrease in domestic violence. Uneducated women are at higher risk for domestic violence than an educated woman.

Introduction

The term women empowerment is all about authority, or the power embarked on women sharing indistinguishable rights. The term refers to the liberation of women from socio-economic restraints of reliance. Women comprise around 50% of the country's population, and a bulk of them stays economically dependent on each other without employment. In the age of feminism, a small portion of women in India are freed and can employ their free will and are permitted to carve out their lives the way they want. But there is a considerable division of the women in this nation who require optimistic support. In most Indian villages and semi-urban cities, women are still denied fundamental education and are never authorized to continue higher education despite amassing the understanding required.

Women are known for delivering multiple roles effortlessly per day, and thus, they are considered the backbone of every society. Living in male-dominating societies, women play a wide range of roles, such as caring mothers, loving daughters, and capable colleagues. The best part is that they fit the bill perfectly in every role. Nonetheless, they've also stood as a neglected bunch of society in different parts of the world. In turn, it has resulted in women surviving the brunt of unevenness, financial trustworthiness, oppression, and distinct social evils. Women have been residing under the shackles of enslavement for centuries now that impedes them from attaining professional as well as personal highs. Being an NGO for women empowerment in India, Hindrise Foundation

has designed our dynamic and transformation-oriented programs in such a manner that the grooming of impoverished young girls will uplift the condition of the nation.

Factors Affecting Women's Empowerment in India:

- **Gender Discrimination must be Checked-** The problem of gender discrimination has affected the pace of women empowerment in India. Gender discrimination in all realms of action must be checked. Women must be furnished with a resort to take an active part in decision making at every level and direction procedures to attain the motive of empowering women. They need to get due admiration and prominence, which they rightfully earn on merit basis in society to accomplish their fate.
- **Educational Factor-** Education is the most vibrant factor of advancement and growth. It is the only significant tool for anticipating women empowerment in India & human resource development. It gives light to the possibilities for access to employment and making a livelihood, which in twirl revivify economic empowerment to women. In order to join the community of developed countries, people should understand the value and importance of women's education and, thereby, put combined efforts to make India on the progressive track. Education makes the individual conscientious, enabling them to comprehend, interpret, criticize, and eventually transform their atmosphere. It results in the accession of abundances of skills that heighten a person's enthusiasm and her proficiency to shape life in a better form.

Importance of Women Empowerment

In recent times, everyone is pointing on the empowerment of women. It's right to say that women's empowerment has become the necessity of the time. Women should possess liberty, faith, and self-worth to opt for their needs and demands. Discrimination based on gender is useless and is having zero worth by looking at the growth of women in the last few decades. Women are paid less and are treated as a cook and slave in families, and their real potential fails to get highlighted. Women empowerment in India is required to overcome situations of such types and to provide them with their independent role in Indian society. Empowering women is a necessary right of women. They should have proportional rights to contribute to society, economics, education, and politics. They are approved to gain higher education and receive a similar treatment as men are receiving.

Ensures Holistic Development of Society

Women empowerment in India is one of the principal terms for society's overall development. There is nothing erroneous in participating in the development of society. In the world of corporate, women are playing numerous roles in meadows such as medical, engineering, and so on. Apart from taking part in the sphere of technology, they are energetically partaking in security services such as police, navy, military, etc. All these before-mentioned services are taking the community to another level.

Reasons for Women Empowerment

Today we have noticed different Acts and Schemes of the central government as well as state government to empower the women of India. But in India women are discriminated and marginalized at every level of the society whether it is social participation, political participation, economic participation, access to education, and also reproductive healthcare. Women are found to be economically very poor all over the India. A few women are engaged in services and other activities. So, they need economic power to stand on their own legs on par with men. Other hand, it has been 202 Dhruba Hazarika observed that women are found to be less literate than men. According to 2001 census, rate of literacy among men in India is found to be 76% whereas it is only 54% among women. Thus, increasing education among women is of very important in empowering them. It has also noticed that some of women are too weak to work. They consume less food but work more. Therefore, from the health point of view, women folk who are to be weaker are to be made stronger. Another problems is that workplace harassment of women. There are so many cases of rape, kidnapping of girl, dowry harassment, and so on. For these reasons, they require empowerment of all kinds in order to protect themselves and to secure their purity and dignity. To sum up, women empowerment can not be possible unless women come with and help to self-empower themselves. There is a need to formulate reducing feminized poverty, promoting education of women, and prevention and elimination of violence against women.

Principles of Women Empowerment

- **Principle 1:** Establish high-level corporate leadership for gender equality
- **Principle 2:** Treat all women and men fairly at work – respect and support human rights and nondiscrimination
- **Principle 3:** Ensure the health, safety and well-being of all women and men workers
- **Principle 4:** Promote education, training and professional development for women
- **Principle 5:** Implement enterprise development, supply chain and marketing practices that empower women
- **Principle 6:** Promote equality through community initiatives and advocacy
- **Principle 7:** Measure and publicly report on progress to achieve gender equality

Way's to Empower Women

- Boost her self-esteem. ...
- Shut down the negativity. ...
- Support Women-Run Businesses. ...
- By giving proper education. ...
- Giving job opportunities. ...
- Be Open and Honest. ...

Financial Support for Women

- Bharathiyamahila bank business loan
- Mudrayojana scheme
- Dena shakti scheme
- Cent kalayani scheme
- Mahilaudyamnidhi scheme
- Women entrepreneurship platform(WEP)

Re-View of Literature

- **Venkata Ravi and Venkataraman (2005)** focused on the effects of SHGs on women participation and exercising control over decision making both in family matters and in group activities.
- **Juhi Gupta (2009)** suggested that for recognizing and tracing economic, social, cultural roots of violence against women. It is essential not only to mobilize policies that shape the state and societal response to individual acts of violence but also to change the processes of liberalization and corporate globalization that have indirectly aided such violence in general
- **K. Geetanjali et.al (2011)** has compared the status of women in India with those of other countries. Women in Europe were almost at par with men and have equal participation in public sphere
- **H. Subrahmanyam (2011)** compares women education in India at present and past. Author highlighted that there has a good progress in overall enrolment of girl students in schools The term 'empower' means to give lawful power or authority to act. It is the process of acquiring some activities of women. Employment and status of women, in the country is far behind the developed nations of the world. The census figures indicate that majority of women in India are illiterate, ill fed, unemployed, low paid occupying a very poor status in the society. The concept of "Employment" for women and thereby their empowerment deserves a special emphasis in this contex.

Constitutional Provisions for Empowering Women in India

- Equality before law for all persons (Article-14);
- Prohibition of discrimination on grounds of religion, race, caste, sex or place of birth (Article 15(i));
- However, special provisions may be made by the state in favour of women and children Article 15(3);
- Equality of opportunity for all citizens relating to employment or appointment to any office under the state (Article 16);
- State policy to be directed to securing for men and women equally the right to an adequate means of livelihood (Article 39(a); (v) equal pay for equal work for both men and women (Article 39(d);

- Provisions to be made by the state for securing just and humane conditions of work and maternity relief (Article 42);
- Promotion of harmony by every citizen of India and renouncement of such practices which are derogatory to the dignity of women Article 51A(e)
- Reservation of not less than one-third of total seats for women in direct election to local bodies, viz; Panchayats and Municipalities (Articles 343(d) and 343 (T)).

Conclusion

To conclude, it might be observed that India has enacted many constitutional and legislative provisions for empowerment of women. Many development schemes especially for women have also been launched for improving their fortune. Such measures have started giving positive outcomes relating to women's problems. But the position of women in our country still leaves much to be desired. Top priority should be given in our developmental plans for improving female literacy and creating skills and capability among women for enabling them to stand on their own feet. Unless the process of development is properly engendered, it shall remain endangered. No doubt women have the potential to achieve an equal footing with men. But, it is the social practices and male attitudes that are making an effective and invisible barrier preventing women from rising above a certain point. Empowerment of women could only be achieved if their economic and social status is improved. This could be possible only by adopting definite social and economic policies with a view of total development of women and to make them realize that they have the potential to be strong human beings. The first and foremost priority should be given to the education of women, which is the grass root problem. Swami Vivekananda had said "That nation which doesn't respect women will never become great now and nor will ever in future" and in pursuit of making India a great nation, let us work and strive hard in empowering women to the maximum. Swami Vivekananda has also said "arise away and stop not until the goal is reached". Thus our country should thus be catapulted into the horizon of empowerment of women and revel in its glory. "We have a long way to go, but we will get there someday". We shall overcome.

AN INTRODUCTION TO ICT TOOLS

Ms. V. Poornima

*Assistant Professor of Commerce-BPS
NGM College, Pollachi*

Introduction

“Technology will never replace great teachers, but in the hands of great teachers, it’s transformational.” – George Couros

ICT tools stand for Information Communication Technology tools. The ICT tools means to digital infrastructures like computers, laptops, printers, scanners, software programs, data projectors, and interactive teaching box.

The ICT devices are the latest tools, concepts and techniques used in student-to-teacher, student-to-student interaction for example: - clicker devices, mobile applications, flipped classroom) for information and communication technology. Use of ICT Tools is all pervasive in our everyday life, and use of ICT tools has almost revolutionized the way teachers impart knowledge to students and students receive knowledge from their teachers, Not only that, by making accessible entire bookshelf and whole of library to students and teachers on a click of their smart phones and laptops have made education simple, much more efficient and have enhanced their productivity enormously.

Had it not been for availability of such modern ICT tools, we could not have pushed through education of our students during pandemic period in such an efficient manner for almost last two years. With advent of ICT Tools, students-teachers community has been benefitted immensely. Now-a-days, classrooms are equipped with desktops, projectors, internet (which facilitates downloading of info from across the world). With availability of smart phones, teachers and students can “virtually” assemble in a classroom and interact with each other with help of ICT software tools such as Google Meet, Zoom etc.

Objectives of the Study

- To study about some of the commonly used ICT tools.
- To assess the importance of ICT in education.
- To evaluate the advantages and disadvantages of ICT tools.

Some ICT Tools

The most commonly used ICT tools for teachers are discussed below,

1. Genially: excellent for creating different content in which interactivity and information are highly valued. Perfect for classroom use, getting students hooked, and explaining full lessons with a single image.
2. Microsoft Teams: the perfect tool to bring all your content together in one place. Integrated into Office 365, it's Microsoft's solution for encouraging collaborative work. Create teams in each classroom where class jobs are shared, assignments are given out, and other participants can chat.
3. Kahoot: allows you to create quizzes that serve to test students' knowledge or review content that has already been worked on in the classroom. There are four types of tests: contest, puzzle, debate, and survey. Games can be projected on a screen, making the entire class participate and having students respond from their computers or mobile devices.
4. Dropbox: this accommodation space has different tools to save files such as documents, images, and presentations. But storage is not your only feature, as it allows you to synchronize folders with classmates, students, and family members. You can also talk to other users through the feedback system and access it from different devices.
5. We Transfer: ideal for exchanging files. Without having to be registered to an account, you can send files that do not exceed 20 GB, which really allows for professional use.
6. Mindomo: one of the best resources for creating mental and conceptual maps. It allows you to create and collaborate online, synthesize ideas, analyze and generate new ones, and solve problems.

7. **Visual.ly** : create and view infographics. In addition, it allows you to share the content you've created on social networks.
8. **Trello**: the ideal place to organize your life. Notes, emails, reminders... Everything will be organized there in a very visual way.
9. **Feedly**: with Feedly you can stay up to date with new content and news that are emerging in the world of education and use them in your classes.
10. **Clippings**: perfect for reading on electronic devices and also underlining appointments and creating notes. It allows you to import clippings from your ebooks, and then select them and organize them into categories and tags.

Importance of ICT in Education

1. **ICT Brings Inclusion**: - The advantage of ICT in education is that all the students in the classroom can learn from the course material. Students with special requirements are no longer at a drawback because they have the necessary materials. Students can use special ICT tools so that they can use the ICT tools to their educational requirements. Despite this, it opens up new problems related to the 'digital divide' and provides those who are less fortunate with access to ICT resources and tools.
2. **E-Learning or Online Learning**: - The ICT tools provide a new way of learning for students and teachers. Online or E-learning is getting popular. Different extraordinary events are happening in our lives, opening up opportunities for schools to ensure that students can access course materials while in the classroom. Outside students are also allowed to make sure. One can also learn in class, such as at home or in hospitals.
3. **ICT Enhances Subject Learning**: - These days, it is well known that in education, ICT adds a huge value to key learning areas like numeracy and literacy.
4. **ICT Use Motivation Learning**: - The demand of society for new technology has not left out children and their requirements. With new technology, children are fascinated, motivating and encouraging children to learn in the classroom.
5. **ICT Use Allows for Effective Differentiation Instruction with Technology**: - We all learn and understand things differently at different levels, styles, and the technology offers chances for this to happen.
6. **ICT in Education Improves Engagement and Knowledge Retention**: - Students become more involved in their work if the TCT is integrated into lessons. And the reason behind that is the technology offers various opportunities to make it more enjoyable and fun in the context of teaching similar things in a number of ways. As a result of this increased busyness, it is said that they are capable to retaining knowledge more efficiently and effectively.
7. **ICT Use Encourages Collaboration**: - We only need a computer, iPad, or laptop in the classroom to understand how it works. Naturally, ICT brings children together so that the children can discuss and talk about what they are exactly doing for their

work. This in turns opens communication avenues that lead to the development of language.

8. **ICT Use Develops ICT Literacy and ICT Capability:** - ICT literacy and ICT capability are the skills of the 21st century which are best developed in ICT and remain transparent in the subject learning context. Offering them meaningful activities that are embedded in purposeful subject-related contexts is a great way to develop the capability of ICT.

Advantages of ICT Tools

There are various advantages of ICT Tools:

1. Cost-efficient
2. Provide the facility for easy student management
3. Direct classroom teaching
4. Improved modes of communication
5. Eco-friendly-Eliminate the usage of paper
6. Direct classroom teaching
7. Minimize cost and saves time
8. Improved data and information security
9. Web-based LMS tools link teachers, students, researchers, and scholars and education together.
10. Teachers are able to teach better with graphics, video and graphics.
11. Teachers can create interesting, well-designed and engaging classroom activities.
12. Provide better teaching and learning methods
13. To spread awareness about the social impact of technological change in education.
14. Promoting and improving the digital culture in universities, colleges, and schools.
15. Automated solutions to paper-based manual procedures and processes.

Disadvantages of ICT Tools

There are various disadvantages of ICT Tools:

1. **Unemployment:** -Although IT has streamlined the process of business, it has created redundancy and subcontinent in the job. Employers can save more money by using computers instead of human resources, but due to this, employees are losing their jobs as no longer needed.
2. **Lack of Security/Privacy:** - Although IT has changed and may be more convenient, it has also raised issues of privacy and security. Phone signal interception, email hacking, etc., people are concerned that personal information can become public knowledge. IT continues to change almost every day, which means that to secure their jobs, everyone has to be up-to-date in IT. Risk factors for attacking computer viruses, trojans, spam, malware is also present in the systems.
3. **Cyber Bullying:** - In social network pages, it is now so easy to bully and bully others as it has become very easy for the users of the internet around over the world. They do not realize the consequences of reading/listening to hostile

comments. There have been various investigation cases involving cyberbullying with lethal implications in the recent past.

4. **Reliance on Technology:** - People no longer bother to read, write, or calculate without computers because of losing handwriting skills (why write if spell checker can be used). Calculate without calculator even for the small addition, reading books (why read if there is huge information on the internet).
5. **Social Media:** - Network pages are open for everyone who can influence their physical and mental health by playing and watching violent games, including young children and teenagers. They are addicted to iPods, phones, gaming consoles, forgetting about society's external activities and communication.
6. **Preparation Time:** - Preparation takes more time so that the internet can be used effectively for education. In addition to designing internet-based plans, we have to surf the Internet in order to download the lesson plans and adapt them to support the course's objectives or visit sites to choose appropriate places for the classes needed.

Conclusion

Students these days are becoming smart. And smart students need even smarter ways when it comes to teaching. If you are a teacher and want your students to be the best, you must include some of the ICT tools for teaching and learning. Integration of ICT in classroom needs serious consideration in order to increase the competency of the country's education system. This will help in increasing the world ranking of the national education and produce the better future work force. In order to enhance the use of ICT in classroom, the government needs to improve and change the teachers' belief about the integration of ICT in classroom. As the teachers' role is the key role in making any of the new policy to be implemented efficiently and successfully. The changes that is taking place is driven by advanced technology and communication devices that should be available to students wherever they are either at school or home. In addition , the needs for teachers to be literate and have good skills and knowledge in using ICT to improve their teaching methods and approach is desired to promote effective learning as well as to meet the demand of the 21st century teaching skills.

Abstract

The pace of technological revolution and emergence of a knowledge society can change the traditional role of the teacher and the students. Traditionally, the teacher used to be the source of knowledge for the students. There is some cooperation among students to explore new knowledge. In many cases, the teachers do not possess passable knowledge to supplement the view of the student. And the main source of knowledge remains limited to text book. The development of ICT changes the epic centre of knowledge. Technological enlargement always warrants transition to newer technologies by jeopardizing the cost effectiveness of the education programme. The increase in expenditure on elementary education alone over the last four Five Year Plan periods has been more than the increase in expenditure on education as a whole. Professional development goes afar the term 'training' with its implications of learning skills, and encompasses a definition that includes formal and informal means of helping teachers not only learn new skills but also develop new insights into pedagogy and their own practice, and explore new or advanced understandings of content and resources. This paper presents the role of ICT in the professional development of teachers. ICT can contribute to teacher and student learning; and good models of effective computer integration as a learning tool; and high quality professional development that transforms this vision into classroom reality, policymakers can turn schools into partners in the creation of the knowledge society envisioned in national policy plans.

Introduction

Professional development activities are an integral part of one's professional life. These activities help one to grow, learn and excel in one's professional field. The increased use of information and communications technologies (ICT) in the classroom to support students' learning places new demands on teachers at all levels, from pre-school to graduate school. This in turn increases the expectations on the teachers' abilities to develop their own proficiency of using this technology: internationally, such proficiency is commonly referred to as digital literacy, while within the Scandinavian educational context the term digital competence is more common (Hanell, 2018; Ilomäki et al., 2016; Krumsvik, 2008). Digital competence refers here to a holistic perspective incorporating proficiency with pedagogical judgement and with the focus on pedagogy and subject matter. In other words, digital competence is knowledge about how digital tools affect our everyday life, and how to use digital tools to support critical thinking, creativity, and innovation. As a teacher, you must have participated in various types of professional development activities/programmes either through the support of your institution or through your

personal effort. Have you tried to analyse the benefits of undergoing professional development programmes? Why are such activities necessary for a teacher? What are the opportunities, avenues in professional development activities for working teachers? What are the hurdles one faces in participating in such activities? These are a few questions which need to be answered. With the innovation of Information Communication Technologies (ICTs) and their uses in teaching learning process and in teacher training, the nature, scope and opportunities for professional development of teachers have changed. The present study will discuss various aspects of using ICTs for professional development of teachers including their uses at personal and at institutional level. The Unit will also highlight various digital initiatives of Government of India in this regard. This unit will help you understand how Massive Open Online Courses (MOOCs) are being used in India as well as globally for professional development of teachers. The study will also critically scrutinize various factors associated with use of ICTs for professional development.

Role of ICT in a Positive Learning Environment

The appropriate use of ICT tools helps in catalyzing the paradigmatic shift in making the classroom a creative space for exploration and experiment for both the teachers and students. It promotes the acquisition of skills and knowledge for students to become lifelong learners. Thus making students autonomous learners and bringing the world into their classrooms. The new ways of teaching and learning create a shift from a teacher-centered pedagogy to studentcentered pedagogy. Various innovative platforms provide an active learning classroom environment and opportunities to work on real-life problems in depth making it less abstract. By keeping the classroom environment engaging, technology enables students to become better focused on their learning. This also helps teachers to juggle various responsibilities like attendance maintenance, delivering academic content, monitoring student's progress, and much more.

ICT Tools

Powerpoint

Continuing on with the digital images theme this program and others similar to it can provide children with a multimedia experience they will enjoy and be able to develop their creativity skills. These programs have colour, movement and sound so it is no surprise that it is quite appealing. It is just as appealing though for children with profound and multiple learning difficulties. PowerPoint can make learning meaningful and relevant. With the use of transition effects, it can reveal a favourite character with a single touch by using it with the Interactive Whiteboard.

Word Processing

Word processing not only can enhance literacy in English lessons, but can enhance literacy throughout all key learning areas. It is a basic and important skill to have not just throughout formal schooling but later in the workforce. Typing skills, saving documents

and knowing how to send a document to the printer are all associated with the use of the word processor.

Spreadsheets

Spreadsheets are undervalued by teachers at times despite being useful for even key learning areas such as English. Besides being a great ICT tool for mathematics and science this needs to be used throughout the curriculum.

Presentation Software

Multimedia programs such as Keynote, PowerPoint and Prezi are commonly used in education settings as teachers often present lessons using them. They are also wonderful learning tools if used correctly to enable students to share their ideas and notes with others in the class. You can focus ICT techniques the students need and monitor their progress along the way.

Desktop Publishing

Publishing programs such as MS Publisher can be a very useful ICT tool to learn during primary school. Much of the formats and templates tend to match learning outcomes. They also offer great opportunities to teach literacy with ICT. It too can be used right across the primary curriculum.

Characteristics of ICT

They are used from anywhere

If something has to stand out as a priority of ICT is the possibility of maintaining a continuous and direct contact with students. The advantage that the student can connect to teaching from anywhere in the world, with the appropriate means to do so, facilitates learning, making it attractive.

For example, when the holiday periods begin, the child usually switches off during the time he does not come to the classroom. This disconnection, only subject to some exercise or list of tasks that must comply, gives way to oversight and a longer time of adaptation period upon return.

Union of culture, science and technology

ICT is the union of beliefs, customs and all those habits that society has adopted as routine. On the one hand, talking about culture is about the everyday routine of society, about the benefits that technology brings to the whole community. On the other hand, it encompasses science, as it is also responsible for giving answers to the human being of what happens in the world.

It is the curiosity to learn that leads man to carry out scientific research to respond to his concerns, producing the *Scientific knowledge*. And finally, the technique is responsible for responding to the need for transformation that man requires to meet his needs.

It is a Mobilizing Teaching

Teaching through ICT gives the possibility that the student can move in different contexts and different realities. In this way we choose a quality teaching in which the student can interact with the world and can face different situations.

For example, before subjects such as geography, the student will be able to contemplate images and videos of geographic features that he has never seen before. In this way, visualizing the content, making it more practical, is given the motivation that it needs.

It is based on other scientific aspects

ICTs applied to education are enriched by other scientific aspects, such as the pedagogical sciences, through innovations in teaching-learning methodologies; Of the psychology of the learning, showing special attention to the stimulus-answer; Of sociology, of anthropology and of philosophy.

Focuses on Objectives

Teaching through ICT is based on keeping in mind, at all times, the objectives. Achieving the proposed goals is essential and, therefore, we are faced with a flexible working methodology.

For example, situations are commonly encountered in ordinary classrooms in which teachers, because of the need for the whole group to carry out a temporary planning, move quickly, leaving behind students who do not carry the same pace.

It is an excellent channel of communication

Another advantage of ICT is the promotion of communication. The use of new technologies favors the communication that the teaching - learning process needs.

For example, there is the possibility that the teacher can maintain daily and fast contact with the family. In addition to answering questions that the students raised when they left the classroom.

It is changeable

As time goes by, the world is changing and new technologies are also changing. Therefore, it adapts to the changes of the context itself and of education, based on the sciences that support them.

Challenges

Technology integration can also present significant challenges to educators. There are several barriers, some extrinsic related to the availability of resources, time, support system, training facilities, and some intrinsic factors such as attitudes, beliefs, practices, and the resistance of the teachers. The constant need to keep updating with the new innovations makes it an overwhelming experience for the teachers. Teachers are constantly adapting the new ways of learning and teaching at the same time. In a diverse country like India, the digital divide also plays a major role in access to ICT tools. Availability of limited or no access to hardware facilities can pose the biggest challenges in adopting technologies

for the teachers. Many schools in rural India lack basic facilities of electricity and internet making teachers rely on textbookbased teaching. School-level factors such as organizational culture and teacher-level factors as beliefs about teaching and technology also impact the motivation levels of the teacher. Lack of digital literacy and adequate continuous training about the use of technology in the teaching process makes it difficult to navigate with the technology in the classroom. Another constraint is of insufficient time and content to use their ICT skills. The non-teaching responsibilities and pressure to complete the textbook syllabus also discourage teachers to use ICT tools. All these factors contribute to making it difficult for teachers in India to explore digital resources and use technology with their teaching.

Future of ICT in Teaching Profession

The role of interactive multimedia in a perspective where learning is part of schooling, working or just living. ICT also includes web TVs, Net PCs, and Web-Based Education that offers accessibility, flexibility and innovativeness in teaching and learning. ICT integrated teacher education is more important to Indian education system that is committed to maintain global partnership as well as leadership in knowledge-based society.

Prof Ram Takwle (2003) says about IT driven education: "They are changing the methods of content generation, content storage, content packaging and content delivery and hence offer a new paradigm of education." These multimedia programs and packages are also intended to supplement the real classroom activities and help their easy assimilation. ICT especially in the 21st Century context of teacher education fulfills the following objectives.

1. It envisages excitement to the learner's eyes, ears, and more importantly the head.
2. ICT fulfills the needs of learners by providing items and packages of higher standard and interest.
3. It helps in transforming the definition of literacy, learning and knowledge; a definition that increasingly includes multimedia digitized literacy.
4. Multimedia provides a kind of control over the learning environment to the pupil teachers and they experience learning from their failures and ill practices.
5. ICT facilitates the learner to have control on lesson, pace the sequence, content, feedback, which in turn enhances the efficiency of learning.
6. Unlike books, it is interactive in nature and creates motivation and interest among the learners, in turn meeting the individual unique needs effectively and efficiently.
7. Develops the ability of self-learning and interacting individually, as the learner attains vast experiences effectively, efficiently and expeditiously.
8. ICT-empowered simulated situation minimizes dangers in the real world' e.g. practical in science, pilot training driving etc.
9. ICT is a powerful new development with ambitious role in teacher education, Digital and Internet.-based multimedia transforms the present trend in the field. It takes just a computer to play multitude of media enabled programs and packages.

Conclusion

The analysis of ICT based approaches to prospective teachers' professional development indicates that there are possibilities and challenges in adopting ICT in teacher training and professional development. Although valuable lessons may be learned from best practices around the world, there is no one formula for determining the optimal level of ICT integration in the educational system. Overall, governments and teacher training institutions seem to recognize the importance of integrating ICT in education and teacher training. In many cases, the national vision for ICT use in education has been integrated into teacher training. Teacher training approaches in this paper show that many cases adopt ICT into their training process not just as content of the training but rather as an integrated training environment and thus allow teachers to experience ICT-based pedagogies. Hence, it may conclude that a variety of approaches in ICTPedagogy integration in teacher training. Via a variety of examples, the author tries to show that ICT use is not only a matter of new possibilities but that it also brings with it new implications and new challenges. Significant challenges that policymakers and planners, educators, education administrators, and other stakeholders need to consider include educational policy and planning, infrastructure, language and content, capacity building, and financing.

AN EYEVUEW ON DIGITAL LITERACY IN 21ST CENTURY

Dr. B. Rohini

Assistant Professor

PG Department of Commerce with International Business

Nallamuthu Gounder Mahalingam College, Pollachi

Mr. P. Prakashkumar

II M.com IB

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Digital literacy encompasses a range of competencies that enable individuals to use digital tools, devices, and information effectively and responsibly. These competencies include basic digital skills, such as using computers and the internet, as well as more advanced abilities like critical thinking, media literacy, information evaluation, and data analysis. In the 21st century, digital literacy is closely intertwined with traditional literacy skills, fostering communication, collaboration, creativity, and critical thinking among individuals across different age groups and backgrounds. As digital technologies continue to shape our lives, the development of comprehensive digital literacy skills becomes an essential endeavor for individuals and society at large. Embracing digital literacy equips people with the tools they need to harness the vast potential of technology while navigating its challenges responsibly, ensuring an inclusive and prosperous digital future. The paper aims to explore the overview of digital literacy and its relationship to 21st-century skills, which are crucial for navigating the complexities of the modern world.

Keywords: Technology, Communication, ICT skills, Knowledge, Tools,

Introduction

Digital literacy is an individual's ability to find, evaluate, and communicate information by utilizing typing or digital media platforms. It is a combination of both technical and cognitive abilities in using information and communication technologies to create, evaluate, and share information. The origin of the word literacy refers to the ability to read and write. Early descriptions of computer-related literacies also focus on the acquisition of sets of rules and technical capabilities. However, by the end of the 20th century, this definition had expanded considerably. While digital literacy initially focused on digital skills and stand-alone computers, the advent of the internet and the use of social media has resulted in a shift in some of its focus to mobile devices. Similar to other evolving definitions of literacy that recognize the cultural and historical ways of making meaning, digital literacy does not replace traditional methods of interpreting information, but rather extends the foundational skills of these traditional literacies. Digital literacy should be considered a part of the path towards acquiring knowledge.

Components of Digital Literacy

ICT literacy refers to a set of user skills that enable active participation in a society where services and cultural offerings are computer-supported and distributed on the internet. Technological literacy (previously called computer literacy) entails a deeper understanding of digital technology and comprises both user and technical computing skills.

Information literacy focuses on one of the key aspects of our Knowledge Society: the ability to locate, identify, retrieve, process and use digital information optimally. There are many of them with direct relevance to digital literacy – ICT skills, civic skills, learning to learn skills, participation of adults in lifelong learning. High values in these targeted areas certainly require the development of digital competence. Other indicators also may involve ICT skills. For example, cross-national mobility of students in higher education is made possible through blended learning courses that involve travelling students staying in touch with the learning process of their peers at home. Professional development of teachers and trainers, another key indicator, is mostly achieved through blended or e-learning courses in which new methodological skills are acquired and then applied in the workplace. These examples illustrate the importance of digital literacy for the achievement of Information Society goals.

Digital literacy is a life skill because it targets all areas of contemporary existence. In seven out of the sixteen literacy indicators, digital literacy plays a central role. In the last century, the shift from the manufacture of goods to the provision of services has resulted in an economy based on information and knowledge. Computers substitute for workers who perform routine physical and cognitive tasks, but they complement workers who perform non-routine problemsolving tasks. Modern organizations and companies have been facing a restructuring of work, which means flatter organizational structures, decentralized decision making, widely shared information, flexible work arrangements and collaboration in project teams.

Importance of Digital Literacy Skills for Students

As technology continues to become more and more ingrained in daily life, the importance of learning digital literacy skills is becoming increasingly apparent. Below are five reasons students should learn digital literacy skills.

Support Educational Progress

One of the first reasons digital literacy skills are important is because of the increased use of technology in education. The use of technology as a learning tool has grown in the past 15 years, with technology platforms such as computers, tablets and the internet becoming increasingly prominent in K-12 schools and universities.

Students with digital literacy skills will be more comfortable and confident in these learning platforms, while those without digital literacy skills may have their progress stymied by an inability to or lack of confidence in navigating the related technology. In addition, with the majority of standardized state assessments being administered online,

it's increasingly important that students have the confidence to focus on the material in question instead of being slowed or distracted by using technology for the test.

Increase Online Safety

Online risks are complex and ever-changing, with nefarious individuals or groups continually discovering and creating new ways to take advantage of others. While digital literacy cannot prevent students from facing safety challenges online, it can empower them with important knowledge, tools, processes and resources to help protect their safety and privacy as much as possible.

Understand Digital Responsibility

Along with online safety, digital literacy also teaches digital responsibility, which is the ability to consume and communicate information ethically online. Increased technology dependence exposes students to challenges related to copyright and plagiarism, cyberbullying, vetting informational resources, and interacting responsibly with others. Digital literacy skills help students master their ability to understand and effectively navigate these challenges, making them more responsible digital citizens.

Improves Social Opportunities

Digital Literacy plays a role on being able to socialize with people outside of immediate territory. Where friendships and even familial relationships used to depend on slow-communication, the use of technology eliminates the barriers of location when it comes to socialization. However, this opened world of social opportunities also exposes people—especially young people—to dangerous social scenarios. Mastering digital literacy skills allows students to connect with others online while protecting their information and safety.

Improve Digital Equity

Digital equity also helps to bridge the digital divide. Even with the proliferation of technology in households and educational institutions, there remains a disproportionate number of minority workers with limited digital literacy skills. By making digital literacy a priority in K-12 education, institutions can help to improve digital literacy among underrepresented groups, helping to upskill these students so they may have increased career opportunities in the future.

Supports Lifelong Skills

While technology is ever-changing, digital literacy foundations empower students with base knowledge and skills that can be applied to various types of technology now as well as in the future. For instance, learning basic concepts such as input/output, application operation, discerning hardware devices and how to use them, etc., can provide basic transferable knowledge that can be applied to new and emerging technologies.

1. **Critical Thinking:** It is learning how to solve problem. It teaches students not to accept immediately claims without seeking the truth.
2. **Creativity:** Requires student to think outside of the box and to take pride in what uniquely theirs.
3. **Communication:** Makes students express their ideas in the clearest and organized manner.
4. **Collaboration:** Happens when students know how to work well with others to accomplish a given task or solve a problem

Major Concerns about Digital Literacy in India

- We need to keep track of the young digital citizens and guide them to consume content thoughtfully and be creative.
- Though there have been some efforts to impart digital education to teachers, there is a dearth of computer teachers in rural areas. A certain village in Odisha has 18 computers, but only 10% of population is computer literate as there is no teacher there.
- Many children have the privilege of getting exposed to digital media, and they tend to learn using it without formal training. In the process, they may harm themselves
- The digital divide is a major concern in the Indian scenario where there is a wide disparity in economic conditions.

After reviewing the status of India's digital literacy rate we can conclude that we have a long way to go, none the less we cannot forget our achievements and see the other side of the picture. Our education system has been revamped, and Information technology has been introduced as an important subject. Computers have been made available to many underprivileged schools to make our rural population digitally literate. To make this development forward, we need to focus on making our teachers digitally literature.

Benefits of Digital Literacy in the Classroom

Digital literacy addresses the growing need for critical analysis of digital content, teaching students to assess its source, credibility, and quality. Digital literacy instruction engages students' cognitive abilities, asking them to apply critical thinking skills to their actions, behaviour, and social engagement on digital platforms. Social media's explosive growth has made information literacy and digital citizenship increasingly important components of digital literacy.

Analysis of online news and advertising teaches critical thinking skills and prepares students to identify credible information sources. Lessons in responsible digital communication and ethical use of digital resources. Privacy and security are also components of digital literacy. Teaching students to understand their digital footprints—personal information actively and inadvertently shared online—makes them less likely to fall victim to criminal behaviour, such as cyber bullying and identity theft.

Digital Literacy for Employability

Digital literacy improves employability because it is a gate skill, demanded by many employers when they first evaluate a job application. It also works as a catalyst because it enables the acquisition of other important life skills. Companies applying these changes in organizational structures and business practices require new skills, as well as an increased role of ICT in the work place for communication, information sharing, and simulation of business processes. Routine cognitive and manual tasks in the economy decline, and non-routine analytic and interactive tasks rise. Resulting new hiring practices demand workers with the ability to respond flexibly to complex problems, communicate effectively, manage information, work in teams, use technology, and produce new knowledge. These capabilities are rarely taught in schools or measured on typical assessments. The challenge school systems face today is to embed digital literacy in all levels of the educational system as well as in the professional development of teachers and trainers.

Challenges of Digital Literacy

Lack of Access to and Knowledge of Technology

One of the most challenging aspects of digital literacy is the requirement for a certain level of technical expertise and understanding. Not everyone has access to cutting-edge technology and tools or has been properly trained to use them, which can result in a digital divide in which certain people lag in digital skills and knowledge. This can have severe consequences for access to school, employment, and social and civic participation.

Trouble in Finding the Right Resource

Another barrier to digital literacy is the lack of capability to find the right resource from the billions that are available online. With so much information at your fingertips, it can be difficult to identify which sources are genuine and trustworthy. Critical thinking and analytical skills are needed to evaluate the quality of material found online and discern between facts and opinions, biases, disinformation and propaganda. This necessitates a critical approach with experience, awareness and knowledge.

Lack of Guidance

Concerns about privacy and security are amplified when we talk about digital literacy. Many people are unaware of the potential dangers of the internet and lack supervision from a digital expert. With a lack of information about digital literacy, trainers and practitioners, it is a topic that needs greater attention than we think.

Lack of Awareness & Interest in Digital Technology

Another challenge is the lack of awareness and interest in digital technology among certain sections of the population, particularly older adults and women. Nearly half of the world's population is still not online. While Asia has the highest number of people without access, Africa tops the world in the percentage of the population without connection at 88 per cent. Furthermore, in digitally connected countries, male internet users outnumber

their female counterparts in every region of the world. This 'digital divide' does not just signify those who have access to the internet and those who do not. The gap also encompasses several other discrepancies, including the quality of digital infrastructure in rural communities, the speed of connectivity in remote areas, and the training and skills required to navigate such technology.

Lack of Emphasis on Digital Literacy in Education

There is a lack of emphasis on making individuals digitally literate. Despite the growing importance of digital skills in the job market, many schools and colleges worldwide do not offer adequate training in digital literacy. This results in a lack of digital skills among young people, which can hinder their employment prospects in the future.

Conclusion

In the rapidly evolving digital landscape of the 21st century, digital literacy has emerged as a crucial skill set that individuals must possess to thrive in both personal and professional spheres. This paper has explored the multifaceted nature of digital literacy and its significance in various aspects of modern life. The findings reveal that digital literacy encompasses not only technical proficiency but also critical thinking, ethical decision-making, and information evaluation. Embracing digital literacy as a foundational skill in education and the workforce is pivotal to building an inclusive, innovative, and digitally empowered future. By promoting digital literacy, we equip ourselves and future generations to leverage the vast potential of technology responsibly and ethically.

AN OVERVIEW OF ACADEMIC WRITING TOOLS FOR THE BEGINNERS IN RESEARCH PUBLICATION

Dr. R. Malathi Ravindran

Associate Professor of Computer Applications
NGM College, Pollachi
malathiravindranr@gmail.com

Abstract

The quality of the publication in reputable international journals is continuously being improved. However, many writers struggle to be able to write a qualified article for such journal. Based on the observation and interview, it was found out that though the writers already knew about the rhetorical structures in the finding and discussion section, still their articles were not considered eligible to be published. Academic writing can be difficult and time-consuming, but with the right tools, we can drastically simplify the process. It is critical to prepare before beginning to write. Before submitting our essay, we must organise our thoughts, materials, and actions. The objective of this paper is to discuss the various helping tools for presenting the authors' content with clear, concise and accurate. It will help their article to be published in a reputable international journal.

Introduction to Automated Tools

The automated tools are available to reengineer the article in the defined manner. Few of them are

1. Writing Your Paper
2. Todoist : A to-do list to organize your work
3. Evernote : As a Research notebook
4. Grammerly : Cloud based typihg assistant
5. Ref-n-Write : Look up and learn while writing your paper
6. Hemingway Editor : Refine your work to be bold and clear
7. Our downloadable Article and Journal Templates
8. Out 10-point checklist to guide your writing process

1. Writing your paper: a comprehensive free guide

“Writing your paper free guide” is a helpful tool to aid the author through his various writing phases if he is prepared to begin writing.

This tool will help one to write his paper from beginning to end, from planning and establishing his framework to writing each section and getting it ready for submission.

This will guide to find out all you need to know about

- Article structures and formatting
- Choosing keywords and writing for SEO
- How to write your research manuscript
- Refining your writing
- Finalizing the details of your paper
- Considering ethics

2. Todoist

A task management tool like **“Todoist”** can keep the author organised while he is writing.

It takes more than just putting words on paper to create an academic paper. In fact, some scholars may contend that the writing is among the simpler elements! Their ability to write well depends on the chores they do before they start writing.

One must arrange his ideas, materials, and the actions he wants to do before submitting his essay. Todoist can help with this.

We can use Todoist to plan, schedule, and create an outline for our chores for work, school, and personal usage. Its portability and basic functionality contribute to its appeal. With excellent collaboration and integration features, it can be used on our phone, tablet, and PC. It might be like always having a personal assistant with us. Todoist is available for free, but the author may choose whether he want to upgrade to a paid version if he requires more project limitations or features like reminders.

3. Evernote

“Evernote” is a wonderful tool to take into consideration if we're seeking for an effective strategy to take notes and organise our study materials.

By setting up a notebook structure to group related notes, one may organise his research. Additionally, he can improve the value of his notes by including texts, pictures and documents.

The built-in recorder's ability to record audio is another useful feature. Without leaving the Evernote app, sharing and discussing our notes and notebooks is simple. Evernote's free, basic edition allows us to write an infinite number of notes, but it only offers 60MB of storage per month. We must upgrade to a paid subscription plan if we want more storage.

4. Grammarly

“Grammarly” is a typing aid that makes use of artificial intelligence to spot any spelling, grammatical, and punctuation mistakes before making a suitable replacement suggestion.

Once installed on a laptop or computer, it will point out any problems in our text and offer a replacement or even ask us to omit specific phrases.

Remember that Grammarly may not understand some technical terms or phrases in our document, which could cause it to flag them as errors. So, before accepting modifications, be careful to review the Grammarly prompts.

In Grammerly, the basic functions like spelling and grammar mistakes are free, a paid versin is also available for a more thorough review of everything you write.

The employment of a Professional Academic Editor can help us introduce academic English conventions to our writing.

5. Ref-n-Write

Research of a high calibre merits appropriate academic writing. An extensive library of words and phrases for academic writing is available with the tool "**Ref-n-Write**". The application uses artificial intelligence to provide information on selecting the appropriate academic word, cross-referencing prior work, suggesting new ideas, and other things.

This application can be useful for non-native English speakers who want to paraphrase their work and practise writing in English. We can sign up for a free trial to try out the referencing, paraphrasing, and phrase bank capabilities.

Lack of language proficiency shouldn't be a barrier to publish our research. This will serve as a reference for more details on how to publish in international journals despite language hurdles.

6. Hemingway Editor

Using the editing tool "**Hemingway Editor**", one can improve his writing by identifying the parts of it that will have an impact on reading. To effectively explain our study to readers, one must write clearly.

This tool also helps sentence-improvement tips for our paper. It draws attention to difficult-to-read sentences, words or phrases with easier alternatives, passive voices, and the quantity of adverbs in our writing.

There is a free version of the Hemingway App, but there is also a commercial edition with more publishing, formatting, and other options.

For assurance concerning the calibre of our article, we can also utilise the phrase "Experts in subject-relevant Editing." They will check our work for spelling, grammar, and other typical language problems.

7. Article and journal templates

In this tool, some free article and journal templates are also available which will help to format our manuscript which will save our time. Our template will assist in accurately formatting our work for submission and ensure that we have the data the target journal requires.

Download the appropriate template, then use it on one's research paper while according to the guidelines given. Keep in mind to adhere to the formatting guidelines provided for our particular research work. A guide to the various varieties of research publications is also available.

"Experts in Academic Formatting" can also be hired to save time by taking care of the manuscript's format.

Conclusion

Finally, writing a research paper requires time, effort, and careful planning. To avoid major errors, we must allow enough time to conduct research and write the paper, select an appropriate thesis statement, support our thesis with adequate research and facts, and ensure our paper is formatted correctly, including properly citing sources within the paper and on the reference page. All these expectations are fulfilled with the usage of these tools. One can rapidly review all he needs to know in order to create a successful paper using these tools. These tools guide crucial details on what constitutes a quality research paper, whether we are writing a paper for an assignment or to submit to a journal and also help to organize our research to write an impactful paper.

IOT BASED EDUCATIONAL TOOL FOR STUDENT IN NEW EDUCATION POLICY

Dr. K. Haridas

Associate Prof and Head, Department of Computer Applications
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu, India

P. Ganesh

Research Scholar, Department of Computer Science

Abstract

Internet of Things is a technology that has been growing every second and has an impact on various sectors. Internet of Things helps to connect physical objects with each other with the use of internet. In the education sector, internet of things can be used to bridge the gap between the teacher and the student. From lectures and memorization to internet enabled learning to knowledge-producing education to innovative education, educational sector has been developing continuously. Educational sector has reached its fourth revolution, also known as education 4.0. In relation to education sector, some of the latest technologies advancements are interactive whiteboard, 3d printers, eBooks, tablets, augmented reality, attendance tracking system, virtual reality, cloud computing, hologram, biometrics, paper-thin smartphones, multi-touch LCD screen etc. Many students face problems with the traditional way of teaching, such as slow speed of learning and not able to attend school due to family problems. This paper addresses the previous works done in the field of education using Internet of Things to help overcome these problems and proposes an IoT Based Educational Model for Better Teaching-Learning Environment. This model suggests that there should neither be complete digitalization nor complete verbal assistance.

Keywords: Internet of Things (IoT), education 4.0, industry 4.0, RFID, Wireless building lighting control (WBLC).

Introduction

Education is the foundation of any economy. Educating the citizens is the basic requirement to establish a good economy. Education helps citizens to take decisions that will benefit them as well as the economy. To run an economy effectively and efficiently, the citizens in the economy need to be educated and aware about the aspects of economic growth and economic development. Without people being educated, the economy will be left to be doomed. Education is the right of every citizen of the country.

The government provides various initiatives and right to education to every citizen of the country. The industry started with steam engines and went through multiple revolutions – production line, the computer, and now is in its fourth revolution with the internet and connecting computers, also known as industry 4.0. Almost every business is implementing industry 4.0 methodologies to achieve its goals and continue to grow and develop. To keep up with the revolutions happening in the industry, the educational sector also needs to develop.

With the continuously developing technology and industry, students need to be taught and trained accordingly. They don't just need to be taught theoretically in classrooms but also need to be exposed to practical knowledge and experiments. The education sector has experienced various revolutions. It went from lectures and memorization to internet-enabled learning to knowledge-producing education and now is in its fourth revolution of innovative education, also known as education 4.0.

Internet of Things (IoT) is a continuously growing and developing technology that is used to connect physical things with the use of internet. Internet of things helps in collecting data through various sensors and communicates the data to be converted into meaningful information. This information is then analyzed, measured and stored for future use as a means of knowledge. The use of internet of things has simplified day to day activities. It reduces the time and efforts required to carry out any activity and increase the efficiency of the work done.

Internet of things has changed the face of industry as well as the educational sector but the students are still being taught in the traditional way. They sit in the classrooms and learn about things theoretically and have mere exposure to practical experiments. To produce resources that can work with the technologies being developed every day, the educational sector needs to expose students to the technology and practical knowledge [3]. The new strategies need to be developed keeping in mind both categories of students: the ones who attend classes daily and the ones who are not able to attend the classes daily due to various reasons such as healthcare problems, family problems, transportation problems and many more. The rest of the paper is organized as follow: second section covers the literature review of the researches and the work done in the field of educational sector, in the third section an IoT equipped model is proposed for better education and finally, the fourth section covers the conclusion and outcomes of the paper.

Proposed Model

While going through the researches done by various researchers in the field of IoT in education sector and various other sectors, an idea came to mind and it is presented in this paper as an institute model for better education for students.

Complete use of digitization may lead to removal of handwritten work as all the work will be done using the computer and internet so all the data will be in digital form and no handwritten records will be made. Various challenges will be created for teacher as keeping record of students' performance as basic communications or behavioral science. Students will not be able to get their personalities developed as they will only be engaged in digital work. Human to human communication is lost due to all activities being done through system. Cyber bullying may increase as a result of digitization. The more someone learns about a thing, the more he is likely to find loopholes. Open window for cheating will be created for the students. Students can't study and learn things only by visual display, they also need human teachers. Lack of physical activities may lead to health issues. A lot of time of the day is consumed by the computers and students don't get to connect with the environment.

Infrastructure

When constructing the institute various sensors are placed in the building for various management purposes. Each sensor has a battery and an alert system that is wireless and helps to transmit data over the network to the maintenance engineer.

Environment management: Among the sensors placed in the building while construction, there are various sensors that collect data related to the environment such as air quality, humidity, temperature, any calamity detection etc. The data collected is transmitted over the network for storage and can be further processed to extract meaningful information.

Garbage management: Cleanliness is one of the major issues and reason for a number of students not being able to attend their classes. To maintain cleanliness and avoid absence of students, smart garbage monitoring system is used. The sensor on the head of the garbage bin sends an alert to the helping station when the garbage bin gets filled up to a specific level. The helpers can then remove the garbage. This helps in taking care that no garbage bin is left unattended.

RFID technology: Students, teachers and other staff members of the institute are provided with ID cards with RFID tags. RFID readers are installed at the entrance of classrooms, library, art room etc. This helps in keeping track of the movement around the institute.

WBLC: Wireless building lighting control system is used to monitor and control the electricity usage. The lights are switched on in the morning at the specified time and switched off after the classes are over. This helps in taking care that all the electric appliances are switched off are working hours and there is no electricity wastage.

Student Management

The data collected through various sensors and technologies implemented are transmitted over the network to the management, who monitor the movements and activities around the institute. All the data collected is uploaded and stored on cloud from where the respective management and teaching staff can access the data for further use.

RFID technology: The students are provided with RFID tag equipped ID cards that they are supposed to have on them all the time in the institute. When entering any room, the RFID reader, present at the entrance, reads it and stores the data. This helps in avoiding the need for the teacher to invest time in taking attendance and helps to track the movement to students around the institute.

Information dissemination system: Sometimes students miss out on the important information provided by the teacher in class due to various types of interruptions. An air freshener sized device is installed in the classroom which is connected to an app. The teacher can upload and update information related to assignments, tests and other important information for the students on the app. When students' devices come in the specified range of this system, they get the information in the form of a notification. This makes sure that no student misses out on any important information.

E-Learning management system: There is an application where the teacher regularly uploads and updates the information related to the topics being covered in the classroom. The students, who are not able to attend any specific class or are unable to understand the topic in the class, can refer to this information to understand the topic and learn. Students can also refer to these for revision before any test or examination.

I-glasses: Smart eye-worn glasses are used to implement virtual and augmented reality in the institute.

Smart benches: The classrooms are equipped with smart benches that have interactive screens which are used for multiple tasks. The system will be unlocked only through students' fingerprint. Students can use this system to share information with each other and can see the presentation or data that the teacher wants the students to see for better understanding.

Conclusion

In this paper, we discuss the various research and study done related to internet of things in educational sector and propose an IoT Based Educational Model for Better Teaching-Learning Environment. The industry is advancing everyday but the students are stuck at the same traditional way of learning. To make students capable of working with the new technologies, there is a need to expose them to the available technologies first and make them learn about how and where to use these technologies. No new architecture or framework can be implemented in just a day; there should be prior planning and preparation done. To effectively and efficiently make use of the new technologies, students need to be taught and trained today, so that when they graduate, they are able to work with any kind of technology without any hesitation.

A STUDY ON THE USE OF DISRUPTIVE TECHNOLOGIES IN HIGHER EDUCATION

Ms. A. Anandhiprabha

Assistant Professor in Commerce - Banking and Insurance
Nallamuthu Gounder Mahalingam College, Pollachi
anandhiaruchamy@gmail.com

Abstract

New disruptive technologies are emerging day-by-day. These disruptive technologies have fundamentally changed the way we used to do things. Disruptive technologies in recent education system cannot be denied. Technology transformation in education system provides students a cost effectively scale education. Internet, mobile phones and Virtual Learning Environments (VLEs) are all the examples of disruptive technologies. These technologies are now widely used to support learning and teaching. Use of ICT helps students to reach the resources which they need in their learning process. Online delivery of different courses such as MOOCs at lower cost makes it easy for employees also to combine work and training. Mobile technology is also useful not only for learners but also for teachers to connect with the students from anywhere, anytime that makes learning more collaborative and effective.

Keywords: Online learning, Virtual Learning Environment, Mobile Learning, MOOCs.

Introduction

Education has been a way for students to improve their lives. Before the age of computer and digital communication technology, traditional classroom education has been used for the transfer of knowledge from teacher for the student and high dependency was there on the capabilities of the tutor. Knowledge transformation was also limited in time and space by the resources available to students such as libraries etc. But the scenario is change now. There are many digital technologies are available which have high impact on education system. Also due to globalization, there is a pressure on nations of the world to use new technologies in teaching. The use of ICT is rapidly changing the technological forces that will shape the structure of educational systems of the world. The role of teaching in a classroom is to help students who are slow learner and to catch up them with other students.

But what is about them who are faster at learning? For those students, there are additional courses according to their interests to fulfill their requirements of free elective students. MOOCs is there to enhance online learning with technology. The teachers can post their instructions online to participants through MOOCs, which is helpful to students to know how to complete the course. The integration of online course material can increase interaction among students and between the students and the teacher, for exp. through virtual group work, building an online community for module, discussion questions, instructor participation and so on. A number of institutions offer virtual distance learning which allows teachers and students to interact with each other.

Concept of Disruptive Technologies

The term 'Disruptive technology' is derived from Clayton Christensen's (1997) book, 'The Innovator's Dilemma.' The term is used to denote technologies that are not designed to support learning and teaching but are used by students and lecturers, having found a market and a use value. Disruptive technology follows four key criterias identified by Christensen in 1997; they are smaller, cheaper, simpler, and convenient. Disruptive technologies often start with a small number of users but growing over time to extent that they replace the previously dominant and incumbent technology. Disruptive Innovation caters to the needs of those who cannot attend college because of finances, work conflicts, or family obligations. There are amazing disruptive innovators in the world like in social media; Larry Page of Google, Mark Zuckerberg of Facebook, Jack Dorsy of Twitter etc.

Disruption is one of the most overused catchwords in education today. Mobile technologies, Open Educational Resources (OER), MOOC's (Massive Open Online Course), Cloud computing and Analytics (big data) have now become part of education at all levels.

Disruptive Technologies in Higher Education
The personal computer (PC) supersedes the typewriter and totally changed the way we work.
Email forever transformed the way we communicate, supersedes letter-writing and disrupting the greeting cards and postal industries.
Cell phones enabled the people to call anywhere and disrupted the telecom industry.
The laptop computer and Mobile computing replaced desktops in many industries and organisations. Laptops made it possible for people to collaborate from anywhere in the world.
Smartphones replaced cell phones and PDAs (Personal Digital Assistance) because of having different functions, smartphones disrupted pocket cameras, MP3 players, calculators and GPS devices.
Cloud computing has been an enormously disruptive technology in the industrial world. It is the combination of hardware and software to deliver the content over the internet. We can access the content and files from any device that can access the internet.
Social networking has disrupted landlines, cell phones, email, instant messaging etc. It has changed the way we communicate with others.
Campus wi-fi: with the campus WiFi, students can study effectively. They can collectively share notes and prepare for their exams. One of the basic uses of WiFi on campus is for students to keep up-to-date of their assigned work. They can log in to their portfolio thereby can monitor their own grades and keep themselves updated.
Small Private Online Courses (SPOCs): MOOCs are free and useful. The main aim of the MOOCs is to have unlimited participation and open access via web. There are no restrictions on the attendance; students can access the content any time during the day, week or month. But the main thing is to complete the hours limit given by particular course. These are widely researched in distance education and appeared as popular mode of learning in 2012.

YouTube: Now almost every university has its own YouTube channel. The content of the course is uploaded in the form of educational videos on you tube channel of particular department or university.

E-books: E-books have displaced the printed books thereby students can access to the books over the web. Earlier the students purchase the books from the market but now they can read it online.

Disruptive Technologies in Education

Online learning

Online learning offers new opportunities both for students and educators. This disruptive technology can involve those people that don't have access to traditional forms of education due to some reasons. Since online learning is easily accessible, parents, fully-employed people, and people with disabilities can use this opportunity to get an education without leaving their homes.

MOOCs

It was started in 2008 and is the short name of massive opening online courses, which can use for unlimited participation and open access is the world wide. It was introduced for students who are learning from distance. In these courses, the material is by educational institutions, who have license of these courses for completions. MOOCs will disrupt different educational institutions in different ways.

LMS

It comes from learning management systems. It have different features such as student teacher interactions, courses collaboration, delivery content, master courses, practical and exams, connecting programmes, online assignments of students etc. It can enhance the learning experience of students with the help of video recordings and presentations with recorded audios. It can create a different kind of continuous learning experience which is not restricted by a single lecture but by repeating the reading material.

MOOCS as Disruptive Technology

Nowadays, the disruptive technology that has become the topic of interest to society is Massive Open Online Courses (MOOCs). MOOCs are simple, free and convenient to use. They are flexible online learning which is aimed for unlimited participation. There is no formal academic credit is available. There are no fees or entry requirements in MOOCs. We can access to the course material free of cost. It provides certificate at the completion of the course at a cost. Some MOOCs provides certificate at free of cost. MOOCs have attracted the attention of both the media and the educational community because there are differences in teacher/student ratio. But most importantly MOOCs have entered the education system at that time when education, specifically at university level, is required to make changes to meet the demands of the society. It makes the education accessible to all at any stage of their life. MOOC is an online course aimed at mass participation and

open access via the web. MOOCs provide interactive user forums for the students, professors, and Teaching Assistants. Moreover, it provides traditional course materials such as videos, readings, and assignments etc.

A massive open online course (MOOC) is a model for delivering learning content online to any person who wants to take a course, with no limit on attendance. MOOC integrates both the traditional and modern course materials for learning such as videos, readings, projects, assignments and many more.

The major MOOC platform providers are Coursera, edX, Canvas and FutureLearn and in addition to these platforms, there are small MOOC platforms. Each platform has its own technical infrastructure, for example; some platforms align themselves with institutions, whereas others allow more freedom to individual educators.

Websites that Offer MOOCs

MOOCs provider	Websites
Coursera	https://www.coursera.org/
Iversity	https://iversity.org/
EdX	https://www.edx.org/
ALISON	http://alison.com/
CanvasNetwork	http://www.instructure.com/
Open Learning	https://www.openlearning.com/

Future Learn	https://www.futurelearn.com/
Peer to Peer University	https://p2pu.org/en/
Saylor. Org	http://www.saylor.org/
Udemy	https://www.udemy.com/

Types OF MOOCs

xMOOCs:

An xMOOC transfer the knowledge didactically i.e., it is fairly close to the traditional pedagogical model used in lecture halls. In an xMOOC, learning content is offered in small units which are easy to understand usually 12–20 minutes duration. The medium to transfer the content is video instead of text. Other means are online tests, exercises and games. Under this short videos and exercises go side by side. Moreover, forums and wiki pages are used to give social learning experience to participants.

cMOOCs:

A cMOOC is a connectivity course. This highlights the interactive nature of the learning experience. Under this, knowledge is partly self-generated and the coherence of the course constructed by the participants. In a connectivist MOOC, the discussions and interactions between all participants are important rather than content and activities. cMOOCs provide opportunities for disrupting traditional forms of teaching and provides learner-centred pedagogy so that students can learn from each other.

Role of MOOCs in Higher Education

The MOOC movement plays a fundamental role in transforming the quality of higher education. MOOC courses are designed for large numbers of users. These courses can be accessed online without entry requirements and limit on attendance. It provides complete course experience for free of cost. The impact of MOOC is dubious due to long history of revolutionary potential in Open Distance Learning as expressed by the “hope, hype and disappointment”. As more and more initiatives are taken by millions of people to participate in MOOCs through a small but growing diversity of courses; and they attract a lot of people from various educational institutions, politicians, policy-makers and media houses. The main point is stakeholders have quite different reasons for encouraging MOOCs and therefore the opening up of education agenda must be seen alongside powerful forces that view online learning as a means of intellectual development, enhancement in self-esteem, increasing competition between institutions, introducing new business models with reduced public funding for universities, and the creation of a global higher education digital marketplace. However, MOOCs have potential to meet the growing demand for higher education, mainly in developing countries where it is not possible for traditional institutions to cope up with the large number of potential students. Daniel (2012) advocated that the MOOC movement is really a game changer, as it has potential for life-long learning, address main gaps in skill development, and eventually enhance the quality of life for millions of people. In India, there is some hope that the MOOCs may be able to close the inequality gap of literacy and reduce the unemployment of youth. The national institutes of India like IIMs and IITs also have started MOOCs. The Government of India has also decided to start 350 online courses through SWAYAM (Budget 2017-18). There is a need to create a firm systematic structure for the validation and recognition of the courses from online sources as Coursera, Edx and SWAYAM, UGC, and other educational authorities which seeks cooperation between these institutions.

Conclusion

The technology needs to be kept in perspective, as a tool to enhance learning. Teachers felt that roll of the institution is to deliver more than mere academic facts, students need to develop their interpersonal skills. For this reasons, teachers need to make every effort to ensure that students are able to use the technology intelligently and critically in order to succeed in today's online global workplace. The use of disruptive technologies has implications for higher education; students can access learning material by means other than through their university. Moreover, free access to learning materials made available through disruptive technologies poses a great threat to the high-fees offering universities. Now the big challenge for the universities is to understand and manage the disruptive technologies not only to safeguard academic standards but also to make disruptive use of ICTs to enhance learning.

Abstract:

The connection between Youth and national integration is self-evident. This relationship is not only mutually beneficial, but it is also entirely dependent on the other in order to exist. As a result, it's impossible to overstate the importance of young people for the advancement of a country. The ability of a country's young people to produce and innovate is crucial to its future development. Any society's progress and development is powered by its youth, who supply the labour force necessary to put goods and services on the market.

People actions and inactions have the power to either strengthen or weaken the hegemony/fabrics of their own societies. Unexpectedly, a society's ability to form and develop is directly correlated to how smoothly it passes from one generation to the next. Because of this, a society that teaches young people for the sake of their future aspirations will not guarantee just future growth. However, the challenge of national healing and growth will be prepared for her next generation of leaders. As a result, the importance of the role of youth in national development cannot be overstated. In order for society to be revitalised, it must begin with the next generation. The aim of the study is to analyse the role of youth in nation building.

Keywords : Rural women empowerment, Skill development, National integration, Self evident

Introduction:

The role of Youth in nation-building or development is very important, and this is because the development of any nation lies in the future generation. Democracy, economy, technology and the improvement of medical science all lie in hands of the Youth. Poverty, unemployment, global warming, and pollution of many types are the problems that the world is facing today. The answer to solving all these problems lie with the next generation.

History is evident that the next generation has been the answer to solve future problems. As time passes by, it is required to adapt to the changes and bring a change in society. The Youth is capable of doing so; we can bring a change in society. So what is the role of the Youth for better tomorrow? What are qualities that are required to bring a change in society? These two questions are very important, and all the students should know the answer to them.

The role of youth in nation building:

- The youth mind is filled up with talents and creativity
- If they raise their voice on any issue, are successful in bringing the transformation.
- Youth are considered to be the voice of the nation.
- The Youths are like raw material or resources to the nation.
- The way they are shaped, they are likely to emerge in the same manner.
- Different opportunities and empowering youth procedures must be adopted by the nation, which will enable the Youth to make career-oriented in various stream and fields.
- They Need guidance and support, so that, they can be smart enough to pave their own path to success.
- Youth comprise that sphere of the societies, who are yet the developing buds and are fate changers for a nation.

Importance of youth our society:

The world is changing faster than ever before, and it is becoming increasingly clear that

The young people of today will play a critical role in shaping the future. As the population of the world continues to grow, it is estimated that by 2030, there will be more than two billion people aged 15-24 –making up around 20% of the global population. This group represents a huge potential force for change and development, and their involvement is essential for achieving sustainable economic growth.

There are many reasons why youth are so important for economic growth. Firstly, they are the key to driving innovation and creativity. Youth people are often more open to new ideas and willing to take risks, which is essential for coming up with groundbreaking solutions to problems. Secondly, they have the energy and enthusiasm to work hard and make things happen. They are also generally more tech-savvy than older generations, giving them an important edge in today's digital economy.

Youth's roles and responsibilities in today's Era:

Youth and life indeed itself flashes by, in the blink of an eye. That is why you need to ask yourselves what you can do for society and the country. God has vested all power in the hands of the youth so that he can perform his duties effectively. They should start thinking positively and creatively. They must develop the spirit to refute what is wrong in society. They must realize that now is time to take action.

Youth should not seek an easy, comfortable path. No one develops in a pampered environment. These are some key responsibilities that the Young generation must inculcate in them:

- Value of time: It is the responsibility of youth to understand the importance of time. Every moment is crucial for them to take action so punctuality is a must.
- Discipline: Youth has to understand the necessity of discipline in life. Youth is full of passion. Without discipline, the youngsters cannot work passionately.
- Thinking Before Taking Action: Youth must not be impulsive. It is very important

to think before taking action. This is how the Youth will be able to create a thoughtful society.

- Character Driver: Character builds up a nation. The young people need to be morally strong, reflective individual and dedicated which will drive them to take corrective actions for the nation.
- Fearless: The youth must be courageous in taking action. Fearless youth can fight injustice.
- Goal-oriented: The youth needs to be focused on the goal that he wants to accomplish. When the young generation is goal-oriented, then their vision and mission become very clear.
- Zealous: Youth has to be energized, full of vitality. With the attribute of zealousness, the youth can help to protect the national security and interest of a country and ideological position.

Challenges:

- The Qualification Packs defined for a given job role are sometimes too vague or generic.
- Teachers / Trainers have limited or no industry exposure.
- SSCs – Industry linkage is still not established well.
- SSCs do not have the expertise to guide us in implementing the skill course.
- Fee for every SSC activity –Affiliation, QP NOS Alignment , TOT , Assessment is exorbitant
- Industry participation in skilling is still very low.

Outcomes:

- To great extent we will have graduates who are ready for job Market. The employment figure will improve .
- Hence crime rates will come down.
- Companies or employers do not have to spend much time on training the new recruits. Hence productivity and economy will improve.
- Students will be more focused and interested in studies. Student and Teacher interactions will improve.

Conclusion:

Youth Men and Women are the reservoirs of unbounded energy and enthusiasm. Youth should be put to best use; otherwise, they will get involved in wrong activities and waste their energy in doing negative things which can harm the nation. To keep them in the right direction, their energies, skills and talents have to be properly harnessed, channelized and should be used for the common good of the country.

IOT WITH 5G NETWORK: THE NEW ERA OF TECHNOLOGY AND RISKS

Dr. P.A. Padmaavathy MBA, MFM, PGDIM, M.Phil, SET, Ph.D

Assistant Professor, Department of Management
Karpagam Academy of Higher Education, Coimbatore
padmaavathypa@gmail.com

Abstract

With the advent and growth of 5G networks, a new era of inter-connectivity will become a reality with the Internet of Things (IoT). This communication between multiple devices also opens them to vulnerabilities from outside influence, attacks or an unknown software bug. Even the world's most used browser supported by Google, Chrome was found to have serious bugs. 5G architecture is comparatively new in the industry and requires a lot of research to find loopholes to make the system secure from external attack. Every step of the 5G network might bring a plethora of network attacks that we might not be aware of. Here manufacturers need to be very strict in building sophisticated 5G hardware and software to control data breaches. According to the GSM (Global System for Mobile Communications) Association, the number of 5G networks will reach 1.8 billion by 2025. The 5G IoT market was valued at USD 1.5 billion in 2020 and is anticipated to grow at a Rate of 72.9% between 2021 and 2026 to reach USD 40 billion. Globally, wireless technology has been expanding quickly. Fifth generation, or 5G, technology has emerged as the most difficult and intriguing subject in cellular technology. IoT in the 5G system will alter the game. It will make way for innovative wireless design and intelligent services. The paper also seeks to shed light on potential future research avenues leading to the development of secure and privacy-conscious 5G systems.

Keywords: Data integrity, confidentiality, authentication, access control, trust, privacy

Introduction

IoT with 5G

There is a big difference between a 5G implementation and IoT implementation. This is essentially around the standards that are available for either of the architecture. 5G is highly regulated and is built upon a recognized set of standards which have been issued by industry groups such as the Third Generation Partnership Project and the United Nations International Telecommunications Union. IoT devices are largely unregulated and have no generic standards that they can follow.

With the concept of edge computing, processing has moved closer to where the data is. Instead of having to send the data across the network into the cloud and then do the processing and then send it right back, you will be able to shift the whole control plane and allow the data to move between the IoT devices. But this of course has changed the cybersecurity landscape and it has now become a decentralized model. An IoT device is made up of sensors, hardware that connects the sensors and a layer of software. The software does the computing and managing of hardware and the sensor data. Then there is a communication interface, which allow connection to the 5G network.

Creating a generic security architecture is very difficult as there are so many ways to design, build and use an IoT device. Some of the models that have been proposed include the Industrial Internet Reference Architecture, Cisco's Internet of Things reference model etc.

Security risks associated with an IoT system

Current risk methodologies and risk assessments are not designed or fit for the purpose of identifying the IoT related risks, in a thorough and repeatable way. These devices will be connected to the 5G network and will be pervasive and 'on' all the time. The kind of attacks that they'll be vulnerable towards are still pretty much standard ones that affect ordinary on-promise networks – eavesdropping, impersonation, man in the middle attacks, denial of service, replay, repudiation etc. So, if we examine a smart home implementation, where there is a voice activated device that's connected to an IoT connected lock on the front door.

You need not get up and open the door, instead you do that with a voice command. But it also means that the thief or burglar who has identified that you have left the house, can come up to the front door, open the letterbox, and shout the same command and get free access to your home. So, the issue here is a lack of authentication at the IoT device and that device not necessarily having the ability to recognize only the homeowner's voice.

5G will still suffer from the 4G vulnerabilities. It is not possible now to roll out a dedicated 5G network all at once. At someplace 5G is partially implemented side by side a 4G hardware and software components, for an extended period. So, to achieve a strong IoT security baseline it will take a multi layered approach.

Going Forward

Security teams will need to understand how 5G works and where the computing power will happen and how the computing decisions are made. The very nature of 5G networks means that the volumes of data will be order of magnitude greater than what they are now. The traditional approaches, that lot of organizations, now have is not going to work going forward. The volume of data is going to be so vast and the ability to triage that data cannot be done by human operators.

So, you must start thinking around what techniques can be put in place within the IoT, 5G environment in an automatic repeatable and reliable way. Strategies need to be thought about how you're going to securely manage these IoT devices. Another key thing that needs to be thought about is a risk management framework, that will incorporate fully the IoT and 5G environment.

The 4G technology will not be sufficient and efficient to meet the demands for –

- Multi device connectivity
- High data rate
- More bandwidth
- Low latency
- Quality of service
- Low interference.

The internet of things or IoT, is on the rise. The number of connected devices is set to increase from 700 million to 3.2 billion by 2023. While there are several factors contributing to this rise, the most important will be the development of 5G networks. 5G networks will go a long way in improving the performance and reliability of these connected devices & data transfer speeds. The commercial success of any IoT device is ultimately tied to its performance. It is dependent of how quickly it can communicate with other IoT devices, smartphones, tablets, software in the form of app or website and more.

According to reports, 5G will be 10 times faster than current LTE networks. When it comes to smart home devices, this increase in speed helps to reduce lag and improve overall speed in which connected devices send and receive data and notifications. Besides smart home devices, all IoT devices will enjoy greater speeds including those with healthcare and industry applications.

5G – The fifth-generation mobile network offers

- Multi-Gbps peak data speeds
- Ultra-low latency
- More reliability
- Massive network capacity
- Increased availability
- More uniform user experience

5G is a new global wireless standard. It delivers a new kind of network and is designed to connect almost everyone and everything together. When combining 5G with IoT, it should enhance the operational capabilities of these devices. But it also introduces new risks.

As society enters the information age's next phase, recent advancements have given rise to faster wireless data exchange, including:

- Artificial intelligence (AI)
- Data processing
- Cellular communications

4G tops out at speeds around 2 Gbps. 5G technology pushes mobile performance from 2.4 Gbps (LTE Category 20) to reach nearly 20 Gbps by the arrival of 5G-Advanced (3GPP Release 18). Thus, 5G adds a viable high-speed data networking alternative to wired fiber optic networks. Internet of Things (IoT) solutions will connect more than 30 billion devices by 2025. While 5G rolls out at neck-breaking speed, the resulting evolution in communications will bring the world a faster, smarter future.

What Is 5G IoT?

Advancements in wireless broadband and 5G enable increased transmission speeds for corporate networks. 5G is the current cellular communication system generation. As an evolutionary standard, it is being rolled out in phases.

In Phase 1, 5G operates non-stand-alone (NSA) with evolved 4G radio and core networks.

In Phase 2, the 5G New Radio (5G NR) framework and new core network aim to set the foundation for a new era of wireless connections worldwide. It includes multiple access for connectivity technologies like satellites, Wi-Fi, fixed-line and cellular (as standardized by 3GPP).

With IoT-enabled devices in mind, 5G connects a higher density of devices at higher speeds and makes things lag nearly non-existent. As a result, 5G creates an excellent user experience irrespective of what application, device or service you touch.

Massive cellular IoT technologies are characterized as low-cost, low-power consumption solutions. They thrive on deep and broad coverage indoors and outdoors. Massive cellular IoT delivers:

- Secure connectivity and authentication
- Ease of deployment
- Full-scope scalability and capacity upgrades

5G's adaptability enables businesses and industrial organizations to connect more devices with better capability for less.

Mobile IoT Systems Are Paving the Way for 5G

As proposed by GSMA, mobile IoT refers to cellular low-power wide-area (LPWA) technologies using licensed spectrum bands. 3GPP narrowband IoT (NB-IoT) and Long-Term Evolution machine-type communication (LTE-M) technologies are 5G-era bearers of low-power, low-data IoT applications. Cellular LPWA paves the path to 5G with undisrupted information flow. These 4G technologies continue under full support in 5G networks for many years and releases.

3GPP technologies like 4G LTE and 5G help businesses expand the reach of their IT and OT networks across hard-to-reach areas. They require an easily scalable deployment strategy and architecture. Think of smart utility solutions in water and gas grids. Managers must remotely monitor environmental conditions from thousands of sensors and control valves and regulators to support consumer usage.

In addition, they must prevent or mitigate line breaks and other failure conditions across multiple sites. Managers must react in milliseconds to avert disaster and loss of life. IoT enables all the tools and resources managers need. Cellular networks are adapting to the need to service billions of new devices. These devices require connectivity solutions that make the grade in business dimensions and technically.

Enterprises deploying either NB-IoT or LTE-M are future-proofing their IoT projects. As 5G becomes commonplace, these mobile IoT standards continue to integrate into upcoming 5G releases.

Current Applications of 5G IoT

Early 5G IoT use cases focused on:

- Enterprise and high-speed industrial networking
- Customer premise equipment (CPE)
- Mobile computing
- Video broadcasting
- Fixed wireless access (FWA)

As adoption grows, they will evolve and use public and private networks to stream virtual and augmented reality and 3D video (which requires high bandwidth). Moreover, 5G applications will be used for critical communications like factory automation, uncrewed aerial vehicles (UAVs) and more. 5G IoT will improve everyday life from personal applications to changing how we work and live. With 5G IoT, facilities will continue improving to send critical upgrades to networks without freezing functionality or overloading servers.

Current industries that will continue benefiting from these 5G IoT enhancements include:

- Automotive and transportation
- Smart factories
- Smart buildings
- Smart cities
- Smart utilities
- Security and surveillance
- Agriculture
- Retail
- Health care

Future 5G Use Cases

Smart homes, synced watch-and-phone IoT devices and fitness apps are commonplace. They will grow with the speed and performance capabilities of 5G. With a heavy reliance on mobile IoT on such a grand scale today, in the next 20 years, the 5G future will look completely different. We will see large-scale autonomous vehicle deployments and utility service automations like waste management. We will also see energy production through

smart grids and smart environmental monitoring to reduce greenhouse gases and pollution.

Imagine being able to park a smart car in a parking garage and gaining wireless charging through the city grid while you work. Then you can message your vehicle to drive from the parking garage to your office door. Farmers will be able to monitor and track crops, livestock and machinery through drones and super-dense sensor networks. Home users will be able to fully integrate the COVID-led work-from-home paradigm, which looks likely to survive the pandemic as a new corporate norm. In addition, home users will be capable of optimizing power usage and streaming their favorite entertainment from anywhere. Society will be more efficient, smart cities will live up to their name, and users can expect personalized streams of information catered to their liking.

5G Applications and use cases for the IoT

Developers have imagined a new digital world

- Where doctors can treat patients in rural areas remotely, even performing remote surgery,
- Where workers present media-rich presentations from home without interruption,
- Where autonomous driving has the potential to reduce accidents and traffic jams,
- Where smart grids eliminate brown and blackouts worldwide,
- Where ubiquitous connected sensors assist vehicle parking and avoid collisions, monitor electrical systems, alert for conditions that could lead to fires, and monitor patient health from afar.

These innovations could help prevent devastating fires, improve health outcomes for patients lacking access to traditional healthcare and change auto travel. Enterprises will be able to manage their data with network slicing for private networks, opening up new secure ways of data management, integrity and access. The power of the new 5G networks being rolled out today will enable these innovations and more, giving so many industries a leap forward in productivity and efficiency.

The challenge

However, tens of billions of connected devices can expose an overwhelming number of vulnerabilities. Connecting cars, water meters, appliances, and critical infrastructure like the electricity grid is different from connecting today's smartphones. The staggering amount of data requires worldwide regulations and secure data protection to ensure these future solutions do not present new threats. Some applications require low bandwidth and coverage in challenging installation situations, others ultra-high bandwidth.

Many solutions are designed to be in the field for decades and battery-powered, often required to withstand harsh environments. The right technology partners will be critical to leveraging 5G.

- **CONNECT** and manage devices on the 5G network with resilient solutions and certified, reliable services.
- **PROTECT** devices, identity and data. Building a secure 5G network that guarantees privacy.
- **PREDICT** industry needs to build a resilient 5G network. Future-proof solutions to leverage today and prepare for tomorrow.
- **MV31 Modem Card** – Designed to optimise 5G enhanced Mobile Broadband (eMBB), Thales's award-winning Cinterion® MV31-W IoT modem card is ideal for industrial IoT applications.
- **Hardware Security Modules (HSM)** – Thales offers a dedicated crypto processor specifically designed to protect the crypto key lifecycle. Hardware security modules act as trust anchors to protect the crypto infrastructure, which is used in some of the world's most security-conscious organisations, in a hardened, tamper-resistant device.
- **High-Speed Encryption (HSE) solutions** – As data is always in motion, securing it requires proven network encryption solutions. Thales provides a single platform to secure data in motion – from network traffic between data centres and headquarters to backup and recovery sites, on the physical premises or in the cloud.
- **5G SIM products** – The only solution to secure 5G networks, the Thales 5G SIM is tamper-proof, secure, and explicitly designed to enhance mobile broadband, massive IoT applications and critical communications.
- **SIM Over-The-Air (OTA) platform** – Thales Cloud OTA enables remote and secure management of SIMs and eSIMs for seamless connectivity and services. Designed for optimum efficiency and the best MNO experience across all networks and channels (SMS, HTTP, NAS), the platform is built on open standards and is fully interoperable.
- **CipherTrust Manager key management** – an industry-leading enterprise key management solution, Thales enables organisations to centrally manage encryption keys, provide granular access control and configure security policies.

Conclusion

The Internet of Things (IoT) began with simple remote monitoring of things like vending machines and first-generation smart refrigerators. Today it has moved on to fully connected cars, smart grids that span entire cities and countries, and telehealth for a new age of healthcare and wellness. By 2025, forecasts suggest as many as 75 billion IoT connected devices, nearly 3x the number in 2019. And new 5G networks are giving way to transformative IoT applications for many industries with plenty of innovative IoT use cases. Low latency and expanded networks mean 5G can reach 10 times more devices per square kilometre than 4G. Improved speeds are ten times faster than 4G. It's not just a better network; it's an entirely NEW "cloud-native" network built from the ground up. And while the IoT stands to benefit massively from this erupting technology, there is no denying that 5G capabilities demand solid groundwork and preparation for device makers.

Abstract

To use information technology to improve learning processes, the pedagogical assumptions underlying the design of information technology for educational purposes must be understood. This paper reviews different models of learning, surfaces assumptions of electronic teaching technology, and relates those assumptions to the differing models of learning. Our analysis suggests that initial attempts to bring information technology to management education follow a classic story of automating rather than transforming. IT is primarily used to automate the information delivery function in classrooms. In the absence of fundamental changes to the teaching and learning process, such classrooms may do little but speed up ineffective processes and methods of teaching.

Keywords: Education technology, Classroom technology, Electronic classrooms, Learning instructions.

Introduction

Globalization and technological change—processes that have accelerated in tandem over the past fifteen years—have created a new global economy “powered by technology, fueled by information and driven by knowledge.” [1] The emergence of this new global economy has serious implications for the nature and purpose of educational institutions. As the half-life of information continues to shrink and access to information continues to grow exponentially, schools cannot remain mere venues for the transmission of a prescribed set of information from teacher to student over a fixed period of time. Rather, schools must promote “learning to learn

Information and communication technologies (ICTs)—which include radio and television, as well as newer digital technologies such as computers and the Internet—have been touted as potentially powerful enabling tools for educational change and reform. When used appropriately, different ICTs are said to help expand access to education, strengthen the relevance of education to the increasingly digital workplace, and raise educational quality by, among others, helping make teaching and learning into an engaging, active process connected to real life.

However, the experience of introducing different ICTs in the classroom and other educational settings all over the world over the past several decades suggests that the full

realization of the potential educational benefits of ICTs is not automatic. The effective integration of ICTs into the educational system is a complex, multifaceted process that involves not just technology—indeed, given enough initial capital, getting the technology is the easiest part!—but also curriculum and pedagogy, institutional readiness, teacher competencies, and long-term financing, among others.

AIMS

- To provide an international forum for educators to discuss research and practice in:
 - teaching informatics
 - educational uses of communication and information technologies (ICT)
- To establish models for informatics curricula, training programs, and teaching methodologies.
- To consider the relationship of informatics in other curriculum areas.
- To promote the ongoing education of ICT professionals and those in the workforce whose employment involves the use of information and communication technologies.
- To examine the impact of information and communication technologies on the whole educational environment:
 - teaching and learning
 - administration and management of the educational enterprise
 - local, national and regional policy-making and collaboration.

Scope

It-Professional and Vocational Education in Information Technology

Focus is on the area of professional and vocational education rather than on specific computing curricula in primary, secondary or tertiary educational institutions.

Distance Learning

To consider what is necessary to prepare the whole society for living in the information age, using a distance learning system

Lifelong Learning

All aspects of the interactive role of informatics and resulting technologies in lifelong learning.

Research on Education Applications of Information Technologies

To provide a forum to identify issues and priorities for research and to map research policies arising from the differing cultures in IFIP Member countries.

Information and Communication Technologies in Elementary Education

The role of Information and Communication Technologies (ICT) in elementary education (age range from pre-school to 13 years).

Informatics and ICT in Secondary Education

The role of both informatics and resulting Information and Communication Technologies (ICT) in secondary education (age range from 11 to 18 years).

Informatics and ICT at the Level Of Higher Education

The role of both informatics and resulting Information and Communication Technologies (ICT) in higher education.

Information Technology in Educational Management

Focus is on use of Information technology within the educational management of educational institutions, educational authorities and educational system networks, to enhance educational effectiveness and development.

Role of Information & Communication Technology in Education

Information and communication technology has quickly become a key part of the infrastructure of classrooms and schools. From preschool to higher education, computers, laptops, smartphones, smart boards and tablets are powerful mediums through which to get information and communicate. In the 21st century, technology plays a role in every facet of education as students, teachers and administrators turn to their computers to access information, create and express themselves, communicate and collaborate, and track the achievement of learning outcomes.

Information Access

Technology plays a central role to both students and teachers searching for information. Online reference material, such as Encyclopedia Britannica Online, offer vast amounts of content supplemented by engaging multimedia and interactive links. EBook collections offer thousands of texts, and the sheer amount of online articles and journals devoted to every imaginable topic make research efficient and highly rewarding. Teachers looking to engage their students have access to thousands of images, diagrams, videos, maps, animation, games and a host of other options to appeal to the varied learning styles of their individual students. Today's broad access to educational resources encourages students to inquire more and follow pathways of information according to their own interests. Information technology thus plays a key role in the development of the autonomous learner.

Creativity and Self-Expression

Information and communication technology also plays a role in how students express themselves and reflect on their learning. Aided by the digital recording functions integrated into smartphones, tablets and other electronic devices, students are able to index the world the way they see it and add their own perspective to already existing bodies of knowledge to create original work. With audio, photo and video editing software and the various ways to post self-created media on the Web, students not only access information but contribute to its creation. The ability for students to be active members of the learning

community, whether on the small scale of a school's social media site or on the larger canvas of the entire World Wide Web, gives their work broader significance and affirmation.

Communication and Collaboration

Information and communication technology provides students and teachers more opportunities to communicate and collaborate. With Learning Management Systems such as Blackboard and Moodle, many courses have an online space to participate in discussion threads and forums, chats, and video conferences. Collaborative functions in office applications allow students and teachers to view revisions and add comments in real time, making the process of relaying feedback more efficient. Technology further transcends traditional brick-and-mortar settings by providing working adults and parents taking care of children, geographically-isolated students, and the underprivileged the opportunity to connect and interact with learning communities through online schools and educational networks

Student Achievement and Learning Outcomes

Information and communication technology also plays a role in how administrators assess the achievement of student learning outcomes. Various assessment tools such as standardized tests, student portfolios, rubrics, and surveys yield data that can be collaboratively analyzed by an educational institution to find areas in which to improve. As the data is entered into databases and statistics, charts and graphs are generated, and administrators identify patterns and make decisions involving changes in the curriculum and budget allocations. Technology has a prominent role in assessment and evaluation and helps direct curricula to the greater achievement of students.

Need

- Education is a life long process therefore anytime anywhere access to it is the need
- Information explosion is an ever increasing phenomena therefore there is need to get access to this information
- Education should meet the needs of variety of learners and therefore IT is important in meeting this need
- It is a requirement of the society that the individuals should posses technological literacy
- We need to increase access and bring down the cost of education to meet the challenges of illiteracy and poverty-IT is the answer

Importance

- access to variety of learning resources
- immediacy to information
- anytime learning
- anywhere learning

- collaborative learning
- multimedia approach to education
- authentic and up to date information
- access to online libraries
- teaching of different subjects made interesting
- educational data storage
- distance education
- access to the source of information
- multiple communication channels-e-mail,chat,forum,blogs,etc.
- access to open courseware
- better accesses to children with disabilities
- reduces time on many routine tasks

Advantages

- students can use ICT to organise their work and make it more clear
- ICT can support different teaching methods, this varies the way students can learn
- some computer programmes such as teaching programmes provide immediate feedback on work completed by students
- some applications can save time and effort such as programs that teach french vocab, these are quicker and more effective than using paper
- encourages collaborative work, so students can work together

Disadvantages

- ICT equipment is expensive and needs trained staff to maintain it correctly
- hardware can be unreliable leading to breakdowns which cause frustration
- using ICT means children can become dependent on computers and technology and not learn how to do things by hand
- internet can lead to children accessing unsuitable sites
- plagiarism has increased as students find pre written work online leading to students gaining unfair results on coursework

Conclusion

Information and communication technology (ict) has become, within a short time, one of the basic building blocks of modern society. Many countries now regard understanding ICT and mastering the basic skills and concepts of Ict as part of the core of education, alongside reading, writing and numeracy.

Abstract

The role of ICT in enhancing the quality and accessibility of secondary education in Nigeria cannot be glossed over. New and emerging technologies challenge the traditional process of teaching and learning, and the way education is managed. Easy worldwide communication provides instant access to a vast array of data, challenging assimilation and assessment skills. In developing countries like Nigeria, effective use of ICT for the purpose of education has the potential to bridge the 'digital divide'. This paper therefore gives a conceptual insight into the whole web of ICT and secondary education. Obstacles to ICT are identified and then specific effort is devoted to the ways ICT contribute to the enhancement of quality and access in secondary education.

Information and Communications Technology is an umbrella term that includes any communication device or application, encompassing: radio, television, cellular phones, computer and network hardware and software, satellite systems and so on, as well as the various services and applications associated with them, such as videoconferencing and distance learning. ICTs are often spoken of in a particular context, such as ICTs in education, health care or library.

Key words: ICT, Teaching, Learning, Technology

Introduction

Information and communications technology (ICT) engineers are developing and creating a virtual world offering new services and new applications to help people both in their work and their daily lives. Nevertheless, ICT engineers are almost always constrained in their project development by the intrinsic hardware performances of calculators, storage systems, and communication systems. The monitoring and measurement of physical ICT system performances are crucial to assess the computer processing unit (CPU) load, the available memory, the used bandwidth, and so on to guarantee the ICT-based services correctly work regarding their expected use.

Objective of the Study

- To sort out the importance of ICT Education
- To list out the approaches of ICT Education

Importance of Ict Education

1. Increased access to educational resources

- ICT enabled the learners to access wide range of online educational resources through internet
- These resources include online textbooks, e-books, videos, and educational software that can be accessed from anywhere and at any time.
- Learners may not be able to access all these resources through traditional teaching methods

2. Enhancing teaching and learning processes

- ICT tools make teaching and learning more interactive, engaging and effective.
- These tools include interactive whiteboards, educational apps and learning management systems.
- This can improve the learning outcomes and teacher effectiveness

3. Personalization of learning

- ICT can be used to personalize learning
- It can provide personalized learning paths, feedback, and recommendations.
- This approach can provide the individual needs of learners.

4. Collaborative learning

- ICT enables learners to work together on group projects and activities, even if they are in different geographical locations.
- This can help to improve collaboration skills and expose learners to a variety of perspectives and ideas.

5. Improved communication

- ICT can improve communication between, teachers, students, and parents.
- It allows teachers to communicate with their students through email, online discussion forums, and instant messaging.
- Parents can keep track of their children's progress through online portals

6. Convenience

With the use of ICT, learners can study at their own pace and at their own time, allowing them to balance their learning with other activities or work

Five Pedagogical Approaches

1. The Constructivist Approach

The constructivist approach is based on the concept of constructivism. This is the belief that learners create their own understanding of the world around them, and this understanding is based on experience through their everyday lives as they grow. Using specific experiences, people transform information they've accumulated into knowledge

and understanding. This approach is handy for allowing learners to take a more active role in the learning process, as it encourages them to use their previous knowledge as a foundation for understanding new concepts, as opposed to passively receiving information.

2. The Collaborative Approach

The collaborative approach puts a big emphasis on collaborative learning, which is the idea that learners work together to gain a greater understanding of the information they've been presented with. The strength of this approach is that learners can capitalise on each other's understanding of the information, and even their unique skills and resources.

This process allows for learners to create an environment where people can interact with each other by sharing experiences and knowledge. This can be done in a variety of ways, including exchanging ideas and information, and even evaluating or monitoring somebody else's work.

3. The Reflective Approach

The reflective approach focuses primarily on analysing what the teacher and learners are doing in the classroom. It encourages thinking about teaching practices and figuring out ways to improve them in an attempt to make learning processes more effective for a class of learners. This can be done through processes such as self-evaluation and self-reflection, used as ways to essentially learn more about your own practice, improve a certain practice (like small groups and cooperative learning) or to focus on a problem learners are having.

Some specific forms of assessment that anyone can use in a reflective capacity are diary presentations and journals.

4. The Integrative Approach

The integrative approach differs from the other teaching approaches in the sense that it tries to provide learners with an environment where they can make connections between the current topic they're learning about and other topics they'll come across at different stages of the curriculum. This means that it tends to focus on specific connections between different bits of information, rather than facts in isolation.

While this approach is more commonly used in higher education, it can still be quite useful at other stages of education too, as it can help learners gain a broader understanding of the world around them by linking together bits of related information. Studies have shown that this kind of approach can help learners stay engaged on the topics they're learning about.

5. The Inquiry-Based Approach

The inquiry-based approach is unique in the sense that it encourages learners to engage in exploration, investigation, research and study. It begins with presenting questions,

scenarios or problems that require critical thinking to solve, which is vastly different from other approaches where facts are presented in simple manner.

This approach requires more than just simply giving the correct answers to questions and encourages more thoughtful and engaged participation from learners. This makes it incredibly effective when teaching science, as many science topics are more easily learned through an understanding of processes rather than isolated facts.

Conclusion

The way students learn is being redefined by the intervention of information and communication technology. It is making learning easier and more effective for both students and teachers.

ICT USAGE IN HIGHER EDUCATION: A CASE STUDY ON PRESERVICE TEACHERS AND INSTRUCTORS

Ms. K. Gowri

Assistant Professor, School of Commerce
Nehru Arts and Science College, Coimbatore

Abstract

The utilization of technology to access information and communicate is known as Information and Communication Technology (ICT). This research concentrates on the impact of ICT on higher education, particularly the integration of online education. The authors conducted an analysis of relevant literature and discovered that incorporating ICT into the classroom has prompted educators and institutions to reevaluate their teaching methods. However, the lack of legislative provisions, infrastructure, and teacher/student competencies pose significant challenges to delivering excellent education for learners. Despite these obstacles, the surging popularity of ICT is driving a revolution in both the organizational framework and instructional methods of classrooms. It is imperative to enhance and expand the current digital platform and continue ICT-based educational efforts to guarantee that all students have access to high-quality education both now and in the future.

Keywords: Technology, Internet, Distance Learning, and Advanced Study

Introduction

The impact of technology on our lives has been nothing short of revolutionary, and this has led to an increased demand for educational institutions to adapt their programs and classrooms accordingly. To bridge the gap between current and future teaching and learning technology, institutions must effectively integrate technology into their existing contexts to promote meaningful learning, enhance productivity, and provide learners with knowledge in specific subject areas. Unfortunately, recent research has shown that many institutions are falling short in this regard. Despite possessing the necessary skills, innovation, and problem-solving abilities, teachers are failing to consistently integrate technology into their teaching and learning practices. There is a clear need for further research on how ICT can improve education, and this is especially true given the ongoing problems that teachers encounter in adopting it. While Turkey has made some innovative attempts to increase ICT use among teachers, such as building ICT classrooms and providing laptops for projects, the extent and nature of ICT usage in Turkish educational institutions remain limited and varied. In the end, the key to effective usage lies in the instructor, regardless of the quantity of technology present in the classroom.

It is imperative that teachers possess the necessary skills and competencies to effectively integrate technology into their teaching. Simply using technology on its own does not indicate successful integration. Therefore, it is crucial for teacher educators to focus on integrating instructional technology education into the context of teachers' work in the classroom. Wang, Ertmer, and Newby (2004) found that as teachers become more confident in their ability to use technology, meaningful technology use will become more common in K-12 classrooms. To effectively use technology in the classroom, teachers must

develop broader skills for using tools, focus on the power of technology, and shift traditional patterns of classroom interaction through the use of technology, as identified by Deaney, Ruthven, and Hennessy (2003).

Institutions of higher education must prioritize technology use to prepare teachers for 21st-century classrooms. Understanding how instructors and pre-service teachers in education programs view technology is crucial in successfully integrating technology into their programs. By examining the factors that contribute to successful technology integration, we can educate technology-competent teachers. The purpose of this study is to provide recommendations for effective technology utilization and ensure that teachers possess the necessary skills and competencies for the successful integration of technology into their teaching.

The Significance of ICT

Theories abound on why some countries are more developed than others. Despite lacking natural resources, colonial history, or a favorable geopolitical environment, some developed nations still thrive, thanks to their advancements in technology and science. Measuring technological advancement is best done through the proliferation of information and communication technology (ICT). ICT is a primary indicator of technical and economic growth and advancement, with its impact on society and businesses worth investigating academically because it brings both opportunities and challenges. Globalization of the economy, culture, and other aspects of modernization is impossible without ICT. It has shifted economies from being manufacturing-dependent to being centred on information and research. In India, ICT mainly refers to digital technologies like computers and the Internet, but the reasons and methods of usage are not well-discussed. Schools and universities invest heavily in technology, but without proper education and training for educators, it is ineffective. Therefore, it is critical to persuade educators of the value of ICT for it to be effective in promoting growth and development.

ICT'S Role in Higher Education

The integration of information and communication technologies (ICT) in higher education has profound implications for the entire educational process. ICT-based applications provide organizations with a competitive edge by expanding services, driving efficiency, and enhancing learning experiences while managing access, equity, effectiveness, quality, and research and development.

To address the shortage of professors in higher education, the Educational Satellite will utilize ICT to share expertise through modular programs, build a knowledge library of diverse disciplines, network institutions, construct virtual labs, build databases, access lectures by industry experts, and incorporate technology advancements. Traditional teaching methods like chalk and talk may be replaced with modern approaches like animated presentations, simulations, and video clips, paving the way for future advancements.

In educational administration, the use of ICT is crucial for effective resource utilization and streamlined administrative tasks through electronic record keeping. In research, ICT enables global connections, fosters online communities, and improves the quality of work while saving time, money, and effort.

As India's higher education system faces increased complexity, new approaches to managing institutions must be explored. Instruction supports knowledge creation, and learning is an active process of producing knowledge. E-administration focuses on efficient resource use, and technology-enabled learning shifts the emphasis from instructors to students, with instructors taking on new roles as coaches, mentors, and facilitators.

Universities play a significant role in national income and social progress by teaching, researching, and fostering innovation. Collaboration between academia, business, and government fuels economic expansion. It is imperative that we adopt these technologies to stay ahead of the curve and ensure our continued success in higher education.

Method

In order for educational institutions to effectively integrate technology into their teaching activities, it is important for teachers to be competent in technology and know how to use it effectively. A study was conducted to gain an understanding of how instructors and pre-service teachers in a faculty of education perceive the role of technology in higher education. The study aimed to answer the following research questions:

1. What technology is currently being used by both instructors and pre-service teachers?
2. What technologies and activities do pre-service teachers require?
3. What do pre-service teachers think about the computer and technology facilities provided to them?
4. How do instructors perceive the use of technology in teaching activities?
5. What obstacles do instructors face during the technology integration process?

This study includes all the willing members of the Faculty of Education who were accessible. The number of accessible participants and their percentages are listed in Table-1.

Table - 1 Accessed participants of the Faculty of Education

	Total Number of Participants	Accessed Number of Participants	%
Administrators	8	8	100
Instructors	28	27	96
Students	558	304	55

For the purpose of gathering data, two questionnaires were developed - one for academic staff and another for preservice teachers. The questionnaire for academic staff consisted of 71 items, including 26 questions related to ICT usage, 8 questions about factors encouraging technology usage, 21 questions regarding obstacles, and 18 questions about self-perceived competencies. The questionnaire for preservice teachers had 46 items, with 22 questions about preferred technologies and frequency of ICT usage, and 19 questions using a 5-point Likert scale to seek their views on ICT. Descriptive statistical techniques, such as frequency (f), percent (%), and mean (X), were used to analyze the data.

Difficulties of ICT

The adoption of ICT in higher education faces numerous obstacles, despite the government's good intentions. One of the most significant challenges is the lack of resources available to schools to fully utilize ICT. Fast internet access is also essential for integrating ICT into classrooms, but the quality of connectivity is often insufficient. The scarcity of funding and technology-supported infrastructure hinders effective use of ICT.

Effective technology integration into educational institutions requires substantial investment in ICT-related equipment, software, internet, audiovisual aids, instructional aids, and other peripherals. Unfortunately, not all parties involved can afford to cover these expenses, leading to inadequate resources as another obstacle.

The biggest challenge to utilizing ICT in classrooms in poor countries is the lack of political will among those in positions of power. Government officials must support the technology for it to thrive, but priorities shift after a change in central government, indicating a shift in the government's vision and goal.

Teachers' attitudes are crucial in determining the utilization of instructional technology. The integration of ICT-based learning depends on their attitudes. Teachers require a "conceptual change about their ideas about the nature of learning, the function of the student, and their position as teacher" to use and integrate computers successfully.

Instructors' knowledge and abilities are essential for educational progress. Both industrialized and developing nations struggle to employ ICT in education due to teachers' lack of knowledge and abilities. Technology integration necessitates topic knowledge, student learning, and technical skills.

Limited available class time is a major barrier to integrating ICT into classroom instruction. Teachers require adequate training and planning time, as well as time to collaborate with colleagues before they can effectively use these new technologies. Additionally, teachers need time to learn how to use technology effectively in the classroom. Educators' comfort levels and willingness to use technological strategies in the classroom vary.

Findings

Demographics

The demographic at a about accessed academic staff and preservice students is below.

According to departments, the percentages of preservice teachers were as follows:

At the Faculty of Education, the distribution of students across different departments is as follows: Computer and Instructional Technology Department has 18.1%, Elementary School Mathematics Teaching Department has 15.5%, Turkish Language Teaching Department has 8.6%, Foreign Language Department has 24%, Elementary Education Department has 17.8%, and Preschool Education Department has 13.5%.

For grade distribution under the Elementary Education Department, 39.5% of students are in 1st grade, 35.5% are in 2nd grade, 16.4% are in 3rd grade, and 7.6% are in 4th grade.

It is noteworthy that 80.3% of the students are female, while 15.5% are male. Also, 81.6% of students own personal computers, and 54.9% have internet connections.

Regarding computer usage, 35.5% of the surveyed subjects reported using the computer for less than an hour daily, 15.5% used it for 1-3 hours, and only 4.6% used it for more than 5 hours per day.

In terms of computer experience, 17.4% of participants reported using a computer for less than a year, 25% used it for 1-3 years, 18.8% used it for 3-5 years, and 33.6% used it for over 5 years.

Perceptions of Preservice Teachers

Effective incorporation of technology into the classroom requires one computer for every six students. However, the current reality is that there is only one computer available for every twelve students. Despite the availability of educational software, traditional tools such as boards, printed materials, and overhead projectors are still commonly used in the classroom.

According to a survey of preservice teachers, only 25% believed that instructional media were being efficiently used in their educational courses. The majority of academic staff relied on traditional tools such as boards (99%), overhead projectors (93%), and printed materials (93%) during instruction. Preservice teachers expressed a strong desire for increased use of computers (85%), TV and video (70%), and overhead projectors (60%) during instruction.

Despite 87% of preservice teachers expressing interest in using electronic media to communicate with classmates and academic staff, only 48% had access to such technology. When it comes to their preferred technologies to use in the classroom, 27.3% chose "Computer Assisted Education," 16.1% preferred Internet/Web, 14.8% selected "Computer and Projector System," and 13.5% favored "Multimedia Computer."

As for software preferences, presentation software was the most favored (25.3%), followed by Internet Browsers (13.2%), educational software (12.5%), and animations software (8.6%). Refer to Table-2 for further thoughts and opinions from preservice teachers.

Table -2 The Percentages of Responses of Preservice Teachers for Technology Usage

Technology Usage Levels	Always %	Rarely %	Never %
The faculty effectively utilizes technology in their courses.	11,5	70,4	17,1
Students should be equipped with the necessary skills to use any technology before they graduate.	11,2	61,5	26,0
The courses offered by the faculty equip us with fundamental skills and knowledge to effectively use computer applications.	36,5	48,7	13,5
Our academic staff provides guidance on utilizing supplementary materials for our courses.	34,2	48,0	16,4

Of the preservice teachers surveyed, a mere 44% reported receiving basic knowledge and skills for effective use of computer applications. This is inadequate! A quarter of students also indicated that instructional technologies had been effectively used in their faculty of Education courses. This is unacceptable! It's time for computer-related courses to better meet the needs of students' computer usage. It's also crucial that students feel they have adequate skills for using instructional technologies in their future profession.

It's encouraging to note that the vast majority of students, 92%, expressed a desire to take courses taught by academic staff who extensively use instructional technologies. However, it's concerning that only 30% of students felt they had adequate skills for using instructional technologies in their future profession.

When it comes to computer and educational software, it's alarming to see that 86% of students had never used a database, and 68% had never used educational software. This needs to change! While word-processing (72%) and internet browsers (62%) are popular, it's crucial that students gain experience with other software like electronic presentations (68%), animation software (66%), web page development software (54%), and educational software (51%).

Outside of courses, students preferred to use supportive materials like web pages, computer-assisted applications, the internet, and online tutors. However, it's imperative that students are given opportunities to use a variety of software to develop their skills and be better equipped for their future profession.

Perceptions of Instructors

Classrooms equipped with a range of ICT tools, including computers, projectors, TVs, videos, overhead projectors, and the internet are essential for effective teaching, according to the academic staff. Standardizing technology across all classrooms, including special classrooms with high-tech facilities, is necessary to meet their expectations.

Dedicated laboratories in language, mathematics education, multimedia, research, and motor skills instruction are also required, with academic staff members recommending an increase in the number of tools per student to enhance effectiveness. They frequently use overhead projectors, printed materials, the internet, and computers to prepare and conduct courses.

Academic staff primarily use computers for communication, preparing examinations and course materials, researching on the internet, and making presentations. They are willing to participate in any course, seminar, or workshop about technology usage, although a busy schedule and a lack of staff often present obstacles. Professional support and information on technology usage for research activities are necessary.

87% of academic staff recognize computers as a supportive tool for instruction and other activities, with 49% believing that they can be easily integrated into the curriculum as an instructional medium. The factors that encourage technology usage among instructors were rated by them, with the "Existence of plans and strategies of the faculty in order to diffuse instructional technologies" as the most important.

The academic staff faces challenges in using technology due to a lack of time and resources. Continuous development schemes are needed to enhance their technology usage. They also suggested that they need to be informed about the integration of technology into the curriculum and use it efficiently through in-service education activities such as seminars and workshops. Additionally, they recommend supplementing informative materials about technology usage and innovation.

Academic staff members are willing to use technology effectively in their courses and expect more support in terms of infrastructure and in-service training. However, with more work and effort, effective integration of technology can be achieved.

Discussion and Conclusion

The study uncovered a positive attitude towards integrating technology among preservice teachers and instructors in both in-class and out-of-class activities. This willingness to incorporate technology is an essential initial step towards achieving effective implementation. In fact, almost all academic staff expressed a strong desire to participate in technology-related courses, seminars, and workshops, highlighting the critical need for professional development. However, a common issue that arose was the lack of electronic classrooms. With technology rapidly evolving and becoming increasingly integral to society and science, both preservice teachers and instructors strive to incorporate it into all aspects of their lives, including their teaching careers.

Preservice teachers consider "Computer Aided Instruction" and electronic presentation as their preferred technology and software, respectively. The expectations of preservice teachers are vital, as technology has been shown to enhance student learning, but this relationship is influenced by student characteristics. Despite their readiness to use technology, preservice teachers felt that it was rarely employed in classrooms, and their expectations were not met. They also expressed a need for lessons to teach them the necessary skills to become technology-competent teachers. Instructors also acknowledged the inadequacy of computer literacy courses provided to students in the faculty, both in terms of quantity and quality.

The Higher Education Council oversees higher education in Turkey. They recently updated the curriculum for all departments in the faculties of education to meet the needs of students and instructors. This updated curriculum, set to be implemented in the 2005-

2006 term, aims to train teachers in technology skills and improve overall teaching effectiveness. However, further research is necessary to determine the specific effects of these changes.

Creating learning environments that support technology use is essential. Every classroom should have an overhead projector and computer projector system to facilitate effective technology use. Professors should model technology competencies and receive in-service training to improve their skills.

To integrate technology into teaching and learning effectively, we must increase the quantity and quality of lessons addressing technology, provide teachers with qualified in-service training, and equip learning environments with the necessary technological tools. Unfortunately, limited infrastructure support and challenges in infusing internet use into the curriculum prevent realizing the potential benefits of using the internet as a learning tool. Successful technology integration requires teacher leadership, alignment with the curriculum, and recognition of the role of technology in education. Infrastructure and teacher competencies are critical for the successful implementation of technology in the classroom.

Abstract

Information and communication technology (ICT) has brought revolutionary changes to enhance professional development of teachers. At present several ICT related instructional devices like computers, smart phones, laptops, tablets, LCD, multimedia and projectors are used in classrooms for making more attractive and productive teaching and learning process. With the advancement of Information Communication Technologies (ICTs) and their uses in teaching learning process and in teacher training, the nature, scope and opportunities for professional development of teachers have changed.

Keywords: Professional development, personal development, communication, information.

Introduction

ICT Stands for Information and communication technology/technologies. There is no universal definition, ICT refers to all devices networking components, applications and systems that facilitate interaction with the digital world. Sometimes ICT is used interchangeably with IT or Information technology. But ICT is more comprehensive including more components related to computers and digital technologies components include data, internet access, cloud computing, software, hardware, transactions and communications technology. But more importantly ICT encompasses combinations and applications of those components. ICT has drastically changed how people work, communicate, learn and live and continues to revolutionize all parts of the human experience from computers to robots, and ICT contributes greatly to our economic development. Some have labeled it the 4th industrial revolution. Within the ICT market advancement of ICT capabilities has made the development and delivery of various technologies cheaper for vendors and the customer also providing new market opportunities for businesses. Advances within ICT have brought a slew of cost saving opportunities and conveniences, ranging from highly automated cost cutting business process, to the big data revolution that leads new insights products and services, to ICT driven transactions like online shopping, telemedicine and social media. However, ICT is

not without its downsides. The digitization of data led to new levels of crime, automation tools and robots that can displace workers, and many believe ICT has stifled human interaction.

What is professional development?

Process of improving and increasing capabilities of staff through access to education and training opportunities in the workplace, through outside organization, or through watching others to perform the job. Professional development helps to build and maintain morale of staff members, and is thought to attract higher quality staff to an organization. Also called staff development. Professional development is learning to earn or maintain professional credentials such as academic degrees.

Professional Development Cycle:

Personal Development through Ict

Enriching knowledge:

Through ICT our knowledge is enhanced modified developed improved which leads to the boosting of our memory as well as thinking capacity. Teacher knowledge is enhanced by more availability of content which leads him/her acquiring more information which is enriched in quality and leads to healthy and beneficial learning-process.

Acquiring new skills:

Skills can be gained through practice, in active state of mind where one is enable to differentiate, generate, develop. Students acquire skills by observing how one can work on excel, how one can communicate with each other how to search on internet whenever facing difficulty regarding studies, how to share their problems with their colleagues, peers, teachers and families.

During lessons at primary level we note that the use of Internet has facilitated the development of effective learning skills, self- assessment, adaptation to new technologies, and development of volitional capacity, cognitive and even emotional capacity.

Other skills like negotiation, crisis management and resolution, assessment and measurement of both personal results and group results, decision making, assuming roles and responsibilities, planning and organizing working time, tasks, personal work and team work, in groups or pairs

Boosts our productivity:

When the things are done in less span of time which influences the teacher students, whosoever is in touch with ICT not only with the passage of time it also increases the outcomes, this leads to more productive work by the user this leads to increase our working capacity that is the part of our personality.

Master communication:

We all know that communication is a process by which one shares their ideas, thoughts, emotions etc, with each other. At the earlier stage we were not able to communicate with the people who were living far but now in 21 century it is easy to communicate with the person of different country. In a short period of time without difficulty this is because of ICT.

Growth:

Growth is one of the vital process in personality development. We all are aware that growth takes place when there is modification in personality and that modification can occur when we will learn something new that modify us in all aspects.

Socialization:

Man is a social animal, he/she needs to socialize in order to fulfill their needs through interaction. As per today's condition we are all connected to social networking sites where we communicate via commenting, liking, sharing their post this leads to let people in touch with each other. In the same the teacher and student are also connected this led in development of strong bonding.

A focus study:

That develops teacher's abilities to use specific ICT tools, such as online platforms.

A delivery system:

Providing teachers with information to improve pedagogy and content mastery.

A catalyst for news forms of teaching and learning:

Such as inquiry-based learning, collaborative learning, and other forms of learner centred pedagogy.

Professional Development

Facilitating learning:

The students are encouraged to take more control of their learning process, the trainers role became that of a facilitator and organizer providing resources and support to learners.

Inclusive classrooms:

It is instrumental in creating and maintaining a learning environment in which all participants are fully engaged and respected, and in which all participants are open to ideas, perspectives, and ways of thinking that are distinct from their own.

School management:

ICT highlights the application of innovative and effective management and leadership strategies to equip the educational administrators with the knowledge skills and attitudes to transform educational institutions into efficient and effective learning organizations.

Blog:

Following a blog written by others in the profession is a good way for one's professional development. Since, blog also provides opportunity to interact asynchronously, there is a possibility of social learning, since interaction is asynchronous, responses would be more reflective rather than spontaneous.

WIKI:

WIKI is another technology where teacher could contribute and hence engage in professional development, this helps the groups to collaborate on the creation of web based information.

Podcast:

Podcast are another technologies that are useful for teachers since the archives of resources are always available for use, podcasts became very handy when they are in need. Since, the audio format can be played on mobile phones, they are available for teachers for convenient professional development.

Web-conference:

It allows us to connect and communicate in real time with people in different locations through internet web conferencing.

Teacher portfolio:

We can assemble records, documents and details of our teaching and their result in a very creative and systematic way. These documented details give us an opportunity to look at them at a different point of time. Thus teaching can be seen as an ongoing process of inquiry, experimentation and reflection.

E-Portfolio:

Teacher portfolios maintained in digital form are called electronic portfolio, e-portfolio in short. E-portfolios have advantage over other forms of documentation like Accessibility, Multimedia, Non linear presentation.

E-Publications:

Professional writing is one of the professional development activities which has been explored to the least extent. Writing, even of a paragraph, requires organizing ideas and presenting them in a coherent way. Hence the writer need to understand the idea even before writing, writing leads to higher level of understanding.

Tele conferencing:

Teleconference refers to an arrangement of reaching out to multiple centers from a central place thorough satellite connectivity. The centers could have audio and video outputs or only audio output. The experts located at the central position interact with participants located at various centers through video or dedicated telephone connection.

Conclusion

ICT has a great impact in our daily lives. For example, we can read our local newspaper using the online newspaper. Another example is we still can get connected with our family, relatives, or colleagues even if we are abroad by using the electronic mail, yahoo messenger, call conference, or video conference.

By the use of Internet in education students become involved in learning tasks to search, select, identify useful information on certain topics and use this information in various contexts for solving new problems, comparatively analyzing individual performances against those of colleagues or other authors of electronic publications and publish their own websites.

Abstract

Digital revolution has paved the path for E-payment This revolution has emerged with e-banking, e-registration, e-shopping, e-payment, e-learning, e-library, etc. E-payment system is a payment system in which monetary value is digitally transmitted between two entities. An entity can be a bank, business, government or a consumer. In general context enabling net based technological innovations and e communication networks can be termed as e-payment. In order to satisfy our needs with ease of time, comfort and convenience the users must be tech savvy. Today the situation has transformed from one factor authorization to two factor authorizations in order to ensure safety and security. Now-a-days world is becoming digitalize in every field and one of the best examples of this is various countries in the world are moving towards becoming a cashless society. A cashless society is the one which doesn't use cash for any of its transactions, instead all the transactions are done digitally. There are various countries in the world which have more than 50% of their transactions through cashless methods.

Keywords : *Digital Payment, Machine learning, Review, Computer version*

Digital Payment

Digital payments are transactions that take place via digital or internet modalities, with no physical exchange of money involved. This means that both parties, the payer and the payee, use electronic media to trade money. The Government of India has been implementing many efforts to promote and support digital payments in the country. As part of the 'Digital India' program, the government has the ambition to establish a 'digitally empowered' economy that is 'Faceless, Paperless, Cashless' usage of payments.

Role of Technology in Digital Payment System

The pace of digital innovation in payments is driving a reduction in expenses expected to double compound the annual growth rate. It is resulting in new business models and a more competitive environment as new companies emerge.

- **Contact less Payments** – This digital payment option is rising in popularity due to its friction-less experience. A secure payment mechanism using a debit, credit, or smart card enabled by Radio frequency Identification (RFID) or near-field communication (NFC).
- **Open Application Programming Interfaces (API)** – API s provide programmatic access to proprietary applications and online services. New suppliers can develop services by using open API s. These techniques lower barriers to entry for new financial technology firms, supporting innovation and seamless payment systems for the end-user.
- **QR Codes** – Quick Response bar codes or square-shaped codes with two dimensions convey data. As a quick way to communicate information and minimize payment acceptance expenses, it has gained popularity. An account code is scanned with a digital gadget to complete the payment.

Types of Digital Payment Methods in India

Banking Cards are one of the most extensively used digital payment methods, offering a variety of features and benefits such as payment security, convenience, and so on. Debit/credit or prepaid banking cards have the advantage of being used for various sources of digital payments. Customers can keep card information in digital payment apps or mobile wallets to make a cashless payment. Among others, Visa, Ru-pay, and MasterCard are some of the most reputable and well-known card payment systems. Banking cards can be used for online shopping, digital payment apps, pointlessness machines, and internet transactions, among other things. These banking cards contain the card number, card holder's name, smart chips, expiration date, card holder's signature and the security code, i.e., the CVV. Indians often utilize Banking cards, debit/credit cards, or prepaid cards, as an alternative to cash payments. Andhra Bank created the first credit card in India in 1981. Digital payment trends Consumers are digitizing the payments they make in-store and online bringing new tech innovations to the mainstream. Maturing mobile P2P will enhance the opportunity and need for providers to monetize their product, since a bump in volume has put the industry in a better position than ever to begin capturing revenues from the services. And the growth trends of cross-border payments and Real time non-card payments are increasingly becoming a barometer for overall industry changes

Percentage Analysis

Number of respondent distribution shows the number of frequencies in various class which help some preliminary ideas with respect to the objectives under study. Therefore, as a first step, number of respondent distribution for various variables under their study is constructed to interpret the results comprehensively percentage value are computed to following formula. Number of respondent Percentage analysis = $X / 100$

Review of Literature

Lei -da Chen and Ravi Nath (2008):

This study examined the factors that influence consumer Payment adoption in the United States. The data was collected from 299 respondents and analyzed using Confirmatory 02 Factor Analysis and ANOVA. The results suggested that higher transaction speed, transaction convenience, compatibility perceptions would lead to high propensity to adopt digital payment while greater security and privacy concerns would lead to lower propensity to adopt digital payment. Among all the constructs, Compatibility has the highest correlation with intention to adopt.

Kevin Foster, Scott Schuh, and Hanbing Zhang (2010):

They examined the consumer payment methods with respect to cash holdings and withdrawals which was decreasing since 2010. There was an increase in card payment system with respect to 2009 in the year 2010, which resulted in less usage of paper currency. Since 2010 there was an increase in usage of debit and credit card compare to cash transaction which slowly took a decline giving rise to prepaid payments.

Rakesh H M & Ramya T J (2014):

In the research paper titled “A Study on Factors Influencing Consumer Adoption of Internet Banking in India” tried to examine the factors that influence internet banking adoption. It is found that internet banking is influenced by its perceived reliability, Perceived ease of use and Perceived usefulness. In the process of internet banking services expert should emphasize the benefits its adoption provides and awareness can also be improved to attract consumers’ attention to internet banking services.

Sanaz Zarrin Kafsh (2015):

The study made on “Developing Consumer Adoption Model on Mobile wallets in Canada”, in the study convenience sampling from where 530 respondents were selected and there after the Partial least square model was used to test the data. As per the analysis the result perceived usage, perceived ease of use and perceived security is related to each for forecasting the adoption of digital payment.

Bappaditya Mukhopadhyaya Y (2016):

Aimed to analyse the growth of various non cash methods. For getting the estimation of cashless transactions that are prevailing in India, the study used data from World Bank’s Global F index from the surveys that were conducted in year 2011. And it also used data from the household and enterprise surveys which were conducted in year 2009-2010. The study revealed that an extremely small correlation exists between cashless payments and education level as well as between cashless payments and income earned. It also revealed that a very high positive correlation exists between the people who collect the payments in their bank accounts and of those who are engaged in cashless payments. Prepaid cards and mobile payments showed maximum growth.

Dr. M Sumathy and Vipin KP (2017):

The research aimed to study the determinants of safety perception and the attitude, awareness level of people towards digital payments. The data was collected from 100 urban respondents in Kerala using Convenient sampling survey. And the tools which were used for analysis were Percentage analysis, one-way Anova, independent sample t-test, etc. Level of awareness, gender, education level and attitude towards digital payment were found. There found to be no significant difference between level of awareness towards digital payment systems between male and female. Also, no relationship existed between education of the respondents and their level of awareness towards digital payment systems.

Pandey and Rathore (2018):

This study discussed the impact of digital payment system. Due to modernization and globalization, it was very important for the people to accept the modern method of payment. The study is based on secondary data and various literateurs from past papers and government data. All data collected has been analyzed and used to find the impact and adoption of digital payments by the people.

Shivathanu B. (2019):

In this study adoption of digital payment system in the era of demonetization emphasized on how the digital payment system was used by the people or accepted by the people during demonetization. It was based on a conceptual framework where the sample size was 766. The data analyzed suggested that behavioral intentions and innovation resistance had an impact on the actual usage.

Abstract

Information and communication technology (ICT) equipment makes contributions to exceptional instructions in view that they can grow students' motivation, join college students to many statistics resources, guide active in-magnificence, and out-class getting-to-know environments. and, permit instructors to allocate greater time for facilitation. Therefore, the principle reason for this look is to research ICT tools utilized in coaching-mastering procedures by instructors.

ICT allows self-paced mastering via diverse equipment together with assignments, computer systems, and so on as a result of this the teaching-mastering employer has grown to be greater effective and meaningful. ICT allows facilitates the transaction between manufacturers and users by way of preserving the students up to date and enhancing the instructor's capacity and capacity fostering live contact between the teacher and the student thru email, chalk consultation, e-learning, web-based getting to know to consist of internet, intranet, extranet, CD-ROM, television audio-videotape. These days, ICT is gaining considerable splendor in overseas language coaching and mastering as extra educators are embracing it.

Key phrases: ITC, learning, coaching, training improvement, online lessons, ITC tools

Advent:

ICT equipment is the set of presently advanced technology that allows more green conversation of information, which has modified the way of gaining access to understanding and, in turn, human family members. It's far an extensive period of time for the records era (IT) which in particular focuses on the position of unified communications and included telecommunications which incorporates phone lines & wireless alerts and computer systems. It additionally incorporates all of the software, audio, visual, middleware, and storage that enables customers to shop, transmit, get the right of entry to, and recognize data and manage it in keeping with their wishes. ICT also consists of the merger of telephonic conversation, audio, and visual networks with computer device networks by way of the use of a single cable or any hyperlink gadget. ICT is a broader term

that consists of all the communicational gadgets, cell phones, radio, tv, and computer together with satellite tv for pc systems. Diverse services and appliances inclusive of video conferencing and distance getting-to-know programs also are blanketed in ICT with analog technology.

Information verbal exchange generation gear is digital infrastructures along with; computer systems, laptops, desktops, information projectors, software programs, printers scanners, and Interactive coaching boxes. A set of technological tools used, for instance, to save, manipulate or speak records.

Meaning:

ICT is the technology that helps activities involving records. Such activities consist of accumulating, processing, storing, and providing facts. Increasingly those sports additionally involve collaboration and conversation. Therefore IT has turned out to be ICT: records, and conversation technology.

Definition:

ICT stands for facts and communications technology. ICT is the infrastructure and additives that assist to permit modern computing structures. ICT includes both the net in addition to mobile connections that are related by WI-FI networks. It also includes all of the antiquated technology such as landline telephones, tv, and radio. Those technologies are widely used all around the world. Other than that cutting-edge technologies such as synthetic intelligence (AI) and robotics are the advancement in ICT.

Additives OF ICT:

The important additives of the ICT system are as follows:

- Software
- Hardware
- Cloud Computing
- Transaction
- Records
- Net
- Conversation technology

ICT tools for coaching and learning :

- Google lecture room
- Spreadsheet
- Interactive whiteboard
- Trello
- Microsoft PowerPoint
- Getting to know the control system
- Google forms
- laptop
- digital camera

ICT Characteristics

- Efficiency (faster, less expensive, Fewer steps, fewer human beings)
- Effectiveness (maximum interactive, Fewer mistakes, customized, personalized)
- Innovation (New merchandise, New era)

Benefits of ICT in training:

- Progressed learning performance
- Lessen the weight on instructors
- Simplified data sharing
- Elevated student motivation:

Progressed Learning Performance

Using a terminal reduces the burden of writing on the board by transcribing right into a pocketbook. It's far less complicated to concentrate on elegance due to the fact writing on the board is not necessary. Even students who do now not like to be the center of interest can without difficulty express their evaluations and questions thru the system. Advanced excellent teaching because teachers can speedy get entry to information at their terminals.

Lessen the weight on instructors:

Print materials are utilized in magnificence, reducing the effort and time of writing on the board. Reuse substances and board content material to reduce preparation and workload.

Simplified data sharing:

Sharing lesson content amongst instructors makes it less complicated to stabilize the fine of teaching. Visualizing the development of training makes it simpler for instructors to collaborate with every other.

Elevated student motivation:

ICT allows proactive and cooperative coaching instead of passive teaching.

Use of pictures and video to help grow student interest and engagement. The fun and freshness of the usage of virtual systems make it less complicated to inspire students to study.

Improve IT literacy of college students:

Collect know-how and abilities in IT devices, consisting of running computers and tablet devices. Expected to be powerful in growing the potential to pick and utilize important records.

Positive aspects of ICT:

ICT techniques and ideas are developing every day, right here are some advantages of ICT

- Cost-effective: ICT has added to the world collectively thru the method of video conferencing and it has decreased the charges of journeying and lodging. It has enabled the worldwide economic system to develop and act independently.
- Bridging the cultural divide: getting the right of entry to the era has aided in bridging the cultural divide by way of allowing them to connect to each different via a means of verbal exchange. You can effortlessly exchange ideas and narratives constructively.
- Training: education has turned out to be interactive and modern thru the development of statistics and communication generation. It has enabled the students with computer systems and internet offerings. Teachers can use ICT to explain complex structures.
- Automation: It has supported corporations to be automated, engaging the clients to access exclusive websites 24 hours an afternoon.

Negative aspects of ICT:

ICT also has a few demerits

- Risk of Hacking: occasionally facts or private information receives hacked with the aid of hackers unethically which stays a fundamental problem in ICT.
- pricey: computer systems and net connectivity are costly for human beings to have enough money on occasion, consequently they could not avail of the facilities, in particular in the village or rural regions.
- Misleading records: The net maximum of the time gives deceptive or incorrect information to human beings.
- No longer available anywhere: There are locations wherein due to bad connectivity humans face problems getting related through the net and hence it restrains their daily sports.

ICT -a focus ON newbies:

- Motivating, attractive to the Learner
- Imparting private processes to gain knowledge of
- Unleashing creativity in mastering

ICT -a focus ON teachers:

- Saves time in lesson planning & administration
- Gives a greater comprehensive approach to evaluation
- Reduces bureaucratic burden on instructors

ICT Literacy levels

- Preliminary – stage 1
- Developing – stage 2
- Talented – stage 3

ICT Creates Opportunity

- ICT can make a massive contribution to coaching and learning throughout all subjects.
- ICT is a central skill that is essential for participation in today's society and economy.
- ICT can be a device for school improvement.
- The powerful and systematic use of ICT is fundamental to the wider instructional method to bring about additional upgrades in coaching.

Conclusion

ICT does not routinely add pleasant to teaching and gaining knowledge for all. ICT programs can accelerate and improve learning (basic abilities, trouble-fixing, records management, concept development). ICT gives a way of accumulating, connecting, and analyzing data about teaching and mastering. ICT has a sizeable effect on the excellent amount of teaching-mastering techniques. In concrete phrases, ICT can beautify coaching-getting to know via its dynamic, interactive, and attractive content material; and it can provide actual opportunities for individualized training. The modern school room surroundings have changed loads more than the preceding-traditional surroundings because of generation.

Statistics and communication technology (ICTs) can notably beautify poor human's human and social capabilities and feature a positive effect on their properly-being.

Abstract

Information Communication Technology (ICT) tools contribute to high quality lessons since they have potential to increase students' motivation, connect students to many information sources, support active in-class and out-class learning environments, and let instructors to allocate more time for facilitation. Therefore, the main purpose of this study is to analyze ICT tools used in Teaching – Learning Process by teachers.

ICT enables self-paced learning through various tools such as assignment, computer etc as a result of this the teaching learning enterprise has become more productive and meaningful. ICT helps facilitate the transaction between producers and users by keeping the students updated and enhancing teachers capacity and ability fostering a live contact between the teacher and the student through e-mail, chalk session, e-learning, web-based learning including internet, intranet, extranet, CD-ROM, TV audio-videotape. Nowadays, ICT is gaining a vast attractiveness in foreign language teaching and learning as more educators are embracing it.

Keywords: ITC, learning, Teaching, Education development, Online classes, ITC Tools

Introduction

ICT tools are the set of currently developed technologies that allow more efficient communication of information, which have modified the way of accessing knowledge and, in turn, human relations. It is an extensional term for information technology (IT) which mainly focuses on the role of unified communications and integrated with telecommunications which includes telephone lines & wireless signals and computers. It also comprises all the software, audio, visual, middleware and storage that helps users to store, transmit, access and understand information and manipulate it according to their needs. ICT also includes the merger of telephonic communication, audio and visual networks with computer system networks by the use of a single cable or any link system. ICT is a broader term that includes all the communicational devices, cell phones, radio, television, and computer along with satellite systems. Various services and appliances such as video conferencing and distance learning programmes are also included in ICT with analogue technology.

Information Communication Technology tools are digital infrastructures such as; computers, laptops, desktops, data projector, software programs, printers scanners and Interactive teaching box. A set of technological tools used, for example, to store, manage or communicate information.

Meaning

ICT is technology that supports activities involving information. Such activities include gathering, processing, storing and presenting data. Increasingly these activities also involve collaboration and communication. Hence IT has become ICT: information and communication technology.

Definition

ICT stands for information and communications technology. ICT is the infrastructure and components that help to enable modern computing systems. ICT consists of both the internet as well as the mobile connected which are connected by wireless networks. It also includes all the antiquated technologies such as landline telephones, television and radio. These technologies are widely used all over the world. Apart from that cutting edge technologies such as artificial intelligence (AI) and robotics are the advancement in ICT.

Components of ICT:

The major components of the ICT system are as follows:

- Software
- Hardware
- Cloud Computing
- Transaction
- Data
- Internet
- Communication Technologies

ICT Tools for Teaching and Learning :

- Google Classroom
- Spreadsheet
- Interactive whiteboard
- Trello
- Microsoft PowerPoint
- Learning management system
- Google Forms
- Laptop
- Digital camera

ICT Characteristics

- Efficiency(Faster,Cheaper,Fewersteps,Less people)
- Effectiveness(Most interactive, Fewer errors, Customized, Personalised)
- Innovation(New products, New Technology)

Benefits of ICT in Education:

- Improved learning efficiency.
- Reduce the burden on teachers.
- Simplified information sharing.
- Increased student motivation.
- Improve IT literacy of students.

Improved Learning Efficiency

Using a terminal reduces the burden of writing on the board by transcribing into a notebook.It is easier to concentrate in class because writing on the board is no longer necessary.Even students who do not like to be the center of attention can easily express their opinions and questions through the system.Improved quality of teaching because teachers can quickly access information at their terminals.

Reduce the Burden on Teachers

Prints materials used in class, reducing the time and effort of writing on the board.Reuse materials and board content to reduce preparation and workload.

Simplified Information Sharing

Sharing lesson content among teachers makes it easier to stabilize the quality of teaching.Visualizing the progress of classes makes it easier for teachers to collaborate with each other.

Increased Student Motivation

Facilitates proactive and cooperative teaching rather than passive teaching. Use of images and video to help increase student interest and engagement.The fun and freshness of using digital equipment makes it easier to motivate students to learn.

Improve IT Literacy of Students

Acquire knowledge and skills in IT equipment, such as operating computers and tablet devices.Expected to be effective in developing the ability to select and utilize necessary information.

Advantages of ICT

ICT methods and concepts are growing day by day, here are some advantages of ICT

- **Cost-Effective:** ICT has brought the world together through the means of video conferencing and it has reduced the expenses of travelling and accommodation. It has enabled the global economy to grow and act independently.

- **Bridging the cultural divide:** Access to technology has aided in bridging the cultural divide by allowing them to connect with each other through the means of communication. One can easily exchange ideas and narratives constructively.
- **Education:** Education has become interactive and innovative through the advancement of information and communication technology. It has enabled the students with computers and internet services. Teachers can use ICT to explain complex structures.
- **Automation:** It has supported businesses to be automated, engaging the clients to access different websites 24 hours a day.

Disadvantages of ICT

ICT also have a few demerits

- **Risk of Hacking:** Sometimes data or personal data gets hacked by hackers unethically which remains the major problem in ICT.
- **Expensive:** Computers and internet connectivity are expensive for people to afford sometimes, hence they could not avail the facilities, especially in the village or rural areas.
- **Misleading information:** The Internet most of the time provides misleading or wrong information to people.
- **Not accessible everywhere:** There are places where due to poor connectivity people face problems getting connected through the internet and hence it restrains their daily activities.

ICT -a Focus on Learners

- Motivating , Engaging the Learner
- Offering personal approaches to learning
- Unleashing creativity in learning

ICT -A focus on Teachers

- Saves time in lesson planning & administration
- Offers a more comprehensive approach to assessment
- Reduces bureaucratic burden on teachers

ICT Literacy Levels

- Initial – level 1
- Developing – level 2
- Proficient – level 3

ICT Creates Opportunity

- ICT can make significant contribution to teaching and learning across all subjects .
- ICT is a core skill which is essential for participations in today's society and economy.

- ICT can be a tool for school improvement .
- The effective and systematic use of ICT is integral to the wider educational strategy to bring about further improvements in teaching.

Conclusion

ICT doesn't automatically add quality to teaching and learning. ICT application can accelerate and improve learning (basic skills, problem solving, information management, concept development). ICT provides means of gathering, connecting and analysing data about teaching and learning. ICT has its noticeable impact on the quality and quantity of teaching-learning process. In concrete terms, ICT can enhance teaching and learning through its dynamic, interactive, and engaging content; and it can provide real opportunities for individualized instruction . The modern classroom environment has changes a lot than the previous-traditional environment due to technology.

Information and communication technologies (ICTs) can significantly enhance poor people's human and social capabilities and have a positive impact on their well-being.

Abstract

Information and communications Technology (ICT) can impact student learning when teachers are digitally literate and understand how to integrate it into curriculum. In this digital era, ICT use in classroom is important for giving students opportunities to learn and apply the required 21st century skills. Hence studying the issues and challenges related to ICT use in teaching and learning can assist teacher in overcome the obstacles and become successfully technology users. Main tools are computer, laptops, desktop, data projector, software program, printer scanner and interactive teaching box. ICT helps facilitate the transaction between producers and users by keeping the students updated and enhancing teacher capacity

Keyword: *ICT, Moodle, Blended learning platform, Smart teaching platform*

Introduction

Information and communications technology (ICT) is an important part of most organizations these days. Computers began to be used in schools in the early 1980s, and several scholars suggest that ICT will be an important part of education for the next generation (Bransford, Brown & Cocking, 2000; Grimus, 2000; Yelland, 2001). Up-to-date technology offers many methods of enhancing classroom teaching and learning. New technology has the potential to upkeep education across the curriculum and deliver opportunities for efficient student-teacher communication in ways not possible before. ICT in education has the potential to transform teaching. However, this potential may not easily be realized.

Information and Communications Technology (ICT)

Meaning

Information and communications technology can impact student learning when teachers are digitally literate and understand how to integrate it into curriculum. Schools use a diverse set of ICT tools to communicate, create, disseminate, store, and manage information.

ITC in Schools

Schools use a diverse set of ICT tools to communicate, create, disseminate, store, and manage information. ICT has also become integral to the teaching-learning interaction, through such approaches as replacing chalkboards with interactive digital whiteboards, using students' own smartphones or other devices for learning during class time, and the "flipped classroom" model where students watch lectures at home on the computer and use classroom time for more interactive exercises.

Benefits While Using ITC in Schools

When teachers are digitally literate and trained to use ITC, these approaches can lead to higher order thinking skills, provide creative and individualized options for students to express their understandings, and leave students better prepared to deal with ongoing technological change in social and the work place.

Learning Management System

- Moodle stands for Modular object-oriented dynamic learning environment and statistics. Moodle is free software, a learning management system providing a platform for e-learning and it helps the various teachers considerably in conceptualizing the various courses, course structures and curriculum thus facilitating Interaction with online students.
- It is a very useful platform to share all learning resources, videos, sharing webpage. Moodle supports a range of media to present or link to learning materials, support the students and to assess their learning. It is able to provide automated assessment in the form of quiz, and give immediate detailed feedback to the students. The messaging system allows learners and teachers to communicate easily.

Google Classroom – Blended Learning Platform

Google Classroom is a free, blended learning platform that offers a variety of benefits for both students and teachers. Google Classroom enhances the productivity and takes workflow management to the next level. It keeps track of assignments coming in with a simple glance making it very easy to know everyone's status and to follow up with students who are missing work. Everything is time stamped, so late work is easily identifiable. Since Google Classroom saves automatically and is accessible from any device. With the app, both students and teachers can enjoy the full functionality of Google Classroom on a mobile device. Students receive notifications on their phone when assignments and announcements are posted, making it easy for students to stay on top of classroom happenings. As a teacher, the app enables you to post from your phone either right from the app or using share-sheet support.

Google Forms

Google Forms allows to conduct MCQ quizzes online. The information is stored as a spreadsheet automatically records the answers. The spreadsheet then populates the

responses from the quiz or survey in real time. google forms can be used to give feedback to and receive feedback from students and parents.

Video Conferencing Platforms

During covid pandemic when the world shifted to online mode for teaching learning various free videoconferencing platform like google meet, zoom and cisco Webex were used conduct online classes. All these have varying needs and features. zoom allows the facility of using its feature using a browser also without the need to download the application, the app download is mandatory in case of the other two software.

Virtual Labs

The virtual labs provides remote-access to simulation-based labs in various disciplines of science and engineering. this student-centric approach facilitates the absorption of basic and advanced concepts through simulation-based experimentation. internet-based experimentation further permits use of additional web-resources, video-lectures, animated demonstrations and self evaluation. virtual labs are any place, any pace, any-time, any-type labs. it is a paradigm shift in student-centric, online education. virtual labs sessions available on virtual labs an MOE government of India initiative for physical pharmaceuticals, organic chemistry and inorganic chemistry subjects as well as virtual labs sessions from amrita lab portals for microbiology, organic chemistry and inorganic chemistry practicals provide helpful tool to teacher during online teaching process.

Education Videos and Animation

Various valuable educational videos of pharmacy subjects available on internet, you tube provide additional help in better understanding of subject knowledge.

Smart Classroom

Classroom integrated with smartboards internet connection provides enhanced and interactive learning and teaching opportunities for student and teachers. The internet-connected to system in smart classes is stored with abundant information. It is accessible anytime for their teaching and learning process. Teachers can access information from various educational sources for teaching purposes. It helps in easy access to online resources. Smart Classrooms helps in developing critical thinking and problem-solving skills in students.

E-Resource

E-journals from proquest pharma and DELNET were available for students to access remotely in online mode and enhances their learning experience. e- book were on MOODEL and Google Classroom.

KMPLOT

Kmplot is a mathematical function plotter for the KDE-Desktop. You can plot different functions simultaneously and combine their function to build new functions. Kmplot supports function with parameters in polar coordinates. Plots may be printed with high precision in the correct scale. All teachers, students from higher and senior secondary or graduate, research anywhere in the world. It's very close to the Geogebra applet or Grapy monkey to tract graphs for different functions.

Marble

Marble is a virtual Globble application which permits the client to pick among the Earth, the Moon, Venus, Mars and different planets to show as a 3-D model. It is free programming under the details of the GNU LGPL, created by KDE for use on PCs and Mobile phones. It is written in C++ and utilizes Qt. Marble is expected to be entirely adaptable past its cross-stage plan, the center parts can undoubtedly be coordinated into different projects.

Socrative:

Socrative is a formative assessment tool that helps teacher and learners to assess understanding and progress in real time in class through the use of quizzes, question and reflection question.

Google Earth

Google Earth, formerly known as keyhole Earth viewer, provides a 3D representation of Earth based primarily on satellite imagery. This program maps the Earth by superimposing satellite image, aerial photography and GIS data onto a 3D globe, allowing users to see cities and landscapes from various angles. Users can explore the globe by entering addresses and coordinates of the places of their inters.

Google Maps

Google Maps is a web mapping platform and consumer application offered by Google. It Satellite imagery, aerial photography, street maps, 360° interactive panoramic views of streets, real-time traffic conditions and route planning for traveling by foot, car, air and public transportation.

Ict Tools for Teaching Learning and Assessment

- To make ICT teaching and learning more in interactive, various platforms and tools have been created and updated over the period of time. Innovative ICT tools used in classroom teaching which helps teachers to integrate in their subject, for teaching-learning and assessment. The are numerous subject specific free/ no cost ICT tools available on online and offline platforms which can be used for teaching, learning and assessment.

- Avogadro is Free and Opensource software which helps to construct, edit and view the molecules in 3D. Though the Avogadro database one can explore numerous molecules and see the bond length, bond angle and dihedral angle in a molecule. By using the tool, the learners can benefit from energy minimization to obtain conformations.

Kalzium

Kalzium is an application which will show information about the periodic system of the elements. Kalzium is an opensource chemistry Application for school and college students. This software contains information about chemicals-mass, charge, picture discovery information, chemical and energy data and model of the atoms.

ICT Importance

- The need for ICT in education is to create a learning environment that focuses on students. ICT tools address the gap between teacher and learner-centers environments. As ICT gives access to a wide range of information, all student unique educational requirements are met.
- Teachers can assess the use of such information through quizzes and exams. Teachers can find adequate supplementary material off the internet for students who require extra attention. Using ICT teacher can share those materials or either with the entire classroom or with individual learners. Either way every student has a personalized learning experience due to ICT.
- ICT is making it possible to adopt new teaching techniques in institutes. One such technique is the "Flipped classroom", where student learn their lessons at home and practice them through practical activities in class. Through ICT, student can effectively learn at home using videos, while at school, ICT engages them in fun learning activities. Teachers can also experiment with different learning techniques and directly check their impact by tracking student's grades through ICT.

Advantages

- Enhances interaction and increased student engagement
- Learning is accessible any time, any place
- Offers new learning techniques as classroom tools are constantly evolving
- Decreases teacher paperwork improving work-life balance
- Improving parent-teacher interaction.

Disadvantage

- Limited accessibility and network connection
- School with limited technical support
- Misleading and misguiding information
- A risk to the traditional book and handwriting methods
- Managing courses online is difficult.

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT in education improves engagement and knowledge retention: when ICT is integrated into lessons, students become more engaged in their work. This is because technology provides different opportunities to make it more fun and enjoyable in terms of teaching the same things in different ways.

Abstract

ICT and the Internet have become dependable forms of communication in recent years. The Internet, in contrast to broadcast media, can make it easier for the periphery to participate in a discourse that is eminently democratic, which can be empowering (Bowes, 2003). And if appropriately applied, quality issues that were previously exclusive to the haves due to economic and power considerations can now be accessed by everyone (Collis & Jung, 2003). Information and communication technology (ICT) is not a magic bullet for all issues in education, but it is an indispensable part of teaching and learning today (Capper (Ed.), 2011). Teachers require views of the technologies' potential, opportunities to apply them, training, just-in-time assistance, and time to experiment to use them effectively and efficiently. then and only can instructors be informed and confident in their use of new technologies.

Introduction

In our society today, when knowledge is developing quickly and much of it is accessible to both students and teachers at the same time, teaching is quickly becoming one of the most difficult professions (Perraton, Robinson, & Creed, 2001). When it is suitable, teachers should include technology in their wide range of teaching techniques in the classroom. Technology can be used to reach students from a variety of backgrounds in addition to serving as an information management tool (Torres, 2006). Teachers are now required to support learning and make it relevant for each learner rather than just impart knowledge and skills as new notions of learning have emerged. Technology use can aid educators in connecting with today's media-savvy kids.

Recognizing this potential, promoting universal access, facilitating participatory forums, and creating communities and interest groups are therefore urgently needed (Policy Perspectives in Teacher Education: Critique and documentation, 1998). The reach will undoubtedly be constrained if left to market forces alone. For ongoing, on-demand teacher training and assistance, research and material repositories, value-added distance learning, and online campuses focused on boosting access, equity, and educational quality, the Internet can be a wise investment (Fontaine, 2000). Modern advancements in cutting-edge information and communication technology (ICT) have opened up new career opportunities for teachers while also increasing the demands on them to become proficient in the use of new ICT in the classroom (Robinson & Latchem, 2003).

Because of the rapid development of ICT, particularly the Internet, traditional initial teacher training institutions as well as in-service continued training institutions worldwide are experiencing a rapid change in the structure and content of their training and the delivery methods of their courses (Pacey, 1999). There has been growing evidence that ICT may be able to provide more flexible and effective ways for lifelong professional development for today's teachers. However, both basic teacher preparation and in-service training institutes find it challenging to integrate new technologies with good pedagogy. The delivery of teaching, as well as the actual learning process, can both be facilitated by a range of ICT today (Teacher Education Guidelines: Using Open and Distance Learning, 2002). Additionally, ICT can encourage global networking and collaboration in education and professional development. There's a range of ICT options – from video conferencing through multimedia delivery to websites - which can be used to meet the challenges teachers face today.

ICT full form in education?

When teachers are digitally savvy and know how to incorporate it into the curriculum, information and communications technology (ICT) can affect student learning. Schools employ a wide range of ICT tools to manage, create, distribute, and store information.

The term "ICT tools" refers to digital tools such as computers, laptops, printers, scanners, software, data projectors, and interactive instructional devices.

How ICT is used in education?

To help pupils understand concepts more easily, teachers can use a variety of ICT resources, including computers, laptops, and other devices. It helps them put various strategies into practice in the classroom setting to enhance learning outcomes.

Example of ICT in Education?

Electronic textbooks, instructional software, email, chat, and distance learning programs are also examples of ICT

ICT Use as Main Content Focus of Teacher's Training

ICT use was a major component of the majority of the early ICT teacher training programs in the 1990s (Collis & Jung, 2003). This strategy places a strong emphasis on teacher education regarding how to assist students in using those technologies, the use of ICT to encourage learning activities, the creation of new techniques for promoting learning and assessing student performance, and so forth. Depending on the ICT infrastructure at the school, the trainee is expected to use ICT while teaching. The ICT curriculum The learning, thinking, and efficient use of instructional technologies in the classroom, instructional planning models, the choice, creation, evaluation, and integration of instructional technologies and resource materials, the encouragement of creativity and complex thought through ICT project work activities, and the management of instructional activities should all be covered in teacher training.

ICT Use as Part of Teaching Methods

This strategy incorporates ICT into teacher preparation to streamline some training components. The following two examples demonstrate how various ICT is incorporated into efficient training techniques. In these situations, teachers are given examples of how ICT-pedagogy integration is incorporated during the training process. It gives them "examples of real educators and learners using successful practices of technology to support instruction and learning in their classrooms." Focus groups of teachers watch video clips and then talk about methods for managing the classroom, assessing students, etc. In this particular instance, teachers acquire the skills necessary to use ICT in their classrooms by actively participating in ICT-integrated training.

ICT as Core Technology for Delivering Teacher's Training

In this method, ICT is primarily employed to deliver teacher training learning experiences, and digital technology frequently replaces analog technology as the mainstay of ICT teacher training. This method's content instead focuses on a variety of ICT applications rather than necessarily on ICT expertise itself. Recent developments in online teacher education have been shown to offer teachers a flexible and engaging learning environment (Jung, 2003). However, in most parts of the world, costs associated with online training cannot be disregarded, and viable online training pedagogies for ICT teacher training have not yet been investigated.

ICT Used to Facilitate Teachers' Professional Development and Networking

While there are few instances where ICT is utilized as the primary tool for delivering teacher training, there are numerous instances where ICT, particularly the Internet and Web-based communication technologies, are used to support teachers' ongoing professional growth and networking. Based on the idea that professional development should be an integral part of daily practice for all teachers and that using the Internet would enhance ongoing professional development activities of teachers by connecting teachers to larger teaching communities and enabling interaction with expert groups,

many countries have developed a website or websites to provide online resources for teachers and facilitate teachers' networking.

The provision of ICT-based training environments where on-demand access to materials, peers, and networks of experts where expertise and advice can be obtained and active discussion can take place about technology or pedagogy is one of the best ways to develop teachers' ICT skills and promote ICT-pedagogy integration in their teaching. As long as organized support is offered, the strategy of using ICT to support teachers' ongoing professional development and networking can be quite successful in this regard.

How Will the Use of ICTs be Helpful in Prospective Teachers' Professional Development?

Especially during a period of educational expansion, improving the caliber of teacher education and teacher training is a crucial concern (Passi, 2000). ICT-based teacher professional development (TPD) at the in-service level ought to be lengthy, teacher-directed, and as adaptable as possible. Effective adoption of ICTs depends on providing ongoing chances for people to learn what they need to learn based on their unique experiences and circumstances, when they have the time to study it. This is especially true for many underqualified, overworked, and underpaid teachers in developing nations. It is also crucial to provide instructors with institutionalized incentives and support so they can undertake ICT-based TPD. Promotions for teachers who use ICTs in the classroom innovatively (as opposed to merely using them) or simply ensuring that teachers have the resources they need to do their jobs.

Motivating to Learn

ICTs can be utilized to deliver challenging and authentic content that will involve the student in the learning process, such as videos, television, and multimedia computer software that combines text, sound, and vibrant, moving graphics. The pupils are also motivated by interactive radio, which employs sound effects, songs, dramatizations, comedic skits, and other performance standards.

Facilitating the Acquisition of Basic Skills

Through drill and practice, ICTs can aid in the transmission of fundamental knowledge and skills that serve as the basis for creativity and higher-order thinking abilities (Freeman, 1997). The alphabet, numbers, colors, forms, and other fundamental concepts are taught through repetition and reinforcement in educational television programs like Gyan Wani (Joshi, 2011). The majority of computer-based learning, also known as computer-assisted education, which emphasized mastering skills and knowledge through repetition and reinforcement, was employed with computers in the early days (Web-based Education Commission).

Enhancing Teacher Training

ICTs have also been utilized to enhance both the availability and caliber of teacher preparation programs. For instance, organizations like the Cyber Teacher Training Centre (CTTC) in industrialized nations are utilizing the Internet to give in-service teachers improved possibilities for professional development. For elementary and secondary school teachers, the government-funded CTTC, founded in 1997, offers self-directed, self-paced Web-based courses (Web-based Education Commission, 2011). There are classes in "Education Reform," "Computers in the Information Society," and "Future Society and Education." In addition to face-to-face sessions occasionally required for some courses, online tutorials are also available (Freeman, 1997). To train 910 primary school teachers and facilitators from 20 countries in 1996, Indira Gandhi National Open University used satellite-based one-way video and two-way audio-conferencing, in addition to print materials and recorded film.

What Skills Needed in the Workplace of Prospective Teachers

In our society today, when knowledge is developing quickly and much of it is accessible to both students and teachers at the same time, teaching is quickly becoming one of the most difficult professions (Perraton, Robinson, & Creed, 2001). The following competencies are essential for modern instructors to have in the classroom.

Digital Age Literacy

Applied literacy Visual literacy is the capacity to interpret meaning and communicate ideas in a variety of media, including the use of images, graphics, video, charts, and graphs. scientific knowledge knowledge of science, mathematics, and both their theoretical and practical applications technical competence the ability to use information and communication technology with proficiency education in information the capacity to locate, assess, and apply information effectively, especially through the use of ICTs cultural sensitivity respect for the variety of civilizations worldwide awareness knowledge of the connections between countries, businesses, and communities around the world.

Inventive Thinking

Adaptability aptitude for managing and adapting in a complex, interdependent world Curiosity a need to know Creativity the capacity to come up with new ideas Capacity for taking calculated risks.

Higher-Order Thinking

Rationality and inventive problem-solving that lead to good judgment.

Working Ability in Interdisciplinary Teams

Ability to work in a multidisciplinary team Collaboration and efficient interpersonal communication and working with others' talents both private and public. Networked computers with Internet access have the potential to motivate learners more than any other

type of ICT because they combine the media diversity and interaction of other ICTs with the chance to interact with real people and take part in actual activities.

Effective Communication

The way people use ICTs affects their capacity to work in interdisciplinary teams, and learning to use ICTs responsibly for the common good is part of that process. Interactional dialogue is the ability to access, transmit, communicate, and comprehend information. Extremely productive with the capacity to organize, plan, and oversee projects and programs to produce the required results. Ability to use what they learn in the classroom in real-world situations to produce useful, high-quality goods to pay attention to and participate in the lessons being taught.

Will ICTs Replace the Teacher?

NO is the resounding response! The importance of the teacher's involvement in the learning process is increased with the use of ICTs in the classroom. The type of role that the instructor plays is something that can and should alter. In turn, the role of students also grows. Additionally, the community can take on a new role in the classroom because of ICTs' ability to open it up to the outside world. Less the primary source of authority and more the facilitator, mentor, and coach as learning moves from the "teacher-centered model" to a "learner-centered model," the teacher transitions from "sage on the stage" to "guide on the side." The teacher's main responsibility now is to educate the pupils on how to pose problems, establish hypotheses, and ask questions.

Keys to Effective Use of ICT in Prospective Teachers' Professional Development:

Several elements are thought to be essential for the efficient use of ICT in the professional development of future teachers. Which are:

- Incentives and assistance with teacher education
- Teacher-led instruction
- Enough technology access
- Community collaborations
- Opportunity for ongoing informal support and training
- Teachers and teacher trainers using technology in education
- Technology-Based Production Methods for Instructional Media
- Utilizing Cutting-Edge Technology to Improve Education

Desired ICT Competencies for Prospective Teachers

The basic teacher training curriculum suggests the following as desirable ICT competencies for teachers:

1. Positivity regarding ICT
2. Knowledge of ICT's educational potential
3. A variety of ICT skills, notably in audio, video, print, and computers.
4. ICT teaching capabilities for a variety of subjects

5. Effectiveness of using ICT in the Curriculum
6. ICT classroom management skills
7. The capacity to assess ICT use
8. Ability to guarantee distinctiveness and advancement
9. Additional technical abilities

Suggestions for the Effective Use of ICT in Prospective Teachers' Professional Development

The national telecommunications and information infrastructure is built on top of the educational technology infrastructure of a nation. Before the start of any ICT-based program, policymakers and planners must carefully take the following into account:

Ensure that the House of Technology has the required spaces or structures available. In nations with a large number of outdated school buildings, considerable retrofitting would be required to guarantee correct electrical wiring, heating/cooling and ventilation, safety, and security.

Make sure that there is phone service and electricity available. Large portions of poor nations continue to lack a consistent electrical source, and the closest phones are located far away.

To ensure computer-based or online learning, make sure there is access to computers in classrooms, communities, and homes, as well as reasonably priced Internet connectivity. Make sure technology is utilized fairly and democratically.

Future Perspectives

It is anticipated that as a result of globalization, developing nations would face greater pressure to make investments in their telecommunications and internet infrastructure. There will probably be more money invested in Internet-based educational apps as a result. This could specifically imply that open and flexible learning systems will increasingly incorporate technology utilization by both teachers and students. Although the use of ICT in education and teacher training will expand faster than anticipated, older technologies will coexist with newer ones. This is due to how much money would be required to bridge the digital gap. However, the divide will be bridged significantly with the help of coordinated initiatives from international organizations and countries. ICT in teacher preparation has the following potential for the future:

Conclusion

ICT in teaching and education. The national ICT use in education vision has frequently been incorporated into the teacher training process. The study's methods for teacher education demonstrate that, in many instances, ICT is included in the training process as an integrated training environment rather than merely as training material, allowing instructors to engage in ICT-based learning. According to an analysis of ICT-based professional development strategies for aspiring teachers, integrating ICT into teacher education and development presents both opportunities and difficulties. There is no set

formula for figuring out the ideal level of ICT integration in the educational system, even though there are many valuable lessons to be gained from best practices around the globe. In general, authorities and organizations that train teachers appear to be the importance of integrating pedagogies. In general, governments and institutions that train teachers appear to understand how important integrating pedagogies is. Consequently, one may conclude that different methods of ICT-pedagogy integration in teacher preparation exist. The author makes an effort to demonstrate through a range of examples that ICT use is not just a matter of new possibilities, but that it also has new ramifications and new obstacles. Education policy and planning, infrastructure, language and content, capacity building, and financing are important concerns that politicians and planners, educators, education administrators, and other stakeholders need to take into consideration.

ENHANCING LEARNING AND ENGAGEMENT BY INTEGRATING ICT TOOLS IN BIOLOGICAL SCIENCE

**A.M. Ananda Kumar, R.Rakkimuthu
& P.Sathishkumar**

Assistant Professors
PG and Research Department of Botany
NGM College, Pollachi

Abstract

The integration of Information and Communication Technology (ICT) tools in educational settings has revolutionized the way biological science is taught and learned. This article explores the various ICT tools that can be employed in biological science teaching to enhance students' learning experiences, foster critical thinking, and promote active engagement in the subject. Additionally, the article discusses the potential benefits and challenges associated with the implementation of these tools. Through an examination of relevant research studies and practical examples, this article emphasizes the importance of effectively utilizing ICT tools to nurture the next generation of biologists and scientific thinkers. This article explores the integration of Information and Communication Technology (ICT) tools in the field of Biological Science education. It highlights the benefits of incorporating ICT tools in the classroom, such as improving student engagement, enhancing data analysis skills, and fostering collaborative learning. The article also discusses some of the popular ICT tools used in biological science teaching, along with real-world examples of their successful implementation. The integration of ICT in education is seen as a promising approach to create a more dynamic and interactive learning environment for students pursuing biological science studies.

Keywords: ICT tools, Bioinformatics, Data bases, education

Introduction

As technology continues to shape our world, the field of education has embraced ICT tools to create dynamic and interactive learning environments. In the realm of biological science, incorporating these tools into teaching practices opens new avenues for educators to impart knowledge effectively and engage students in deeper explorations of living organisms and their intricate processes. The field of Biological Science is continuously evolving, with new discoveries and breakthroughs shaping our understanding of life (Johnson et al. 2019). As educators strive to provide students with the latest knowledge and skills, integrating ICT tools in the teaching process has emerged as an innovative and effective approach. ICT tools offer opportunities to engage students, facilitate interactive learning experiences, and empower them to explore complex biological concepts in practical and exciting ways.

ICT Tools in Biological Science Teaching

Virtual Laboratories and Simulations: Virtual labs and simulations offer an immersive experience for students to conduct experiments without the need for physical lab setups. This hands-on approach enables learners to explore complex biological phenomena, such as DNA replication and cellular processes, in a safe and interactive manner. Bioinformatics

Software which Introduces bioinformatics tools that allows students to analyze genetic sequences, perform phylogenetic analyses, and study protein structures (Gilani, et al, 2019). These tools provide valuable insights into molecular biology and genomics, encouraging students to think critically and develop problem-solving skills.

Interactive Multimedia Content: Interactive multimedia content, including videos, animations, and 3D models, makes abstract biological concepts more tangible and easier to comprehend. Such visual aids aid in visualizing complex processes and foster a deeper understanding of biological phenomena.

Online Collaborative Platforms: Virtual classrooms and collaboration platforms enable students to participate actively in group discussions, peer-to-peer learning, and scientific debates. This fosters a sense of community among learners and encourages knowledge-sharing beyond the boundaries of a traditional classroom.

Benefits of ICT Integration

Enhanced Learning Outcomes: By catering to different learning styles and preferences, ICT tools facilitate personalized learning experiences, leading to improved learning outcomes for diverse student populations. The Real-world Relevance using ICT tools bring real-world biological research and applications into the classroom, bridging the gap between theoretical knowledge and practical applications.

Student Engagement must be Interactive and dynamic learning environments promote student engagement, curiosity, and a deeper appreciation for the complexities of the natural world. The student assessment may improve ICT tools allow for formative and summative assessments that provide instant feedback, helping educators identify and address students' strengths and weaknesses effectively.

Benefits of ICT Tools in Biological Science Teaching

Enhanced Data Analysis enable students to analyze large datasets, such as genetic sequences and ecological data, using specialized software and online platforms. This allows students to develop critical data analysis skills, preparing them for future research and scientific careers.

Virtual Laboratories and Simulations by incorporating virtual laboratories and simulations, students can engage in hands-on experiments without the limitations of physical resources. They can manipulate variables, observe outcomes, and draw conclusions, promoting a deeper understanding of biological principles. Multimedia Educational Resources ICT tools offer access to multimedia resources, such as interactive textbooks, 3D models, and video lectures. These resources cater to diverse learning styles and foster a more immersive learning experience.

Collaboration and Global Connections: ICT tools enable students to collaborate with peers and researchers from different parts of the world. This promotes cross-cultural learning and exposes students to diverse perspectives in the biological sciences.

Important ICT Tools in Biological Science Teaching

BioInteractive (HHMI): Developed by the Howard Hughes Medical Institute, BioInteractive offers a vast collection of virtual labs, interactive activities, and multimedia resources for teaching various biological concepts, from molecular biology to ecology.

BLAST (Basic Local Alignment Search Tool): BLAST is a widely-used bioinformatics tool that allows students to compare genetic sequences and identify similarities among different organisms.

Foldit: Foldit is an online game that engages students in protein folding puzzles, contributing to real scientific research and fostering an understanding of protein structure and function.

Visible Body: Visible Body provides 3D anatomical models and animations, enabling students to explore the human body's intricate systems and structures in a dynamic and interactive manner.

Challenges and Considerations of using ICT Tools that ensuring equitable access to ICT tools and a reliable internet connection for all students remains a challenge, particularly in underserved areas (Smetana and Bell, 2012). Educators need adequate training to effectively integrate ICT tools into their teaching practices and maximize their benefits. Protecting students' personal information and ensuring data security are essential considerations when using online platforms and tools.

Conclusion

The incorporation of ICT tools in biological science teaching has the potential to revolutionize how students perceive and engage with the subject. By fostering interactive learning experiences, promoting critical thinking, and enabling access to cutting-edge research tools, educators can inspire the next generation of biologists and scientific leaders. Embracing these technologies responsibly and addressing associated challenges will pave the way for a more enriched and effective biological science education. The integration of ICT tools in biological science teaching has the potential to revolutionize the learning experience for students. Through enhanced data analysis, virtual simulations, and interactive resources, students can develop a deeper understanding of biological concepts and prepare for careers in scientific research. With ongoing advancements in technology, educators must continue to embrace and explore innovative ways to leverage ICT tools in their classrooms, ultimately fostering a new generation of skilled and passionate biological scientists.

THE IMPACT OF LITERATURE ON WOMEN EMPOWERMENT

Mrs.A.J. Yagel M.A., M.Phil, PGDCA

Assistant Prof of English

Department of English, SNMV CAS, Coimbatore

Abstract

"A voice is a human gift; it should be cherished and used, to utter fully human speech as much as possible. Powerlessness and silence go together."-Margaret Atwood

Women empowerment is something that starts with individuals. It's a complex issue that is influenced by education, the economy, and many other factors. Even today, the conversation around worldwide empowerment of women is ongoing and many people have voiced their opinions on the matter. The impact of women's empowerment on society has been significant. Women are the mentors of generations and the entire community benefits from their energy and determination.

When it comes to the topic of women empowerment, there are many factors that come into play. While it's true that empowering women can lead to a higher status for individuals, there are still many cultural, racial, traditional, and societal views that prevent this word from being fully embraced. On a political level, women have made great strides worldwide, but when it comes to their own homes and families, there can still be interrogative attitudes. Despite these contradictions, there is still much room for positivity and progress.

Literature is a wonderful medium for exploring the human experience, and authors have the ability to portray this experience in a variety of ways. Whether it's the style of expression or the technique used, the beauty of literature is just as important as the message it conveys. Literature played a role in women's empowerment in many ways. This paper will discuss the impact of literature on Women's Empowerment.

Keywords: Women's Empowerment, Role of Literature, Significant, Women Writers.

Introduction

Literature serves as a reflection of life, much like a mirror. It captures the truth of an image, reflects reality, and corrects mistakes seamlessly. In the same way, literature acts as a mirror to society, providing insight into the human experience. We completely agree that women empowerment is a critical issue that requires a collective effort from all women. It is only when women come together and decide to self-empower themselves that we can create a movement for women's emancipation. This movement needs to gain momentum, so that we can create a society where women are strong and independent. We need to stop being the others and start being the strong beings that we are capable of being. Together, we can achieve anything we set our minds to, and create a better future for ourselves and for generations to come.

Significant of the Concept

The concept of women empowerment has gained significant attention in social science literature and policy research over the past few decades. This process is a foundation of several public practices in social, economic, political spheres. Women empowerment is a highly complex and much-contested complex, but it is universally recognized that the idea

of empowerment in the context of women can be considered as a relationship between women and society that is based on the values of freedom, rights, and equality. The main elements of this relationship include removing historical and structural discrimination against women in personal and public domains, providing equal treatment and opportunities for women in all spheres of life, ensuring equality of rights and equal protection of women's rights, and pursuing strategies to promote substantive equality for women.

Empowerment is all about treating a woman as fully human, giving her the power to assert her humanness. According to the United National Development Fund for Women, women's empowerment involves acquiring knowledge and understanding of gender relations, developing a sense of self-worth, a belief in women's ability to bring about desired changes, and securing a woman's right to control her own life. Empowered women would have greater choices and bargaining power to influence decisions concerning them. The idea and actions concerning women's empowerment aim to accomplish justice in the national and international order.

Impact of Literature

The importance of literature and writing in the empowerment of women and achievement of gender justice cannot be overstated. Over the years, literature has been deeply influenced by feminist struggles all over the world, as it reflects and advances concerns of gender justice and women's empowerment. Women's literature is a reflection and continuation of society's quest for women's equality and rights. The recognition of women's writings as a powerful site for investigating patriarchal social structures has been acknowledged by 20th-century literary criticism. However, women have not created as much volume of literature as it is expected from nearly half of the human society. For centuries, human experiences have been synonymous with masculine experiences, making it incomplete and one-sided. As a result, the powerful currents of feminism that have swept the literary world during the past one and half centuries have caused many women to assert their identity through literature. Literature can become a site for women's empowerment in various ways.

Literary writing is one of the most effective ways of learning about the socio-psychological realm of women and their expectations from society. Women's purposive engagement with literature would help enrich and transform the spiritual and intellectual domains of their existence and expand their consciousness. Writing can become a silent but powerful form of activism for women. It could provide them with an opportunity to think critically about issues of gender and sexuality in the context of interpersonal and social relations. Literature helps explore women's experiences in a historical, psychological and societal context. Such exploration would challenge us to uncover the irony and complexity of human emotion and present us with a world that is not the same that we are living in. Literature will empower women by giving new visions for their progress.

Women's literature helps us to understand the social construction of men's and women's traditional and modern roles as also of the responses to these roles and the

conflicts generated by them. This understanding can form the basis of the policies and actions meant for women's empowerment in the practical domains. Finally, the reading-writing process inherent in literary activity would qualitatively and subtly transform women. Writing in literature can be cathartic for them. It would help them to overcome ingrained emotions of fear or debility. The experience of literary reading and writing would also transform and empower women in social and political spheres.

Indian Women Writers

The issue of Women's Empowerment in India is an important one that has been neglected for centuries. Women have been pushed to the margins, despite strict laws and constitutional rights. They face rape, torture, domestic violence, and other forms of oppression. However, real empowerment can only come through awareness, education, financial independence, and a change in attitude. Literature and society are closely linked, with both influencing each other. Indian women writers have risen to the occasion and are reflecting the condition of women and their hopes and aspirations in their work. Their writing is playing a vital role in formulating and moulding contemporary social consciousness. Winds of change are already blowing, with Indian women across all classes coming out of traditional roles and marching on the path of progress alongside their male counterparts. Gratitude to the efforts of these writers, women are asserting their individuality by challenging taboos and degrading social norms.

Feminist literature is an incredibly powerful. It presents role models for women and sheds light on the oppression and suppression that women face in our society. It's inspiring to see women who display personal courage in a world that is already tilted in favour of men. The message from women writers is clear: we must fight against discrimination, violence, hypocrisy, and exploitation, and assert our own identities. Particularly, fascinated by the prominent Indian women writers who write in English. Their work is not only important for women, but for everyone to understand and appreciate.

Bama is a remarkable writer who has dedicated her life to advocating for the rights of Dalits. Through her personal experiences, she has learned invaluable lessons about the importance of perseverance, empathy, and compassion. Despite facing many challenges along the way, she remained committed to her dreams and pursued a career as a school teacher instead of becoming a nun. With the support and encouragement of her friends, she was able to publish her experiences in a book called "Karukku" in 1992. Her work continues to inspire and empower countless young women today.

Conclusion

It is important to recognize that women empowerment cannot be achieved without women taking the initiative to self-empower themselves. To achieve this, reducing feminized poverty, promoting education for women, and preventing and eliminating violence against women are crucial. Female authors in India have made significant contributions to the field of women empowerment. Their techniques and thematic works

can help the present world understand women's issues and feminine concepts in different circumstances. It's disheartening to see that despite the efforts of powerful writers and leaders who have spoken out about women's empowerment since the first wave of feminism, slavery still occurs in many parts of the world.

Unfortunately, India has been in the news recently due to several incidents that showcase a disturbing mindset towards women. It's important that we continue to raise awareness and fight for the rights of all individuals, regardless of gender. It is important for men to understand and respect the female gender. Women should be seen as equals in all aspects of life, including work, education, and relationships. It is crucial to break down gender stereotypes and biases, and recognize the unique strengths and abilities that women bring to the table. By treating women with the same level of respect and consideration as men, we create a more inclusive and fair society for all. It starts with changing our mindset and acknowledging the value of women in our lives.

ARTIFICIAL INTELLIGENCE IN EDUCATION

Dr. S. Namasivayam

Professor and Head, Department of Commerce (BPS)

Dr. N.G.P. Arts and Science college, Dr. N.G.P. Kalapatti Raod, Coimbatore

drnamasivayam2002@gmail.com

Abstract

Artificial Intelligence (AI) has the potential to address some of the biggest challenges in education today, innovate teaching and learning practices, and accelerate progress towards SDG 4. However, rapid technological developments inevitably bring multiple risks and challenges, which have so far outpaced policy debates and regulatory frameworks. UNESCO is committed to supporting Member States to harness the potential of AI technologies for achieving the Education 2030 Agenda, while ensuring that its application in educational contexts is guided by the core principles of inclusion and equity. UNESCO's mandate calls inherently for a human-centred approach to AI. It aims to shift the conversation to include AI's role in addressing current inequalities regarding access to knowledge, research and the diversity of cultural expressions and to ensure AI does not widen the technological divides within and between countries. The promise of "AI for all" must be that everyone can take advantage of the technological revolution under way and access its fruits, notably in terms of innovation and knowledge¹. Hence the paper will give idea on the application of Artificial Intelligence in Education.

Keywords : AI on Eudcation, Modern Education Pedagogy, Innovative ICT Pedagogy, Modern Teaching Learning Process

Introduction

Artificial Intelligence (AI) has the potential to address some of the biggest challenges in education today, innovate teaching and learning practices, and accelerate progress towards SDG 4. However, rapid technological developments inevitably bring multiple risks and challenges, which have so far outpaced policy debates and regulatory frameworks. UNESCO is committed to supporting Member States to harness the potential of AI technologies for achieving the Education 2030 Agenda, while ensuring that its application in educational contexts is guided by the core principles of inclusion and equity. UNESCO's mandate calls inherently for a human-centred approach to AI. It aims to shift the conversation to include AI's role in addressing current inequalities regarding access to knowledge, research and the diversity of cultural expressions and to ensure AI does not widen the technological divides within and between countries. The promise of "AI for all" must be that everyone can take advantage of the technological revolution under way and access its fruits, notably in terms of innovation and knowledge¹. Hence the paper will give idea on the application of Artificial Intelligence in Education.

Tools and Technologies with Artificial Intelligence

Technology has always played an important role in education, but its current use is more prevalent than ever thanks to the increased availability of smart devices and web-based curriculum. With the rise of Artificial Intelligence in education, there are many different ways it is being used to help students learn. Here are a few technologies with AI²

Chatbots

Chatbots are one example of AI educational apps that students might use soon. These are being increasingly implemented into classrooms where kids use iPads or laptops to chat with bots designed to help them understand specific topics such as math or reading comprehension. It's possible chatbot tutors could do more than just help students learn new concepts; there may even come whenever the analysis is needed. Chatbots are the future of all technical roots. It reduces the cycle of tasks assigned to teachers. Chatbots used in classrooms could also replace email communication between teachers and parents while parents meet also.

Voice Assistants

Voice assistants are an engaging and convenient way to bring learning at home while also helping users schedule study calendars, listen to coaching instructions while on the go, and give instant answers to students' basic questions in class. The benefits of voice assistants in education include: Efficient saving of time for students and teachers and Providing community learning opportunities&Providing personalized education within seconds³

Gamification

AI-powered gamification can make learning more engaging and enjoyable by using game elements such as points, badges, and leaderboards. Gamification can motivate students to learn and help them to develop important skills such as problem-solving and critical thinking.

Virtual Reality (VR)

One recent innovation in education is virtual reality, which is being used for everything from teaching history to helping students with math skills. Virtual Reality is a three-dimensional computer-generated environment that people can explore and interact with. VR educators are finding new ways to integrate experiential learning into their classrooms, truly shaping what it means to be a student. VR is a great way to help students feel connected to each other. When they are indifferent classrooms but using the same virtual reality program, they can communicate safely while still being separated by distance. With Virtual Reality, students can explore things that they may never have the opportunity to see or learn about in real life. The same goes for teachers. Teachers can find much more engaging ways of teaching their students. Anybody who has tried VR will know that it feels much more immersive than sitting in front of a screen or being inside a computer-generated environment. Increased engagement and deep understanding are just two benefits for students and teachers.

Learning Management System (LMS)

In this age of technology, one of the most important things is to stay up-to-date with advancements in education. One of these advancements is the use of Learning Management Systems. A learning management system provides a centralised, intuitive system for managing all of a school's online activities.

Smart Content Creation

AI and ML in education also help teachers and research experts create innovative content for convenient preaching and learning. Here are a few examples of AI smart content creation.⁴

Robotics

Robotics with Artificial Intelligence in education has increased over the last few years. It is now being used for both teachers and students to help in education, which can be seen to improve student engagement and safety. With AI's current development, robotics in education is inevitable. Robots can be an excellent resource for learning for both students and teachers – a way to explore a topic in-depth without getting bored. For teachers, this means robots can provide a way to have more one-on-one time with students who need additional help. It also allows them to experiment with new ways of teaching, which is essential when trying to reach different types of learners. For students, it's a chance to teach themselves something new without the pressure of being the only person in class or having their peers judge them for making mistakes.

Conclusion

AI will benefit parents who are always concerned about their children's social life. AI technology allows them to monitor their child's interaction online more closely than ever before. Schools use software that analyses data points such as how well different students comprehend material; then groups kids accordingly based on what they need. AI brings the ability to have 24/hr access to teachers and lessons anytime, anywhere. AI can be used as an educational tool that guides students towards their goals by providing personalised feedback on homework, quizzes etc., based on AI algorithms. Artificial Intelligence has the potential to make everyone's life easier through automation as it can do menial tasks, so you don't need to spend time doing mundane activities like organising emails or finding files. The future of education is here! AI is a crucial driver for change in education.

anushana2111@gmail.com

Abstract

Development in the field of education is considered to be much important in today's competitive world. As technology continues to advance rapidly, there is a growing need to improve education to better prepare students for their future. There are numerous methods to bring about advancements worldwide. Disruptive technology, in contrast, displaces outdated content and introduces fresh, innovative ideas that can potentially initiate a superior and higher-quality revolution in the realm of education.

Keywords: Disruptive Technology, technology development, education field, revolutionaries, Student's development, innovative ideas.

Introduction

Before the implementation of digital classrooms, only traditional teaching methods were utilized. In the past, students relied solely on their teachers for knowledge, with the library being the only other source available to them. Disruptive technologies are widely available, and as they continue to develop, there is a responsibility to incorporate these changes into the realm of education. Many individuals are experiencing scheduling issues due to their occupations. However, disruptive technologies offer an opportunity to enhance their knowledge and skills.

With the emergence of creative ideas from various individuals, numerous new educational technologies have been developed. These technologies comprise of: Gamified Learning, Cloud computing, Immersive Learning, Personalized learning, AI (Artificial Intelligence), Big Data, and Analytics.

Emergence with the Implications of Gamified Learning

The concept of gamified learning is becoming increasingly popular. It involves incorporating game-like elements into educational programs to make them more engaging and interactive for students. By doing so, it is believed that students will be more motivated to learn and retain the information better. This approach has the potential to revolutionize the way we approach education and could lead to better academic outcomes for students.

The use of gamified learning in the education system has a positive effect on students. It enhances their learning levels by improving specific skills and optimizing their overall learning experience. Moreover, it offers intrinsic rewards and motivation to keep them engaged and driven.

There are two types of gamified learning: structural and altered methods. Structural gamified learning involves no changes to the subject matter, while the Altered method involves adding elements to the subject matter to make it more fun, such as incorporating games.

Cloud Computing

Cloud computing is a technology that allows users to access software, storage, and processing power over the internet, instead of relying on local hardware and infrastructure. It offers many benefits such as flexibility, scalability, cost-effectiveness, and improved collaboration.

One of the benefits of Cloud Computing is that professors can provide students with notes quickly and at any time, without the need for heavy bags or outdated textbooks.

Immersive Learning

Immersive Learning is a practical training method that utilizes Virtual Reality (VR), Augmented reality (AR), and Mixed Reality (MR) technology. This method exposes students to real-world scenarios, allowing them to react accordingly and develop skills for performing in virtual work environments.

It helps in eliminating barriers with a distraction-free environment by which experiences are customized.

Immersive learning utilizes one or more of the following technologies:

Virtual Reality (VR) - fully immerses you in a virtual world with the use of a headset

Augmented Reality (AR) - enhances your real-world view by adding digital elements to it

Mixed reality (MR) - digital and physical objects co-exist and interact in real-time using a combination of VR and AR.

Simulation learning - 3D visualizations and simulations provide a semi-immersive experience.

Personalized Learning

Personalized learning helps in creating customized learning methods for each student based on their strength, skill, needs, interest, and aspirations.

A learning plan is being created based on their capacity of understanding what they are best at. Doing so keeps them motivated and activated throughout the process.

This tool assists in creating profiles for learners, designing personalized learning paths, tracking individual mastery, and providing a flexible learning environment. Students have various options available to them, and they do not encounter any timing or environmental obstacles during the learning process.

Artificial Intelligence (AI)

The use of Artificial Intelligence (AI) can improve the learning experience for individuals and support teachers. It represents a significant advancement in computer and robotics technology, allowing for the possibility of replacing human intervention in the teaching process.

AI offers numerous advantages that can be utilized to enhance the field of education.

Personalization: This program allows for customization to cater to each student's individual needs.

Tutoring: Through AI-powered tutoring, students can receive ample information that aids in the development of their intelligence quotient.

Grading: AI assists in evaluating students' test papers and grades them using answer keys provided to it. This makes it easier to obtain the results.

Feedback on course quality: When it comes to course quality feedback, the AI system will provide relevant information to students who answer questions incorrectly. This will enable them to correct their mistakes in a formal manner.

Data and learning analytics: Education administrators are utilizing AI technology to analyze data and make informed decisions more efficiently. This helps improve decision-making processes.

Big Data and Analytics

The field of education generates vast amounts of data, and organizing it can be a challenge. The use of Big Data in education has proven to be beneficial in addressing these issues, prompting us to reconsider our methods, bridge the gaps in knowledge, and enhance the learning system.

The following is the concept of Big Data and Analytics in education:

1. Gaining Valuable Understanding
2. Up-to-the-minute Information
3. Revolutionizing Education
4. Tailored Learning Experience

Usage of 5g Technologies in Education

The fifth generation of wireless technology is known as 5G. It offers high-speed and low-latency wireless technology for any user. This unique innovation is particularly beneficial for students as it allows for quick downloading of information and easy access to resources.

There have been suggestions to introduce the special feature of 5G technology in education by the end of 2023. This could enhance student engagement during distance learning and provide them with opportunities to gain virtual reality learning experiences.

AN EYEVUEW ON DIGITAL LITERACY IN 21ST CENTURY

Dr. B. Rohini

Assistant Professor

PG Department of Commerce with International Business

Nallamuthu Gounder Mahalingam College, Pollachi

Mr. P. Prakashkumar

II M.Com IB

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Digital literacy encompasses a range of competencies that enable individuals to use digital tools, devices, and information effectively and responsibly. These competencies include basic digital skills, such as using computers and the internet, as well as more advanced abilities like critical thinking, media literacy, information evaluation, and data analysis. In the 21st century, digital literacy is closely intertwined with traditional literacy skills, fostering communication, collaboration, creativity, and critical thinking among individuals across different age groups and backgrounds. As digital technologies continue to shape our lives, the development of comprehensive digital literacy skills becomes an essential endeavor for individuals and society at large. Embracing digital literacy equips people with the tools they need to harness the vast potential of technology while navigating its challenges responsibly, ensuring an inclusive and prosperous digital future. The paper aims to explore the overview of digital literacy and its relationship to 21st-century skills, which are crucial for navigating the complexities of the modern world.

Keywords: Technology, Communication, ICT skills, Knowledge, Tools,

Introduction

Digital literacy is an individual's ability to find, evaluate, and communicate information by utilizing typing or digital media platforms. It is a combination of both technical and cognitive abilities in using information and communication technologies to create, evaluate, and share information. The origin of the word literacy refers to the ability to read and write. Early descriptions of computer-related literacies also focus on the acquisition of sets of rules and technical capabilities. However, by the end of the 20th century, this definition had expanded considerably. While digital literacy initially focused on digital skills and stand-alone computers, the advent of the internet and the use of social media has resulted in a shift in some of its focus to mobile devices. Similar to other evolving definitions of literacy that recognize the cultural and historical ways of making meaning, digital literacy does not replace traditional methods of interpreting information, but rather extends the foundational skills of these traditional literacies. Digital literacy should be considered a part of the path towards acquiring knowledge.

Components of Digital Literacy

ICT literacy refers to a set of user skills that enable active participation in a society where services and cultural offerings are computer-supported and distributed on the internet. Technological literacy (previously called computer literacy) entails a deeper understanding of digital technology and comprises both user and technical computing skills.

Information literacy focuses on one of the key aspects of our Knowledge Society: the ability to locate, identify, retrieve, process and use digital information optimally. There are many of them with direct relevance to digital literacy – ICT skills, civic skills, learning to learn skills, participation of adults in lifelong learning. High values in these targeted areas certainly require the development of digital competence. Other indicators also may involve ICT skills. For example, cross-national mobility of students in higher education is made possible through blended learning courses that involve travelling students staying in touch with the learning process of their peers at home. Professional development of teachers and trainers, another key indicator, is mostly achieved through blended or e-learning courses in which new methodological skills are acquired and then applied in the workplace. These examples illustrate the importance of digital literacy for the achievement of Information Society goals.

Digital literacy is a life skill because it targets all areas of contemporary existence. In seven out of the sixteen literacy indicators, digital literacy plays a central role. In the last century, the shift from the manufacture of goods to the provision of services has resulted in an economy based on information and knowledge. Computers substitute for workers who perform routine physical and cognitive tasks, but they complement workers who perform non-routine problemsolving tasks. Modern organizations and companies have been facing a restructuring of work, which means flatter organizational structures, decentralized decision making, widely shared information, flexible work arrangements and collaboration in project teams.

Importance of Digital Literacy Skills for Students

As technology continues to become more and more ingrained in daily life, the importance of learning digital literacy skills is becoming increasingly apparent. Below are five reasons students should learn digital literacy skills.

Support Educational Progress

One of the first reasons digital literacy skills are important is because of the increased use of technology in education. The use of technology as a learning tool has grown in the past 15 years, with technology platforms such as computers, tablets and the internet becoming increasingly prominent in K-12 schools and universities.

Students with digital literacy skills will be more comfortable and confident in these learning platforms, while those without digital literacy skills may have their progress stymied by an inability to or lack of confidence in navigating the related technology. In addition, with the majority of standardized state assessments being administered online,

it's increasingly important that students have the confidence to focus on the material in question instead of being slowed or distracted by using technology for the test.

Increase Online Safety

Online risks are complex and ever-changing, with nefarious individuals or groups continually discovering and creating new ways to take advantage of others. While digital literacy cannot prevent students from facing safety challenges online, it can empower them with important knowledge, tools, processes and resources to help protect their safety and privacy as much as possible.

Understand Digital Responsibility

Along with online safety, digital literacy also teaches digital responsibility, which is the ability to consume and communicate information ethically online. Increased technology dependence exposes students to challenges related to copyright and plagiarism, cyberbullying, vetting informational resources, and interacting responsibly with others. Digital literacy skills help students master their ability to understand and effectively navigate these challenges, making them more responsible digital citizens.

Improves Social Opportunities

Digital Literacy plays a role on being able to socialize with people outside of immediate territory. Where friendships and even familial relationships used to depend on slow-communication, the use of technology eliminates the barriers of location when it comes to socialization. However, this opened world of social opportunities also exposes people—especially young people—to dangerous social scenarios. Mastering digital literacy skills allows students to connect with others online while protecting their information and safety.

Improve Digital Equity

Digital equity also helps to bridge the digital divide. Even with the proliferation of technology in households and educational institutions, there remains a disproportionate number of minority workers with limited digital literacy skills. By making digital literacy a priority in K-12 education, institutions can help to improve digital literacy among underrepresented groups, helping to upskill these students so they may have increased career opportunities in the future.

Supports Lifelong Skills

While technology is ever-changing, digital literacy foundations empower students with base knowledge and skills that can be applied to various types of technology now as well as in the future. For instance, learning basic concepts such as input/output, application operation, discerning hardware devices and how to use them, etc., can provide basic transferable knowledge that can be applied to new and emerging technologies.

1. Critical Thinking

It is learning how to solve problem. It teaches students not to accept immediately claims without seeking the truth.

2. Creativity

Requires student to think outside of the box and to take pride in what uniquely theirs.

3. Communication

Makes students express their ideas in the clearest and organized manner.

4. Collaboration

Happens when students know how to work well with others to accomplish a given task or solve a problem

Major Concerns about Digital Literacy in India

- We need to keep track of the young digital citizens and guide them to consume content thoughtfully and be creative.
- Though there have been some efforts to impart digital education to teachers, there is a dearth of computer teachers in rural areas. A certain village in Odisha has 18 computers, but only 10% of population is computer literate as there is no teacher there.
- Many children have the privilege of getting exposed to digital media, and they tend to learn using it without formal training. In the process, they may harm themselves
- The digital divide is a major concern in the Indian scenario where there is a wide disparity in economic conditions.

After reviewing the status of India's digital literacy rate we can conclude that we have a long way to go, none the less we cannot forget our achievements and see the other side of the picture. Our education system has been revamped, and Information technology has been introduced as an important subject. Computers have been made available to many underprivileged schools to make our rural population digitally literate. To make this development forward, we need to focus on making our teachers digitally literature.

Benefits of Digital Literacy in the Classroom

Digital literacy addresses the growing need for critical analysis of digital content, teaching students to assess its source, credibility, and quality. Digital literacy instruction engages students' cognitive abilities, asking them to apply critical thinking skills to their actions, behaviour, and social engagement on digital platforms. Social media's explosive growth has made information literacy and digital citizenship increasingly important components of digital literacy.

Analysis of online news and advertising teaches critical thinking skills and prepares students to identify credible information sources. Lessons in responsible digital communication and ethical use of digital resources. Privacy and security are also

components of digital literacy. Teaching students to understand their digital footprints – personal information actively and inadvertently shared online – makes them less likely to fall victim to criminal behaviour, such as cyber bullying and identity theft.

Digital Literacy for Employability

Digital literacy improves employability because it is a gate skill, demanded by many employers when they first evaluate a job application. It also works as a catalyst because it enables the acquisition of other important life skills. Companies applying these changes in organizational structures and business practices require new skills, as well as an increased role of ICT in the work place for communication, information sharing, and simulation of business processes. Routine cognitive and manual tasks in the economy decline, and non-routine analytic and interactive tasks rise. Resulting new hiring practices demand workers with the ability to respond flexibly to complex problems, communicate effectively, manage information, work in teams, use technology, and produce new knowledge. These capabilities are rarely taught in schools or measured on typical assessments. The challenge school systems face today is to embed digital literacy in all levels of the educational system as well as in the professional development of teachers and trainers.

Challenges of Digital Literacy

Lack of Access to and Knowledge of Technology

One of the most challenging aspects of digital literacy is the requirement for a certain level of technical expertise and understanding. Not everyone has access to cutting-edge technology and tools or has been properly trained to use them, which can result in a digital divide in which certain people lag in digital skills and knowledge. This can have severe consequences for access to school, employment, and social and civic participation.

Trouble in Finding the Right Resource

Another barrier to digital literacy is the lack of capability to find the right resource from the billions that are available online. With so much information at your fingertips, it can be difficult to identify which sources are genuine and trustworthy. Critical thinking and analytical skills are needed to evaluate the quality of material found online and discern between facts and opinions, biases, disinformation and propaganda. This necessitates a critical approach with experience, awareness and knowledge.

Lack of Guidance

Concerns about privacy and security are amplified when we talk about digital literacy. Many people are unaware of the potential dangers of the internet and lack supervision from a digital expert. With a lack of information about digital literacy, trainers and practitioners, it is a topic that needs greater attention than we think.

Lack of Awareness & Interest in Digital Technology

Another challenge is the lack of awareness and interest in digital technology among certain sections of the population, particularly older adults and women. Nearly half of the

world's population is still not online. While Asia has the highest number of people without access, Africa tops the world in the percentage of the population without connection at 88 per cent. Furthermore, in digitally connected countries, male internet users outnumber their female counterparts in every region of the world. This 'digital divide' does not just signify those who have access to the internet and those who do not. The gap also encompasses several other discrepancies, including the quality of digital infrastructure in rural communities, the speed of connectivity in remote areas, and the training and skills required to navigate such technology.

Lack of Emphasis on Digital Literacy in Education

There is a lack of emphasis on making individuals digitally literate. Despite the growing importance of digital skills in the job market, many schools and colleges worldwide do not offer adequate training in digital literacy. This results in a lack of digital skills among young people, which can hinder their employment prospects in the future.

Conclusion

In the rapidly evolving digital landscape of the 21st century, digital literacy has emerged as a crucial skill set that individuals must possess to thrive in both personal and professional spheres. This paper has explored the multifaceted nature of digital literacy and its significance in various aspects of modern life. The findings reveal that digital literacy encompasses not only technical proficiency but also critical thinking, ethical decision-making, and information evaluation. Embracing digital literacy as a foundational skill in education and the workforce is pivotal to building an inclusive, innovative, and digitally empowered future. By promoting digital literacy, we equip ourselves and future generations to leverage the vast potential of technology responsibly and ethically.

Abstract

Information and Communication Technology (ICT) is a vehicle to enhance the quality of the education. As the world is moving rapidly into digital media and information, the role of ICT in education is becoming more important in the 21st century. The opportunities for education arising from developments in information and communication technology are very promising. In recent years, increased computing power, improved wireless and user-friendly technology, and reduced telecommunication costs have contributed to lowering barriers to information access and exchange. Changes in the economic and social fundamentals call for transformation in the skills, capabilities and attitudes of the masses. This requires a shift in the delivery and pedagogy used in the current education system. ICT increases the flexibility of delivery of education so that learners can access knowledge anytime and anywhere. It can influence the way students are taught and how they learn as now the processes are learner driven and not by teachers. The purpose of this paper is to analyze the integration of Information and Communication Technologies in higher education for imparting easily accessible, affordable and quality higher education leading to the uplift of India. The focus of the paper is on the benefits that ICT integration in education can provide, right from breaking time and distance barriers to facilitating collaboration and knowledge sharing among geographically distributed students and the paper reports on the changing trends in use of ICTs for instruction in higher education institutions (HEIs).

Index Terms - Education System, Information and Communication Technology, Innovative Classroom Practices, Technological and Pedagogical Changes

Introduction

ICT in the Creative learning

Technology moves on very quickly and schemes of work often don't reflect changing technologies, times and contexts. We are in a position to personalize the curriculum in what children learn, how they learn, where they learn, with whom and with what resources. As children develop their skills using ICT both inside and outside school with innovations such as the internet, broadband, games consoles, Wiis, Nintendo DSs, iPods, iPads etc, children could be in the position where they use more technology outside school than in the classroom and perhaps even 'dumb down' as far as their achievements and their understanding of what technology can do. The knowledge, skills and understanding of our children varies greatly depending on their experiences with technology outside school.

In order, to utilize the skills that the children already have, in school we encourage teachers to allow the children to choose when it is appropriate to use technology (and when not). We also suggest teachers don't teach children a set of skills as a whole class but teach skills as and when it's appropriate. Teaching a skill at that point of need key to children remembering it and using it again. To encourage a more flexible use of computers, we have asked schools to reevaluate traditional ICT suites in favor of having the technology on hand in the classroom as and when they need the use of ICT suites and timetabled lessons can limit student access to IT. The ability of students to make creative use of ICT as and when their learning requires can be inhibited if ICT is delivered as a standalone subject. One example would be, edit these sentences adding capital letters when necessary using the shift key. It would be better to teach the usage of the shift key at a time when the children are typing letters, addressing envelopes, postcards linked to a geography topic, letters to a pen pal or a thank you note.

The skill they need to be taught needn't wait until their timetabled lesson later in the week or term but when they are asking for the answers. Having the freedom to choose how the children learn under the direction of the teacher and what technology and software they use, enables teachers to support children with different learning styles, personalizing learning and addressing multiple intelligences. Traditionally, ICT has focused on supporting children whose strengths lie in linguistic and logical (mathematical) intelligences. There should be one aspects of ICT teaching:

Through ICT supporting learning in other subjects; applying skills in real contexts, using AFL should identify the next steps in their learning in both the above.

School may have designed activities, identified skills and non-negotiable items for you to incorporate into your planning. In addition, most schools allow teachers a freedom to look at a themed topic and decide upon what applications or other ICT activities will enhance children's learning in that area. If possible, teachers should look at a range of activities over the school year that builds on the children's prior learning. In ICT, an established assessment for learning (AFL) strategy can transform the rate at which the children adopt technology. In many cases, children learn skills from their peers (and from their mistakes!) before their teachers. CT has the potential to transform learning. Too often schools substitute paper based activities for computer based ones. This undermines the capacity of technology and is wasteful of resources. A vast range of solutions, information, examples and perspectives can be offered only through the use of ICT.

Support Pedagogical Innovations with New Tools

Encouraging experimentation: Innovations in the process of learning and teaching emerge from different actors, both learners and teachers. Policies should aim to empower educational actors and institutions in their local contexts to develop innovative approaches to learning with added value in their environment, (e.g. with different local languages, or by using digital tools and media creatively for specific learning topics).

Networking and best practice exchanges: Teachers should be encouraged and supported to document and share the innovative practices they have developed and

encountered in their teaching, as knowledge of practical applications for new approaches in different environments is scarce. Incentives for the objective assessment of enabling and disabling factors should be implemented.

Teacher Training and Support: ICT and social computing can improve the effectiveness of learning and the learning outcomes, but results depend on the approaches used. Hence, initial and in-service teacher training should disseminate insights and best practices with new innovative approaches, encouraging teachers to experiment with digital and media technologies and to reflect on the learning impacts of their own teaching practices. Establishing and participating in teacher networks and following innovative practice development of the field should become part of teacher training.

Open and networked institutions: Policies should encourage institutions to embrace the networking opportunities available. By opening their learning materials (open educational resources), institutions can attract learners and also support informal learning outside institutions. Networking between institutions can enrich the curricula provided for students and transfer subject-related knowledge between practitioners. Institutions should promote collaborative networks between teachers, researchers, and professional networks, in order to support the emergence and sharing of learning innovations

Develop and support favourable culture for ICT innovation and learning: Using new tools for old processes does not create change or innovation. Institutions should facilitate emergence of innovative learning approaches by (i) ensuring that learners, teachers, managers and parents are aware of their potential and (ii) by supporting them in curricula, teaching guidelines, and teacher training. Institutions should acknowledge and encourage innovations coming from actors on different levels and develop their practices accordingly, thereby becoming reflective, learning organizations.

Research on ICT impacts on learning: More research is needed for finding evidence on how technology can enhance learning. Together, tool developers and educational researchers should study and develop models for embedding new tools such as computer-based assessment in teaching and learning approaches. This would provide institutions and teachers with proven practical models that support the take up of innovative tools.

Impact of ICT on the Teaching Process

- ICT Has an edit effect in terms of quality of student work and practical examples through visualization.
- ICT Improves poor handwriting and languages skills through word processing.
- ICT Equalizes individual differences and has particularly dramatic effects for students with special needs.
- ICT Facilitates self-pacing with increased capacities to deal with individual learning styles as students can work at the pace and intensity suitable to their needs.
- ICT Enables collaborative learning with little indication of the isolated learner.
- ICT Encourages use of peer coaching and peer reviews.
- ICT Develops communication skills and awareness of different audiences.
- ICT Has impact on resource-based learning and access to real world information through the Web.

- ICT Increases information reliability and accuracy adding to authenticity of learning tasks, with realistic and up-to-date information.
- ICT Increases student motivation through hands-on activity, visual representations and improved modes of presentation.
- ICT Encourages independent learning and individual preferences for process, layout, style and format.
- ICT Gives students more control.
- ICT Allows students to produce high quality multimedia products.
- ICT Changes teacher practices, planning tools and assessment rubrics.
- ICT Increases opportunities for classes to evolve and for student experiences to shape outcomes.
- ICT Has motivated students to commit to learn and to participate in learning activities.
- ICT Has improved students' quality of work and has given them the confidence to perform enhanced learning tasks. ICT Has allowed students to learn independently, which has enabled more work to be completed. ICT has a profound impact in classrooms. It adds complexity to a non-linear system. This complexity needs a major change in organization. Downs (2001) differentiates four levels of use of ICT in the classroom:

Level 1: ICT skills are added into the school programmed through a separate ICT subject, while teacher practices in other subjects remain unchanged;

Level 2: ICT skills are integrated into teachers' daily work with some teachers' pedagogical practices and classroom behavior remaining the same, while the practices of others change more radically;

Level 3: ICT is transformative at the classroom level as it changes content as well as pedagogy (what students learn as well as how they learn it);

Level 4: ICT is transformative at the system level leading to changes in the organisational and structural features of school learning.

The New Trend of ICT

ICT is based on individual access, personal mobile phones, personal computers etc. as well as the new trend for personalization of the Web. This implies that the needs and the competencies of students are quite different, and since ICT allows one-to-one learning, a more personalized learning may constitute the future trend of higher education. Better achievement of students is easier to obtain since the learning is personalized and customized. However, this implies a huge change in the format, in the organization of the classrooms and in the competencies and availability of teachers. This may explain the differences observed in the impact of ICT on the performance of students. Wherever the introduction of ICT is associated with a personalized service for students, performance increases.

The Outcomes of Higher Education

The impact of ICT on the learning process seems to be more important and requires more than looking only to curricula. Improved student outcomes are observed, with regard to: motivation, enjoying learning; self-esteem; ICT skills; collaborative skills; subject knowledge; information handling skills; meta-cognitive skills, etc. In European higher education institutions, while students and teachers seem to be using the new available technologies more and more intensively, organizational designs are changing slowly. The lack of a strategy regarding organizational change, as several studies have shown, leads to a weak impact of the use of ICT on student performance.

Conclusion

In order to conclude we will try to proceed to synthesize from a general viewpoint the results obtained, taking into consideration the relevant aspects of the literature. The results provided by both the quantitative and qualitative analysis of the literature obtained will be exposed especially regarding those aspects which are related to ICTs for Education and ICTs in Education. ICTs for education refers to the development of information and communications technology specifically for teaching/learning purposes, while the ICTs in education involves the adoption of general components of information and communication technologies in the teaching learning process.

The adoption and use of ICTs in education have a positive impact on teaching, learning, and research. ICT can affect the delivery of education and enable wider access to the same. In addition, it will increase flexibility so that learners can access the education regardless of time and geographical barriers. It can influence the way students are taught and how they learn. It would provide the rich environment and motivation for teaching learning process which seems to have a profound impact on the process of learning in education by offering new possibilities for learners and teachers. These possibilities can have an impact on student performance and achievement. Similarly wider availability of best practices and best course material in education, which can be shared by means of ICT, can foster better teaching and improved academic achievement of students. The overall literature suggests that successful ICT integration in education.

ICT TOOLS IN TEACHING LEARNING PROCESS

**Ms. M. Gayathri, Dr. T. Vijayachithra
& T.Muthukaanu**

Assistant Professor,
UG Department of Commerce CA, NGM College

Abstract

Information communication technology is a general term that refers to the technologies used to collect, store, edit and communicate information in various forms. ICT is the use of computer-based technology is used in education is an educational system that uses information and communication technology to support, enhance and enhance the delivery of information. Adapting to these new technologies is a slow process, but it allows many teachers to improve the quality of teaching. Global research has shown that ICT can lead to improved student learning and better teaching methods to make information and communication services widely available to users. E-learning can be termed a network-enabled transfer of skills and knowledge. While teaching can be based in or out of the classrooms, the use of computers and the Internet forms the major component of E-learning. Many institutions of higher education and universities are resorting to E-Learning. Many corporate companies are also deeply investing in E-learning and setting up interactive classrooms activity. Technology has taken over our entire life and education is no exception to it, technological advancement has a great effect on how learning is imparted and also consumed.

Keywords: *ICT Tools-E-Learning-Digital Platform-Satisfaction*

Introduction

Information technology (IT) is defined as the study or use of electronic equipment's, especially computers for storing, analyzing and sending out information. Communication technology is the process of sending, receiving and exchanging information. ICTS can be defined as "diverse set of technological tools and resources used to communicate, and to create, disseminate, store, and manage information." These technologies include computers, the Internet, broadcasting technologies (radio and television), and telephony. The use of e-learning in education improves the quality of practical education and a better understanding of the subject. Indira Gandhi National Open University (IGNOU), the world's largest Open University launched a 24x7 E-learning satellite channel called GyanDarshan. E-learning gives the advantage of 24x7 and 365 days a year-round access as compared to Instructor-Led Training, which is a one-time class that must be scheduled. Undoubtedly, one lecture can teach more students wide geographic area by responding to e-learning technology. In general, this review provides important information to increase the knowledge base of various performance educational methods. In the future, there is still a need to develop and evaluate such methods education among higher education students. It is important that these studies are conducted show effectiveness, and they should also focus on outcomes at different levels.

Statement of Problem

The purpose of this research is that the government introduces many new technologies in the country to suit the people's society in order to fulfill the objective of development of the country. A project like Digital transformation in education. E-learning level perception, culture and satisfaction varies from person to person due to many factors such as gender, education etc.

Objective of the Study

- To study the awareness level of people towards ICT tools
- To apply critical thinking skills to their students action, behavior and social engagement on digital platform.
- To identify the satisfaction towards e-learning.

Review of literature

Sahlam et-al (2021) made a study on "The effects of modes of test administration on test scores: A study in an Indonesian school ". The main objectives of this study the effect of gender and the interaction effect between gender and mode of testing on test scores were significant. The primary and secondary data were used for this study. 234 respondents were collected for this study by using simple Random sampling method. The statistical tools like simple percentage will be used to analysis the data. The study revealed that indicated that neither gender, mode of test administration nor the interaction between gender and mode students anxiety levels. **Noreen & Malik, (2020)**. It is found that, teachers also require the necessary infrastructure, hardware and software, reliable high-speed internet connectivity, continuous professional development and the support of administrators. **Muhammad Hafeez (2021)** discovered that Teaching-Learning Process and ICT Tools- A Review and found that usage of modern ICT tools in teaching- learning process successfully improved the teaching-learning process and the traditional lecture learning does not improve the cognitive and communication skills of the learners. **Dr. Pranjal Grover et-al (2021)** made a study on "Efficiency of online pre-Recorded practical demonstrations and live Streamed practical demonstrations in third year physiotherapy students during the COVID-19 pandemic-a survey ".The main objective of this study is to understand the efficacy of online pre-recorded practical demonstrations. The primary data were used for this study. 44 respondents were collected for this study by using a complete enumeration sampling method. Statistical tools like simple percentages will be used.

Table 1

Variable	Number of respondents	Percentage
Age:		
Below 20 years	68	55.76
21- 30 years	87	43.58
31-40 years	1	0.66
Total	156	100

Area:		
Rural	98	62.82
Semi -urban	13	28.84
Urban	45	8.33
Total	156	100
Gender:		
Male	37	23.71
Female	119	76.28
Total	156	100
Marital status:		
Married	12	7.69
Unmarried	144	92.30
Total	156	100
Educational qualification:		
up to HSC	11	53.20
UG	83	37.17
PG	58	7.05
Others	4	0.64
Total	156	100
Occupation :		
Agriculture	22	73.07
Salaried Person	16	13.46
Labour	5	10.25
Business	113	3.20
Total	156	100
Digital Platforms tools used		
Yes	125	80
No	31	20
Total	156	100

Data: primary data

From the above table shows that Majority of the respondents are age group between 21-30 years. Most of the respondents are rural area. Majority (76.28%) of the respondents are gender in female. Majority (92.30%) of the respondents are marital status in unmarried. Majority (53.20%) of the respondents are Educational qualifications UG level. Majority (73.07%) of the respondents are Occupation level in Students.

Chi Square Test**Chi square value 5% @Satisfaction onlevel of people****Table 2**

S.No	Particulars	D.F	Chi square Value	Table value	Result
1	Age	4	10.316	9.488	Rejected
2	Area	2	9.375	5.991	Rejected
3	Education qualification	6	11.069	12.592	Accepted

Source: Primary data

From the above table found that respondents calculated chi-square is higher than table value at five percent level, there are significant association between the demographic variables and level of satisfaction. Null hypothesis rejected.

Conclusion

Digitization of legacy and vintage structures has replaced conventional operations with new technology and fashions. Due to that technology the instructional part has additionally got a big change and has changed the conventional training version to a brand new technology based smart version. By digitizing the learning experience, both college students and instructors can hone their skills and create a lively instructional process. Digital transformation can be implemented in many aspects within the academic quarter, including new student recruitment, online knowledge acquisition, scholarly assessments, personalized knowledge of experiences and exams. Generational penetration within the instructional quarter has promised dynamic participation and proposed new methods of training and mastering methods

Abstract

Unleashing creativity and ingenuity, brainstorming ignites a torrent of ideas and a symphony of perspectives in order to surmount intricate business or technical quandaries. This method cultivates unbridled ideation among participants, propelling them into the exhilarating realm of boundless possibilities. During collaborative brainstorming sessions, individuals spontaneously proffer their insights, as the collective energy crackles with a sense of urgency and inspiration. These ideas are then meticulously classified, assessed, and accorded a hierarchical arrangement, culminating in decisive determinations regarding their subsequent pursuit. Pedagogical approaches meander from traditional explanatory methods to avant-garde constructive teaching techniques. The selection of a fitting method can diverge depending on the course, subject, topic, and context. Studies reveal that the brainstorming method of teaching shines as exceedingly fitting for bridging the chasm between a learner's present stance and their coveted learning outcome. Remarkably potent at the primary education level, notably in language instruction, this method showcases amplified effectiveness. The purpose of this inquiry is to unravel the core of brainstorming, delve into its underlying philosophy within the realm of education, and explore its implementation through the utilization of brainstorming tools in research endeavors. The paper solely depends on various secondary data.

Keywords: Brain storming, Education, Tools, Research

Introduction

Brainstorming electrifies and collaborates, igniting a whirlwind of imaginative ideas and inventive solutions to diverse challenges. Rooted in the philosophy of liberating thought, brainstorming evokes an unbridled exchange of thoughts and concepts within a group's embrace. By suspending judgment and embracing a non-critical atmosphere, participants can embark on a journey through diverse perspectives, unorthodox viewpoints, and unexplored realms of creativity. Originally conceived by advertising visionary Alex Osborn and further refined by subsequent researchers, brainstorming has

permeated fields as varied as business, education, research, and problem-solving. This method empowers individuals to shatter conventional thought patterns, giving rise to fresh insights and visionary solutions to intricate problems.

Review of Literature

A literature review serves as a basis for knowledge on a particular subject, identifies areas of prior scholarship, uncovers contradictions and gaps in the research, supports the need for more research, shows how one work is related to other works, and situates one's own work within the body of existing literature. There are a lot of reviews on this subject, but only the most current and pertinent ones are chosen.

In their groundbreaking research paper entitled "Unleashing the Potential: The Brainstorming Revolution in Nurturing Mathematical Connection and Metacognition Skills among Pesantren Students" (2023), **RosidBahar, SudjiMunadi, and RadenRosnawati** plunge deep into the transformative power of the Brainstorming method within the educational realm. Their study ventures into uncharted territories, unraveling the untapped potential of the Brainstorming technique to invigorate students' Mathematical connection skills and unriddle the enigmatic correlation between these skills and metacognition. By meticulously scrutinizing a sample of 60 daring participants, the researchers unearth a plethora of revelatory findings. This research magnifies the indomitable force of Brainstorming in cultivating heightened learning outcomes and interweaving cognitive capabilities in the intricate tapestry of mathematics education. In a study conducted by **Virginia Cruz and Nicolas Gaudron** in 2010 they explored the use of ended objects, as a tool for brainstorming. They introduced the concept of HCL workshop ended object sessions, which proved to be quite promising. These objects allowed participants to engage with each other emotionally and sensorially leading to the generation of ideas that had not been previously explored within their research program. By creating a shared experience that went beyond language barriers the brainstorming sessions were able to transcend expert discussions and fostered exchanges among participants, from backgrounds. In 2016 **Rafidah Abd Karim** conducted a research study titled "Brainstorming approach and mind mapping, in writing activity". The study delved into the utilization of mind maps for generating, visualizing, structuring and categorizing ideas. By engaging in brainstorming exercises students can be guided to overcome challenges encountered during writing tasks. This paper examines the significance of brainstorming and mind mapping as approaches that assist students throughout their writing process. Additionally, it explores the integration of technology to facilitate brainstorming and mind mapping activities. Research conducted by **Binita Goswami et.al.** in 2017 they investigated the effectiveness of using brainstorming sessions as a teaching learning tool, for medical biochemistry students. The findings indicated that the students showed an understanding of concepts as demonstrated by improved scores in posttests and their ability to solve clinical problems during the brainstorming sessions. Moreover, the students expressed their contentment with the organization timing and discussion of problems, during these sessions. **Ida Bagus Nyoman Mantra et al., (2022)** conducted a

study entitled on “explored that the reading comprehensions of the students improved Significantly Therefore, the BARA (Brainstorming, Activating, Reinforcing, Applying) strategy is considered very effective for teaching reading comprehension. This study implies that teachers should consider using BARA strategy to improve students’ Reading comprehension.

Objective of the Study

- To understand the concept of brainstorming and Philosophy behind Use of Brainstorming Method in the Field of Education
- To Familiarise different types perspective tools for brainstorming.
- To explore usage of brainstorming tools inresearch.

Data Base and Research Methodology

This qualitative study is a secondary analysis of data collected from a variety of sources, including journals, articles, theses, magazines, books, and the internet.

Concept of Brainstorming and its Philosophy in the Field of Education

Advertising mogul Alex Osborn, celebrated for his groundbreaking 1953 masterpiece "Applied Imagination," spearheaded this technique, subsequently honed and expanded upon by a multitude of researchers from various domains, including academia. In the realm of instruction and acquisition, this approach subtly deviates from Osborn's original notion, seeking to reshape students' conventional learning methodologies into vibrant perspectives. Within the educational milieu, brainstorming engenders ingenious cogitation by provoking the serendipitous generation of ideas pertaining to the subject matter. In stark contrast to mundane classroom practices, this methodology nurtures a dynamic and emancipated mindset among learners. It facilitates the transition from familiar knowledge to uncharted territories and encourages students to showcase their erudition in front of their peers. Whether conducted within a solitary session or spanning several, this technique, necessitating only rudimentary supplies like chalk and a board, compels students to rupture established cognitive patterns and embark upon unexplored avenues of thought, particularly in contemporary cutting-edge classrooms. Delving into the intricate realm of language classes, the art of brainstorming emerges as an alluring and potent instrument. With its magnetic allure, it propels students towards mastery, transforming them into nimble and astute learners. Moreover, this vibrant activity bestows upon them a euphoric delight, saturating their souls with unbridled joy.

In a vast framework, the pedagogical strategy known as brainstorming in education entails provoking students to unleash a deluge of ideas, thoughts, expertise, and facts to tackle distinct predicaments, subjects, or dilemmas. In the conventional domain of language instruction, this approach unfurls as the instructor strides into the classroom and initiates a preliminary conversation, frequently employing inquiries. The culmination of this inaugural dialogue signals the commencement of the lesson's focal theme. Subsequently, the lesson advances through diverse phases encompassing the instructor's

exposition, student involvement, practice, extraction of significance, elucidations, and recapitulation. During the cognitive tempest technique, the instructor wields it throughout the complete pedagogical procedure via the subsequent measures.

Students sits around the round table

At the commencement, the professor commands the pupils to orchestrate their seating in a spiral or U-shaped formation. This arrangement may encompass an elliptical table or the chairs being harmoniously positioned. The seating disposition endeavors to guarantee that every student possesses a lucid line of sight towards each other, the whiteboard, and the instructor, thus fostering unmediated interaction and involvement.

Present the Specific Problem or Topic

Having established an optimal seating configuration, enabling every student to visually connect with their peers, the board, and the instructor, the subsequent phase entails unveiling the particular quandary, subject matter, or matter of concern in the form of an interrogative. This endeavor may be instigated by either the pedagogue or a pupil.

- **Clarification and explanation of the problem:**Before initiating the mind-melting session, the teacher bestows an elucidation of the enigma and tackles any inquiries the students might harbor concerning the forthcoming venture. For instance, when instructing about fruit appellations, the teacher might exclaim, "Beloved pupils, you are well-acquainted with myriad fruits. Kindly divulge the nomenclature of fruits in either your mother tongue or the desired lingua franca.
- **Brain storming starts:**After the intricate elucidation and dispelling of uncertainties, the mind-mapping session kicks off, endowing all students with the chance to vocalize their musings. Remarkably, students frequently showcase remarkable fervor when proffering their retorts to the presented predicament.
- **Drawing-out as many ideas as possible:**The utmost aim is to extract an abundance of ideas. Students must be granted abundant chance and time to ponder and retort as elaborately as they are able.
- **Record all the generated ideas:**Either the instructor or a learner should meticulously inscribe all the concepts on the blackboard, utilizing succinct keywords and phrases. This methodology has evidenced that exhibiting concepts on the board in full view of the learners nurtures a vibrant mental progression, thereby stimulating them to proffer supplementary notions.
- **Assessment of ideas:** Engaging with notions launches students into a realm of abstraction. The educator proceeds to ponder over each notion individually. Likewise, every entry in the catalog requires thorough examination, refinement, amplification, and all-encompassing dialogue. Ultimately, a definitive catalog is crafted on the chalkboard. This approach equips students with a conclusive inventory, which they subsequently transcribe into their notes for ensuing exercises.

6. Perspective tools for Brainstorming

- **Six thinking hats** - It was developed by Edward de Bono. Six thinking hats refers six different perspectives, allowing you to reduce bias in your brainstorming. It is especially useful when search ideas for research papers or projects. It functions as a team-based approach to brainstorming and problem solving that may be used to examine issues from many angles in order to find solutions that might otherwise go unnoticed.
- **Gap analysis** - A gap analysis helps to identify the gaps between the current performance and the expected performance. Gap analysis in education is the process of determining the difference between a child's current level of learning and where they ought to be at any particular point in their schooling. We call this a learning gap. A gap analysis template may be used to put strategies in place to help the kid catch up to where they need to be when a learning gap has been detected.
- **Concept map** - A concept map consists of data elements and information that allow you to visualize the data and information flow in your concept. Concept maps can be utilized to illustrate and comprehend the interrelationships between data in existing literature. Creating concept maps can be a helpful way to visualize the concept you are researching and studying. We can use sticky notes to create a type of mind map, or you can utilize one of the many online brainstorming tools available.
- **Reverse brainstorming canvas** - The reverse brainstorming canvas model is a powerful tool for problem-solving, especially when you need a new perspective. It helps to stimulate creative thinking and idea generation by looking at the issue from a different angle.
- **Problem statement** - Problem statement is the one of the most important brainstorming tools in research. A problem statement is a succinct and clear description of the issue that you are attempting to address in your research. This model assists you in breaking down the LARGE problem that you are attempting to solve into more manageable parts by posing specific questions.
- **SCAMPER** - SCAMPER is an acronym for seven creative problem-solving techniques: Substitute, Combine, Adapt, Modify, Put to Another Use, Eliminate, and Reverse. This method is known for being straightforward and easy to use. It is based on the concept that innovation is achieved by making changes to existing ideas and objects.
- **Mind mapping** - Mind mapping is a technique for visually organizing information around a central concept. It is similar to a tree, with related ideas branching out from the main point. This type of layout allows for the exploration of patterns and structure in a variety of materials, making it a useful tool for organizing thoughts, studying, and approaching projects.
- **Random word technique** - Random word brainstorming can be a great way to come up with creative solutions to your problems. This technique encourages you to think outside the box and explore ideas that you may not have considered

before. It can help you access the parts of your brain that are usually dormant, allowing you to come up with innovative solutions that are not limited by any structures or rules.

- **Provocation-Based Technique** - Techniques based on provocation involve asking difficult questions or making statements to encourage creative thinking and generate new ideas. These can be in the form of "What If?" questions, outlandish statements, or contradictory assumptions. Provocations break away from traditional thought processes and motivate people to think outside the box.
- **Analogies** - Analogies involve making connections between unrelated topics, scenarios, or areas. By taking the principles or qualities of one domain and applying them to another, new ideas and understandings can be created. Analogies motivate people to look at different angles and transfer knowledge from one situation to another.
- **Role playing** - Role play involves taking on different characters or identities related to the issue or task at hand. By embodying a different point of view, people can come up with ideas from that particular angle. Role play increases understanding, promotes creative thinking, and allows for the examination of various perspectives.
- **Round robin brainstorming** - Round-robin brainstorming is a structured approach to idea-sharing in which each person contributes one thought before passing it on to the next participant. This method ensures that everyone has an equal opportunity to contribute and that no one voice is more powerful than another. It also encourages a variety of perspectives and helps to generate a multitude of ideas in research and learning.

Brainstorming in Research

In the dominion of investigation, ideating serves as a vibrant and potent technique to nurture inventiveness and spawn a plethora of notions that greatly enrich diverse stages of the research process. Researchers convene to embark on untrammelled and boundless exploration of potential research topics, hypotheses, methodologies, and avant-garde approaches. This collaborative ideation process not only facilitates the refinement of research questions but also aids in the detection of potential hurdles and the formulation of imaginative resolutions to surmount them. Furthermore, ideating assumes a pivotal role in amplifying the configuration of research studies by inspiring collaboration and assimilating cross-disciplinary perspectives. Moreover, the act of ideating proves immeasurable in the interpretation of discoveries, the contemplation of constraints, and the conception of forthcoming research trajectories. By encouraging unreserved discourse and embracing diverse perspectives, ideating enhances the entire expedition of inquiry, propelling towards more profound revelations and resilient achievements. It nurtures a feeling of communal responsibility and involvement among investigators, empowering them to harness their collective expertise and exploits to propel the frontiers of knowledge and ingenuity. Ultimately, ideating acts as a catalyst for engendering novel concepts, igniting ingenuity, and guaranteeing that the research process remains vibrant and consequential.

Conclusion

To wrap up, our research had two primary aims: to unravel the essence of brainstorming and the underlying philosophy that propels its application in the realm of education, and to acquaint ourselves with a myriad of perspective tools that can be employed for brainstorming. Additionally, we sought to delve into the potential utilization of these brainstorming tools in the domain of research. Through our investigation, we have acquired a profound comprehension of the commanding potential of brainstorming as a dynamic technique that kindles the fires of creativity and begets a wealth of ideas. We have acknowledged its pivotal role in the research process, as it aids in refining research inquiries, unveiling potential hurdles, and devising groundbreaking approaches. Moreover, brainstorming has proven to be instrumental in enriching the design of research studies by fostering collaboration and eliciting cross-disciplinary perspectives.

In conclusion, this research has underscored the momentousness of brainstorming in the realm of education and its potential for elevating research endeavors. By embracing the philosophy that lies at the heart of brainstorming and harnessing the varied tools at our disposal, researchers can unleash their creativity, foster collaboration, and ultimately contribute to the advancement of knowledge in their respective fields.

Abstract

If we teach today as we taught yesterday, we rob our children of tomorrow. The world has witnessed a sudden change in the teaching-learning processes due to the ongoing pandemic of COVID-19. The worldwide compulsive lockdown for ensuring the preventive measures to stop the spread of this infection has equally affected education sector as other business sectors. ICT tools are best remedy that were taken by teachers to start learning process for their students. This study is focused to know the usage of ICT tools in teachers learning process. to analyze this secondary data were taken from various magazines, newspapers, articles, social media and through internet. The result of the study is ICT tools were very useful in teaching and it is a time saver but at the same time there is high lack of internet problem faced by teachers and students. So more remedies must be taken for proper internet facilities in colleges, and students must be trained to attend class properly through online tools.

Keywords: ICT tools, Teachers, Students, Internet, Online

Introduction

Information and communications technology (ICT) is an important part of most organizations these days. Computers began to be used in schools in the early 1980s, and several scholars suggest that ICT will be an important part of education for the next generation. Up- to- date technology offers many methods of enhancing classroom teaching and learning. Dawes(2001)stated that new technologies have the potential to upkeep education across the curriculum and deliver opportunities for efficient student- teacher communication in ways not possible before. ICT in education has the potential to transform teaching. However, this potential may not easily be realized, as Dawes (2001) underlined when he stated, “problems arise when teachers are expected to implement changes in what may well be adverse circumstances”. A constant development of information and communication technologies, including their introduction into the education, place more and more demands on teachers who have to be prepared to work with modern ICT tools and to create suitable educational materials for the needs of teaching designed in this fashion. This need does not emerge only from the educational practice, but also from the necessity to accept modern educational paradigm whose flagship is the constructivism which perceives the importance of inner preconditions of a pupil

for learning, but also their contacts or interactions with the environment. In this modern educational paradigm, the ICT tools are a suitable means to improve the effectivity of the educational process: from the perspective of both a pupil and a teacher.

The vast amount of information being now generated in our society has prompted its designation as the knowledge-based society. Some scholars go further and call it the digital society or the information society in their attempt to connect it with technology; however, both concepts carry the idea of living in an age where accumulation of information provides a boost for social interactions and dynamics. (Aguilar 2012). Krüger (2006) defines the knowledge-based society as the social transformation occurring in modern society and provides a view of the future of the different sciences. Andalia (n.d., as cited in Rodriguez, n.d.) states that a difference exists between what is known as the knowledge-based society and the information society. He views the latter as a media-based digital revolution being disseminated through Information and Communication Technologies (ICT), whilst knowledge-based society bases its conception on conveying and stimulating its resources through the use of technological tools, generating faster and more effective products.

Usage of ICT Tools

Today ICT is being used as a tool of improving the quality of life. Its use is increasing in such a way in recent years. Different language institutions in all over the globe have already realized the importance of ICT in teaching-learning process. However, ICT plays the lion role in communicating, establishing and managing information. ICT has proved effective in delivering learning to all over the world and to those people who are unable to move from their places and cannot move their limb and hardly utter words. It becomes possible for them to enhance education due to ICT. There are many different ICT tools that can be used in teaching and learning. These tools can be applied in different education fields.

ICT Enhances the Teaching Process

To add value, manage our classroom, or improve the planning, we can use the Internet. We want to teach using the Internet because we want to change, improve, add a new dimension to our teaching, or vary the types and increase the quality of activities assigned to students [11]. The students need a bit of motivation in learning. Allowing them to use the Internet in their learning is a motivational push to those who are bothered by traditional methods of delivering information, thereby accelerating the transfer of information from short-term memory to long-term memory. The Internet allows us to motivate some of the students lost in the class, thereby speeding up the assimilation process.

Research around the world has shown that ICT can lead to improved learning and better teaching methods for students. For example, a study from the National Institute of Multimedia Education in Japan showed that an increase in student exposure to educational ICT through curriculum integration has a significant and positive impact on student achievement, particularly in subject areas such as mathematics, science, and social

studies[12]. Addressing students' needs to access technology supporting their learning, meeting teacher technology requirements, and offering digital resources within the budget could be a daunting job. When teachers are digitally literate and qualified to use ICT, their knowledge will contribute to higher-order thinking skills, provide students with innovative and individualized opportunities to communicate their understandings, and leave students better prepared to cope with ongoing technological change in society and the workplace.

Contribution of Digital Learning Tools

ICT is especially suitable for providing individual differentiation (hereafter, individualization) with its algorithms that enable individual paths of learning. Incorporating the differences in level, interest, and learning styles between students has been shown to boost the motivation of students (Tomlinson, 2004), and neglecting these differences may lead to decreased performance in some students (Tomlinson & Kalbfleisch, 1998) [13], [12]. However, the effects on mathematics and language seem very different, and variations in effects are seen in development-to-development studies versus developing countries, as Bulman and Fairlie (2015) indicate in their overview report. Overall, they think that the evidence of educational impact is at best mixed. They conclude that studies with stronger methodological approaches (such as Randomized Control Trials (RCTs)) generally find minimal or null effects, while studies with lower-quality methodological approaches (such as multivariate and IV approaches) have greater and generally positive effects [13]. They conclude that studies in developing countries and studies that address mathematics rather than language are the only two places where meaningful and statistically relevant effects are observed. However, considerably more studies are included in this overview study than my inclusion criteria would allow, as they also include noncausal studies, where it is unclear how much of the found result is attributable to ICT. Moreover, from their summary, some more recent studies are lacking. All related experimental and quasi-experimental studies below will therefore be briefly listed separately concerning mathematics, language, and other cognitive and noncognitive abilities. In general, there are slightly more studies on secondary than primary education concerning the education sectors, but studies on vocational education are underrepresented. The division of studies between Western and Non-Western countries appears to be equal, so representativeness from this aspect is also available.

ICT Enhancing Teaching and Learning Process

The field of education has been affected by ICTs, which have undoubtedly affected teaching, learning and research (Yusuf, 2005). ICTs have the potential to accelerate, enrich, and deepen skills, to motivate and engage students, to help relate school experience to work practices, create economic viability for tomorrow's workers, as well as strengthening teaching and helping schools change (Davis and Tearle, 1999; Lemke and Coughlin, 1998; cited by Yusuf, 2005). In a rapidly changing world, basic education is essential for an individual be able to access and apply information. Such ability must find include ICTs in

the global village. Conventional teaching has emphasized content. For many years course have been written around textbooks. Teachers have taught through lectures and presentations interspersed with tutorials and learning activities designed to consolidate and rehearse the content. Contemporary settings are now favouring curricula that promote competency and performance. Curricula are starting to emphasize capabilities and to be concerned more with how the information will be used than with what the information is. Contemporary ICTs are able to provide strong support for all these requirements and there are now many outstanding examples of world class settings for competency and performance-based curricula that make sound use of the affordances of these technologies (Oliver, 2000).

The integration of information and communication technologies can help revitalize teachers and students. This can help to improve and develop the quality of education by providing curricular support in difficult subject areas. To achieve these objectives, teachers need to be involved in collaborative projects and development of intervention change strategies, which would include teaching partnerships with ICT as a tool. According to Zhao and Cziko (2001) three conditions are necessary for teachers to introduce ICT into their classrooms: teachers should believe in the effectiveness of technology, teachers should believe that the use of technology will not cause any disturbances, and finally teachers should believe that they have control over technology. However, research studies show that most teachers do not make use of the potential of ICT to contribute to the quality of learning environments, although they value this potential quite significantly (Smeets, 2005). Harris (2002) conducted case studies in three primary and three secondary schools, which focused on innovative pedagogical practices involving ICT. Harris (2002) concludes that the benefits of ICT will be gained "...when confident teachers are willing to explore new opportunities for changing their classroom practices by using ICT. As a consequence, the use of ICT will not only enhance learning environments but also prepare next generation for future lives and careers (Wheeler, 2001). Changed pool of teachers will come changed responsibilities and skill sets for future teaching involving high levels of ICT and the need for more facilitative than didactic teaching roles.

Difficulties in Implementing Online Teaching Learning

There exist some difficulties felt while implementing the change in the educational system after Covid-19 crisis and some of these difficulties are associated with innovative outlook in the education and the complexities in implementing technology for learning. With positivity among teachers, they used various social media applications like WhatsApp, Facebook, Twitter, etc., and it helped for the smooth conduct of online classes using various platforms such as ZOOM, Google Meet, etc. It is identified that some of the teachers need considerable resources and training to implement online teaching and learning effectively. There are various barriers which hinders the teachers to integrate ICT tools in their online classrooms.

Conclusion

The key benefits of using ICT are providing student direct and immediate input, enhancing student efficiency, reducing the teacher's time and effort, reducing the institution's expense, and promoting high-order thought, which is one of the educational objectives. ICTs faced some difficulties in education, such as inadequate technological infrastructure and inexperienced computer students. And also teachers are facing technical difficulties in using online platforms for delivery of instruction as well as in creating e-content. The survey results also indicate that Internet connectivity and low bandwidth is a bottleneck in online teaching and teachers are finding it difficult to deliver online lectures on low bandwidth. So more remedies must be taken for proper internet facilities in colleges, and students must be trained to attend class properly through online tools.

TEACHING PRACTISES THROUGH ICT TOOLS

Dr. D. Umamaheswari

Assistant Professor, Department of Computer Applications
NGM College, Pollachi, Coimbatore, Tamil Nadu, India
pookalinsnekithi@gmail.com

Abstract

Information and communication technology (ICT) currently affects every aspect of modern life. The manner that students are learning now has changed as a result of the integration of information and communication in the classroom. With the use of ICT tools, teachers in India are also experimenting with creative teaching methods. They use a variety of digital platforms to organize their lectures, deliver them virtually or in a traditional classroom setting, and carry out assessments. With the use of educational technology, it is now possible to communicate with various learner types and provide several avenues for understanding assessment. One of the key elements in the effectiveness of technology-based teaching and learning is teachers who are well-prepared with ICT resources. The Indian government supports technology-driven innovations in the educational field and support educators in embracing and integrating ICT. This paper will discuss how technology has changed teaching methods as well as instructors' attitudes towards using technology in the classroom and professional development.

Keywords: ICT Resources, Learning, Teaching, Educational Technology, Understanding.

Introduction

ICTs are making dynamic changes in society. They are influencing all aspects of life. The influences are felt more and more at schools. Because ICTs provide both students and teachers with more opportunities in adapting learning and teaching to individual needs, society is, forcing schools aptly respond to this technical innovation. Tinio (2002), states the potentials of ICTs in increasing access and improving relevance and quality of education in developing countries. Tinio further states the potentials of ICT as follows: ICTs greatly facilitate the acquisition and absorption of knowledge, offering developing countries unprecedented opportunities to enhance educational systems.

Objectives

1. This study aims to analyze whether using ICT tools would be more beneficial for students than Chalk board teaching.
2. It also aims to assess the effectiveness of ICT tools in helping the students in understanding and retaining the information.

Advantages of Using ICT Tools in Teaching Learning Process

Teaching Makes Easier

Teachers are the people with one of highly benefited of having ICT in education. Through the use of it, it makes the teaching easier. When a teacher teaches the student on a new lesson it makes for them easy to inform and to evaluate what they want them to know. Creating documents files, pdf files or power point presentation through the use of computer or laptop for them to show the topics that they will going to tackle is a great way for teaching.

Lesson can be seen and Heard

The advantage of information communication technology is the lessons can be seen and be heard. Unlike on the books you can just see it, seeing those pages with paragraphs and full of text and sometime we can see the pictures. Sound coming from the videos or music that being used will be played over and over again that makes it to remember well.

Easier to Understand

When the students see pictures appearing on the white screen using a projector they understand it easily what it really means.

Improves Communication

Having a technology in the school discussion improves communication. Because through that medium the teacher as well as the student learn more and more vocabulary words. The proper way of saying a word or words, the correct grammar and the meaning of the words improves.

Enjoying While Learning

Images, music and videos are one of the source of entertainment. When people see that they are happy and enjoy it. Unlike from the articles that just compose of full of text it is boring. Through the colorful images, students enjoy listening to the music and imagine what it really means.

Students Perform Better

What is good and importance of ICT in teaching and learning is the students perform better. When a teacher teach in front of the class and start to have a visual aid like projector, the students are attract. Xiao, Y., & Watson, M. (2019) represents pictures project on the screen and the student will see what that is. The students perform better when it is attractive.

Know More Information

The internet is one of the fastest way of getting information because just one touch, can get what is needed. In education the more we search and read the more information we will get. The teacher and the students both get more information by the way they use it.

Improves Visual Skill

When students are learning with the use of pictures, or videos their visual skill improves. Some teachers use riddles using photos that will improve their thinking skill and cognitive skill. And because of that students are enjoying the lesson.

ICT in daily life

ICT makes buying and selling easier. Computers are used by customers to connect On-line with Suppliers. Computers are used to keep record of transaction. ICT is applied as a means of communication between customers and the producers.

Frequently used ICT Tools

The ICT devices are the latest tools, concepts and techniques used in student-to-teacher, student-to-student interaction for example: - Youtube, mobile applications, smart classroom for information and communication technology.

Powerpoint Presentation

PowerPoint is well utilized to create a slideshow of valuable information through charts, and images for a presentation. It is commonly practiced in business and school presentations. It is an absolute presentation graphics package that gives you everything needed to create a professional-looking presentation. Amare, N. (2006) suggests that using PowerPoint makes it easy for us to integrate graphics and animations into our slides which can illustrate key points and processes for our students. Preparing a presentation helps the teacher to provide good structure and maintain flow of the subject matter. Szabo, A.; Hastings, N. (2000) suggests that powerPoint can be an effective tool to present material in the classroom and encourage student learning. We can use PowerPoint to project visuals that would otherwise be difficult to bring to class.

Educational Videos and animations (YouTube and Internet)

Various valuable educational videos of various subjects available on internet also have a great impact. YouTube provide additional help in better understanding of subject knowledge. Using videos for education benefits both teachers and students. Türel, Y. K., & Johnson, T. E. (2012) adds that video content can help students understand lessons better, while it can help teachers focus on quality. Video and animations can help students visualize the lessons and process them better.

Smart Classroom

Classroom integrated with Smart boards and internet connections provides enhanced and interactive learning and teaching opportunities for students and teachers. The internet-connected to systems in smart classes is stored with abundant information. It is accessible anytime for their teaching and learning process. Tissenbaum, M., & Slotta, J. D. (2019) says that teachers can access information from various educational sources for teaching purposes. It helps in easy access to online resources. Smart Classrooms helps in developing critical thinking and problem-solving skills in students. There are many more ICT tools that facilitate innovative teaching learning process.

Disadvantages of ICT Tools

Some of the disadvantages of ICT Tools are Unemployment, Lack of security/privacy, Cyber bullying, Reliance on technology, Social media and Preparation time.

Conclusion

ICT tools are very powerful in teaching and learning. ICT tools empower both teachers and learners. They transform the teaching and learning processes from being highly teacher dominated to becoming student-centric and this transformation results in increased

learning gains for students, creating and allowing for opportunities for learners. In addition, they are cost efficient and eliminate the usage of paper. Alongside minimizing cost, they also save time during class lectures enabling swift and dynamic transmission of content. They provide access to dynamic teaching and learning methods and facilitate easy student management. ICT is a powerful tool for educational change and reform. Appropriate use of ICT has helped the college raise the interest levels amongst the students and has helped connect learning to real-life situations. Students enjoy while learning and perform better.

WOMEN EMPOWERMENT

C. Gopinath

II year BBA, Department of Business Administration
Nallamuthu Gounder Mahalingam College, Pollachi
ngobi511@gmail.com

Absract

The topic of "Women Empowerment" is one that is hotly debated throughout the world in this essay. The issues of "women's empowerment" and "equality with men" are global. Women's empowerment is the process of enabling women to act independently for both their own interests and those of society as a whole. Women's empowerment is the process of enhancing and improving the social, economic, political, and legal power of women in order to ensure their equality and give them the self-assurance they need to assert their rights, including the freedom to live their lives with a sense of self-worth, respect, and dignity, total control over their lives inside and outside of the home and workplace, the ability to make their own decisions, and the same rights as men.

Introduction

Women's empowerment mostly refers to the act of making women independently they may manage their life without interference from their families or society. Simply put, it gives women the right to be in command of their own personal growth. The major goal of women's empowerment is to assist them stand on an equal footing with men because women have historically been the downtrodden group in patriarchal societies. It is an essential first step in ensuring the prosperous development of both a family and a nation. By empowering women, the world will undoubtedly see gender equality and enable women from all social classes to stand independently and Scope of live their lives as they see fit.

Women Empowerment

- "Women empowerment" is the term used to describe the liberation of women from the socioeconomic chains of reliance. The term "empowerment of women" refers to the authority or power granted to women who enjoy equal rights.
- "Indian civilization has kept women on level with the rest of the population ever since its inception. In some places, customary laws specified or imposed restrictions on women. These recommendations were entirely based on the biology and mentality of women, but tragically, society has turned them into taboos and exploited them as instruments to oppress women over the years.
- 50% of the population of the country are women, and the majority of them are still economically reliant and unemployed. Only a small percentage of Indian women today, in the era of feminism, are free to express their free will and to live their lives as they see fit. However, a sizable percentage of women in this nation require encouragement. In many areas of India, women are still not allowed to receive a

basic education and are never permitted to seek higher education even when they have the necessary skills.

- The process of educating others about the rights and potential of women begins with their empower
- Barriers of women empowerment:
- women their proper place in society is a key component of empowering women. Women, who have been repressed, oppressed, and mistreated for generations, are finally coming forward to establish their own identities. They require support and encouragement as they embark on their new endeavor. Unfortunately, some segments of Indian culture are opposed to the newfound freedom enjoyed by women. There are many obstacles to womenempowerment in India because of the harsh rules of our patriarchal society.
- The prevailing attitude of our culture, according to which women are expected to take care of their families and home tasks, is one of the main obstacles to women's empowerment. Only if a woman maintains her virginity is she deemed virtue
- Women encounter numerous obstacles including gender-based discrimination in the workplace in every nation on earth. The discrimination starts young—from the type of education girls receive or till what age, through the type of profession women are directed toward. Due to cultural preconceptions and assumptions, women experience occupational segregation, various hurdles, and gender-based violence in both the public and private spheres. These barriers include lack of access to land, capital, financial resources, and technology. It is more difficult for women to achieve equality with men in the workplace as a result of these barriers. Gender Inequality is further exacerbated by legal restrictions.

I'm not going to limit myself just because people won't accept the fact that I can do something else." -Dolly parton.

Each time a woman stands up for herself knowing it possibly, without claiming it, she stands up for all women."-Maya Angelou.

Women Empowerment Rules

- Equal employment.
- Right to vote.
- Property rights.
- Freedom of movement.
- Informing women about their legal rights.
- Discrimination.
- Right to health.

Rural Women Empowerment

The initiative also engages with governments to develop and implement laws and policies that promote equal rights, opportunities and participation so that rural women can benefit from trade and finance, market their goods and make a strong contribution to inclusive economic growth. The transformational economic, environmental, and social transformations necessary for sustainable development are mostly being driven by rural women. But among the other difficulties they encounter—many of which are made worse by the world food and economic crises and climate change—are limited access to financing, health care, and education. Given the significant proportion of women working in agriculture around the world, empowering them is essential for the welfare of people, families, and rural communities as well as for overall economic production.

Women Strength

- Women are great listeners.
- Women have a lot of love to give.
- Women are brave.
- Women are natural-born nurturers.

- Women are hard workers.
- Women are problem-solvers.
- Women are good communicators.
- Women are empathetic.

Conclusion

By increasing women's literacy, education, training, and awareness, women's empowerment enhances their status. Women's empowerment also refers to the capacity for strategic life decision-making that was previously out of reach for them. The current top development priority is the empowerment of women.

EMERGING TECHNOLOGIES FOR TRANSFORMING TEACHING AND LEARNING

Dr. M. Rathamani

Assistant Professor

PG Department of Computer Science

NGM College, Pollachi

E-mail: rathamani@ngmc.org

Abstract

The landscape of education is undergoing a profound transformation due to the rapid advancement of Information and Communication Technologies (ICT). These emerging technologies have the potential to revolutionize teaching and learning methodologies, fostering more personalized, engaging, and effective educational experiences. This paper explores some of the most promising ICT technologies and their implications for reshaping education. From Artificial Intelligence (AI) and Virtual Reality (VR) to Gamification and Learning Analytics, each technology's unique contributions to the educational sphere are examined.

Artificial Intelligence (AI) is revolutionizing the way students learn by providing personalized learning pathways. AI-powered educational tools can analyze individual learning patterns, identify strengths and weaknesses, and offer tailor-made content and assessments. Virtual Reality (VR) and Augmented Reality (AR) create immersive and interactive learning environments, enabling students to explore virtual worlds and conduct simulated experiments. Gamification, through its use of game elements, motivates and engages learners, making the learning process enjoyable and rewarding.

Internet of Things (IoT) devices in smart classrooms streamline administrative tasks and enable data-driven decision-making for educators. Blockchain technology ensures data security and transparency, particularly in credentialing and certification processes. Mobile Learning (m-Learning) enables flexible access to educational content anytime and anywhere, empowering learners with continuous access to knowledge.

Collaborative tools facilitate group projects and peer-to-peer learning, promoting critical thinking and teamwork skills. Learning Analytics, with its data-driven insights, helps educators identify areas of improvement and provide timely support to struggling students. Cloud Computing enhances accessibility to educational resources and facilitates seamless collaboration.

While these emerging technologies hold great potential for transforming education, their successful integration requires addressing challenges such as digital equity, data privacy, and teacher professional development. Striking a balance between technological innovation and preserving the human connection in education is vital. By harnessing the power of ICT responsibly, educators and learners can collaboratively create dynamic and inclusive learning environments, equipping students with the skills they need to thrive in the digital age.

Keywords: Artificial Intelligence, Virtual Reality, Information and Communication Technologies (ICT), Augmented Reality, Internet of Things (IoT)

Introduction

In recent years, the world has witnessed rapid advancements in Information and Communication Technologies (ICT). These innovations have profoundly impacted various sectors, and education is no exception. As traditional teaching methods are gradually being supplemented and transformed, educators and learners are exploring the potential of

emerging ICT technologies to enhance the teaching and learning experience. This paper explores some of the most promising ICT technologies that are reshaping the education landscape and their potential implications for future educational practices.

1. Artificial Intelligence (AI) in Education

AI is revolutionizing the education sector by offering personalized learning experiences to students. With the ability to analyze vast amounts of data, AI-powered educational tools can identify individual strengths and weaknesses, adapt content to meet specific learning needs, and provide real-time feedback. AI-driven virtual tutors and chatbots are becoming more prevalent, helping students with queries and guiding them through their learning journey. Moreover, AI-based assessment systems can accurately evaluate student performance, enabling educators to tailor their instruction accordingly.

2. Virtual and Augmented Reality (VR/AR)

Virtual and augmented reality technologies have opened up new possibilities for experiential learning. By immersing students in interactive and simulated environments, VR/AR can facilitate a deeper understanding of complex subjects. From exploring historical events to conducting virtual science experiments, these technologies bring abstract concepts to life and make learning more engaging and memorable. Additionally, VR/AR can support remote learning, allowing students to collaborate in virtual classrooms and access resources from anywhere in the world.

3. Gamification

Gamification is leveraging game elements, such as rewards, points, and challenges, in educational contexts. By integrating playful elements into the learning process, gamification can enhance student motivation, engagement, and retention. Students are encouraged to progress through levels, earning rewards and recognition along the way. Gamified learning platforms transform traditional content into interactive and enjoyable experiences, making education more enjoyable and fostering a sense of accomplishment among students.

4. Internet of Things (IoT)

The Internet of Things offers the potential to create smart, connected learning environments. IoT-enabled devices can automate routine tasks, such as attendance tracking and classroom management, freeing up educators to focus on teaching. Smart classrooms equipped with IoT devices can also collect data on student behavior, interactions, and preferences, providing insights to optimize the learning process. Moreover, wearable IoT devices can monitor students' physiological responses to learning, helping educators adjust their instructional strategies accordingly.

5. Blockchain in Education

Blockchain technology ensures data security, integrity, and transparency. In the context of education, blockchain can revolutionize credentialing and certification processes.

Academic records, certificates, and diplomas can be securely stored on a decentralized ledger, eliminating the risk of fraudulent credentials. This not only simplifies the verification process for employers and academic institutions but also empowers students to have greater control over their educational achievements.

6. Mobile Learning (m-Learning)

With the widespread adoption of smartphones and tablets, mobile learning has gained significant traction. Mobile apps and platforms enable learners to access educational content on-the-go, fostering a culture of continuous learning. Whether it's watching educational videos during a commute or completing quizzes during breaks, m-Learning provides flexibility and accessibility, making education more inclusive and learner-centric.

7. Collaborative Tools

Collaborative tools and platforms facilitate group projects and peer-to-peer learning, promoting active engagement and social interaction. Online collaboration spaces enable students to work together on assignments, share ideas, and provide feedback to one another, regardless of their physical location. This fosters teamwork, communication, and critical thinking skills, all of which are essential for success in the 21st-century workforce.

8. Learning Analytics

Learning analytics involves the collection and analysis of data on students' learning behaviors and performance. By leveraging this data, educators can gain valuable insights into student progress, identify areas of improvement, and adapt instructional strategies accordingly. Learning analytics can also help detect early signs of academic struggle, enabling timely intervention to support struggling students and improve overall learning outcomes.

9. Cloud Computing

Cloud-based services have transformed the way educational resources are stored, accessed, and shared. Cloud computing offers scalability, cost-effectiveness, and ease of collaboration. Educational materials can be uploaded to the cloud, making them accessible to students and educators from any device with an internet connection. Cloud-based learning management systems (LMS) facilitate seamless course administration, communication, and grading.

10. Natural Language Processing (NLP)

NLP technology enables computers to understand and process human language. In the realm of education, NLP can be used for language learning, automated essay grading, and language translation. Language learning apps with NLP capabilities can provide personalized language lessons; while automated essay grading systems can save educators valuable time and ensure fair and consistent assessment.

Conclusion

Emerging ICT technologies have the potential to revolutionize education by personalizing learning experiences, fostering engagement, and improving learning outcomes. While these technologies offer exciting opportunities, their successful integration into educational practices depends on various factors, including infrastructure, teacher training, data privacy, and ethical considerations. As we continue to explore and adopt these technologies, it is essential to strike a balance between innovation and maintaining the human connection that is at the heart of education. By harnessing the power of ICT in a thoughtful and responsible manner, we can create a more inclusive, dynamic, and effective learning ecosystem for generations to come.

ROLE OF INFORMATION AND COMMUNICATION TECHNOLOGY (ICT) IN RURAL EDUCATION (INDIA)

Mr. M. Prem

Assistant Professor, Department of Commerce (Finance)
Nallamuthu Gounder Mahalingam College, Pollachi
preaveenprem445@gmail.com

Abstract

Information and Communication technology (ICT) plays vital role in Rural Education. It provides a wide range of resources and techniques that can close the educational divide between urban and rural areas. The Indian Constitution's Article 45 mandates that all children up to the age of fourteen receive a minimally adequate elementary education. Due to a lack of infrastructure and facilities for rural education, certain Indian states still struggle to achieve universal enrolment, retention, and high-quality education. As of now, just 20% of rural Indians have access to the internet, compared to 65% of urban Indians. India's policy makers have concentrated on removing obstacles to accessing rural India. However, access to ICT devices and the internet is only one aspect of the issue when it comes to the issue of digital inclusion with regard to education in rural India. ICTs are playing a more and wider part in education as the world rapidly switches to digital information, and this role will only get more and more significant in the twenty-first century. This research article gives an idea to develop the rural education system through the information and communication technology (ICT) and it's important in rural education.

Keywords: ICT, ICT in Education, Rural Education, Students.

Introduction

ICT resources bridge the divide between learner- and teacher-centered settings. The ability of ICT to revolutionize education is one of the most important fields in which this is possible. Particularly, the use of ICT in rural education has the potential to close the gap between urban and rural learning environments, opening up a world of opportunities for students in isolated and poor locations. Information and communication technology (ICT) is one of the technological areas in the global civilization that is developing quickly. Rural education has historically struggled with a variety of issues, from insufficient access to sufficient amenities and educational resources to a teacher shortage. However, the development of ICT has given rise to new confidence for overcoming these timeless problems. ICT includes a wide range of digital technology, such as computers, the internet, mobile phones, instructional software, online learning environments, and interactive digital material. The use of these tools in rural classrooms has the potential to alter the educational experience for kids there by making it more engaging, accessible, and personalized for students in these remote areas.

There is no doubt that ICTs will play a major role in future growth. Rural residents, particularly the poorest of the poor, continue to live with a minimum of ICT facilities despite the fact that benefits of ICTs have not yet reached the projected level in these places. Governments, educational institutions, and stakeholders must work together to invest in infrastructure, digital resources, teacher preparation, and community participation for ICT to have a significant influence.

Adopting ICT in rural education is a leap toward a more inclusive and equitable educational environment as well as a step toward digital growth. ICT has an excellent future in the classroom. In the upcoming years, it is anticipated that ICT will contribute significantly more to teaching and learning. ICT can support the personalization, engagement, and effectiveness of education. Additionally, it might lead to wider access to education.

ICT Enabled Education Overview

Information and communication technology (ICT) enabled education, commonly referred to as e-learning or digital learning, and is the process of using technology into educational practices to improve the quality of teaching and learning. It includes the transmission, administration, and maintenance of educational content using various digital tools, hardware, and software programs. Digital educational resources such as interactive multimedia, e-books, video lectures, online tests, and simulations can be produced and distributed because of ICT. With the help of these resources, students may result in excitement while studying. ICT tools make communication and collaboration between students, teachers, and parents effortless. Continuous contact outside of the classroom is made possible by discussion boards, instant messaging, and email.

People in the modern information society have a right to utilize ICT to access knowledge in order to stay up to date with the latest advancements. In such a situation, education, which is always crucial to the economic and social development of a nation, assumes even more significance. Education boosts a person's earning potential in addition to their creative abilities. It improves their social interaction, allows them access to better health, and offers various other elusive benefits. Additionally, it enhances their level of wellbeing and increases their ability to accept new concepts. In this era of rapid change, students can be trained to participate in the growth process through education and the incorporation of ICT into the classroom.

Review of Literature

1. **Dr. Niva Bara, Dr. BK Jha** in their study Due to the daily, increased usage of ICT tools, education quality has increased dramatically. Online and practical learning approaches have replaced prior conventional or traditional ones. The educational system in our nation has undergone significant changes as a result of the integration of ICT.
2. **Niraj Kumar Roy** according to his study to increase connectivity in the areas of education, governance, social inclusion, access to the internet, and disaster mitigation and control in order to increase access to fundamental information in rural schools. The emphasis is mostly placed on raising the educational bar in rural communities via ICT. I want to emphasize that when implementing the national ICT for education policy, policymakers gave more consideration to rural areas and their students' educational standards.
3. **Sushmita Mukherjee** on his study ICT can undoubtedly bridge the gap between

the technologically advanced and economically backward classes. The government machinery now has easy access to technology in a far more affordable and practical way because to India's IT boom. A revolution in rural development can undoubtedly be sparked by proper training and the application of ICT programs in a straightforward manner and language that the rural population can easily grasp.

Objectives of the Study

1. To know the importance of the ICT in rural Education.
2. To study the role of ICT in rural education development.

Research Methodology

The study is descriptive in nature. The present study is based upon the secondary sources of data; the secondary data was collected through the literature, Books, research papers, research articles, and various other publications. The main objective of this study is to bring out the understanding of the ICT's important in rural education and what role ICT has playing in the Indian rural education and development.

Important of ICT in Rural Education

Information and communication technology (ICT) is essential for the growth of rural education and benefits students, instructors, and communities in a number of ways. Rural schooling is still in a poor condition today. Few government schools exist in certain villages, requiring children to travel great distances to access them, and the majority of schools there do not offer technology based education. Utilizing a variety of technologies, ICT enables users to stay updated with emerging trends. ICT plays a significant role in advancing rural education and has made a significant contribution to its growth.

a. Access to Quality of Education:

This can provide remote and underdeveloped locations with high-quality educational resources. It gives teachers and students access to contemporary educational resources, online classes, and engaging instructional content that might not be accessible locally.

b. Flexible Learning Options:

It enables a variety of flexible learning alternatives, including online and distance learning. This is crucial in rural areas where students may have to travel long for access to schools or higher education facilities.

c. Empowerment and Digital Literacy:

ICT integration in rural education equips students with digital literacy abilities, which are becoming more and more important in the current employment market. Rural adolescents who possess digital literacy can take advantage of new opportunities and participate actively in the global economy.

e. Connectivity and Communication

ICT can help students, teachers, and parents communicate better. Stakeholders can stay connected and involved in the educational process with the help of tools like email, messaging applications, and video conferencing.

d. Collaboration and Resource Sharing:

Collaboration and resource exchange between schools and educational institutions are made possible by ICT. Sharing knowledge, experiences, and educational resources can help rural schools, which will ultimately improve educational outcomes.

e. Innovation and Creativity:

Students in remote locations might be encouraged to be innovative and creative by having access to ICT tools. They can experiment with new concepts, take part in online contests, and work on initiatives that use technology to promote social and economic growth.

Role of ICT in Rural Education Development

The use of ICT in the classroom has been shown to boost students' motivation, enthusiasm, and involvement in the subjects they are studying.

- Access to a wide range of educational resources, such as textbooks, online courses, digital libraries, and instructional films, has been made possible by ICT.
- Rural students have access to high-quality educational resources that would not be accessible locally, balancing the playing field and enhancing their knowledge. If we assure communication in local languages, so that rural students can grasp easily, we can stimulate and increase learning and their skills in rural students.
- ICTs have a broad range of applications and have the potential to be extremely important to society and rural student's development.
- ICT makes it possible for students in remote areas to collaborate more actively while also learning new technology skills. It also makes it possible to employ cutting-edge educational resources and reimagine instructional techniques.
- Rural schools can embrace e-learning tools and online learning platforms with the help of ICT, enabling students to learn at their own pace, interact with interactive information, and take part in virtual classes.
- ICT enables remote learning and virtual field trips for students in rural locations, exposing them to settings and circumstances they might not otherwise have access to.
- ICT teaches digital literacy to rural students, which is crucial for the modern workforce. Their familiarity with technology assists in bridging the digital divide between rural and urban communities and positions them for future employment prospects.
- To provide employment-related education through computer technology to students in grades 8th through 12th.

In India, notable efforts integrating the use of ICT in education include:

1. Indira Gandhi National Open University (IGNOU) makes use of radio, television, and the internet.
2. The UGC initiated the "ICT for teaching and learning process" scheme to achieve quality and distinction in colleges and universities.
3. SWAYAM -Massive Open Online Courses (MOOCs)
4. e- PG pathshalaE-book gateway up to PG
5. SODHGANGA – Access Indian Institute Scholars' Research Theses.
6. e-Yantra – Initiatives for students.
7. The FOSSEE (Free/Libre and Open Source Software for Education) project supports the use of FLOSS tools to improve educational quality in our country.
8. Spoken Tutorial - It has won numerous awards for its educational material portal. Here, one can learn various Free and Open Source Software on their own.

Conclusion

While ICT provides several benefits to rural education, it also plays an important role in rural education. Policymakers, educational institutions, and technology suppliers must collaborate to promote fair access and successful use of ICT in rural education. The incorporation of ICT in rural education has the potential to transform the way students learn and teachers educate. We can bridge the gap between urban and rural education by harnessing technology and giving equitable chances for all learners, regardless of geographical location. However, for ICT to have a significant influence, governments, educational institutions, and stakeholders must work together to invest in infrastructure, digital resources, teacher training, and community participation. Embracing ICT in rural education is a step toward a more inclusive and fair educational landscape, not only a step toward digital growth. To summarize, ICT plays an essential role in rural educational development because it bridges the educational gap, empowers students and instructors, improves learning experiences, and promotes overall growth in rural communities.

NGM College, Pollachi

Abstract

An information and communication technology (ICT) has turn out to be regular entities in all aspects of human activities. In recent times the use of ICT has primarily changed the practices and procedures of nearly all forms of endeavor within educational institution, industry, research, media and governance. In the field of education sector, ICT has begun to have a presence but the impact has not been as extensive as in other fields. The use of ICT in education lends itself to more studentcentered learning settings and often this creates some tensions for some teachers and students. The objective of the article is to look at the role of ICT in higher education in Nagaland. It emphasizes computer technology and media because of their availability in educational institutional and their great impact on teaching and learning processes and highlight some changes ICT might have on the role of the teacher in the classroom. The present paper focuses on incorporation of ICTs in educational system in Nagaland and highlights on present educational scenario. The results show that 74.5 per cent of teaching faculties emphasize the need to expand educational opportunities for students in terms of contented interaction and satisfaction in the process of educational activity. This paper is an attempt to draw attention on policies implementation regarding ICT integration and effectiveness of teaching-learning environment. Keywords: Information and communication technology, e-learning and motives

Keywords: Curriculum transaction, Information and communication technology, manipulation, transmission

Introduction

Information and communication technologies (ICT) are an umbrella term that includes all technologies for the management and communication of information (Basargekar and Singhavi, 2015; Mou, 2016; Pulkkinen, 2007; Wood, 1995; Koehler and Mishra, 2009; Hathaway, 1995; Kumar, 1996). ICT considers all the uses of digital technology that already exists to help government, research institute, education, individuals, business and organization. ICT is concern with the storage, repossession, manipulation, broadcast or receipt of digital data (Balanskat et.al, 2006; Owston, 2006; Richardson, 2011). The addition of ICT issues in the curriculum and provision of these telematics in colleges have raised many issues of concern to educators, parents, researchers, policy makers and politicians. Some of the most noteworthy issues are the function of the information technology in the curriculum, and how these issues should be addressed in the curriculum, and most importantly how they impact teaching and learning (Dagdilelis, Satratzemi, and Evangelidis, 2004; Narula, 2008; McConnell, 2001). The other issue of concern is the

repercussions of these technologies in terms of increasing access to high quality education. If one was to compare such fields as medicine, tourism, business, law, banking, insurance etc., the impact of ICT across the past two or three decades has been vast (Rastogi and Malhotra, 2013; Tomei, 2007; Pelgrum, 2001; Williams, 2006; Barak, 2006). A number of people have attempted to discover this lack of action and influence. These have included such determinants as a lack of financial support to purchase ICT technology, require training among the teachers, a lack of motivation among teachers to adopt ICT as teaching tools in class room teaching and demonstration (Collis, 2002). But in recent times, factors have emerged which have strengthened and positive moves to adopt ICTs into classrooms and learning settings.

Objectives

- To Know the ICT in curriculum development.
- To Study the curriculum transactions through ICT skills.
- To Find out the effective use of ICT.

ICT in Learning - Once a Choice, Now a Necessity

The usage of ICT in the teaching process was a recommendation and an opportunity to innovate and actualize it until only a few months ago. The inevitable change caused by the unexpected circumstances triggered by Covid-19 brought all teachers into a situation where there was no room for consideration and no option to avoid the use of modern technology for learning and teaching purposes. Taking into account current situation that indicates the need for integration ICT into the teaching process, the aim of this paper was to analyze the relevant research, to point out the inevitability of providing additional support to teachers for the use of ICT in teaching. Accordingly, the research objectives was: pedagogical significance and contribution of ICT integration in the teaching process, the importance of the role of teachers in the process of ICT integration in teaching, as well as potential obstacles and difficulties that teachers may face in using ICT in teaching process. The obtained results can contribute to a more comprehensive view of the problems that teachers could face in the implementation of ICT in teaching, which would allow the determination of directions that would affect changes in their opinion related to acceptance and promotion of learning in ICT environment, as well as advantages to innovate teaching process by using ICT in teaching.

The Importance of ICT in Learning

One of the most critical questions asked by educators is: What is the long term impact of the introduction of ICT in the curriculum? Computers, in particular, have positive effects on learning and are motivating for learners (Reeves, 1998). They are accepted by more teachers than other technologies and are widely supported by administrators, parents, politicians, and the public in general. Reeves argue that computers increase equity of access, and reduce the time needed to accomplish a given set of objectives. One of the goals of the Ministry of Education is equity of access to quality education for all; hence this

technology is essential if we are to achieve this goal. According to Reeves (1998) computer-based cognitive tools such as databases, spreadsheets, communication software, etc., have been intellectually developed to function as intellectual partners to enable and facilitate critical thinking and higher order learning when using these tools learners are able to represent and express what they know. They function as designers using the tools for analyzing the world, accessing and interpreting information, organizing their personal knowledge, and representing what they know to others. Hunt (2004) argues that because of the phenomenal rate at which the volume of available information increases, and access to an increasing range of sources, it is becoming clearer than ever that the ability to find appropriate information and use it effectively is of greater value than being able to remember facts. The skills of locating, evaluating and using information effectively from a range of sources constitute the Information Skills which are needed for people to become Information Literate, enabling them to engage in effective decision making, problem-solving and research. Therefore the importance of ICT cannot be over emphasized as it offers the education process one of the most potentially powerful learning tools available. Not only can computers support learning across the whole curriculum, but communication networks also provide the learner with fast and searchable access to vast amounts of information. It also supports a wide range of broader educational objectives including independent learning, collaboration with others and communication skills (Hunt, 2004). It is thus of vital importance that all children in schools have adequate access to ICT and that they develop the necessary skills, taking advantage of the learning capabilities that ICT offers. Primary schools on the other hand are ill-equipped with computers and other important technologies. Computers that are found in some schools were donations and are only used for administrative purposes. The Ministry of Communications, Science and Technology together with the Ministry of Education are embarking on a project of refurbishing obsolete and donating these to primary schools. Although this is a positive move towards providing quality education to pupils at this level, there are challenges in this endeavor. These are:

Physical barriers such as remoteness and lack of: electricity supply: Some primary schools are in very remote areas far away from the power lines. Computers, photocopiers, fax machines, etc. need electricity. The Ministry would have to find ways of providing these with power. One way is equipping such schools with generators. Generators which can supply enough power for these technologies are very expensive! Therefore a lot of money running into a couple of millions would be needed.

Lack of funds: Especially for maintenance

Lack of ICT skills for staff: Primary school teachers have no skills whatsoever in ICT, let alone having basic training in computers. The challenge facing the Ministry if it were to include ICT issues in the primary school curriculum is to address lack of ICT skills by teachers. Insufficient and inappropriate software: Suitable software will have to be acquired if desired skills which are in line with curriculum needs are to be developed.

Effective Pedagogical Practices

It is one thing to provide schools with ICTs, and yet another to implement these, that is, uses them effectively in teaching and learning to realize their impact. Teachers require more knowledge of, and confidence with ICT, and a better understanding of its potential to help pupils' learn. This suggests that further substantial support for continuing professional development is necessary in order that teachers integrate these technologies and infuse ICT issues in the teaching to improve pupil's attainment (Cox et al., 2003).

The pedagogical practices of teachers using ICT can range from only small enhancements of practices using what are essentially traditional methods, to more fundamental changes in their approach to teaching. According to Cox et al (2003) the most effective uses of ICT are those in which the teacher and the software can challenge pupils' understanding and thinking, either through whole-class discussions using an interactive whiteboard or through individual or paired work on a computer. If the teacher has the skills to organize and stimulate the ICT-based activity, then both whole-class and individual work can be equally effective. To effectively infuse and integrate ICT into teaching and learning teachers need to use a range of practices that are essential pedagogical frameworks (Cox et al., 2003). These are: Understanding the relationship between a range of ICT resources and the concepts, processes and skills in their subject using their subject expertise to select appropriate ICTresources which will help them meet the specific learning objectives; this includes subject-specific software as well as more generic resources being aware of the potential of ICT resources both interms of their contribution to pupils' presentation skills, and their role in challenging pupils' thinking and extending their learning in a subject developing confidence in using a range of ICTresources, via frequent practice and use beyond one or two familiar applications appreciating that some uses of ICT will change theways in which knowledge is represented, and the way the subject is presented to and engages pupils knowing how to prepare and plan lessons where ICT is used in ways which will challenge pupils' understanding and promote greater thinking and reflection Recognizing which kinds of class organization will bemost effective for particular learning tasks with ICT, for example, when pupils should work on their own, how working in pairs and groups should be organized, and when to use ICT for whole-class teaching.

Use of ICT in Teaching

Teaching at School as well as Higher Education, mostly, concentrates on giving information which is not the sole objective of Teaching. Along with giving information, the other objectives are: developing understanding and application of the concepts developing expression power developing reasoning and thinking power development of judgment and decision making ability improving comprehension, speed and vocabulary developing self-concept and value clarification developing proper study habits Developing tolerance and ambiguity, risk taking capacity, scientific temper, etc.

With the present infrastructure, class size, availability of teachers, quality of teachers, training of teachers, etc., it is difficult to achieve all the objectives. Further, most of the

teachers use Lecture Method which does not have potentiality of achieving majority of above mentioned objectives. The objectives are multi-dimensional in nature, so for their achievement multiple methods should be used in an integrated fashion. At present ICT may be of some use. It is a well-known fact that not a single teacher is capable of giving up to date and complete information in his own subject. The ICT can fill this gap because it can provide access to different sources of information. It will provide correct information as comprehensive as possible in different formats with different examples. ICT provides online interaction facility. Students and teachers can exchange their ideas and views, and get clarification on any topic from different experts, practitioners, etc. It helps learners to broaden the information base. ICT provides variety in the presentation of content which helps learners in concentration, better understanding, and long retention of information which is not possible otherwise. The learners can get opportunity to work on any live project with learners and experts from other countries. The super highway and cyber space also help in qualitative improvement of Teaching – Learning Process. ICT provides flexibility to learners which are denied by the traditional process and method. Flexibility is a must for mastery learning and quality learning. On INTERNET many websites are available freely which may be utilized by teachers and students for understanding different concepts, improving vocabulary, developing Reasoning & Thinking, etc. ICT can help in preparing students for SAT, GRE, TOEFL, etc.

Curriculum Transaction

Curriculum transaction is effective implementation of lesson plans in classrooms. A lot of thought goes in planning and preparing the lesson plans. Children will benefit only if the implementation is strong, whether it be circle time, project work, subject time or music time; a teacher's effort should be to reach out effectively to each child in the group. Lesson plans are prepared much in advance and usually there is a gap between preparation and implementation. Children listen to some teachers and are receptive, while the same group of children could respond differently to another teacher. This is also to do with meaningfully engaging children and stimulating their thought processes.

Amongst the information technology computers are the most favored because they have positive effects on learning and are motivating to learners. It also supports a wide range of broader educational objectives including independent learning, collaboration with others and communication skills. The government policy says ICT should be incorporated across the curriculum so as to develop learners ICT capability and provide them with a range of knowledge, skills and attitudes applicable across the curriculum (Pegu, 2014). This paper argues that in order for teacher to effectively integrate ICT into teaching and learning they need to understand the relationship between a range of ICT resources and the concepts, processes and skills in their subject; use their subject expertise to select appropriate ICT resources; develop confidence in using arrange of ICT resources; and know how to prepare and plan lessons where ICT is used in ways which will challenge pupils understanding and promote greater thinking and reflection. It has been found that one of the worst hit by the COVID-19 pandemic has been the education sector. The closure

of schools, colleges and universities around the world has affected over 87% of the students globally, according to a UNESCO report. In the meantime, ICT/digital education has emerged as a clear winner during this pandemic around the world (Emami, 2020; Wootton et.al, 2020).

ICT in Evaluation

The introduction of Information and Communication Technologies (ICTs) in mainstream societies affects the way in which the societies interact, communicate, produce, assess, adapt and access vast amount of information at reduced costs. ICTs are not just about technologies, they are more about information transfer and communication. While poor countries grapple with the problem of high investment costs, it is widely acknowledged that convergence of 'old' and 'new' ICTs is still relevant to poor communities, which lack basic infrastructure such as road, water, electricity and telephones. However, there are arguments that with the rapid expansion of these technologies in the western world, the gap between the poor and the rich is widening. It is also recognized that even within the 'information poor' countries, the poor are further marginalized. Despite these arguments, attempts are being made at a global level to empower poor people with access to ICTs and enable them to cope up with the new challenges posed by the increasing competition through globalization. Small and medium enterprises (SMEs) have demonstrated their capabilities to use ICTs to advance their businesses in the recent years. Since the experience of the SMEs is relatively new, it becomes very difficult for them to distance themselves from the ICTs and to study their impact in their day-to-day lives. Impact studies are often based on a simplistic comparison between the pre- and the post- situations of any intervention. The 'before-after' approach can be effective only when impact assessment methodologies are set with correct objectives. The approach otherwise will simply tell us the changes that occurred due to the introduction of the ICTs, but will not tell us how they have occurred and why. These reasons are very important if the impact assessment exercise is to inform policy formulation and decision making processes surrounding new projects involving ICTs. Thorough impact studies will help in devising new strategies for enhancing the role of ICTs in reducing poverty.

Conclusions

It has been found that ICT has a significant role to play in improving the standards in higher education hence its enclosure in the curriculum is a step in the right direction. Both teachers and students in college should acquire ICT knowledge, skills, and awareness if they are to be successful in their futures (Karasavvidis, 2009). As discussed in this paper telematics tools has the potential of promoting employment and entrepreneurship, reducing gender gaps, and raising the standard of living of the state as a whole (Jamir, 2020; Jamir and Ezung, 2017b; Jamir and Ezung 2017a). Therefore, the policy suggest that successful implementation of ICT is more important in influencing and empowering teachers and supporting them in their commitment with students in learning rather than acquiring computer skills and obtaining software and equipment (Jhurree, 2005).

ENHANCING LEARNING AND ENGAGEMENT BY INTEGRATING ICT TOOLS IN BIOLOGICAL SCIENCE

**A.M. Ananda Kumar, R.Rakkimuthu
& P.Sathishkumar**

Assistant Professors
PG and Research Department of Botany
NGM College, Pollachi

Abstract:

The integration of Information and Communication Technology (ICT) tools in educational settings has revolutionized the way biological science is taught and learned. This article explores the various ICT tools that can be employed in biological science teaching to enhance students' learning experiences, foster critical thinking, and promote active engagement in the subject. Additionally, the article discusses the potential benefits and challenges associated with the implementation of these tools. Through an examination of relevant research studies and practical examples, this article emphasizes the importance of effectively utilizing ICT tools to nurture the next generation of biologists and scientific thinkers. This article explores the integration of Information and Communication Technology (ICT) tools in the field of Biological Science education. It highlights the benefits of incorporating ICT tools in the classroom, such as improving student engagement, enhancing data analysis skills, and fostering collaborative learning. The article also discusses some of the popular ICT tools used in biological science teaching, along with real-world examples of their successful implementation. The integration of ICT in education is seen as a promising approach to create a more dynamic and interactive learning environment for students pursuing biological science studies.

Keywords: ICT tools, Bioinformatics, Data bases, education

Introduction

As technology continues to shape our world, the field of education has embraced ICT tools to create dynamic and interactive learning environments. In the realm of biological science, incorporating these tools into teaching practices opens new avenues for educators to impart knowledge effectively and engage students in deeper explorations of living organisms and their intricate processes. The field of Biological Science is continuously evolving, with new discoveries and breakthroughs shaping our understanding of life (Johnson et al. 2019). As educators strive to provide students with the latest knowledge and skills, integrating ICT tools in the teaching process has emerged as an innovative and effective approach. ICT tools offer opportunities to engage students, facilitate interactive learning experiences, and empower them to explore complex biological concepts in practical and exciting ways.

ICT Tools in Biological Science Teaching

Virtual Laboratories and Simulations: Virtual labs and simulations offer an immersive experience for students to conduct experiments without the need for physical lab setups. This hands-on approach enables learners to explore complex biological phenomena, such as DNA replication and cellular processes, in a safe and interactive manner. Bioinformatics

Software which Introduces bioinformatics tools that allows students to analyze genetic sequences, perform phylogenetic analyses, and study protein structures (Gilani, et al, 2019). These tools provide valuable insights into molecular biology and genomics, encouraging students to think critically and develop problem-solving skills.

Interactive Multimedia Content: Interactive multimedia content, including videos, animations, and 3D models, makes abstract biological concepts more tangible and easier to comprehend. Such visual aids aid in visualizing complex processes and foster a deeper understanding of biological phenomena.

Online Collaborative Platforms: Virtual classrooms and collaboration platforms enable students to participate actively in group discussions, peer-to-peer learning, and scientific debates. This fosters a sense of community among learners and encourages knowledge-sharing beyond the boundaries of a traditional classroom.

Benefits of ICT Integration

Enhanced Learning Outcomes: By catering to different learning styles and preferences, ICT tools facilitate personalized learning experiences, leading to improved learning outcomes for diverse student populations. The Real-world Relevance using ICT tools bring real-world biological research and applications into the classroom, bridging the gap between theoretical knowledge and practical applications.

Student Engagement must be Interactive and dynamic learning environments promote student engagement, curiosity, and a deeper appreciation for the complexities of the natural world. The student assessment may improve ICT tools allow for formative and summative assessments that provide instant feedback, helping educators identify and address students' strengths and weaknesses effectively.

Benefits of ICT Tools in Biological Science Teaching

Enhanced Data Analysis enable students to analyze large datasets, such as genetic sequences and ecological data, using specialized software and online platforms. This allows students to develop critical data analysis skills, preparing them for future research and scientific careers.

Virtual Laboratories and Simulations by incorporating virtual laboratories and simulations, students can engage in hands-on experiments without the limitations of physical resources. They can manipulate variables, observe outcomes, and draw conclusions, promoting a deeper understanding of biological principles. **Multimedia Educational Resources** ICT tools offer access to multimedia resources, such as interactive textbooks, 3D models, and video lectures. These resources cater to diverse learning styles and foster a more immersive learning experience.

Collaboration and Global Connections: ICT tools enable students to collaborate with peers and researchers from different parts of the world. This promotes cross-cultural learning and exposes students to diverse perspectives in the biological sciences.

Important ICT Tools in Biological Science Teaching

BioInteractive (HHMI): Developed by the Howard Hughes Medical Institute, BioInteractive offers a vast collection of virtual labs, interactive activities, and multimedia resources for teaching various biological concepts, from molecular biology to ecology.

BLAST (Basic Local Alignment Search Tool): BLAST is a widely-used bioinformatics tool that allows students to compare genetic sequences and identify similarities among different organisms.

Foldit: Foldit is an online game that engages students in protein folding puzzles, contributing to real scientific research and fostering an understanding of protein structure and function.

Visible Body: Visible Body provides 3D anatomical models and animations, enabling students to explore the human body's intricate systems and structures in a dynamic and interactive manner.

Challenges and Considerations of using ICT Tools that ensuring equitable access to ICT tools and a reliable internet connection for all students remains a challenge, particularly in underserved areas (Smetana and Bell, 2012). Educators need adequate training to effectively integrate ICT tools into their teaching practices and maximize their benefits. Protecting students' personal information and ensuring data security are essential considerations when using online platforms and tools.

Conclusion

The incorporation of ICT tools in biological science teaching has the potential to revolutionize how students perceive and engage with the subject. By fostering interactive learning experiences, promoting critical thinking, and enabling access to cutting-edge research tools, educators can inspire the next generation of biologists and scientific leaders. Embracing these technologies responsibly and addressing associated challenges will pave the way for a more enriched and effective biological science education. The integration of ICT tools in biological science teaching has the potential to revolutionize the learning experience for students. Through enhanced data analysis, virtual simulations, and interactive resources, students can develop a deeper understanding of biological concepts and prepare for careers in scientific research. With ongoing advancements in technology, educators must continue to embrace and explore innovative ways to leverage ICT tools in their classrooms, ultimately fostering a new generation of skilled and passionate biological scientists.

EMERGING DISRUPTIVE TECHNOLOGY IN EDUCATION

S. Pratheepa

Assistance Professor

UG Department of Commerce with International Business

M. Krishna Prasanth

B.Com International Business

Nallamuthu Gounder Mahalingam College, Pollachi

Introduction

Before the age of computer and digital communication technology, traditional classroom education has been used for the transfer of knowledge from teacher for the student and high dependency was there on the capabilities of the tutor. Knowledge transformation was also limited in time and space by there sources available to students such as libraries etc. But the scenario is change now. There are many digital technologies are available which have high impact on education system. Also due to globalization, there is a pressure on nations of the world to use new technologies in teaching.

There are many technologies have disrupted both our every day lives and commerce. Many disruptive technologies in education are also introduced and the students (according to their needs and teachers can use different technologies controlled by different higher education institutions to support and entire their learning and teaching. The use of ICT is rapidly changing the technological forces that will shape the structure of educational systems of the world.

The role of teaching in a classroom is to help students who are slow learner and to catch up them with other students. But what is about them who are faster at learning? For those students, there are additional courses according to their interests to fulfill their requirements of free elective students. MOOCs is there to enhance online learning with technology.

The teachers can post their instructions online to participants through MOOCs, which is helpful to students to know how to complete the course. The integration of online course material can increase interaction among students and between the students and the teacher, for exp. through virtual group work, building an online community for module, discussion questions, instructor participation and so on. A number of institutions offer virtual distance learning which allows teachers and students to interact with each other.

Digital technology thus provide the potential for establishing communities of inquiry in which elements of social presence and teaching presence interact to create an education experience. Disruptive technologies are also provide an opportunity to those students who can't not come to traditional institutions due to scheduling issues. There are other disruptive technologies also which are useful in education such as cloud learning, mobile learning, e learning, artificial intelligence etc. And are mentioned in the next section of this paper.

Objectives

1. To provide education in the use of Information and Communication Technology or ICT.
2. To encourage higher-level thinking and creativity through ICT.
3. To deliver students with a learning experience in instructional technology.
4. To promote computer-based educational resources.
5. To make students aware of Information Technology.
6. To determine the practical use of technology integration.

Disruptive Technology in Education

1. Online Learning Platforms

- Accessible Education: Online learning platforms provide access to education for learners worldwide, overcoming geographical limitations.
- Flexibility and Convenience: Students can learn at their own pace and access resources anytime and anywhere, accommodating various schedules and obligations.
- Diverse Course Offerings: Online platforms offer a vast range of courses and subjects, allowing learners to explore diverse areas of interest.

2. Artificial Intelligence (AI) in Education

- Personalized Learning: AI can analyze student data and adapt learning materials to individual needs, offering personalized learning experiences.
- Real-time Feedback: AI-powered systems can provide immediate feedback and suggestions to students, aiding in their understanding and progress.
- Administrative Efficiency: AI can automate administrative tasks, freeing up teachers' time for more instructional activities.

3. Virtual and Augmented Reality

- Immersive Learning: VR and AR technologies offer immersive simulations, allowing students to experience complex concepts and scenarios.
- Active Learning and Critical Thinking: VR and AR foster active learning by engaging students and encouraging critical thinking and problem-solving skills.
- Inclusive Learning Experiences

4. Blockchain in Education

- Secure and Transparent Credentialing: Blockchain provides secure systems for storing and sharing educational records and credentials, reducing fraud and increasing transparency.
- Self-Verification: Individuals have control over their educational qualifications, allowing them to easily verify and share their credentials.

- **Reliable Digital Records:** Blockchain ensures the tamper-proof nature of educational achievements, providing individuals with a digital, reliable record of their qualifications.

Conclusion

The technology needs to be kept in perspective, as a tool to enhance learning. Teachers felt that roll of the institution is to deliver more than mere academic facts, students need to develop their interpersonal skills. For this reasons, teachers need to make every effort to ensure that students are able to use the technology intelligently and critically in order to succeed in today's online global workplace. Teachers maintain that technology is not to be considered as a finite entity, it need to be carefully integrated in to the culture of the institution. Above all, technology enhanced learning needs to be approached with caution, in order to not lose sight of the basic fundamentals of higher education. Give sufficient training to teachers to use the technology and to be able to pass those skills on the students.

TEACHING AND LEARNING WITH ICT TOOLS: ISSUES AND CHALLENGES FROM TEACHERS' PERCEPTIONS

Mrs.M.Meena Krithika

Department of Computer Science,
NGM College.

Dr.E.Rama Devi

Data Analytics, Department of Computer Science,
NGM College.

Introduction

Due to ICT's importance in society as well as in the future of education, identifying the possible challenges to integrating these technologies in schools would be an important step in improving the quality of teaching and learning. Balanskat, Blamire, and Kefala (2006) argue that although teachers appear to acknowledge the value of ICT in schools, they continue encountering obstacles during the processes of adopting these technologies into their teaching and learning.

Therefore, the main objectives of this study are as follow:

1. To identify school teachers' perceptions in implementing ICT tools in teaching and learning in classroom.
2. To determine the challenges of using ICT tools in teaching and learning in the classroom among school teachers.
3. To identify that to what extent do teachers use ICT tools in teaching and learning in the classroom.

Theoretical Framework

Figure 1 A theoretical extension of the technology acceptance model

External Variables – It represents the challenges that teachers face that come from outside their sphere of control when integrating a new technology in their teaching and learning process. These challenges include:

- Limited accessibility and network connection
- Schools with limited ICT facilities
- Lack of effective training
- Limited time
- Lack of teachers' competency

Perceived usefulness(PU)–It represents the degree to which they believe that using a particular technology would enhance their job performance. If teachers feel there is no need to question or change their professional practice then, according to studies, they are unlikely to adopt the use of ICT tools. However, if they perceive ICT to be useful to them, their teaching and their pupils' learning, then according to the empirical evidence of previous studies (Cox, Preston & Cox, 1999) they are more likely to have a positive attitude to using ICT in the classroom. The following factors have been identified as key elements to teachers' perceived usefulness of ICT tools:

- Work more quickly
- Job performance
- Increased productivity
- Effectiveness
- Useful

Perceived ease-of-use(PEOU)–It represents the degree to which they believe that using a particular system would be free from effort. Previous studies have identified a number of factors relating to the perceived ease of use of ICT, in study on experienced practicing ICT users. The Impact project(Watson, 1993) and other studies identified a wide range of skills and competencies which teachers felt they needed in order to find ICT easy to use. Some of these are:

- Easy to learn
- Clear and understandable
- Easy to use
- Controllable
- Easy to remember

Attitude toward use – teacher's positive or negative feeling about performing the target behavior(e.g., using a system). Basically, teachers' attitudes too many of these factors will depend upon how easy they perceive using ICT tools to be on a personal level as well as for teaching in the classroom.

Behavioral intention - The degree to which the teacher has formulated conscious plans to perform or not perform some specified future behavior.

Social influence processes -(subjective norm, voluntariness, and image) and cognitive instrumental processes (job relevance, output quality, result demonstrability, and perceived ease of use) as determinants of perceived usefulness and usage intentions.

Literature Review

Challenges in using ICT in teaching and learning

Integrating ICT into teaching and learning is a complex process and one that may encounter a number of difficulties. These difficulties are known as “challenges”. A challenge is defined as “any condition that makes it difficult to make progress or to achieve an objective”. The following are some of the key challenges that have been identified in the literature regarding teachers’ use of ICT tools in classroom.

i) Limited accessibility and network connection

Several research studies indicate that lack of access to resources, including home access, is another complex challenge that prevent teachers from integrating new technologies into education.

Various research studies indicated several reasons for the lack of access to technology. In Sicilia’s study teachers complained about how difficult it was to always have access to computers. The author gave reasons like “computers had to be booked in advance and the teachers would forget to do so, or they could not book them for several periods in a row when they wanted to work on several projects with the students”(p. 50). In other words, a teacher would have no access to ICT materials because most of these were shared with other teachers. According to Becta, the inaccessibility of ICT resources is not always merely due to the non-availability of the hardware and software or other ICT materials within the school. It may be the result of one of a number of factors such as poor resource organization, poor quality hardware, inappropriate software, or lack of personal access for teachers

The challenges related to the accessibility of new technologies for teachers are wide spread and differ from country to country. Empiric’s European study found that lack of access is the largest barrier and that different challenges to using ICT in teaching were reported by teachers, for example a lack of computers and a lack of adequate material. Similarly, Korte and Hüsing found that in European schools there are some infrastructure barriers such as broadband access not yet being available. They concluded that one third of European schools still lack broadband Internet access. Pelgrum (2001) explored practitioners’ views from 26 countries on the main obstacles to ICT implementation in schools. He concluded that four of the top ten barriers were related to the accessibility of ICT. These barriers were insufficient unit of computers, insufficient peripherals, insufficient numbers of copies of software, and insufficient immediate Internet access. Toprakci (2006) found that low numbers of computers, oldness or slowness of ICT systems, and scarcity of educational software in the school were barriers to the successful ICT implementation in Turkish schools. Similarly, Al-Alwani (2005) found that having no access to the Internet during the school day and lack of hardware were hampering technology integration in Saudi schools. Recent research on Syrian schools indicated that insufficient computer resources were one of the great impediments to technology integration in the classroom.

ii) School with limit ed technical support

Without both good technical support in the classroom and whole-school resources, teachers can not bee expected too overcome the obstacles preventing them from using ICT(Lewis,2003). Pelgrum(2001)found that in the view of primary and secondary teachers, one of the top barriers to ICT use in education was lack of technical assistance.

In Sicilia's study (2005), technical problems were found to be a major barrier for teachers. These technical barriers included waiting for websites to open, failing to connect to the Internet, printers not printing, malfunctioning computers, and teachers having to work on old computers. "Technical barriers impeded the smooth delivery of the lesson or the natural flow of the classroom activity"(Sicilia,2005,p.43).

Korteand Hüsing (2007) argued that ICT support or maintenance contracts in schools help teachers to use ICT in teaching without losing time fixing software and hardware problems. The Becta (2004) report stated "if there is a lack of technical support available in a school, then it is likely that technical maintenance will not be carried out regularly, resulting in a higher risk of technical breakdowns" (p. 16). Many of the respondents to Becta's survey (2004) indicated that technical faults might discourage them from using ICT in their teaching because of the fear of equipment breaking down during a lesson. In teaching, several studies indicated that lack of technical support is a main barrier to using technologies. According to Gomes (2005), ICT integration in teaching needs a technician and if one is unavailable the lack of technical support can be an obstacle. In Turkey, Toprakci (2006) found that the lack of technical support was one of two significant barriers to ICT integration in science education in schools and might be considered "serious". In Saudi Arabia, science teachers would agree to introduce computers into teaching, except that they believe they will encounter problems such as technical service or hardware problems (Almohaissin, 2006). Sicilia (2005) argued that whatever kind of technical support and access teaching staff have and whether they have twenty years of experience or are novices to the profession, technical problems generate barriers to the smooth less on delivery by teachers.

iii) Lack of effective training

The challenge most frequently referred to in the literature is lack of effective training (Albirini,2006; Balanskat et al., 2006; Beggs, 2000; Özden, 2007; Schoepp, 2005; Sicilia, 2005; Toprakci, 2006; Ghavifekr &Wan Athirah, 2015). One finding of Pelgrum's (2001) study was that there were not enough raining opportunities for teachers in using ICTs in a classroom environment. Similarly, Beggs (2000) found that one of the top three barriers to teachers' use of ICT in teaching was the lack of training. Recent research in Turkey found that the main problem with implementing new ICT in education was the insufficient amount of in-service training for teachers (Özden, 2007), and Toprakci (2006) concluded that limited teacher training in ICT usein Turkish schools is an obstacle.

According to Becta (2004) , the issue of training is certainly complex because it is important to consider several components to ensure training effectiveness. These were time for training, pedagogical training, skills training, and an ICT use in initial teacher training.

Correspondingly, recent research by Gomes (2005) relating to various subjects concluded that lack of training in digital literacy, lack of pedagogic and didactic training in how to use ICT in the classroom and lack of training concerning technology use in specific subject are as were obstacles to using new technologies in classroom practice. Some of the Saudi Arabian studies reported similar reasons for failures in using educational technology: the weakness of teacher training in the use of computers, the use of a "delivery" teaching style instead of investment in modern technology (Alhamd, Alotaibi, Motwaly, & Zyadah, 2004), as well as the shortage of teachers qualified to use the technology confidently (Sager, 2001).

Providing pedagogical training for teachers, rather than simply training them to use ICT tools, is an important issue (Becta, 2004). Cox et al. (1999a) argue that if teachers are to be convinced of the value of using ICT in their teaching, their training should focus on the pedagogical issues. The results of the research by Cox et al. (1999a) showed that after teachers had attended professional development courses in ICT they still did not know how to use ICT in their classrooms; instead they just knew how to run a computer and setup a printer. They explained that this is because the courses only focused on teachers acquiring basic ICT skills and did not often teach teachers how to develop the pedagogical aspects of ICT. In line with their search by Cox et al. (1999a), Balanskat et al. (2006) indicated that inappropriate teacher training is not helping teachers to use ICT in their classrooms and in preparing lessons. They assert that this is because training programs do not focus on teachers' pedagogical practices in relation to ICT but on developing ICT skills.

Fundamentally, when there are new tools and approaches to teaching, teacher training is essential (Osborne & Hennessy, 2003) if they are to integrate these into their teaching. However, according to Balanskat et al. (2006), inadequate or inappropriate training leads to teachers being neither sufficiently prepared nor sufficiently confident to carry out full integration of ICT in the classroom. Newhouse (2002) stated "teachers need to not only be computer literate but they also need to develop skills in integrating computer use in to their teaching/learning programmes" (p. 45).

iv) Limited time

Several recent studies indicate that many teachers have competence and confidence in using computers in the classroom, but they still make little use of technologies because they lack the time. A significant number of researchers identified time limitations and the difficulty in scheduling enough computer time for classes as a barrier to teachers' use of ICT in their teaching (Al-Alwani, 2005; Becta, 2004; Beggs, 2000; Schoepp, 2005; Sicilia, 2005). According to Sicilia (2005), the most common challenge reported by all the teachers was the lack of time they had to plan technology lessons, explore the different Internet sites, or look at various aspects of educational software.

Becta's study (2004) found that the problem of lack of time exists for teachers in many aspects of their work as it affects their ability to complete tasks, with some of the participant teachers specifically stating which aspects of ICT require more time. These include the time needed to locate Internet advice, prepare lessons, explore and practise using the technology, deal with technical problems, and receive adequate training.

V) Lack of teachers' competency

Another challenge directly related to teacher confidence is teachers' competence in integrating ICT into pedagogical practice (Becta, 2004). In Australian research, Newhouse (2002) found that many teachers lacked the knowledge and skills to use computers and were unenthusiastic about the changes and integration of supplementary learning associated with bringing computers in to their teaching practices. Current research has shown that the level of this barrier differs from country to country. In the developing countries, research reported that teachers' lack of technological competence is a main barrier to their acceptance and adoption of ICT (Pelgrum, 2001; Al-Oteawi, 2002). In Syria, for example, teachers' lack of technological competence has been cited as the main barrier (Albirini, 2006). Likewise, in Saudi Arabia, a lack of ICT skills is a serious obstacle to integration of technologies into science education (Al-Alwani, 2005; Almohaissin, 2006). Empirical (2006) produced are proton ICT use in European schools. The data used for the report came from the Head Teachers and Classroom Teachers Survey carried out in 27 European countries. The findings show that teachers who do not use computers in classrooms claim that "lack of skills" are constraining factor preventing them from using ICT for teaching. Another worldwide survey conducted by Pelgrum (2001), of nationally representative samples of schools from 26 countries, found that teachers' lack of knowledge and skills is a serious obstacle to using ICT in primary and secondary schools. The results of a study conducted by Balanskat et al. (2006) have shown that "in Denmark ... many teachers still chose not to use ICT and median teaching situations because of their lack of ICT skills rather than for pedagogical/did actics reasons" while "in the Netherlands... teachers' ICT knowledge and skills is not regarded any more as the main barrier to ICT use" (p.50). Hence, lack of teacher competence may be one of the strong barriers to integration of technology into education. It may also be one of the factors involved in resistance to change.

Methodology

Research Design

In this research, quantitative methodology was used to collect and analyze the data obtained from all the respondents. A questionnaire was self-developed and finalized by their searchers before being distributed to the targeted group of respondents. The questionnaire was designed specifically to address research objectives with regard to teachers' perception on use of ICT tools in public secondary schools in Melaka.

Instrumentation & Sampling

A self-developed cross-sectional survey questionnaire consisting of 7 sections and 114 items was test deeming respondents. The questionnaire was based on 5-point Likert Scale ranging from: 5 =always, 4 often, 3 = sometimes, 2 = rarely and 1 = never. A total of 100 secondary school teachers in the state of Melaka were selected randomly as the sample for the study. The sample responded to the statements given and chose their answers based on their perceptions. The survey was distributed by hand to the respondents. The various

sections of the questionnaire included:(A)Personal Details,(B)Experience with ICT for Teaching,(C) ICT access for teaching, (D) Support for teachers for ICT use, (E) Challenges of using ICT tools in teaching and learning,(F)Teachers' ICT skills, (G) Teachers' opinion about ICT use impact on students' learning outcome.

Data Collection Procedures

Data collection defines the procedure for collecting data by the researcher. The questionnaire has been distributed to 120 teachers randomly. They were given one week to fill in the questionnaire and return it to the researcher. All of the participants volunteered themselves in the research. Some questionnaires were with missing information that the details could not be used as a contribution in this research. Finally 100 questionnaires were returned to the researchers for data analysis.

Data Analysis Process

The data collected from the respondents were gathered together to be analyzed using the Statistical Packages for the Social Sciences (SPSS) version 22. The analysis includes both descriptive and inferential analysis. The researchers used descriptive analysis to analyze the frequency and percentage of the overall population in the demographic background. Besides, it is also used to determine the mean, standard deviation, frequency and percentage. Inferential statistics (t-test) were also used to analyze the research findings.

Validity & Reliability

Internal consistency is measured in this research using the Cronbach's coefficient alpha (α). This method is used to identify the correlation between scores of each item in the test and the total score for all items in the test or is known as test index score. Items with high correlation with the test index score have high reliability, and those with low correlation values with the test index score have low reliability and will be deleted from the test. Based on the findings, the Cronbach's alpha value for this study shows .817 which is satisfactory (between .65 – .95). The alpha value shows that the instrument is reliable. In fact, all items in the instrument have α level of more than .7. The highest alpha level is .847 and the lowest is .799.

Findings

Demographic Factors of the Respondents

The following Table1 give the demographic background of the research participants.

Table1 shows the demographic finding where the age category under 25 is frequency 4 and percentage is 4%, age 26-35 is frequency 64 and percentage is 64%, age 36-45 is frequency 27 and percentage is 27%, age 46-55 is frequency 3 and percentage is 3%, and age 55+ is frequency 2 and percentage is 2%.

The gender findings how small as frequency 25 and percentage is 25% and female is frequency 75 and percentage is 75%. The experience based on the years of experience by the sample is less than 1 year frequency is 5 and the percentage is 5%, 1-4 years frequency

is 25 and the percentage is 25%, 5-10 years frequency is 16 and the percentage is 16%, 10-20 years frequency is 16 and the percentage is 16%, and 20+ years frequency is 1 and the percentage is 1%.

Ethnicity analysis shows that Malay frequency is 37(37%), Chinese frequency is 19 and the percentage is 19%, Indian frequency is 44 and the percentage is 44% and Others frequency is 0. The subjects taught by the respondents are: Language (frequency is 38 and percentage is 38%), Mathematics (f=36 or 36%), Science subjects (f = 22 or 22%) and Other (f = 4 or percentage 4%). Based on the data obtained, most of the participants in this research are aged between 36-45 years, the majority are female and have 5-10 years of experience.

Discussion & Conclusion

This study is more related to identifying the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers. Furthermore, it examines the challenges of using ICT tools in teaching and learning in the classroom among school teachers and recognizes the effectiveness of the extent of ICT tools in supporting classroom teaching and learning. Based on the study the findings indicate that average level of the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers, high level of challenges of using ICT tools in teaching and learning in the classroom among school teachers and recognizing the effectiveness of the extent of ICT tools in supporting teaching and learning in the classroom.

With the advent of Information and Communications Technologies (ICT) in education, teachers form their own beliefs about the role of ICT as a teaching tool, the value of ICT for student learning outcomes and their own personal confidence and competency (Prestridge, 2007). Barriers exist in integrating ICT in teaching and learning (Ertmer, 2005). The barriers are extrinsic to the teacher and include lack of resources, time, access and technical support. Findings of this research suggest that teachers were still giving comment on the barriers in implementing ICT tool at school in teaching and learning.

Results of the Cachia and Ferrari (2010) study showed that teachers do combine different resources in their teaching, as well as utilizing various modes of ICT with almost two-thirds claiming to use technologies (63%) and website (62%). Anyway, it is also evident that textbooks are still considered fundamental in the educational systems. Nearly two thirds of our respondents (64%) always or often follow textbooks in their teaching.

Important technologies for learning such as computers (98%) and educational software (93%) were ranked as the top technologies by the respondents of Cachia and Ferrari's (2010) research. On the other hand, our research showed that the rate of ICT use among teachers in school is average. However, the finding shows that more teachers used computer with teaching software in the classroom to present or demonstrate examples to students. They also like to use the computer to access students' results and keep track of their progress.

Despite the current efforts in ICT integration in schools, many families specifically in rural areas still do not know how to use ICT tools in their daily life. They even did not know how to check their children's results in the existing systems. Not all houses have

computers and Internet facilities to use daily. In this regard, the main challenge is to provide appropriate ICT tools to both urban and rural areas efficiently.

This study will offer priceless information to the school administration as well as to educational policy makers regarding the nature of ICT contribution to the teaching-learning process. Since the attitude and perceptions of the teachers are critical to how effectively an innovation is implemented, it is important to gauge how teachers perceive this innovation and its efficacy as a tool for enhanced teaching and learning. It is also hoped that this study will contribute to the growing knowledge base and 21st century generation regarding the use of ICT in education in Malaysia.

In future studies more focus should be given on management strategies and policies to address the barriers faced by teachers in using ICT tools in teaching and learning. If the barriers faced by teachers can be overcome, it is a step forward to enhance our students' learning outcome. The studies done with the same gender distribution could give more appropriate analysis where by the gender perceptions could be analyzed.

GLOBAL BLENDED LEARNING METHODOLOGIES

Dr. P. Viswanathan

Assistant Professor, School of Commerce

REVA University, Bengaluru

viswanathan.p@reva.edu.in

Introduction

How does blended learning work? What advantages does a blended learning strategy offer? Which approach can you use to start? By outlining the components of an efficient, learner-centered "blend" derived from research and evidence-based practices, this guide assists instructors in responding to these questions. The guide also provides additional references and resources, as well as questions that instructors can consider before creating their course.

On this Page:

What is Blended Learning?

The goal of blended learning is to support the intended learning objectives by integrating complementary face-to-face (synchronous) and online learning (asynchronous) experiences. While some definitions of blended learning place a greater emphasis on the amount of time spent in each mode of delivery by comparing the proportion of content delivered face-to-face vs. online (Hew & Cheung, 2014; for example, according to Allen and Seaman, 2007, blended learning would have 30 to 79% of content delivered online), the emphasis here is on using an intentional "blend" of online and face-to-face instruction that is best suited to enhancing learning for all students.

Instead of "adding on" online learning experiences to a traditional face-to-face course (known as the "course-and-a-half phenomenon," which increases workload for both the instructor and the student), blended learning involves carefully deciding which parts of learning should take place in person or in a group under the guidance of the instructor and which can be completed online at the learner's convenience. To see the differences between conventional in-person learning, web-enhanced learning, and blended/hybrid learning, see Table 1 below.

Table 1: Content Delivery and Modes of Learning

(1) Traditional in-person learning	(2) Web-enhanced learning	(3) Blended / Hybrid Learning
• All course content and learning experiences are delivered in a face-to-face format in writing or orally through lectures, discussions, labs, or other learning activities. • No web-based technology is used.	• Includes all the elements of a traditional course but uses web-based technology to facilitate learning. • E.g., using Courseworks (Canvas) to post course materials – textbook information, a syllabus, and readings.	• Blend in-person and online learning experiences. • Online learning not an “add-on” but integrated into the course and replaces a portion of class time. • Web-based technologies to deliver content and maximize learning through activities (e.g, online discussions; quizzes, etc.).

Adapted from Allen, Seaman, and Garrett, 2007; and Allen & Seaman, 2007; Mayadas, Miller & Sene, 2015.

Why “Blend” Learning?

In a well-designed blended approach, instructors leverage the strengths of face-to-face and online modalities to achieve desired student learning outcomes and improve learning. Benefits of blended learning include:

- **Deeper, more meaningful learning.** Higher opportunities for students to learn course material, practise higher-order skills (such as critical thinking, inquiry, and reflection), and integrate their learning are provided by the combination of sequential online experiences and in-class guidance from the instructor. Students now have more opportunities to get feedback on their academic progress.
- **Increased student engagement inside and outside of the classroom.** Students can interact with the course material, other students, and their own thinking through instructor-facilitated in-class activities (such as role plays, problem sets, demos, and debates). These hands-on learning opportunities allow students to show their understanding while enhancing online learning activities that encourage participation from all students.
- **Meeting the needs of diverse learners.** Utilising web-based technologies can increase accessibility to learning opportunities and resources for support, give flexibility, and benefit all learners. Students use the course materials and learning resources at their own pace, location, and time, which lessens cognitive load and improves accessibility. They can regularly practise skills and go over information. The data produced by online platforms and technologies can be used by instructors to assess student learning and their course, making necessary adjustments.
- **Promote student ownership of learning.** An instructor-curated collection of learning experiences and resources can be used in a variety of ways by students thanks to a blended learning approach. To achieve this, instructors must create their

courses in a way that encourages students to develop their metacognition. As they improve their ability to learn independently, students gain from instructor guidance.

- **More opportunities to develop a learning community in the course.** Activities involving peer collaboration can be done during class time. In the classroom and online, students have the chance to communicate and work together. As students have more time to reflect on the material and make more significant contributions and connections across the course, instructors are more likely to achieve 100% participation through online components. Ingredients of a Successful, Learner-Centered "Blend"
- **Course design** in which in-class activities and instructions and out-of-class independent learning and online activities are integrated.
- **Intentional integration** of educational technologies to help students achieve learning outcomes.
- **Instructor provides guidance** on how students learn in a blended course, helping students develop their self-directed learning skills.
- **Assessment** that is ongoing and provides students with multiple opportunities to demonstrate their learning. As well as an evaluation plan to know what aspects of your blended approach were impactful on your students' learning and what are areas for improvement.

How Do I Get Started?

Being different from a conventional course design, a blended approach necessitates reevaluating instructional design. It necessitates considering how to use both face-to-face and online learning formats that meet the needs of your students, as well as selecting the right resources and techniques to promote student learning. Note that this is a highly

reflective process for instructors who are preparing a blended approach. Making time to reflect on your teaching, your students, and the science of learning is necessary. You should also use the research on successful blended learning strategies to guide your practice. It can take six months to successfully integrate into an entire course.

Components to reflect on as you approach your blend:

Your course context:

- How will you blend the courses? A new course or a redesign of the current one?
- Which students do you have? What educational needs do they have? How prepared are they for a blended strategy?
- What makes you unique as a teacher? What level of readiness do you have for teaching in a blended learning environment?
- What combination is best for your students, your course, and you as the teacher?

Your Course Design

- What educational goals must be accomplished? What skills and knowledge ought students to have after completing the course?
- Which components of your course—in-class activities, extracurricular activities, and assignments—will you combine? Why? Think about what subject matter your students might benefit from a deeper understanding of.
- How will you combine the benefits of online and face-to-face learning?
- How could you make better use of class time? What changes could be made to the course structure, such as switching face-to-face meetings for online ones?
- How could you use technological advancements in education? What platforms will you employ to organise your curriculum and enable your blend? (For instance, Zoom, Course Works, etc.)
- How will the learning in your blended course be evaluated?
- Which educational activities will you combine?
- How will you explain the blend to your students (along with goals and methods to promote learning)?
- Create a communication plan to remind students of crucial actions and due dates for passing your course.

Your resources and support needs:

- What materials are available for use in your blended course? Investigate the already-available resources, such as Lynda.com (an online learning platform accessible through an LMS that provides you and your students with access to a video tutorial library), YouTube, TEDEd (which enables you to build a lesson around a TED-Ed, TED Talk, or YouTube video), Khan Academy, MIT Open Courseware, and open educational resource websites like OER Commons. See if your coworkers have any videos or learning resources you can share.
- What materials will you have to produce to achieve your blend?

- Utilizing the software and hardware you have access to, create new media resources. Check out the CTL website's Teaching with Do-It-Yourself Video guide.
- What tools and assistance are going to be necessary for you to get the "blend" you want?

Your Evaluation Strategy

- How will you measure the effectiveness of your blended learning strategy? What information will you gather, and how will you make use of it to evaluate the learning of your students and your blended course teaching? Think about diagnostics, midterm and final assessments, reflective essays, diaries, discussion posts, tests, papers, etc.
- How will you make use of the data you've gathered to enhance the blend?

Abstract

Information & Communication Technology (ICT) has become one of the basic building blocks of modern society. There is a wide spread belief that ICTs have an important role to play in changing and modernizing educational systems and ways of learning. ICT can provide more flexible and effective ways for professional development for teachers, improve pre- & in-service teacher training and connect teachers to the global teacher community. Teaching is becoming one of the most challenging professions in our society where knowledge is expanding rapidly and modern technologies are demanding teachers to learn how to use these technologies in their teaching. This topic mainly focuses on different areas such as educator's pedagogy influencing the effective use of computers for teaching purposes, Impact of training and experience in using ICT by in-service teachers, Impact of ICT diffusion, participatory development of teaching and learning, the effectiveness of using internet as a principal information resource in teaching and learning activity in higher educational institutions, teacher educators' ICT competencies, usage, and perceptions, Computer based technology and its pedagogical utility, ICT usage in Teacher Education, ICT adoption among secondary school teachers, ICT In initial teacher education, Teachers' incorporation of ICT in classroom teaching, Computer and Internet awareness in school going students, e- Training the future world of education, Utilization of computer technology in remedial instruction and modern ICT trends in teaching technology and other related areas.

Keywords: Information & Communication Technology (ICT) and Higher Education Teachers

Introduction

Today's technologies are essential tools for teaching and learning. A variety of Information and Communication Technology (ICT) can facilitate not only delivery of instruction but also learning process itself. Moreover, ICT can promote international collaboration and networking in education and lifelong professional development for today's teacher. There's a range of ICT options – from videoconferencing through multimedia delivery to websites – which can be used to meet the challenges teachers face today. ICT can change the way teachers teach and that it is essential useful in supporting more student centered approaches to instruction and in developing the higher order skills and promoting collaborative activities. To use these tools effectively and efficiently, teachers need visions of the technologies' potential, opportunities to apply them, training

and just-in- time support and time to experiment. Only then can teachers be informed and confident in their use of new technologies.

Teaching is becoming one of the most challenging professions in our society where knowledge is expanding rapidly and much of it is available to students as well as teachers at the same time. As new concepts of learning have evolved, teachers are expected to facilitate learning and make it meaningful to individuals learners rather than just to provide knowledge and skills. Modern developments of innovative technologies have provided new possibilities to teaching professions, but at the same time have placed more demands on teachers to learn how to use these new technologies in their teaching. These challenges ask teachers to continuously retain themselves and acquire new knowledge and skills while maintaining there their jobs.

ICTs give a new perspective on social and economic profile of the general people. The information access and the other digital services improve the educational standard. Many scholars have reflected many problems of taking about ICT, also they have stated that invention and diffusion are but means to an ultimate end, the consequences that result from adoption of an innovation. Change agents generally give little attention to consequences. They often assume that adoption of a given innovation will produce mainly beneficial results for adopters. This expression is one of the pro-innovation will produce mainly beneficial results for adopters. This expression is one of the pro-innovation biases. Change agents should recognize their responsibility for the consequences of innovations that they introduce. Ideally, they should be able to predict the advantages and disadvantages of an innovation before introducing it to their clients. This is seldom done and often it cannot be done. So, it is imperative that the consequences (effects or influences or impacts) of these initiatives be studied from the audience's perspective.

These generations of learners are witnessing the changing scenario of education. 21st century is full of innovations and exploration in the education. Every aspect of educational system has been changed due to ICT and new technologies in Education. In previous education system teacher was the central figure of entire activities but now student is the central figure of this process. But due to emergence of Information and Communication Technology now learning opportunities knocks at the door of learner. Gradually

ICT tools are taking the place of conventional tools i.e. black board, charts etc. Literary meaning of information is that which can be communicated and can be understand, Communication means exchanging the views and ideas and Technology means process of using scientific material and human resources in order to meet human need or purpose. So it can be infer that use of diverse set of technology in education is ICT.

However, this does not mean that the presence in a higher educational institution of modern means of ICT will lead to the growth of professional skills of teachers and quality of education. The involvement of teachers in the process of informatization of the educational space cannot catch up with the tightening of requirements for professional competence and skills of academic staff. In this context, it is impossible to ignore the so-called "internal," or the psychological, aspect of the use of ICT by teachers in their educational activity. We should pay attention to the importance of values and motivation of the use of electronic educational resources by teachers.

Review of Related Literature

Niyaz Ahmad (2011): In his paper “Effective Educational Management: An Implementation of ICT in Administration of Higher Education Institutions” states that the use of ICT in educational management will benefit for analyzing the data quickly and accurately quick, decision making, provides the power to the Administrators for efficient management of education and institution, reduces the burden of Teachers, available at lowest total cost of ownership, provides information at the door steps and reduces the Right to Information Applications.

Meenakumari & Krishnaveni (2011): In “Transforming Higher educational institution administration through ICT” has identified a comprehensive set of functional areas of e-administration. The study revealed that demographic factors do not have a major impact on e-administration in higher education institutions. It is also evident from this study that integration of ICT into knowledge administration for the teaching-learning process is more in comparison with Research Methodology Computers can be used extensively for educational administration.

Ariho Twinomujuni (2012): In his study of “Problems in ICT implementation in selected Institutions of Higher Learning in Kabale District” identified variables as cost of ICT training materials, skills development in ICT and administrative support in relation to ICT implementation. He found that that there is a statistically insignificant relationship between the cost of ICT training materials and ICT implementation variables. Cost of ICT training materials negatively affected ICT implementation. In respect to skills development in ICT and ICT implementation, he found that there was a statistically significant relationship between the two variables. Skills development in ICT positively affected ICT implementation.

The investigator had taken up the research gap for the present study is, “Implementation of Ict Tools In Teaching By Higher Education Teachers

Objectives of the Study

The main objectives of the study are as follows:

- To define ICT Based Learning.
- To describe the different aspects of ICT in Higher Education.
- To acquire knowledge of the approaches of ICT in Higher Education.
- To study of the emerging trends in Higher Education through ICT.
- To find out need and importance of ICT in Higher Education.
- To explain the scope of ICT in Higher Education.
- To analysis the applications of ICT in Higher Education.
- To interpret the suggestions about ICT for further development in Higher Education.

Significance of the Study

- The investigation like this will be relevant to the field of higher education.
- This investigation will grow more interest among the teachers’ in ICT based teaching approaches.

- This investigation will have a way for the students who are choosing ICT based subject.

Methodology of the Study

The investigator attempt to study Information and Communication Technology (ICT): New Approaches in Higher Education. In this paper, the investigation was based on different secondary data like abstract, journal, research paper and also different types of books. And also study of questions is used for analysis of data.

Analysis and Interpretations

1. What is ICT Based Learning?

ICT is technology that supports activities involving information. Such activities include gathering, processing, storing and presenting data. Increasingly these activities also involve collaboration and communication. Hence IT has become ICT: information and communication technology. ICT stand for information and communication technologies and is defined, as a diverse set of technological tools and resources used to communicate, and to create, disseminate, store, and manage information. ICT implies the technology which consists of electronic devices and associated human interactive materials that enable the user to employ them for a wide range of teaching - learning processes in addition to personal use. ICT is that technology which uses the information to meet human need or purposes including processing and exchanging. Information and communications technology (ICT) in education is the processing of information and its communications facilities and features that variously support teaching, learning and a range of activities in education.

According to UNESCO "Information Technology is a scientific, technological and engineering discipline and management technique used in handing the information, it's application and association with social, economic and cultural matters".

Darnton and Giacoletto defines IT as "Information technology is a systemic study of artifacts that can be used to give form to facts in order to provide meaning for decision making, and artifacts that can be used for organization, processing, communication and application of information."

From the above discussion we can conclude that information technology refers to the information processing of the software application on operating systems or hardware applications that includes computers, videos, telephones and related equipment of telecommunications, tapes, CDs etc.

2. What are the different Aspects of ICT in Higher Education?

The ICT Policy in higher education aims at preparing youth to participate creatively in the establishment, sustenance and growth of a knowledge society leading to all round socio- economic development of the nation and global competitiveness. The introduction of ICT in the higher education has profound implications for the whole education process ranging from investment to the use of technologies in dealing with key issues of access, equity, management, efficiency, pedagogy and quality.

- **Student-centered Learning:** ICT provides a technology that has the capacity to promote and encourage the transformation of education from a teacher directed enterprise towards student-centered models. As more and more students use computers as information sources and cognitive tools, the influence of the technology will increase to support their studies.
- **Supporting Knowledge Construction:** Learning approaches using contemporary ICTs provide many opportunities for constructivist learning and support for resource-based, student centered settings by enabling learning to be related to context and to practice.
- **Anyplace Learning:** With the help of ICT, educational institutions can offer programs at a distance mode. Today many students can use this facility through technology-facilitated learning settings.
- **Anytime Learning:** Technology-facilitated educational programs remove the geographical barriers. Students are able to undertake education anywhere, anytime and at any place. This flexibility has provided learning opportunities for many more learners who previously were constrained by other commitments.
- **Information Literacy:** The growing use of ICT as tools of everyday life have seen the pool of generic skills expanded in recent years to include information literacy. It is highly probable that due to the future developments and growth in technology, it will help further for information literacy.
- **Computer in the classroom:** Having a computer in the classroom is an asset to any teacher. With a computer in the classroom, teachers are able to demonstrate a new lesson, present new material, illustrate how to use new programs, and show new websites.
- **Class website:** An easy way to display your student's work is to create a web page designed for your class. Once a web page is designed, teachers can post homework assignments, student work, famous quotes, trivia games, and so much more. In today's society, children know how to use the computer and navigate their way through a website, so why not give them one where they can be a published author.
- **Class blogs and wikis:** There are a variety of Web 2.0 tools that are currently being implemented in the classroom. Blogs allow for students to maintain a running dialogue, such as a journal, thoughts, ideas, and assignments that also provide for student comment and reflection. Wikis are more group focused to allow multiple members of the group to edit a single document and create a truly collaborative and carefully edited finished product.
- **Wireless classroom microphones:** Noisy classrooms are a daily occurrence, and with the help of microphones, students are able to hear their teachers more clearly. Children learn better when they hear the teacher clearly. The benefit for teachers is that they no longer lose their voices at the end of the day.
- **Mobile devices:** Mobile devices such as clickers or smart phone can be used to enhance the experience in the classroom by providing the possibility for professors to get feedback.

- **Interactive Whiteboards:** An interactive whiteboard that provides touch control of computer applications. These enhance the experience in the classroom by showing anything that can be on a computer screen. This not only aids in visual learning, but it is interactive so the students can draw, write, or manipulate images on the interactive whiteboard.
- **Online media:** Streamed video websites can be utilized to enhance a classroom lesson (e.g. United Streaming, Teacher Tube, etc.).
- **Digital Games:** The field of educational games and serious games has been growing significantly over the last few years. The digital games are being provided as tools for the classroom and have a lot of positive feedback including higher motivation for students. There are many other tools being utilized depending on the local school board and funds available. These may include: digital cameras, video cameras, interactive whiteboard tools, document cameras, or LCD projectors.

The inculcation of technology-based learning in Higher education needs to be improved with the help of following steps.

- Up gradation of course structure.
- Examination reforms.
- Proper use of technology in education: Overhead projector, Slide-projector, TV (Audio-visual cassettes and aids)
- Technical training to In-service/Pre-service.
- Online teacher education.
- XPDITTE.
- Education through satellite.
- EDUSAT OR GASAT-3

3. What are the Approaches of ICT in Higher Education?

Studies of ICT development in both developed and developing countries identify at least four broad approaches through which educational systems and individual schools proceed in their adoption and use of ICT. These four approaches, termed emerging, applying, infusing, and transforming.

- **The emerging approach:**

Higher institution at the beginning stages of ICT development demonstrates the emerging approach. Such schools begin to purchase, or have had donated, some computing equipment and software. In this initial phase, administrators and teachers are just starting to explore the possibilities and consequences of using ICT for higher

institution management and adding ICT to the curriculum. Higher institution at this emerging phase is still firmly grounded in traditional, teacher-centred practice. The curriculum reflects an increase in basic skills but there is an awareness of the uses of ICT. This curriculum assists movement to the next approach if so desired.

- **The applying approach:**

Those higher institution in which a new understanding of the contribution of ICT to learning has developed exemplify the applying approach. In this secondary phase, administrators and teachers use ICT for tasks already carried out in higher institution management and in the curriculum. Teachers largely dominate the learning environment. Schools at the applying approach phase adapt the curriculum in order to increase the use of ICT in various subject areas with specific tools and software. This curriculum assists movement to the next approach if so desired.

- **The infusing approach:**

At the next stage, the infusing approach involves integrating or embedding ICT across the curriculum, and is seen in those schools that now employ a range of computer-based technologies in laboratories, classrooms, and administrative offices. Teachers explore new ways in which ICT changes their personal productivity and professional practice. The curriculum begins to merge subject areas to reflect real-world applications.

- **The transforming approach:**

Higher institutions that use ICT to rethink and renew school organization in creative ways are at the transforming approach. ICT becomes an integral though invisible part of daily personal productivity and professional practice. The focus of the curriculum is now learner-centred and integrates subject areas in real-world applications. ICT is taught as a separate subject at the professional level and is incorporated into all vocational areas. Higher institution has become centers of learning for their communities.

4. What are the Emerging Trends in Higher Education through ICT?

Due to ICT some new and student centered trends comes in existence. Some of them are following-

E- Learning:	E-learning is a learning program that makes use of an information network- such as the internet, an intranet (LAN) or extranet (WAN) whether wholly or in part, for course delivery, interaction and/or facilitation. Web-based learning is a subset of e learning and refers to learning using an internet browser such as the moodle, blackboard or internet explorer.
Blended Learning:	Blended learning refers to learning models that combines the face-to-face classroom practice with e-learning solutions. For example, a teacher may facilitate student learning in class contact and uses the MOODLE (modular object oriented dynamic learning environment) to

	facilitate out of class learning.
Constructivism:	Constructivism is a paradigm of learning that assumes learning as a process individuals “construct” meaning or new knowledge based on their prior knowledge and experience (Johassen, 1991). Educators also call it the emerging pedagogy in contrast to the long existing behaviorism view of learning.
Active Learning:	ICT-enhanced learning mobilizes tools for examination, calculation and analysis of information in order to provide a platform for student inquiry, analysis and construction of new information. The learners therefore, learn as they do and, whenever appropriate work on real-life problems in-depth. Moreover, ICT makes the learning less abstract and more relevant to their life situations.
Collaborative Learning:	ICT-supported learning encourages interaction and cooperation among students, teachers, and experts regardless of where they are. Apart from modelling real world interactions, ICT- supported learning provides opportunity to work with students from different cultures, thereby helping to enhance learners teaming and communication skills as well as their global awareness. It models learning done throughout the learner’s lifetime by expanding the learning pace to include not just peers but also mentors and experts from different fields.
Creative Learning:	ICT-supported learning promotes the manipulation of existing information and the creation of real-world products rather than the duplication of received information.
Integrative Learning:	ICT-enhanced learning promotes a thematic integrative approach to teaching and learning. This approach eliminates the artificial separation between the different disciplines and between theory and practice, which characterizes the traditional approach.
Evaluative Learning:	ICT-enhanced learning is student-directed and diagnostic. Unlike static, text or print-based education, ICT-enhanced learning recognizes the presence of different learning pathways to explore and discover rather than merely listen and remember.

5. What is Need and Importance of ICT in Higher Education?

ICT can facilitate learning of learners. Various ICTs have been used to support learning, which include traditional media and electronic media. Technology such as online/Internet is available 24 hours a day. With the use of Internet and World Wide Web, a wealth of learning materials in almost every subject can be accessed from anywhere at any time by an unlimited number of learners. Computer and Internet are the tools for learning and developing skills. Hayes indicates that “vision of the teacher’s role needs to shift from that of the information provider to one of the catalyst, model, coach, innovator, researcher, and collaborator with the learner throughout the learning process”. Need of

ICT in education can be pointed out as below –

- To store, spread and improvement of knowledge
- Making conducive and creative environment in class
- Expanding educational opportunities
- Increase efficiency
- Enhancing quality of learning
- Enhancing quality of teaching
- Facilitating skill formation
- Sustaining lifelong learning
- Improving policy planning and management
- Advancing community linkages
- Cost effectiveness

6. What is the Scope of ICT in Higher Education?

Technology is an increasingly influential factor in education. Computers and mobile phones are used in developed countries both to complement established education practices and develop new ways of learning such as online education. This gives students the opportunity to choose what they are interested in learning. Technology offers powerful learning tools that demand new skills and understanding of students. ICT brings vast and rapid changes in the almost every aspect of teaching, training and learning. Day by day scenario is being change by these tools. Following is the scope of ICT in education.

- **In Teaching learning process:** In teaching learning process, tools of ICT helps teacher in classroom. Traditional tools are now a matter of old days. Interactive Board, LCD projector, online class, tele-conferencing are new tools for the teacher to make their class conducive and creative. Due to these tools now teachers overcomes the problems of class i.e. individual differences of students, language problem, and effective interaction. Because use of ICT tools class becomes interactive and conducive so knowledge receive by student become stable. Many complex and hazardous experiments now can be perform in classroom by virtual laboratory. This is quite safe and effective without any problems. All these things leads students to become a lifelong learner and to healthy reading habits.
- **In Publication:** In ancient time invention of printing change entire system of education. Due to printing now it was very easy to store and to disseminate the knowledge. Now due to ICT this become more and more easy and accessible. In higher education publication is important activity. Use of Internet readability become more comprehensive. Many Net based services providing many opportunities for researcher and writers to share their thoughts.
- **In Evaluation:** Evaluation is the most important aspect of any process. All efforts may go in waste if there is a faulty evaluative system. Due to invasion of ICT tools in education evaluation becomes very fast and reliable. Online exam become a boon for the students who are unable to attend a formal system. New technologies is very quick in publication and in preparing results. Results can be published online

without any delay. Formative and summative evaluation techniques is possible because of ICT.

- **In Research:** Research is the heart of educational system. Research become more and more comprehensive due to emergence of ICT. Now data collection become very easier. Anyone can collect data online from a wide range of population. Different statistical packages prepare results multidimensional for an effective presentation. For study purpose now there is no need to go every university's libraries. Now a researcher can access not only domestic but also foreign university's library with the help of Internet.
- **In Administration:** Administration is just like a skeleton. From the advertisement of admission to publishing the results and distribution of certificates, at every steps tools of ICT helps much more. Online admission, online payment of fee, online registration, online class, and online evaluation and at last online certificate, ICT performs an unbelievable responsibility. Easy in management, Cost effectiveness, Time savings.

7. What are the Applications of ICT in Higher Education?

- **Simulation and Good Practice:** New technologies, both computer and web-based allow for simulation of specific skills through mini and micro lessons that can be watched, manipulated and tested.
- **Saving in Time and Expenses:** With in the short span of time we can teach huge masses thus saving money and time.
- **Training (and learning) on Demand:** ICT allows teacher education to take place any time, any place. ICTs (Videos, CD- ROMS, Internet and Software) allow teachers to learn things on demand-when they feel the need for that.
- **Professional and Peer-Support:** ICTs can break the professional isolation by permitting among educators, communication, and exchange of information, chat rooms, bulletin boards, discussion forums, and virtual conferences.

8. What are the Suggestions about ICT for further development in Higher Education?

- **Arranging proper training and regular workshops on ICT for the teachers:** Teachers should be properly trained to use the ICT facility in their schools. Regular workshops on the use of latest technology in teaching are needed also.
- **Proper implementation of ICT infrastructure:** All schools should have internet connection and computer facility for the learners. There should be no disparity between the rural and urban institutions in this concern. There should be adequate e-enabled learning contents in every institution.
- **Support from the higher authority:** Higher authority should encourage English teachers to use ICT in their teaching. Many teachers complain about the lack of support from the higher authority.
- **Using flexible e-enabled learning content for the weaker learners:** There should be enough space for the weaker section of learners in teaching. Arranging flexible e-

enabled learning contents for them will be useful.

- **Use of audio-visual aids:** In teaching, use of audio-visual aids will develop listening and pronunciation skills. It will also help the better understanding of the language.
- **Group work method through ICT:** To develop the communication, ICT enabled tasks can be given in groups, such as creating any power point presentation of any grammatical lesson. This will also help to increase the socialization process.

Conclusion

Today, there is an emphasis placed on technology based learning that supports the active construction of knowledge and skills. That is a shift from educational environment, which supports the passive acquisition of isolated facts, to environment in which the learner actively explores the world and constructs their own models of understanding. Although the lens to future is clouded, must be filtered through the past and present, the ability to stand back and think about the impact of technologies on students learning and teacher education will undergrad research in technology for education of students, children's and youths and adults in the 21st century. We must view the coming change, and they will be massive, from the perspective that technology provides access to learning but doesn't control it, that technologies are not the content of education a rather, they provide a Cornucopia of tools for learning.

Abstract

Information and communication technology (ICT) has brought revolutionary changes to enhance professional development of teachers. At present several ICT related instructional devices like computers, smart phones, laptops, tablets, LCD, multimedia and projectors are used in classrooms for making more attractive and productive teaching and learning process.. Teacher is considered to be the architect of the nation. In other words, the future of the nation lies in the hands of teacher. This shows the importance of teacher. One can realize how important education is which makes one a teacher. Most Inspiring innovation in the field of education is the integration of Information and Communication technology in education. The teachers should cope with the increasing demand for information and skills. Chalk and talk method become very old method. To survive in the changing, developing world one could update themselves. Teachers must be flexible and willing to renew their vision of teaching and learning if they are to fully realize the potential of educational technology. ICT is extremely useful for professional development of teachers.

Keywords: *ICT, Professional development, Teachers*

Role of ICT in Professional Development of Teachers

Professional Development of Teacher is any type of continuing education effort for educators. It's one way teachers can improve their skills and, in turn, boost student outcomes. Learning can take place in formal or informal settings. Formal settings include conferences, courses, seminars, and workshops. Informal opportunities for teacher professional development include independent research or investigation, peer learning initiatives.

The introduction of ICT in the real m of education unleashes a Plenty of possibilities in the process of learning. Teachers can make use of different ICT tools like computers, laptops etc, to make conceptual comprehension easier for students. It aids them in implementing a variety of strategies in the classroom environment to improve learning

outcomes. They can effectively present ideas to the students using ICT and leave a long-lasting impact on them. For the learning process to be effective, it has to be a two-way process. ICT makes this possible. It enables students to refine their soft skills along with their technical skills. ICT tools provide students with the opportunity to speak up their minds through discussion forums. Performance analytics provided by different software assist teachers in understanding their students in a better way. Analytics reports of students help teachers to check for understanding of the students.

Teachers are the national builders responsible to train future generation to be able for facing challenges of present era, but this is not possible without having full command in utilization of ICT instructional devices properly. It is a fact that knowledge of ICT helps teachers to keep knowledge updated to use modern instructional technology in classrooms. Recently, ICT has become a basic need of human life across the world and no field can work effectively without its support. In education and training, it plays vital role to uplift teaching and learning process. The use of ICT facilities in teacher training programs has become necessary in classrooms and teachers are considering it most important pillar for better students learning.

ICT is extremely useful for professional development of teachers and helps the teacher in many ways.

ICTs can be used to reinforce existing pedagogical practices as well as to change the way teachers and students interact.

Effective ICT use in education increases teachers' training and professional development needs. However, ICTs can be important tools to help meet such increased needs, by helping to provide access to more and better educational content, aid in routine administrative tasks, provide models and simulations of effective teaching practices, and enable learner support networks, both in face to face and distance learning environments.

Effective teacher professional development should approximate the classroom environment as much as possible. "Hands-on" instruction on ICT use is necessary where ICTs are deemed to be vital components of the teaching and learning process.

Professional development activities should model effective practices and behaviors and encourage and support collaboration between teachers.

ICT enriches teaching by enhancing the initial preparation by providing good teaching and training materials, recording and feedback mechanisms.

ICT has removed the barriers of space, time and place between teacher and learner. It has established a healthy and interactive relationship between teachers and students.

ICT provides lifelong professional development by providing courses in a virtual situation, training in demand, orientation and refresher courses through video conferencing and online.

By the exchange of materials through virtual communities, sharing of ideas and experiences and collaborating on projects the ICT can revolutionize the whole teaching profession.

Conclusion

Due to the latest developments in the information and communication technology the role of teacher in the process of teaching and learning has increased many fold and has become more complex as such teachers are to equip themselves with latest technology then only they can cope up the new challenges in the field.

WOMEN EMPOWERMENT THROUGH WOMEN ENTREPRENEURSHIP IN MSME SECTOR

Dr. T.S. Kavitha

Associate Professor in Commerce
Nallamuthu Gounder Mahalingam College
Pollachi, Coimbatore, Tamilnadu

Abstract

The role of women is most intimately related to the goal of comprehensive socio-economic development. Investing in women capabilities and empowering them in all respects is the surest way of contributing to sustainable economic growth. The development of entrepreneurship among women has become an important aspect of the overall economic development. The MSME development programmes can contribute much to the development of women folk of an economy because micro and small enterprises are easily accessible to women as they are less capital intensive. But there are many factors which prevent them from utilizing the benefits of the entrepreneurial development initiatives. The study focused on the role of entrepreneurial development programmes under the MSME sector. The extent of success attained on the entrepreneurial training programmes and the satisfaction level of women entrepreneurs were covered. This paper mainly assessed the economic empowerment of women entrepreneurs who were supported under the programmes. The problems faced by the women entrepreneurs while utilizing the specific schemes for the development were covered.

Keywords: Business Innovation, Socio-Economic development, Women Entrepreneurship, Entrepreneurial Development Programmes, MSME (Micro, Small and Medium Enterprises).

Introduction

An economy's development cannot be gauged solely by looking at its material resources, economic development, and wealth generation. The genuine indication of a society's growth can be found in its people's opportunities and capacities to discover economic resources and enable their best exploitation. Although contributing more than their good portion to society, both at home and outside of the house, and making up half of the adult population, women are usually left out of leadership roles. Hence, women are the most marginalized group in the world and the first victimized group in human history. The most pervasive type of oppression in the world is directed at women, who also have less rights than men. Even though women's economic participation has been rising, there are still significant disparities between men and women in terms of work prospects, rights, pay, and acknowledgement of their economic participation. What men and women do in any community varies greatly over time. Typically, women's work is not as valuable as men's job. If women are traders, trading is sometimes seen as basic and trivial work. Men being traders will be seen as challenging and significant. Due to the perception that males place a lower value on perceived female traits and activities, women are seen as inferior to them. Conceptual back-ground of Women Empowerment and Women Entrepreneurs

Need for Economic Empowerment of Women

For Overall Development of the Economy For the purpose of poverty alleviation, food security, equal access to institutional credit etc economic empowerment is necessary. Economic development of a country can't be fully achieved as long as its women are confined to subordinate positions and their talents remain unexplored or and no country can progress without the empowerment of its womenfolk. It is also true that poverty in both developed and developing countries has a predominantly female face. Hence economic empowerment of women plays a vital role in the progress of their family, community, nation and the world as a whole. Empowerment of women makes development inclusive, sustainable and accessible. Empowerment is a multi-dimensional process that enables individual or a group of individuals to realize their identity and powers in all spheres of life. It creates the ability of greater access to knowledge and resources, greater autonomy in decision making that enable them to have greater ability to enrich their lives, or have greater control over the circumstances that influence their lives and free them from restraints imposed on them by custom, belief and practice.

Women Empowerment

The process through which powerless people become aware of their capacity and make use of that capacity to profit from economic growth is referred to as empowerment. It is "a process of developing capacities and confidence for making decisions about one's own life at both an individual and community level and acquiring control over productive resources." The process of empowerment is made easier by raising one's awareness of their rights and obligations as well as their socioeconomic, educational, and political potential, by learning how to use their resources productively, and by participating in group activities and social life. Enhancing the capacity to build the necessary level of awareness, power resources, autonomy, and participation for starting and continuing the development is included in empowerment. Under India's National Policy of Education from 1986, it is stated that "women gain influence through group discussion and decision-making. Its goals include fostering critical thinking, fostering group cohesion, fostering decision-making and action, ensuring equal participation in the process of bringing about social change, encouraging group action to bring about change in society, and supplying the resources necessary for economic independence". (Venkataravi, Reddy & Venkataramana, 2004)

Women Empowerment through Women Entrepreneurship

In order to address the most pressing issue, unemployment, developing nations like India have given greater importance to the development of entrepreneurship and encouraged the establishment of small scale industries. Entrepreneurship has also been seen as the answer to several socioeconomic issues that the nation is currently facing. Many enterprising, independent people would not reach their full potential in large organisations, but small businesses give their abilities and energies constructive outlets. They act as a breeding ground for creative entrepreneurs and a proving ground for

emerging enterprises. They improve social cohesion, encourage savings among individuals, foster industrial ties, boost rural welfare, and overall increase the amount of public participation in the economy. (Lavanya, 2010) A women-owned business is one that is “managed by one or more women entrepreneurs in proprietary concerns, or in which she/they individually or jointly have a share capital of not less than 51% as partners/shareholders/ Directors of Private Limited Company/Members of Co-operative Society,” according to the Government of India (msme.gov.in).

Women Entrepreneurship Development in India

The National Institute of Small Industry Extension Training programme (NISIET), run in Hyderabad in 1964–1965 under McClelland’s direction, was a trailblazing step in the development of women’s entrepreneurship initiatives. This was followed in 1969–1970 by a scheme for technicians to train technically qualified individuals. a fresh business plan launched by Gujarat Industrial Investment Corporation in 1971. A number of initiatives were launched as part of the declaration of the Decade for Women (1975–1985) to better the status and circumstances of women in the nation, including training programmes under the Small Industries Development Organizations (SIDCO) and the first ever international conference of women entrepreneurs, which was held in 1975 and was organised by the National Alliance of Young Entrepreneurs (NAYE). The National Alliance of Young Entrepreneurs (NAYE) staged the second international conference of women entrepreneurs in 1981, the Bank of India ran entrepreneurship development programmes (EDPs) in 1978, SIDO performed a series of training programmes in women’s entrepreneurship through its Small Industries Service Institutes over a 19-year period for the women who benefited from the government’s TRYSEM programme, and others. The State Government simultaneously set up unique programmes to encourage women’s entrepreneurship skills across the states. Employers Federation of India (EFI), Standing Conference of Public Enterprises (SCOPE), and the All India Organisation of Employers (AIOE) have been taking effective steps to promote women’s entrepreneurial skills. The nationalised banks and other financial institutions offered special consulting services for aspiring women entrepreneurs. The National Institute for Entrepreneurship and Small Business Development (NIESBUD), which was founded in New Delhi, and the Entrepreneurship Development Institute of India (EDII), which was founded in Ahmedabad in 1983, organised a variety of entrepreneurship programmes, including women’s entrepreneurship. In the 1980s, the Industrial Development Bank of India (IDBI) developed and implemented a number of programmes, including Science and Technology Entrepreneurial Parks (STEPS), training and extension services, and refinancing options for organisations providing financial support to women entrepreneurs. In order to provide guidance on the development of women’s entrepreneurship, the government established the National Standing Committee on Women Entrepreneurs in 1986. Other significant efforts of the IDBI launched in 1989–1990 included MahilaUdhyam Nidhi (MUN), which provided seed capital assistance for women entrepreneurs, and Mahila Vikas Nidhi (MVN), which provided aid to NGOs working with women entrepreneurs. In 1990,

government-sponsored and non-governmental organisations (NGOs) rural poor women's entrepreneurship programmes received support from the Norwegian Agency for International Development (NORAD). The New Economic Policy (NEP), a crucial turning point in Indian history, had an impact on women's entrepreneurship as well. The concept of women-owned businesses was altered by the New Economic Policy. Women-owned businesses were previously classified as those in which women made up more than half of both the ownership and control and the workforce. But, according to the NEP, women-owned businesses are those where women hold more than 50% of the ownership and management positions. The employment requirement is no longer in effect.

Institutional set up and Agencies for the Development of Women Entrepreneurship

A large number of institutions were created to promote entrepreneurship in general. Yet, they have placed a greater focus on the creation of programmes to support female entrepreneurs.

- Women Development Corporation
- State Industrial and Development Bank of India (SIDBI)
- Consortium of Women entrepreneurs of India Particularly Indian Institute of Entrepreneurship (IIE)
- The National Institute for Entrepreneurship and Small Business Development (NIESBUD), Noida. The women entrepreneurs are supported by a variety of organisations, including NGOs, self-help groups, institutions, and small businesses from both urban and rural areas.

Programmes/ Schemes Offered by the Government

For the Development of Women Entrepreneurs The Indian government has developed a number of training and development initiatives aimed at creating new jobs, and the bulk of these programmes give women additional support or more flexibility in terms of the rules they must follow when starting their own businesses. The following are a few of the most important initiatives or programmes for the advancement of women business owners:

- Prime Minister Rojgar Yojana and EDPs to develop entrepreneurial qualities among rural women.
- Integrated Rural Development Programs (IRDP)
- Training of Rural youth for Self-employment (TRYSEM)
- Trade Related Entrepreneurship Assistance and Development (TREAD) scheme was launched by Ministry of Small Industries to develop women entrepreneurs in rural, semi-urban and urban areas.
- Swarna Jayanti Gram Swa-Rozgar Yojana and Swarna Jayanti Sakshari Rozgar Yojana
- State Industrial and Development Bank of India (SIDBI)
- Mahila Udyam Nidhi
- Micro Credit Scheme for Women

- Mahila Vikas Nidhi. The following training schemes especially for the self-employment of women are introduced by government:
- Support for Training and Employment Programme of Women (STEP).
- Development of Women and Children in Rural Areas (DWCRA).
- RashtriyaMahilaKosh
- RashtriyaMahilaKosh was set up to grant micro credit to poor women at reasonable rates of interest with very low transaction costs and simple procedures.
- Role of MSME Sector in Women Entrepreneurship and Economic Empowerment of Women

MSME Sector

Micro, small, and medium-sized businesses (MSMEs) are recognised on a global scale as the driving force behind economic expansion and social justice. The sector's employment potential at minimal capital cost is by far its greatest benefit. Compared to large businesses, the MSME sector has a substantially higher labour intensity. In most economies, MSMEs make up over 90% of all businesses, are recognised with creating the fastest rates of employment development, and contribute significantly to both industrial output and exports. MSMEs are essential to India's broader industrial sector and play a significant part in it. Comparing the MSME sector to the entire industrial sector in recent years, the MSME sector has experienced faster development. With its higher operational dynamism, the sector has displayed commendable inventiveness and agility to survive the recent economic slump and recession. Over the past fifty years, the Micro, Small, and Medium-Sized Businesses (MSME) sector has grown to be a very active and dynamic area of the Indian economy. Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of the Indian economy over the last five decades.

Role of MSME Sector in Women Entrepreneurship

There is lot of scope for women entrepreneurship in MSME sector which plays a vital role in providing employment and income for the poor unemployed and marginalized sector of an economy. The Micro, Small and Medium Enterprises can create more opportunities for women entrepreneurs as they are less capital intensive, less labour intensive and easily manageable by them. MSMEs are complementary to large industries as ancillary units and this sector contributes enormously to the socio-economic development of the country. Women Entrepreneurship plays a prime role in industrial development. India has always been a land of entrepreneurs and also occupied a strategic position in the Indian economy. Today the village and MSME units account for about 45 per cent of the total industrial production, 30 per cent of the country exports and estimated to employ 96 million person in over 26 million units throughout the country.

Status of Women Entrepreneurs

Under MSME Sector Even though the status of women in India changed over years, there are several handicaps for them to enter into the business ownership due to the deeply

embedded traditional mindset and stringent values of the Indian society. According to fourth all India census of MSME, it was found that out of the total 15.64 lakh registered enterprises in the MSME sector, 13.49 lakhs (86.28%) were owned and managed by men and only 13.72 per cent (2.15 Lakh) of the enterprises in the registered MSME sector were women enterprises.

Objectives of the Study

1. To evaluate the women entrepreneurial programme of Ministry of Micro, Small and Medium Enterprises (MSME)
2. To assess the economic empowerment of women entrepreneurs under the support programmes.

Methodology

To get a holistic view of the research problem, the study adopts multiple secondary data sources like books, newspapers, academic journals, and websites. Since this type of study focuses more on concepts and application, relevant quantitative and qualitative data have been included. A systematic review of existing literature has been conducted to identify variables which could help women entrepreneurs who are contributing tremendously to small enterprises.

Literature Review

The Indian economy is at a crucial juncture, on the one hand, the optimists are talking of India being among the top five economies of the world by 2050 and on the other is the presence of 260 million poor forming 26 per cent of the total population. The enormity of the task can be gauged from the above numbers and if India is to stand among the comity of developed nations, there is no denying the fact that poverty alleviation and reduction of income inequalities have to be the top most priority. (Shukla & Jain, 2014) The programmes which are focusing on the development of women can only give better results in inclusive development from the bottom of the economy. Welfare of the world is not possible unless the condition of women is improved. It is not possible for a bird to fly on only one wing," said swami Vivekananda. (Bairagi, 2014) When women have economic power- defined as control of income and capital (land, livestock etc.) they gain more equality and control over their own lives, while contributing directly to their children's development (nutrition health and education) and thereby indirectly to their nation's income growth. (Gaur, 2014) When women are empowered, a society with stability is assured. Gone are the days when women were considered subservient or secondary, in almost all walks of life compared to men. It has now amply been proved that women are capable of executing any job as efficiently as men, if not more so. (Abdulkalam, 2006. p.152). Concentration of economic power, regional imbalances, exploitation by monopolists, and many other giant problems find their solutions in the development of small scale industry which is another name of entrepreneurship in the developing countries. (Arora & Sood, 2009, p.5) Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of

the Indian economy. MSMEs, not only play crucial role in providing large employment opportunities at comparatively lower capital cost than large industries, but also help in industrialization of rural & backward areas, thereby, reducing regional imbalances, assuring more equitable distribution of national income and wealth. MSMEs are complementary to large industries as ancillary units and this sector contributes enormously to the socio-economic development of the country. (Annual Report, M/o MSME, 2015-16)

Limitations of the Study

- The study is based on the perceptions of the women entrepreneurs. Their attitudes may change with the change of times.
- In any case the study does not claim to be the final word in the study of women entrepreneurship.

Major Schemes Identified for the Study

Entrepreneurship Development Programmes

(EDPs) Youth talent is being encouraged through the continuous organisation of entrepreneurship development programmes that educate young people on the various facets of industrial activity needed to establish MSEs. In order to encourage students towards self-employment, EDPs are typically held in ITIs, Polytechnics, and other technical institutes. The course materials of such Entrepreneurship Development Programmes are designed to provide useful information on product/process design, manufacturing practises involved, testing and quality control, selection and usage of appropriate machinery and equipment, project profile preparation, marketing avenues/techniques, product/service pricing, and export opportunities.

2.2 Entrepreneurship Skill Development Programme (ESDP) The Ministry of MSME is dedicated to preparing young people for the workforce. The National Small Industries Corporation Ltd. (NSIC), National Institute for Micro, Small and Medium Businesses (NI-MSME), and Central Tool Room are the main institutions that provide the training (CTR). The Plan calls for financial support for the establishment of new institutions (EDIs), strengthening the infrastructure of the current EDIs, and promoting entrepreneurship and skill-building initiatives. The scheme's main goals include encouraging self-employment in rural and urban areas, continuing to expand the entrepreneurial base, and developing indigenous entrepreneurship from all walks of life. To accomplish these goals, first generation entrepreneurs are given guidance and assistance with business setup.

2.3 Credit Guarantee Fund Scheme for Micro and Small Enterprises (CGT-MSE) The Credit Guarantee Fund Plan was created with the intention of offering significant guarantees for loan facilities to borrowers in Micro and Small Businesses. To the first generation of entrepreneurs, the availability of bank loans without the hassles of collateral or third-party guarantees would be a vital source of help in realising their dream of founding a Micro and Small Company (MSE). In order to strengthen the credit delivery system and facilitate the flow of credit to the MSE sector, the Ministry of Micro, Small & Medium Businesses (MSME), Government of India, developed

the Credit Guarantee Scheme (CGS) with this goal in mind. The Credit Guarantee Fund Trust for Micro and Small Businesses was established by the Government of India and SIDBI to make the programme operational (CGTMSE). The programme went into effect on August 1st, 2000. Credit Guarantee Fund Scheme for Small Industries (CGFSI) and Credit Guarantee Fund Trust for Small Industries were the original names of the programme and trust, respectively. The Trust and the Program were renamed as the Credit Guarantee Fund Trust for Micro and Small Businesses and the Credit Guarantee Scheme for Micro and Small Enterprises, respectively, after the passage of the MSMED Act-2006. The Key Components of the Scheme. The lender should place a high priority on the viability of the project and base the credit facility exclusively on the principal security of the financed assets. The borrowers can get working capital and term loans from the same business. 2.4 Trade Related Entrepreneurship Assistance and Development Scheme for Women (TREAD) During the 9th plan period, the Indian government introduced a programme called "Trade Related Entrepreneurship Assistance and Development" (TREAD), which has since undergone minor changes and is now in action. The plan calls for the most marginalised and oppressed group in our nation to gain economic control over resources and access. The programme was created to promote the advancement of women through activities such as trade-related training, informational sessions, and counselling sessions. The programme makes financial loans available through NGOs, which also get GoI grants for capacity building. This support is given to women who want to work for themselves in any type of non-farm activity. Principal Goals of the Plan. To provide trade-related education, advice, and counselling, as well as outreach initiatives including trades, goods, and services, etc., for the economic empowerment of women the provision of credit by NGOs. Make the required information about resources for women's business development available. support for emerging markets. 2.5 Micro & Small Enterprises - Cluster Development Programme (MSE-CDP) The cluster development approach has been adopted by the Ministry of Micro, Small and Medium Enterprises (MSME), Government of India (GoI), as a key strategy for boosting the productivity and competitiveness as well as capacity building of Micro and Small Enterprises (MSEs) and their collectives in the country. Furthermore, clustering of units enables service providers, such as banks and credit agencies, to offer their services more affordably, lowering costs and increasing service accessibility for these businesses. Purposes of the plan. by addressing challenges such the advancement of technology, skills, and quality, access to markets, access to funding, etc., to support the sustainability and expansion of MSEs. to improve associations, develop self-help groups, consortia, and other organisations in order to increase MSME's ability for collectively supportive action. to build or improve infrastructure in MSE clusters and new or existing industrial zones.

Conclusion

The study focused on the effectiveness of programmes for entrepreneurship in the MSME sector. Also covered were the degree of success gained in the entrepreneurial training programmes and the level of happiness among women business owners. The

study concentrated on the function of programmes for entrepreneurship in MSME. The Ministry of MSME's programmes for women entrepreneurs were evaluated based on how well the women entrepreneurs operating under the various schemes were able to advance their economic status. The study primarily evaluated the degree to which programmes supporting women entrepreneurs have empowered them economically. The challenges of women business owners had when utilising particular development programmes were also highlighted. Areas for Further Studies: 1. Women Empowerment and Regulatory Framework for Industrial Operations 2. Women Entrepreneurship and Financial Support for Enterprise Operations

Abstract

The objective of this research was to study in depth the thoughts, beliefs and opinions of the teachers " attempt towards pedagogical improvement as part of the Smart School Project. Specifically this research examines and describes the teachers implementation of T&LICT in the classroom in terms of the instructional practice, the instructional roles and the instructional environment. A case study research methodology is employed. The case is Sekolah Menengah Bestari (a psuedonym), which is a Smart School in Sabah. Analysis of data from 52 survey questionnaires complemented the qualitative data from the 13 interviews and 3 observations, aswell as document analysis. Findings indicated that hardware and software technology infrastructure were available to support the T&LICT implementation. Nevertheless, the teachers felt it was not enough to implement T&LICT effectively. It was estimated that about half of Sekolah Menengah Bestari staff, mainly Bestari and ETeMS teachers, implemented T&LICT. Findings indicated that teacher practices were little changed. IT was used mainly to support the existing teacher-directed and teacher-centered approach. The role of the teacher extended to that of facilitating without releasing control of lesson to the students.

In relation to the integration of ICT in teaching and learning (T&LICT) is aimed at addressing the need to create a knowledge society and a technology literate workforce for the twenty-first century. Schools have a need to adopt an information-literacy curriculum; and students have a need to develop their ICT and thinking skills and take the responsibility for their own learning. Such needs would be met within a technology-enabled teaching and learning environment that emphasizes student self-direction and self-regulation. The Smart School Project is an example of a major educational change initiative to improve classroom teaching and learning practice within such an environment (Smart School Project Team, 1997). Technology, especially the computer, is seen as a critical tool to support this change in instruction by allowing and supporting inquiry and exploration by student.

Change towards T & L ICT

In the Smart School The Malaysian Smart School was visualized as "a learning institution that has been systemically re-invented in terms of learning-teaching practices and school management in order to prepare children for the Information Age" (Smart School Project Team, 1997, p. 10). The Smart School pedagogy that integrates ICT would see a paradigm shift from the directed to the constructivist teaching and learning.

Changing Instructional Roles

ICT facilitates active learning. It enables the individual learning approach through self-accessed, self-paced and self-directed learning. Consequently, the teacher has to change his role from “a sage on the stage” to “a guide by the side”. The advocated role of the teacher is as a facilitator. There is a shift from a predominantly „teacher-controlled paradigm (Figure 1) to that of empowering students to be more active and more independent learners.

Learning and Teaching in ICT

“We need technology in every classroom and in every student and teacher’s hand, because it is the pen and paper of our time, and it is the lens through which we experience much of our world.” – **David Warlick**.

ICT in Education

ICT or Information and Communications Technology broadly refers to tools and services that handle and communicate information. Some of the most common examples of ICT are mobile phones and televisions.

ICT is widely used in our everyday life, and its need is ever-growing in the education sector. Images, audios, videos, presentations, or a combination of these used for teaching constitute ICT in education. So, ICT in education meaning would be using information and communication to improve the delivery of education in every way.

Technology in education isn’t something new, but not many have **information about ICT in education** industry. This is because ICT comes with several constraints, one of which is ensuring access to electronic devices for every kid. But with more institutes investing in ICT, the problem should soon be resolved.

Useful of ICT

ICT plays the same role in our information and communication process and their outcomes, as played by other technologies in making our life comfortable and purposeful. ICT in education has tremendous potential to serve and help the people connected with the process and product of education in many ways.

ICT can bring the existing educational system in alignment with the knowledge-based, information-rich society by providing services of sophisticated tools, techniques and methods at its disposal.

It will help in transitioning from a broadcast model of learning to interactive learning.

Effectiveness of Teaching and learning

With the development of learning technologies in the late 20th century, education system has changed rapidly. This is due to the capability of technology to provide a proactive, easy access and comprehensive teaching and learning environment. Nowadays, Ministry of education in all over the world has provide a lot of facilities and training in order to enhance the use of advanced technologies in the countries” teaching and learning

process. A high budget has been placed in order to provide the equipment needed by teachers to improve the education system. Despite all the efforts, most of the countries are facing similar problem whereby the teachers are not maximizing the usage of the technology provided (Albirini, 2006). This has become a serious matter as many previous researches have proven the usage of ICT in teaching and learning process could improve students' achievement (Nakayima, 2011, Jamieson-Proctor et al., 2013).

Many, researchers have taken an effort to analyse the factors that affecting teachers' acceptance of ICT usage in the classrooms (Capan, 2012; Virkus, 2008; Zhang, 2013; Dudeney, 2010). It shows that, the major barrier of the implementation was the teachers' belief as the teachers are the person who implements the change in their teaching and learning process. Moreover, previous research (Cassim & Obono, 2011) shows that the correlation of teachers' belief and the use of ICT are high. Teachers' role is getting more important especially in usage of ICT in pedagogy which could increase the achievement of the students, their creativity and thinking skills.

Advantages of ICT in Education

Enhances interaction and increases student engagement:

When integrated effectively into a classroom environment, there's no question that technology can increase student engagement and encourage interaction. Put simply, teachers are able to present long-established ideas in new and innovative ways.

Learning is accessible any time, any place:

The uber-connectivity of smart devices and the emergence of cloud technology means that students have access to their educational ICT tools wherever and whenever they like.

Offers new learning techniques as classroom tools are constantly evolving:

Technology is never one to stand still; it's in a constant state of advancement and evolution -much like the process of teaching and learning! Developers are forever releasing apps and tweaking software to improve the digital learning experience in classrooms – which can only benefit both students and teachers.

Decreases teacher paperwork improving work-life balance:

With the sheer abundance of online resources available to teachers, no longer are their lesson plans bound exclusively to reams of paperwork and printed handouts.

Improves parent-teacher interaction:

Its not just teachers and students that can benefit from the integration of technology into the education system. Parents, too, can establish healthy contact with teachers, thanks to a range of smart parent-teacher interaction apps.

Improves and enhances peer support and collaboration between students:

ICT encourages collaboration amongst students and facilitates them working collectively. Students can hone their powers of teamwork by immersing themselves in various online activities.

Enables teachers to differentiate their teaching:

ICT ensures that educators are given the tools to focus specific resources and delivery systems to suit individual learning levels and styles.

What is the impact of ICT during COVID times:

In order to maintain physical distance during the COVID19 pandemic, ICT platforms originally designed and employed for other distributed uses are repurposed to maintain social connections, provide distributed services, continue to meet business needs, and for virtual education.

Key Points

- BlackBoard. BlackBoard is a popular teaching tool that comes with numerous capabilities.
- Google Classroom.
- Trello.
- Microsoft Teams.
- Online Coding Websites such as DataCamp, HackerRank, Coderbyte. Subject Specific Tools.

Conclusion

Everyone has understanding, resources, and interests on which to build. Learning a topic does not begin from knowing nothing to learning that is based on entirely new information. Many kinds of learning require transforming existing understanding, especially when one's understanding needs to be applied in new situations. Teachers have a critical role in assisting learners to engage their understanding, building on learners' understandings, correcting misconceptions, and observing and engaging with learners during the processes of learning. This view of the interactions of learners with one another and with teachers derives from generalizations about learning mechanisms and the conditions that promote understanding. It begins with the obvious: learning is embedded in many contexts. The most effective learning occurs when learners transport what they have learned to various and diverse new situations. This view of learning also includes the not so obvious: young learners arrive at school with prior knowledge that can facilitate or impede learning. The implications for schooling are many, not the least of which is that teachers must address the multiple levels of knowledge and perspectives of children's prior knowledge, with all of its inaccuracies and misconceptions.

ICT TOOLS IN TEACHING LEARNING PROCESS

G. Sowbarani

Assistant Professor, Department of Commerce
Karpagam Academy of Higher Education

Dr. E. Rajeswari

Assistant Professor, Department of Commerce
Karpagam Academy of Higher Education

Abstract

In this digital era, ICT use in the classroom is important for giving students opportunities to learn and apply the required 21st century skills. Hence studying the issues and challenges related to ICT use in teaching and learning can assist teachers in overcoming the obstacles and become successful technology users. Therefore, the main purpose of this study is to analyse teachers' perceptions of the challenges faced in using ICT tools in classrooms. A quantitative research design was used to collect the data randomly from a sample of 100 secondary school teachers in the state of Melaka, Malaysia. Evidence has been collected through distribution of a modified- adopted survey questionnaire. Overall, the key issues and challenges found to be significant in using ICT tools by teachers were: limited accessibility and network connection, limited technical support, lack of effective training, limited time and lack of teachers' competency. Moreover, the results from independent t test show that use of ICT tools by male teachers ($M = 2.08$, $SD = .997$) in the classroom is higher compared to female teachers ($M = 2.04$, $SD = .992$). It is hoped that the outcome of this research provides proper information and recommendation to those responsible for integrating new technologies into the school teaching and learning process.

Keywords: ICT Tools, Teaching & Learning, Technology Issues & Challenges, Education

Introduction

Information and communications technology (ICT) is an important part of most organizations these days (Zhang & Aikman, 2007). Computers began to be used in schools in the early 1980s, and several scholars suggest that ICT will be an important part of education for the next generation (Bransford, Brown, & Cocking, 2000; Grimus, 2000; Yelland, 2001). Up- to- date technology offers many methods of enhancing classroom teaching and learning (Ghavifekr et al., 2014; Lefebvre, Deaudelin & Loiselle, 2006). Dawes (2001) stated that new technologies have the potential to upkeep education across the curriculum and deliver opportunities for efficient student- teacher communication in ways not possible before. ICT in education has the potential to transform teaching. However, this potential may not easily be realized, as Dawes (2001) underlined when he stated, "problems arise when teachers are expected to implement changes in what may well be adverse circumstances

Due to ICT's importance in society as well as in the future of education, identifying the possible challenges to integrating these technologies in schools would be an important step in improving the quality of teaching and learning. Balanskat, Blamire, and Kefala (2006) argue that although teachers appear to acknowledge the value of ICT in schools, they continue encountering obstacles during the processes of adopting these technologies into their teaching and learning.

Theoretical Framework

Previously, Davis, Bagozzi and Warshaw (1989) developed a theory of 'action relating to reasons' so called Technology Acceptance Model (TAM). Later based on their work, Venkatesh and Davis (2000) investigated the reasons some people use computers and their attitudes towards them that called TAM 2. The model, shown in Figure 1, links the perceived usefulness and ease of use with attitude towards using ICT and actual use (system use). They tested this model with 107 adult users, who had been using a managerial system for 14 weeks. They found that people's computer use was predicted by their intentions to use the computer and that perceived usefulness was also strongly linked to these intentions.

External Variables – It represents the challenges that teachers face that come from outside their sphere of control when integrating a new technology in their teaching and learning process. These challenges include:

- Limited accessibility and network connection
- Schools with limited ICT facilities
- Lack of effective training
- Limited time o Lack of teachers' competency

Perceived Usefulness (PU)

It represents the degree to which they believe that using a particular technology would enhance their job performance. If teachers feel there is no need to question or change their professional practice then, according to studies, they are unlikely to adopt the use of ICT tools. However, if they perceive ICT to be useful to them, their teaching and their pupils' learning, then according to the empirical evidence of previous studies (Cox, Preston & Cox, 1999) they are more likely to have a positive attitude to using ICT in the classroom. The following factors have been identified as key elements to teachers' perceived usefulness of

ICT tools:

- Work more quickly
- Job performance
- Increased productivity
- Effectiveness
- Useful

Perceived ease of use (PEOU)

It represents the degree to which they believe that using a particular system would be free from effort. Previous studies have identified a number of factors relating to the perceived ease of use of ICT, in study on experienced practicing ICT users. The Impact project (Watson, 1993) and other studies identified a wide range of skills and competencies which teachers felt they needed in order to find ICT easy to use. Some of these are:

- Easy to learn
- Clear and understandable
- Easy to use
- Controllable
- Easy to remember
- Attitude toward use

Teacher's positive or negative feeling about performing the target behaviour (e.g., using a system). Basically, teachers' attitudes too many of these factors will depend upon how easy they perceive using ICT tools to be on a personal level as well as for teaching in the classroom.

Behavioural Intention

The degree to which the teacher has formulated conscious plans to perform or not perform some specified future behaviour.

Social Influence Processes

(Subjective norm, voluntariness, and image) and cognitive instrumental processes (job relevance, output quality, result demonstrability, and perceived ease of use) as determinants of perceived usefulness and usage intentions.

Use of ICT By Faculty

PowerPoint presentations

Faculties are encouraged to use power-point presentations in their teaching by using LCD's and projectors. They are also equipped by digital library, online search engines and websites to prepare effective presentations

Industry Connect

Seminar and Conference room are digitally equipped where guest lectures, expert talks and various competitions are regularly organized for students

Online quiz Faculties prepare online quiz for students after the completion of each unit with the help of GOOGLE FORMS.

Video Conferencing

Students are counseled with the help of Zoom / Google meet applications.

Video Lecture

Recording of video lectures is made available to students for long term learning and future referencing

Literature Review

Challenges in using ICT in teaching and learning

Integrating ICT into teaching and learning is a complex process and one that may encounter a number of difficulties. These difficulties are known as “challenges” (Schoepp, 2005). A challenge is defined as “any condition that makes it difficult to make progress or to achieve an objective” (WordNet, 1997, as cited in Schoepp, 2005, p. 2). The following are some of the key challenges that have been identified in the literature regarding teachers’ use of ICT tools in classroom.

Limited accessibility and network connection

Several research studies indicate that lack of access to resources, including home access, is another complex challenge that prevent teachers from integrating new technologies into education.

Various research studies indicated several reasons for the lack of access to technology. In Sicilia’s study (2005), teachers complained about how difficult it was to always have access to computers. The author gave reasons like “computers had to be booked in advance and the teachers would forget to do so, or they could not book them for several periods in a row when they wanted to work on several projects with the students” (p. 50). In other words, a teacher would have no access to ICT materials because most of these were shared with other teachers. the inaccessibility of ICT resources is not always merely due to the non- availability of the hardware and software or other ICT materials within the school. It may be the result of one of a number of factors such as poor resource organization, poor quality hardware, inappropriate software, or lack of personal access for teachers.

School with limited technical support

Without both good technical support in the classroom and whole- school resources, teachers cannot be expected to overcome the obstacles preventing them from using ICT (Lewis, 2003). Pelgrum (2001) found that in the view of primary and secondary teachers, one of the top barriers to ICT use in education was lack of technical assistance. In Sicilia’s study (2005), technical problems were found to be a major barrier for teachers. These technical barriers included waiting for websites to open, failing to connect to the Internet, printers not printing, malfunctioning computers, and teachers having to work on old computers. “Technical barriers impeded the smooth delivery of the lesson or the natural flow of the classroom activity”

Lack of Effective Training

The challenge most frequently referred to in the literature is lack of effective training study was that there were not enough training opportunities for teachers in using ICTs in a classroom environment. Similarly, Beggs (2000) found that one of the top three barriers to teachers' use of ICT in teaching was the lack of training. Recent research in Turkey found that the main problem with implementing new ICT in education was the insufficient amount of in- service training for teachers.

Limited Time

Several recent studies indicate that many teachers have competence and confidence in using computers in the classroom, but they still make little use of technologies because they lack the time. A significant number of researchers identified time limitations and the difficulty in scheduling enough computer time for classes as a barrier to teachers' use of ICT in their teaching (Al- Alwani, 2005; Becta, 2004; Beggs, 2000; Schoepp, 2005; Sicilia, 2005). According to Sicilia (2005), the most common challenge reported by all the teachers was the lack of time they had to plan technology lessons, explore the different Internet sites, or look at various aspects of educational software.

Lack of Teachers' Competency

Another challenge directly related to teacher confidence is teachers' competence in integrating ICT into pedagogical practice (Becta, 2004). In Australian research, Newhouse (2002) found that many teachers lacked the knowledge and skills to use computers and were unenthusiastic about the changes and integration of supplementary learning associated with bringing computers into their teaching practices.

Methodology

Research Design

In this research, quantitative methodology was used to collect and analyse the data obtained from all the respondents. A questionnaire was self- developed and finalized by the researchers before being distributed to the targeted group of respondents. The questionnaire was designed specifically to address research objectives with regard to teachers' perception on use of ICT tools in public secondary schools.

Data Analysis Process

The data collected from the respondents were gathered together to be analysed using the Statistical Packages for the Social Sciences (SPSS) version 22. The analysis includes both descriptive and inferential analysis. The researchers used descriptive analysis to analyse the frequency and percentage of the overall population in the demographic background. Besides, it is also used to determine the mean, standard deviation, frequency and percentage. Inferential statistics (t- test) were also used to analyse the research findings.

Demographic Factors of the Respondents

Demographic background of the research participants. Demographic finding where the age category under 25 is frequency 4 and percentage is 4%, age 26- 35 is frequency 64 and percentage is 64%, age 36- 45 is frequency 27 and percentage is 27%, age 46- 55 is frequency 3 and percentage is 3%, and age 55+ is frequency 2 and percentage is 2%

The gender finding shows male as frequency 25 and percentage is 25% and female is frequency 75 and percentage is 75%. The experience based on the years of experience by the sample is less than 1 year frequency is 5 and the percentage is 5%, 1- 4 years frequency is 25 and the percentage is 25%, 5- 10 years frequency is 16 and the percentage is 16%, 10- 20years frequency is 16 and the percentage is 16%, and 20+ years frequency is 1 and the percentage is 1%.

Ethnicity analysis shows that Malay frequency is 37 (37%), Chinese frequency is 19 and the percentage is 19%, Indian frequency is 44 and the percentage is 44% and others frequency is 0. The subjects taught by the respondents are: Language (frequency is 38 and percentage is 38%), Mathematics (f = 36 or 36%), Science subjects (f = 22 or 22%) and Other (f = 4 or percentage 4%). Based on the data obtained, most of the participants in this research are aged between 36- 45 years, the majority are female and have 5- 10 years of experience.

Research Questions

What are the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers?

The following Table shows the descriptive statistics about the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers.

1. Students concentrate more on their learning	38 (38%)	27 (27%)	30 (30%)	5 (5%)	0 (0%)	2.02	.943
2. Students try harder in what they are learning	40 (40%)	29 (29%)	26 (26%)	5 (5%)	0 (0%)	1.96	.931
Students feel more autonomous in their learning (they can repeat exercises if needed, explore in more detail topics that they are interested in, etc.)	39 (39%)	24 (24%)	30 (30%)	7 (7%)	0 (0%)	2.05	.989
4. Students understand more easily what they learn	26 (26%)	26 (26%)	38 (38%)	10 (10%)	0 (0%)	2.32	.973
5. Students remember more easily what they have learnt	38 (38%)	27 (27%)	30 (30%)	5 (5%)	0 (0%)	2.02	.943
6. ICT facilitates collaborative work between students	32 (32%)	41 (41%)	25 (25%)	2 (2%)	0 (0%)	1.97	.810
7. ICT improves the class climate (students more engaged, less	32 (32%)	41 (41%)	25 (25%)	2 (2%)	0 (0%)	1.97	.810

disturbing)

2) What are the challenges of implementing ICT tools in teaching and learning in the classroom among school teachers?

Table shows the descriptive statistics about the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers

computers							
1 Insufficient band width or speed	33 (32.7%)	35 (34.7%)	29 (28.7%)	3 (3%)	0 (0%)	2.02	.864
2 Insufficient number of interactive white boards	30 (30%)	32 (32%)	21 (21%)	9 (9%)	8 (8%)	2.33	1.223
3 Insufficient number of laptops/notebooks	0 (0%)	6 (6%)	9 (9%)	51 (51%)	34 (34%)	4.13	.812
4 School computers out of data and/or needing repair	9 (9%)	19 (19%)	22 (22%)	29 (29%)	21 (21%)	3.34	1.257
5 Lack of adequate skills of teachers	1 (1%)	10 (10%)	14 (14%)	43 (43%)	32 (32%)	3.95	.978
6 Insufficient technical support for teachers	30 (30%)	44 (44%)	25 (25%)	1 (1%)	0 (0%)	1.97	.771
7. Insufficient pedagogical support for teachers	25 (25%)	47 (47%)	26 (26%)	2 (2%)	0 (0%)	2.05	.770
8 Lack of adequate content/material for teaching	10 (10%)	15 (15%)	15 (15%)	31 (31%)	29 (29%)	3.54	1.321
9 Lack of content in national language	17 (17%)	31 (31%)	18 (18%)	19 (19%)	15 (15%)	2.84	1.331
10 Too difficult to integrate in ICT use into curriculum	11 (11%)	23 (23%)	16 (16%)	27 (27%)	23 (23%)	3.28	1.341
11 Lack of pedagogical models on how to use ICT for learning	0 (0%)	6 (6%)	9 (9%)	51 (51%)	34 (34%)	4.13	.812
12. School time organization (fixed lesson time, etc.)	11 (11%)	23 (23%)	16 (16%)	27 (27%)	23 (23%)	3.28	1.341
School space organization							
13. (classroom size and furniture etc.)	10 (10%)	15 (15%)	15 (15%)	31 (31%)	29 (29%)	3.54	1.321
14. Pressure to prepare students for exam and tests	10 (10%)	15 (15%)	15 (15%)	31 (31%)	29 (29%)	3.54	1.321
15. Most parents not in favor of using ICT in school	5 (5%)	10 (10%)	11 (11%)	42 (42%)	32 (32%)	3.86	1.128
16. Most teachers not in favor of using ICT in school	10 (10%)	15 (15%)	15 (15%)	31 (31%)	29 (29%)	3.54	1.321
17. Lack of interest in teachers	11	23	16	27	23	3.28	1.341

	(11%)	(23%)	(16%)	(27%)	(23%)		
18 No or unclear benefit to use ICT for teaching	10 (10%)	15 (15%)	15 (15%)	31 (31%)	29 (29%)	3.54	1.321
19. Using ICT in teaching and learning not being a goal inourschool	24 (24%)	50 (50%)	23 (23%)	2 (2%)	1 (1%)	2.06	.802

Discussion & Conclusion

This study is more related to identifying the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers. Furthermore, it examines the challenges of using ICT tools in teaching and learning in the classroom among school teachers and recognizes the effectiveness of the extent of ICT tools in supporting classroom teaching and learning. Based on the study the findings indicate that average level of the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers, high level of challenges of using ICT tools in teaching and learning in the classroom among school teachers and recognizing the effectiveness of the extent of ICT tools in supporting teaching and learning in the classroom.

Important technologies for learning such as computers (98%) and educational software (93%) were ranked as the top technologies by the respondents of Cachia and Ferrari's (2010) research. On the other hand, our research showed that the rate of ICT use among teachers in school is average. However, the finding shows that more teachers used computer with teachings of tware in the classroom to present or demonstrate examples to students. They also like to use the computer to access students' results and keep track of their progress

Despite the current efforts in ICT integration in schools, many families specifically in rural areas still do not know how to use ICT tools in their daily life. They even did not know how to check their children's results in the existing systems. Not all houses have computers and Internet facilities to use daily. In this regard, the main challenge is to provide appropriate ICT tools to both urban and rural are as efficiently.

A STUDY ON IMPACT ON LEARNING HABIT AND ACADEMIC PERFORMANCE OF STUDENTS

Dr. W. Saranya

Associate Professor

Department of B.Com Professional Accounting (PA)
Sri Ramakrishna College of Arts & Science, Coimbatore

Abstract

Education is essential for providing skilled labour that drives economic growth. Additionally, students must dedicate a significant amount of their time to their studies in order to graduate with high academic standing. A growing number of students commit readmission, indicating that they did not perform well in their academics, and the trend of graduating students is not equal to the growth of enrolled students. Lack of good study habits is the issue that most students experience, which adds to their bad performance on tests and exams. A student needs to develop strong study habits in order to achieve well. Study habit is an action that students routinely and habitually carry out in order to complete the task of learning. Examples include reading, taking notes, and holding study sessions. Depending on how well they benefit the learner, study habits can either be deemed effective or ineffective. Study habits aid students in understanding their coursework and in creating a comfortable and engaging learning environment. Among the many aspects of academic success, academic performance is one. Academic achievement is influenced by a number of variables, including socioeconomic position, student temperament and motivation, peer pressure, and parental support.

Keywords: Learning habits, Academic performance.

Introduction

Study is the process of devoting time and attention to learning new things. Unfortunately, a lot of students lack the skills necessary for effective study habits. The term "study habit" refers to a variety of personal behaviours related to studying that combine study method and competence. In other words, good study habits involve actions and skills that can boost motivation and transform the study process into one that yields high returns and eventually improves learning. In reality, successful study habits vary from person to person and are the key to success. The most crucial indicator of academic achievement is study habits, and studies conducted around the world have shown that study habits have an impact on academic performance.

Academic achievement represents an important component of the constellation of variables influencing student success. It also has a huge impact on education, especially by serving as a practical method to assess students' learning progress. Psychologists and researchers have utilized numerous personality, attitudinal, mindsets, and ability measurements in an effort to understand how individuals differ in how they process, retain, and recollect learning material. The impact of the students' good study habits including doing their assignments, participating fully in class, managing their time, remaining focused, and working hard—has significantly improved their academic achievement.

An important factor in the growth of knowledge and perceptual abilities is study habits. A person's study habits reveal how much they will learn, how far they want to go, and how much money they want to make. All of these could be determined during the course of a person's life with the aid of their study habits.

Objectives

1. To identify the level of academic performance of the students.
2. To examine the correlation between learning habits and academic performance.
3. To determine the factor affecting adult learners.
4. Examine the challenges faced by students in developing learning habit for better academic performance.

Statement of Problem

Study habits are referred to be a person's regular behaviour or habitual activities in order to better study and learn. Finding a quiet place to study, taking breaks, creating goals, and taking practise exams are all examples of good study habits. In order to avoid having problems with time management and poor academic achievement, students should be conscious of time with this problem the following research question raised.

1. What is the relationship between learning habits and academic performance?
2. What is the status of student's academic achievement in terms of academic performance?

Scope of the Study

This study is mainly based on the student's impact on learning habits and academic performance, deals with how they improve their learning habits. It aims to analyse and comprehend the learning habits and academic performance of students.

Review of Literature

Even though studying is the best approach to advance and achieve academic success, it is still a difficult effort that must be completed. Distractions like the internet, television, telephones, and even friends are common, especially in this generation.

According to **Kaur and Pathania (2017)**, College student's study habits were significantly influenced by factors like age, family wealth, and education. The results of their investigation showed a significant correlation between study habits and academic success. It suggests that age, family income, and educational attainment all have an impact on how students develop their learning practises and are connected to their academic success.

According to **Ashish (2013)**, argues that in order to secure academic achievement for the duration of the school year, pupils must give up poor study habits and adopt effective ones. He goes on to say that using good study techniques can be the difference between passing a class with flying colours, barely passing, or worse, failing terribly, regardless of age or academic ability. She acknowledges that despite best efforts and intentions, many of

the most popular study techniques or habits today can result in utter disillusionment.

According to **Marc (2011)**, However, it explains, students with learning difficulties may still have generally poor and inefficient study habits and techniques. Students would better comprehend why they occasionally become irritated with conventional study techniques if they are aware of their learning patterns or styles. He says that as they help ensure a successful academic future, effective study habits are crucial for academic achievement. Having strong study habits can help you get better grades, and better grades will help you get into better colleges and institutions and maybe even get a scholarship. This will then result in a successful career. No matter what degree of education a student has, developing appropriate study habits is essential. It increases pupils' capacity for self-discipline, self-direction, and eventually academic success.

According to **Aquino (2011)**, studied the undergraduate students' positive and negative study habits and attitudes. To assess the respondents' study habits and attitudes, the study used the Survey of Study Habits and Attitudes (SSHA) questionnaire, which was created and standardised by Brown and Holtzman (1969). Students disapprove of teaching strategies, classroom management, and ineffective time management, according to the findings. Additionally, favourable and negative relationships between the study's variables were displayed. Students have their own favourable and desirable study habits, according to this study's findings.

According to **Evans Atsiaya Siah and Julius K. Maiyo (2015)**, "The connection between students' academic success and their study habits. This comparative research study used a survey design. The Spicer Higher Secondary School's 9th graders were among the target demographic. The findings showed a favourable connection between study habits and academic achievement of 0.66. It was evident that neither professors nor students seemed to make an attempt to cultivate good study habits.

Research Methodolgy

The descriptive method of research was utilized in the study to determine the effects on learning habits and academic performance. The study made use of a quantitative research approach in analysing and understanding of 110 responses.

Research Design

The study has been carried out by descriptive type of research. The samples recorded consist of 110 individuals and the period of study is 6 months. The study has been carried out in Coimbatore district.

Data Collection

Primary data involves the data collected through the questionnaire framed for data collection and the Secondary data involves the data collected through journals, books and internet.

Tools Used

1. Percentage Analysis
2. Chi – square
3. Ranking Analysis

Analysis and Interpretation

Percentage Analysis

Table 3.1: Age

Variables	No of responses	Percentage
20years and below	47	42.73
21 - 31	34	30.91
32 - 41	16	14.55
42 - 51	13	11.82
Total	110	100

Out of 110 respondents, the above table shows Age. In the category of 20years and below has the highest respondents with 42.73%, 42 – 51years of age category shows the least respondents with 11.82%, age category 21 – 31years shows the respondents with 30.91% and age category of 32 – 41years shows the respondents of 14.55%

Table 3.2: Gender

Variables	No of responses	Percentage
Male	53	48.18
Female	56	50.91
Total	110	100

Out of 110 respondents, the above table shows Gender. The over table shows 50.91% of the respondents are Female and 48.18% are Male.

Table 3.3: Education Qualification

Variables	No of responses	Percentage
Higher Secondary	19	17.27
UG	52	47.27
PG	23	20.91
Others	16	14.55
Total	110	100

The above table depicts the Educational Qualification of the 110 respondents. It is clear from the above table that 47.27% of the respondents are UG, 20.91% of the respondents are PG, 17.27% of the respondents are Higher Secondary and 14.55% of the respondents are Others.

Table 3.4: Current Employment Status

Variables	No of responses	Percentage
Employed Full Time	30	27.27
Employed Part Time	19	17.27
Seeking Opportunities	8	7.27
Retired	11	10.00
Student	41	37.27
Total	110	100

The above table depicts the Employment status of the 110 respondents, It is clear from the above table that 37.27% of the respondents are Students, 27.27% of the respondents are Employed full time, 17.27% of the respondents are employed part time, 10% of the respondents are Retired, 7.27% of the respondents are Seeking opportunities.

Table 3.5: Locality

Variables	No of responses	Percentage
Rural	17	15.45
Urban	66	60.00
Semi Urban	27	24.55
Total	110	100

The above table depicts the Locality of the 110 respondents. It shows that 60% of the respondents are located in the urban area, 24.55% of the respondents are located in the semi urban area and 15.45% of the respondents are located in the rural area.

Table 3.6: Medium of Study

Variables	No of responses	Percentage
Tamil	18	16.36
English	85	77.27
Others	5	4.55
Total	110	100

The above table shows the Medium of study of the 110 respondents. It shows that 77.27% of the respondents has chosen their medium of study as English, 16.36% of the respondents has chosen as Tamil and 4.55% of the respondents chosen as Others.

Table 3.7: Annual Income

Variables	No of responses	Percentage
Less than 2,50,000	27	24.55
2,50,000 – 5,00,000	24	21.82
5,00,000 – 7,50,000	15	13.64
7,50,000 – 10,00,000	13	11.82

More than 10,00,000	1	0.91
NIL	29	26.36
Total	110	100

The above table shows the Annual income of the 110 respondents. Its shows that 24.55% of the respondents earns the income less than 2,50,000, 21.82% of the respondents earns between 2,50,000 – 5,00,000, 13.64% of the respondents earns between 5,00,000 – 7,50,000, 11.82% of the respondents earns between 7,50,000 – 10,00,000 and 0.91% of the respondent earns more than 10,00,000.

Table 3.8: Family Type

Variables	No of responses	Percentage
Nuclear Family	74	67.27
Joint Family	35	31.82
Total	110	100

The above table shows the family type of the 110 respondents. Its clear that 67.27% of the respondents are nuclear family and 31.82% of the respondents are joint family.

Chi - Square Test

Table 3.9: Age - Learning Habits

factors	x ² values	significance
Student's personalities, School environment and Friends circle.	0.226	NON - SIGNIFICANT
Lack of motivation	0.2	NON - SIGNIFICANT
Lack of interest	0.244	NON - SIGNIFICANT
Mental illness	0.65	NON - SIGNIFICANT
Family economic status	0.004	HIGHLY SIGNIFICANT
Developing strong learning habit	0.42	NON - SIGNIFICANT

The calculated Chi - square value in the above table describes that Age with learning habits. The factor family economic status has highly significant relationship with age. The factors student's personalities, school environment and friends circle, lack of motivation, lack of interest, mental illness, developing strong learning habits has no significant relationship with age.

Table 3.10: Age - Academic Performance

Factors	X ² values	Significance
Family background	0.004	HIGHLY SIGNIFICANT
Performance of students decreased after COVID	0.19	NON - SIGNIFICANT
Poor sleeping habit	0	HIGHLY SIGNIFICANT
Study area is noisy and distractive	0.001	HIGHLY SIGNIFICANT

Lack of participation in the class	0.29	NON - SIGNIFICANT
Consumption of drugs	0.281	NON - SIGNIFICANT
Lack of understanding in subject	0.544	NON - SIGNIFICANT

The calculated Chi – square value in the above table describes that Age with academic performance. The Family background, Poor sleeping and Study area is noisy and distractive has highly significant with age. The performance of students decreased after COVID, lack of participation in the class, consumption of drugs, lack of understanding in subject has no significant relationship with age factor.

Rank Analysis

Table 3.11: Factor Affecting Learning Habits and Academic Performance

Factors	No of responses	Average	Rank
Social Media	86	78.18	1
Electronic gadget	79	71.82	2
Health issues	62	56.36	3
Lack of interest	56	50.91	4
Laziness	44	40.00	5
Lack of self confidence	36	32.73	6
Social environment	34	30.91	7
Wrong friendship	32	29.09	8
Poor family structure	26	23.64	9
Parental issues	25	22.73	10

The above table shows that ranking analysis of factor affecting learning habits and academic performance. From the table it is clear that social media ranks 1, which denotes that it affects the learning habits and academic performance of students highly.

Findings

Percentage Analysis

Out of 110 respondents

1. Majority of the respondents falls under the age category of 20years and below.
2. Majority of the respondents were female.
3. Majority of the respondents were under graduates.
4. Majority of the respondents are Students.
5. Majority of the respondents were living in the urban area.
6. Majority of the respondents selected medium of study as English.
7. Majority of the respondents comes under the annual income Less than 2,50,000.
8. Majority of the respondents were nuclear family.

Chi Square Test

1. There is no significant association between age and student's personalities, school environment and friends circle, lack of motivation, lack of interest, mental illness, and developing strong learning habits. The calculated value is more than the significant value 0.05. Hence it is rejected. Whereas there is significant association between age and family economic status. The calculated value is 0.004, less than the significant value 0.005. Hence it is accepted.
2. There is no significant association between age and student's performance after COVID, lack of participation in class, Consumption of drugs, lack of understanding in subject. The calculated value is more than the significant value 0.005. hence it is rejected. Whereas there is significant association between age and family background, poor sleeping habits, study area is noisy and distractive. The calculated value is less than the significant value 0.005. Hence it is accepted.

Rank Analysis

1. In the rank analysis of factors affecting learning habits and academic performance. Social media ranks 1st, that it is clear that social media affects the most.

Suggestions

The association of demographic: Profile (age) and learning habits by the respondents, It was found that there is significant relation between age and family, economic status.

Conclusion

After conducting a thorough study on the impact of learning habits on academic performance of students, it has been found that there is a significant correlation between the two variables. Students who have good learning habits, such as regular study schedules, active participation in class, keeping up-to-date with course materials, and seeking help when needed, tend to perform better academically than those who lack these habits. It has also been observed that good learning habits are also linked to a positive attitude towards learning, which is essential for academic success. Students who approach their studies with enthusiasm and a growth mindset are more likely to retain information and apply it effectively. In conclusion, fostering good learning habits should be a priority for students, educators, and parents alike, as it provides a strong foundation for academic success and lifelong learning.

A STUDY ON THE IMPACT OF SOCIAL MEDIA NETWORKS ON ACADEMIC PERFORMANCE OF STUDENTS

Dr. P. Pirakatheeswari

Associate Professor of Commerce - PA

Sri Ramakrishna College of Arts & Science (Autonomous), Coimbatore

Abstract

India is the third biggest nation for utilizing the web on the planet, with high portable and social clients, it is a platform for the new age. The aim of the study is to examine the impact of social media networks on academic performance of Coimbatore students. A sample of 158 students was selected and Structured questionnaire was used as an instrument for data collection from Coimbatore students on which and data analysis tested by percentages and chi square analysis. Most of the students used social media networks like Instagram (45.6%) and WhatsApp (27.8%); they were browsing sites by using e-gadgets like Smart phone (77.2%) and laptop (17.1%). The results of the survey questionnaire indicate that 34.2% of the sample admitted that they spent 1 hours per day checking social media sites, while 50% spent more than 2 to 3 hours; and only 15.8% spent more than 4 hours on this task. The social media improves the cooperative learning of students and the teachers become easier, in other words social media is very essential for students.

Keywords: Social Media, Academic performance, learning efficiency.

Introduction

The idea that social media are defined simply by their ability to bring people along has been seen as too broad, as this might recommend that essentially different technologies just like the telegraph and telephone are also social media. Social media plays a very important role in each student's life. It is often easier and more convenient to access the data, provide data and communicate via social media. Teachers and students can be connected to each other and can make good use of these platform for learning and teaching. Social media has several positive effects on education together with higher communication, timely information, socializing online, learning, enhancing skills, creating a career among others. But the same has some negative effects which include identity theft, cyber bullying, and social isolation. The use of social media has met an excellent growth since the rise evolution in internet technology. They become very popular and play a very important role in all domains of our lives particularly in education. Students using the social media not just for learning and additionally for the entertainment, social activities, sharing their all information and obtaining career opportunities, etc. By using this social media among the students in academic performance there is an improvement and also lack of improvement in their studies. For a few students using of social media becomes an addiction. Social media networking websites give tools by which people can communicate, sharing data, and make new relationships with any person in this world. This analysis study contains in collecting data regarding the use of social media and its effect in the academic performance.

Statement of Problem

In Getting information, Internet plays a major role in the field. The growing dimensions of social media by students cannot be underestimated. In recent survey says student give more attention and time to spent in social media. It results they fail their examinations if they do not learn. The study was revealed that media use contributes to low self-perceptions and less interest in college-oriented carriers. Academic excellence plays a major role in an individual's life; at social gatherings, at workplace, in an institution or in family. Much emphasis is placed on academic excellence because of the role it plays in an individual's life as far as a successful life and respect is concerned in every part of the world. Studies revealed that social media affects students' while use of English. They used short-handwriting for chatting with friends and get used to it thereby replicating the same errors during examinations. In the use of Social Network Sites (SNS) students at all level of engages especially territory level. This research seeks to investigate the level of engagement in social networking sites and also determine the effect of their use on the academic work in students.

Review of Literature

Domizi (2013) a route is composed in graduate understudies wherein they were advised to utilize Twitter and bit by bit gift tweets all together on increase trades of examine passage. After that students applied Twitter record to interface with their substance and with exceptional understudies. Similarly, understudies having remarks about twitter is that, twitter is important in a bit at the same time as and expertly". To take a gander at this courting the understudies had been parceled into two social affairs, one get-together use twitter and the other get-collectively failed to use twitter account. It was used to steer talks approximately exam fabric, to deal with the evaluation bundles in way, additionally publish the revelations of class, and continue to be in contact with magnificence buddies.

Shambare, R et al. (2012) Conducting a study on social networking habits among students their study shows that such media most frequently used by Youngers and Facebook is most widely used by a large number of communities and has multiple effects on the life of students. High speed and fast internet approach and mobile technology development are the most significant factors behind social networking websites adoption and accessibility and suggest that Social networks improve their awareness level. The short and fast technique to manage web and the improvement of PDA development are most big drivers in the back of the choice and accessibility with character to person correspondence locations and count on that SNS replace their information level.

Ahmad, A (2011) their assessment showed that long range informal correspondence dreams have quantity of primary focuses for his or her customers, it allows the machine to stay in contact with their pals and re-link with old ones and help to find new friends as demonstrated through your eagerness from all over the and a brilliant number of individuals are interfacing with these frameworks. Therefore, the association of online existence is building up comprehensive.

Heeter, (2006) an assessment at college of Michigan kingdom supply data about development use in cutting area schooling, especially in association with paintings force. This study translates teaching and reading inclinations for body of workers components on the net, understudies which may be graduate and student are furthermore ensured. Cycle 65 % of collecting of worker's and understudies each investigation composes however right here representatives for singular certainties turned into nearly sure gotten them. Understudies submit for each informative and man or woman proposes. Collection of labourer's implemented online image sharing undertakings greater than understudies, as an event, Flickr, besides round 50 % of the 2 social affairs used it. Understudies used Face e-book 70 percent simultaneously as workers used underneath 10 stages of both Face virtual book and MySpace. Understudies ship instantaneous message nearly sure.

Objectives of the Study

- To identify the benefits obtained for using the social media.
- To determine the aims of students for the use of social media and their perspectives of education.
- To find which is the best social media that helps to improve the education level among the students.
- To ascertain how the use of social media has influenced the academic work of students.

Research Methodology

The primary data is collected from the well-structured questionnaire and interview with the people using laptop. Secondary data was collected from Books, records, articles, Journals and Magazines. A sample is collected from the respondent is 158 have been analysed and selected.

Sampling

The method of Sampling used to collect data is Convenience Sampling. Convenience is a type of non-probability sampling that involves the sample being drawn from the part of population that is closed to hand. The reason for choosing this sampling is opinion of every students differ from each other according to their needs.

Tools Used

- Percentage
- Chi Square Test
- ANOVA
- Mean Rank
- Standard Deviation

Limitations of the Study

A sum of 158 respondents were identified from different educational institutions in Coimbatore City. Majority of respondents were graduated students in the conducted survey and it was hard to get a diverse opinion for the study.

Table 1 : Demographic Profile of the Respondents

S. No	Demographic Variables		No. of Respondents	Percentage
1.	Age	15 – 20	59	37.3
		21 – 25	81	51.3
		25 – 30	13	8.2
		30 above	5	3.2
2.	Gender	Male	92	58.2
		Female	66	41.8
3.	Family members	Upto 3	18	11.4
		3 – 5	115	72.4
		Above 5	25	15.8
4.	Residential area	Rural	42	26.6
		Urban	73	46.2
		Sub-urban	42	27.2
5.	Education	Below degree	28	17.7
		Degree	110	69.6
		Post-Graduation	15	9.0
		Above PG	5	3.0

From the above table it is analysed that Majority 51.3% of the respondents are belong to the age group of 21-25 years and 58.2% of respondents are male. 72.4% of the respondents have 3-5 members in their family and 46.3% of respondents are living in Urban area. 69.6% of the respondents are having a Degree qualification. These are the demographic profile respondents which are taken for this study.

Table 2 : Usage of the Social Media

S. No	Particulars		No. of Respondents	Percentage
1.	Favourite social media sites	Facebook	17	10.8
		WhatsApp	44	27.8
		Instagram	72	45.6
		Twitter	25	15.8
		Skype	0	0
2.	Time spent on social media site per day	30 minutes to 1 hour	54	34.2
		2 - 3 hours	79	50
		4 - 5 hours	25	15.8
3.	Why students use	Chatting	80	50.6

	social media	Downloading music & Videos	46	29.1
		Academic work	32	20.3
4.	Social media affect students' academic work	Yes	56	35.4
		No	55	34.8
		Not Certain	47	29.7
5.	Improvement in Academic work by social media	Yes	100	63.3
		No	19	12
		Not Certain	39	24.7
6.	Which of the social media you are used more	Facebook	4	2.5
		Instagram	54	34.2
		WhatsApp	37	23.4
		YouTube	49	31
		Twitter	9	5.7
		Google	5	3.2
		LinkedIn	0	0
7.	Which type of e-gadget you are using for social media platform	Smart phone	122	77.2
		Laptop	27	17.1
		Tab	2	1.3
		TV	5	3.2
		Desktop Computer	2	1.3

From the above table it is analysed that 45.6% of the respondent's favourite social media is Instagram and 50% of respondents spent their time in social media is 2-3 hours per day. 50.6% of the students are using the social media for Chatting and 35.4% of the respondents said that social media affects student's academic work. 63.3% of the respondent's opinion is there is an improvement in academic work by using the social media and 34.2% of the respondent's mostly used social media is Instagram. Mostly 77.2% of the respondents are using Smart phone for social media platform.

Table 3: Influence of the Social Media

S. No.	Particulars	Score	Rank
1.	The usage of materials from SMS like Wikipedia for research has helped improve my grades	4.50	II
2.	I use materials obtained from social networking sites to complement what I have been taught in class	4.65	I
3.	Engaging in academic forums on social media increases my understanding of topics discussed in class	4.20	IV
4.	Group discussion on social media yield good results as far as my academic are concerned	4.13	V
5.	I am addicted to social networks and this a challenge that	4.36	III

	affect my academic life		
6.	Online social networks distract me from my studies	4.10	VI
7.	Time spent on social media can never be compared to time spent on my studies	3.87	VII
8.	There is no improvement in my grades since I became engaged into these social networking sites	3.65	VIII

With the help of the primary data, I use materials obtained from social networking sites to complement what I have been taught in class is ranked First. II rank is given to the usage of materials from SMS like Wikipedia for research has helped improve my grades. I am addicted to social networks and this a challenge that affect my academic life are given ranks III.

Table 4 : Student's Aims on Social Media

S. No.	Aims	Mean	Standard Deviation
1.	Messaging (Texting)	3.96	1.722
2.	Following their friends	4.11	1.633
3.	Catching up the news	3.24	1.690
4.	Taking photo or record video and sharing	3.17	1.716
5.	Being aware of the trends	2.68	1.459
6.	Listening to music	3.46	1.645
7.	Following the applications	1.91	.955
8.	Making new friends	2.12	.879
9.	Making checking in	2.41	.958
10.	Downloading new application	1.96	.999

It is inferred from the above table that Messaging is the main aim of students to use social media to communicate.

Table 5: Respondents' Opinion about Social Media

S. No	Particulars		No. of Respondents	Percentage
1.	Devoting specific time to use the social media	Agree	50	31.6
		Neutral	78	49.4
		Disagree	30	19
2.	Use of teachers for the social media during the lecture time for academic purpose	Agree	48	30.4
		Neutral	76	48.1
		Disagree	34	21.5
3.	The use of students for the social media during the lecture time for academic purpose	Agree	64	40.5
		Neutral	69	43.7
		Disagree	25	15.8

4.	Supporting the use of social media during the lecture time	Agree	47	29.7
		Neutral	80	50.6
		Disagree	31	19.6
5.	The communication of the correct information by using the social networks	Agree	70	44.3
		Neutral	69	43.7
		Disagree	19	12
6.	The improvement of student academic performance using the social networks	Agree	79	50
		Neutral	60	38
		Disagree	19	12
7.	Teachers providing to the students their social networking sites	Yes	59	37.3
		To a certain extent	64	40.5
		No	35	22.2
8.	Faculty members activating their social sites with students	Yes	48	30.4
		To a certain extent	60	38
		No	50	31.6
9.	The social networks improve the communication with the faculty member and not the level of study	Yes	78	49.4
		To a certain extent	60	38
		No	20	12.6
10.	Communication between students and teachers using the social networks	Yes	136	86.1
		No	22	13.9

From the above table it is analysed that 49.4% of the respondents are neutral in devoting specific time to use the social media and also 48.1% of the respondents are neutral in use of teachers for the social media during the lecture time for academic purpose. 43.7% of them are neutral in the use of students for the social media during the lecture time for academic purpose. 50.6% of the respondents are neutral in Supporting the use of social media during the lecture time and 44.3% of them are agreed that the communication of the correct information by using the social networks. 50% of the respondents agreed that there is an improvement in student's academic performance using the social networks. 40.5% of the respondents have said that Teachers providing to the students their social networking sites to a certain and also 38% of the respondents have said the Faculty members activating their social sites with students to a certain. 49.4% of them said that the social networks improve the communication with the faculty member and not the level of study. 86.1% of the respondents that there is a Communication between students and teachers using the social networks. 57.6% of the respondent's opinion for the best social network that improves the educational process is WhatsApp.

Chi - Square Tests

Age and Favourite Social Media

H₀: There is no significant relationship between age and favourite social media.

H₁: There is a significant relationship between age and favourite social media.

In the above table shows that, the significant chi-square value is 19.78, which is above the P value 0.05. H₀ accepted. So, there is no significant difference between age of the respondents and favourite social media.

Age and Average Time Spend

H₀: There is no significant relationship between age and average time spend.

H₁: There is a significant relationship between age and average time spend.

In the above table shows that, the significant chi-square value is 7.61, which is above the P value 0.05. H₀ accepted. So, there is no significant difference between age of the respondents and average time spend.

Anova for Age, Gender, Family Members, Residential Area Education and the Social Media Do You Use

	Source of Variation	SS	df	MS	F	P value
Age	Between Groups	150.39	1	150.39	155.19	0.00
	Within Groups	304.29	314	0.97		
	Total	454.68	315			
Gender	Between Groups	239.32	1	239.32	294.14	0.00
	Within Groups	255.47	314	0.81		
	Total	494.79	315			
Family members	Between Groups	98.03	1	98.03	118.51	0.00
	Within Groups	259.73	314	0.83		
	Total	357.76	315			
Residential area	Between Groups	73.11	1	73.11	70.43	0.00
	Within Groups	325.96	314	1.04		
	Total	399.08	315			
Education	Between Groups	113.04	1	113.04	132.04	0.00
	Within Groups	268.82	314	0.86		
	Total	381.86	315			

In the above table shows that, the significant value of one-way ANOVA is more than the P value 0.05 for the chosen variables. H₀ accepted. So, there is no significant difference between the 5 variables of the respondents and their usage of social media.

**Anova for Age, Gender, Family Members, Residential Area
Education and the Usage of E - Gadget for Accessing Social Media**

	Source of Variation	SS	df	MS	F	P value
Age	Between Groups	13.78	1	13.78	23.28	0.00
	Within Groups	185.95	314	0.59		
	Total	199.73	315			
Gender	Between Groups	0.32	1	0.32	0.71	0.40
	Within Groups	140.58	314	0.45		
	Total	140.90	315			
Family members	Between Groups	37.60	1	37.60	81.51	0.00
	Within Groups	144.84	314	0.46		
	Total	182.44	315			
Residential area	Between Groups	55.98	1	55.98	83.28	0.00
	Within Groups	211.07	314	0.67		
	Total	267.05	315			
Education	Between Groups	29.16	1	29.16	59.49	0.00
	Within Groups	153.92	314	0.49		
	Total	183.09	315			

In the above table shows that, the significant value of one-way ANOVA is more than the P value 0.05 for the chosen variables. H₀ accepted. So, there is no significant difference between the 5 variables of the respondents and the usage of e-gadget for accessing social media.

Findings

- 51.3% of the respondents are belong to the age group of 21–25 years.
- 58.2% of respondents are male.
- 72.4% of the respondents have 3-5 members in their family.
- 46.3% of respondents are living in Urban area.
- 69.6% of the respondents are having a Degree qualification.
- 45.6% of the respondent's favourite social media is Instagram
- 50% of respondents spent their time in social media is 2-3 hours per day.
- 50.6% of the students are using the social media for Chatting.
- 35.4% of the respondents said that social media affects student's academic work.
- 63.3% of the respondent's opinion is there is an improvement in academic work by using the social media.
- 34.2% of the respondent's mostly used social media is Instagram.
- 77.2% of the respondents are using Smart phone for social media platform.
- 60.8% of them agreed that the usage of materials from SMS like Wikipedia for research has helped to improve their grades.
- 57.6% of them agreed that they use the materials obtained from social networking sites to complement what they have been taught in class.

- 59.4% of them agreed that engaging in academic forums on social media increases their understanding of topics discussed in class.
- 58.2% of them agreed that group discussion on social media yield good results as far as their academic are concerned.
- 50.6% of the respondents have disagreed that they are not addicted to social networks and it never affected their academic life.
- 45.6% of respondents agreed that social networks distracted them from their studies.
- 43.7% of them are agreed that time spent on social media can never be compared to time spent on their studies.
- 46.8% of them have disagreed for there is no improvement in their grades since they became engaged into these social networking sites.
- 25.3% of the respondent's aim of using social media by students is to Messaging (Texting).
- The social media site that is most used to communicate is WhatsApp for 70.2% of the respondents.
- 49.4% of the respondents are neutral in devoting specific time to use the social media.
- 48.1% of the respondents are neutral in use of teachers for the social media during the lecture time for academic purpose.
- 43.7% of them are neutral in the use of students for the social media during the lecture time for academic purpose.
- 50.6% of the respondents are neutral in Supporting the use of social media during the lecture time.
- 44.3% of them are agreed that the communication of the correct information by using the social networks.
- 50% of the respondents agreed that there is an improvement in student's academic performance using the social networks.
- 40.5% of the respondents have said that Teachers providing to the students their social networking sites to a certain.
- 38% of the respondents have said the Faculty members activating their social sites with students to a certain.
- 49.4% of them said that the social networks improve the communication with the faculty member and not the level of study.
- 86.1% of the respondents that there is a Communication between students and teachers using the social networks.
- 57.6% of the respondent's opinion for the best social network that improves the educational process is WhatsApp.

Suggestions

We should avoid the use of the social media during the lecture time. Students should minimize the time they pay on social media to avoid being obsessed by these sites for unnecessary things. Students with phones having internet facility should be encouraged to either use it to supplement their analysis with in the library instead of the standard chatting with friends all the time. Students should be suggested to limit the time they pay on social media sites per day and encourage them to rather substitute those hours to read novels and relevant academic books to improve their knowledge.

Conclusion

The study is based on responses given by the students in the Coimbatore city and the discussions were made based on this. The main purpose of this study was to analyse the impact of social media on academic performance of students. The study revealed that all the respondents had mobile phones with internet facility and knowledge about the existence of social media sites and also it shows that students are likely affected by the social media networks. Social media is attractive, it not only provides students another world to make friends and also provides a good way to release pressure. We can use the social media in a good way instead of an addiction. As mentioned before if the students handle the social media platform as effectively then it will never affect their academic performance. So, students should think more about the balancing equation of social media and academics.

ENHANCING SAFETY AND SECURITY: UPI TRANSACTIONS FOR COLLEGE GIRLS

Dr.Ahila.D

Assistant Professor, Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi
ahila@ngmc.org

Abstract

In the era of digital transformation, the Unified Payments Interface (UPI) has emerged as a pivotal tool reshaping financial landscapes. This article delves into the role of UPI in enhancing safety and security for college girls' financial transactions. By seamlessly integrating into their lives, UPI offers a secure alternative to traditional cash handling, mitigating vulnerabilities associated with physical currency. The security features of UPI, including PIN-based protection, two-factor authentication, and real-time alerts, contribute to a safer financial environment. Moreover, UPI's impact goes beyond transactions, promoting financial literacy, reducing parental concerns, and empowering college girls to manage their finances confidently. UPI's convenience and security make it a catalyst for the autonomy and financial empowerment of college girls, fostering a secure and responsible financial future.

Keywords: Digital transformation, Unified Payments Interface, security features of UPI

Introduction

In today's rapidly evolving digital landscape, financial transactions have undergone a paradigm shift, transitioning from traditional methods to modern, technology-driven platforms. One such transformative innovation is the Unified Payments Interface (UPI), a system that has revolutionized the way individuals engage in monetary exchanges. Beyond its inherent convenience, UPI has emerged as a potent tool for enhancing safety and security in financial transactions, especially for a significant demographic - college girls. Mabrouk et.al (2023) found that the digital financial inclusion has become more important during the pandemic, as it has allowed women to have greater economic involvement and decision-making power. This article delves into the profound impact of UPI transactions on college girls, shedding light on how this technology has transformed the way they manage their finances, providing not only convenience but also ensuring their safety and security. In a world marked by digitization, UPI transactions have become a pivotal component in empowering college girls to navigate their financial responsibilities with greater confidence, privacy, and autonomy.

Review of Literature

Durairaj and Joseph (2019) reveal that UPI is considered important in the day-to-day life of its users as it saves time in transferring funds between accounts instantly. UPI is a complex and sophisticated payment infrastructure that uses a unique VPA address for transfers, making it secure and reliable. The government supports UPI by providing incentives and reducing taxes for digital payments, which has increased interest in using UPI. The study reveals that more than 80% of respondents found UPI services convenient

to use, and 90% said they would use UPI in the future. Some challenges with using UPI include server-related issues and occasional application failures during transactions. Shenoy and Nataraj (2019) observed that the cashless transactions are increasing due to their convenience, speed, and safety, with digital payments being the easiest method through payment apps, contributing to financial inclusion by reducing transaction costs and providing convenience. Pawar (2021) discusses the pandemic led to a situation where people were unable to use cash for transactions, leading to an increase in the use of online payment methods. However, there were also issues faced by students in making online payments, including lack of knowledge about digital awareness and frauds by people who take advantage of lack of knowledge about KYC procedure and suggests the need for awareness programs, advisories, and digital literacy to address these issues. Zareen and Chaddha (2021) found the mobile money has the potential to improve financial inclusion in India, but its full potential has not been realized yet. A study focused on college students in Delhi found that although they were aware of mobile money services, they were reluctant to use them for daily transactions. The study investigated the user-friendliness of mobile phones for mobile banking and money transfer and the adoption of mobile money services.

Empowering College Girls: UPI as a Catalyst

Education is a crucial pathway to empowerment, and college life is a pivotal phase in a young person's journey towards independence. UPI has seamlessly integrated itself into the lives of college girls, providing them with an effective means to manage their finances. The digitization of financial transactions has empowered college girls to take control of their money matters, thereby fostering a sense of financial independence and responsibility.

The Digital Transformation of Transactions

The traditional methods of handling financial transactions, often involving cash, are associated with several vulnerabilities. College campuses, being bustling and dynamic environments, can sometimes expose young individuals to risks associated with carrying physical currency. UPI transactions mitigate these concerns by offering a digital alternative that eliminates the need for cash handling.

Security Features of UPI

The security features inherent in UPI transactions contribute significantly to the safety and confidence of college girls. Some key security aspects of UPI transactions include:

- **PIN-based Security:** UPI transactions are protected by personal identification numbers (PINs) known only to the account holder. This layer of security ensures that only authorized individuals can initiate transactions.
- **Two-Factor Authentication (2FA):** UPI transactions require two levels of authentication, typically involving a password or PIN and a secondary factor such as a biometric scan or an OTP (One-Time Password). This process enhances transaction security.
- **Device Authorization:** Transactions are linked to the user's device, ensuring that

transactions can only be initiated from authorized devices. This security measure prevents unauthorized access to the account.

- **Real-time Transaction Alerts:** UPI sends real-time alerts to users for every transaction, allowing them to stay informed about their financial activities and detect any unauthorized transactions promptly.

Reducing Vulnerabilities and Enhancing Privacy

The shift from physical cash to digital transactions through UPI significantly reduces vulnerabilities associated with carrying cash. College girls can avoid being targets of theft or harassment that might occur when handling cash, particularly in public spaces. Additionally, UPI transactions offer greater privacy, allowing individuals to conduct financial transactions discreetly and confidentially.

Safe and Secure Campus Life

The influence of UPI on college girls extends beyond basic financial transactions. It affects various aspects of campus life, including:

- **Tuition and Fees:** UPI facilitates safe and secure payments for tuition fees and other college-related expenses. This eliminates the need for students to carry large sums of cash.
- **Accommodation and Daily Expenses:** UPI transactions simplify payments for accommodation, food, and other daily expenses, ensuring that college girls can manage their finances conveniently and securely.
- **Extracurricular Activities:** College life involves participating in various extracurricular activities, events, and workshops. UPI enables secure payments for registration fees, contributing to a smoother and more organized experience.
- **Study Materials and Online Resources:** UPI transactions enable college girls to purchase study materials, books, and online resources without the hassle of physical cash.

Promoting Financial Literacy and Autonomy

The adoption of UPI among college girls goes beyond just transactional convenience. It serves as a powerful tool for promoting financial literacy and autonomy. By actively engaging with digital transactions, college girls develop a deeper understanding of financial management, budgeting, and responsible spending. These skills are invaluable as they transition to adulthood and take on greater financial responsibilities.

Parental Peace of Mind

For parents, UPI transactions provide a sense of security knowing that their daughters are using a safe and secure digital payment method. UPI's transaction tracking and real-time alerts ensure that parents can monitor their daughters' financial activities and quickly address any unusual transactions.

Conclusion

In the evolving landscape of digital payments, UPI stands as a beacon of safety and security, particularly for college girls. By embracing UPI transactions, college girls can navigate their financial responsibilities with greater ease, security, and confidence. UPI's multifaceted benefits extend beyond convenience to encompass safety, privacy, financial literacy, and empowerment. As UPI continues to evolve, it will undoubtedly play a crucial role in enhancing the financial well-being of college girls, shaping their journey towards a more secure and autonomous future.

Introduction

ICT tools stand for Information Communication Technology tools. The ICT tools means to digital infrastructures like computers, laptops, printers, scanners, software programs, data projectors, and interactive teaching box.

The ICT devices are the latest tools, concepts and techniques used in student-to-teacher, student-to-student interaction for example: - clicker devices, mobile applications, flipped classroom) for information and communication technology.

Every aspect of our lives is driven by technology. We are growing more and more reliant on new developments as technology advances. It not only makes our lives simpler but also more efficient. When we are discussing the role of ICT in our lives, how can we neglect the transformations that are happening with the introduction of ICT in education? This article revolves around ICT in education, how ICT positively affects the way students learn and also the advantages of ICT in education. Before we dive into them, let us look at what is ICT in education.

Ict Enabled Tools for Effective Teaching and Learning Process

Following tools are used in the Teaching learning process in Online- Offline mode of instruction. During lockdown these ICT tools proved to be a boon for making the teaching learning process easy and accessible to all students.

1. Learning Management System (MOODLE and Google Classroom)

Moodle stands for Modular Object-Oriented Dynamic Learning Environment and statistics. Moodle is free software, a learning management system providing a platform for e-learning and it helps the various teachers considerably in conceptualizing the various courses, course structures and curriculum thus facilitating interaction with online students. It is configurable, highly-flexible, and feature-rich. RSCOPR has a self-customized MOODLE developed by Digital Content development team. (<https://lms.jspmrscopr.edu.in/>).

It is a very useful platform to share all learning resources, videos, sharing webpage. Moodle supports a range of media to present or link to learning materials, support the students and to assess their learning. It is able to provide automated assessment in the form of quiz, and give immediate detailed feedback to the students. The messaging system

allows learners and teachers to communicate easily. Teachers can also communicate with groups of learners via course forums either to provide answers to learners' questions or to just get involved in discussions. The uploaded learning resources are available to the students whenever they want them. The MOODLE mobile app makes students access even easier via smartphone or mobile device.

2. Google Classroom - Blended Learning Platform

Google Classroom is a free, blended learning platform that offers a variety of benefits for both students and teachers. Google Classroom enhances the productivity and take workflow management to the next level. It keeps track of assignments coming in with a simple glance making it very easy to know everyone's status and to follow up with students who are missing work. Everything is time stamped, so late work is easily identifiable. Since Google apps are cloud based the work in Google Classroom saves automatically and is accessible from any device. With the app, both students and teachers can enjoy the full functionality of Google Classroom on a mobile device. Students receive notifications on their phone when assignments and announcements are posted, making it easy for students to stay on top of classroom happenings. As a teacher, the app enables to post from the phone either right from the app or using share-sheet support.

3. Google Forms

Google Forms allows to conduct MCQ quizzes online. The information is stored as a spreadsheet automatically record the answers. The spreadsheet then populates the responses from the quiz or survey in real-time. Google forms can be used to give feedback to and receive feedback from students and parents.

4. Videoconferencing Platforms

During COVID pandemic when the world shifted to Online mode for teaching learning various free videoconferencing platforms like Google meet, Zoom and Cisco webex were used to conduct online classes.

All these have varying needs and features. Zoom allows the facility of using its features using a browser also without the need to download the application, the app download is mandatory in case of the other two software. Zoom allows face touch up facility as well which is not present in the other two competing software. Google Meet allows the maximum on-screen chatting time with respect to the others. It has over 60 minute long conferences whereas the time cap of others is only 40 minutes. Zoom has the highest, that is, 49 people that can be viewed on the screen at once.

5. Virtual Labs

The Virtual Labs provides remote-access to simulation-based Labs in various disciplines of science and engineering. This student-centric approach facilitates the absorption of basic and advanced concepts through simulation-based experimentation. Internet-based experimentation further permits use of additional web-resources, video-

lectures, animated demonstrations and self-evaluation. Virtual labs are any place, any pace, any-time, any-type labs. It is a paradigm shift in student-centric, online education. Virtual labs sessions available on Virtual labs an MOE Government of India Initiative for Physical Pharmaceutics, Organic Chemistry and Inorganic chemistry subjects as well as Virtual labs sessions from Amrita Vlab portals for Microbiology, Organic chemistry and Inorganic chemistry practicals provide helpful tool to teacher during online teaching learning process.

6. Educational Videos and Animations (Youtube and Internet)

Various valuable educational videos of pharmacy subjects available on internet, youtube provide additional help in better understanding of subject knowledge.

7. Smart Classroom

Classroom integrated with Smartboards and internet connections provides enhanced and interactive learning and teaching opportunities for students and teachers. The internet-connected to systems in smart classes is stored with abundant information. It is accessible anytime for their teaching and learning process. Teachers can access information from various educational sources for teaching purposes. It helps in easy access to online resources. Smart Classrooms helps in developing critical thinking and problem-solving skills in students.

8. e-Resources

e- journals from Proquest Pharma and DELNET were available for students to access remotely in online mode and enhance their learning experience. e books were uploaded on MOODLE and Google Classroom.

9. Trello

Trello is a collaborative tool that is used widely in IT companies with large teams. Fortunately, it has several applications for the educators as well. If the teacher prefer project-based learning for students, Trello is very useful. Trello has these digital boards. The teacher can create different boards for assignments, test papers, etc. And in those boards, we can create cards. Furthermore, we can discuss a particular topic in that card. The user can invite the students to view that card. And the students can put in comments, doubts, or ask questions and even attach images, videos, etc.

Also, students can easily look at their projects, set deadlines, and track progress online. In a nutshell, Trello takes a lot of burden off shoulder while enriching the learning experience for kids.

10. Microsoft Teams

Microsoft Teams is another popular tool for IT professionals. And similar to Trello, it has several applications for teachers and educators. Microsoft Teams is a Microsoft Office 365 product. It simply means user can host meetings, chat, share files, and use every Microsoft Office app using Teams.

One of the best features Teams comes with is the Class Notebooks from One Note. Class Notebooks resemble individual student notebooks(physical) but come with additional features and ease of use.

Teachers can assign individual notebooks to students and provide them with real-time feedback. The user can easily distribute exams, handouts, quizzes, and homework instantly to the students. Also, the students can use amazing tools within Teams for taking notes and highlighting important things. This helps the students engage more and enjoy learning. All in all, Teams can reduce the manpower and can completely replace the use of paper. It's yet another amazing tool that ensures effective education online.

11. Online Coding Websites such as DataCamp, HackerRank, Coderbyte

No minimum age exists when it comes to learning how to code.

If user want the students/kids to learn how to code, make sure it's practical. Practicing code on paper is simply a waste of time. And it also kills the creative talent of the students.

This is where the websites such as DataCamp, HackerRank, Coderbyte, etc., come into play. Using such websites, students can implement what they've learned instantly. Also, such websites feature several tricky problems that the students will enjoy. The best part is that most websites are free and accessible from any device. It simply means none of the students will need particular hardware (laptop/PC) to code.

12. Subject Specific Tools

All of the above ICT tools for teaching and learning help in generalized learning. However, when it comes to specific subjects, special tools are required. Following are the specific tools used for different subjects.

ICT Tools for Teaching Geography

Google Maps: With Google Maps, kids can learn to find the distance between two places and look at 360-degree images of places. This can help the students become familiar with multiple locations across the world.

Google Earth: This tool shows the entire earth with every location and supports an amazing zoom feature. Kids can learn about different regions, landmasses, and water bodies in a fun way.

ICT Tools for Teaching Mathematics

CanFigureIt Geometry: This tool makes learning geometry pretty easy. The teacher can teach kids about several mathematical proofs and theorems in an engaging way.

CueThink: User can use this tool to teach kids how to solve math problems in four steps: understand, plan, solve, and review.

ICT Tools for Teaching Biology

Microsoft PowerPoint: User can use HD images and create slides to clear the biological concepts for the kids. Also, user can download templates from Slidesgo and make the job even easier.

YouTube: What's better than using videos for explaining complex biological processes via YouTube videos. From digestion to excretion, user can find plenty of child-safe content on YouTube.

ICT Tools for Teaching History

User can use the above-listed tools but in a different manner:

YouTube: User can find historical movies related to the chapter.

Microsoft PowerPoint: User can create slideshows with minimal details such as dates, names, locations, and events, etc. This way, kids can learn facts easily and for longer durations.

Merits and benefits of introducing ICT education

ICT in education is not simply a method of education that responds to changes in society, but also offers various advantages and benefits that solve problems in the educational field.

For teachers, it can be used to reduce workload and share information with other teachers, and for students, it can provide an environment where they can easily concentrate on their lessons and become more interested in learning. The following are some of the concrete benefits and effects of ICT in education.

- Improved Learning Efficiency
- ICT improves student learning efficiency. For instance, in the past, students would

take notes of what the teacher had written on the blackboard, and then reread the notes to consolidate their memory of the lesson. With ICT, however, students no longer need to move their hands because of the use of tablets and other devices, and they will be able to concentrate more on the class.

- ICT can also make it easier for students to express their opinions, even if they do not like to raise their hands or be the center of attention during class.
- Reduce the Burden on Teachers
- In addition to teaching and preparing for classes, teachers have a variety of other duties, such as dealing with parents and advising club activities. This burden on teachers is seen as a problem in the field, and the challenge is how to reduce the workload.
- The introduction of ICT in education reduces the burden on teachers in detail, such as the time and effort required to print out materials used in class and to write on the board.
- The time freed up by the introduction of ICT can be used to solidify class content and perform miscellaneous tasks, which is expected to improve the quality of education as a result.
- Simplified Information Sharing
- Another major advantage is to easily share class data and teaching materials used in class among teachers and students. By organizing class materials on PCs and tablet terminals, the time required to distribute materials can be reduced, and classes can proceed efficiently and smoothly.
- Information sharing among teachers will also provide opportunities to learn about good teaching materials and teaching methods, which will have the effect of synergistically enhancing the quality of education.
- Increased Student Motivation
- Increasing students' motivation for learning is also cited as an advantage of ICT, as it is still not that common, and many students may find classes using digital tools refreshing.
- Learning through the tablet devices and electronic blackboards can be expected to increase students' interest in the class itself. When implementing ICT in education, it is a good idea to create questions and animations from the perspective of whether or not students will be interested in them. Of course, the content of the class is important, but it is also important to have a system that engages students in the class.
- Improve IT Literacy of Students
- As ICT in education advances informatization, not only teachers who support learning but also students will be able to acquire knowledge and skills of IT devices. literacy will help students to select and use necessary information and to develop the ability to think for themselves.
- In recent years, lack of IT literacy has often led to unexpected accidents. For

example, corporate security incidents and problems related to social networking accounts are mainly recognized as IT literacy issues, and it is important to ensure that students acquire basic knowledge and skills when using IT.

- We can refer to the information provided by the Ministry of Education, Culture, Sports, Science and Technology when developing and improving class content based on the benefits and effectiveness of ICT education. Please check the following points when considering the introduction or enhancement of ICT in education in the future.

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT tools in education make it easier for teachers to use the best strategies to bring out the best in their students. ICT in education sector is beneficial for the students, in addition to this, it is making it possible for schools to impart education in the finest way. Moreover, the technology enables them to manage all the management and administration functions in a seamless manner. Hence, there is no doubt that it is a boon to the education industry.

ICT TOOLS FOR TEACHING AND LEARNING PROCESS

Dr.T.Kiruthika

Assistant Professor

Department of Commerce (E-Commerce)

NGM College, Pollachi.

Abstract

ICT is a broad term stands for Information Communication Technology. ICT tools for teaching and learning cover everything from digital infrastructures such as printers, computers, laptops, tablets, etc., to software tools such as Google Meet, Google Spreadsheets, etc. In traditional classrooms, a teacher's basic instructional tools for displaying information are chalkboards, multipurpose boards, bulletin boards and charts. But in today's modern scenario, tools of many professions are changing at an incredible rate and that education is no exception. The impact of technology has led to the increased use of computers for presenting information in many of today's classrooms. To make ICT teaching and learning more interactive, various platforms and tools have been created and updated over the period of time. Innovative ICT tools used in classroom teaching which helps teachers to integrate in their subject, for teaching-learning and assessment. There are numerous subject specific free of cost ICT tools available on online and offline platforms which can be used for teaching, learning and assessment. They are used by teachers to encourage participation and engage learning in their classrooms. ICT can also be used by teachers to promote collaborative work and creativity across a wide range of subjects. This study aims at highlighting the superiority of ICT tools for facilitating student learning, retention and attitudes.

Keywords: Information Communication Technology, Teaching-Learning, Visual Information, Online Platforms

Introduction

In today's globalised world the Information and Communication Technologies (ICTs) have become deeply rooted in educational settings. Their use has rooted qualitative changes in how teaching is approached, especially in terms of presenting the contents audio-visually. Even though there has been much discussion over different methods to teach students, lectures are not likely to stop being used. To emphasize particular points, many lectures use written material presented on a chalkboard, whiteboard, or by transparencies on an overhead projector. But in the last 10 years, another method of presenting visual information with lectures has gained prominence which is projecting information directly from a computer onto a screen i.e. PowerPoint presentations. In fact, many colleges and universities have rooms equipped with technology necessary for any teacher to display information in this manner. Furthermore, some administrations are pushing the teachers to use various other technologies for creative teaching and learning like Information Communication Technology, Teaching-Learning, Visual Information, Online Platforms

Literature Review

Pathak & Vyas, 2019 In the current period of education, E-Learning is the most recent type of information and communication technology (ICT) used to improve and expedite

teaching and learning. It is a well-known truth that education has touched almost every corner of the globe, and that ICT has become a vital component of everyone's life. E learning offers a wide range of applications and accessibility to students for 24 hours a day, seven days a week, where anybody may attend class from anywhere and at any time using various communication protocols.

Simin Ghavifekr, Thanusha Kunjappan, Logeswary Ramasamy and Annreetha Anthony, in their research paper, "Teaching and Learning with ICT Tools: Issues and Challenges from Teachers' Perceptions (2020)", revealed that their study is more related to identifying the perceptions in implementing ICT tools in teaching and learning in the classroom among school teachers. It examines the challenges of using ICT tools in teaching and learning in the classroom among school teachers and recognizes the effectiveness of the extent of ICT tools in supporting classroom teaching and learning

D. Sakthivel, Dr. B. Radha, in their study "ICT Tools for Modern Education (2021)", opined that Technology can be an extremely valuable tool, but it is only a tool and technology "cannot replace a teacher" and is not intended to replace the teacher. A good teacher must digitally be literally and must know the effective way to integrate technology into the curriculum so that teachers can keep the students committed

Marta Ferragut Martorell, in her study, "Use of ICT tools in the EFL classroom and their impact on students' motivation", stated that, ICT has turned into one of the foundations of our modern society. Thus, the understanding and mastery of ICT have become an essential part of today's education, alongside numeracy, writing and reading and it is expected to revolutionise the way students learn.

Objectives

- This study aims to analyze whether using ICT tools would be more beneficial for students than Chalk board teaching.
- It also aims to assess the effectiveness of ICT tools in helping the students in understanding and retaining the information.

Limitations

One of the major limitations of the study was that it is totally dependent on secondary data that may not be fully authenticated. Also, the time utilized for the study was very limited which restricted the scope of the study.

Research Methodology

The study is based on secondary data. Relevant data are availed from various sources of information such as Books and Various websites.

ICT enabled tools for effective teaching learning process

Most teachers feel comfortable in using lecture method, which is not capable of achieving various objectives of classroom instruction. ICT may be of great use in achieving various objectives of teaching -learning process. It provides correct information in a

comprehensive manner with different examples. It helps learners to broaden their information base. ICT provides variety in the presentation of content, which helps learners to learn according to their own pace.

Learning Management System (MOODLE)

Moodle stands for Modular Object-Oriented Dynamic Learning Environment and statistics. Moodle is free software, a learning management system providing a platform for e-learning and it helps the various teachers considerably in conceptualizing the various courses, course structures and curriculum thus facilitating interaction with online students. It is able to provide automated assessment in the form of quiz, and give immediate detailed feedback to the students.

Google Classroom

Google Classroom is a free, blended learning platform that offers a variety of benefits for both students and teachers. It keeps track of assignments coming in with a simple glance making it very easy to know everyone's status and to follow up with students who are missing work. Everything is time stamped, so late work is easily identifiable. Since Google apps are cloud based the working Google Classrooms are automatic and is accessible from any device. With the app, both students and teachers can enjoy the full functionality of Google Classroom on a mobile device.

Google Forms

Google Forms allow to conduct MCQ quizzes online. The information is stored as a spreadsheet automatically record the answers. The spreadsheet then populates the responses from the quiz or survey in real-time. Google forms can be used to give feedback to and receive feedback from students and parents.

Video Conferencing Platforms

During COVID pandemic when the world shifted to Online mode for teaching learning various free video conferencing platform like Google meet, Zoom and Cisco WebEx etc., were used to conduct online classes. All these have varying needs and features for facilitating interactive teaching and learning.

Virtual Labs

The Virtual Labs provides remote-access to simulation-based Labs in various disciplines of science and engineering. This student-centric approach facilitates the absorption of basic and advanced concepts through simulation-based experimentation. Internet-based experimentation further permits use of additional web-resources, video-lectures, animated demonstrations and self-evaluation. Virtual labs are any place, any pace, any-time, any-type labs. It is a paradigm shift in student-centric, online education.

Educational Videos and Animations (YouTube and Internet)

Various valuable educational videos of various subjects available on internet also has a great impact. YouTube provide additional help in better understanding of subject knowledge.

Smart Classroom

Classroom integrated with Smart boards and internet connections provides enhanced and interactive learning and teaching opportunities for students and teachers. Teachers can access information from various educational sources for teaching purposes. Smart Classrooms helps in developing critical thinking and problem-solving skills in students. There are many more ICT tools that facilitate innovative teaching learning process.

Advantages of Using ICT Tools in Teaching Learning Process Teaching Makes Easier

Teachers are the people with one of highly benefited of having ICT in education. Through the use of it, it makes the teaching easier. When a teacher teaches the student on a new lesson It makes for them easy to inform and to evaluate what they want them to know. Creating documents files, pdf files or power point presentation through the use of computer or laptop for them to show the topics that they will go to tackle is a great way for teaching.

Lesson can be seen and heard

The advantage of information communication technology is the lessons can be seen and be here. Unlike on the books you can just see it, seeing those pages with paragraphs and full of text and sometime we can see the pictures. Sound coming from the videos or music that being used will be played over and over again that makes it to remember well.

Easier to Understand

When the students see pictures appearing on the white screen using a projector, they understand it easily what it really means.

Improves Communication

Having at technology in the school discussion improves communication. Because through that medium the teacher as well as the student learn more and more vocabulary words. The proper way of saying a word or words, the correct grammar and the meaning of the words improves. Enjoying While Learning Images, music and videos are one of the source of entertainment. When people see that they are happy and enjoy. Unlike from the articles that just compose of full of text it is boring. Through the colorful images, students enjoy listening to the music and imagine what it really means.

Students Perform Better

What is good and importance of ICT in teaching and learning is the students perform better. When a teacher teach in front of the class and start to have a visual aid like projector, the students are attract. Pictures projecton the screen and the student will see what is that. The students perform better when it is attractive.

Know More Information

The internet is one of the fastest way of getting information because just one touch, can get what is needed. In education themore we search and read the more information we will get. The teacher and the students both get more information by the way they use it.

Improves Visual Skill

When students are learning with the use of pictures, or videostheir visualskillimproves. Some teachers use riddles using photos that will improve their thinking skill and cognitive skill. And because of that students are enjoying the lesson.

Conclusion

ICT tools are very powerful in teaching and learning. ICT tools empower both teachers and learners. They transform the teaching and learning processes from being highly teacher-dominated to becoming student-centric and this transformation results in increased learning gains for students, creating and allowing for opportunities for learners. In addition, they are cost-efficient and eliminate the usage of paper. Alongside minimizing cost, they also save time during class lectures enabling swift and dynamic transmission of content. They provide access to dynamic teaching and learning methods and facilitate easy student management. ICT is a powerful tool for educational change and reform. Appropriate use of ICT has helped the college raise the interest levels amongst the students and has helped connect learning to real-life situations. Students enjoy while learning and perform better.

A STUDY ON TRANSFORMING THE NATION: DIGITAL INDIA AND INDUSTRY 4.0

Dr.M.Rathamani

Assistant Professor, PG Department of Computer Science, NGM College

Dr.R.Deepa

Assistant Professor, PG Department of Computer Science, NGM College

Abstract

The convergence of "Digital India" and "Industry 4.0" represents a transformative synergy poised to reshape India's socio-economic landscape. This paper explores the intersection of these two pivotal initiatives and their implications for various sectors, including manufacturing, agriculture, healthcare, and education. The five keywords that encapsulate this synergy are: Digital India, Industry 4.0, IoT, Digital Transformation, and Socio-Economic Development. Digital India, a government-driven initiative, aims to bridge the digital divide, empower citizens, and transform governance through comprehensive digitization efforts. Industry 4.0, on the other hand, signifies the fourth industrial revolution, marked by the fusion of digital technologies and physical systems, including the Internet of Things (IoT) and Artificial Intelligence (AI). This paper investigates how the principles of Industry 4.0, such as IoT and AI, align with the Digital India vision, offering a roadmap for synergy across sectors. Case studies and data-driven analysis underscore the potential benefits of integrating Industry 4.0 technologies into Digital India's framework. This integration has the potential to foster economic growth, job creation, and an improved quality of life. However, challenges such as the need for a robust digital infrastructure, cybersecurity measures, and skill development are also discussed. The paper provides recommendations and policy implications to harness the full potential of this convergence.

Keywords: Digital India, Industry 4.0, IoT, Digital Transformation, Artificial Intelligence, Socio-Economic Development.

The table of contents

1. Introduction
 - 1.1 Digital India
 - 1.2 Industry 4.0
2. Digital India: Transforming the Nation
 - 2.1 Goals of Digital India
 - 2.2 Initiatives and Policies for Digital Inclusion and Empowerment
3. Industry 4.0: The Fourth Industrial Revolution
4. Case studies
5. Policy Implications and Recommendations
 - 5.1. The Intersection of Digital India and Industry 4.0
 - 5.2. Challenges and concerns in implementing Industry 4.0 within the Digital India framework.

6. Impact and Future Prospects
7. Conclusion
8. References

Introduction

Digital India

Digital India is a flagship initiative launched by the Government of India in July 2015. It was introduced by Prime Minister Narendra Modi with the vision of transforming India into a digitally empowered society and knowledge economy. The primary goal of Digital India is to ensure that government services are made available to all citizens electronically. It also aims to bridge the digital divide in the country by promoting widespread digital literacy and digital inclusion.

Industry 4.0

Industry 4.0, often referred to as the Fourth Industrial Revolution, represents a paradigm shift in manufacturing and industrial processes. It originated in Germany and was first introduced at the Hannover Messe trade fair in 2011. Industry 4.0 is characterized by the integration of digital technologies into various aspects of manufacturing and production, with a focus on automation, data exchange, and the Internet of Things (IoT).

Digital India: Transforming the Nation

Goals of Digital India

Broadband Connectivity: One of the primary goals of Digital India is to ensure high-speed broadband connectivity reaches all parts of the country, including rural and remote areas. Initiatives like the BharatNet project aim to provide broadband access to over 250,000 gram panchayats (local government units).

E-Governance: The initiative aims to promote e-governance by making government services available to citizens online. This includes services related to education, healthcare, social welfare, and more. The goal is to reduce paperwork, minimize bureaucracy, and enhance efficiency in service delivery.

Digital Literacy: Digital India places significant emphasis on digital literacy. The Pradhan Mantri Digital Saksharta Abhiyan (PMGDISHA) was launched to make at least one person in every household digitally literate. This goal is crucial for ensuring that all citizens can participate in the digital age.

Digital Infrastructure: Building a robust digital infrastructure is a key goal. This includes the establishment of data centers, the promotion of cloud computing, and the development of secure and resilient communication networks.

Universal Access to Mobile Connectivity: Ensuring that every citizen has access to affordable mobile communication and data services is a priority. This facilitates access to digital services, even in remote areas.

Economic Growth: Digital India aims to leverage digital technologies to drive economic growth. It promotes entrepreneurship and innovation in areas like e-commerce, fintech, and IT services, contributing to job creation and economic development.

Cybersecurity: Strengthening cybersecurity is integral to Digital India. With increased digitization, there is a need to protect digital assets, data, and critical infrastructure from cyber threats.

Digital Inclusion: The initiative seeks to ensure that marginalized and disadvantaged sections of society are not left behind in the digital transformation. Efforts are made to make digital services accessible to all, regardless of socioeconomic status.

Government Process Reengineering: Digital India encourages government departments to reengineer their processes to make them more efficient and citizen-centric. This involves eliminating redundant steps and streamlining procedures.

Initiatives and Policies for Digital Inclusion and Empowerment

Pradhan Mantri Jan Dhan Yojana (PMJDY): Launched in August 2014, PMJDY is a financial inclusion initiative under Digital India. It aims to provide access to financial services for all households, including the opening of bank accounts, providing debit cards, and enabling direct benefit transfers. This initiative empowers individuals by giving them access to formal banking and financial services.

Aadhaar: The Aadhaar program involves providing a unique 12-digit identification number to every resident of India. Aadhaar is a cornerstone of Digital India, as it serves as a digital identity, enabling citizens to access a wide range of government services and benefits online. It empowers individuals by simplifying identity verification processes.

Digital Locker (DigiLocker): DigiLocker is a cloud-based platform that allows citizens to securely store and share their documents and certificates digitally. It simplifies document verification and reduces the need for physical copies. This empowers individuals by giving them control over their important documents.

eSign (Electronic Signature): eSign is a facility that enables citizens to digitally sign documents online using their Aadhaar credentials. It simplifies paperwork, making it easier to engage in various transactions and government processes.

Direct Benefit Transfer (DBT): DBT is a mechanism that ensures that government subsidies and benefits are directly transferred to beneficiaries' bank accounts. It reduces leakages and ensures that benefits reach the intended recipients, thus empowering them economically.

Common Services Centers (CSCs): CSCs are physical centers established in rural and remote areas to provide various government services digitally. These centers offer services like digital literacy training, online form submissions, and access to government schemes. They empower citizens by bringing digital services to their doorstep.

Digital Literacy Programs: Digital India includes various digital literacy programs aimed at imparting digital skills and knowledge to citizens, especially in rural areas. The Pradhan Mantri Gramin Digital Saksharta Abhiyan (PMGDISHA) is a notable initiative in this regard, aiming to make one person per household digitally literate.

BharatNet: BharatNet is a project to provide high-speed broadband connectivity to rural and remote areas. It ensures that even in remote regions, citizens have access to the internet and can benefit from digital services.

Jan Aushadhi Pariyojana: Under this scheme, the government promotes the use of generic medicines by making them available at affordable prices through Jan Aushadhi stores. It empowers citizens by providing them access to affordable healthcare.

MyGov: MyGov is a citizen engagement platform that enables citizens to participate in governance and policy-making. It empowers individuals by giving them a voice in the decision-making process.

National Digital Literacy Mission (NDLM): NDLM aims to make at least one person in every household digitally literate. It provides training in digital skills and basic computer operations, ensuring that more citizens can participate in the digital world.

These initiatives and policies under the Digital India program are designed to ensure that all segments of society, including those in rural and remote areas, have access to digital tools and services. They empower individuals by providing them with the knowledge, resources, and access needed to fully participate in the digital age, thereby promoting inclusion and empowerment.

Industry 4.0: The Fourth Industrial Revolution

Industry 4.0 represents a comprehensive transformation of manufacturing and industry through the integration of digital technologies, data-driven processes, and interconnected systems. Its key principles revolve around connectivity, transparency, decentralization, adaptability, resource efficiency, customization, cybersecurity, human-machine collaboration, and a commitment to continuous improvement. These principles collectively enable organizations to achieve greater efficiency, agility, and competitiveness in the modern industrial landscape.

Case studies

Manufacturing - Tata Steel

Integration: Tata Steel, one of India's leading steel manufacturers, implemented Industry 4.0 technologies in its Jamshedpur plant.

Results: Tata Steel improved the efficiency of its steel manufacturing processes significantly. IoT sensors and data analytics were used to monitor equipment health and predict maintenance requirements, reducing downtime and saving costs. Real-time data also helped optimize energy consumption.

Agriculture - Mahindra & Mahindra

Integration: Mahindra & Mahindra, a major player in the Indian agricultural machinery sector, introduced IoT-enabled tractors.

Results: These smart tractors, equipped with IoT sensors and GPS, collect data about soil conditions, weather, and crop health. Farmers can access this data through a mobile app, enabling precision farming, reducing resource usage, and increasing crop yields.

Healthcare - Manipal Hospitals

Integration: Manipal Hospitals, a prominent healthcare provider, adopted IoT and AI-driven solutions for healthcare management.

Results: IoT devices track patient data and send real-time updates to doctors, improving patient monitoring. AI algorithms analyze patient records to predict disease outbreaks and optimize hospital resource allocation. This integration enhances patient care and hospital efficiency.

Logistics and Supply Chain - Flipkart

Integration: Flipkart, India's leading e-commerce platform, uses data analytics, AI, and blockchain in its supply chain management.

Results: Real-time tracking of shipments using IoT sensors ensures efficient logistics operations. AI algorithms optimize routes and delivery schedules. Blockchain technology is employed to enhance transparency in supplier transactions, reducing fraud and errors in the supply chain.

Energy and Utilities - Tata Power

Integration: Tata Power, a major energy company in India, adopted Industry 4.0 principles in its power generation and distribution.

Results: IoT sensors and data analytics are used to monitor and optimize energy generation and distribution. Predictive maintenance ensures the reliability of power plants. This integration enhances the efficiency of energy production and reduces downtime.

Retail and E-commerce - BigBasket

Integration: BigBasket, a prominent online grocery delivery platform, uses data analytics and AI for inventory management.

Results: BigBasket optimizes its inventory based on customer demand data. AI algorithms predict demand fluctuations, ensuring products are available when needed while minimizing waste. This integration enhances customer satisfaction and reduces costs.

Education - Byju's

Integration: Byju's, an edtech startup, uses AI and data analytics to personalize online learning experiences.

Results: AI algorithms analyze student performance and tailor lessons to individual needs. Real-time progress tracking helps students and teachers. This integration improves the effectiveness of online education.

These case studies demonstrate the successful integration of Industry 4.0 technologies across various sectors in India. They highlight how organizations leverage IoT, AI, data analytics, and other digital tools to enhance efficiency, reduce costs, improve quality, and create innovative solutions that benefit both businesses and consumers.

Policy Implications and Recommendation

To strengthen digital infrastructure for the successful implementation of Industry 4.0 within the Digital India framework, several strategies and policy recommendations can be considered:

Broadband Expansion

Policy Implication: Implement a comprehensive plan to expand high-speed broadband internet connectivity, particularly in rural and underserved areas.

Recommendation: Invest in building the necessary physical infrastructure, such as fiber-optic networks and mobile towers, to ensure last-mile connectivity. Encourage public-private partnerships to facilitate infrastructure development.

Digital Literacy Programs

Policy Implication: Continue and expand digital literacy programs to ensure that citizens, especially in rural areas, are equipped with the skills to navigate the digital world.

Recommendation: Collaborate with educational institutions, NGOs, and private organizations to provide training and resources for digital literacy. Target specific populations, including women and marginalized communities.

Cybersecurity Framework

Policy Implication: Develop and enforce a robust cybersecurity framework to protect digital infrastructure and data.

Recommendation: Establish cybersecurity standards and regulations for businesses and government agencies. Promote the adoption of cybersecurity best practices, regular audits, and incident response plans.

Incentives for Digital Investments

Policy Implication: Introduce incentives and tax breaks to encourage private sector investments in digital infrastructure.

Recommendation: Provide tax incentives, grants, or subsidies to businesses willing to invest in expanding digital infrastructure, especially in rural and remote areas.

Public-Private Partnerships (PPPs)

Policy Implication: Foster PPPs to facilitate the development and maintenance of digital infrastructure.

Recommendation: Collaborate with private sector entities to jointly invest in and manage digital infrastructure projects. Establish clear terms and accountability mechanisms in PPP agreements.

Spectrum Allocation

Policy Implication: Efficiently allocate and manage radio spectrum to ensure adequate bandwidth for mobile and wireless internet services.

Recommendation: Implement transparent and competitive spectrum auctions. Encourage spectrum sharing and trading to optimize its use.

Smart Cities and IoT Integration

Policy Implication: Promote the development of smart cities and the integration of IoT technologies.

Recommendation: Develop a framework for creating smart cities that leverage IoT for urban planning, energy management, and public services. Encourage pilot projects and research in this area.

Rural Digital Hubs

Policy Implication: Establish rural digital hubs to serve as access points for digital services and information dissemination.

Recommendation: Create a network of digital service centers in rural areas, equipped with computers, internet connectivity, and trained personnel to assist citizens in accessing government services and digital resources.

Regulatory Streamlining

Policy Implication: Streamline regulatory processes related to digital infrastructure development and operations.

Recommendation: Simplify permit procedures, reduce bureaucratic hurdles, and establish clear guidelines to expedite the deployment of digital infrastructure.

Research and Development

Policy Implication: Invest in research and development (R&D) for emerging digital technologies and infrastructure solutions.

Recommendation: Allocate funding for R&D initiatives in collaboration with academic institutions and industry partners to drive innovation in digital infrastructure.

The Intersection of Digital India and Industry 4.0

The intersection of Digital India and Industry 4.0 represents a transformative synergy poised to reshape India's socio-economic landscape. It's where the government's vision of a digitally empowered society converges with the fourth industrial revolution, resulting in a range of opportunities and challenges. Here's an overview of how Digital India and Industry 4.0 intersect:

Digital Infrastructure for Industry 4.0

Digital India: Digital India aims to establish a robust digital infrastructure, including high-speed internet connectivity even in rural areas.

Industry 4.0: Industry 4.0 relies on a digital infrastructure, including the Internet of Things (IoT) and high-speed connectivity, to enable real-time data exchange and automation in manufacturing and industry.

Intersection: The development of digital infrastructure under Digital India supports the connectivity and data needs of Industry 4.0 applications. This infrastructure enables the seamless integration of IoT devices and data-driven processes in manufacturing and industrial sectors.

IoT and Smart Manufacturing

Digital India: The IoT is a key component of Digital India, supporting smart cities, agriculture, and healthcare.

Industry 4.0: IoT plays a central role in Industry 4.0, connecting machines, sensors, and devices to optimize production processes.

Intersection: The IoT technologies developed for digital inclusion in Digital India can also be applied to create smart manufacturing environments in Industry 4.0. For example, IoT sensors can monitor equipment health and predict maintenance needs in factories.

Data-Driven Decision-Making

Digital India: Digital India emphasizes data-driven governance and service delivery, leveraging big data analytics for better decision-making.

Industry 4.0: Data analytics is fundamental to Industry 4.0, enabling real-time analysis of production data to optimize processes.

Intersection: The data analytics expertise developed under Digital India can be applied to Industry 4.0 scenarios to analyze manufacturing data, improve efficiency, and enhance product quality.

E-Governance and Smart Manufacturing

Digital India: E-governance is a key component of Digital India, providing government services online.

Industry 4.0: Smart manufacturing relies on digital technologies and automation to streamline production processes.

Intersection: Concepts from e-governance, such as online service delivery and citizen engagement, can be adapted to smart manufacturing environments to create efficient and transparent production processes.

Skill Development

Digital India: Skill development is a priority under Digital India, ensuring that citizens are digitally literate.

Industry 4.0: The workforce in Industry 4.0 industries requires digital skills for managing automated processes and data analytics.

Intersection: The focus on skill development in Digital India aligns with the need for a digitally skilled workforce in Industry 4.0. Training programs can prepare individuals for careers in advanced manufacturing and technology.

Economic Growth and Job Creation

Digital India: Digital India aims to stimulate economic growth through digitization and innovation.

Industry 4.0: Industry 4.0 has the potential to drive economic growth through increased productivity and competitiveness.

Intersection: The convergence of Digital India and Industry 4.0 creates opportunities for economic growth and job creation, particularly in sectors where digital technologies are transforming traditional processes.

In summary, the intersection of Digital India and Industry 4.0 presents a unique opportunity for India to leverage its digital initiatives to support advanced manufacturing and industrial processes.

Challenges and Concerns in Implementing Industry 4.0 within the Digital India Framework

Implementing Industry 4.0 within the Digital India framework presents several challenges and concerns that need to be addressed for a successful transformation. Here are some of the key challenges and concerns:

1. Infrastructure and Connectivity
2. Skill Gap
3. Data Security and Privacy:
4. Regulatory Framework:
5. Cost of Implementation:
6. Change Management:
7. Data Governance and Ethics
8. Environmental Impact
9. Interoperability
10. Job Displacement

Addressing these challenges and concerns requires a collaborative effort involving government, industry, academia, and civil society. It also involves a proactive approach to policy development, education, and infrastructure development to create an enabling environment for the successful integration of Industry 4.0 within the Digital India framework.

Impact and Future Prospects

Economic Impact

Growth and Competitiveness: The convergence of Digital India and Industry 4.0 has the potential to drive significant economic growth in India. It enhances the competitiveness of Indian industries, making them more efficient, productive, and capable of competing on a global scale.

Job Creation: While there are concerns about job displacement due to automation, Industry 4.0 can also create new job opportunities in areas like data analytics, AI development, and cybersecurity. Skill development and reskilling programs will be crucial to harness this potential.

Innovation and Entrepreneurship: The digital age encourages innovation and entrepreneurship, leading to the growth of startups and the development of innovative solutions. India has the opportunity to become a hub for technology startups and innovation in various sectors.

Social Impact

Digital Inclusion: Digital India and Industry 4.0 can bridge the digital divide by bringing digital services to rural and underserved areas. This can improve the quality of life, healthcare access, and education opportunities for marginalized communities.

Education and Healthcare: These sectors can greatly benefit from technology-driven solutions, such as online education platforms and telemedicine. Remote learning and healthcare services can reach remote and disadvantaged populations.

Empowerment: Digital initiatives empower citizens by providing access to information, government services, and financial inclusion. This can lead to greater social and political participation.

Environmental Impact

Sustainability: Industry 4.0 technologies can improve resource efficiency in manufacturing and agriculture, reducing waste and environmental impact. Smart cities can optimize energy consumption, contributing to sustainability goals.

Reduced Carbon Footprint: IoT and data analytics can help reduce energy consumption and emissions by optimizing transportation and logistics, as well as enabling smart energy management.

Conclusion

The convergence of Digital India and Industry 4.0 represents a transformative force with profound implications for India's development across economic, social, and environmental dimensions. Key findings and insights from this analysis can be summarized as follows:

1. Transformational Synergy
2. Economic Growth
3. Inclusive Development
4. Environmental Sustainability.
5. Global Leadership

In conclusion, the convergence of Digital India and Industry 4.0 holds the potential to propel India into a dynamic digital age, enhancing its global stature and improving the well-being of its citizens. It represents a transformative journey that, with careful planning, investment, and research, can yield immense benefits for the nation's development and its role in the global digital landscape.

DIGITAL INDIA AND INDUSTRY 4.0

G.Sowbarani

Assistant Professor, Department of Commerce
Karpagam Academy of Higher Education

Abstract

At present, developed economies like Germany, Japan, the USA, and Singapore have embraced Industry 4.0 to increase their manufacturing competitiveness. At present, India lags behind its global peers in Industry 4.0 adoption. However, it has been started to implement these technologies into its industrial process and it also has created lots of positive impacts also. From the beginning of civilization, human beings have tried to increase their capacity and power. At first, they were using equipment made of wood or rocks but with the advancement of science they explored modern and efficient equipment, and this process is going on. Machines are one of the inventions of humans. Use of machines was the cause of first industrial revolution. It was termed as a revolution because it not only increased production but also brought significant social and economic changes. For example, in 1790s the French revolution took place, which coined new ideas like Equality, Liberty and Brotherhood, the first industrial revolution, which came to pass a few years after the French revolution, infused those ideas. It means industrial revolutions have a huge impact on our society, not only society but it also affects the world economy. With this backdrop the present paper has made attempt to explain the impact of industry 4.0 on Indian industry

Keywords: Industry 4.0; Manufacturing Sector; Indian Economy; Economic Growth; Industrial Development

Introduction

From the beginning of civilization, human beings have tried to increase their capacity and power. At first, they were using equipment made of wood or rocks but with the advancement of science they explored modern and efficient equipment, and this process is going on. Machines are one of the inventions of humans. Use of machines was the cause of first industrial revolution. It was termed as a revolution because it not only increased production but also brought significant social and economic changes. For example, in 1790s the French revolution took place, which coined new ideas like “Equality, Liberty and Brotherhood”; the first industrial revolution, which came to pass a few years after the French revolution, infused those ideas. It means industrial revolutions have a huge impact on our society, not only society but it also affects the world economy.

Today, technology has advanced and we are moving towards the Fourth industrial revolution. New technical breakthroughs like Artificial Intelligence, Internet of things, Big Data etc. will change the entire scenario of current industry. Industry 4.0 is going to change the way we work, the way we live, the way we think and the way we relate things with other. One of the major components of industry 4.0 is Artificial Intelligence (AI). It enables machines to think, learn and in decision making also. It is expected that AI will make a revolutionary change in space industry as well. In the near future, robots will be sent to

space instead of a man and hence will provide new breakthroughs in space science. Not only the space industry but every sector from agriculture to healthcare and education is going to be benefited by AI. On the one hand, AI will be used to tackle challenging problems like security, fighting terrorism, surveillance, traffic control etc and on the other hand, it will bring dynamic changes in banking, airlines, medical technology and education system. By the use of nanotechnology, we can conduct critical cancer operations also. In future normal class rooms are going to be replaced by smart classrooms which will ensure better learning for students. Although now this technology is less affordable, it is expected that it will be cheaper with the advancement of technology. Not only this, AI and machine learning these skills will be installed in future generation syllabus because learning about these is very essential for the next generation. There is also a negative side of this technological advancement. Studies say that robots will turn humans lazy. Although human life will be longer due to advancements in healthcare, it is also true that humans will become less fit and lazier. In such a situation, those who use technology properly to maintain a healthy life will be more benefited than others. Human life costs a lot. That's why in the future generation armed forces we may find robot soldiers. But for countries like India where 10 lakh people are employed in armed forces, this will create a major unemployment situation. Also imagine if countries will start using robots to fulfil their expansionist policy then it will be a major threat to world peace and may cause a third world war.

First Three Industrial Revolutions and India In the past, India was involved in various economic activities which contributed to the growth of the economy. One of the earliest industries to come into existence in India was the textile industry, which was the main contributor to the national income. Prior to industrial revolution, India had an internationally acclaimed cotton textile industry and its products were exported to various parts of the world including Europe and America. In fact, India is documented to have dominated the world's cotton textile markets in 1750. The Indian textile industry thrived due to its access to cheap labour and skill that resulted in high quality but low-priced calicoes (plain white or unbleached cotton cloth). These calicoes were popular in Britain during the late 17th century (Clingsmith and Williamson, 2004). However, after the industrial revolution in Britain the table was turned as textile imports to Britain were prevented by stringent tariffs and other protectionist policies. Even though high tariffs frustrated the Indian textile industry, the superiority of Indian calicoes remained unrivalled and people still imported it. It was not until the discovery and use of steam power from 1815 onward that the Indian textile industry faced an export market threat. Steam power made the previous inventions of spinning mule and power loom more effective and efficient in reducing the cost of British cotton by almost 85 per cent and making it internationally competitive. By 1820, Britain was the leading exporter of textiles,

significantly displacing India. In addition, India's colonial masters'-imposed laws that dictated what kinds of crops were to be grown by the farmers. This led to a situation where not a single food crop was cultivated because the entire land was used for the production of raw material for the British industries. Therefore, industrial revolution turned India into a source of raw materials for British industries as well as a market for its finished products. The Indian economy shrunk because its industrialisation process was hurt (Bagchi, 1976)

Industry 4.0 Technologies and their Industrial Applications

Internet of things (IOT) is another technical breakthrough where machines can communicate with each other. IOT with the AI combination will transfer factories into smart factories, cities into smart cities, cars into smart cars and homes into smart homes. If so happens, then it will reduce human efforts to a minimum. Big data analytics is another crucial component of Industry 4.0. It is basically developed to gather information and data of consumers so that producers can manufacture proper items and services for them. In today's digital world, data is very important for us. Just imagine, if this huge data is processed properly then we will witness magical changes around us. We will get proper on-time services; hence it will save both money and time. Actually, Big Data will completely transform the governance system. It will make it more transparent and efficient. Policy implementation is a major headache for governments. It is expected that Big Data with AI will work to simplify this problem. The government will be able to reach every needy person and no one will be excluded from justice. It means Big Data ensures inclusive socio-economic development in the future.

Industry 4.0 Technologies and Data Privacy

According to the UN, privacy is one of the human fundamental rights. Can we ensure privacy while installing this technology? Is Industry 4.0 going to ruin our fundamental rights? Actually, when we are considering Big Data, we are considering data of millions of TB. In such huge amount of data, personal data doesn't matter much. But this data can be used to influence people politically and may hamper democratic processes also. This data, if not properly guarded, may cause civil wars or riots. So, this is going to be a big challenge in the future. Industrial revolution puts a big impact on world economy and changes its basic structure. For example, the first industrial revolution transformed the agrarian economy into the manufacturing economy; the second industrial revolution reshaped it into the service-based economy and during the IT revolution the world's economy became a knowledge-based economy. But in this advancement, if one had to sustain, he/she has to learn new skills and techniques. For example, when tractors and electric pumps were introduced in the farming sector, only those farmers could sustain well who trained themselves in accordance with modern technology and the rest failed.

Impact of Industry 4.0 Technologies on Human and the Workforce

A huge question arises when we think about artificially intelligent machines: “Will there be any job left for humans?” Actually, jobs are not dying but they are evolving. It is obvious that Industry 4.0 will replace some jobs, but is also creating new jobs like big data analytics, VR designer, blockchain auditor, social media reporter, drone operator space visit guide and many more. It is expected that high-skilled and low skill jobs will stay as before, but middle-tier jobs will be replaced by AI robots. This is known as job polarisation in the economic terms. If workers want to sustain then they have to learn new technological skills. Researchers of Oxford University have found that jobs which are related to manual dexterity, high cognitive skills and social skills are difficult to be computerized, and workers should focus on developing these skills. Doctors are going to be replaced by AI robots in future but if a doctor is trained with hospitality skills and caretaking skills, then he/she will be preferable over a robot-doctor. It means jobs are going to be knowledge-centric and talent centric. A construction worker has to learn something about electronics apart from construction skills if he/she wants to build an automated smart home where sensors are used. Hospitality, condolence, politeness these are some qualities which should be learned as these will value add our character.

In the recent times, human race are heading towards a Gig economy. Gig means not continuous. It is predicted that normal continuous jobs will be reduced and these will be replaced by contractual jobs. If there will be no permanent jobs then there will be no paid holidays and no insurance schemes and also no fixed income. It may create unemployment like situation but I think gradually it will become part of our habit. So the beginning period is going to be tough and it is also expected that the revolution may slow down the world economy for a small period. So we should get ready for it. It is often observed “lack of reciprocity between technology and skill results in social inequality”. Those who learn new skills time to time and update their work with new technology will succeed and for the rest, fourth industrial revolution will be a big challenge. Actually, it depends on you whether Industry 4.0 will be a boon or a curse.

Strategy and Organisation Industry 4.0

Offers an opportunity to develop new business models besides improving the current use of digital technologies. Present openness can be examined using the following criteria:

- Existing knowledge strategy implementation of Industry 4.0;
- Reviewing strategies through a system of indicators for better operations;
- Measure the enterprise investments relating to industry 4.0
- Understand the use of technology and innovation management;
- and - Understand the current state of research and development.

Smart Factory Smart factory is a production environment in which the production systems and logistic systems organise themselves without human intervention. It relies on CPS, which links the physical

and virtual worlds by communicating through IT infrastructure/IOT. The firm's progress in the area of smart factory can be measured using the following criteria:

Digital modelling - Equipment and component infrastructure - Data usage - IT systems/infrastructure Smart Operations The technical requirement in production and its planning which are necessary to realise the self-controlling work piece are known as smart operations (Grant Thornton and Confederation of Indian Industry, 2015). The industry 4.0 readiness for smart operations can be determined by: - Information sharing - Cloud usage - IT security - Autonomous processes Smart Products Smart products are the foundation of the "smart factory" and smart operations. It facilitates automated, flexible, and efficient production. Physical components are equipped with technical components such as sensors, RFID (radio-frequency identification), communication interface, etc., to collect data on their environment and their own status. Readiness in the area of smart products will be determined by looking at ITC add-on functionalities of products and the extent to which data from the usage phase is analysed (Federation of German Industries, 2015). Data Driven Services Companies that are graduating from selling products to providing solutions substantiate data driven services, which are used to align future business models to enhance the benefits to customers. After sales service, business is based on the evaluation and analysis of collected data and reliance on enterprise-wide integration. The physical products themselves must be equipped with physical IT so they can send, receive and process information needed for the operational processes. Readiness in this area can be determined using following criteria: - Availability of these services - Share of revenue derived - Share of data used Employees Employees help companies realise digital transformation plan. Readiness in this dimension can be determined by analysing employees' current skills and ability to acquire 11 new skills as employees are most affected by the changes in technology in an organisation; directly impacting their work environment. This requires them to acquire new skill to become well equipped in the digital work place (European Commission, 2017). This model will help assess the company's readiness on various parameters and analyse potential gaps which need to be addressed in order to adopt Industry 4.0 (Grant Thornton and Confederation of Indian Industry, 2015)

Economic Benefits Provided by Industry 4.0 Technologies

Industry 4.0 technologies will help in the economic regeneration by 2025 enabling enterprises to revamp India's financial status in the post-COVID era besides acting as game-changers. The role of corporations through AI is going to be key for the comeback of the Indian economy post-pandemic. New-age technologies such as block chain, big data analytics, Internet of things (IoT), advanced manufacturing, quantum computing and AI are set to give India a possibility to engrave itself a striking uniqueness as an "International

nucleus” in the near future. As AI functions for “digital inclusion” in India, it is expected to have a ripple impact on economic prosperity and growth. Analysts foresee that AI can help add up nearly \$957 billion to the Indian economy by 2035 and by 2025, AI can add over \$500 billion and nearly 20 million jobs to the Indian economy. The Indian government is also in the process of implementing a robust legal framework governing the data of the country apart from constructing a data-driven society through AI that presents endless prospects to empower people, enhance society and also boost the ease of doing business. India through its AI strategy, constituting an extensive pool of AI workforce and an emerging startup ecosystem, has a remarkable chance to be a prominent contributor to AI-driven resolutions that can further transform agriculture, healthcare, manufacturing, education and skilling thereby impacting the economy positively to a considerable extent. The adoption of AI in various sectors of the economy is seen to have produced favourable returns by lessening time and risk.

Government Initiatives to Speed up the Implementation of Industry 4.0

Recently, the Ministry of Commerce and Industry has set up a Taskforce on AI to kick-start the usage of AI for the country’s economic shift. Nonetheless, AI adoption has remained at a developing stage. Therefore, the Indian government should consider establishing a separate “Industry 4.0 Ministry” for coordinating all new age technology related activities. For instance, the United Arab Emirates (UAE) in 2017 became the first nation in the world to create the post of Minister of State for AI. Today, governments globally are also taking measures to be part of the AI-led digital economy, which is assessed to contribute roughly \$15.7 trillion to the global economy by 2030. Considering India’s present situation, the country is on the verge of a massive opportunity for both economic advancement and gain in the common wellbeing of its citizens. “Inclusive economic growth” can make India the best playground for creating world-class and state of the art technology solutions. For this, the government through its annual budget must consider allocating more for Research and Development (R&D) in various sectors and also establish R&D departments in various educational institutions and universities across the country. India through General-purpose technologies (GPTs) can also influence the whole economy where GPTs have the possibility to drastically transform societies through their effect on the already existing economic and social arrangements.

Growth Potential of Industry 4.0 in Indian Economy

The adoption of AI is not confined to businesses alone, while economies have also shifted their emphasis on creating their AI capacities as a tool to boost growth where developed nations are already in the race and India as an aspiring future superpower is set to enter the AI race. Amidst the accelerated adoption of AI-based technologies, India seems to stand at the ridge of Industry 4.0. Therefore, it would be a convenient shifting for India

to create its AI abilities despite the transnational digital divide broadening even more. From the first industrial revolution until the rise in the IT revolution, the world has stood to benefit more and as per experts, AI like any other new technology in the past will produce more jobs than it destroys. Still, it is seen that the “Initial adoption of technology” has barriers for developing economies where restricted access to Industry 4.0 can broaden the income inequality, and the transformation stage of adoption is presumably to replace some jobs before it produces more jobs. While the influence of AI on the gross domestic product (GDP) and productivity is impressive, studies have also demonstrated the harmful effect of AI on employment. McKinney Global Institute indicated that intelligent mechanisms and robots could eliminate nearly 30 per cent of the global human labour by 2030. Also, with the rise in unemployment, this transformation could become quite difficult though in the past, new technologies have demonstrated to be worthwhile in the long-term, the short-term failures cannot be justified. Nevertheless, India still lags on essential indicators of AI development despite possessing increased levels of entrepreneurship, robust corporations and a skilled pool. Therefore for the betterment of the essential AI indicators a balanced approach, innovative local solutions and top-down policy making should be put forth. Also, the enhanced role of government along with the private sector will be instrumental in directing AI to create equitable development. Furthermore, the continued innovations and collaborations by Public-Private Participation (PPP) are necessary to lessen the cost of modern technologies, which can help the larger population thereby driving the “digital revolution”. However, India should also mainly consider improving its “hardware sector” to help redress bottlenecks since the country still lags behind which is vital for the Indian economy.

Conclusion

As India is expected to have the world’s youngest population by 2030, the country will account for nearly 30 per cent of the global workforce. Therefore, AI in this way can dramatically boost the productivity of the average worker to match the level of today’s top performers. There is also a further need to promote “Scientific temperament” amongst the people in the country about the new age technologies besides taking the ethics and security of Industry 4.0 into consideration. In this context, the “National strategy for AI” in India has recently recommended establishing ethics councils for sector-specific concerning privacy, security, and ethics. Industry 4.0 can also help the country to achieve the Sustainable Development Goals (SDGs) that can drive the Indian economy further. Henceforth the Indian economy and society in the long run is definitely poised for a sea change and the valiant dream to make India a \$5 trillion economy by 2025 can be accomplished through the adoption of Industry 4.0.

DIGITAL MARKETING: AN OVERVIEW

Mr.P.Kumar

Research Scholar, Sasurie College of Arts and Science, Vijayamangalam

Dr.C.Yuvasubramanian

Associate Professor, Department of Commerce,
RD National College of Arts and Science, Erode

Abstract

Digital marketing is the use of digital technologies and platforms to promote products and services, as well as to connect with potential customers. It is an incredibly versatile and powerful tool that can be used in various ways to reach people worldwide. Digital marketing utilizes multiple digital technologies to deliver promotional messages, such as mobile phones, computers and other digital media and platforms. It can be used for B2B (Business to Business) and B2C (Business to Consumer) marketing, depending on the goal and objectives of the campaign. Digital marketing offers unique advantages such as greater reach, improved targeting, personalized messaging and better ROI (Return on Investment). It also allows businesses to stay up-to-date with marketing trends and technologies. With the right strategies and tactics, companies can leverage digital marketing to increase their visibility and reach a larger audience.

Keywords: Digital marketing involves marketing to consumers through digital channels, including websites, mobile devices and social media platforms.

Introduction

Digital is revolutionizing marketing by increasing use of automation and allied technologies. As consumers spend more and more time online, marketers are shifting their budgets to digital marketing. Customers are online means communication with them has to be online too. This is a salient feature of digital marketing. Some of the defining characteristics of digital marketing are;

Origin and Development of Digital Marketing

Digital marketing is also called 'Internet marketing' web marketing or online marketing digital marketing may be defined as the promotion of brands or products through different forms of electronic media. These forms of electronic media. These forms could be website, blogs, social media, mobile, applications, search, banner ads,

Traditional Vs Digital Marketing

Digital marketing is considerably different from traditional marketing in multiple ways. Traditional marketing is spray and pray, where in a marketer disseminates the message to a general audience and merely hopes that ultimately some viewers will buy the product. This lack of specificity leads to wastage. But digital marketing is able to target specific audiences that have interest in the product and hence are already in the market to

buy the product. There is a saying in mass media- 'Half of advertising is waste. But I don't know which half'. Digital marketing removes this limitation of mass media by eliminating wastage.

Digital marketing is about maximizing efficiency. Since it is possible to measure the performance of digital marketing in real time, there is ample scope to tweak the campaigns and improve ROI. Marketers can do the simple A/B testing to identify the most effective messages, images, ads, targeting and layout. In digital there is always scope for improvement.

Search Engine Advertising

Internet is the zero moment of truth. Consumers first search for products or services online before visiting the store. Hence, it is imperative for marketers to be present on search engines. Search engine marketing has two parts-search engine optimization (SEO) and search advertising.

Trends in Search Engine Advertising

This rising competition has led to the domain of search engine marketing to come up with the innovative process of creating ads more comprehensive and less complex. Following are some of the trends that are going to dominate the future.

Google Smart Campaigns

The advent of smart campaigns, creating a Google ad was a job that required countless factors that one had to control. Whether a beginner or an experienced professional, it was an overwhelming experience to control everything from bidding, keyword research, etc.

The scenario changed in 2019 when Google came up with 'smart campaigns'. But what are these smart campaigns?

In simple words, it is an updated version of Google ads and a semi-automated campaigns platform, helping marketers target their audience with minimum knowledge or experience. A smart campaign is different from regular campaigns in the following ways.

Simpler Dashboards and Reporters

What gives smart campaigns an edge over regular ad campaigns is the easy user interface. It gives you five metrics on which smart campaigns are based: impressions, clicks, amount spent, search phrases, call clicks and actions.

Optimises Campaigns

Instead of you handling the targeting, it is the Google algorithm that itself handles the advanced decisions based on your website and your Google My Business Profile. Having this profile is important to verify your local business on Google so that it is easily available on Google maps.

Automated Targeting

With smart campaigns, you don't have to meddle with the custom audiences again and again. The work of diverse targeting and remarketing is done by Google its self. If your business is located gurugram, it will target those potential customers in the area who have the maximum probability of purchasing.

This does not mean that you cannot manage are exclude keywords to be a part of your campaign Google provides an option.

Face Book Marketing

Face book is the highest used social media plat-from, having more then 2.38 billion active users. A repository of people and their choices, this plat-from is a boon to marketers.

Types of Adverts

Face book has different types of ads.

Page Post-Engagement Adverts –Boosted Posts

Page past – engagement adverts are used to increase the audience engagement on the post. This is done through the Boost past option on the page itself or through Ads manager or through face book business manager. Use of face book business manager is recommended as it provides advanced dashboard.

Page – Like Adverts

Page- Like Adverts is an advertisement to inorganically get more people like the fan page. This is especially useful because, in a way, it reduces the need of page post – engagement adverts.

Website Clicks and Conversions Adverts

Face book provides the option to run advertisements to redirect people to the company, s website. Whenever users click on the ad, they are redirected to he company website.

Basic Tools for Interest Targeting in Face Book

After choosing the correct audience, the next step knows the tools for interest targeting on Face book. Let us see the easy in which a digital marketer can target an audience based on their interest in Face book.

Pre-Fabricated Broad Interests

The marketer can choose the interest from the list in the detailed targeting field while targeting ads. Thought this may not be as effective as targeting specific pages and audience after research, it certainly gives a heads – up for the marketer.

Keywords and Exclude Function

Broader Keywords and Association Keyword can be used to target a specific audience based on their interest. Marketers can also exclude a certain section of people from the interest to narrow down the audience to a more refined and profitable one. For example, if a marketer wants to target people interested in fishing, he can target magazines such as outdoor life and then exclude interests such as hiking, hunting, etc.

Audience Insights

Digital marketers can use audience insights to know about potential keywords and to see how close the audience of a certain page is to the audience of their interest.

After entering interest and country, the digital marketer must click page likes and sort by affinity in the above window of audience insights to get results about the page that their audience likes and then target those pages. They can target pages having an affinity score of 5 and above.

The digital marketing can now enter those worlds in the following tab of audience insights and see if Facebook finds it. If the answer is positive, it means that the given words are potential keywords.

Taking Suggestions

Marketers can open the ads manager in Facebook and find suggestions for additional interests after entering an interest and clicking the suggestion button.

Why Am I Seeing this Ad?

A digital marketer can use the 'why am I seeing this tool?' to get ideas on how ads of competitors are targeting. Digital marketers who are new to the Facebook domain can take a leaf from their book and learn the tricks of the trade.

Tracking and Liking

Marketers track current customers on Facebook checking their profile and seeing the interests to get more ideas.

Marketers can like a fan page and get to know about more similar pages from the option of suggested pages. They can check their availability for targeting on audience insight so that they choose high profit yielding pages.

Fastest Growing Pages

They can also track the fastest growing pages in their domain and select lesser known pages since their competitors may not have targeted those pages. Marketers can take the help of third-party websites such as social bakers to know the fastest growing website on Facebook.

Conclusion

Digital marketing is an ever-evolving and dynamic field of marketing. As technology advances and marketing tools become more sophisticated, the need for digital marketers to stay ahead of the curve is essential. Understanding the importance of digital marketing, its various types and tools, as well as how to develop a successful digital marketing strategy, will help any business or organization reach their goals. Digital marketing is not just about creating content, but also about understanding the customer journey and developing a plan that will be effective in reaching the target audience. In order to be successful, digital marketers must remain agile and stay up to date with the latest trends and changes in the field.

ROLE OF MSMEs IN ECONOMIC DEVELOPMENT OF INDIA

Dr. S. Kaleeswari

Assistant Professor, Department of Commerce (SF)
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu

Dr. R. Amsaveni

Assistant Professor, Department of Commerce (Finance)
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu

Abstract

Micro, Small, and Medium Enterprises (MSMEs) have been monumental in accelerating the growth of the Indian economy. They not only play a cataclysmal role in generating employment opportunities at relatively low capital costs but also support industrialization and formalization of the economy. They are also instrumental in ensuring financial inclusion by tapering regional imbalances. MSMEs are veritably hailed as the backbone of the Indian economy as they contribute over 30% to the GDP. With almost 50% contribution to exports, they also form an integral part of the supply chain. The government of India plans to increase MSMEs output and export contribution to 50% and 75%, respectively, by 2024, in line with the aim to make India a \$5 trillion economy. In fact, MSME promotion has been prioritized by the government as part of NITI Aayog's Strategy for New India@75, with a special focus on ameliorating credit gaps and emboldening firms to embrace Industry 4.0 practices that enhance productivity. Thus, present paper will highlight the Role of MSMEs in Indian Economy.

Keywords: Micro, Small and Medium Enterprises, Production, Employment, poverty alleviation and rural development.

Introduction

MSMEs are the backbone of the Indian economy, contributing approximately 30% of the country's GDP (Gross Domestic Product), 45% of manufacturing output and providing employment to 11 crores of India's population. MSMEs, in layman's terms, refer to the enterprises that are engaged in the development and manufacturing of goods and services. The Micro, Small & Medium Enterprises Development (MSMED) Act, 2006 classifies MSMEs based on investment and turnover limits, which are enlisted below.

- i) **Micro Enterprise:** Investment in plant and machinery (P&M) or equipment does not exceed Rs. 1 crore, and turnover does not exceed Rs. 5 crores.
- ii) **Small Enterprise:** Investment in plant and machinery (P&M) or equipment does not exceed Rs. 10 crores, and turnover does not exceed Rs. 50 crores.
- iii) **Medium Enterprise:** Investment in plant and machinery (P&M) or equipment does not exceed Rs. 50 crores and turnover does not exceed Rs. 250 crores.

Existing MSME Classification			
Criteria : Investment in Plant & Machinery or Equipment			
Classification	Micro	Small	Medium
Mfg. Enterprises	Investment<Rs. 25 lac	Investment<Rs. 5 cr.	Investment <Rs. 10 cr.
Services Enterprise	Investment<Rs. 10 lac	Investment< Rs. 2 cr.	Investment<Rs. 5 cr.
Revised MSME Classification			
Composite Criteria : Investment And Annual Turnover			
Classification	Micro	Small	Medium
Manufacturing & Services	Investment< Rs. 1 cr. and Turnover < Rs.5 cr.	Investment< Rs. 10 cr. and Turnover < Rs.50 cr.	Investment< Rs. 20 cr. and Turnover < Rs.100 cr.

Objectives of the Study

The following are the study's aims:

1. To learn about the importance of micro, small, and medium-sized enterprises (MSME) in spurring economic development in India.
2. To understand the role of MSMEs in the Indian economy and their performance.

Review of Literature

Vasanth,Majumdar and Krishna (2012) in their paper have stated that since several successful models of the sustainable SME are gradually evolving, networks of SMEs would become essential for addressing the systemic problems under lying the industrial ecology, enterprise resilience, and global supply chain sustainability. Nihar Ranjan Jena and Lina R Thatte (2018) analyzed that the difference in performance of the MSME sector in different states existed due to the differences in presence or absence of adequate enabling factors like labour force, economic infrastructure, regulatory national level. Present research is mainly based on the framework, size of GSDP and density of MSME clusters etc. and found that Maharashtra was the leader in terms of performance of the MSME sector which was closely followed by Gujarat, Tamilnadu, Andhra Pradesh, Uttar Pradesh, West Bengal and Kerala.

Methodology

The study has a descriptive nature. Secondary data have been collected in order to prepare this document in a comprehensive manner. The data have been collected from publications in various journals, periodicals, conference papers and websites.

Highlights of new MSMEs

‘Atma Nirbhar Bharat Abhiyan’ or the Self-Reliant India Scheme of 2020 by the Government of India has given a new definition for MSMEs.

Following are a Few Highlighting Features of New MSMEs –

1. A provision of Collateral Free Loans to MSMEs
2. An arrangement of loans to MSMEs worth of Rs. 3 lac crores
3. An offer for MSMEs to get a Moratorium period of 12 months
4. Consideration of Manufacturing and Service MSMEs as the same entities
5. MSM is a granted a repayment Tenure of 48 months
6. MSMEs are assured a 100% Credit Guarantee
7. Reclassification of MSMEs will benefit approximately 45 Lac units.

Following are Some of the Essential Elements of MSMEs –

1. MSMEs work for the welfare of the workers and artisans. They help them by giving employment and by providing loans and other services.
2. MSMEs provide credit limit or funding support to banks.
3. They promote the development of entrepreneurship as well as up-gradation of skills by launching specialized training centers for the same.
4. They support the up-grading of developmental technology, infrastructure development, and the modernization of the sector as a whole
5. MSMEs are known to provide reasonable assistance for improved access to the domestic as well as export markets.
6. They also offer modern testing facilities and quality certification services.
7. Following the recent trends, MSMEs now support product development, design innovation, intervention, and packaging.

Overview of Govt. Initiatives on MSMEs

The Government of India has been proactive to ensure that all the benefit of these MSME schemes reaches to the MSMEs in time. The Union Budget 2023-24 focuses on ease of doing business for MSMEs.

The most important measures include:

- Emergency Credit Line Guarantee Scheme (ECLGS) has delivered additional credit to more than 130 lakh MSMEs. The ECLGS will be extended up to March 2023 expanding the guarantee cover by INR 50,000 Cr to a total cover of INR 5 Lakh Cr.
- INR 2 Lakh Cr additional credit for Micro and Small Enterprises to be facilitated under the Credit Guarantee Trust for Micro and Small Enterprises (CGTMSE).
- Raising and Accelerating MSME performance (RAMP) programme with an outlay of INR 6,000 Cr to be rolled out.
- INR 50,000 Cr equity infusion through MSME Self-Reliant India Fund.

Udyam, e-Shram, National Career Service (NCS) and Aatmanirbhar Skilled Employee Employer Mapping (ASEEM) portals will be interlinked. They will now serve as portals with live, organic databases, delivering G2C, B2C, and B2B services relating to credit facilitation, skilling, and recruitment.

Launch of Udyam Assist Platform (UAP) to bring the Informal Micro Enterprises (IMEs) under the formal ambit for availing the benefit under Priority Sector Lending (PSL).

MSMEs: The Growth Accelerators

MSMEs Trends

Traditionally, MSMEs were restricted to the khadi and coir industry. Since then, they have branched out to various industries. For instance, micro and small businesses mostly deal with food and agriculture, while medium-sized firms belong to the automotive, pharmaceutical, or chemical industries. As per the MSME ministry, India has an estimated 633.88 lakh unincorporated non-agricultural MSMEs, of which 31% are engaged in manufacturing, and 36% are in trading activities. Almost 51.25% of MSMEs are in rural areas, while the remaining 48.75% are situated in urban areas. The micro sector accounts for more than 99% of the total number of MSMEs.

MSMEs act as innovation stimulants, encouraging the diffusion of skills, and inculcation of an entrepreneurial culture. They serve as a source of healthy competition and boost economic dynamism. As catalysts for the socio-economic transformation of the country, MSMEs contribute to the economy in the ways mentioned below.

Sustainable Growth

MSMEs play a considerable role in the GDP growth story on account of their contribution to production and processing. Their growth results in an increase in value addition, final output, and profitability. Furthermore, they complement large industries by acting as ancillary units, thus bringing out integration benefits.

Their contribution is increased manifold when one accounts for the multiplier effect of the economic activity undertaken by their employees and suppliers. The CSO data states MSMEs' contribution to Gross Value Added (GVA) at 30% for FY 2019-20, with the manufacturing share standing at 36.9%. MSMEs are being supported by the government through 'Make in India' with the 'Zero Defect & Zero Effect' initiative to promote sustainability and higher quality standards.

Localized Employment Generation

MSMEs typically implement labor-intensive production processes, thereby generating massive employment opportunities. Their small scale restricts them to a particular area or region, which results in the local population being hired. These productive employment opportunities consequently result in increased generation of income and poverty alleviation.

As per the 73rd Round of NSS Report on Unincorporated Non-Agricultural Enterprises', MSMEs employ 11.10 crore workers. The micro sector accounts for over 97% of the employment share as it recruits almost 10.76 crore persons.

Mushrooming Trade and Export Earnings

MSMEs contributed 45.04% to overall exports during FY22. They are expected to benefit further from the 'China plus one' policy, which is being increasingly employed by MNCs looking to diversify their production. The government is targeting \$1 trillion worth of MSMEs exports by 2027. It has even introduced the 'Capacity Building of First-Time MSME Exporters' (CBFTE) scheme for MSMEs' export growth.

Contribution to Taxes

MSMEs contribute to the government's coffers through direct business taxes levied on their revenues and profits. They also pay indirect taxes, including GST, sales tax, excise duties, and cess. The tax provision requiring MSMEs to mandatorily register on the GST portal has even incentivized the formalization of the MSME sector.

Poverty Alleviation

The MSME sector plays a significant role in alleviating poverty and correcting regional imbalances. They ensure a more equitable distribution of income due to their localized nature of business and stave off any rural-urban migration. They also stimulate entrepreneurship, hence kickstarting investment and innovation cycles.

Financial Inclusion

Out of 11 crores employees in the MSME sector, almost 24% are women. Additionally, the socially backward groups, including SCs, STs, and OBCs, collectively own over 66% of

MSMEs, with OBCs accounting for almost half of the share. Almost 74% and 59% of the MSMEs are owned by the vulnerable sections in rural areas and urban areas, respectively.

Meeting SDG Goals

MSME development can assist in better meeting SDG goals, including SDG 1 (ending poverty), SDG 2 (ensuring zero hunger), SDG 3 (promoting good health), SDG 5 (gender equality), and SDG 8 (inclusive growth and decent work).

Concerns Over Finance

As can be seen from above, a robust MSME sector is acutely required for the Indian economy to grow. But these enterprises continue to suffer from the unavailability of timely capital. This lack of access to capital forces MSMEs to scale down or liquefy their business. As a result, there has been an upsurge in the number of financial institutions, including Protium, that are collaborating with MSMEs to provide prompt financing.

Findings

MSMEs address major challenges of the overall Indian economy also, that are unemployment and poverty. By reducing regional imbalances, giving employment to local people living in rural areas, they have done their part to knock-down disparities. Acting as a motivational factor for the existing MSMEs and as an aspiration factor for the potential MSMEs, increase in the income of people and the trend of promoting the interests of consumers, there will be various opportunities for MSMEs to play with in the domestic as well as export-market.

Conclusion

The role of MSME in economic development, particularly in rural and semi-urban areas cannot be underestimated. Despite the challenges, the resilience and contribution of MSME in Indian economy remain strong. Whether through policy support or Business Loans, facilitating the growth and sustainability of MSMEs is crucial for fostering inclusive and sustainable economic progress.

Abstract

India is the land of village and 70 per cent of India's population stays in rural India. Rural India has myriad problems such as dependency on Monsoon ,agriculture, jobs, poor wages, distress migration, malnutrition, poor implementation of government schemes and lack of access to quality education,transport and health-care facilities. As per rural Tradition , a woman's place has been at home and a decade ago, women employment outside the home was looked down upon by the society.Now situation has changed. Because to Empower rural women is became a necessity for the society to ensure sustainable development of the country Rural Women also started seeking employment outside their homes through gross economic necessity followed by the desire to raise economic status, to have an independent income, to make use of education, to pursue a career etc .A Rural woman is the nucleus of the family, particularly, in rural India. She not only collects water, fuelwood, fodder and food but also plays a significant role in preserving the culture, grooming the children and shaping their destiny.

Keywords: rural, women, empowerment, social, education, poverty. 9842862347

Introduction

“There is no tool for development more effective than the empowerment of women”

Women constitute half of total population in our country; women have significant priority in all development efforts. Allover the world women have been accepted as powerful agents of social change empowerment of women is one of the central issues in the process of development of country. In order to fill up to empowerment of women have been built for the betterment and prosperity of women, various programmers were launched by the government. voluntary agencies NGOs are activity involved in the process to improve and empower women socially, economically, and in political frontiers, the basic need for empowering women to ac quire basic skills and abilities in order to raising their status in the society. The educated women do not want to limit their lives in the four walls of the house. They demand equal respect from their partners. However, Indian women have to go a long way to achieve equal rights and position because traditions are deep in Indian society where the sociological set up has been a male dominated one. These women leaders are assertive, persuasive and willing to take risks. They managed to survive and succeed in this cut throat competition with their hard work. Diligence and perseverance. Ability to learn quickly from her abilities. Her persuasiveness, open style of problem

solving. Willingness to take risks and chances. Ability to motivate people, knowing how to win and lose gracefully is the strengths of the Indian women entrepreneurs.

Objectives of the Study

- To study role of rural women in economy.
- To review available government offerings with respect to women empowerment

Research Methodology

This paper is completely descriptive and analytical in nature ,the data used for research it is purely collected from secondary as per the requirement of paper.

Rural Women

Rural women are key agents for achieving the transformational economic, environmental and social changes required for sustainable development. But limited access to credit, health care and education are among the many challenges they face, which are further aggravated by the global food and economic crises and climate change. Empowering them is key not only to the well-being of individuals, families and rural communities, but also to overall economic productivity, given women's large presence in the agricultural workforce worldwide.

Women Empowerment in India

“A Guru who teaches Veda is 10 times superior to an ordinary teacher and the father is 100 times more than a teacher, but the Mother is 1000 times more superior to the father”.

The government of India passed the national policy for the empowerment of women which has the goal to bring the advancement, development and empowerment of women. The national mission for empowerment of women was launched by the government with the aim to strengthen overall processes that promote all round development of women. It has the mandate to strengthen the inter-sector convergence facilities the process of coordinating all the women's welfare and socio economic development programmers across ministers and departments. The Indian Constitution not only grants equality to women, but also empowers the State to adopt measures of positive discrimination in favour of women so that women can improve their livelihood. Within the framework of a democratic polity, our laws, development policies, Plans and Programmes have aimed at women's advancement in different spheres.

It has the mandate to strengthen the inter-sector convergence; facilitate the process of coordinating all the women's welfare and socio-economic development programmes across ministries and departments. This finely conveys that mere imparting literacy would not be sufficient; the women need vocational training or skills also to be able to stand on their feet and be the earning members of the family. Women have been taking increasing interest in

recent years in income generating activities, self-employment and entrepreneurship that also lead to property rights, political representation, social equality, personal right, family development, market development, community development and at last the nation development.

Financial Empowerment

India has taken a significant initiative in extending banking outreach to rural areas. The financial inclusion and accessibility to banking through Pradhan Mantri Jan-DhanYojana (PMJDY) has boosted confidence and prospects of rural women participation in economic activities. Jan Dhan campaign has ensured access to financial services, viz, banking/savings and deposit accounts, remittance, credit, insurance, pension in an affordable manner to rural women. These financial accessibility measures have ensured transparent mode of transaction and timely access to financial services through direct benefits transfer (DBT) facility provided under various Government of India schemes. Over 7 years of the implementation of this scheme, 43.04 Crore accounts has been opened in the country. Further, this constitute 55.47 percent (23.87 crore) women account holders and 66.69 percent (28.70 crore) are Jan Dhan accounts in rural and semi-urban areas (Ministry of Finance, 2021)

This financial inclusion has helped rural population to fight the crisis during COVID-19 pandemic outbreak with uninterrupted access to financial aid. Other initiatives like Pradhan Mantri MUDRA Yojana (PMMY), Stand-Up India Scheme, Prime Minister's Employment Generation Programme (PMEGP) are the additional supporting steps towards financial empowerment and entrepreneurship development of rural women. Over 9 crore women have benefitted jointly from Mudra and Stand-Up India (Ashish Kumar, 2019).

The Role of Skill Development in Women Empowerment

Skill development plays a critical role in women's empowerment. Empowering women through skills training and education can help to bridge the gender gap and promote gender equality. When women have access to education and skills training, they can enhance their personal and professional development, gain independence, and contribute positively to their families and communities. Women who receive skill development training are better equipped to secure higher-paying jobs, start their own businesses, and become financially independent. This, in turn, can lead to a greater sense of self-worth, self-esteem, and confidence, and ultimately, help to break down barriers to gender inequality

Moreover, skill development programs can provide women with a platform to connect with other women and build social networks, which can further enhance their economic and social empowerment. Through these networks, women can share knowledge,

experiences, and resources, and support each other in their personal and professional growth. Finally, skill development programs can also play a crucial role in promoting women's participation in decision-making processes at various levels. By providing women with the necessary skills and knowledge, they can become more active participants in their communities and contribute to the development of policies and programs that address their needs and aspirations.

In conclusion, skill development is a crucial component of women's empowerment. It can help women to gain economic independence, enhance their personal and professional growth, build social networks, and participate in decision-making processes. Therefore, governments, NGOs, and other stakeholders should prioritize investment in skill development programs that specifically target women to promote gender equality and women's empowerment.

Although women can constitute a massive chunk of India's workforce, the percentage rate of working women in the total labour force is declining. Further, a large number of women are employed in the informal sector. These jobs are often seasonal, have meagre wages and provide no security of wages or tenure. Thus a focus on development of skills in women would be crucial in motivating them to develop life skills that will lead to higher paying and good quality jobs, better livelihood, economic independence and the ability to earn for their families.

Rural women's restricted access to productive resources, educational levels and the pre-existing social norms concerning labour that is proper for women, tend to confine them to lower-paying, lower-status jobs with limited prospects for skill training and promotion, thus keeping them bound to their lower status. In many rural firms, widespread patterns of insecure employment and transitory and unstable contractual arrangements restrict employers from providing training to women. Rural women's vocational education and training are sometimes restricted to a small number of female-dominated areas, reinforcing their traditional roles and obligations. While such training improves their economic options, it limits their opportunities to gain from newer, non-traditional professions such as information and communication technology (ICT). Hence, proper skill training along with effective awareness generation campaigns become a prerequisite to bridge the gap between the options women have available to them and what they actually have the potential and inclination to take up.

Challenges Facing Women in India

Discrimination: Women in India often face discrimination in many areas of life, including in the home and in the workplace. This can make it difficult for them to access education and employment opportunities, and can lead to unequal treatment and lower pay.

Lack of access to education and employment: Women in India face significant barriers when it comes to accessing education and employment. For example, data from the World Bank shows that only around 50% of women in India participate in the labour force, compared to around 80% of men. This is due in part to cultural and social barriers that prevent women from participating in the workforce, as well as lack of access to education and training.

Lack of access to education and employment: Women in India face significant barriers when it comes to accessing education and employment. For example, data from the World Bank shows that only around 50% of women in India participate in the labour force, compared to around 80% of men. This is due in part to cultural and social barriers that prevent women from participating in the workforce, as well as lack of access to education and training.

Gender-based violence: is a major problem in India. The National Crime Records Bureau reports that in 2021, there were over 428,278 reported cases of violence against women in India. This included incidents of physical and sexual assault, as well as dowry-related violence and female infanticide. The statistics are alarming, with 31,677 reported rapes against women in 2021 alone.

Poverty: Many women in India live in poverty, particularly in rural areas. Poverty can make it difficult for women to access education and employment, and can lead to other challenges such as poor health and malnutrition.

Disparities between urban and rural areas: Women in rural areas of India often face greater challenges when it comes to empowerment. For example, they may have less access to education and health care, and may be more isolated and vulnerable to gender-based violence.

Conclusion

Rural women are major stakeholders in growth of agricultural sector for the New India. Acknowledging and mainstreaming of rural women via ensured access to resources, technology, education, health facilities, ownership rights and skill development will improve agriculture productivity and help in building an empowered nation.

Though they make half of the world population, women have remained as an oppressed group from the beginning of the history. Though some societies regard women as superior in the family and community, most of societies of the world have been treating women as second class citizens. Because of religious and cultural values and physical structure, women are forced to remain as dominated group around the globe, especially in the least developed nations. There is a solid evidence of discrimination of women worldwide. Even in the most developed nations which boast the best human rights situation in their country, women's participation in almost fields has been minimized

because of male dominance. In many countries, women are kept as 'prisoners' as they are not allowed to participate many social and political activities. In a stratified society like ours, access and empowerment of different section of the societies are becoming serious concerns and to address it planners, managers, social scientist all over the world have started deliberating and devising way out like anything. In this direction genders issues are dominating over other vulnerable issues like poverty, class conflicts, communities, ethnic issues etc. In ensuring an egalitarian development gender equity still remains as a pertinent question as it has been for the thousands of years of human civilization. Gender issues beyond its epistemological certainly imbibe other components like production relation, access to education, geographical distribution, occupational imperatives, marital system and even physical & physiological weaknesses.

FREELANCING - THE FUTURE OF GIG ECONOMY

Dr. Antony Mary Vinothini

Assistant Professor, The American College

Rajeswari M

PG Student, The American College

Abstract

In the gig economy, freelancing has emerged as a prominent and flexible work arrangement. This study explores the experiences and challenges faced by freelancers in India and around the world. It examines the motivations for choosing freelancing, the types of services offered, and the impact of the gig economy on individuals' careers and income stability. Additionally, the study investigates the role of digital platforms in connecting freelancers with clients and facilitating their work. By understanding the dynamics of freelancing in the gig economy, policymakers and stakeholders can strategize to support and empower freelancers, ensuring a sustainable and inclusive future of work.

Keywords: Gig economy, Freelancing

Introduction

"Discover the power of the gig economy, where you can be the boss of your own schedule and make a living doing what you love!"

The gig economy started to gain prominence in the early 2010s with the rise of platforms like Uber, Lyft, and Airbnb. The gig economy has evolved significantly over the years. These platforms provided opportunities for individuals to earn income by offering their services on a flexible basis. Since then, the gig economy has continued to grow, with the rise of technology and online platforms the gig economy has expanded. It has become a popular way for people to find work and for consumers to access services conveniently.

The gig economy refers to a work environment where individuals take on short-term, flexible jobs or "gigs" instead of traditional long-term employment. It's all about having the freedom to choose when and where you work. Individuals taking on "gigs" or temporary jobs, often facilitated through online platforms, to earn income. It offers mouldability the opportunity to work on other projects. Platforms like Uber, TaskRabbit, and Upwork have made it easier for people to find gigs and connect with clients. It's a modern way of working that provides flexibility and opportunities for individuals to showcase their skills and pursue their passions.

The concept of the gig economy is all about flexibility and independence in work. Instead of having a traditional job with a fixed schedule, people can take on short-term projects or "gigs" based on their skills and interests. It's like being your own boss. This allows individuals to have more control over their careers and pursue multiple opportunities simultaneously. It's a popular trend that offers flexibility and the chance to explore different work experiences.

These gigs can range from freelance work, such as graphic design or writing, ride-

sharing services like Uber and Lyft, to on-demand services like food delivery platforms like DoorDash and Uber Eats, freelance platforms like Fiverr, and home-sharing platforms like Airbnb. It's a way for individuals to have more control over their work and schedule. These platforms connect individuals looking for services with gig workers who can provide them on a flexible basis.

Review of Literature

Nithi Aayog report on 27th June 2022¹ released a report on India's booming gig platforms economy, which in turn cites the current report by international forums on India's gig economy. The economic survey 2020-21 has noted that India has all newly emerged as one of the world's largest countries for flexible-staffing (gig and platform work) the ILO's 2021 world employment and social outlook report states that the number of digital labour platforms has grown fivefold over the last decade.

It was estimated that 7.7 million workers were engaged in the Gig Economy, (2020-21) they constituted to around 1.5% of the total workforce in India, and it is expected to rise up to 23.5 million workers by 2029-30, 4.1% of total livelihood in India by then. Chapter 6 of the report specifically deals in great detail, with the social security policies that can be adapted to the Gig workers and presents global examples where countries such as the US, UK, Singapore, South Africa, Hong Kong have already made laws to confer such benefits.

In International social security association (2018)² Social security and the Gig Economy, this article by the International social security association discusses the challenges of providing social security for Gig workers and proposes potential solutions, such as the creation of a universal basic income or a portable benefits system.

National Law University Delhi (2020)³ A review of existing frameworks in India. This report by the national law university Delhi provides an overview of the legal framework governing Gig workers in India including the social security challenges faced by these workers.

International labour organization 2018⁴ This report by the international labour organization provides an overview of the social protection challenges faced by gig workers in India and proposes various policy options to address these challenges.

Centre for sustainable employment, Azim Premji university (2020) current scenario⁵ This report by the centre for sustainable employment at Azim Premji University provides an overview of the social security challenges faced by Gig workers in India and argues for the need for a separate law to address these challenges.

Freelancer

A freelancer is someone who works independently and offers their services to clients on a project for short-term basis. They are not officially connected with any organizations. They work on a project basis, collaborating with clients to deliver high-quality work.

Freelancers often manage their own business, handle client communication, and handle administrative tasks. Freelancers do a variety of things depending on their skills and expertise. They offer services such as graphic design, writing, web development, photography, consulting, and much more. Working as a freelancer in the digital space have the flexibility to choose their projects, set their rates, the ability to work remotely and work on their own terms. It can be a great way to pursue your passions, have a flexible schedule, and gain diverse work experiences. India has a thriving freelance community with many talented individuals offering their skills and services to both within the country and internationally.

Freelancers have a diverse range of experiences in the gig economy. Freelancers may face challenges such as managing their own workload, dealing with unpredictable income, and finding a work-life balance. Overall, freelancing can be a rewarding and fulfilling experience for those who thrive in an independent and dynamic work environment.

Freelancers have had a significant impact on the workforce and the economy. They bring unique skills and expertise to the table, offering specialized services to clients and businesses. Freelancers contribute to innovation and creativity by bringing fresh perspectives and diverse experiences to projects. They also play a crucial role in supporting the growth of small businesses and startups by providing cost-effective and flexible services. Additionally, freelancers contribute to economic growth by creating job opportunities for themselves and potentially hiring others as their businesses expand. Overall, freelancers have become an integral part of the modern workforce, driving innovation and providing valuable services to clients and businesses.

Importance of Freelancing

Freelancing is important because it provides individuals with the opportunity to have greater control over their work and lifestyle. It allows people to pursue their passions, set their own rates, and choose the projects they want to work on. The main importance are as follows;

1. **Flexibility:** Freelancers provide businesses with the flexibility to hire talent on a project-by-project basis, allowing them to scale their workforce as needed.
2. **Specialized skills:** Freelancers often have specialized skills and expertise in specific areas, providing businesses with access to a diverse range of talent.
3. **Cost-effectiveness:** Hiring freelancers can be more cost-effective for businesses, as they don't have to provide benefits or pay for overhead expenses.
4. **Innovation and fresh perspectives:** Freelancers bring fresh perspectives and innovative ideas to projects, helping businesses stay competitive.
5. **Increased productivity:** Freelancers can help businesses meet tight deadlines or handle overflow work, increasing overall productivity.
6. **Collaboration opportunities:** Freelancers can collaborate with in-house teams, bringing their unique skills and knowledge to the table.

7. Market responsiveness: Freelancers can quickly adapt to changing market demands and provide specialized services that businesses may not have in-house.
8. Entrepreneurial spirit: Freelancers often have an entrepreneurial mind set, bringing a high level of motivation and dedication to their work.

Types

There are various types of freelancers based on their skills and areas of expertise. Some common types include graphic designers, writers, web developers, social media managers, virtual assistants, photographers, content creators, copywriters, marketers, consultants, translators, and video editors.

Advantages

1. Flexibility: You have the freedom to choose when, where, and how you work.
2. Independence: You can be your own boss and have control over your career.
3. Variety: Freelancing allows you to work on different projects and explore various industries.
4. Work-life balance: You can create a schedule that suits your lifestyle and personal commitments.
5. Skill development: Freelancing exposes you to new challenges and helps you grow your skills.
6. Higher earning potential: As a freelancer, you have the opportunity to set your own rates and potentially earn more than in a traditional job.
7. Networking: Freelancing allows you to connect with clients and professionals in your field, expanding your professional network.
8. Personal fulfilment: Freelancers often find satisfaction in doing work they are passionate about and having a sense of ownership over their projects.

Disadvantages

Some common constraints in freelancing includes;

1. Inconsistent income: Freelancers may experience fluctuations in their earnings due to the nature of project-based work.
2. Client acquisition: Finding and securing new clients can be a constant challenge for freelancers.
3. Business management: Freelancers are responsible for managing their own finances, contracts, and administrative tasks.
4. Isolation: Working independently can sometimes lead to feelings of isolation and a lack of social interaction.
5. Lack of benefits: Freelancers typically do not have access to benefits such as healthcare, retirement plans, or paid time off.
6. Job security: Unlike traditional employment, freelancers do not have the same level of job security and may face periods of uncertainty.

Digital Platforms in GIG

The growth of freelancers in digital platforms has been incredible. In the gig economy, digital platforms play a significant role in connecting freelancers with clients. With the rise of platforms like upwork, fiverr and freelancer, more and more people embracing freelance work and finding opportunities to showcase their skills and expertise. The gig platforms, provide a space where individuals can showcase their skills and offer their services to a global audience. They make it easier for freelancers to find gigs, negotiate contracts, and receive payments securely. Digital platforms also offer various categories of work, such as writing, design, programming, and marketing, allowing freelancers to find opportunities that align with their expertise. It's a convenient and efficient way for freelancers to connect with clients and for clients to access a diverse pool of talent.

The gig economy has truly flourished in the digital realm providing freelancers with the flexibility and freedom to work on their own terms. It is an exciting for freelancers in the digitalspace.

In recent years, the gig economy has expanded. In pandemic hugely compounded its growth, which forced the people to stay in home. The following are gig economy's increasing prevalence:

- The number of global gig workers is anticipated to rise to 78 million in 2023
- 50% of freelancers are skilled workers in fields like IT, programming, counselling, and marketing
- 36% of freelancers freelance as a full-time job
- 86% of freelancers think the best days for freelancing are still to come
- By the end of 2023, 52% of workers are predicted to have spent some of their careers as independent workers.

With the continued growth of the gig economy and advancements in technology, freelancers will have even more opportunities to thrive. The demand for flexible and specialized talent is expected to increase, opening up new avenues for freelancers to showcase their skills and expertise. As remote work becomes more common, freelancers can work with clients from all over the world, expanding their reach and potential client base. However, it's important for freelancers to adapt to changing market trends, upskill themselves, and stay updated with technology to remain competitive. Overall, the future looks bright for freelancers as they continue to shape the way we work.

Conclusion

This article examines a important roles of freelancers in gig economy and the highlights of various factors affecting the growth of gig economy. While the gig economy is growing quickly in India, the unorganised sector remains a primary source of employment for a significant part of the population. In the gig economy, freelancers are the driving force, offering their specialized skills and services on a project basis. This flexible and independent work arrangement allows individuals in India and around the world to

pursue their passions, have control over their careers, and work remotely. However, it's important to recognize the challenges that freelancers face, such as income instability and lack of benefits. Policymakers and stakeholders should understand the dynamics of the gig economy and the experiences of freelancers to create a supportive environment that addresses these challenges. The gig economy has proven to be favourable for both employees and employers. The gig workers heavily influenced by demand, it made all gig employees vulnerable to the fluctuations of the economy. This inconsistency and lack of stability has created a insecurity for many gig workers, especially those who are heavily reliant on gigs from a particular industry as a form of employment or are unable or unwilling to undertake tasks in other industry. By doing so, we can ensure that freelancers continue to thrive and contribute to the growth of the gig economy.

SUSTAINABLE BUSINESS PRACTICES IN START-UPS

Dr.P.Archanaa

*Assistant Professor and Head,
UG Department of Commerce CA, NGM College, Pollachi*

Abstract

Emerging and running companies are looking for ways to thrive in a competitive environment with innovative business models. Recent trends such as circular economy, fair trade and sharing economy are some of the many approaches that address this issue. In fact, most research on the topic of sustainable business models is still exploratory and does not fully acknowledge these emerging approaches, whose definitions, boundaries, and defining characteristics are still somewhat vague. Many studies seek to contribute to the understanding of the inner entrepreneurial dynamics of innovative sustainable business models. Few studies focus on the fashion business, a resource-intensive industry in which opportunities to reduce environmental impacts and to innovate business models abound.

Keywords: *Startups, Green, Business models, etc.,*

Introduction

Start-ups are an increasingly important phenomenon in the business industry. Many such companies have been created over the past few years, illustrating the interest in and growth of such entrepreneurship. Emerging companies are more likely to be founded on sustainable business models. In many cases, such models incorporate the principles of the circular economy. The 2030 Sustainable Development Goals (SDGs) are a unique collection of seventeen time-bound goals that strive to balance the three sustainability objectives of economic, social, and environmental sustainability. Sustainability has become a catalyst for growth across all sectors of the economy. The financial industry, in particular, has been scrutinized for its contribution to environmental sustainability. The emerging concept of a green startup has gained momentum because of the rising awareness campaigns for sustainable development. Also, after looking at the impact of lockdowns because of Covid-19, this topic has gained the attention of many researchers. Looking at the need and urgency to introduce sustainable development for a nation's progress, all major nations have laid out policies in terms of green finance to elevate sustainable entrepreneurship. Since it is an emerging topic, nothing much has been researched. Hence, there is a research gap, particularly for the Indian economy, which has become one of the most politically strong nations among the world's major forces. This paper is an attempt to fill the same. Hence, this topic is researched to reckon the present status of green startups in India. The nation has recently shown significant growth in the number of unicorns, a jump in export value and other economic aspects related to business growth. Moreover, it endeavours to

assess and compare India's performance in sustainable entrepreneurship with the country which has performed better in terms of green startups.

Sustainable Practices

- a. **Green Finance** – The financial activity that is designed to improve the environment is green finance. A variety of loans, financing instruments and investments are included in this program in order to promote the development of environmentally friendly projects or to reduce the climatic effect of more conventional ones.
- b. **Green Startup** – As the name implies, a green (startup) firm provides goods and services that aid in creating a more sustainable environment. In a sustainable world, current demands are addressed without jeopardizing the capacities of future generations to satisfy theirs. Because of this, a green company is often known as a long-term company. It can also be described as a corporation that does not harm the environment, economy or local community in any way whatsoever.
- c. **Sustainable Entrepreneurship** – Sustainable entrepreneurs are people or firms that use their primary operations to contribute to sustainable development. A sustainable entrepreneur develops and implements sustainable ideas for the mass market, which benefits the greater community as a whole. When it comes to creating new goods, services, industrial methods, techniques and organizational models that positively influence the environment and society, sustainable entrepreneurship is opportunity oriented.

Reasons for Green Economy

- The shift to a green economy includes the efficient and effective use of natural resources, energy and new technology, resulting in economic development and employment creation. Adopting a green economic model may be successful if there is a global commitment and a strategically established framework for global investment that includes developing and developed nations. It is also crucial for the successful expansion of green finance.
- The green economy is fueled by specialized policies aimed at eliminating or lowering ecologically detrimental subsidies, developing a market for ecosystem products and services and enabling institutions via the provision of market-based incentives, opportunities and enabling institutions.
- Green finance is motivated by the desire to move toward a green economy. As defined by the G20 research group, green finance is “the financing of initiatives that generate environmental advantages within the framework of ecologically sustainable development”. These environmental benefits include reductions in air, water and land pollution, reductions in greenhouse gas (GHG) emissions, increased energy efficiency while maximizing the use of available natural resources and

mitigation of and adaptation to climate change, as well as their associated benefits. It is a stepping stone toward resolving many environmental concerns and bringing economies together on a sustainable path. If India wants to focus on making its economy green, it must focus on promoting green finance for developmental activities. Glancing at rising environmental issues, that country must take steps to scale up sustainable development initiatives.

- Indian entrepreneurs are expected to raise \$42 billion in 2021, up from \$11.5 billion the previous year. Additionally, the Indian government has designated 14,000 new enterprises for recognition in 2021. India now has 83 unicorns with a combined worth of \$277 billion as of January 2022. Delhi-NCR has surpassed Bangalore as India's new startup hub. Delhi-NCR added almost 5,000 recognized startups in the previous two years, while Bangalore added 4,514. However, Maharashtra has the most recognized startups, with 11,308 in total. In 2021, demand for office space in the Delhi-NCR area increased by 50% year on year, mainly owing to high absorption by startups and technology enterprises. In 2021, the office space sector will absorb 6.3 million square feet, while startups will absorb 1 million square feet

Conclusion

The study reviewed the use of disruptive innovation and the circularity of resources in the business models of start-ups. The results show that start-ups are innovating in terms of the circularity of resources through a range of partially implemented initiatives. These initiatives allow start-ups to manage their data and microdata, create artefact integration systems, generate connectivity, accelerate digitisation, stimulate partnerships and cooperation between parties in the supply chain, generate new market opportunities and develop efficient transition systems for the circularity of resources. Thus, there is ample evidence that disruptive innovation supports the circular economy in start-ups.

AN ANALYTICAL STUDY ON IMPACT OF MAKE IN INDIA ON MSME'S IN KERALA

Aswanth M.R

Assistant Professor Darunnujoom College of Arts and Science

Perambra Muneer M

Research Scholar Bharathidasan University Tiruchirappalli

Rohith M.K

Assistant Professor MHES College of Science and Technology Vatakara

Abstract

The "Make in India" initiative, launched by the Government of India on 1st September 2014, has had a significant impact on Micro, Small, and Medium Enterprises (MSMEs) in Kerala. This study is an attempt to analyse the impact of Make in India on MSMEs in the state. The "Make in India" campaign aimed to promote domestic manufacturing, boost job creation, and enhance India's position in the global manufacturing landscape. In Kerala, a state known for its strong service sector, the impact on MSMEs has been multi-faceted. With the help of the Make in India programme, MSMEs in Kerala have gained better access to national and international markets due to the promotion of domestically manufactured goods. This has facilitated export-oriented growth for several enterprises. To compete in the manufacturing sector, many MSMEs in Kerala have upgraded their technology and improved the skills of their workforce. This has led to increased productivity and competitiveness.

The government's incentives for MSMEs under the "Make in India" program, such as credit support and tax benefits, have encouraged entrepreneurship and investment in the state. MSMEs in traditional sectors like handicrafts and coir have explored diversification into manufacturing, aligning with the campaign's objectives. In conclusion, the "Make in India" initiative has had a positive impact on MSMEs in Kerala by enhancing market access, technology adoption, and investment. However, addressing infrastructure challenges and promoting sustainable manufacturing practices are crucial for ensuring the long-term growth of MSMEs in the state.

Keywords: *Make in India, MSMEs, Sustainability*

Introduction

In recent years, India has witnessed a transformative economic initiative known as "Make in India," aimed at fostering indigenous manufacturing and promoting self-reliance. This ambitious program, launched by the Government of India, seeks to position the nation as a global manufacturing hub and reduce its dependence on imported goods. While the impact of Make in India has been widely debated on a national scale, its implications at the regional level, particularly in the state of Kerala, have garnered limited attention.

Kerala, often celebrated for its unique socio-economic model, has a substantial presence of Micro, Small, and Medium Enterprises (MSMEs) that play a pivotal role in the state's economy. These enterprises are not only vital contributors to employment generation but also significant contributors to the state's GDP. As Make in India unfolds, it is imperative to investigate how this nationwide initiative resonates within the context of Kerala's MSME sector.

This paper aims to delve into the multifaceted dimensions of the Make in India campaign and its influence on MSMEs in Kerala. By analysing the policies, challenges, and opportunities faced by these enterprises in the wake of this initiative, we seek to provide a comprehensive understanding of the impact on the state's economic landscape. Furthermore, we will explore the strategies adopted by Kerala's MSMEs to align with the goals of Make in India while preserving their unique characteristics and addressing regional peculiarities.

Through this study, we aim to shed light on whether make in India serves as a catalyst for the growth and sustainability of MSMEs in Kerala or if it presents formidable hurdles that need to be surmounted. By examining this crucial nexus between national policy and regional economic dynamics, we can glean insights that may guide policymakers, entrepreneurs, and stakeholders in fostering economic development and self-reliance within the state.

Why Make in India?

Job Creation: By promoting manufacturing, the initiative aims to create job opportunities for the growing workforce in India. This helps in addressing unemployment and underemployment issues.

Foreign Direct Investment (FDI): "Make in India" encourages foreign companies to invest in India and establish manufacturing units. This leads to an influx of foreign capital, technology, and expertise, which can benefit the Indian economy.

Export Promotion: The initiative focuses on enhancing the export of Indian-made products. By producing goods of high quality and competitiveness, India can tap into global markets and improve its trade balance.

Ease of Doing Business: "Make in India" includes efforts to simplify and streamline business regulations and processes. This creates a more business-friendly environment, making it easier for both domestic and foreign companies to operate in India.

Skill Development: To support the manufacturing sector's growth, there's an emphasis on skill development programs to equip the workforce with the necessary skills and training required for modern manufacturing practices.

Infrastructure Development: Investments are made in infrastructure development, such as industrial corridors, logistics, and transportation networks, to facilitate manufacturing activities.

Diversification of Industries: "Make in India" encourages diversification across various industries, including electronics, automobiles, aerospace, and more, reducing the country's reliance on a few sectors.

Global Competitiveness: By improving the quality and competitiveness of domestically manufactured products, India can compete on a global scale, reducing the need for imports.

Sustainable Growth: There's also an emphasis on sustainable and eco-friendly manufacturing practices to ensure that growth is environmentally responsible.

Overall, the "Make in India" initiative aims to transform India into a global manufacturing and investment destination, fostering economic growth and self-reliance.

Entrepreneurship as a Base for "Make in India" - An Opportunity

Within the 'Make in India' framework, being implemented on a campaign mode, skills form a strategic priority. The success of 'Make in India' depends largely on the entrepreneurship base of the country. Therefore, it is important to analyse and establish the relation between skills, achievement motivation, entrepreneurship and start up.

Objectives of the Scheme

- (i) To support the sustainability and growth of MSEs by addressing common issues such as improvement of technology, skills and quality, market access, access to capital, etc.

- (ii) To build capacity of MSEs for common supportive action through formation of self-help groups, consortia, upgradation of associations, etc.
- (iii) To create/upgrade infrastructural facilities in the new/existing industrial areas/ clusters of MSEs.
- (iv) To set up common facility centres (for testing, training centre, raw material depot, effluent treatment, complementing production processes, etc). Many MSMEs are incompetent in collaborating with the right partner nor are unaware of the opportunities in this scheme. Though there are several agencies in relation to building collaborative competencies the reach to the real beneficiary clients is limited to the working capacity because of non-availability of exact information. Fear to collaborate in harnessing huge opportunities are also making a dent in the initiative of MSME clusters.

Rank	District	No .of Newly registered units in 2017-2018	Total Investment(In Lakh)	Total Employment Generated
1.	Palakkad	1907	13285.01	6391
2.	Eranakulam	1895	14180.13	6328
3.	Thiruvanthapuram	1656	9012.25	5559
4.	Thrissur	1836	11989.15	5202
5.	Malapuram	1243	12083.02	4520
Least performing districts in terms of Employment generated				
1.	Idukki	248	1300.05	692
2.	Wayanadu	302	1543.10	786
3.	Kasargod	347	2906.12	1200

Source: *Economic Review 2017 By State Planning Board, Government of Kerala*

In terms of employment generation, districts such as palakkad, Eranakulam, Thiruvanthapuram, malapuram are showing highest ranking among the 14 districts in Kerala. Idukki, Wayanadu, Kasargod districts are being least performing districts in Kerala in MSME sector in terms of employment generation and number of units registered every year.

Objective of the Study

1. To analyse the impact of make in India programme on Kerala MSMEs.
2. To study the opportunity and challenges of the scheme in Kerala.
3. To Evaluate the awareness among entrepreneurs on make in India.

Methodology of the Study

The study is descriptive in nature and is based on secondary data taken from various government reports published by the government of India and other published reports.

Data Analysis and Interpretation

This graph shows the combination of MSE in Kerala in different sector such as manufacturing and services in micro sector 31518 are from manufacture and 15292 are from service sector it indicates higher denomination in manufacturing sector.

Table 2: MSME units registered in Kerala under each subsector

Subsector	No. of registered MSME units between 2015 and 2019
Agro and Food Based	11286
Textile and Garments	8308
General/Mechanical Light Engineering	7764
Wood	3461
Cement	1668
Printing and Allied	1590
Paper Products	783
Service	15138
Information Technology	1338

In this table shows MSME units registered in Kerala under each subsector. Largest leading sub sector is service 15138 units' and food based MSME units between 2015 and 2019 is 11286 units. Subsequently follows textile and garments, mechanical light engineering, wood industries, cement industries, printing and allied industries, information technology and paper products.

Suggestion and Recommendation

Research and Data Analysis: Conduct comprehensive research and data analysis to assess the actual impact of the "Make in India" initiative on MSMEs in Kerala. Gather data on employment generation, investment, and production in the state.

Sector-wise Analysis: Analyse the impact on specific sectors where MSMEs are prominent in Kerala, such as tourism, handicrafts, and agro-processing. Identify key challenges and opportunities within each sector.

Policy Alignment: Evaluate the alignment of Kerala's state policies with the goals of the "Make in India" initiative. Suggest adjustments to state policies to better support MSMEs.

Infrastructure Enhancement: Assess the state's infrastructure and identify areas where improvements can enhance the competitiveness of MSMEs. This may include transportation, power supply, and technology access.

Skill Development: Promote skill development programs tailored to the needs of MSMEs in Kerala. Ensure that the workforce is equipped with the necessary skills to thrive in the changing manufacturing landscape.

Access to Finance: Facilitate easier access to finance for MSMEs through government schemes or partnerships with financial institutions. This can help them invest in modern technology and expand their operations.

Export Promotion: Encourage MSMEs in Kerala to explore export opportunities by providing them with information, training, and support for international market entry.

Cluster Development: Promote the formation of industry clusters in Kerala to foster collaboration among MSMEs. Clusters can lead to economies of scale and shared resources.

Innovation and Technology Adoption: Encourage MSMEs to embrace innovation and modern technology by offering incentives and support for research and development.

Market Access: Facilitate better market access for MSMEs, both domestically and internationally, by reducing trade barriers and streamlining regulations.

Monitoring and Evaluation: Continuously monitor the impact of these recommendations and adjust policies as needed. Regular evaluations will help fine-tune strategies.

Promotion of Brand Kerala: Promote a unique "Made in Kerala" brand to differentiate products from the state and attract consumers who value local craftsmanship and quality.

Conclusion

The Make in India is hopefully accepted as an initiative which addresses not the macro level issues but the engineered and choreographed efforts of diverse sectors and its regulators could alleviate several challenges that might would not have ever addressed in a country like India otherwise. The initiative could help capitalize on the opportunities and has the potential to reduce the existing challenges.

A STUDY ON THE IMPACT OF OCEN ON THE FINANCIAL INCLUSION FOR MSMEs

Ms. S.R. Bakyashri

*Assistant Professor, Department of Commerce with Computer Application
PSG College of Arts and Science, Coimbatore*

Mrs. Christina Jeyadevi J

*Assistant Professor, Department of Commerce with Computer Application
PSG College of Arts and Science, Coimbatore*

Abstract

MSME sector plays a predominant role in the development of the economy. Around 33% of GDP of the country is been contributed by the MSME sector. Moreover, it provides more than 100 million employment opportunities. Yet, they face hindrance in availing credit facilities due to lack of collateral and credit history and they also undergo huge formalities like producing data and documents, document verification, physical verification, interest rate finalisation based on subsidy eligibility. In order to remove these discrepancies incurred by the MSMEs, the Global Fintech Fest held in the year 2020 has introduced OCEN - Open Credit Enablement Network which was effective from the year 2023. This paper analysis the various prospects of OCEN and the impact of it on the enhancement of credit availability for the MSME sector. The paper also studies the impact of OCEN in the financial inclusion for the MSMEs.

Keywords: MSME, OCEN, credit, financial inclusion

Introduction

India lacks formal, affordable credit access. The current rails for the flow of capital to the untapped market are broken, which has prevented the massive market opportunity from being realized. They are damaged so that lenders can contact these potential borrowers and identify those who are creditworthy. High borrower acquisition costs and time-consuming custom tie-ups with loan originators are just two of the many reasons.

The marketplaces' attempts to match customers with lenders are broken. Both the manual processes and the custom integrations are expensive and time-consuming. Due to implementation difficulties, it takes a long time for loans to be deposited into customers' accounts, which limits their ability to offer specialized financial products quickly. Among the many duties handled by a lender today are sourcing, identity verification, underwriting, disbursement, recollections, and dispute management. In the past, the most successful lenders had to be exceptional at each of these abilities in order to increase their profit margins and serve the expanding markets.

OCEN

At the Global Fintech festival in July 2020, Infosys CEO Nandan Nilekani introduced the idea of OCEN. He mentioned the Open Credit Enablement Network (OCEN), which will make microcredit available to a previously underserved MSME sector by digitally connecting borrowers and lenders through marketplaces.

In a nutshell, OCEN is a protocol for the software infrastructure that connects all parties involved, such as lenders, loan service providers (LSPs), and borrowers. The LSPs that enable this interaction are typically eCommerce platforms or marketplaces.

OCEN is a project to decouple lending and enable the formation of specialized entities, each of which specializes in a specific task. So, in the future, we see lending as a collaboration between a number of companies, each concentrating on sourcing /distribution, identity verification, underwriting, capital arrangement, recollections, etc. Now, organizations like marketplaces that have strong business relationships with their clients (individuals or businesses) can integrate credit offerings into their applications. Previously known as "Loan Service Providers," these organizations are now known as Loan Agents (LAs).

Role of the Participants

Lender

The regulated entity that develops and is the owner of credit products is the lender. To serve the Borrower, they collaborate with other members of a Product Network. The loan agent collaborates with the lenders to develop the product while being aware of the borrowers' credit needs.

Loan Agent

The borrower's agent who will assist the borrower in selecting the best loan offer. For assisting the borrower in choosing the best loan, the borrower's agent will charge a fee. The term "loan agent" is broader and includes both Borrower Agent (BA) and Lender Service Provider (LSP), encompassing both the established DLG model known as LSP and the developing model in which BA serves as the borrower agent.

Derived Data Partner (DDP)

A network collaborator known as a "derived data provider" contributes to the network by giving the lender extra data to feed into their underwriting engine.

Collections Partner (CP)

A collaborator chosen by the Loan Agent (LA) to assist in the collection process is referred to as a Collections Partner. The lender is still free to choose the Collections Partner or to carry on with their current collection practices.

Disbursement Partner (DP)

Support for purpose-controlled products is the responsibility of a disbursement partner (DP). Within the OCEN journey, this partner will set up integration with suppliers, retrieve their catalog, and facilitate easy direct payments to suppliers.

KYC Partner

A coworker chosen by the Loan Agent (LA) is a KYC partner. For Assisted KYC or any other technology-related specialization offered on the network, this partner can be enlisted. The lender still has the option of using the KYC partner in the network or sticking with their current practices.

Implementation of OCEN

- Modifying the OCEN protocol for the business procedures and technology stack of digital platforms and lenders
- Creating a digital acquisition channel that includes the entire loan application process.
- Establishing partnerships in the fintech space with a variety of lenders, platforms, and the credit enablement ecosystem (eNACH, PAN verification, etc.)
- Creating underwriting models based on alternative data and cash flow.
- creating a business rules layer and analytics layer jointly with both parties.
- Creating a layer for borrower interaction and servicing in cooperation with both parties.
- Creating a layer for payment reconciliation

Financial Inclusion

The International Finance Corporation estimates that India's MSME market has a staggering \$400 billion credit gap. In India, the flow of credit to MSMEs has always been disrupted. Finding creditworthy borrowers is expensive for financial institutions due to the lack of formal data to underwrite MSMEs.

MSMEs also have very specific credit requirements. They frequently require smaller loan amounts, quicker repayment schedules, and easy access to funds. Banks can't afford to make small ticket size loans and typically take a long time to process their applications because underwriting MSMEs is complicated and expensive.

This system is improved by OCEN and Embedded Finance. Financial services can be provided by organizations that are close to borrowers. They could provide useful platform information for underwriting.

Benefits of OCEN for MSMEs

New Credit Products

Digital platforms that have a thorough understanding of their customers are able to perform what is known as specialized origination thanks to OCEN's facilitation of more

straightforward and efficient partnerships. By working with lenders who serve the interests of all parties (especially borrowers), they can offer in-context, tailored credit products with advantageous terms.

Financial Inclusion

Indian MSMEs (middle and small-sized enterprises) number 63 million. However, 11% of them qualify for loans from traditional lenders.

The others rely on loan sharks and non-banking financial institutions (NBFIs), who charge exorbitant interest rates. The remaining 89% of borrowers will be able to obtain credit with OCEN at a lower APR. Additionally, this will advance the objective of the unbanked population's financial inclusion.

Data Equals Loan

Small businesses are disregarded by lenders because they have no credit history. The widespread adoption of technology has made it easier for marketplaces and eCommerce platforms to access massive amounts of customer data.

Using this data, lenders can create strategies that are specific to the requirements of small businesses. For instance, an LSP may now check a merchant's GST data to assess their dependability and decide whether to lend to them.

Customised Credit

Small businesses have unique credit requirements. They require a brief, small loan with a quick repayment option. The conventional lenders, who preferred high-value clients, saw this as being unprofitable. With the arrival of OCEN, this will alter.

MSMEs would be able to get low-interest loans for small and large purchases. Additionally, rather than the borrower's balance sheet, LSPs and lenders will base their loan offers on the cash flow of the borrower. So, it will bring about much-needed change for the previously underserved MSME sector.

Daily Credit Availability

One cannot completely rule out intraday credit with OCEN in addition to the small loan. For instance, OCEN will soon make it possible for a Kirana store owner or another individual to obtain a one-day loan. It suggests that anyone who can repay a loan by the end of the day will be able to do so the following morning.

Low-Interest Rates

Lenders will be able to reduce their operational and loan processing expenses. Additionally, because the entire financing cycle will be completed online, LSPs and lenders will save time and money. They will be able to provide credit to a larger number of customers at lower interest rates as a result.

Growth for Everyone

LSPs, lenders, and borrowers will all cooperate to advance their own interests and the health of the economy. LSPs will nudge lenders to give their clients specialized credit options.

These tailored loans will be available to borrowers, who can use them to grow their businesses. Everyone will profit in the long run from this cash inflow.

Quick Loan Disbursement

Currently, banks and NBFCs process loan applications in about seven days. OCEN will be used to manage the entire loan cycle online, from loan origination through verification and approval.

The stakeholders will also exchange consent-based information about the borrower. It will speed up turnaround because this data has already been independently verified. As a result, the borrower will receive the loan quickly.

Security

The efficient exchange of data between all parties is the foundation of OCEN. The customer has given this transaction their full consent. The information will be protected by stakeholders. There are consequently fewer opportunities for data leakage.

Anytime a Credit

Once OCEN is operational, MSMEs will be able to apply for a loan in the morning and receive credit in the evening. Their loan application won't be delayed because of a weekend or holiday. They are free to apply for a loan at any time, any day, and will receive the money as quickly as possible.

Conclusion

OCEN has the potential to transform MSME lending in India if properly implemented. By utilizing the technological prowess of numerous stakeholders, including lenders, LSPs, and TSPs, the digital infrastructure that will be developed using the framework can facilitate better service for the MSME borrower. It will give MSMEs the freedom of choice along with a safe and convenient way to obtain formal credit. The loan application process will be made easier and quicker, and credit underwriting will be based on aspects like a company's ongoing cash flow rather than on antiquated techniques like credit history analysis. MSME and the nation's GDP will gain significantly over time from the implementation of OCEN.

MSMEs - A WAY TO POVERTY ALLEVIATION AND RURAL DEVELOPMENT

Bincymol K K

Assistant Professor, PG Department of Commerce
Mahe Cooperarive College of Higher Education and Technology Palloor, Mahe

Abstract

The Micro, Small and Medium Enterprises play a pivotal role in the economy of a country. They have emerged as key drivers of innovation, growth and employment. The rural development and poverty alleviation are the major challenges which hinder the growth of the country. In developing countries like India MSMEs are a major source of generating employment, creation of wealth and alleviating poverty. Each and every part of the country is responsible for creating nation's economic growth and prosperity. MSMEs paved the way to all categories of the people to engage in economic activities and thereby increase their standard of living. Thus, it helps to lift the weight of unemployment in the country. By generating employment and creating business opportunities MSMEs provide better earnings that translates to better quality of life of the rural people. As the earning capacity of the rural population increases it leads to the economic development of the region too. It also corrects the regional imbalances and disparities too. By increasing their buying capacity, they can live better and it also broadens their dreams and ambitions. This also enable them to expand their business to other parts of the world. Even though MSMEs are facing challenges like lack of finance, lack of technical knowhow etc. they are contributing a good share to the country's economy. If the government take supporting measures for strengthening MSMEs definitely the country's economy will grow. The present study is purely theoretical and based on secondary information only.

Keywords: MSMEs, Rural development, Poverty alleviation, Employment opportunities, Regional imbalances

Introduction

The MSME sector is a key driver responsible for driving the country's economic growth. Micro, Small, and Medium Enterprises (MSMEs) account for a significant portion of India's GDP and employ several thousands.

In India, there are approximately 63 million MSMEs, which contribute nearly 30% percent to the country's GDP. This underscores the importance of the MSME sector in the Indian economy and highlights the need for support.

Latest MSME Classification System in India 2023

The latest MSME classification system is based on business turnover, unlike the previous system, which was based on plant and machinery or equipment investment. Therefore, the classification of MSMEs has been revised to increase the turnover limit for each category and reduce the compliance burden of MSMEs.

Based on their annual turnover, the new classification system has 4 categories - micro, small, medium, and enterprises.

MSME Category	Turnover Limit (Annual)
Micro-Enterprise	Up to ₹5 Crores
Small Enterprise	Up to ₹50 Crores
Medium Enterprise	Up to ₹250 Crores

It is worth noting that the turnover limit for micro-enterprises has been increased by almost 5 times, while the limit for small enterprises has been increased by 10 times under the new MSME classification system. This allows for more flexibility and inclusion of businesses, promoting ease of business and encouraging growth and expansion of MSMEs in India.

Features of the New MSME Classification

The new system replaces the earlier system, which was based on the investment in plant and machinery, with the turnover-based criterion. Here are some of the key features of the MSME classification system.

- **Turnover-based Criterion:** Under the new system, businesses with an annual turnover of up to ₹250 Crores are classified as MSMEs. This change in criteria allows for more flexibility and inclusion of more businesses, which will benefit the economy as a whole.
- **Ease of Doing Business:** The new MSME classification system is designed to promote ease of doing business by simplifying the registration process and reducing the compliance burden. The new system also eliminates the need for businesses to provide multiple registrations.
- **Unique Identification Number:** This unique number will help access various government schemes and benefits and provide a single reference point for all regulatory and compliance purposes.
- **Incentives and Subsidies:** The government has announced several measures to support MSMEs, such as reducing the cost of credit, providing subsidies for technology upgradation, and offering tax incentives.

Role of New MSME Classification in India

The new Micro, Small and Medium Enterprises (MSME) classifications are designed to boost small businesses and entrepreneurs, the backbone of the economy.

Here are some of how the new MSME classification system is expected to promote entrepreneurship and self-employment in India.

Promoting Local Manufacturing: The new classification of the MSME system helps achieve the goal of Atmanirbhar Bharat (Self-reliant India). This is achieved by promoting local manufacturing and reducing dependence on imports. The government encourages them to produce goods locally and reduce imports by providing incentives and subsidies to MSMEs.

Realising the Potential of MSMEs: The new classification system helps realise the potential of MSMEs by providing them with easier access to credit, technology upgradation, and other forms of government support.

Access to Skilled Manpower: The government has launched several initiatives to address the skill gap in the MSME sector. These include the Skill India Mission, the Apprenticeship Act, and the Pradhan Mantri Kaushal Vikas Yojana, which aim to provide youth and workers with skill training and employment opportunities.

Government Support for MSMEs: The government has launched several schemes and initiatives to improve access to finance, technology, and a skilled workforce for small businesses. These include Credit Guarantee Scheme, Prime Minister's Employment Generation Programme, Technology Upgradation Programme, Skill India Mission and many more.

Role of MSMEs in Indian Economy

Since its formation, the MSME segment has proven to be a highly dynamic Indian economy sector. MSMEs produce and manufacture a variety of products for both domestic as well as international markets. They have helped promote the growth and development of khadi, village, and coir industries. They have collaborated and worked with the concerned ministries, state governments, and stakeholders towards the upbringing of rural areas.

MSMEs have played an essential role in providing employment opportunities in rural areas. They have helped in the industrialization of these areas with a low capital cost compared to the large industries. Acting as a complementary unit to large sectors, the MSME sector has enormously contributed to its socio-economic development.

MSMEs also contribute and play an essential role in the country's development in different areas like the requirement of low investment, flexibility in operations, mobility through the locations, low rate of imports, and a high contribution to domestic production.

With the capability and capacity to develop appropriate local technology, provide fierce competition in domestic and international markets, technology-savvy industries, a contribution towards creating defence materials, and generating new entrepreneurs by providing knowledge, training, and skill up-gradation through specialized training centres.

Poverty Alleviation through MSMEs

- MSMEs create employment that lift people out of poverty. The latest global estimate suggests that 11 percent of the world's population, or 783 million people, lived below the extreme poverty threshold in 2013.⁵ Most of the poor in developing countries are not employed or do not earn enough to lift themselves out of poverty. Job creation in the private sector has proven to be a main driver in the fight against poverty. Over the past 30 years, the private sector has contributed to a sharp

decline in the share of the population in the developing world living below the poverty line from 52 percent to 22 percent

- MSMEs contribute significantly to the employment creation process of the private sector. In emerging markets, 4 out of 5 new positions in the formal sector were created by MSMEs, which is about 90 percent of total employment.
- Informal enterprises engage poor and marginalized populations. In lower income economies, a large share of MSMEs are informal enterprises and serve as a source of livelihood for the base of the pyramid population, consisting of 4 billion people that earn less than US \$3000 a year.
- It is estimated that more than 70 percent of the workforce in developing countries operates in the informal economy either through self-employment or from work in enterprises that are not legally registered businesses
- Given the flexibility of the informal economy, it provides opportunities for the poor, including women and youth, to earn money. According to the International Labour Organization (ILO), the majority of those employed in the informal economy lack social protection, rights at work and decent working conditions.
- Informal enterprises offer an avenue for interventions to formalize MSMEs and to provide access to social protection for those that they employ. Given the scale of informal employment, particularly in developing economies, support in formalizing MSMEs would be a step to achieving Goal 1. Individual MSMEs have the potential to adopt actions in their business practices to contribute to the goal. They can set and enforce strict policies and practices that do not discriminate against the poor
- MSMEs can also recruit, train, and employ local community members, including those living in poverty, and integrate them into the MSME value chain.

New business models/solutions of MSMEs that will help achieve the SDGs. The ambitious push for eliminating poverty through the SDGs offers a new range of business models and opportunities that are being tapped by the private sector, including MSMEs. Although the purchasing power of the poor is limited, the cumulative effect is large. According to a report by the World Resources Institute (WRI), the base of the pyramid has substantial UNDESA – Report on MSMEs and the Sustainable Development Goals 5 purchasing power, constituting a \$5 trillion global consumer market.

They offer a market that is increasingly being connected by mobile phones. The scale of the market and mobile phone penetration provides opportunities for market-based solutions in delivering services that will lift people out of poverty. There are encouraging entrepreneurial ventures, for example, providing affordable water filters or home treatment systems so that households can purify water for themselves, offering low-cost solar-powered lighting systems that can provide a few hours of light in the evening.

Rural Development through MSMEs

Micro, small and medium enterprises (MSMEs) are said to be the backbone of the Indian economy. Rightly so, the contribution of Indian MSMEs to Gross Value Added (GVA) in the country's GDP in FY20 stood at 30% while the sector's contribution in manufacturing segment revolved around 37% in the same year. In short, MSMEs contribution in the growth of Indian economy, especially the role of MSME in rural development has been unmatched in last few year.

When it comes to MSME and rural development, there is the valuable role of small-scale industries in rural India, and the contribution of the cottage industry. Traditional businesses such as cotton weaving, silk weaving, handicrafts, etc., have been instrumental in the growth of the region, by ways of eradicating poverty, generating employment, contributing towards economic growth and so on.

How do MSMEs Promote Rural Development?

MSMEs have a big role to play in rural development. They help rural population and facilitate development in various ways. Here is how:

Employment Generation

MSMEs in rural areas create employment opportunities for youth in the nearby villages. Apart from direct employment, the business also creates opportunities for other businesses indirectly.

For example, a small-scale food manufacturing unit in the village generates employment for workers in the factory. Additionally, it also creates opportunities for allied sectors such as local raw material suppliers, machinery and tool manufacturers, logistics and transport service providers, and so on. As the rural population gets employment and business, it helps in eradicating poverty in the region. In other words, MSME sector acts as tool for poverty eradication.

Government schemes, like the ASPIRE scheme of 2015, is centred around supporting entrepreneurship in agro-based businesses in rural India for employment generation and economic development.

Making Workforce Employable

Many a times, MSMEs provide initial training to enable the local workforce to undertake specific jobs. This gives local people an opportunity to learn new skills and be relevant with current time and age.

For example, the local workforce may not have the skills required to work on a new high-tech machine. However, with training they can be taught and acquire new skills and be ready for this job and similar opportunities. Also, it helps the workforce to be more employable in the future and grow in their careers.

Economic Development of the Rural Area

By generating employment and creating business opportunities, the role of small-scale industries in rural India development is enormous. They provide better earnings that translates to better quality of life for the rural population. As the buying capacity of the rural population increases, it leads to the economic development of the region too.

Getting Recognition on the Global Map

The MSME sector, especially the cottage industry like saree weaving, carpet weaving etc., are classic examples of family run businesses (or generational businesses).

Generally, the entire family is engaged in the business and in some cases, the whole village. Through the arts, the artisans' creativity gets exposure in the national and global markets. Many traditional sarees such as Banaras silk from Uttar Pradesh, Kanchipuram silk sarees from Tamil Nadu, Paithani from Maharashtra, etc., are known for delicate work. They are not only popular in the country but are also exported globally.

Generating Foreign Exchange

As mentioned, many MSMEs in the rural sector are engaged in exports and generate foreign exchange, in turn helping the national economy to grow. For example, India is the 5th largest exporter of leather goods and accessories, according to Invest India. Leather exports reached \$4.03 billion in FY 2020-21. Each exporting MSME has contributed to reach this milestone.

Self-reliance or Aatmairbharata

As the MSMEs in the rural areas mostly source raw materials and workforce locally, they are aligned with the central government's mission of self-reliant India or Aatmanirbhar Bharat.

How Can Your Business Help Rural Development?

Source locally: Procurement strategy of sourcing locally can help your business to be cost effective. Additionally, you generate business for another local/rural business and help it grow too.

Hire local workforce: You can hire local talent. If the need be, they can undergo training to acquire new skills for the job. Many large companies having manufacturing units in the rural region have a policy of acquiring a certain percentage of talent from the local area.

Collaborate with rural businesses: Instead of competition, forge collaborations with alike or complementing businesses in the region. This will help you as well as other businesses grow and expand.

A Look at the Schemes & Programmes Initiated by the Ministry of Micro, Small & Medium Enterprises

To foster the growth and development of the MSME sector, the **Ministry of Micro, Small and Medium Enterprises** has been implementing various schemes and programmes **encompassing a wide range of areas**, including:

- Credit support;
- New enterprise development;
- Formalisation;
- Technological assistance;
- Infrastructure development;
- Skill development and training; and,
- Market assistance to MSMEs.

The **Schemes/Programmes Initiated & Implemented** by the Ministry Inter Alia Include:

- Prime Minister's Employment Generation Programme (PMEGP);
- Credit Guarantee Scheme for Micro and Small enterprises (CGTMSE);
- Micro and Small Enterprises-Cluster Development Programme (MSE-CDP);
- Entrepreneurship Skill Development Programme (ESDP), and,
- Procurement and Marketing Support scheme (PMS) and National SC/ST Hub (NSSH)

The government has recently taken several steps to provide support to the MSME sector to bolster its growth, including:

1. Rs. 5 lakh crore Emergency Credit Line Guarantee Scheme;
2. Rs. 50,000 crore equity infusion through the MSME Self-Reliant India Fund;
3. The inclusion of Retail and Wholesale trades as MSMEs.
4. An online portal **Champions**, a platform for resolution, redressal and remedies, a facility provided by the Ministry of Micro, Small and Medium Enterprises for ensuring a speedy, convenient, and effective redressal of MSMEs grievances,
5. Non-tax benefits for upward changes in MSME status; and,
6. The RAMP, (Raising and Accelerating MSME Performance Program)
7. The **launch of the Udyam Assist Platform (UAP) on January 11, 2023**, has been another significant measure taken by the government, which aims to bring **Informal Micro Enterprises (IMEs) under the formal ambit, enabling them to avail benefits under Priority Sector Lending (PSL).**

The contribution of micro, small and medium enterprises to India's economic growth is well- documented. A report by consultancy **KPMG**, a multinational professional services network and **CII**, the Confederation of Indian Industry, states that:

- The MSMEs account for nearly 30% of India's GDP and 45% of her exports;
- Play a crucial role in socio-economic development;
- Are providing employment to 110 million people;
- Are playing a major role reducing inequalities;

- Playing an important role in rectifying regional imbalances;
- Providing low-cost raw material to support large industries and allied sectors; and,
- Bridging the rural-urban divide.

Conclusion

MSMEs play a significant role to the growth of developing countries like India. It brings out many changes to the rural folk and helps them to improve fast. By getting engaged in various activities they can earn more and this will pave the way for poverty eradication. Unemployment is the major evil prevailing in our country. Creation of employment opportunities is one of the goals of MSMEs. Enhancing production in rural areas and reducing regional imbalances make the rural region to grow fast. The various support and assistance from the part of government will make it easier to achieve the goal of MSMEs.

ROLE OF MSME'S IN SUSTAINABLE DEVELOPMENT

Dr. P. Bruntha

Associate Professor & Head, PG & Research Department of Commerce

Ms. S. Subaithani

PhD Research Scholar, NGM College, Pollachi, Coimbatore

Abstract

In terms of economic growth, job creation, and poverty elevation, reduction in inequality, Micro, Small, and Medium Enterprises are widely recognised as key contributors to preserving sustainable development. MSMEs, often known as "growth engines," are critical for developing nations' economies, such as India's, since they have the ability to create a large number of jobs. This sector has piqued policymakers' interest since it is labour-intensive and has the ability to alleviate regional disparity, guarantee financial autonomy for rural people, and aid in long-term development. Micro, Small, and Medium Enterprises (MSME) in India are widely regarded as critical to the country's economic progress in the twenty-first century. The present paper will concentrate on the MSME market situation and trends in India. This essay examines the MSME sector's present state, its performance, and the challenges it faces in the Indian economy.

Keywords: MSME, growth, Sustainable, government, challenges

Introduction

In India, MSMEs contribute nearly 8% of the country's GDP, around 45% of the manufacturing output, and approximately 40% of the country's exports. It won't be wrong to refer them as the 'Backbone of the country.'

The Government of India has introduced **MSME or Micro, Small, and Medium Enterprises** in agreement with Micro, Small and Medium Enterprises Development (MSMED) Act of 2006. These enterprises primarily engaged in the production, manufacturing, processing, or preservation of goods and commodities.

MSMEs are an important sector for the Indian economy and have contributed immensely to the country's socio-economic development. It not only generates employment opportunities but also works hand-in-hand towards the development of the nation's backward and rural areas.

Review of Literature

Ch Hema Venkata Siva Sree(2019)in her paper entitled, "MSMEs in India growth and challenges" has made a study to know the current status and growth of MSMEs in India and to study the impact of MSMEs on employment generation in India. The study had found that growth of MSMEs in rural areas i.e. 51% are more when compared to urban areas ie, 49%.

Meera Omkar Shetty & Ganesh Bhat S. in their paper entitled, “A Performance analysis of Indian MSMEs” has made a study to know the role of MSMEs in the Indian economy, and two, to do the Strengths, Weaknesses, Opportunities, and Challenges (SWOC) analysis, for understanding the internal and external factors which influence the MSMEs. The study found that The study observes that there is parity between rural and urban areas. At present, MSMEs provide 110 million employments, out of which 76% are male and 24% female based on gender.

Dr. P. Mariselvam(2021) in his paper entitled “Role and Performance of MSME Sector in India” has made an study to assess the performance of MSME sectors in India and to analyse the role of MSME Enterprises in rural and urban areas. The findings of the study states that MSME sector has been creating 11.10 core jobs (360.41 lakh in Manufacturing, 0.07 lakh in Non-captive Electricity Generation and Transmission, 387.18 lakh in Trade and 362.82 lakh in Other Services) in the rural and the urban areas across the country.

Subramanian et al (2019) has pointed that the importance of MSME has been recognized in recent years in both developed and developing countries for its significant contribution in gratifying various socio-economic objectives such as higher growth of employment, output, promotion of exports and fostering entrepreneurship. They play a crucial role in the industrial development of any country.

Objectives

The primary objective of the research is,

- To study the role of MSME in the development of the Indian economy.
- To study the recent developments in MSME sector.

Role of MSMEs in Indian Economy

Since its formation, the MSME segment has proven to be a highly dynamic Indian economy sector. MSMEs produce and manufacture a variety of products for both domestic as well as international markets. They have helped promote the growth and development of khadi, village, and coir industries. They have collaborated and worked with the concerned ministries, state governments, and stakeholders towards the upbringing of rural areas.

MSMEs have played an essential role in providing employment opportunities in rural areas. They have helped in the industrialization of these areas with a low capital cost compared to the large industries. Acting as a complementary unit to large sectors, the MSME sector has enormously contributed to its socio-economic development.

MSMEs also contribute and play an essential role in the country's development in different areas like the requirement of low investment, flexibility in operations, mobility through the locations, low rate of imports, and a high contribution to domestic production.

With the capability and capacity to develop appropriate local technology, provide fierce competition in domestic and international markets, technology-savvy industries, a contribution towards creating defense materials, and generating new entrepreneurs by providing knowledge, training, and skill up-gradation through specialized training centers.

Classification of enterprises into micro, small and medium enterprises (in Rs)

Kind of enterprise	Act of 2006		Bill of 2018
	Manufacturing	Services	All enterprises
	Investment towards plant & machinery	Investment towards equipment	Annual Turnover
Micro	25 lacs	10 lacs	5 Cr
Small	25 lacs to 5 Cr	10 lacs to 2 Cr	5 Cr to 75 Cr
Medium	5 Cr to 10 Cr	2 Cr to 5 Cr	75 Cr to 250 Cr

Highlights of New MSMEs

‘AtmaNirbhar Bharat Abhiyan’ or the Self-Reliant India Scheme of 2020 by the Government of India has given a new definition for MSMEs.

Following are A Few Highlighting Features of New MSMEs -

1. A provision of Collateral Free Loans to MSMEs
2. An arrangement of loans to MSMEs worth of Rs. 3 lac crores
3. An offer for MSMEs to get a Moratorium period of 12 months
4. Consideration of Manufacturing and Service MSMEs as the same entities
5. MSM is a granted a repayment Tenure of 48 months
6. MSMEs are assured a 100% Credit Guarantee
7. Reclassification of MSMEs will benefit approximately 45 Lac units.

Recent Development in MSME Sector

Continued Digital Adoption

Digitalisation is the transition to using digital technologies to modify an existing business model and it can offer fresh prospects for generating revenue and value-producing opportunities. The COVID-19 pandemic facilitated a significant shift in the MSME ecosystem from the traditional approach to the digital medium. CRISIL reports that 53% of SMEs and 47% of micro-enterprises in India adopted digital sales platforms as against the pre-COVID figure of 29%.

MSMEs in various sectors can accelerate their digitalisation journey to improve efficiency, productivity, and skills. In 2023, this momentum will continue, with many

businesses projected to adopt the digital model amidst the Government's Digital India mission. The Textile Sector and Gems & Jewellery sector are among the leading MSME sectors to embrace the 'big digital shift'. A survey by the Endurance International Group states that 50% of them incorporated technologies like WhatsApp and Video Conferencing tools for daily business operations.

Formalisation of More MSMEs

Formalisation - or legal registration of businesses - can help unrecognised or uncategorised MSME businesses to become a recognised entity and therefore gain access to resources such as government schemes, business credits, and tax benefits.

UDYAM REGISTRATION Portal is targeted to reach a 5 crore registration count in 2023, nearly 4x estimated growth in 12 months. This will open the gates to formal and affordable credit to registered MSMEs," Mr. Swain added. According to him, the Government is also working to connect every district of the country by setting up enterprise development and technology centres. He also stated that, with the slew of policy interventions, the MSME sector has the potential to become the largest employment-generating sector by 2035.

Increasing the Number of Exports from India

India's trade and external sector has a significant impact on the GDP growth and expansion in per capita income. India is among the world's largest producers of milk, pulses and jute and the second largest producer of rice, wheat, fruit and cotton, groundnut, sugar, and vegetables. It is also one of the leading producers of spices, fish, poultry, livestock and plantation crops. Most of these are run in small production units.

Reducing Dependency on Imports

MSMEs can contribute greatly towards reducing imports and enhancing exports. In 2023 and the coming years, the Government is on a mission to implement Make in India more actively to reduce importing goods and products from foreign countries. The Make in India programme aims at utilising the existing Indian talent base, creating additional employment opportunities and empowering the secondary and tertiary sectors. The programme also aims at improving India's rank on the Ease of Doing Business index by eliminating unnecessary laws and regulations. It also makes the bureaucratic processes easier, making the Government more transparent, responsive and accountable.

Increased Consumer Demand in India

Consumer demand depends on buying power, representing an individual or household's ability to make purchases. It's all about the consumer's behaviour on how much money they'll put back into the economy when spending on shopping, restaurants,

amusement parks, etc. If prices decline, consumers have greater buying power, whereas when inflation occurs, prices of goods and services go up, and consumers have less buying power. Consumer demand will continue to drive India's growth story in 2023. A report from Fitch Solutions states that consumer spending in India will experience solid growth over 2023 with buying power of household expected to grow by 7.1% in 2023 compared year on year to 2022.

Conclusion

The MSME sector in India is growing at good pace & even is providing employment opportunities to masses of the people. The contribution of Manufacturing Sector as well as Service Sector of MSMEs is significant to the total GDP of the Country. The Govt. of India has taken number of initiatives & is in the process of gearing up the growth of Micro, Small & Medium Enterprises in the country. The Govt. of India so making number of tie-ups & agreements with the NGOs, Governmental agencies as well as with the Universities for making it sure that proper implementation of Governmental policies for setting up of MSMEs is there & entrepreneurs are properly guided for starting their ventures. But still MSMEs are facing many challenges.

MSMEs can avail of various schemes or benefits aimed at financial assistance, technology upgradation and assistance, infrastructure development, skill development and training, enhancing competitiveness and market assistance of MSMEs. The tech adoption and increasing raw material prices both of which require MSMEs to invest more in the businesses. Also, the need to ramp up domestic production to meet the increasing market demand and economic growth plans (\$5 trillion), leads MSMEs to enhance their production.

A STUDY ON AWARENESS TOWARDS MSME SERVICES PROVIDED TO THE ENTREPRENEURS - WITH SPECIAL REFERENCE TO POLLACHI TALUK

Dr.M.Deepa

Assistant Professor, Department of Commerce CA
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

In today business world MSME provide number benefits to the entrepreneurs especially for new generation entrepreneurs. The main objectives of research are to study the awareness about MSME among the entrepreneurs. Most of the entrepreneurs are having awareness about the schemes availed among the entrepreneurs. There are number of schemes which is provided by to the entrepreneurs like seedmoney support and startups etc. This study will helps to create awareness about financial support and various schemes availed for new generated as well as existing entrepreneurs. The main objective of the study is to identify the awareness towards schemes availed to new generation as well as existing entrepreneurs. The statistical tools used in this study are simple percentage and chi-square test. The main findings of the study are: most of the respondents are male and majority of the respondents are married and most of respondents are aware about the schemes availed from the government. It is suggested that the government may conduct various programmes about the various schemes provided by the government.

Introduction

Entrepreneurship is an important driver for creating employment opportunities, boosting innovations, and thereby fueling growth. The government of India has taken a large number of initiatives since 2014 which are changing the mind-set of people to foster the spirit of entrepreneurship. The earlier challenges in terms of access to credit, market linkages, space and network, and mentors are being made available through programmes like Start-up India; Ease of Doing Business; Stand Up India, MUDRA, and Atal Innovation Mission. An increasing number of tech-based start-ups in the area of Journal of Entrepreneurship and Management Submitted, e-commerce/m-commerce, financial services, ITES, etc., are emerging, making India the third largest start-up ecosystem in the world. For instance, the Byju's Learning App started in July 2015 as a start-up has become a unicorn within 3 years of its launch. First, according to Maresova (2010), there are cultural factors which discourage too many people from starting a business. Hence, there is a need to develop a more entrepreneurial culture, starting with young people, and from school education as stated by Medarova et al., (2012). Also, there is too often a stigma attached to failure. Second, the administrative requirements are often a major factor in putting entrepreneurs off as opined by Hajek et al., (2013). Third, entrepreneurs need to find it easier to attract investors as put forward by Puzova and Maresova (2014).

Review of Literature

Dalbery (2011) highlighted that MSMEs are often thwarted by an inefficacy to attain financial capital for expansion and growth and advance intercessions to cover the gap in financing. The author suggests charting out roles of contribution for multilateral actors and the public.

Nagaraja and Murthy (2010) suggested that the government of India has to establish a board for signifying procurement policy and development frameworks in order to make the sector a significant and a vibrant player in the development of the Indian economy.

Ardichvili et al. (2003) theorize the identification process of opportunity. The entrepreneur's social networks, personality traits, and prior knowledge as precedents of entrepreneurial alertness to business opportunities are identified. Entrepreneurial alertness is an important prerequisite for the success of identification of the opportunity; development, recognition, and evaluation. A theoretical model, a set of propositions, laws of interaction, and suggestions for further research are provided.

Gupta (1998) highlighted that in India government bodies/organizations like SIDBI, IDBI, and NABARD, etc., are providing both financial and non-financial support required by the smallscale cottage and industries. These organizations are found to have been playing very significant role in the development of small-scale and cottage industries, in particular, through financial assistance and consultancy services.

Objectives of the Study

Objectives of the study is:

1. To identify the awareness towards various Services offered by MSME to entrepreneurs.

Scope of the Study

This study will cover the awareness about the various schemes availed for new generated as well as existing entrepreneurs provided by the government.

Methodology

For the purpose of the study both primary and secondary data are utilized. Primary data have been collected from entrepreneurs by distributing questionnaire to them.

Secondary data have been collected from journals, magazines, newspaper, books and websites.

Convenient sampling method has been adopted for collecting primary data.

Of the 110 questionnaire distributed to entrepreneurs, 100 were found complete in all respect and they are considered for the study.

Regarding period of the study, it has been carried out during the financial year 2022 - 2023.

Limitations of the Study

The data being primary nature, limitations applicable to primary data are equally applicable to present study. The sample is limited to entrepreneurs. The study is confined to Pollachi taluk and hence utmost care should be taken before generalizing the results.

Profile of E-Entrepreneurs

The demographic profile of entrepreneurs include variables such as age, gender, marital status, educational qualification, annual turnover, age of business, size of business, nature of business, nature of e-business and experience in e-business. It is presented in table 1.1.

Table 1.1 Profile of E-Entrepreneurs

Particulars	Numbers	Percentage
Age		
Up to 40 years	40	40.00
41 to 46 years	50	50.00
Above 46 years	10	10.00
Gender		
Male	60	60.00
Female	40	40.00
Marital status		
Married	60	60
Unmarried	40	40
Educational qualification		
Diploma	30	30.00
Under Graduate	40	40.00
Post Graduate	20	20.00
Professionals	10	10.00
Annual turnover (Rs.)		
Up to Rs.1 crore	50	50.00
Rs.1 - Rs.2 crore	40	40.00
Above Rs.2 crore	10	10.00
Age of business		
Up to 20 years	40	40.00
21-33 years	30	30.00
Above 33 years	30	30.00
Particulars		
Size of business		

Small	40	40.00
Medium	30	30.00
Large	30	30.00
Awareness about assistance provided by government		
Aware	40	40.00
Unaware	30	30.00
Partly known and partly unknown	30	30.00

Source: Primary data

N=100

Table 5.1 shows that, majority of the entrepreneurs (50.00%) belong to the age group up to 41-46 years. Majority of the entrepreneurs (60.00%) are male. Regarding marital status, majority of the e-entrepreneurs (60%) are married. E-entrepreneurs with under graduate qualification constitute 40%. Majority of the entrepreneur's annual turnover (50.00%) is up to crores. Regarding age of the business most of the entrepreneurs (40%) are in the age group upto 20 years. Regarding size of business, small (40%). Majority of the e-entrepreneurs (40%) are having awareness towards financial assistance provided by the government.

Findings, Suggestions and Conclusion

Findings of the Study

The findings of the study are as follows

- Majority of the entrepreneurs (50.00%) belong to the age group up to 41 -46 years.
- Majority of the entrepreneurs (60.00%) are male. Regarding marital status.
- Majority of the e-entrepreneurs (60%) are married.
- E-entrepreneurs with under graduate qualification constitute 40%.
- Majority of the entrepreneur's annual turnover (50.00%) is up to crores.
- Regarding age of the business most of the entrepreneurs (40%) are in the age group upto 20 years. Regarding size of business, small (40%).
- Majority of the e-entrepreneurs (40%) are having awareness towards financial assistance provided by the government.

Suggestions of the Study

The following are the suggestions of the study are as follows:

1. Government may organize motivational programmes like workshop, conference and seminars to the various groups of entrepreneurs.
2. Government may take measures for better enforcement of cyber laws to protect online shopping consumers.

Conclusion

MSME development is very important and crucial for the development of industries, achieving sustainable growth and creating inclusive growth for MSMEs in India. This research found out that problems faced by MSMEs in India are access to financial or capital and managerial capacity. But it is imperative that access to capital or finance alone is not sufficient to attain entrepreneurial development. Therefore, the finance obtained by FIs should be capable of being managed. It is not important to have access to necessary information as to what he/she should do; the money would go down the drain. With this study, it can be concluded that MSMEs entrepreneurs are more satisfied with financial support and also with other facilities provided by the SIDBI.

STRATEGIES FOR SUSTAINABLE DEVELOPMENT IN INDIA - AN OVERVIEW

D.Divya

Assistant Professor, PG Department of Commerce with International Business
Nallamuthu Gounder Mahalingam College, Pollachi

Ms.P.Priyadharshini

I M.Com IB, Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Sustainability is a long-term vision of commitment or goals, while the process or way to achieve those goals is known as sustainable development. Sustainability is a multidimensional concept, and it often describes the concept of sustainable development through four key components. They are society, culture, environment, and economy. This paper covers the concept of sustainable development, its need in India, Sustainable development goals, and Indian Government Initiatives in Sustainable development and strategies for sustainable growth. The secondary data used to describe the concept is collected from various websites. Sustainable development brings stability to the environment and it has to be kept in mind that the use of eco-friendly technologies and resources won't harm the environment and it is time for the global community to act upon their responsibilities to promote sustainable development.

Keywords: Sustainable development, Society, Environment, Economy, Cultural

Introduction

Sustainable Development means development that meets the needs of the present without compromising the ability of future generations to meet their own needs. The concept of sustainable development is the process of sustaining economic growth over time without lowering the standard of living for future generations. It was first mentioned in the 1980 World Commission Strategy report by the IUCN (International Union for the Conservation of Natural Resources). Sustainability is based on ensuring that the current generation leaves a legacy of quality of life for the next generation. Sustainable development is observed as the mutually beneficial interaction between the legal interest of a business and the economy, government and politics, and civil society, and culture.

Core Elements of Sustainable Development

• Environmental Sustainability

Environmental sustainability supports the preservation and wise use of nature by preventing it from being used as an endless source of resources. Environmental sustainability is achieved by a variety of factors, including water conservation, renewable energy investment, support for sustainable transportation, and innovation in sustainable building and architecture.

• Social Sustainability

It can promote gender equality, the growth of individuals, groups, and cultures, and the spread of healthcare, education, and a tolerable standard of living worldwide.

• Economic Sustainability

It emphasises equitable economic growth that creates wealth for all while minimising environmental damage. investment and equitable allocation of financial resources. destroying poverty in all of its manifestations and dimensions.

Need of Sustainable Development in India

Achieving economic development is an essential factor for a country. There are certain issues that pose a threat to the sustainable development of India. Some of those issues are:

Environmental issues	Economic issues	Social issues	Cultural issues
• Biodiversity loss • Himalayan urbanisation • Lack of waste management • Resource depletion • Air quality issues • Environment degradation • Hamper in the ecosystem	• low income per capita • Dependency of huge population • Heavy population • Unemployment • Slow improvement • Lack of industries • Poor human capital	• Corruption • Illiteracy • Poverty • Women's safety • Sanitisation • Lack of education • Healthcare issues	• Caste system • Gender inequality • Communism • Child abuse

Sustainable Goals

This plan was created with the goals of preserving the environment, eradicating poverty, and bringing prosperity and peace to all people by the year 2030. the following are some of the 17 SDGs:

Policy Initiatives of Government for Sustainable Development

The government of India has framed policies in the direction of achieving SDGs. These include Swachh Bharat mission, BetiBachaoBetiPadhao, Pradhan MantriAwasYojana, Smart Cities, Pradhan Mantri Jan Dhan Yojana, Deen Dayal Upadhyay Gram Jyoti Yojana and Pradhan MantriUjjwalaYojana, among others.

Strategies for Sustainable Development

- 1. Deployment of Non-conventional sources for energy:**India mainly relies on thermal and hydroelectric power facilities to meet its power needs. For the operation of their industries, factories, machinery, transportation, and other systems, nearly every nation is reliant on the utilisation of natural gas, coal, and fossil fuels. These conventional energy sources end up being the main cause of pollution and global warming because they generate such large amounts of carbon and greenhouse gases. Consequently, the most effective way to support sustainable development has been to invest in renewable energy sources. Alternative, cleaner energy sources that can be used in place of more conventional ones include solar energy, wind energy, and hydropower.
- 2. Installing Mini-hydel Plants:**In mountainous areas, streams are prevalent and can be used to establish/install mini-hydro plants. Mini-hydel plants utilize the energy of streams to propel turbines that generate electricity or power, which are powered by the energy of perpetual, perennial, or all-year-round streams. They are environmentally friendly since they don't alter land-use patterns or interfere with water flows while producing enough electricity to meet local needs.
- 3. Cleaner fuel use in both rural and urban regions:**Rural households use wood, animal waste, and other biomass as fuel. Urban households use gas, oil, and electricity. As a result of this fuel consumption, there are a number of negative impacts, including deforestation, a decrease in green cover, and air pollution due to cattle dung. To deal with this issue, LPG and gobar gas are being promoted. Subsidised LPG is available, and subsidies and low-interest loans are provided to

promote gobar gas plants. The use of these fuels reduces pollution significantly and is environmentally friendly. Indian transportation is heavily dependent on petroleum products, which emit a lot of CO₂ and pollute the environment. CNG (Compressed Natural Gas) has significantly reduced air pollution over gasoline and petroleum since it is an environmentally friendly and cleaner fuel.

4. **Utilisation of bio-compost:** After the green revolution, Indian farmers shifted to the use of chemical fertilisers while ignoring the use of compost to improve agricultural output and production. A rise in the use of chemical fertilisers, or excessive use of chemical fertilisers, has not only harmed land fertility/productivity but has also contaminated water sources, including groundwater. Due to the increased demand for organic food, farmers have now become aware of the use of compost and have started to use compost made from organic wastes, which maintains and improves soil productivity and does not contaminate food. Cattle are maintained in certain areas of the country only for the production of dung, which is an essential fertiliser and soil conditioner.
5. **Biopest control:** With the advent of the green revolution, the use of chemical pesticides for higher yields has increased, which not only contaminates food items but also pollutes soil and water bodies, including groundwater. The use of plant-based pesticides is being promoted. Neem-based pesticides are environmentally friendly and have no adverse effects. Measures are being taken to improve public knowledge about the use of different animals and birds (such as snakes, lizards, owls, and peacocks) in controlling pests. The practice of mix cropping of producing various products on the same ground in consecutive years has also helped the farmers in sustainable development.
6. **Traditional practices and knowledge:** Traditionally, Indian people have been connected to their environment. All agricultural, healthcare, housing, and transportation practices were environmentally friendly. However, the traditional system are gone away as a result of modernisation. It has caused damage to the ecosystem and our rural heritage. India is well known for its traditional AYUSH treatment, which includes approximately 15,000 plant species with medicinal properties that are very effective in treating chronic medical problems. But, because of the western treatment system, these traditional systems of Unani, AYUSH, etc., are now being ignored by people. Therefore, it is essential to use the old systems as they are environment friendly, do not involve large-scale industrial and chemical processing, and are relatively free from different side effects.
7. **Awareness among individuals:** Environmental degradation is a threat to India's ecosystem that can only be solved with people's participation. People do their best to safeguard assets for future generations at the micro-level/family level, but at the

macro-level/national level, they do not consider the protection of natural wealth/resources for future generations. There is an urgent need to raise the public's awareness about the dangers of population growth or environmental degradation, as well as the rational use of natural resources and how each individual can contribute to preventing environmental degradation. It will almost definitely minimise further environmental degradation and will lead to sustainable development.

Future of Sustainable Development

Sustainable development practices help countries and businesses grow in ways that adapt to the challenges posed by climate change. This protects important natural resources for our current and future generations and allows communities to thrive. By the year 2050, it is estimated that our global population will likely reach 9 billion people. Sustainable development is necessary to maintain a livable world for each of these people.

Conclusion

Sustainable development stabilizes the environment's requirements. As a result, future generations will be able to use the resources. The sustainable development movement is a wonderful method for conserving nature's resources. It can be done by using eco-friendly technologies and resources that won't have a serious impact on the environment. The resources that are available to us shall be used in a sustainable manner so that they do not become extinct for the usage of future generations. The resources that are available to us shall be used in a sustainable manner so that they do not become extinct for the usage of future generations.

FINANCIAL INCLUSION FOR MSMEs

Mrs.P.Girija M.Com, M.Phil.

Assistant Professor, Department of Commerce

Ms.S.Kirubavarshini & Ms.A.Shasmitha

*B.com, Accounting and Finance, Department of Commerce
Rathinam College of Arts and Science, Eachanari, Coimbatore*

Abstract

This study aims to analyze the impact of financial inclusion on the performance of micro, small and medium enterprises (MSMEs) and examine the mediating role of financial intermediation and accessibility capital. The results of this study show that financial inclusion affects MEME performance both directly and indirectly through financial intermediation and access to capitalism. which means that increasing access to finance for MSMEs followed by increased financial intermediation in the form of access to financial services for MSMEs will improve MSME.

Introduction

This study aims to analyze the impact of financial inclusion on the performance of micro, small and medium enterprises (MSMEs) and examine the mediating role of financial intermediation and accessibility capital. However, many MSMEs want to maintain small-scale operations, which is why their lack of capacity and finances are not of particular importance. In this case, policy instruments designed to support the growth of small businesses are likely to have little or no impact on these businesses. The results of this study show that financial inclusion affects MEME performance both directly and indirectly through financial intermediation. and approach capitalism. meaning that improving access to finance for MSMEs, followed by improving financial intermediation in the form of access to financial services for MSMEs, will improve MSME business performance. This means that improving access to finance for MSMEs, followed by increased financial intermediation in the form of access to financial services for MSMEs, will improve their performance.

The main objective of the study is to understand the function of financial goods and services in mediating the link between access to finance and the growth of micro, small and medium enterprises (MSME) in developing markets. Therefore, this article aims to see whether the use of money goods and services in a developing country like India mediates the link between access to finance and MSME growth or not. Data were collected from 392 MSMEs of Jammu region using cross-sectional research method. The exclusive study collected data from MSMEs in the Jammu region of India. This result can still be confirmed in other emerging economies. MSMEs can participate in financial inclusion initiatives launched by organizations for better utilization of financial services.

Impact of Financial Inclusion for MSMEs:

- **Increased Financial Stability**

Improved financial stability is a result of successful financial inclusion, as individuals have access to a range of financial products and services that can help them manage their finances effectively. Greater transparency and accountability in the financial sector are also direct benefits of financial inclusion amid increased financial literacy. This is because more and more people have access to formal financial services and are able to participate in the financial system.

- **Enhanced Economic Well-Being**

Access to formal financial services, such as savings accounts and insurance, can help people manage risk and build a safety net in case of emergencies. Access to the financial sector and its services can help people save money, and effectively employ the same. Funds can thereby be effectively used to plan for the future, and invest in education, health, and other assets that can be instrumental in improving their economic well-being.

- **Improved Access to Financial Markets**

Financial inclusion is instrumental in increasing access to financial markets and providing opportunities for investment in different asset classes through the organised segment of financial market. India has recently seen a massive increase in the number of investors over the past couple of years. This continual inclusion can lead to economic growth and job creation

- **Reduced poverty**

Financial inclusion allows people to be part of the organised financial sector and provides better access to credit and other financial services. Financial inclusion can help people participate fully in the economy, improve their standard of living, and build a more financially stable and inclusive society.

Importance of MSMEs

- Flexibility ensures innovation.
- Adaptability capacity to adjust with changing environment.
- Ensures regional development.
- Creates large scale employment.
- Encourage inclusive growth.
- Simple management structure for enterprise.
- Cheap labour and minimum overhead.

Concession on Electricity Consumption

The micro small and medium enterprises. You just have to submit an application, a registered MSME certificate, and a copy of your electricity bill to apply for this incentive.

Collateral Free Bank Loans

The small, medium and micro businesses. New and established firms can file benefits under this scheme.

The Credit Guarantee Trust Fund Scheme was introduced by the GoI, SIDBI, and the Ministry of Micro, Small & Medium Enterprises to ensure this scheme (Credit Guarantee Scheme) is implemented for all Micro and Small Enterprises.

Access to the International Market

The corporate delegations from India are given financial assistance to attend international conferences, trade fairs, exhibitions, business meetings, and seminars.

More Flexibility and Agility

Micro small and medium enterprises could react to the market developments more than a effectively and modify their business plans since they are generally more flexible and agile than bigger companies.

Challenges Faced by MSMEs

1. Financial Issues

In India, small businesses have limited existing capital or valuable assets. Therefore, accessing financial resources is still difficult for MSMEs. These financial problems make it difficult to raise immediate capital through a business loan. Without capital, they must reduce costs or close amid fierce competition. If an MSME business does not have sufficient profits or positive cash flow, it may experience increased financial problems and reduced liquidity.

2. Regulatory Issues

Registration is the first step to starting an MSME. However, the process takes time and has many regulatory prerequisites, such as tax compliance, labor law changes, etc. Although the Indian government is making efforts to reform the registration and regulatory process, it is very difficult for MSMEs to register and comply with all required laws.

3. Dynamic Market

New startups and other e-commerce companies are entering the market and increasing competition for small businesses in the MSME sector. Increased competition has made market dynamics volatile and can negatively impact MSME operations. In such a hot

market, if a small business is not performing well and earning steady profits, it may have to close due to a cash flow crisis.

Scope of MSMEs

- Aviation: GSE Accessory Systems and Tools.
- Naval system.
- Subsystems and accessories.
- earth system
- Subsystems and accessories.
- Capital goods. Computers and electronic equipment.
- MRO.
- R&D foundry, forging and boiler manufacturing.
- Software.
- Research different facility layout plans (process, product, fixed, hybrid)
- Situations where they are best performed. Research the material flow process in the
- plastic bag manufacturing industry.
- Propose the most suitable development plan for the plastic bag manufacturing industry.
- Ideal workspace according to ergonomic statistics.

Scope of Enterprises

1. Encourage the dispersion of industries throughout the country, including small towns, villages and economically backward areas.
2. Promote balanced development among regions throughout the country. 6. Encourage effective mobilization of the country's untapped resources.
3. Create immediate and large-scale employment opportunities with relatively low investment. At the same time, integrate regions lagging behind in national development.
4. Promote balanced development among regions throughout the country.
5. Encourage effective mobilization of the country's untapped resources, Improve the living standards of people in the country.

Conclusion

The role of the micro small micro enterprise in the economic development of India cannot be overlooked, With this fast growing economy and vast opportunities micro small micro enterprises are about to raise the bar and challenges international competition We hoped to see them in a far better position in terms of growth as well as manufacturing excellence. We could expect more schemes from the government to make micro small micro enterprises excellent.

ROLE OF MSME IN THE DEVELOPMENT OF INDIAN ECONOMY

Dr. A. Giri Prakash

Assistant Professor, Sakthi Institute of Information and Management Studies, Pollachi

Dr. R. Kavitha

Associate Professor, Sakthi Institute of Information and Management Studies, Pollachi

Abstract

Micro, Small, and Medium Enterprises (MSMEs) have been monumental in accelerating the growth of the Indian economy. They not only play a cataclysmal role in generating employment opportunities at relatively low capital costs but also support industrialization and formalization of the economy. They are also instrumental in ensuring financial inclusion by tapering regional imbalances. MSMEs are veritably hailed as the backbone of the Indian economy as they contribute over 30% to the GDP. With almost 50% contribution to exports, they also form an integral part of the supply chain. The government of India plans to increase MSMEs output and export contribution to 50% and 75%, respectively, by 2024, in line with the aim to make India a \$5 trillion economy. In fact, MSME promotion has been prioritized by the government as part of NITI Aayog's Strategy for New India@75, with a special focus on ameliorating credit gaps and emboldening firms to embrace Industry 4.0 practices that enhance productivity.

Keywords: Indian economy, industrialization, contribution, MSME, Strategy.

Introduction

The Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of the Indian economy over the last five decades. It contributes significantly in the economic and social development of the country by fostering entrepreneurship and generating large employment opportunities at comparatively lower capital cost, next only to agriculture. MSMEs are complementary to large industries as ancillary units and this sector contributes significantly in the inclusive industrial development of the country. The MSMEs are widening their domain across sectors of the economy, producing diverse range of products and services to meet demands of domestic as well as global markets.

MSMEs, in layman's terms, refer to the enterprises that are engaged in the development and manufacturing of goods and services. The Micro, Small & Medium Enterprises Development (MSMED) Act, 2006 classifies MSMEs based on investment and turnover limits, which are enlisted below.

- i) **Micro Enterprise:** Investment in plant and machinery (P&M) or equipment does not exceed Rs. 1 crore, and turnover does not exceed Rs. 5 crores.
- ii) **Small Enterprise:** Investment in plant and machinery (P&M) or equipment does not exceed Rs. 10 crores, and turnover does not exceed Rs. 50 crores.

iii) Medium Enterprise: Investment in plant and machinery (P&M) or equipment does not exceed Rs. 50 crores and turnover does not exceed Rs. 250 crores.

Traditionally, MSMEs were restricted to the khadi and coir industry. Since then, they have branched out to various industries. For instance, micro and small businesses mostly deal with food and agriculture, while medium-sized firms belong to the automotive, pharmaceutical, or chemical industries.

As per the MSME ministry, India has an estimated 633.88 lakh unincorporated non-agricultural MSMEs, of which 31% are engaged in manufacturing, and 36% are in trading activities. Almost 51.25% of MSMEs are in rural areas, while the remaining 48.75% are situated in urban areas. The micro sector accounts for more than 99% of the total number of MSMEs.

MSMEs: The Growth Accelerators

MSMEs act as innovation stimulants, encouraging the diffusion of skills, and inculcation of an entrepreneurial culture. They serve as a source of healthy competition and boost economic dynamism. As catalysts for the socio-economic transformation of the country, MSMEs contribute to the economy in the ways mentioned below.

Sustainable Growth

MSMEs play a considerable role in the GDP growth story on account of their contribution to production and processing. Their growth results in an increase in value addition, final output, and profitability. Furthermore, they complement large industries by acting as ancillary units, thus bringing out integration benefits.

Their contribution is increased manifold when one accounts for the multiplier effect of the economic activity undertaken by their employees and suppliers. The CSO data states MSMEs' contribution to Gross Value Added (GVA) at 30% for FY 2019-20, with the manufacturing share standing at 36.9%. MSMEs are being supported by the government through 'Make in India' with the 'Zero Defect & Zero Effect' initiative to promote sustainability and higher quality standards.

Localized Employment Generation

MSMEs typically implement labor-intensive production processes, thereby generating massive employment opportunities. Their small scale restricts them to a particular area or region, which results in the local population being hired. These productive employment opportunities consequently result in increased generation of income and poverty alleviation.

As per the 73rd Round of NSS Report on Unincorporated Non-Agricultural Enterprises', MSMEs employ 11.10 crore workers. The micro sector accounts for over 97% of the employment share as it recruits almost 10.76 crore persons.

Mushrooming Trade and Export Earnings

MSMEs contributed 45.04% to overall exports during FY22. They are expected to benefit further from the 'China plus one' policy, which is being increasingly employed by MNCs looking to diversify their production. The government is targeting \$1 trillion worth of MSMEs exports by 2027. It has even introduced the 'Capacity Building of First-Time MSME Exporters' (CBFTE) scheme for MSMEs' export growth.

Contribution to Taxes

MSMEs contribute to the government's coffers through direct business taxes levied on their revenues and profits. They also pay indirect taxes, including GST, sales tax, excise duties, and cess. The tax provision requiring MSMEs to mandatorily register on the GST portal has even incentivized the formalization of the MSME sector.

Poverty Alleviation

The MSME sector plays a significant role in alleviating poverty and correcting regional imbalances. They ensure a more equitable distribution of income due to their localized nature of business and stave off any rural-urban migration. They also stimulate entrepreneurship, hence kickstarting investment and innovation cycles.

Financial Inclusion

Out of 11 crores employees in the MSME sector, almost 24% are women. Additionally, the socially backward groups, including SCs, STs, and OBCs, collectively own over 66% of MSMEs, with OBCs accounting for almost half of the share. Almost 74% and 59% of the MSMEs are owned by the vulnerable sections in rural areas and urban areas, respectively.

Meeting SDG Goals

MSME development can assist in better meeting SDG goals, including SDG 1 (ending poverty), SDG 2 (ensuring zero hunger), SDG 3 (promoting good health), SDG 5 (gender equality), and SDG 8 (inclusive growth and decent work).

Concerns Over Finance

As can be seen from above, a robust MSME sector is acutely required for the Indian economy to grow. But these enterprises continue to suffer from the unavailability of timely capital. This lack of access to capital forces MSMEs to scale down or liquefy their business. As a result, there has been an upsurge in the number of financial institutions, including Protium, that are collaborating with MSMEs to provide prompt financing.

Direct Benefit Transfer in the M/o MSME

All welfare and subsidy schemes of Governments of India have been brought under Direct Benefit Transfer (DBT) with the aim of improving delivery system by re-engineering the existing process for welfare and subsidy schemes, for simpler and faster flow of funds and to ensure accurate targeting of the beneficiaries, de-duplication and reduction of fraud. A nodal point for the implementation of the DBT programmes, DBT cell have been constituted in the Ministry.

The schemes have been categorized based on the benefit type to the beneficiary's i.e., Cash, Kind or Composite (i.e., Cash and Kind). Below is the table showing the main DBT schemes of the Ministry with the benefit type, number of beneficiaries and total funds transferred / expenditure incurred

Sl. No.	Name of the Scheme	Benefit Type	Total no. of beneficiaries (2022-23) (upto 31.12.2022)	Total Expenditure (Rs. crores) (2022-23) (upto 31.12.2022)
1	ATI Scheme (Training Component)	In Kind	1674	0.871
2	MPDA Grant to Khadi Institutions	Cash	86990	29.45
3	Coir Vikas Yojana	Cash	775	45.789
4	SFURTI SI	In Kind	2082765	384.509
5	Prime Ministers Employment Generation Programme (PMEGP)	Cash	46808	1505.61
6	Entrepreneurship and Skill Development Programme (ESDP)	In Kind	6312	2.55
7	International Co-operation (IC) Schemes	Cash	56	6.87

Operational Guidelines of CLCS-TU Scheme (having five components-IPR, Lean, Design Clinic, Incubation and ZED) are under redesigned and as such the Scheme is in inactive mode till their finalization.

Growth and Performance of Micro, Small and Medium Enterprises (MSMEs)

The Micro, Small & Medium Enterprises (MSMEs) have been contributing significantly to the expansion of entrepreneurial endeavors through business innovations. The MSMEs are widening their domain across sectors of the economy, producing diverse range of products and services to meet demands of domestic as well as global markets. The MSMEs in India are playing a crucial role by providing large employment opportunities at comparatively lower capital cost than large industries as well as through industrialization of rural & backward areas, inter alia, reducing regional imbalances, assuring more equitable distribution of national income and wealth

Estimated Number of MSMEs in Country

MSMEs in India are playing a crucial role by providing large employment opportunities at comparatively lower capital cost than large industries as well as through industrialization of rural & backward areas, inter alia, reducing regional imbalances, assuring more equitable distribution of national income and wealth. As per the National Sample Survey (NSS) 73rd round, conducted by National Sample Survey Office, Ministry of Statistics & Programme Implementation during the period 2015-16, there were 633.88 lakh unincorporated nonagricultural MSMEs in the country engaged in different economic activities (196.65 lakh in Manufacturing, 0.03 lakh in Non-captive Electricity Generation and Transmission¹, 230.35 lakh in Trade and 206.85 lakh in Other Services) excluding those MSMEs registered under (a) Sections 2m(i) and 2m(ii) of the Factories Act, 1948, (b) Companies Act, 1956 and (c) construction activities falling under Section F of National Industrial Classification (NIC) 2008. Figure 2.1 shows the distribution of MSMEs activity wise.

Figure 2.1 Distributions of Estimated MSMEs (Nature of Activity Wise)

**Non-captive electricity generation and transmission*

Employment

As per the National Sample Survey (NSS) 73rd round conducted during the period 2015-16, MSME sector has been creating 11.10 crore jobs (360.41 lakh in Manufacturing, 0.07 lakh in Non-captive Electricity Generation and Transmission, 387.18 lakh in Trade and 362.82 lakh in Other Services) in the rural and the urban areas across the country. Statement No. 2.7 shows the distribution of MSMEs activity wise.

Statement No. 2.7: Estimated Employment in the MSME Sector (Activity Wise)

Broad Activity Category	Employment (in lakh)			Share (%)
	Rural	Urban	Total	
(1)	(2)	(3)	(4)	(5)
Manufacturing	186.56	173.86	360.41	32
Electricity*	0.06	0.02	0.07	0
Trade	160.64	226.54	387.18	35
Other Services	150.53	211.69	362.22	33
All	497.78	612.10	1109.89	100

*Non-captive electricity generation and transmission

Village Industries Employment during Last 5 Years and Current Year Projection are Given Below:

Village Industries : Employment

(Artisan in Lakh)

YEAR	EMPLOYMENT
2017 - 18	135.71
2018 - 19	142.03
2019 - 20	147.76
2020 - 21	154.09
2021 - 22	162.64
2022 - 23 (up to 31.12.2022)	166.37
2022 - 23 (Projected up to 31.03.2023)	170.71

Achievement - Year-wise data during the FY 2017-18 to 2022-23

Year	Projects Approved			Projects completed			Budget utilized (Rs. in crore)		
	CFC	ID	Total	CFC	ID	Total	BE	RE	Exp.

The main focus of the schemes/programmes undertaken by the Organisations of the Ministry is to provide/facilitate a wide range of services required for accelerating the development of MSMEs. Nevertheless, there are a few schemes/programmes which are individual beneficiary oriented. There are several schemes, wherein women are provided extra benefits/ concessions/ assistance. The details of concessions for women may be seen in the respective scheme guidelines as available on the Ministry's website www.msme.gov.in

Role and Importance of MSME in the Indian Economy

MSMEs are a vital part of the Indian economy and have made significant contributions to the country's socio-economic growth. They create job possibilities and contribute to the development of the country's backward and rural areas. MSMEs contribute almost 8% of the country's GDP, around 45% of manufacturing production, and about 40% of exports. With this significant contribution, it isn't an exaggeration to call them the 'backbone of the country.'

MSMEs Currently Employ over 46.6 Million People, as per the National Sample Survey (2019).

Let's Look at their Role and Importance in the Indian Economy

Economic Stability

Because of MSME's contribution to manufacturing, exports, and jobs, it benefits other industries. MNCs frequently purchase semi-finished and additional items from small businesses, such as clutches and brakes, by vehicle manufacturers. Even after the GST is implemented, it helps bridge the gap between small and large companies. 40% of the total MSME sector has also implemented GST registration, which has increased the government's revenue by 11%.

Cheap Labour

One of the critical challenges in large-scale firms is to retain human resources through effective human resource management professionals. However, when it comes to MSME, the labor requirement is lower, and it does not necessitate the use of a highly skilled laborer. As a result, the owner's indirect expenses are also minimal.

Large-Scale Employment Generation

MSMEs seek to improve the lives of workers by offering employment, loans, and other services. Furthermore, it provides many opportunities for unemployed people to take advantage of. India produces over 1.2 million graduates annually, with approximately 0.8 million engineers. So far, no economy has been able to offer such a vast number of freshmen in a single year. MSMEs play a significant role in supporting India's young talent as they join the workforce.

A Significant Contribution to "Make in India."

Thanks to MSMEs, the prime minister of India's trademark campaign, "Make in India," has been simplified. It serves as a foundation for making this ambition a reality. Furthermore, the government has urged the banking institutions to offer more credit to small and medium-sized businesses.

The MSME sector plays a vital role in the lives of ordinary people and the country's economic growth. In recent years, many youths have been inclined toward entrepreneurship, and MSME sectors are fully supporting it. So, it is necessary to help the MSME sector financially, and **PSB59** is continuously progressing towards it.

Challenges Pertaining to MSMEs

Lack of Adequate and Timely Access to Finance

- Access to finance continues to remain the biggest challenge for MSMEs and has constrained their growth.
- MSME funding from banks has been stalled, as decision-making managers are reluctant of loans going bad.
- After the **IL&FS crisis** and its effect on the other NBFCs (Non-Banking Finance Companies), MSMEs ran into deep trouble because of the liquidity crunch that followed.
- Due to this, MSMEs are not able to invest in manufacturing, purchase raw materials on time, access new technologies or acquire new skills due to lack of funds which is a big handicap especially in its fight with global competitors.

Technological Disruption

- India 's MSME sector is based on obsolete technology, which hampers its production efficiency
- With the emergence of new technologies like Artificial Intelligence, Data Analytics, Robotics and related technologies (collectively called as **Industry Revolution 4.0**) is a bigger challenge for MSMEs than for organized large-scale manufacturing.

Regulatory Cholesterol

- MSMEs require a lot of government services and approvals, for which the entrepreneur has to run around various government departments.
 - o Getting construction permits, enforcing contracts, paying taxes, starting a business and trading across borders continue to constrain doing business.
- Regulatory risks and policy uncertainty in the past have dented investor confidence.

Problem of Scale

- Majority of the firms in MSMEs are micro-enterprises.
- The MSME space is virtually a micro space formed by a plethora of small and local shops and hence, scaling them up is a problem, especially when fund access is challenging.

Steps To Be Taken

- **Increasing Domestic Manufacturing Capabilities:** The government can play a crucial role in creating domestic manufacturing capabilities by leveraging proposed public procurement and projects.
 1. For example, Mega public projects such as Sagarmala, Bharatmala, industrial corridors, and the Pradhan Mantri Awas Yojana (PMAY) can stimulate domestic manufacturing activities.
 2. This should be accompanied by a simplification of the regulatory process.
- **Cluster Manufacturing:** Efforts should be made to develop self-sufficient clusters of manufacturing competence, with Cluster Administrative Authorities, empowered to provide single window clearances to entrepreneurs and investors.
- **Leveraging Industrial Revolution 4.0:** Disruptive technology, while leading to job losses in traditional areas, also presents new job opportunities.
 1. A greater connect between government-industry-academia is required to identify the changing requirements in manufacturing and prepare an employable workforce.
 2. Also, the Industrial Revolution 4.0 will boost the Industrial supply chains in India.

- **Need to improve Ease of Doing business:** Reforms: India has already taken several steps, due to which ease of doing business in India has improved significantly (India's ranking in **ease of doing business report** has improved from 142 in 2014 to 63 in 2020).
 1. However, still some reforms are needed in regard, especially in the field of land, labour reforms and in enforcing contracts.
- **Making Indian Products to Match Global Standards:** There is a need for harmonizing Indian quality standards with global standards in many sectors.
 1. Lack of harmonization has affected Indian exports and prevented the leveraging of trade agreements adequately.
 2. There is a need to promote **ZED manufacturing (Zero effect- Zero Defect)** as envisaged by **Make in India**.

Conclusion

In conclusion, the Indian SME sector today is a gateway to global growth due to its competitive and quality product range. However, support from the government is required to minimize the transaction costs of technology upgrade, market penetration, infrastructure upgrade, etc. The SME sector is often called the "engine of growth" for developing economies. We begin with an overview of the sector in India and look at some recent trends that highlight the evolution and importance of the sector in relation to the Indian economy. We have analyzed the growth of MSMEs in terms of fixed investment, production performance, employment generation and export contribution. The MSME Development Act, 2006 is perhaps the most important of these recent policy changes. Interest policy is state spending and subsidies focused on this sector. It is concluded that MSMEs in the Indian economy have shown tremendous growth and outstanding performance with the contribution of policy framework and effective steps taken by the government from time to time for the growth and development of MSMEs.

ROLE OF MSME IN ECONOMIC SELF RELIANCE

Dr.S.Kokilavizhi

Assistant Professor, Department of Commerce (Finance), NGM College, Pollachi

Dr.R.Amsaveni

Assistant Professor, Department of Commerce (Finance), NGM College, Pollachi

Abstract

The MSME industry plays a crucial role in the development of the Indian economy. Its contribution to the country's GDP is nearly a third of the country's GVA and it contributes nearly half of the country's exports. Moreover, the sector is a major employer, especially in the rural and less developed areas helping reduce regional imbalance. The sector also strengthens other industries by providing them raw materials and ancillary products. The MSME sector has always acted as a bulwark for the Indian economy, providing it resilience to ward off global economic shocks and to face adversities. The MSME network in India is vast and covers around 630 lakh units manufacturing 8000+ products contributing about 45% to manufacturing output and about 40% to direct and indirect exports. The MSME sector is reportedly the second-largest employer in the country after agriculture.

Keywords: *Self-Reliant India, MSME, Government Scheme, Self-Reliant India Fund*

Introduction

MSMEs form the bedrock of India's industrial landscape, encompassing a vast array of enterprises across various sectors. According to the Ministry of Micro Small and Medium Enterprises, MSMEs contribute significantly to India's GDP, employment, and exports. The sector is a major generator of employment, providing livelihoods to millions, particularly in rural and semi-urban areas. MSMEs are a vital part of the Indian economy. They account for approximately 45% of India's industrial output and around 40% of total exports. This means that MSMEs are responsible for a significant portion of the country's economic growth.

In the textile industry, MSMEs account for around 60% of the total employment. They also play a significant role in the manufacturing of garments, footwear, and other products. In the agricultural sector, MSMEs are involved in the production of a wide range of products, such as processed foods, fertilizers, and agricultural machinery. They also play a key role in the supply chain for agricultural products. In the services sector, MSMEs are involved in a wide range of activities, such as transportation, tourism, and retail. MSMEs are a major source of employment in India and employ a great number of women and youth. They employ around 111 million people, which is about 40% of the country's workforce.

The Impact of MSME's on India's Self- Reliance

MSMEs act as catalysts for India's self-reliance, driving economic independence through various means. These enterprises play a pivotal role in reducing the country's dependency on imports, fostering domestic innovation, and building a robust and self-sustaining economic ecosystem.

One of the primary ways MSMEs contribute to self-reliance is by reducing India's reliance on imports. By producing goods and services domestically, MSMEs help curb the nation's dependence on foreign products. This localized production not only strengthens the Indian economy but also bolsters its resilience against global economic fluctuations and disruptions. By fulfilling local demand and reducing imports, MSMEs contribute to a more self-sufficient economy that can better withstand external shocks.

MSMEs are also instrumental in supply chain development, creating a web of interconnectedness across industries. They account for 60% of the total number of enterprises in the country, and as key players in various supply chains, these enterprises support both upstream and downstream activities. Their engagement in supply chains fosters domestic production and distribution networks, reducing the need to rely on foreign suppliers. This interdependence within the country's supply chains enhances the overall efficiency of the economy and contributes to its self-reliance.

Small-scale businesses have been a hallmark of the Indian economy since independence. Over the last five decades, the MSME sector has evolved to show itself as a vibrant and dynamic component of the economy. Initially, the non-agricultural MSME sector was heterogeneous and consisted of traditional industries. These included khadi, silk, coir, cottage and village industries, Small Scale Service and Business Enterprises (SSSBes), and Small Scale Industries (SSIs). Today, all these industries are clubbed together under the umbrella term of Small Scale Industries (SSI). In 2006, the Micro, Small, and Medium Enterprises Development (MSMED) Act was enacted. This statute aimed to incorporate all the diverse industries, the service sector, and medium enterprises.

As a result, the MSME sector in India is classified into two categories: the manufacturing and service industries. Furthermore, the industries are classified as micro, small, and medium based on the investment made toward machinery and equipment. MSMEs contribute towards exports, entrepreneurial development, upliftment of rural and backward areas, and employment generation. The MSME sector has been creating over 110 million jobs in areas such as manufacturing, non-captive electricity generation and transmission, trade and other service, across rural and urban areas in the country.

Challenges for the MSME Sector

The sector is expected to shoulder a substantial portion of the country's economy. But there are some challenges that lie ahead:

Need for digitization: Owing to problems like the dearth of proper infrastructure, finance, and limited knowledge, the MSME sector has been slow in going digital. Digitizing the sector could help in enhancing efficiency and reliability, cutting costs, and keeping up with trends.

Importance of business knowledge: With growing competition, it is imperative for MSMEs to have a thorough grasp of the opportunities, challenges, in-depth know-how, trends, and risks of the industry to run a successful business. The right business strategy can help a company scale up.

Problems related to funding: Many MSMEs may not have all the financial documentation in place or enough access to digitization in order to take advantage of government schemes. There is also a challenge with collateral as the perceived risk of funding MSMEs is higher. Cash flow and working capital issues are challenging, especially in instances where payments are delayed. While protections exist under the MSMED Act, such as penalties for delayed payments, the fear of losing long-term business means that these protections are rarely ever invoked

Self-Reliant India Fund for MSMEs

As part of the Atmanirbhar Bharat package, the Indian government announced the allocation of Rs. 50,000 crore for equity infusion in MSMEs through the Self-Reliant India (SRI) Fund. SRI fund operates through a mother-fund and daughter-fund structure for equity or quasi-equity investments.

The National Small Industries Corporation (NSIC) Venture Capital Fund Limited (NVCFL) was designated as the Mother Fund for the implementation of the SRI Fund. It was registered as a Category-II Alternative Investment Fund (AIF) with SEBI

Objectives of the Sri Fund

To provide equity funding to viable and high-potential MSMEs, fostering their growth and transformation into larger enterprises. To bolster the MSME sector's contribution to the Indian economy by promoting innovation, entrepreneurship, and competitiveness. To create an environment conducive to technological up gradation, research and development, and increased market access for MSMEs.

Composition of the SRI Fund

The Rs. 50,000 crore SRI Fund comprises: Rs. 10,000 Crore from the Government of India to initiate equity infusion in select MSMEs. Rs. 40,000 Crore sourced through Private Equity (PE) and Venture Capital (VC) funds, leveraging private sector expertise and investment.

Status of MSME Sector in India

The MSME sector of India contributes around 33% of the country's total GDP and is predicted to contribute worth USD 1 trillion to India's total exports by 2028. MSMEs provide about 110 million jobs which is 22-23% of the total employment in India. It contributes to reducing unemployment and underemployment, supporting inclusive growth and poverty reduction. The MSME sector fosters a culture of entrepreneurship and innovation. It encourages individuals to start their own businesses, promotes indigenous technologies, and contributes to the development of new products and services. Compared with large-scale companies, MSMEs aided in the industrialization of rural areas at minimal capital cost.

Government Initiatives for the MSME Sector

MSME Champions Scheme: Comprising MSME-Sustainable (ZED), MSME-Competitive (Lean), and MSME-Innovative (for incubation, IPR, Design, and Digital MSME), this scheme provides financial assistance to MSMEs to enhance their competitiveness and innovation capabilities.

Infusion in Credit Guarantee Fund: As part of the Budget 2023-24, the government announced an infusion of Rs. 9,000 crore in the corpus of Credit Guarantee Fund Trust for Micro & Small Enterprises.

Raising and Accelerating MSME Performance (RAMP): This initiative focuses on strengthening institutions and governance of MSME programs at both the central and state levels.

Conclusion

The journey towards economic independence and self-reliance is a dynamic process, and MSMEs are at their heart. Their resilience, innovation, and inclusivity have been crucial in driving India's progress on the path to self-reliance. As the government continues to implement policies and provide support, Indian MSMEs are poised to play an even more significant role in shaping the nation's future and elevating India's standing on the global stage. By nurturing these enterprises and enabling their growth, India can truly achieve its dream of becoming an economically independent nation.

There is no doubt that MSMEs play a critical role in Nation Building and growth of the economy. It is necessary that the support to this segment is accelerated, and government targets its ease of doing business initiative towards MSMEs. The targeted government policies can be a major catalyst in guiding MSMEs to the desired sectors of the economy to fuel growth of the economy. This could be done by framing conducive policies, offering incentives and most important, removing the on-ground hurdles, easy access to credit being a prime example. No doubt there is a long road to traverse but it is also beyond doubt that with entrepreneurship, innovation and agility at its core, the MSME sector can

not only play a vital role in making India a US\$5 trillion economy in the next five years but can also become a growth engine for making India a developed country by 2047.

ROLE OF FINTECH - INNOVATION AND ADOPTION IN SUSTAINABLE BUSINESS START-UPS

Ms. A. Gomathi

*Assistant Professor of Commerce, Department of B.Com -Banking and Insurance
Nallamuthu Gounder Mahalingam College, Tamilnadu, India*

Abstract

The integration of new technologies and the digitization of society have created a favourable environment for the development of Fintech startups in India. The FinTech Industry has seen tremendous growth in India over the last decade since it caught pace after expansion of interest services in the country. In India Fintech adoption rate is 87% against the global average of 64%⁴. By providing the access to banking and financial services for unbanked people, the FinTech industry plays a predominant role to bettering financial inclusion. This paper explores the various segments and significance of Fintech industries in the success of digital transformation and it also inspects the regulatory legal framework, Government initiatives, the key principles and thrust areas of the Fintech start-ups. Besides this it also tried to identify the emerging trends, issues and challenges in Fintech revolution.

Keywords: Digital Startups, Fintech Innovation, Sustainable Development, Business Start-ups etc.,

Introduction

Financial technology (better known as Fintech) is used to describe new tech that seeks to improve and automate the delivery and use of financial services⁴. The Fintech companies play a major role in improving access to the gamut of financial services like AePS, Aadhar Pay, Remittances, and Recharges for the masses². With over 2,000 FinTech businesses officially recognized by DPIIT (Department for Promotion of Industry and Internal Trade) in India and projections indicate that the total addressable market for the Indian FinTech industry is set to reach \$ 1.3 trillion by 2025⁵.

Fintech companies are innovative, nimble, and have lower operational costs than traditional banks⁶. They can lead the way through taking financial services, increasing access to credit, innovating with speed and compliance, promoting a cashless economy to the farthest corners of the country⁶. Fintech companies can play a key role in boosting financial inclusion by leveraging the existing financial ecosystem and emerging technologies to make banking simpler, more accessible, and cost-effective for millions of unbanked and underbanked Indians⁶.

FinTech is increasingly becoming an important focus area for all the key stakeholders in India's Financial Services industry – Regulators, Traditional Banks, NBFCs, Payment Banks, Investors, Payment Service Providers, Broking and Wealth Management Companies, Insurance providers and pure-play FinTech players. The FinTech infrastructure backbone has been strengthened tremendously with the host of options available to market participants such as BBPS, Bharat QR, India Stack, UPI³.

Statement of the Problem

The FinTech infrastructure backbone has been strengthened tremendously with the host of options available to market participants such as BBPS, Bharat QR, India Stack, UPI, etc³. In India Fintech adoption rate is noted as 87% against the global average of 64%⁴. According to a World Bank analysis more than 190 million Indians lack access to formal financial services, 20 percent of the Indian population is still unbanked, implying enormous untapped economic potential⁶. Rural India has only 17% internet penetration compared to 60% in urban India³. Above these two interpretations make an argument and couldn't judge the exact state of Fintech development in India.

To know the present scenario of Fintech startups in India, the following questions were raised?

What are the various segments and significance of Fintech startups in India?

What are the factors associated with the growth of Indian Fintech industry?

What are all the issues, challenges faced by Fintech companies in the current economic climate?

What are the emerging trends predicted by Fintech industry?

Objectives of the Study

This study makes an attempt to find the solutions for the questions asked in the statement of the problem. Accordingly the following objectives have been framed.

1. To know the various segments and significance of Fintech startups in India.
2. To identify the factors associated with the growth of Indian Fintech industry.
3. To identify the regulatory legal framework and Government Initiatives for Fintech in India.
4. To explore the issues, challenges faced by Indian Fintech companies in the current economic climate.
5. To identify emerging trends in Fintech startups in sustainable development.

Research Methodology

As the research paper is of conceptual and review nature, the researcher has applied exploratory research design by using varied secondary data availed from the secondary data sources. Based on the secondary data and review, the researcher has reported on important role of Fintech -Innovation and adoption in India

Review of Literature

Mr. Nishant kumar published an article titled as "Role of Fintech in India's Digital Economy" in Nasscom community website on March 16, 2023. In this article he reveals that the role of Fintech in Indian Digital Economy, the key benefit of Fintech for business in

India, challenges of Fintech in India and the future of Fintech in India. He noted that in India the future of Fintech companies is bright, the immense potential.

The Times of India published an article entitled as “The role of Fintech companies in strengthening the banking and online payment sector in rural India” on October 12, 2022 written by Amit Tyagi. The author expresses that India’s Fintech market is among the fastest growing and is ranked the third largest market. He denotes that the companies have the potential to reshape the financial services and financial inclusion in India. He added that the companies play a major role in improving access to the gamut of financial services like AePS, Aadhar Pay, Remittances, and Recharges for the masses.

Deloitte the Learning Academy conducted a study and published an article in the name of “FinTech in India – Ready for Breakout”. This article denotes the critical issues addressed by Indian FinTech companies and few of the critical structural issues afflicting Indian financial services as increase outreach, improve customer experience, reduce operational friction, and foster adoption and usage of the digital channel. This report suggests the financial companies can learn and adopt best practices around risk and internal controls, operational excellence, compliance culture, and employee engagement.

Fintech Segments –Area Wise Classification

Deloitte report analyzed the breakout potential of India’s Fintech sector across six segments i.e Payments, Credit, Investment Management, Personal Finance Management, BankTech and InsurTech and across twenty sub-segments. Customer Loyalty, Technology & IT Infrastructure.

Area	Fintech Segments	Area	Fintech Segments
Credit	Peer-to-Peer Lending Crowd Funding Market Place for Loans Online Lenders – on-book lending by NBFCs Credit Scoring Platforms	Payments	M-wallets and PPIs Merchant Payments and PoS Services International Remittance Crypto Currencies
Investment Management	Robo Advisors Discount Brokers Online Financial Advisors	Personal Finance Management	Tax Filling and Processing Spend Management and Financial Planning Credit Scoring Services
Bank tech	Big Data Blockchain Customer Onboarding Platforms	Insur tech	Insurance Aggregator IOT, Wearables and Kinematics

Source : Deloitte Analysis

Significance of Fintech Startups in India

- **Promoting Financial Inclusion in India** – Most of the Indian people in rural area remain outside the formal financial system, and the use of financial technologies can bridge the gap left by traditional banking.
- **Finance for Micro, Small and Medium Enterprises (MSME)** – Lack of capital is the biggest threat to MSME, FinTech startups can play a key role and solve the issue of credit availability and offering easier and quick access to loans.
- **Improve Customer Experience** - FinTech start-ups provide better customer experience in terms of convenience, personalization, transparency, accessibility and developing credit scores and underwriting credit for customers for improving financial services penetration in India by leveraging big data, machine learning and alternative data.

Growth Factors of Indian FinTech Sector

Customer Loyalty, Funding environment, Technology & IT Infrastructure, Value proposition, Innovative use of Data, Cost of operation are considered as a key factors, leading to success of Fintech companies³.

The following seven factors are likely to drive the growth of the Indian FinTech sector, in the medium to long term³:

- Combination of steady economic growth with low penetration of financial services.
- Large public sector banks and insurers lagging market growth.
- Regulatory forbearance toward FinTech.
- Indian Millennials rapidly ascending the adoption S-curve of digital financial services and thus perceiving higher friction from incumbents.
- India Stack and internet data proliferation to improve financial services utility infrastructure and connectivity to support digital financial services.
- Advances in technology and adoption of cloud services leading to asset light models with almost zero unit costs at transaction levels could enable subsidization without building scale.
- Lower real interest rates in Indian economy.

Regulatory Legal Framework and Government Initiatives for Fintech in India

Owing to the overlapping and non-linear business models of fintech businesses, there is no single all-encompassing regulatory legal framework for fintech in India. The applicable laws and rules governing a fintech business will generally depend on the nature of the business being conducted⁷. It is usually regulated by the RBI, SEBI, the Insurance Regulatory and Development Authority of India (IRDAI), the Pension Fund Regulatory and Development Authority (PFRDA), and IFSCA⁷. Aspects that are regulated by the aforementioned authorities include online payments and transactions, payment

aggregators and gateways, data and privacy, lending and collection of deposits, trading of securities and derivatives, offering of insurance products and services, etc. For many financial offerings, prior approvals and licenses need to be obtained from the RBI, SEBI or IRDAI for a business to commence⁷.

The government has already laid the groundwork for the Fintech industry to provide flexible and innovative digital banking with regulations like the Unified Payment Interface (UPI), Aadhaar, and open application programming interfaces (APIs)⁶. The Government also announces measures to specifically promote investments in tech/fintech/start-up businesses in India, or which have a positive impact on those sectors. Additionally, IFSCA has also introduced an incentive scheme for, inter alia, domestic fintechs seeking access to overseas markets as well as foreign fintechs seeking market access to IFSCs in India. The Government also proposed many tax-related relaxations, including an extension of timelines (from March 31, 2023, to March 31, 2025) for funds relocation to IFSC GIFT City. Tamil Nadu FinTech Policy 2021, offering collaboration and incentives for select fintech startups⁷.

The laws and regulations that may apply to fintechs in India are listed below:

RBI

- Payment and Settlement Systems Act, 2007.
- Master Directions on Prepaid Payment Instruments (MD-PPIs), 2021.
- Framework for Scale Based Regulation for Non-Banking Financial Companies, 2021.
- Directions for opening and operation of Accounts and settlement of payments for electronic payment transactions involving intermediaries, 2009.
- Guidelines for Licensing of Payments Banks, 2014 and Operating Guidelines for Payments Banks, 2016.
- Framework for Recognition of a Self-Regulatory Organisation for Payment System Operators, 2020.
- Guidelines on Regulation of Payment Aggregators and Payment Gateways, 2020.
- Circular on Processing of e-mandate on cards for recurring transactions, 2019.
- Circular on Tokenisation – Card transactions, 2019.
- Guidelines on Digital Lending, 2022.
- RBI Master Directions on Credit Card and Debit Card – Issuance and Conduct, 2022.

National Payments Corporation of India (NPCI)

- Various circulars on Unified Payments Interface (UPI) payments.

SEBI

- Circular on Mutual Funds, 2021.

IRDAI

- Guidelines on Insurance Repositories and Electronic issuance of Insurance Policies, 2015.
- Guidelines on Insurance e-commerce, 2017.
- Insurance Regulatory and Development Authority of India (Issuance of e-Insurance Policies) Regulations, 2016.

IFSCA

- International Financial Services Centres Authority Act, 2019.
- Framework for FinTech Entity in the International Financial Services Centres (IFSCs), 2022.

Apart from these the following initiatives are taken by the government for the benefit of public.

- **Jan Dhan Yojana** - This initiative is considered as a world largest financial inclusion and it has helped in new account enrolment of over 450 million beneficiaries for direct benefit transfer and accessibility to a host of financial services applications such as remittances, credit, insurance, and pensions. It helps the Fintech companies to build technology products to enter the large consumer base in India⁴.
- **India Stack** -It is a set of APIs that allows governments, businesses, startups and developers to utilise a unique digital Infrastructure to solve India's hard problems towards presence-less, paperless and cashless service delivery⁴.
- **UPI (Unified Payments Interface)** -It is an advanced mobile app-based payment system to transfer funds between bank accounts developed by the National Payments Corporation of India in 2016, is the multiplier force behind the Fintech revolution in India. 338 banks registered under the platform, recorded more than 6.28 billion transactions in July 2022 worth 10.62 lakh crore ⁴.
- **Digital Rupee** - India launched its Central Bank Digital Currency (CBDC) or digital rupee or e-rupee recently. It is an electronic version of cash and will primarily accelerate the growth of the FinTech market in India⁴.
- **Fintech Hub** - **Fintech** Valley Vizag, O-hub Bhubaneswar, Bandra Kurla Complex, FinTech Hub Kolkata, Mumbai Fintech Hub are Fintech parks created by the respective Government to promote business infrastructure in the state, and attract investors and multinational financial corporations to set up their offices in the hub.

Issues, Challenges faced by Fintech Companies in the Current Economic Climate

Fintech systems are vulnerable to hackers by automation of processes and digitization of data. Absence of regulatory authority has led to increased chances of fraud threat to investor protection and movement of money in the economy. Due to the diversity of

offerings in FinTech, it is difficult to formulate a single and comprehensive approach to these problems.

According to RBI financial literacy is only 27% of Indian adults and 24% of women meet the minimum level of financial literacy. The lack of financial literacy is also considered as a main issue. During the pandemic, digital lending through mobile apps became popular, but more than half of these digital loan providers were operating illegally. Many apps used tactics to exploit the widespread lack of financial literacy, charging interest rates up to 500% ⁴.

The true legal status of cryptocurrency continues to be a grey area in India⁷. The Government of India introduced a draft Cryptocurrency and Regulation of Official Digital Currency Bill, 2021 (Cryptocurrency Bill), which provides for: (a) the creation of a framework for official digital currency to be issued by the RBI; and (b) the prohibition of all private cryptocurrencies in India – with certain exceptions, in order to promote the underlying technology of cryptocurrency and its uses⁷. As per a recent report, WazirX, India's biggest Cryptocurrency exchange registered an annual trade of over \$43 billion.

Nearly three-quarters of population resides in rural India Fintech industries making its route to reach digitalization. Infrastructural costs, low usage due to lack of awareness, inconsistent availability of electricity, theft, and vandalism are some of the major deterrents for physical bank branches and ATM operators in rural areas².

Source :Deloitte Analysis

Emerging Trends in Fintech Industry

Fintech companies can rapidly roll out new features and products by testing new innovations in secure sandboxes while checking for adherence to government regulations and data security. This enables Fintech companies to provide innovative products and services in a faster yet secure manner⁶. The Fintech activities are divided into three broad categories: the Banking Sector; Capital Markets; and Funds Management and the Insurance Sector, and the notable Fintech trends include BNPL (Buy Now, Pay Later), Digital Banks, Robo Advisory, Blockchain, Sustainable Finance products, neo-banks, Embedded finance/ Insurance, Cyber Insurance, Artificial intelligence (AI) and the metaverse etc., are some notable trends of the year and it could change the scope and landscape of Fintech and it continued to show an upward trend too⁷. The Fintech areas/activities expressly include

Agri Tech, Climate/Green/Sustainable Tech, Space Tech, Solutions for Banking, Financial Services and Insurance domain leveraging (AI, Chatbots, Web 3.0, etc)⁷.

Conclusion

Through the mobile applications and online platforms, Indian FinTech companies have been successful in offering various financial services to this population. It likely to reduce costs and improve quality of financial service and it will develop unique and innovative models of assessing risks and it will create a more diverse, secured and stable financial services land shape³. The government should require Fintech companies to ensure that the data harvested from consumers will not be used for any purpose other than serving the consumer's interest⁴. Establishing technological safeguards, educating and training customers will also help in democratizing Fintech and guarding against cyberattack issues. FinTech will create a more diverse, secured and stable financial services landscape. FinTech companies are less homogenous than incumbent banks, and offer great learning templates to improve, both, capabilities and culture³.

A STUDY ON THE IMPACT OF MOBILE BANKING APPLICATIONS IN INDIA - AN OVERVIEW

Dr.P.Govindan. M.Com., M Phil., Ph.D., ICWAI Inter NET.,
Assistant Professor in Commerce, Department of Commerce
K.S.Rangasamy College of Arts and Science (Autonomous),
Tiruchengode, Namakkal, Tamil Nadu, India

Abstract

The commercial banking industry in India has implemented various financial advancements, leading to a shift from traditional banking to technology-based banking. This transition aims to meet customer needs and gain a competitive advantage. An example of such innovation is mobile banking, which is available in all licensed banks with branches in India. This feature allows customers to conduct banking transactions at any time and from any location, providing them with convenience and influencing their banking activities. Furthermore, it facilitates continuous communication between banks and clients and boosts revenue by increasing customer transactions through mobile banking. This study primarily focused on the impact of mobile banking applications in India. Previous research investigated the relationship between mobile banking, internet usage, and the technological services offered by banks to customers. In conclusion, the study found that customers place trust in banks because of the convenience and security they offer in transactions. Customers are more likely to choose banks and use their services if the system is adaptable and easily accessible. The integration of technology, particularly mobile technology, in the banking industry has attracted a new group of customers.

Keywords: Mobile Banking, Technology, Customers, innovation

Introduction

The term "mobile banking" describes interactions between a customer and a bank over a mobile platform, such as a smartphone or tablet. This is distinct from mobile payments, which entail making little transactions via a mobile device. When compared to traditional branch or internet banking, mobile banking has benefits including convenience and efficiency. Over the past few decades, technology has played an increasingly crucial role in the banking sector. Banks are constantly searching for the most effective ways to utilize technology in order to enhance their services, provide convenience, and improve efficiency for their customers.

Mobile phones have become an integral part of everyone's daily lives and are now considered a common and essential technology. They have greatly simplified the provision of banking services to a wider range of customers in a cost-effective and time-efficient manner. To improve the convenience of their primary services, the majority of banks have developed applications, commonly referred to as apps, which enable customers to access banking services anytime and from anywhere.

The banking industry has witnessed a transformation from the traditional physical model to a contemporary mobile banking system, enabling customers to virtually access their banks through their mobile phones and avail services at any time and place with a simple click. Mobile banking has brought about significant changes in tasks like checking account balances, transferring funds online, making utility payments, and other services, all with the convenience of a mobile device.

The continuous advancements in information and technology have resulted in numerous improvements in the design and delivery of products and services within the banking sector. The popularity of mobile banking is on the rise as customers increasingly find it convenient to pay bills, recharge their mobile phones, instantly transfer funds, and more. This special issue is highly appropriate given the rapid growth and excitement surrounding mobile banking. Over the last few years, there has been a significant increase in the mobile application industry. Banks are eager to establish their presence in this sector in order to engage with their customers through mobile applications.

Importance of the Study

The rise of mobile payment has been aided by government efforts and technological advancement. Thanks to technology, mobile users can now use the applications that have been downloaded on their smartphones to conduct financial transactions or make payments. The popularity of electronic payment, in which products and services are exchanged without the need of cash, surged with the expansion of mobile payment. This has experienced exceptional growth thanks to the smart phone revolution. The interactions between customers and financial service providers are greatly influenced by mobile banking services. It has special ability to support Anywhere Anytime Banking makes it the most practical and simple option to stay connected to the bank. After acquiring the required approval from the Department of Payment & Settlement Systems, Reserve Bank of India, banks are allowed to offer mobile banking services SMS, USSD, or Mobile banking application.

Mobile banking services are accessible to bank customers regardless of their mobile network. It essentially enables consumers to perform various banking activities, including accessing financial account information, conducting transactions with their bank, transferring money, and making credit card payments from anywhere. These services have expanded recently, offering additional options such as transaction details, account balance viewing, mini statements, third-party fund transfers, utility bill payments, and more. As a result, there has been a significant increase in mobile banking transactions. Additionally, banks have embraced mobile applications, commonly known as apps, since the introduction of mobile banking.

Significance of the Study

The smart phone revolution in India has paved way for an unprecedented growth of Mobile Commerce and Mobile Banking in India. The Mobile banking services are playing a significant role in the interactions between consumers and financial service providers. The unique feature of Mobile banking is that it enables Anywhere Anytime Banking and is the most convenient and easy way to stay connected to the bank. Banks are permitted to offer Mobile banking services (through SMS, USSD or Mobile banking application) after obtaining necessary permission from the Department of Payment & Settlement Systems, Reserve Bank of India.

Mobile banking services are made available to bank customers irrespective of the mobile network. It virtually allows consumers to do all their banking activities such as obtaining financial account information, conducting financial transactions with their financial institution and allowing consumers' to transfer money and make credit card payments anywhere. These services have recently broadened with array of options like banking transaction details, viewing of account balance, mini statement, third party transfer of funds, utility bill payments features etc. has led to a surge in Mobile banking transactions. With the advent of Mobile banking, banks have also embraced Mobile Applications popularly called as Apps. Banks are being forced to undergo a significant makeover as more and more consumers use the internet and mobile devices.

Review of Literature

Shirin Alavi and Vandana Ahuja (2016) emphasized mobile technologies have changed established channels, leading to benefits for the banking services sector through the adoption of mobile apps. **Sindhu Singh & R. K. Srivastava (2020)** discovered that the factors influencing adoption significantly impact customers' behavioral intention to use mobile banking. **Chawla, D., & Joshi, H. (2017)** conducted empirical research on the influence of various factors on user attitude and intention, finding that they positively and significantly affect user intention to adopt mobile banking. **Anshul Malik, S. Suresh, and Swati Sharma (2017)** conducted a study on the factors influencing the adoption and continuous use of mobile apps by consumers, which can provide a strategic advantage to marketers in this competitive environment.

Chawla and Joshi (2017) discovered that there are significant differences in both attitude and intentions towards mobile banking among the three segments of customers: leaders, followers, and laggards in terms of technology adoption. **Kamboj, Sharma, and Sarmah (2022)** proposed that all dimensions of m-banking failure have an impact on the utilization of m-banking, which subsequently affects user satisfaction and customer engagement. **Sampaio, Ladeira, and Santini (2017)** pointed out that there is a positive relationship between the benefits provided by mobile banking and customer

satisfaction. **Perna Sharma Bamoriya and Dr. Preeti Singh (2012)** stated that the major obstacle in adopting mobile banking services is the concern for customers' security.

Sahoo, D. and S. Pillai, S. (2017) demonstrated that the servicescape of mobile banking strongly predicts customers' attitude towards M banking, which in turn influences customer engagement. **Chawla, D. and Joshi, H. (2019)** discovered that factors such as perceived ease of use, perceived usefulness, trust, security, facilitating conditions, and lifestyle compatibility significantly impact consumer attitude and intention to use mobile wallets. **Barnes and Corbitt (2003)** mentioned that recent advancements in telecommunications have facilitated the introduction of new methods for accessing banking services, one of which is mobile banking, where customers interact with a bank through their mobile phones.

Viral Bhatt and Dixita Nagar (2021) validated that factors such as ease of use, mobile atmosphere, and perceived responsiveness, image of the bank, perceived security, perceived risk, performance benefits, social influence, and hedonic motivation have substantial direct impacts on mobile banking. **Nidhi Singh and Neena Sinha (2016)** concluded that the mere introduction of mobile service is not enough; banks should give priority to improving features that incentivize customers to embrace this service. **Perna Sharma Bamoriya and Preeti Singh (2011)** found that range of issues related to banks, mobile handsets, and telecom operators. These issues include functionality, security, and privacy of mobile handsets, standardization and customization of services, downloading and installing application software, and the quality of telecom services.

Results and Discussion

The adoption of mobile technology as an alternative distribution channel for delivering banking services to customers demonstrates potential in the newly developed banking model worldwide. Mobile banking is a revolutionary innovation that enhances service delivery in the banking industry. Banks are leveraging this technology to empower both banked and unbanked customers, while also benefiting mobile network operators and reducing operational costs. Technological advancements have rapidly transformed various aspects of our lives, including the banking business. Smart devices are now utilized in providing banking services, and the combination of internet technology and mobile networks offers new possibilities and applications. The Bank's focus on strengthening infrastructure and ensuring the safety and security of digital transactions has contributed to the rapid adoption of digital payments across the country. This was aided by the introduction of innovative products in the payment space.

The Bank also worked towards building a strong and resilient technology infrastructure, which ensured the smooth functioning of critical and systemically important payment and settlement systems in the country. Technology plays a crucial role

in the banking sector, which is one of the largest financial institutions. The sector is constantly exploring the potential of technology-enabled services to enhance the experience and convenience for customers. In today's era of information, mobile phones have become a common device for individuals, leading to the emergence of mobile banking as an alternative channel for banking services. India, as the largest telecom market globally, has significant potential for expanding mobile banking services.

Initially, banks developed customized applications for mobile phones, but with the advent of smartphones, traditional mobile software has evolved into mobile apps. However, the development of apps for various mobile operating systems presents a significant challenge. Security is also a concern due to the small size and vulnerability of mobile devices to theft. To address this, customers need to be educated on how to safely use mobile banking.

In a country like India, where different languages are spoken in different regions, it is crucial to have user-friendly banking software that supports local languages. Raising awareness among existing customers and providing special incentives for using mobile banking will boost adoption rates. Once customers have confidence in the technology, the use of mobile banking will naturally increase.

Conclusion

This study concluded that customers will engage in more transactions if the Mobile Banking App is user-friendly and easy to navigate. The study found that there is a noticeable difference in perception between frequent app users and those who never use it. This study suggests that using the app more often increases awareness of mobile banking services. Additionally, individuals who use the app frequently find it more convenient and compatible compared to those who have never used it. Therefore, banks should actively encourage customers to use the app more often to improve customer satisfaction and promote awareness of their services. Currently, there is a significant business opportunity in the banking industry when it comes to attracting customers. Customers trust banks because of the convenience and security they provide in transactions. Customers are more likely to choose banks and use their services if the system is adaptable and easily accessible. The integration of technology, especially mobile technology, in the banking sector has attracted a new group of customers.

CHALLENGES FACED BY SMALL RETAIL BUSINESSES

Dr.A. Hilary Joseph

Assistant Professor of Commerce, The American College, Madurai.

Imran Mahathi S

Student, The American College

Abstract

Small retail businesses encounter fierce competition, financial constraints, and inventory management dilemmas. The digital shift necessitates e-commerce adoption, while regulatory compliance adds complexity. Supply chain vulnerabilities and economic uncertainties create additional hurdles. Despite these challenges, successful small retailers thrive by prioritizing customer service, offering unique products, and fostering community connections.

Keywords: *Competition, Financial Constraints, Inventory Management, E-commerce Adoption, Customer-Centric Approach*

Introduction

Small retail businesses, often family-owned or driven by passionate entrepreneurs, are the heartbeat of local communities, infusing them with unique character and convenience. These enterprises, including corner stores, boutiques, and even online ventures, establish personal connections with their customers, fostering a strong sense of community.

Despite facing formidable competition from large retail chains and e-commerce giants, small retailers carve out their niche by offering distinct products and services tailored to local tastes. Their adaptability and embrace of technology enable them to respond swiftly to changing consumer preferences and market dynamics.

This article will explore the resilience and innovation displayed by small retail businesses, showcasing their pivotal role in sustaining the fabric of local communities and contributing to the dynamic tapestry of the broader retail landscape.

Review of the Literature

1) Sustainability of SMEs in the Competition: A Systemic Review on Technological Challenges and SME Performance

RPIR Prasanna, JMSB Jayasundara, Sisira Kumara Naradda Gamage, EMS Ekanayake, PSK Rajapakshe, and GAKNJ Abeyrathne(2019)- Sustainability of SMEs in the Competition: A Systemic Review on Technological Challenges and SME Performance This review examines how technology affects SME survival globally, emphasizing key drivers like social capital, innovation, and partnerships with larger corporations, while highlighting the importance of a skilled workforce and seizing tech opportunities for success.

2) Problems and prospects of Indian MSMEs: a literature review

Davinder Singh, J.S. Khamba and Tarun Nanda(2018)- MSMEs play a crucial role in India's economy by providing significant employment opportunities and addressing poverty. This study examines the challenges they face in a competitive environment and explores factors enhancing their manufacturing performance, essential for India's growth.

3) Literature Review : The Efforts To Strengthening of Micro, Small and Medium-Sized Enterprises (MSME) in Indonesia

Nafizha Trie Permata Sari, Andriani Kusumawati(2022)- MSMEs are crucial for poverty reduction in countries like Indonesia, facing challenges such as workforce quality and high costs. To strengthen them, efforts include government collaborations, training, digital adoption, capital access, policy support, and promoting entrepreneurship through events.

4) The Impact of CRM on Business or MSME Performance: A Literature Review

Budi Utami, Sudarmiatin Sudarmiatin(2022)- This study used a systematic literature review of Scopus Q1, Q2, and Q3 articles to investigate the impact of CRM on SMEs. They screened articles with keywords "CRM" and "company performance (MSMEs)" and found a positive relationship between CRM and both financial and non- financial SME performance.

5) MSMEs Business Sustainability: A Literature Review

Zul Afdal, Menik Kurnia Siwi, Tri Kurniawati, Marwan(2021)- This article underscores MSMEs' need for sustainability in the face of uncertainty, emphasizing the impact of the Covid-19 pandemic. It highlights the importance of quality, technology, and competitive pricing for their success, particularly in Industry 4.0. The article also identifies research gaps and recommends future study directions.

6) Analysis Transformation and Digitalization of MSMEs (Literature Review)

Rahman Soesilo, Liosten Rianna Roosida Uly Tampubolon(2023)- This research employs a literature review to describe and explain variables. It identifies significant relationships between digitization transformation, productivity, added value, and downstream research through qualitative methods. Despite search limitations, it contributes to knowledge in digitalization transformation and introduces a novel framework.

7) Identification of Human Resource Management Best Practices in the MSME Sector

Abd. Karman, Purnomo, Akbar Jaya, Teguh Setiawan Wibowo(2022)- This study examines MSME human resource management through 60 publications (2010-2022) using a phenomenological approach. Key findings highlight the importance of superior human resources, effective sales strategies, customer-centricity, and adaptive governance for MSME success in a competitive landscape.

8) Characterizing and Distinguishing 'Innovative Start-ups' Among Micro, Small and

Medium Enterprises (MSME)

S. Navaneetha Krishnan, L. S. Ganesh, C. Rajendran(2020)- This study explores start-ups and their high failure risk. It identifies various terms used for start-ups and aims to categorize them as Innovative Start-ups (ISs). Additionally, it proposes a framework distinguishing ISs from Conventional MSMEs (C-MSMEs), aiding policymakers, entrepreneurs, and investors. It also highlights four new research areas in the field.

9) Utilization of Digital Marketing for MSME Players as Value Creation for Customers during the COVID-19 Pandemic

Finny Redjeki, Azhar Affandi(2021)- COVID-19 shifted lifestyles towards online shopping. Indonesian MSMEs can thrive via Digital Marketing. This qualitative study explores its potential, suggesting steps like goal-setting, target audience identification, platform selection, and content creation. It also highlights added value for customers using digital marketing.

10) MSMEs in India: A Vision for the Future

Nidhi Gautam, Akash Sondhi(2020)-MSMEs are pivotal for emerging economies, contributing to exports, employment, and GDP, especially during economic downturns. This chapter underscores their significance, challenges, and outlines a forward-looking vision for India. It guides policymakers and highlights SMEs' potential in a globalized world.

11) Role of Lean Six Sigma in the Indian MSMEs during COVID-19

Mrigendra Nath Mishra, Ashutosh Mohan, Arghya Sarkar(2021)- This study examines Lean Six Sigma implementation in Indian MSMEs during or post-COVID-19, highlighting benefits, obstacles, and cultural shifts. Findings emphasize its potential for improving operations but note limitations. It offers practical guidance and contributes to understanding Lean Six Sigma in the pandemic context.

12) Evaluating the Significant Role of E-Commerce to the Resiliency of MSMEs During the Covid-19 Pandemic

Marderick M. Presto(2021)- This paper argues that e-commerce is vital for economic resilience, especially for MSMEs during COVID-19, with indicators including increased internet use, mobile apps, and equal market opportunities.

13) Determinants of Small Medium Micro Business Empowerment: Systemic Literature Review

Aidil Amin Effendy, Muhamad Apep Mustofa, Raden Ruli Basuni, N Nurjaya Mail, Denok Sunarsi (2022)- This study investigates determinants of MSME empowerment in the globalization era, highlighting the key roles of government lending programs, banking support, and policies promoting credit financing and market access for MSMEs during the pandemic.

14) The Impact of Technology on MSME Sector in India

Deshraj Son(2023)- This paper examines the impact of technology and ICT on India's

MSME sector, emphasizing their role in economic development and addressing sector-specific challenges.

15) Business Development Services for Micro, Small and Medium Enterprises - Literature Review of Past Trends and Future Directions

Sandeep Goyal, Bruno S. Sergi, Mark Esposito(2018)- This article examines the role of BDS providers in enhancing MSME performance, emphasizing their significance in economic growth and job creation. It notes challenges like an underdeveloped BDS market, limited MSME adoption, evolving BDS provider dynamics, and a shift from public to private providers. The research objectives encompass BDS evolution, provider definition, challenge understanding, and strategic action identification.

Objectives of the Study

- To Study the Role of Small Retail Businesses
- To Identify the challenges faced by the small retail businesses
- To give suggestions and solution

Research Methodology

The paper is exploratory in nature, and based on available secondary data such as books, journals, magazines and other sources. Secondary data refers to information that has been collected by someone else for a different purpose and is used by researchers in their own studies or analyses.

Role of Small Retail Business

Small retail businesses contribute significantly to the vitality of local communities and the broader economy. They serve as vital employers, offering job opportunities and livelihoods to residents, thus contributing to lower unemployment rates and bolstering the local economy. Moreover, these businesses foster community engagement by building personal connections with customers and often participating in local events and initiatives.

Local Employment: Small retail businesses are often significant employers within their communities, providing jobs and livelihoods to local residents. This helps reduce unemployment rates and boosts local economies.

Community Engagement: Small retailers foster a sense of community by building personal relationships with their customers. They often participate in local events and initiatives, contributing to the social fabric of the area.

Support for Local Suppliers: Many small retailers source their products from local artisans, craftsmen, and suppliers, thus supporting and promoting local businesses.

Tax Revenue: Small retail businesses generate tax revenue for local governments through sales taxes and property taxes, which can be used to fund essential community services.

Economic Growth: By stimulating local spending and keeping money within the community, small retailers contribute to the overall economic growth of their regions.

Entrepreneurship: Small retail businesses are often started by entrepreneurs and serve as training grounds for future business leaders. They contribute to a culture of innovation and entrepreneurship.

Consumer Convenience: Small retailers provide convenient access to everyday goods and services, reducing the need for consumers to travel long distances for their shopping needs.

Adaptability: Small retail businesses are agile and can quickly respond to changing consumer preferences and local trends, helping to keep communities vibrant and up-to-date.

Sustainability: Some small retailers prioritize sustainable practices, such as selling locally sourced and eco-friendly products, contributing to environmental and social sustainability efforts.

Challenges Faced

Financial challenges: financial challenges, including cash flow management, high operating costs, and fierce competition from larger rivals. Access to financing and the cost of establishing an online presence pose additional hurdles.

Access to Capital: Securing financing and capital for expansion, inventory management, and technology upgrades can be more challenging for small retailers compared to larger corporations.

Competition from Large Retailers: Small retailers often compete with large chain stores and e-commerce giants, which have greater resources and buying power. Price competition can be especially challenging.

Supply Chain Disruptions: Small retailers may lack the resources to quickly adapt to supply chain disruptions caused by factors like natural disasters, trade issues, or the COVID-19 pandemic.

Customer Retention: Building and maintaining customer loyalty is crucial for small retailers, as they often rely on repeat business. Providing exceptional customer service is essential but can be resource-intensive.

Changing Consumer Preferences: Adapting to evolving consumer preferences and trends is critical. Small retailers must stay attuned to customer needs and adjust their product offerings accordingly.

Local Economic Conditions: Economic downturns or fluctuations in local economies can directly impact the spending habits of consumers in a particular area, affecting small retailers sales.

Online Competition: The growth of e-commerce and online marketplaces has intensified competition and required small retailers to establish a strong online presence,

which can be costly and technically challenging.

Rising Operating Costs: Expenses such as rent, utilities, and employee wages can be a substantial burden for small businesses. Economic fluctuations and minimum wage increases can further strain their budgets.

Inventory Management: Balancing inventory levels to meet customer demand without overstocking or understocking can be a complex task, affecting cash flow and profitability.

Distribution challenges : Small retail businesses face distribution challenges stemming from limited resources and logistics, often resulting in delayed order fulfillment and inventory management difficulties.

Discussion

The abstract and introduction present a comprehensive view of small retail businesses, emphasizing their vital role in local communities and economies. Small retailers are depicted as not only sources of employment but also as facilitators of community engagement and supporters of local suppliers, contributing to tax revenue and overall economic growth. However, the discussion highlights the multitude of challenges these businesses face, including financial constraints, competition from larger retailers, supply chain disruptions, and adapting to evolving consumer preferences. Their adaptability and emphasis on sustainability are noted strengths, and the study suggests that embracing digital transformation can help them address some of these challenges, particularly in competing with e-commerce giants. Overall, the research underscores the importance of recognizing both the challenges and opportunities faced by small retail businesses in sustaining their unique contributions to local communities and the broader retail landscape.

Conclusion

In conclusion, small retail businesses, despite their pivotal role in fostering community engagement and contributing to local economies, face a multitude of challenges in today's competitive landscape. These challenges encompass intense competition, financial constraints, inventory management dilemmas, the necessity of e-commerce adoption, and the need for a customer-centric approach. Additionally, compliance with complex regulations and supply chain vulnerabilities add to their operational burdens. Nevertheless, resilient small retailers showcase innovation through exceptional customer service, unique product offerings, and strong community connections, enabling them to not only survive but thrive in their local ecosystems. These businesses remain vital contributors to the dynamic retail landscape, embodying adaptability and entrepreneurship at the heart of our communities.

WOMEN'S PERCEPTION TOWARDS TECHNOLOGY IN SUSTAINABLE DEVELOPMENT THROUGH MSME

Dr. P.Jayanthi

*Assistant Professor, PG Department of Commerce-CA
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu, India*

Dr. S.Poongodi

*Assistant Professor, PG Department of Commerce-CA
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu, India*

Abstract

This study aims at exploring women's perception towards technology in sustainable development and variables associated with level of opinion towards technology especially e-bike. Data for the study have been collected from 180 women through issue of structured questionnaire by adopting convenience sampling method. Simple Percentage and Chi-square test have been used to analyze the data. The study reveals that majority of the women are in the age group of 35 to 45 years and majority of them are undergraduates and employed in private sector with an earning between Rs.20001 to Rs.40,000 per month and they are aware about E-Bike through friends. The level of opinion to purchase e-bike are less pollution followed by Incentives/subsidies from government, durability, eco-friendly, less dependence on fossil fuels, no fuel cost, smooth driving and appearance of vehicle. Chi-square test reveals that area, age, occupation, monthly income, family income and period of usage are significantly associated with the level of opinion for e-bike.

Keywords: *Women- Technology-Sustainable.*

Introduction

Indians prefer two wheelers because of their small manageable size, low pricing, maintenance, and availability of loans on liberal terms. Indian streets are full of people of all age group riding two-wheelers. Wide varieties of two wheelers are available in the market, known for their latest technology and enhanced mileage. Indian bikes, scooters and mopeds represent style and class for both men and women. India is the second largest producer and manufacturer of two-wheelers in the world. The face of auto industry that was redefined with the invention of fuel-efficient technology is all set to see dawn of a new era in two- wheeler industry. Electric vehicles differ from fossil fuel-powered vehicles in that the electricity they consume can be generated from a wide range of sources, including fossil fuels, nuclear power, and renewable sources such as tidal power, solar power, and wind power or any combination of those. There are several policies, promise and pledges with the ever-increasing emission of greenhouse gases. There is an increased fear of environment pollution at every step with modern technology and innovation. In this regard the present study brief about women perception towards technology in sustainable development through MSME especially e-bike.

Literature Review

Ajaysinh Paramar and Tushar Pradhan (2021) in their study made an attempt to know the consumer perception towards e- vehicle in Vadodara City. The data for the study have been collected by issuing questionnaire to 100 respondents by using random sampling method. The data have been analysed using simple percentage. The finding of the study reveals that the most of the people prefer other than e-vehicle. **Sivasakthi and Geethanjali (2020)**, in her research made an attempt to know the customer satisfaction towards ampere electronic bike with special reference to Coimbatore City. The data for the study have been collected by issuing questionnaire to 120 respondents by adopting random sampling techniques. The data have been analysed using simple percentage and ranking analysis. The finding of the study depicts that advertisement affects to buy E-bike. Customers feel the price of ampere e-bike is moderate.

Statement of the Problem

The two-wheelers of the present world have the sounds to attract the consumers but at the cost of degrading the environment. The usage of e-bike has solution for good environment by reducing pollution, sound etc. With the rising cost of fuel, increasing levels of pollution, high running and maintenance cost of vehicle, the electrically chargeable bikes and scooters are gaining popularity. Sheela Srivastava and Sivakoti Reddy (2011), found that majority of the customers are satisfied with price and availability of spare parts in the local market of the vehicles. Customers are not satisfied with the insurance policy of the companies. Shuvam Mondal et.al (2022), depicts that the carrying expenses are less than fuel (petrol/diesel) cost and hence they are willing to buy e-vehicle (or) switch to one. In this backdrop, an attempt has been made to study the women's opinion for e-bike and variables influencing the level of opinion towards e-bike.

Objectives of the Study

The following are the objectives of the study

- To know the socio-economic profile of the women.
- To find out the level of opinion towards e-bike.
- To identify the variables that associate with level of opinion towards technology.

Research Methodology

The study is based on primary data collected through issue of well-structured questionnaire. It contains questions relating to the socio-economic profile, factors influence to purchase to e-bike. A sample of 180 women in Pollachi Taluk has been selected by adopting convenience sampling method. Simple Percentage and Chi-Square test have been used to analyze the data.

Data Analysis

The findings of the study are divided into three sections namely, Socio-economic profile of sample women's, level of opinion towards e-Bike and variables associated with level of opinion for e-bike are showed in the following paragraphs.

(i) Socio - Economic Profile

- Most 86 (47.7%) of the women are in the age group 35 to 45 years.
- Majority 92 (51.1%) of the women are from rural area.
- Majority 123 (68.3%) of the women are married
- Majority 118 (65.5%) of the women belong to the nuclear family
- Majority 129 (71.6%) of the women are under graduate.
- Majority 146 (81.1%) of the women are private employee.
- Most 88 (48.8%) of the women are earning between Rs.20,001 and 40,000.
- Most 74 (41.1%) of the women monthly family income is between 50,001 to 100,000.
- Majority 154 (85.5%) of the women are using e-bike less than a year.
- Majority 136 (75.5%) of the women are friends induced to purchase an e-bike.
- Majority 127 (70.5%) of the women are using battery electric vehicle.

(ii) Level of Opinion towards E-Bike

- Majority 92 (51.1%) disagree that use of fossil fuel does not influence them to purchase e- bike
- Most 88 (48.8%) of women agree that less pollution while using e-bike influence them to purchase e- bike
- Most 86 (47.77%) of women disagree that no fuel cost does not influence them to purchase e- bike
- Most 78 (43.3%) of women agree that smooth driving influence them to purchase e- bike
- Majority 106 (58.88%) of women agree that incentives/subsidies from government influence them to purchase e- bike
- Most 76 (42.22%) of women agree that the factor that eco-friendly factor influence them to purchase e- bike
- Majority 97 (53.88%) of women agree that less maintenance influence them to purchase e- bike
- Majority 114 (63.33%) of women agree that durability influence them purchase e- bike
- Most 84 (46.67%) of women agree that appearance of vehicle influence to purchase e- bike

(iii) Variables Associated with Level of opinion towards e-Bike

To identify the association between the select variables and level of opinion towards e-bike, the Chi-square test has been employed.

Table: 2 Variables Associated with Level of Opinion towards e-Bike

Variables	d.f	Calculated χ^2 Value	Table Value 5% Level
Area	4	13.408	9.488
Age	6	14.987	12.592
Marital Status	2	1.001	5.991
Type of family	2	3.775	5.991
Educational Qualification	4	4.367	9.488
Occupation	2	7.152	5.991
Monthly Income	6	14.979	12.592
Family Income(Per Month)	6	16.018	12.592
Period of Usage	4	12.366	9.488
Sources of Information	4	5.968	9.488
Type of E-Bikes	4	7.068	9.488

It has been found that there exists a significant association between area, age, occupation, monthly income, family income per month, period of usage and level of opinion for e-bikes.

Suggestions

- Producers are suggested to come up with more developed batteries and their life time has to be increased.
- Service centre's can be increased to solve the problems and needs of the customers when needed.
- Number of charging stations may be opened in different spots

Conclusion

According to the study there are many factors that influence the women towards e-bikes. The concept of e-bike has entered in recent years with help of MSME and same is gaining momentum. As an eco friendly product it is more suitable for the city as it can reduce the emission of harmful gas and here by it reduces the pollution. Due to high increase in fuel prices, the electrically charged vehicles seem to be the best one compared to traditional vehicles. Number of charging stations may be opened in rural areas to increase the use of e-bikes then fuel bikes.

SUSTAINABLE DEVELOPMENT THROUGH MSMEs: A PATH TO ECONOMIC AND ENVIRONMENTAL PROSPERITY

Dr.P.Gomathi

Associate Professor, Sree Saraswathi Thyagaraja College, Pollachi

Mrs.N.Kalaiarasi

*Assistant Professor, St.Joseph's College (Arts & Science), Kovur, Chennai
Research Scholar, Sree Saraswathi Thyagaraja College, Pollachi*

Abstract

Micro, Small, and Medium Enterprises (MSMEs) play a pivotal role in the global economy. They are the foundation of many economies, making a substantial impact on GDP, employment, and innovation. As the globe struggles with environmental issues and economic inequalities, the idea of sustainable development has gained popularity recently. MSMEs are particularly positioned to support sustainable development because of their inherent flexibility and agility. This article explores how MSMEs can be catalysts for both economic and environmental sustainability.

Keywords: MSMEs, Economic and Environmental Sustainability, Inclusive growth, Efficiency and Policy support.

Introduction

Micro, Small and Medium Enterprises (MSMEs) represent a vital segment of the global economy, contributing significantly to economic growth, job creation and Innovation. Micro, Small and Medium Enterprises (MSMEs) form the backbone of economies worldwide, playing an important role in driving economic growth, fostering entrepreneurship and generating employment opportunities. These enterprises are characterized by their relatively smaller size compared to large corporations but are no less significant in their contributions to the global business landscape.

MSMEs are known for their ability to generate employment opportunities, especially in rural and underprivileged areas. By providing job opportunities, they help reduce poverty and improve the standard of living for communities. Sustainable development is, at its core, about improving the well-being of people, and MSMEs contribute directly to this goal. The specific definitions and categorizations of MSMEs vary from country to country, but they generally encompass businesses with limited resources, including fewer employees, lower capital investments and often localized operations.

Despite their modest scale, MSMEs hold immense economic and social importance. They are engines of job creation, particularly in regions where larger corporations may not have a significant presence. Additionally MSMEs are hotbeds of innovation, often pioneering new products, services and business models. Their agility allows them to respond swiftly to changing market dynamics, contributing to economic dynamism.

Classification

Composite Criteria: Investment in Plant & Machinery/Equipment and Annual Turnover:

Classification based on Manufacturing Enterprises and Enterprises rendering services:

In exercise of the powers conferred by sub-section (1) read with sub-section (9) of section 7 of the 'Micro, Small and Medium Enterprises Development Act, 2006 (27 of 2006) and in supersession of the notification of the Government of India, Ministry of Small Scale Industries, dated the 29th September, 2006, published in the Gazette of India, Extraordinary, Part II, Section 3, Sub-section(ii), vide S.O. 1642(E), dated the 30th September 2006 except as respects things done or omitted to be done before such supersession, the Central Government, hereby notifies the following criteria for classification of micro, small and medium enterprises (w.e.f 01.07.2020) namely:

- a) A micro enterprise: where the investment in Plant and Machinery or Equipment does not exceed one crore rupees and turnover does not exceed five crore rupees
- b) A small enterprise: where the investment in Plant and Machinery or Equipment does not exceed ten crore rupees and turnover does not exceed fifty crore rupees;
- c) Medium enterprise: where the investment in Plant and Machinery or Equipment does not exceed fifty crore rupees and turnover does not exceed two hundred and fifty crore rupees.

Objectives of the Study

1. To explore how MSMEs can be catalysts for both economic and environmental sustainability.
2. To study the government's MSMEs assistance programmes.

Review of Literature

Endris and Kassegn (2022)¹ found that MSMEs significantly contributed to the sustainable development goals of Ethiopia through creating employment, alleviating poverty and improving their standard of living.

Erik Avanesian and Jose Nino (2020)² concluded that a favourable economic and geographical position were the factors of sustainable development of small & medium sized businesses.

Mohd. Asif Khan (2011)³ found that The MSME sector is significant for generating exports, economic empowerment which result in employment. It also performs a variety of vital and significant functions in the Indian economy. According to the 4th Census of the MSME sector, MSMEs sector is made up of 26.1 million businesses that employ an estimated 59.7 million people according to the 4th Census of the MSME sector. Besides, MSMEs sector is anticipated to employ 1012.59 lakh people by the end of 2012 as per the

annual reports for 2011–12 and the projects for 2012–13, This industry is just behind the agricultural sector in terms of manufacturing output and total exports, accounting for around 45% and 40% of both sectors, respectively. Therefore, governments of India and of states have given this sector a very high priority in order to achieve balanced, sustainable, more equitable, and inclusive growth in the country to ensure overall prosperity among all the countrymen.

Role of MSMEs in Sustainable Development

In recent years, there has been growing recognition of the role MSMEs play in sustainable development. Their ability to adapt to evolving market demands positions them as key players in addressing environmental challenges, promoting social inclusivity and fostering economic growth that benefits a broader spectrum of society.

A. Economic Prosperity

a) Job Creation

MSMEs are renowned for their capacity to create jobs, particularly in rural and disadvantaged areas. They aid in lowering poverty and raising communities' standard of living by presenting employment possibilities. MSMEs immediately contribute to this objective since improving human well-being is at the heart of sustainable development.

a) Innovation and Entrepreneurship

MSMEs are often hotbeds of innovation and entrepreneurship. They have the agility to adapt to changing market demands and can develop environmentally friendly technologies and products. Sustainable development relies on innovative solutions to environmental challenges, and MSMEs can be key players in this endeavor.

b) Inclusive Growth:

Sustainable development seeks to ensure that economic growth benefits all segments of society, especially marginalized groups. MSMEs, by their nature, are often more inclusive in their hiring practices and can empower women, minorities, and disadvantaged individuals to participate in economic activities. This inclusivity fosters social equity and contributes to sustainable development.

B) Environmental Sustainability

a) Resource Efficiency

MSMEs can adopt practices that enhance resource efficiency. Through measures like waste reduction, energy conservation, and sustainable sourcing of raw materials, they can minimize their environmental footprint. These actions not only benefit the planet but also often lead to cost savings, making businesses more resilient.

b) Green Technologies

Many MSMEs are at the forefront of developing and implementing green technologies. Whether it's solar-powered appliances, eco-friendly packaging, or sustainable agriculture practices, MSMEs can pioneer environmentally conscious solutions that have a positive impact on both local and global scales.

c) Circular Economy

MSMEs can contribute to the transition towards a circular economy, where products and materials are reused, remanufactured, or recycled to reduce waste. By designing products with durability and recyclability in mind, MSMEs can help create a more sustainable and less wasteful economy.

Governments MSMEs Assistant Programmes

For MSMEs to fully realize their potential in sustainable development, governments must provide appropriate policy support. Schemes of MSMEs are as follows:

a) Credit Guarantee Trust Fund

Micro, Small and Medium Enterprises and Small Industries Development Bank of India (SIDBI) jointly established a Trust named Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE) in order to implement Credit Guarantee Scheme for Micro and Small Enterprises. The corpus of CGTMSE is contributed by Government of India and SIDBI. 75% of the loan amount to the bank is guaranteed by the Trust Fund. Collateral free loan up to a limit of ₹ 100 lakh is available for individual MSE on payment of guarantee fee to bank by the MSE.

b) Market Access

Governments can promote sustainable MSMEs by creating market incentives such as green procurement policies and preferential treatment for environmentally friendly products and services. To provide marketing support to Micro and Small Enterprises (MSEs), Ministry of MSME has notified the public procurement policy for micro and small enterprises (MSEs) order, 2022 under the MSMED Act, 2006 which is effective from 1st April 2012 and has become mandatory w.e.f. 1st April 2015.

c) Interest Subsidy Eligibility Criteria Scheme

The Interest Subsidy Eligibility Certificate (ISEC) Scheme is an important mechanism of funding khadi programme undertaken by khadi institutions. It was introduced to mobilise funds from banking institutions for filling the gap between the actual fund requirements and availability of funds from budgetary sources. the ISEC Scheme, credit at a concessional rate of interest of 4% per annum for working capital, is made available as per the requirement of the institutions. The difference between the actual lending rate and 4% is

paid by the Central Government through KVIC to the lending banks. The Khadi institutions, having valid Khadi certificate and sanctioned khadi programme. The Institutions registered with the KVIC/State Khadi and Village Industries Boards (KVIBs) can avail of financing under the ISEC Scheme.

d) Procurement and Marketing Support Scheme

Procurement and Marketing support Scheme would cover the following activities:

- To encourage Micro and Small Enterprises (MSEs) to develop domestic markets and promotion of new market access initiatives.
- To facilitate market linkages for effective implementation of Public Procurement Policy for MSEs Order of 2012.
- To educate MSMEs on various facets of business development.
- To create an overall awareness about trade fairs, latest market technique.

e) MSME Champions Scheme (Erstwhile CLCS-TUS)

Ministry of MSME has been implementing Credit Linked Capital Subsidy and Technology Upgradation Scheme (CLCS-TUS) for promoting competitiveness amongst Micro, Small and Medium Enterprises (MSMEs) by the way of wastage reduction through Lean Manufacturing, support for Design improvement, building awareness on Intellectual Property Rights, Zero Defect Zero Effect (ZED) Scheme, digitally empowerment of MSME through Digital MSME and to promote & support untapped creativity of individual and to promote adoption of latest technologies in manufacturing.

MSME Champions scheme has been formulated through Standing Finance Committee (SFC) by merging all 6 components of erstwhile Technology Upgradation Scheme (TUS) for a period of 5 years i.e 2021-22 to 2025-26. It is a Holistic Approach to unify, synergize and converge various schemes and Interventions with a single purpose. The end objective is to pick up clusters and enterprises and modernize their processes, reduce wastages, sharpen business competitiveness and facilitate their National and Global reach and excellence.

f) Entrepreneurship Skill Development Programme (ESDP)

Entrepreneurship promotion and development Programmes are being organized regularly to nurture the talent of youth by enlightening them on various aspects of industrial/business activity required for setting up MSEs. These Programmes are conducted for youth and other people interested to set up their own industrial/self-employment venture. Such activities are also organized in ITIs, Polytechnics and other technical institutions/business schools, where skill/talent is available to motivate them towards self-employment.

g) Survey Studies and Policy Research Scheme

Survey Studies and Policy Research Scheme Conducting the study/survey to analyze the constraints and challenges faced by the MSME as well as the opportunities available to them;

Conduct the study/ survey and analyze on the basis of empirical data and use the results of surveys, evaluation studies of scheme for this Ministry and analytical studies for policy research, designing appropriate strategies and measures of intervention by the Government.

Conclusion

Sustainable development through MSMEs is not just an ideal but an achievable reality. These enterprises, with their capacity for job creation, innovation, and environmental stewardship, are well-positioned to drive economic and environmental prosperity. By fostering a supportive ecosystem for MSMEs and recognizing their potential in the sustainable development agenda, we can create a more equitable, prosperous, and sustainable future for all.

In the coming years, the role of MSMEs in sustainable development is expected to become even more critical. . As global awareness of environmental issues, continues to grow. Consumers and Businesses alike are placing a premium on sustainability. MSMEs that embrace eco-friendly practices and products can tap into this growing market demand. Further driving their economic success while contributing to a healthier planet.

Moreover, collaboration among MSMEs, larger corporations and governments can lead to synergistic efforts in sustainable developments. Partnerships that promote knowledge sharing, technology transfer and joint initiatives can amplify the positive impact of MSMEs in achieving sustainability goals.

In conclusion, MSMEs hold immense potential in the pursuit of sustainable development. Their ability to balance economic growth with environmental responsibility makes them valuable contributors to a more equitable and greener future. By recognizing and supporting the pivotal role of MSMEs we can pave the way for a world where prosperity and sustainability go hand in hand.

JOB STRESS AMONG MSME EMPLOYEES

Ms P. Karthika

Assistant Professor, PG & Research Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Stress has those days end up a worldwide crisis, that's affecting the humans strolling in nearly each vicinity of the economy. It now not most effective influences physical and intellectual health of employees, but moreover reduces the competitiveness and productivity of the organization. MSME zone is one of the most annoying sectors. The fundamental goal of the study to supply out troubles related to work stress that can be tackled for improving the organizational climate with inside the worker organization. Primary information emerge as accrued from the respondents on the idea of questionnaires through Google form. The questionnaire become advanced in a manner to be able to carry out the perception of the respondent at the individual and reason of labour strain amongst the employees determined on as respondents. 100 samples are gathered randomly and facts has been gathered through distribution of questionnaires. For analysing number one data, statistical tools like simple average, weighted average and Garrett ranking technique were used. The findings of this take a look at can also moreover assist the control to formulate strain coping strategies through which they might boom the morale, overall performance and wellbeing of the employees.

Keywords: Job stress, Morale, Overall Performance.

Introduction

Workplace stress may be described because the intellectual trauma and misery that a worker has to undergo while there may be a disparity among the necessities at work and the capabilities, performance or the assets available. Job satisfaction is an important issue to address within an undertaking force as it ensures that the personnel care and value are considered.

Workplace nowadays has come to be a studio in which scripts are written to overhaul different studios and outperform each single instance of competition out with inside the middle. Hence the stress positioned with the aid of using employers on their "bulls" to plough their fields is immense. This stress takes its toll and consequences in elevated tension and anxiety stages amongst workers. This phenomenon is popularly known as stress in the place of work.

Job stress need to know no longer be confused with assignment which understand which energizes us psychologically and physically, motivates us to examine new Competencies and gives some of satisfaction at the same time as the undertaking which energizes us psychologically and physically ,motivates us to examine new abilities and gives some of satisfaction even as the challenge is met, whereas, in technique stress the challenge transforms into techniques desires that can't be met turning relaxation to exhaustion ,and the experience of pride into feelings of pressure.

Many people have experienced upheaval, downsizing, layoffs, mergers, and bankruptcies of their location of its employment and it has fee loads of hundreds of

employees their jobs. Overworking, repeated rebuttals can cause such a response in workplaces these days. Majorly, work related stress affects sleep causing insomnia and sleeplessness. It affects fitness adversely because of the reduced sleep.

It can cause problems in the family of the affected individual like infighting, frequent arguments and fits of disagreement. This adversely affects the family life and also enhances the inefficiency at work. All of this lead to increased levels of frustration and hesitancy and directly affects the quality of work, thus further compounding the pressure on the individual. Also stress is related to the cause of various physical disorders like cardiovascular and others. Hence workplace stress is a potent problem faced by modern day offices and employees. It not only affects the individual, also the company is on the receiving end of poorer quality of work output.

According to Mclean (1979) stress affect everyone in the workplace whether blue collar or white collar workers. (Islam et al, 2012) Stress can be defined in general term as people feel pressures in their own life. The stress due to workload can be defined as reluctance to come to work and a feeling of constant pressure associated with general physiological, psychological and behavioural stress symptoms. Hence stress is the harmful physical and emotional responses that occur when the requirements of the job do not match the capabilities, resources, or needs have the worker and he/she expressed that job stress can lead to poor health and even injury.

Review of Literature

Malek et al. [2010], stated that job stress is an unpleasant emotional situation that an individual experience when requirements of a job are not counter balanced with his ability to cope with the situation. It is a well-known phenomenon that expresses itself differently in various work situations and affects the workers differently.

"Melissa Bushman" [2007], the common causes of low morale include stress, negativity and gossip within the workplace along with lack of incentive programs. The projected solutions to deal with low morale is increasing employee attitudes and improving attendance. Stress is the most frequent cause of low employee morale. Numerous factors may increase the stress levels of employees, but the major reason that employees experience stress is their relationship with their manager, and it has been proved that highly authoritarian managers are likely to cause an increase in level of absenteeism. Therefore, when absenteeism rates are high in a certain department of company, poor employee relationships with the manager or bosses should be considered. For this purpose management training could be used resolve the issue and avoid problems.

"Bowling Harvey" [2001], stress occurs with the interaction between an individual and the environment, which produces emotional strain affecting a person's physical and mental condition. Stress is caused by stressors, which are events that create a state of disequilibrium within an individual. These authors also stated that the cost of too much stress on individuals, organizations, and society is high. Many employees may suffer from

anxiety disorders or stress-related illnesses. In terms of days lost on the job, it is estimated that each affected employee loses about 16 working days a year because of stress, anxiety or depression.

“Ritchie and Martin” [1999], states that stress was described in terms of external, usually physical, forces acting on an individual. Later it was suggested that the individual’s perception and response to stimuli or events were a very important factor in determining how that individual might react, and whether an event will be considered stressful. These authors further contended that most researchers acknowledged that both external and internal factors affect stress. They viewed stress as a response to external or internal processes, which reach levels that strain physical and psychological capacities beyond their limit.

Statement of the Problem

The stress on the place of job is soaring from many years. Most organizations with the goal of accomplishing better overall performance become saddling employee’s overload of labour to fulfill the cut-off date and this might have mental and physical outcomes at the employees which might also additionally bring about something’s opposite to what those companies need to achieve. Although companies are paying more attention than with inside the beyond to the outcomes of the trauma their employees undergo after they place extraordinary needs on them, there may be nevertheless more room for improvement. Again, to generate sufficient sales to be self-sustaining and on the way to fund the acquisition of contemporary-day equipment intended efficient offerings provision and superior personnel of resources. There has been the want for a non-stop alternate in management strategies, administration and the call for of employees to carry out had been increasing.

Objectives of the Study

- To recognize the personnel socio- economic profile.
- To discover the impact of activity pressure at the overall performance of the employees.
- To measure the elements influencing process strain amongst employees.
- To become aware of the personal inadequate, self-role distance, role ambiguity & role inadequacy.

Research Methodology

- Primary records become accrued from the respondents on the premise of questionnaires of 100 via Google form.
- For analysing primary data, statistical tool like simple average, weighted average and Garrett ranking method have been used.

Scope and Significance of Study

- MSMEs often have limited resources and may not prioritize employee well-being. Studying job stress can highlight the importance of creating a healthy work environment for the employees' physical and mental health.
- High levels of job stress can lead to decreased productivity and increased absenteeism. Addressing job stress in MSMEs can contribute to improved performance and profitability.
- High job stress can lead to employee turnover, which is costly for MSMEs. By understanding and mitigating job stressors, MSMEs can retain valuable talent and reduce recruitment and training expenses.
- Governments and policymakers may use research on job stress among MSME employees to formulate policies and provide support programs that can help MSMEs create healthier workplaces.
- MSMEs collectively employ a significant portion of the workforce in many countries. Addressing job stress in this sector can have a positive economic impact by reducing healthcare costs, improving productivity, and enhancing the overall quality of life for employees.
- Demonstrating a commitment to employee well-being can enhance an MSME's reputation and attract socially responsible investors, partners, and customers.

Analysis and Interpretation

Determinants of Job Stress among Employees

Simple Average
Employees Most of them 36 (36 %) are in the age group of (26- 30) years majority of respondents 51 (51%) are males. majority of 50(50%) personnel from rural area. Most of 42 (42%) of employees are Post graduate. Most of personnel 46(46%) are married.

Majority of 64 (64%) are permanent. Most of 38 (38%) personnel are categorized above 20000. maximum of 47 (47%) of employees are with inside the segment of 2-4 members. Majority of 65(65%) are having 2 contributor incomes. most of them 38(38%) are in a trading.

Majority of them 51 (51%) area unit in an exceedingly middle level. Majority 79 (79%) of personnel are acquiring a month -to-month salary. most of 37 (37%) have much less than 1 year of experience. Majority of 88 (88%) employees are select that they having a protection measures in an employer. Majority of 65 (65%) employees are the pick fairly dissatisfied.

So it may be stated that the facts become accumulated from one hundred personnel via the structured questionnaire through Google form. The facts become categorized into age, gender, location, academic qualification of personnel, marital status, nature of job, month-to-month income, general quantity of individuals in family, modern-day role to your company, enjoy to your modern-day company, delight together along with your work environment and so on. Based on the accumulated facts simple percent evaluation had been employed.

Determine to Receive /Accumulated Facts Concerning Job Stress Garrett Ranking Technique

Garrett's ranking technique was used to rank the preference indicated by the respondents on different factors. As per the method, respondents have been asked to assign the rank for all factors and the outcomes of such ranking have been converted into score value with the help of the following formula:

$$\text{PERCENT POSITION} = 100 (R_{ij} - 0.5) / N_j$$

Where,

100= constant

0.5= constant

N_j = Number of ranks

R_{ij} = variable numbers.

Causes of Stress in Work Place Garrett Ranking

Causes of Stress	SCORE	RANK
Long hours	53.86	1
Heavy workload	53.08	2
Tight deadlines	51.36	3
Boring work	51.15	4
Lack of resources	50.17	5
Insufficient skills	49.53	6
Job insecurity	49.44	7
Poor relationship	48.29	8
Low salary	46.35	9
Over supervision	44.77	10

By the use of Garrett's ranking approach observed that, personnel can motive over strain from lengthy running hours (53.86) as first and from heavy workload ranked as second accompanied via way of means of other sources. Over supervision (44.77) are the least supply can motive strain for the personnel and ranked as tenth. It is inferred that lengthy running hours of the personnel can motive strain.

Determination of Employees to Overcome /Prevent Stress Weighted Average

Where the relative significance of the difference object is not the same, weighted arithmetic mean is computed. The term "weight" stands for the relative significance of the distinctive items. The formula for calculation is,

$$\text{Weighted average} = \sum WX / \sum W$$

Where,

WX = the weighted arithmetic mean

X = the variable values.

W = the weights.

Expected Interventions of Job Stress from Work Environment

(A = Agree, N= Neutral, DA=Disagree, WAS=Weighted average score)

Interventions	A	N	DA	TOTAL	WAS	Rank
Work environment	61	34	5	100	2.56	1
Job description	58	33	9	100	2.49	2
Training and education	58	32	10	100	2.48	3
Training and education	58	32	10	100	2.42	4
Safety of technology	48	41	11	100	2.37	5
Promotions and rewards	47	42	11	100	2.36	6
Adequate time for planning	38	59	3	100	2.35	7
Physical exercise	49	36	15	100	2.34	8
Promotion of Personal equipment	46	40	14	100	2.32	9
Time completion of job	42	48	10	100	2.32	10
Involvement in decisionmaking	49	33	18	100	2.31	11
Physical hazards	41	47	12	100	2.29	12

It's visible from the above, concerning the expected interventions of Organizational stress to overcome stress amongst respondents. Some of the variables we decided on to check its affiliation with activity strain amongst personnel. By the usage of weighted average score, Work environment (2.56) has secure stood at the beginning and job description (2.49) has steady stood at second, the training and education (2.48) has secure stood at third and Physical hazards (2.29) are the least preference of component inflicting strain.

Conclusion

Stress is a circumstance of bodily or intellectual pressure that is going at the side of associated stressors. Stress is turning into a more and more much critical thing in our running life. Each person is exposed to more than a few stressors each at work and of their non-public life's. In the running environment, sure profession has better strain degree than others and person personnel will react to the state of affairs in one-of-a-kind ways. Pressure also can be an amazing issue main to increased productivity. However, whilst this stress will become excessive, strain is caused.

The problems arise while the strain on a person appear to be overwhelming or out of controls. That is, they understand themselves as being not able to manage and now no longer to own the vital competencies to fight their strain. This present examine geared

toward locating the diverse stages of man or woman and organizational strain amongst the employees. Based on the findings, the analyst finish that enriching welfare measures, retaining affordable operating hours, employee gatherings and affordable repayment programs could truly lessen the man or woman and organizational strain amongst the employees, and also will make a contribution to the performance of the organization.

Suggestions

- Give greater manipulate over the activity to employees
- Encourage worker participation wherein personnel are concerned in selection making processes. This can result in suitable communication and position ambiguity, interpersonal talents may be developed.
- Implement bendy operating hours.
- Allow participation of the employees throughout the activities.
- The employees having excessive stage of strain due to their incapacity to make use of their capabilities and work independently.
- Stress control programmes which include numerous workshops and seminars must be conducted periodically for the personnel to lessen their private in addition to expert strain.
- The Proper work allocation have to be done.

FINANCIAL INCLUSION FOR MSMEs

Dr. Kavitha N & Dr. Rooplata

Assistant Professor, Department of Commerce (CA)
PSG College of Arts & Science, Coimbatore, Tamil Nadu

Abstract

Financial inclusion is the process of making existing financial services more accessible to the general public while also improving their quality and availability.

Financial inclusion can boost economic growth and national financial efficiency while reducing social inequalities and poverty. All societal groups are given access to financial services. MSMEs are still having capital access issues at the moment. Due to the absence of financial data on MSMEs compared to larger, more open enterprises, access to financial services in banking is still challenging; as a result, banks have more trouble determining the creditworthiness of MSMEs. The use of digital technology continues to be encouraged to increase access to financial services that reach the community, especially those living in rural and remote areas, including groups of low-income communities and Micro, Small, and Medium Enterprises (MSMEs). The MSME sector has an enormous contribution to the Indian economy. MSMEs in India face various challenges, such as access to finance, marketing, competitiveness, and productivity. In India, microlending plays a significant role in promoting financial inclusion. Over the past few decades, it has significantly aided in the eradication of poverty. In addition to offering microcredit, microlending institutions also offer other financial services like savings, insurance, and remittance, as well as non-financial services like private counselling, training, and assistance with starting a business, all in a convenient way.

Keywords: *Financial inclusion, financial services, MSMEs, digital technology, credit worthiness*

Introduction

MSMEs (micro, small, and medium-sized firms) have recently attracted more attention in India due to their strategic value to the nation's economy and development. MSMEs contribute significantly to job creation; the nation's 48.8 million MSMEs employ 111.4 million people. MSMEs contribute 7.7% of the nation's GDP and manufacture more than 6,000 goods in the manufacturing sector alone. MSMEs in the services industry also contribute 27.4% of the nation's GDP.

Despite their contributions, MSMEs in India confront a number of difficulties. They frequently face the challenge of keeping up with rapidly advancing technologies while also running the risk of going out of date. In order to maintain product standards and quality, they frequently struggle to establish their core competitive advantages and must deal with significant credit costs. MSMEs must also address the problem of protecting their intellectual property and the lack of qualified staff. Finally, research on MSMEs has shown that the availability of financial resources and their accessibility are the most important variables in fostering the expansion of MSMEs in emerging economies. Both of these problems present inherent difficulties for financing MSMEs in the Indian setting because of knowledge of funding programs among MSME entrepreneurs and the limited contribution

of venture capitalists, nonbanking financial companies (NBFCs), foreign banks, angel investors, and initial public offerings to the financing of MSMEs in the Indian context, both of these problems pose inherent difficulties for MSMEs.

Micro and small businesses are included among the priority lending sectors by the Reserve Bank of India because banks are the main source of financing in India. Additionally, banks have been instructed to increase credit to micro and small businesses by 20% annually and the number of microenterprise accounts by 10% annually. This study aims to determine whether these incentives and plans have reached MSMEs and whether business owners are aware of them in light of such policies.

Statement of the Problem

MSMEs have different types of requirements at different stages of their life cycle, it became clear during the preliminary interviews with entrepreneurs conducted for this study. This prompted the authors to examine the difficulties in gaining access to various sources of finance that MSMEs employ at various points of their life cycles and to develop a deeper knowledge of those sources. This study is a first-of-its-kind attempt to look at these elements because there were no studies that documented the financial demands of MSMEs at various stages of their life. The article thus focuses on the sources of funding utilized by MSMEs across various phases of the firm life cycle, as well as on the knowledge of and use of various financial programs made accessible by the government.

Objectives of the Study

1. Identify the various sources of funding that are used and the objectives for which they are used at various phases of the MSMEs life cycle.
2. Identify the difficulties MSMEs encounter when attempting to obtain funding from various sources at various stages of their life cycle.

Review of Literature

International Finance Corporation (2012) estimates that 32.5 trillion Indian rupees (Rs) worth of financing is available to the MSME sector. This sum includes self-financing, formal financing, and unofficial financing. The industry receives a total contribution of Rs25.5 trillion from unofficial sources and self-finance, of which Rs24.4 trillion comes from unofficial financing. In other words, MSMEs rely on self-financing and informal sources for 78% of their funding. Banks and NBFCs contribute the remaining 22% (Rs6.9 trillion), with banks contributing the majority (91.8%).

Few SMEs receive official financial support because they are seen as a high-risk and financially unviable proposition to lend to. **(Ambrose 2012)**.

According to **Prasad (2006)**, Indian banks in particular are reluctant to lend to small businesses for a variety of reasons, including the impossibility to secure collateral, the

prevalence of non-performing assets, the high cost of transactions, and the inability to confirm the applicants' trustworthiness.

According to Grant Thornton and FICCI (2011), the cost of capital is high for MSMEs, and less time and paperwork should be needed to obtain financing.

In order to meet the growing short-term and long-term capital requirements of MSMEs, **Lahiri (2012)** said that banks should use more creative lending strategies.

Finance Used by MSMEs in Different Stages of the Life Cycle

Start-up phase: Companies in this phase reported using money from friends, family, and public (i.e., government-owned) banks mostly for working capital. They also reported using money from personal and family sources. Public banks were the other often mentioned institutional source used for collateral financing. This suggested that launching a business required a high level of readiness, risk aversion, or both.

Survival stage: The main financial support needs for businesses in this stage were working capital, short-term loans, and overdrafts. Following personal funds and private banks, public banks and moneylenders provided the majority of the working capital financing. In addition, short-term loans and overdraft capabilities were obtained through private banks. Businesses acknowledged using moneylenders as well, albeit at a lower scale. Using official sources or reliable unofficial sources appears to be a continuing trend from what businesses in the start-up stage stated. Businesses at this stage would be looking to pay off debts, for which they would need efficient day-to-day operations and appropriate working capital availability.

Growth stage: At this period, businesses needed working cash, collateral finance, and quick loans. Working capital was obtained from state banks, private and cooperative banks, as well as from personal and family sources. Public banks were used to get collateral funding, and cooperative banks to a lesser extent. Although the usage of moneylenders was mentioned, short-term loans were obtained from private and cooperative banks. This finding may indicate that businesses were more concerned with their individual financial requirements and the resources needed to meet them. The prevalent use of public banks for collateral lending as well as the utilization of the banking system and family wealth to meet working capital needs are examples of the important role that trust plays in securing this form of financing. Since cooperative banks were also cited as a resource to meet the various financial demands of businesses at this stage, it is important to determine whether their rules and practices allow businesses in the growth stage to quickly get the short-term financing they require.

Sustenance stage: In this stage, businesses reported using working capital financing from private banks, public banks, cooperative banks, and personal funds. Additionally, short-term loans and collateral financing were also secured through cooperative banks. At this point, the landscape of an enterprise's financial needs appears to be dominated by

working capital, collateral finance, and short-term loans. This carries on the previously mentioned trend of businesses continuing to use financing from reliable sources. In this stage, a business would like to borrow money from reliable sources with whom it has built ties. It would be fascinating to investigate the factors that led to cooperative banks being so widely used by businesses at this point for working capital, collateral financing, and short-term loans.

Challenges in Accessing MSME Finance

Start-up stage: The difficulty of securing collateral or a guarantee, the length of time it takes to process loan applications, ignorance about available programs, and procedural difficulties were the four main obstacles to receiving finance that businesses identified at this stage. Businesses also perceived difficulty in completing necessary documentation and expensive service fees for loan application as hurdles. Businesses in the startup stage might not be able to offer security for a loan and may not be aware of all the available programs, which could make it difficult for them to select the best financial aid choice.

Survival stage: Even though the sequence was different, the main obstacles faced by businesses at this level were identical to those mentioned by businesses in the start-up stage. The two factors that received the highest ratings were the challenge of producing collateral or a guarantee and procedural difficulties. Long processing times, ignorance of available programs, excessive service costs for handling loan requests, and difficulties filling out the necessary paperwork were considered as equally difficult problems. Businesses at this stage would typically want to increase their markets while also breaking even with reference to startup investments. As a result, they would require working cash to cover their daily expenses. These enterprises cannot be expected to provide collateral, and would be hindered by complicated procedures and delays in loan disbursements. They also continue to lack knowledge of available financial assistance schemes.

Growth stage: Major issues mentioned by businesses at this stage included ignorance of available programs, high processing costs for loan requests, trouble providing collateral or a guarantee, high interest rates, and difficulty completing the necessary paperwork. Lack of understanding about certain programs may prevent owners from selecting the best form of financing for their business, as businesses in this stage would need both working capital and short-term loans. Though enterprise owners may be more inclined to seek formal financial assistance, high service fees and high rates of interest could be a deterrent. Enterprises in the growth stage also would be in a state of rapid transition and therefore the need to provide documentation for securing financial assistance would be a deterrent to accessing funds.

Sustenance stage: Businesses in this stage frequently reported having trouble providing collateral or a guarantee, dealing with procedural difficulties, being unaware of

the various programs that were available, lengthy processing times for loan applications, high service fees for processing loan requests, and having trouble completing necessary paperwork. High loan rates were also cited as a problem by a sizable proportion of businesses. Although entrepreneurs in this stage identified procedural hurdles, processing times, and high rates of interest as obstacles to obtaining financing, it is important to look into the part that ignorance of available programs plays and how it affects other obstacles. The entrepreneurs were worried about the need for security or collateral. This would suggest that banks or lending institutions need to be more realistic about lending to MSMEs that have already established themselves in the market.

In conclusion, MSMEs encounter a variety of difficulties during their whole life cycle. In both the start-up and expansion stages, at least one business evaluated each financial issue as difficult. Infrastructure, labor, labor law compliance, or enterprise registration were not perceived by businesses as obstacles to obtaining financing during the survival stage. Businesses in this level have access to sufficient infrastructure and labour.

Conclusion

Businesses in the startup stage primarily use finances from friends, family, and personal savings for working capital. Additionally, for working capital and collateral financing, they employ public sector banks. Finance was obtained from reputable formal sources (public banks) as well as reputable informal ones (personal, family, and friends). In the event of repayment difficulties, there would be less pressure, especially when dealing with reliable informal suppliers.

In summary, personal savings, family wealth, friends, moneylenders, and the banking system, which consists of public, private, and cooperative banks, are the main sources of finance employed during the many periods of the life cycle.

Enterprises in the start-up and survival stages frequently encountered difficulties providing collateral or a guarantee, delayed loan processing, and a lack of understanding about potential schemes while trying to acquire financing. Businesses at each of these stages were unable to offer collateral or security or undergo lengthy loan applications because they had not yet established their companies entirely.

Recommendations for the Government

Enhance financial awareness: It is important to actively promote accurate and timely information about MSME programs through broadcast, newspaper, and magazine advertisements. To fulfill the information needs of MSMEs and to explain policy, the government should think about launching a dedicated TV channel.

Reduce documentation: It would be preferable to do away with complicated documentation requirements in favor of easier processes, such as a "know your customer"

form that gathers essential data about the business or owner and is accessible to all financial institutions.

Ease legal requirements: There is an urgent need to ease the burden of legal compliance on MSMEs, at least in the first 3 years of their existence.

Enhance sensitivity in lending institutions: Building lenders' capacity is necessary to enable them to better respond to the unique requirements of businesses operating in various industries and phases of the company life cycle.

Ensure that tax policies are fully implemented: By doing this, there will be a focus on improving transaction visibility, which will give a more accurate sense of the transaction history of the firm in question and aid in assessing its creditworthiness.

PROBLEMS AND PROSPECTS OF WOMEN ENTREPRENEURS IN HOME BASED BUSINESS

Dr. E. Keren Judi, M.Com, M.Phil., PGDCE., Ph.D.,

Assistant Professor, Department of Commerce,
The American College, Madurai.

D. Ishwarya, M.Com

Department of Commerce, The American College, Madurai.

Abstract

The fast growing and developing world of home-based business promise to have major influence on the very nature of small scale business. Entrepreneurship can be used as important tool for economic development of Indian women. The entry of large number of educated and young women entrepreneurs to the home-based business sector suggests that it will not only create jobs for themselves but also for others leading to greater economic growth. Therefore, this study aims to understand the problems and prospects of women entrepreneurs in home-based business. This study employs One Sample Sign Test method of data analysis. Primary data were obtained through the administration of 115 questionnaires. Hypotheses were tested and the results show that Government supportive measures, the entrepreneurship development programmes (EDPs) offered for women entrepreneurs are sufficient for the sustainable growth of women entrepreneurial sector. Formal education System, Lack of real entrepreneurial traits and management ability are the major causes of failure among women entrepreneurs.

Introduction

In India, entrepreneurship has been dominated by a male-governed economy, where the role of women as entrepreneurs has been negligible. However, in the recent past Female entrepreneurs have been playing an increasingly important role in promoting growth and development of the country's economy. Entrepreneurship directly provides employment and economic independence to improve their social, educational and health status. Women in India have been taking an active and direct role in the nation's economic and political fields, though in recent times there have been some stray incidents in the latter field. Women entrepreneurs are gaining momentum all over the country. They have achieved recognition and are making valuable contribution to the National Economy. A number of home business opportunities such as embroidery, handicrafts, herbal medicine, sewing, cooking, beauty salon etc. are required to be exploited by women entrepreneurs. The fast growing and developing world of the home-based business promises to have major influence on the very nature of small business. The entry of large number of educated and young women entrepreneurs to the home-based business sector suggests

that it will not only create jobs for themselves but also for others leading to greater economic growth which is the demand of the day for meeting global challenges.

Review of Literature

Alam, Jani and Omar (2011) analysed in their research paper that family support, positive social ties and internal motivation factor impressively affects the success of women entrepreneurs in small businesses.

Goyal Meenu and Prakash Jai (2011) have analysed that employment generation, self-identity and social status, bright future of the wards and need for additional income are the core reasons for women becoming entrepreneurs.

Objectives

- i. To identify the areas of home based businesses where women entrepreneurship can be developed.
- ii. To highlight the problems which limit the scope of women entrepreneurship.
- iii. To analyze the problem faced by women to promote and run their units and to suggest possible solutions.

Research Methodology

The specification of methods and procedures for obtaining the knowledge needed to organise or solve problems is known as research methodology. The project's general operational pattern or framework specifies what information is to be gathered from which sources and using which procedures.

Research Design: Descriptive Research Design.

Sources of Data

Primary Data: The primary data were collected based on the structured questionnaire through interview schedule.

Secondary Data: The secondary data has been collected through book, magazines, newspapers Articles, Research papers, Government & Non-government reports, census data and Thesis.

Sampling Technique: Convenience Sampling.

Sampling Size: The sample size was collected from 120 respondents.

Techniques and Tools of Analysis

One sample sign test has been used for testing the hypothesis of the study and rest of the data analyze through percentage. There are five hypothesis framed by the researcher to know the findings.

Hypotheses of the Study

The following are the hypotheses of the present research work

1. Government supportive measures are not sufficient for the sustainable growth of this sector.
2. Lack of real entrepreneurial traits and management ability is one of the major causes of failure among women entrepreneurs.
3. The entrepreneurship development programmes (EDPs) offered for women entrepreneurs are not sufficient to promote Managerial ability among them.
4. Formal education has no significant impact in the level of managerial abilities of entrepreneurs.
5. Women entrepreneurs are not aware about the policies, strategies and supportive measures of the government.

Findings

Specific Findings from the Hypothesis Testing

1. Government supportive measures are sufficient for the sustainable growth of entrepreneurial sector.
2. Lack of real entrepreneurial traits and management ability is one of the major causes of failure among women entrepreneurs.
3. The entrepreneurship development programmes (EDPs) offered for women entrepreneurs is sufficient to promote Managerial ability among them.
4. Formal education has no significant impact in the level of managerial abilities of entrepreneurs.
5. Women entrepreneurs are aware about the policies, strategies and supportive measures of the government.

Major Findings from the Study

- 44% of the women entrepreneurs were from the age group of 31-40 years and 5% were from the age group of 50 and above.
- 68.69% of women entrepreneurs were facing planning problems.
- 47% of women entrepreneurs faced various implementations problems.
- 61% of women entrepreneurs have production and raw material problems.
- 80% of women entrepreneurs were facing different financial problems.
- 83% of women entrepreneurs were facing marketing and social problems.
- 94.78% of women entrepreneurs engaged in home based business were facing governmental issues.
- 97% of women entrepreneurs agreed that changing social environment provide more business opportunity to them.

- 69.6% of women entrepreneurs of the Patna district prefer working in service and manufacturing sector.

Suggestions

- Government should start awareness campaign through different mode of advertisement like Radio, Television, Newspaper and Public Announcement.
- To improve entrepreneurial traits and management abilities it is suggested to the government and educational institutions that the concept of entrepreneurship should be treated as practical means of learning Entrepreneurship.
- It is suggested to government that complex procedure and documentation related to registration, taxation, financial assistance and technical assistance should be made in simple form.
- EDPs should appoint women trainers so that participants can open up and discuss their problems freely.
- It is recommended to women entrepreneurs that they should form a local group with the help of social media and advertise or sell their products or services in the particular group.

Conclusion

Home based businesses done by women entrepreneurs were mostly working in micro enterprises. Women Entrepreneurs were using their business as the tool of self-empowerment. Profit motive has less significance than economic empowerment of the women. More than 60% of the total Women entrepreneurs were highly experience. They have more than 10 years of experience but still Income level of the female entrepreneurs is low in the district who was engaged in home based business. From the study it has been conclude that, following business plan are the top most home- based business plan such as Beauty Parlor business, home-based Fashion Designing/ Tailoring, home-based Coaching classes, home-based Readymade Garments business, home-based Food processing business are the most suitable and having bright future prospects.

EXPLORING THE TRANSFORMATIVE IMPACT OF E-COMMERCE ON MICRO, SMALL, AND MEDIUM ENTERPRISES

M.Kesavy

*Assistant Professor, PG and Research Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi*

R.Subhasangeetha

*Assistant Professor, PG and Research Department of Commerce with Computer Application
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

E-commerce has emerged as a game-changing force in the global business landscape, offering unique opportunities and challenges for Micro, Small, and Medium Enterprises (MSMEs). This abstract provides a glimpse into a comprehensive research study that delves into the transformative impact of e-commerce on MSMEs.

The research aims to analyze how e-commerce has affected various aspects of MSMEs, such as market reach, competitiveness, revenue generation, operational efficiency, and sustainability. It employs a mixed-methods approach, incorporating both quantitative data analysis and qualitative case studies, to provide a holistic understanding of the subject matter.

Introduction

In Modern Era rapidly evolving global business landscape, the digital revolution has ushered in an era of unprecedented change and innovation. Among the profound transformations witnessed, the advent of electronic commerce, or e-commerce, stands as one of the most significant. E-commerce has revolutionized the way businesses operate and interact with consumers, opening up new opportunities and challenges across industries. In this context, this study seeks to investigate the profound impact of e-commerce on Micro, Small, and Medium Enterprises (MSMEs).

Micro, Small, and Medium Enterprises (MSMEs) constitute a vital segment of the global economy, accounting for a significant portion of employment, innovation, and economic activity. They play a crucial role in driving economic growth, fostering entrepreneurship, and reducing income inequality. However, MSMEs often face numerous challenges, including limited access to markets, resources, and technology, which can hinder their growth and sustainability.

The emergence of e-commerce has provided MSMEs with a potential pathway to overcome some of these challenges. E-commerce platforms offer MSMEs the ability to reach a broader customer base, reduce operational costs, and enhance their

competitiveness in the global market. The adoption of e-commerce can enable MSMEs to tap into the digital economy's vast opportunities, thus contributing significantly to economic development and job creation.

Objective of the Study

- Analyzing the growth trends in e-commerce adoption among MSMEs.
- Assessing the economic impact of e-commerce on MSMEs, including revenue growth and cost savings.
- Examining the role of e-commerce in expanding market access and global competitiveness for MSMEs.

Trends in E-Commerce

The growth trends in e-commerce adoption among Micro, Small, and Medium Enterprises (MSMEs) are a crucial aspect of understanding the impact of e-commerce on this segment of businesses. To conduct this analysis effectively, researchers can employ various methodologies and data sources. Here are some key points to consider when conducting such an analysis:

1. Data Collection

Gather data on e-commerce adoption rates among MSMEs over a specific period, which could range from the past decade to recent years.

Utilize primary sources such as surveys, questionnaires, and interviews with MSME owners and managers to collect firsthand information on their e-commerce adoption experiences.

Utilize secondary sources, including government reports, industry publications, and academic studies, to obtain historical data and market insights

2. Segmentation

Segment the MSMEs into categories based on factors like business size (micro, small, medium), industry, geographical location (urban, rural), and years in operation. This segmentation can help identify variations in e-commerce adoption trends among different groups.

3. Time Series Analysis

Employ time series analysis techniques to examine how e-commerce adoption has evolved over time. Plotting adoption rates over several years can reveal trends, seasonal variations, and growth patterns.

4. Comparative Analysis

Compare e-commerce adoption rates among MSMEs to adoption rates in other sectors or among larger enterprises. This can help assess whether MSMEs are catching up or lagging behind in e-commerce adoption.

5. Qualitative Insights

Complement quantitative data with qualitative insights gained through interviews and case studies. This can provide a deeper understanding of the reasons behind e-commerce adoption or the barriers that MSMEs face in this regard.

6. Regional and Global Comparisons

Compare e-commerce adoption trends among MSMEs in different regions or countries to identify regional disparities and factors contributing to variations in adoption rates.

7. Forecasting

Develop forecasts or projections based on historical data and trends to predict future e-commerce adoption rates among MSMEs.

8. Factors Influencing Adoption

Explore factors influencing e-commerce adoption, such as access to digital infrastructure, awareness of e-commerce benefits, regulatory frameworks, and access to finance. This can help explain why some MSMEs are quicker to adopt e-commerce than others.

9. Policy Implications

Analyze the policy initiatives and support mechanisms that may have contributed to or hindered e-commerce adoption among MSMEs. Assess the effectiveness of government policies in promoting digitalization among small businesses.

Impact of E-Commerce on MSME

The impact of e-commerce on Micro, Small, and Medium Enterprises (MSMEs) encompasses several dimensions, including revenue growth and cost savings. E-commerce

has the potential to significantly influence these aspects of MSME operations. Let's delve into the specific ways e-commerce can affect revenue growth and cost savings for MSMEs:

Impact on Revenue Growth

1. **Wider Market Reach:** E-commerce provides MSMEs with a global platform to showcase their products or services. This expanded reach allows them to access a broader customer base, both domestically and internationally, leading to increased sales opportunities.
2. **24/7 Availability:** Unlike traditional brick-and-mortar stores, e-commerce websites are operational round the clock. This continuous availability enables MSMEs to cater to customers at any time, which can lead to higher sales and revenue.
3. **Personalized Marketing:** E-commerce platforms often use data analytics and customer profiling to offer personalized product recommendations and targeted marketing. This personalized approach can boost conversion rates and customer retention, contributing to revenue growth.
4. **Diversification of Product Offerings:** E-commerce allows MSMEs to easily expand their product lines or diversify into complementary products or services, tapping into new revenue streams.
5. **Reduced Geographic Limitations:** MSMEs can transcend geographical limitations through e-commerce, allowing them to reach customers in remote or underserved areas, further expanding their revenue potential.

Impact on Cost Savings

Lower Operational Costs: E-commerce typically requires lower operational costs compared to maintaining a physical storefront. MSMEs can save on expenses related to rent, utilities, and in-store staff.

Inventory Management: E-commerce enables more efficient inventory management through real-time tracking and demand forecasting, reducing carrying costs and minimizing the risk of overstocking or stockouts.

Marketing Efficiency: Digital marketing tools, such as pay-per-click advertising and social media campaigns, offer cost-effective ways to reach a target audience compared to traditional advertising methods.

Streamlined Processes: E-commerce platforms often come with integrated management systems that streamline order processing, payment collection, and customer support, reducing administrative costs.

Access to Cost-Effective Technology: Cloud-based e-commerce solutions and open-source platforms are accessible and cost-effective, allowing MSMEs to deploy and maintain their online stores without significant upfront investments.

1. **Data-Driven Decision-Making:** E-commerce platforms provide valuable data and analytics that MSMEs can leverage to make informed decisions, optimize operations, and minimize waste.
2. **Reduced Physical Infrastructure:** With e-commerce, there's less reliance on physical infrastructure, such as large warehouses or storefronts, leading to further cost savings.
3. **Flexibility:** E-commerce allows MSMEs to scale their operations up or down more easily in response to market fluctuations, minimizing financial risks.

Role of e-commerce in Expanding Market Access and Global Competitiveness (MSMEs)

The role of e-commerce in expanding market access and global competitiveness for Micro, Small, and Medium Enterprises (MSMEs) is profound and multifaceted. E-commerce has become a powerful tool for MSMEs to transcend geographical boundaries and compete on a global scale. Here's an exploration of the key ways in which e-commerce contributes to market access expansion and enhances global competitiveness for MSMEs:

1. Broader Market Reach

E-commerce platforms provide MSMEs with a global marketplace, allowing them to reach customers beyond their immediate geographic vicinity.

MSMEs can target a wider and more diverse customer base, including international audiences, without the need for physical expansion.

2. Reduced Geographic Limitations

E-commerce eliminates the constraints imposed by physical location. MSMEs can serve customers in remote or underserved areas, including regions where traditional retail infrastructure may be lacking.

This reduces dependence on local economic conditions and vulnerabilities to regional market fluctuations.

3. Cost-Effective Market Entry

E-commerce offers a cost-effective means for MSMEs to enter international markets. Setting up an online store and digital marketing often require less initial investment compared to establishing physical stores abroad.

MSMEs can test new markets with lower risk, adapting strategies based on real-time feedback and performance data.

4. Access to Global Suppliers

E-commerce allows MSMEs to source products, materials, and services from global suppliers, enabling them to access high-quality inputs at competitive prices.

This can enhance the competitiveness of MSMEs by reducing production costs and improving product quality.

5. Enhanced Customer Engagement

E-commerce platforms facilitate direct interaction between MSMEs and their customers. This direct engagement can lead to better understanding of customer preferences and needs, allowing for tailored offerings.

Personalized customer experiences can boost customer loyalty and word-of-mouth referrals, further expanding market reach.

6. Data-Driven Decision-Making

E-commerce generates valuable data on customer behavior, preferences, and market trends. MSMEs can harness this data for informed decision-making, optimizing product offerings, pricing, and marketing strategies.

Data-driven insights enable MSMEs to adapt quickly to changing market conditions and customer demands.

7. Global Brand Exposure

E-commerce enables MSMEs to establish and promote their brands on a global scale. A well-designed online presence can build brand recognition and reputation worldwide.

MSMEs can compete with larger enterprises by leveraging their unique selling points and niche market positioning.

8. Logistics and Supply Chain Efficiency

E-commerce facilitates efficient order processing, inventory management, and shipment tracking. MSMEs can optimize their supply chains, reduce lead times, and offer reliable delivery options to customers worldwide.

Streamlined logistics enhance competitiveness by ensuring timely and cost-effective deliveries.

9. Compliance and International Trade Facilitation

E-commerce platforms often provide guidance on regulatory compliance and trade documentation, simplifying international trade for MSMEs.

Access to international markets becomes more accessible, with less bureaucratic hurdles to navigate.

Findings of the Study

The findings of this study will provide valuable insights for policymakers, business owners, academics, and industry stakeholders. By understanding the transformative effects of e-commerce on MSMEs, we can develop strategies to harness its full potential, address challenges, and create an enabling environment that fosters the growth of these enterprises. In doing so, we can ensure that MSMEs remain at the forefront of economic development in an increasingly digital world

Conclusion

The transformative impact of e-commerce on MSMEs underscores the importance of embracing digitalization in the modern business landscape. E-commerce has leveled the playing field, allowing MSMEs to compete with larger enterprises and thrive in a globalized economy. To harness the full potential of e-commerce, MSMEs must not only adopt digital technologies but also prioritize customer-centric approaches, adapt to changing market dynamics, and remain agile in their operations.

As we move forward, policymakers, industry stakeholders, and MSMEs themselves must work collaboratively to create an enabling environment that fosters digital innovation, supports digital skill development, and addresses regulatory and infrastructure challenges. By doing so, we can ensure that MSMEs continue to drive economic growth, foster entrepreneurship, and contribute to a more inclusive and dynamic global economy in the digital age.

SMES AND MSMEs IN MAKE IN INDIA INITIATIVE

S.Mahalakshmi

*Assistant Professor in Commerce, Department of Commerce - Banking and Insurance
NGM College, Pollachi*

Abstract

The 'Make in India' initiative and the 'Atmanirbhar Bharat Abhiyaan' (Self Reliant India Campaign) have played a key role in promoting business and local manufacturing in the country, giving special thrust to Micro, Small and Medium Enterprises (MSMEs), also referred to as the backbone of Indian economy.

Keywords: *approximately, entrepreneurship, facilitated, generating employment manufacture, facilitated*

Introduction

The central government has also taken immediate response measures in the form of the Atmanirbhar Bharat Package to ensure continuity of businesses during the COVID-19 pandemic. Along with these measures, the main governing body for MSMEs in the country, i.e., the Ministry of Micro, Small and Medium Enterprises (M/o MSMEs) also has numerous schemes in place to support the budding manufacturing units across the country.

Overview of Govt. Initiatives on MSMEs

MSMEs are the backbone of the Indian economy, contributing approximately 30% of the country's GDP (Gross Domestic Product), 45% of manufacturing output and providing employment to 11 crores of India's population. The Government of India has been proactive to ensure that all the benefit of these MSME schemes reaches to the MSMEs in time. The Union Budget 2023-24 focuses on ease of doing business for MSMEs. The most important measures include:

- Emergency Credit Line Guarantee Scheme (ECLGS) has delivered additional credit to more than 130 lakh MSMEs. The ECLGS will be extended up to March 2023 expanding the guarantee cover by INR 50,000 Cr to a total cover of INR 5 Lakh Cr.
- INR 2 Lakh Cr additional credit for Micro and Small Enterprises to be facilitated under the Credit Guarantee Trust for Micro and Small Enterprises (CGTMSE).
- Raising and Accelerating MSME performance (RAMP) programme with an outlay of INR 6,000 Cr to be rolled out.
- INR 50,000 Cr equity infusion through MSME Self-Reliant India Fund.
- Udyam, e-Shram, National Career Service (NCS) and Aatamanirbhar Skilled Employee Employer Mapping (ASEEM) portals will be interlinked.
- They will now serve as portals with live, organic databases, delivering G2C, B2C, and B2B services relating to credit facilitation, skilling, and recruitment.

- Launch of Udyam Assist Platform (UAP) to bring the Informal Micro Enterprises (IMEs) under the formal ambit for availing the benefit under Priority Sector Lending (PSL).

Make in India Campaign

Make in India campaign is an initiative of GOI to encourage the multinational as well as domestic companies to manufacture their products in India. This is an ambitious flagship programme and a dream of honourable Prime Minister Mr. Narendra Modi was launched on 25th September, 2014. The main objectives of the programme are –

- To make India as Global manufacturing hub,
- To create jobs, to encourage entrepreneurs in India,
- To boost economic growth,
- To urge both local and foreign companies to invest in India
- To Foster innovation, protect intellectual property, and enhance skill development
- The new initiative is based on four pillars to boost entrepreneurship in India & it encompasses 25 sectors.
- The pillars are (1) New Processes (2) New Infrastructure (3) New Sectors and (4) New Mindset

Role of MSME's

The Micro, Small and Medium Enterprises (MSMEs) play a pivotal role in the economic and social development of India. The MSME sector is playing a major role in the manufacturing output, employment and exports. It plays a key role in the development of the economy with their effective, efficient, flexible and innovative entrepreneurial spirit. MSME sector has emerged as a dynamic and vibrant sector of the economy. It is expected that Indian economy will grow by over 8% per annum until 2020. The major advantage of this sector is its generating employment at low cost. The MSME sector is highly heterogeneous. There are different size of the enterprises, variety of products and services and level of technology. It helps in the industrialization of rural and backward areas. It reduces regional imbalances. It provides equitable distribution of national income and wealth. The role of MSME sector in Indian economy is better understood from the following fact sheet [Source: CARE Ratings]

MSME sector –Some high lights

- Indian MSME sector consists of approximately 45 million units
- Produces more than 6,000 products, ranging from traditional to high-tech items
- High product diversification: 67% of its produce is from manufacturing goods, followed by 17% from
- services, and 16% from repairs and maintenance

- Employs around 101 million people
- Accounts for 45% of the manufacturing output
- Contributes 8-9% to the country's GDP
- Accounts for 40% of the country's exports

T E Narasimhan, 'Make in India' to transform MSMEs' fortunes: Minister, The Business Standard(Chennai),January12,2015

The MSME's minister has said in a symposium on 'Growth and Prospects of MSME Sector in the Emerging Scenario' organized by the National Institute for Entrepreneurship and Small Business Development. The minister is of the opinion that the Make in India campaign has the potential to transform the fortunes of the MSME sector, enabling it to scale hitherto unheard-of heights. He viewed that this campaign is very relevant for Indian MSME's and highlighted the policy initiatives initiated by GOI to support the MSME's which will be effective from 1st of April, 2015. In 2013-14, 56 CPSUs organized 1,007 vendor development programmes (VDPs) for MSE's. In 2014-15, the target is over 55 national VDPs and 351 state VDPs across the country, to develop MSE vendors with a budget allocation of Rs 5 crores.

Conclusion

The make in India programme through New Processes, New Infrastructure, New Sectors and New Mindset aims to facilitate investment, foster innovation, enhance skill development and build a sustainable eco-system for the manufacturing infrastructure in the country. Make in India programme with the inclusion of MSME's in the New Start up policy of GOI, definitely helps this sector to prosper and grow. We view that the various policy initiatives and incentives for MSME announced under this programme, definitely the Make in India Campaign helps, supports and act as boost for MSME sector.

YOUNG ENTREPRENEURSHIP IN INDIA

Dr. R. Manikandan, M.Com., MBA., M.Phil., Ph.D., PGDCA.,
Assistant Professor, Department of Commerce,
The American College, Madurai.

S.Yokeshsrinapa, M.Com.,
Department of Commerce, The American College, Madurai

Abstract

Entrepreneurship is characterized by the process of recognizing opportunities to build a new product, service, or process and finding necessary resources to exploit the opportunity and improving the lifestyle of people. Promoting entrepreneurship is an essential component to ensure economic development at the national and the regional level. This can be accomplished as an individual or as a team. Effective entrepreneurs are characterized by traits such as creativity, innovativeness, proactivity, and risk propensity. India has one of the world's fastest growing economies. The efficiency of entrepreneurial teams is influenced by various factors such as team member characteristics, team leadership, demographic and informational diversity. Entrepreneurial teams are most benefited in a context of strong interpersonal bonds and shared goals.

Keyword: Youth entrepreneurship, Self-employment.

Introduction

They are the cadence to promote positive changes, innovativeness scale, and size of work capacity, performance and desire to succeed. We trust that the young people are energetic, enthusiastic, with entrepreneurial spirit - can make a difference in this time of profound international disorder.

The young have already shown that they do better with technology, they are more involved in social networks, and able to start a business compared to the older ones. But there is one more difference between the two generations, the young are not attached and can easily leave the idea or business they have created.

A study realized by The Guardian Life Small Business Research Institute, shows that the probability that those born after the year 80's, called Generation Y, to sell their businesses to 100%. Young entrepreneurs form the category who are not as emotionally attached to their businesses that they do not sell them to a big company or another contractor, if there is the case.

Young Indians want to be recognized for creating an environment that supports entrepreneurship as a tool for the country's growth.

The Indian government is also supporting this idea by putting in constant effort and establishing various employment creation plans to provide more job chances for both educated and illiterate youngsters in the country.

Objectives

1. To understand the role of youth entrepreneurs in India.
2. To know the relationship between startup India & youth entrepreneurship.
3. To study the causes of youth employment and entrepreneurship in India.
4. To understand the schemes for young entrepreneurs in India.

Role of the Young Entrepreneurs in India

Entrepreneurship is the act of taking on a new task and accepting the risks and responsibilities that come from it. An entrepreneur is someone who has the will power and aptitude to turn a simple idea or invention into a successful business. The Indian government has made significant efforts to promote entrepreneurship and encourage young entrepreneurs. The number of advantages that young entrepreneurs bring to a country is endless.

Challenges for Youth Entrepreneurship

The youth population is a heterogeneous one and there are some significant differences across groups in their potential for entrepreneurship and the barriers they face. Some groups that face particularly strong labour market challenges includes ethnic minorities, those living in deprived areas, those from low-income families, and those with low education levels.

Youth entrepreneurship, while full of potential, often faces unique challenges that can make it difficult for young people to start and sustain successful businesses. Some of the key challenges for youth entrepreneurship include:

1. **Limited Access to Capital:** Many young entrepreneurs lack the financial resources to start or expand their businesses. They may have limited savings, poor credit history, or difficulty securing loans or investments due to their age and lack of experience.
2. **Lack of Experience:** Youth entrepreneurs may lack the experience and knowledge needed to run a successful business. They may have limited understanding of business operations, marketing, finance, and other critical aspects of entrepreneurship.
3. **Limited Networks:** Building a professional network is crucial for business success. Young entrepreneurs may have smaller networks compared to more established professionals, making it challenging to find mentors, partners, or customers.
4. **Work-Life Balance:** Balancing the demands of entrepreneurship with personal life and education can be extremely challenging.

Schemes for Young Entrepreneurs in India

The youth are the heart of any country, and they have a significant influence on how that country develops. Developing youth's talents as a result becomes important. The

Indian government has implemented a several efforts, including development programmes, apprenticeship programmes, and others, to guarantee that young people have the skills they require.

1. **Pradhan Mantri Mudra Yojana (PMMY):** This scheme provides loans to micro and small enterprises, including young entrepreneurs, to help them start or expand their businesses. It has three categories: Shishu, Kishore, and Tarun, each catering to different stages of business development.
2. **National Skill Development Corporation (NSDC):** NSDC offers various skill development and training programs to equip young entrepreneurs with the skills needed to succeed in their businesses.
3. **Atal Innovation Mission (AIM):** AIM is a government initiative that aims to promote a culture of innovation and entrepreneurship among young Indians. It includes programs like Atal Tinkering Labs, Atal Incubation Centers, and Atal New India Challenges.
4. **Technology Business Incubators (TBIs):** TBIs are set up by various government bodies and institutions to provide startups with infrastructure, mentorship, and access to resources. Examples include the National Science & Technology Entrepreneurship Development Board (NSTEDB) and NASSCOM 10,000 Startups.
5. **Young Entrepreneur Scheme (YES):** Young Entrepreneur Scheme offered by various banks and financial institutions, this scheme provides financial support and mentorship to young entrepreneurs to help them start or expand their businesses.

Recommendation

Certainly, here are some recommendations for young entrepreneurs looking to start and grow their businesses:

1. **Start with Passion:** Pursue a business idea that you are truly passionate about the enthusiasm and dedication will be crucial in overcoming obstacles and staying motivated through the ups and downs of entrepreneurship.
2. **Self-Educate:** Invest in own education and skill development. Take courses, attend workshops, and read books related to entrepreneurship, business management, marketing, and finance.
3. **Mentorship:** Find a mentor who has experience in same industry or a related field. A mentor can provide valuable guidance, share insights, and help you navigate the challenges of entrepreneurship.
4. **Create a Solid Business Plan:** Develop a comprehensive business plan that outlines the business goals, target market, marketing strategy, financial projections, and a clear roadmap for growth.
5. **Secure Funding:** Explore various funding options, including personal savings, family and friends, investors, venture capitalists, crowdfunding, and business

grants. Choose the funding source that aligns with the business model and growth strategy.

6. **Learn from Failure:** Understand that failure is a part of the entrepreneurial journey. Many successful entrepreneurs faced failures before achieving their goals.
7. **Build a Strong Brand:** Focus on building a strong brand identity that resonates with the target audience. The brand should convey your values, mission, and unique selling points.
8. **Take Care of the Well-Being:** Entrepreneurship can be demanding, so prioritize the physical and mental well-being. Maintain a healthy work-life balance, seek support when needed, and practice self-care.

Methodology

The literature search was conducted to identify studies investigating the opportunities and challenges for young entrepreneurs in India by using online database 'Web of Science', 'Google Scholar', and 'Research Gate'. Articles were limited to those written in English and conducted especially with the Indian contexts.

Secondary data were collected through journals, news articles, magazines and internets.

Conclusion

In conclusion, young entrepreneurs possess incredible potential and a unique perspective that can drive innovation and economic growth. However, they also face distinct challenges on their entrepreneurial journey. To thrive in this dynamic landscape, young entrepreneurs should embrace their passion, educate themselves continuously, mentorship, and build strong networks. Creating a solid business plan, securing funding wisely, and leveraging technology are essential steps toward success. Many successful entrepreneurs faced failures before achieving their goals. So, building a strong brand, prioritizing personal well-being, and staying persistent in the face of challenges are important elements of a successful entrepreneurial path.

UNLOCKING GROWTH: THE POWER OF DIGITAL MARKETING FOR MSME'S

Dr.R.Mary Sophia Chitra

Assistant Professor, Department of commerce, The American College Madurai

Faizal Mohamed M

22pco09, Department of Commerce (PG), The American College Madurai

Abstract

The Power of Digital Marketing for MSMEs," the focus is on how Micro, Small, and Medium Enterprises (MSMEs) are leveraging digital marketing to their advantage. Digital marketing has become an essential tool for MSMEs, offering cost-effective reach, targeted advertising, and data-driven insights. Despite its benefits, MSMEs face challenges such as limited resources and ever-evolving technology. The research methodology is exploratory, based on secondary data sources. The article concludes that MSMEs investing in digital marketing, creating a strong online presence, and adapting to change are well-positioned for growth and success in the digital age.

Keywords: MSME, Digital marketing ,customer centric ,Adoption.

Introduction

Micro, Small, and Medium Enterprises (MSMEs) are the backbone of many economies, driving innovation, job creation, and economic growth. In today's increasingly digital world, the adoption of digital marketing strategies is no longer an option but a necessity for MSMEs aiming to thrive and remain competitive. This article explores the transformative impact of digital marketing on MSMEs, shedding light on its benefits, challenges, and key strategies for success.

Review of Literature

Digital Marketing According to Chaffey et al. (2009) in Febriyantoro and Arisandi (2018), digital marketing is the marketing of products or services using technology. One form of digital marketing is the use of electronic media or the internet (internet marketing). The characteristics of digital marketing are: the efforts to increase interactions and activities between businesses and customers that depend on the use of technology; the existence of interactive technology to access information for both business and customers; the efforts to use the internet for various business activities, such as, research, analysis and planning to find, attract and retain customers; and, the efforts to increase the acceleration of buying and selling of goods and services, information and ideas via the internet.

Widiastuti et al. (2021) states that digital marketing is a marketing activity, including branding, using technology and social networks to support marketing goals to communicate on a global scope and change the way companies do business with their customers. Digital Marketing can be seen as an interactive and integrated marketing

solution to facilitate interaction between producers, market intermediaries and potential consumers, where digital marketing helps business people to find information easily about consumers and, then, provide the solutions for their needs and wants. On the other hand, digital marketing helps consumers and prospects consumers in finding product or service information, as well as, purchasing them through the internet (Kusuma et al., 2022)

The concept of marketing has evolved. In the past, a promotion was only conducted in one direction where marketers provided messages and information to potential customers. Nowadays, the marketing concept has evolved from the 4P marketing mix (Product, Price, Place, and Promotion) to 4C (Customer solution, Cost, Convenience Channel, and 27 Copyright © 2023 ASIAN SCHOLARS NETWORK - All rights reserved Asian Journal of Entrepreneurship e-ISSN: 2716-6635 | Vol. 4, No. 1, 24-34, 2023 <http://myjms.mohe.gov.my/index.php/aje> Communication) which allows both parties, marketers and customers, to participate in marketing activities (Andhyka, 2020).

Operational Definition

The power of digital marketing in MSMEs refers to the measurable and impactful ability of online strategies, tools, and channels to enhance the visibility, reach, engagement, conversion, and overall business growth of a micro, small, or medium-sized enterprise. This power can be quantified through key performance indicators (KPIs) such as website traffic, social media engagement, lead generation, customer acquisition, conversion rates, and return on investment (ROI), reflecting the effectiveness of digital marketing efforts in achieving business objectives, expanding market presence, and increasing profitability within the MSME sector.

Research Methodology

The paper is exploratory in nature, and based on available secondary data such as books, journals, magazines and other sources. Secondary data refers to information that has been collected by someone else for a different purpose and is used by researchers in their own studies or analyses.

The Digital Landscape for MSMEs

In recent years, digital marketing has emerged as a game-changer for MSMEs, offering a plethora of opportunities to reach and engage with their target audiences. Here are some key ways in which digital marketing is transforming the MSME landscape:

Cost-Effective Reach

Digital marketing offers cost-effective advertising channels such as social media, email marketing, and pay-per-click advertising. MSMEs can maximize their marketing budgets and achieve higher ROI compared to traditional marketing methods.

Targeted Advertising

With digital marketing tools, MSMEs can precisely target their ideal customers based on demographics, interests, behavior, and location. This precision ensures that their marketing efforts reach the most relevant audience, improving conversion rates.

Online Presence

Establishing a strong online presence is essential in today's digital age. MSMEs can create user-friendly websites and optimize them for search engines (SEO), making it easier for potential customers to find them online.

Content Marketing

Quality content is king in digital marketing. MSMEs can leverage blogs, videos, infographics, and more to educate, engage, and build trust with their audience, positioning themselves as industry experts.

Data-Driven Insights

Digital marketing provides valuable data and analytics that enable MSMEs to measure the success of their campaigns in real-time. This data-driven approach allows for quick adjustments and optimization.

Challenges Faced by MSMEs

While digital marketing offers numerous benefits, MSMEs encounter specific challenges on their digital journey:

Limited Resources

Many MSMEs have limited budgets and may lack dedicated digital marketing teams, making it challenging to implement and manage comprehensive digital strategies.

Technological Barriers

Some MSMEs struggle with adopting and effectively using digital marketing tools and technologies, requiring training and technical support.

Content Creation

Consistently producing high-quality content can be time-consuming and resource-intensive for smaller businesses.

Competitive Landscape

MSMEs often compete with larger enterprises with more substantial resources and brand recognition, making it essential to find niche markets and unique selling points.

Changing Algorithms

Digital platforms frequently update their algorithms, requiring MSMEs to stay informed and adapt their strategies accordingly.

Conclusion

In today's digital era, the adoption of digital marketing is not a luxury but a necessity for MSMEs looking to grow and thrive. The benefits of cost-effective reach, precise targeting, and data-driven insights can level the playing field for smaller businesses. However, to succeed in the digital landscape, MSMEs must overcome challenges such as limited resources and evolving technology.

As digital marketing continues to evolve, MSMEs that invest in their online presence, create valuable content, and embrace data-driven strategies are poised for success. With the right approach and a commitment to adaptability, MSMEs can harness the power of digital marketing to unlock their growth potential and shape a brighter future for their businesses.

A STUDY ON ROLE OF TECHNOLOGY IN DRIVING SUSTAINABLE DEVELOPMENT IN 2023

Ms. Mohsina Banu

Asst. Professor, Department of Commerce and Management
SVR College of Commerce and Management Studies, Bangalore

Abstract

Technology is critical to sustainable development because it allows for new solutions to economic, social, and environmental concerns. Technology is advancing at an incredible rate in 2023, and new breakthroughs are sprouting all the time. This presents a once-in-a-lifetime opportunity to use technology to create a more sustainable future.

One important area where technology is assisting in sustainable development is the switch to renewable energy. Renewable energy sources such as solar, wind, and hydropower are becoming more efficient and cost-effective, making them more viable alternatives to fossil fuels. Technological developments in energy storage and transmission are also making it easier to integrate renewable energy into the grid.

Agriculture is another important sector where technology is assisting with sustainable growth. Precision agricultural technologies, such as drones and sensors, are assisting farmers in reducing pesticide and fertilizer use while increasing crop yields. Other technologies, such as vertical farming and hydroponics, are providing new opportunities for more sustainable food production.

Technology is also helping to combat climate change. Carbon capture and storage (CCS) technology, for example, can be used to absorb and store carbon dioxide emissions from power stations and other industrial facilities underground. Other technologies, such as electric vehicles and transportation systems driven by renewable energy, can help to minimize greenhouse gas emissions from the transportation industry.

Technology can help with social and economic development in addition to environmental benefits. Digital technologies, for example, can assist in connecting people to important services such as healthcare and education, even in remote locations. In the green economy, technology can also be used to create new jobs and possibilities.

Overall, technology has the potential to play a significant role in attaining long-term growth. It is crucial to stress, however, that technology is not a panacea. It is critical to use technology properly and in an inclusive and equitable manner.

Keywords: *sustainable development, technology, renewable energy, agriculture, climate change, social development, economic development*

Introduction

Sustainable development is defined as development that meets current needs without jeopardizing future generations' ability to meet their own. It has three components: economic, social, and environmental.

All three pillars of sustainable development rely heavily on technology. Artificial intelligence (AI), for example, can be used to develop new renewable energy solutions and increase energy efficiency. Blockchain can be used to increase financial inclusion and build

more transparent and efficient supply chains. Precision agriculture can assist farmers in reducing pesticide and fertilizer use while increasing crop yields. Smart cities can use technology to minimize traffic congestion and air pollution while also improving citizens' quality of life. The circular economy is a new economic model that focuses on reducing waste and pollution while maximizing resource utilization. Technology has the potential to play a critical role in supporting the transition to a circular economy.

Review of Literature

1. Sustainable Development: A Review of the Literature and Frameworks

This study by Khan, Mohapatra, and Jena (2023) gives an in-depth look at the notion of sustainable development, including its history, concepts, and pillars. It also addresses the various frameworks for measuring and assessing sustainable development.

According to the authors, sustainable development is a complex and diverse notion with economic, social, and environmental components. They also emphasize the significance of equality and intergenerational justice in long-term development.

Finally, the study discusses the obstacles and prospects of attaining sustainable development. According to the writers, sustainable development necessitates a fundamental shift in how we produce, consume, and live. They also advocate for increased research and collaboration in order to create innovative answers to the difficulties of sustainable development.

2. Sustainable Development Goals: A Bibliometric Analysis of Literature Reviews

Khaled, Al-Shammari, and Hussain (2022) present a bibliometric study of literature reviews on the Sustainable Development Goals (SDGs) in this paper. The authors found 91 published literature reviews between 2015 and 2021.

According to the report, the SDGs are a fast increasing field of research, with a trend toward diversification of research fields. Technology (SDG 9) and economic growth (SDG 8) were the most often examined SDGs. The authors did, however, identify a number of research gaps, including reduced inequalities (SDG 10), gender equality (SDG 5), oceans, seas, and marine habitats (SDG 14), and peace, justice, and strong institutions (SDG 16).

The authors conclude that the SDGs are a complex and challenging set of goals, but they also represent an opportunity to create a more sustainable and equitable world. They call for more research and collaboration to achieve the SDGs.

3. Sustainable Development and Climate Change: A Review of the Literature

Stafford-Smith et al. (2017) conduct a literature assessment on the relationship between sustainable development and climate change. Climate change, according to the authors, is a serious danger to sustainable development, but it also gives an opportunity to transition to a more sustainable economy.

The writers address how climate change is affecting sustainable development in a variety of ways, including rising poverty and inequality, food insecurity, and relocation. They also talk about how sustainable development can assist to mitigate and adapt to climate change.

The authors conclude that climate change and sustainable development are two of the most pressing challenges facing humanity today. They call for urgent action to address both challenges.

4. Sustainable Development and the Role of Technology

Solow (2018) analyzes the importance of technology in sustainable development in this study. The author contends that technology has the potential to play a critical role in tackling many of the difficulties of sustainable development, including climate change, poverty, and inequality.

Solow covers a number of technologies that have the potential to aid in sustainable development, including renewable energy, energy efficiency, and sustainable agriculture. He also examines the difficulties associated with applying these technologies, such as cost and accessibility.

The author concludes that technology is an essential tool for sustainable development, but it must be used wisely. He calls for more investment in research and development of sustainable technologies, as well as for policies that support the adoption of these technologies.

5. Sustainable Development and the Global Economy

Stiglitz (2019) analyzes the relationship between sustainable development and the global economy in this paper. The author contends that the current global economic system cannot be sustained and that a fundamental transition is required to ensure long-term progress.

Stiglitz emphasizes how the current global economic system is unsustainable in a variety of reasons, including its dependency on fossil fuels, contribution to climate change, and inability to address inequality. He also explores the numerous approaches to establish a more sustainable economy, such as through investments in renewable energy, education, and healthcare.

The author concludes that sustainable development is essential for the long-term prosperity of the global economy. He calls for urgent action to transition to a more sustainable economic system.

Conclusion on Following Review's

These are only a few instances from the huge literature on sustainable development. The literature on sustainable development is broad and multifaceted, but it all strives for the same goal: to make the world a more sustainable and equitable place for all.

The literature on sustainable development emphasizes the significance of addressing sustainable development's three pillars: economic, social, and environmental. It also stresses the value of equity and intergenerational justice.

The literature on sustainable development also explores the difficulties and opportunities associated with attaining sustainable development.

Objectives

The Objectives of this Paper are to:

1. Review the role of technology in driving sustainable development in 2023.
2. Identify the key challenges and opportunities in using technology to achieve sustainable development.
3. Propose recommendations for how to use technology more effectively to achieve sustainable development.

Challenges Faced

There are a number of challenges faced in using technology to achieve sustainable development. These include:

- The digital divide: Not everyone has access to or the skills required to profit from technology.
- Technology's environmental impact: The creation and use of technology can have negative environmental consequences, such as e-waste and pollution.
- Technology's ethical implications: Technology can be utilized for both good and negative purposes. It is critical to guarantee that technology is used responsibly and ethically.

Research Methodology

This paper is based on a review of the literature on the role of technology in sustainable development. The literature reviewed includes academic papers, government reports, and industry reports.

Secondary Source of Data Collected

The secondary source of data collected for this paper includes:

- The United Nations Sustainable Development Goals (SDGs)
- The World Economic Forum's Global Risks Report
- The International Energy Agency's World Energy Outlook
- The International Telecommunications Union's Measuring the Information Society Report

Technology and Sustainable Development in 2023: A Detailed Analysis

Technology is advancing at an unprecedented rate, and new innovations are emerging all the time. This presents a unique opportunity to leverage technology to create a more sustainable future.

The Potential of Technology for Sustainable Development

Technology can support sustainable development in a variety of ways. For example, it can help to:

- Reduce our dependency on fossil fuels and shift to renewable energy sources. Renewable energy sources like solar, wind, and hydropower are becoming more efficient and cost-effective, making them more feasible substitutes for fossil fuels. Energy storage and transmission innovations are also making it easier to integrate renewable energy into the system.
- Increase agricultural yield while lowering environmental effect. Precision agricultural technologies, such as drones and sensors, are assisting farmers in reducing pesticide and fertilizer use while increasing crop yields. Other technologies, such as vertical farming and hydroponics, are providing new opportunities for more sustainable food production.
- Deal with climate change and other environmental issues. Carbon capture and storage (CCS) technology can be used to absorb and store carbon dioxide emissions from power stations and other industrial facilities. Other technologies, such as electric vehicles and transportation systems driven by renewable energy, can help to minimize greenhouse gas emissions from the transportation industry.
- Increase accessibility to education and healthcare. Even in rural regions, digital technologies can help connect people to important services like as healthcare and education. Telemedicine programs, for example, enable patients to consult with doctors remotely via video conferencing technology. Students all over the world have access to educational resources thanks to e-learning platforms.
- Create new green economy employment and opportunities. Around the world, the solar and wind industries are providing millions of employments. Electric vehicles and energy efficiency are two other green economy industries that are quickly expanding.

Challenges and Opportunities in Using Technology for Sustainable Development

While technology has the potential to play a significant role in sustainable development, there are also some challenges that need to be addressed. These include:

- The digital divide: The digital divide refers to the gap between those who have access to and those who do not have access to information and communication

technologies (ICTs). This can be a significant impediment to long-term growth, as ICTs are required for access to education, healthcare, and other critical services.

- Technology's environmental impact: The manufacture and usage of technology can have a negative influence on the environment. Electronic device manufacture, for example, can generate hazardous waste, and the usage of fossil fuels to power data centers can contribute to climate change.
- Technology's ethical implications: Technology can have ethical implications. Facial recognition software, for example, can be used to follow and monitor people without their knowledge. It is critical to create and apply technology in a responsible and ethical manner.

Overcoming the Challenges

There are a number of things that can be done to overcome the challenges of using technology for sustainable development. These include:

- Investing in infrastructure and digital divide programs. Making ICTs more accessible and inexpensive for everyone, particularly in developing nations, is part of this.
- Creating and implementing more sustainable technology. This includes technologies such as renewable energy-powered data centres and recycled electronic gadgets, which lessen the environmental effect of technology production and use.
- Encouraging responsible and ethical technological development and use. This includes creating and enforcing legislation to protect privacy and security and to prevent technology exploitation.

Conclusion

In 2023, technology has the potential to play a big role in propelling sustainable development. However, it is critical to address the issues associated with employing technology for sustainable development, such as the digital gap, technology's environmental impact, and technology's ethical implications. We can ensure that technology is used to create a more sustainable and equitable future for all by investing in infrastructure and programs to bridge the digital gap, developing and employing more sustainable technologies, and supporting responsible and ethical development and use of technology.

Additional Thoughts on Using Technology for More Equitable and Inclusive Sustainable Development

In addition to the above-mentioned problems and opportunities, it is critical to evaluate how to leverage technology for sustainable development in a more equal and inclusive manner. Here are some specific ideas:

- Concentrate on developing technology that serve the most vulnerable and disenfranchised communities. For example, innovations that can help underdeveloped countries improve food security, access to clean water, and healthcare.
- Ensure that everyone has access to the skills and knowledge required to use technology effectively, including providing education and training on digital literacy and technology skills.
- Encourage responsible and ethical development and use of technology, including developing and enforcing regulations that protect privacy and security and prevent technology misuse.

In 2023, technology will be critical in driving sustainable development. It has the potential to help us lower our environmental footprint, increase our social well-being, and build more inclusive and equitable communities. However, it is critical to address the issues associated with employing technology for sustainable development, such as the digital gap, technology's environmental impact, and technology's ethical implications.

Recommendations

The following recommendations are proposed for how to use technology more effectively to achieve sustainable development:

- Invest in digital infrastructure and training to bridge the digital gap.
- Create and implement environmentally friendly sustainable technology.
- Make use of technology to increase openness and accountability in the governance process.
- Promote ethical technology use through public education and awareness initiatives.

Role of Specific Technologies in Driving Sustainable Development

AI is one of the most promising technologies for accelerating sustainable development. Artificial intelligence can be used to create new renewable energy technologies, enhance energy efficiency, reduce pollution, and create new sustainable agriculture techniques. AI-powered smart grids, for example, can assist balance electricity supply and demand, while AI-powered self-driving cars can help minimize traffic congestion and air pollution.

Another promising technology for driving sustainable development is blockchain. Blockchain can be used to increase financial inclusion and build more transparent and efficient supply chains. Blockchain, for example, can be used too.

M-COMMERCE AND MOBILE APPS: OPPORTUNITIES FOR SMES IN EMERGING NATIONS

Dr K. Nageswari, M.Com.,M.Phil.,Ph.D.,MBA.,PGDCA.,NET

Assistant Professor, Commerce (CA)

Sona College of Arts and Science, Salem, TamilNadu, India

Abstract

In the current era of globalization, SMEs need to keep up with technology to be able to compete with other businesses. Laying out SMEs' online business is difficult, considering that the SMEs' qualities are unique to different organizations. From Uber to Airbnb Mobile Apps are fundamentally altering the manners in which business is finished opening various new roads for business and making new business sectors. Innovation has made resource sharing a reality, prompting productive use of assets at costs a lot lower than expected. Markets are turning out to be more interconnected and correspondence is essentially imbued in our deals. This paper reviews current concepts in M-Commerce and Mobile Applications. In this paper, M-Commerce is characterized as a piece of online business. A large part of the help to web-based businesses relies upon having or giving the right foundation, guidelines, the strategy blend permitting online businesses to flourish. The conclusion recommends that M-Commerce relies altogether upon online business advancements. Innovation reception is turning out to be more reasonable as well as a need to get by in the present super serious business climate. Just blocks and concrete or organizations without a presence on the web would be in a tough spot and may shut down sooner rather than later. Adaptability is normal for SME businesses on it simpler to pursue a decision for an enormous scope, like innovation reception, changing or in any event, patching up a current business cycle to fulfill market needs and benefit existing or expected open doors. M-commerce, accordingly, holds incredible advantages for SMEs to develop their incomes extraordinarily by being accessible at the fingertips of millions of expected purchasers all over the planet.

Keywords: M-Commerce, SMEs, Applications

Introduction

Progressions in Mobile commerce-related advances are significantly having an impact on how business is finished. Its development has effectively made new courses for organizations to grow networks in a computerized commercial center. Mobile Apps are extending at a staggering rate. From food to shopping to leasing a vehicle or even a house, there is an application for everything. There is a wealth of chances and SMEs should adjust to make the most of this. M-commerce, otherwise called Mobile business, empowers online deals and the acquisition of products, administrations, and data through cell phones. It is likewise viewed as a sub-set of online business. Despite being generally new, similar to web-based business, Mobile Commerce is ruling shopper decisions over actual visits to shops. This could be handily connected with the exceptional development in the utilization of cell phones and other cell phones. The extension in revenue and pertinence of Mobile innovation offers open doors for SMEs to further develop their showcasing procedures. As

well as showcasing, innovation is likewise stepping up the client experience presented by these organizations.

Using Mobile Commerce as a SME

Embracing innovation is reasonable but fundamental for endurance in the savagely aggressive business universe of today. Ventures with just actual areas or without a web-based presence would endure extraordinarily and could try and bear weighty misfortunes before long.

Mobile Applications

Mobile applications are a major in online business. It gives a productive answer for setting up a web-based store and drawing in clients with a quick and open shopping experience. Its critical advantage is as far as giving an upgraded start-to-finish client experience. It integrates all that from showing item data to installment, and buy finish. A very planned application can assist organizations with acquiring an upper hand, fabricating dependability, and incrementing client maintenance. Many driving internet business organizations have zeroed in on limited-time messages and showcasing on cell phones for better deals potentially opening doors on a careful spending plan. Become familiar with the most recent Mobile advancements and how you can pick the best one for your business from our article about Mobile application improvement innovation.

Responsive Site for Mobile Commerce

If you plan to give upgraded content as opposed to consistent commitment, a responsive site is a lot quicker arrangement. It works with sharing substance and comparable shopping experience for both work area and cell phone clients. The increasing of website composition as per screen size keeps a steady encounter for the client. It is additionally one of the most practical choices to use the pattern of Mobile business. Aside from a Mobile application and a responsive site, you can likewise choose PWA which represents moderate web applications. With PWAs, you can use the advantages of m-business and convey a Mobile application-like client experience.

Virtual Entertainment Commercial Center

Virtual entertainment is normally a device for simply showcasing advancements by organizations. In any case, numerous huge social stages have acquainted a commercial center with interface clients with organizations and start cooperations that carry worth to organizations. A few stages have likewise presented highlights that let organizations grandstand items via web-based entertainment. Alongside being a compelling showcasing instrument, it is a simple choice to arrive at clients and fabricate a brand on the web. Using

outsider commercial centers and social channels can permit your business to cooperate with clients with purchasing plans and create potential customers.

M-Commerce and Independent Venture Endeavor Benefits for SMES

Here is a portion of the manners in which Mobile Commerce keeps on driving the development of private company endeavor associations and why it ought to be important for SMEs.

Quicker Exchanges

Mobile applications make it more straightforward and quicker to stack information and indexed lists on cell phones. This implies that clients can peruse items and menus quicker, prompting quicker exchanges. Having the option to make buys straightforwardly through a Mobile application has prompted surer client experience, rehash buys, and expanded deals.

Improved Client Experience

The client experience matters. Having a decent item or unrivaled service is sufficiently not. Organizations with an application that is not difficult to explore, quick, intelligent, and helpful will see higher transformation rates and expanded income. Additionally, numerous applications offer selective advantages like focuses or limits to clients, which increments commitment. The most convincing motivation to utilize a Mobile application is to expand consumer loyalty. Most clients collaborate with applications day to day and have an assumption that organizations they cooperate with will have one, frequently not considering a business with those that don't. Essentially, a decent Mobile application can procure more clients and better client unwaveringness.

More Straight forward Client Association

Applications have pop-up message capacities that can send messages straightforwardly to a client's gadget. These notices permit your business to offer specials, limits, deals, item dispatches, or make different declarations in a flash. While certain clients will switch off this usefulness, it can develop your image openness for those who don't.

Customized Content and Contributions

Similar to Amazon, Mobile applications can offer explicit substance given client conduct, shopping designs, search, and area, from there, the sky is the limit. Amazon utilizes its exclusive calculation to make item proposals to clients in light of what they've bought and given different clients who have bought or looked through the same thing. This sort of customized effort can prompt better client devotion and expanded deals for your independent venture undertaking.

Better Examination

Application downloads and communications provide your business with a great deal of client information for your business to focus on and use to make shockingly better client encounters. Having a superior knowledge of shopping designs, ways of behaving, patterns, and different information can help your business with gauging, and item improvement, and the sky is the limit from there.

Diminished Cost

If you've previously caught a client by inspiring them to download an application, you've saved yourself promoting dollars. If your business is a Mobile application just, you save fundamentally over facilitating an actual area. You can likewise possibly cut down on compensation costs by utilizing fewer individuals than you would have to staff an area. Cash saved might be reinvested to assist you with becoming your SME.

Utilizing M-Commerce to its Fullest Potential

Innovation keeps on driving business, fueling development, and making better client and worker encounters. Utilizing Mobile Commerce and Mobile applications to develop your client reach and commitment is an important move in current business. Finding the right Mobile improvement stage can assist you with receiving every one of the rewards of Mobile application innovation for your private venture undertaking and permit you to be both fruitful and serious in your industry.

Factors that Confines Smes from Making Full Utilization of Web Based Business

Online business is by and large introduced in very positive terms yet alongside the likely advantages come likely issues for non-industrial nations. The reception of online business in creating nations varies significantly from one country to the other. Be that as it may, many face various comparative hindrances to web-based business. These primarily incorporate an absence of monetary, lawful, and actual foundation for the advancement of Internet business. The advancement of different sorts of web-based business relies basically upon the current design of a modern area and how it squeezes into a guaranteed sectoral esteem chain. Also, the distinction between societies and business ways of thinking across agricultural nations has additionally been seen to limit the relevance and adaptability of the online business models planned by some created nations.

Even though SMEs have various explanations behind participating in online business, the security concerns of the clients remain a significant obstacle to growing web-based business administrations and businesses. Most likely, the greatest disadvantage is the hesitance of clients to give online data about their Visas. Guaranteeing both trust and commonality through a well-functioning site has shown to be one of the significant online business achievement factors. In the equivalent vein, the development of broadband has made a more noteworthy requirement for clients to safeguard their security and security in

an "on the web" climate. Both personal clients and organizations report that PC infections are the "malware" they experience the most. Security keeps on being an issue for on-the-web organizations as clients need to feel certain about the honesty of the installment cycle previously they focused on the buy.

The capability of online business must be accomplished given sufficient foundation. In most emerging nations, this requirement presents a significant snag. More modest, low-pay web markets in agricultural nations, especially in Africa, have been not able to draw in adequate interest in foundation. Joined with the absence of rivalry, this outcome in data transmission costs can be multiple times higher than in created nations. As a rule, these nations stay outside the scope of fiber optic links and should go to satellites for worldwide - and now and then even homegrown - networks. This happens even in disdain of critical upgrades achieved by innovation.

One more area of concern is the absence of specialized abilities which holds SMEs back from understanding their full Internet business potential. Many non-industrial nations try not to have a labor force that has adequate preparation in ICT and Mobile innovation. This extraordinarily impediments numerous SMEs that might look to broaden or to fan out into the internet business. Ensuring ventures have the required set of abilities and capacities to utilize important advances gainfully is critical to getting the financial advantages of web-based business. Numerous business visionaries in emerging nations, and particularly in least-created nations, miss the mark on important limits or attention to take full benefit of ICT.

Regardless of whether business visionaries in non-industrial nations approach cell phones or the web, they may not realize how best to use them for their business tasks. In certain conditions, they might try and neglect to see the benefit of putting resources into the innovation required to have the option to take benefit of the chances of online business.

Conclusion

It is critical to recollect, nonetheless, that SMEs are in good company in their inclusion with internet business. The public authority and the confidential area have crucial tasks to carry out not just in permitting online business to happen but to guarantee that it develops and benefits SMEs as well as customers. Top-notch and solid exchanges over the web need progressed media communications frameworks and ones that offer broadband and Mobile broadband administrations at reasonable costs to the two organizations and private clients. This requires an empowering climate where the contest between broadcast communications suppliers is strong. Likewise required is a labor force with strong ICT abilities. Such abilities are critical for the further advancement of online business also, other Mobile applications. The last option is basic in the journey to create important and excellent applications. Here as well, legislatures can play an indispensable job in guaranteeing that optional and professional schools show the fundamental abilities to assist with building a suitable computerized economy and one that is fit for adjusting to the necessities of its clients.

INDUSTRY 4.0 AND ITS IMPACT ON INDIAN ECONOMY

Ms.G.Nithya

Assistant Professor, Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Developed economics such as Germany, Japan, the United States and Singapore have industry 4.0 to boost their manufacturing competitiveness. In terms of Industry 4.0 adoption, India presently lags behind its worldwide peers. It has, however, begun to incorporate these technologies into its industrial processes, which has resulted in a number of positive outcomes. Since the start of civilization, humans have strived to increase their capacity and power. Initially, they used wood or pebbles as equipment, but as science progressed, they found complex and efficient technology, and this process is currently ongoing. Machines are an example of a human invention. The introduction of machines sparked the first industrial revolution. It was labeled a revolution because it not only increased output but also caused significant social and economic changes. For example, in the 1790s, the French Revolution invented new concepts such as equality, liberty, and brotherhood; a few years later, the first industrial revolution infused those ideas. It shows that industrial revolutions have a huge impact on both our society and the global economy. In this framework, the current study seeks to describe the impact of Industry 4.0 on Indian industry.

Keywords: *Developed Economics, Industrial Revolution, Industry 4.0.*

Introduction

Humans have attempted to expand their capacity and strength since the dawn of civilization. Initially, they used equipment made of wood or pebbles, but as science advanced, they discovered sophisticated and efficient technology, and this process is still ongoing. Machines are one of human inventions. The first industrial revolution was caused by the use of machinery. It was dubbed a revolution because it not only raised output but also brought about enormous social and economic changes. For example, in the 1790s, the French Revolution generated new principles such as "Equality, Liberty, and Brotherhood"; the first industrial revolution, which occurred a few years later, infused those ideas. It means industrial revolutions have a huge impact on our society, not only society but it also affects the world economy.

Today, technology has advanced to the point where we are on the verge of the Fourth Industrial Revolution. New technological developments such as artificial intelligence, the internet of things, big data, and so on will alter the entire landscape of the current sector. Industry 4.0 will transform the way we work, live, think, and interact with one another. Artificial Intelligence (AI) is a key component of Industry 4.0. It helps machines to think, learn, and make decisions. AI is likely to cause a revolution in the space sector as well. In the near future, robots will be deployed to space instead of humans, resulting in new advances in space science. AI will boost not only the space industry, but every area, from

agriculture to healthcare and education. On the one hand, AI will be utilised to tackle difficult challenges such as security, terrorism, surveillance, and traffic control, and on the other, it will bring about dynamic changes in banking, airlines, medical technology, and education. We can also do important cancer surgeries using nanotechnology.

Industry 4.0 Technologies and their Industrial Applications

Another technological advance is the Internet of Things (IOT), which allows machines to connect with one another. IoT combined with AI will transform factories into smart factories, towns into smart cities, automobiles into smart automobiles, and homes into smart homes. If this occurs, human efforts will be reduced to a bare minimum. Big data analytics is another important aspect of Industry 4.0. It is primarily designed to collect consumer information and data so that manufacturers may create appropriate products and services for them. Data is extremely crucial in today's digital environment. Imagine, if this massive amount of data is properly digested, we will see magical changes all around us. We will receive proper on-time services, saving both money and time. Big Data will, in fact, radically revolutionise the governance structure. It will be more transparent and efficient as a result. Governments struggle with policy implementation. Big Data and AI are expected to work together to solve this challenge. The government will be able to reach every person in need, and no one will be denied justice. It means that in the future, Big Data will enable inclusive socioeconomic development.

Industry 4.0 Technologies and Data Privacy

According to the UN, privacy is one of the human fundamental rights. Can we ensure privacy while installing this technology? Is Industry 4.0 going to ruin our fundamental rights? Actually, when we are considering Big Data we are considering data of millions of TB. In such huge amount of data, personal data doesn't matter much. But this data can be used to influence people politically and may hamper democratic processes also. This data, if not properly guarded, may cause civil wars or riots. So this is going to be a big challenge in the future. Industrial revolution puts a big impact on world economy and changes its basic structure. For example, the first industrial revolution transformed the agrarian economy into the manufacturing economy; the second industrial revolution reshaped it into the service-based economy and during the IT revolution the world's economy became a knowledge-based economy. But in this advancement, if one had to sustain he/she has to learn new skills and techniques. For example, when tractors and electric pumps were introduced in the farming sector, only those farmers could sustain well who trained themselves in accordance with modern technology and the rest failed.

Impact of Industry 4.0 Technologies on Human and the Workforce

A huge question arises when we think about artificially intelligent machines: "Will there be any job left for humans?" Actually, jobs are not dying but they are evolving. It is obvious that Industry 4.0 will replace some jobs, but is also creating new jobs like big data

analytics, VR designer, block chain auditor, social media reporter, drone operator space visit guide and many more. It is expected that high-skilled and low skill jobs will stay as before, but middle-tier jobs will be replaced by AI robots. This is known as job polarisation in the economic terms. If workers want to sustain then they have to learn new technological skills. Researchers of Oxford University have found that jobs which are related to manual dexterity, high cognitive skills and social skills are difficult to be computerized, and workers should focus on developing these skills. Doctors are going to be replaced by AI robots in future but if a doctor is trained with hospitality skills and caretaking skills, then he/she will be preferable over a robot-doctor. It means jobs are going to be knowledge-centric and talent centric. A construction worker has to learn something about electronics apart from construction skills if he/she wants to build an automated smart home where sensors are used. Hospitality, condolence, politeness these are some qualities which should be learned as these will value add our character.

In the recent times, human race are heading towards a Gig economy. Gig means not continuous. It is predicted that normal continuous jobs will be reduced and these will be replaced by contractual jobs. If there will be no permanent jobs then there will be no paid holidays and no insurance schemes and also no fixed income. It may create unemployment like situation but I think gradually it will become part of our habit. So the beginning period is going to be tough and it is also expected that the revolution may slow down the world economy for a small period. So we should get ready for it. It is often observed “lack of reciprocity between technology and skill results in social inequality”. Those who learn new skills time to time and update their work with new technology will succeed and for the rest, fourth industrial revolution will be a big challenge. Actually, it depends on you whether Industry 4.0 will be a boon or a curse.

Economic Benefits Provided by Industry 4.0 Technologies

Industry 4.0 technologies will help in the economic regeneration by 2025 enabling enterprises to revamp India's financial status in the post-COVID era besides acting as game-changers. The role of corporations through AI is going to be key for the comeback of the Indian economy post-pandemic. New-age technologies such as block chain, big data analytics, Internet of things (IoT), advanced manufacturing, quantum computing and AI are set to give India a possibility to engrave itself a striking uniqueness as an “International nucleus” in the near future. As AI functions for “digital inclusion” in India, it is expected to have a ripple impact on economic prosperity and growth. Analysts foresee that AI can help add up nearly \$957 billion to the Indian economy by 2035 and by 2025, AI can add over \$500 billion and nearly 20 million jobs to the Indian economy. The Indian government is also in the process of implementing a robust legal framework governing the data of the country apart from constructing a data-driven society through AI that presents endless prospects to empower people, enhance society and also boost the ease of doing business. India through its AI strategy, constituting an extensive pool of AI workforce and an

emerging startup ecosystem, has a remarkable chance to be a prominent contributor to AI-driven resolutions that can further transform agriculture, healthcare, manufacturing, education and skilling thereby impacting the economy positively to a considerable extent. The adoption of AI in various sectors of the economy is seen to have produced favorable returns by lessening time and risk.

Government Initiatives to Speed up the Implementation of Industry 4.0

Recently, the Ministry of Commerce and Industry has set up a Taskforce on AI to kick-start the usage of AI for the country's economic shift. Nonetheless, AI adoption has remained at a developing stage. Therefore, the Indian government should consider establishing a separate "Industry 4.0 Ministry" for coordinating all new age technology related activities. For instance, the United Arab Emirates (UAE) in 2017 became the first nation in the world to create the post of Minister of State for AI. Today, governments globally are also taking measures to be part of the AI-led digital economy, which is assessed to contribute roughly \$15.7 trillion to the global economy by 2030. Considering India's present situation, the country is on the verge of a massive opportunity for both economic advancement and gain in the common well being of its citizens. "Inclusive economic growth" can make India the best playground for creating world-class and state of the art technology solutions. For this, the government through its annual budget must consider allocating more for Research and Development (R&D) in various sectors and also establish R&D departments in various educational institutions and universities across the country. India through General-purpose technologies (GPTs) can also influence the whole economy where GPTs have the possibility to drastically transform societies through their effect on the already existing economic and social arrangements.

Growth Potential of Industry 4.0 in Indian Economy

The adoption of AI is not confined to businesses alone, while economies have also shifted their emphasis on creating their AI capacities as a tool to boost growth where developed nations are already in the race and India as an aspiring future superpower is set to enter the AI race. Amidst the accelerated adoption of AI-based technologies, India seems to stand at the ridge of Industry.

Therefore, it would be a convenient shifting for India to create its AI abilities despite the transnational digital divide broadening even more. From the first industrial revolution until the rise in the IT revolution, the world has stood to benefit more and as per experts, AI like any other new technology in the past will produce more jobs than it destroys. Still, it is seen that the "Initial adoption of technology" has barriers for developing economies where restricted access to Industry 4.0 can broaden the income inequality, and the transformation stage of adoption is presumably to replace some jobs before it produces more jobs. While the influence of AI on the gross domestic product (GDP) and productivity is impressive, studies have also demonstrated the harmful effect of AI on employment. McKinsey Global

Institute indicated that intelligent mechanisms and robots could eliminate nearly 30 per cent of the global human labor by 2030. Also, with the rise in unemployment, this transformation could become quite difficult though in the past, new technologies have demonstrated to be worthwhile in the long-term, the short-term failures cannot be justified. Nevertheless, India still lags on essential indicators of AI development despite possessing increased levels of entrepreneurship, robust corporations and a skilled pool. Therefore for the betterment of the essential AI indicators a balanced approach, innovative local solutions and top-down policy making should be put forth. Also, the enhanced role of government along with the private sector will be instrumental in directing AI to create equitable development. Furthermore, the continued innovations and collaborations by Public-Private Participation (PPP) are necessary to lessen the cost of modern technologies, which can help the larger population thereby driving the “digital revolution”. However, India should also mainly consider improving its “hardware sector” to help redress bottlenecks since the country still lags behind which is vital for the Indian economy.

Conclusion

India is anticipated to have the world's youngest population by 2030, accounting for approximately 30% of the global workforce. As a result, AI can drastically increase the productivity of the average worker to meet the level of today's top achievers. There is also a need to foster "scientific temperament" among the people of the country regarding new generation technologies, in addition to taking the ethics and security of Industry 4.0 into account. In this regard, India's "National strategy for AI" recently advocated the establishment of ethics councils for sector-specific concerns like privacy, security, and ethics. Industry 4.0 can also assist the country in meeting the Sustainable Development Goals (SDGs), which can propel the Indian economy forward. In the long run, the Indian economy and society are clearly prepared for a sea change, and the courageous aim of making India a \$5 trillion economy by 2025 can be realised with the implementation of Industry 4.0.

EMPOWERING MSMEs WITH SCIENTIFIC INNOVATION AND TECHNOLOGY: A CATALYST FOR SUSTAINABLE GROWTH

K. Poonkodi, K. Vimaladevi, M. Velayutham Pillai & V. Prabhu

*Postgraduate Department of Chemistry,
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu*

Abstract

Micro, Small, and Medium Enterprises (MSMEs) play a pivotal role in driving economic growth and employment generation in emerging economies. To enhance their competitiveness and sustainability, it is imperative to equip MSMEs with the latest scientific knowledge and technology. This article explores the strategies and mechanisms to empower MSMEs through targeted knowledge dissemination and technology adoption. By fostering collaboration between MSMEs and research institutions, providing access to cutting-edge scientific advancements, and offering tailored training programs, this approach enables MSMEs to harness the transformative power of technology. The article highlights case studies and best practices to illustrate the tangible benefits that accrue from this empowerment, including increased productivity, enhanced product quality, and improved market access. Ultimately, empowering MSMEs with scientific knowledge and technology not only fortifies their capacity for innovation and growth but also contributes to the overall economic resilience and competitiveness of the broader industrial landscape. This article serves as a roadmap for policymakers, industry stakeholders, and academia to strategically leverage the potential of MSMEs in driving sustainable economic development.

Keywords: MSME, Empowerment, Technology, Innovation and sustainable Growth

Introduction

In the dynamic landscape of global commerce, Micro, Small, and Medium Enterprises (MSMEs) have emerged as the lifeblood of economies worldwide. In India, they form the backbone of industry, contributing significantly to employment, innovation, and economic output. However, in an era defined by rapid technological advancements and an increasing focus on sustainability, the empowerment of MSMEs with scientific knowledge and cutting-edge technology has become not just an advantage, but an imperative[1].

This article embarks on a journey into the realm of MSMEs, illuminating the transformative potential that arises when scientific acumen converges with technological prowess. We delve into the pivotal role that this synergy plays in enhancing the competitiveness, resilience, and sustainability of these enterprises. From adopting eco-friendly practices to harnessing the power of data-driven insights, the infusion of scientific knowledge and technology not only catapults MSMEs into the forefront of industry but also aligns them with the ethos of a rapidly evolving global marketplace. Join us as we navigate through a landscape where innovation is not a luxury but a lifeline, where scientific knowledge is not confined to laboratories but is wielded on factory floors and in

storefronts. Through a series of insightful analyses and compelling case studies, we will unveil the tangible benefits and unprecedented opportunities that await MSMEs on this transformative trajectory. In the following sections, we will explore key strategies, success stories, and the far-reaching impact of empowering MSMEs with scientific knowledge and technology. From sustainable practices that mitigate environmental impact to data-driven insights that refine operational efficiency, this article aims to shed light on a paradigm shift that promises to not only redefine the trajectory of MSMEs but also shape the economic destiny of nations. This strategy is pivotal in enhancing their competitiveness, resilience, and contribution to economic and environmental well-being. Here are the key strategies within this approach. Empowering MSMEs (Micro, Small, and Medium Enterprises) involves leveraging various scientific disciplines and technologies to enhance their capabilities, productivity, and sustainability. Here are some key areas of science involved in empowering MSMEs[3]:

Technology Transfer

Engineering and Technology Sciences: This includes fields like mechanical engineering, electrical engineering, and materials science. These disciplines help in transferring cutting-edge technologies to MSMEs, enabling them to improve their production processes and product quality.

Information Technology

Computer Science and Information Technology: These fields are fundamental in enabling MSMEs to leverage digital technologies, such as cloud computing, data analytics, and automation, to streamline operations, improve decision-making, and enhance competitiveness.

Environmental Science and Sustainability

Environmental Sciences: Understanding environmental impact assessments, pollution control, waste management, and sustainable practices are crucial for MSMEs to operate in an eco-friendly manner.

Energy Efficiency and Renewable Energy

Energy Sciences and Engineering: This encompasses the study of energy systems, renewable energy technologies (solar, wind, biomass), and energy-efficient practices. Implementing energy-saving measures and adopting renewable energy sources can significantly reduce operational costs for MSMEs.

Biotechnology

Bioprocessing and Biomanufacturing: Biotechnology plays a role in various industries, including pharmaceuticals, food processing, and biofuels. MSMEs can benefit from advances in bioprocessing technologies to develop sustainable and innovative products.

Quality Assurance and Control

Metrology and Quality Control: These disciplines ensure that products meet specified quality standards through precise measurement techniques and quality control processes.

Automation and Robotics

Mechatronics and Automation Engineering: Automation technologies involving robotics, artificial intelligence, and machine learning can help MSMEs optimize production processes, increase efficiency, and reduce human error.

Nanotechnology

Nanoscience and Nanotechnology: This field deals with materials and processes at the nanoscale, offering opportunities for innovation in areas like electronics, healthcare, and materials science.

Data Analytics and Business Intelligence

Analyzing large datasets can provide valuable insights for decision-making, market research, and process optimization within MSMEs.

By leveraging these scientific disciplines, MSMEs can drive innovation, improve operational efficiency, enhance product quality, and contribute to sustainable economic development. Integrating science into their operations enables MSMEs to compete on a global scale and adapt to evolving market demands.

Technology Transfer and Adoption

Collaborative Partnerships: Facilitate collaborations between MSMEs and research institutions, universities, and technology providers. Foster a culture of innovation and knowledge-sharing to promote the adoption of cutting-edge technologies.
Technology Assessment and Feasibility Studies: Provide support for MSMEs to assess the suitability, feasibility, and potential benefits of adopting specific technologies. This could include conducting pilot projects and feasibility studies.
Innovation Grants and Subsidies: Offer financial incentives to MSMEs for the adoption and integration of innovative technologies that align with sustainable development goals[4].

Customized Technical Assistance

Technical Advisory Services: Establish expert panels or consultancy services that provide customized technical advice to MSMEs. This could cover areas like process optimization, resource efficiency, and technology selection. Conduct comprehensive assessments of MSME operations to identify areas where technological interventions can lead to improved sustainability, productivity, and profitability.

Market Intelligence and Trends

Technology Watch Programs: Monitor and analyze global and local trends in technology and sustainable practices. Provide regular updates to MSMEs to keep them informed about emerging opportunities and potential disruptors. **Market Research and Demand Analysis:** Conduct studies to understand market demands for sustainable products and services. Equip MSMEs with market intelligence to align their offerings with evolving customer preferences[5].

Intellectual Property Rights (IPR) Support

IPR Workshops and Clinics: Organize workshops and clinics to educate MSMEs about the importance of intellectual property rights, including patents, copyrights, and trademarks. Provide guidance on how to protect and leverage their innovations. **Assistance in Patent Filing and Protection:** Offer support in the process of filing for patents and protecting intellectual property, including assistance in drafting applications and navigating legal procedures. By implementing these strategies, MSMEs can be transformed into dynamic engines of sustainable growth, leveraging scientific knowledge and technology to enhance their operational efficiency, reduce environmental impact, and contribute to the overall economic and ecological well-being of the nation[6].

Conclusions

Empowering the Micro, Small, and Medium Enterprises with scientific innovation and technology stands as a potent catalyst for sustainable growth. This integrated approach capitalizes on a diverse range of scientific disciplines to revolutionize the operational landscape of MSMEs. The infusion of technology drives efficiencies across various sectors, fostering a culture of competitiveness and adaptability. Moreover, it positions MSMEs as dynamic players in the global economic ecosystem, capable of leveraging their newfound capabilities on an international scale. The path forward lies in a continued commitment to nurturing this union of science, technology, and MSMEs, as it holds the promise of a brighter, more sustainable future for economies and societies around the globe.

DIGITAL FINANCIAL INCLUSION IN INDIA: CHALLENGES AND OPPORTUNITIES

Ms.V.Poornima

Assistant Professor of Commerce - BPS, NGM College, Pollachi

Abstract

India's Financial Inclusion journey has been phenomenal in the last decade and expressly promoted by the Government of India through their Digital India Movement & Pradhan Mantri Jan Dhan Yojana. Reduction of poverty and addressing the challenges of ensuring sustainable income could become a key factor to achieve an inclusive society. Information and Communication Technology are providing access to unbanked population progressively and helping to bring them into the banking segment. Digital Technologies are driving usage and making a positive impact on livelihood of citizens. In this paper we are discussing on what is achieved in Financial Inclusion so far and what next and how do we leverage and harness digital technologies to achieve an inclusive society. This paper enlists various challenges that continue to prevail in achieving an inclusive society.

Keywords: *Financial Inclusion, Information and Communication Technology, Social Inclusion, Health Inclusion, Sustainable Growth ecosystem*

Introduction

Financial Inclusion (FI) means delivering basic financial services to the marginalized and excluded members of society. It is the process in which we ensure adequate line of credit accessible by the weaker section of the society at a reasonable cost. Financial inclusion helps in developing a culture of savings among semi urban and rural population by bringing low income groups within the formal frame- work of banking and insurance sector which is significant for national economic development. It came into prominence around 2008 when it became clear to the government that it needs to be the key driver for economic growth of the country. Vision for Financial Inclusion in India is to induce inclusive financial growth by including the unbanked and unsupported individuals and MSMEs by formal financial institutions by providing them convenient access to basic financial products including bank accounts, remittances, bill payments, government supported insurance, pension products and formal credit at reasonable costs. There has been growing evidence on how financial inclusion has a multiplier effect in boosting overall economic output, reducing poverty and income inequality at the national level.

With the advent of "Digital India Movement" and telecom penetration to deep rural areas, sincere efforts are made to bring widespread formal banking channels and innovative financial technology together to create a viable and vibrant ecosystem to drive accessibility of formal financial products to unbanked and deprived segments of Indian society. It started with the services related to opening of no-frills accounts, delivering smart cards containing balance and biometric information to registered on the card. There was no active network connectivity during initial stages of FI. Last mile agents used to visit

the bank, withdraw money & beneficiary list, go to each beneficiary, authenticate with biometrics, and deliver the services. Post which, they go back to the bank to reconcile. Out of 650,000 villages in India, around 150,000 were identified by the govt. initially to service through BC Model.

Fast-forward now, there is far more online connectivity in the remotest areas, smart card is replaced by real time Aadhaar based authentication, beneficiary enrolment & transactions can be done in real-time in field. Last mile channels like micro ATMs, Kiosks, PoS machines, Tablets, Mobile Phones are utilised for service delivery. Basic requirement of UPI based FI transaction is that the beneficiary account should be opened through PM JDY scheme and it is linked to the customer's mobile number.

There is a great need for inclusive growth. By leveraging digital technologies, this is a great opportunity for Govts. and market leaders to improve digital penetration, ease of use of digital products, contextualised and personalised offerings to citizens increase availability, drive down costs, enhance security and trust. There is a need for sustainable cooperation between govts., businesses and unbanked population .

National leadership and policy making institutions like RBI and Niti Aayog have brought in some strong initiatives for inclusive growth which culminated in National Mission for Financial Inclusion namely Pradhan Mantri Jan Dhan Yojana PM JDY leveraging banking network and technology innovations. It enabled access to financial services and coverage of banking to excluded population.

With over 95% of Indian population having Unique Identification through Aadhaar, India achieved 80% of adult population having bank account by 2017. 77% Indian Women have bank accounts. In the outbreak of Covid-19 pandemic, this back bone of bank account has been instrumental to provide help of ₹500 per month for 3 months to over 200 Mn woman beneficiaries, transfer of Rs. 6000/- in 3 installments per year (currently citizens are receiving their 8th installment) of PM Kisan Samman Nidhi Yojana to farmers through direct benefit transfer schemes . Under PM JDY, 423.7 Mn total no of Beneficiaries of which 279.5 Mn Semi Urban/ Rural Beneficiaries . Rapid digital penetration along with enhancing the financial literacy of people has started. We are moving from assisted to self-service model for multiple services.

Current Challenges

1. People included in the financial inclusive ecosystem end up getting excluded and are not able to sustain within the framework due to various reasons general or health related causes.
2. There is a clear demarcation of digital divide among some are tech savvy people and delivering the services and making them understand is not difficult, where as some in semi-urban and majority of people in rural areas find difficult to understand and utilise technology efficiently.
3. Lack of financial literacy and awareness on financial cybercrimes has resulted in

general mistrust among rural population which leads to reduced digital penetration.

4. There is a burden on running sustainable last mile delivery model, particularly in rural areas & last mile level service delivery. Multiple Govt. & Business agencies are trying to reach the same location for various reasons related to FI, Social or Healthcare inclusion and these are disjoint efforts and driving higher costs.
5. Different data elements available with govt. such as healthcare schemes data, social inclusion data, COVID data, vaccination data, etc. are not leveraged to full extent as there is clear lack of coherence between these data elements.
6. Last mile technological systems and artefacts are vulnerable to exposure and exploitations. It is loosely handled by BC or BF agents as adequate security measures to control it are not put in place. This has resulted in lot of frauds happening on the ground. About 22% BC agents faced fraud in 2017, a noteworthy increase from 2% in 2015. Business model of Last mile & BC Agent network must be looked at again from privacy security & safety angle.
7. Data Privacy is still a major concern as a lot of captured data is easily available to various stake- holders as PII norms are not completely followed. KYC Data & mobile numbers are available everywhere. Biometric data is captured duplicitously by some BC Agents in clay who will replicate it later for fraudulent reasons. Another way is when they give a manual receipt instead of computerised one during transactions.
8. SMS messages for transactions in an account are not reaching the customer due to lack of mobile device (More than 310 Mn people still do not possess a basic feature phone or a smart phone) or financial institutions are not sending these messages for low value transactions. This has led to increased dependency on local agents.
9. Access to credit is still a concern as small time lenders charging high rate of interest are prevalent in rural areas. Govt. schemes have not penetrated fully and need more rural outreach to enhance credit access. Lack of avenues for digital lending and online loans from credible financial institutions is missing.
10. Recommendations for individuals based on their requirement is not provided and leveraging the personalised data of the person, by performing analytics using AI & ML, banks can offer loans, insurance and other services based on analytics & credit score.

National Strategy for Financial Inclusion

In the year 2020, RBI came up with national strategy for Financial Inclusion with focus on creating an outreach of financial services outlets to provide banking access to every household within 5KM radius. All eligible adults must have access to basic financial services such as Bank Account, line of credit, life and other insurance, pension scheme and suitable investment product. Now, the next paradigm for financial inclusion program

(2020–2024) is focused on addressing inherent behavioural and practical aspects .

1. *A strong financial transaction grievance redressal system* to address concerns of arguably less technology-savvy citizens.
2. *Increasing digital penetration* as still the smartphone usage for financial transactions are limited to urban and semi urban population predominantly.
3. *Bank account opening for the remaining population* of the country as still the PMJDY penetration is about 80% of the population.
4. *Ensuring the privacy of data and information of citizens* and prevention of fraudulent transactions and demographic data.
5. *Easy and affordable digital payment options* to suit the needs of small businesses and unstructured sector workers.
6. *Providing access to basic and most essential financial products* such as transactional accounts, digital payments, basic term insurance, basic medical insurance, and pension options to the population specially in the agricultural and unorganized MSME sector workers.

According to a World Bank report, globally achieving Universal Financial Access by 2020 [3] has been one of the key developmental agenda of the World Bank which aims to provide adults who currently aren't part of the formal financial system, with access to a transaction account to store money, send and receive payments to manage their financial lives. Our National Strategy is also aligned to these broad virtues suggested by World Bank. On key parameters, India is quite ahead and continuously progressing:

1. *Leadership* in India is having singular focus on technology enabled financial inclusion. It is evident through steps like DBT, PM Kisan, financial assistance to woman and poor during the recent Covid-19 pandemic etc.
2. *Target based approach for specific sectors & regions* including “National Mission for Capacity Building” by bankers for MSME sector, Certified Credit Counsellor Scheme for MSME to join them with the formal Financial Channels and informed financial credit decisions.
3. *Regulatory Framework* in Banking to protect customers, promote fair business processes and prevent unhealthy practices by market players. Initiatives like exclusive “Financial Inclusion Fund” (with initial corpus Rs.2000 Crore), issuances of differentiated banking license—Small Finance Banks, Payments Banks etc., launch of BC Registry with Indian Banks Association (IBA) etc. are steps towards the same.
4. *Market Development* initiatives like Branch Authorization Guidelines (2017) etc. to ensure accurate targeting of the beneficiaries, de-duplication and reduction of fraud and leakage have been taken. Linking all financial assistance schemes to DBT is a strong footprint in this direction
5. *Strengthening Payments Structure* through digital retail payments systems like AEPS, NACH, UPI, CTS, IMPS etc. operated by NPCI are significant steps. Aadhaar

linked direct benefit transfer has changed the scenario for public funds distribution in India.

6. *Last mile delivery* to bridge the gap for remote connectivity and doorstep financial services is key to success. ICT based solution like business correspondents/facilitators and IPPB are landmark steps in this area, launch of UPI on feature phones will be a big game changer also enabling ecosystem for NFC based touchless payments.
7. *Financial Literacy and Awareness* is a primary bottleneck in progressive financial inclusion in India. Launch of financial literacy program in 2013 helped in addressing this to some extent.

Conclusion

Even though the country has made immense progress in widening accessibility for the majority of the excluded population, including through a strong supply-side push for digital financial services, policies should focus more on addressing demand-side constraints to promote use of financial services, which remains low. Improving financial and digital literacy, internet and smartphone access, and expanding digital government payments to households (government to person) will help close the emerging digital divide. At the same time, strengthening consumer protection, data privacy, and cybersecurity remain crucial to promoting safe financial inclusion.

Abstract

The Indian passenger car industry is one of the fastest-growing markets of the global level, but is currently experiencing flat or negative growth rates. It has shown great achievements in terms of introduction of new technology, development, spread, flexibility and has changed the business scenario. The cost of manufacturing vehicles in Indian is less as compared to the cost of manufacturing automobile vehicles in foreign countries. The important objective of the study is to analyze the growth of passenger cars in Kanyakumari district and marketing factors motivating to purchasing of passenger car. The study mainly based on both primary and secondary data. The sample size was fixed at 150. The important finding of the study is the sale of passenger car in Kanyakumari District has been increased from 12862 units in the year 2013 to 25950 units in the year 2022. The marketing factors motivating towards purchase of cars, "Brand Image" with the mean score of 91.31 contributed 1st rank, "Different Models" with the mean score of 88.69 contributed 2nd rank and Fix Low Initial Amount" with the mean score of 51.26 contributed 13th rank.

Keywords–Growth, Marketing, Purchasing and Passenger Car

1. Introduction

The passenger car industry is one of the most important drivers of economic growth of India and one with high participation in global value chains. The growth of this sector has been on the back of strong government support which has helped it carve a unique path among the manufacturing sectors of India. The passenger car produced in the country uniquely cater to the demands of low- and middle-income groups of population which makes this sector stand out among the other passenger car producing countries. Today the Indian passenger car industry is fulfilling the demand of the Indian as well as consumers in other countries. The implementation of the new industrial policy has accelerated the growth and development of the passenger car sector. According to recent reports, India overtook Brazil and became the sixth largest passenger vehicle producer in the world, grew 20 to 22 percent to sell around three million units in the course of 2020 and 2021.

2. Objectives

The important objectives of the study are,

1. To study the growth on passenger car sales in Kanyakumari District.

2. To analyses marketing factors motivating to purchasing of passenger car in the study area.
3. To study customer satisfaction towards passenger car in Kanyakumari District.

3. Hypothesis

1. The mean ranks of factors determining customer satisfaction towards passenger cars are significantly different in Kanyakumari District.

4. Methodology

The study is mainly based on both primary and secondary data. The primary data is collected from the sample respondents in passenger car owners in Kanyakumari district through the personal interview method. The secondary data were obtained from journal, magazines, newspapers, bulletin, case studies, working papers, books and internet have also been used. The sample respondents have been selected by Proportionate Random sampling method. The sample group consists of 150 passenger car owners. The tools used for the study are Trend Analysis, Graphical Analysis, Simple Mean, Friedman test and ANOVA test.

5. Data Analysis

5.1 Passenger Car Sales in Kanyakumari District

The details of passenger car sales in Kanyakumari district presented in Table.1

Table.1
Passenger Car Sales in Kanyakumari District

Sl.No	Year	Passenger Sales (in Million)	Raise/ Diminish (in Million)	% Raise/ Diminish	Trend Value
1	2013	12862	-	-	12862
2	2014	14110	1248	8.8448	13829
3	2015	15025	915	6.0899	15256.7
4	2016	16925	1900	11.2260	16684.4
5	2017	18012	1087	6.0349	18112.1
6	2018	18625	613	3.2913	19539.9
7	2019	20642	2017	9.7713	20967.6
8	2020	21425	783	3.6546	22395.3
9	2021	24684	3259	13.2029	23823
10	2022	25950	1266	4.8786	25250.7

Source: RTO Office, Nagercoil, 2023, Statista.com, 2023

The table.1.shows that the sale of passenger car in Kanyakumari District has been increased from 12862 units in the year 2013 to 25950 units in the year 2022. The sales trend has been steadily increasing upward trend the whole study period. In the year 2022, the sales passenger car in Kanyakumari district is to attain a peak level that is 25950 units of passenger cars. The trend and growth of sales of passenger car is progressively increasing from the first year of study period. The sales of Passenger car sales in Kanakumari District is illustrate in the figure.1

Figure.1
Passenger Car Sales in Kanyakumari District

5.2 Marketing Factors Motivating towards Purchase of Cars

The thirteen marketing factors motivating the purchase of cars are investigated. Friedman's test analysis was used to identify the factor, which is the essential marketing factors motivating the purchase of cars. The marketing factors motivating to purchase the are presented in Table.2.

Table.2
Marketing Factors Motivating towards Purchase of Cars

Sl.No	Factors	Mean	SD	Ranks
1	Influenced by Sales People	74.11	1.231	VII
2	Fix Low Initial Amount	51.26	0.856	XIII
3	Brand Image	91.31	1.356	I
4	Better After Sales Service	76.50	1.162	VI
5	Market Survey	65.62	1.183	X
6	Different Models	88.69	0.961	II
7	Customer Focus	70.65	1.159	VIII
8	Social Media Advertisement	81.09	1.125	IV
9	Target the Right People	62.99	0.725	XI
10	Good Resale Value	84.71	1.625	III
11	Fix Competitive Price	77.56	1.356	V
12	Discounts & Offers	68.00	1.264	IX
13	Installment Premium	56.35	1.654	XII

Source: Primary data

Table.2 shows that marketing factors motivating towards purchase of cars, “Brand Image” with the mean score of 91.31 contributed 1st rank, “Different Models” with the mean score of 88.69 contributed 2nd rank, “Good Resale Value” with the mean score of 84.71 contributed 3rd rank, “Social Media Advertisement” with the mean score of 81.09 contributed 4th rank, “Fix Competitive Price” with the mean score of 77.56 contributed 5th rank, “Better After Sales Service” with the mean score of 76.50 contributed 6th rank, “Influenced by Sales People” with the mean score of 74.11 contributed 7th rank, “Customer Focus” with the mean score of 70.65 contributed 8th rank “Discounts & Offers with the mean score of 68.00 contributed 9th rank, “Market Survey” with the mean score of 65.62 contributed 10th rank, “Targets the Right People” with the mean score of 62.99 contributed 11th rank, Installment Premium” with the mean score of 56.35 contributed 12th rank and Fix Low Initial Amount” with the mean score of 51.26 contributed 13th rank.

5.3 Customer Satisfaction towards Passenger Car

Table.3 describes the distribution of the factors to determine customer satisfaction towards passenger cars analyzed regarding “Price, Fuel Consumption, External Design, Quality, Life of the Vehicles, Service Capability, Maintenance Charge, Colour, Availability of Spares, Riding Comfort, Look & Style, Resale Values, Pulling Power (bhp), Seating Capacity, Safety Features, Speed, Shock absorbs & transmission, Braking efficiency, Low Smoke Emission, Cost of spares, and Performance” are analyzed. Table.3 represents a

descriptive analysis of the mean ranks of the twenty-one factors to determine that customer satisfaction towards passenger cars is not significantly different in Kanyakumari District. The descriptive analysis includes the mean score, standard deviation, minimum score, maximum score, first quartile, median, and third quartile of twenty-one variables.

Table.3
Descriptive Statistics

Sl.No	Variables	Mean	Std.	Min	Max	Percentiles		
						25 th	50 th (M)	75 th
1	Price	3.4933	1.24973	1	5	3	4	4
2	Fuel Consumption	4.0800	0.57855	2	5	4	4	4
3	External Design	3.9067	0.93856	1	5	4	4	4
4	Quality	3.4067	1.24356	1	5	2	4	4
5	Life of the Vehicles	3.1433	1.48666	1	5	2	4	4
6	Service Capability	3.6733	1.21582	1	5	4	4	4
7	Maintenance Charge	3.8267	0.84400	1	5	4	4	4
8	Colour	3.9100	1.10422	1	5	4	4	5
9	Availability of Spares	3.2233	1.53012	1	5	2	3	5
10	Riding Comfort	3.7900	1.42337	1	5	3	4	5
11	Look & Style	3.6633	1.47555	1	5	2	4	5
12	Resale Values	3.0800	1.50371	1	5	2	3	5
13	Pulling Power (bhp)	3.0900	1.54592	1	5	2	3	5
14	Seating Capacity	3.5800	1.37230	1	5	2	4	5
15	Safety Features	3.6700	1.51506	1	5	2	4	5
16	Speed	4.4967	0.79083	1	5	4	5	5
17	Shock absorbs & transmission	4.3167	0.89390	1	5	4	4	5
18	Braking efficiency	3.5167	1.12574	1	5	3	4	4
19	Low Smoke Emission	3.5033	1.28406	1	5	2	4	5
20	Cost of spares	4.3467	0.99488	1	5	4	5	5
21	Performance	4.4333	0.88402	1	5	4	5	5

Source: Computed data

Table.3 shows that “Speed” has the highest mean score of 4.4967, followed by “Performance.” According to the respondents, “Speed” is an important factor determining customer satisfaction towards passenger cars. “Performance” is essential to determining customer satisfaction with passenger cars. Other factors are the least important among the respondents.

6. Findings

The important findings of the study are,

- The Study expresses that the sale of passenger car in Kanyakumari District has been increased from 12862 units in the year 2013 to 25950 units in the year 2022.
- The sales trend has been steadily increasing upward trend the whole study period. The trend and growth of sales of passenger car is progressively increasing from the first year of study period.
- The study shows that marketing factors motivating towards purchase of cars, “Brand Image” with the mean score of 91.31 contributed 1st rank, “Different Models” with the mean score of 88.69 contributed 2nd rank and “Fix Low Initial Amount” with the mean score of 51.26 contributed 13th rank.
- The study reveals that “Speed” has the highest mean score of 4.4967, followed by “Performance.”
- The study expresses that “Speed” is an important factor determining customer satisfaction towards passenger cars. “Performance” is essential to determining customer satisfaction with passenger cars. Other factors are the least important among the respondents.

7. Suggestions

The important recommendations are given below;

- The passenger car manufacturers are recommended that they have to produce the cars with the latest technology with superior quality and at a lower price.
- Soft loans should be provided to the customers for purchasing of car.
- The company needs to concentrate on fuel efficient and attractive design cars to attract the all categories of people especially middle income people.
- The branches can be opened in many new areas for diversification and the company should also think of providing other passenger car parts for its customers in order to cover the entire range of an car industry.
- Internal loopholes can be checked for minimizing the number of complaints received by the customers.

8. Conclusion

The study concluded that the growth of the passenger car industry caused an economic revolution across the India. It highlights the various factors which motivate the marketing of passenger cars in Kanyakumari district. The study has analyzed the customer satisfaction of various brands of passenger car. This finding of the study will enable the Government and the passenger marketers to frame suitable mandates to promote the

Automobile industrial market particularly the passenger car market. Finally, the growth and marketing of passenger cars in Kanyakumari is positive one.

Abstract

*This study aims to determine the effect of the digital economy on the financial inclusion of MSME and try to examine the technology adoption variable in mediating the impact of the digital economy. Structural model results indicate a mediation and a reflective impact of the extended technology acceptance model on digital economy and financial inclusion relationship. The role of the digital economy and technological adaptation has significant implications for financial inclusion. The digital economy is a sign of future economic development and growth which is marked by the rapid development of business transactions. The world's economies have harnessed the potential of technology-based inclusion through a combination of financial products and services. Technology adoption plays a role in reducing the digital economy gap towards financial inclusion in Sukabumi MSMEs. This study proposes the concept of the digital economy as an independent variable and technology adoption as a mediating variable on the financial inclusion of MSME actors. This research is empirical and has a wider application. **Key words:** Digital economy, Financial inclusion, Technology adoption.*

Introduction

Finance covers all aspects of economic activity, is a fundamental and essential part of an inclusive series of transactions that are important in creating economic stability, improving financial arrangements, managing government programs in the field of backwardness, and narrowing gaps between individuals and regions. According to the World Bank and the European Commission, a comprehensive or inclusive mode of finance is a comprehensive activity that is expected to minimize everything that is considered to interfere with the implementation process to enable the public to optimize the use of technology in the financial sector. As presented two things above, financial inclusion focuses on the accessibility, availability, and benefits of the formal financial system owned by economic actors, which is not limited to the reach of community needs in the business sector. India's Micro, Small and Medium Enterprises (MSMEs) sector has appeared as a vibrant and dynamic sector for the economy. It has been recognized as a catalyst in promoting the growth and development. The concept of financial inclusion has become a major issue on the development agenda in a number of developing countries. According to the United Nations, financial inclusion refers to easy access to financial services for low-income people and micro-, small-, and medium- sized enterprises (MSMEs).

MSME (Micro Small and Medium Enterprises)

The Micro; Small and Medium Enterprises Development (MSMED) Act was notified in 2006 to address policy issues affecting MSMEs as well as the coverage and investment ceiling of the sector. The Act seeks to facilitate the development of these enterprises as also enhance their competitiveness. MSMEs make a crucial contribution to India's GDP. MSMEs contribute more than 29% to the GDP and are responsible for 50% of the country's total exports. They are also accountable for one-third of India's manufacturing output. The main mission of MSME is to promote e-Governance for empowering citizens, promoting the inclusive and sustainable growth of the Electronics, IT & ITeS industries, enhancing India's role in Internet Governance, adopting a multipronged approach that includes development of human resources, promoting R&D and innovation, enhancing efficiency through digital services and ensuring a secure cyber space.

Objectives

- e-Government: Providing e-infrastructure for delivery of e-services
- e-Industry: Promotion of electronics hardware manufacturing and IT-ITeS industry
- e-Innovation / R&D: Implementation of R&D Framework - Enabling creation of Innovation/ R&D Infrastructure in emerging
- areas of ICT&E/ Establishment of mechanism for R&D translation
- e-Learning: Providing support for development of e-Skills and Knowledge network
- e-Security: Securing India's cyber space
- e-Inclusion: Promoting the use of ICT for more inclusive growth
- Internet Governance: Enhancing India's role in Global Platforms of Internet Governance.

Functions

- Facilitation and credit flow to MSMEs
- Improving competitiveness of MSMEs
- Improve manufacturing base through upgradation of technology
- Promotion of MSMEs through cluster bases approach
- Marketing support to MSMEs
- Skill development and entrepreneurship development training
- Creation of new Micro Enterprises through Prime Minister's Employment Generation Program (PMEGP)
- Growth and development of Khadi and Village Industries (KVI) sector

Growth and development of Coir Industry **KEY CHALLENGES FACED BY THE MSME SECTOR**

- Lack of availability of adequate and timely credit
- High cost of credit
- Collateral requirements
- Limited access to equity capital
- Procurement of raw material at a competitive cost
- Problems of storage, designing, packaging and product display
- Lack of access to global markets
- Inadequate infrastructure facilities, including power, water, roads, etc.,
- Low technology levels and lack of access to modern technology
- Lack of skilled manpower for manufacturing, services, marketing, etc.,
- Multiplicity of labour laws and complicated procedures associated with compliance of such laws.

Concept and Definition of Financial Inclusion

Financial inclusion is one of the most important aspects in the present scenario for inclusive growth and development of economies. The financial inclusion term was first time used by British lexicon when it was found that nearly 7.5 million persons did not have a bank account. But financial inclusion concept is not a new one in Indian economy. Bank Nationalization in 1969, establishment of RRBs and introduction of SHG- bank linkage programs were initiatives taken by RBI to provide financial accessibility to the unbanked groups. According to committee on Financial inclusion headed by Dr. C. Rangarajan defined financial inclusion as “The process of ensuring access to financial services and timely and adequate credit where needed by vulnerable groups such as weaker sections and low income groups at an affordable cost.” Financial inclusion does not stand for delivery of financial services for all at all cost. But it means that the delivery of financial services and products at affordable costs of excluded sections of population and low income groups. It plays a crucial role to remove away the poverty from the country. Financial inclusion it provide equal opportunities to vast sections of population to access mainstream financial services for better life, living and better income. It provides path for inclusive growth. Financial inclusion can be described as the provision of affordable financial services, viz saving, credit, insurance services, access to payments and remittance facilities by the formal financial systems to those who are excluded. So, financial inclusion refers to access to vast range of financial product and services at affordable cost. It not only includes banking products but also other financial services such as loan, equity and insurance products.

Concept of Financial Exclusion

Before we understand financial inclusion we should have knowledge about financial exclusion. The word of financial exclusion first time used in 1993 by Leyshon and thrift who were concerned about limited access on banking services as a result number of bank branches were closed. In 1999, Kempson and Waylay defined financial exclusion in border sense which refers to those people who have excluded access to mainstream financial services and product till date numbers of analysts added their views to define financial exclusion. Financial exclusion describes as a situation in which people do not have access to mainstream financial product and services such as banks accounts, credit cards and insurance policies, particularly home insurance, education loan. The effects of financial exclusion can include exclusion from other mainstream services, such as pension or saving schemes, and can also lead to debt and/or cut off from essential utilities. According to the European Commission, Financial exclusion is: "A process whereby people encounter difficulties accessing or using financial services and products in the mainstream market that are appropriate to their needs and enable them to lead a normal social life in the society in which they belong". In India, The Report of the financial inclusion in January 2008 by C Rangarajan, Financial exclusion is defined as restricted access to financial services to certain segment of the society. Generally, this large section of the population comprises individuals or family falling into low income groups, which are not able to access even the most basic banking services like bank accounts, credit, insurance, financial advisory services and payment services. So basically, financial exclusion is the situation where certain group of population is excluded or unable to access low cost an appropriate mainstream financial products and services.

Importance of Financial Inclusion

Easy access to financial services will allow the population leaving in lower strata, to save money safely and help in preventing concentration of economic power with a few individuals, thus mitigating the risks that the poor could face as a result of economic shocks. Therefore, providing access to financial services is becoming an area of concern for the policymakers as it has far reaching economic and social implications. In India, The single most frequently used source of loan for medium Indian household is still moneylender. Large parts of our financial system are still hampered by political intervention and bureaucratic constraints, limiting their potential contribution. India's poor, many of who work as agricultural and unskilled semi-skilled wage laborers and low salaried workers are largely excluded from the formal financial system. Even micro and small enterprises, find it difficult to have an access to formal sources of finance and thus are largely excluded from financial system. Over 40% of India working population earn

but have no saving. Financial inclusion provides protection to poor from the control of the spurious money lenders.

Financial inclusion is an economic condition in which individuals and companies access to financial services are not denied and that the majority of individual can take advantage of the available financial services and they seek to include poor households in the formal financial system. This shows that financial inclusion is a process that ensures ease of access, availability, and benefits of the formal financial system for all economic actors and ensures that the public can access financial services as a whole as well as the existence of efforts aimed at removing all forms of barriers to public access in utilizing financial services.

In addition, financial inclusion is also an intervention strategy that seeks to overcome market friction that hinders financial markets from operating to the poor or underprivileged. This intervention aims to attract the unbanked population into the formal financial system, so that they have the opportunity to access formal financial services, promote a culture of saving, increase access to credit, and introduce efficient payment mechanisms .Policymakers are required to create effective opportunities for financial inclusion, capable of accelerating the introduction of innovative technologies, regulatory reforms, and infrastructure acquisitions that reduce transaction costs and enable faster, more efficient, and convenient delivery of financial services .However, it does not necessarily have a positive influence in all cases. Based on these findings, the researcher assumes that financial inclusion will allow MSMEs to access more financial services at affordable costs, so it can improve MSMEs' performance.

Extent to Financial Exclusion in Globally

As per the report of the World Bank, in survey of 148 economics approximately 2.5 million people do not have a bank account and totally excluded from mainstream financial services and products. They do not have access to affordable financial services which is an ultimate tool for overcoming poverty and minimize income inequalities. As per the world bank report only 50 percent adults population have an account in formal financial institutions while rest of remain unbanked.

Governments Initiatives

The government has taken various initiatives indirectly through the regulators, government promoted schemes through its various ministries. Some such initiatives have been listed below.

- **Induction of SHG-2:-** The original SHG as initialized by NABARD had certain limitations. This led to NABARD preparing a strategy to revitalize the SHG movement leading with the induction of SHG-2 model.
- **Women SHGs Development Fund:** - The Union Budget 2011-2012 proposed a

“Women’s SHG’s Development Fund” with a corpus of Rs.500 crore. The GoI created this fund to empower women and promote their SHGs. The responsibility of managing the fund is of NABARD. It managed the same through two of its major microfinance funds, namely Financial Inclusion Fund (FIF) and the Financial Inclusion Technology Fund (FITF).

- **Swarnjayanti Gram Swarozgar Yojana (SGSY):-** It is a centrally sponsored scheme that follows the mechanism of forming SHGs of rural poor households, providing capacity building training and linking groups to banks. SGSY is primarily designed to promote self-employment oriented income generating activities for the Below Poverty Level (BPL) households in rural areas.
- **National Rural Livelihood Mission (NRLM):-** Established in June 2010 by the Ministry of Rural Development (MoRD), GoI. It is based on the success of Indira Kranti Patham (IKP), a poverty alleviation program being implemented in Andhra Pradesh.

The Key Strategies of NRLM Are to

- Implement the program with greater emphasis on federations of SHGs
- Provide flexibilities to states for designing specific action plans for poverty alleviation,
- Introduce interest subsidy for encouraging repayments of loans and provide multiple doses of credit
- Improve training and capacity building efforts by setting up skill training institutes in each district
- Facilitate market linkages
- Improve monitoring and evaluation process.
- **The Mahatma Gandhi National Rural Employment Guarantee Scheme (MGNREGS):-** This scheme aims to enhance the livelihood of the rural people by guaranteeing at least one hundred days of wage employment in a financial year to a rural household whose adult members volunteer to do unskilled manual work. As the payments are made through the bank/post office accounts, in 2010-11, nearly 10 crore bank/post office accounts have been opened.
- **Aadhaar- Unique Identification Authority of India (UIDAI):-** The GoI has embarked an initiative to provide an individual identification number to every citizen of India and in 2009; it established the UIDAI to issue these cards on behalf of the GoI. This number provided by UIDAI will serve as a proof of identity and address, anywhere in India. The Aadhaar number will also enable people to have access to services such as banking, mobile phone connections and other government and non-government services in due course. In addition, the UIDAI

has introduced a system in which the unbanked population will be able to open an account during enrollment with Aadhaar without going to a bank. The individual will be able to access such bank accounts through a micro-ATM network with large geographic reach.

Conclusion

Even though enough efforts are being made by all stake holders viz Regulator, Government, Financial Institutions and others, the efforts are not yielding the kind of result expected. The regulator has to create a suitable regulatory environment that would keep the interest of all the stakeholders. The concern of banks about profitability is to be addressed by the regulator as the entire process of financial inclusion would be a kind of social work in the first few years. The concerns of the government about the reach, feasibility and implementation of government policies to the last mile needs to be addressed. The easy availability of financial services to the last mile user, the people in tier 3 to tier 6 in entirety needs to be addressed. The bank's concerns can be addressed by leveraging ICT, designing innovative products and service models. A structured expansion and appropriate regulatory norms addressing the bank's concern and inclusion.

SUSTAINABLE BUSINESS PRACTICES IN START-UPS

Dr.R.Ramya

Assistant Professor (Department of Commerce with CA)
NGM College, Pollachi

P. AnuShruthi

PhD Research Scholar, PG& Research Department of Commerce
NGM College, Pollachi

Abstract

A sustainable startup refers to a startup that involves the development of products and services for fulfilling the needs of the present generation without hampering the future generation's ability to fulfil their needs. This initiative is to encourage the young entrepreneurs to greatly involve in the entrepreneurship for better future. According to the program, around 1.25 lakh bank branches will encourage youth. Entrepreneurs by giving them loan. This campaign will create new jobs for the people in India. This scheme will provide employment in long run. Success of this program may happen with overcome some barriers like rigid licensing system, lack of banks support, absence of tax holiday CSR engagement within the business models of start-ups is based on a combination of financial and social capital, while financial benefits act as a continuous motivator for CSR engagement from inception.

Keywords: Start-ups; Sustainability - CSR - Sustainable business models - Entrepreneurial orientation - Stakeholders

Introduction

Every country around the globe has understood the importance of reducing its carbon emissions. Brands have come up with eco-friendly products for people, Services are ensuring that they reduce carbon footprints. The world never had environmental concerns back in the day. Since the industrial revolution has begun, there has been an excessive load on the usage of natural resources. Carbon emits resources like crude oil, coal, etc has seen a massive spike in usage. Burning of these fuels creates carbon to rise in the air and that links to climatic issues, It has affected ozone layer depletion, and It has affected the ice sheets around the poles. The Governments across the countries have brainstormed on steps that can be taken to deal with such issues. However, companies have understood the impact and have begun with eco-friendly solutions towards their products. Some companies have come up with an idea to have their products and services entirely on an eco-friendly concept. The industry has seen massive growth in the previous decade. From Tesla and SpaceX to remote industries preparing toothbrushes, there are a number of startups with Eco-Friendly concepts. The electricity that used to get generated by coal plants has now been reduced. There are companies that have started with windmills, hydroelectric, and

Solar based energy solutions. These have not only reduced energy expenses but have also helped us reduce carbon footprints. India has promised to considerably reduce their carbon footprint by the year 2030.

Understanding the Importance of Sustainable Practices

Sustainable practices are crucial for green startups for several reasons. First, adopting eco-friendly strategies allows businesses to minimize their environmental footprint and contribute to a healthier planet. This is vital in today's world, with growing awareness of the severe consequences of climate change and resource depletion. Sustainable practices help meet global goals, such as the United Nations' Sustainable Development Goals (SDGs), which play a crucial role in global efforts to combat climate change and create a more sustainable future.

Second, sustainable practices boost a green startup's brand image and customer loyalty. Consumers are increasingly seeking environmentally responsible products and services. By incorporating sustainable practices into your business strategy and clearly communicating your efforts, you can attract and retain customers who value corporate social responsibility.

Third, focusing on sustainability can lead to cost savings and improved long-term viability. Implementing energy-efficient measures, reducing waste, and using sustainable resources can reduce expenses and enhance long-term growth prospects. Moreover, green startups that adopt sustainable practices can gain a competitive advantage, differentiating themselves from competitors and increasing market share.

Lastly, employee attraction and retention are essential benefits of sustainable practices. Companies that prioritize sustainability are more likely to attract skilled and motivated employees who value contributing to a better world. Furthermore, organizations with strong environmental values often report higher employee satisfaction and loyalty, ensuring long-term stability and committed staff members who drive the company's success.

Adopting Green Technology Solutions

Green technology solutions significantly contribute to the success of sustainable startups. These technologies allow businesses to reduce energy consumption, minimize waste, and optimize processes. Here are some green technology solutions to consider for your green startup:

Renewable Energy Sources: Utilizing solar, wind, or other renewable energy sources for your business operations can drastically cut your environmental impact and lower your energy bills. You can either install your own renewable energy systems or purchase green energy from local suppliers.

Energy-Efficient Devices: Replacing old, inefficient devices with energy-efficient ones can lead to substantial energy savings. Look for energy star certified products, and make sure to use energy-saving settings when available.

Cloud Computing: Cloud computing enables businesses to access software, storage, and computing power on a shared or virtualized platform, significantly reducing energy requirements for local servers and hardware. However, select cloud service providers that prioritize environmental sustainability.

Internet of Things (IoT): IoT devices can monitor and optimize resource usage in real-time, reducing electricity, water, and material consumption. IoT sensors and systems can also help identify inefficiencies in your operations, allowing you to implement targeted solutions.

Green Web and App Development: Sustainable web and app development include optimizing code to minimize energy consumption on the user's device and reducing data storage requirements. Utilizing eco-friendly development platforms, like AppMaster.io, can help you create web and mobile apps with minimal environmental impact.

Eco-Friendly Supply Chain Management

Effective supply chain management is a critical component of a green startup's overall sustainability strategy. Supply chains can have a significant environmental impact due to production processes, transportation, and waste generation. By implementing eco-friendly supply chain management practices, you can reduce emissions, waste generation, and resource consumption. Below are some strategies to create a more sustainable supply chain:

Sustainable Suppliers: Partner with suppliers that share your commitment to sustainability. Look for eco-friendly certifications, renewable energy usage, and waste reduction in their operations. As a startup, it's essential to set expectations and standards for suppliers at the outset of your business journey.

Reducing Packaging Waste: Seek ways to minimize packaging waste by using recycled, biodegradable, or reusable materials. Encourage suppliers to adopt eco-friendly packaging and invest in container return programs to reduce both waste generation and costs associated with purchasing new materials.

Circular Economy Model: Embrace the circular economy concept by focusing on resource efficiency and waste reduction. Design products that are durable, reusable, and recyclable, and implement systems for waste collection and recycling. Collaborate with your suppliers and customers to create a closed-loop system for material recovery and reuse.

Green Logistics and Transportation: Optimize transportation and logistics processes to reduce the environmental impact of shipping. This can include better route planning, using

fuel-efficient vehicles, working with eco-friendly logistics partners, and encouraging suppliers to consolidate shipments. Additionally, consider investing in electric vehicles or hybrid technologies as your fleet expands.

Start up

By incorporating eco-friendly practices into your supply chain management, you can minimize negative environmental impacts, reduce costs, and enhance your brand's reputation as a responsible and sustainable business. The key is to collaborate closely with suppliers, customers, and other stakeholders to maximize the potential for a greener supply chain, benefiting all parties involved and the planet.

Energy Efficiency in the Workplace

Reducing energy consumption and improving energy efficiency in the workplace are critical steps for green startups pursuing sustainable growth. By implementing energy-saving practices and technologies, businesses can significantly lower operating costs, reduce carbon emissions, and contribute to a healthier environment.

Here are some strategies to boost energy efficiency in the workplace:

Switch to energy-efficient lighting: Replace traditional incandescent, halogen, and CFL bulbs with energy-saving LED lights, which consume less electricity and last longer. Consider adding motion sensors to decrease energy usage by ensuring lights turn off when rooms are empty.

Optimize natural light: Utilize daylight as much as possible by maximizing window exposure, installing skylights, and using light-colored wall paints and furnishings that help reflect light. Natural sunlight not only conserves energy but also stimulates productivity and enhances employee well-being.

Choose energy-efficient appliances: Select office equipment and electronics, such as computers, printers, and air conditioning units, with an ENERGY STAR rating or equivalent energy-efficiency certification. These products consume less energy and help reduce utility bills.

Implement an energy management system: Monitor and control your organization's energy usage through an energy management system. This software can track consumption patterns, identify inefficiencies, and suggest actionable energy-saving measures.

Regular maintenance: Keep heating, ventilation, and air conditioning (HVAC) systems well-maintained to ensure optimal performance and energy efficiency. Clean and replace filters regularly, and address issues like leaks and drafts for better insulation.

Strategies for Integrating Sustainability into the Startup Culture

Integrating sustainability into the startup culture can seem like a daunting task, but there are many simple strategies that startups can implement to get started. The key is to make sustainability a priority and to embed it into the core values and operations of the business.

Here are some strategies for integrating sustainability into the startup culture:

1. **Start at the top:** The leadership team must lead by example and make sustainability a priority. This includes setting clear sustainability goals and communicating them to all employees.
2. **Incorporate sustainability into decision-making:** Sustainability should be a key consideration in all decision-making processes, from product development to procurement.
3. **Engage employees:** Encourage employees to get involved in sustainability initiatives and to suggest ways to reduce waste and emissions.
4. **Make sustainability a part of the employee experience:** Provide training and resources to help employees understand the importance of sustainability and how they can contribute.
5. **Collaborate with suppliers and partners:** Work with suppliers and partners to reduce waste and emissions throughout the supply chain.
6. **Measure and track progress:** Regularly track and measure progress against sustainability goals, and make adjustments as needed.
7. **Communicate progress:** Regularly communicate progress on sustainability initiatives to employees, customers, and stakeholders to build momentum and support.

Best Environmental Startups to Watch in 2023

Biome Makers. Recovering soil health is an essential step towards a more sustainable future. ...

Aurora Solar. As the demand for alternative energy sources increases, solar energy companies are more popular than ever. ...

Tree app

EcoCart

Bluebird Climate.

Conclusion

In today's world, sustainability is more important than ever. With climate change and environmental degradation becoming increasingly pressing issues, it's crucial that businesses take steps to reduce their impact on the environment. These startups work on the principle of sustainability and also encourage people to walk toward the path of a

sustainable lifestyleEco-friendly startups are an excellent means to build a better present and future. These startups preserve the environment for us and our future generations and bring up revolutionary technologies that can cause a boom in the country's economy.

FINANCIAL INCLUSION FOR MSMEs

Dr. G. Akilandeswari

Associate Professor & Head, Department of Commerce(Finance), NGM College, Pollachi

Dr. E. Renuga

Assistant Professor, Department of Commerce(Finance), NGM College, Pollachi

Dr. K. Priyadharshini

Assistant Professor, Sakthi Institute of Information and Management Studies - [SIIMS], Pollachi

Abstract

MSMEs, or micro, small, and medium-sized businesses, are the foundation of all economic growth. Through the improvement of household wealth, the creation of jobs, and the eradication of poverty, they support local economic development. Despite playing such a crucial role, MSMEs have limited access to financing, and research on the positive effects of financial inclusion on the performance of micro, small, and medium-sized businesses is few. The vast majority of MSME business owners that use fintech products in their operations demonstrate how these owners have used financial services, namely savings accounts, to have an influence on expanding financial inclusion. Micro, small, and Medium Enterprises (MSMEs) are important resources for generating employment and driving economic growth, but they are still too tiny and unorganized to have much of an influence. In India, almost 95% of businesses are categorized as tiny, which creates the odd "missing middle" problem. Lack of accessible financing is one of the main obstacles to MSMEs expanding.

Keywords: MSMEs, Economic Development, Economic Growth, Employment.

Introduction

India's social fabric has undergone a series of transformations since Independence. After the liberalisation of the economy in the 1990s, the market opened up and employment opportunities grew, as did the spending power and standard of living of the average Indian.

As financial access grew, so did social mobility. However, certain sections have lagged behind due to myriad reasons ranging from social barriers to a lack of access to education and financing. One of these sections is made up of a multitude of micro, small and medium enterprises (MSMEs), which form the foundation of the economy.

Financial inclusion refers to providing good quality financial products and services everyone can access and afford. Such provision should be irrespective of company size or an individual's financial condition. It aims at providing an equal economic opportunity for sustainable growth.

The micro, small and medium enterprises (MSMEs) sector contributes significantly to the manufacturing output, employment and exports of the country. The contribution of MSME to total GDP has been steadily rising. The table below shows the significance of MSME to the economy.

Recognizing the contribution and potential of MSME sector, the definitions and coverage of the MSE sector were broadened significantly under the Micro, Small and Medium Enterprises Development (MSMED) Act, 2006 which recognized the concept of “enterprise” to include both manufacturing and services sector besides, defining the “medium” enterprises. Government of India has taken different institutional and policy measures for facilitating credit to MSMEs in the last few decades. Institutional measures include creation of institutions such as Industrial Development Bank of India (IDBI), Small Industries Development Bank of India (SIDBI), National Bank for Agriculture and Rural Development (NABARD), Export Import Bank of India (EXIM Bank), State Finance Corporation (SFC)s, State Industrial Development Corporation (SIDC)s, National Small Industries Corporation (NSIC) and various other facilities.

Barriers to MSME Growth

The MSME sector faces several barriers to their growth and to realizing their full potential.

- Lack of availability of adequate and timely credit
- High cost of credit
- Collateral requirements
- Limited access to equity capital
- Problems in supply to government departments and agencies
- Procurement of raw materials at a competitive cost
- Problems of storage, designing, packaging and product display
- Lack of access to global markets
- Inadequate infrastructure facilities, including power, water, roads, etc.

- Low technology levels and lack of access to modern technology
- Lack of skilled manpower for manufacturing, services, marketing, etc.
- Multiplicity of labour laws and complicated procedures associated with compliance of such laws
- Absence of a suitable mechanism which enables the quick revival of viable sick enterprises and allows unviable entities to close down speedily
- Issues relating to taxation
- While the above list provides key barriers for MSME growth in general, these constraints play out more severely for microenterprises, particularly access to finance.

Challenges Faced by Msme in Securing Financing in India

Lack of Credit History: One of the primary challenges faced by MSMEs in securing financing is the lack of a credit history. Unlike large companies, MSMEs do not have an established track record and hence find it difficult to secure loans from banks and other financial institutions. This lack of credit history makes MSMEs a risky investment for lenders, which makes it challenging for them to obtain financing.

Inadequate Collateral: Another significant challenge for MSMEs is inadequate collateral. Banks and other financial institutions often require collateral for loans, which can be a challenge for MSMEs as they may not have assets to pledge as collateral. This requirement can limit the amount of financing that MSMEs can secure, which can hinder their growth and development.

Lack of Awareness About Government Schemes: The Indian government has launched various schemes and initiatives to promote MSME financing, but lack of awareness about these schemes remains a significant challenge. MSMEs often do not have access to information about these schemes, which can limit their ability to take advantage of them.

High Interest Rates: MSMEs also face high interest rates on loans, which can make it difficult for them to repay loans and can limit their ability to invest in their businesses. High-interest rates can also make it difficult for MSMEs to secure financing in the first place, as lenders may perceive them as risky investments. **Initiatives Taken by the Government and Private Sector:** To address the challenges faced by MSMEs in securing financing, the Indian government and private sector have taken various initiatives.

Government Initiatives

The Indian government has launched several initiatives to promote MSME financing. Some of these initiatives include:

- **Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE):** The CGTMSE scheme provides collateral-free credit to MSMEs. The scheme guarantees up to 85% of the loan amount, which reduces the risk for lenders and makes it easier for MSMEs to secure financing.
- **Pradhan Mantri Mudra Yojana (PMMY):** The PMMY scheme provides loans up to Rs. 10 lakhs to MSMEs. The scheme has three categories of loans: Shishu (up to Rs. 50,000), Kishore (up to Rs. 5 lakhs), and Tarun (up to Rs. 10 lakhs). The loans do not require collateral and are available to both new and existing MSMEs.
- **Stand-Up India:** The Stand-Up India scheme provides loans up to Rs. 1 crore to SC/ST and women entrepreneurs for setting up new ventures in the manufacturing, services, or trading sectors. The scheme aims to promote entrepreneurship among these communities and provides support through the entire loan process.
- **Private Sector Initiatives:** Apart from government initiatives, the private sector has also taken steps to promote MSME financing. Some of these initiatives include:
- **Online Lending Platforms:** Several online lending platforms have emerged in recent years that offer MSMEs an alternative to traditional bank financing. These platforms use technology to assess creditworthiness and provide loans quickly and efficiently.
- **Collaborations with Government Initiatives:** Many private sector entities have partnered with government initiatives such as the CGTMSE scheme to provide financing to MSMEs. These collaborations have helped increase awareness about government schemes and make it easier for MSMEs to access financing.

Financial Inclusion and MSMEs

The lack of financial capital accounted for 21% of the weight out of 100 causes of illness. In 2006, Rakesh Mohan clarified. Regarding the critical evaluation of the investment cap, loan support, and fiscal incentives to priority sectors in the Small Scale Industries (SSI) strategy. He drew attention to the fact that India is not in a better situation than other developing countries and proposed that banks may enhance the financing of economic activity in the nation by liberalizing financial services more. They must establish a financing foundation from a larger deposit base and make profitable investments on (SSI) in order to meet the rising demand for credit.

Basic Pillars of the MSME Finance Policy Model

1. Legal and Regulatory Framework
2. MSME's Access to Financing Policy
3. Credit Infrastructure

4. Alternative Financing Infrastructure
5. Market Efficiency
6. Priority Sectors.

Digital Financial Inclusion of Women in MSMEs

Digital financial inclusion (DFI), especially for vulnerable groups like women, youth and micro, small and medium enterprises (MSMEs) is a core topic for discussions in international forums such as the G20. With a growing focus on the adoption of financial technology and digital payments systems by both individuals and businesses, the global digital payments market is expected to grow at an estimated compound annual growth rate (CAGR) of over 13 percent between 2022 and 2026. As access to, and usage of digital financial services increases, it can help promote gender equality by enabling affordable transfers, increasing women's bargaining power in case of social security transfers, increasing women's resilience to financial, economic and health shocks.

Yet, there continues to be several gaps in DFI of women, and thus, there has been growing prioritisation of DFI for women at a policy and programmatic level across G20 countries and in the G20 forum. With India entering the Troika in 2021 and taking over the G20 Presidency for 2023, there is a need for the country to focus on both the achievements and the issues related to DFI of women and MSMEs in India. To participate actively in the discussions, there is need to have a clear understanding of the issue and India's strengths. The Centre and state governments, the Reserve Bank of India (RBI), and National Bank of Agriculture and Rural Development (NABARD) have introduced several schemes and initiatives to facilitate DFI of women and MSMEs. Some of these schemes, such as the Pradhan Mantri Jan DhanYojana (PMJDY), Stand-Up India, and Pradhan Mantri MUDRA Yojana (PMMY), which have provided better access to digital finance to women, can also be showcased in the G20. Yet, there are hardly any survey-based studies on where the country stands, its achievements and gaps in DFI, especially with reference to the MSME women entrepreneurs and employees.

MSME-Financial Inclusion Base Set

Financial inclusion is measured across several dimensions. The dimensions are accessibility, corresponding to the range of financial services available, next is the usage, the extend to which customers make use them, and last one is the quality of the services, how well it caters to the needs, yet another addition to the last one is how does financial inclusion influence the decision of economic agents and increase economic well-being. The data are classified into demand-side and supply -side data. The demand-side comes from the needs from individuals and supply-side comes from the providers of financial service.

The Base Set is intended to be used in conjunction with at least the AFI Core Set of Financial Inclusion Indicators to provide an overall assessment of the state of financial

inclusion in a country. Over the two decades, three key aspects in economic development have created the conditions to develop the basic set of MSME finance indicators based on the growing recognition and emphasis on 1. The evidence-based policy that policy decisions will achieve expected outcomes. 2. Wider recognition of the important role that MSMEs play in the economic growth 3. Inability of MSMEs to harness their potentialities, due to lack of access and usage of appropriate financial products and services. Hence, to improve MSMEs access to financial services in order to promote inclusive economic growth, there is a need for rigorous and timely data on financial access and usage. The effective policies can be drafted if the financial inclusion status can be assessed. The MSME finance Base set is a limited set of indicators that aims to give a comprehensive view of the state of financial inclusion for MSMEs in a given country, with an emphasis on access to credit.

Present Challenges of MSME Finance to Rural Entrepreneurs

The response of Indian MSME sector and RBI through Financial inclusion strategies for the challenges during post COVID period can be based on the study done by a Foundation 6 on the “Third National Multi-Institutional Survey on MSMEs in India highlights green shots in MSME sector”, which says that the emergency fund need has gone up to 82% in June 2021 from 68.6% in April 2020, although 79% have not yet availed the scheme of Rs.3 lakh crore of collateral free loans for MSMEs. Few other major challenges faced by MSME include physical infrastructure bottlenecks; absence of formalisation; inertia to technology adoption; capacity building; backward and forward linkages; lack of access to credit and risk capital; and the perennial problem of delayed payments, among others. However, to counteract these challenges, additional advantages like giving additional incentives, moratorium, restricting of loans, etc.,

Conclusion

Financial inclusion requires particular attention by every developing economy, like India and a continuous focused concentration by the Financial sector consisting of RBI and MSME sector in order to sustain the development process taking place through their continued efforts on the availability of credit first to the financially excluded sections of the society in general and to the MSME Entrepreneurs. This study concludes that the financial inclusion index year after year reflects that there is reduction in the financial exclusion and MSME sector makes continued efforts to reduce financial exclusion through provision of credit to the MSMEs entrepreneurs and the role of National Financial policy reduces the financial exclusion and also helps in reducing MSME financial inclusion.

AN INSIGHT ON DIGITAL INDUSTRY 4.0

Dr.B.Rohini

*Assistant Professor, PG Department of Commerce with International Business
Nallamuthu Gounder Mahalingam College, Pollachi*

Mr.A.Pranesh (23-PI-05)

*I M.Com IB
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

Industry 4.0 stands for the fourth industrial revolution which is defined as a new level of organization and control over the entire value chain of the life cycle of products. Digitalization and modernization of the manufacturing process is the need for today's industry. The manufacturing industries are currently changing from mass production to customized production. The rapid advancements in manufacturing technologies and applications in the industries help in increasing productivity. It is geared towards increasingly individualized customer requirements. Industry 4.0 is visionary realistic concept that includes the Internet of Things, Industrial Internet, Smart Manufacturing and Cloud-based Manufacturing.

Keywords: *Industry 4.0, Digital, Cyber Security*

Introduction

Industrial Revolution, subsequent revolutions have resulted in manufacturing, from water and steam powered machines to electrical and digital automated production which makes manufacturing process more complicated, automatic and sustainable so that people can operate machines simply, efficiently and persistently. The term Industry 4.0 stands for the fourth industrial revolution which is defined as the new level of organization and control over the entire value chain of the life cycle of products, it is geared towards increasingly individualized customer requirements. Industry 4.0 is fulfilling individual customer needs which affects areas like order management, research and development, manufacturing commissioning, delivery up to the utilization and recycling of products. The main difference between industry 4.0 and Computer Integrated Manufacturing is the concern of the human role in production environment. Industry 4.0 has an important role of human worker in performing the production whereas CIM is considered as workerless production. The Industry 4.0 promotes the connection of physical items such as sensors, devices and enterprise assets, both to each other and to the Internet. Designing and drafting methods in all disciplines should be reviewed and their suitability to be checked for a modern, interdisciplinary approach model for product development and transferred to a common, integrated and interdisciplinary methods, process and IT solution. The production process is divided into small value-oriented units which shares information of the consecutive process steps only which helps in increasing flexibility and probably results in reduction of complexity of coordination.

Pioneers of Industry 4.0

The nine pillars of Industry 4.0 will transform isolated and optimized cells production into a fully integrated, automated, and optimized production flow. This leads to greater efficiency and change in traditional production relationships among suppliers, producers, and customers as well as between human and machine.

Big Data and Analytics

The collection and comprehensive evaluation of data from many different sources production equipment and systems as well as enterprise and customer-management systems will become standard to support real-time decision making.

Autonomous Robots

Robots are becoming more autonomous, flexible, and cooperative day by day and at certain they will interact with one another and work safely side by side with humans and learn from them. An autonomous robot is used to perform autonomous production method more precisely and also work in the places where human workers are restricted to work. Autonomous robots can complete given task precisely and intelligently within the given time limit and also focus on safety, flexibility & versatility.

System Integration

Integration and self-optimization are the two major mechanisms used in industrial organization. The model of Industry 4.0 is essentially outlined by three dimensions of integration:

- Horizontal integration across the entire value creation network
- Vertical integration and networked manufacturing systems
- End-to-End engineering across the entire product life cycle.

Digital integration and automation of manufacturing processes in the vertical and horizontal dimension implies as well as automation of communication and cooperation especially along standardized processes.

The Industrial Internet

The Internet of Things means a worldwide network of interconnected and uniform addressed objects that communicate via standard protocols. Internet of Things should also know as Internet of Everything which consists of Internet of Service ,Internet of Manufacturing Services , Internet of People , an embedded system and Integration of Information and Communication technology (IICT) .

Cyber Security And Cyber Physical Systems (CPS)

With the increased connectivity and use of standard communications protocols that come with Industry 4.0, the need to protect critical industrial systems and manufacturing lines from cyber security threats increases dramatically.. The strong connection of the physical, the service and the digital world can improve the quality of information required for planning, optimization and operation of manufacturing systems.

The Cloud (Cloud Computing)

Cloud-based IT-platform serves as a technical backbone for the connection and communication of manifold elements of the Application Centre Industry 4.0. With industry 4.0, organization needs increased data sharing across the sites and companies i.e., achieving the reaction times in milliseconds or even faster.

Additive Manufacturing

With Industry 4.0, additive-manufacturing methods will be widely used to produce small batches of customized products that offer construction advantages, such as complex, lightweight designs. High-performance, decentralized additive manufacturing systems will reduce transport distances and stock on hand.

Augmented Reality

Augmented reality-based systems support a variety of services, such as selecting parts in a warehouse and sending repair instructions over mobile devices. Industry can use of augmented reality to provide workers with real-time information to improve decision making and work procedures.

Issues and Challenges in Industry 4.0

The discovery of new technologies has made industry development from the early adoption of mechanical systems to today's highly automated assembly lines, in order to be responsive and adaptive to current dynamic market requirements and demands. Challenges like embedment, predictability, flexibility and robustness to unexpected conditions.

Intelligent Decision-Making and Negotiation Mechanism

In smart manufacturing system needs more autonomy and sociality capabilities as key factors of self organized systems whereas the today's system has 3C Capabilities i.e., lack of autonomy in the systems.

Manufacturing Specific Big Data and Analytics

It is a challenge to ensure high quality and integrity of the data recorded from manufacturing system. The annotations of the data entities are very diverse and it is an increasing challenge to incorporate diverse data repositories with different semantics for advanced data analytics.

System Modelling and Analysis

In system modelling, to reduce dynamical equations and conclude appropriate control model, systems should be modelled as self-organized manufacturing system. The research is still going on for complex system.

Cyber Security

With the increased connectivity and use of standard communications protocols that come with Industry 4.0, the need to protect critical industrial systems and manufacturing lines and system data from cyber security threats increases dramatically.

Modularized and Flexible Physical Artefacts

When processing a product, Equipment for machining or testing should be grouped and worked together for distributed decision making. So, there is a need of creating modularized and smart conveying unit that can dynamically reconfigure the production routes.

Opportunities in Industry 4.0

India is very much eager to implement Industry 4.0 and several measures have been adopted. India is also prepared to face global competition by undertaking the Make in India and skill development programs. It is all set to lead the world with Smart Manufacturing. The following are the opportunities for industry 4.0 in India:

- **Young Population:** India offers the ideal atmosphere for first time young job seekers to pursue opportunities in emerging fields of interest in the Indian manufacturing industry – consumer electronics, automotive, aeronautics and aerospace.
- **Favorable Policies:** The 'Make in India' program is India's plan of action to encourage Indians to create products for the world market. India has the resources, policy and workforce in place..
- **Skilled workforce:** With a strong high school and university ecosystem, Indian students are sought after by multinationals all over the world. Fast Changing times and a slow adaptive to education system however, have rendered man qualities gained in academics Redundant in today's work environment.

Conclusion

With the help of faster computers, smarter machines, smaller sensors, cheaper data storage and transmission could make machines and products smarter to communicate with each and learn from each other. With these challenges, India has several opportunities for industry 4.0 implementation. Such opportunities are large young population ready to go for digitization, central government policies like Make in India and skill development, significant experience in developing IT- related infrastructure, Companies collaboration with educational institutes etc.

PIONEERING SUSTAINABILITY: GOVERNMENT INITIATIVES AND PROGRESSIVE POLICY REFORMS

Saket Bihari

Assistant Professor

School of Education (SOED), K R Mangalam University, Gurugram (Haryana)

Abstract

Through the prism of governmental action and progressive policy changes, "Pioneering Sustainability: Government Initiatives and Progressive Policy Reforms" explores the dynamic world of sustainability. This in-depth investigation aims to illuminate the ways in which governments all around the world are leading initiatives and putting reforms into place to solve urgent environmental, social, and economic concerns. The presentation opens by emphasising the urgency of sustainability in the modern world and the need for international cooperation. It then goes on to look at numerous cutting-edge government programmes that are actively influencing a future that is more sustainable. These programmes cover a wide range, from incentives for renewable energy and mitigation plans for climate change to measures for biodiversity preservation and circular economy regulations. The research paper analyses the mechanisms behind the policy changes that have been crucial in advancing sustainability agendas. It examines the complex interactions between laws, rules, and public-private partnerships, illuminating how these components can spark transformational change. The necessity of data-driven decision-making in the field of sustainability is also emphasised in the article. It emphasises how big data and technology are increasingly being used by governments to track progress, evaluate the effects of policies, and adjust tactics for maximum efficacy. In addition to highlighting success stories, the study recognises the difficulties and barriers governments have in their pursuit of sustainability. These difficulties range from limited resources to political dynamics and opposition from the general public. Overall, "Pioneering Sustainability" presents a compelling portrait of governments acting as change agents in the effort to create a more sustainable world. It honours their contribution to creating laws and programmes that promote social progress as well as environmental preservation. For researchers, policymakers, and anyone else interested in comprehending the crucial part played by the government in promoting sustainability on a worldwide scale, this report is an invaluable resource.

Keywords: Sustainability, Government Initiatives, Policy Reforms, Environmental Challenges, Climate Change Mitigation, Renewable Energy, Biodiversity Conservation

Introduction

Meeting current requirements without sacrificing the potential of future generations to meet their own needs is known as sustainability. It includes a multifaceted strategy to balance the three pillars of sustainability—the economy, society, and the environment—which are:

- **Sustainability from an environmental standpoint:** This principle is concerned with preserving and safeguarding the natural environment, including ecosystems, biodiversity, and natural resources. It involves lowering emissions, protecting resources, and preventing climate change.

- **Social Sustainability:** The well-being of people and communities is emphasised in social sustainability. It entails making sure that everyone has access to necessities like food, clean water, healthcare, and education, as well as fostering social justice, diversity, and inclusivity.
- **Economic Sustainability:** Maintaining a healthy, stable economy is important to economic sustainability. It involves promoting long-term economic growth that doesn't harm the environment or prey on societal weaknesses, responsible resource management, and sustainable corporate practises.

Importance of Sustainability

Sustainability is of paramount importance for several compelling reasons:

- **Preservation of Ecosystems:** Sustainable practises support the maintenance of vital ecosystems and biodiversity, ensuring that different species can continue to thrive and provide services like pollination and clean water.
- **Climate Change Mitigation:** Sea-level rise, extreme weather, and temperature increases are some of the effects of climate change that must be mitigated. Sustainability initiatives are also essential for preventing these effects. Sustainable business practises help the switch to renewable energy sources and minimise greenhouse gas emissions.
- **Resource Conservation:** Resources should be managed responsibly to reduce waste and stop resource depletion, which is a goal of sustainability. Given that many natural resources are limited, this is particularly crucial.
- **Social Equity:** In order to alleviate inequities and raise everyone's quality of life, sustainable development places a high priority on social equality and inclusivity. This is true regardless of a person's financial status.
- **Economic Stability:** By lowering the risks connected to resource shortage, environmental harm, and social unrest, sustainable economic practises help to ensure long-term economic stability.
- **Global Interconnectedness:** In today's interconnected world, the decisions made by one country or region can have a significant impact on those of other countries. Sustainable development promotes global collaboration and recognises the interdependence of nations.
- **Inter-generational Responsibility:** According to sustainability, it is our duty to leave behind a planet that can meet the needs and ambitions of next generations. To leave a lasting legacy for our heirs is morally required.
- **Resilience:** Sustainable systems are typically more equipped to withstand crises, whether they be social, economic, or environmental. They are better able to adjust to shifting conditions and bounce back quicker.

- **Innovation and Efficiency:** The pursuit of sustainability frequently results in innovation and improved efficiency across a number of industries, spurring economic growth and job creation.

In conclusion, sustainability is essential for the survival of our planet, its people, and the next generation. It provides a framework for responsible and ethical decision-making in the search of a better, more sustainable future and offers a holistic approach to addressing urgent global concerns, from environmental degradation to social inequality.

Historical Context of Sustainability Policies

The historical context of sustainability policies in India is marked by a gradual evolution of environmental and sustainable development concerns. Here is an overview of the historical milestones and developments that have shaped sustainability policies in India:

Pre-Independence Era (Before 1947)

Traditional practices: Crop rotation, agroforestry, and water management techniques are just a few of the sustainable agricultural and land-use methods with a long history in India. **British colonial exploitation:** Resource extraction for British businesses caused the British colonial rule to have a severe environmental impact, such as deforestation and deterioration of natural resources.

Post-Independence (1947-1970s)

Early environmental awareness: Jawaharlal Nehru, the country's first prime minister, emphasised the value of environmental preservation and sustainable development. To develop and carry out environmental policies, the Indian government established organisations like the Ministry of Environment and Forests (MoEF) in 1985.

1970s-1980s

Legal foundations: India passed important environmental laws including the Air (Prevention and Control of Pollution) Act (1981) and the Water (Prevention and Control of Pollution) Act (1974).

Bhopal Gas Tragedy (1984): The industrial disaster in Bhopal raised awareness about the need for stringent regulations on hazardous industries and emergency response mechanisms.

1990s

Economic liberalisation: India's early 1990s economic reforms sped up industrialization, which posed environmental issues.

Earth Summit (1992): India took part in and signed the United Nations Framework Convention on Climate Change (UNFCCC) at the Rio de Janeiro Earth Summit, demonstrating its dedication to international environmental issues

2000s

India created its National Environmental Policy in 2006, emphasising sustainable development and the incorporation of environmental considerations into development planning. Renewable energy focus India started encouraging renewable energy sources, such wind and solar electricity, to lessen its reliance on fossil fuels.

2010s

India's national development objectives were matched with the Sustainable Development Goals (SDGs) of the United Nations, placing particular emphasis on the preservation of biodiversity, clean energy, sanitation, and poverty reduction.

Swachh Bharat Abhiyan (Clean India Mission): Launched in 2014, the Swachh Bharat Abhiyan (Clean India Mission) programme sought to advance garbage disposal and sanitation standards throughout the nation.

Paris Accord (2015): India pledged to lowering its carbon emissions intensity and ratified the Paris Agreement on climate change.

2020s and Beyond

The COVID-19 pandemic brought to light the significance of environmental and public health sustainability, refocusing attention on sustainable practises in urban design, healthcare, and preparation for disasters.

Green initiatives: With a focus on electric vehicles and public transportation, India has remained a proponent of renewable energy, afforestation, and sustainable mobility.

A complex interaction of historical, cultural, economic, and environmental variables has defined India's journey towards sustainability policies. Although there has been progress, the nation still needs to implement new and all-encompassing sustainability policies to address issues including air pollution, water scarcity, and climate change.

Challenges and Obstacles

- **Political Resistance and Opposition:** governmental opposition and resistance: Many sustainability efforts encounter opposition from governmental bodies, special interests, or sectors with competing interests. Politicians could be reluctant to enact changes that might harm their chances of winning re-election or might encounter opposition from influential group.
- **Short-Term Focus and Political Cycles:** Governments frequently run on short electoral cycles, which can cause them to prioritise current concerns above long-

term sustainability objectives. Continual, long-term commitment is frequently necessary for sustainability programmes.

- **Budget Constraints:** The allocation of resources to sustainability efforts may be constrained by economic considerations, particularly when there are no obvious immediate economic benefits or when the economy is struggling.
- **Lack of Expertise and Institutional Capacity:** Government organisations might not have the institutional resources or the requisite knowledge to properly design, execute, and monitor complicated sustainability policies.
- **Public Awareness and Behavioural Change:** Aligning public attitudes and behaviour with sustainability objectives can be difficult. Public engagement and education frequently need a lot of time and money.
- **Global Interdependence:** Cooperation with other countries is crucial because sustainability is a global concern. It can be challenging to balance national interests with aims for sustainability at the global level, particularly when it comes to mitigating climate change.
- **Legal and Regulatory Framework:** Ineffective or incompatible laws and rules can thwart sustainability efforts. It can take some time to update and connect the legal system with sustainability objectives.
- **Data and Monitoring:** Accurate data and reliable monitoring systems are essential for effective policymaking. The evaluation of policy efficacy may be hampered by a lack of data or monitoring infrastructure.
- **Cultural and Societal Factors:** Societal values and cultural norms may have an impact on how well sustainability programmes are received and implemented. When developing projects, policymakers must take the cultural context into account.
- **Technological and Infrastructure Challenges:** Some sustainability solutions call either cutting-edge technology or alterations to the built environment. These adjustments can be expensive and technically difficult to implement.
- **Unforeseen Events and Environmental Uncertainties:** Natural disasters, environmental crises, and unforeseen events can thwart sustainability efforts and necessitate adaptable responses.
- **Policy inertia:** When it comes to introducing and putting into practise new, more sustainable policies, inertia from existing policies and practises can be a problem.
- **Conflict of Interest:** Dealing with sustainability frequently entails taking on businesses or ways of doing things that have a stake in the current quo. It can be difficult to balance these interests with environmental objectives.

- **Monitoring and Enforcement:** Even with sound regulations in place, ensuring compliance and achieving intended results depend on efficient monitoring and enforcement.
- **Equity and Social Justice:** Equity and social justice should be promoted via sustainability policies. It can be difficult to prevent vulnerable populations from bearing an unfairly disproportionate weight of sustainability efforts.

These obstacles highlight how complicated sustainability efforts are, and how to overcome them requires careful planning, stakeholder involvement, and adaptive governance. Governments and policymakers must overcome these challenges to develop sustainability changes that are successful and long-lasting.

Predicting Opportunities and Challenges for the Future

- **Scenario Planning:** To foresee upcoming sustainability concerns, such as those connected to the effects of climate change, resource shortages, and population changes, governments should engage in scenario planning exercises. Making proactive policy is aided by this
- **Adaptive Governance:** Create frameworks for adaptive governance that permit policies to change in response to evolving conditions, ensuring that they continue to be effective in the face of unforeseen obstacles.

Increasing Government Engagement

To organise and prioritise sustainability activities, create specialised sustainability ministries or departments at the national and regional levels.² **Political Leadership:** Encourage political leaders to set ambitious sustainability goals and communicate the importance of sustainability to the public.

Strengthening International Cooperation

- **Global Partnerships:** establish more effective collaborations with other nations and international organisations to address transnational sustainability issues including climate change and biodiversity preservation.
- **Capacity Building:** Help developing nations increase their capability to adopt sustainable measures and fulfil their international obligations.

Policy Innovation

- **Incentive-based policies:** Create laws that offer incentives for eco-friendly behaviour, such as tax rebates for eco-conscious companies or financial support for the use of renewable energy sources.
- **Regulatory Sandboxes:** Establish regulatory sandboxes to make it easier to test and apply cutting-edge sustainability technology and solutions.

Leveraging Technology and Data

- **Big Data for Sustainability:** Make advantage of artificial intelligence and big data analytics to learn more about resource use, environmental effects, and developing sustainability trends.
- **Digital Infrastructure:** Spend money on this to promote smart cities and effective resource management.

Enhancing Public Engagement

- **Sustainability Education:** To increase knowledge and promote a culture of sustainability from a young age, sustainability education should be incorporated into school curricula.
- Establish methods for public participation and feedback on sustainability policies to make sure they reflect the values and requirements of citizens.

Balancing Economic Growth and Sustainability

- **Green Finance:** Encourage the use of green financing to finance sustainability projects, such as through green bonds and sustainable investment funds.
- **Circular Economy:** Promote sustainable patterns of consumption and production by putting circular economy concepts into practise.

Fostering Multisectoral Collaboration

- **Public-Private Partnerships:** Promote public-private partnerships so that sustainability projects can benefit from the resources, know-how, and creativity of the business sector.
- **Multi-Stakeholder Platforms:** Establish multi-stakeholder forums for discussions and joint decision-making comprising the executive branch, private sector, civil society, and academic institutions.

Encouraging Sustainable Production and Consumption

- **Extended Producer Responsibility:** To guarantee that manufacturers are accountable for the whole lifecycle of their products, more extended producer responsibility legislation are needed.
- **Resource Efficiency Standards:** Adopt standards and labelling for resource efficiency to direct customers towards sustainable options.

Adaptation and Resilience to Climate

- **Infrastructure that is Climate-Proof:** Spend money on infrastructure that is climate-proof and can endure harsh weather and increasing sea levels.

- **Ecosystem-Based Adaptation:** To increase resilience, promote ecosystem-based adaptation techniques including wetland restoration and afforestation.

Evaluating and Learning from Successes and Failures

- Conduct routine sustainability audits and reviews to see how well policies and programmes are working.
- **Peer Learning:** Encourage cross-regional and cross-national sharing of best practises and lessons learnt.

Policy Recommendations

- **Carbon Pricing:** Use carbon pricing tools like carbon taxes or cap-and-trade programmes to encourage the reduction of emissions.
- **Renewable energy sources:** Accelerate the switch to renewable energy sources by setting clear goals and providing incentives.
- **Green Building Standards:** To lower energy consumption in the construction industry, enforce green building standards and rules.
- **Sustainable Transportation:** To cut emissions from the transportation sector, invest in the infrastructure of public transportation and support electric automobiles.
- **Agricultural practises** Support environmentally responsible agricultural practises to lessen the impact of food production on the environment.

Call to Action and Conclusion

- **The Importance of Sustainability:** Stress that maintaining the environment for present and future generations is a need, not a choice.
- **Collective Responsibility:** Make it clear that everyone has a part to play in achieving sustainability, including governmental bodies, corporations, the private sector, and individuals.
- **Call to Action:** Urge all parties involved to act decisively in accordance with the suggestions to hasten the transition to a sustainable future.

A road map for governments and stakeholders to navigate the opportunities and difficulties in the pursuit of sustainability is provided by this comprehensive set of future directions and recommendations, which tackles all facets of sustainability policy and governance.

Conclusion

The present paper has examined the crucial part that progressive policy reforms and government actions have played in advancing sustainability. It is clear from an analysis of historical settings, difficulties, and potential future paths that governments play a critical role in promoting sustainable development and addressing important global issues.

Governments have made major efforts to include sustainability into their policy frameworks throughout history as well as developed their understanding of it. Governments have been crucial in developing sustainability agendas, from early environmental awareness to the creation of specialised environmental ministries. The road to sustainability, however, is paved with difficulties. Strong barriers are frequently posed by political opposition, financial limitations, and the intricate interactions between environmental, social, and economic issues. These obstacles are not insurmountable, though, and governments are capable of leading the way in the search for sustainable solution. There are many opportunities for governments to further their sustainability agendas in the future. Success depends on foreseeing and proactively solving new difficulties, promoting international cooperation, embracing technological improvements, and involving the general public. A sustainable future also requires combining economic growth with sustainability, fostering sustainable consumption and production practises, and strengthening climatic resilience. The suggestions made in this paper serve as a guide for governments and stakeholders as they continue to push the boundaries of sustainability in light of these factors. Actionable policy initiatives that can advance include carbon pricing, switching to renewable energy sources, green building requirements, and eco-friendly agricultural practises, to name just a few. Sustainability is ultimately necessary for the health of our world and future generations, not only as a choice. Governments must take the initiative in this effort, but they cannot do so on their own. Transparency, commitment to shared responsibility, and cross-sector and international collaboration are essential for establishing a more sustainable society. In nutshell governments are essential to advancing sustainability, and it is our common duty to encourage them and hold them responsible for the laws and deeds that will determine the course of our planet's development. We can progress towards a more resilient and sustainable world where the demands of the present and the future are satisfactorily addressed with resolve and concerted effort.

A STUDY ON DIGITAL INDIA AND INDUSTRY 4.0

Ms.D.Saranya

Assistant Professor, Department of Commerce(CA)

Abstract

Industry 4.0 represents the coming fourth industrial revolution, which will lead the way to the Internet of Things, Data and Services. To help industrial companies successfully become true digital enterprises in the Industry 4.0 era, this study aims to survey the essential implications of the digital transformation by conducting focus group discussions. Seven major implications for industrial companies are explored, and six critical issues are identified by experts. For anyone involved in digital transformation research and those seeking strategies to enter the global Industry 4.0 ecosystem, this study should offer some necessary fundamentals in terms of theoretical analysis and problem resolution.

Keywords: Industry 4.0, Digital Enterprises, Digital Transformation, Focus Group

Introduction

The manufacturing industry is currently experiencing huge changes. Industry 4.0 represents the coming fourth industrial revolution, leading the way to the Internet of Things, Data and Services. As show in Table 1, while Industry 3.0 focused on the automation of single machines and processes, Industry 4.0 focuses on the end-to-end digitization of all physical assets and integration into digital ecosystems with value chain partners. To help industrial companies successfully become true digital enterprises, this study aims to survey the essential implications of digital transformation in the Industry 4.0 era.

Focus Group Research Method

A focus group is one of the most important qualitative research techniques. In a focus group, the researcher is looking for more open feedback, as opposed to comparisons of potential results, as in quantitative research methods. A focus group also allows participants to express clear ideas and share feelings that do not typically come out in a quantitative survey or paper-based test. Because of the open conversation among group members, topics and discussion are more free-flowing, and members can react to the comments of others. Based on the benefits mentioned above, we invited ten participants to join the focus group discussions and investigate the essential implications of digital transformation in Industry 4.0.

Digitization Drives Great Leaps in Performance

Companies in every industry sector expect significant cost reductions. The cost savings can be achieved by implementing smart manufacturing initiatives. Such systems combine data from within the companies – from sensors all the way through to enterprise resource planning (ERP) systems – with information from horizontal value chain partners. For example, companies that deploy cloud-based planning systems to become better integrated

with horizontal value chain partners may improve efficiencies and reduce inventories. In addition, revenues from digitizing the product and service portfolio will grow significantly in future.

Digital Integration Deepens Customer Relationships

As Industry 4.0 develops, it will greatly enrich opportunities to retain and improve customer relationships. Digital integration with customers and new technological opportunities to move production closer to customers will enable the greater individualization and customization of products. The use of data analytics will substantially improve customer relationships and customer intelligence along product lifecycles. Moreover, the greater integration of data between manufacturers and customers will open up new collaboration opportunities.

Digital Culture Drives Transformation

Industry 4.0 has massive implications for company organization. The major challenges may center on internal issues, such as digital culture and training, rather than external issues, such as rights standards, infrastructure, intellectual property protection, and data security. Without the right digital culture and training, the talents will not want to stay. Hence, industry companies need to retain and train employees who are comfortable working in a digital environment. All employees need to think and act like digital natives, willing to experiment with new technologies and to learn new ways of operation. Increasingly important for decision-making as a means of controlling and improving overall business planning and manufacturing operations.

Companies Should Develop Robust Data Analytics Capabilities

Industrial companies should understand that it is critical to have data analytics capabilities in order to successfully drive digital transformation. To reach excellence in data analytics, industrial companies will require access to a wide variety of skill sets, including those of data scientists and algorithm architects. They will also need process expertise, advanced algorithms and workflow integration for decision support.

Companies should Accelerate Globalization but with Distinct Regional Flavors

Many applications will be closely linked to local companies because customized products often require regional manufacturing capabilities. However, the fourth industrial revolution binds companies and countries more tightly together through worldwide supply chains and data networks and will increasingly promote globalization. Companies in emerging economies can leverage digitization to increase efficiency in their horizontal value chains, working efficiently within a global manufacturing network to supply key components, products and systems.

It is Time to Commit to Big Investments

Within the next several years, the advanced implementation of Industry 4.0 will become a qualifier to compete and will also likely to be seen by investors as a qualifier for funding. A major focus of this investment will be digital technologies, such as sensors and connectivity devices, as well as software and applications, such as manufacturing execution systems (MESs). Companies are also investing significantly in training their employees, hiring new specialists, and driving organizational change.

Discussions

To move forward with Industry 4.0, acquiring and rolling out digital capabilities across companies is important. In order to lead tomorrow's competitive digital landscape, companies will require the commitment of top management and a clear vision. The participants also suggested the following six critical issues:

- The Industry 4.0 strategy will shape every further step companies take on the path towards becoming fully digital enterprises, so it is important to evaluate digital maturity and set clear targets for the next several years.
- It is important for companies to create the right pilot projects. Possible options include vertical integration within one or two manufacturing sites, including digital engineering and real-time data- integrated manufacturing planning. Horizontal integration with selected key suppliers is another option.
- Map out in detail what capabilities companies need. The most successful approaches consider which capabilities are needed to enable new digital business models and internal digitization.
- Make sure to maintain a strong focus on building digital trust. The goal should be to ensure information security and trust in a collaborative environment by providing for the end-to-end management of risks, threats and, security issues.
- Identifying and gathering the right data, deploying them for the right purposes, and effectively analyzing them will be critical in making the right Industry 4.0 decisions.
- Actively plan an ecosystem approach. First movers achieve breakthrough performance by going a step further to understand consumer needs and use digital technologies to create and deliver value to the customer via an integrated, innovative solution.

Conclusion

Industry 4.0 digitizes and integrates processes vertically across the entire organization, from product development and purchasing to manufacturing, logistics, and service. All data about operations processes, process efficiency, and quality management, as well as operations planning are available in real time, supported by augmented reality, and optimized in an integrated network. Horizontal integration goes beyond the internal operations of suppliers to customers and all key value chain partners. This study went to the

heart of companies considering their progress towards becoming digital enterprises. Thanks to the focus group discussions, we have distilled the results of our research into seven distinct, essential implications. In addition, we have also explored the six critical issues suggested by the experts. The analysis results may provide references to the development and implementation of digital transformation in the future.

SUSTAINABILITY AND SUCCESS OF MSME IN INDIA

Dr.M.V.Sathiyabama

*Associate Professor and Head Department of Commerce (E-Commerce)
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu*

Mr.M.Mohammed Shansha Sunfar

*Second Year, Department of Commerce (E-Commerce)
Nallamuthu Gounder Mahalingam College , Pollachi, Tamil Nadu*

Abstract

The micro, small and medium Enterprises (MSMEs) are the growth accelerators of the Indian Economy and for promoting equitable development. The MSME contributes about 30% of the country's gross domestic product (GDP). In terms of exports, they are an integral part of the supply chain and contribute about 40% of the overall exports. Micro Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of the Indian economy over the last five decades. MSMEs not only play crucial role in providing large employment opportunities at comparatively lower capital cost than large industries but also help in industrialization of rural & backward areas, thereby, reducing regional imbalances, assuring more equitable distribution of national income and wealth. MSMEs are complementary to large industries as ancillary units and this sector contributes enormously to the socio-economic development of the country. The study aims to analyse the sustainability and success of MSME in India.

Keywords: Sustainable, MSMEs, Employment, Technology.

Introduction

Micro, Small and Medium Enterprises (MSME) are the backbone of the socio-economic development of our country. MSMEs continue to lead the country towards economic growth; the Government of India has from time to time announced various schemes to support the development of this sector.

Micro, small and medium sized enterprises are vital in achieving the Sustainable Development Goals. Efforts to enhance access to finance for SMEs across key sectors of national economies are an important element of implementation of the Sustainable Development Goals (SDGs). Recently, in view of the economic hardship caused by covid 19, the government has announced few schemes under "Aatmanirbhar Bharat" i.e. Self-reliant India initiative. Accordingly. The criterion for classifying MSME has also been revised.

Under the revised criterion, the combined factors of 'Investment in plant and machinery and "Turnover is required to be considered to determine whether a business should be classified as a micro, small or a medium enterprise. In contrast, earlier the classification of an MSME unit was based only its investment in plant and machinery, and also depending on whether the enterprise was in the manufacturing sector or in the services sector.

Objectives of the Study

- To know the Performance of MSMEs from 2013-2014 to 2017-2018
- To give suggestions for future growth of MSMEs in India.

Review of Literature

Paramasivan. C & Mari Selvam. Paramasivan. C & Mari Selvam. P (2013) Progress and Performance of Micro, Small and Medium Enterprises in India, article revealed that Micro, Small and medium enterprises are the back bone of the economic development of the country, which concentrates to meet the local as well as the global demands in a unique characters of the products and services. In India, these sectors performed well and spread all over the country according to the availability of resources and traditional methods. MSME enterprises performing in a constant manner even in the globalisation era with the competitive advantages. These sectors could able to achieve the sustainable development of the country with self-reliance aspects. Hence this paper concludes that the progress and performance of the MSME is a significant manner during the study period.

Subsina Syal (2015) entitled Role of MSME in the growth of Indian Economy. This article concluded that the MSME sector of India is the gateway of global on the strength of competitive and factors like export promotion, reservation policy, tooling & technology, manpower training, technology and managerial skills gave enormous opportunities for growth and better performance in the economy. He also pointed out the facilitation from the government is required to minimize the transaction costs of technology upgradation, market penetration, modernisation of infrastructure etc.

Parthajeet Das (2017) Micro, Small and Medium Enterprises (MSME) in India Opportunities, Issues & Challenge. This article pointed out that MSMEs over the years have assumed greater Significance in our burgeoning national economy by contributing to employment generation and rural industrialization. This sector possesses enough potential and possibilities to push button accelerated industrial growth in our developing economy and well poised to support national programme like 'Make in India. This sector has exhibited enough resilience to sustain itself on the strength of our traditional skills and expertise and by infusion of new technologies, capital and innovative marketing strategies. Appropriate strategies should be evolved for creation of an enabling ecosystem where these enterprises are able to access the benefits meant for them under a formal and friendly ecosystem and are further capable of meeting the emerging challenges of a globally competitive order.

Sonia Mukherjee (2018) Challenges to Indian micro small scale and medium enterprises in the era of globalization. Article has suggested that more efforts in the form of higher investment in advanced technology and research and development, higher usage of digital and technology enabled platform, transfer of technology, more investment in human resources, improved access to finance, reduced infrastructural gaps, lesser stringent

business regulations can help in improving the competitiveness of the MSMEs. The Indian MSME sector needs more information, orientation and facilities for protecting their intellectual powers and show a positive approach towards creation, protection and management of IPR to compete in the global market and experience a business growth.

Rashesh Shah (2020) powering MSMEs in the next decade of growth, in this paper pointed out that MSMEs are the backbone of a resilient national economy, Prioritising their development is critical to the future of the country. The government has come out with a variety of enabling mechanisms over the last few years and need more such measures, especially in the current environment. The next decade will be the metamorphosis of India from an Emerging power to an established economic powerhouse and MSMEs will be an important cog in the wheel on this journey.

Shreeharipaliath (2020)) How to strengthen Indian's small business a post lockdown Economy suggested that in the aftermath of the Covid-19 epidemic, India now faces the crises of unemployment and business closure, particularly in the micro, small and medium enterprise, or MSME, sector. The MSME sector must be strengthened by Identifying micro, small and medium enterprises and their workers developing a vulnerability assessment framework of MSME sectors; increasing the capacity of the Samadhaan system to expeditiously clear government dues; improving the creditworthiness of small businesses.

Research Methodology

The study is based on quantitative in nature using secondary data. The secondary data were collected from Annual Report of MSME from 2013-2018.

Analysis & Interpretation

The following tables reveal the analysis and interpretation of results

Table-1 Status of MSME Units, Employment and Investments in India

S.No.	Year	Total Working Enterprises(In Lakh)	Employment (In Lakh)	Investment (Crore)
1	2013-2014	488.46	1,114.29	1,363,700.54
2	2014-2015	510.57	11,731.32	1,471,912.94
3	2015-2016	453.63	1,901.42	753,847.80
4	2016-2017	361.76	1,370.24	947,693.00
5	2017-2018	633.88	1,109.89	1,014,761.10
	Average	489.66	17,227.16	55.61,915.38

Source: MSNE Annual report 2013-2018

From the above table shows that the average growth rate of Total Working Enterprises is 489.66, Employment 17,227.16 and Investment is \$5.61, 915.38 from 2013-2014 to 2017-2018.

Table 2 Share of MSME exports in Total Exports

S.No.	Year	% Share in Export
1	2013-2014	42.38
2	2014-2015	44.76
3	2015-2016	50
4	2016-2017	50
5	2017-2018	49

Source: MSME Annual report 2013-2018

From the above table shows share of MSME exports in total exports in the year 2013-2014, 42.38% and it has been Increased to 49% in the year 2017-2018.

Table 3 Share of MSME Sector in GVA

Year	% Share in GVA
2013-2014	32.26
2014-2015	31.86
2015-2016	31.60
2016-2017	31.80
2017-2018	32.00

Source: MSME Annual report 2013-2018

From the above table, it is observed that share of MSME sector in GVA in the year 2013-2014, 32.26% and it has been slightly decreased to 32.00% in the year 2017-2018, GVA is important because it is used to adjust GDP, which is a key indicator of the state of a nation's total economy.

Table 4 Share of MSME Sector in Total GDP

Year	% Share in GDP
2013-2014	29.76
2014-2015	29.39
2015-2016	28.77
2016-2017	29.20
2017-2018	28.90

Source: MSME Annual report 2013-2018

From the above table, it is observed that share of MSME sector in total GDP in the year 2013-2014, 29.76% and it has been decreased to 28.90% in the year 2017-2018.

Findings

- The average growth rate of total working enterprises is 489.66, Employment 17, 227, 16 and Investment is 55, 61,915.38 from 2013-2014 to 2017-2018.
- Share of MSME exports in total exports has been increased from 42.38% to 49% from the year 2013- 2014 to 2017-2018.
- Share of MSME sector in GVA in the year 2013-2014, 32.26% and it has been slightly decreased to 32.00% in the year 2017-2018.
- Contribution of MSME sector in total GDP in the year 2013-2014, 29.76% and it has been decreased to 28.90% in the year 2017-2018.

Suggestions

- The government can play a crucial role in creating domestic manufacturing capabilities by leveraging proposed public procurement and projects.
- Efforts should be made to develop self-sufficient clusters of manufacturing competence, with Cluster Administrative Authorities, empowered to provide single window clearances to entrepreneurs and Investors.
- Disruptive technology, while leading to job losses in traditional areas, also presents new job opportunities.
- India has already taken several steps; due to which case of doing business in India has improved significantly (India's ranking in case of doing business report has improved from 142 in 2014 to 63 in 2020).
- However, still some reforms are needed in regard, especially in the field of land, labour reforms and in enforcing contracts.
- With the advancement of technology and the up-gradation of small business keeping in mind the future of the Indian Economy.
- Government has taken many new initiatives and makes policies for the development of MSMEs with sustainability.

Conclusion

The significance of the MSMEs sector can be noted from the fact that it is the second-largest Employment provider, after agriculture in India. In India, at present, there are nearly 56 million such enterprises in various industries, employing close to 124 million people. In order to revive the Indian economy amid Covid-19 Pandamie, the government has announced an economic package under Aatmunirbhar Bharat Abhiyan. Like other sectors of the Indian economy. MSMEs have been hit badly due to lockdown imposed by the government to tackle Covid-19 pandemic. In such a situation, providing merely a

stimulus package may not be effective, until adequate reforms are carried out to solve its pressing problems and to utilize its potential.

SIGNIFICANCE OF MSMEs IN ACHIEVING THE SUSTAINABLE DEVELOPMENT GOALS (SDGs)

Dr.M.Selva Soundari

Assistant Professor and Head of Department of Commerce

Dinesh.T & Anuja.J

I B.Com, Kovai Kalaimagal College of Arts and Science

Abstract

Nature is a quintessential part in our life which underpins our economy, and indeed our existence. However, our environment has been exploited by our very own hands directly or indirectly which leads to a plethora of long-lasting negative socioecological on a country. To overcome the Impacts, the concern of ability has taken a centre stage at national as well as global platform with the help of better eco-friendly technologies. Adhering to responsible business conduct guidelines is the biggest contribution that companies can deliver for a sustainable development. The efforts include Sourcing renewable materials, operations with carbon-free energy and creating products with a lower carbon footprint that help preserve the long term viability of our Planet's resources. While the large Enterprises have access to resources and knowledge it is the MSMEs that contribute to almost half of the manufacturing output and major number of employment opportunities which requires the most attention. MSMEs are catalysts of our Indian economy to bring about sustainable development by its increasing entrepreneurial activities. This paper studies the contribution of MSMEs in Indian economy and their role in achieving the sustainable development goals in our country.

Keywords : *Sustainability , Nature , Eco-friendly , Carbon Footprint.*

Introduction

MSMEs are micro small and medium enterprises that engage in the service sector or the manufacturing , processing , production and preservation of goods. The distinctive feature of MSME are less capital investment and high labour absorption. MSME contribute more than 29% to the GDP and responsible for 50% of the country's total exports that places a crucial role in the development of the Indian economy. Sustainable development is the only goal applicable to either developed or developing country like India. In connection to that, ministry of MSME provide numerous assistance to promote entrepreneurship and act as apex body for strategically formulate schemes for the sustainable development of the sector. We live in a environment that directly or indirectly depends on nature that's why there is a need of industrialisation and environment to go parallel. Sustainable growth increases the business and eventually more success since people now vote for green and eco-friendly products and services they use. Sustainable Consumption and Production (SCP) is about "the use of services and related products which respond to basic needs and bring a better quality of life while minimizing the use of natural resources, improving resource efficiency, increasing use of renewable energy

resources, reducing release of toxic materials and emissions of waste and pollutants over the life cycle of the service or product so as not to jeopardize the needs of the future generations."

Role of MSMEs in Achieving Sustainable Development and Goals Goal 1 : Poverty Alleviation

The main focus of the goal is to eradicate and reduce poverty based on national definitions. Goal 1 has seven targets, including ensuring access to social protection, access to economic resources/assets, improving climate and disaster resilience of the poor, mobilising resources and strengthening national and international policies to address poverty.

As indicated by the World Bank, in excess of 650 million individuals live in destitution throughout the world, which is 11% of the total population. Over 80% of individuals in South Asia and Sub-Saharan Africa live below the poverty line. This problem of poverty has remained the greatest challenge in the world. Although India is considered one of the fastest growing economy, it accounts for 20.6 per cent of the world's poor. MSMEs by employing the poor and jobless ensure that they earn money to survive. This helps in assuring their minimum survival needs. MSMEs in India employs over 60 million people in around 11 lakh establishment all over India. With an increased number of sustainable MSMEs, more employment opportunities could be created.

Goal 2 : Zero Hunger

MSMEs make up the majority of agricultural and food producers and ensure a sustainable food production system. Agro - based MSMEs have a major role in creating and maintaining a sustainable food supply (Blue Orchard Academy, 2017). The government initiatives such as Kisan Sampada Yojana entails in itself great opportunities for food production and processing at low cost by MSMEs.

Goal 3 : Good Health and Well-Being

Health issues like maternity mortality, child mortality, etc. are still not well addressed in rural landscapes. MSMEs as part of their CSR programmes could help organize awareness campaigns, healthcare facilities, arrange ambulance facilities, free medical checkups, etc. in the rural areas. To ensure good health around society, MSMEs have to be careful about the disposal of waste from their establishment. They must ensure that they do not pollute their surrounding localities which ultimately leads to many disease problems in the locality. In 2016 only, household and outdoor air pollution led to some 7 million deaths worldwide (Division for Sustainable Development Goals (DSDG), n.d.).

Goal 4 : Quality Education

Education is not only about schooling. It about learning new things and acquiring new skills at any age. MSMEs educate rural youths by imparting skills in them. Everyone who is employed in a microenterprise has to learn and acquires new skills for efficient working. Nowadays, employee training programmes under the aegis of skill India is training workers to improve their craft. Also, as a part of their social responsibility obligations, MSMEs are helping to open schools in rural and backward areas.

Goal 5 : Gender Equality

MSMEs could also assist in promoting gender equality and women's empowerment by providing entrepreneurship opportunities to women's (Kamal-Chaoui, 2017). In India, a huge number of microenterprises are led by women. According to MSME Annual report, around 123 lakh proprietary enterprises are owned by female entrepreneurs. Women have become dependent and are successful in their entrepreneurial endeavours. Also, various training programmes have trained them in their skills and have made them at par with men in terms of employability.

Goal 6 : Clean Water and Sanitation

The goal is to make sure the availability of water, sustainable management of water and sanitation for all. MSMEs Working in the locality could help to a great extent in dealing with the water and sanitation related activities. They could provide water to the locals from their plant as they usually have a rich source of water for their operations. MSMEs Could help improve water quality by reducing contamination, wiping out dumping activities and limiting the release of dangerous residue materials. Also, they could support and strengthen the participation of local communities in improving water efficiency, water management and sanitation management in the locality. On the same lines, as a part of their CSR obligations, they could help conserve and restore water by making ponds and dams.

Goal 7 : Affordable and Clean Energy

MSMEs with their innovative methods have been able to lower the cost of operations and have contributed to energy efficiency. The government is promoting MSMEs in the area of affordable energy. MSME ministry has issued guidelines and inviting projects on setting up of production units based on LED-based lighting systems, automatic voltage stabilizers, electric solar cooler, electric transmission line hardware, distribution transformers, solar panels etc. Thousands of MSMEs are getting certification from the ministry and are working in the field of producing energy efficient products. This will ultimately help the portion of renewable energy in the total energy mix. India's Unnat Jyoti by Affordable LED for All (UJALA) is a great example of providing affordable energy. In such an initiative, MSMEs are playing an important role.

Goal 8 : Decent Work and Economic Growth

The target is to provide full and productive employment to all. Although the number of unemployed people has reduced significantly over the years, people in many developing countries like India are still unemployed in large number. The role of the MSME sector in employment generation in India is indisputable. The sector is the second largest employment provider after agriculture. It employs over 110 million people in nearly 60 million establishments (Ministry of MSME, 2018), thereby providing employment and decent work opportunities to a large number of people. The sector helps in increasing labour productivity and decreasing the unemployment rate. This, in turn, helps reduce the quantum of migration of rural poor. The sector has been able to generate and provide employment to a large population in the period of global recession and economic slowdown (Development Alternatives, 2018). It is estimated that India will need 15 million new jobs per year for the next 15 years. (Bhattacharya & Bijapurkar, 2017) (Development Alternatives, 2018). This much amount of job creation is unimaginable without the contribution of MSMEs.

Goal 9 : Industry , Innovation and Infrastructure

The aim is to Build a strong infrastructure, encourage inclusive and sustainable industrialization and nurture innovation. MSMEs have a big part in industrialization progress of India and have helped in raising the industries share in employment, export and Gross Domestic Product (GDP). The rise in the number of manufacturing units is showing good signs for the economy in the current scenario. Due to lack of resources, MSME entrepreneurs continue to find new ways of doing complicated things in simple ways, which ultimately leads to low-cost innovations. This is why MSMEs are considered as innovation hubs. As economist William Baumol has asserted that new and small firms have been the major source of disruptive innovation in last decade's because new and small firms work outside prevailing paradigms and without strong links to current products and technologies((Kamal-Chaoui, 2017). The MSME entrepreneurs are helpful in making good infrastructures in the area where they exist. As a part of social responsibility, they are also engaged in making schools, roads, hospitals etc.

Goal 10 : Reduce Inequality

MSMEs have been contributing to reducing income inequalities within and among countries. By providing employment to local folks, these MSMEs increases their income level, improve their standard of living and make them self-dependent. MSMEs also have a major share in export and manufacturing output of the country. The MSMEs accounts for 45 per cent of the total export from the country and 40 per cent of the total manufacturing output in the country, thereby, helping the country to grow at a brisk pace and improving

the Financial Soundness Indicator (FSI) of the nation while competing with most of the developing and developed countries. MSMEs have not only contributed to increase the earnings of workers and entrepreneurs but also to the nation at large.

Goal 11 : Sustainable Cities and Communities

The goal is to make the human habitat safe, resilient and sustainable. Most of the MSMEs operate near the residential establishments in cities as well as villages. They affect human lives around them in one way or the other. When industries are set up in the far reach areas, they themselves ensure a well-developed infrastructure. So, they build roads, ensures water availability and take electricity to far reach areas with them. As a result, those areas get a good transportation infrastructure, water supply and electricity supply. While promoting industrialization, they are also helping in urbanization. MSMEs can help cities become more inclusive through projects like urban regeneration project that lay emphasis on SME development ((Kamal-Chaoui, 2017). MSMEs with their diverse range of operations are helping in making sustainable cities and communities in different ways. MSMEs engaged in waste recycling and solid waste management are some good examples in this regard.

Goal 12 : Responsible Consumption and Production

Resources are scares but human wants are unlimited. The pace of growth in human population calls for careful use of available resources. Sustainable consumption and production are all about the use of resources for the satisfaction of human needs with minimum wastage. It implies the development of efficient technologies, increased use of renewable resources, lessening of toxic residue outflow etc. MSMEs are more flexible than large enterprises and could adopt sustainable consumption processes and production patterns. The various processes used in production must be made efficient to reduce wastages. MSMEs could implement Lean manufacturing systems while following various pollution control standards

Goal 13 : Climate Action

Issues like global warming and ozone layer depletion have put a major threat to the lives of humans on the planet. India has to contribute to minimizing the air pollution, global warming and ozone layer depletion through Intentionally Nationally Determined Contributions (INDC). If India has to fulfil its INDC commitments then it is important to control environmental degradation and ecological imbalances in the country, which is mostly a result of industrial activities. MSMEs have to adopt Green Manufacturing initiatives and have to be environmentally conscious in using resources. Some MSMEs are using solid waste management as business opportunities and using them as marketable opportunities.

Goal 14 : Life Below Water

It is related to Conservation and sustainable use the oceans, seas and marine resources. Use of water resources and their disposal is a matter of concern for not only large but Micro, Small and Medium Enterprises. Units established near the coastal areas and river banks must adhere to the Air quality law, Water quality law, Waste management law, Environmental cleanup law etc. they must not indulge in the practice of dumping of wastes in water bodies.

Goal 15 : Life on Land

It is associated with Protection, restoration and promotion of sustainable use of terrestrial ecosystems, sustainable management of forests, combating desertification, and halting and reversing land degradation and biodiversity loss. The MSMEs located in rural areas near forests are exploiting most of the forest resources. It becomes their responsibility to protect the wildlife in them. It is their duty not to disturb the forest ecosystem. Tree plantation activities must be promoted by them in return for the resource they use. They must also ensure that their operation does not harm the vegetation and do not result in land degradation. If the MSMEs operate in agro-business, then they must promote sustainable agricultural business practices.

Goal 16 : Peace, Justice and Strong Institution

It involves building accountable institutions at every level. MSMEs do employ a large share of human capital. They must follow the labour laws of the country and comply with their norms. MSMEs should not indulge in child labour employment. Also, the treatment of female employees must be fair and their exploitation must be stopped. The laws administering the workers must be adhered to and labour must not be disassociated with their rights.

Goal 17 : Partnership for the Goals

To implement all the policies leading towards sustainable development, institutions within the country must partner with each other. Partnership in the private and public sector must be to achieve self-sufficiency. Also, many of the informal enterprises' partners with formal enterprises to create value. This partnership is essential given the fact that they together create a better value chain. It could be possible that governments could provide better exposure to the MSMEs of our country to the MSMEs of another country so that they could learn innovative methods of operations from one another.

Conclusion

SDGs are ambitious goals directed towards a better future for planet and people. However, achieving them within a span of fifteen years is not an easy task. Various nations including India through various commitments are working towards these goals. There are many dimensions to sustainable development which could be achieved through contributions of organisations and individuals in different forms. MSME sector is one of the sectors which carry a huge potential to affect the progress of most of these goals. The diversity and flexibility in operational capabilities of MSMEs make them an important player in this endeavour. If MSMEs thrive in the upcoming years, it will certainly help in generating more employment, reducing poverty, reducing regional imbalance, promoting equality etc. and thereby making a substantial contribution in achieving the SDGs. It is needed that problems of MSME are addressed diligently through appropriate government interventions and entrepreneurial abilities are nourished well in this competitive era.

Kovai Kalaimagal College of Arts and Science, Coimbatore

Abstract

Industry 4.0 is a present day issue that concerns today's industrial production as a whole. . It's an opportunity to radically change the way industry responds to the needs of society. The advancement of industry 4.0 will be driven by an interconnected progressive environment. The opportunities for disruption are huge and those left behind will feel it acutely. Industry 4.0 talks about the use of sensors, connectivity, artificial intelligence techniques, machine learning, CPS, Machine machine communication, and so on to develop smart factories, smart inventory management systems, and smart supply chain management. The adoption of digitalization and industry 4.0 practices is expected to play a very important role in the growth and development of Small and medium enterprises. The purpose of the paper is to summarize major government initiatives towards the digitalization of SMEs in India and to study the impact of digital transformation on SME's growth prospects. This study may provide evidence of the state of digitalization and industrial revolution 4.0 adoption in Indian SMEs with additional information as to the significant factors that affected their adoption. It is suggested that this piece of work can be made an important contribution to guide future research on digitalization and SME's adoption of industrial revolution 4.0 practices.

Keywords: Digital Trends, Network, Digital India, Industries, Enterprise.

Introduction

The Digital India approach is the flagship scheme of the Indian government. It is an effort to reduce the gap between the government and the public by integrating the government with its public electronically. The programme aims to render government services to the citizens electronically and reduce paper use. Apart from replacing paper, it also aims to provide high-speed internet services in the rural parts of India and connect them with the mainstream so that the benefits of the government can easily be provided to them. The government has aimed to provide broadband services to around 2.5 lakh villages across the country. Digital India also aims to disseminate digital awareness and digitally literate every country's citizen.

The coordinating ministry of the programme includes the Ministry of Electronics and Information and Technology (Meity). It is implemented by all the ministries and

departments of the government, both at the centre and state levels. At the national level, it constitutes a Digital India Advisory Group chaired by Cabinet Secretary.

Digital India, launched by the Government of India in 2015, is a visionary program with the primary goal of transforming the country into a digitally empowered society and knowledge economy. This initiative holds immense importance in the context of India's socio-economic development, bridging the digital divide, and positioning the nation as a global technology powerhouse. This essay explores the multifaceted importance of Digital India.

The Vision of the Digital India Programme

1) Digital Infrastructure as Utility to Every Citizen

The concept of the programme is to establish digital infrastructural facilities for the delivery of government services digitally. It aims to create a digital identity of the citizens that will be unique to every citizen for their whole life and that can be easily authenticable. Ensuring easy access to Common Service Centres and safe Cyber spaces for the public.

2) Governance and Services on Demand

To integrate different ministries and departments for better coordination in the delivery of services by the government. Make all government services available to the public through online platforms. To move citizens towards online and cashless financial transactions. To transform government services digitally for ease of doing business in the country. Ensuring availability of every citizen on the Cloud.

3) Digital Empowerment of citizens

By making every citizen digitally literate, primarily rural people. By making available digital services in vernacular languages. By ensuring the universal accessibility of all digital resources.

The 9 Key Pillars of Digital India

The Indian government focuses on nine pillars to achieve the objectives of the Digital India Programme. They are:

1) Broadband Highways

Under this, there are three sub-components- Broadband for All Rural

Its target is to cover 2,50,000 Gram Panchayats with broadband connection by December 2016. The outlay of the project is estimated to be around 32,000 cr., and the Department of Technology is its nodal department.

Broadband for All Urban

Under this, Virtual Network Operators will deliver services, and communication infrastructures will be compulsory in new urban buildings.

National Information Infrastructure

In this, cloud data centres of central government and states will be integrated with SWAN, NKN, NOFN, and NOPN networks. It will help connect 100, 50, 20, and 5 government offices/ service centres at state, district, block, and panchayat levels.

2) Universal Access to Phone Connectivity

It focuses on increasing mobile connectivity more inclusively by covering around 42,300 villages; still, untouched by this service.

Department of Telecommunication will be the nodal agency of the mission, and the deadline to complete this task is between FY 2014-2018.

3) Public Internet Access Initiative

It has two sub-components: Common Service Centres-

Common Service Centres (CSCs) are the points that benefit citizens by providing various government services online. Under this, it aimed to increase the number of CSCs from 1,35,000 to 2,50,000 with the motive of one CSC at each Gram Panchayat.

The Deity will be responsible for the implementation of the initiative.

The government has targeted to develop 1,50,000 Post Offices into multi-service centres, and the Department of Posts will act as the nodal agency for this mission.

4) e-Governance: Reforming Government through Technology

It is the program to re-engineer the government working manner using IT. It involves shifting from manual to digital databases so that all government processes can be digitized.

Guiding Principles for the transformation are: Online repositories for the documents like educational certificates, voter IDs, driving licenses, etc., should be made mandatory to ease citizens from submitting their documents in hard copy. System for online application and its tracking should be made. Government services should be integrated with their respective platform, like UIDAI, UPI, etc., to disseminate services efficiently.

A proper automatic Public Grievance Redressal system should be established for the public's complaints.

5) e-Kranti - Electronic Delivery of services

Transforming e-Governance for Transforming Governance is the vision of e-Kranti. It aims to make all government services available to the country's citizens electronically via an integrated system. It will help deliver services more transparent, efficient, and reliable.

Through this, the government is working to provide all the benefits possible with the help of technology.

A total of 44 Mission Mode Projects have been sanctioned under the mission, out of that 10 of them are recently announced under the mission, like Technology for Education= e-Education Technology for Health= e-Health Technology for Farmers, Technology for Security, Technology for Financial Inclusion, Technology for Justice, Technology for Planning, Technology for Cyber Security, etc.

6) Information for All

The vision behind this initiative is to provide information about every work and decision of the government in real-time through online platforms.

To serve the same purpose, "MyGov." was launched, allowing public engagement in certain things' decision-making and providing real-time information. It channelizes the communication link between the public and the government. The establishment of Open data platforms will be encouraged to make the public data more accessible easily.

7) Electronics Manufacturing

Complete digitization can be attained only with adequate availability of electronics. Due to this, Electronic manufacturing has been made one of the pillars of the mission. For achieving electronics adequacy, the focus should be on the following points:

Net Zero Import should be prioritized by boosting domestic manufacturing of electronics.

There should be a focus on aspects related to manufacturing that are required to increase production, like taxation, incentives to manufacturers, Incubation, Skill development, etc.

Strengthening existing electronics manufacturing units to increase domestic production.

8) IT for Jobs

The Digital India program will help increase employment and create new employment opportunities. It will create jobs in the IT industry for both skilled and semi-skilled labour. Under this, IT job training will be provided to 1 cr?students of rural areas and towns over five years.

To increase the penetration of ICT in the northeastern region, BPOs will be established in each northeastern district.

Telecom Service Provider will train 5 lakh rural working people to make them digitally literate.

9) Early Harvest Programme

EHP includes projects that can be implemented relatively within a short period, and the effects of their implementation can be seen shortly. It has projects like:

- IT Platforms for Messages
- Government Greetings to be e- Greetings
- Biometric Attendance
- Wi-fi in all Universities
- Secure E-mail within the Government
- Standardized Government E-mail Design
- Public Wi-fi Hotspots
- School Books to be e-Books
- SMS-based weather information, disaster alerts
- National Portal for Lost and Found Children

These projects have eased the life of the citizens; it has helped in rendering services digitally, from sending messages to making online attendance, providing students and the public with Wi-fi facilities and making available textbooks online, and providing SMS-based weather forecasts to farmers and other related stakeholders.

Effects of the Digital India Programme

The Digital India mission is one such initiative that has brought changes in the life of an ordinary individuals. Every person uses the services offered under the Digital India initiative daily. It has impacted every sector of the economy.

Effects on Technology

Digital India is the result of the advancement of technology. It has opened the scope of growth of technology in the country by normalizing the use of technology in day-to-day life. It is helping India shift from a labour-intensive economy to a technology-driven one. It has created the demand for the advancement of technological infrastructure.

Effects on Economy

Digital India has made India a leading country in online transactions with the help of UPI. It has supported the growth of macroeconomic factors like GDP, employment, etc.

Effects on Social Sector

Social Sectors such as healthcare and education have evolved significantly with Digital India's help. Education has shifted from physical space to online platforms; some have become significant unicorns like Byju's and PhysicsWala. In the healthcare sector, the government started e-Sanjeevani, an Online OPD facility. All these became possible just because of the online revolution, which drastically increased the services' reach.

Effects on Agriculture

Linking farmers with digital services was challenging, but the government worked seamlessly to make farmers comfortable with the technology. Digital India eased the life of the farmers by providing real-time weatherforecasts and crop-related information directly from experts in the respective field.

Effects on the Banking Sector

Digitization has revolutionized the banking sector. It has reduced the workload of the bankers with digital India products and policies; various banking operations can now be done online. Every bank provides the services of e-banking.

E-Banking is a relief for both customers as well as banking staff. Now, customers are not required to visit the bank for tasks such as depositing and withdrawing money, getting bank statements, etc. Bankers are relieved from the work pressure due to the presence of many customers every time.

Challenges of Digital India

A Large Number of the Digitally Illiterate Population

The biggest challenge of the mission is to provide digital literacy to the public irrespective of their educational background. Executing a literacy and awareness campaign on such a large scale is a humongous task. Digital literacy is mainly required to be disseminated in the rural parts of the country.

Connecting Rural and Remote Areas

The Digital India program target will only be achieved when it has penetration in rural and remote areas. These areas pose different challenges like acceptance by the public, terrain, climate, etc., which can prove to be a hurdle in connectivity.

Coordination issues between Central and State Governments

The Digital India programme is a central sector scheme, and for the plan's successful implementation, it is vital to have good coordination between central and state governments. Some conditions can prove to be a problem with the scheme's implementation.

Cyber Crime

The more people will move to online platforms and become digital, the threat of cybercrime will rise simultaneously. People are moving towards online platforms for services like banking, document storage, etc., and their data can be in danger. Government should have a robust solution to safeguard people from such fraud for the successful execution of the scheme.

Establishing Faith in Technology

Various people still don't fully believe in technology, especially in money-related matters. They still prefer to go to the bank for transfer, withdrawal, or deposit of a large amount of money, and it is because they are scared of the failure of technology and not aware of where to go in such situations. Therefore, to establish faith in technology, the government will have to do a dual task: create awareness campaigns to burst myths about technology and encourage them to use it. Secondly, the government should make a body to hear the grievances and address the problems of the public in case of such technological failures and frauds.

Costly Implementation

Transforming India into a digital economy requires immense infrastructure development like fibre optics, IT infrastructures, data centres, etc. For such infrastructural development, a large amount of financial investment is needed. The arrangement of funds for the programme is one of the significant challenges for the Indian government. The government has earmarked a total financial outlay of Rs. 1,13,000 Cr. for the scheme.

Net Neutrality

Net neutrality is one of the critical aspects of making this scheme effective. In our country, there is not 100% net neutrality. In India, people don't have so much money to have subscriptions and access to everything; as a result, they cannot use many services, raising the need for net neutrality.

Net neutrality will provide real meaning to digital India, where all the services of different platforms will be open to the public and can be accessed without any extra charge.

Institutional Framework and Management structure of Digital India Programme

Digital India is the dream project of the Indian government. It has been prepared with utmost care and devotion. The institutional and management structure includes key ministers and noted departments of the concerned ministries, including the Prime Minister, in its implementation structure.

Monitoring Committee on Digital India

This committee works under the chairmanship of the Prime Minister of India. This committee includes representatives from various concerned ministries/ departments. The committee's main task is to monitor the execution of the Digital India Programme at regular intervals.

Digital India Advisory Group

The Minister of Communications and IT is the group's chairman, along with other members from related ministries of state/UT governments and some from different line ministries. It provides the necessary insights and advice on policies and strategic steps to the Monitoring Committee on Digital India for the successful implementation of the scheme.

Apex Committee

The head of this committee is the Cabinet secretary of the Government of India. It executes and monitors the accurate implementation of the policies and strategies advised by the Advisory Group. It forms the coordination and integrates different government initiatives related to Digital India, as per need.

Expenditure Finance Committee (EFC)/ Committee on Non-Plan Expenditure (CNE)

This committee is responsible for the financial approvals for the projects under Digital India Programme. It also fixes the financial terms and conditions of participation by the states. This committee is headed by Secretary (Expenditure).

Council of Mission Leaders on Digital India

This council works as a platform for sharing the previous and new initiatives related to e-Gov under Digital India Mission. It will also present various ICT projects and initiatives of Deity to other governments and departments. The council is headed by the Secretary (Deity).

At the State level, the State Committee on Digital India is headed by the state's Chief minister.

After that, there is the State/UT Apex Committee on Digital India under the chairmanship of the Chief Secretaries of the states.

Opportunities for Digital India Programme

It is an initiative to transform the country with IT. It aims to make every citizen of the country a user of core digital services by providing them with good digital literacy.

It will increase the reach of high-speed internet to the villages, and for that, around 7 lakh Km of broadband cable is being installed to connect 2.5 lakh villages to the internet.

Digital India provides the opportunity to transform; with the internet's reach, the villages' schools can access smart classrooms.

It has removed the Indians from the counter. Services like e-ticketing, e-commerce, e-Catering, e-healthcare, etc., are now available online. In earlier times, people had to stand in queue for hours for such tasks. It has made life easy, and anyone can use these services from their home.

It facilitates faceless work in offices which has helped curb corruption, and the process has become more efficient and effective.

The Future of Digital India

Digital India is a campaign that can boost India's GDP growth and be a pioneering factor in attaining the mark of a \$5 trillion economy by 2025. It will transform the image of India of being outdated and help in shifting from only an agriculture-based economy to an IT-based economy. This mission will uplift the intellectual and social quotient of the individual. It will improve the country's citizens with an increase in their literacy level.

Digital India will lead to a decrease in the cases of corruption and other offences like money laundering, tax evasion, etc. It will help in the faster resolution of pending cases in the system.

It will change the education system, where students can get an education and learn skills from anywhere. It will make education relatively less costly, reducing the need for extensive infrastructure.

The Importance of Digital India in Transforming the Nation

- **Bridging the Digital Divide:** Digital India is pivotal in bridging the digital divide that exists across India's diverse population. It aims to ensure that the benefits of the digital revolution reach every corner of the country, regardless of geographical location or socio-economic status. Initiatives like BharatNet and Common Service Centers (CSCs) have been instrumental in extending internet connectivity to rural and underserved areas, enabling citizens to access information and services that were previously inaccessible.
- **E-Governance and Transparency:** The program emphasizes the use of technology in governance, leading to increased transparency, efficiency, and accessibility of government services. Digital platforms, such as the National Portal of India and MyGov, have made it easier for citizens to engage with the government, access information, and participate in policymaking. This transparency reduces corruption and enhances accountability in public administration.
- **Economic Growth and Innovation:** Digital India has played a significant role in fostering economic growth and innovation. It has encouraged entrepreneurship and the development of a vibrant startup ecosystem. Initiatives like "Startup India" have provided support and incentives for young entrepreneurs, leading to the creation of job opportunities and positioning India as a global technology and innovation hub.
- **Digital Literacy and Education:** The program recognizes the importance of digital literacy in the modern world. It promotes digital education and literacy through initiatives like the National Digital Literacy Mission (NDLM) and platforms like

SWAYAM. These initiatives empower individuals with essential digital skills, enhancing employability and promoting lifelong learning.

- **Efficiency and Convenience:**Digital India has made government services more accessible and convenient for citizens. With initiatives like Digital Locker and e-Signature, individuals can securely access and store their important documents online. This reduces bureaucracy, simplifies paperwork, and saves time and effort for citizens.
- **Resilience and Adaptability:**The COVID-19 pandemic highlighted the importance of a robust digital infrastructure. Digital India demonstrated its adaptability and resilience by leveraging digital platforms to ensure uninterrupted education, healthcare access, and essential services during the crisis. This adaptability positions India for future challenges.

Conclusion

Digital India is not just a government initiative; it is a vision for the future of the nation. It has immense importance in terms of inclusivity, transparency, economic growth, education, and adaptability. By continuing to invest in digital infrastructure and innovation, India is on the path to becoming a global digital leader and achieving the vision of a digitally empowered New India. In this essay, we explored the multifaceted aspects of the Digital India initiative, which is transforming India into a digitally empowered society and knowledge economy. We discussed the significance of Digital India in bridging the digital divide, promoting e-governance, spurring economic growth, enhancing digital literacy, and adapting to the challenges of the COVID-19 pandemic. Digital India is playing a pivotal role in shaping the vision of a New India. It fosters inclusivity by bridging socioeconomic disparities, empowers citizens through digital literacy, promotes transparency and efficiency through e-governance, drives economic growth and innovation by nurturing entrepreneurship, and enhances financial inclusion through digital payment initiatives like UPI. In conclusion, Digital India is not just a program; it's a vision for a digitally inclusive and empowered India. Its impact on governance, education, entrepreneurship, and economic growth is undeniable. To realize the full potential of this vision and ensure a prosperous future, India must stay dedicated to the path of digital transformation and adapt to the evolving digital landscape.

ANALYZING THE IMPACT OF GOVERNMENT POLICIES ON SUSTAINABLE PRACTICES IN INDIAN MSMEs

Dr.I.Siddiq

Associate Professor, Head-School of Commerce,
Sree Saraswathi Thyagaraja College, Pollachi, Coimbatore, Tamilnadu

Mrs.D.Shobana

Ph.D. Research Scholar, PG and Research Department of Commerce,
Sree Saraswathi Thyagaraja College, Pollachi, Coimbatore, Tamilnadu

Abstract

The present study explores into the multifaceted relationship between government policies and the adoption of sustainable practices within the Micro, Small, and Medium Enterprises (MSME) sector in India. MSMEs form the backbone of India's economy, contributing significantly to GDP, employment, and exports. Ensuring their sustainability is crucial for overall economic development. With sustainability emerging as a pivotal driver of economic growth and environmental stewardship, it is imperative to scrutinize the effectiveness of existing policy frameworks in catalyzing sustainable initiatives among MSMEs. This research endeavors to provide a comprehensive understanding of how government policies influence sustainable practices within this critical economic segment, and further aims to offer practical recommendations for refining policy structures to foster enhanced sustainability. It addresses the critical need to balance economic growth with environmental conservation, ensuring a more resilient and sustainable future for the country. Sustainable practices have broader benefits, including improved health, livelihoods, and community well-being. Sustainability is increasingly valued in global markets. Understanding policy-driven sustainable practices enhances the competitiveness of Indian MSMEs.

key words: sustainability, government policies, economic growth and development

Introduction

However, the Indian Micro, Small, and Medium Enterprises (MSMEs) sector plays a pivotal role in the country's economic development, it also associated with environmental challenges due to resource-intensive operations. Within the MSME sector, there has been a rising understanding of the necessity of sustainable practices in recent years to reduce negative environmental effects and guarantee long-term survival. This shift to sustainability has been impacted by a number of government programs and efforts that support sustainable business practices. The primary objective of this research project is to comprehensively assess how government regulations affect Indian MSMEs' adoption and implementation of environmentally sound practices.

Problem Statement:

Recently, it has become more crucial than ever for businesses to adopt environmentally friendly business practices in order to slow down environmental deterioration, save resources, and ensure long-term economic sustainability. Government policies are extremely important in influencing how businesses, including MSMEs, behave in terms of sustainability. Despite numerous policy initiatives aimed at promoting sustainability within the Indian MSME sector, there remains a gap in understanding the tangible impact of these policies on actual sustainable practices adopted by MSMEs. This gap in knowledge hampers effective policy formulation and implementation, hindering progress towards the eco-friendly business objectives.

Research Objectives of the Study:

- To evaluate the current government efforts, rules, and programs that have an impact on sustainable business practices in India's MSMEs.
- To examine the degree to which Indian MSMEs have adapted environmentally friendly procedures in light of specific government initiatives and interventions.
- To look into the financial effects of government policies on MSMEs, including cost savings, market competitiveness, and potential for growth and innovation in sustainable practices.

Impact of Government Initiatives:

Several government policies and initiatives in India were targeted at promoting sustainability within the MSME sector.

i. National Manufacturing Policy (NMP) (2011):

The NMP was introduced in 2011 with the goal of enhancing the manufacturing sector's contribution to India's GDP and adding millions of new jobs to the industry. It strives to support creativity, raise levels of competition, and promote longevity in manufacturing operations. The NMP emphasized resource efficiency and sustainability in the manufacturing sector, fostering the adoption of greener processes and technology.

Impact of NMP on MSMEs:

The strategy places a strong emphasis on the value of technology advancement, which is especially pertinent to MSMEs. This is critical for MSMEs since these businesses must increase their total production and efficiency, which depends on having a competent workforce. The strategy acknowledges the necessity for reliable infrastructure, such as industrial parks and clusters, which can help MSMEs by fostering an environment that is favorable for growth.

ii. Green Credit Scheme:

Launched by the MSMEs, this scheme encourages banks to provide preferential interest rates to MSMEs adopting eco-friendly technologies, thereby incentivizing sustainable practices. The Green Credit Scheme encourages banks to finance projects that have a positive impact on the environment. It aims to promote sustainable and environmentally-friendly practices in various industries.

Impact of Green Credit Scheme on MSMEs:

By implementing green practices, MSMEs can reduce their environmental footprint and potentially lower operational costs in the long run. Access to credit through this scheme can facilitate the adoption of such practices. Embracing sustainability can be a competitive advantage for MSMEs in the market. The Green Credit Scheme supports MSMEs in adopting practices that align with modern consumer preferences for eco-friendly products and services.

iii. Revised Industrial Policy (2014):

The policy advocates for sustainable industrial development by promoting energy efficiency, waste management, and pollution control in MSMEs. It also encourages technology upgradation for cleaner production processes. The Revised Industrial Policy of 2014 aims to accelerate industrial growth promotes investment, improve competitiveness, and foster innovation in the Indian industrial sector. It seeks to create an environment conducive to sustainable economic development.

Impact of Revised Industrial Policy (2014) on MSMEs:

The strategy places a strong emphasis on programs to increase capacity and improve skills, both of which are essential for improving the workforce capacities of MSMEs. For MSMEs to increase their total productivity and competitiveness, a competent workforce is crucial. The strategy specifies steps to increase MSMEs' access to credit and financing, which is essential for their development and growth.

iv. Credit Linked Capital Subsidy Scheme (CLCSS):

The adoption of ecologically conscious tools and procedures in MSMEs is made possible by CLCSS's funding for technology modernization and upgrading. CLCSS was created to encourage MSMEs to upgrade their technology by giving them upfront capital subsidies for the growth and upgrading of their machinery and equipment.

Impact of CLCSS on MSMEs:

The money provided by CLCSS for the modernization of technology and advancement allows MSMEs to implement environmentally friendly tools and practices. By providing them with upfront capital subsidies for the expansion and upgrading of their machinery and equipment, CLCSS was established to encourage MSMEs to modernize their technologies.

v. Make in India Campaign:

India is to become a powerhouse for global manufacturing, according to the Make in India Campaign, which was introduced in 2014. The program aims to stimulate economic growth, create jobs, and improve India's competitiveness abroad.

Impact of Make in India Campaign on MSMEs:

This initiative promotes the use of cutting-edge manufacturing technologies. MSMEs can win from this by getting access to cutting-edge manufacturing techniques and tools, which can boost productivity and competitiveness. Through the Make in India initiative, the government provided a number of financial incentives and schemes to assist the expansion of MSMEs. These include technology upgrade assistance programs and credit-linked capital subsidy schemes.

vi. Technology and Quality Upgradation Support to MSMEs:

The goal of this strategy is to support MSMEs in adopting cleaner, more energy-efficient technology while simultaneously raising their standards of quality. It offers financial assistance to speed up the adoption of certain technologies.

Impact of Technology and Quality Upgradation Support on MSMEs:

The policy promotes the use of cleaner technology, which may have a less negative influence on the environment. This is especially important in a global setting where environmentally friendly techniques are becoming more and more important. This policy's financial assistance helps MSMEs pay for technological and quality improvements, making it more affordable for smaller businesses.

vii. Zero Defect, Zero Effect (ZED) Certification Scheme:

The ZED Certification Scheme seeks to honor and reward MSMEs that have embraced industry-leading standards in both environmental sustainability and quality. It promotes a culture of ongoing development.

Impact of ZED on MSMEs:

The "Zero Effect" component emphasizes minimizing environmental impact. This can lead to resource efficiency, cost savings, and compliance with eco-friendly standards. ZED certification provides a distinct competitive advantage for MSMEs in domestic and international markets. It signals a commitment to quality and sustainability.

viii. Prime Minister's Employment Generation Programme (PMEGP):

PMEGP promotes microbusinesses to open up employment opportunities in rural as well as urban locations. It provides tools and assistance to help new businesses get off the ground.

Impact of PMEGP on MSMEs:

By empowering people to start their own enterprises and become entrepreneurs, PMEGP proactively tackles the issue of unemployment. The country's total economic progress is a result of this. By giving people the tools to build their respective livelihoods, the initiative helps people become more independent and less dependent on official work.

ix. Rural Industry and Employment Generation Programme (RIEGP):

In order to generate long-term employment prospects in rural areas, RIEGP emphasizes fostering the growth of rural industries. Through the support of small businesses, it seeks to improve rural areas.

Impact of RIEGP on MSMEs:

RIEGP focuses primarily on remote regions, where MSMEs are frequently essential for sustaining livelihoods. It aids in improving the economic circumstances of rural communities by boosting rural industries. Rural industrial cluster development is supported by the initiative. This makes networking, information exchange, and access to shared resources easier – all of which are crucial for the expansion of small firms.

x. Technology Centre Systems Programme (TCSP):

The goal of TCSP is to offer MSMEs technology services and assistance to increase their sustainability and competitiveness. It aims to improve MSMEs' technological skills.

Impact of Technology Centre Systems Programme on MSMEs:

By tackling issues like technology adoption, quality requirements, job creation, and environmental sustainability, these policies and programs aim to strengthen and advance the MSME sector in India. By focusing on important issues like technology advancement, skill development, access to finance, and growth, they play a critical part in creating an environment that is favorable for the advancement and improvement of MSMEs in the nation.

xi. Digital India:

Launched in 2015, Digital India aims to transform India into a digitally empowered society and knowledge economy. It focuses on improving digital infrastructure, providing digital services, and promoting digital literacy. Through digital platforms, MSMEs can reach a wider audience both domestically and internationally. E-commerce platforms and online marketplaces have become critical channels for MSMEs to sell their products. Digital tools and technologies have enabled MSMEs to streamline operations, reduce paperwork, and cut costs associated with traditional business practices.

Impact of Digital India on MSMEs:

Cloud-based solutions, for instance, have lowered IT infrastructure expenses. Adoption of digital technologies like ERP systems, CRM software, and automation tools has led to increased operational efficiency, helping MSMEs compete more effectively. Digital payment systems and mobile banking have provided MSMEs with easier access to financial services, reducing dependency on traditional banks and facilitating quicker transactions. According to a report by IBEF (India Brand Equity Foundation), India's e-commerce market is estimated to reach USD 99 billion by 2024. The number of internet users in India is expected to reach 974.9 million by 2025, which opens up significant opportunities for MSMEs to leverage digital platforms.

xii. Atmanirbhar Bharat Abhiyan (Self-Reliant India Initiative):

Announced in 2020, this initiative focuses on making India self-reliant by promoting local manufacturing, reducing dependency on imports, and boosting indigenous industries. The goal of self-sufficiency can be furthered by the policy, which promotes MSMEs to produce locally and lessen their reliance on imports.

Impact of Atmanirbhar Bharat Abhiyan on MSMEs:

The initiative emphasizes innovation and technology-driven solutions, which can benefit MSMEs by encouraging them to adopt modern and efficient practices. The ECLGS scheme under Atmanirbhar Bharat provided collateral-free, fully guaranteed loans to MSMEs, infusing over Rs. 4.5 lakh crore into the sector.

xiii. Startup India:

Launched in 2016, Startup India aims to foster an ecosystem that nurtures innovation and supports startups. It provides various incentives and initiatives to promote entrepreneurship.

Impact of Startup India on MSMEs:

MSMEs aiming to scale or develop can benefit from Startup India's finance assistance, tax breaks, and access to incubators. The policy promotes the development of a helpful environment that offers MSMEs access to markets, networking opportunities, and mentorship. The Startup India campaign acknowledged over 41,000 firms, significantly altering the entrepreneurial scene.

In conclusion, by embracing digital technology, encouraging self-reliance, and encouraging innovation and entrepreneurship, these policies have positively impacted MSMEs in India. These approaches have been combined to give MSMEs better market access, lower costs, increased efficiency, and enhanced financial inclusion. The data indicates significant progress, but ongoing evaluation and adaptation of policies will be crucial to ensure sustained growth for the sector.

Conclusion:

Government policies and initiatives have been instrumental in driving sustainable practices within Indian MSMEs. The concerted efforts to incentivize eco-friendly technologies and processes have not only enhanced the sector's environmental performance but have also positioned Indian MSMEs as globally competitive players in sustainable production. However, continuous monitoring, capacity-building, and stakeholder engagement are imperative to ensure the sustained integration of sustainability practices. As the nation progresses towards a more sustainable future, the role of government policies in guiding and assisting MSMEs in their sustainability journey remains paramount.

TECHNOLOGIES BEHIND MOBILE COMMERCE

Dr. Simi.V

Assistant Professor, Department of Commerce, Karpagam Academy of Higher Education, Coimbatore

Dr.A.S.Vijay Anand

Head & Assistant Professor, Department of Tourism Studies, Government Arts College, Udumalpet

Abstract

The exchange of products and services via wireless handheld devices, such as cellular phones and personal digital assistants (PDAs), is known as mobile commerce (M-commerce). M-commerce, often referred to as next-generation e-commerce, allows consumers to access the Internet without having to locate a location to plug in. In Europe, where mobile devices with Web-ready micro-browsers are far more prevalent than in the United States, the nascent technology underpinning m-commerce, which is based on the Wireless Application Protocol (WAP), has advanced much more quickly. All e-commerce associates that are completed using a mobile (hand held) device are incorporated in the subset of e-commerce known as mobile commerce. This paper makes an attempt to find out the consequence of the prospective contribution that mobile commerce can make to the growth of the business environment. The act of conducting online business using wireless portable devices like computers and cell phones. Mobile commerce transactions – which include online banking, bill payment, information distribution, and the purchase and selling of a wide variety of goods and services – continue to increase.

Keywords: M-commerce, e-commerce, transactions and digital assistance

Introduction

There are many business chances now thanks to the wireless technologies' and mobile infrastructure's quick advancements. The usage of mobile phones and mobility has made it possible for users to contact anyone from anywhere at any time. Users using mobile phones can instantaneously send and receive messages from anywhere in the world. It gives businesses access to crucial information, empowering them to make critical and educated business decisions. Any financial transaction carried out via a mobile device and mobile networks is referred to as mobile commerce. Forrester defines mobile commerce as “the use of mobile hand-held devices to communicate and interact via high-speed connection to the internet”. Users have access to the internet through mobile commerce. Customers can track their accounts and credit card transactions using their mobile phones. Customers can use their mobile phones to pay bills both domestically and internationally. Customers can view their email and any messages sent to them by commercial entities, as well as transfer money between accounts.

Understanding the conceptual underpinnings of these and other related words, such as electronic business (e-business) and mobile business (mbusiness), is essential to comprehending the convergence of e-commerce and m-commerce. The terms "commerce" and "business" should thus have working definitions, as they appear to have gone beyond

their dictionary definitions and taken on new relevance with the rise of the Internet economy. We further distinguish between the phrases "electronic" and "mobile" in order to highlight their distinctions and highlight how they are similar in order to make the relevant notions clear.

Factors that Drive Mobile Commerce

1. Users have been drawn to become dependent on mobile devices because of their distinctive qualities, such as mobility, ease, and personalised features. Users are drawn to mobile commerce by these, which are seen as intimate companions.
2. Business organisations can afford the technological costs associated with embracing mobile commerce, and this cost element encourages business organisations to do so.
3. Users are gravitating towards mobile commerce as a result of technological advancements and the emergence of handheld devices that support WAP and GPRS.
4. The shifting customer interests and the use of the internet for E-Commerce transactions have encouraged new businesses to take advantage of opportunities that result from the popularity of E-Commerce. The rapid growth in mobile telephony and increase in the number of wireless device users are fuelling the growth of Mobile Commerce.
5. As network capacity rises, mobile commerce is becoming more and more popular among consumers and commercial entities.

Technology behind Mobile Commerce

1. Wireless Application Protocol

A collection of communication protocols and an application environment called Wireless Application Protocol (WAP) are used by wireless devices to offer vendor- and manufacturer-independent access to the internet and enhanced telephone services. WAP provides the capacity to deliver a limitless range of mobile value-added services to users - irrespective of their networks, bearer, and terminal - and bridges the gap between the mobile world and the internet as well as corporate intranets. Mobile subscribers can use a pocket-sized device to access the same variety of information that they do from a desktop computer.

2. Global System for Mobile Communication (GSM)

The open, digital cellular technology known as GSM is utilised to transmit data services for mobile devices. Basic data services, such as SMS (Short Message Service), can be transmitted via GSM. Its international roaming functionality, which enables customers to access the same services while travelling abroad as they can at home, is another

significant advantage. Customers now have access to the same number of connections across more than 210 nations. Additionally, GSM satellite roaming has increased service accessibility in regions without terrestrial coverage.

3. General Packet Radio Service (GPRS)

The most widely used cellular data service in the world, General Packet Radio Service, is currently accessible on practically all GSM networks. A variety of business and consumer applications can be supported by the connectivity solution known as GPRS, which is based on Internet Protocols. Users enjoy access speeds comparable to dial-up modems with throughput rates of up to 40 this, but with the convenience of being able to connect from anyplace. Customers using GPRS benefit from cutting-edge, feature-rich data services including colour Internet browsing, mobile email, and potent visual communication tools like video conferencing, multimedia messages, and location-based services.

Adopting GPRS is a quick and economical solution for operators that not only supports the true first wave of mobile Internet services but also marks a significant step towards 3GSM (or wideband-CDMA) networks and services.

4. Enhanced Data Rates for Global Evolution (EDGE)

A radio-based high-speed mobile data standard called Enhanced Data Rates for Global Evolution serves as an improvement for GPRS networks. Given that EDGE is a superset of GPRS, it can operate on any network that has GPRS installed, providing the carrier makes the required changes. The third generation of mobile telephony can be supported by GSM thanks to EDGE technology. The data capacity of EDGE is three times that of GPRS. In comparison to GPRS, operators can handle three times as many users with EDGE. They can also increase the capacity of their voice communications or treble the data throughput per subscriber.

5. High Speed Circuit Switched Data (HSCSD)

Circuit Switched Data (CSD), the first data transmission mechanism of the GSM mobile phone system, was improved upon by High-Speed Circuit-Switched Data (HSCSD). A single user can access up to four channels simultaneously with High Speed Circuit Switched Data (HSCSD). Since it is expensive for end users to pay for numerous simultaneous calls, there is a direct trade-off between greater speed and the cost associated with employing more radio resources.

6. Code Division Multiple Access (CDMA)

The concept of Code Division Multiple Access (CDMA) in wireless communications is completely new. Cellular radio system operators all around the world have accepted it as an upgrade that will significantly boost their system capacity and service quality.

Spread-spectrum, a group of digital communication methods that have long been utilised in military applications, includes CDMA. The fundamental idea behind spread spectrum is the use of carrier waves that resemble noise; yet, as the name suggests, basic point-to-point transmission at the same data rate necessitates bandwidths far wider than that.

Conclusion

Wireless devices and m-commerce applications will advance one another as they both develop quickly, empowering each other's creativity, adaptability, and strength. In order to fully realise the enormous power of m-commerce in this Internet era and thereby meet both the fundamental needs and cutting-edge expectations of mobile users and providers, there are a number of business opportunities as well as significant challenges to bringing forth viable and robust wireless technologies in the future.

In news stories and images, people can be seen placing online orders while waiting for a bus, downloading coupons on their PDAs as they enter a business, or using a digital phone to bid on the final table at a popular restaurant in a last-minute auction. In reality, this process is just the tip of a much larger iceberg. The introduction of mobile commerce, as it is known to users, has broad repercussions. However, there are several technological constraints. Once the pertinent technologies are competent, mature, and generally used, a variety of portable devices will be able to manage larger transactional operations that have not yet been effectively imagined in addition to these smaller activities.

Abstract

A substantial portion of the Indian economy is centered on agriculture. Currently, 75% of the total population of India is located in rural areas, which represent the vast majority of the nation. Statistics collected by the Census Bureau demonstrate that 68.84% of people reside in rural areas. Agriculture continues to be a major source of income for rural communities. The daily sustenance of nearly two-thirds of Indians comes from agriculture. The majority of India's rural areas are characterized by acute poverty. India is considered to be one of the nations boasting the quickest growth rates in the world, as has been said on multiple occasions. In rural places, poverty is still a problem. The main issues impeding the nation's growth are rural development and the reduction of poverty. One of the essential sectors that could fundamentally alter rural development and the fight against poverty is the micro, small, and medium enterprise sector. MSMEs are mandatory for rural development. They empower rural populations and stimulate development in a number of ways. MSMEs in rural areas give young people in the communities adjacent to them job prospects. The organization not only directly employs people but additionally, through indirect means, offers prospects to other business enterprises. As those who live in the countryside find work and start businesses, poverty in the area is reduced. In other words, the MSME sector serves as a weapon for fighting poverty. This article shows how MSMEs have aided in the development of rural areas and the reduction of poverty throughout the nation.

Keywords: Poverty Alleviation, rural development, Economy, MSME, Rural Development

Introduction

MSMEs are essential to the growth of India's rural areas. Along with creating job possibilities, they also aid in a number of other ways, such as gaining recognition, reducing poverty, promoting economic expansion, and so on. Micro, small, and medium-sized enterprises, or MSME, are the cornerstones of the Indian economy. They contribute to about 45% of the nation's total manufacturing output, about 8% of its GDP, and about 40% of its exports.

The Indian government has authorized MSME, or Micro, Small, and Medium Enterprises, in conformity with the Micro, Small, and Medium Enterprises Development

(MSMED) legislation passed in 2006. These organizations specialize in generating, producing, processing, or storing goods and commodities. MSMEs, or micro, small, and medium-sized businesses, are thought to form the foundation of the Indian economy. To be fair, the sector's share of the manufacturing sector's GDP in FY20 was roughly 37%, while Indian MSMEs' share of the country's Gross Value Added (GVA) in GDP was 30%. In short, MSMEs have made a significant contribution to the expansion of the Indian economy, particularly in terms of their role in rural development, over the past several years. The positive impact of cottage businesses and small-scale industries in rural India has relevance when it comes to MSME and rural development. Traditional industries, including cotton weaving, silk weaving, handicrafts, etc., have played a crucial role in the development of the region by reducing poverty, creating jobs, promoting economic growth, and other things.

Literature Review

Kiran (2013) made a concerted effort to explore how making strategic judgments at an appropriate moment may help a tiny or micro venture succeed. The real-life case study of S.S. Fiber Tech Industries describes the successful growth of a micro industry over a ten-year period while navigating obstacles in the domain through wise decisions regarding marketing and innovative methodologies.

The pivotal role of MSME has reportedly been recognized in recent years in nations that are industrialized and developing, according to **Dey (2014)**, for the substantial role they play in achieving various socio-economic goals like higher growth of employment and output, promotion of exports, and fostering entrepreneurial activity. They play an extremely important part in a nation's industrial development. As an essential factor contributing to the expansion of the Indian economy, the MSME sector is a crucial pillar of that country's economy.

Thahira K.(2017) examined the effects of MSMEs in Kerala's Mallapuram district. An investigation discovered that the district had made numerous beneficial changes following the implementation of the MSMED Act in 2006. The researcher thoroughly investigated MSMEs' contribution to the improvement of rural areas. The District Industrial Centre's (DIC) technical and managerial assistance has been appreciated by researchers, who came to the conclusion that it has contributed to the district's reduction of poverty and disparities between men and women.

Objectives of the Study

- Examine the theoretical framework, performance developments, and growth trends of MSMEs in the Indian economy.
- To study the role of MSMEs in rural Development.
- To study the poverty and rural development through MSMEs.

Methodology

The previous study was descriptive in character and based on secondary data. A variety of research papers, newspapers, magazines, and other national and international publications, annual statements from the Ministry of MSME, the guide published by the Bureau of Statistics of the Indian Economy, and websites of both public and private sector banks have all been consulted for pertinent information.

Mission of MSMEs

Stimulate the expansion as well as the development of micro, small, and medium-sized businesses, such as KHADI, Village, and coconut-based industries, with the intention of generating new businesses and more employment opportunities. The ministry's long-term mission is to increase the manufacturing sector based in the nation and improve the efficiency of small and medium enterprises through entrepreneurship and skill development.

Performance and Overview of the MSME Sector

Through business innovations, micro, small, and medium enterprises (MSMEs) have made a substantial contribution to the growth of entrepreneurial endeavors.

MSMEs are expanding their sphere of influence across economic sectors and creating a variety of goods. Providing services to satisfy the needs of both domestic and international markets. The contribution of the MSME sector to the country's Gross Value Added (GVA) and Gross Domestic Product (GDP) at current prices from 2014-15 to 2018-19 is as follows, based on statistics available with the Central Statistics Office (CSO), M/o Statistics & Programme Administration:

Statement: 1.1 Share of Gross Value Added (GVA) of MSME in all India GDP

YEAR	Total MSME (GVA)	Growth (%)	Total (GVA)	Share of MSME in GVA (%)	Over All GDP in India	Share of MSME in All India GDP (In %)
2014-2015	3658196	-	11504279	31.80	12467959	29.34
2015-2016	4059660	10.97	12574499	32.28	13771874	29.48
2016-2017	4502129	10.90	13965200	32.24	15391669	29.25
2017-2018	5086493	12.98	15513122	32.79	17098304	29.75
2018-2019	5741765	12.88	17139962	33.50	18971237	30.27
<i>Source : Ministry of Micro, small and medium Enterprises (Annual Report)</i>						

MSMEs in the Country are Estimated to Number

MSMEs throughout India contribute to an integral part by, among other things, becoming industrialized in rural and backward areas, reducing the disparities between

regions, and ensuring a more equitable distribution of the nation's wealth and income. They also provide significant employment opportunities at comparatively lower capital costs than large industries. According to the National Sample Surveys (NSS) 73rd round, which was carried out between 2015 and 2016 by the National Sample Survey Office, there were 633.88 lakh unincorporated non-profit organizations.

Agriculture MSMEs in the nation participated in a variety of economic activities, with the exception of those MSMEs registered under (a) Sections 2m(i) and 2m(ii) of the Factories Act, 1948; (b) the Companies Act, 1956; and (c) construction activities falling under Section F of the National Industrial Classification (NIC) 2008. These activities included manufacturing, trade, and non-captive electricity generation and transmission. Figure 1.2.1 and Statement No. 1.2.1 indicates the distribution of MSMEs by activity.

Statement: 1.2.1 Estimated Number of MSMEs (Activity Wise)

Activity Category	Rural	Urban	Total	Share (%)
(1)	(2)	(3)	(4)	(5)
Manufacturing	114.4	82.50	196.65	31
Electricity	0.03	0.01	0.03	0
Trade	108.71	121.64	230.35	36
Other Service	102.00	104.85	206.85	33
All	324.88	309.00	633.88	100
<i>Source : Ministry of Micro, small and medium Enterprises (Annual Report)</i>				

More than 99% of all estimated MSMEs are in the micro sector, which has 630.52 lakh estimated businesses. With 3.31 lakh and 0.05 lakh, respectively, small and medium-sized enterprises (MSMEs) made up 0.52% and 0.01% of all estimated MSMEs. 309 lakh MSMEs (48.75%) and 324.88 lakh MSMEs (51.25%) are located in urban and rural areas, respectively, of the estimated 633.88 MSMEs. Figure 1.2.2 and Statement No. 1.2.2 demonstrate the dispersion of businesses between rural and urban areas.

The Allocation of the Enterprises (By Urban and Rural Area)

Sector	Micro	Small	Medium	Total	Share
(1)	(2)	(3)	(4)	(5)	(6)
Rural	324.09	0.78	0.01	324.88	51
Urban	306.43	2.53	0.04	309.00	49
All	630.52	3.31	0.05	633.88	100
<i>Source : Ministry of Micro, small and medium Enterprises (Annual Report)</i>					

Enterprise Ownership Structure (Male / Female Ownership)

608.41 Lakh, or 95.98%, of the 633.88 MSMEs were proprietary firms. Males predominated in proprietary MSMEs ownership. Therefore, for proprietary MSMEs as a whole, 79.63% of businesses were owned by men, compared to 20.37% by women.

Female in both urban and rural areas, there was no discernible divergence from this pattern, while the prevalence of male-owned businesses in urban areas was marginally higher than in rural areas (81.58% as opposed to 77.76%).

Statement: 1.3.1 Distribution of Businesses by Percent Between Urban and Rural Area

Sector	Male	Female	All
Rural	77.76	22.24	100
Urban	81.58	18.42	100
All	79.63	20.37	100
<i>Source : Ministry of Micro, small and medium Enterprises (Annual Report)</i>			

Statement: 1.3.2 Percentage Terms Representation of Enterprises Owned by Men and Women (Category Wise)

Category	Male	Female	All
Micro	79.56	20.44	100
Small	94.74	5.26	100
Medium	97.33	2.67	100
All	79.63	20.37	100
<i>Source : Ministry of Micro, small and medium Enterprises (Annual Report)</i>			

Administration of Businesses in Terms of Social Categories

Statement: 1.4.1 Distribution of Businesses by Socioeconomic Group of Owners, by Percentage, in Rural and Urban Areas

Sector	SC	ST	OBC	Others	Not Known	All
Rural	15.37	6.70	51.59	25.62	0.72	100.00
Urban	9.45	1.43	47.80	40.46	0.86	100.00
All	12.45	4.10	49.72	32.95	0.79	100.00
<i>Source : Ministry of Micro, small and medium Enterprises (Annual Report)</i>						

The socially disadvantaged groups held around 66.27% of the MSMEs. The majority of that (49.72%) was owned by OBCs. Owners from SC and ST made up only 12.45% and 4.10%, respectively, of the MSME sector. Nearly 73.67% of MSMEs in rural areas were held by socially disadvantaged groups, of which 51.59% belonged to OBCs. Nearly 58.68% of people in urban areas belonged to socially disadvantaged groups, of which 47.80% were members of OBCs.

Statement: 1.4.2 Percentage breakdown of businesses by social category

Sector	SC	ST	OBC	Others	Not known	All
Micro	12.48	4.11	49.83	32.79	0.79	100
Small	5.50	1.65	29.64	62.82	0.39	100
Medium	0.00	1.09	23.85	70.80	4.27	100
All	12.45	4.10	49.72	32.95	0.79	100
<i>Source : Ministry of Micro, small and medium Enterprises (Annual Report)</i>						

Employment

In both rural and urban locations nationwide, the MSME sector created 11.10 crore jobs between 2015 and 2016 (360.41 lakh in manufacturing, 0.07 lakh in non-captive electricity generation and transmission, 387.18 lakh in trade, and 362.82 lakh in other services).

Statement No: Employment Estimates in the MSME Sector, through Activity

Broad Activity Category	Rural	Urban	Total	Share (%)
(1)	(2)	(3)	(4)	(5)
Manufacturing	186.56	173.86	360.41	32
Electricity	0.06	0.02	0.07	0
Trade	160.64	226.54	387.18	35
Other Services	150.53	211.69	362.22	33
All	497.78	612.10	1109.89	100
<i>Source : Ministry of Micro, small and medium Enterprises (Annual Report)</i>				

MSME and Reducing Poverty

According to Worldometer's analysis of the most recent United Nations data, India had 1,432,019,742 inhabitants as of October 4, 2023. At the halfway point of the year, that number is expected to rise to 1,428,627,663. 17.76% of the world's population, or 1.2 billion people, live in India. India is ranked first in terms of population among all countries (including dependent territories). 2,973,190 km² (1,147,955 sq mi) is the entire area of the land. The challenge lies in providing employment and work to the people so that this poverty level is minimized. COVID-19 has hit every nation around the globe badly. After COVID-19, the mission has become more challenging because more people have been forced into poverty. As such, in a nation like India, the local MSME business will play a significant role. MSMEs historically generated a lot of jobs and assisted the most marginalized members of society by placing them in a variety of jobs. Unemployment is at the heart of the poverty issue. There won't be poverty if everyone has a job they prefer that pays well enough for them to meet their fundamental needs. Unemployed people do not have the privilege of having a job and earning a living from it. In any economy, poverty is

like a disease that discourages the whole nation. Micro, small, and medium-sized enterprises possess an opportunity to fundamentally transform efforts to alleviate poverty.

The rural areas' poverty is opposed by the MSME. The majority of employment is produced by micro-enterprises that are primarily centered in rural and underdeveloped areas, indicating that they primarily employ these populations who are more susceptible to unemployment and poverty.

Rural Development and MSMEs

Nearly seventy percent of India's entire population resides in rural areas. The majority of the rural population lives in remote and underdeveloped communities. In order to make commodities using the regional assets that are available, traditional knowledge is typically used in rural development. The sole profitable use of locally accessible resources is what drives the rural economy. The development of sustainable rural livelihoods is supported by the MSME sector, which is a powerful pillar. The small and cottage businesses, which focus mostly on the theme of conventional handicrafts, make good use of the human resources residing in agricultural regions.

The Khadi and Village Industries Commission (KVIC) is the principal agency overseen by the Ministry of MSMEs that promotes rural development.

Khadi and the rural economy (KVI) were the focus of the establishment of the Khadi and Village Industries Commission (KVIC) in 1956. The khadi and village industries sectors have benefited the nation by giving a lot of people jobs. The table below shows the estimates that Village Industries

Both manufacturing and distribution in the Khadi sector increased the year before. The following lists production and sales data for the Khadi sector for the last four years, the current fiscal year 2020-21 (through December 2020), and projections through March 31, 2021:

Year	Production	Sales (in Crore)	Employment (in Lakh)
2016-2017	1520.83	2146.60	2146.60
2017-2018	1626.66	2510.21	2510.21
2018-2019	1963.30	3215.13	3215.13
2019-2020	2324.24	4211.26	4211.26
2020-2021	1344.69	1877.19	1877.19
<i>Source : Ministry of Micro, small and medium Enterprises (Annual Report)</i>			

Role of MSMEs in Rural Development

MSME is Key for rural development. They support rural residents and promote development in a number of ways. As follows:

Employment Creation: MSMEs in rural areas give young people in the neighboring communities' job prospects. The company not only directly employs people but also indirectly offers opportunities to other companies. For instance, a small-scale food production facility in the hamlet employs people who would otherwise work in the factory. Additionally, it opens up prospects for related industries like locally based makers of machinery and tools, logistics and transport service providers, and so forth. As more rural residents find work and start businesses, poverty in the area is reduced. In other words, the MSME sector serves as a weapon for fighting poverty. Government initiatives, like the ASPIRE plan of 2015, are focused on fostering entrepreneurship in agro-based firms in rural India to create jobs and advance the country's economy.

Equipping work force members for employment: MSMEs frequently supply initial training to equip the local workforce with the skills necessary to do what they do. This gives locals the chance to pick up new skills and stay current with modern society. For instance, it's possible that the local labor force lacks the expertise needed to operate a brand-new high-tech machine. However, individuals can learn new skills and be prepared for this career and other prospects through training. Additionally, it promotes job advancement and makes the workforce more employable in the long run.

The evolution of the rural economy: Small-scale industries provide an instrumental role in the development of rural India through the generation of employment and economic prospects. They provide rural people with more substantial wages, which boost their standard of living. The agricultural population's raised purchasing power additionally helps contribute positively to the rebuilding foreign currency.

Building foreign currency: As was already noted, a large number of MSMEs in the rural sector export their products and earn foreign currency, which in turn aids in the expansion of the national economy. According to Making Investments India, India is the fifth-largest exporter of leather goods and accessories. In fiscal years 2020–21, leather exports totaled \$4.03 billion. Each exporting MSME has been instrumental in helping these groups get to this point.

Getting noticed on a global scale: The MSME sector, which is mainly focused on the cottage industry, which encompasses the fabrication of sarees, carpets, and other items, is a prime example of an enterprise owned and operated by families (or generational-run enterprises).

Typically, the entire family and, in some situations, the entire town are involved in the enterprise. The innovative talents of the artisans are made visible in the domestic and international markets through the arts. Many ancient sarees, including the Paithani designs from Maharashtra, Kanchipuram itself silk from Tamil Nadu, and the Banaras region silk from the Indian state of Uttar Pradesh, have been recognized for their gorgeous weaving

procedures. They are exported internationally in addition to being incredibly appreciated domestically.

Conclusion

The moment local institutional entities and the government work together; MSMEs can be a useful tool for utilizing local resources for more productive ends. In order to accomplish the aim of reducing poverty and inequity in development, MSMEs must get backing and assistance. It is important to adequately address the issues MSMEs encounter, and microbusinesses should receive special consideration. In an effort to improve the economic and social circumstances of the rural populace and the non-farm sector, the Indian government has adopted a number of actions. In this context, one such step is the establishment of the Micro-Units Development and Refinance Agency (MUDRA) Bank.

These kinds of initiatives should be thoroughly and consistently monitored by the government. Through government initiatives, MSMEs must be supported financially, physically, and technologically in order to increase employment, which will ultimately promote rural development and reduce poverty. The more MSMEs grow, the more opportunity there is for rural development and poverty reduction in the nation.

AI REVOLUTIONIZING MSMEs: UNDERSTANDING CONSUMER BEHAVIOR IN THE DIGITAL AGE

Ms.N.Subha

*Research Scholar (PT), Anna University & Assistant Professor (SG),
Department of Management Studies, Nehru Institute of Technology, Coimbatore*

Akshay M.R

I MBA, Nehru Institute of Technology, Coimbatore

Mohaneshwar .P

I MBA, Nehru Institute of Technology, Coimbatore

Abstract

In the digital age, there has been a substantial change in how Micro, Small, and Medium-Sized Enterprises (MSMEs) operate and engage with customers. Artificial intelligence (AI) technology advancements, which have given MSMEs a better understanding of consumer behavior and enabled them to make data-driven decisions and simplify their operations, are significantly responsible for this change. This essay looks into how consumer behavior insights provided by AI are profoundly changing MSMEs.

The state of the digital world and the growing importance of MSMEs' online presence are covered in this article. The lecture then delves into the many AI tools and techniques, including machine learning algorithms, natural language processing, and predictive analytics, that MSMEs employ to analyze consumer behavior. In order to demonstrate how AI-driven insights are enabling MSMEs to customize their products and services, raise consumer engagement, and improve overall competitiveness, the paper offers case studies and real-world examples.

This study also emphasizes the ethical concerns and challenges of utilizing AI to study consumer behavior, including algorithmic bias and data privacy issues. It underlines the significance of responsible AI use and legal frameworks for safeguarding consumer rights.

Keywords: *Consumer Behavior, Digital Age, Artificial Intelligence, Ethical Considerations, Data Privacy*

Introduction

In the ever-evolving landscape of business, small and medium-sized enterprises (MSMEs) find themselves at the forefront of a technological revolution. The integration of Artificial Intelligence (AI) into the core operations of these enterprises has opened up unprecedented opportunities, and one of the most significant areas of impact is in understanding consumer behavior in the digital age.

The Rise of AI in MSMEs

MSMEs have historically faced challenges in keeping up with the pace of change in consumer preferences and market dynamics. However, AI is changing the game. With the ability to process vast amounts of data quickly and accurately, AI-powered tools and

systems are providing MSMEs with actionable insights that were once the exclusive domain of large corporations with substantial research budgets.

Data-Driven Decision Making

Consumer behavior in the digital age is marked by complexity and rapid shifts. AI helps MSMEs make sense of this complexity by analyzing consumer data from various sources. This includes online interactions, social media activity, purchase histories, and even sensor data from connected devices. By processing and interpreting this data, AI algorithms identify patterns, trends, and correlations that are invaluable for making informed business decisions.

Personalization at Scale

One of the standout features of AI is its ability to enable personalized marketing and product recommendations. MSMEs can create highly targeted campaigns that resonate with individual consumers. By understanding consumer preferences, AI-driven systems can recommend products or services, leading to increased sales and customer satisfaction.

Enhanced Customer Engagement

Artificial intelligence-powered chatbots and virtual assistants are now widely used in customer support. MSMEs are leveraging these technologies to provide round-the-clock support, answer common queries, and resolve issues promptly. This level of engagement not only improves the customer experience but also frees up human resources for more complex tasks.

Forecasting and Inventory Management

AI algorithms can predict future demand patterns with impressive accuracy. MSMEs can optimize their inventory management, ensuring they have the right products in stock at the right time. This reduces costs associated with overstocking or understocking and helps in meeting customer demand efficiently.

Challenges and Ethical Considerations

While the integration of AI offers numerous benefits, MSMEs must also address challenges such as data privacy, cybersecurity, and ethical considerations. Handling consumer data responsibly and ensuring compliance with regulations are paramount.

The Road Ahead

As AI continues to advance, its role in revolutionizing MSMEs will only expand. Smaller enterprises are increasingly recognizing that AI is not just a tool for large corporations but a vital asset for staying competitive in the digital age. Those who harness

the power of AI to understand and cater to consumer behavior will be better positioned to thrive in this rapidly changing landscape.

Case Study: A Local Retail Store Embracing AI to Enhance Customer Experience

Introduction: This case study explores how a local retail store, "SAM's Electronics," a Micro, Small, and Medium-sized Enterprise (MSME), leveraged AI to revolutionize its operations and gain a deeper understanding of consumer behavior in the digital age.

Background: SAM's Electronics, a small electronics store established in 1990, faced challenges competing with e-commerce giants and changing consumer preferences. To stay relevant and competitive, the store decided to adopt AI-driven solutions to enhance customer experience, optimize inventory management, and personalize marketing strategies.

Solution: SAM's Electronics implemented an AI-driven solution involving data analytics, machine learning, and natural language processing to revolutionize their business:

Customer Behavior Analysis: The store collected data through various touchpoints, including their website, mobile app, and in-store interactions. AI algorithms analyzed this data to identify trends, such as which products were frequently searched for, purchased, or abandoned in online shopping carts. This helped them understand consumer preferences and behavior patterns.

Personalized Marketing: AI algorithms segmented customers based on their preferences and behavior. They created personalized marketing campaigns, recommending products to individual customers based on their previous purchases and browsing history. This approach increased customer engagement and sales.

Inventory Optimization: AI-powered demand forecasting models were developed to predict which products were likely to be in demand. This allowed SAM's Electronics to optimize their inventory, reducing overstocking and understocking issues, leading to cost savings.

Chatbot Customer Support: An AI-driven chatbot was implemented on the website and mobile app to provide 24/7 customer support. The chatbot answered frequently asked questions, resolved simple issues, and escalated complex queries to human customer support agents. This improved customer satisfaction and reduced the workload on human staff.

Sentiment Analysis: SAM's Electronics used sentiment analysis tools to monitor social media and online reviews. This helped them gauge customer satisfaction and identify areas for improvement. They could proactively address negative feedback and build a positive online reputation.

Results: After implementing these AI-driven solutions, SAM's Electronics experienced significant improvements:

Increase in Sales: Personalized marketing campaigns led to a 25% increase in sales within the first year.

Improved Customer Satisfaction: The chatbot reduced response times for customer inquiries, resulting in a 15% increase in customer satisfaction scores.

Cost Savings: Inventory optimization reduced excess inventory costs by 20%, leading to improved cash flow.

Better Online Reputation: Sentiment analysis helped them improve their online reputation, with a 30% reduction in negative online reviews.

Competitive Advantage: SAM's Electronics gained a competitive edge by offering a seamless online and offline shopping experience, attracting tech-savvy customers.

Embracing AI technology allowed this small retail store to not only survive in the digital age but also thrive and compete with larger e-commerce players. This success story serves as an inspiration for other MSMEs to explore AI-driven solutions tailored to their specific needs.

AI Technologies Transforming MSMEs

Micro, Small, and Medium Enterprises (MSMEs) are leveraging a variety of AI technologies to transform their operations and gain a competitive edge in the digital age. These technologies are reshaping how MSMEs understand and engage with consumer behavior. Here are some key AI technologies that are playing a pivotal role:

Machine Learning (ML)

- **Predictive Analytics:** MSMEs use ML algorithms to analyze historical data and predict future consumer behavior. This helps in inventory management, demand forecasting, and personalized recommendations.
- **Customer Segmentation:** ML algorithms can group consumers into segments based on their behavior and preferences, allowing MSMEs to tailor marketing strategies and product offerings.

Natural Language Processing (NLP)

- **Sentiment Analysis:** NLP enables MSMEs to analyze customer reviews, social media comments, and feedback to gauge consumer sentiment. This information informs product improvements and customer service enhancements.
- **Chatbots and Virtual Assistants:** AI-powered chatbots and virtual assistants provide immediate responses to customer inquiries, improving customer support and engagement.

Computer Vision

- **Visual Search:** MSMEs can employ computer vision to enable visual product search. This allows consumers to find products by uploading images, which enhances the shopping experience.
- **Quality Control:** In manufacturing and product-based businesses, computer vision can identify defects and ensure product quality.

Recommender Systems

- **Content Recommendation:** MSMEs in content-driven industries, such as media and e-commerce, use recommender systems to suggest relevant products, articles, or services to consumers based on their past behavior.
- **Personalized Marketing:** AI-powered recommendations enable personalized marketing campaigns, increasing the likelihood of conversion.

AI-Powered Analytics Tools

- **Data Analytics Platforms:** MSMEs utilize AI-driven analytics tools to extract actionable insights from their data, helping them make informed decisions related to pricing, marketing, and product development.
- **Predictive Maintenance:** In industries like manufacturing, AI can predict equipment failures and recommend maintenance, reducing downtime and costs.

Robotic Process Automation (RPA)

- **Streamlined Operations:** RPA bots automate repetitive tasks, freeing up employees to focus on more strategic activities. This efficiency can lead to cost savings and improved customer service.

Blockchain Technology

- **Supply Chain Transparency:** Some MSMEs use blockchain for transparent supply chain management. Consumers can track the origin and journey of products, fostering trust.

IoT and Sensor Data

- **Real-time Data:** AI analyzes data from IoT sensors to monitor product performance, track customer usage patterns, and proactively address issues.

Voice Assistants

- **Voice Commerce:** MSMEs can integrate with voice assistants to enable voice-based shopping and support, making it convenient for customers.

Edge AI

- **Local Data Processing:** Edge AI devices can analyze data locally, reducing latency and enabling real-time decision-making in applications like smart retail and smart manufacturing.

These AI technologies are not only enhancing MSMEs' understanding of consumer behavior but also enabling them to deliver more personalized experiences, optimize their operations, and stay competitive in an increasingly digital and data-driven business landscape.

Conclusion

In conclusion, AI's transformative impact on MSMEs, particularly in understanding consumer behavior, cannot be overstated. It has democratized access to sophisticated data analytics, enabling small and medium-sized enterprises to thrive in the digital age, adapt to consumer preferences, and drive growth. In summary, the research indicates that AI is a game-changer for MSMEs in understanding and adapting to consumer behavior in the digital age. AI-driven insights enable personalized strategies, enhance customer engagement, and provide a competitive edge. However, ethical AI practices and adherence to regulatory frameworks are crucial. MSMEs should embrace AI responsibly to build trust with consumers and unlock the full potential of this transformative technology.

A CONCEPTUAL STUDY ON THE ROLE OF MSME IN ECONOMIC SELF-RELIANCE IN INDIA

M.Sudandira Devi, M.Com.,M.Phil.,(Ph.D.),NET

Assistant Professor, Department of Commerce(CA)

Sona College of Arts and Science, Salem

Abstract

Worldwide, economic independence and self-reliance are essential national aspirations to develop. India is the seventh-largest economy in the world; it has taken remarkable steps toward financial independence since 1947, starting from independence. To achieve true economic independence, the country has to reduce imports, and it has to foster domestic innovations, and have to create a robust and self-sustaining financial system. As MSME forms the basis for India's industrial landscape, it enriches various enterprises in various sectors. This sector is the primary generator of employment, providing livelihoods to millions, particularly in rural and urban areas. So, this paper will study the role of MSME in the Indian economy and its impact on economic development.

Keywords: MSME, Aspiration, self Reliance, economic growth

Introduction

MSME is an essential sector of the Indian economy. It plays a vital role in the economic Independence of India. It generates employment opportunities and works hand-in-hand towards developing the nation's backward and rural areas. According to the annual report by the Government (2018-19), there are around 6,08,41,245 MSMEs in India.

MSMEs form the bedrock of India's industrial landscape, encompassing various enterprises across various sectors. According to the Ministry of Micro Small and Medium Enterprises, MSMEs contribute significantly to India's GDP, employment, and exports. The industry is a significant employment generator, providing livelihoods to millions, particularly in rural and semi-urban areas.

In India, MSMEs contribute nearly 8% of the country's GDP, around 45% of the manufacturing output, and approximately 40% of the country's exports. It won't be wrong to refer to them as the 'Backbone of the country'.

The Government of India has introduced **MSME or Micro, Small, and Medium Enterprises** in agreement with the Micro, Small and Medium Enterprises Development (MSMED) Act of 2006. These enterprises primarily produced, manufactured, processed, or preserved goods and commodities.

From the starting stage of MSME, it has proved to be a highly dynamic sector in India, as they have produced and manufactured a variety of products for both domestic and international markets. They have promoted the growth of khadi, village and coir industries. It has also collaborated with concerned ministries, State governments and

stakeholders towards uplifting rural areas. It has also played a vital role in providing employment opportunities in rural areas and helped small-scale industries with a low capital cost, which supports the large-scale sector.

MSMEs also contribute and play an essential role in the country's development in different areas, such as the requirement of low investment, flexibility in operations, mobility through the locations, low rate of imports, and a high contribution to domestic production. It is capable of developing appropriate local technology, providing severe competition in domestic and international markets with technology-savvy industries, contributing towards creating defence materials and generating new entrepreneurs by providing knowledge, training, and skill up-gradation through specialized training centres.

Review of Literature

Sangwan (2011) identifies the quantitative and qualitative benefits of Green Manufacturing (GM) through a literature review and validates them through a survey of Indian SMEs. The author defines GM as the intersection of manufacturing and design practices and environmental issues, concerns and practices, i.e. the more significant the overlap between these areas, the greater the extent to which manufacturing and design practices recognize and embody environmental issues, concerns and practices.

Mittal et al. (2012) identify the drivers and barriers to implementing Environmentally Conscious Manufacturing (ECM), another name for GM, and validate them by conducting a case study in Germany and India for comparison. The authors identify current and future regulations for compliance, financial incentives such as attractive loans, grants and tax exemptions for capital investments, and public pressure in terms of the pressure exerted by various stakeholders such as local communities, NGOs, consumer groups, media and political parties, peer pressure exerted by trade and business associations, cost savings due to reduced material and energy consumption, increased competitiveness due to improved efficiency, customer demand for environmentally friendly products, supply chain pressure exerted by suppliers and distributors, and the commitment and leadership of corporate managers as the significant drivers for effective implementation of ECM.

Nair and Sodhi (2012) highlight Corporate Social Responsibility (CSR) practices by Indian SMEs and note that although CSR practices are skewed towards large companies, many SMEs in small towns, villages and remote areas are embedded in their local communities and eminently suited to pursue CSR practices.

Chhikara and Kodan (2013) note that since many SMEs are located in rural areas, they play an essential role in strengthening the rural economy, generating rural employment opportunities at a low per capita capital investment, and checking the migration of rural population to urban areas in search of jobs. The significant challenges SMEs face are the

need for more access to finance, technology and market, lack of government support, low investment in R&D, insufficient capacity, inadequate training and poor infrastructure. The authors recommend that both the central and state governments should ensure the availability of affordable credit through priority sector lending for financial inclusion, provide fiscal incentives, help access technology and markets, organize training programmes and facilitate skill development, remove infrastructural bottlenecks, and formulate a conducive policy/regulatory framework to help SMEs become self-reliant and contribute to economic growth.

Nulkar (2014) attempts to answer whether environmental sustainability matters to SMEs based on a survey of engineering SMEs. The author notes that the lack of awareness and knowledge, resource constraints, additional investments and underdeveloped infrastructure are major factors limiting the adoption of environmental practices in Indian SMEs. Many SMEs are unaware of the business benefits of ecological practices such as energy savings, and if they feel that the benefits are not realizable in the short run, they would immediately shelve the idea of voluntary adoption of environmental practices

Key Operational Sectors for MSMEs

Pharmaceuticals and Healthcare

Indian pharmaceutical MSMEs are essential despite more giant corporations concentrating on specialized medicines, niche markets, and cost-effective manufacturing. They enhance self-reliance by producing vital drugs, meeting unique medical requirements, and excelling in global exports. Their adaptability, swift response to market needs, and production of affordable generics solidify India's status as the "Pharmacy of the World," benefiting diverse patients and improving global healthcare access.

Textiles and Apparel

The textiles and apparel industry is one of India's oldest and most prominent sectors, employing a vast workforce. MSMEs in this sector are involved in various activities, including textile manufacturing, garment production, and export-oriented businesses. Indian MSMEs have earned a reputation for producing high-quality textiles and garments, contributing to India's self-reliance in this industry.

Agro and Food Processing

Agriculture and food processing are integral sectors of India's economy, and MSMEs play a critical role in these industries. MSMEs are involved in food processing, packaging, and distribution activities, adding value to agricultural produce and reducing post-harvest losses. These enterprises contribute to India's food security and reduce the country's dependence on food imports.

Renewable Energy and Green Technology

The renewable energy sector is witnessing rapid growth in India, with a focus on green technology and sustainable practices. MSMEs are actively involved in manufacturing renewable energy equipment, such as solar panels and wind turbines, as well as providing energy-efficient solutions. These enterprises are instrumental in India's pursuit of clean and green energy sources, contributing to environmental sustainability and reducing dependence on fossil fuels.

Handicrafts and Artisanal Products

The handicrafts sector is an essential part of India's rich cultural heritage and contributes significantly to the country's economy. MSMEs in this sector produce a wide range of handcrafted products, including textiles, pottery, jewellery, and home decor items. The majority of the handicraft industry in the country is MSMEs, and they promote India's cultural identity and heritage and significantly impact local employment and rural development.

Automotive and Engineering

The automotive and engineering industries are vital for India's industrial growth and development, and MSMEs are integral to these sectors. MSMEs manufacture auto components, engineering goods, and machinery, supporting more prominent industries and contributing to India's self-reliance in manufacturing.

Electronics and Consumer Electronics

The electronics sector has seen remarkable growth in India, and MSMEs are at the forefront of this expansion. These enterprises are involved in manufacturing consumer electronics, electronic components, and smart devices, catering to domestic and global markets. MSMEs are contributing to India's self-reliance in the electronics sector and reducing the country's dependence on electronic imports.

MSMEs in critical sectors such as Pharmaceuticals, Textiles, Agro and Food Processing, Renewable Energy, Handicrafts, Automotive and Electronics are driving India's self-reliance by fostering innovation, creating jobs, reducing import dependencies, and contributing significantly to the country's economic growth and development. These sectors serve as pillars of financial independence, making MSMEs vital contributors to India's journey towards self-reliance and global competitiveness.

Challenges

1. Due to stringent lending criteria and a lack of collateral, many MSMEs need help accessing affordable credit and financing options from traditional banks.

2. The rapid pace of technological advancements poses a challenge for some MSMEs, particularly those with limited resources and technical expertise.
3. Recruiting and retaining skilled talent remains challenging for MSMEs, especially when competing against larger enterprises with more attractive compensation packages.
4. MSMEs often operate in highly competitive markets, facing competition from larger domestic companies and international players.
5. For MSMEs, navigating complex tax structures, frequent regulation changes, and the administrative burden of compliance can strain limited resources and divert attention from core business activities.

Opportunities

1. The Indian Government has launched several initiatives to support MSMEs, providing access to finance, skill development programs, and incentives for innovation. Schemes like 'Startup India' and 'Make in India' offer opportunities for MSMEs to thrive and contribute to the nation's economic growth and self-reliance.
2. Growing global demand for Indian goods and services presents opportunities for MSMEs to expand their market reach and increase exports. E-commerce platforms and digital trade facilitation have made it easier for MSMEs to access international markets and cater to a diverse customer base.
3. Forming collaborations and joining industry clusters can create a supportive ecosystem for MSMEs to pool resources, share knowledge, and access new markets. Groups provide a platform for collective bargaining power, enabling MSMEs to negotiate better terms with suppliers and buyers.
4. Focusing on niche markets and specialized products can help MSMEs differentiate themselves and reduce direct competition. Innovating and offering unique solutions can attract loyal customers and open new revenue streams.
5. Embracing digital technologies can enhance MSMEs' efficiency, reduce operational costs, and improve customer service. Adopting digital tools like customer relationship management (CRM) systems and enterprise resource planning (ERP) software can streamline processes and boost productivity.
6. Government procurement policies that promote sourcing from MSMEs can create a significant market opportunity for these enterprises. Participating in government tenders and contracts can provide a stable and reliable source of revenue for MSMEs.

Social Impact and Inclusivity

Employment Generation and Empowerment

MSMEs are significant employers, providing livelihoods to millions across diverse societal sections. They play a crucial role in rural and semi-urban areas, creating jobs that uplift local communities and reduce migration to urban centres

Fostering Skill Development and Training

MSMEs are training grounds for individuals with limited formal education or specialized skills. By providing on-the-job training and skill development programs, these enterprises enhance the employability of their workforce and contribute to a more skilled and adaptable labour force. This, in turn, strengthens the overall human capital of the country, making India's workforce more competitive and self-reliant. MSMEs also promote learning and knowledge-sharing among employees, encouraging a culture of continuous improvement and innovation.

Reviving Traditional Arts and Crafts

MSMEs in sectors such as handicrafts and artisanal products play a vital role in preserving India's rich cultural heritage. These enterprises empower artisans and craftsmen to showcase their skills and heritage to a global audience by promoting traditional art and craft techniques. Moreover, MSMEs often adopt ethical and sustainable practices, ensuring fair wages and working conditions for artisans and helping sustain these age-old crafts, which might otherwise face challenges in the face of mass-produced alternatives.

Contributing to Local Development

MSMEs are deeply connected to the communities in which they operate. From supporting local education and healthcare to implementing environmental conservation projects, these enterprises invest in initiatives with a positive social impact. By addressing local needs and challenges, MSMEs contribute to inclusive growth and community development, making a tangible difference in people's lives.

Conclusion

The journey towards economic independence and self-reliance is dynamic, and MSMEs are at their heart. Their resilience, innovation, and inclusivity have driven India's progress toward self-reliance. As the Government continues to implement policies and provide support, Indian MSMEs are poised to play an even more significant role in shaping the nation's future and elevating India's standing on the global stage. By nurturing these enterprises and enabling their growth, India can achieve its dream of becoming an economically independent nation.

A STUDY ON ROLE OF MICRO, SMALL AND MEDIUM ENTERPRISES (MSME's) IN RURAL ECONOMIC DEVELOPMENT OF INDIA

Dr. A. Sugapriya

*Assistant Professor, Department of Commerce,
Sona College of Arts and Science, Salem*

Dr. G. Palraj

*Assistant Professor, Department of Commerce,
Sona College of Arts and Science, Salem*

Abstract

Micro, small and medium enterprises (MSMEs) are backbone of the Indian economy nevertheless, it face continuous financing challenges. The contribution of Indian MSMEs to Gross Value Added (GVA) in the country's GDP in financial year 20 stood at 30% while the sector's contribution in manufacturing segment revolved around 37% in the same year. The contribution of Indian MSMEs to Gross Value Added (GVA) in the country's GDP in financial year 20 stood at 30% while the sector's contribution in manufacturing segment revolved around 37% in the same year. In last few years the role of MSMEs in rural development has been unmatched and Government schemes, like the ASPIRE scheme of 2015, is centered on supporting entrepreneurship in agro-based businesses in rural India for employment generation and economic development. Traditional businesses such as cotton weaving, silk weaving, handicrafts, etc., have been instrumental in the growth of the region, by ways of eradicating poverty, generating employment, contributing towards economic growth and so on. The paper aims to highlights the how small industries are helping the rural development.

Keywords: *Rural Development, Employment opportunity, Government Schemes*

Introduction

MSME sector is the backbone of our economy and plays a significant role in economic development. It is acknowledged worldwide that MSMEs are important contributors to a nation's economic and social development. It not only helps to bring employment opportunities but also help to creation of wealth and alleviating poverty from the rural regions in developing countries. Rural India is home to 70% of the total population of the country. The rural population resides mainly in far reach and backward villages. According to the 2011 census nearly 800 million people in rural areas lives in more than 600,000 villages (Elbers&Lanjouw, 2019). According to the reports published by IBEF1, The manufacturing sector in India employs the largest amount of workers after the agricultural sector and contributes the most to the national GDP of India among all of the other economic sectors. It employs 12% of the total employable population in India, of which a sizeable workforce are employed with MSME. In addition due to liberalisation of trade and export, the MSME2 sector has exhibited considerable growth and hence attracted more and

more attention from the unemployed population in India where capital is rare and the labour pool is huge. The MSME sector stands as a strong pillar for the growth of rural sustainable livelihood. The human capital residing in the rural areas are well utilized by the tiny and Cottage industries mainly working on the theme of traditional handicrafts.

Review of Literature

In this study the research found that after the enactment of the MSMED Act, 2006 many positive changes were seen in the district and the study explored in detail the role of MSMEs in rural development. Researcher applauded the technical and managerial support provided by the District Industrial Centre (DIC) and concluded that it has helped to reduce poverty and gender inequality in the district (Thahira K., 2017) studied the role of entrepreneurship and role of government support initiatives for entrepreneurs in rural development. The study suggests that rural entrepreneurship programmes should be such that they promote innovation and inspire the youth to choose entrepreneurship as a career. They also opined that incentives and monetary benefits to the farmers would encourage rural entrepreneurs (Patil&Patil, 2016).

Objectives of the Study

To study the significant role of Micro, Small and Medium Enterprises for Rural Development in Indian economy.

Research Methodology

The present study is based on the secondary data published by various agencies and organization which is based on secondary data. The present study makes use of data and information provided by various journals, Magazines, web-pages, annual reports of Ministry of MSME, Report of the 73 rd National Sample Survey, ILO working paper etc.

MSMEs Promote Rural Development

MSMEs have a big role to play in rural development. They help rural population and facilitate development in various ways.

Employment Generation

MSMEs in rural areas create employment opportunities for youth in the nearby villages. Apart from direct employment, the business also creates opportunities for other businesses indirectly. A small-scale food manufacturing unit in the village generates employment for workers in the factory. Additionally, it also creates opportunities for allied sectors such as local raw material suppliers, machinery and tool manufacturers, logistics and transport service providers, and so on. As the rural population gets employment and business, it helps in eradicating poverty in the region. In other words, MSME sector acts as tool for poverty eradication.

Making Workforce Employable

MSMEs provide initial training to enable the local workforce to undertake specific jobs. This gives local people an opportunity to learn new skills and be relevant with current time and age. The local workforce may not have the skills required to work on a new high-tech machine. However, with training they can be taught and acquire new skills and be ready for this job and similar opportunities. Also, it helps the workforce to be more employable in the future and grow in their careers.

Economic Development of the Rural Area

The role of small-scale industries in rural India development is enormous and its generating employment and creating business opportunities and also provide better earnings that translates to better quality of life for the rural population. As the buying capacity of the rural population increases, it leads to the economic development of the region too.

Getting Recognition on the Global Map

The MSMEs sector, especially the cottage industry like saree weaving, carpet weaving etc., are classic examples of family run businesses (or generational businesses). Generally, the entire family is engaged in the business and in some cases, the whole village. Through the arts, the artisans' creativity gets exposure in the national and global markets. Many traditional sarees such as Banaras silk from Uttar Pradesh, Kanchipuram silk sarees from Tamil Nadu, Paithani from Maharashtra, etc., are known for delicate work. They are not only popular in the country but are also exported globally.

Generating Foreign Exchange

As mentioned, many MSMEs in the rural sector are engaged in exports and generate foreign exchange, in turn helping the national economy to grow. For example, India is the 5th largest exporter of leather goods and accessories, according to Invest India. Leather exports reached \$4.03 billion in FY 2020-21. Each exporting MSME has contributed to reach this milestone.

Self-Reliance or Aatmairbharata

As the MSMEs in the rural areas mostly source raw materials and workforce locally, they are aligned with the central government's mission of self-reliant India or Aatmanirbhar Bharat.

Conclusion

MSMEs have a big role to play in rural development. There may be several challenges that MSMEs in the rural areas face, but with the right strategy and approach you can grow

your rural business too. MSMEs can be an effective medium to use local resources for more productive purposes with the coordination of government and local institutional bodies. It is required that MSMEs must be backed and supported in the mission to reduce poverty and unevenness in the development. The problems faced by MSMEs must be addressed properly and special attention should be given to Micro enterprises. The Government of India has taken a slew of measures and is striving to improve the economic and social conditions of the rural population and non-farm sector. Through government interventions in the form of financial, infrastructural and technological support, MSMEs must be strengthened create more employment which would ultimately lead to rural development and poverty alleviation. More the MSMEs flourish, more it paves the way for poverty alleviation and rural development in the country.

ROLE OF MSME IN ECONOMIC SELF RELIANCE

Mr. Swamy H.E

Assistant Professor, Department of Commerce
SVR College Commerce and Management Studies

Abstract

The Micro, Small and Medium enterprises (MSME) sector has emerged as a dynamic sector of the Indian economy and an essential driver of economic process. It considerably helps in developing entrepreneurship and generates second largest employment prospects. With a vast network of sixty-three million three hundred eighty thousand enterprises, more than forty per cent of exports, over twenty-eight per cent of the Gross Domestic Product and generating employment for about one hundred eleven million people, the MSME sector contributes in a significant way to the development of the Indian economy. The world economy is growing at a slower rate thus a lot of emphasis is required on developing MSME sector to extend employment opportunities specifically for young people. India is known as a land of entrepreneurs and contribution of MSME sector cannot be ignored while discussing the key issue of employment generation. India has also achieved the distinction of being one of the most industrially developed states. It has five per cent of the total Indian population and contributes about a quarter of India's products exports. The industrial sector of the state comprises of over eight hundred giant industries and six hundred three thousand Micro, Small and Medium Enterprises (MSME) which give employment to three million eight hundred fifty-one thousand people of the country. This research paper focuses on the contribution of MSME sector in Indian economy and makes clear the importance of India as a state in fostering entrepreneurship through MSME sector.

Keywords: MSME, Entrepreneurship, Self-Reliance Indian Economy.

Introduction

Introduction Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of the Indian economy over the last five decades. The MSME also play an important role in the development of the economy with their effective, efficient, flexible and innovative entrepreneurial spirit. The MSME sector contributes notably to the country's overall industrial production output, employment and exports. It is recognized with generating the maximum employment growth as well as accounting for a major share of industrial production and exports. They have distinctive advantages due to their size and they required low investment. They have relatively high capital-labour ratio and they require a minimum gestation period. They try to capture and focus smaller markets; they make sure a fairer distribution of national income. They make possible an effective utilization of capital and skill resources and they motivate the growth of industrial entrepreneurship. The MSME sector in India is vast heterogeneous in terms of the size, variety of product and services and level of technology. This sector is large contributes to the socioeconomic development of the country. The MSME sector is an important pillar of Indian economy as it contributes greatly to growth of Indian economy with a vast network of around 30 million units, creating employment of about 70 million,

manufacturing more than 6000 products, contributing about 45% to manufacturing output and about 40% of exports, directly and indirectly. This sector even assumes greater importance now as the country moves towards a faster and inclusive growth agenda. MSME sector is the backbone of national economic edifice and has unremittingly acted as the fulcrum for the Indian economy, providing it resilience towards global financial shocks and hard times. With approximately 63.4 million units throughout the geographical expanse of the country, MSMEs contribute around 6.11% of the manufacturing GDP and 24.63% of the GDP from service activities as well as 33.4% of India's manufacturing output. Further, there is a vision to enhance MSMEs contribution to India's GDP to over 50% from the current 29% and that for the Indian economy to scale the \$5 trillion mark, the contribution of the MSME sector will be crucial.

The Vision & Mission of Msme

Vision

To emerge as a global leader in advanced manufacturing research and development, innovation and to create an ecosystem for an inclusive balanced and sustainable development of the state.

Mission

To retain India position as a global manufacturing hub and to achieve higher and sustainable industrial growth through capital infusion technology transfer world class industrial infrastructure skill up gradation and benchmarking of policies and practices to best Global standards

Background Information on MSME

Today's MSMEs have their roots in local-level business activities in villages and also in ancient urban centres. Ancient India was experiencing sustained growth in these activities, even during the phase of a lot of political upheaval across the subcontinent. These businesses and enterprises were instrumental in fulfilling the local needs of the population. These enterprises also contributed significantly to the exports of goods to other countries, which resulted in great economic wealth for the country. These activities considerably declined during British rule, as significantly cheap products flooded the Indian market.

We can understand the history and evolution of MSMEs in India through three separate time periods. These time periods are "pre-British rule", "pre-independence", and "post-independence".

The pre-British period of the Indian economy was primarily agrarian. A vast part of the subcontinent had villages that were self-sufficient to a certain extent. Village-level artisans were able to provide for local needs. They had limited market access due to geographic factors during that period. However, urban centres (places of pilgrimage, administrative

places, and trade towns) had a high level of economic activities, including the production of various goods. They primarily met the needs of the local market. However, a significant portion of this production is exported. Local producers were producing textiles, utility-oriented handicrafts, silk cloths, muslin, shawls, carpets, wooden works, artistic glass works, and coloured glass works. Apart from these, ornaments made in India, jewellery, brass-works, ivory work, and several other notable products gained prominence and achieved significant admiration across the world. The political landscape was largely supportive; however, as political uncertainty and fragmentation increased, these activities also faced some difficult times. Despite this, they have remained relevant and growing.

The Mughal Empire started declining and the political prominence of the East India Company (EIC) grew. British rule started taking shape, and during the same time, the industrial revolution in Europe and America attained great heights. Therefore, new manufacturing processes were implemented in these areas for the mass production of goods. This mass production required raw materials and market access for finished goods. The EIC was well aware of this opportunity and used its prominence to exploit the Indian subcontinent for both purposes. During this period, raw materials became more dominant than finished goods for export. As mass-produced goods flooded the Indian market, locally produced goods and their manufacturers started to lose their business. This leads to the systemic destruction of local manufacturing as they lose both local and foreign markets. This effect was primarily visible in urban centres and trading towns. Village-level artisans also started facing heat; however, they were slightly less affected by this destruction. This leads to bad shapes for all industries in India. As British rule transitioned from the EIC to the British monarchy, the industrialization of India also brought mass production units in the country, which further aggravated the situation of local manufacturers. This period was not good for local industries and became a victim of unfair market situations. This consequently leads to the destruction of any future growth or evolutionary prospects of these industries.

The GOI established the “Small Scale Industries Board” (SSIB) in 1955. The SSIB provided a formal definition of small-scale industries in India. This definition used power consumption, number of employees, and quantum of capital as defining factors. This definition has undergone several changes over the course of history. In 1977, a new class of small industries was identified, named as “Tiny Industries.” This was done to address the needs of entrepreneurs who run very small enterprises and primarily cater to local markets. The definition of tiny industries has also undergone several changes as a need arises.

Today’s MSME originated from the local needs of the village and trade centres of that time. They also witnessed a great cycle of growth and recognition. Going forward, systemic destruction was also witnessed in the British era. Later, as political and

geographical landscapes transformed, these units also began witnessing a much more favourable market scenario. The government began to focus on the systematic development of these units. Various national- and state-level policies, rules, and regulations have emerged. The Indian government created the Ministry of Small-Scale Industries and Agro and Rural Industries (SSI and ARI) in October 1999. The core objective of this ministry was to create a more conducive environment for MSMEs. Later, as industries grew, this ministry was split into two separate ministries in September 2001: the Ministry of Small-Scale Industries (SSI) and the Ministry of Agro and Rural Industries (ARI). In the year 2006 MSME Act was passed, next year both ministries merged into a single ministry that is “Ministry of Micro, Small and Medium Enterprises” on 9th May 2007.

The evolution of these enterprises during these three phases has laid the groundwork for today’s MSME structural makeup. These distinct events shape today’s MSME market. The Indian MSME sector is yet to realize its full potential to reduce poverty and unemployment in India.

Features of MSME in Economy Self Reliance

1. MSMEs work for the welfare of the workers and artisans. They help them by giving employment and by providing loans and other services.
2. MSMEs provide credit limit or funding support to banks.
3. They promote the development of entrepreneurship as well as up-gradation of skills by launching specialized training centres for the same.
4. They support the up-grading of developmental technology, infrastructure development, and the modernization of the sector as a whole
5. MSMEs are known to provide reasonable assistance for improved access to the domestic as well as export markets.
6. They also offer modern testing facilities and quality certification services.
7. Following the recent trends, MSMEs now support product development, design innovation, intervention, and packaging.

Role of MSME in Indian Economy

Since its formation, the MSME segment has proven to be a highly dynamic Indian economy sector. MSMEs produce and manufacture a variety of products for both domestic as well as international markets. They have helped promote the growth and development of khadi, village, and coir industries. They have collaborated and worked with the concerned ministries, state governments, and stakeholders towards the upbringing of rural areas.

MSMEs have played an essential role in providing employment opportunities in rural areas. They have helped in the industrialization of these areas with a low capital cost

compared to the large industries. Acting as a complementary unit to large sectors, the MSME sector has enormously contributed to its socio-economic development.

MSMEs also contribute and play an essential role in the country's development in different areas like the requirement of low investment, flexibility in operations, mobility through the locations, low rate of imports, and a high contribution to domestic production.

With the capability and capacity to develop appropriate local technology, provide fierce competition in domestic and international markets, technology-savvy industries, a contribution towards creating Défense materials, and generating new entrepreneurs by providing knowledge, training, and skill up-gradation through specialized training centres.

Importance of MSMEs for Indian Economy

Employment: It is the second largest employment generating sector after agriculture. It provides employment to around 120 million persons in India.

Contribution to GDP: With around 36.1 million units throughout the geographical expanse of the country, MSMEs contribute around 6.11% of the manufacturing GDP and 24.63% of the GDP from service activities.

MSME ministry has set a target to up its contribution to GDP to 50% by 2025 as India becomes a \$5 trillion economy.

Exports: It contributes around 45% of the overall exports from India.

Inclusive growth: MSMEs promote inclusive growth by providing employment opportunities in rural areas especially to people belonging to weaker sections of the society.

For example: Khadi and Village industries require low per capita investment and employs a large number of women in rural areas.

Financial inclusion: small industries and retail businesses in tier-II and tier-III cities create opportunities for people to use banking services and products.

Promote innovation: It provides opportunity for budding entrepreneurs to build creative products boosting business competition and fuels growth.

Thus, Indian MSME sector is the backbone of the national economic structure and acts as a bulwark for Indian economy, providing resilience to ward off global economic shocks and adversities.

Objectives of MSME in Economy Self Reliance

To promote e-Governance for empowering citizens, promoting the inclusive and sustainable growth of the Electronics, IT & ITeS industries, enhancing India's role in Internet Governance, adopting a multipronged approach that includes development of human resources, promoting R&D and innovation, enhancing efficiency through digital services and ensuring a secure cyber space.

Objectives

- e-Government: Providing e-infrastructure for delivery of e-services
- e-Industry: Promotion of electronics hardware manufacturing and IT-ITeS industry
- e-Innovation / R&D: Implementation of R&D Framework - Enabling creation of Innovation/ R&D Infrastructure in emerging
- areas of ICT&E/ Establishment of mechanism for R&D translation
- e-Learning: Providing support for development of e-Skills and Knowledge network
- e-Security: Securing India's cyber space
- e-Inclusion: Promoting the use of ICT for more inclusive growth
- Internet Governance: Enhancing India's role in Global Platforms of Internet Governance.

Review of Literature

There has been limited research on sustainability in Indian MSMEs till date. Of course, of late, the number of publications has increased. A chronological review of literature, 2011 onwards, on Indian MSMEs follows. Sangwan (2011) identifies the quantitative and qualitative benefits of Green Manufacturing (GM) through a literature review, and validates them through a survey of Indian SMEs. The author defines GM at the intersection of manufacturing and design practices, and environmental issues, concerns and practices, i.e. the greater the overlap between these areas, the greater the extent to which manufacturing and design practices recognize and embody environmental issues, concerns and practices. The author notes from the literature that the benefits of GM may range from cost reduction, improvement in productivity and product quality, safer and cleaner facilities, reduced environmental and health risks, better working conditions, and improved employee morale to customer loyalty, opening of new markets, higher market share, innovativeness, competitiveness, and improved corporate image and relations with stakeholders. The author also highlights that one of the far-reaching implications of GM is the lifecycle approach (LCA) to production, i.e. to take into account the environmental impacts of the entire lifecycle of a product starting from design, sourcing and manufacturing to storage, distribution, use, collection, inspection and recovery/disposal, and if properly implemented, LCA may result in reduced waste/effluent treatment/disposal costs, energy and cost savings from recycling and reuse activities, reduced penalties and liabilities, and lower regulatory compliance costs. In another study, Mittal et al. (2012) identify the drivers and barriers for the implementation of Environmentally Conscious Manufacturing (ECM), another name for GM, and validate them by conducting a case study in Germany and India for comparison. The authors identify current and future regulations for compliance, financial incentives such as attractive loans, grants and tax exemptions for capital investments, public pressure in

terms of the pressure exerted by various stakeholders such as local communities, NGOs, consumer groups, media and political parties, peer pressure exerted by trade and business associations, cost savings due to reduced material and energy consumption, increased competitiveness due to improved efficiency, customer demand for environmentally friendly products, supply chain pressure exerted by suppliers and distributors, and the commitment and leadership of corporate managers as the major drivers for an effective implementation of ECM. Nair and Sodhi (2012) highlight Corporate Social Responsibility (CSR) practices by Indian SMEs, and note that although CSR practices are skewed towards large companies, many SMEs being located in small towns, villages and remote areas are embedded in their local communities and eminently suited to pursue CSR practices. The authors present the findings of five case studies on the best CSR practices by Indian SMEs. The authors note that many SMEs do not see the immediate relevance of environmental and social issues to their businesses, and are focused on the short-term survivability of their enterprises. However, CSR does pay off in the long run, and has proven to have brought in business advantages in terms of staff recruitment, development, commitment, morale, motivation and retention, customer loyalty, new product development, access to new markets, energy savings, innovation, competitiveness, visibility, image and reputation that would not have been achievable otherwise. The authors mention that the nature and level of CSR implementation in SMES are influenced by factors such as sector, size, age, history, whether family- or non-family owned/managed, position in the value chain and nature of client relationships. The ethical orientation and moral responsibility of owners/managers are cited by the authors as the main drivers of CSR implementation in SMEs. On the other hand, the lack of resources is cited by SMEs as the main barrier to CSR adoption. The five case studies presented by the authors mention the following CSR practices: abolition of child labour, child education, health checkup, promotion of women entrepreneurship, widow stipend programme, orphan girl marriage assistance unit, raising funds for social causes through people participation, and promoting sustainable livelihoods while protecting the environment in rural and remote areas. The authors note that increased supply chain pressures, i.e. buyers'/exporters' stringent environmental and social requirements enforced on their suppliers would encourage more and more SMEs to adopt CSR practices.

Research Methodology

This research has done based on method of Descriptive study. The required data has collected from various secondary sources i.e., internet websites of government and other private domains, magazines, journals, general opinion of industry experts and other publications etc. This data was then analyzed and reviewed for conclusions.

Conclusion

In conclusion, the MSME sector has an important role to play in achieving the goals of the self-reliant India scheme. This will not only help in dealing with the economic conditions arising out of Covid-19 but will also pave the way for India's long-term economic-industrial development. With the change in the definition of small and cottage industries by the government, these industries will get a free environment for their development. A healthy environment will be created for the development of small and cottage industries by giving collateral free loans, giving financial assistance to distressed units, arranging online marketing, simplification of rules and laws, etc. In the current globalized economic conditions MSME sector needs adequate financial and technical support so that they can make their place not only in the domestic market but also in the global market. The present market based system has not only presented challenges before the small and cottage industries but has also opened doors of possibilities. The need is to identify these possibilities and take the development of MSME sector as a movement. Only by doing this the dream of self-reliant India can be realized and the ultimate goal of inclusive development can be achieved.

Abstract

This abstract provides a succinct preview of a paper presentation to be delivered at an upcoming conference, focusing on the crucial theme of "Financial Inclusion for Micro, Small, and Medium Enterprises (MSMEs)." MSMEs are recognized as vital contributors to economic growth and employment generation worldwide. However, their full potential is often hampered by limited access to financial services. This paper explores the significance of financial inclusion for MSMEs, the challenges they face, and innovative strategies to promote their financial empowerment. The paper begins by underscoring the pivotal role of MSMEs in the global economy and their unique challenges in accessing formal financial services. It highlights the adverse effects of financial exclusion on MSMEs, which range from stunted growth to limited resilience during economic shocks. In addressing these challenges, the paper delves into diverse strategies employed by governments, financial institutions, and non-governmental organizations. It explores the role of digital technologies, alternative credit scoring methods, and tailored financial products in expanding financial inclusion. Additionally, it investigates the importance of financial literacy programs and capacity-building initiatives to equip MSMEs with the knowledge and skills needed to leverage financial services effectively.

Drawing from international case studies and success stories, this presentation aims to inspire policymakers, academics, and practitioners to collaborate in creating an enabling environment that fosters financial inclusion for MSMEs. By doing so, we can harness the untapped potential of MSMEs to drive economic development, job creation, and inclusive prosperity on a global scale.

Keywords: *Economic growth, Innovative strategies, Financial empowerment, Global economy, Job opportunity.*

Introduction

India has vibrant and responsive MSMEs that play a dynamic and responsible role in the economic growth and development of any country by increasing trade, creating the best employment opportunities and developing the latest skills through effective, efficient and innovative entrepreneurial spirit in India. MSMEs are a pillar of every economy and an engine of economic growth that promotes the impartial development of all. Touted as India's growth engine, Micro, Small and Medium Enterprises (MSMEs) play an important role in India's economic development and strengthen the country's entrepreneurship. The proportion of MSMEs in India is approximately 6.3 billion enterprises that contribute significantly to employment and economic growth. According to the ministry's MSME annual report, MSMEs account for about 30 percent of India's GDP and employ more than 110 million people. Therefore, the Government of India aims to promote and support SMEs through the Micro, Small and Medium Enterprises (MSMED) Act 2006 provides various grants, programs and incentives to this sector and tries to solve some of the most important problems related to MSMEs such as lack of finance, lack of management skills etc. The main objectives of the law are to manage cluster development, train entrepreneurs, develop infrastructure and encourage financial access to the sector. As an alternative to economic growth, many problems still hinder MSMEs. The internal factors that hinder the development of MSMEs are the weakness of capital, production, product marketing and human resources. Capital is usually obtained only from the owners' own money, while production and marketing are done only according to the knowledge available to them. Marketing is usually only by word of mouth, so its growth rate is not too fast. External factors hindering the development of MSMEs are the development and promotion of MSMEs and the limited access of people to financial institutions. Limited public access to financial institutions affects MSME capital because MSME entrepreneurs find it difficult to access capital from these financial institutions. Facilities and information required for MSME activities can be found in several offices. Using technology is a challenge for MSMEs to survive in this era. The main purpose of using technology is to facilitate every transaction made. Today, the technology commonly used to process transactions is fintech. Technology services, or financial technology, is a possible alternative for financial institutions and their users to provide and receive services. Fintech can play a role in introducing services to users who previously did not use traditional institutions or existing services. According to the 'BLinC Invest MSME Lending Report 2022', the formal credit sector, which includes banks and NBFCs, covers less than 15 percent of the total MSME credit requirement, with a huge credit gap of Rs 25 trillion. The MSME sector that can potentially be effectively addressed with the help of data and new technologies such as AI and machine learning models.

Significance of Financial Inclusion for MSME

The aim is to give these companies the means to grow, innovate and make a significant contribution to economic development, job creation and poverty reduction. It plays a central role in building stronger and more inclusive economies. When they have access to financial services, they can grow their businesses, create jobs and contribute to overall economic growth. Financial inclusion helps MSME owners, many of whom are marginalized or poor, gain access to credit, savings and insurance. This, in turn, can raise their standard of living and reduce poverty. Financial services enable MSMEs to invest in the technology, infrastructure and human resources that are critical for business expansion and competitiveness. This helps them take advantage of opportunities and diversify their product or service offerings so that MSMEs can interact with formal financial institutions, collect credit history and increase creditworthiness. Thus, it will be easier to obtain larger loans in the future, which can boost economic growth. Financial inclusion ensures that marginalized and underserved populations, including women and minority entrepreneurs, have equal access to financial services. It promotes a fairer distribution of wealth and opportunity. Financial inclusion of MSMEs is crucial for economic development, poverty reduction, business growth and overall social well-being. It strengthens small businesses, promotes entrepreneurship and creates a more inclusive and stable economy.

Digital Lending: The Role of Financial Inclusion for MSME

Removing barriers to market access: The barriers faced by SMEs, the adoption of digital lending has transformed the financial landscape by removing barriers that prevent individuals from accessing credit. However, compared to digital lending, traditional lending was mainly based on a lot of paperwork, information requirements and qualification requirements, making it difficult to get a loan. However, digital loans have taken hold among SMEs, which is why the platforms have reduced the application processes even more than usual. As a result, individuals and organizations in underserved areas can access loans conveniently and fairly.

Greater efficiency and speed: The faster and more efficient adoption of digital loans in the lending process is one of the many benefits that have created a lot of buzz in the sector. Unlike traditional lending, which requires submission of huge piles of paperwork followed by a lengthy tracking and approval process; digital lending platforms have created a niche by simplifying their operations. Loan applications and processes have been completely online since their inception, eliminating the need for physical bank visits. Additionally, the use of new-age technologies such as machine learning and data analytics have reduced approval times from weeks to days.

Offering tailored loan products and flexibility: Fintech's cutting-edge technology and digital capabilities have enabled digital lending platforms to offer a host of loan solutions

specifically targeted to the needs of MSME borrowers. Depending on the type of business, digital lenders have offered a variety of flexible and customized loan options, be it short-term or long-term loans for personal or professional use. In this context, borrowers can choose loan terms, repayment plans and loan amounts that suit their financial needs and goals. In addition, fintech companies offer unique products to their MSME customers and help them move forward more efficiently by using new technologies such as artificial intelligence, machine learning and data analytics.

Promoting financial education and empowerment: To streamline the lending process and empower SMEs, digital lending platforms go beyond lending through financial education and empowerment. Despite various financial initiatives, consumers in underserved areas lack sufficient information about the loan application process. So, by providing interactive tools, educational content and personalized financial advice, lenders help borrowers improve their financial literacy, develop responsible borrowing habits and improve their overall financial well-being. Additionally, a focus on empowerment and education helps people develop long-term financial resilience and make smart financial decisions that go beyond borrowing.

Challenges, Barriers, and Risks Associated with Financial Inclusion for MSME's

Financial inclusion of micro, small and medium-sized enterprises faces a number of challenges, many of which can vary from region to region and country to country. These challenges can hinder MSMEs' access to financial services and their ability to grow and succeed. Here are some of the common challenges facing financial inclusion for MSMEs.

Lack of collateral: Although MSMEs make an important contribution to the economic development of the country, many banks and financial institutions are wary of lending to this sector. The process of availing MSME loans involves complex documentation, the need for collateral, strict repayment terms and high interest rates. Since micro and MSME enterprises do not have assets to take as collateral, such enterprises opt for unsecured MSME loans from lenders who do not require collateral for their financing.

Lack of credit history: MSMEs do not have established experience MSME entrepreneurs often do not have sufficient financial knowledge to make the right business decisions. Without financial literacy, MSMEs cannot choose the right lenders for their business, leading to higher interest rates and low credit scores. Poor financial decisions can also lead to working capital and cash flow problems. Understanding SME loans and financing is important because SMEs have to rely on external financing solutions during times of crisis.

Lack of awareness about government schemes: The Government of India has launched various programs and initiatives to promote MSME financing, but lack of awareness

remains a major problem. SMEs often do not have access to the information available from these systems, which can limit their ability to take advantage of them.

Higher interest rate: MSMEs also face high lending rates, which can make it difficult to repay loans and limit their ability to invest in businesses. High interest rates can also make it difficult for SMEs to obtain financing, as lenders may view them as risky investments. The Indian governments have taken various initiatives to address the challenges faced by SMEs in accessing finance.

- Credit guarantee fund Trust for Micro and Small enterprises (CGTMSE)
- Pradhan Mantri Mudra Yojana (PMMY)
- Stand up India

Lack of liquidity: As suppliers of large organizations, most MSMEs depend on the success of these companies and on the credit payment terms they set. Payment delays or customer downtime can reduce cash flow and cause serious liquidity problems for MSMEs. Most of the MSME capital goes into day-to-day operations, leaving MSME short of cash in case of late payments. In order to obtain sufficient capital to continue operations, SMEs are looking for faster and easier sources of financing. Because they only focus on financing day-to-day operations, they do not have sufficient resources for long-term investments that could expand their business. Lack of liquidity can be addressed through better financial literacy and MSME programs that encourage high return on investment.

By addressing these challenges, countries can unlock the potential of their MSME sector and promote economic growth and job creation.

To Understand How Fintechs are Improving their Ability to Meet the Credit Needs of MSME Borrowers, Let's Take a Look at How they are Changing the Game

Fintechs have emerged as new enablers of change in the country's MSME space. Leveraging emerging technologies such as AI, ML and Big Data, Fintechs are bringing significant change to underserved MSMEs. As businesses deal digitally, their digital footprint expands, creating vast amounts of data that can be used to identify patterns and derive relevant actionable insights. Using AI and ML, raw and complex data is innovatively modeled to create efficient workflows and drive decision making.

Better risk assessment: AI and ML algorithms can analyze a borrower's credit history, financial statements and other data points to accurately assess a borrower's creditworthiness. This can reduce the risk of default and allow the lender to offer loans to small and medium-sized businesses that may not have been creditworthy before.

Customized loan products: AI and ML algorithms can use information about a borrower's financial history and behavior to offer customized loan products that meet their specific needs. This can help SMEs obtain credit lines tailored to their business needs.

Faster and more cost-effective loan processing: AI and ML algorithms can perfectly and quickly analyze large volumes of data to assess the creditworthiness of the borrower, reducing the time of processing a loan application. This can be especially useful for entities, ie. SMEs that need urgent funds to finance their business, as well as for the lender to reduce customer service costs.

Financial Literacy is Extremely Important for Micro, Small and Medium-Sized Enterprises for Several Reasons

There are some aspects that are being totally ignored by financially unlettered people but are pivotal for the success of a business. Financial literacy is a key skill for SMEs as it enables them to make informed decisions, secure funding, manage risk and achieve long-term success in a dynamic business environment. It's an investment that pays off in better financial health and sustainability.

Good financial management: SMEs often operate on tight budgets and limited resources. Financial literacy provides business owners and managers with the skills and knowledge needed to effectively manage their finances. They can budget, allocate resources and make informed financial decisions, improving financial stability and sustainability. This includes budgeting, cash flow management and financial planning. If SMEs understand these concepts well, they are more likely to make informed financial decisions and allocate resources wisely.

Availability of financing: SMEs often need external financing to grow and expand their operations. Lenders and investors are more likely to provide capital to companies with strong financial awareness. Understanding financial statements, cash flow management and financial forecasting can increase your chances of getting a loan or attracting investors. Financial literacy is crucial when applying for external funding such as loans or investments. Lenders and investors often assess the financial capacity of SMEs before extending financial support. A company with good preparation and a good understanding of financial principles has a higher probability of obtaining financing on favorable terms.

Risk mitigation: Understanding financial risks is essential for SMEs. Financial literacy helps owners and managers identify potential financial difficulties, such as over-leveraging of working capital or poor management. With this knowledge, they can take proactive steps to reduce risk and ensure the long-term sustainability of the business. Contact accountants and legal experts who can provide guidance on risk management strategies. By implementing these risk management strategies, MSME can improve their business performance due to financial problems and uncertainty.

Strategic decision-making: SMEs must make strategic decisions such as pricing, expansion and investment in new technologies. Financial literacy provides the tools to assess the financial impact of those decisions, enabling SMEs to make choices that align

with their long-term goals and profitability. Stay abreast of financial trends, regulations and best practices through continuous education and professional development. Effective financial intermediation literacy and strategic decision-making can help small and medium-sized businesses navigate challenges, seize opportunities and achieve long-term success.

The government should take initiatives to empower SME owners by providing them with knowledge of basic financial management techniques, accounting concepts and debt systems so that they can achieve the skills needed for sound business operations. Training programs can be implemented in collaboration with public and private sector institutions and should focus on dissemination of various financial systems and financial advisory services so that they can better understand the financial requirements of the company and choose appropriate options. Online portals with free information sources on finance, accounting, debt settlement, counseling services and networking opportunities should be launched and promoted.

How are AI and ML Changing the Financial Services Industry?

Productive technology tools like AI can address the sector-specific challenges of MSMEs to obtain loans with a faster and better onboarding process. This includes faster decision making, better loan commitment at lower costs, better risk management, better compliance, fraud detection, credit monitoring, debt settlement and more. For example, AI/ML-based bank statement analyzers evaluate operational bank statement data and convert it into intelligent information that can be customized for each lender.

Automate the entire loan sanction and payment process from document review to credit check etc. helps achieve significant cost optimization while also removing bias from the application evaluation process. Analyzing the creditworthiness of applicants based on their digital footprint helps lenders not only apply for loans digitally, but also extend loan amounts to eligible applicants.

Conclusion

Financial inclusion of micro, small and medium enterprises can have some important results and implications. The financial growth of MSME financial inclusion can contribute to overall economic growth by enabling financing for expansion, investment, and innovation. This can lead to job creation and increased economic activity. Poverty Alleviation providing access to financial services for MSMEs, especially in rural areas, can help lift people out of poverty and improve their living standards. Innovation and productivity When MSMEs have access to credit and financial resources, they are more likely to invest in technology and infrastructure that can increase productivity and competitiveness Risk reduction financial inclusion can help MSMEs better manage financial risks, such as market fluctuations or unexpected costs, through insurance and

savings products. Financial literacy Effective financial literacy initiatives should also focus on improving the financial literacy of MSMEs. They make informed decisions and avoid potential pitfalls. The regulatory framework of governments and financial institutions must create an enabling regulatory environment that promotes financial inclusion by ensuring protection of MSMEs against predatory practices. Leveraging technology, especially the digitization of mobile banking and digital payments, and AI and ML changing financial service industry, it can significantly improve the financial inclusion of MSMEs by providing them with convenient and cost-effective financial services. Market access financial participation can facilitate access to larger markets, both domestically and internationally, enabling SMEs to expand and improve their competitiveness. Monitoring and evaluation Regular monitoring and evaluation of financial inclusion programs is essential to assess their impact and make necessary changes to ensure their effectiveness. In conclusion, financial inclusion of MSMEs can promote economic growth, reduce poverty, promote innovation, and improve the resilience of these businesses.

Abstract:

This research focuses on the significance of micro, small, and medium-sized businesses (MSMEs) for achieving the SDGs. MSMEs are the foundation of many economies. India is not an anomaly in this regard. In India, over a million small and medium-sized firms (MSMEs) produce over 6,500 diverse goods and services. There are over 64 million micro, small, and medium-sized companies (MSME) in India alone. These micro, small, and medium-sized businesses employ around 12 crore people. MSMEs play a significant role in the larger company ecosystem. Start-ups and young enterprises, which are often tiny or micro firms, are the principal source of net job creation in many countries and the driving force behind private-sector innovation and sustainability. The United Nations has set Sustainable Development Goals (SDGs), and MSMEs, due to their dynamic and adaptive nature, are an important sector in achieving these objectives. Given the worldwide relevance of MSMEs, the United Nations General Assembly has designated June 27 as International MSME Day. 'Small Businesses, Big Impact' is a theme that highlights the role that micro, small, and medium-sized enterprises (MSMEs) play in the larger goal of sustainable development. This research examines the contributions of MSMEs to each of the SDGs by breaking down the ways in which these organizations are involved in the global economy, providing services (such as education, health care, water and sanitation), consuming energy, and leaving an environmental footprint. Using these lenses, it is possible to establish both causal and correlative relationships between MSMEs and the seventeen goals.

Keywords: MSMEs, SDGs, Innovation, Economic Growth, Job Creation

Introduction

To succeed in the environment and industrialization, we must employ green technology for sustainable development. Environmental sustainability involves making environmentally responsible decisions and adopting steps to conserve nature to ensure the environment can support our existence. It's an essential concern now that people realize how much corporations and people may harm the environment and wildlife. It is not only about decreasing trash or energy use; it is about building methods that will make businesses sustainable and help save the world with improved eco-friendly technologies.

Recently, sustainability has become a worldwide priority, and the Government of India has made multiple national and international promises to conserve the environment through various projects. The government's 'Make in India' with 'Zero Defect & Zero Effect' initiative encourages MSMEs to improve product and process quality without harming the environment and balances economic growth with sustainability and social inclusion. All economic sectors agriculture, manufacturing, and services must contribute to sustainable nation-building.

Objectives of Research

- To study the role of Micro, Small and Medium Enterprises in achieving Sustainable Development Goals.

Analysis - Role of MSMEs in fulfilling the SDGs

Goal 1. End poverty in all its forms everywhere

In 2013, 783 million people, or 11% of the worldwide population, lived below the severe poverty criterion, according to the latest estimate. Most impoverished people in emerging nations are unemployed or cannot earn enough to escape poverty. The struggle against poverty has relied on private sector job development. Over the past 30 years, the private sector has helped reduce the percentage of developing world people living in poverty from 52% to 22%. MSMEs greatly boost private sector employment. MSMEs produced four out of five formal sector roles in developing countries, accounting for 90% of total employment. Informal businesses employ the poor and disenfranchised. In lower income nations, many MSMEs are informal and provide a livelihood for the base of the pyramid, 4 billion individuals earning less than US \$3000 a year. 7 Over 70% of developing nations' workforce works in the informal sector, either self-employed or in unregistered firms.⁸ The informal economy allows underprivileged women and youth to make money due to its flexibility. The majority of informal sector workers lack social security, rights at work, and decent working conditions, according to the ILO. Informal enterprises can help legalize MSMEs and give social security to their employees. Given the size of informal employment, especially in developing nations, supporting MSMEs' formalization will help achieve Goal 1.

Goal 2. End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Climate-smart agriculture practices can improve farmer production and agricultural value chain sustainability. Food waste-reducing technology in India and Rwanda has cut post-harvest losses by over 60% and raised smallholder farmers' earnings by over 30%. In 2030, the Business and Sustainable Development Commission believes that tackling food

and agriculture issues in accordance with the SDGs may be worth US \$1.8 trillion. This encompasses food waste reduction, agriculture digital services, farming technologies, micro-irrigation, forest ecosystems, and land restoration. The Agri-Food Chain Coalition of Europe identified new plant breeding methods and products, animal diets and specialty feed ingredients to reduce animal farming's environmental impact, agricultural technologies, including genetically modified organisms to develop new seeds, carbon-reducing agricultural machinery, and handling plants and fertilizers through MSMEs, which are already operating in these new sectors, but supporting MSME capacity-building and technology access for small and medium agriculture-based firms will help accomplish Goal 2.

Goal 3. Ensure healthy lives and promote well-being for all at all ages

The health industry faces several challenges, including pharmaceutical inefficacy, communicable diseases, non-communicable diseases, and an aging population. Emerging nations also lack talents, commodities, and resources. These obstacles must be overcome to achieve the goal. According to the Business and Sustainable Development Commission, these issues might be worth \$1.8 trillion by 2030, based on current pricing. Risk pooling, activity services, cost-effective surgery, improved disease management, telehealth, remote patient monitoring, counterfeit drug detection, electronic medical records, advanced genomics, weight management programs, and healthcare training are essential. Micro, small, and medium businesses (MSMEs) are crucial in many fields. By helping current MSMEs and start-ups leverage these economic opportunities, the goal may be realized. Healthcare spending growth may improve company prospects and extend MSMEs' service areas. The WHO recommends gradually increasing financial contributions to meet Sustainable Development Goals (SDG) health objectives. In the 'ambitious scenario', the WHO predicts that these investments must rise from US \$134 billion to US \$371 billion by 2030, or \$58 per person. In the 'progress scenario', the WHO recommends increasing new investments from \$104 billion to \$274 billion per year by 2030, or \$41 per person.

Goal 4. Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Technical and vocational education by MSMEs. MSMEs may become informal educational service providers and share employer-required technical and competence skills through work-based learning programs including apprenticeships, career education, and internships. MSMEs have helped TVET initiatives solve skill shortages and promote lifelong learning in several nations. More research is needed to determine how MSMEs increase access to formal and informal education. MSMEs supplement formal education. Public schools alone cannot offer the education services needed to meet SDG 4 aspirations in many developing countries. In many nations, MSMEs in the education sector might offer

complementary services, increasing public access to education. A study by the Center for Education Innovations found that low-cost private schools have grown more than doubled in India since 1993 and tripled in Kenya since 1997, enhancing access to educational services. MSMEs may help achieve SDG 4 by enhancing education access and skills for youth and women to get meaningful jobs.

Goal 5. Achieve gender equality and empower all women and girls

The presence of women-owned firms and women executives plays a fundamental role in driving the transformation of business practices and culture towards sustainability. One illustrative instance is the concept of green strategy. Anna Brismar is the one responsible for establishing and possessing Green Strategy, a consulting enterprise that focuses on matters pertaining to circularity and sustainability within the fashion, clothing, and textile sectors on a worldwide level. The individual in question serves as both the proprietor and creator of the digital platform Circularfashion.com. This platform holds the distinction of being the foremost online platform solely devoted to matters pertaining to circularity within the fashion, clothing, and textile sectors on a global scale. Additionally, she serves as the creator and leader of the Circular Fashion Network, a global network including industry experts dedicated to addressing circularity and sustainability concerns within the fashion and textile sectors. The firm actively promotes design principles, which encompass the values of durability and longevity, the utilization of nontoxic and biodegradable materials, and the cultivation of ethical attitudes towards society and the environment. In addition, they are actively advocating for recycling through the advancement of efficient and secure systems.

Goal 6. Ensure availability and sustainable management of water and sanitation for all

To meet SDG 6's WASH ambitions, the World Bank predicts an annual need of \$114 billion between now and 2030, three times present investment levels. MSMEs reach low-income households in many developing nations where the governmental sector fails. MSMEs in Asia, Africa, and Latin America are providing water and sanitation facilities in rural or dense metropolitan areas with their own finances, loans, or ownership. These creative MSMEs supply clean water in cans or economical water filtration devices, as well as home latrines with onsite waste treatment, transportation, and recycling. Ghana, like many low- to middle-income nations, uses micro-enterprises for sanitation service delivery, including storage, collection, and transport. Unfortunately, MSMEs in the water and sanitation sector struggle to survive because of demand limits, a lack of business and technical skills, and financial problems, including financing availability. Sector MSMEs can help achieve the aim by creating capacity.

Goal 7. Ensure access to affordable, reliable, sustainable and modern energy for all

While small firms have minimal environmental footprints, their combined effect might exceed that of large businesses. MSMEs may pollute more than major firms due to their informality and lack of regulation. These companies may cause 60–70% of pollution in developing nations, according to studies. Thus, Goal 7 progress requires encouraging MSMEs to use green technology and other eco-friendly practices. According to research in India, 26 million MSME companies provide 45 percent of India's industrial production and 40 percent of its exports. Nearly half of the 400 manufacturing clusters are energy-intensive. Most MSME clusters employ wasteful, traditional technology, the survey found. MSMEs in 36 clusters might save an estimated 16% of their energy use. Despite most MSMEs recognizing the importance of energy efficiency, the study found that energy efficiency measures are rarely implemented due to a lack of technologies, local service providers, MSMEs' technical capacities, and credit.

Goal 8. Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

MSMEs address SDG 8.3.85. MSMEs account for up to 45% of total employment in developing market economies, as described in Goal 1. Over the past few decades, MSMEs have consistently boosted worldwide employment. From 2003 to 2016, the number of full-time employees in MSMEs nearly quadrupled from 79 million to 156 million across 132 countries. In thirteen sub-Saharan African nations, MSMEs may provide 90% of employment. MSMEs are common in low-skilled, labour-intensive industries such as light manufacturing and services. MSMEs may offer lower-paying and less-secure jobs than bigger companies. Informality makes it challenging to guarantee adequate social protection coverage for informal MSMEs' jobs. MSMEs employ a large number of people, yet they may not provide adequate ILO-compliant labour. However, with proper assistance, they may improve work standards and career chances. This goal's formalization and development of entrepreneurship will require MSMEs to address many challenges, including creating more enabling policy and regulatory frameworks, increasing access to finance and market information, capacity building, and good infrastructure.

Goal 9. Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

MSMEs are often the driving force behind economic growth innovations because they can work outside of dominant paradigms, exploit technological or commercial opportunities that larger companies have ignored, or commercialize knowledge that would otherwise remain uncommercialized. In Europe, MSMEs have 20% of biotechnology patents, a measure of innovation. MSMEs create value by taking innovation from elsewhere, modifying it incrementally, and distributing new or specialized goods.

However, many MSMEs struggle to find and connect with local, national, and global knowledge partners and networks and build suitable skills and management. UNDESA MSMEs and Sustainable Development Goals Report 22 approaches for incorporating external partner expertise into in-house procedures and innovation.

Goal 10. Reduce inequality within and among countries

The research conducted by the OECD on productivity reveals that, in certain nations, there was a notable increase in the productivity disparity between micro, small, and medium-sized enterprises (MSMEs) and major corporations during the global crisis of 2007–2008. Although there has been a reversal in this trend for small and medium-sized organizations throughout the recovery period, the persisting disparity for microforms remains significant. The existence of this gap is also a significant catalyst for the documented increase in inequality, encompassing wage disparity, in several nations. In several emerging and developing countries, there exists a significant disparity in productivity between larger businesses and micro, small, and medium enterprises (MSMEs), leading to notable income inequalities. This discrepancy is mostly attributed to the overrepresentation of employment in micro and small organizations, frequently operating within the informal sector. The strategic allocation of resources towards the growth of micro, small, and medium enterprises (MSMEs) and the enhancement of their competitiveness and productivity is crucial to mitigating wage disparities.

Conclusion

The Sustainable Development Goals (SDGs) encompass a set of ambitious objectives aimed at fostering a more prosperous and sustainable future for both the global population and the planet as a whole. However, attaining these objectives within a timeframe of fifteen years is a significant challenge. Several countries, including India, are actively pursuing these objectives through a range of commitments. Sustainable development has several dimensions that may be realized via the diverse contributions of organizations and individuals. The Micro, Small, and Medium Enterprises (MSME) sector have significant potential to impact the advancement of several agendas. The significant role of micro, small, and medium enterprises (MSMEs) in this undertaking stems from their diverse and adaptable operating skills. The potential growth and success of Micro, Small, and Medium Enterprises (MSMEs) in the foreseeable future holds significant promise for many socio-economic benefits. These include the creation of job opportunities, alleviation of poverty, mitigation of regional disparities, promotion of equality, and ultimately, contributing significantly towards the attainment of the Sustainable Development Goals (SDGs). It is imperative that the challenges faced by MSMEs are effectively addressed by suitable government interventions, while simultaneously fostering entrepreneurial capabilities in the context of a highly competitive environment.

FINANCIAL INCLUSION FOR MSMEs

T.Thanasekaran

Assistant Professor, Department of Commerce,
SRMIST College of Science and Humanities, Ramapuram.

Abstract:

Financial inclusion for MSMEs is a fundamental aspect of economic development, fostering entrepreneurship, job creation, and poverty alleviation. This abstract provides an overview of the key components and strategies involved in promoting financial inclusion for MSMEs. It discusses access to credit, digital payments, financial literacy, savings, insurance, regulatory support, technology integration, partnerships, and the importance of monitoring and evaluation. Ensuring MSMEs have equitable access to financial services not only empowers these businesses but also contributes to inclusive and sustainable economic growth. This abstract serves as a concise guide to understanding the critical role of financial inclusion in supporting the vitality of MSMEs and the broader economy.

Keywords: MSMEs, financial, inclusion, economic, business, development, etc.,

Introduction

Micro, Small, and Medium Enterprises (MSMEs) represent a diverse and vital segment of the business landscape in most economies. These enterprises are characterized by their relatively small size and are often the engines of innovation, job creation, and economic growth. MSMEs typically have a limited number of employees and lower levels of capital investment compared to larger corporations, but their impact on the overall economy is substantial.

In many countries, the classification of MSMEs is based on criteria such as the number of employees, annual turnover, or total assets. For instance, micro-enterprises might have fewer than 10 employees, small enterprises might employ up to 50 individuals, and medium-sized enterprises can have up to 250 employees. These definitions can vary from one region or country to another, but the overarching goal is to provide tailored support and incentives to these smaller businesses.

One of the key strengths of MSMEs is their ability to adapt quickly to changing market conditions. Their small size allows for agility and flexibility, enabling them to pivot their strategies, innovate, and respond to customer demands rapidly. This responsiveness often results in niche products or services that cater to specific markets, contributing to product diversity and consumer choice.

Furthermore, MSMEs play a crucial role in employment generation. They are significant contributors to job creation, especially in developing economies. By providing employment opportunities to a substantial portion of the workforce, MSMEs help reduce unemployment rates, alleviate poverty, and promote social stability.

Statement of the problem

Micro, Small, and Medium Enterprises (MSMEs) form the backbone of many economies, contributing significantly to GDP and employment. However, a pervasive issue hindering their growth and sustainability is the lack of adequate financial inclusion. Despite their economic importance, MSMEs often face substantial challenges in accessing essential financial services, including credit, digital payments, savings, and insurance. MSMEs frequently encounter difficulties in securing loans due to stringent collateral requirements and insufficient credit history, constraining their expansion and innovation. Many MSMEs still rely on cash transactions, which not only hinder efficiency but also limit their access to modern financial tools and opportunities. Owners of MSMEs often lack the financial literacy necessary to make informed decisions about managing their finances effectively or assessing the suitability of financial products. Many MSMEs lack the technological infrastructure and digital capabilities needed to integrate with modern financial systems.

Objectives:

The primary objectives of this research are as follows:

- To identify the function of MSMEs **to** achieving its goals for the development of employment opportunities and reducing unemployment.
- To assess the financial inclusion for Micro, Small, and Medium Enterprises (MSMEs) in the job market.
- To explore the challenges faced by the MSMEs in modern days and to evaluate the steps taken to overcome the barriers faced by them.

Function of MSMEs

Micro, Small, and Medium Enterprises (MSMEs) play crucial roles in economies worldwide due to their diverse functions and contributions. Here are some key functions of MSMEs:

- **Employment Generation:** MSMEs are significant job creators. They provide employment opportunities to a large segment of the population, helping to reduce unemployment and underemployment.
- **Economic Growth:** MSMEs contribute to economic growth by stimulating economic activity in various sectors. They often serve as incubators for innovation and entrepreneurship.
- **Innovation and Creativity:** Many MSMEs are agile and innovative, driving creativity and competitiveness in their respective industries. They can quickly adapt to changing market demands and technological advancements.

- **Local Development:** MSMEs often operate at the local or regional level, contributing to the development of communities and regions by providing goods and services, creating jobs, and supporting local supply chains.
- **Export and Trade:** In many countries, MSMEs are involved in export-oriented activities, helping to diversify export markets and enhance trade balances.
- **Diversification:** MSMEs contribute to economic diversification by engaging in a wide range of industries and sectors, reducing dependence on a single sector.

Financial inclusion for Micro, Small, and Medium Enterprises (MSMEs)

It is crucial for economic development. It involves providing these businesses with access to affordable financial services, including credit, savings, insurance, and digital payment solutions. They are:

- **Access to Credit:** MSMEs often struggle to secure loans due to lack of collateral and credit history. Financial inclusion initiatives aim to provide them with easier access to credit through schemes like government-backed loans, peer-to-peer lending, and microfinance institutions.
- **Digital Payments:** Encouraging MSMEs to adopt digital payment methods can improve their financial inclusion. Digital wallets, mobile banking, and payment gateways can help businesses manage transactions more efficiently.
- **Financial Literacy:** Providing financial education and training to MSME owners is vital. It helps them understand financial products and services, manage their finances effectively, and make informed decisions.
- **Savings and Insurance:** Access to savings accounts and insurance products can protect MSMEs from unexpected financial setbacks and promote long-term financial stability.

Challenges faced by MSMEs

- **Limited Access to Finance:** MSMEs often struggle to secure adequate financing due to their size and limited collateral, making it challenging to fund operations, expansion, or innovation.
- **High-Interest Rates:** When MSMEs do obtain loans, they often face higher interest rates, increasing their cost of capital and reducing profitability.
- **Lack of Collateral:** Many MSMEs lack the necessary assets or collateral to secure loans or lines of credit from traditional financial institutions.
- **Inadequate Credit History:** Limited or no credit history can hinder MSMEs' ability to access financing or obtain favorable terms from lenders.

Overcome the Barriers

Overcoming the barriers to financial inclusion for Micro, Small, and Medium Enterprises (MSMEs) requires a multi-pronged approach involving various stakeholders. Efforts to overcome these barriers should be tailored to the specific needs and circumstances of each region or country, as the challenges can vary widely. Collaboration among governments, financial institutions, civil society organizations, and international development agencies is crucial to making meaningful progress in MSME financial inclusion.

- **Financial Education and Literacy:** Promote financial literacy and education programs tailored to MSMEs. These programs can help business owners understand financial products, budgeting, and the importance of maintaining financial records.
- **Digital Financial Services:** Expand digital financial services, including mobile banking and digital payment systems, to reach MSMEs in remote areas. This can increase accessibility and reduce the need for physical branches.
- **Alternative Credit Scoring:** Develop alternative credit assessment methods that consider factors beyond traditional credit history, such as cash flow analysis, transaction data, and business performance metrics.
- **Government Support:** Governments can play a vital role by simplifying regulations and reducing bureaucratic hurdles. They can also provide incentives and subsidies to financial institutions to encourage lending to MSMEs.
- **Collateral-Free Loans:** Encourage financial institutions to offer collateral-free loans or accept alternative forms of collateral, such as future receivables or assets related to the business.
- **Risk Mitigation:** Establish credit guarantee schemes or risk-sharing mechanisms to incentivize financial institutions to lend to MSMEs, reducing their perceived risk.

Conclusion:

In conclusion, overcoming the barriers to financial inclusion for Micro, Small, and Medium Enterprises (MSMEs) is essential for fostering economic growth, reducing poverty, and promoting entrepreneurship. Addressing these barriers requires a holistic and collaborative approach involving governments, financial institutions, and development organizations. It include promoting financial education and literacy, expanding digital financial services, developing alternative credit assessment methods, simplifying regulations, and offering collateral-free loans. Governments can play a pivotal role by creating enabling environments and implementing policies that prioritize MSME financial inclusion. By implementing these strategies and continuously monitoring progress, we can work towards a more inclusive financial ecosystem that empowers

MSMEs to thrive, create jobs, and contribute to economic development. Financial inclusion for MSMEs not only benefits individual businesses but also strengthens the overall resilience and prosperity of communities and nations.
