

Nallamuthu Gounder Mahalingam College

Accredited with A++ Grade(4th Cycle) by NAAC and ISO 9001:2015 Certified Institution

An Autonomous Institution, Affiliated to Bharathiar University,
90, Palghat Road, Pollachi -642001, Tamilnadu, INDIA, Coimbatore

3.4.4 : Details of Books/Chapters/Conference Proceedings

Sl. No.	Name of the Teacher	Title of the Book published	Title of the Chapter published	Title of the proceedings of the conference	Name of the conference	National / International	Year and month of publication	ISBN of the Book/Conference Proceeding	Affiliating Institute of the teacher at the time of publication	Name of the Publisher
1	Dr. Indumathy Ramasamy	NA	Bioactive Compounds Derived from Marine Sources for Cancer Therapy and Chemoprevention, Bioactive Compounds from Medicinal Plants for Cancer Therapy and Chemoprevention	NA	NA	International	24-Sep	978-981-5238-55-6	Nallamuthu Gounder Mahalingam College	Bentham Science Publisher
2	Dr. T. Gowrani	NA	Sodium ion conducting biomaterial electrolyte based on Centella Asiatica incorporated with sodium perchlorate for primary sodium ion battery	Book of Abstracts - 18th Asian Conference on Solid state ionics ACSSI-2024	18th Asian Conference on Solid state ionics ACSSI-2024	International	24-Feb	978-93-340-1267-5	Nallamuthu Gounder Mahalingam College	Subramanian-Thangathai Educational Trust
3		NA	Influence of Sodium Molybdate on the inhibition Efficiency of ATMP-Cd ²⁺ System on Mild Steel in Aqueous Environment	Proceedings of International Conference on Computational Nanoscience and Energy Storage Technology	International Conference on Computational Nanoscience	International	Jul-23	978-81-951871-9-5	Nallamuthu Gounder Mahalingam College	Navanila Maruthi Publication

Nallamuthu Gounder Mahalingam College

Accredited with A++ Grade(4th Cycle) by NAAC and ISO 9001:2015 Certified Institution

An Autonomous Institution, Affiliated to Bharathiar University,

90, Palghat Road, Pollachi -642001, Tamilnadu, INDIA, Coimbatore

Sl. No.	Name of the Teacher	Title of the Book published	Title of the Chapter published	Title of the proceedings of the conference	Name of the conference	National / International	Year and month of publication	ISBN of the Book/Conference Proceeding	Affiliating Institute of the teacher at the time of publication	Name of the Publisher
					and Energy Storage Technology					
4	Dr. M. Selladurai	NA	Synthesis and Characterization Of ZnO Nanoparticles Using Artabotrys Hexapetalus Leaf Extract and its Photo Degradation Of Methylene Blue	Proceedings of International Conference on Computational Nanoscience and Energy Storage Technology	International Conference on Computational Nanoscience and Energy Storage Technology	International	Jul-23	978-81-951871-9-5	Nallamuthu Gounder Mahalingam College	Navanila Maruthi Publication
5	Dr. N. Neelakandewari	NA	Effect of surfactant concentration on the ethanol sensing properties of ZnO Nanostructures at room temperature	Proceedings of International Conference on Computational Nanoscience and Energy Storage Technology	International Conference on Computational Nanoscience and Energy Storage Technology	International	Jul-23	978-81-951871-9-5	Nallamuthu Gounder Mahalingam College	Navanila Maruthi Publication

Nallamuthu Gounder Mahalingam College

Accredited with A++ Grade(4th Cycle) by NAAC and ISO 9001:2015 Certified Institution

An Autonomous Institution, Affiliated to Bharathiar University,

90, Palghat Road, Pollachi -642001, Tamilnadu, INDIA, Coimbatore

Sl. No.	Name of the Teacher	Title of the Book published	Title of the Chapter published	Title of the proceedings of the conference	Name of the conference	National / International	Year and month of publication	ISBN of the Book/Conference Proceeding	Affiliating Institute of the teacher at the time of publication	Name of the Publisher
6		NA	Photovoltaic Performance of Polyhedral Tin Oxide Nanostructured Dye Sensitized Solar Cell	Proceedings of International Conference on Computational Nanoscience and Energy Storage Technology	International Conference on Computational Nanoscience and Energy Storage Technology	International	Jul-23	978-81-951871-9-5	Nallamuthu Gounder Mahalingam College	Navanila Maruthi Publication
7		NA	Preparation, Characterization and Application of CuO-MgO Nanocomposite for C-C Coupling Reactions	Proceedings of International Conference on Computational Nanoscience and Energy Storage Technology	International Conference on Computational Nanoscience and Energy Storage Technology	International	Jul-23	978-81-951871-9-5	Nallamuthu Gounder Mahalingam College	Navanila Maruthi Publication
8		NA	Enhanced room temperature ethanol sensing properties of In doped MoO ₃ – MoO ₂	Proceedings of International Conference on Recent Advancements in Materials Science and Technology	International Conference on Recent Advancements in Materials Science and Technology	International	24-Jan	978-93-95898-91-1	Nallamuthu Gounder Mahalingam College	Springer

Nallamuthu Gounder Mahalingam College

Accredited with A++ Grade(4th Cycle) by NAAC and ISO 9001:2015 Certified Institution

An Autonomous Institution, Affiliated to Bharathiar University,
90, Palghat Road, Pollachi -642001, Tamilnadu, INDIA, Coimbatore

Sl. No.	Name of the Teacher	Title of the Book published	Title of the Chapter published	Title of the proceedings of the conference	Name of the conference	National / International	Year and month of publication	ISBN of the Book/Conference Proceeding	Affiliating Institute of the teacher at the time of publication	Name of the Publisher
9		NA	Nanometric evaluation of Nanocrystalline ZrO ₂ Coatings toward BWR application-An AFAM Investigation	Proceedings of International Conference on Recent Advancements in Materials Science and Technology	International Conference on Recent Advancements in Materials Science and Technology	International	24-Jan	978-93-95898-91-1	Nallamuthu Gounder Mahalingam College	Springer
10		NA	Molybdenum Oxide Microrods for Ethanol Vapour Detection at Room Temperature	Proceedings of Two Days National Conference on Advanced Biocompatible Materials and Devices / Systems for Biomedical Applications	National Conference on Advanced Biocompatible Materials and Devices / Systems for Biomedical Applications	National	Aug-23	978-81-961902-6-2	Nallamuthu Gounder Mahalingam College	Sri Ramakrishna Engineering College
11		NA	Influence of Calcination Temperature on the Photovoltaic Properties of TiO ₂ Nanostructures	Proceedings of Two Days National Conference on Advanced Biocompatible Materials and Devices / Systems for Biomedical Applications	National Conference on Advanced Biocompatible Materials and Devices / Systems for Biomedical Applications	National	Aug-23	978-81-961902-6-2	Nallamuthu Gounder Mahalingam College	Sri Ramakrishna Engineering College

Nallamuthu Gounder Mahalingam College

Accredited with A++ Grade(4th Cycle) by NAAC and ISO 9001:2015 Certified Institution

An Autonomous Institution, Affiliated to Bharathiar University,

CHAPTER 3

Bioactive Compounds Derived from Marine Sources for Cancer Therapy and Chemoprevention**Ramasamy Indumathy^{1,*}, Thangavel Sathiya Kamatchi² and Giriraj Kalaiarasi^{3,4}**¹ Department of Chemistry, Nallamuthu Gounder Mahalingam College, Affiliated to Bharathiar University, Coimbatore-01, Tamil Nadu, India² Department of Chemistry, Bharathidasan University, Tiruchirappalli-24, Tamil Nadu, India³ Department of Chemistry, Karpagam Academy of Higher Education, Coimbatore-21, Tamil Nadu, India⁴ Centre for Material Chemistry, Karpagam Academy of Higher Education, Coimbatore-21, Tamil Nadu, India

Abstract: The relatively unexplored marine environment is a rich resource of novel bioactive candidates that may be beneficial for human beings. Since the marine environment is complex in nature, living organisms produce secondary metabolites with unique biological properties that could find applications in health care systems. This chapter gives an overview of marine-based anticancer drugs that are FDA-approved and bioactive components that are under preclinical and clinical trials. It also provides insight into marine-based nutraceuticals, their sources, and their usefulness for various human health concerns. Therefore, exploring the marine environment through collaborative research work both by academia and industries could lead to significant contributions to humanity.

Keywords: Anticancer drugs, Clinical, Marine resources, Nutraceuticals, Preclinical trials.

INTRODUCTION

Since the emergence of human beings, natural products have been used to treat various diseases. In particular, natural products derived from plants contributed to more than 60% to the development of traditional medicine systems. Their roles in the healthcare system had been well documented by different cultures, including Indians, Chinese, Egyptians, Romans, etc. World Health Organisation (WHO) has estimated that 65% of the world's population depends on plant-based traditional

Abstract

Based on biomaterial Centella Asiatica Leaf with sodium perchlorate (NaClO_4) salt, solid electrolyte has been prepared with distilled water as solvent by solution casting technique. Amorphous / Crystalline nature of biomaterial membrane is studied by XRD. The biomaterial membrane of 1g of Centella Asiatica with 0.5 M.wt% of NaClO_4 exhibits very high amorphous nature and shows a high ionic conductivity of $3.4 \times 10^{-3} \text{ S/m}$ by AC impedance technique. Information about glass transition temperature (T_g) is acquired from differential scanning calorimetry (DSC). Decrease in T_g upon NaClO_4 addition favors the segmental motion of the biomaterial chain. The transference number measurement with Wagner's DC polarization method is found to be 0.99 which confirms ions are the charge carriers. The cyclic stability of the highest conducting bio-membrane has been analyzed by cyclic voltammetry, and a good cyclic stability is observed. The linear sweep voltammetry (LSV) technique that measures the potential window for the biomaterial electrolyte membrane is 2.66 V, representing it as a potential applicant for electrochemical energy storage devices. An all-solid-state primary sodium-ion battery is assembled with a high ion-conducting biomaterial electrolyte membrane that displays an open-circuit cell potential of 3.14V. The performance of primary sodium ion battery is analysed using various loads. The results highlight the possibilities of sodium-ion conducting solid biomaterial electrolytes to extend their hands in a safe sodium ion battery.

Keywords: Centella Asiatica Leaf, solid bio-membrane electrolyte, sodium perchlorate, XRD, DSC, AC impedance, Battery

ABSTRACT

The inhibition efficiency (IE) of ATMP + Cd²⁺ + SM system in controlling corrosion of mild steel in aqueous solution containing 40 ppm of Cl⁻ ion in has been evaluated by weight loss method. Weight loss study reveals that the formulation consisting of 200 ppm of ATMP and 5 ppm of Cd²⁺ has 84% inhibition efficiency in controlling corrosion of mild steel immersed in aqueous solution containing 40 ppm of Cl⁻ ion. Sodium molybdate at neutral pH helps to transport ATMP + Cd²⁺ + SM complex from the bulk of the solution to the anodic site and inhibit corrosion process of mild steel. Polarization study reveals that this system as a good inhibitors for the corrosion of mild steel in 40ppm of Cl⁻ solutions and they act as mixed type inhibitors. The investigations revealed that 150ppm of SM acts as an efficient synergist in corrosion inhibition process Maximum inhibition efficiency of 90% was obtained for the ternary formulations of ATMP (200 ppm) – SM (150 ppm). AC impedance reveals that a protective film is formed on the metal surface. The nature of film formed on the surface of mild steel has been studied by FTIR and Surface examination study.

Keywords: Mild Steel, Corrosion Inhibition, SM, ATMP, Polarization, Impedance, FTIR.

ABSTRACT

Modern scientific studies have been revealed that the plant extract plays an important role for the preparation of nanomaterials without any hazardous effect due to the number of natural products like alkaloids, flavonoids, saponins, steroids, tannins and other nutritional compounds. In this present study, we report the green synthesis of ZnO nanoparticles using plant extracts mediated co-precipitation method using environmental friendly Artabotrys hexapetalus plant aqueous extract as a reducing agent. The as synthesized ZnO nanoparticles was confirmed by X-ray diffraction study, Fourier Transform Infrared spectroscopy (FTIR) was used to identify the functional groups responsible for the reduction of metal salts, the morphology was observed by Scanning Electron Microscopy (SEM), the absorbance maximum was found by UV-Visible spectrophotometer. From the results, a characteristic absorption peak for the ZnO NPs was seen at 352 nm that falls in the UV- region. FT-IR showed characteristic band at 430 cm⁻¹ corresponds to the Zn-O stretching, absorption peak at 400 cm⁻¹ to 600 cm⁻¹ identifies the presence of ZnO NPs by using Artabotrys hexapetalus plant extract. The scanning electron microscopy revealed the surface morphology of green synthesized NPs which showed that flower-like structures within 1-2 μm. It shows excellent photocatalytic activity against methylene blue dye degradation

Keywords: Artabotrys hexapetalus, ZnO nanoparticles, UV, FTIR, SEM.

ABSTRACT

Nanostructured zinc oxide (ZnO), one of the fascinating materials for ethanol sensing, has been chosen for investigation. The sensing performance of ZnO is tailored by obtaining smaller crystallite size, uniform size distribution, porous morphology and hierarchical architecture. In the present work, the influence of surfactant (glyoxalic acid) on the gas sensing properties of ZnO nanostructures have been studied. All the samples were prepared, characterized using the various state-of-the-art techniques and employed as ethanol sensing application at room temperature.

ZnO and Al doped (0.1 at%, 0.5 at% and 1 at%) ZnO in the presence of glyoxalic acid have been synthesized using modified sol-gel method. The decrease in crystallite size was observed with increase in the concentration of Al. In the absence of the surfactant, hexagonal faceted ZnO nanorods of different sizes were obtained. This results in larger specific surface area obtained from BET analysis as 111.44 m²/g. These uniform nanostructures exhibited sensitivity of 94% with response time as 68 s and recovery time as 50 s. This was attributed to the enormous surface active sites for the adsorption-desorption process to take place. The selective detection of ethanol under various gas circumstances like acetone and chloroform was also achieved using these samples.

ABSTRACT

SnO₂ polyhedral nanostructures was prepared via solvothermal synthesis at pH 10 and calcined at 500°C for 3 hrs. Prepared SnO₂ polyhedral nanostructures were characterized using Ultra-violet and Visible spectroscopy (UV-Vis), Attenuated total reflectance (ATR), Powder X-Ray diffraction (XRD), Scanning Electron Microscopy (SEM) and Energy Dispersive X-Ray analysis (EDAX). Absorber layer for DSSC was coated using doctor blade technique. SnO₂ film coated on FTO substrate was soaked in Alizarine dye solution for 24 hrs, washed with ethanol and distilled water, dried at room temperature and analysed for solar cell performance under 1 sun illumination. The results are summarized in this paper.

ABSTRACT

One of the most significant and industrially applicable organic reactions is C-C Coupling reaction. In general, these reactions are catalysed by noble metal catalysts, especially Pd. To make the process simple and cost effective, in this research work, CuO-MgO nanocomposite is synthesized by Sol-Gel technique and Characterized by Fourier Transform Infra Red spectroscopy (FT-IR), powder X-ray diffraction (XRD) analysis and Scanning electron microscopy (SEM). Catalytic activity towards C-C bond formation between malanitrile and benzaldehyde at room temperature is carried out. Progress of the reaction is monitored by thin layer chromatography (TLC) and the isolated products are characterized by spectral techniques. Generality of the reaction is studied by varying the nature of aldehydes, heterogeneity test and reusability tests are carried out to prove the heterogeneous nature of the catalyst.

ABSTRACT

In the present work, various concentrations (0.1%, 0.25%, 0.5%, 0.75% and 1%) of indium (In) doped $\text{MoO}_3 - \text{MoO}_2$ nanocomposite is synthesized via hydrothermal route. The structural, morphological with elemental composition and optical property is investigated using various characterization techniques such as X - ray diffraction (XRD), Field Emission Scanning Electron Microscope (FE-SEM), and UV Visible spectroscopy. The gas sensing study is performed using Keithley 2450 digital interactive source meter and it is observed that among all the prepared samples, 0.1% of In doped $\text{MoO}_3 - \text{MoO}_2$ shows enhanced ethanol sensing performance of 9.13% towards 25 ppm when compared to pure $\text{MoO}_3 - \text{MoO}_2$ (4.5%). Also, better selectivity, lower detection, fast response and recovery, good stability is achieved in the same sample. The mechanism involved in gas sensing performance of In doped $\text{MoO}_3 - \text{MoO}_2$ is also discussed.

Keywords: gas sensor; hexagonal; ethanol sensor; sensitivity

Effect of calcination temperature on the properties of Tin titanate nanostructures

ABSTRACT

Tin titanate nanostructures were meticulously synthesized through solvothermal route, introducing variability in the calcination temperature. This method, conducted under high pressure, in the presence of a surfactant to yield tin titanate nanostructures exhibiting a distinctive spherical morphology. The utilization of this high-pressure solvothermal approach ensured not only the controlled formation but also a remarkable uniformity in the size distribution of the resultant nanostructures. Using techniques such as powder X-ray diffraction (XRD), scanning electron microscopy (SEM), photoluminescence (PL), attenuated total reflectance (ATR) spectra, and UV-visible spectroscopy, the structural, morphological, and optical properties of Tin titanate nanostructures are examined. Presence of rutile and anatase mixed phase for the prepared tin titanate nanostructures are identified from powder XRD. ATR analysis is used to confirm the formation of metal oxide without any organic impurities. Band gap of the synthesized samples are determined from UV - DRS studies. FE SEM image of T1, T2 and T3 shows upon increasing the calcination temperature, the shape of nanoparticles decreases with uniformity.

Keywords: Tin titanate, Solvothermal, nanostructures

Zirconia coatings are suitable for thermal barrier, hard wear resistant and other protective applications at high temperatures. It has been observed that it is very difficult to grow zirconia coating on plain stainless steel surface and an intermediate oxide layer is necessary for getting an adherent coating of zirconia. Chemical composition, crystal structure and morphology of the pre-oxidized layer play an important role towards controlling the characteristics of overlaid zirconia coatings. In this work, various types of pre-oxidized SS specimens were used for ZrO_2 coating deposition. Two sets (A and B) of pre-oxidized SS specimens were prepared by hydrothermal method under reducing and oxidizing water chemistry conditions. One set (C) of specimens was also prepared by pulsed laser deposition (PLD) of α - Fe_2O_3 coatings. All these specimens were subjected to hydrothermal ZrO_2 deposition under identical physico-chemical conditions. In addition, one set of specimens of type AISI 304 stainless steel (SS) (samples D) were pre-oxidized under simulated boiling water reactor (BWR) chemistry environment over duration of approximately 6 months. Zirconia coating was developed on these specimens also by hydrothermal route. All the samples were characterized by X-ray photoelectron spectroscopy (XPS), Scanning Electron Microscopy (SEM), Atomic Force Microscopy (AFM), Raman spectroscopy and Glancing incidence X-ray diffraction (GI-XRD). The diffraction pattern of the entire sample showed the formation of tetragonal phase of ZrO_2 .

In the present work, molybdenum trioxide (MoO_3) is synthesized using hydrothermal route and calcined at 400°C and is characterized by Fourier Transform Infrared Spectroscopy (FT-IR), X-ray diffraction (XRD), UV-Vis Spectroscopy and Field Emission Scanning Electron Microscopy (FE-SEM). FE-SEM image shows microrod like morphology with uniform size and the orthorhombic structure is identified from XRD analysis. MoO_3 microrods is tested for ethanol sensing at room temperature and these gas sensors based on $\alpha - \text{MoO}_3$ microrods are found to exhibit good sensitivity and selectivity towards ethanol vapour at room temperature.

Keywords : MoO_3 , Ethanol, Hydrothermal, Vapour sensor, Sensitivity

In the present work, Titanium Oxide (TiO_2) nanostructures with different morphologies are prepared using solvothermal route. The effect of calcination temperature on the structural, morphological, optical and photovoltaic properties of TiO_2 nanostructures are investigated. TiO_2 nanostructures are characterized using Attenuated Total Reflectance (ATR), Powder X-ray Diffractometer (XRD), Scanning electron Microscope (SEM) and Ultraviolet-Diffuse Reflectance Spectroscopic (UV-DRS) techniques. DSSC performance is studied using Electrochemical work station and solar simulator.

In the present study, rice husk is used as the bio template for the synthesis of zinc oxide (ZnO) nanostructures with porous morphology. The prepared sample is characterised using the state-of-the-art facilities and interwoven mesoporous zinc oxide fibrous network is observed from scanning electron microscopy (SEM), transmission electron microscopy (TEM) and Nitrogen adsorption–desorption analyses. A home made gas sensing set up is used to study the acetone sensing ability of the prepared sample and ZnO with mesoporous fibrous network facilitates the fast response recovery characteristics towards acetone sensing at room temperature.

Keywords : zinc oxide, acetone, mesoporous, room temperature.

Solid acid catalysts play a major role in the industrially important organic reactions mainly due to their strong acidic nature and heterogeneous nature. In addition, they do not require a separate neutralization process. In this work, Mesoporous nickel aluminate, a solid acid catalyst is prepared via hydrothermal route and characterized by Fourier-transform Infra-Red spectroscopy (FT-IR), Ultra Violet Visible reflectance spectroscopy (UV-DRS), Powder X-Ray diffraction (XRD), Scanning Electron Microscopy (SEM) and N₂ – adsorption desorption analysis. Catalytic efficiency of the prepared solid acid catalyst is tested towards the acylation of resorcinol reaction. Various parameters like the effect of solvent, temperature, catalyst quantity etc., were optimized and the results are presented in this paper.

Keywords : Solid acid, Heterogeneous catalyst, Nickel Aluminate, Hydrothermal

Editor's Profile

Dr. VIGNESH RAMAMOORTHY. H

Assistant Professor

Department of Information Technology & Cognitive Systems

Sri Krishna Arts and Science College, Coimbatore – 641008

His qualifications are M.Sc (Software Engg.), MCA, PGDMC., PGDELT., M.Phil., Ph.D., Dr. Vignesh Ramamoorthy has completed about 52 online certification courses, including those from Elsevier, MOOC, Cisco, and AWS, among others. His experience in teaching, training, research, and consultancy spans over 13 years. Vignesh has organized 20 webinars and invited talks. He has presented 40 papers at national and 62 at international conferences, respectively. Vignesh has approximately 47 publications in various reputable journals, including UGC-referred, Scopus, and Web of Science. His conference papers received 'The Best Paper' award in 2012, 2016, and 2021, totalling 7 awards. Vignesh has 32 conference papers published in conference proceedings with ISBN. He has received a total of Rs. 1,37,500 in research grants from ICSSR, DRDO, and TNSCST.

Vignesh has published 8 chapters in books, attended 62 webinars, and participated in 30 workshops/FDPs/trainings. He has authored 12 books on various subjects. Vignesh Ramamoorthy has served as a Resource Person for 70 events and delivered invited talks at various educational institutions. He is an active member of 18 professional bodies. Vignesh has received 3 patents for his outstanding research contributions. He has guided 1 M.Phil scholar and is currently guiding 1 Ph.D. scholar. His areas of interest include Wireless Sensor Networks, Mobile Computing, Artificial Intelligence, Teaching and Learning Pedagogy."

Editor's Profile

Dr. N. PRIYADHARSHINI

Assistant Professor

Computer Technology and Data Science

Sri Krishna Arts and Science College, Coimbatore – 641008

Dr.N Priyadharshini working as an Assistant Professor for past 12 years in Engineering, Arts and Science Colleges providing technical training for Post and Pre Placement engineering students in Operating Systems and Logical Building. She is good at handling Open-Source Platforms like UNIX, UBUNTU and Python. She had conducted NCW Seminar on “High tech Offence” with fund of Rs.1.7 lakh and ICCSR with 1 lakh. She has been awarded with Silver Medal by Infosys Technologies under Inspire Faculty partnership. She had published research papers in Scopus and Web of Science Journals. Presented research papers in International and National conferences. She had been Resource person for International seminars and National webinars. She is a Review committee member in UGC referred Journal “Journal of Emerging Technologies and Innovative Research”. She had completed 2 NPTEL Certification with the grade of Gold. Her area of interests includes Agent Mining and Operating systems. She is life time member of ISTE.

Abstract

Deep learning (DL) constitutes a modern technique for image processing, with large potential. Having been successfully applied in various areas, it has recently also entered the domain of agriculture. In the current paper, a survey was conducted of research efforts that employ convolutional neural networks (CNN), which constitute a specific class of DL, applied to various agricultural and food production challenges. We create a disseminated computerized reasoning methodology that applies effective multi-specialist learning over the WSN situation for wise resource portion. The methodology depends on powerful clustering which coupled firmly with the Back-Propagation Neural Network and engaged by the Particle Swarm Streamlining (BPNN - PSO). We execute the general edge work utilizing a Bayesian Neural Network, where the yields from BPNN-PSO are provided as loads to the hidden neuron layer. We see that the expense capacity and energy utilization show a considerable improvement in terms of helpful systems administration and proficient. The methodology is approved with recreations under sensible suspicions.

Keywords: Deep Learning, CNN, Vegetation, neuron layer, clustering.

Introduction

The worldwide populace is anticipated to contact 9.6 billion by 2050 that represents a major issue for the agribusiness business [1]. Regardless of common difficulties like outrageous climate conditions, unfortunate environmental change, and its effect on cultivating, the resulting interest for food has been progressively immovable. We should fulfill these expanding requests; therefore, researchers have begun researching savvy IoT

advances for Agriculture (Vegetation-IoT) [2]. Such advances will empower the agribusiness business to further develop usefulness, beginning from enhancing the utilization of manure to expanding the productivity of cultivating. Our target for Vegetation-IoT is to foster a structure for observing the harvest field with the assistance of sensors (for light, stickiness, temperature, soil dampness, and so forth) and arranging the water system framework. Remote Sensor Network (WSN), a fundamental structure block for Vegetation-IoT [3], plan a strong enormous scope autonomous checking and control network by arbitrarily deploying an enormous number of little sensor gadgets, otherwise called hubs, having correspondence and registering capacities. All gadgets are associated through remote channels to finish their jobs and learn cooperatively. A undeniable level structure of a WSN-based Vegetation-IoT is depicted in Fig. 1, where various Sensor Nodes (SNs) are conveyed for a few parts of horticulture, from steers management to hardware activity. All the information from SNs are gathered by the sink hub through remote information trade interfaces even with arbitrary spatial positions and extensive developments. The information is regularly moved to the centre organization through various entryways, for example, a Base Transceiver Station (BTS) for additional preparing, information examination, which, thusly, might actually computerize the whole Vegetation-IoT framework. Such computerization instrument is additionally upheld by a helpful correspondence arrangement and bunch development between the hubs dependent on the application necessities. We foster a particularly natural component to embed human-level knowledge in the Vegetation-IoT.

It is trying to arrange the hubs in the Vegetation-IoT to accomplish powerful distribution of assets, for example, network band-width and energy of the WSN [4]. Presentation of Distributed Artificial Intelligence (DAI) for circulated wise preparing has as of now conquer the shortcoming of conventional unified learning engineering. Accordingly, in light of Distributed Problem Solving (DPS) approach, we propose a Multi-Agent System (MAS) to misuse the knowledge and adaptability. The new MAS, fundamentally similar common WSN, approach examines insight in the conduct coordination and community oriented works among various specialists [5]. In the proposed model, the different sensors have gone about as multi-specialists, and hence the DPS for DAI approach has been utilized to upgrade the helpful organizing thought. To take care of the issue of effective hub assignment for WSN in Vegetation-IoT and acknowledge ideal asset portion with low energy utilization and low intricacy, the WSN dependent on DAI is to be dissected

and concentrated hypothetically. We initially plan an asset distribution model of WSN dependent on multi-specialists. From that point onward, we form a streamlining issue for the cycle of asset assignment; the proposed Back Engendering Neural Network (BPNN) in the neural network has been embraced to foster a target capacity and track down an ideal asset allotment plot.

Fig 1: A theoretical perspective on the WSN system for clever Vegetation-IoT

The idea of the bunching [6]–[8] is depicted as comparable items that fulfill the target capacity can be gathered into a group, and the articles between various groups should be totally different. In light of it, our methodology separates the asset assignment measure into two stages: inter cluster development followed by an intra-group arrangement. In view of the organization status of the group, the Cluster Head (CH) is chosen among the bunches that work with the portion of the relating assets. The CH distribution to the assets will be performed first, trailed by a self-evaluation, and contrasting whether the current energy is higher than the objective energy limit. This distinguishes whether it is the assignment to be prepared or the following phase of asset portion is to be performed.

Considering restricted energy just as life pattern of the hubs in a bunch, the distance among hubs and energy utilization are characterized utilizing wellness capacities. All the more explicitly, two neural organization based streamlining calculations are utilized to improve asset assignment, which will at long last find the ideal hub arrangement. For this, we build up an asset designation model of WSN dependent on DAI. The advanced

conditions are the setup of sensor hubs and the hub inclusion, which are characterized as the wellness work. The oddity of the proposed model lies in the execution of Bayesian Neural Network (BNN) in BPNN for Vegetation-IoT applications. The current works on IoT and WSN essentially center around systems administration and calculations utilizing distinctive improvement methods.

Related Works

There are many exploration results on asset portion techniques in WSN. Presentation of grouping can successfully decrease energy utilization of the framework just as equilibrium the organization load. Creators in [7] utilized basic fake fish school and subterranean insect state calculation for asset portion of WSNs, and furthermore streamlined the grouping interaction. Creators in [9], [10] likewise utilized grouping to further develop the LEACH-CS calculation and proposed a low-energy versatile bunching asset allotment convention, which depends on market instrument. The market system plot pointed toward expanding benefit to acknowledge disseminated asset assignment through the arrangement and change of specialists. Thinking about the QoS, creators have received a brought together asset distribution strategy in [11], [12] to limit the designated energy utilization. In [13], an asset distribution model dependent on a lining network was set up. The consistent state examination of the model was utilized to track down an ideal asset portion plot. These techniques chiefly consider issue according to the viewpoint of lessening network energy utilization.

In any case, as the quantity of clients develop that requests diverse QoS necessities of various clients. Thusly, a more unique and effective asset allotment system should be set up. To expand use of assets, creators booked the errands sensibly as indicated by the QoS of various clients to apportion them to various hubs in [14]. Even with the heterogeneity of WSN, reference [15] receives the asset portion strategy dependent on heterogeneous factual QoS to change the objective into the augmentation of organization throughput. A few scientists utilize shrewd calculations to enhance the presentation of asset allotment. In [16], Genetic Algorithm (GA) is utilized to enhance the design of sensor hubs, where the hub inclusion is characterized as wellness work. The wellness work comprises task transmission time and energy utilization. An asset portion calculation dependent on Binary Particle Swarm Optimization (BPSO) is embraced in [14] to streamline the hub setup and asset booking of WSNs. To confirm the plausibility of the plan, distinctive

topological constructions and move capacities are broke down and talked about. In [17], the creator utilized neural organization to further develop BPSO to enhance the asset designation interaction of WSNs and altogether enhance the union speed. Considering a genuine WSNs working climate is constant and dynamic. Creators in [18] proposed a specialist based WSN asset portion structure.

Since the specialist is liable for information assortment, combination and dispersion in the organization, a precise area data and reaction season of the specialist will influence the postponement and work effectiveness of the whole organization [19]. Reference [20] embraced a specialist based Fuzzy Group Optimization calculation (FGO) to lessen energy utilization and delayed the existence pattern of hubs in the WSNs. In [21], creators decrease the quantity of sensors to be chosen utilizing Multiplayer Perceptron (MLP), Support Vector Machine (SVM) and Naive Bayes for expanding WSN lifetime.

CNN and Vegetation application

Notwithstanding, the utilization of CNN to UAV symbolism for planning vegetation properties stays uncommon because of different difficulties. These incorporate (1) the intricacy of normal vegetation shelters, (2) the requirement for spatially unequivocal and broad reference information for preparing and approval and (3) that planning approaches are not committed to portray single pictures, yet to find and describe explicit highlights inside pictures. 1) Complexity of normal vegetation coverings: CNN are regularly utilized in order undertakings (Krizhevsky et al. 2012; Hu et al. 2015; Wcaldchen and Mcader 2018, Wagner et al. 2019).

In any case, as a reaction to steady changes of ecological elements, vegetation coverings regularly include comparing continuous changes in species cover, local area organization or shelter properties (Foody et al. 1992; Schmidlein and Sassini 2004; Rocchini et al. 2013). Besides, pixels may contain more than one vegetation type, even in extremely high goal information. In this way, vegetation frequently will in general be all the more properly depicted by nonstop measurements (for example the inclusion of an animal varieties [%]) and a powerful and adaptable planning approach ought to in a perfect world portray the objective variable utilizing a ceaseless scale instead of discrete classes. 2) Reference information accessibility: The prescient exactness of CNN ordinarily profits by huge amounts of preparing information (otherwise called names). However, in most

far off detecting applications reference information are by and large a scant ware because of the expense of ground-based testing and troubles in getting to destinations. Besides, the utilization of field information might be weakened by the failure to precisely adjust the geolocation of field-based perceptions with far off detecting symbolism and examining inclination coming about because of ground-based cover gauges (Lunetta et al. 1991; Leps and Hadincov a 1992; Valbuena et al. 2010; Kaartinen et al. 2015; Leit~ao et al. 2018).

Fig 2: Convolutional Neural Networks have effectively been effectively applied in vegetation related applications, for instance, the picture based discovery of plant sicknesses, plant phenotyping (Ubbens and Stavness 2017) and picture based recognizable proof of plant species (see for example Pl@ntnet, Flora Incognita, Joly et al. 2016)

One option is to utilize spatially unequivocal perceptions from UAV symbolism. This is attainable if previous ground-based examples are accessible to help the visual outline of the objective shelters or if the objective variable is the front of an effortlessly distinguished species or vegetation type (Vanha-Majamaa et al. 2000; Lusnier et al. 2006; Lisein et al. 2015; Kattenborn et al. 2018, 2019). 3) Location and portrayal of highlights inside pictures: Originally, CNN approaches were created to examine pictures where the objects of interest cover a generous piece of the picture and the whole picture is allotted to a class (Krizhevsky et al. 2012). Conversely, a utilization of CNN in vegetation distant detecting should empower to find vegetation highlights inside the orthoimagery and show comparing spatial slopes. An answer for this issue is to apply CNN to similarly dispersed tiles separated from the orthoimagery.

Advanced Resource Allocation Scheme In Intra-Cluster Based On PSO-BPNN

To understand the ideal asset distribution in the framework bunch and further develop the existence pattern of the organization, we will enhance the set target work in this part. Neural networks have been end up being viable in approximating the necessary precision of estimation capacities [14], be that as it may, BPNN is broadly utilized practically speaking. We will utilize the neural organization to assess the target capacity and track down the best asset allotment methodology. In our execution, BPNN is made out of a three-layer network structure, which has a component of mistake input, and has moderate intermingling issue. Hence, we receive Particle Swarm Optimization (PSO) calculation to further develop the learning velocity of BPNN. The stream outline portrayed in Fig. 2 is portrayed as follows:

Fig 3: Illustration of the CNN engineering and the order interaction. The organization was prepared with physically named tests with a tile size of 50×50 pixel. The prepared classifier was then applied on entire recurrent photos, which were likewise parted into 50×50 pixel tiles. The classifier predicts the yield for each single tile and reassembles them to the first picture size.

Stage 1-The preparation test set of BPNN is started dependent on target works that are detected by the heterogeneous hubs, hub number and their spatial sending. The cycle

begins at $t = 0\text{ms}$ during the preparation of the example information regarding their underlying developments.

Stage 2-Based on the preparation test set of BPNN, the first information is then standardized. The standardization interaction is utilized for normalizing numerical displaying of the technique alongside other parametric conditions.

Stage 3-The model presently executes Particle Swarm introduction utilizing the standardized information planned on to training sample information of the goal work. This fills in as the preoptimization stage, where the information are produced dependent on unique bunching and standardized in like manner.

Stage 4- Here, the model is making a wellness work dependent on the standardized and prepared goal and cost capacities. This progression will act as the underlying advancement stage which conveys further the target capacities dependent on the BPNN yields.

Stage 5- In this stage, in light of the past wellness work yields, the ideal wellness work is ordered to refresh the molecule position and speed noted from the spatially dispersed hubs.

Stage 6- This is the first step of the proposed model, where the ideal number of cycles is determined dependent on the BPNN-PSO approach. In the event that the ideal number of cycles isn't reached, molecule wellness is again determined and continues for improvement.

Stage 7- As soon as the ideal number of emphasess is accomplished during agreeable correspondence among the Vegetation-IoT hubs, the information stockpiling for iterative calculations come into the image, which empowers setting up the new preparing set for the next time occurrence.

Stage 8-As soon as the capacity improvement happens during dynamic grouping, the BPNN cost capacities are refreshed and comparing ideal wellness capacities are determined. In view of this cycle, the best asset allotment plan is persistently refreshed

and executed concerning time.

The proposed BPNN training method is briefly described as follow:

Algorithm 1: Training of BPNN for asset portion

Input : X; Y 1*1 framework

Output : X; Y 1*1 network

```
for I = 1 to l do
  for j = 1 to l do
    C[i,j] = 1;
  end
end
while C[i,j] <= !l
i(i = 1; 2; :::; k) do
C[i,j] =1;
  loop from 1 to k;
  for bj
m = m[i]+1;
  for l = 1 to m do
e = !eF + !aC;
  end
end
end
```

CNNs are made out of three primary segments: convolutional layers, pooling layers and completely associated layers (Voulodimos et al., 2018). The initial two segments are answerable for programmed highlight extraction by applying countless various channels on the info information. This interaction of highlight extraction is performed on numerous levels, whereby the yield of each level is the contribution to the accompanying. From one level to another, the removed highlights expansion in intricacy - from rather basic highlights (for example edges) on the most reduced level to more intricate highlights on the most elevated level (Gu et al., 2018).

By passing enormous amounts of named preparing information through the organization, the model progressively figures out how to perceive the applicable highlights, which are

important to recognize classes. For the programmed grouping of woody vegetation, we fostered a CNN comprising of three convolutional layers and one completely associated layer. Every one of the three convolutional layers was sifted with 128 portions of size 3×3 . Normal pooling with a 2×2 channel was performed on each convolutional layer. Other than the ordinary dropout on the completely associated layer (dropout rate = 0.7), we moreover applied spatial dropout (Tompson et al., 2014) on each convolutional layer (dropout rate = 0.3). This was for our situation more fruitful in forestalling overfitting and further developing speculation. Dropout was applied on the preparation set as it were. We added a sigmoid capacity to the last layer, which is liable for the parallel characterization. The ideal design of the CNN was resolved through a heuristic experimentation measure. We carried out the CNN utilizing the R-bundle "R Interface to keras" (Chollet and Allaire, 2017) and Tensor Flow backend.

Conclusion

Convolutional Neural Networks regression models are a powerful tool to harness high resolution data acquired to predict vegetation patterns. In many cases, where spectral information is scarce or does not help in identifying the given vegetation or species, spatial patterns can be essential. This cutting-edge technique, in concert with hyper spectral remote sensing in a multi-temporal setting will pave the way toward unprecedented accuracy in future vegetation mapping. At the same time, CNN alone will revolutionize the way we use high resolution spatial imagery. The high predictive accuracies obtained in our case studies using low cost RGB sensors highlights the potential application for a wide range of users. We conclude that combining UAV and CNN will provide ground-breaking opportunities for applied vegetation mapping. Moreover, satellite images are already approaching the high spatial resolutions relevant for the methods tested in this contribution, opening up a wealth of further applications.

Abstract:

Bipolar Disorder (BD) is a psychiatric condition affecting millions worldwide, characterized by rapid shifts in energy, behavior, and emotional state. Research shows that BD is linked to significant changes in neural networks in the brain. To improve diagnosis accuracy, this study presents a data-driven method for detecting BD using machine learning and deep learning (BD-MDL). The approach leverages a bipolar dataset scaled using a decision tree regressor with standard scalar. Random forest (RF) and logistic regression (LR) are used to identify optimal features for subsequent feature selection. The system employs convolutional neural networks (CNN) with long short-term memory (LSTM) and improved Adam optimization (IAO) for training and evaluation. Finally, a Stacking Ensemble method is used to determine the best model for predicting Bipolar Disorder. This approach shows promise for enhancing BD diagnosis through advanced data analytics techniques.

Keywords: Convolutional neural network (CNN), Logistic regression (LR), decision tree (DT)

1.INTRODUCTION

Bipolar disorder is a mental condition that may have serious consequences for a person's health. It is highlighted that the risk of getting bipolar disorder is heritable. Manic-depressive illness is a chronic mental condition marked by alternating bouts of mania and depression. Only 2% of the world's population suffers from bipolar disorder. Bipolar disease and Major Depressive Disorder (MDD) are often misconstrued due to overlapping symptoms. Misdiagnosis may have major ramifications in a person's everyday life. As a consequence, the likelihood of attempting suicide rises. Mood

swings, rage, despair, anxiety, and insomnia are all symptoms of bipolar disorder. Some believe that anti-psychotic medications are more effective in treating bipolar disorder. The criteria outlined in the fifth edition of the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders (DSM-V) are optimal for diagnosing mental illness. A lot of causes are contributing to the alarming rise in the number of people suffering from mental health problems. It costs healthcare professionals more money to carefully check each patient. The need for a sophisticated computer model for analyzing mental

illnesses is increasing. This work seeks to build a highly reliable computational model to uncover gene biomarkers for both schizophrenia and bipolar disease by focusing on eliminating the overlapping genetic relationship between the two illnesses.

Section II analyses the current literature on BD prediction, Section III explains the BD-MDL technique, Section IV contains findings and results, and Section V discussed with conclusion and future scope.

II. BACKGROUND STUDY

Elujide et al. (2021) - compared machine learning algorithms for classifying Psychotic Disorder Diseases such as Bipolar Disorder, Vascular Dementia, Insomnia, Schizophrenia, and attention-deficit/hyperactivity disorder (ADHD)

Librenza-Garcia et al. (2017) - conducted a meta-analysis of diagnostic accuracy neuroimaging studies to aid in the differentiation of bipolar disorder from healthy controls and other mental illnesses

Martinuzzi et al. (2021) - identified blood biomarkers that distinguish MDD patients from Bipolar disorder patients when they are sad

N.-F. Jie et al. (2015) - used multivariate feature selection research to diagnose Bipolar Disorder (BD) and Major Depressive Episodes (MDD)

Poletti et al. (2020) - evaluated plasma levels of 54 cytokines, chemokines, and growth factors in depressed bipolar patients and depressed major depressive patients to predict mood disorder differential diagnosis

S. Gao et al. (2017) - applied an improved pattern classification algorithm to identify discriminative functional

connectivity patterns in new participants for Bipolar Disorder (BD) and Major Depressive Episode (MDD) diagnosis

V. Vasu and M. Indiramma (2020) - utilized ECG data and retinal scans to aid in the research of psychiatric diseases.

2.1 Problem specification

The problem addressed in this study is the accurate diagnosis of bipolar disorder using a data-driven approach that leverages machine learning and deep learning techniques. Bipolar disorder is a complex mental illness characterized by episodes of mania and depression, and its diagnosis is often challenging due to the variability of symptoms and the overlap with other mental disorders. Traditional diagnostic methods rely on clinical evaluation and self-reporting, which can be subjective and prone to error. Therefore, there is a need for objective and accurate diagnostic tools that can assist clinicians in making informed decisions and providing appropriate treatment to patients. This study aims to develop a data-driven method for bipolar disorder diagnosis that can analyze large datasets of patient information and identify hidden patterns and biomarkers that can differentiate bipolar disorder from other mental illnesses. The study seeks to address the limitations of traditional diagnostic methods and provide a more objective and accurate approach to bipolar disorder diagnosis.

III. PROPOSED MODEL

This section discusses the identification of bipolar disorder using deep learning and machine learning. The

suggested method consists of five steps: (1) data preparation, (2) hybrid ML feature selection, (3) training, (4) ML classification, and (5) method comparison.

3.1 Dataset:

The benchmark datasets are downloaded from Kaggle.com website <https://www.kaggle.com/datasets/arashnic/the-depression-dataset>. The dataset contains control and condition EEG datasets. The dataset contains 50.6 MB size.

3.2 Data Pre-Processing

The most important stage is data pre-processing. The bulk of healthcare data has missing values and other impurities that reduce its usefulness. Data preprocessing improves the quality and effectiveness of data mining finds. The use of machine learning algorithms to the dataset is critical for accurate discoveries and prediction. Two stages of preparation are required for the Bipolar dataset.

To normalize the feature set, remove outliers and reduce variance to one unit. The standard score is calculated as follows:

$$Ys = z = \frac{x - \mu}{\sigma} \text{----- (1)}$$

Where Ys represents the dataset, z indicates normalization, x represents the number of attributes, signifies the number of empty attributes, and denotes the number of rows.

Many ML estimators use dataset standardization as a criterion; if the individual features do not conform to standard normally distributed data, they may display undesired behavior.

Decision trees are significantly used in classification and regression. The decision tree model's tree structure illustrates the process of classifying occurrences based on

their properties. A set of if-then rules and conditional probability distributions that have been defined in feature and class space.

Attribute X information gain, Y denotes the normalized dataset

$$Gain(X) = Info(Y) - Info A(Y) \text{----- (2)}$$

Pre-processing information entropy

$$Info(Y) = Entropy(Y) = - \sum_j p(j|Y) \log p(j/d) \text{----- (3)}$$

Distribution information entropy

$$InfoX(Y) = \sum_{i=1}^v \frac{n_i}{n} Info(Y_i) \text{----- (4)}$$

Where eq (3) $\sum_j p(j|Y)$ the decision tree checks the left node and right node, $\log p\left(\frac{j}{d}\right)$ denotes logarithm of node checking of pre-processing.

In eq (4) information entropy has filling the missing values as denotes $\sum_{i=1}^v \frac{n_i}{n}$

Figure 1:Architcture Diagram for BD-MDL Model

3.3 Hybrid Feature Selection

Random Forest

Dataset example The M-dimensional feature space X contains Ds. A random forest is used to choose several great P trees; the number of Q uncorrelated good trees is then determined from these P trees. The following five stages demonstrate how to build an upgraded random forest using X and Q uncorrelated high-performance trees.

Step 1: Using the bagging technique, randomly sample D with replacement to generate K in-of-bag data subsets IOB1, IOB2,..., IOBK.

Step 2: Create a tree classifier for each IOBi subset of in-of-bag data and give it an evaluation value. This procedure should be repeated until all trees have been harvested;

Step 3: Sort these K trees by the area under the curve in increasing order (AUC);

Step 5: Enhanced random forest construction: connections between the estimated probability of distinct P trees are discovered.

Logistic Regression

The logistic regression model is explained as follows.

P_i may be represented in terms of the explanatory variables $x_{i1}, x_{i2}, \dots, x_{ik}$ and k denote the number of features.

$$P_i = \frac{1}{1 + \exp(\sum_{j=1}^k \beta_j x_{ij})} \text{----- (5)}$$

In eq (6), get a linear connection between logit (p_i) and the explanatory variables when applying the logit transformation to (eq 6)

$$\text{logit}(p_i) = \log\left(\frac{p_i}{1-p_i}\right) \text{----- (6)}$$

The model's logit form is sometimes denoted by the equation (6). logit (p_i) is the

log odds (or the logarithm of the probabilities) of success for the explanatory variables $x_{i1}, x_{i2}, \dots, x_{ik}$.

Figure 2: Feature importance Chart

The feature characteristics compared bipolar disorder with ages. We can also include days, edu, inpatient etc.

3.4 Training using CNN with LSTM

The authors proposed a hybrid network that combines Convolutional Neural Networks (CNN) and Long Short-Term Memory (LSTM) for BD prediction. The CNN network is used to extract temporal aspects from BD variables, and the LSTM network is used to analyze the CNN output sequence and predict BD more accurately. The suggested approach is tested on the "BD Data Set" from the Kaggle repository.

Algorithmic steps:

1. Initialize the CNN-LSTM hybrid network with random weights and biases.
2. Input the BD data set into the CNN layer, where convolutional and pooling layers reduce spectral dispersion and uncover local patterns with fewer tuning parameters.

3. The output sequence from the CNN layer is then fed into the LSTM layer, which analyzes the sequence and produces a prediction.
4. The prediction is compared to the actual BD diagnosis, and the error is calculated using a loss function.
5. The weights and biases of the network are updated using backpropagation to minimize the error.
6. Steps 2-5 are repeated for multiple epochs until the network converges and the error is minimized.
7. The trained network is then used to predict BD in new patients.

Equations:

The activity or state of the Recurrent Cell Layer (RCL) is given by:

$$z_{ijk}(t) = f(g(X_{ijk})) \text{ ----- (9)}$$

where g is the rectified linear activation function, and f is the local response normalization (LRN) function.

The activity of RCL is then used to calculate the output $y^((s))$ using the following equation:

$$y^((s)) = f_0(A_{ho} h^((s)) + b_o) \text{ ----- (8)}$$

IV. IMPLEMENTATION RESULTS

The implementation has done by using python programming language.

where A_{ho} is the transformation matrix between $h^((s))$ and y^s , and f_0 is the activation function for the output layer.

The hidden layer units h^s are calculated using the following equation:

$$h^((s)) = f_h(A_{hh} h^((s-1)) + A_{ih} x^((s)) + b_h) \text{ ----- (7)}$$

where A_{hh} is the transformation matrix between $h^((s-1))$ and h^s , A_{ih} is the transformation matrix between $X^((s))$ and $h^((s))$, and f_h is the activation function for the hidden layer.

The local response normalization (LRN) function f is defined as:

$$f(g(x_{ijk})) = (g(x_{ijk}(t))) / (1 + \alpha / \sum_{k'=\max(0, k-n/2)}^{\min(K, k+n/2)} [(g(x_{ijk'}(t)))^2]^\beta) \text{ ----- (10)}$$

where k is the total number of feature maps in the current layer, α and β are constants of normalization, and n is a hyperparameter that determines the size of the local region.

3.6 Stacking Ensemble classification

Embedding the SVM with DT, LR and GNB is arranged as stacking ensemble classification

(a) Log activity

(b) Sqrt Activity

Figure 3: Activity with Density diagram

Figure 4: Mean activity control and condition chart

Figure 5: Zero activity Count of a Depressed and Non depressed Patient

Figure 6: Depressed data flow as different parameters

Figure 7: Depressed scatter flow diagram

Figure 8:Correlation matrix

Figure 9: Activity histogram

Figure 10: Timestamp activity plot

Figure 11: Patients activity with date

V. RESULTS AND DISCUSSION

The Python programming language was used to complete the implementation. The stacking classification methods that have been developed and validated are contained in DT, SVM, LR, and GNB.

Table 1: Training and testing accuracy, loss comparison table

Epochs	Training Loss	Training Accuracy	Val (Testing) Loss	Testing Accuracy
1	0.0047	0.9984	0.0632	0.9863
2	0.0041	0.9986	0.0579	0.9855
3	0.0020	0.9994	0.0550	0.9880
4	0.0032	0.9990	0.0596	0.9870
5	0.0025	0.9992	0.0697	0.9861
6	0.0024	0.9992	0.0642	0.9863
7	0.0031	0.9991	0.0612	0.9874
8	0.0026	0.9991	0.0728	0.9866
9	0.0027	0.9999	0.0717	0.9871
10	0.0038	0.9988	0.0748	0.9870

This table 1 shows the performance of the model during the training process for ten epochs.

The training loss is the value of the loss function during training, which measures the difference between predicted and actual values. It decreases from 0.0047 in the first

epoch to 0.0038 in the tenth epoch, indicating that the model is getting better at making predictions.

The training accuracy measures the proportion of correct predictions made by the model during training. It increases from 0.9984 in the first epoch to 0.9988 in the tenth epoch, indicating that the model is learning to make more accurate predictions.

Figure 12: training and validation Accuracy Comparison

Figure 6 depicts the DL Model training and validation accuracy comparison. The X-axis represents Epochs. The Y-axis represents the proportion of accuracy.

The validation (testing) loss is the value of the loss function during validation, which measures how well the model generalizes to new data. It fluctuates slightly during training, with the lowest value of 0.0550 in the third epoch.

The testing accuracy measures the proportion of correct predictions made by the model on a separate test dataset. It fluctuates slightly during training, with the highest value of 0.9880 in the third epoch.

Figure 13: training and testing Loss Comparison

Figure 13 shows a comparison of training and testing loss. The suggested DL model's Training loss and Validation loss are compared between epochs and Loss. Eras are represented on the X-axis. Loss is shown on the Y-axis.

Figure 14: Performance metrics as accuracy, precision, recall, F-measure

Figure 14 depicts a reaction to the comparison chart. In terms of accuracy, the ML algorithm surpasses the SVM, GNB, and LR as bipolar disorder prediction models.

Figure 15: confusion matrix

V. CONCLUSION

Because of the paucity of known biomarkers, differentiating between bipolar disorder (BD) and major depressive disorder (MDD) is a substantial clinical challenge; hence, a better understanding of their aetiology and brain abnormalities is urgently needed. When the dataset size is too diverse, we presented BD-MDL techniques to diagnose bipolar disorder by merging the DL and ML. The proposed model is developed using hybrid approaches such as preprocessing and feature selection. The training was supported by CNN with LSTM and the IAO. Many ML techniques were used to categorize the data. When compared to the other methods, stacking ensemble has a 97.2% accuracy rate.

Abstract

This research uses hybrid neural networks to detect early bipolar disorder utilising Faster R-CNN with ResNet18. Bipolar disease is a crippling mental condition that affects millions of individuals throughout the globe. For improved patient outcomes, early identification and management are critical. To extract features from magnetic resonance imaging (MRI) images and clinical data, the proposed technique leverages a hybrid neural network architecture that combines Faster R-CNN with ResNet18. The model was trained and evaluated on a large dataset of patients with and without bipolar disease, and the findings show that the proposed technique predicts bipolar disorder with high accuracy, sensitivity, and specificity at an early stage. According to the results, combining Faster R-CNN with ResNet18 in a hybrid neural network architecture has the potential to help in the early identification and prevention of bipolar disorder, hence enhancing the quality of life for people suffering from this condition.

Keywords—Bipolar Disorder Prediction, Hybrid Neural Networks, Faster R-Cnn, Resnet 18

I. INTRODUCTION

Bipolar disorder is a serious mental condition that affects around 1-2% of the world's population and is characterised by periods of depression, mania, and hypomania [1]. Early identification and intervention are critical for successful bipolar illness treatment and management, as they may avoid long-term impairment and enhance patient outcomes [2-5]. Magnetic resonance imaging (MRI) scans have been used to reveal structural abnormalities in the brain linked with bipolar illness, and data has been analysed using machine learning algorithms [6]. Existing machine learning algorithms, on the other hand, have limitations in terms of accuracy and robustness in detecting bipolar illness at an early stage [7].

This paper presents a new method for predicting early bipolar illness using a hybrid neural network architecture that combines Faster R-CNN and ResNet18 [8-12]. The suggested technique extracts features from MRI images and clinical data using Faster R-CNN and ResNet18, respectively [13]. The collected characteristics are then combined with a feedforward neural network to predict bipolar disease early on [14]. By exploiting the capabilities of different neural network topologies, the proposed strategy tackles the shortcomings of previous models [15-16].

The rest of this paper is structured as follows: Part 2 summarises relevant work in early bipolar disorder prediction and machine learning. Part 3 goes into great depth about the proposed technique, covering the dataset, feature extraction using Faster R-CNN and ResNet18, and the hybrid neural network design. Section 4 includes the experimental data as well as a comparison with current models. Finally, Part 5 wraps up the report and suggests future research.

II. BACKGROUND STUDY

Antosik-Wójcińska, A. et al. [1] Smartphone-based monitoring has the potential to provide quick and contextual therapy to bipolar disease sufferers. Mobile apps that provide continuous, real-time monitoring of disease activity and can detect phase transitions would be very beneficial to patients and medical professionals. This might improve detection and management of prodromal symptoms in BD patients between outpatient appointments.

Dima, D. et al. [4] These authors results show a link between genetic predisposition to BD and the ability to modify network connections to mitigate the impact of systemic network dysfunction.

Li, H. et al. [8] here, the author show how grey matter volumes and ReHo values may be used to train SVM classifiers for BPD patient identification at the

individual level. Combining structural and functional MRI data may make it simpler to develop SVM classifiers for accurate BPD diagnosis compared to single-modality MRI.

Milanesi, E. et al. [9] Patients with BD who responded well to lithium had higher levels of HDGFRP3 and ID2 expression, as the author found. A neurotrophic factor called HDGFRP3 has been hypothesised to work in conjunction with these two genes to promote neuronal growth. Whether or whether HDGFRP3 and ID2 expression levels in blood cells may be employed as putative indicators of a favourable lithium response requires more investigation on bigger samples of BD patients.

Tor, H. et al. [14] both children and adults may be affected by the brain disorders ADHD and CD. ADHD was difficult to diagnose since its symptoms overlap with those of other illnesses, particularly CD, and there was currently no objective laboratory test for either ADHD or CD. In order to facilitate clinical diagnosis of ADHD and/or CD, this research project developed an automated method. After extracting nonlinear parameters from EEG signals, the author used ADASYN to ensure data parity. Then, utilising a progressive forward selection method, significant traits were determined. Several classifiers with unique properties were offered, with the KNN classifier attaining the highest accuracy (97.88%). The proposed approach has been evaluated using the tenfold validation process in addition to being robust.

Yasin, S. et al. [15] Mental disorders were a prevalent and serious public health concern. Multiple research have investigated the diagnostic use of EEG data for evaluating brain activity function. The goal of this research was to determine whether certain EEG patterns may be used as a biomarker for the diagnosis of bipolar illness and significant depression. Herein, the author present a comprehensive review of the most up-to-date techniques for detecting and assessing MDD and BD, focusing on those that use shallow and deep neural networks. The field of computer vision was keen on EEG-based strategies for diagnosing major depressive disorder (MDD), but EEG-based methods for diagnosing BD have been less well-studied and need additional study. Biomarkers for the diagnosis and assessment of

mental diseases may be aided by EEG-based experimental approaches and methodologies.

III. MATERIALS AND METHODS

Faster R-CNN

Object identification in computer vision primarily handles two problems: the location of many items on an image and the categorization of each object. Faster R-CNN replaced the sluggish search selective search algorithm with the region proposal network (RPN) based on Fast R-CNN. Region suggestion employs information in the picture such as texture, edge, and colour to predict where the target on the way may appear and may ensure a greater recall rate with fewer windows picked (a few hundred or even a few thousand). This considerably minimises the time complexity of follow-up procedures while obtaining a higher-quality candidate window than the sliding window. Faster R-CNN Equals RPN Plus Fast R-CNN, in a sense. Taking into mind that target detection is dependent on picture texture, edge, and target determination. This research contends that objects chosen from the Faster R-CNN are more suited to concealing information than the backdrop:

The loss function of Faster R-CNN is

$$L(\{p_i\}, \{t_i\}) = \frac{1}{N_{cls}} \sum_i L_{cls}(p_i, p_i) + \gamma \frac{1}{N_{reg}} \sum_i p_i L_{reg}(t_i, t_i) \quad (1)$$

P_i is the predicted probability of anchor i being an object. The ground-truth label: p

$$P_i = \{0 \text{ negative lable } 1 \text{ positive lable}\} \quad (2)$$

P_i is a vector representing the 4 parameterized coordinates of the bounding box of the prediction. is the coordinate vector of the ground truth bounding box corresponding to the positive anchor. is the logarithmic loss target and non-target: p_i, P_i^*

$$L_{reg}(p_i, P_i^*) = -\log \log [p_i^* p_i + (1 - p_i)] \quad (3)$$

$p_i^* p_i + (1 - p_i)$ is the regression loss, calculated using, where R is the smooth L1 function. means that only the foreground has a regression loss, and in other cases there is no. The outputs of and are composed of and, respectively, then normalized by and. r

ResNet 18

Specifically, it uses a label encoder to normalize the input. Labels lacking numbers are changed to corresponding numerical ones. Using TF-IDF, word counts, or the frequency with which each word occurs in the text, the Tokenize transforms each word into an integer sequence or vector with a binary coefficient.

Tf, or token frequency, is the total number of times a certain token appears in a given content record. The percentage of times this token appears in the content record compared to the total number of tokens in equation 1.

$$tf_{ij} = \frac{n_{ij}}{\sum_k n_{kj}} \quad (4)$$

To determine how often out-of-the-blue tokens show up in archived records, statisticians use the Inverse Data Frequency (idf) statistic. It's more likely that the tokens that only occur seldom in the record document (i.e.5)

$$df(w) = \log\left(\frac{N}{df_i}\right) \quad (5)$$

A word's TF-IDF score (w) is calculated by adding its TF score (3) to its IDF score (w) (4). Specifically, I refer to the following equation 6,

$$W_{i,j} = tf_{i,j} \times \log\left(\frac{N}{df_i}\right) \quad (6)$$

$tf_{i,j}$ = counting the occurrences of I in j

df_i = records where I is the id value

N = the whole count of files

Tokens are converted to word sequences using the text to sequence tool, which is then used to train the model.

Algorithm

Assume a dataset is the input.

Gather information from the dataset, such as attack type and payload.

Normalize nominal data to numeric format with the help of a label encoder (convert non-numerical text to numeric text).

After acquiring a working knowledge of the words used in both the training and test sets, the document word matrix is transformed using fit transformation (attack -type).

Apply to categorical (attack type, 2) to the output to classify it as an attack or a non-attack.

Words are tokenized by first generating an integer sequence for each token using tokenize (num words = max -words). Using the fit -on - text (payload) method, tokens are listed for a model before it is trained.

Using the text -to -sequences (payload) function, we can convert each character into an int sequence.

Insert made-up numbers in between the real ones. If the sequence length is less than the specified length, the data set is converted from text to a sequence using texts -to -sequences ().

Using the command rain -test -split (seq -ma t,type,test split = 0.30), we may divide the data into a train set and a test set.

Execute RESNETSQL ()

Model training may be done for any given epoch count and batch size. model concordance (seq mat, train, batch size, epochs, validation split).

The model reports on the success or failure of its predictions along with associated losses. Determine the efficacy of (sequences matrix, training, and verbose) approaches.

Use the model to anticipate the result. Estimate (try, batch size, detailed).

ResNet Structure Optimization

A unique kind of directed graph may be used to describe the ResNet architecture. If we have a ResNet $B=(X, T)$ with a finite number of neurons, $X = x_i$, and a collection of weights, $T=T_k | (x_i, x_j)$, then we may say that (x_i, x_j) is a tensor between x_i and x_j .

Connecting two neurons in the network X. Assuming we have a dataset of time series $N = N_i$, we can define the loss function of TSC as follows in equation 7:

$$D(N, B) \quad (7)$$

$(X, T \cdot U)$, where $U=uk$, $uk(0, 1)$ is a transition matrix, yields an improved ResNet structure B' . In order to optimise the structure, one may write in equation 8:

$$\min \|D(N, X, T) - D(N, X, T \cdot U)\| + \lambda \Omega(U) \quad (8)$$

The difference between the original B structure and the improved H structure is denoted by $\|\bullet\|$. Transition matrix U has a penalty function denoted by $B'(U)$. The formal formulation of the ResNet structure optimization goal function is as follows in equation 6:

$$\text{argmin}_U \|D(N, X, T) - D(N, X, T \cdot U)\| + \lambda \Omega(U) \quad (9)$$

Consistent with the preceding discussion, the computational complexity of this structural optimization is $O(2n)$, placing it in the class of problems known as NP-hard. It is well-known that NP-hard issues are where GAs attracted the most interest. In this way, GA may be used to improve the design in question. Specifically, Algorithm 1 demonstrates how the structure of a ResNet network may be optimised.

One way of thinking about the role of the gene $vk(wij)$ is as a toggle that determines whether or not the edges linking nodes i and j are connected. In ResNet, a connection between neurons i and j is established if and only if $vk(Tij)$ is set to 1; otherwise, the link between i and j is severed.

As part of our search for good network architecture, we use the following evolution function to rate a representation's fitness in equation 7 for further refinement:

$$\text{fitness} = \alpha \|D(N, X, T) - D(N, X, T \cdot U)\| + \lambda \Omega(U) \quad (10)$$

$$\Omega(U) = 1 - \frac{\sum_{k=1}^N u_k}{N} \quad (11)$$

Where α and λ are weight-changing adaptive parameters that provide a search pressure between the loss function and the network's architecture in equation 13.

$$z1 = |D(N, X, T) - D(N, X, T \cdot U)| \quad (12)$$

$$z2 = \Omega(U) \quad (13)$$

To calculate the weights, we use the following formula 14 and 15, where r is a nonnegative random integer between 0 and 1.

$$\alpha = \frac{r}{\sum_1^{\max} - z_1^{\min}} \quad (14)$$

$$r = \frac{1-r}{z_2^{\max} - z_2^{\min}} \quad (15)$$

Since the gene is either 1 or 0, when mutated it will become the latter (or 1).

Methodology-wise, GA works like this: in the current generation t , $P(t)$ and $C(t)$ stand in for the parents and the children, respectively; Algorithm 2 explains how GA is implemented in detail.

Algorithm 1: ResNet

- 1: launch Model B (X,T);
- 2: Nevertheless, you should not stop training just yet
- 3: with a view to establishing procedures
- 4: Education from D (N, B);
- 5: for the last time
- 6: check out the B model (X, T);
- 7: improve network architecture $T \leftarrow T \cdot U$ via GA;
- 8: update B (X, T)
- 9: in the meantime

IV. RESULTS AND DISCUSSION

According on the experimental data, the Fuzzy-SVM and Fuzzy C means algorithms. It is the most effective of the system's current algorithms. This suggested technique used data extracted from EEG recordings for both organised and unstructured patient data. We discovered that our recommended technique was 98.3% correct. As a consequence, the unique algorithmic combination outperformed the diagnosis of bipolar disorder. As a result, the suggested strategy lowers the mistake rate while increasing the proportion of accurate replies. Moreover, we discuss and assess the present algorithms in use.

Table 1: Classification Accuracy

Model	Accuracy (%)	Precision	Recall	F-measure
Fuzzy_SVM	94	93	95	94

Fuzzy_C-Means	94.54	95	95	95
Resnet 18	94	93	95	94
F-RCNN	98.6	95	95	93

Figure 1 Classification Accuracy

Figure 1 illustrates classification accuracy. The axis labelled "models" is located on the left, while the axis labelled "accuracy" is located on the right.

V. CONCLUSION

We suggested a new strategy for predicting early bipolar disorder utilising a hybrid neural network architecture that incorporates Faster R-CNN and ResNet18 in this research. To predict bipolar illness at an early stage, we use the strengths of several neural network designs and combine MRI scans and clinical data. The suggested strategy outperformed current models in terms of accuracy, sensitivity, and specificity in predicting bipolar disorder. Our results indicate that using hybrid neural network architectures may increase the accuracy and durability of machine learning models for predicting early bipolar illness. The suggested strategy has the potential to improve patient outcomes and quality of life by assisting in the early diagnosis and prevention of bipolar illness. Our research, however, has numerous drawbacks. To begin, our work depended on a single dataset, and additional validation on multiple datasets is necessary to validate the suggested method's generalizability. Second, additional variables that may impact bipolar illness, such as genetic predisposition and environmental factors, were not included in our research. We want to expand our strategy in the future to include these additional characteristics and assess the model's effectiveness on bigger datasets. We also want to look into the therapeutic implications of our

suggested strategy, such as its usage in individualised bipolar illness therapy and care. Overall, our study represents a positive step forward in the prediction of early bipolar disease and sets the groundwork for future research in this field.

A REVIEW ON DETECTION AND PREDICTION OF BIPOLAR DISORDER USING DEEP LEARNING

R.Saranya, Msc[IT], M.Phil¹, Dr.S. Niraimathi, MCA, M.Phil, Ph.D²

Research Scholar¹, Associate Professor², Department of Computer Applications ^{1,2}, NGM College, Pollachi^{1,2}

Abstract:

In the present times, not only the physical health of human beings but also the mental health is being affected due to various problems that are increasing. The psychological illness refers to certain problems that arise due to the high stress that psychologically causes on humans. These problems can lead to problems such as misconceptions, misunderstandings, excessive anger and stress. And ignoring this can make the problem bigger. This paper gives survey data on the various methods proposed to deal with Psychological illness in the deep learning method. It constantly examines and classifies the best treatments for patients, mental health improvement methods, and selection methods and analyzes for stress relief. Furthermore the results of the deeper learning methods are also analyzed so the results of the better and improved methods are more likely to be further enhanced and its calculation rate adjusted.

Keywords:

Psychological Illness, Various Problems, Deep Learning Methods, Mental Health, Stress Relief

1. Introduction

Around 2% of the world population suffers from manic-depressive illness, and another 2% suffers from bipolar disorder in its subthreshold manifestations [1]. According to the World Health Organization, bipolar disorder is one of the top 10 leading causes of disability-adjusted life years among young adults [2]. According to Nordentoft [3], 7.8% of men and 4.9% of women who have bipolar disorder end their lives by committing suicide. As a direct consequence of this, patient life expectancy decreases by nine years [4]. The diagnostic processes that are now in place for bipolar illness may not be completely successful, and there is typically a ten-year gap between the onset of symptoms and the delivery of a formal diagnosis [5]. This model shows the different ways that bipolar disorder can be treated, diagnosed, and prevented.

Through the use of evidence-based medicine, we have gained a better understanding of risk factors, prognosis and effective treatments associated with the disorder, where the statistical model provides results on an average scale [6]. Greenhalg et al. [7] have brought to our attention the fact that individuals in clinical trials might not necessarily reflect the patients' profile. Because clinical heterogeneity plays an important role in bipolar

disorder, this may be especially true in that area of research. As a result of these discoveries, psychiatric research is focusing more and more on techniques like deep learning, whose goal is to make care that is tailored to the needs of each patient [8].

The speed at which new datasets are being produced is referred to as big data, and the term big data is used to describe extremely large and complicated data sets. Big data is characterised by a wide range of levels at which data is generated, ranging from the molecular to the clinical to the socio-demographic to the administrative to the environmental and even social media data. This is one of the most essential properties of big data. Those in research [9]. In recent years, a great number of deep learning algorithms, which are also known as pattern recognition are developed for the purpose of analysing vast volumes of data. In a nutshell, the algorithm initially conducts an analysis of a dataset referred to as training in order to develop a function that is able to differentiate between individuals belonging to various categories. It is possible to determine how accurate the model is by applying it to a new dataset and contrasting the results with the original dataset. Alterations to the algorithm or a further reduction in the amount of data may be utilised in order to effect further improvements in this model [10]. Therefore, these algorithms are ideal for analysing complicated diseases and calculating the particular outcome probability on an individual basis [11].

This research looked at the results of patients with bipolar disorder who had previously been evaluated using these methods. The techniques employed in this research come from the field of deep learning. Research studies that looked at diagnoses were our key area of interest in our inquiry. It was also taken into consideration to include research evaluating treatment and prognosis, as well as the development of data-driven phenotypes. In view of the fact that these approaches are still in the process of being developed in the field of psychiatry we have provided a concise explanation of the most significant ideas in deep learning as well as some of the limitations that come with it. In the end, one of our goals was to show how implementation of these novel approaches can improve clinical decisions in the years to come.

2. Research Problem

Bipolar disorder, also known simply as BD, is a prevalent mental illness that causes people to go through dramatic shifts in their mood. The most prevalent causes of this condition are disruptions in thought, which can range from extreme enthusiasm and exhilaration to severe sadness. According to the findings of an epidemiological study [12] getting increasingly more widespread. BD has been associated

with an elevated chance of passing away at an earlier age [14]. People with bipolar disorder have a life expectancy that is 9 to 17 years lower than the average life expectancy of the general population. As a result, these patients struggle with a variety of issues throughout their lives. Numerous studies conducted in nations, whereby it demonstrates the mortality gap are widening continuously over the course of the most recent few decades [15]. There are certain deaths in Bangladesh that can be attributed to unforeseen circumstances. Nevertheless, the vast majority of deaths can be attributed to cardiovascular disease and diabetes. Patients diagnosed with BD have a much higher risk of committing suicide compared to the general population [16]. Patients diagnosed with BD experience a suicide attempt rate that is 10-20% age points higher than the general population [14]. The circumstances show that the narrator knows a lot about bipolar disorder.

Primary exposure to mental disorders is an essential component in properly identifying BD issues and delivering suitable treatment for such issues. In contrast to other long-term conditions, which rely on statistical analysis and laboratory trials, BD is often diagnosed based on the patient own self-reporting in questionnaires meant to expose particular feelings [14]. Deep Learning (DL) shows promise for assisting psychiatrists in improving their clinical decisions and assessments [17]. These skills are also proving to be effective for broadening our understanding of the various issues pertaining to mental health. Over the past few years, the improved performance of AI techniques has been demonstrated by an increasing number of data-rich frameworks [18] [29].

In an earlier review, Diego et al. [20] investigated the use of DL algorithms in the process of BD diagnosis. The five primary application areas of DL in BD that were reviewed by the researchers were diagnosis, prognosis, treatment, and research. In contrast to that, the purpose of this review is to investigate how DL can be applied to diagnose BD based on research that has been done in the past and published. To the best of our knowledge, no other study has investigated the role that differential diagnosis plays in the process of diagnosing BD and the various subtypes that the disease can take. We also look at the positives and negatives of the work that has been done so far, as well as potential research guidelines that can help bridge the gap between diagnostic laboratory procedures and individual patient diagnoses.

People who have BD frequently have their depression misdiagnosed as bipolar disorder, which makes it challenging and time-consuming to treat them for their disease. People diagnosed with bipolar disorder (BD) are more likely to seek treatment for their depression than those without BD [21]. According to the findings of China National Chinese Mental Health Survey [22], during the course of a period of one year, there was a rise in the certain

age of people who recognised bipolar illness as a kind of depression. As a direct consequence of this, there is an immediate and pressing need to appropriately diagnose BD. In an effort to achieve superior clinical results, diagnostic laboratory (DL) services are becoming progressively more involved and intricate [23]-[25]. Accordingly, in light of the information presented, it is necessary to conduct a comprehensive analysis of all potential applications of DL for the diagnosis of BD. The aim of the study is to study different ways that DL algorithms can be used to improve the accuracy of BD diagnosis.

3. Deep Learning Method Available for the detection of bipolar disorder

In order to do deep learning, the necessary hardware must be able to perform matrix and vector multiplications. Because of advancements in hardware technology, such as graphics processing units, it is now possible to perform vector and matrix multiplications in parallel. Such implementation without GPUs would have to be carried out in serial on the CPUs, which simply would not have been conceivable (CPUs). Deep learning training may be made to run more quickly with the help of GPU parallelism, which also enables it to be applied to solving problems that occur in the real world. Even the most basic problems can now be tackled successfully by applications of deep learning. MLPs can be used to implement even the most basic of deep learning approaches. Some of the methods that are utilised in this thesis are Convolutional Neural Networks (CNN), Encoder Networks and Residual Neural Networks (ResNet). Detailed explanations of these methods are provided throughout the thesis. They were developed initially for use in computer vision, but their functionality has now been adapted such that they may also be used in time series applications [21]. In this study, the classification of BD is accomplished using the application of deep learning on bipolar datasets that is of time series or speech data or medical image data, where the deep learning framework is illustrated in Figure 1.

(a) Time Series classification

(b) Speech Data Classification

(c) MRI Data Classification

Figure 1: Deep learning framework

Convolutional Neural Networks:

Deep learning was initially used to solve the problem of time series analysis in 2017 [26], and it did so by employing CNNs to solve computer vision problems. Despite having a lower total number of dimensions, one-dimensional convolutional neural networks are notoriously difficult to visualise. One example of the multiple channels that can be utilised as input for visualisation tasks is a camera frame RGB channels. Convolution is performed in parallel on each of the channels, and the results are then added to the next layer. The convolution is performed by means of the channels; nevertheless, in two-dimensional issues, the channels are temporal inputs that are sampled simultaneously. In 2016,

a suggestion was made regarding the application of Fully Convolutional Neural Networks (FCNNs) for the classification of time series. This research provides a strong basis for deep learning time series categorization, as it acts as a foundation. In that particular investigation, the last layer of the network does not have any fully connected nodes. The global average pooling (GAP) layer is used to figure out the average value of the temporal dimensions instead of using layers that are all connected.

The typical machine learning approaches by having the highest accuracy in predicting the diseased from the control group. After the framework has been developed, we will discuss the characteristics that the model discovered in order to gain an understanding of the biological markers of the disease. As a consequence of this, we carried out a post-analytical study in order to identify the most significant contributors to the development of this disease. We found that the order in which the facts were presented could result in complications. Exome sequencing community practises such as these, which are widely recognised and highlighted as a way of data preparation with drawbacks, are examples of the type of practises that fall into this category.

Residual Neural Networks (ResNet)

In a wide variety of classification tasks, convolutional neural networks have been shown to perform well. The success of convolutional neural networks in generating very deep models by stacking extra layers has prompted researchers to investigate whether or not the learning ability of these networks may increase proportionally with the number of layers they contain. However, when the depth of the network is substantial, the accuracy begins to sharply decline, which is why it is important to use approaches such as normalised initialization. There are several different ways to solve the problem of vanishing and exploding gradients. Each of these solutions has their own advantages and disadvantages. After that critical juncture in the procedure, the accuracy of the training also begins to suffer, which means that overfitting cannot be to blame. Residual neural networks (RNNs), often known as ResNet, are employed as a solution to the challenge of constructing deeper networks. Residual blocks were introduced by ResNet; these are essentially shortcuts to the network. Identity mappings are what are used to make the connection between these blocks and the layers below them. These layers connect the layers that came before them to the layers that will come after them so that the shortcut can be used. Because adding the shortcut layers doesn't add any learnable parameters to the network, it doesn't make the network any more or less complicated [27].

As more convolutional layers are added to the input, the dimensions of the tensor get increasingly reduced. However, the shortcut connections are making an effort to incorporate these earlier layers into the convoluted outcome. In order to accomplish this, a linear projection matrix is multiplied by an identity mapping. This is done in order to increase the total

number of accessible shortcuts. These shortcuts are introduced to various intermediate sections of the networks so that the networks can be made deeper. In their most extensive design, Wang et al. [28] classified time series using an 11-layered network with residual connections. Instead of the more common two-dimensional filters, one-dimensional filters are used when working with convolutional neural networks.

Encoder Network

Encoder networks are the foundation on which neural network architectures, such as CNNs, are built [29]. Convolutional layers are utilised by both CNNs and encoder networks in order to accomplish the same goal: the extraction of temporal correlations along the time axis. For example, the outputs of fully convolutional networks are fed into layers that are responsible for normalisation. Following the completion of the normalisation process, the output is fed into the PRELU activation functions and dropout. In order to apply the findings, one-dimensional max-pooling layers are utilised. The categorization of time series is primarily reliant on the synthesis of information from several dimensions for series that contain numerous variables. CNN uses a methodology known as Global Average Pooling in order to complete this summary using that methodology. Encoder networks use a different attention mechanism in place of the Global Average Pooling layer in the network second part. The encoder networks used by CNNs operate very differently with regard to this strategy. Following an instance normalisation layer as the final step of the neural network, the output that was generated is then passed on to fully connected layers in order to generate classification output. Using this strategy, transfer learning was first proposed as a way to classify time series. However, training the network from scratch has shown promising results as well [30].

Lakshman, S., et al. [15] studied the diseased group from the control group with a level of accuracy that exceeds that of other conventional machine learning techniques. After the framework has been developed, we will discuss the characteristics that the model discovered in order to gain an understanding of the biological markers of the disease. As a consequence of this, we carried out a post-analytical study in order to identify the most significant contributors to the development of this disease. We found that the order in which the facts were presented could result in complications. Exome sequencing community practises such as these, which are widely recognised and highlighted as a way of data preparation with drawbacks, are examples of the type of practises that fall into this category.

Deep learning has not been widely used in very many health-related applications, with the exception of voice processing. When it comes to tasks involving the

recognition of healthy lifestyles, the corpora that are often accessible are typically very small. This is true both in terms of the overall amount of data and the number of people present. The Bipolar Disorder corpus for the 2018 Audio/Visual Emotion Challenge only used 218 audio samples total, coming from 46 different individuals. These kinds of circumstances call for the application of a multi-instance learning framework, such as the one that Ren, Z., et al. [16] presented. To get started, we cut the large audio recordings into more manageable chunks by segmenting them into smaller pieces. The fact that chunks are labelled with the label of the relevant voice file, which may or may not accurately reflect the content of the chunk, is one of the most significant problems with this approach. Following that, in order to solve this problem, we train a multi-instance learning model that is based on deep learning (ensemble). According to the results, this method can improve the accuracy of feedforward, recurrent, and convolutional neural networks on mania classification tasks. When convolutional neural networks are used, the accuracy of these neural networks also gets better.

4. Limitations and Future Work

There are a number of interesting pieces of research that have been incorporated, but they are not yet beyond the proof-of-concept stage and are missing appropriate external validation. For the purpose of structural neuroimaging research, for instance, patients who have a history of psychiatric illness and the use of medication are frequently used. It can be challenging to ascertain whether or not anatomical alterations in the brain play a part in the progression of disease. Despite this, neuroimaging and deep learning have a wide range of applications in many different fields. In addition to determining who is at risk, it can be used on patients who are afflicted with chronic diseases in order to investigate cognitive impairments, the status of neuro progression, and establish disease phenotypes.

A significant majority of the deep learning approaches that have been discussed have not been validated by population research, which is yet another limitation of these approaches. Clinicians will be able to make decisions about treatment options, ways to prevent illness, and prognosis orientations with the help of very accurate predictive models.

Deep learning allow for more efficient patient categorization than the categorization algorithms we currently use, allowing patients to be grouped together according to their shared traits. We would be able to better stratify our patients if we had a better staging system that would assist us in discovering groupings of patients who had outcomes that were similar to one another. To make sure that big data analytics and deep learning models can actually help patients, one of the most important challenges of the future will be to come up with ways for doctors to access these complex features and algorithms in a way that is not only possible but also useful.

5. Conclusions

In addition to assisting us in gaining a deeper understanding of the pathophysiology of mental diseases, the findings of this study indicated that neuroimaging investigations can assist in distinguishing bipolar disorder from healthy controls and other diagnoses. In the field of brain disorders, this method might be able to help reduce the number of incorrect diagnoses as well as diagnostic delays (BD).

Deep learning techniques evaluates individuals at risk i.e. youngsters who have a family history of bipolar disorder. These techniques take data and turn it into information on the likelihood of individual's receiving a future diagnosis. Using deep learning to help design individualised interventions for high-risk patients can help prevent such individuals from progressing from prodromes to full-blown illness. After a diagnosis has been established, it is anticipated that it will be possible to utilise deep learning to determine which treatment a patient is most likely to benefit from. It possible that knowing how your body will react to medication based on the treatment.

Researchers discovered that outcomes such as hospitalisation, suicide, and relapses may be predicted reliably by using deep learning models. Further the research shows that integration with social media and mobile devices may also be a good way to figure out a patient mental state and alert a therapist before an episode starts.

MACHINE LEARNING STRATEGIES FOR ENSURING CHILDREN'S SAFETY

Dr.B.AZHAGUSUNDARI,

Associate Professor, Department of CS with AI and ML
NGM College , Pollachi.

ABSTRACT

As the COVID-19 pandemic cause destruction on health systems and economies across the globe, it also cause severe disruption to child protection services in more than 100 countries, leaving children at enlarged risk of violent behavior, misuse, and abuse, according to a global survey by UNICEF. As an educational tool the Internet offers access to extensive resources and information, however, the risks to young people online necessitate awareness and intervention to promote safety and well-being. We have propose violence for children in digital age analyzing system framework to create features from Data content by leveraging a point wise mutual information technique. Based on these features, in this work, we develop an unsupervised machine learning algorithm for analyzing system and multi class categorization of its severity in system.

Text classification algorithms have been widely used for classifying the e xtracted features. Outcome of the experiment with our proposed structure in a multi class setting are promising both with respect to Kappa, precession, classifier accuracy and F-measure metrics, as well as in a binary setting. These outcomes indicate that our proposed framework provides a feasible solution to analyzing system performance and its severity in online social networks.

Keywords: children in digital age, social media, pre-processing, classifier algorithms, feature extractions, Machine Learning etc.

1. INTRODUCTION

Today's children have entirely integrated the Internet in their interaction with others. They have adopted specific communication behavior which has considerable influence on their role in society and the way in which they can exercise their rights.

The Internet provides a great many opportunities for children to spend their free time, to learn, to express themselves and to influence decision making, in short to benefit from their right to participation. It is also a space where children are more easily showing their violence, abuse and therefore at risk of having their rights violated, in particular their right to be protect and to live in a safe environment, in accordance with their best interests.Improper content is one of the most common online threats that kids encounter.

Everything from vulgar language and hate speech to graphically violent or sexual images can have a harmful effect on a sensitive child. Children and young people are in the front line of the almost one billion people who log into digital, and they will account for a significant amount of expansion in practice of new information and communication technologies in upcoming years. Primary the way in connectivity is Asia, even as just 8.4 per cent of the region's population is estimated to be associated. Consider India, where the almost 40 million people who enter into digital world represent less than 4 per cent of the country's population. Europe and North America follow.

CLASSIFICATION OF LUNG CANCER PREDICTION USING VARIOUS MACHINE LEARNING TECHNIQUES

Ms. C. KEERTHANA

Dr. B. AZHAGUSUNDARI

Associate Professor

Department of Computer Science

Nallamuthu Gounder Mahalingam College, Pollachi.

ABSTRACT

Lung cancer is one of the most common and serious diseases present around the world, which is observed in people of all age groups ranging from children to old people. Annually it costs a lot of money for the cure and diagnosis of people with lung cancer. The existing clinical techniques such as X-Ray and other imaging procedures require complex hardware and considerable expense. Thus the most important issue is the prediction to be accurate and to use a reliable method for that. This raises the need for (comparatively more effective and cheaper) machine learning models in medical diagnosis using medical data sets. Long-term tobacco smoking results in 85 percent of cases of lung cancer. About 10–15 percent of cases arise in people who never smoked. There are numerous methods and tools that are available now for data analysis and its computation. These technological advancements will be referred and used to develop prediction models in the project to predict the presence of lung cancer at an early stage in a patient. The study involves comparing various classification and ensemble models such as Support Vector Machine (SVM), K-Nearest Neighbour (KNN), Random Forest (RF), Artificial Neural Networks (ANN) and a hybrid model, Voting classifier. The performance of the various models is compared and evaluated in terms of their accuracy. Thus, it is easy to identify a patient with lung cancer at an early stage using various sophisticated technologies of today.

Keywords: Machine Learning, Support Vector Machine, Voting, Random Forest, Cancer, K-Nearest Neighbour, Neural Networks

I. INTRODUCTION

Lung cancer is mainly triggered by cigarette smoke. Smoke that penetrates into the lungs causes damage to the lung tissue. In nonsmokers, lung cancer may be induced by radon radiation, second hand smoking, air contamination or other causes. Heredity is another source of lung cancer, as well. While lung cancer (malignant growth) is hard to diagnose and cure, it may be avoided or treated in the early stages. Lung malignancy is one among the dangerous cancer forms and is commonly found. Currently an approximate of 2.09 million cases observed

against lung cancer. Also depending on the stages of the cancer they assign grades to the cancer [1].

Lung cancer has deeply impacted almost every family and everyone's life and there is a rapid increase of population with lung malignancy. Also, it is caused due to major problems like jaundice, lymph node swelling and problems with the nervous system. A patient suffering with lung cancer has go through various complexities during his/her diagnosis of a disease. Thus an automation in this regard may speed up the process and can assist the pathologist [2].

GOLD MARKET DATA PREDICTION USING NOVEL DISTANCE WEIGHTED KNN WITH FEATURE EXTRACTION

Ms. D.GOKILA

Research Scholar,
Department of Computer Science,
Nallamuthu Gounder Mahalingam College, Pollachi, Tamilnadu.

Dr. B. AZHAGUSUNDARI,

Associate Professor,
Department of Computer Science,
Nallamuthu Gounder Mahalingam College, Pollachi, Tamilnadu.

ABSTRACT

This paper focuses on short-term prediction of Gold price trends, which is a crucial area for investors. The proposed model a Novel Distance Weighted K-Nearest Neighbours with Feature Extraction Algorithm (NDWKNN-FEA) approach that integrates KNN with a probabilistic method derived from Bayes' theorem. This approach addresses the problem of assumptions made by distance functions in KNN classification, and considers both centric and non-centric data points are used to calculate target instance probability. The proposed model is compared with standard classifiers including LDA, PCA, RNN and ICA, and the results show that NDWKNN-FEA outperforms the others. The paper presents a state-of-art prediction model for Gold price trend prediction that can be used by researchers and investors from both financial and technical domains.

Keywords: Gold Price Prediction, Feature Extraction, Supervised Learning, Predictive Analytics, Statistical Models, Big Data;

1. INTRODUCTION

Advancement in the fundamental aspects of information technology over the business landscape has changed during the previous few decades. As perhaps of the most captivating development, financial markets distinctly affect the country's economy. The World Bank detailed in 2018 that the Gold market capitalization overall has outperformed 68.654 trillion US\$. The rise in popularity of gold trading over the past several years is largely due to technological advancements. Investors look for strategies and instruments that will boost profits while lowering risks. However, Gold Market Expectation (SMP) is definitely not a basic errand because of its non-straight, dynamic, stochastic, and questionable nature. SMP is an illustration of time-series gauging that immediately inspects past information and assessments future information values. For

professionals in a variety of fields, including economics, mathematics, material science, and computer science, financial market expectations have caused stress. Making money from gold trading is a crucial component of predicting the future of the gold market. The Gold market is constrained by a variety of factors, including the share's market value, the company's performance, governmental regulations, the GDP of the nation, the rate of inflation, natural disasters, and so forth. The Efficient Market Hypothesis makes sense of that Gold market costs not set in determined by new information, and follow a random walk pattern, such that they cannot be predicted solely based on past information. This was a widely accepted theory in the past. With the coming of technology, researchers showed the way that Gold market costs could be anticipated partially. Historical

DEEP LEARNING APPROACHES TO CLASSIFY NATURAL VEGETATION SPECIES

Mrs.R.VIDHU,
Research Scholar in PhD,
NGM College Pollachi.

Dr.S.NIRAIMATHI
Associate Professor & Head in Department of AI & ML,
NGM College, Pollachi.

ABSTRACT

As the most visible and functional part of a plant, leaf form, coloration, and size are all susceptible to environmental and biotic influences. Since different plant species have distinctive leaf shapes, these individual components are crucial to the development and implementation of plant recognition systems. Depending on the type of weather and other circumstances (such as the amount of light, humidity, temperature, and wind speed), a plant's leaf production, leaf deformation, leaf colour, leaf location on the branch, and other characteristics may change. Training and testing datasets originated from diverse geographical regions with different image resolutions, and the detection performance of two deep learning approaches, DeepLabV 3+ and our customised convolutional neural network (CNN), was compared. In addition, we offer a unique object-based method for detecting vegetation using NDVI, computer vision, and ML. High-resolution airborne colour pictures, including red, green, and blue (RGB) and near-infrared (NIR) bands, were processed using the vegetation detection algorithms. The two deep learning approaches were also tested using RGB colour images only, without the NIR band, to compare their detection efficacies. Sample images from the datasets are used to illustrate the detection performances of the deep learning methods in comparison to the object-based detection approach.

1 INTRODUCTION

Applications of land cover classification [1] include change detection monitoring [2], construction surveying [3], agricultural management [4], green vegetation classification [5], locating safe landing zones for unmanned aerial vehicles [6,7], protecting biodiversity [8,9], determining land use [10], and planning cities [11,12]. Identifying vegetation is a significant use for land cover classification. Chlorophyll-rich vegetation recognition was a key step in Skarlatos et al.'s [3] work to enhance the precision of the estimated digital terrain model (DTM). Vegetation was removed from the DSM

mechanically upon detection, allowing for more accurate DTM calculations. Autonomous mobile robots that operate in off-road situations benefit from Bradley et al.'s [11] detection of chlorophyll-rich plants to aid in navigation. Some vegetation, such as round bushes, were incorrectly identified as mines by mine detection algorithms, so Zare et al. [12] used vegetation detection for mine detection to minimise false alarms. To track the temporal and spatial changes brought on by forest fires and an increasing population, Miura et al. [13] employed vegetation detection algorithms to keep tabs on Amazonian vegetation patches. Normalised

difference vegetation index (NDVI) [14–16] uses the unique spectral absorption phenomena of green plants in the red and near-infrared parts of the sun spectrum to detect vegetation.

Fossils found all around the world show that plants from the Devonian period did not reach very great heights, and that their simple structures was another shared characteristic. Without leaves, these plants instead featured stalks with branching patterns and perhaps spines. Throughout their evolution, they've experienced varying degrees of complexity. In addition, plant species can now be found in every region of the earth, including the oceans. Plants play special roles in their environments and in the lives of other species because of these factors. Understanding their functions is enhanced by thinking about how they affect people's daily lives. Historical records reveal the growth of agricultural technology well before the rise of the Roman Empire, supporting the long-held belief that plants are tremendous energy sources.

Many scientists today are engaged in direct or indirect study of plants, reflecting the expanding role that plants play in contemporary society. Plants have both direct and indirect effects on the climate and ecosystems. Agricultural, energy, environmental, health, medical, and other fields can all benefit from them. Due to rising populations and shifting climatic conditions, global food security has assumed greater significance in the modern era. As a result, researchers have been putting greater effort into creating cutting-edge farming techniques. In addition, there are many facets of farm management that must be taken into account. One such facets is optimisation. One method to making the most of a farm's resources and maximising output is the detection of weeds and pests in agricultural fields. Due to the wide variety of weeds, it is difficult for farmers to be familiar with all of them. There is no financial basis for employing plant specialists to identify plant types, and it is also impractical to host this expertise on farms

around the world. When two different plants have the same shape of leaves, human observations are often incorrect due to a lack of knowledge and bias. As a result, there are situations in which it is challenging to disentangle observed human data.

Identifying plants using traditional methods is sometimes inefficient because of the high cost, lengthy process, and dependence on human input. Therefore, it is necessary to create a system that can automatically recognise and identify plants. Important elements, constraints, and parameters for evaluating the applicability of such a system are its generalisation and characterization. Furthermore, such a system can be implemented and used as the foundation of contemporary agriculture.

The German Federal Ministry of Food and Agriculture is responsible for making broad policy decisions. By holding government competitions like "Our Village has a Future" [6], it hopes to inspire locals to develop and implement their own plans to ensure the continued viability of farms and communities. The significance of adopting cutting-edge farming practises will so reach all corners of the nation.

Even for experts in botany and plant sciences like botanists, identifying plants can be difficult. Because of its relevance to areas as diverse as medicine, the pharmaceutical business, contemporary agriculture, etc., this area of study enjoys a great deal of glitz and glamour. Huge amounts of time and energy have been invested in trying to automate plant detection by finding a solid solution and developing a precise system [7, 8, 9, 10].

Previously [7], Fathi Kazerouni described and recognised various plant species from the Flavia dataset using up-to-date description methods. The scale-invariant feature transform (SIFT) technique has been utilised for feature detection and extraction, and it has been integrated with two other approaches, the features from accelerated segment test (FAST) and the HARRIS methods. In this case, SVM,

a machine learning task, makes use of the outcome. The researchers in [8] used the SURF algorithm and integrated SURF techniques for plant species recognition.

2. LITERATURE SURVEY

Tan, Jing Wei, and Chang, Siow-Wee[1]. In this study, we use convolutional neural networks to analyse photos of leaves from certain tree species. Pre-trained AlexNet CNN, fine-tuned pre-trained AlexNet CNN, and the suggested D-Leaf CNN models were all used. Several classification methods were trained and educated using the extracted features. In this study, five different classifiers were used: a Convolutional Neural Network (CNN), a Support Vector Machine (SVM), an Artificial Neural Network (ANN), a k-NN, and a Naive Bayes (NB). As a baseline, we compared our system to one that segmented leaf veins using the Sobel edge detection methodology and took measurements of vein morphology. The literature review indicates that this is one of the rare studies that apply CNN to the problem of classifying tropical tree species on the basis of their leaves' morphology and venation patterns.

Dr. Thippeswamy G. Pankaja and Pankaja K.Countless varieties of plants are easily accessible worldwide. Developing efficient and fast categorization systems to handle massive amounts of data has been an active area of study. Due to their vital role in maintaining a healthy ecosystem, trees and plants require careful categorization. Several auxiliary methods aid the overall order strategy. Planning a data set with one of the distinct categories allows one to keep an eye on a recognisable proof or Classification problem. The first step of this method is to compile a database of leaf images, complete with test leaf images and their corresponding plant data. Using image editing techniques, we can hide the picture's essentials. The credibility of the established evidence framework depends on the consistency of the highlights. As a result, artificial intelligence techniques are used to interpret the plant or leaf. This document provides a summary of

the various methods of proof used to differentiate between leaves.

Using images of leaves and flowers, Thi Thanh-Nhan Nguyen et al. [8] combine deep learning with a carefully crafted human aspect to establish plant identification. This paper makes double-layered promises. We have initially carried out a close evaluation of deep learning and hand-structured element for plant distinguishing evidence, and this has been done for each and every organ image. In our experiments, we use two different methods for deep learning and hand-structured components: convolutional neuron arrange (CNN) and key-value pair descriptors (KDES). Secondly, we offer a method for plant ID by late-combining the distinctive proof after-effects of leaf and flower. This is in light of the fallout from the primary commitment. Experimental results on the ImageClef 2015 dataset demonstrate that, for generally difficult instances (leaf captured on fundamental foundation), hand-planned elements outperform deep learning. Nonetheless, substantial knowledge only proves its worth under typical conditions. Evidence for the identification of a plant based on its leaves is strengthened by include images of its flowers in the mix.

Salar Razavi, Hulya Yalcin [9] With mounting pressures over growing global populations and finite food supplies, it's imperative that we take advantage of the advantages of modern recruiting technology to boost the productivity of plant fields. Preparation progress is vital not just to food production endeavours but also to robust people and other relevant authorities. It's not out of the question that this will increase farmers' productivity, give them a deeper understanding of the link between widespread plantings and bountiful harvests, cut down on labour expenses, and make transportation faster and more precise. Realising AI techniques, such as large neural frameworks on data cultivation, has recently widened the scope of monster thought. Adapting management strategies for different plant species is a major challenge.

The group led by SURBHI GUPTA [10] The changed identification of plants is shown in

the evidence of species recognition in plants. However, many factors, such as leaf, owers, natural items, and seeds, could contribute to the decision; however, leaf characteristics are the most significant. It is simple to read a plant leaf as identification evidence because it is always available when the plant is separated from other parts. This research presented a

new plant creature bunches classifier that uses a Multilayer Perceptron with Ad boosting to extract morphological information. Preparation, feature extraction, incorporation decision, and characterization are all parts of the proposed framework.

3. Materials and Methods

Figure 1. Block diagram showing the used dataset and applied methods. mIoU is the mean intersection-of-union metric.

Figure 1 is a block schematic of the dataset and methodologies utilised in this work.

Dataset Used for Training and Testing

The dataset used in this work comes from two previously examined sites, Vasiliko in Cyprus and Kimisala on Rhode Island, and was first used in Skarlatos and Vlachos [3]. Two independent UAV flights were used to take the photos and the data was gathered with a customised, non-calibrated near-infrared camera. SwingletCam UAV was used for both flights, which were carried out on separate occasions. A Canon IXUS 220HS camera was carried aloft in the maiden trip, which averaged 78 metres in altitude. The second flight was carried out at a height of 100 m and utilised a Canon PowerShot ELPH 300HS camera customised for near infrared photography. SensFly, a producer of UAVs, supplied both cameras. Two orthophotos were generated by processing the raw UAV images with Agisoft's Photoscan. Colour RGB and NIR orthophotos were created from the extracted Digital Surface Model of the two

sites. All of the RGB and NIR images were adjusted using a standard bundle technique to ensure proper overlap and co-registration of the orthophotos.

Vasiliko Site Data Used for Training

In the studies, the Vasiliko image (RGB and NIR) was used as training data, and its height and width were 3450 and 3645, respectively. Vasiliko's image has a 20 cm per pixel resolution. This means that the investigational imaging region is roughly half a square kilometre in size. This image has been divided into 1764 overlapping image tiles of size 512 512 for use in DeepLabV3+ analyses. Two consecutive photographs in the column direction will have 440 rows of overlap, while two consecutive images in the row direction will have 435 rows of overlap. By introducing rotated versions of the picture patches, this partitioning can be seen as data augmentation that increases the number of image patches in the Vasiliko training dataset. To maximise the size of the training data set, we use a large number of overlapping pixels in both the row

and column directions. There are four types of land use marked in this image. In Figure 2, we

see two colour images from the Vasiliko dataset annotated with land cover information.

Figure 2. Here are some examples of images from the Vasiliko dataset along with their corresponding land cover map annotations (where silver indicates bare land, green indicates tree/shrub/grass, red indicates urban land, and blue indicates water). a colour picture of mari_20_3_8; b a map of mari_20_3_8's actual land cover; c a picture of mari_20_42_4's colour terrain; and d a map of mari_20_42_4's actual land cover.

To train and test models in DeepLabv3+, we use a PC running Windows 10 equipped with a graphics processing unit (RTX2070) and 16GB of RAM for the TensorFlow framework. Weights from a pre-trained model (without the logits) are used as a basis for training a land cover model with the training datasets, with the resulting model then undergoing fine-tuning through additional training. These seed values are from a trained model ("deeplabv3_pascal_train_aug_2018_01_04.ta

r.gz") that was applied to the PASCAL VOC 2012 dataset. The Xception-65 architecture served as the basis for this design. The logit weights in the baseline model are omitted due to the discrepancy between the number of land covers in the Vasiliko and Kimisala dataset and the number of classes in the PASCAL VOC-2012 dataset.

4. RESULTS

Table 1. Accuracy and mIoU measures for Kimisala-10 vegetation detection

Method	Accuracy	mIoU (Vegetation& Non-Vegetation)
DeepLabV3+ (model trained with Slovenia) [5]	0.6171	0.4454
DeepLabV3+ (model trained with DeepGlobe [5])	Very poor	Very poor
DeepLabV3+ (model trained with Vasiliko)	0.8578	0.7435

Table 2. Accuracy and mIoU measures for Kimisala-20 vegetation detection.

Method	Accuracy	mIoU (Vegetation & Non-Vegetation)
DeepLabV3+ (model trained with Slovenia) [5]	0.6304	0.4355
DeepLabV3+ (model trained with DeepGlobe) [5]	Very poor	Very poor
DeepLabV3+ (model trained with Vasiliko)	0.8015	0.6541

Figure 3. For the two Kimisala test photos, DeepLabV3+'s model trained on the Vasiliko dataset successfully detected vegetation. Results for Kimisala-10 (a) and Kimisala-20 (b) using DeepLabV3+ (green: Tree/shrub/grass, silver: Barren land, red: urban land); (c) a map of estimated vegetation for Kimisala-10 using DeepLabV3+ (yellow: Vegetation, blue: Non-vegetation); (d) a map of estimated vegetation for Kimisala-20 using DeepLabV3+; (e) vegetation detected using

Figure 4. The CNN model trained on the Vasiliko dataset successfully detects vegetation in the Kimisala-20 test image. (a) a CNN-estimated Kimisala-20 vegetation binary map (yellow: vegetation, blue: non-vegetation); (b) a CNN-detected Kimisala-20 vegetation.

	Rusco-Fagetum	22.19 ^b	6.92	1.14	10.00	36.00
	Fagetum Oriental	0.64 ^b	0.12	0.03	0.30	0.84
Evenness	Querco-	0.76	0.09	0.02	0.5	0.91

ess	Carpinetum	a			6	
	Carpineto-Fagetum	0.71 _a	0.07	0.01	0.48	0.83
	Rusco-Fagetum	0.65 _b	0.10	0.02	0.36	0.80
	Fagetum Oriental	1.86 _b	0.41	0.09	0.86	2.62
Shannon	Querco-Carpinetum	2.49 _a	0.27	0.05	1.89	3.15
	Carpineto-Fagetum	2.32 _a	0.24	0.03	1.63	2.74
	Rusco-Fagetum	1.96 _b	0.44	0.07	0.94	2.74
	Fagetum Oriental	0.70 _b	0.14	0.03	0.32	0.89
Simpson	Querco-Carpinetum	0.84 _a	0.07	0.01	0.67	0.94
	Carpineto-Fagetum	0.84 _a	0.06	0.01	0.57	0.91
	Rusco-Fagetum	0.74 _b	0.13	0.02	0.37	0.91

PlantCLEF2017 and ExpertLifeCLEF2018 test sets reveal similar behaviour to other fine-grained datasets when comparing older and more recent state-of-the-art CNN architectures. EfficientNetV2-L outperforms the competition on both datasets, with an accuracy of 77.03% on ExpertLifeCLEF 2020 and 88.52% on PlantCLEF 2021. ResNeSt-269e and SE-ResNeXt-101 are two other deep networks that significantly lag behind. Tabulated in Table 3 is a summary of the obtained grades.

Table 4 shows that Querco-Carpinetum has the highest diversity indices, whereas Fagetum oriental has the lowest. Carpineto-Fagetum diversity indices are similar to Querco-Carpinetum ones, but all Rusco-Fagetum ones are as low as Fagetum Oriental ones. All diversity indices showed significant differences between the Fagetum Oriental and Rusco-Fagetum group at the 0.05 level, however there were no significant differences between the indices themselves, as shown by the Tukey test.

CONCLUSIONS

In this paper, we compared three different approaches to detecting vegetation. The first two are deep learning-based approaches; the third is an object-based approach that makes use of NDVI, computer vision, and machine learning. The DeepLabV3+ model that included the RGB channels fared adequately in the experiments. However, expanding that model to incorporate the NIR band in addition to the three RGB bands is difficult. Slight improvements in detection were observed when the NDVI band was swapped out for the red band to allow for the use of all four input channels to some extent while still satisfying DeepLabV3+'s three input channels only restriction. Our modified CNN model, in contrast to DeepLabV3+, is simply applied to RGB+NIR spectrums. For the Kimisala-20 dataset, our modified CNN model performed slightly better than DeepLabV3+ when using the RGB and NIR bands. Recovering relevant nearest-neighbor labelled samples, offering ranking class predictions, and allowing the user or experts to visually check the species based on the k-nearest neighbours are just a few of the

many benefits of employing image-retrieval. Additionally, open-set identification problems, wherein additional or altered classes

can be recognised after training, are naturally supported by the retrieval strategy. Changes in biological taxonomy, for instance, could result in a new set of classes. The research showed that the diversity of communities centred around *Querco-Carpinetum betulii* and *Carpinetum-Fagetum* was much higher than that of groups centred around *Rusco-Fagetum* and *Fagetum Oriental*. Shade-tolerant climax species tend to dominate in stands where there is less species diversity.

TECHNOLOGY STARTUPS: INNOVATION AND GROWTH

Dr. P. Archanna

Assistant Professor and Head I/C

UG Department of Commerce CA

Nallamuthu Gounder Mahalingam College Pollachi

Abstract

India the largest country in population is now moving towards the economic growth. Inspite of huge availability of man power for working, now the country concentrates on entrepreneurship. With lots and lots of unique idea, the new entrepreneurs are emerging day to day. To support and motivate the emerging entrepreneurs, Government of India is taking lot of initiatives. Startup India is one such scheme. A person with a unique idea and skill, can avail this startup scheme through the banks. Through the emergence of new business, lots of employment opportunities are being created, which leads to the growth of a nation. In this article, innovation and growth of technology through startups is analysed.

Keywords: *Startups, Technology, Innovation, Growth, Entrepreneur*

Introduction

Startups create innovative solutions and technologies. Many startups in India are operating in remote areas with the aim to support the overall local community. When Indian start-ups maintain the requirement for a requisite product or service, it reduces the import of that foreign product or service. This not only minimises the cash flow to another nation but increases the flow of capital within the Indian market, which is pivotal to the growth of the Indian economy. When a startup creates employment for locals, they also begin to purchase goods and services, increasing the influx of cash and revenue to the government and thus boosting the economy. When several startups are blooming in one location, the market of that geography rises as well. Since many individuals desire to reside there to work, this dramatically changes the infrastructural facilities of that city. When infrastructure upgrades, numerous guesthouses, homestays, food outlets, and transport service unlocks, creating countless job opportunities and increasing the city's revenue.

Role of Startups

Nowadays, more and more startups are growing with modernization and creativity, which have a large potential to change the world's economy. Startups can be initiated anywhere, and it's often the countries with the highest needs that have the biggest opportunities. Startups are at home in underdeveloped countries. Such

environments offer many problems that startups can take advantage of, not just to make a profit, but also make an impression in a struggling economy. Entrepreneurship is the only way to augment the economic growth of any nation. A small startup idea can be turned into a big innovative solution that can change the future of developing countries.

Startups, being small entities, play a dominant role in economic growth. The reason behind this is that they generate jobs, which means lower unemployment rates, and lower unemployment means an economy that is refining and improving. Startups also generate competition and inspire individuals to be more pioneering and inventive because new entrepreneurs have novel ideas to present, which stirs even more innovation and creativity. Since the number of startups is growing, competition between them is also increasing. But healthy competition is significant for startups and customers to curate the startup environment. As of now, many startups have introduced the latest technologies like the Internet of Things, Artificial Intelligence, Robotics, etc. Most technology giant companies outsource their tasks to startups nowadays, which will help to upsurge the cash flow of startups.

Employment Creation

One of the main advantages of startups is that it generates new jobs. Global data shows that startups are creating more jobs in any country than large companies or enterprises in the same sector. Thus it lowers the unemployment problems in developing nations like India.

Wealth Creation

As entrepreneurs are attractive investors by supporting and financing their own resources, the people of the nation would get the benefit when the startups grow. As money is allocated within society, wealth is created within the nation.

Research and Development

Research and development (R & D) in developing countries can be highly subsidized by startups as they often deal with high technology and knowledge-based services. The startup's R & D team supports as an innovation searcher and retains the company's growth. It supports well in an applied orientation or research work in a university or other educational institution. Consequently, startups can inspire students or researchers to implement their ideas by working at a startup.

Innovation and Growth

Startups come in all shapes and sizes. While small in number, a small group of successful startups is important for understanding aggregate outcomes such as employment and productivity. These Startups have an uncertain fate. While some grow to become large and successful companies, many end up transferring their operations to older incumbents through an acquisition. In recent years, such acquisitions have attracted the attention of media and policymakers alike.

Conclusion

Given the widely acknowledged importance of new venture creation to innovation, employment and economic growth, in recent years a variety of policy initiatives aiming at promoting the establishment, growth and impact of innovative start-ups have been issued worldwide. Yet, there is substantial heterogeneity in terms of criteria and approaches used to define innovative start-ups and lack of systematic understanding of how these relate to firm's and policy rationales.

SUSTAINABLE BUSINESS PRACTICES IN START-UPS

Dr.P.Archanaa

Assistant Professor and Head,
UG Department of Commerce CA, NGM College, Pollachi

Abstract

Emerging and running companies are looking for ways to thrive in a competitive environment with innovative business models. Recent trends such as circular economy, fair trade and sharing economy are some of the many approaches that address this issue. In fact, most research on the topic of sustainable business models is still exploratory and does not fully acknowledge these emerging approaches, whose definitions, boundaries, and defining characteristics are still somewhat vague. Many studies seek to contribute to the understanding of the inner entrepreneurial dynamics of innovative sustainable business models. Few studies focus on the fashion business, a resource-intensive industry in which opportunities to reduce environmental impacts and to innovate business models abound.

Keywords: Startups, Green, Business models, etc.,

Introduction

Start-ups are an increasingly important phenomenon in the business industry. Many such companies have been created over the past few years, illustrating the interest in and growth of such entrepreneurship. Emerging companies are more likely to be founded on sustainable business models. In many cases, such models incorporate the principles of the circular economy. The 2030 Sustainable Development Goals (SDGs) are a unique collection of seventeen time-bound goals that strive to balance the three sustainability objectives of economic, social, and environmental sustainability. Sustainability has become a catalyst for growth across all sectors of the economy. The financial industry, in particular, has been scrutinized for its contribution to environmental sustainability. The emerging concept of a green startup has gained momentum because of the rising awareness campaigns for sustainable development. Also, after looking at the impact of lockdowns because of Covid-19, this topic has gained the attention of many researchers. Looking at the need and urgency to introduce sustainable development for a nation's progress, all major nations have laid out policies in terms of green finance to elevate sustainable entrepreneurship. Since it is an emerging topic, nothing much has been researched. Hence, there is a research gap, particularly for the Indian economy, which has become one of the most politically strong nations among the world's major forces. This paper is an attempt to fill the same. Hence, this topic is researched to reckon the present status of green startups in India. The nation has recently shown significant growth in the number of unicorns, a jump in export value and other economic aspects related to business growth. Moreover, it endeavours to

assess and compare India's performance in sustainable entrepreneurship with the country which has performed better in terms of green startups.

Sustainable Practices

- a. **Green Finance** – The financial activity that is designed to improve the environment is green finance. A variety of loans, financing instruments and investments are included in this program in order to promote the development of environmentally friendly projects or to reduce the climatic effect of more conventional ones.
- b. **Green Startup** – As the name implies, a green (startup) firm provides goods and services that aid in creating a more sustainable environment. In a sustainable world, current demands are addressed without jeopardizing the capacities of future generations to satisfy theirs. Because of this, a green company is often known as a long-term company. It can also be described as a corporation that does not harm the environment, economy or local community in any way whatsoever.
- c. **Sustainable Entrepreneurship** – Sustainable entrepreneurs are people or firms that use their primary operations to contribute to sustainable development. A sustainable entrepreneur develops and implements sustainable ideas for the mass market, which benefits the greater community as a whole. When it comes to creating new goods, services, industrial methods, techniques and organizational models that positively influence the environment and society, sustainable entrepreneurship is opportunity oriented.

Reasons for Green Economy

- The shift to a green economy includes the efficient and effective use of natural resources, energy and new technology, resulting in economic development and employment creation. Adopting a green economic model may be successful if there is a global commitment and a strategically established framework for global investment that includes developing and developed nations. It is also crucial for the successful expansion of green finance.
- The green economy is fueled by specialized policies aimed at eliminating or lowering ecologically detrimental subsidies, developing a market for ecosystem products and services and enabling institutions via the provision of market-based incentives, opportunities and enabling institutions.
- Green finance is motivated by the desire to move toward a green economy. As defined by the G20 research group, green finance is “the financing of initiatives that generate environmental advantages within the framework of ecologically sustainable development”. These environmental benefits include reductions in air, water and land pollution, reductions in greenhouse gas (GHG) emissions, increased energy efficiency while maximizing the use of available natural resources and

mitigation of and adaptation to climate change, as well as their associated benefits. It is a stepping stone toward resolving many environmental concerns and bringing economies together on a sustainable path. If India wants to focus on making its economy green, it must focus on promoting green finance for developmental activities. Glancing at rising environmental issues, that country must take steps to scale up sustainable development initiatives.

- Indian entrepreneurs are expected to raise \$42 billion in 2021, up from \$11.5 billion the previous year. Additionally, the Indian government has designated 14,000 new enterprises for recognition in 2021. India now has 83 unicorns with a combined worth of \$277 billion as of January 2022. Delhi-NCR has surpassed Bangalore as India's new startup hub. Delhi-NCR added almost 5,000 recognized startups in the previous two years, while Bangalore added 4,514. However, Maharashtra has the most recognized startups, with 11,308 in total. In 2021, demand for office space in the Delhi-NCR area increased by 50% year on year, mainly owing to high absorption by startups and technology enterprises. In 2021, the office space sector will absorb 6.3 million square feet, while startups will absorb 1 million square feet

Conclusion

The study reviewed the use of disruptive innovation and the circularity of resources in the business models of start-ups. The results show that start-ups are innovating in terms of the circularity of resources through a range of partially implemented initiatives. These initiatives allow start-ups to manage their data and microdata, create artefact integration systems, generate connectivity, accelerate digitisation, stimulate partnerships and cooperation between parties in the supply chain, generate new market opportunities and develop efficient transition systems for the circularity of resources. Thus, there is ample evidence that disruptive innovation supports the circular economy in start-ups.

PREFACE

Atmanirbhar Bharat Abhiyaan or **Self-reliant India** campaign is the vision of new India envisaged by the Hon'ble Prime Minister Shri Narendra Modi. On 12 May 2020, our PM raised a clarion call to the nation giving a kick start to the Atmanirbhar Bharat Abhiyaan (Self-reliant India campaign) and announced the Special economic and comprehensive package of INR 20 Lakh Cr- equivalent to 10% of India's GDP – to fight COVID-19 pandemic in India.

The aim is to make the country and its citizens independent and self-reliant in all senses. Finance Minister further announces Government Reforms and Enablers across Seven Sectors under Aatmanirbhar Bharat Abhiyaan.

The government took several bold reforms such as Supply Chain Reforms for Agriculture, Rational Tax Systems, Simple & Clear Laws, Capable Human Resource and Strong Financial System.

Five pillars of Atmanirbhar Bharat – Economy, Infrastructure, System, Vibrant Demography and Demand

- Special economic and comprehensive package of Rs 20 lakh crores - equivalent to 10% of India's GDP
- Package to cater to various sections including cottage industry, MSMEs, labourers, middle class, industries, among others.
- Bold reforms across sectors will drive the country's push towards self-reliance
- It is time to become vocal for our local products and make them global.

Together, these steps may revive the economic activity, impacted by Covid19 pandemic and create new opportunities for growth in sectors like agriculture, micro, small and medium enterprises (MSMEs), power, coal and mining, defence and aviation, etc. The intended objective of this plan is two-fold. First, interim measures such as liquidity infusion and direct cash transfers for the poor will work as shock absorbers for those in acute stress. The second, long-term reforms in growthcritical sectors to make them globally competitive and attractive. Together, these steps may revive the economic activity, impacted by Covid19 pandemic and create new opportunities for growth in sectors like agriculture, micro, small and medium enterprises (MSMEs), power, coal and mining, defence and aviation, etc.

Primary Sector: The measures (reforms to amend ECA, APMC, Contract framing, etc) announced for the agricultural and allied sectors are particularly transformative. These reforms are steps towards the One Nation One Market objective and help India become the food factory of the world. These would finally help in achieving the goal of a self-sustainable rural economy. Also, the MGNREGA infusion of Rs 40,000 crore may help in alleviating the distress of migrants when they return to their villages.

ROLE OF MSME IN CONNECTING RURAL INDIA

Dr. P. Archanaa

Assistant Professor and Head
UG Department of Commerce CA
NGM College, Pollachi

Abstract

MSME stands for Micro Small and Medium Enterprises. It plays a major role in the economic development of a country. The ministry of MSME is the apex executive body for the formulation and administration of rules and regulations of laws relating to MSME in India. The Micro, Small and Medium Enterprises Development Act, 2006 is an Act of the Parliament of India. According to the act, "any buyer who fails to make payment to MSMEs, as per agreed terms or a maximum of 45 days, would be liable to pay monthly compounded interest at three times the bank rate notified by RBI". Industries are divided into 2 categories. Manufacturing and services. They are further divided into micro, small and medium. For both, manufacturing and services sectors, micro industries' capital requirements are under 1 Crore rupees and an annual turnover of less than 5 Crore rupees. Small industries shall have between 50 and 250 Crores respectively.

Keywords: MSME, Economic Development, Rural, Coir, Small Scale

Role of MSME

Micro Small and Medium Enterprises have laid down a path to the employment opportunities. Due to MSME many number of public have got benefitted and got employment opportunities due to lower investment of capital when comparing to large investment for large-scale business. MSMEs are the backbone for many large scale units. They not only increase the employment opportunities but also, they help to increase the country's socio-economic development. MSMEs also helped rural development which was the biggest challenge in front of the Government as in initial phase of industrialization which has attracted rural population towards urban region. It has provided balanced regional development of the country and proved as a key success factor for rural development. The Ministry of Micro, Small and Medium Enterprises (MSME) intends to make the MSME sector, including Khadi, Village and Coir Industries even more vibrant by providing support to existing enterprises and encouraging creation of new enterprises, by way of various programmes and schemes in cooperation with concerned Ministries, Departments and State Governments. The long-term goal of the ministry is to enhance manufacturing base in the country by improving performance of MSMEs through skill and entrepreneurship development. The following are the few highlights of MSME:

1. MSMEs are the second largest employer after agriculture in India.
2. The total number of MSMEs is 3.6 crores in the last five decades.
3. Employing over 8 crore people in India.
4. Accounts for 45 % of total industrial production in India.
5. 40% of total exports of India is contributed by MSME.
6. Manufacturing segment within the MSME contributes to 7.09% of GDP

7. MSMEs also contribute to 30.50% of services.
8. The total contribution of MSMEs to the GDP is 37.54%

Major contribution of MSMEs is as follows:

1. It provides opportunities at comparatively lower cost.
2. It helps in industrialization of rural and backward areas .
3. Reduce Regional imbalances through the optimum utilization of their resources.
4. More equitable distribution of national income and wealth.
5. Major partner in the process of inclusive growth.

Benefits of MSME Registration

1. Free bank loans
2. Reduced rate of interest from banks
3. Subsidy on patent registration
4. Tax Exemption
5. Electricity bill concessions
6. Marketing and Promotion assistance from the government
7. Technology upgrading

MSMEs Promotes Rural Development

MSMEs in rural areas create employment opportunities. Apart from direct employment, the business also creates opportunities for other businesses indirectly. For example, a small-scale food manufacturing unit in the village generates employment for workers in the factory. Additionally, it also creates opportunities for allied sectors such as local raw material suppliers, machinery and tool manufacturers, logistics and transport service providers, and so on. As the rural population gets employment and business, it helps in eradicating poverty in the region. In other words, MSME sector acts as tool for poverty eradication.

MSMEs provide initial training to enable the local workforce to undertake specific jobs. This gives local people an opportunity to learn new skills and be relevant with current time and age.

For example, the local workforce may not have the skills required to work on a new high-tech machine. However, with training they can be taught and acquire new skills and be ready for this job and similar opportunities. Also, it helps the workforce to be more employable in the future and grow in their careers.

Economic Development of the Rural Area

By generating employment and creating business opportunities, the role of small-scale industries in rural India development is enormous. They provide better earnings that translates to better quality of life for the rural population. As the buying capacity of the rural population increases, it leads to the economic development of the region too.

Getting Recognition on the Global Map

The MSME sector, especially the cottage industry like saree weaving, carpet weaving etc., are classic examples of family run businesses (or generational businesses). Generally, the entire family is engaged in the business and in some cases, the whole village. Through the arts, the artisans' creativity gets exposure in the national and global markets. As mentioned, many MSMEs in the rural sector are engaged in exports and generate foreign exchange, in turn helping the national economy to grow. For example, India is the 5th largest exporter of leather goods and accessories, according to Invest India. Leather exports reached \$4.03 billion in FY 2020-21. Each exporting MSME has contributed to reach this milestone.

Self-reliance

As the MSMEs in the rural areas mostly source raw materials and workforce locally, they are aligned with the central government's mission of self-reliant India.

Rural Development through Business

- **Source locally:** Procurement strategy of sourcing locally can help your business to be cost effective. Additionally, you generate business for another local/rural business and help it grow too.
- **Hire local workforce:** You can hire local talent. If the need be, they can undergo training to acquire new skills for the job. Many large companies having manufacturing units in the rural region have a policy of acquiring a certain percentage of talent from the local area.
- **Collaborate with rural businesses:** Instead of competition, forge collaborations with alike or complementing businesses in the region. This will help you as well as other businesses grow and expand.

Conclusion

MSMEs contribution to the economic development of a nation is wide. But there are some difficulties in MSMEs. Many entrepreneurs are not entering in the field of exports due to lack of market knowledge, availability of a growing domestic market, and the complexities of international trade. Limited scale of operations leads to low production capacity (and consequent low exportable surplus), which is related to the maximum limits for capital investment for definition of MSME. Problems of designing, packaging and product display due to limited capacities. Inadequate infrastructure facilities, including power, water, roads, etc. Low technology levels and lack of access to modern technology. Lack of skilled manpower. Absence of a suitable mechanism which enables the quick revival of viable sick enterprises and allows unviable entities to close down speedily.

Abstract

Woman creates a family which leads to society and nation. The social and economic development of women is essential for the overall economic development to any society or country. Although entrepreneurship is in the mindset of any woman, it is not invested in India the way it should be. Although there are some exceptions, due to the changing environment, people are comfortable accepting the important role of women in our society. Entrepreneurial development of women is an essential part of human resource development. Any strategy aimed at economic growth without engaging women, who make up half of the world's population, will back fire. Evidence has unequivocally established that entrepreneurial spirit is not a male prerogative. Women-owned businesses are increasing rapidly in almost all economies. Women's latent entrepreneurial potential is gradually changing with growing sensitivity to role in society and economic status. Skill, knowledge and adaptability in business are the main reasons why women emerge in business ventures. The main objectives of the study are to find out the factors that contribute to the formation of female entrepreneurs. The study also highlights the major barriers and challenges faced by women entrepreneurs and the opportunities available to them. Finally the paper makes some commendations to increase or promote women entrepreneurship and healthy development of women entrepreneurship in India.

Keywords: Women Entrepreneurship, Role, Self-Fulfillment, Entrepreneurship Development.

Introduction

Women's empowerment is a social process in which women expand and recreate what it means to be in a previously denied situation. There are many principles that define women's empowerment, for one to be empowered; they must come from a position of disempowerment. Entrepreneur is the agent who buys means of production at certain prices, in order to sell at prices that are certain at the moment at which he commits himself to his cost". According to P.F Drucker "he is one who always searches for change: responds to it & exploits it as an opportunity". Hence, Entrepreneurship refers to the act of setting up a new business or reviving an existing business so as to take advantages from new opportunities. Women have

developed tremendously in their mentality. With increasing dependence on the service sector, many entrepreneurial opportunities have been created, especially for women, where they can enhance their skills while maintaining a balance in their lives.

Objectives

The study has the following objectives

- To understand the philosophy and concept of women empowerment and entrepreneur development in rural area.
- To identify the impact of entrepreneur development on women empowerment; and
- To suggests one possible solution for encouraging; developing; and improving the women empowerment in emerging economies.

Methodology

Given the nature of the present study, data had to be collected from secondary sources. The author was always mindful of the objectives of the study and collected data accordingly to achieve those objectives. Secondary data was collected from research studies, books, journals, newspapers and on going academic work papers. The collected data can be processed and analyzed to make the present study useful for the practitioners, researchers, planners, policymakers and educators of the concerned area.

Analysis and Findings

1. Empowerment

Empowerment means that people have power and control over their own lives. People get the support they need. Empowerment means that people are equal citizens. They are respected and trusted in their community. Empowerment as action refers to the process of self-empowerment and professional support of people to overcome their feelings of powerlessness and lack of influence, and to identify and use their resources. The term empowerment originates from American social psychology and is associated with social scientist Julian Rappaport (1981).[1] However, the roots of empowerment theory extend further into history and are linked to Marxist sociological theory. These sociological concepts are continuously developed and refined through neo-Marxist theory. Empowerment redistributes power from the powerful to the powerless. It is more than participation in decision making, it must also include the process that lead people to perceive themselves as able and entitled to make decisions (Prasad & Sahay, 2000). Empowerment must

involve undoing negative social construction, so that people come to see themselves as having the capacity and the right to act and influence decisions (Rowlands, 1997).

II. Entrepreneurship

Entrepreneurship is the creation or extraction of economic value. With this definition, entrepreneurship is viewed as change, generally entailing risk beyond what is normally encountered instarting a business, which may include other values than simply economic ones. An entrepreneur is an individual who creates and/or invests in one or more businesses, bearing most of the risks and enjoying most of the rewards. The process of setting up a business is known as entrepreneurship. The entrepreneuris commonly seen as an innovator, a source of new ideas, goods, services, and business/or procedures. More narrow definitions have described entrepreneurship as the process of designing, launching and running a new business, which is often similar to a small business, or as the "capacity and willingness to develop, organize and manage a business venture along with any of its risks to make a profit. The people who create these businesses are often referred to as entrepreneurs. While definitions of entrepreneurship typically focus on the launching and running of businesses, due to the high risks involved in launching a start-up, a significant proportion of start-up businesses have to close due to "lack of funding, bad business decisions, government policies, an economic crisis, lack of market demand, or a combination of all of these."

Characteristics of Entrepreneurship

Not all entrepreneurs are successful; there are definite characteristics that make entrepreneurship successful. A few of them are mentioned below:

- **Ability to take a risk:** Starting any new venture involves a considerable amount of failure risk. Therefore, an entrepreneur needs to be courageous and able to evaluate and take risks, which is an essential part of being an entrepreneur.
- **Innovation:** Its hould be highly innovative to generate new ideas, start a company and earn profits out of it. Change can be the launching of a new product that is new to the market or a process that does the same thing but in a more efficient and economical way.
- **Visionary and Leadership quality:** To be successful, the entrepreneur should have a clear visionof his new venture. However, to turn the idea into reality, a lot of resources and employees are required. Here, leadership quality is paramount because leaders impart and guide their employees towards the right path of success.

- **Open-Minded:** In a business, every circumstance can be an opportunity and used for the benefit of a company. For example, Paytm recognized the gravity of demonetization and acknowledged the need for online transactions would be more, so it utilized the situation and expanded massively during this time.
- **Flexible:** An entrepreneur should be flexible and open to change according to the situation. To be on the top, a business person should be equipped to embrace change in a product and service, as and when needed.

III. Empowerment of women through empowerment

In the early 1980s, the United Nations reported that women performed two-thirds of the world's work. The world's labor earned one-tenth of the world's income and owned one-hundredth World Economic Resources (Laois, 2000). A tool for women empowerment is self-employment or entrepreneurship. Why women choose self-employment or Entrepreneurship? In one study autonomy was rated highly as a means to gain Personal freedom. This level of autonomy offers opportunities to:

- (1) Be able to their Own Decisions
- (2) Able to do optional work
- (3) To reach Financial Independence

The impact of ED on Empowerment

1. Self- confidence of women

Increased self-confidence through entrepreneurship development for women a prosperous future.

2. Economic Solvency

Economic solution the most significant changes come from increases in income, not just upgrades the individual's life but increases her quality of life, the economy increases hardness within the family. Increase in her income also increase in family income and it provides better lifestyle including education to the family members improving child and family health.

3. Capital Building

Women economic success enables women to expand their business, procure new machinery, tools, accessories and relevant necessities. Modernization of the workplace, introduction of new technology for increase production, increase of labourers, along with the increase in purchasing power, upgrades their status both socially and economically.

4. Role of Status

Some aspects of household decision making are reported to have changed as a result of women's contribution in family income. Most of the men now consult with

their wives in important family matters. Their power of decision making has increased because they have money. Since women retain control over earnings, women can easily lend small and big amounts to business and others without asking for their husbands' permission. Since women perceive that their bargaining power within the family has increased as an indirect outcome of participating in the business. Women's status has changed in the family and society gradually.

Conclusion

Empowerment is scalable. Women develop their managerial skills and develop visions of growth that embrace strategic planning areas. Empowerment Women's economic independence leads to control over their lives, self-determination and self-fulfillment. Empowerment by Self-employment is associated with women's ability to gain control over economic resources and participate fully in the wealth building process. Empowerment leads to the self-fulfillment of knowing where women are headed.

Abstract

Information communication technology is a general term that refers to the technologies used to collect, store, edit and communicate information in various forms. ICT is the use of computer-based technology is used in education is an educational system that uses information and communication technology to support, enhance and enhance the delivery of information. Adapting to these new technologies is a slow process, but it allows many teachers to improve the quality of teaching. Global research has shown that ICT can lead to improved student learning and better teaching methods to make information and communication services widely available to users. E-learning can be termed a network-enabled transfer of skills and knowledge. While teaching can be based in or out of the classrooms, the use of computers and the Internet forms the major component of E-learning. Many institutions of higher education and universities are resorting to E-Learning. Many corporate companies are also deeply investing in E-learning and setting up interactive classrooms activity. Technology has taken over our entire life and education is no exception to it, technological advancement has a great effect on how learning is imparted and also consumed.

Keywords: *ICT Tools-E-Learning-Digital Platform-Satisfaction*

Introduction

Information technology (IT) is defined as the study or use of electronic equipment's, especially computers for storing, analyzing and sending out information. Communication technology is the process of sending, receiving and exchanging information. ICTS can be defined as "diverse set of technological tools and resources used to communicate, and to create, disseminate, store, and manage information." These technologies include computers, the Internet, broadcasting technologies (radio and television), and telephony. The use of e-learning in education improves the quality of practical education and a better understanding of the subject. Indira Gandhi National Open University (IGNOU), the world's largest Open University launched a 24x7 E-learning satellite channel called GyanDarshan. E-learning gives the advantage of 24x7 and 365 days a year-round access as compared to Instructor-Led Training, which is a one-time class that must be scheduled. Undoubtedly, one lecture can teach more students wide geographic area by responding to e-learning technology. In general, this review provides important information to increase the knowledge base of various performance educational methods. In the future, there is still a need to develop and evaluate such methods education among higher education students. It is important that these studies are conducted show effectiveness, and they should also focus on outcomes at different levels.

Statement of Problem

The purpose of this research is that the government introduces many new technologies in the country to suit the people's society in order to fulfill the objective of development of the country. A project like Digital transformation in education. E-learning level perception, culture and satisfaction varies from person to person due to many factors such as gender, education etc.

Objective of the Study

- To study the awareness level of people towards ICT tools
- To apply critical thinking skills to their students action, behavior and social engagement on digital platform.
- To identify the satisfaction towards e-learning.

Review of literature

Sahlam et-al (2021) made a study on "The effects of modes of test administration on test scores: A study in an Indonesian school ". The main objectives of this study the effect of gender and the interaction effect between gender and mode of testing on test scores were significant. The primary and secondary data were used for this study. 234 respondents were collected for this study by using simple Random sampling method. The statistical tools like simple percentage will be used to analysis the data. The study revealed that indicated that neither gender, mode of test administration nor the interaction between gender and mode students anxiety levels. **Noreen & Malik, (2020)**. It is found that, teachers also require the necessary infrastructure, hardware and software, reliable high-speed internet connectivity, continuous professional development and the support of administrators. **Muhammad Hafeez (2021)** discovered that Teaching-Learning Process and ICT Tools- A Review and found that usage of modern ICT tools in teaching- learning process successfully improved the teaching-learning process and the traditional lecture learning does not improve the cognitive and communication skills of the learners. **Dr. Pranjal Grover et-al (2021)** made a study on "Efficiency of online pre-Recorded practical demonstrations and live Streamed practical demonstrations in third year physiotherapy students during the COVID-19 pandemic-a survey ".The main objective of this study is to understand the efficacy of online pre-recorded practical demonstrations. The primary data were used for this study. 44 respondents were collected for this study by using a complete enumeration sampling method. Statistical tools like simple percentages will be used.

Table 1

Variable	Number of respondents	Percentage
Age:		
Below 20 years	68	55.76
21- 30 years	87	43.58
31-40 years	1	0.66
Total	156	100

Area:		
Rural	98	62.82
Semi -urban	13	28.84
Urban	45	8.33
Total	156	100
Gender:		
Male	37	23.71
Female	119	76.28
Total	156	100
Marital status:		
Married	12	7.69
Unmarried	144	92.30
Total	156	100
Educational qualification:		
up to HSC	11	53.20
UG	83	37.17
PG	58	7.05
Others	4	0.64
Total	156	100
Occupation :		
Agriculture	22	73.07
Salaried Person	16	13.46
Labour	5	10.25
Business	113	3.20
Total	156	100
Digital Platforms tools used		
Yes	125	80
No	31	20
Total	156	100

Data: primary data

From the above table shows that Majority of the respondents are age group between 21-30 years. Most of the respondents are rural area. Majority (76.28%) of the respondents are gender in female. Majority (92.30%) of the respondents are marital status in unmarried. Majority (53.20%) of the respondents are Educational qualifications UG level. Majority (73.07%) of the respondents are Occupation level in Students.

Chi Square Test**Chi square value 5% @Satisfaction onlevel of people****Table 2**

S.No	Particulars	D.F	Chi square Value	Table value	Result
1	Age	4	10.316	9.488	Rejected
2	Area	2	9.375	5.991	Rejected
3	Education qualification	6	11.069	12.592	Accepted

Source: Primary data

From the above table found that respondents calculated chi-square is higher than table value at five percent level, there are significant association between the demographic variables and level of satisfaction. Null hypothesis rejected.

Conclusion

Digitization of legacy and vintage structures has replaced conventional operations with new technology and fashions. Due to that technology the instructional part has additionally got a big change and has changed the conventional training version to a brand new technology based smart version. By digitizing the learning experience, both college students and instructors can hone their skills and create a lively instructional process. Digital transformation can be implemented in many aspects within the academic quarter, including new student recruitment, online knowledge acquisition, scholarly assessments, personalized knowledge of experiences and exams. Generational penetration within the instructional quarter has promised dynamic participation and proposed new methods of training and mastering methods

Abstract

The rapid digital transformation of the marketing landscape has ushered in unprecedented opportunities for businesses to engage with consumers. However, this transformation has also raised critical ethical questions concerning data privacy in the context of digital marketing. This review research paper explores the intricate dynamics between consumer perceptions of data privacy and the practices employed by the digital marketing industry. It delves into the multifaceted dimensions of data collection, storage, usage, and the transparency of data practices.

Consumer concerns regarding data privacy have been amplified in an era of data breaches and heightened awareness of personal data vulnerabilities. This paper examines how consumer perceptions of data privacy influence their trust in digital marketing practices and their willingness to share personal information for targeted advertising. It also assesses the extent to which digital marketing practices align with ethical standards and regulatory frameworks. The paper draws from a diverse range of academic sources, industry reports, and surveys to provide a comprehensive analysis of the ethical challenges and opportunities within digital marketing. It highlights the ethical dilemmas faced by businesses in balancing data-driven marketing strategies with respect for individual privacy rights. Furthermore, it explores evolving consumer attitudes and expectations, underscoring the importance of transparent data handling practices and informed consent mechanisms.

As digital marketing continues to evolve, understanding the ethical dimensions of data privacy becomes paramount for both marketers and policymakers. This research paper contributes to the ongoing dialogue surrounding data privacy ethics, offering insights that can inform ethical marketing practices, consumer protection regulations, and the cultivation of a trustworthy digital marketing ecosystem. This paper underscores the intricate interplay between consumer perceptions, industry practices, and ethical considerations in the realm of data privacy within digital marketing. It calls for a collaborative effort among industry stakeholders, policymakers, and consumers to navigate these ethical challenges and foster a digital marketing environment characterized by transparency, trust, and respect for individual privacy.

Keywords: *Data Privacy, Digital Marketing, Consumer Perceptions, Industry Practices, Targeted Advertising*

Introduction

The digital age has ushered in a transformative era of marketing, revolutionizing how businesses engage with consumers and deliver tailored experiences. As consumers navigate an increasingly interconnected digital landscape, they leave behind a trail of data—a digital footprint that marketers eagerly harness to personalize advertisements and content. While data-driven marketing holds the promise of relevance and engagement, it raises profound ethical questions, especially concerning data privacy.

¹ Assistant Professor of Commerce CA, Nallamuthu Gounder Mahalingam College, Pollachi

The collection, storage, and utilization of personal data in digital marketing practices have become central to contemporary marketing strategies. However, this evolution has not been without controversy. It has ignited a fierce debate about the ethical boundaries of data privacy, consumer consent, and the power dynamics between individuals and corporations. As technology advances, consumer awareness of the value and vulnerability of their personal data has grown, leading to heightened concerns about how that data is acquired, used, and protected.

This review research paper delves into the intricate terrain of data privacy ethics in the realm of digital marketing. It explores the dynamic interplay between consumer perceptions of data privacy and the practices employed by the digital marketing industry. At its core, this study seeks to understand the ethical implications of the data-driven marketing ecosystem and to provide insights into the evolving relationships between consumers, marketers, and regulators.

Consumer perceptions of data privacy are central to the ethical dimension of digital marketing. How consumers perceive the collection and utilization of their personal data shapes their trust in digital marketing practices and influences their willingness to share information for targeted advertising. As concerns about data breaches and privacy vulnerabilities mount, understanding consumer attitudes becomes paramount for both ethical marketing and consumer protection.

Furthermore, this research paper critically assesses the extent to which digital marketing practices align with ethical standards and regulatory frameworks. It examines the ethical dilemmas faced by businesses in the pursuit of data-driven marketing strategies while simultaneously respecting individual privacy rights. In an era marked by evolving consumer expectations and increased scrutiny from regulators, it is essential to evaluate the ethical foundations of digital marketing.

The comprehensive analysis presented in this review draws from a diverse range of academic sources, industry reports, and surveys. It offers a panoramic view of the ethical challenges and opportunities within digital marketing. It highlights the ethical dilemmas faced by businesses in balancing data-driven marketing strategies with ethical considerations and regulatory compliance. The evolving landscape of consumer attitudes and expectations serves as a focal point of investigation. The paper underscores the importance of transparent data handling practices and the development of informed consent mechanisms. It also explores the role of policymakers, industry stakeholders, and consumers in shaping the ethical contours of the digital marketing ecosystem.

The ethical dimensions of data privacy within digital marketing represent a complex and evolving landscape. As the digital marketing industry continues to expand and adapt, understanding and addressing these ethical challenges become critical imperatives. This research paper contributes to the ongoing dialogue surrounding data privacy ethics, offering insights that can inform ethical marketing practices, consumer protection regulations, and the cultivation of a trustworthy digital marketing environment.

Background of the Study

The digital age has ushered in a paradigm shift in marketing, driven by technological innovations that enable businesses to collect, analyze, and leverage vast amounts of consumer data. This transformation has redefined how marketers engage with their target audiences, offering the promise of highly personalized and contextually relevant advertising. While data-driven marketing has revolutionized the industry, it has also given rise to profound ethical questions surrounding data privacy, consumer consent, and the responsible use of personal information. The practice of data-driven marketing relies on the systematic collection of user data, encompassing a wide array of personal details, including browsing history, location data, social media interactions, and even biometric information. This information is then harnessed to create detailed consumer profiles, enabling marketers to deliver targeted advertisements and content. While these practices hold the potential to enhance user experiences and boost marketing effectiveness, they raise intricate ethical dilemmas regarding the extent of data collection, transparency, and individual privacy rights.

Consumer awareness of data privacy issues has grown significantly in response to high-profile data breaches, privacy scandals, and legislative efforts to safeguard personal information. As a result, consumers are increasingly vigilant about how their data is handled and are demanding greater control over their digital identities. This shift in consumer attitudes has profound implications for the digital marketing industry, as consumers' willingness to share data for marketing purposes hinges on trust in the ethical conduct of businesses. The digital marketing landscape is further shaped by a complex web of regulations and standards designed to protect consumer data privacy. Initiatives such as the European Union's General Data Protection Regulation (GDPR) and the California Consumer Privacy Act (CCPA) have set stringent requirements for data handling, consent mechanisms, and user rights. These regulatory frameworks reflect the growing recognition of the importance of ethical data practices and individual privacy rights.

To navigate this evolving ethical landscape, businesses must not only comply with regulations but also foster a culture of ethical data stewardship. Understanding consumer perceptions of data privacy and the ethical implications of digital marketing practices is vital for building trust, maintaining customer relationships, and demonstrating a commitment to responsible data handling. This review research paper embarks on a comprehensive exploration of the ethics of data privacy in digital marketing. It seeks to unravel the intricate dynamics between consumer perceptions of data privacy and the practices employed by the digital marketing industry. By delving into the multifaceted dimensions of data collection, storage, usage, and transparency, this study aims to shed light on the ethical considerations that underpin data-driven marketing strategies. The digital marketing landscape stands at a crossroads where ethical data practices and consumer perceptions of data privacy intersect. This background sets the stage for a thorough examination of these critical issues in the context of digital marketing, providing the foundation for a comprehensive analysis of the ethics of data privacy.

Justification of the study

The investigation of the ethics surrounding data privacy in digital marketing is both timely and imperative in today's digital age. This research study is justified for several key reasons:

1. **Rising Data Privacy Concerns:** The proliferation of high-profile data breaches, privacy scandals, and growing awareness of personal data vulnerabilities have heightened consumer concerns regarding data privacy. Consumers are increasingly wary of how their data is collected and used in digital marketing practices. Understanding these concerns is essential for businesses to regain consumer trust and navigate the evolving digital marketing landscape.
2. **Evolving Regulatory Landscape:** The emergence of comprehensive data protection regulations, such as the GDPR and CCPA, reflects a global commitment to safeguarding individual privacy rights. These regulations have far-reaching implications for businesses engaged in digital marketing. Examining how these regulations intersect with industry practices and consumer expectations is essential for compliance and ethical data handling.
3. **Ethical Data Practices:** Ethical considerations are at the forefront of discussions surrounding data privacy in digital marketing. It is paramount to assess how businesses balance data-driven marketing strategies with ethical standards and societal expectations. Investigating the ethical dilemmas faced by businesses can provide valuable insights into responsible data practices.
4. **Trust and Consumer Relationships:** Trust is a cornerstone of consumer relationships. As consumers become increasingly cautious about data privacy, the ability of businesses to establish and maintain trust is contingent on transparent and ethical data handling practices. This study explores how consumer trust is influenced by data privacy perceptions and the ethical conduct of businesses.

5. **Gap in Academic Literature:** While there is a growing body of literature on data privacy and digital marketing, a comprehensive review that synthesizes the existing research and explores the ethical dimensions is notably absent. This study bridges this gap by providing a holistic analysis of the ethical challenges and opportunities in the intersection of data privacy and digital marketing.
6. **Practical Implications:** Beyond academic inquiry, this research offers practical implications for businesses and policymakers. Understanding consumer perceptions and ethical considerations in data-driven marketing can inform the development of best practices, industry standards, and regulatory policies that promote ethical data privacy.
7. **Emerging Ethical Debates:** The rapid evolution of technology and marketing practices continually introduces new ethical debates. By conducting this research, we contribute to the ongoing dialogue surrounding data privacy ethics, offering insights that can guide ethical marketing practices, consumer protection regulations, and industry self-regulation.

Objectives of the Study

1. To assess consumer perceptions, attitudes, and concerns regarding data privacy in the context of digital marketing practices
2. To investigate the data collection, storage, usage, and sharing practices employed by the digital marketing industry, including the extent to which they align with ethical standards.
3. To explore the relationship between consumer trust in digital marketing practices and their perceptions of data privacy and ethical conduct by businesses.
4. To identify and analyze the ethical dilemmas faced by businesses in balancing data-driven marketing strategies with ethical considerations and individual privacy rights.
5. To investigate the role of transparency and informed consent mechanisms in addressing ethical concerns related to data privacy in digital marketing.

Literature Review

1. Data Privacy in the Digital Age

The digital age has brought about unprecedented opportunities and challenges in data privacy. As individuals engage with digital platforms, they generate vast amounts of personal data. This data encompasses a wide range of information, from online behaviors and preferences to location data and biometrics. It forms the foundation of data-driven marketing strategies, enabling businesses to deliver personalized content and advertisements. However, this data-driven approach has raised ethical concerns regarding the extent of data collection, usage, and individual consent.

Numerous scholars have examined the evolving landscape of data privacy in the digital age. Acquisti and Grossklags (2005) explored the trade-offs between privacy and personalization, highlighting the ethical dilemmas arising from the use of personal data for targeted advertising. They emphasized the need for transparency and user control in data collection practices. Nissenbaum (2010) introduced the concept of "contextual integrity," arguing that data practices should respect the social and contextual norms in which data is shared.

2. Consumer Perceptions and Trust

Consumer perceptions play a pivotal role in shaping the ethical considerations surrounding data privacy in digital marketing. Scholars have investigated how consumers perceive data privacy and the impact of these perceptions on trust and willingness to engage with digital marketing practices. Culnan and Armstrong (1999) found that concerns about data privacy influence consumer trust in e-commerce. Similarly, Li et al. (2008) highlighted the importance of trust in online advertising and the role of perceived privacy protection in building trust.

Research by Turov et al. (2015) revealed that consumers have varying levels of awareness and concern about data privacy, with some expressing resignation while others are highly cautious. Understanding these varying perceptions is crucial for businesses seeking to establish trust with

their audience. Furthermore, Tsai and Men (2017) explored the role of transparency and consumer control in mitigating concerns and enhancing trust in personalized advertising.

3. Regulatory Frameworks and Compliance

The emergence of data protection regulations has had a profound impact on data privacy in digital marketing. The European Union's General Data Protection Regulation (GDPR) and the California Consumer Privacy Act (CCPA) are notable examples of regulatory frameworks aimed at safeguarding individual privacy rights. Scholars have examined the implications of these regulations for businesses and consumers.

Kaplan and Haenlein (2019) assessed the GDPR's impact on the marketing industry, highlighting the importance of transparency, data minimization, and user consent. They noted that the GDPR has prompted businesses to reevaluate their data practices. Additionally, Dienlin and Trepte (2015) investigated the effects of privacy policy transparency on user trust, emphasizing the role of clear and concise privacy disclosures in compliance with regulations.

4. Ethical Considerations and Dilemmas

The ethical considerations within data-driven marketing practices are multifaceted. Scholars have explored the ethical dilemmas faced by businesses as they navigate the balance between data-driven strategies and consumer privacy rights. Taddeo and Floridi (2018) argued for an ethical framework that considers both individual and collective interests in data privacy, emphasizing the need for responsible data handling.

Mann and Gavison (2017) delved into the challenges of consent in digital environments, highlighting the complexities of obtaining informed consent from users. They called for a more nuanced understanding of consent mechanisms to ensure ethical data practices. Additionally, Dobson et al. (2019) examined the ethical implications of personalized advertising, particularly in the context of vulnerable populations, underscoring the importance of ethical advertising practices.

5. Future Directions and Emerging Debates

The field of data privacy ethics in digital marketing continues to evolve, presenting new challenges and opportunities. Emerging debates include the ethical considerations of artificial intelligence and machine learning in data-driven marketing, the role of data ethics in the era of the Internet of Things (IoT), and the ethical implications of data sharing in collaborative marketing efforts.

As the digital marketing landscape undergoes rapid transformations, scholars and practitioners must continue to explore the ethical dimensions of data privacy, informing best practices, regulatory frameworks, and industry standards. The dynamic interplay between consumer perceptions, industry practices, and regulatory developments will continue to shape the ethical contours of data privacy in digital marketing.

Material and Methodology

1. Data Collection

- **Academic Literature:** A systematic search of academic databases, including PubMed, IEEE Xplore, JSTOR, and Google Scholar, was conducted to identify relevant scholarly articles, conference papers, and books related to data privacy in digital marketing and consumer perceptions.
- **Industry Reports:** Reports and publications from reputable industry sources, such as Nielsen, Pew Research Center, and eMarketer, were accessed to gather insights into industry practices and consumer behavior.
- **Regulatory Documentation:** Official documents and guidelines from regulatory authorities, including the General Data Protection Regulation (GDPR) and the California Consumer

Privacy Act (CCPA), were consulted to understand the legal framework governing data privacy.

2. Ethical Considerations

Ethical considerations were paramount throughout the research process. Proper citation and referencing practices were adhered to, ensuring that all sources were appropriately credited.

Consent and privacy of individuals were respected, particularly when citing data from surveys or studies involving human subjects.

Results and Discussion

The comprehensive review of academic literature, industry reports, and regulatory documentation on the ethics of data privacy in digital marketing has yielded several significant findings:

1. Consumer Perceptions and Concerns

- **Variability in Perceptions:** Consumer perceptions of data privacy in digital marketing vary widely. While some individuals are highly concerned about their data, others exhibit a resigned attitude, viewing data sharing as an inevitable consequence of digital engagement.
- **Transparency Matters:** Transparency in data collection and usage practices significantly impacts consumer trust. Consumers are more likely to trust businesses that provide clear and concise privacy disclosures and allow for informed consent.
- **Concerns About Targeted Advertising:** Consumers express concerns about the intrusiveness of personalized advertising. The use of personal data to deliver highly tailored ads can be seen as a violation of privacy, especially when consumers are unaware of how their data is being utilized.

2. Industry Practices

- **Data-Driven Strategies:** The digital marketing industry relies heavily on data-driven strategies. The collection of extensive consumer data is central to creating personalized content and advertisements.
- **Adherence to Regulations:** Regulatory frameworks such as the GDPR and CCPA have prompted businesses to reevaluate their data practices. Many organizations have taken steps to ensure compliance with data protection laws.
- **Ethical Dilemmas:** Businesses face ethical dilemmas in balancing data-driven marketing strategies with ethical considerations. The tension between maximizing marketing effectiveness and respecting individual privacy rights is an ongoing challenge.

3. Regulatory Frameworks

- **Impact of GDPR:** The GDPR has had a significant impact on data privacy practices in digital marketing. It has led to increased transparency, data minimization, and user consent mechanisms. Businesses that operate within the European Union have adapted their practices to comply with these regulations.
- **Patchwork of Regulations:** The existence of multiple regional and national data protection regulations, such as the GDPR and CCPA, creates a complex regulatory landscape. Compliance requires businesses to navigate varying legal requirements across jurisdictions.

4. Ethical Considerations

- **Informed Consent:** Obtaining informed consent from users remains a challenge. Many consumers are presented with lengthy and complex privacy policies that they may not fully understand, raising questions about the validity of their consent.
- **Role of Industry Self-Regulation:** Industry self-regulation efforts, such as the Interactive Advertising Bureau's Transparency and Consent Framework, aim to standardize data

practices and improve transparency. These initiatives reflect industry recognition of the need for ethical data handling.

5. Trust Building

- **Transparency and Trust:** Transparency emerges as a key factor in building and maintaining consumer trust in digital marketing. Businesses that are transparent about their data practices and offer users control over their data are more likely to gain trust.
- **Long-Term Relationships:** Trust is essential for fostering long-term relationships between businesses and consumers. Ethical data practices contribute to trust-building and customer loyalty.

In short, the findings from this comprehensive review illuminate the complex interplay between consumer perceptions, industry practices, and regulatory frameworks in the realm of data privacy ethics in digital marketing. The variability in consumer perceptions, ethical dilemmas faced by businesses, and the impact of regulatory frameworks underscore the importance of transparency, informed consent, and responsible data practices in building trust and ethical marketing in the digital age.

Limitations of the study

1. **Scope of Literature:** The review primarily relies on existing literature, which may not capture the most recent developments and emerging trends in the rapidly evolving field of digital marketing. New ethical challenges and practices may have emerged since the last publication date of the reviewed sources.
2. **Language Limitation:** The study is limited to English-language publications. Relevant research published in other languages may not have been included, potentially introducing language bias.
3. **Geographic Focus:** The review predominantly draws from literature and regulations in Western countries, such as the United States and European Union. Ethical considerations and regulatory landscapes may vary significantly in other regions, limiting the generalizability of findings.
4. **Consumer Heterogeneity:** Consumer perceptions and attitudes toward data privacy are highly heterogeneous. The review captures broad trends but may not fully account for diverse consumer demographics, cultural variations, or contextual factors that influence data privacy perceptions.
5. **Industry Variability:** The digital marketing industry comprises a wide range of businesses, from small startups to multinational corporations, each with varying data privacy practices. The review provides a generalized view and may not fully reflect the diversity of industry practices.
6. **Temporal Relevance:** Some regulatory frameworks and industry practices discussed in the review may have evolved or changed since the time of publication. Ongoing developments in data privacy regulations can have a significant impact on the digital marketing landscape.
7. **Overemphasis on Academia:** The review places significant emphasis on academic literature, which may not always align with real-world industry practices. Practical insights from industry experts and practitioners could provide additional perspectives.
8. **Quantitative Data:** The review primarily relies on qualitative data and thematic analysis. Quantitative data and statistical analyses were not conducted due to the nature of the review.
9. **Data from Surveys and Reports:** Some findings are based on data from consumer surveys and industry reports, which have their own methodological limitations, including sampling biases and potential reporting biases.
10. **Generalizability:** While the review aims to provide a comprehensive overview, the findings may not apply universally to all digital marketing contexts or consumer segments.

Despite these limitations, the study contributes valuable insights into the ethics of data privacy in digital marketing, highlighting the need for continued research, industry self-regulation, and policy development to address the evolving challenges and opportunities in this domain.

Future Scope

The study on the ethics of data privacy in digital marketing has illuminated several avenues for future research and exploration:

1. Emerging Technologies

The integration of emerging technologies, such as artificial intelligence (AI), machine learning (ML), and blockchain, into digital marketing practices presents new ethical challenges and opportunities. Future research can investigate the ethical implications of AI-driven personalization, algorithmic bias, and the use of blockchain for transparent data management.

2. Cross-Cultural Analysis

Cross-cultural studies examining data privacy perceptions and ethical considerations can provide valuable insights into how cultural norms and values shape consumer attitudes and industry practices. Comparative research across different regions and cultures can contribute to a more comprehensive understanding of the global data privacy landscape.

3. Longitudinal Studies

Longitudinal studies tracking changes in consumer perceptions and industry practices over time can offer insights into the evolving nature of data privacy ethics. Monitoring the impact of regulatory changes, industry self-regulation, and technological advancements on ethical considerations is essential.

4. Consumer Education and Awareness

Research focusing on consumer education and awareness campaigns can assess their effectiveness in enhancing data privacy literacy. Understanding how informed consumers make ethical choices in data sharing and online engagement is critical for promoting responsible data practices.

5. Industry Self-Regulation

Exploration of industry-led initiatives and self-regulation efforts can shed light on their impact on ethical data handling. Future studies can evaluate the effectiveness of industry-developed frameworks, codes of conduct, and best practices in promoting ethical marketing.

6. Privacy-Preserving Technologies

Research into privacy-preserving technologies and methodologies, such as differential privacy and homomorphic encryption, can examine their feasibility and adoption within digital marketing. These technologies aim to strike a balance between data-driven marketing and data privacy.

7. Ethics in Personalization

Further investigation into the ethical dimensions of personalization in digital marketing can explore the boundaries of customization. How can businesses personalize content while respecting user privacy and consent? What ethical principles should guide the deployment of personalization algorithms?

8. Consumer Empowerment

Studies focusing on tools and platforms that empower consumers to control their data can assess their impact on data privacy ethics. Evaluating the effectiveness and usability of privacy-enhancing technologies can inform their development and adoption.

9. International Harmonization

With the proliferation of data protection regulations worldwide, future research can examine efforts to harmonize international data privacy standards. Comparative analyses of regulatory frameworks and their impact on global digital marketing practices can be insightful.

10. Ethical Marketing Metrics

Development and validation of ethical marketing metrics can provide businesses with a quantitative framework to evaluate and benchmark their data privacy practices. These metrics can assess transparency, user consent, and adherence to ethical principles.

Conclusion

The ethics of data privacy in the realm of digital marketing have become increasingly prominent in an era defined by data-driven strategies, emerging technologies, and evolving regulatory landscapes. This comprehensive review has delved into the multifaceted dimensions of this critical field, shedding light on the interplay between consumer perceptions, industry practices, and ethical considerations.

Consumer Perceptions and Concerns

One of the central findings of this review is the variability in consumer perceptions and concerns regarding data privacy in digital marketing. While some individuals exhibit high levels of concern and caution, others may be resigned or unaware of the extent to which their data is collected and utilized. Transparency in data practices emerges as a pivotal factor in shaping consumer trust and willingness to engage with personalized marketing efforts.

Industry Practices and Ethical Dilemmas

The digital marketing industry relies extensively on data-driven strategies to deliver personalized content and advertisements. However, this reliance on data collection and utilization has introduced a host of ethical dilemmas. Balancing marketing effectiveness with individual privacy rights poses an ongoing challenge for businesses. The review highlights the tension between maximizing the benefits of data-driven marketing and respecting ethical principles.

Regulatory Frameworks and Compliance

The emergence of data protection regulations, such as the GDPR and CCPA, has had a profound impact on industry practices. These regulations have prompted businesses to reevaluate their data handling procedures, emphasizing transparency, data minimization, and user consent. Compliance with these evolving regulatory frameworks is a crucial aspect of ethical data practices.

Transparency and Trust

Transparency emerges as a key theme throughout this review. Transparent data collection and usage practices are pivotal in building and maintaining consumer trust. Businesses that prioritize clear and concise privacy disclosures and provide users with control over their data are more likely to foster trust and long-term relationships with consumers.

Future Directions

As the digital marketing landscape continues to evolve, this review suggests several avenues for future research. These include the exploration of emerging technologies, cross-cultural

analyses, longitudinal studies tracking changes in perceptions and practices, and investigations into industry self-regulation and privacy-preserving technologies. Additionally, ethical marketing metrics and tools for consumer empowerment warrant further examination.

In conclusion, the ethics of data privacy in digital marketing are integral to the sustainability and responsible growth of the industry. Consumer perceptions, industry practices, and regulatory frameworks are interconnected elements that shape the ethical contours of data-driven marketing. Businesses that prioritize transparency, user consent, and ethical data handling not only foster trust but also contribute to the cultivation of a trustworthy digital marketing ecosystem. As the field continues to evolve, ongoing research and ethical considerations are imperative to navigate the dynamic intersection of data privacy, consumer expectations, and digital marketing practices.

CHAPTER - 30

THE ROLE OF DIGITAL TRANSFORMATION IN SUPPLY CHAIN MANAGEMENT

Dr. T. Vijaya Chithra ¹

Abstract

In the contemporary landscape of global commerce, the dynamic nature of supply chain management has necessitated a paradigm shift towards digital transformation. This review research paper delves into the pivotal role that digital transformation plays in revolutionizing supply chain management practices. The paper provides a comprehensive analysis of the transformative impact of digital technologies, such as IoT (Internet of Things), blockchain, artificial intelligence, and data analytics, on various facets of supply chain operations.

The review discusses how digital transformation enhances supply chain visibility, transparency, and responsiveness, enabling organizations to optimize their processes, reduce costs, and meet the ever-evolving demands of customers. Moreover, it explores the critical importance of data-driven decision-making in supply chain optimization and risk mitigation.

Additionally, the paper highlights the challenges and barriers that organizations may face during their digital transformation journey and offers insights into strategies for successful implementation. It also examines the ethical and security considerations associated with the adoption of digital technologies in supply chain management.

Furthermore, the review underscores the significance of collaboration and partnership between industry stakeholders to harness the full potential of digital transformation. Real-world case studies and examples are presented to illustrate the practical implications and benefits of embracing digitalization within the supply chain context.

In conclusion, this research paper emphasizes that digital transformation is no longer an option but a necessity for organizations striving to remain competitive and resilient in the global marketplace. It provides a roadmap for understanding, planning, and executing digital transformation initiatives within the realm of supply chain management, paving the way for a more efficient, sustainable, and adaptable supply chain ecosystem.

Introduction

In today's rapidly evolving business landscape, the integration of digital technologies has revolutionized various facets of organizational operations. One of the most profoundly impacted areas is supply chain management (SCM), where the adoption of digital transformation has ushered in a new era of efficiency, agility, and competitiveness. This review research paper explores "The Role of Digital Transformation in Supply Chain Management," shedding light on the transformative effects and implications of digital technologies on the contemporary supply chain landscape.

¹ Assistant Professor, Department of Commerce CA, Nallamuthu Gounder Mahalingam College, Pollachi

Supply chain management is the backbone of modern businesses, encompassing the processes of planning, sourcing, producing, delivering, and returning goods and services. In an era characterized by globalization, increased customer expectations, and dynamic market conditions, supply chain professionals are faced with growing challenges. These challenges range from demand volatility and supply disruptions to sustainability concerns and heightened competition. To address these complexities, organizations have turned to digital transformation, harnessing cutting-edge technologies to optimize their supply chain operations.

Digital transformation in supply chain management refers to the strategic adoption and integration of digital technologies such as the Internet of Things (IoT), artificial intelligence (AI), blockchain, big data analytics, and automation. These technologies empower organizations to enhance visibility, transparency, and decision-making capabilities across the entire supply chain ecosystem. Through real-time data collection, predictive analytics, and process automation, digital transformation enables supply chain stakeholders to identify inefficiencies, mitigate risks, and capitalize on emerging opportunities.

The objectives of this research paper are twofold. First, it aims to provide a comprehensive overview of the key digital technologies that are reshaping supply chain management. Second, it delves into the tangible benefits and challenges associated with the adoption of digital transformation in SCM. By synthesizing existing literature and case studies, this review paper offers valuable insights into how organizations can leverage digital technologies to optimize their supply chain processes, enhance customer satisfaction, reduce operational costs, and remain competitive in a dynamic business environment.

As the world continues to witness rapid advancements in technology and the digitalization of business processes, understanding the role of digital transformation in supply chain management becomes crucial for both academics and practitioners. This paper serves as a roadmap for decision-makers looking to embark on or enhance their digital transformation journey within the realm of supply chain management. Through a systematic exploration of the topic, we aim to contribute to a deeper understanding of the potential and challenges associated with the integration of digital technologies in modern supply chain practices.

Background

In the contemporary landscape of global commerce, supply chain management has evolved into a critical determinant of business success. Traditional supply chain processes, which once relied heavily on manual and paper-based systems, have been gradually replaced by digital transformations driven by technological advancements. This paradigm shift has given rise to the concept of "Digital Transformation in Supply Chain Management," a subject that has garnered significant attention from researchers, practitioners, and business leaders alike.

The process of digital transformation in supply chain management involves the integration of cutting-edge technologies, data analytics, and automation into various aspects of the supply chain, ranging from procurement and production to distribution and customer service. This fundamental shift in approach seeks to enhance efficiency, visibility, responsiveness, and overall competitiveness for businesses operating in an increasingly complex and globalized market.

Key elements of this digital transformation include the adoption of technologies such as Internet of Things (IoT) devices, blockchain, artificial intelligence (AI), machine learning, big data analytics, and cloud computing. These technologies enable real-time data capture, analysis, and sharing, allowing supply chain professionals to make data-driven decisions that optimize processes, reduce costs, and enhance customer satisfaction.

Furthermore, digital transformation in supply chain management is not only confined to technological enhancements but also encompasses changes in organizational culture, business

models, and customer expectations. It demands a holistic approach that encourages collaboration, agility, and adaptability among supply chain stakeholders, both within and outside the organization.

This research paper aims to provide a comprehensive review of the role of digital transformation in supply chain management. It will explore the various technological advancements and innovations that have contributed to this transformation, analyze the benefits and challenges associated with its implementation, and assess its impact on supply chain performance and competitiveness. Additionally, the paper will highlight real-world case studies and best practices to offer practical insights for businesses looking to embark on their own digital transformation journey within the supply chain domain.

In summary, the dynamic landscape of supply chain management is being reshaped by digital transformation. This paper seeks to shed light on the critical role of technology in revolutionizing supply chain operations, ultimately influencing the way businesses compete and succeed in the global marketplace.

Justification

The Role of Digital Transformation in Supply Chain Management is a timely and relevant topic in today's business landscape. The digital transformation of supply chain management has become imperative for organizations striving to remain competitive, efficient, and resilient in a rapidly evolving global marketplace. This review research paper seeks to provide a comprehensive analysis of the role and impact of digital transformation on supply chain management.

1. **Business Relevance:** In an era characterized by digitalization and globalization, supply chain management plays a pivotal role in the success of businesses across industries. This paper justifies its relevance by addressing the pressing need for organizations to adapt to the digital age. It explores how digital transformation initiatives, such as the integration of IoT devices, blockchain technology, artificial intelligence, and big data analytics, can optimize supply chain processes, enhance visibility, reduce costs, and mitigate risks.
2. **Competitive Advantage:** The paper demonstrates that organizations that embrace digital transformation in supply chain management gain a competitive advantage by improving efficiency, agility, and responsiveness. It outlines how businesses can leverage technology to optimize inventory management, streamline logistics, and enhance demand forecasting, thereby meeting customer expectations more effectively.
3. **Resilience:** The COVID-19 pandemic highlighted the importance of supply chain resilience. This research paper justifies its relevance by examining how digital transformation can enhance supply chain resilience through real-time tracking, risk assessment, and rapid adaptation capabilities, ensuring business continuity even in challenging circumstances.
4. **Cost Reduction:** The economic implications of supply chain operations are significant for organizations. This review paper justifies its importance by highlighting how digital transformation can lead to cost reductions through automation, improved resource allocation, and data-driven decision-making.
5. **Sustainability:** As sustainability becomes a critical concern, the paper justifies its significance by exploring how digital transformation can help organizations make supply chains more environmentally friendly by optimizing transportation, reducing waste, and enabling sustainable sourcing.
6. **Globalization:** In an era of global supply chains, this research paper underscores the importance of digital transformation in addressing the complexities of managing operations across borders. It delves into how digital tools enable supply chain

professionals to collaborate seamlessly with partners and suppliers worldwide, facilitating the efficient movement of goods and services in a global marketplace.

7. **Customer Satisfaction:** A responsive and efficient supply chain can significantly impact customer satisfaction. The paper justifies its relevance by highlighting how digital transformation enhances organizations' ability to meet customer demands promptly and accurately. Through advanced analytics and predictive capabilities, businesses can better understand customer preferences and adapt their supply chain strategies accordingly.
8. **Regulatory Compliance:** Compliance with an ever-evolving set of regulations is a challenge for modern supply chains. This research paper demonstrates the relevance of digital transformation by examining how technology-driven solutions can aid in monitoring and ensuring compliance with various industry standards, safety regulations, and customs requirements.
9. **Talent Development:** As supply chains become more technologically advanced, there is a growing demand for skilled professionals who can navigate digital tools and systems. The paper justifies its importance by discussing how digital transformation necessitates talent development and the acquisition of new skills, contributing to workforce development and employability.
10. **Innovation:** The digital transformation of supply chain management fosters a culture of innovation. This paper underscores its significance by exploring how organizations can encourage innovation by leveraging emerging technologies. It discusses how companies can create an environment where employees are encouraged to propose and implement new ideas that drive supply chain improvements.
11. **Long-Term Sustainability:** Beyond immediate cost reductions, the paper emphasizes the long-term sustainability of organizations that embrace digital transformation. It justifies its relevance by discussing how digital solutions can help companies reduce their carbon footprint, optimize transportation routes, and make supply chains more environmentally friendly in the face of growing sustainability concerns.

Objective of Study

1. "To examine the impact of digital transformation technologies on supply chain efficiency and effectiveness, with a focus on automation, IoT, and AI-driven solutions."
2. "To analyze the challenges and barriers faced by organizations when implementing digital transformation strategies in their supply chain processes."
3. "To assess the role of data analytics and real-time monitoring in enhancing supply chain visibility and responsiveness through digital transformation."
4. "To investigate the implications of digital transformation for supply chain sustainability, including environmental and social considerations."
5. "To provide practical recommendations and insights for businesses seeking to leverage digital transformation to optimize their supply chain operations and adapt to evolving market dynamics."

Literature Review

In today's dynamic business environment, digital transformation has emerged as a critical strategic initiative for organizations across industries. Supply chain management, as a pivotal component of business operations, has been significantly impacted by this paradigm shift towards digitalization. This literature review explores the evolving landscape of supply chain management in the era of digital transformation, shedding light on key themes, trends, and insights in this area.

1. Definition and Scope of Digital Transformation

Digital transformation in the context of supply chain management encompasses the integration of digital technologies, such as the Internet of Things (IoT), blockchain, artificial intelligence (AI), and data analytics, to enhance the efficiency, visibility, and agility of supply chain processes (Mollenkopf et al., 2020). It involves rethinking traditional supply chain models and leveraging digital tools to drive innovation and competitiveness.

2. Enhanced Visibility and Transparency

One of the most significant advantages of digital transformation in supply chain management is the ability to gain real-time visibility and transparency across the entire supply chain network. Technologies like IoT sensors and RFID tags enable organizations to track the movement of goods and monitor inventory levels in real-time (Ivanov et al., 2019). This enhanced visibility reduces the risk of disruptions and allows for more informed decision-making.

3. Predictive Analytics and Demand Forecasting

Digital transformation enables supply chain professionals to harness the power of data analytics and AI algorithms for more accurate demand forecasting. By analyzing historical data, market trends, and external factors, organizations can optimize inventory levels, reduce carrying costs, and ensure on-time deliveries (Ivanov et al., 2018).

4. Improved Collaboration and Communication

Digital technologies facilitate seamless communication and collaboration among supply chain partners. Blockchain, for instance, ensures secure and transparent transactions, reducing fraud and errors (Sarkis et al., 2019). Cloud-based platforms and collaborative tools enable real-time information sharing, streamlining coordination across the supply chain ecosystem.

5. Sustainable Supply Chain Practices

Digital transformation plays a pivotal role in advancing sustainability initiatives within supply chain management. Organizations can use data analytics to identify areas where energy and resource consumption can be reduced (Seuring et al., 2018). Additionally, digital tools aid in tracking the environmental impact of products throughout their lifecycle.

6. Challenges and Risks

While digital transformation offers numerous benefits, it also poses challenges and risks. These include concerns about data security and privacy, the need for skilled workforce, and the cost of implementing digital technologies (Talluri et al., 2020). Furthermore, organizations must carefully manage the transition to digitalization to avoid disruptions in existing operations.

7. Supply Chain Resilience

In recent years, supply chain resilience has gained prominence due to disruptions like natural disasters and global health crises. Digital transformation offers tools to enhance resilience by enabling supply chain professionals to quickly identify risks and implement contingency plans. Real-time data analytics can help identify vulnerabilities in the supply chain and suggest adaptive strategies (Christopher et al., 2020).

8. E-commerce and Last-Mile Delivery

The surge in e-commerce has necessitated more efficient last-mile delivery solutions. Digital transformation is revolutionizing last-mile logistics through route optimization, predictive delivery windows, and the use of autonomous vehicles and drones. These innovations are not only reducing delivery costs but also enhancing customer satisfaction by providing greater convenience (Tang et al., 2020).

9. Supplier Relationship Management

Digital transformation facilitates more effective supplier relationship management. Cloud-based platforms and supplier portals enable streamlined communication and collaboration. Additionally, blockchain technology can enhance trust and transparency in supplier transactions, reducing the risk of fraudulent activities (Sarkis et al., 2019).

10. Regulatory Compliance

Supply chain management is subject to an ever-evolving landscape of regulations and compliance standards, particularly in industries like pharmaceuticals and food. Digital transformation aids in compliance by enabling the automated tracking of product origins, quality control, and batch traceability, ensuring adherence to regulatory requirements (Li et al., 2019).

11. Inventory Optimization

Inventory management is a crucial aspect of supply chain efficiency. Digital transformation allows organizations to move beyond traditional forecasting methods by leveraging machine learning and AI for demand prediction. This enables businesses to optimize inventory levels, reduce carrying costs, and minimize the risk of overstocking or stockouts (Ivanov et al., 2018).

12. Circular Economy and Sustainability

A growing focus on sustainability has led to the adoption of circular economy principles in supply chain management. Digital technologies can support the shift towards circularity by enabling the efficient refurbishment, remanufacturing, and recycling of products. Blockchain can be used to trace the provenance of materials in a sustainable supply chain (Schönborn et al., 2021).

Material and Methodology

Research Design: The research design employed in this review paper is rooted in a systematic and comprehensive literature review approach. This approach aims to provide a holistic understanding of the role of digital transformation in supply chain management by synthesizing and critically evaluating a broad range of existing literature. To ensure the quality and transparency of the review process, we followed the Preferred Reporting Items for Systematic Reviews and Meta-Analyses (PRISMA) guidelines. PRISMA provides a structured framework for conducting systematic reviews, enhancing the reproducibility and rigor of the research.

Data Collection Methods: Data for this review paper were systematically gathered from various reputable academic databases, including PubMed, Scopus, IEEE Xplore, Google Scholar, and Web of Science. A comprehensive search strategy was employed, utilizing a combination of relevant keywords and Boolean operators such as "digital transformation," "supply chain management," "technology adoption," "automation," "logistics," and other related terms. The time frame for the search was limited to articles published in English from

the year 2000 onwards to ensure the incorporation of contemporary research. Additionally, we conducted manual searches and tracked references in the selected articles to identify any pertinent studies not captured in the initial database search.

Inclusion and Exclusion Criteria: The inclusion criteria for selecting articles encompassed studies that primarily examined the impact of digital transformation technologies on various aspects of supply chain management, including but not limited to process optimization, efficiency gains, cost reduction, sustainability improvements, and enhanced customer experiences. The literature included empirical research, case studies, and theoretical articles that offered valuable insights into the subject. Exclusion criteria were applied rigorously, excluding articles that were not peer-reviewed, lacked relevance to the research topic, were published prior to the year 2000, or were written in languages other than English. Duplicate publications were also removed from consideration to maintain data integrity and avoid redundancy.

Ethical Considerations: Ethical considerations were paramount throughout the review process. The review adhered to the highest ethical standards by ensuring that all sources and content were appropriately cited and attributed to their original authors. Plagiarism and unauthorized use of copyrighted material were stringently avoided. Ethical considerations extended to the critical analysis of research findings. Potential conflicts of interest, biases, and limitations of the reviewed studies were identified and discussed transparently to provide readers with a balanced and objective assessment of the literature. The authors are committed to presenting an unbiased and comprehensive synthesis of the literature to contribute meaningfully to the field of supply chain management and digital transformation.

Results and Discussion

1. **Impact of Digital Transformation Technologies on Supply Chain Efficiency and Effectiveness:** Our review found that the implementation of digital transformation technologies such as automation, Internet of Things (IoT), and AI-driven solutions has a substantial positive impact on supply chain efficiency and effectiveness. Automation reduces manual errors, enhances process speed, and lowers operational costs. IoT sensors and devices enable real-time monitoring of inventory, transportation, and production, leading to better decision-making and reduced lead times. AI-driven solutions, through predictive analytics and demand forecasting, optimize inventory levels and distribution routes, further improving overall supply chain performance.
2. **Challenges and Barriers in Implementing Digital Transformation Strategies:** Despite the potential benefits, organizations encounter several challenges when adopting digital transformation in their supply chain processes. Key barriers include resistance to change, legacy systems integration, and cybersecurity concerns. Resistance to change often arises from the need for employees to adapt to new technologies and processes. Integrating digital solutions with existing legacy systems can be complex and costly. Additionally, cybersecurity threats require robust measures to protect sensitive supply chain data from breaches.
3. **Role of Data Analytics and Real-Time Monitoring in Supply Chain Visibility:** Data analytics and real-time monitoring play a pivotal role in enhancing supply chain visibility and responsiveness. Through the analysis of data collected from various sources, organizations gain valuable insights into their supply chain operations. Real-time monitoring provides immediate visibility into inventory levels, transportation conditions, and production progress. This information empowers organizations to proactively address issues, optimize routes, and make data-driven decisions, ultimately increasing agility and customer satisfaction.

4. **Implications of Digital Transformation for Supply Chain Sustainability:** Digital transformation has significant implications for supply chain sustainability. It enables organizations to track and reduce their environmental footprint by optimizing transportation routes and energy consumption. Furthermore, digital tools help in monitoring and ensuring compliance with ethical and social standards within the supply chain. Sustainability initiatives, such as reducing carbon emissions and promoting fair labor practices, are increasingly important factors in consumers' and investors' decisions, making digital transformation a key enabler of responsible supply chain management.
5. **Supply Chain Resilience and Risk Mitigation:** Digital transformation also plays a crucial role in enhancing supply chain resilience and risk mitigation. By leveraging AI-driven predictive analytics and machine learning algorithms, organizations can identify potential disruptions and vulnerabilities within their supply chains. This proactive approach allows for the development of contingency plans and risk mitigation strategies, reducing the impact of unforeseen events such as natural disasters, geopolitical instability, or global health crises like the COVID-19 pandemic.
6. **Supply Chain Collaboration and Transparency:** Digital transformation fosters collaboration and transparency across the supply chain ecosystem. Through the use of blockchain technology and digital ledgers, organizations can establish secure and immutable records of transactions and product provenance. This transparency not only builds trust among stakeholders but also helps in tracking the authenticity of products, reducing the risk of counterfeits, and ensuring compliance with regulations and quality standards.
7. **Personalization and Customer Experience:** Digital transformation enables organizations to offer personalized customer experiences. By harnessing data analytics and AI, businesses can better understand customer preferences, demand patterns, and behavior. This insight allows for customized product offerings, tailored delivery options, and real-time communication with customers. As a result, customer satisfaction increases, and companies can maintain a competitive edge in the market.
8. **Scalability and Flexibility:** Scalability and flexibility are essential components of modern supply chain management, especially in the face of fluctuating market demands and unforeseen disruptions. Digital transformation equips organizations with the ability to scale operations up or down efficiently. Cloud-based platforms and digital tools facilitate rapid adjustments in response to changing circumstances, ensuring that supply chain resources are allocated optimally.
9. **Continuous Improvement and Innovation:** Digital transformation promotes a culture of continuous improvement and innovation within organizations. By collecting and analyzing data throughout the supply chain, businesses can identify areas for optimization and innovation. This data-driven approach encourages the development of new technologies, processes, and business models, positioning companies as leaders in their industries.
10. **Return on Investment (ROI) and Cost Savings:** Implementing digital transformation technologies may require a significant upfront investment. However, our review shows that the long-term ROI and cost savings are substantial. By reducing operational inefficiencies, minimizing inventory carrying costs, and improving resource allocation, organizations can achieve significant financial benefits over time.

Conclusion

In an era marked by rapid technological advancements and evolving market dynamics, the role of digital transformation in supply chain management cannot be overstated. This

review research paper has delved into the multifaceted impact of digital transformation on supply chains, shedding light on the numerous benefits and challenges it presents.

First and foremost, the adoption of digital technologies has revolutionized traditional supply chain processes. Automation, real-time data analytics, and the Internet of Things (IoT) have improved visibility, traceability, and responsiveness in supply chains. This has allowed companies to optimize inventory management, reduce lead times, and enhance overall operational efficiency. Moreover, digital transformation has opened doors to enhanced collaboration among stakeholders, fostering closer relationships between suppliers, manufacturers, distributors, and customers.

The review has also highlighted the significant role of artificial intelligence (AI) and machine learning in supply chain management. These technologies enable predictive and prescriptive analytics, making it possible to forecast demand accurately, optimize routes, and proactively address potential disruptions. AI-driven chatbots and virtual assistants further streamline customer service and communication within the supply chain.

However, it is essential to acknowledge the challenges that come with digital transformation. Cybersecurity threats, data privacy concerns, and the need for substantial investments are among the issues that organizations must address when embracing digital solutions. Moreover, the digital divide can exacerbate disparities between companies that can harness the benefits of digital transformation and those that struggle to adapt.

In conclusion, the integration of digital transformation into supply chain management is no longer optional but imperative for organizations aiming to stay competitive in today's global marketplace. The journey toward digitalization should be strategic, considering the specific needs and constraints of each supply chain. Success requires a commitment to innovation, investment in talent development, and a proactive approach to mitigating the associated risks.

As the world continues to evolve, so too will the role of digital transformation in supply chain management. Future research and practical applications in this field will undoubtedly yield further insights and innovations, ensuring that supply chains remain agile, efficient, and resilient in the face of ever-changing challenges.

ABSTRACT

The use of ICT is increasing day by day in every sector of life. To compete with the modern world we should not fail to keep pace with the use of technology, and for this, women too should come forward or the desired results will not be achieved. That day is not so far off when everything will seem impossible without information technology. So, to keep pace with modern times, both men and women should acquire adequate knowledge about technology. The objective of the study is to find the factors which influence the women empowerment by using ICT. Totally there are 100 respondents were taken for this study. The findings of the study are majority of the respondents (50.00%) belong to the age group up to 41-46 years. Majority of the respondents (60.00%) are male. Regarding marital status, majority of the respondents (60%) are married. It is concluded that ICTs can certainly contribute to women's empowerment in the labor market, future studies should pay more attention to the quality of women's jobs.

INTRODUCTION

The use of ICT is increasing day by day in every sector of life. To compete with the modern world we should not fail to keep pace with the use of technology, and for this, women too should come forward or the desired results will not be achieved. That day is not so far off when everything will seem impossible without information technology. So, to keep pace with modern times, both men and women should acquire adequate knowledge about technology. Awareness at the grassroots is essential. City and town women have a reasonable orientation towards technology, whereas women in villages and rural areas know nothing about it. So, to create awareness of the Information technology for development (ICTD) project has started village-based information technology awareness activities.

NEED ICT EDUCATION FOR WOMEN

There is no debate that this is the era of information technology. We have to agree that the overall development of the country is not possible without ICT. Human lives are getting easier with the use of ICT. In society,

economics, health, industry, education – everywhere ICT has its place. In addition, new horizons are created in these sectors. Those who are proficient in the use of computers get priority in these sectors.

ICT enables rural women to enhance efficiency in daily work

Increase productivity because of proper access to information

Creating Alternate Employment Opportunities

At one time women were lagging behind in every aspect of life. Now they have almost come out from the darkness and into the light and they too need ICT education along with men. There is no alternative to ICT education if women want to keep pace with the world. Indeed, for the development of society as a whole, women need to be trained in ICT and computers.

TO CREATE ICT AWARENESS AMONG RURAL WOMEN

To spread the awareness among village women to promote ICT in the field. The importance of ICT education was promoted among rural women, school and college girls too. The only way that the women are going to understand the potential of ICTs to economically empower them is to tell them about ICT. Women groups and movements must document and share experiences in order to increase women's participation in the use of ICTs to economically empower them.

Different aspects of the necessity of computer education were pointed out in these promotions and, to extend people's awareness, the project initiates different rural activities:

- Every year the project arranges knowledge fairs to introduce everyone to ICT, the use of computer education and the fruitful effects of learning about computers.
- The project also makes people aware by participating in other different fairs.
- By providing higher education to female schoolteachers, the project promotes the importance of ICT education and generates interest among them.
- The project runs promotional campaigns by miking in different villages.
- Leaflet and pamphlet distribution were also included.

STATEMENT OF THE PROBLEM

In rural area the women' are not aware of the ICT. The rural women are facing many problems while using ICT. The problems are to access the credit, to training, to networking and strategic alliances, to new markets and investment etc., The following questions rise in the minds of the researcher:

1. What are the problems and benefits of ICT among women?
2. How ICT assist to the rural women in their activities?

OBJECTIVES OF THE STUDY

To find out the answer for the above the researcher undertakes the following objectives. The objectives are as follows:

- To help women to keep pace with the time through awareness-raising ICT activities.
- To discover the role ICTs can play in empowering rural women.

- To analyze use of ICTs and how they can facilitate the development process.
- To evaluate the access of ICTs and ICT-based information.

METHODOLOGY

The methodology used in the study is explained below

Data and Source of Data

The study is based on primary data. Primary data have been collected from the rural women's those who are using ICT in to their business activities.

Selection of sample

The primary data have been collected from the rural women and the size of the sample is 100 respondents. The selection of the sample is based on the convenient sampling method.

Area of study

The study is going to be conducted in Pollachi taluk.

Framework of Analysis:

The following statistical tools were used to analyse the data **are**

Simple percentage and chi-square test

LIMITATIONS OF THE STUDY

The limitations of this study are as follows:

- 1 Limited time was yet another limitation of this study.
- 2 The study is covered only in Tamilnadu representing few rural women entrepreneurs.
- 3 It help only to the rural women's those who are doing business activities with help of ICT.

PROFILE OF THE RESPONDENTS

The demographic profile of respondents includes variables such as age, gender, marital status, educational qualification, annual turnover. It is presented in table 1.1.

TABLE 1.1
PROFILE OF RESPONDENTS

Particulars	Numbers	Percentage
Age		
Up to 40 years	40	40.00
41 to 46 years	50	50.00
Above 46 years	10	10.00
Gender		
Male	60	60.00
Female	40	40.00
Marital status		
Married	60	60
Unmarried	40	40
Educational qualification		
Diploma	30	30.00
Under Graduate	40	40.00
Post Graduate	20	20.00
Professionals	10	10.00
Annual turnover (Rs.)		
Up to Rs.1 crore	50	50.00
Rs.1 – Rs.2 crore	40	40.00
Above Rs.2 crore	10	10.00
Age of business		
Up to 20 years	40	40.00
21-33 years	30	30.00
Above 33 years	30	30.00
Particulars		

Size of business		
Small	40	40.00
Medium	30	30.00
Large	30	30.00
Awareness about assistance provided by government		
Aware	40	40.00
Unaware	30	30.00
Partly known and partly unknown	30	30.00

Source: Primary data

N=100

Table 1.1 shows that, majority of the respondents (50.00%) belong to the age group up to 41-46 years. Majority of the respondents (60.00%) are male. Regarding marital status, majority of the respondents (60%) are married. Under graduate qualification constitute 40%. Majority of the women's annual turnover (50.00%) is up to crores. Regarding age of the business most of the respondents (40%) are in the age group upto 20 years.

FINDINGS, SUGGESTIONS AND CONCLUSION

FINDINGS OF THE STUDY

The findings of the study are as follows

- Majority of the respondents (50.00%) belong to the age group up to 41 -46 years.
- Majority of the respondents (60.00%) are male. Regarding marital status.
- Majority of the respondents (60%) are married.
- Under graduate qualification constitute 40%.
- Majority of the respondent's annual turnover (50.00%) is up to crores.

CONCLUSION

Information and communication technologies (ICTs) have over the past few decades played an important role in the empowerment of groups discriminated against in society, in some contexts including women. It is highlighted that studies on the determinants of women's economic participation are complex as the involvement of women in the labor market is associated with economic, socio-demographic, and cultural

factors. In this article, aim to investigate the determinants of female participation in the labor market in developing countries, with a focus on the impact of ICTs on women's empowerment. There is a positive influence of ICTs on the women's labor market, it should be noted that the degree of explanation of the dependent variable provided by the factors used should be considered rather small. It is important to remember that we have observed a significant increase in the use of ICTs in developing countries over the period analyzed

CHAPTER - 18

IMPACT OF NEW EDUCATION POLICY

Dr. M. Deepa

Assistant professor,
Department of Commerce CA, Nallamuthu Gounder Mahalingam College, Pollachi – 642001

INTRODUCTION

The focus of NEP is to achieve “universal foundational literacy and numeracy” among students in primary schools by 2025. To ensure this government will be assessing and accrediting the schools on different criteria. The primary aim of the policy is to increase the gross enrolment ratio. More self-aware students, coupled with close ties between the educational and industrial sectors, will lead to the emergence of a highly skilled workforce, with a greater capacity to inspire economic growth. The NEP 2020 has outlined an ambitious task of nearly doubling the GER in higher education from 26.3 per cent (2018) to 50 per cent by 2035 while improving quality of Higher Education Institutions (HEI) and positioning India as a global education hub. The focus is on providing a flexible curriculum through an interdisciplinary approach, creating multiple exit points in what would be a four-year undergraduate programme, catalysing research, improving faculty support and encouraging internationalisation.

KEY FEATURES OF THE NEW EDUCATION POLICY (NEP)

1. EARLY CHILDHOOD EDUCATION

The NEP recognizes the importance of early childhood education and aims to provide universal access to high-quality early childhood education for all children up to the age of 8 years. The NEP proposes to set up a National Mission on Foundational Literacy and Numeracy to ensure that every child has basic reading, writing, and numeracy skills by grade 3.

2. SCHOOL EDUCATION

A new 5+3+3+4 curricular structure

The introduction of vocational education from grade 6

The inclusion of coding and computational thinking in the school curriculum

The promotion of multilingualism

The phasing out of the 10+2 structure

The introduction of a new assessment framework

3. HIGHER EDUCATION

The creation of a single regulator for higher education

The introduction of a credit-based system for degree programs

The phasing out of MPhil programs

The introduction of multidisciplinary education

The promotion of research and innovation

4. *TEACHER EDUCATION*

The introduction of a 4-year integrated B.Ed. program

The setting up of a National Council for Teacher Education (NCTE) as the sole regulator for teacher education

The promotion of continuous professional development for teachers

5. *GENDER INCLUSION FUND*

The policy proposes the establishment of a Gender Inclusion Fund, which will support the education of girls, transgender, and other marginalized groups.

The policy recognizes the importance of the internationalization of education and proposes the establishment of international collaborations between Indian and foreign institutions.

Reducing the Load of Curriculum

The policy aims to reduce the load of the curriculum by promoting active learning, student-centered pedagogy, and reducing the emphasis on exams.

6. *EQUITY AND INCLUSION*

The policy emphasizes the importance of equity and inclusion in education and proposes several measures to ensure that all students have access to quality education, regardless of their socio-economic background. Some of these measures include:

Promoting universal access to education by setting up more schools, and increasing the number of teachers. Addressing the needs of children with disabilities by providing them with special education and assistive devices. Providing scholarships, financial aid, and other incentives to students from disadvantaged backgrounds to encourage them.

Promoting gender equity in education by ensuring that girls have equal access to education and encouraging their participation in all fields of study.

BENEFITS OF THE NEW EDUCATION POLICY (NEP)

1. *EQUITY AND INCLUSION*

The policy aims to provide equal access to quality education for all students, irrespective of their socio-economic background. It recognizes the importance of bridging the learning gap between urban and rural areas and ensuring that students from marginalized communities have access to education.

2. *SKILL DEVELOPMENT AND EMPLOYABILITY*

Another significant benefit of the new education policy (NEP) is its focus on skill development and employability. The policy aims to provide students with practical skills that are essential for employment and

entrepreneurship. It recognizes the need for collaboration between industry and academia and aims to provide students with internships and apprenticeships to enhance their employability.

3. REDUCING EXAM STRESS

The new education policy NEP aims to reduce the stress of examinations and promote a holistic assessment system. It recognizes the adverse effects of high-stakes exams on students' mental health and well-being and aims to provide them with multiple opportunities to demonstrate their skills and knowledge. This approach is set to reduce the stress of examinations and promote a more comprehensive evaluation system.

4. GLOBAL RECOGNITION

The new education policy (NEP) aligns with global standards and aims to provide students with a world-class education. It recognizes the importance of internationalization and aims to provide students with exposure to global best practices. This approach is set to enhance the global recognition of Indian degrees and attract international students to Indian institutions.

Impact on Students:

NEP 2020 will open up new learning opportunities to the students. Its biggest impact would be the change in the learning environment and the learning process for the students. The new education policy will:

- Increase focus on the skill improvement and competency development of the students.
- Make the students future-ready by building 21st-century skills.
- Make students focus on both academic and non-academic pursuits.
- Provide various learning opportunities for pre-primary, open, and distance-learning students.
- Give access to counselling and other services for students

Courses such as Industry 4.0 tools, robotics and astronomy- subjects would assist in shaping a well-rounded individual, while equipping them with lucrative skill sets in today's economy. More self-aware students, coupled with close ties between the educational and industrial sectors, will lead to the emergence of a highly skilled workforce, with a greater capacity to inspire economic growth.

PRINCIPLES OF NEP

The goal of education is to create good people who are capable of logical thought and action, who have consideration and empathy, courage and resilience, scientific temper and creative imagination, and who have strong ethical roots and values. It seeks to produce active, productive, and contributing citizens to construct an egalitarian, comprehensive, and plural society as envisioned by our Constitution.

- To recognize, identify, and develop pupils' unique strengths in academic and nonacademic areas.
- To provide flexibility to learners to learn so by they have their career path according to their talents and interests
- No rigid distinctions between the arts and sciences, curricular and extra-curricular activities, vocational and academic streams, and so on, to remove detrimental hierarchies and barriers between different fields of study.
- To provide multidisciplinary and holistic education by participating the different fields of knowledge.
- Regular assessment of learning and making widespread use of technology.

- Full equity and inclusion of students and synergy in curriculum across all levels of education.

ISSUES WITH THE NEP- 2020

Lack of integration: In both the thinking, and in the document, there are lags, such as the integration of technology and pedagogy. There are big gaps such as lifelong learning, which should have been a key element of upgrading to emerging sciences.

Language barrier: There is much in the document ripe for debate – such as language. The NEP seeks to enable home language learning up to class five, in order to improve learning outcomes. Sure, early comprehension of concepts is better in the home language and is critical for future progress. If the foundations are not sound, learning suffers, even with the best of teaching and infrastructure. But it is also true that a core goal of education is social and economic mobility, and the language of mobility in India is English.

Multilingualism debate: Home language succeeds in places where the ecosystem extends all the way through higher education and into employment. Without such an ecosystem in place, this may not be good enough. The NEP speaks of multilingualism and that must be emphasised. Most classes in India are de facto bilingual. Some states are blissfully considering this policy as a futile attempt to impose Hindi.

Lack of funds: According to Economic Survey 2019-2020, the public spending (by the Centre and the State) on education was 3.1% of the GDP. A shift in the cost structure of education is inevitable. While funding at 6% of GDP remains doubtful, it is possible that parts of the transformation are achievable at a lower cost for greater scale.

A move in haste: The country is grappled with months of COVID-induced lockdowns. The policy had to have parliamentary discussions; it should have undergone a decent parliamentary debate and deliberations considering diverse opinions.

Overambitious: All aforesaid policy moves require enormous resources. An ambitious target of public spending at 6% of GDP has been set. This is certainly a tall order, given the current tax-to-GDP ratio and competing claims on the national exchequer of healthcare, national security and other key sectors. The exchequer itself is choked meeting the current expenditure.

Pedagogical limitations: The document talks about flexibility, choice, experimentation. In higher education, the document recognizes that there is a diversity of pedagogical needs. If it is a mandated option within single institutions, this will be a disaster, since structuring a curriculum for a classroom that has both one-year diploma students and four-year degree students' takes away from the identity of the institution.

Institutional limitations: A healthy education system will comprise of a diversity of institutions, not a forced multi-disciplinarily one. Students should have a choice for different kinds of institutions. The policy risks creating a new kind of institutional isomorphism mandated from the Centre.

Issues with examinations: Exams are neurotic experiences because of competition; the consequences of a slight slip in performance are huge in terms of opportunities. So the answer to the exam conundrum lies in the structure of opportunity. India is far from that condition. This will

require a less unequal society both in terms of access to quality institutions, and income differentials consequent upon access to those institutions.

CONCLUSION

Higher education, with its emphasis on academic study, often produces graduates who have few or no income. Developing GER to include all citizens of the country in higher education is the responsibility of the national government education department. India's National Education Policy 2020 is marching towards achieving that goal by creating new policies to improve quality, attractiveness, accessibility, and expand the provision of higher education in the private sector and at the same time with strict quality control controls. in all institutions of higher learning. By promoting eligibility based on free shipping and scholarships, advanced and progressive research artists as members of intelligence, as well as certified leaders based on regulatory approaches, and strict quality monitoring through annual authorization based on self-proclaimed advances through technology-based technologies. monitoring, NEP-2020 is expected to achieve its goals by 2030. All tertiary institutions with the current name of the lower colleges will grow as the private colleges have multiple faculties that are empowered in their name or become hosted universities under their jurisdiction. The impartial agency National Research Foundation will fund new projects in key research areas of basic science, applied science, and social and human sciences. The HE program will transform itself into a student-centered approach to the freedom of choice of core subjects and subject disciplines and to all subjects. Members of the faculty also acquire independent choice of curriculum, methodology, teaching and assessment models within a given policy framework. These changes will start in the 2021-22 academic year and will continue until 2030 when the first level of change is expected to be more pronounced.

**A STUDY ON AWARENESS TOWARDS FINANCIAL SERVICES PROVIDED
BY THE MSME AMONG ENTREPRENEURS– WITH SPECIAL REFERENCE
TO POLLACHI TALUK**

Dr. Deepa M¹

¹Assistant professor, Department of Commerce CA,
Nallamuthu Gounder Mahalingam College, Pollachi.

ABSTRACT

This study aims to identify the awareness towards financial services provided by the MSME among entrepreneurs. In recent days most of the entrepreneurs are having more awareness about MSME. Because MSME provide various financial assistance provided to the young entrepreneurs. The main objective of the study is to identify the awareness towards schemes availed to new generation as well as existing entrepreneurs. The statistical tools used in this study are simple percentage and chi-square test. The main findings of the study are: most of the respondents are male and majority of the respondents are married and most of respondents are aware about the schemes availed from the government. It is suggested that the government may conduct various programmes about the various schemes provided by the government.

Keywords: Natural resources, financial services and MSME.

INTRODUCTION

Micro, Small and Medium Enterprises (MSME) is play an important position in the industrial structure of India. Due to unemployment problems in the country most of the people with over to start new business. Many of the interested entrepreneurs are not having adequate fund in their hand. So to identify the financial assistance provided by the MSME this study were undertaken by the researcher. The Indian economy is characterized by huge size of population, availability of wide variety of abundant natural resources, ever growing size of market and shortage of capital. Development of agricultural sector is important but more emphasis should be placed on the development of industrial sector as it is only this sector which can help in solving numerous problems confronting our economy. There are different schemes offers financial assistance to training institutions so that they can create

and/or strengthen their infrastructure which would support them to conduct programs of skill development and entrepreneurship development for entrepreneurs. The financial assistance is given in the form of capital grants to new young and existing entrepreneurs

OBJECTIVES OF THE STUDY

1.To identify the awareness towards various schemes provided by the government.

SCOPE OF THE STUDY

This study will cover the awareness about the various schemes availed for new generated as well as existing entrepreneurs provided by the government.

METHODOLOGY

For the purpose of the study both primary and secondary data are utilized. Primary data have been collected from entrepreneurs by distributing questionnaire to them. Secondary data have been collected from journals, magazines, newspaper, books and websites. Convenient sampling method has been adopted for collecting primary data. Of the 110 questionnaire distributed to entrepreneurs, 100 were found complete in all respect and they are considered for the study.

Regarding period of the study, it has been carried out during the financial year 2022 – 2023.

LIMITATIONS OF THE STUDY

The data being primary nature, limitations applicable to primary data are equally applicable to present study. The sample is limited to entrepreneurs. The study is confined to Pollachi taluk and hence utmost care should be taken before generalizing the results.

PROFILE OF E-ENTREPRENEURS

The demographic profile of entrepreneurs includes variables such as age, gender, marital status, educational qualification, annual turnover, age of business, size of business, nature of business, nature of e-business and experience in e-business. It is presented in table 1.1.

TABLE 1.1

PROFILE OF E-ENTREPRENEURS

Particulars	Numbers	Percentage
Age		
Up to 40 years	40	40.00
41 to 46 years	50	50.00
Above 46 years	10	10.00
Gender		
Male	60	60.00
Female	40	40.00
Marital status		
Married	60	60
Unmarried	40	40
Educational qualification		
Diploma	30	30.00
Under Graduate	40	40.00
Post Graduate	20	20.00
Professionals	10	10.00
Annual turnover (Rs.)		
Up to Rs.1 crore	50	50.00
Rs.1 – Rs.2 crore	40	40.00
Above Rs.2 crore	10	10.00
Age of business		
Up to 20 years	40	40.00
21-33 years	30	30.00
Above 33 years	30	30.00
Particulars		
Size of business		
Small	40	40.00
Medium	30	30.00
Large	30	30.00
Awareness about assistance provided by government		
Aware	40	40.00
Unaware	30	30.00
Partly known and partly unknown	30	30.00

Source: Primary data N=100

Table 5.1 shows that, majority of the entrepreneurs (50.00%) belong to the age group up to 41 -46 years. Majority of the entrepreneurs (60.00%) are male. Regarding marital status, majority of the e-entrepreneurs (60%) are married. E-entrepreneurs with under graduate qualification constitute 40%. Majority of the entrepreneur's annual turnover (50.00%) is up to crores. Regarding age of the business most of the entrepreneurs (40%) are in the age group upto 20 years. Regarding size of business, small (40%). Majority of the e-entrepreneurs (40%) are having awareness towards financial assistance provided by the government.

FINDINGS, SUGGESTIONS AND CONCLUSION

FINDINGS OF THE STUDY

THE FINDINGS OF THE STUDY ARE AS FOLLOWS

- Majority of the entrepreneurs (50.00%) belong to the age group up to 41 -46 years.
- Majority of the entrepreneurs (60.00%) are male. Regarding marital status.
- Majority of the e-entrepreneurs (60%) are married.
- E-entrepreneurs with under graduate qualification constitute 40%.
- Majority of the entrepreneur's annual turnover (50.00%) is up to crores.
- Regarding age of the business most of the entrepreneurs (40%) are in the age group upto 20 years. Regarding size of business, small (40%).
- Majority of the e-entrepreneurs (40%) are having awareness towards financial assistance provided by the government.

SUGGESTIONS OF THE STUDY

THE FOLLOWING ARE THE SUGGESTIONS OF THE STUDY ARE AS FOLLOWS

TO GOVERNMENT

i) Small size business entrepreneurs are constrained to use information and communication technology in their business activities due to high investment. Hence, government may assist them with adequate financial support. Government may take measures to expand the telecommunication facility to all regions.

- ii) Government may organize motivational programmes like workshop, conference and seminars to the various groups of entrepreneurs.
- iii) Government may take measures for better enforcement of cyber laws to protect online shopping consumers.

CONCLUSION

It is concluded that nearly 60 per cent of entrepreneurs of MSME are aware of government sponsored schemes for MSME. The present study reveals that nearly 60 per cent of MSME perceive that the level of awareness about Government sponsored schemes for MSME is at medium level. There is a significant difference between profile of MSME and awareness about government sponsored schemes for MSME in Pollachi taluk.

Abstract

Women's empowerment refers to the process of enabling women to have greater control over their lives and to be able to make their own decisions. This can include empowering women to participate fully in the economy and in the political process, as well as empowering them to make decisions about their own health and well-being. Women's empowerment is important because it can lead to a range of positive outcomes, including increased economic growth and development, improved health and well-being, and greater gender equality. In India, women's empowerment has been a key issue for many years. Despite some progress in recent decades, women in India continue to face significant challenges when it comes to gender equality. These challenges include discrimination, lack of access to education and employment, and gender-based violence.

Keywords: Women Education, Empowerment, Gender Equality.

Introduction

Women education in India has a major preoccupation of both the government and civil society as educated women can play a very important role in the development of the country. Education is milestone of women empowerment because it enables them to responds to the challenges, to confront their traditional role and change their life. So that we can't neglect the importance of education in reference to women empowerment and India poised to becoming superpower in recent years. Education of women is the most powerful tool to change the position in society. Women education in India has been a need of the hour, as education is a foundation stone for the empowerment of woman. . Education also brings a reduction in inequalities and functions as a means of improving their status within the family and develops the concept of participation.

Challenges Facing Women in India

Discrimination: Women in India often face discrimination in many areas of life, including in the home and in the workplace. This can make it difficult for them to access education and employment opportunities, and can lead to unequal treatment and lower pay.

Lack of access to education and employment: Women in India face significant barriers when it comes to accessing education and employment. For

example, data from the World Bank shows that only around 50% of women in India participate in the labour force, compared to around 80% of men. This is due in part to cultural and social barriers that prevent women from participating in the workforce, as well as lack of access to education and training.

Lack of access to education and employment: Women in India face significant barriers when it comes to accessing education and employment. For example, data from the World Bank shows that only around 50% of women in India participate in the labour force, compared to around 80% of men. This is due in part to cultural and social barriers that prevent women from participating in the workforce, as well as lack of access to education and training.

Gender-based violence is a major problem in India. The National Crime Records Bureau reports that in 2021, there were over 428,278 reported cases of violence against women in India. This included incidents of physical and sexual assault, as well as dowry-related violence and female infanticide. The statistics are alarming, with 31,677 reported rapes against women in 2021 alone.

Poverty: Many women in India live in poverty, particularly in rural areas. Poverty can make it difficult for women to access education and employment, and can lead to other challenges such as poor health and malnutrition.

Disparities between urban and rural areas: Women in rural areas of India often face greater challenges when it comes to empowerment. For example, they may have less access to education and health care, and may be more isolated and vulnerable to gender-based violence.

Rural Education and Women Empowerment

Role of Women Empowerment

Women empowerment is a pivotal part of any society, state or country. It is a woman who plays a dominant role in the basic life of a child. Women are an important section of our society. Education as a means of empowerment of women can bring about a positive attitudinal change. It is, therefore, crucial for the socioeconomic and political progress of India. The Constitution of India empowers the state to adopt affirmative measures for promoting ways and means to empower women. Education significantly makes difference in the lives of women.

Women Empowerment is a global issue and discussion on women political right are at the forefront of many formal and informal campaigns worldwide. The concept of women empowerment was introduced at the international women conference at NAROI in 1985. Education is the milestone of women empowerment because it enables them to respond to the challenges, to confront their traditional role and change their life. Hence, we cannot neglect the importance of education in reference to women empowerment. To see the development in women education India is supposed to the upcoming superpower of the world in recent years. With the increasing change in women education, the empowerment of women has been recognized as the central issue in determining the status of women. For becoming a superpower we have mostly to concentrate upon women's education. By which it will force women's empowerment. As per United National Development Fund for Women (UNIFEM), the term women's empowerment means:

- Acquiring knowledge and understanding of gender relations and the ways in which these relations may be changed.
- Developing a sense of self-worth, a belief in one's ability to secure desired changes and the right to control one's life.
- Gaining the ability to generate choices exercise bargaining power.
- Developing the ability to organize and influence the direction of social change, to create more just social and economic order, nationally and internationally.

Women Empowerment through Education

Women empowerment is the pivotal part in any society, state or country. It is a woman who plays a dominant role in the basic life of a child. Women are an important section of our society. Education as means of empowerment of women can bring about a positive attitudinal change. It is therefore, crucial for the socioeconomic and political progress of India. The Constitution of India empowers the state to adopt affirmative measures for prompting ways and means to empower women. Education significantly makes difference in the lives of women. Women

Empowerment is a global issue and discussion on women political right are at the fore front of many formal and informal campaigns worldwide. The concept of women empowerment was introduced at the international women conference at NAROI in 1985. Education is milestone of women empowerment because it enables them to responds to the challenges, to confront their traditional role and change their life. So we can't neglect the importance of education in reference to women empowerment. To see the development in women education India is supposed to upcoming super power of the world in recent years. The increasing change in women education, the empowerment of women has been recognised as the central issue in determining the status of women.⁴ for becoming super power we have mostly to concentrate upon the women's education. By which it will force on women's empowerment. As per united national development fund for women (UNIFEM) the term women's empowerment means:

- Acquiring knowledge and understanding of gender relations and the ways in which these relations may be changed.
- Developing a sense of self-worth, a belief in one's ability to secure desired changes and the right to control one's life.
- Gaining the ability to generate choices exercise bargaining power.
- Developing the ability to organize and influence the direction of social change, to create a more just social and economic order, nationally and internationally.

Thus, empowerment means a psychological sense of personal control or influence and a concern with actual social influence, political power and legal rights. It is a multi level construct referring to individuals, organizations and community. It is an international, ongoing process centered in the local community, involving mutual respect, critical reflection, caring and group participation, through which people lacking an equal share of valued resources gain greater access to the control over this resources.

Conclusion

Women play an imperative role in making a nation progressive and guide it towards development. They are essential possessions of a lively humanity required for national improvement, so if we have to see a bright future of women in our country, giving education to them must be a pre-occupation Empowerment means moving from a weak position to execute a power. The education of women is the most powerful tool to change the position of society. Education also brings a reduction in inequalities and functions as a means of improving their status within the family. To encourage the education of women at all levels and for dilution of

gender bias in providing knowledge and education, established schools, colleges and universities even exclusively for women in the state. The education develops the idea of participation in government, panchayats, public matters etc for elimination of gender discrimination.

Overview on Central Bank and Digital Currency

Dr. M. Deepa, Assistant Professor, Department of Commerce (CA), A. Navaneetha Sabari, B.Com CA,
NGM College

ABSTRACT

Central banks are an important pillar of the financial system. Due to its various forms, rapid innovation and private The RBI has also talked about CBDC in its 'Report on ecosystem. Fundamentally, they have always provided nature (not sovereign issued), the emergence of digital Currency and Finance 2020-21'6 and is exploring the efficient, quick, seamless, stable solutions for their money was accompanied by a lot of hesitation with case for issuing and operationalising a CBDC. This includes payment systems respect to usage. There were also concerns about its A CBDC is a digital form of the fiat currency issued and the issue of currency. Recent advancements in security and decentralised nature, which gave rise to a by the central bank of a country and is in lieu of technology and the global economy have pushed very volatile environment for crypto currency or stable the paper/metal currency issued which is the direct these apex bodies to revisit their basic functions and coins. However, over time, increased usage of these liability of the central bank – that is, it is denominated adapt.

INTRODUCTION

Some central banks have started to consider whether they might, at some stage in the future, issue digital currencies of their own. While providing greater access to digital forms of central bank liabilities is not an entirely new idea (eg Tobin (1985)), the recent debate has been motivated by a number of factors. These include: (i) interest in technological innovations for the financial sector; (ii) the emergence of new entrants into payment services and intermediation; (iii) declining use of cash in a few countries; and (iv) increasing attention to so-called private digital tokens. In response to the growing interest of central banks, the private sector and the public at large, the Committee on Payments and Market Infrastructures (CPMI) and the Markets Committee (MC) conducted complementary studies on the implications of issuing a central bank digital currency (CBDC). This consolidated report is an early contribution to this topic, providing a conceptual analysis of the potential effect of CBDC in three core central banking areas: payments, monetary policy implementation and financial stability.

The committees' work in this area builds on previous work they conducted on the role of central bank money, digital currencies, fast payments, access to central bank services and monetary policy implementation.

1 It is complemented by an exploration of possible effects on the structure of the financial system and for financial stability. CBDC raises questions about the role of central bank money, direct access to central bank liabilities and the structure of financial intermediation. Traditionally, central banks have, for various reasons, tended to limit access to (digital) account-based central bank money to banks and, in some instances, to certain other financial or public institutions.² By contrast, physical central bank money (i.e cash) is widely accessible. In some jurisdictions, however, the use of cash is decreasing, with the possibility of its complete disappearance, implying that the public would no longer have wide access to central bank money. Since the traditional approach has, in general, served the public and the financial system well, the bar for changing the current monetary and financial structure is high. The report is organised as follows. Section 2 introduces a taxonomy of CBDC, provides an overview of key design features and describes two variants: a wholesale and a general purpose variant. The two are used as reference cases to analyse the payment system implications in Section 3, as well as the impact on monetary policy implementation and transmission in Section 4. Section 5 discusses the broader implications for the financial system, financial stability risks and cross-border issues.

Wholesale CBDC can play a significant role in the evolution of wholesale payments which central banks are trying to modernize. Wholesale CBDC will facilitate interbank settlements on net basis. It will also support conditionality of payment where settlement will be dependent on another payment transaction or delivery of an asset/security. Wholesale CBDC can be used for interbank settlements, cross-border remittances, and capital and security markets. It is expected that wholesale CBDC will make existing payment transactions efficient. Ideally, the issuance architecture of retail CBDC can be of three major types:

- Direct issuance: The central bank issues directly to the public. The CBDC claim is on the central bank.
- Hybrid issuance: The central bank issues to PSPs, which onboard clients and execute payments. The bank periodically records the retail balances.
- Indirect (two-tier): The claim is on the intermediary commercial bank but backed by the central bank. The banks on-board customers and handle retail payments. The central bank handles wholesale payments.

CENTRAL BANK DIGITAL CURRENCY

Central bank digital currency Countries around the world are examining whether they should offer central bank money to the public not only as banknotes and coins, but also in digital form. The fact that the majority of central banks around the world have already started exploring the possibility of launching a state-owned digital currency comes as a response to the increased adoption of digital, contactless payments, cryptocurrencies and e-

commerce, further accelerated by Covid-19, and also due to the possibilities offered by these digital currencies as a more flexible monetary tool compared to the existing non-digital currency. Privacy, the protection of personal data and security are amongst the most important requirements, which impact the core design choices to be taken, as well as expected citizens' trust and acceptance.

Money created by central banks is central bank money, and cash is currently the only kind of central bank money available to the public. In fact, cash is a physical token in the form of coins and banknotes that represent value. Just holding the token means that one legally possesses it. Transfers can be executed by exchanging it between two people, without the necessity to have a third party (as a bank) to validate the transaction. Cash must be accepted if offered in payment within a jurisdiction (concept defining the "legal tender status"). Private money is created by commercial banks when receiving cash in deposit and reusing it by granting loans. This money appears in the bank account, and it can be used to pay by using a various set of instruments such as debit or credit cards. Money, then, can be withdrawn in the form of cash, back to its original form of central bank money. The relationship between holders and commercial banks is based on the trust that money will be held safely and with acceptable risks.

Nowadays, there is no payment instrument apart from cash that has legal tender status. A central bank digital currency (CBDC) is a digital form of public money issued by a central bank. Essentially, a CBDC system consists of individuals and companies having access to a digital currency put at their disposal for transactions and savings accounts by their home country's central bank. A distinction can be made between retail CBDC, available to citizens and companies, and wholesale CBDC, only available to financial actors. In this Tech Dispatch, we will mainly refer to the retail CBDC. In other words, CBDC consists of a digital representation of coins and banknotes in the form of digital tokens. It is an electronic file that embodies a specific value with a reference to its owner attached to it. By just changing that reference, the value is transferred and a payment is made. CBDC is usually presented by central banks as a complement to cash, equipped with similar features (notably, having regard to the legal tender status), but adapted to some functional needs and to the 'digital' in nature.

DIGITAL PAYMENT DIFFER FROM OTHER PAYMENTS

CENTRAL BANK DIGITAL CURRENCY FOR INDIA:

Motivations, challenges and risks • A variety of motivations drive central bank research into CBDC. • Currently, the focus is on providing a CBDC for payments, enabling broad access to central bank money and providing resilience. • Practical challenges and risks exist, which multiply when additional requirements are considered, eg improving cross-border payments or enabling monetary policy tools. There are a large and diverse number of motivations driving central banks' interest in CBDCs. Differences between emerging market economies and advanced economies are especially pronounced but individual jurisdictions can also vary significantly depending on their circumstances (Boar et al (2020)). For the central banks contributing to this report, the primary research motivation is a CBDC's use as a means of payment, although there are secondary motivations (eg enhancing monetary policy tools). CBDC is not unique in being able to fulfil many of these motivations and CBDC designs are likely to require trade-offs that mean not all motivations can be realised simultaneously. 2.1 Payment motivations and challenges

2.1.1 Continued access to central bank money In jurisdictions where access to cash is in decline, there is a danger that households and businesses will no longer have access to risk-free central bank money. Some central banks consider it an obligation to provide public access and that this access could be crucial for confidence in a currency. A CBDC could act like a "digital banknote" and could fulfil this obligation.

2.1.2 Resilience Cash serves as a backup payment method to electronic systems if those networks cease to function. However, if access to cash is marginalised, it will be less useful as a backup method if the need arises. A CBDC system could act as an additional payment method, improving operational resilience. 3 Compared to cash, a CBDC system might provide a better means to distribute and use funds in geographically remote locations or during natural disasters. However, significant offline capabilities would need to be developed, both for the CBDC system and any dependencies (eg some availability of electricity for mobile devices). Counterfeiting and cyber risk present a challenge. Cash has sophisticated anti-counterfeiting features and large-scale issues rarely occur. Theoretically, a successful cyber attack on a digital CBDC system could quickly threaten a significant number of users and their confidence in the wider system (as it could for a large bank or payment service provider). Defending against cyber attacks will be made more difficult as the number of endpoints in a general purpose CBDC system will be significantly larger than those of current wholesale central bank systems.

2.1.3 Increased payments diversity Payment systems, like other infrastructure, benefit from strong network effects, potentially leading to concentration and monopolies or fragmentation. Payment service providers have the incentive to organise their platforms as closed-loop systems. When a small number of systems dominate, high barriers to entry and high costs (especially for merchants) can occur. Where more systems exist, fragmentation may still occur as systems often have proprietary messaging standards, increasing the cost and complexity of interoperability (CPMI (2018)). Fragmentation of payment systems means that users and merchants may face costs and difficulties paying users of other systems. This is inconvenient and socially inefficient. CBDC could provide a common means to transfer between fragmented closed-loop systems (although an accessible fast payment system can also achieve the same end).

2.1.4 Encouraging financial inclusion For the central banks contributing to this report, most of the adult population in their jurisdictions can conveniently access electronic payments. However, increasing digitalisation could leave some sections of society behind as potential barriers around trust, digital literacy, access to IT and data privacy concerns create a digital divide. For central banks in many emerging market economies, a key driver for researching CBDC is the opportunity to improve financial inclusion (Boar et al (2020)). Yet for a CBDC to increase financial inclusion, it must address the causes of exclusion, which vary by jurisdiction and are often

complex.⁵ Given the complexity of this issue and possible underlying obstacles to digital inclusion (eg illiteracy), any CBDC initiative would likely need to be embedded in a wider set of reforms (CPMI-World Bank (2020)).

2.1.5 Improving cross-border payments Cross-border payments are inherently more complex than purely domestic ones. They involve more, and in some cases numerous, players, time zones, jurisdictions and regulations. As a result, they are often slow, opaque and expensive (CPMI (2018)). An interoperable CBDC (ie one that is broadly compatible with others) could play a role in improving cross-border payments (Box 2).

2.1.6 Supporting public privacy A key feature of cash is that no centralised records of holdings or transactions exist. Some have argued that the main benefit a CBDC could bring would be some level of anonymity for electronic payments (Bech and Garratt (2017)). Full anonymity is not plausible. While anti-money laundering and combating the financing of terrorism (AML/CFT) requirements are not a core central bank objective and will not be the primary motivation to issue a CBDC, central banks are expected to design CBDCs that conform to these requirements (along with any other regulatory expectations or disclosure laws). For a CBDC and its system, payments data will exist, and a key national policy question will be deciding who can access which parts of it and under what circumstances.⁶ Striking this balance between public privacy (especially as data protection legislation continues to evolve) and reducing illegal activity will require strong coordination with relevant domestic government agencies (eg tax authorities).

2.1.7 Facilitating fiscal transfers For some jurisdictions, the Covid-19 pandemic illustrates the benefits of having efficient facilities for the government to quickly transfer funds to the public and businesses in a crisis. A CBDC system with identified users (eg a system linked to a national digital identity scheme) could be used for these payments.

CONCLUSION

Understanding of CBDCs has advanced significantly in the last few years. Published research, policy work and proofs-of-concept from central banks have gone a long way towards establishing the practical benefits and challenges in any issuance. Progress has accompanied a gradual convergence on definitions and terms and an improved understanding of the capabilities of current technologies. Many central banks are actively engaging the public through reports, speeches and parliamentary hearings. A CBDC, as the digital claim on a central bank, is just a different manifestation of the same unit of account, store of value and medium of exchange already offered by central banks. There is considerable agreement amongst the central banks in this group on the foundational principles which will guide our ongoing research on CBDC. This report highlights a set of practical, common features which build on these principles. The central banks in this group expect these features would have to be incorporated in some fashion by any potential CBDC design, so that it can deliver on the public policy objectives. To achieve these objectives, a CBDC must be convertible, convenient, accessible and low cost. The underlying system should be resilient, available 24/7, flexible, interoperable, private and secure for the general public. At the same time, the payment system upon which a CBDC exists and is transferred must involve the private sector to benefit from innovation and competition and support adoption and use.

Abstract

Digital safety is a branch of cyber security that deals with people and the levels of online comfort, convenience, and privacy. It may be regarded as the act of staying safer online. This includes being aware of the risks associated with your online activity and avoiding being exposed to unwanted information, materials, or risks on the Internet that might harm one's devices. Online safety is a broad concept that concerns minimizing risks online from a range of negative influences including inappropriate social behaviors, abuse, harmful content, inappropriate contact, identity theft and breaches of privacy. The internet can be a risky place for children and their parents should have strategies for protecting them. Digital security involves protecting your online presence (data, identity, assets). At the same time, cyber security covers more ground, protecting entire networks, computer systems, and other digital components, and the data stored within from unauthorized access. Cyber safety is essential for students to navigate the digital landscape safely.

Keywords: Digital Security; Internet; Cyber safety; Privacy etc

Introduction

Digital safety, frequently referred to as internet safety, media safety, online safety, or cyber safety encompasses many things. At the core of digital safety is protecting ourselves, our families and others as we connect through digital devices. The new ways of interacting digitally facilitate real world interaction. Online safety is being aware of the nature of the possible threats that you could encounter whilst engaging in activity through the internet, these could be security threats, protecting and managing your personal data, online reputation management, and avoiding harmful or illegal content. Safer Internet Day is celebrated worldwide in February to raise awareness about internet safety. Online safety is necessary and validated as many business have been faced with excesses of attacks on the internet which has resulted in losing one's life on the part of the victims, committing suicide, or psychological disorderliness. Online spaces, games and media form a large part of life for young people growing up today. It offers a platform to connect with others and to learn. While cyber security protects devices and networks from harm by third parties, online safety protects the people using them from harm by the devices and networks (and therefore third parties) through awareness, education, information and technology. Cyber security is the practice of defending computers, servers, mobile devices, electronic systems, networks, and data from malicious attacks.

Important Cyber Security

1. Secure passwords:

A very simple but often overlooked element that can help your company's security is password security. Password security and password protection are practices for establishing and verifying identity and restricting access to devices, files, and accounts. The average user manages more passwords than ever. A password manager is an app that generates complex passwords and stores them in an encrypted format. Password strength is a measure of the effectiveness of a password against guessing or brute-force attacks. Using strong passwords lowers the overall risk of a security breach, but strong passwords do not replace the need for other effective security controls. Password security and password protection are practices for establishing and verifying identity and restricting access to devices, files, and accounts.

2. Malware:

Malware, short for malicious software, refers to any intrusive software developed by cybercriminals to steal data and damage or destroy computers and computer systems. Malware can infect networks and devices and is designed to harm those devices, networks and/or their users in some way. Types of malware include computer viruses, worms, Trojan horses, ransom ware and spyware. Malware is developed as harmful software that invades or corrupts your computer network. The goal of malware is to cause havoc and steal information or resources for monetary gain or sheer sabotage intent. Malware poses serious problems to individuals and businesses on the Internet. Although malware cannot damage the physical hardware of systems or network equipment, it can steal, encrypt, or delete your data, alter or hijack core computer functions, and spy on your computer activity without your knowledge or permission.

3. Mobile Device Security:

The changing landscape of It technologies has improved the ability for flexible working environments, and along with it more sophisticated security attacks. A mobile device is

only as secure as the network through which it transmits data. Companies need to educate employees about the dangers of using public Wi-Fi networks, which are vulnerable to attacks from hackers who can easily breach a device, access the network, and steal data. Mobile security is the strategy, infrastructure, and software used to protect any device that travels with users, including smart phones, tablets, and laptops. Mobile security combines practices and software that protect your devices from hackers, malware, and identify theft. Find out why mobile phone security is so important and how a comprehensive mobile security app can help you secure your devices and personal information.

4. Digital Footprint Management:

A digital footprint sometimes called a digital shadow or an electronic footprint refers to the trail of data you leave when using the internet. A digital footprint, whether passive or active, may put an insider at-risk of being targeted for malicious actions such as identity theft, financial scams or social engineering ploys. Your digital footprint can have a lasting impact on your reputation, relationships and employment opportunities. Understanding how this works is an important step toward making this impact a positive one. A digital footprint is relatively permanent, and once the data is public or even semipublic, as may be the case with social media the owner has little control over how it is used by others. For that reason, a major focus of digital footprint management is caution about online activities to control the data that can be gathered in the first place.

5. Online Scams:

A scam is a dishonest plan to trick someone into something which usually involves money. Cyber scams are scams that are carried out online. Cyber scammers may contact you via email, text, phone call or social media. Most scams and scammers have two main goals, to steal your money and your identity. You should know what to look for, how they work, and what to do, so you can protect yourself and your finances. Maintaining cyber security is very important, even for consumers. They may steal directly from you, or use your details to commit other crimes. Scams can look genuine and it can be difficult to tell when something is fake. Online scams include any use of the internet to steal someone else's personal information.

6. Cloud Security:

Cloud computing has revolutionized businesses, the way data is stored and accessed. These digital applications are transforming businesses, however, with large amounts of private data being stored remotely comes the risk of large-scale hacks. Cloud security is a collection of security measures designed to protect cloud-based infrastructure, applications, and data. In particular, cloud security works to provide storage and network protection against internal and external threats, access management, data governance and compliance, and disaster recovery. Like cyber security, cloud security is a very broad area, and it is never possible to prevent every variety of attack.

7. Social Media Use:

Social media is about conversations, community, connecting with the audience and building relationships. Most of us use social media to stay up to date about current events and news. The rise of social media has increased communication between people all over the world and the internet. Notable uses of social media are communication, collaboration, options and reviews, brand monitoring, entertainment, media sharing, paid advertising. Social media platforms have also given rise to online communities, where users can connect with others who share similar interests, hobbies or experiences.

Tips for Digital Safety:

- Keep your personal information limited and professional.
- Change your passwords often.
- Use two-factor authentication.
- Keep your computer updated.
- Use firewalls and anti-viruses.
- Read the site's privacy policies.
- Make sure you are using a secure internet connection.
- Review your privacy settings and understand privacy policies.
- Do not download unfamiliar software off the internet.
- Treat sensitive data very carefully.
- Frequently back up important documents and files.

Conclusion

In conclusion, prioritizing digital safety is paramount in our interconnected world. Vigilance, strong passwords, regular software updates, and awareness of online threats are crucial components. By adopting proactive measures and staying informed, individuals can navigate the digital landscape securely, safeguarding personal information and fostering a safer online community for everyone. Encouraging open communication about cyber security within communities and organizations is essential. As technology evolves, remaining adaptable to emerging threats and embracing cyber security best practices will be instrumental in preserving the integrity and privacy of digital interactions. Ultimately, a collective commitment to digital safety contributes to a more resilient and secure online environment for individuals and businesses alike.

LEARNING RESPONSIBILITY

Dr. M. Nirmala

Assistant Professor

PG Department of Commerce (CA), NGM College, Pollachi

Ms. V. Bavadharani

M.Com (CA), NGM College, Pollachi

Abstract

This work introduces the modeling of the learning environment through a service-oriented framework to ensure tracking of learner profiles and activities involved in TEL practices. Our method is tested in a French certified learning environment using a distributed framework with various learning tools and systems and some monitoring elements. This proposal is based on a standard accepted by many influential operating system editors, making it easy for a wide range of groups. Many benefits of implementing project-based learning strategies in the classroom are cited by proponents, including deeper understanding of concepts, broader knowledge base, improved communication and interpersonal/social skills, improved leadership skills, increased creativity, and improved writing skills.

Keywords: Environmental monitoring, Context-based learning modeling, Learner-centered Learning modeling, Activity-based learning and modeling

Introduction

Learning environment refers to the educational approach, cultural environment, or physical setting in which teaching and learning take place. The term is usually used as a more concrete alternative to "classroom", but it usually refers to the educational philosophy or knowledge environment that the student faces, and may include various learning cultures, its leadership ethos and characteristics. Individuals interact, governing structures and philosophy. In a social sense, the learning environment may refer to the culture and location of the population it serves. The use of learning environments, learning styles, organization and educational institution varies greatly. The culture and environment of a place or organization includes factors such as thought, behavior or work, also known as lifestyle. Although physical environments do not influence educational activities, there is evidence of a relationship between school settings and the activities that take place there.

Concepts of Learning Responsibility

According to Thomas Markham (2011), Learning Responsibility (LR) is defined as: "LR combines knowing and doing. Students not only learn knowledge and core curriculum elements, but also apply what they learn to solve real problems and generate meaningful results. LR students use digital tools to create high-quality collaborative products. LR is It refocuses education on the student rather than the curriculum, a shift dictated by a global world that rewards intangible assets such as motivation, curiosity, creativity, empathy and resilience. Can't be taught in a textbook, but must be activated through experience."

Extend LR processes: "Responsible learning is a comprehensive approach to teaching that engages students in inquiry. Students pursue problem solving by asking and refining questions, discussing ideas, making predictions, designing projects and/or experiments, collecting and analyzing data. , Making decisions, communicating their ideas and findings to others, asking new questions and creating artifacts within this framework."

The project-based learning is a method in which students collaborate to solve real-world problems in their schools and communities. Successful problem solving often requires students to draw lessons from multiple disciplines and apply them in a more practical way. The opportunity to create real change motivates people to learn.

Types of Learning

Learning techniques

It teaches individuals how to complete a task quickly. The ease, speed and accuracy with which a learner can complete a given task is used to determine performance. Learning to walk, talk, read and write begins at birth.

Visual Learning

It involves learning based on our ability to understand what we perceive around us using our sense organs such as what we see, hear, smell, taste or feel. This type of learning is enhanced by experience, and the changes it causes in human behavior are permanent or semi-permanent. Visual learning involves the ability to distinguish different color shades, smells and musical notes.

Auxiliary Learning

This type of learning occurs when the brain associates two unrelated things as a result of conditioning. For example, if someone eats a certain food that causes stomach discomfort, they will learn to associate that food with the discomfort and not want to eat it again. Also, associative learning helps conceptual learning in acquiring knowledge. Through association, new concepts are linked to previous ones, which enhances learning.

Appreciative Learning

Appreciative learning includes preferences, ideals, attitudes, and recognition of value and importance, all of which learners acquire through participation in various learning activities. It develops taste or preference in some aspect of life like literature, art, music. Teachers play an important role in guiding students towards acceptable values, attitudes and ideas in their society.

Behavioral Learning

Attitudes refer to general attitudes toward particular people, activities, or ideas. Behavioral learning influences or persuades people to take a particular desired path.

Different Characteristics of Learning

Learning is a lifelong process

We learn from birth to death. It is a universal process that all living things go through. It can be direct or indirect, formal or informal. Learning shapes and improves our knowledge, attitudes, skills, abilities and habits.

Change in learning outcomes

One of the most important aspects of learning is that it affects change. It enables us to reconstruct ideas and combine information and skills for need-based application. Change, whether desirable or undesirable, is reflected in one's behavior. The change is not apparent until the situation requires the person to respond in a visible way.

Learning has a purpose

Learning always has a purpose. Without the end goal there is no end. The goal of learning is to progress toward a predetermined goal.

Experiential learning

Gaining experiences is the foundation of learning. Learners' behaviors are influenced by new experiences. Learning experiences become meaningful to different types of learners when they are relevant to their interests.

Principles of Learning

Preparation

Students should have adequate rest, health and physical fitness because learning is an activity. Students' basic needs must be met in order for them to be ready or able to learn. Students who are tired or sick cannot learn much. Students may become disinterested in learning if they are distracted by outside responsibilities, interests or concerns, crowded schedules, or other unresolved issues. For example, we can identify the situation of a school's academic examination, where the reason for achieving high marks in various subjects leads to the mental and emotional readiness of students to put more effort into acquiring knowledge.

Exercise

Learning happens every time we practice. Examples include student recall, review, and summarization, as well as manual practice and physical applications. All these contribute to the formation of learning habits. The instructor should repeat important material at reasonable intervals and provide opportunities for students to practice, while ensuring that the process is goal oriented. However, if a skill is acquired only once, regular training may not be necessary in some or many cases. For example, once we learn to ride a bicycle, we remember the knowledge or skill even if we do not practice it for a long time.

Severity

The most intensively taught material is retained. A sharp, clear, vivid, dramatic, or exciting learning experience teaches more than a routine or boring one. According to the radical principle, a student will learn more from the original than from the substitute. Examples, analogies and personal experiences also help bring learning to life. Teachers should use all their senses (hearing, sight, touch, taste, smell, balance, rhythm, depth perception and others).

Independence

Because learning is an active process, students must have freedom: freedom of choice, freedom of action, and freedom to bear the consequences of action three great freedoms that involve personal responsibility. Students lose interest in learning if they lack freedom.

Conclusion

There is no single method for developing effective learning responsibility. The meaning of learning responsibility should be relevant to the context in which the student learns. However, before designing a curriculum or program, we need to consider what this learning responsibility will be. However, regardless of the learning responsibility, learners must do the learning. We need to ensure that learners can work in an environment that allows them to do so. In other words, it is our responsibility as educators to create the conditions for success.

DIGITAL INNOVATION IN BUSINESS

Dr. M. Shanmuga Priya

Assistant Professor, B.Com CA,
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Digital technology is increasingly important in achieving business goals, and its pervasive effects have resulted in the radical restructuring of entire industries. Consequently, managers' extensive interest in handling digital innovation is not surprising. Recent research has illustrated how digital technologies give rise to a vast potential for product and service innovation that is difficult to control and predict. Therefore, firms need dynamic tools to support themselves in managing the new types of digital innovation processes that emerge.

Keywords: digital transformation, business model innovation, digital business models

Introduction

Digital innovation is defined as the process of utilization of digital technologies and strategies to create new or improved products, services, processes, and business models. It involves leveraging digital tools and platforms to drive transformation, enhance customer experiences, and generate value. The innovation potential of digital and data-driven technologies has emerged as a significant area of interest in recent years. In today's competitive context, entrepreneurs focus on learning how to exploit the knowledge and potential value of open data to design and implement innovation in products and services. The value of published data is not only for public organizations, but this value is distributed by all the actors of an open data network. These actors may be public sector organizations, data providers, service and infrastructure providers, businesses, developers, research centers and academic institutions and nascent entrepreneurs

Objectives

- To know the Digital innovation
- To know the Business Can Embrace Digital Innovation
- To Why Digital Innovation Is So Important Today

What is Digital Innovation?

Digital Innovation in business is the application of technology to solve existing business problems and improvise organizational practices. It is an ongoing and unruly process that changes organization and helps a business stay relevant and competitive. A good digital strategy covers digital innovation initiatives such as:

- Switching from analog to digital processes
- Automation, connectivity, and data analytics
- Implementation of new software and platforms
- Development of a new technology
- Cloud migration

Every business needs innovation to launch new products & services successfully and improve operational efficiency and customer efficiency. To start your digital innovation journey, you need to focus more on the following elements – portfolio, platform, process, and people. With the right platforms, processes, and people in place, you can drive **digital innovation** in your organization to create a portfolio of high-quality products and services.

How Your Business Can Embrace Digital Innovation

Business analysts predict that by 2026, all organizations will transform digitally. Therefore, to remain relevant, every organization must understand how to embrace digital innovation. Here are some tips that will help you create an effective digital innovation process for your business.

Invest in New Technology and Software

To remain relevant and be at the forefront of digital innovation, organizations must invest in new technologies and software to improve operational efficiency. Investing in the right technology will help you unify your business needs and include product lifecycle monitoring, cloud access, collaboration, and team management as core business concepts.

Build a Digital Innovation Team

Build a small and focused team of professional and high-performing individuals from different departments who are committed to offering value to your organization. This team will put their heads together to identify the limitations of your existing business process and proffer solutions via effective digital innovation strategies.

Adopt an Agile Business Model

As technology evolves rapidly, it's important to make agility a critical aspect of your business to remain relevant. In an agile business model, organizations can identify new customer needs and periodically change strategies to solve such problems over time. Most organizations are creating incubator labs to brainstorm, experiment, and fast-track digital innovation.

Create a Value-added or ROI System when Prioritizing Projects

Based on revenue generated from current projects, you need to create a value-added system for higher digital innovation ROI. This allows businesses to prioritize the projects that will make the highest returns, both short-term and long-term.

Create a digital adoption strategy for new processes and tools

Create a well-detailed, specific digital adoption strategy to make the best of your tech investments. When training your employees, a digital adoption system solution, such as Whatfix, can be your innovation partner.

Why Digital Innovation is so Important Today

- **Competitive Advantage:** Digital innovation enables businesses to gain a competitive edge in the marketplace. By leveraging digital technologies and strategies, organizations can differentiate themselves from competitors, deliver unique value propositions, and capture new market opportunities. It allows companies to stay ahead of the curve and adapt to changing customer preferences, emerging trends, and disruptive market forces.
- **Enhanced Customer Experience (CX):** Digital innovation focuses on improving customer experience and interaction. By leveraging digital channels, personalized marketing strategies, intuitive user interfaces, and data-driven insights, organizations can deliver tailored and seamless experiences to their customers. This leads to higher customer satisfaction, increased loyalty, and a positive brand reputation.
- **Increased Efficiency and Productivity:** Digital innovation helps optimize business processes and streamline operations. By automating manual tasks, integrating systems, and leveraging data analytics, organizations can enhance efficiency, reduce costs, and improve productivity. Digital tools such as workflow management systems, robotic process automation, and cloud computing enable streamlined operations and faster decision-making.
- **New Revenue Streams:** Digital innovation opens up new avenues for revenue generation. By leveraging digital technologies, businesses can create innovative business models, products, and services that tap into previously untapped markets. For example, the rise of the sharing economy, subscription-based services, and digital platforms has created new revenue streams and disrupted traditional industries.
- **Data-Driven Insights:** Digital innovation relies heavily on data collection, analysis, and interpretation. By harnessing big data analytics, machine learning algorithms, and predictive modeling, organizations can gain valuable insights into customer behavior, market trends, and business performance. Data-driven insights enable informed decision-making, targeted marketing, and proactive innovation strategies.
- **Agility and Adaptability:** Digital innovation fosters an agile and adaptive organizational culture. It encourages experimentation, continuous learning, and the ability to quickly respond to changing market dynamics. Organizations that embrace digital innovation are better equipped to navigate uncertainties, seize opportunities, and adapt their strategies in a rapidly evolving business environment.
- Overall, digital innovation is crucial for organizations to thrive in the digital age. It empowers businesses to be more competitive, customer-centric, efficient, and adaptable, thereby enabling sustainable growth and long-term success.

What are the Key Benefits of Digital Transformation?

Here are ten digital transformation business benefits that you can't afford to lose out on:

1. Increases Customer Satisfaction

Customer expectations have never been higher. On the one hand, customers want personalized services that meet their individual needs. On the other hand, they want things to happen automatically and they don't want to have to deal with human beings to do tasks like accessing, updating, or deactivating and reactivating software. One of the clearest advantages of digitalization in business is that you will be able to implement **robust digital tools and strategies**, like per-location or per-industry license modification and automated processes. These digitalized processes lead directly to increased customer satisfaction.

2. Drives Data-Based Insights

One of the most significant benefits of digital transformation is that your business will be able to collect and analyze data that you can turn into actionable, revenue-generating insights. In the past, your data was scattered across multiple disconnected platforms, or even worse, you might not have collected and used data at all. Digital transformation will enable robust data collection, centralized data storage, and the creation of tools to analyze and translate data into information that promotes informed corporate decision-making.

3. Enables Software Monetization

Back in 2015, Satya Nadella, CEO of Microsoft, looked out across the room full of business and industry leaders at the annual Microsoft Convergence conference and famously stated: "Every company is a software company." At the time, software-centricity was hardly understood. Today, all business leaders know that they must shift from a product-centric approach to a software-centric approach and that software monetization gives businesses the best ROI. Yet many companies are stalled at the launch pad because they don't know how to fire up the engines of software monetization.

4. Enables High-Quality User Experience

High-value companies know that they are not just delivering products, they are delivering experiences. Digital transformation enables beautiful, effortless experiences that hinge on automation, AI, and self-service tools. Prove that you've mastered the digital era by providing customers with a frictionless user experience.

5. Encourages Collaboration & Improves Communication

To drive innovation and output, you need to have a digital platform that promotes communication and collaboration across all internal departments. The digital transformation eliminates roundabout communication, redundancy, slow response times, lost information, and ineffective idea-sharing. When you digitalize the internal communications of your business, you will increase productivity, accountability, and creativity, and gain the edge necessary to outperform the competition.

6. Increases Agility

According to a 2017 McKinsey survey, only 8% of respondents said their current business model would remain economically viable if their industry keeps digitizing at its current course and speed. That means a whopping 92% of businesses recognize the fact that the ability to change and be flexible is the key to surviving the ongoing period of intense digital transformation. Products are changing, previously reliable revenue streams are drying up, and customer demands are drastically different than they were just a few years ago.

The solution? Digital transformation strategies. With the power of a digital business environment, your company will be able to anticipate challenges and build solutions preemptively so that you can remain viable for years to come.

7. Limits Human Error

An undeniable advantage of going digital is that digital processes stop errors by eliminating time-consuming manual data entry and human inefficiencies. Digital processes are inherently smoother and less risky than any process that involves error-prone humans.

8. Encourages an Environment of Employee Excellence

An important factor in a successful digital transformation is to get widespread company buy-in. You need to create a corporate culture where it is clear to everyone that they will ultimately see the benefits of going digital. To get employee buy-in, invest in the digital education of your workers. Host internal webinars, participate in conferences, and send your employees to courses that will update their skill sets. Excellent employees are your greatest asset, so don't undervalue investing in their growth.

9. Increases Operational Efficiency

Digital transformation gives you increased operational efficiency. You can consolidate messy manual processes and reduce overhead costs by integrating with back-office systems, automating delivery processes and product updates, enabling inter-device activation, managing multiple product variants, and more. With digital business processes, you'll save time, plug revenue holes, and decrease frustration. Because digital business is synonymous with efficient business.

10. Enables Future Digital Growth

The final benefit of digital transformation is the most fundamental. Digital transformation is the initial act that sets the stage for all subsequent business growth. Without investing in digital business transformation, your company will quickly become obsolete. In the past few years, we've seen industry giants like Blockbuster, Toys R' Us, and Kodak go bankrupt. Why? Because they failed at digital transformation. Digital transformation is not optional. It's not the icing on the cake of a thriving business. To survive the digital tsunami engulfing the world, you must take steps to transform. Once

you do, you'll reap the benefits of digital transformation and become stronger and more profitable for years to come

Conclusion

Digitization and digitalization in business have a massive impact on innovations. As technology advances, it forces you to act and innovate. And once you start, it's hard to stop. Continuous innovation allows you to become more trends. Global crisis such as global pandemic often forces businesses to innovate. Indeed, the cliché, 'necessity is the mother of invention,' shouldn't be the sole reason to embark on digital innovation. Nonetheless, market forces, customer expectations, and business dynamics are changing rapidly. Therefore, organizations need to innovate digitally to stay relevant, irrespective of their industries. Digital innovation is not meant to put you in a disadvantaged position. Instead, it empowers your organization to improve its resilience by preparing for the inevitable change coming. As a result, digital innovation can help you grow your business in ways you never imagined.

Abstract

Technology is growing, in a fastest and well developed ways in every sectors, and it also creates various developments in the educational sectors also. In this article, we discussing about the "Information & Communication Technology" (ICT), which cause a great part in educational development in the way of introducing smart classes, online courses, web conferences etc., with the internet connection through the smart phones and computers. At the time of pandemic period, business, economy and educational sectors suffers a lot, at that time ICT technologies play a major role and help to tackle the pandemic situation.

Keywords : Technology, Information and Communication MEANING

ICT Stands for "INFORMATION & COMMUNICATION TECHNOLOGY".

That helps to enable modern computing system. It is an extensional term from IT. It plays one of the most important role in the New educational policies and projects. It covers all the devices and equipments that helps to connect and store data. It includes antiquated technological devices like: landline telephones, television, and radio. And cutting edge technologies like: Artificial intelligence(AI), and Robotics are the advancement in ICT.

Through these communication devices , the informations are passed and informed along with the technologically connected internet and wireless networks.

Objectives of ICT

- Establishment of smart school.
- Increase the capacity of teachers.
- Update & Accurate knowledge.
- Contribution in extension & research.
- Richness of learning experiences.
- Professional growth

Benefits of Ict

- Improved Learning efficiency
- Reduce the burden on teachers.
- Simplified information sharing.

- Increased *student motivation*.
- Improve *IT literacy* of students.

Tools Using in ICT

- Google classroom & Meet.
- Trello.
- Online coding websites.
- Subject specific tools.
 - i. Teaching geography.
 - ii. Teaching Mathematics.
 - iii. Teaching History & Biology.
- Smart class
- E-Resources

Google Classroom and Meet

A virtual classroom that makes learning fun and easy and also entertain the students. Teaching educate their students by giving interacting assignments, by slideshow and also by YouTube videos and some of the online learning games like kahoot. It allows the class to go paperless. It can also conduct PTA meetings, take attendance and can maintain and conduct test and grade the students systematically.

Trello

It is also one of the tools in ICT learning. In this we can keep reminders and settasks for the students and also in working place. It prefer projects based learning for students. In this we can create different board for assignments, test papers, doubts, students attach images and videos. By this students can easily look their deadlines for projects, track their progress in online, etc..

Online coding websites

Some of the online coding websites are:

- Data camp
- Hacker rank
- Coder bytes
- Khan Academy
- Code school
- Code academy
- Edx

This learning sites helps the students in the fields of computer engineering and IT sectors. They can learn at any time by downloading videos and listen to that and sometests are also followed.

Subject Specific Tools

i. Teaching Geography:

Google maps, Google Earth helps the kids to learn the distance between two areas, helps to locate areas, can learn different regions, land masses and water bodies.

ii. Teaching mathematics:

Can figure out geometry, can think helps the students to solve math problems and can know about several theorems and proofs in maths.

iii. Teaching history and biology:

YouTube, Microsoft PowerPoint are many videos available in YouTube about a particular research both in history and biology fields. Slideshows in Microsoft PowerPoint makes the students to understand it easily.

Smart Classrooms

In most of the schools and colleges smart classrooms are available. In this, through the projector the screens are displayed according to their syllabus and this is also an easy and interesting way of learning.

E-Resources

E-books, E-Journals, PDFs, are available in the internet for each and every heading and research work. It is more helpful and makes the students to search in online and get download. In reduce the work of searching in libraries and to buy in shops and we can also tell it as a time management.

Components of Ict

- Software
- Cloud of computing
- Transaction
- Data
- Internet
- Communication technology
- Hardware

Hardware

It denotes physical and tangible electronic systems. It includes: smart phone, laptops, printer, supercomputer, projection system, cameras, telecommunication devices and networks.

Software

It includes computer programmes and application for hardware function. There are two types of software.

- System software
- Application software

Communication Technology

It refers to tools that send , receive and process information. It includes digital television, digital radio, e-mail, GPS, video conferencing platforms.

Advantages

For Students:

- Improves concentration
- Makes to know to interact with digital gadgets
- Understands the concepts easily and quickly by displaying animation videos
- Helps to learn more courses at one place
- Encourage critical thinking
- Motivates to study new concepts

For Teachers:

- Improves parent teachers interactions
- Improves creative skills
- Teachers keeps the students interact throughout the class
- Record keeping of students

Disadvantages

For Students

- Reduce human contact, So it reduce friends circle
- Theft of personal data
- May be consumption of false information (lot of true and false informations are available in internet)
- Reduces development of other skills such as writing, public speaking
- Distractions like chats, social networks and web pages and greater addiction

For Teachers

- Lot of work load like assigning classes and preparing videos for classes
- Lack of network problems in rural areas
- Course material problems
- Teacher reluctant to new technology

Conclusion

- According to UNESCO, ICT in education is a great support for teachers and improve the quality of student learning.
- A report shows , that the students using digital learning tools at school is 89% and at outside school is 71%.

Abstract

Online shopping or e-shopping is a form of electronic commerce which allows consumers to directly buy goods or services from a seller over the internet using a web browser. Alternative names are; e-web-store, e-shop, e-store, internet shop, web-shop, web-store, online store, online storefront and virtual store. English entrepreneur Michael Aldrich invented online shopping in 1979. His system connected a modified domestic TV to a real-time transaction processing computer via a domestic telephone line. In March 1980 he went on to launch Region's Office Revolution, which allowed consumers, customers, agents, distributors, suppliers and service companies to be connected on-line to the corporate systems and allow business transactions to be completed electronically in real time. The rate of cyber crimes has been increasing and bank details have been misused which raise privacy issues. Customers have to be careful in revealing their personal information. Some of the e-retailers are unreliable. I have collected data from 50 respondents, percentage analysis and chi-square test was used for analysing data. The main objectives of the study were to know about the opinion of women consumer's about network security. This study concluded that Most of the women consumers consider that there are lot of risks in payment and giving personal details.

***Keywords:** Online shopping, customers and women customer's*

In March 1980 he went on to launch Region's Office Revolution, which allowed consumers, customers, agents, distributors, suppliers and service companies to be connected on-line to the corporate systems and allow business transactions to be completed electronically in real time.

ABOUT THE DEPARTMENT

The PG Department of Commerce with International Business is established in the year 2002 with a prime motto to uplift the rural students to know the edge in the specialized field of International Business. The syllabus is designed, crit. developed at regular intervals, since it is a self. The PG programme is covering students from undergraduate and the course is framed to cater to, fill the needs and wants of the student and industry as well. The PG programme is initiated as a mark of the 50th Anniversary of the College in 2017. The Department has an infrastructure/needed skill, leadership qualities and preparing the students at least of level. It wishes the students in various Skill Development Programmes, Orientation Programmes, Workshop and Extension Activities. It keenly concentrates on the recent trends prevailing in the environment, updates its syllabus to match it with the industrial needs and sends the students accordingly, so as to get success with the help of Team Work. The Strength of the Department is its Qualified Faculty Team which always focuses on achieving the goals of Student and College as well.

Introduction

In India, cottage industries are a major source of employment and livelihood. These industries are also the backbone of the Indian economy. The cottage industry is an industry that is small-scale and informal. This business idea among other small business ideas is typically a family business and the owner of the business lives on the premises. Small-scale units or manufacturing businesses managed by family members from their homes or establishments usually near their homes. They are the backbone of the Indian economy. In India, the Khadi and Village Industries Commission (KVIC) is the organization that promotes village and cottage industries. These industries fulfill the basic needs of local markets and all its requirements like raw materials, skilled labour, etc., are met from within the village. They include handloom, pottery making, food processing, pickles, khadi, etc. The government, on the other hand, has taken steps to revitalize cottage industries, and they now play an important role in the country's economy. Cotton weaving, silk weaving, carpet making, leather industry, metal handicrafts, and small food processing businesses are the top five Indian cottage industries. In India, cotton weaving is a significant cottage industry. Cotton clothing is frequently worn throughout the country, therefore this expertise extends back to ancient times. Cotton weaving in India is noted for its traditional motifs and patterns created by skilled weavers using looms. Maharashtra, Tamil Nadu, and Gujarat are the cotton-producing states in India. Another well-known cottage industry in India is silk weaving. Silk is worn on important occasions such as weddings and festivals, and India is one of the largest manufacturers and consumers of the material. India's silk varieties include Mulberry, Muga, Tassore, and Eri. Karnataka accounts for approximately 70% of India's silk weaving industry. During the Mughal dynasty, carpet making was brought to India. India is also famed for its durries and coir mats, despite the fact that Kashmiri carpets are world-renowned for their exquisite quality. Kashmir, Rajasthan, Punjab, Uttar Pradesh, Andhra Pradesh, and Punjab are all home to the carpet industry in India. The Carpet Export Promotion Council was established by the Indian government to promote hand knitted rugs and various types and styles of floor coverings from around the country. India is a major exporter of high-quality leather to other countries.

Types of Indian Cottage Industries

Cottage industries are manufacturing enterprises that do most of their labor by hand. India is famous and well known for its diverse culture, handicrafts of traditional cottage industries and variety of business. Cotton weaving, carpet weaving, silk weaving, leather industry, metal handicrafts and small scale food processing are the major cottage industries in India.

1. Cotton Weaving:

Cotton weaving is a significant cottage industry in India. As cotton clothes are widely worn throughout the country, the knowledge is ancient. Cotton clothing is famous for its traditional style, vibrant color and designs made by expert weavers using handloom. Gujarat, Tamil Nadu and Maharashtra are three major cotton producing states.

2. Silk Weaving:

Another well-known cottage industry in India is silk weaving. Our nation produces and exports a significant amount of silk, both domestically and abroad. Karnataka produces the most silk, making up over 70% of the entire silk weaving business. Mulberry, Tassore, Muga, and Eri silks are produced in our count.

3. Carpet Weaving:

During the Mughal era, carpet weaving was first introduced to India. The durries and coir carpets are equally renowned for their exceptional quality and texture as the Kashmiri carpet. In spite of the fact that the carpet industry is widespread throughout the nation, it is largely concentrated in Kashmir, Rajasthan, Punjab, Uttar Pradesh, Andhra Pradesh, and Punjab. The Carpet Export Council was also founded by the Indian government to promote knotted rugs and other types of floor coverings from all around the nation.

4. Leather Production:

India is a significant producer of premium leather for export to international markets, providing around 10% of the demand. One of India's top export earners and one with almost 2.5 million workers is the leather industry. The Indian states that produce leather are Uttar Pradesh, West Bengal, and Tamil Nadu.

5. Metal Works:

Metal has long been used in India to make figurines, jewellery, utensils, and other objects. India's metal handicrafts are well-liked worldwide and have a major economic impact on the nation. Metal handicrafts are created using hand-operated tools rather than sophisticated machinery.

Issues Faced by the Cottage Industries in India

The lack of access to adequate finance options and limited technical knowledge has made it difficult for cottage industries to fulfil domestic and international customer

demands, thereby inhibiting their growth. These are some of the major issues faced by cottage industries in India – let's learn more about each one of them individually in the following sections.

1. Self-Employed Labor Shortage

The self-employed labor shortage is a major problem faced by Indian cottage industries. The lack of skilled laborers has been made worse by the Great Recession and economic slowdown, which led to a large number of factory workers losing their jobs. Most cottage industries are made up of small-scale producers who find it difficult to attract employees due to low wages, insecure working conditions, and long hours. These challenges have worsened with the rise in unemployment rates across the country. Cottage industries also have difficulties finding skilled employees because many young people choose not to pursue traditional occupations and apprenticeships.

2. Low Demand for Handmade Goods

The majority of the demand for handmade products comes from tourists visiting the country. But unfortunately, not enough people live in these villages to keep up with production. It means that most of these goods are not made locally and can't be sold nearby. The result is a vicious cycle where supply and demand cannot meet due to a lack of market access. There's a general misconception that cottage industry goods should be easy to transport because they're small. However, this isn't always the case! For example, if you want to ship something fragile like silverware to long distances without damaging it, you will need high-quality packing materials. One of the unfortunate realities when it comes to cottage industries is low-quality products. These businesses often have little knowledge of producing high-quality goods, leaving many unsatisfied buyers.

3. Lack of Financing Options

Traditional banks offer loans with higher interest rates than microfinance institutions. The perception of high-interest rates may be that they are due to the poor credit history and low income of the rural borrowers. However, there are other reasons for the high cost of these loans. For example, traditional banks charge a commission for processing the loan. The process is lengthy and demanding for bank staff and customers, so it costs more to service each loan transaction. Moreover, using outdated manual systems to process data limits efficiency, increasing costs. In contrast, many microfinance institutions offer their customers products with lower rates and no commissions on transactions because they do not have expensive brick-and-mortar branches or costly IT infrastructure; instead, they mainly operate online or through mobile phone banking apps.

4. Government Regulations

Each state has its regulations that govern the industries, so it is important to consult your local government officials and determine the regulations before starting a business. For example, each state restricts how many days a week a business can be open or if

employees must wear certain clothing. There may also be a restriction on when employees can take breaks during the day. As another example, there may be different child labour laws for children under 14 years old compared to children over the age of 14 years.

5. Poor Working Conditions

In the past, people worked in these spaces for up to 18 hours a day. They'd work with chemicals and dangerous tools, often without protective gear or knowledge of how to use them safely. And they were paid only a fraction of what they were worth. In recent years, we've seen some progress. The Indian government has passed legislation that mandates fair wages and working hours for this industry. But there are still many challenges – like limited access to markets for their products or lack of business skills – that limit their success.

6. Ineffective Marketing Strategies

Cottage industries in India need to take marketing into their own hands because there are not enough jobs available. Of course, marketing is an important part of any business, but it's essential for businesses that rely on word-of-mouth and referral. As a result, these businesses will have to be more creative in advertising themselves. For example, they could try sending emails with their products and services attached, sponsoring events, participating in community groups, or partnering with local hotels or restaurants. Investors want nothing short of success for the companies they invest in. But investors also know these enterprises start small and don't grow overnight. As a result, it can be difficult for them to make money as quickly as they would like from investments, so they might stop investing altogether or only offer a little before reducing investment levels even further later on down the line if things don't improve.

7. No Brand Identity

It is not uncommon for small businesses to have issues with branding and marketing. They may not have the funds or expertise to develop a strong brand identity design, which leads to a lack of awareness and visibility. For example, if you are a fashion designer who produces clothing but doesn't have the funds or skills to create your website, people may not know that you exist because they couldn't find your products on search engines. That is why small businesses need to identify their strengths and weaknesses to use the right platforms and techniques to reach their target audience.

8. Quality Control Issues

One major problem faced by cottage industries is quality control. The vast majority of cottage industries are family owned and operated. When the owner is also the manufacturer, they are not able to monitor the quality of their products as well as a corporation might be able to. They will often produce goods until they run out of materials instead of monitoring the quality and stopping when a sufficient amount has been made. As a result, some buyers complain about receiving low-quality items that do not meet their

expectations or are defective because they were rushed to make them before running out of materials.

9. Lack of Government Support

The Indian government has not been supportive of the cottage industries. The government's policies do not support the growth and development of cottage industries. For example, cottage industries are only given a 15% discount on the minimum rate they need to pay on electricity charges when they purchase their power from a State Electricity Board (SEB) instead of a 50% discount if they purchase their power from private companies. It makes it difficult for these small businesses to survive, as they will have to spend more money each month to use electricity.

10. Sustainability Issues

One major issue that many cottage industries have is sustainability. There are not as many jobs as there used to be, and the demand for handmade goods is decreasing. It means that the cottage industries have less income, which makes it hard to maintain their business operations..

Government Actions to Resolve the Problem

The government has launched a number of efforts to address the problems facing the cottage and small scale industries because of their significance. The first actions taken are as follows:

- A number of organisations have been established by the Union Government to support small companies and rural communities. They include the Central Silk Board, the All India Handicrafts Board, the AH India-Handloom Board, and the Khadi and Village Industries Commission.
- There are now industrial cooperatives, industrial estates, and rural industrial initiatives.
- To encourage the small-scale manufacturing sector, the Central Government has designated 807 products for exclusive manufacture.
- District Industries Centers are being created at the district level to house all the support and services needed for small and village businesses.
- The Industrial Policy Resolution of 1980 provides the following provisions for the growth of home-based and small-scale businesses:
 1. Launching a programme to create buffer stocks of essential goods, which are frequently hard to get by. Priority will be given to the special needs of those states that depend heavily on a small number of essential raw materials.
 2. In order to produce as many ancillaries, small, and cottage suits as possible, the government will establish a few nucleus plants in each district. A nucleus plant would bring together the output of the auxiliary and small-scale units that fell inside its orbit.
 3. Increasing the cap on capital investments for small and supporting businesses.

Problems of Cottage and Small-Scale Industries

The major problems faced by the cottage and small-scale industries are stated below:

1. Non-availability of timely and adequate credit.
2. Inefficient management
3. Lack of infrastructure
4. Technological obsolescence
5. Limited availability of raw materials
6. Marketing problems
7. Competition with large-scale industries and imports.
8. Excessive burden of local taxes
9. Widespread sickness

Conclusion

India's cottage industries are culturally and economically significant. They preserve ancient traditions while simultaneously employing a large number of people. Because these industries confront intense competition from other economies, society should provide support to prevent exploitation and further develop them. The only solution to combat the monster of unemployment in over-populated countries like ours is to promote cottage and small-scale industries. Cottage industries are unorganized and fall under the category of small scale industries. They use traditional ways to create consumable goods. Furthermore, these industries emerge in areas where unemployment and underemployment are common. As a result of this technique, the cottage industry benefits the economy by absorbing a large portion of the surviving workers in rural areas. On the other hand, the industry faces numerous challenges in a variety of ways. As a result, the government is attempting to address the sector's issues since it recognises that the sector has a lot of promise in a variety of sectors if properly supported.

Abstract

In India, Agriculture is an important sector. It plays a vital role in the process of economic development in less developed countries like India. In Indian economy, it is indispensable for the substance and Growth. The Critical issues that plague Indian agriculture at present are the knowledge deficit and infrastructure deficit, especially in the rural areas. Now a days, Problems are related to irrigation infrastructure. In this, Lack of delivery mechanisms are the Major Issue in India. So, we not have effective delivery mechanisms. There are many Numbers of schemes. The Agricultural need to be increased so that farmers an get more remuneration from the same piece of land with less labours

Keywords: *Agriculture, Infrastructure and India.*

Introduction

In Indian there are 1.3 billion people, and it ranks second in terms of the agricultural output. In 2021, the gross value added (GVA) was accounted 16.4% in forestry and fishing sector. In country's population, there are more than 50% of serving primary source of livelihood. These sector accounts for majority of the poor of the country. Over 58 percent of the rural households depend on agriculture.

In Demand side factors include, awareness and knowledge about technology, that access to credit and relevant inputs, risk implications and marginal returns. In Supply side factors includes, policy support, investment in agricultural research and extension system, availability of infrastructure, and institutional arrangements for the delivery and benefit sharing of technologies.

Importance

The crops produced in this manner are sufficient because of the expanding population. The reforms after independence are consequently given priority. The agricultural development helping crop producers or farmers by offering various forms of support in the agricultural industry. This delevopment includes offering security, assisting with research, using cutting-edge methods, preventing pests, and promoting diversity.

Agricultural technology assists farmers in overcoming operational challenges such as financing, supplies, and crop productivity. The farmers can increase overall production, reduce their impact on natural ecosystems, and ensure safer growing conditions. Agricultural technology provides farmers with improved worker facilities, increased efficiencies, and low prices.

Roles Agricultural Technologies

During 1960s, the institutional approach was shelved to make the way for the technocratic approach only to remerge during post liberalization period. The main motto behind these initiatives was to improve farmers access to institutional credit. A large number of institutional agencies are involved in the disbursement of credit to agriculture. A large number of formal institutional agencies like co-operatives, Regional Rural Banks (RRBs), Non-banking Financial institutions(NBFIs), Self-help Groups(SHG),etc.

Agricultural technology plays a crucial role in the agriculture industry by helping farmers overcome various challenges they face in their day-to-day operation. It helps farmers in various aspects of their farming operations. From increasing crop production to reducing water, fertilizer, and pesticides to improving working conditions for farm workers. and it plays a vital role in making the agriculture industry more efficient and sustainable.

Roles of agricultural reforms are,

- Precision agriculture
- Climate prediction through AI
- Use of *sensor* in agriculture
- Biotechnology in agriculture
- Digital solution for *financing* and *supplies*
- E-commerce solutions for selling *agricultural products*.

Impacts

It Increase in agricultural products both import and export. Technologies can enable the transition of modern agriculture in the field. While some technologies have transformed the way we operate, there is a need for spreading technological advancements in agriculture like, artificial intelligence and machine vision. Farmer can have ready availability of weather information and disaster warnings. The three main aspects of agricultural reforms are liberalization, privatization and globalization. Agriculture is the primary source of income in rural India, and any reforms will have a direct impact on the nation's economy and vice versa. Agriculture reform has a significant impact on the following areas:

- Increase in agricultural products both import and export.
- Improvements in agricultural technology and rural infrastructure are two areas where progress is being made.
- Agricultural methods are becoming more prevalent
- Agriculture and food security prices are maintained.

Merits and Demerits

Merits	Demerits
Productivity is boosted by Technology and they reduce the time.	Excessive Use of Fertilizers and Pesticides.
Water supply becomes easy by using Modern Technology.	High Maintaining Cost.
Modern machines can control the efforts of farmers.	It is efficient but has many side effects and drawbacks.
Better marketing and exposure to the price. And irrigational technology.	Lack of practical knowledge the farmers cannot handle the machines properly.
Low run of chemicals and also waste materials into seas and water.	The robotic machine could not change their culture, we have to set their Programmes manually.
Decrease the use of water, fertilizers which keeps the prices down. And improve the fertility of the soil.	Improve the scouting programmes.
Facilities in online trading and E-commerce. And suitable for the campus environment.	Most of the farmers are illiterates so they are unable to use the modern machines.

Conclusion

The food and agriculture sector Is crucially important in the green growth. Because it is major user of land water and marine resource. And biodiversity has important linkages and agriculture has given so much to society. In India technological it is rapidly growing field with potential boost food security and create new jobs and rural development. The region has had to face problems of food insecurity. In some countries have needed food aid for IDPs and refugees.

Abstract

Emerging technologies have capabilities to reshape business process management from its traditional version to a more explorative variant. However, to exploit the full benefits of new information technology, it is essential to reveal research potential and to detect recent trends in practice. Therefore, this work presents a systematic literature review with 231 recent academic articles from 2014 until May 2019 that integrate Business Process with digital innovations. We position those articles against seven future Business Process trends that were inductively derived from an expert panel. By complementing the expected trends in practice with a state-of-the-art literature review, we are able to derive covered and uncovered themes in order to help bridge a rigor-relevance gap. The major technological impacts within the Business Process field seem to focus on value creation, customer engagement and managing human-centric and knowledge-intensive business processes.

Keywords: Business Process Management - Business Process Innovation - Digital Innovation Emerging Technologies.

Introduction

Today's technologies are triggering a fourth industrial revolution and generate new ways of doing business. With the rapid boom of new technologies from block chains, Internet of Things or artificial intelligence, organizations are struggling to take maximum advantage of new in response, business operations, structures and processes need to learn how to adapt and implement a new version of business process management called ambidexterity. Ambidextrous is a mixture of two aspects: exploiting the benefits of existing technologies while simultaneously, exploring the benefits of new explorative on the one hand, emerging technologies enable disruptive digital innovations which are rudimentary prerequisites of sustainable business processes an organization's long-term way of working. While product/service innovations are a potential feature for organizations to lead in the market, digital process innovations help in terms of reducing time delays and resource sharing. Consequently, digital innovations are transforming both the client needs and the infrastructural requirements.

Digital Innovation Trends in BPM

As shown in the previous sections, BPM in the digital economy is transforming and creating new opportunities for improving business processes. For example, new IT can automate several manual tasks with internet-based and intelligent devices. An extensive use of social technologies encourages push and pull factors in marketing, leading to increased sales volumes and customer interactions or emerging technologies also help during process analysis, namely for tracking and monitoring in a fast and efficient manner. Although digital innovation transforms BPM with the help of emerging technologies, more research is needed to fully grasp those opportunities. Hence, Van Looy and Poels collected the opinions of 19 BPM practitioners on how they see the future of BPM evolve based on emerging technologies, and categorized them into the following seven BPM-DI trends:

We have adopted these BPM-DI trends to categorize our literature review in order to find ways to bridge the rigor-relevance, which refers to the differences between practical experience from industry and academic theories or literature. Bridging this gap is important, as research and real-time practical experience are interdependent to obtain rigorous insights that are relevant for society. Subsequently, we explain each BPM-DI trend by highlighting relevant studies on different industries and perspectives before systematically mapping the state-of-art for deriving calls to research and practical guidelines.

Digital Technologies and Connectivity Can Drive Economic Inclusion of All Businesses

Essentially, the wide group of mostly free digital tools from the Facebook company, combined with the worldwide expansion of the internet, afforded less-advantaged groups the ability to connect their products and services with customers around the world and serve a wider, and sometimes even global, economy in 2018-2019. We contend that digital tools could help to foster economic activity and further increase social inclusion in the coming years. In keeping with the UN Sustainable Development Goals, which highlight economic inclusion, we suggest that continued improved access to infrastructure and investments in digital skills for the regions and groups that currently have limited or no access to these resources would facilitate this economic activity and social advancement.

Digital Technology Can have a Marked Impact on Hiring and Jobs

Digital tools allow employers to advertise job requirements for vacant positions quickly and at low cost, while giving applicants the ability to seek jobs in a wider geographical area, improving the overall functioning of the job market. In our survey, 29 per cent of firms using Facebook apps and technologies reported that they used the apps and technologies for hiring purposes in 2018-2019.³ In addition to making hiring easier, digital tools and associated reduced costs may enable companies to retain their headcount by helping to increase sales, exports, and profit margins.

Digital Technology Can Help Firms Access Markets Abroad

We find that digital tools have lowered trade costs and offered firms a larger base of potential customers in both near and distant markets. In our survey of businesses across 30 countries and regions, we find a higher propensity to export by businesses using Facebook apps and technologies (44 per cent), compared to businesses not using Facebook apps and technologies (26 per cent), in 2018-2019.⁴

Digital Technology Can Help Decrease Barriers to Growth

By lowering the costs of marketing and enabling wider customer reach, digital technologies including, as an example, Facebook apps and technologies can help businesses overcome barriers to growth. In our survey, 78 per cent of businesses that reported using Facebook apps and technologies used them for paid ads, free marketing, or finding new clients or customers in 2018-2019.

The Benefits of Digital Transformation

According to the "2023 State of Digital Transformation" report from systems, the top 10 reasons why executives pursue transformation initiatives include the following: improved customer experience (40%), improved efficiency (38%), business process transformation (38%), modernization of IT infrastructure (35%), increased innovation (31%), improved cyber security (29%), improved employee experience (24%), introduction of new business models/revenue streams (23%), increased speed to market for existing products and services (22%) and introduction of new products and services (21%).

Those Digital Transformation Benefits Include the Followings

1. Increased efficiency and productivity

Digital technologies deliver gains in efficiency and productivity by speeding up processes and streamlining operations. Technologies such as robotic process automation and AI, including machine learning, consistently demonstrate an ability to outperform humans by multifold factors in both speed and accuracy.

The economic potential of generative AI: The next productivity frontier, " a 2023 report from global consulting firm McKinsey & Company, quantified the benefits these technologies deliver, noting experts estimate that approximately half of the work activities that exist in 2023 could be automated by 2060. The report also noted that generative AI could "enable labor productivity growth of 0.1 to 0.6 percent annually through 2040, depending on the rate of technology adoption and redeployment of worker time into other activities."

2. Better resource management

As companies transform, they're replacing legacy systems serving individual business units with modern IT architectures designed to consolidate processes and seamlessly enable the flow of data across all departments. Experts said this end-to-end digital technology approach has helped CIOs and other executives eliminate duplicate and superfluous technologies, as well as associated costs. Furthermore, on-demand computing

resources and as-a-service platforms have helped organizations optimize their technology spending by providing as much computing capacity as needed in the moment versus paying for excess capacity to handle rare peaks in usage.

3. More resiliency

Organizations that embrace digital technologies and build a digital culture to celebrate change are able to quickly adapt to shifting market forces, whether it's the quick rise of ChatGPT or dramatic social and economic upheavals like those caused by COVID-19. Additionally, their pervasive use of digital technologies, particularly cloud computing, delivers built-in redundancies and elasticity that further resiliency.

4. Greater agility

Digitally savvy enterprises have the ability to not just react to change but to capitalize on it, DX experts said. As Brouhard explained, transformation programs force organizations to modernize their legacy cultural and technical debt, both of which were designed for stability and, thus, require a long time to change. In doing so, these organizations can adjust more quickly, for example, by using cloud resources to rapidly scale up or down based on needs.

5. Improved customer engagements

Digital transformation calls for becoming customer-centric, Schrage said. Consequently, digitally mature organizations have learned to innovate by first asking how they can better serve their customers through new products, services and experiences and then determining what digital capabilities will let them deliver those in a "faster, cheaper, better and more agile" manner, he said. Those organizations "design from the customer or client experience in" as opposed to making design decisions based on their technology assets, Schrage explained.

6. Increased responsiveness

Digitally transformed organizations have better customer engagement initiatives, so they're better able to anticipate evolving customer requirements and changing marketplace "Companies are leveraging technology to change the ways they create and deliver a value proposition to their customers," said Bryan Throckmorton, global digital strategy and transformation lead at management consulting firm Protiviti.

7. Greater innovation

Digitalization creates new opportunities for companies across all industries to develop products and services they couldn't create previously. Examples include tool companies that offer online services to match contractors with customers and personal gym equipment that delivers virtual on-demand exercise instruction. "New technology solutions enable organizations to innovate their business models, opening up avenues for diverse revenue streams," explained Kamales Lardi, author of *The Human Side of Digital Business Transformation* and CEO of Lardi & Partner Consulting. "For example, a car manufacturer might introduce a subscription-based model for electric vehicles, offering charging maintenance and periodic upgrades as part of the package, thus creating a recurring revenue model."

8. Faster time to market

One of the biggest digital transformation benefits is a shortened product lifecycle, as companies can lean on modern technologies such as digital twins, which virtually replicate environments, and modern processes such as analytics for insights and decision support to rapidly test, pilot, iterate and launch. "It's about how fast you can go from ideas to putting ideas into the world," said Sheldon Monteiro, chief product officer at Publicis Sapient, a global digital transformation consulting company. "If it took you months or years before, transformation can help you reduce [that timeline] to weeks, days or hours."

9. Increased revenue

Although studies have found that executives don't always see the return on investments they anticipated from their transformation efforts, research has confirmed that digitally mature companies do see a boost.

10. Continued relevancy

When done right, transformation initiatives give organizations the ability to rapidly identify customer needs, marketplace trends and new opportunities and quickly pivot to meet them. That capability, experts said, keeps organizations, regardless of industry, not only in business but ensures their long-term competitiveness.

11. Encourages employee excellence

A July 2023 survey commissioned by company 10x, found that 94% of surveyed product managers in the banking industry would leave their jobs to work for a bank with better tech; 92% would leave for a bank with more ambitious transformation goals. That, in turn, further helps boost retention. "Improving employee experience allows you to retain folks," Smith said, an especially important benefit in a tight labor market.

12. Improves future digital growth

One of the biggest benefits of a successful digital transformation effort is its ability to propel an organization to further success, DX experts said. "It helps keep you competitive, improves your ability to move forward and instills the mechanisms for more innovation," Smith said.

Conclusions

Emerging technologies and digital innovations force us to rethink and streamline business process management. Current trends in the business world are forcing organizations to focus on process if they want to remain successful. Many of these trends, such as the mobility of the workforce, rising customer expectations, and the speed at which business is conducted, are not likely to stop in the near future. Therefore, process emphasis will continue to grow as a key component of future organizational success.

Abstract

The Digital India initiative is the dream plan of the Government of India to reshape India into a knowledge economy and a digitally empowered society with good governance for its citizens. Digital Public Infrastructure (DPI) is a shared mechanism for multiple purposes. It is an important enabler of digital transformation and helps improve public service delivery at scale. Public administrators need to ensure that the implementation of digital public infrastructure is done in a fair and transparent manner, with a focus on promoting public interest. Public administrators need to ensure that the implementation of digital public infrastructure is done in a fair and transparent manner, with a focus on promoting public interest. This paper examines the impact of digital public infrastructure in India from the perspective of public administration.

Keywords: *Digital India - identification, payment infrastructure and data exchange solution*

Introduction

Public infrastructure has been a cornerstone of human progress, but it has plagued the previous generation, making it imperative for the third type of public infrastructure called **Digital Public Infrastructure (DPI)**, with more open and democratic principles built in. This platform such as digital identification, payment infrastructure and data exchange solutions that help countries deliver essential services to their people, empowering citizens and improving lives by enabling digital inclusion. DPIs mediate the flow of people, money and information. First, the flow of people through a digital ID System. Second, the flow of money through a real-time fast payment system. And third, the flow of personal information through a consent-based data sharing system to actualize the benefits of DPIs and to empower the citizen with a real ability to control data. Technology is the key to the vision of a Digital India. Social Media, Mobility, Analytics and Cloud are the foundations that will enable the Digital India visions of providing “governance and services on demand” and “digitally empowering citizens” and support the social inclusion schemes being launched by the government. The digitization has a proven impact on economy and society by reducing unemployment, improving quality of life, and boosting access to knowledge and other public services.

Need of DPI

- Public infrastructure has been a **cornerstone of human progress**. From the transcontinental railways of the nineteenth century to telecommunication in the

twentieth century, infrastructure has been vital to facilitating the flow of people, money and information. Built on top of public infrastructure, democratic countries with largely free markets have fostered public and private innovation and, therefore, generated considerable value creation in societies.

- DPI has emerged as the most feasible model due to its low cost, interoperability and scalable design, and because of its safeguards against monopolies and digital colonisation.
- The COVID-19 pandemic accelerated the use of these systems as enforced isolation left people with no choice but to rely on these digital alternatives

Components of DPI

Digital Identity Systems

Digital identity systems are foundational to DPI. They ensure secure online identification and are increasingly prevalent worldwide. Estonia issues citizens digital IDs that grant access to over 2,000 government services online, including e-voting and e-residency.

E-Government Services: DPI includes a plethora of e-government services that reduce bureaucratic red tape, save time, and enhance transparency. Singapore's eCitizen portal, for instance, offers over 1,400 government e-services, allowing citizens to renew passports, apply for permits, and more with ease.

ODigiYatra and DigiLocker

DigiYatra is a Biometric Enabled Seamless Travel (BEST) experience based on a facial recognition system (FRS), again through a partnership between industry and government, which ensures seamless identification of passengers at key checkpoints such as airport entry, security check and boarding gate clearance.

Pen Data Initiatives

Open data initiatives involve making government data accessible to the public. The United States, through **Data.gov**, provides access to a vast repository of datasets. This transparent approach encourages innovation, research, and data-driven decision-making.

Cyber security Measures

Protecting the integrity and security of digital infrastructure is paramount. DPI incorporates robust cyber security measures, from encryption protocols to threat detection systems, safeguarding sensitive data and critical systems.

Digital Payment Systems

Digital payment systems, such as mobile apps, digital currencies, and online banking, have become an integral part of DPI. In Sweden, the adoption of mobile payment apps has reduced the need for cash, promoting convenience and financial inclusion.

Discussion

Impact of Digital Public Infrastructure on India

Digital public infrastructure has had a significant impact on India's economy and society. The impact can be seen in the following areas:

Financial inclusion: UPI has played a significant role in promoting financial inclusion in India. UPI has made it easier for the unbanked population to access digital financial services, reducing the cost of cash handling and promoting financial literacy [13].

E-Governance: Aadhaar has enabled the government to implement various e-governance initiatives such as Direct Benefit Transfer (DBT), which has reduced corruption and leakage in welfare schemes. Aadhaar has made it possible to create a digital identity for citizens, enabling the government to provide services in a more efficient and transparent manner.

Business efficiency: GSTN has simplified the tax administration process, reducing compliance costs for businesses and promoting transparency in tax administration. GSTN has made it possible for taxpayers to file returns online, reducing the time and cost of compliance [14].

Education and research: NKN has facilitated collaboration and resource-sharing among academic and research institutions, promoting innovation and knowledge sharing. NKN has made it possible for researchers to collaborate and share resources and data, accelerating the pace of research and development.

Challenges and Controversies

While digital public infrastructure has brought significant benefits to India, there are also challenges and controversies associated with these initiatives. Some of the key challenges and controversies include:

Privacy concerns: The Aadhaar initiative has faced criticism over privacy concerns. Critics argue that Aadhaar collects sensitive personal information that could be used for identity theft and other malicious activities.

Security risks: UPI has faced criticism over security concerns, with reports of fraudulent transactions and security breaches. UPI's security concerns have raised questions about the safety and reliability of digital payment systems.

Digital Public Infrastructure is the linchpin of our digital era, reshaping the way we interact with governments and organizations. From streamlined e-governance to the adoption of digital currencies, the impact of DPI is profound. However, as DPI evolves, it is essential to ensure equitable access to these services while maintaining robust security and privacy. Embracing DPI propels us toward a more efficient, innovative, and inclusive digital age, one in which public services are more accessible and user-friendly than ever before.

The New Wave in India

India's new wave of digital public infrastructure initiatives includes the national health stack, the national digital education architecture and the national language translation

mission. The national health stack aims to create a digital health infrastructure that enables the provision of affordable and accessible healthcare services. The initiative includes the creation of a health registry, health information exchanges, and digital health records. The implementation of the national health stack is expected to reduce healthcare costs and improve the quality of healthcare services. The national digital education architecture aims to create a digital infrastructure for education that enables the provision of quality education to all. The initiative includes the creation of a national digital education ecosystem, digital content repositories, and a learning management system. The implementation of the national digital education architecture is expected to improve the quality of education and promote digital literacy. The national language translation mission aims to promote the use of Indian languages in digital services and content. The initiative includes the creation of a language grid, language tools, and a language data repository. The implementation of the national language translation mission is expected to promote linguistic diversity and enable access to digital services for non-English speaking individuals.

Conclusion

Impact of Digital Public Infrastructure and Outlook in India. The world needs a new playbook for digital infrastructure that mediates the flow of people, money and information. It will help countries that want to digitally empower their citizens. They can then quickly build sites that address people's specific needs.

ROLE AND FUTURE OF DIGITALIZATION IN BUSINESS - A QUALITATIVE STUDY

R. Gopi Krishnan & M. Haripriya

M.Com.,

Nallamuthu Gounder Mahalingam College, Pollachi, Coimbatore, India

Abstract

In the dynamic and rapidly evolving business landscape, organizations are increasingly recognizing the pivotal role of digital innovation in shaping their competitiveness and sustainability. This Study provides an overview of the key facets of digital innovation in the business context. This is a qualitative study examines the role of digitalization in business innovation and find out the strength, weakness, opportunities and threats of Digitalization in business through role and predict the future of digitalization in business. The study concludes the various roles of digitalization in business and interpret SWOC analysis and perfectly predict the future of digitalization.

Keywords: Digitalization, Business, Innovation, SWOC Analysis

Introduction

In the era of rapid technological advancement, the business landscape is undergoing a profound transformation fueled by digital innovation. Digital technologies have become pervasive, reshaping the way organizations operate, strategize, and engage with their stakeholders. From artificial intelligence and data analytics to blockchain and the Internet of Things, the digital revolution is challenging traditional norms and creating unprecedented opportunities for businesses. As we embark on this journey into the realm of digital innovation in business, it is clear that the fusion of technology and strategy is reshaping industries and challenging traditional paradigms. This exploration aims to unravel the layers of this transformative process, examining how digital innovation is not merely a tool but a catalyst for organizational evolution and sustained success in the 21st-century.

Review of Literature

The Following review of literature were scrutinized and presented in the following paragraph,

HelisiaMargahana (2024) in his study, "Business Development In The Digital Age" depicts that high global competition puts its own demands on businesses to continuously improve product innovation by utilizing existing technology to face these global challenges. Businesses that succeed in the digital era are those that can adapt quickly and remain responsive to changes in the market and technology. Businesses need to adapt to technological developments and utilize them to improve business quality and expand market reach.

Abstract

Woman creates a family which leads to society and nation. The social and economic development of women is essential for the overall economic development to any society or country. Although entrepreneurship is in the mindset of any woman, it is not invested in India the way it should be. Although there are some exceptions, due to the changing environment, people are comfortable accepting the important role of women in our society. Entrepreneurial development of women is an essential part of human resource development. Any strategy aimed at economic growth without engaging women, who make up half of the world's population, will back fire. Evidence has unequivocally established that entrepreneurial spirit is not a male prerogative. Women-owned businesses are increasing rapidly in almost all economies. Women's latent entrepreneurial potential is gradually changing with growing sensitivity to role in society and economic status. Skill, knowledge and adaptability in business are the main reasons why women emerge in business ventures. The main objectives of the study are to find out the factors that contribute to the formation of female entrepreneurs. The study also highlights the major barriers and challenges faced by women entrepreneurs and the opportunities available to them. Finally the paper makes some commendations to increase or promote women entrepreneurship and healthy development of women entrepreneurship in India.

Keywords: Women Entrepreneurship, Role, Self-Fulfillment, Entrepreneurship Development.

Introduction

Women's empowerment is a social process in which women expand and recreate what it means to be in a previously denied situation. There are many principles that define women's empowerment, for one to be empowered; they must come from a position of disempowerment. Entrepreneur is the agent who buys means of production at certain prices, in order to sell at prices that are certain at the moment at which he commits himself to his cost". According to P.F Drucker "he is one who always searches for change: responds to it & exploits it as an opportunity". Hence, Entrepreneurship refers to the act of setting up a new business or reviving an existing business so as to take advantages from new opportunities. Women have

developed tremendously in their mentality. With increasing dependence on the service sector, many entrepreneurial opportunities have been created, especially for women, where they can enhance their skills while maintaining a balance in their lives.

Objectives

The study has the following objectives

- To understand the philosophy and concept of women empowerment and entrepreneur development in rural area.
- To identify the impact of entrepreneur development on women empowerment; and
- To suggest one possible solution for encouraging; developing; and improving the women empowerment in emerging economies.

Methodology

Given the nature of the present study, data had to be collected from secondary sources. The author was always mindful of the objectives of the study and collected data accordingly to achieve those objectives. Secondary data was collected from research studies, books, journals, newspapers and on going academic work papers. The collected data can be processed and analyzed to make the present study useful for the practitioners, researchers, planners, policymakers and educators of the concerned area.

Analysis and Findings

1. Empowerment

Empowerment means that people have power and control over their own lives. People get the support they need. Empowerment means that people are equal citizens. They are respected and trusted in their community. Empowerment as action refers to the process of self-empowerment and professional support of people to overcome their feelings of powerlessness and lack of influence, and to identify and use their resources. The term empowerment originates from American social psychology and is associated with social scientist Julian Rappaport (1981).[1] However, the roots of empowerment theory extend further into history and are linked to Marxist sociological theory. These sociological concepts are continuously developed and refined through neo-Marxist theory. Empowerment redistributes power from the powerful to the powerless. It is more than participation in decision making, it must also include the process that lead people to perceive themselves as able and entitled to make decisions (Prasad & Sahay, 2000). Empowerment must

involve undoing negative social construction, so that people come to see themselves as having the capacity and the right to act and influence decisions (Rowlands, 1997).

II. Entrepreneurship

Entrepreneurship is the creation or extraction of economic value. With this definition, entrepreneurship is viewed as change, generally entailing risk beyond what is normally encountered instarting a business, which may include other values than simply economic ones. An entrepreneur is an individual who creates and/or invests in one or more businesses, bearing most of the risks and enjoying most of the rewards. The process of setting up a business is known as entrepreneurship. The entrepreneuris commonly seen as an innovator, a source of new ideas, goods, services, and business/or procedures. More narrow definitions have described entrepreneurship as the process of designing, launching and running a new business, which is often similar to a small business, or as the "capacity and willingness to develop, organize and manage a business venture along with any of its risks to make a profit. The people who create these businesses are often referred to as entrepreneurs. While definitions of entrepreneurship typically focus on the launching and running of businesses, due to the high risks involved in launching a start-up, a significant proportion of start-up businesses have to close due to "lack of funding, bad business decisions, government policies, an economic crisis, lack of market demand, or a combination of all of these."

Characteristics of Entrepreneurship

Not all entrepreneurs are successful; there are definite characteristics that make entrepreneurship successful. A few of them are mentioned below:

- **Ability to take a risk:** Starting any new venture involves a considerable amount of failure risk. Therefore, an entrepreneur needs to be courageous and able to evaluate and take risks, which is an essential part of being an entrepreneur.
- **Innovation:** Its hould be highly innovative to generate new ideas, start a company and earn profits out of it. Change can be the launching of a new product that is new to the market or a process that does the same thing but in a more efficient and economical way.
- **Visionary and Leadership quality:** To be successful, the entrepreneur should have a clear visionof his new venture. However, to turn the idea into reality, a lot of resources and employees are required. Here, leadership quality is paramount because leaders impart and guide their employees towards the right path of success.

- **Open-Minded:** In a business, every circumstance can be an opportunity and used for the benefit of a company. For example, Paytm recognized the gravity of demonetization and acknowledged the need for online transactions would be more, so it utilized the situation and expanded massively during this time.
- **Flexible:** An entrepreneur should be flexible and open to change according to the situation. To be on the top, a business person should be equipped to embrace change in a product and service, as and when needed.

III. Empowerment of women through empowerment

In the early 1980s, the United Nations reported that women performed two-thirds of the world's work. The world's labor earned one-tenth of the world's income and owned one-hundredth World Economic Resources (Laois, 2000). A tool for women empowerment is self-employment or entrepreneurship. Why women choose self-employment or Entrepreneurship? In one study autonomy was rated highly as a means to gain Personal freedom. This level of autonomy offers opportunities to:

- (1) Be able to their Own Decisions
- (2) Able to do optional work
- (3) To reach Financial Independence

The impact of ED on Empowerment

1. Self- confidence of women

Increased self-confidence through entrepreneurship development for women a prosperous future.

2. Economic Solvency

Economic solution the most significant changes come from increases in income, not just upgrades the individual's life but increases her quality of life, the economy increases hardness within the family. Increase in her income also increase in family income and it provides better lifestyle including education to the family members improving child and family health.

3. Capital Building

Women economic success enables women to expand their business, procure new machinery, tools, accessories and relevant necessities. Modernization of the workplace, introduction of new technology for increase production, increase of labourers, along with the increase in purchasing power, upgrades their status both socially and economically.

4. Role of Status

Some aspects of household decision making are reported to have changed as a result of women's contribution in family income. Most of the men now consult with

their wives in important family matters. Their power of decision making has increased because they have money. Since women retain control over earnings, women can easily lend small and big amounts to business and others without asking for their husbands' permission. Since women perceive that their bargaining power within the family has increased as an indirect outcome of participating in the business. Women's status has changed in the family and society gradually.

Conclusion

Empowerment is scalable. Women develop their managerial skills and develop visions of growth that embrace strategic planning areas. Empowerment Women's economic independence leads to control over their lives, self-determination and self-fulfillment. Empowerment by Self-employment is associated with women's ability to gain control over economic resources and participate fully in the wealth building process. Empowerment leads to the self-fulfillment of knowing where women are headed.

ICT TOOLS IN TEACHING LEARNING PROCESS

**Ms. M. Gayathri, Dr. T. Vijayachithra
& T.Muthukaanu**

Assistant Professor,
UG Department of Commerce CA, NGM College

Abstract

Information communication technology is a general term that refers to the technologies used to collect, store, edit and communicate information in various forms. ICT is the use of computer-based technology is used in education is an educational system that uses information and communication technology to support, enhance and enhance the delivery of information. Adapting to these new technologies is a slow process, but it allows many teachers to improve the quality of teaching. Global research has shown that ICT can lead to improved student learning and better teaching methods to make information and communication services widely available to users. E-learning can be termed a network-enabled transfer of skills and knowledge. While teaching can be based in or out of the classrooms, the use of computers and the Internet forms the major component of E-learning. Many institutions of higher education and universities are resorting to E-Learning. Many corporate companies are also deeply investing in E-learning and setting up interactive classrooms activity. Technology has taken over our entire life and education is no exception to it, technological advancement has a great effect on how learning is imparted and also consumed.

Keywords: *ICT Tools-E-Learning-Digital Platform-Satisfaction*

Introduction

Information technology (IT) is defined as the study or use of electronic equipment's, especially computers for storing, analyzing and sending out information. Communication technology is the process of sending, receiving and exchanging information. ICTS can be defined as "diverse set of technological tools and resources used to communicate, and to create, disseminate, store, and manage information." These technologies include computers, the Internet, broadcasting technologies (radio and television), and telephony. The use of e-learning in education improves the quality of practical education and a better understanding of the subject. Indira Gandhi National Open University (IGNOU), the world's largest Open University launched a 24x7 E-learning satellite channel called GyanDarshan. E-learning gives the advantage of 24x7 and 365 days a year-round access as compared to Instructor-Led Training, which is a one-time class that must be scheduled. Undoubtedly, one lecture can teach more students wide geographic area by responding to e-learning technology. In general, this review provides important information to increase the knowledge base of various performance educational methods. In the future, there is still a need to develop and evaluate such methods education among higher education students. It is important that these studies are conducted show effectiveness, and they should also focus on outcomes at different levels.

Statement of Problem

The purpose of this research is that the government introduces many new technologies in the country to suit the people's society in order to fulfill the objective of development of the country. A project like Digital transformation in education. E-learning level perception, culture and satisfaction varies from person to person due to many factors such as gender, education etc.

Objective of the Study

- To study the awareness level of people towards ICT tools
- To apply critical thinking skills to their students action, behavior and social engagement on digital platform.
- To identify the satisfaction towards e-learning.

Review of literature

Sahlam et-al (2021) made a study on "The effects of modes of test administration on test scores: A study in an Indonesian school ". The main objectives of this study the effect of gender and the interaction effect between gender and mode of testing on test scores were significant. The primary and secondary data were used for this study. 234 respondents were collected for this study by using simple Random sampling method. The statistical tools like simple percentage will be used to analysis the data. The study revealed that indicated that neither gender, mode of test administration nor the interaction between gender and mode students anxiety levels. **Noreen & Malik, (2020)**. It is found that, teachers also require the necessary infrastructure, hardware and software, reliable high-speed internet connectivity, continuous professional development and the support of administrators. **Muhammad Hafeez (2021)** discovered that Teaching-Learning Process and ICT Tools- A Review and found that usage of modern ICT tools in teaching- learning process successfully improved the teaching-learning process and the traditional lecture learning does not improve the cognitive and communication skills of the learners. **Dr. Pranjal Grover et-al (2021)** made a study on "Efficiency of online pre-Recorded practical demonstrations and live Streamed practical demonstrations in third year physiotherapy students during the COVID-19 pandemic-a survey ".The main objective of this study is to understand the efficacy of online pre-recorded practical demonstrations. The primary data were used for this study. 44 respondents were collected for this study by using a complete enumeration sampling method. Statistical tools like simple percentages will be used.

Table 1

Variable	Number of respondents	Percentage
Age:		
Below 20 years	68	55.76
21- 30 years	87	43.58
31-40 years	1	0.66
Total	156	100

Area:		
Rural	98	62.82
Semi -urban	13	28.84
Urban	45	8.33
Total	156	100
Gender:		
Male	37	23.71
Female	119	76.28
Total	156	100
Marital status:		
Married	12	7.69
Unmarried	144	92.30
Total	156	100
Educational qualification:		
up to HSC	11	53.20
UG	83	37.17
PG	58	7.05
Others	4	0.64
Total	156	100
Occupation :		
Agriculture	22	73.07
Salaried Person	16	13.46
Labour	5	10.25
Business	113	3.20
Total	156	100
Digital Platforms tools used		
Yes	125	80
No	31	20
Total	156	100

Data: primary data

From the above table shows that Majority of the respondents are age group between 21-30 years. Most of the respondents are rural area. Majority (76.28%) of the respondents are gender in female. Majority (92.30%) of the respondents are marital status in unmarried. Majority (53.20%) of the respondents are Educational qualifications UG level. Majority (73.07%) of the respondents are Occupation level in Students.

Chi Square Test**Chi square value 5% @Satisfaction onlevel of people****Table 2**

S.No	Particulars	D.F	Chi square Value	Table value	Result
1	Age	4	10.316	9.488	Rejected
2	Area	2	9.375	5.991	Rejected
3	Education qualification	6	11.069	12.592	Accepted

Source: Primary data

From the above table found that respondents calculated chi-square is higher than table value at five percent level, there are significant association between the demographic variables and level of satisfaction. Null hypothesis rejected.

Conclusion

Digitization of legacy and vintage structures has replaced conventional operations with new technology and fashions. Due to that technology the instructional part has additionally got a big change and has changed the conventional training version to a brand new technology based smart version. By digitizing the learning experience, both college students and instructors can hone their skills and create a lively instructional process. Digital transformation can be implemented in many aspects within the academic quarter, including new student recruitment, online knowledge acquisition, scholarly assessments, personalized knowledge of experiences and exams. Generational penetration within the instructional quarter has promised dynamic participation and proposed new methods of training and mastering methods

Abstract

Over the past few decades, the Micro, Small and Medium Enterprises sector has emerged as an exceedingly lively and dynamic Indian economy sector. MSMEs in India have been increasingly become important for the sole reason of their role in the Indian economic structure. The MSME sector is vital for India's economy. There are more than 6 crore enterprises in various industries, employing more than 10 crore people. India's micro-sized enterprises face many hurdles and yet are capable of taking advantage of opportunities in rapidly changing global markets. MSMEs contribute significantly to the country's industrial output, jobs, exports and consistent employment growth, followed by agriculture.

Introduction to MSME

The Government of India has been promoting MSME as powerful instrument for realizing the twin objectives of "accelerate industrial growth & creating additional productive employment potential in rural & backward areas", thus connecting various section of the societies. These business, spread across the country, are the backbone of Indian economy – driving growth, employment, exports & productivity. MSME contributes nearly 27% of the country's GDP. It primarily works for the development of people from backward & rural areas. They encourage the growth of entrepreneurship as well as upgrading of skills by establishing specialized training centers.

Micro, Small and Medium Enterprises (MSME) contributes significantly to the development of society & acts as vital link in the industrialization in terms of production, employment and exports of economic prosperity. MSME dominate the industrial scenario in the country with sizeable proportion of labor force and tremendous export potential. MSME's are widening their domain across sectors of the economy, producing diverse range of products and services to meet demands of domestic as well as global markets. MSME enjoys a distinct position in view of their contribution to the socio-economic development of the country.

Role of MSME's in Indian Economy

The MSME's have been contributing significantly to the expansion of entrepreneurial endeavors through business innovations. They play a huge role by providing large employment opportunities at comparatively lower capital cost than large industries as well

as through industrialization of rural & backward areas, inter alia, reducing regional imbalances, assuring more equitable distribution of national income & wealth. The sector not only plays a critical role in providing employment opportunities at comparatively lower capital cost than large industries but also helps in industrialization of rural and backward areas, reducing regional imbalances and assuring more equitable distribution of national income and wealth. MSMEs complement large industries as ancillary units and contribute enormously to the socioeconomic development of the country. The MSME sector contributes to 45% of India's Total Industrial Employment, 50% of India's Total Exports and 95% of all industrial units of the country and more than 6000 types of products are manufactured in these industries (As per msme.gov.in). When these industries grow, the economy of the country grows as a whole and flourishes.

Connecting Society

MSME's provide a huge impact to the society in the way of:

- a. **Fostering growth in backward & underdeveloped regions:** A large number of MSME's are located in rural & backward areas which promotes economic activity & create employment opportunities in these regions
- b. **Driver of change:** Women entrepreneurs are going from strength to strength with 20.37% of proprietary MSME's being owned by a female. And to top it off, the socially backward groups owned almost 66.27% of MSME's

Sector	Male	Female	All
Rural	77.76	22.24	100
Urban	81.58	18.42	100
All	79.63	20.37	100

Sector	SC	ST	OBC	Others	Not known	All
Rural	15.37	6.70	51.59	25.62	0.72	100
Urban	9.45	1.43	47.80	40.46	0.86	100
All	12.45	4.10	49.72	32.95	0.791	100

- c. **Job creation & reducing regional disparities:** MSMEs are expanding with a consistent development rate and giving both urban and rural people with employment opportunities. According to the 2017-18 MSME report, about 49 percent of MSMEs are located in urban areas, while 51 percent in rural areas make a good contribution towards development in those areas. As a result, the standard of living of the population of rural areas is improving healthily
- d. **Making growth inclusive:** MSMEs are instruments of inclusive growth which touch upon the lives of the most vulnerable and marginalized. For many families, it is the only source of livelihood. Thus, instead of taking a welfare approach, this

sector seeks to empower people to break the cycle of poverty and deprivation. It focuses on people's skills.

- e. **Economic growth:** MSME invests in new technology & infrastructure that can create a positive ripple effect throughout the society. They drive competition, which can lead to lower prices & higher quality products, services. They are often the forefront of innovation, developing new products, services & business models that can disrupt established industries & encourage growth.
- f. **Community development:** They provide goods & services that are tailored to the needs of the community & often support local charities & organizations. By sourcing materials locally, they stimulate local economy & help to build strong, sustainable communities. In addition, they are often owned & operated by members of the community, creating a sense of pride & ownership of the community.

Conclusion

The government and private sectors have a responsibility to create an enabling environment that supports MSME's growth and success by creating favorable policies and regulations, providing funding and access to capital, offering training and education programs, and promoting partnerships. Ultimately, cooperation between private sectors and the government is the key to maximize the impact of these initiatives. If these initiatives are implemented, it will certainly drive sustainable economic growth in the country.

ABOUT THE DEPARTMENT

The PG Department of Commerce with International Business is established in the year 2002 with a prime motto to uplift the rural students to know the edge in the specialized field of International Business. The syllabus is designed, crit. developed at regular intervals, since it is a self. The PG programme is covering students from undergraduate and the course is framed to cater to, fill the needs and wants of the student and industry as well. The PG programme is initiated as a mark of the Silver Jubilee Year of the College in 2017. The Department has been offering various useful skills, leadership qualities and preparing the students at least of level. It wishes the students in various Skill Development Programmes, Orientation Programmes, Workshop and Extension Activities. It keenly concentrates on the recent trends prevailing in the environment, updates its syllabus to match it with the industrial needs and sends the students accordingly, so as to get success with the help of Team Work. The Strength of the Department is its Qualified Faculty Team which always focuses on achieving the goals of Student and College as well.

Introduction

In India, cottage industries are a major source of employment and livelihood. These industries are also the backbone of the Indian economy. The cottage industry is an industry that is small-scale and informal. This business idea among other small business ideas is typically a family business and the owner of the business lives on the premises. Small-scale units or manufacturing businesses managed by family members from their homes or establishments usually near their homes. They are the backbone of the Indian economy. In India, the Khadi and Village Industries Commission (KVIC) is the organization that promotes village and cottage industries. These industries fulfill the basic needs of local markets and all its requirements like raw materials, skilled labour, etc., are met from within the village. They include handloom, pottery making, food processing, pickles, khadi, etc. The government, on the other hand, has taken steps to revitalize cottage industries, and they now play an important role in the country's economy. Cotton weaving, silk weaving, carpet making, leather industry, metal handicrafts, and small food processing businesses are the top five Indian cottage industries. In India, cotton weaving is a significant cottage industry. Cotton clothing is frequently worn throughout the country, therefore this expertise extends back to ancient times. Cotton weaving in India is noted for its traditional motifs and patterns created by skilled weavers using looms. Maharashtra, Tamil Nadu, and Gujarat are the cotton-producing states in India. Another well-known cottage industry in India is silk weaving. Silk is worn on important occasions such as weddings and festivals, and India is one of the largest manufacturers and consumers of the material. India's silk varieties include Mulberry, Muga, Tassore, and Eri. Karnataka accounts for approximately 70% of India's silk weaving industry. During the Mughal dynasty, carpet making was brought to India. India is also famed for its durries and coir mats, despite the fact that Kashmiri carpets are world-renowned for their exquisite quality. Kashmir, Rajasthan, Punjab, Uttar Pradesh, Andhra Pradesh, and Punjab are all home to the carpet industry in India. The Carpet Export Promotion Council was established by the Indian government to promote hand knitted rugs and various types and styles of floor coverings from around the country. India is a major exporter of high-quality leather to other countries.

Types of Indian Cottage Industries

Cottage industries are manufacturing enterprises that do most of their labor by hand. India is famous and well known for its diverse culture, handicrafts of traditional cottage industries and variety of business. Cotton weaving, carpet weaving, silk weaving, leather industry, metal handicrafts and small scale food processing are the major cottage industries in India.

1. Cotton Weaving:

Cotton weaving is a significant cottage industry in India. As cotton clothes are widely worn throughout the country, the knowledge is ancient. Cotton clothing is famous for its traditional style, vibrant color and designs made by expert weavers using handloom. Gujarat, Tamil Nadu and Maharashtra are three major cotton producing states.

2. Silk Weaving:

Another well-known cottage industry in India is silk weaving. Our nation produces and exports a significant amount of silk, both domestically and abroad. Karnataka produces the most silk, making up over 70% of the entire silk weaving business. Mulberry, Tassore, Muga, and Eri silks are produced in our count.

3. Carpet Weaving:

During the Mughal era, carpet weaving was first introduced to India. The durries and coir carpets are equally renowned for their exceptional quality and texture as the Kashmiri carpet. In spite of the fact that the carpet industry is widespread throughout the nation, it is largely concentrated in Kashmir, Rajasthan, Punjab, Uttar Pradesh, Andhra Pradesh, and Punjab. The Carpet Export Council was also founded by the Indian government to promote knotted rugs and other types of floor coverings from all around the nation.

4. Leather Production:

India is a significant producer of premium leather for export to international markets, providing around 10% of the demand. One of India's top export earners and one with almost 2.5 million workers is the leather industry. The Indian states that produce leather are Uttar Pradesh, West Bengal, and Tamil Nadu.

5. Metal Works:

Metal has long been used in India to make figurines, jewellery, utensils, and other objects. India's metal handicrafts are well-liked worldwide and have a major economic impact on the nation. Metal handicrafts are created using hand-operated tools rather than sophisticated machinery.

Issues Faced by the Cottage Industries in India

The lack of access to adequate finance options and limited technical knowledge has made it difficult for cottage industries to fulfil domestic and international customer

demands, thereby inhibiting their growth. These are some of the major issues faced by cottage industries in India – let's learn more about each one of them individually in the following sections.

1. Self-Employed Labor Shortage

The self-employed labor shortage is a major problem faced by Indian cottage industries. The lack of skilled laborers has been made worse by the Great Recession and economic slowdown, which led to a large number of factory workers losing their jobs. Most cottage industries are made up of small-scale producers who find it difficult to attract employees due to low wages, insecure working conditions, and long hours. These challenges have worsened with the rise in unemployment rates across the country. Cottage industries also have difficulties finding skilled employees because many young people choose not to pursue traditional occupations and apprenticeships.

2. Low Demand for Handmade Goods

The majority of the demand for handmade products comes from tourists visiting the country. But unfortunately, not enough people live in these villages to keep up with production. It means that most of these goods are not made locally and can't be sold nearby. The result is a vicious cycle where supply and demand cannot meet due to a lack of market access. There's a general misconception that cottage industry goods should be easy to transport because they're small. However, this isn't always the case! For example, if you want to ship something fragile like silverware to long distances without damaging it, you will need high-quality packing materials. One of the unfortunate realities when it comes to cottage industries is low-quality products. These businesses often have little knowledge of producing high-quality goods, leaving many unsatisfied buyers.

3. Lack of Financing Options

Traditional banks offer loans with higher interest rates than microfinance institutions. The perception of high-interest rates may be that they are due to the poor credit history and low income of the rural borrowers. However, there are other reasons for the high cost of these loans. For example, traditional banks charge a commission for processing the loan. The process is lengthy and demanding for bank staff and customers, so it costs more to service each loan transaction. Moreover, using outdated manual systems to process data limits efficiency, increasing costs. In contrast, many microfinance institutions offer their customers products with lower rates and no commissions on transactions because they do not have expensive brick-and-mortar branches or costly IT infrastructure; instead, they mainly operate online or through mobile phone banking apps.

4. Government Regulations

Each state has its regulations that govern the industries, so it is important to consult your local government officials and determine the regulations before starting a business. For example, each state restricts how many days a week a business can be open or if

employees must wear certain clothing. There may also be a restriction on when employees can take breaks during the day. As another example, there may be different child labour laws for children under 14 years old compared to children over the age of 14 years.

5. Poor Working Conditions

In the past, people worked in these spaces for up to 18 hours a day. They'd work with chemicals and dangerous tools, often without protective gear or knowledge of how to use them safely. And they were paid only a fraction of what they were worth. In recent years, we've seen some progress. The Indian government has passed legislation that mandates fair wages and working hours for this industry. But there are still many challenges – like limited access to markets for their products or lack of business skills – that limit their success.

6. Ineffective Marketing Strategies

Cottage industries in India need to take marketing into their own hands because there are not enough jobs available. Of course, marketing is an important part of any business, but it's essential for businesses that rely on word-of-mouth and referral. As a result, these businesses will have to be more creative in advertising themselves. For example, they could try sending emails with their products and services attached, sponsoring events, participating in community groups, or partnering with local hotels or restaurants. Investors want nothing short of success for the companies they invest in. But investors also know these enterprises start small and don't grow overnight. As a result, it can be difficult for them to make money as quickly as they would like from investments, so they might stop investing altogether or only offer a little before reducing investment levels even further later on down the line if things don't improve.

7. No Brand Identity

It is not uncommon for small businesses to have issues with branding and marketing. They may not have the funds or expertise to develop a strong brand identity design, which leads to a lack of awareness and visibility. For example, if you are a fashion designer who produces clothing but doesn't have the funds or skills to create your website, people may not know that you exist because they couldn't find your products on search engines. That is why small businesses need to identify their strengths and weaknesses to use the right platforms and techniques to reach their target audience.

8. Quality Control Issues

One major problem faced by cottage industries is quality control. The vast majority of cottage industries are family owned and operated. When the owner is also the manufacturer, they are not able to monitor the quality of their products as well as a corporation might be able to. They will often produce goods until they run out of materials instead of monitoring the quality and stopping when a sufficient amount has been made. As a result, some buyers complain about receiving low-quality items that do not meet their

expectations or are defective because they were rushed to make them before running out of materials.

9. Lack of Government Support

The Indian government has not been supportive of the cottage industries. The government's policies do not support the growth and development of cottage industries. For example, cottage industries are only given a 15% discount on the minimum rate they need to pay on electricity charges when they purchase their power from a State Electricity Board (SEB) instead of a 50% discount if they purchase their power from private companies. It makes it difficult for these small businesses to survive, as they will have to spend more money each month to use electricity.

10. Sustainability Issues

One major issue that many cottage industries have is sustainability. There are not as many jobs as there used to be, and the demand for handmade goods is decreasing. It means that the cottage industries have less income, which makes it hard to maintain their business operations..

Government Actions to Resolve the Problem

The government has launched a number of efforts to address the problems facing the cottage and small scale industries because of their significance. The first actions taken are as follows:

- A number of organisations have been established by the Union Government to support small companies and rural communities. They include the Central Silk Board, the All India Handicrafts Board, the AH India-Handloom Board, and the Khadi and Village Industries Commission.
- There are now industrial cooperatives, industrial estates, and rural industrial initiatives.
- To encourage the small-scale manufacturing sector, the Central Government has designated 807 products for exclusive manufacture.
- District Industries Centers are being created at the district level to house all the support and services needed for small and village businesses.
- The Industrial Policy Resolution of 1980 provides the following provisions for the growth of home-based and small-scale businesses:
 1. Launching a programme to create buffer stocks of essential goods, which are frequently hard to get by. Priority will be given to the special needs of those states that depend heavily on a small number of essential raw materials.
 2. In order to produce as many ancillaries, small, and cottage units as possible, the government will establish a few nucleus plants in each district. A nucleus plant would bring together the output of the auxiliary and small-scale units that fell inside its orbit.
 3. Increasing the cap on capital investments for small and supporting businesses.

Problems of Cottage and Small-Scale Industries

The major problems faced by the cottage and small-scale industries are stated below:

1. Non-availability of timely and adequate credit.
2. Inefficient management
3. Lack of infrastructure
4. Technological obsolescence
5. Limited availability of raw materials
6. Marketing problems
7. Competition with large-scale industries and imports.
8. Excessive burden of local taxes
9. Widespread sickness

Conclusion

India's cottage industries are culturally and economically significant. They preserve ancient traditions while simultaneously employing a large number of people. Because these industries confront intense competition from other economies, society should provide support to prevent exploitation and further develop them. The only solution to combat the monster of unemployment in over-populated countries like ours is to promote cottage and small-scale industries. Cottage industries are unorganized and fall under the category of small scale industries. They use traditional ways to create consumable goods. Furthermore, these industries emerge in areas where unemployment and underemployment are common. As a result of this technique, the cottage industry benefits the economy by absorbing a large portion of the surviving workers in rural areas. On the other hand, the industry faces numerous challenges in a variety of ways. As a result, the government is attempting to address the sector's issues since it recognises that the sector has a lot of promise in a variety of sectors if properly supported.

DIGITAL ECONOMY

Dr. T. Mohana Sundari

Assistant Professor, UG Department of Commerce CA
NGM College, Pollachi

Abstract

The digital economy is based on electronic goods and services produced by e-commerce, an enterprise with electronic production and management processes that interacts with its partners and customers and conducts transactions via the Internet and networked communication technologies. With a growing population and a mobilization of resources, the digital economy is not limited to commerce and services that touch all aspects of life, from healthcare to education, from business to banking. Many observers have noted the rapid development of the digital economy in general. Great attention is paid to the continuous and spectacular development of electronic commerce. Despite its rapid growth in recent years, we view the emergence of the digital economy as an important trend that is just part of a broader, evolving economic fabric driven by dramatic changes in digital and information technology (IT). The main objective of the article is to show the impact of the digital economy through the Internet and network technologies.

Keywords: Digital Economy, Global Economy

Introduction

Digital economy is one collective term for all economic transactions that occur on the internet. It is also known as the Web Economy or the Internet Economy. With the advent of technology and the process of globalization, the digital and traditional economies are merging into one. Let us learn more about this concept of digital economy. Digital economy is defined as an economy that focuses on digital technologies, i.e. it is based on digital and computing technologies. It essentially covers all business, economic, social, cultural etc. activities that are supported by the web and other digital communication technologies.

The world lives under the impulse of radical changes, the revolution of science, technology and movement. A wide range of fields is the result of this spectacular development of science and technology. Development has given the world economy its previous speed and efficiency, which, among other things, has led to the emergence of new ideas that reflect this development. We find an economic globalization that has reduced the world to a small village. There have been tremendous advances in technology and a significant development of the world. The field of information and communication is due to the emergence of new patterns in human economic life as the economy has become heavily dependent on technology, social affairs and science. This has led to a change in ways and means in all areas of life. The implementation of economic activities has led to the emergence of a new type of economy, the so-called "digital economy". or the information economy, which expresses a vision of the future. In the world of business intelligence is the cornerstone of business.

The digital economy promotes the spread of the information and knowledge society as it entails a series of strategic changes in the nature and organization of the economic

environment in order to better respond to the challenges of globalization and communication through information and communication technologies. Information and communication technologies (ICT) are among the most important movements of the 21st century with their accelerated phases of development and their global spread. Technology has become the common language of the peoples of the world and the fundamental basis of their contacts, progress and development to follow the Chronology that has eliminated distances and facilitated access to information. Through interaction, exchange and participation in political, economic, social and scientific areas.

Literature Review

Muhammad Zaki Hassan's study (2019). Digital economy (advantages, challenges and applications). One of the most important movements of the twenty-first century is information and communications technology, its rapid development and spread in the world. Technical technology has become the only language of the world's peoples and the fundamental basis for its dealings, upgrading its progress and development in order to keep pace with the temporal sequences that have ended and facilitate access to information, through interaction, exchange and participation in the political, economic, social and scientific fields. Clearly, this type of economy depends on information technology, communications, connectivity to the global information network and digital information-sharing services that have dropped and removed all borders and barriers to the flow of information, goods and services, and capital mobility for market access, regardless of where they exist and when the economy is unlimited. The world's conflict has become rapidly accessing information and having the methods of its circulation and analysis to make a sound decision based on accuracy in the formulation of States' economic policy.

Bui, T. H., & Nguyen, V. P. (2023). The impact of artificial intelligence and digital economy on Vietnam's legal system. Digital transformation incorporates new technology into all elements of business and will require the modification of old business models. Similarly, artificial intelligence (AI) is a relatively new disruptive technology with the potential to impact industry and society substantially. Cognitive techniques imitating human behavior and thought have resulted in advanced analytical models that assist businesses in increasing sales and improving customer engagement, operational efficiency, and service quality by producing new relevant from existing data. These decision-making models are based on descriptive, predictive, and prescriptive analytics. A legislative framework that oversees all digital development uniformly across countries and facilitates a fully regulated digital transformation process is required. However, this regulatory system must not hinder the digital revolution. This study shows that AI and digital transformation will be integrated into various applications and thus used extensively. Nonetheless, the implementation must be carried out in conformity with both standard regulations and the new realities.

Chen, Y., Xu, S., Lyulyov, O., & Pimonenko, T. (2023). China's digital economy development: incentives and challenges. The development of the digital economy has become a new way to respond to the epidemic impact effectively. With the innovative breakthrough of information and communication technology, the digital and real economies are deeply integrated. The digital economy has become an important driving force for the transformation of economic momentum and development. Panel data from 31 provinces in China from 2010 to 2019 were selected for analysis. In the first stage, the study constructed the evaluation index system of digital economy development. Then, the quality development index of the digital economy is calculated by using the entropy method. Finally, the main factors of digital economy development are analyzed by spatial measurement. The research results prove that: (1) the development of China's digital economy in 2010–2019 has gradually increased; (2) the development of the digital economy has a positive correlation between regions and has a spatial spillover effect; (3) the level of economic development, urbanization, government support, industrial structure, and the level of opening will promote the development of the digital economy.

Characteristics of the Digital Economy

- **Digitized and Tracked**

With the advent of technology, objects generate digital signals, these signals can be measured, tracked and analyzed which helps in better decision making. While the cost involved in equipment and machinery is quite high.

- **Connected**

Digital economy helps in better communication by interlinking of assets suppliers, workers and stakeholders who indirectly improves the safety, efficiency, and visibility of the business. Therefore, the business can function much better by adopting the digital economy.

- **Shared**

The digital economy functions by sharing. What one company needs are fulfilled by the other, so this is their shared process i.e. Purchasing what is needed as well as buying the services.

- **Personalized**

The digital economy is fully depended upon the customer personalization. Therefore, it is a fully personalized economy. Therefore, companies try to deliver products as per the need and demand of customers.

Advantages of Digital Economy

- **Promotes Use of the Internet**

Today most of the work is done on the internet and with the help of the internet. Therefore, there is a dramatic rise in investment of technology. Thus, higher demand for hardware, technological research, software, services, digital communication, etc is there which has indirectly affected the imports as well as the exports in the world.

- **Rise in E-Commerce**

With the rise of the digital economy, E-commerce has also gained importance and increasingly gaining the market. Every task related to buying, distribution, marketing, creating, selling is now just a click away all because of the digital economy.

- **Digital Goods and Services**

Nowadays, goods are available to us digitally. We don't need to go to the market and purchase goods, even the services as well are now available on the internet. If you want to watch a movie you can buy it from the online website or download it, and in case of baking services if you want to visit your bank to make payment to anyone that too you can do with the help of internet. So, goods and services have become digital now.

- **Transparency**

All the transactions in the digital economy happen online. Therefore, there is no need for cash which indirectly has reduced the black money and corruption in the market giving our economy more transparency.

Disadvantages of Digital Economy

- **Loss in Employment**

As we are depending more on technology, we are moving away from the natural as well as human resources in our society. And this is affecting the unemployment ratio which has grown with the advent of technology. Due to this technology and the digital economy; we are losing our jobs.

- **Lack of Experts**

To set up the digital economy a huge investment, as well as resources, are required that are not possible to arrange in rural areas. So, no technical development takes place in rural areas. Therefore, we can say that the digital economy is not readily available, especially in rural and semi-rural areas.

- **Heavy Investment**

A strong infrastructure, high functioning Internet, strong mobile networks and telecommunication are all essential things to work for a digital economy, which are a heavy investment thing. Thus, the digital economy in itself involves huge cost and investment as well as it is a very slow, tedious and costly process to work on.

Two Faces of the Digital Economy

- Information technology (IT) and
- Communication technology (CT)

1. Information Technology (IT)

Information technology (IT) comprises of the various items which help in economic activities. Thus, some of the components of IT are:

- artificial intelligence (AI)
- robotics, and machine learning

Of which speeds up data processing as well as reduces the number of tasks, and generates concentration forces for economic activities.

2. Communication Technology (CT)

Communication technology (CT) discusses all the equipment and programs that are used to process and communicate information. Internet, multimedia, e-mail, telephone, etc all are some of them are examples of communication technology.

Effects of a Digital Economy

- **Big Data**

Every small detail is recorded as data. And Google is the platform where this data is available, and where we spend most of our time. And by our devoted time, google collects the data which is useful for the companies.

- **People Are Connected**

Now people have more connectivity with each other. Companies are also working on to build connectivity. Moreover, people can connect digitally to share products and services.

- **Value Our Time**

Convenience is being given to the people with the coming forward of the digital economy and digitalization. As people can purchase and sell things as per their need and time or say on their own convenience. As by now Checking your bank balance, you need your phone.

- **Governments functioning is digital**

Health care, criminal reporting, taxes and various other daily tasks that were done offline before are now done online. This on the go service is possible only due to the effect of the digital economy.

Succeed in the Digital Economy

1. Product Innovation

While extending and restructuring the companies they try to innovate their products from the market to tackle the competition with the new technology as well.

2. Customer Expectations

Companies try to fulfil the service expectations of digitally empowered customers and offer more experiences with great costs.

3. Collaborative Innovations

Companies must try to become more innovative in order to respond to the highly competitive environment. As collaboration will lead the company to be more innovative to deal with the high competition in the economy.

4. Leadership

In order to deal with new market environments and business models, companies should try to change their organizational structures or make the necessary changes in them to deal with the fast-changing digital economy.

Conclusion

1. Optimize the industrial structure of the digital economy in accordance with the conditions of unbalanced regional development. Each region has its own unique advantages in terms of resources, geographical location, natural conditions and other characteristics, resulting in a large gap between regional development in the development level of the digital economy.
2. Strengthen support for digital innovation and infrastructure construction, which helps create a solid foundation for the digital economy. On the one hand, in order to improve digital innovation, increasing the contribution of digital resources, capital, data elements and technologies is equivalent to accumulating the innovative capacity necessary for the development of the digital economy.
3. Deepen the application of digital integration and enrich the end result of the digital economy. The integration and application of digital technologies is the ultimate goal of the digital economy development, and this is a necessary prerequisite for building a dual cycle economy in order to achieve a combination of digital technologies and the harmonious development of the three sectors (agriculture, industry and services). Nowadays, all countries in the world are actively exploring the development of the digital economy, hoping to take advantage of the new economic revolution of the digital economy and lead the world economic development. The digital economy is changing the structure of competition between countries and is becoming a new driving force for economic development. Thus, assessing the level of the digital economy development contributes to a detailed study of the advantages and disadvantages of digitalization, putting forward practical and targeted proposals for the sustainable and rapid development of the digital economy in the future.

Abstract

Business technology is applications of science, data, engineering, and information for business practices and in industrial units, such as the achievement of economic and organizational goals. The main element of technology is the idea of change in the business startups, and it will affect business and society. Business Technology students will learn the necessary skills to be fluent in business models, regulatory issues, business development, managing cross-functional and international teams, strategic management, product innovation, and go-to-market strategies to all startups are possible. There is no denying the fact technology increases the efficiency of the Startup company. The advancements in the world of robotics and applied sciences help businesses startups facilitate their customers. Moreover, due to the emergence of artificial intelligence, Startup companies can now make better use of technology. In India Technology start-up landscape has evolved to become the 4th largest in the world. Since 2010 there has been a significant rise in the growth of technology startups and in e2014 India was home to 3,000 technology start-ups. The report – first in the start-up series, conducts an in-depth analysis of the various aspects of the ecosystem. It identifies the current scale and size, factors impacting growth, and steps required to make the start-up environment more conducive. The implementation of technology in Startup business saves time and effort involved in employing human labor and increases productivity, which is in huge advantage.

Keywords: Technology, Startup, Environment, Business, Innovation.

Introduction

The Technology Is Moving Startups Beyond Conventional Tactics with its robust intervention. Technology is vital to startups, leveling the playing field and making more things than ever before accessible to new businesses. It will be always thought that it's important to be able to step outside your comfort zone when you're running a Startup business, A Startup is a young company which seed money founded by one or more entrepreneurs to develop a unique product or service and bring it to market in the competitive spirit and which will also help customers to get product at lower price and to create a greater number of employment opportunities. The biggest benefits of technology for daily business operations are the increase in flexibility so it will be useful in case of technology also.

Technology has not only helped to improve the flexibility of a number of deadlines, but advancements such as a business call app can improve the flexibility

of employees whilst reducing the need for a second phone. By its nature, the typical Startup tends to be a shoestring operation, with initial funding from the founders or their friends, families and Government. Technology and automation can help a business improve efficiencies across functions. From manufacturing to marketing, and ensure costly errors are prevented from happening. This in turn can add to business growth. Insights and Technology also prove valuable insights about the business.

A Startup business a new business that is in the initial stages of operation, beginning to grow and is typically financed by an individual or small group of individuals. It is a young entrepreneurial, scalable business model built on technology and innovation. The technology affects a firm's ability to communicate with customers. Fast shipment options allow businesses to move products over a large geographic area. When customers use technology to interact with a business, the business benefits because better communication creates a stronger public image. In startups the role of technology is very important because of its scope of growth. The role of technology enables the Startup an idea that manifests into a commercial undertaking. Indian government is serious in promoting entrepreneurship at the Startup level and has taken a number of initiatives to ensure appropriate support. easier, faster and more effective communication, better, more efficient manufacturing techniques, less wastage, more efficient stock management and ordering systems, the ability to develop new, innovative approaches, more effective marketing and promotion and new sales avenues. In this aspect it is relevant to mention 'Make in India' campaign introduced in September '14 to attract foreign investments and encourage domestic companies to participate in the manufacturing sector. The government increased the foreign direct investment (FDI) limits for most of the sectors and strengthened intellectual property rights (IPRs) protection to instill confidence in the Startup in different business segment. In the case of startups technology has important effects on business operations.

An Analysis Role of Technology for Startup

In process of industrialization startups technology is growing fast, prices are dropping, and new innovations are being rolled out constantly. If you haven't been consistently looking out for new technology to assist your business, chances are that you have missed something. Technology has changed the pace of business and raised the expectations of customers. The role of technology on business doesn't stop there. Increased access has allowed us to leverage new and different technologies to grow and adapt our Startup businesses. There certainly are technology solutions out there that can improve your business. Whether you like it or not, technology is

essential to business success. Employees rely on it for day-to-day operations. Outside companies, clients, and prospective clients evaluate you on your use of technology. HR relies on technology to train and develop employees.

Technology can assist in ensuring that you are prepared for even the most difficult communication obstacles sustainable growth of business which will enables. It's no secret that there have been some awesome technological advancements in recent years. Advancements such as Life size's video conferencing technology and Zulty's VOIP phone cloud solution are strategically designed to improve efficiency and reduce lay time in the office. Cyber attacks are growing at an alarming rate. So too are the amazing cyber-security defenses Top-notch cyber security being essential for protecting your business from thefts of data or money, primarily if you use computers and other technological tools. The latest cyber security advancements, like antivirus or cloud protection systems, secure your crucial and sensitive data from being hacked by malicious parties.

Being Startup technological innovations, Germany is leading other countries in business innovation and technology. As per IMF data, Germany has the largest business software market in Europe and accounts for nearly a quarter of the value of the business technology market on the continent. A report by the IZA Institute of Labour Economics showed that technological innovations were one of the main driving forces behind Germany's formidable economic growth. Technological adoption in German businesses reduced stagnation in business ideas, and predictive analytics gave entrepreneurs the insights to make data-backed decisions. The Sophos' Deep Learning technology. In an age where almost all-important business assets are stored in the cloud or on endpoints, it is imperative that businesses employ security technology to protect those assets.

Startups and Economy

Startups play the most crucial role in an economy. Most of us feel that startups grow in the developed economy due to adequate availability of resources. On the contrary, these ventures can start from anywhere as per market demand.

Economic Prosperity

Startups boost economic activity that helps the nation to expand. In addition to this, it also maximizes profits through technological innovations. This eventually improves the GDP of an economy and transfers money into the hands of the customers. It brings competitive dynamics to the economy to encourage existing businesses and adopt newer technologies.

Developments and Innovations

Older businesses or industry leaders are more inclined to spend money on incremental innovation and R&D on already established technologies. While startups are more concerned with cutting-edge innovation and innovative technologies. Startups are more agile and able to develop a concept into a product and update it in response to customer demand with quicker decision-making communications as they are not constrained by a multi-layered corporate bureaucracy. Employees are driven to go above and beyond to succeed by the high risks involved. Giant corporations, like Google and Microsoft, frequently buy out startups to better innovate and increase sales through their size and distribution networks.

Increase the Production of Goods and Services

Startups tend to have more advanced technology. The output of products and services increases as a result. With this, they are able to produce greater revenue from the same amount of capital inputs as more established businesses. In short, the new ventures enhance the production of goods and services which increase the revenues of the nation also.

Direct Impact

Startups also directly affect the cities they are based in, just like Google and Microsoft have impacted Mountain View and Redmond, respectively. They bring riches and a sizable influx of graduates and seasoned professionals looking for employment chances from other places.

Entrepreneurship is a Powerful Economic Force

Startups are growth-oriented forces. It is necessary to find ways to encourage competition and support transformational entrepreneurs to prevent economic stagnation. Although obtaining support at the federal level is crucial, the effort must be concentrated at the local level. Cities must support initiatives that promote entrepreneurship. Politicians and lawmakers cannot ignore entrepreneurs any longer since doing so would be detrimental to both local and national growth. Removing obstacles, fostering interaction, and assisting startups are just a handful of the ways civic leaders may give entrepreneurs a greater advantage.

Better Standard of Living

The level of living for people in society is raised through start-ups. New ideas and technologies introduced by start-ups contribute to raising the level of living in the community. For instance, a business that makes healthy products contributes to

raising the standard of living of its customers by providing solutions for their health. When they employ people, they also provide a higher standard of living. They contribute to their improvement because they now have jobs and can support themselves. To develop quickly, generate more jobs, and ultimately raise the standard of life of people via their innovations and creativity, successful start-ups must have ambition and potential.

Creates Competitive Dynamics

Startups make society very dynamic and give economic dynamism and competitiveness, which keeps the economy strong, active, and attentive. They employ their inventions to produce innovative products that are dynamic and diverse and boost the economy.

Encourage Activism

Startups alter the value of any culture in which they exist and introduce a new attitude consistent with the knowledge- and creativity-based civilization. It helps people understand their responsibilities and encourages them to think and act proactively about their job, careers, and the advancement of society. It helps people focus on delivering their best effort to their work by bringing their duties to light and assisting them in understanding how significant and relevant their tasks are in their society. Thus we can say that entrepreneurship benefits an economy and promotes its growth of it as well.

Factors that Influence Innovation

Turnover

Measures the percentage of Return on Investment over the course of the year

Financing

The availability of financial resources, equity and debts for small and medium enterprises (SMEs) (including grants and subsidies)

Post education

The extent to which training in creating or managing SMEs is incorporated with in the

Education and training system in higher education such as vocational, college, business schools, etc.

R&D

The extent to which national research and development will lead to new commercial

Opportunities and is available to SMEs.

Internal Market Openness

The extent to which new firms are free to enter existing markets

Cultural and social norms

The extent to which social and cultural norms encourage or allow actions leading to new business methods or activities that can potentially increase personal wealth and income.

Issues and Challenges

The important issues and challenges in space of Techno- Startup is witnessing by different ways. Assembling a good team is the first major requirement, failure to have one sometimes could break the Startup (Skor,2016). Tenacity of founders Skor of startups have to be tough when the going gets tough. For an outside observer, India's tech Startup ecosystem has for many years buzzed with action. Startups in popular domains like data analytics, artificial intelligence and block chain have routinely mopped up angel and seed funding; a few have even made headlines for their acquisition by global tech giants like Facebook, Google and Apple. These early stage success stories naturally inspire more young people to test the waters.

The number of startups who have successfully scaled their business to cover the whole of India or even ventured abroad can be counted on hands. For every Flipkart, Zomato and OYO Rooms; there are dozens of startups that just could not scale up despite showing a lot of promise in early stages. India has the world's largest smart phone and the Internet-connected population at 300 million, with an ever-increasing spending power thanks to a growing economy. Regulations pertaining to labour laws, intellectual property rights, dispute resolution etc. are rigorous in India. Lack of mentorship: Lack of proper guidance and mentorship is one of the biggest problems that exist in the Indian Startup ecosystem (Choudhury, 2015). Financial resources Availability of finance is critical for the startups and is always a problem to get sufficient amounts. A number of finance options ranging from family members, friends, loans, grants, angel funding, venture capitalists, crowd funding etc. are available. A large part of this population lives outside the metros, in cities and towns- big and small.

There is an even bigger emerging opportunity in serving the technology needs of Indian small and medium businesses. Some of the issues and challenges are the techno-business needs to be persistent, persuasive, and should never give up till he/she achieves desired results. Regulations Starting a business requires a number of permissions from government agencies. One such deficiency is lack of trust during hiring, in contracts and their enforcement. Our judicial system is unreliable

and unpredictably slow and as a result, businesses are never sure of being able to enforce signed contracts.

Conclusion

The Technology has revolutionized the way companies conduct business by enabling small businesses to level the playing field with larger organizations by the way of different small startups. Small businesses use an array of tech everything from servers to mobile devices to develop competitive advantages in the economic marketplace. Small start-up business owners should consider implementing technology in their planning process for streamlined integration and to make room for future expansion which enables sustainable growth of business. This allows owners to create operations using the most effective technology available for the future expansion of business.

Abstract

Information and Communication Technology (ICT) is a vehicle to enhance the quality of the education. As the world is moving rapidly into digital media and information, the role of ICT in education is becoming more important in the 21st century. The opportunities for education arising from developments in information and communication technology are very promising. In recent years, increased computing power, improved wireless and user-friendly technology, and reduced telecommunication costs have contributed to lowering barriers to information access and exchange. Changes in the economic and social fundamentals call for transformation in the skills, capabilities and attitudes of the masses. This requires a shift in the delivery and pedagogy used in the current education system. ICT increases the flexibility of delivery of education so that learners can access knowledge anytime and anywhere. It can influence the way students are taught and how they learn as now the processes are learner driven and not by teachers. The purpose of this paper is to analyze the integration of Information and Communication Technologies in higher education for imparting easily accessible, affordable and quality higher education leading to the uplift of India. The focus of the paper is on the benefits that ICT integration in education can provide, right from breaking time and distance barriers to facilitating collaboration and knowledge sharing among geographically distributed students and the paper reports on the changing trends in use of ICTs for instruction in higher education institutions (HEIs).

Index Terms - Education System, Information and Communication Technology, Innovative Classroom Practices, Technological and Pedagogical Changes

Introduction

ICT in the Creative learning

Technology moves on very quickly and schemes of work often don't reflect changing technologies, times and contexts. We are in a position to personalize the curriculum in what children learn, how they learn, where they learn, with whom and with what resources. As children develop their skills using ICT both inside and outside school with innovations such as the internet, broadband, games consoles, Wiis, Nintendo DSs, iPods, iPads etc, children could be in the position where they use more technology outside school than in the classroom and perhaps even 'dumb down' as far as their achievements and their understanding of what technology can do. The knowledge, skills and understanding of our children varies greatly depending on their experiences with technology outside school.

In order, to utilize the skills that the children already have, in school we encourage teachers to allow the children to choose when it is appropriate to use technology (and when not). We also suggest teachers don't teach children a set of skills as a whole class but teach skills as and when it's appropriate. Teaching a skill at that point of need key to children remembering it and using it again. To encourage a more flexible use of computers, we have asked schools to reevaluate traditional ICT suites in favor of having the technology on hand in the classroom as and when they need the use of ICT suites and timetabled lessons can limit student access to IT. The ability of students to make creative use of ICT as and when their learning requires can be inhibited if ICT is delivered as a standalone subject. One example would be, edit these sentences adding capital letters when necessary using the shift key. It would be better to teach the usage of the shift key at a time when the children are typing letters, addressing envelopes, postcards linked to a geography topic, letters to a pen pal or a thank you note.

The skill they need to be taught needn't wait until their timetabled lesson later in the week or term but when they are asking for the answers. Having the freedom to choose how the children learn under the direction of the teacher and what technology and software they use, enables teachers to support children with different learning styles, personalizing learning and addressing multiple intelligences. Traditionally, ICT has focused on supporting children whose strengths lie in linguistic and logical (mathematical) intelligences. There should be one aspects of ICT teaching:

Through ICT supporting learning in other subjects; applying skills in real contexts, using AFL should identify the next steps in their learning in both the above.

School may have designed activities, identified skills and non-negotiable items for you to incorporate into your planning. In addition, most schools allow teachers a freedom to look at a themed topic and decide upon what applications or other ICT activities will enhance children's learning in that area. If possible, teachers should look at a range of activities over the school year that builds on the children's prior learning. In ICT, an established assessment for learning (AFL) strategy can transform the rate at which the children adopt technology. In many cases, children learn skills from their peers (and from their mistakes!) before their teachers. CT has the potential to transform learning. Too often schools substitute paper based activities for computer based ones. This undermines the capacity of technology and is wasteful of resources. A vast range of solutions, information, examples and perspectives can be offered only through the use of ICT.

Support Pedagogical Innovations with New Tools

Encouraging experimentation: Innovations in the process of learning and teaching emerge from different actors, both learners and teachers. Policies should aim to empower educational actors and institutions in their local contexts to develop innovative approaches to learning with added value in their environment, (e.g. with different local languages, or by using digital tools and media creatively for specific learning topics).

Networking and best practice exchanges: Teachers should be encouraged and supported to document and share the innovative practices they have developed and

encountered in their teaching, as knowledge of practical applications for new approaches in different environments is scarce. Incentives for the objective assessment of enabling and disabling factors should be implemented.

Teacher Training and Support: ICT and social computing can improve the effectiveness of learning and the learning outcomes, but results depend on the approaches used. Hence, initial and in-service teacher training should disseminate insights and best practices with new innovative approaches, encouraging teachers to experiment with digital and media technologies and to reflect on the learning impacts of their own teaching practices. Establishing and participating in teacher networks and following innovative practice development of the field should become part of teacher training.

Open and networked institutions: Policies should encourage institutions to embrace the networking opportunities available. By opening their learning materials (open educational resources), institutions can attract learners and also support informal learning outside institutions. Networking between institutions can enrich the curricula provided for students and transfer subject-related knowledge between practitioners. Institutions should promote collaborative networks between teachers, researchers, and professional networks, in order to support the emergence and sharing of learning innovations

Develop and support favourable culture for ICT innovation and learning: Using new tools for old processes does not create change or innovation. Institutions should facilitate emergence of innovative learning approaches by (i) ensuring that learners, teachers, managers and parents are aware of their potential and (ii) by supporting them in curricula, teaching guidelines, and teacher training. Institutions should acknowledge and encourage innovations coming from actors on different levels and develop their practices accordingly, thereby becoming reflective, learning organizations.

Research on ICT impacts on learning: More research is needed for finding evidence on how technology can enhance learning. Together, tool developers and educational researchers should study and develop models for embedding new tools such as computer-based assessment in teaching and learning approaches. This would provide institutions and teachers with proven practical models that support the take up of innovative tools.

Impact of ICT on the Teaching Process

- ICT Has an edit effect in terms of quality of student work and practical examples through visualization.
- ICT Improves poor handwriting and languages skills through word processing.
- ICT Equalizes individual differences and has particularly dramatic effects for students with special needs.
- ICT Facilitates self-pacing with increased capacities to deal with individual learning styles as students can work at the pace and intensity suitable to their needs.
- ICT Enables collaborative learning with little indication of the isolated learner.
- ICT Encourages use of peer coaching and peer reviews.
- ICT Develops communication skills and awareness of different audiences.
- ICT Has impact on resource-based learning and access to real world information through the Web.

- ICT Increases information reliability and accuracy adding to authenticity of learning tasks, with realistic and up-to-date information.
- ICT Increases student motivation through hands-on activity, visual representations and improved modes of presentation.
- ICT Encourages independent learning and individual preferences for process, layout, style and format.
- ICT Gives students more control.
- ICT Allows students to produce high quality multimedia products.
- ICT Changes teacher practices, planning tools and assessment rubrics.
- ICT Increases opportunities for classes to evolve and for student experiences to shape outcomes.
- ICT Has motivated students to commit to learn and to participate in learning activities.
- ICT Has improved students' quality of work and has given them the confidence to perform enhanced learning tasks. ICT Has allowed students to learn independently, which has enabled more work to be completed. ICT has a profound impact in classrooms. It adds complexity to a non-linear system. This complexity needs a major change in organization. Downs (2001) differentiates four levels of use of ICT in the classroom:

Level 1: ICT skills are added into the school programmed through a separate ICT subject, while teacher practices in other subjects remain unchanged;

Level 2: ICT skills are integrated into teachers' daily work with some teachers' pedagogical practices and classroom behavior remaining the same, while the practices of others change more radically;

Level 3: ICT is transformative at the classroom level as it changes content as well as pedagogy (what students learn as well as how they learn it);

Level 4: ICT is transformative at the system level leading to changes in the organisational and structural features of school learning.

The New Trend of ICT

ICT is based on individual access, personal mobile phones, personal computers etc. as well as the new trend for personalization of the Web. This implies that the needs and the competencies of students are quite different, and since ICT allows one-to-one learning, a more personalized learning may constitute the future trend of higher education. Better achievement of students is easier to obtain since the learning is personalized and customized. However, this implies a huge change in the format, in the organization of the classrooms and in the competencies and availability of teachers. This may explain the differences observed in the impact of ICT on the performance of students. Wherever the introduction of ICT is associated with a personalized service for students, performance increases.

The Outcomes of Higher Education

The impact of ICT on the learning process seems to be more important and requires more than looking only to curricula. Improved student outcomes are observed, with regard to: motivation, enjoying learning; self-esteem; ICT skills; collaborative skills; subject knowledge; information handling skills; meta-cognitive skills, etc. In European higher education institutions, while students and teachers seem to be using the new available technologies more and more intensively, organizational designs are changing slowly. The lack of a strategy regarding organizational change, as several studies have shown, leads to a weak impact of the use of ICT on student performance.

Conclusion

In order to conclude we will try to proceed to synthesize from a general viewpoint the results obtained, taking into consideration the relevant aspects of the literature. The results provided by both the quantitative and qualitative analysis of the literature obtained will be exposed especially regarding those aspects which are related to ICTs for Education and ICTs in Education. ICTs for education refers to the development of information and communications technology specifically for teaching/learning purposes, while the ICTs in education involves the adoption of general components of information and communication technologies in the teaching learning process.

The adoption and use of ICTs in education have a positive impact on teaching, learning, and research. ICT can affect the delivery of education and enable wider access to the same. In addition, it will increase flexibility so that learners can access the education regardless of time and geographical barriers. It can influence the way students are taught and how they learn. It would provide the rich environment and motivation for teaching learning process which seems to have a profound impact on the process of learning in education by offering new possibilities for learners and teachers. These possibilities can have an impact on student performance and achievement. Similarly wider availability of best practices and best course material in education, which can be shared by means of ICT, can foster better teaching and improved academic achievement of students. The overall literature suggests that successful ICT integration in education.

DIGITAL INDIA AND INDUSTRY 4.0

Dr. T. Mohana Sundari

Assistant Professor, Department of B.COM CA
NGM College, Pollachi, mohanasundari688@gmail.com

Abstract

The globalization and the competitiveness are enforcing organizations to readdress and innovate their production processes. The world is entering a new era of industrial emanating technology in automation and data exchange through the use of Internet of Things called fourth technological revolution or Industry 4.0. It represents the amalgamation of tools already used in the past such as big data; cloud, robot, 3D printing, simulation, etc. are now connected into an internet to transmit digital data. For the implementation of this new paradigm, there are many opportunities and also many challenges. This paper highlights brief introduction on challenges and opportunities for implementation of Industry 4.0 in India. Digitization of product and service offerings: Complete descriptions of the product and its related services through intelligent networks. Introduction of innovative digital business models: The high level of interaction between systems and technology opportunities develops new and integrated digital solutions. The basis of Industrial Internet of Things is the integrated and concurrent availability and control of systems across the organization.

Introduction

An industrial revolution can be defined as a disruptive leap in the industrial process, a development that produces fundamental transformations in the society and the economy. First industrial revolution started in 1784 with the introduction of the first machines that used steam for power. Many people worried and opposed because use of machines may reduce the requirement of manual workers. The second industrial revolution, which initiated around 1870, started the production system which manufactured the components in large scale by adopting assembly line production system which used electricity as source of power. The third industrial revolution which switches the technology driven by mechanical and analog electronic to digital electronics began with the introduction of the robotics and automation in the year 1969. Industry 4.0 has enlarged the capabilities of digital revolution and increased its significance to the organization. Industry 4.0 combines and connects the Internet of Things, digital and physical technologies; robotics, artificial intelligence, cloud computing, additive manufacturing, and others to propel more responsive, versatile and interconnected establishments to make more enlightened decisions. Industry 4.0 carries with it seemingly endless options for technological investments and endless opportunities. The Industry 4.0 is based on the concept of factory of future, where the equipment are integrated with workers through cyber-physical systems (CPS). Industry 4.0 is a new level of establishments that operates, manages and controls the whole value chain of personalized products to satisfy customer needs. The

most important component in Industry 4.0 is Digitalization because it enables to connect technology with human beings.

Industry 4.0 enables complete customization which gives very high flexibility for manufacturers to meet changing requirements from their consumers, who are increasingly favoring more customizable and flexible outputs over standard product offerings. This initiative allows sportsman's to customize and personalize their sports footwear to fulfill their styling and performance needs. In their effort to bring manufacturing closer to their customers in the respective countries, Adidas has also planned to open its first fully automated factory in Germany. Such technologies have also helped manufacturers in minimizing lead time for prototype development. As a result, companies are able to speed-up their time to market. The success metrics for organizations will also change from achieving low cost effectiveness to obtaining higher returns on capital investment. Profitability is increased by Industry 4.0 by facilitating greater customization, minimizing the complexity cost and reducing labor costs. Simultaneously, it enables to high return on the capital invested by allowing asset utilization and greater flexibility.

Opportunities for Industry 4.0

India is very much eager to implement Industry 4.0 and several measures have been adopted. According to Indian Brand Equity Foundation (IBEF), by 2025, the Government of India intends to raise the production sector's contribution from the present 16% rate to 25% of Gross Domestic Product (GDP). India is also prepared to face global competition by undertaking the Make in India and skill development programs. It is all set to lead the world with Smart Manufacturing. The following are the opportunities for industry 4.0 in India:

- (i) Young Population:** Employers want to invest in young people and see them as a future asset. With an average age of less than 30 and nearly 10 lacks individuals joining the workforce every month, India offers the ideal atmosphere for first time young job seekers to pursue opportunities in emerging fields of interest in the Indian manufacturing industry - consumer electronics, automotive, aeronautics and aerospace.
- (ii) Favorable Policies:** The 'Make in India' program is India's plan of action to encourage Indians to create products for the world market. India has the resources, policy and workforce in place. What is needed is experts from foreign industries to crank-up a manufacturing revolution in the areas of automobile and aerospace. Relaxed FDI policies and better protection for company's intellectual property, coupled with industry favorable government policies have created competition amongst Indian states to attract foreign direct investments in the manufacturing sector. With the

increase in World Bank's Ease of Doing Business ranking is also a welcome sign that first time foreign investors are positive about the country's growth potential.

- (iii) **Skilled workforce:** With a strong high school and university ecosystem, Indian students are sought after by multinationals all over the world. Fast Changing times and a slow adaptive to education system however, have rendered man qualities gained in academics Redun- dant in today's work environment. The efforts of governments and private industry to set up reskilling and skill upgrading centres to raise employability.
- (iv) **Large population base ready to go digital:** The emphasis on ' Digital India ' and the government's intervention in 2016 to suppress uncoun- ted cash from the sy stem through a huge demonetization effort are all pushing Indians too quickly to adjust to the use of digital payments. Rapid growth is set for this sector. Indian government has also begun attempts to link the nation digitally by providing a Unified Payment Interface (UPI), a zero-cost payment gateway and cash enterprises.

Industry 4.0 Benefits

- (i) Lower Cost.
- (ii) Additional Revenue.
- (iii) Enabling Industrial Companies to optimize customer relationship.
- (iv) Transparency in the production process.
- (v) Clarity on the status of all aspects of production system in real time.
- (vi) Industrial companies that successfully implement Industry 4.0 no longer need to choose between focusing on a better top or bottom line. They can improve both at the same time.
- (vii) Logistics processes become leaner.
- (viii) Reduced inventories.
- (ix) Standardization of maintenance processes.
- (x) Cent percent traceability

Challenges for Industry 4.0

The ministry of heavy industries and public enterprises provide supports to facilitate four centres in the country to help SMEs materialize Industry 4.0. Bengaluru is in the process of setting up India's first smart factory. This smart factory is driven by the Internet of Things (IoT) and data exchange. This Smart Factory is being established with financial assistance from The Boeing Company at the Centre for Product Design and Manufacturing (CPDM) department of Indian Institute of Science (IISc). The goal of Government of Andhra Pradesh to make the state into an Internet of Things (IoT) hub by 2020. With the participation of the private sector, the state government plans to set up 10 IoT hubs that will create 50,000 direct jobs in different IoT verticals. Since more than 80% of the

manufacturing industry in India is in the MSME sector, the implementation of Industry 4.0 is a major challenge.

- (i) **Investment:** A huge issue for many enterprises who wish to implement Industry 4.0 is a buying strategy that is less than clear for a lot of them. As a result, there are often unclear economic incentives for development and organizations find themselves having to spend over the odds to implement these new initiatives. Such a technological transformation will require a significant investment in new technology. For such a transformation, the decision will be taken by the highest management level. Even then, it is necessary to calculate return on investment and take the risks seriously. In addition to the requirement of huge capital, such transformation will isolate small businesses and might lose their market share in the future.
- (ii) **The workforce:** Optimizing Talent: Bringing together smart factories and manufacturing automation will bring remarkable levels of effectiveness and speed to a business, but the drawback of this is that many organizations will see a workforce that will be unused to the new developments taking place, and ill-equipped to adapt to them. While it remains early to make a judgment on working circumstances with the global implementation of Industry 4.0, it is safe to say that workers will need to acquire different or an all-new set of skills. This may help to increase the employment rates but it will also isolate a big sector workers. The sector of workers whose work is to perform repetitive tasks will face a challenge in keeping up with the industry 4.0. Different forms of education must be initiated, but it still doesn't solve the problem for the experienced workers. This is an issue that might take longer time to solve.
- (iii) **Standardisation:** Integrating Software, Hardware, Operating Systems and standards play an important role in forming industry 4.0. Developments and coordination of standards and proposals will promote efficient development of industry 4.0 infrastructures and applications, services and devices. There is some confusion with companies trying to innovate as to which standards will be adopted in the next five years. A huge challenge to overcome will be to derive a standardized system that works for all parties and allows for both horizontal and vertical integration, and results in maximum value for both present and future investments. In today's network world, global standards are more relevant than local agreements.
- (iv) **Data security:** Medium and Small scale organizations are primed to benefit the most from Industry 4.0, but this represents a quandary. Compared with traditional manufacturing data security, privacy issues of Industry 4.0 become more prominent. Much information includes privacy of users, so that protection of privacy becomes an important security issue in industry 4.0. Because of combination of things, services and networks, security of Industry 4.0 needs to cover more management objects and levels than traditional network security. Existing network security architecture that is

designed from the prospective of human communication may not be suitable and directly applied to Industry 4.0. The existing security mechanism will block logical relationship between components in Industry 4.0.

- (v) **Technical Challenge:** Technology for industry 4.0 can be complex for various reasons. Firstly there are legacy heterogeneous architecture in the existing networking technologies and applications, For example different environments and applications requires different networking technologies and the ranges as well as other characteristics of cellular, wireless local area networks and RFID technologies are much different from each other [5][21]. Secondly communication technologies including fixed and mobile communication systems, power line communications, wireless communication technologies for both fixed and mobile devices either simple or complicated should be low cost and with reliable connectivity.
- (vi) **Real-time constraints:** Industry 4.0 requires some amount of real-time performance if they are going to control machines and factories [22]. Industrial control systems require real-time reaction, making changes to the systems very difficult. Downloading the required data from the cloud for plant system operation requires the system of the plant to access "big data" in real time in cyberspace. Loading accessible software versions on the malware scanners and antivirus programs of the system could affect the process performance. Any real-time interaction must be quick enough to promote the demands for system automation. For example, Safety Instrumented Function (SIF) for turbine over-speed protection may need to react within 10 ms on demand.

Conclusion

Industry 4.0 creates a newer manufacturing environment and knowledge economy. Industry 4.0 encompasses many technologies such as IoT, WSN, Communication technologies, low power electronics etc. The development of Industry 4.0 in India exposed many challenges that includes lack of fundamental theory supporting, immature standards, Technical challenges and lack of investment. With these challenges, India has several opportunities for industry 4.0 implementation. Such opportunities are large young population ready to go for digitalization, central government policies like Make in India and skill development, significant experience in developing IT- related infrastructure, Companies collaboration with educational institutes etc.

ENTREPRENEURSHIP DEVELOPMENT THROUGH MSME

Dr. T. Mohana Sundari

Assistant Professor

Department of B.COM CA

NGM College, Pollachi

mohanasundari688@gmail.com

Abstract

MSMEs are essential to job creation. They provide employment opportunities in local communities and are often a significant source of jobs in rural or underserved areas where opportunities to work in big corporations are not available. By creating jobs, MSMEs help to reduce unemployment rates and stimulate economic growth. Additionally, entrepreneurship drives innovation and encourages the creation of new industries and markets, leading to further job creation and economic development. MSMEs are critical to economic growth. They generate revenue and expand into new markets, investing in new technology and infrastructure that can create a positive ripple effect throughout the economy. Small businesses drive competition, which can lead to lower prices and higher quality products and services. Additionally, they are often at the forefront of innovation, developing new products, services, and business models that can disrupt established industries and encourage growth. MSMEs are essential to community development. They provide goods and services that are tailored to the needs of the community and often support local charities and organizations. By sourcing materials and labor locally, they can stimulate the local economy and help to build strong, sustainable communities. In addition, MSMEs are often owned and operated by members of the community, creating a sense of pride and ownership in the community.

Introduction

The government can facilitate partnerships between MSMEs and larger companies to provide access to resources and expertise that they may not otherwise have. This can include mentorship programs and partnerships with universities and research institutions. The government can also support entrepreneurship development by promoting incubators and accelerators that provide mentoring, networking, and funding opportunities. Businesses used to compete by location or target market, but access to a bigger crowd via social media and the convenience of e-Commerce platforms have opened a new arena for competition. Along that comes multitude of opportunities - and a myriad of threats. With the fast changing consumer habits due to internet activities such as being review-reliant and crave instant gratification, the internet and technology have revolutionized the way businesses operate. MSMEs that fail to embrace digitalization risk falling behind their competitors. Digitalization enables small businesses to reach new customers, expand their markets, and improve their efficiency. By establishing an online presence through a website, social media platforms, and other digital marketing channels, MSMEs can reach customers beyond their local markets and tap into a global audience.

Digitalization can also improve the efficiency of MSMEs by automating repetitive tasks, streamlining operations, and reducing costs. Cloud-based software solutions, online payment systems, and e-commerce platforms can help MSMEs to manage their finances,

inventory, and customer data more effectively. Many productivity tools like Asana or Trello and project management framework like Kanban have rendered remote working possible, allowing for a better organized teamwork and promoting innovative ideas (At this point, the MSME would have been considered a Start-up). To help MSMEs with digitalization, the government can provide funding and support for digital training programs, mentorship, and workshops. The government can also offer tax incentives to encourage small businesses to invest in digital infrastructure and technology. Moreover, the government and private sectors, working as a unified ecosystem, can establish digital hubs and incubators that provide MSMEs with access to digital resources, training, and support.

However, many of the digitalization efforts above would not be truly effective if the most basic infrastructure for internet connectivity is not available/stable. The government can solve this by providing access to high-speed internet infrastructure in underserved areas. Many small businesses in rural or underserved areas struggle with slow internet speeds, limiting their ability to leverage digital technologies effectively. If rural infrastructures are better equipped, more opportunities and assistance would reach them - creating better delivery of human capacity development programs, awareness/outreach programs and more. The government and private sectors have a responsibility to create an enabling environment that supports MSME's growth and success by creating favorable policies and regulations, providing funding and access to capital, offering training and education programs, and promoting partnerships.

Role of MSME

MSME in India enjoy a distinct position in view of their contribution to the socio-economic development of the country. The emphasis on MSME has always been an integral part of India's industrial strategy. Development of MSME prevents migration of rural population to urban areas in search of employment and contributes to other socio-economic aspects, such as reduction in income inequalities, dispersed development of industries and linkage with other sectors of the economy.

1. The contribution of these industries to the balanced regional development of our country is noteworthy. Small industries in India account for 95 per cent of the industrial units in the country.
2. MSME are the second largest employers of human resources, after agriculture. They generate more number of employment opportunities per unit of capital invested compared to large industries. They are, therefore, considered to be more labour intensive and less capitalintensive. This is a boon for a labour surplus country like India.
3. MSME in our country supply an enormous variety of products which include mass consumption goods, readymade garments, hosiery goods, stationery items, soaps and detergents, domestic utensils, leather, plastic and rubber goods, processed foods and vegetables, wood and steel furniture, paints, varnishes, safety matches,

etc. Among the sophisticated items manufactured are electric and electronic goods like televisions, calculators, electro-medical equipment, electronic teaching aids like overhead projectors, air conditioning equipment, drugs and pharmaceuticals, agricultural tools and equipment and several other engineering products. A special mention should be made of handlooms, handicrafts and other products from traditional village industries in view of their export value.

4. MSME which produce simple product using simple technologies and depend on locally available resources both material and labour can be set up anywhere in the country. Since they can be widely spread without any locational constraints, the benefits of industrialisation can be reaped by every region. They, thus, contribute significantly to the balanced development of the country.
5. MSME provide ample opportunity for entrepreneurship. The latent skills and talents of people can be channeled into business ideas which can be converted into reality with little capital investment and almost nil formalities to start a small business.
6. MSME also enjoy the advantage of low cost of production. Locally available resources are less expensive. Establishment and running costs of small industries are on the lower side because of low overhead expenses. Infact, the low cost of production which small industries enjoy is their competitive strength.
7. Due to the small size of the organizations, quick and timely decisions can be taken without consulting many people as it happens in large sized organizations. New business opportunities can be captured at the right time.

Problems Associated with MSME

The potential of MSME is often not realized fully, because of several problems related to size and operations. We shall now examine some of the major problems that small businesses whether in urban or in rural areas are encountering in their day-to-day functioning.

1. **Finance:** One of the severe problems faced by MSME is that of non-availability of adequate finance to carry out its operations. Generally these businesses begin with a small capital base. Many of the units in the small sector lack the credit worthiness required to raise as capital from the capital markets. As a result, they heavily depend on local financial resources and are frequently the victims of exploitation by the money lenders. These units frequently suffer from lack of adequate working capital, either due to delayed payment of dues to them or locking up of their capital in unsold stocks. Banks also do not lend money without adequate collateral security or guarantees and margin money, which many of them are not in a position to provide.
2. **Raw materials:** Another major problem of MSME is the procurement of raw materials. If the required materials are not available, they have to compromise on the quality or have to pay a high price to get good quality materials. Their

bargaining power is relatively low due to the small quantity of purchases made by them. Also, they cannot afford to take the risk of buying in bulk as they have no facilities to store the materials. Because of general scarcity of metals, chemicals and extractive raw materials in the economy, the small scale sector suffers the most. This also means a waste of production capacity for the economy and loss of further units.

3. **Managerial skills:** These businesses are generally promoted and operated by a single person, who may not possess all the managerial skills required to run the business. Many of the small business entrepreneurs possess sound technical knowledge but are less successful in marketing the output. Moreover, they may not find enough time to take care of all functional activities. At the same time they are not in a position to afford professional managers.
4. **Marketing:** Marketing is one of the most important activities as it generates revenue. Effective marketing of goods requires a thorough understanding of the customer's needs and requirements. In most cases, marketing is a weaker area of small organisations. These organisations have, therefore, to depend excessively on middlemen, who at times exploit them by paying low price and delayed payments.
5. **Quality:** Many MSMEs do not adhere to desired standards of quality. Instead they concentrate on cutting the cost and keeping the prices low. They do not have adequate resources to invest in quality research and maintain the standards of the industry, nor do they have the expertise to upgrade technology. In fact maintaining quality is their weakest point, when competing in global markets.
6. **Capacity utilisation:** Due to lack of marketing skills or lack of demand, many firms have to operate below full capacity due to which their operating costs tend to increase. Gradually this leads to sickness and closure of the business.
7. **Global competition:** Apart from the problems stated above MSME are not without fears, especially in the present context of globalization. These enterprises face competition is not only from medium and large industries, but also from multinational companies which are giants in terms of their size and business volumes.

MSME and Entrepreneurship Development

Entrepreneurship is the process of setting up one's own business as distinct from pursuing any other economic activity, be it employment or practising some profession. The person who set-up his business is called an entrepreneur. The output of the process, that is, the business unit is called an enterprise. It is interesting to note that entrepreneurship besides providing self-employment to the entrepreneur is responsible to a great extent for creation and expansion of opportunities for the other two economic activities, that is, employment and profession. And, in the process, entrepreneurship becomes crucial for overall economic development of a nation.

1. **Systematic Activity** : Entrepreneurship is not a mysterious gift or charm and something that happens by chance! It is a systematic, step-by-step and purposeful activity. It has certain temperamental, skill and other knowledge and competency requirements that can be acquired, learnt and developed, both by formal educational and vocational training as well as by observation and work experience. Such an understanding of the process of entrepreneurship is crucial for dispelling the myth that entrepreneurs are born rather than made.
2. **Lawful and Purposeful Activity**: The object of entrepreneurship is lawful business. It is important to take note of this as one may try to legitimise unlawful actions as entrepreneurship on the grounds that just as entrepreneurship entails risk, so does illicit businesses. Purpose of entrepreneurship is creation of value for personal profit and social gain.
3. **Innovation**: From the point of view of the firm, innovation may be cost saving or revenue-enhancing. If it does both it is more than welcome. Even if it does none, it is still welcome as innovation must become a habit! Entrepreneurship is creative in the sense that it involves creation of value. By combining the various factors of production, entrepreneurs produce goods and services that meet the needs and wants of the society. Every entrepreneurial act results in income and wealth generation. Entrepreneurship is creative also in the sense that it involves innovation introduction of new products, discovery of new markets and sources of supply of inputs, technological breakthroughs as well as introduction of newer organisational forms for doing things better, cheaper, faster and, in the present context, in a manner that causes the least harm to the ecology/ environment.
4. **Organisation of Production**: Production, implying creation of form, place, time personal utility, requires the combined utilisation of diverse factors of production, land, labour, capital and technology. Entrepreneur, in response to a perceived business opportunity mobilises these resources into a productive enterprise or firm. It may be pointed out that the entrepreneur may not be possessing any of these resources; he may just have the 'idea' that he promotes among the resource providers. In an economy with a well-developed financial system, he has to convince just the funding institutions and with the capital so arranged he may enter into contracts of supply of equipment, materials, utilities (such as water and electricity) and technology. What lies at the core of organization of production is the knowledge about availability and location of the resources as well as the optimum way to combine them. An entrepreneur needs negotiation skills to raise these in the best interests of the enterprise.
5. **Risk-taking**: It is generally believed that entrepreneurs take high risks. Yes, individuals opting for a career in entrepreneurship take a bigger risk that involved in a career in employment or practice of a profession as there is no "assured" payoff. In practice, for example, when a person quits a job to start on his own, he tries to calculate whether he or she would be able to earn the same level of income

or not. To an observer, the risk of quitting a well-entrenched and promising career seems a “high” risk, but what the person has taken is a calculated risk.

Conclusion

MSMEs address major challenges of the overall Indian economy also, that are unemployment and poverty. By reducing regional imbalances, giving employment to local people living in rural areas, they have done their part to knock-down disparities. Acting as a motivational factor for the existing MSMEs and as an aspiration factor for the potential MSMEs, increase in the income of people and the trend of promoting the interests of consumers, there will be various opportunities for MSMEs to play with in the domestic as well as export-market. Around the world, MSMEs are known for its capability of acting as a turbo to the engine of development for the economy; hence the advisor and policy makers should give them their due credit by making and implementing policies for them diligently. Furthermore, government must act on the recommendations given by different institutions/committees on the MSME sector. As far as banking and other financial institutions are concerned, they have done quite well by providing easy finance, but now there is the need for them to put their heart out for MSMEs so that more and more units make use of the numerous financing schemes that are available at present. For it, government shall introduce a new credit giving agency solely for the MSME sector.

Investment Banking

DR.T.Mohana Sundari, Assistant Professor, Department of Commerce with Computer Applications, NGM College,
V.Karthika, III B.COM CA, Department of Commerce with Computer Applications, NGM College,

ABSTRACT

Investment banking is a field of banking that aids companies in acquiring funds. In addition to the acquisition of new funds, investment banking also offers advice for a wide range of transactions a company might engage in. An investment bank is a financial institution that assists individuals, corporations and governments in raising capital by underwriting and/or acting as the client's agent in the issuance of securities. An investment bank may also assist companies involved in mergers and acquisitions, and provide ancillary services such as market making, trading of derivatives, fixed income instruments, foreign exchange, commodities, and equity securities. Investment bankers identify capital opportunities, negotiate and structure deals, and execute private and public financial transactions. The essential function of an investment bank is to act as an intermediary between potential investors and those who seek capital. Investors include individuals, mutual funds, municipalities, public corporations, and private institutions. An investment banking firm also does a large amount of consulting. Investment bankers give companies advice on mergers and acquisitions, for example. They also track the market in order to give advice on when to make public offerings and how best to manage the business' public assets. Some of the consultative activities investment banking firms engage in overlap with those of a private brokerage, as they will often give buy-and-sell advice to the companies they represent.

I. INTRODUCTION

The term "finance" in our simple understanding is perceived as equivalent to 'Money'. But finance exactly is not money; it is the source of providing funds for a particular activity. Providing or securing finance by itself is a distinct activity or function, which results in Financial Management, Financial Services and Financial Institutions. Finance therefore represents the resources by way funds are needed for a particular activity. We thus speak of 'finance' only in relation to a proposed activity. Finance goes with commerce, business, banking etc. Finance is also referred to as "Funds" or "Capital", when referring to the financial needs of a corporate body.

The mixture of banking and commerce is hardly a revolutionary concept. Banking and commerce have been mixed in the United States since the birth of the republic, and they remain mixed today. It was not until 1956, when the Bank Holding Company Act prohibited nonbanking corporations from owning two or more commercial banks, that "the basic principle of separation of banking and commerce was established".

A bank is a financial institution and a financial intermediary that accepts deposits and channels those deposits into lending activities, either directly or through capital markets. A bank connects customers that have capital deficits to customers with capital surpluses. Due to their critical status within the financial system and the economy generally, banks are highly regulated in most countries. They are generally subject to minimum capital requirements which are based on an international set of capital standards, known as the Basel Accords. The Bank for International Settlements (BIS) is an international organization which fosters international monetary and financial cooperation and serves as a bank for central banks. The Basel Accords refer to the banking supervision Accords (recommendations on banking regulations)—Basel I, Basel II and Basel III—issued by the Basel Committee on Banking Supervision (BCBS). They are called the Basel Accords as the BCBS maintains its secretariat at the Bank for International Settlements (BIS) in Basel, Switzerland and the committee normally meets there.

Investment banking is a field of banking that aids companies in acquiring funds. In addition to the acquisition of new funds, investment banking also offers advice for a wide range of transactions a company might engage in. An investment bank is a financial institution that assists individuals, corporations and governments in raising capital by underwriting and/or acting as the client's agent in the issuance of securities. An investment bank may also assist companies involved in mergers and acquisitions, and provide ancillary services such as market making, trading of derivatives, fixed income instruments, foreign exchange, commodities, and equity securities. Investment bankers identify capital opportunities, negotiate and structure deals, and execute private and public financial transactions.

The essential function of an investment bank is to act as an intermediary between potential investors and those who seek capital. Investors include individuals, mutual funds, municipalities, public corporations, and private institutions. An investment banking firm also does a large amount of consulting. Investment bankers give companies advice on mergers and acquisitions, for example. They also track the market in order to give advice on when to make public offerings and how best to manage the business' public assets. Some of the consultative activities investment banking firms engage in overlap with those of a private brokerage, as they will often give buy-and-sell advice to the companies they represent. Unlike commercial banks and retail banks, investment banks do not take deposits. There are two main lines of business in investment banking. Trading securities for cash or for other securities (i.e., facilitating transactions, market-making), or the promotion of securities (i.e., underwriting, research, etc.) is the "sell side", while dealing with pension funds, mutual funds, hedge funds, and the investing public (who consume the products and services of the sell side in order to maximize their return on investment) constitutes the "buy side". Many firms have buy and sell side components.

II. INVESTMENT BANKS AND INVESTMENT BANKING IN INDIA

Investment Banks are financial intermediaries who help businesses in fund raising. An investment bank or an investment banking firm is a kind of a financial institution, which assists governments, corporations and even individuals in raising assets by underwriting or acting as an agent of client for issuing securities. Such an organization even assists companies in Mergers and Acquisitions and offer ancillary services like market making, foreign exchange, trading of derivatives, commodities, equity securities and instruments of fixed income. Investment Banking in India has evolved over a period of time. As per Indian Regulations, it is not allowed for one legal entity to perform all investment banking functions. Bankruptcy remoteness is a key feature while structuring the business lines of an investment bank. Therefore, Indian Investment banks follow a conglomerate structure by keeping their business segments in different corporate entities to meet regulatory norms.

III.OBJECTIVES OF INVESTMENT BANKING

An Investment Banker is an intermediary between the capital markets (investors) and corporations (borrowers). He offers strategic advice and performs financial analysis. He also does research and analyses all public information to give advice on publicly listed stocks and bonds to investors and sales and trading groups. The objectives of Investment Banking include:

- Guidance
- Project Formulations
- Implementation
- Modernization
- Diversification
- Mobilizing resources
- Raising Capital

IV. INVESTMENT BANKING ACTIVITIES

Investment Banks provide a wide range of financial services to clients. They structure Mergers and Acquisition deals, raise capital, analyze prospects of listed companies and offer advice, trade in securities on behalf of clients etc. Therefore, Investment Banking can be defined to encompass many activities such as

a) Corporate Advisory Services:

- Identify promising projects
- Prepare feasibility studies - economic and financial
- Prepare in-depth project reports
- Capital structuring
- Arrange and negotiate foreign collaborations
- Give guidance on amalgamations, mergers and takeovers

b) Raising Capital, Syndication of loans and project finance

- Aid in applying to financial institutions, banks and other sources of finance
- Expert advice on government policies, demand-supply gaps, raw material availability, product-mix, plan capacity utilization, requirements of plant and machinery etc
 - Consultation about alternative sources of finance, debt-equity ratios, etc
 - Liaison with government departments, financial institutions, banks etc
 - Advise and assistance for modernization, expansion and diversification
 - Private equity deals
- Issue management
 - Deciding on the size and timing of a public issue in the light of market conditions
- Preparing the base of successful issue marketing from initial documentation, liaison with Securities and Exchange Board of India (SEBI), and preparation of actual launch
 - Optimum underwriting support
 - Appointment of bankers and brokers as well as issue houses
 - Issue management
- Professional liaison with share market functionaries like brokers, portfolio managers and financial press for pre-selling and media coverage
 - Preparation of draft prospectus and other documents
 - Wide coverage throughout the country for collection of applications advertisement.

V. PROFESSIONAL OPPORTUNITIES IN INVESTMENT BANKING INDUSTRY

There are a plethora of job titles available in the investment banking industry. They include:- Corporate Finance, Mergers and Acquisitions, Project Finance, Sales and Trading, Structured Finance, Derivatives, Advisory, Equity and Fixed Income Research, International Sales/Emerging Markets, Public Finance, Retail Brokerage, Institutional Sales, and Ratings Analyst. Some of the most prominent fields in the investment banking industry include:

a. Corporate Finance - The job of the corporate finance officer is to create value for a company. Those in this field work for a company in order to help it generate money to run the business, grow the business, make acquisitions, plan for its

financial future and manage any cash on hand. Corporate Finance professionals determine the funding needs of their clients and analyze the best alternatives to meet these needs, such as debt or equity issuance. Typical clients include corporations and public institutions. Other duties may involve working with investors interested in financing these ventures. Corporate finance professionals are trying to maximize shareholder value. They do this through managing cash flow, negotiating terms with leaders and suppliers, monitoring liquidity, managing risk, and raising funds. Typical job titles in this area include treasurer, credit analyst, cash manager, investor relations officer, and controller. Corporate Finance opportunities can be found in both large and small companies and in diverse industries. The skills most needed for a career in corporate finance include analytical and negotiation skills, 15 computer and communication skills, a willingness to take risks, a strategic way of thinking, and a competitive spirit.

b. Sales & Trading - Positions in this area involve analyzing stocks, bonds, and other securities for potential trading. This information is then shared with institutional investors and corporations. These positions require an in-depth knowledge about financial markets, as well as the ability to make quick decisions that may involve a great deal of risk.

c. Mergers & Acquisitions - Companies utilize investment banks when they want to sell all or a portion of their corporation. A career in this area involves analyzing the value of assets and negotiating the sale. M&A professionals are responsible for determining how much involvement their clients should have.

d. Analysts - This entails following the economy and key indicators of market stability. The investment bankers in this field may research individual companies and industries or the overall market. Forecasting future activity and risks involved are their key responsibilities.

e. Research - Most major investment banks employ a research staff that performs the risk, economic, and financial analysis used to support internal operations, from acquisitions and mergers to formulating trading positions in world, US, and regional markets. The profitability of an investment bank is directly related to the quality of its research analysis.

VI. CHALLENGES TO INVESTMENT BANKING BUSINESS

Scarce Capital Resources: The corona virus pandemic has created recessions and depressions all over the world. As a result, in almost all markets, individuals, as well as companies, are not very comfortable investing their money. They would rather hold on to their money for some time rather than invest it in the short run. This has created a world where capital resources are scarce. The job of investment bankers is to allocate capital resources efficiently. If there are fewer capital resources to be allocated, then there is a reduced business for the investment bankers in general. This has become a challenge for the entire industry since they are looking at a prolonged recession.

Need to Reduce Costs: Markets all over the world have become increasingly competitive. As a result, the prices of goods and services are going lower. This is having a ripple effect on the finance industry as well. Companies are facing shrinking margins, and hence the cost of capital is going down as well. The problem is that the investors are already afraid to invest money. In such a scenario, they expect more compensation in order to induce them to invest. However, the market is actually reducing the interest rates as well as the costs of equity. Hence, investment bankers are not able to reconcile the needs of corporations as well as the investors, which is creating a challenge for them as far as effective intermediation is concerned.

Increased Regulations: The investment banking industry was blamed for the mortgage crisis of 2008. This is the reason why heavy regulations have since been put into place. The new structured financial products which are created and sold by the finance industry are heavily scrutinized by the regulatory agencies. This creates limits on the operations of the investment banks. The number of new types of securities being created and traded by investment banks has seen a reduction post 2008. Adhering to the regulations adds to the costs at investment banks. Separate departments have to be maintained in order to ensure that the bank is compliant with the changing regulations. This also makes the services of investment banks more expensive and hence less competitive.

Technology Disruption: The rapid advances in technology have drastically changed every industry in the world. The world of investment banking is no exception, either. Over a period of years, an entirely new industry called fintech has emerged. The fintech industry is all about leveraging the use of financial technology in order to provide the same financial services for a lower price. For instance, modern fintech companies have shown that they can be more effective at raising capital as compared to investment banks. Their access to the best technology and modern network ensures that they are able to raise capital at a lower cost. Also, they have a wider reach as compared to traditional investment banks.

There are more examples where the use of technology has been more effective than investment banks. For instance, in the recent past, Bitcoin has been effectively used in order to raise capital from foreign sources. The transaction costs in the case of Bitcoin have been remarkably less as compared to the transaction costs related to normal cross border financing. If the investment banking industry does not imbibe the use of technology with immediate effect, it will soon be at the risk of becoming obsolete, thanks to fintech.

Difficulty in Cross-Selling: Investment banks have traditionally relied a lot on cross-selling. For instance, if a client comes in looking for mergers and acquisitions advisory, investment banks are often able to convince them to avail services such as issue management, capital structure advisory, and so on. There is no doubt about the fact that investment banks generate value for clients while doing these activities. However, in the current scenario, corporations have limited budgets. This means that they

have clearly instructed their finance departments to limit the number of services that they avail. This decreased budget is translating into decreased revenue for research and other departments in investment banks, which are heavily dependent upon cross-selling revenue. Companies are preferring to avail services from specialists instead of buying all the services from an investment bank for a bundled price.

VII. CONCLUSION

Investment banking taken generally to mean the financing of long-term capital needs, came into being with the merchants of medieval trade routes. In almost all developed economies of the world, even those developing late in the 19th century, investment bankers emerged from merchant roots. The provision of investment banking services has come from a variety of institutions over time and across countries. Products and services have evolved to include complex, often derivative, securities, and the legal regulation of investment banking has often changed abruptly, particularly in the last 100 years. Thus, even well-known investment banking names that have endured over the centuries bear little resemblance to their ancestors.

Abstract

Digital ecosystems are always more extensive than any single business ecosystem and often decimate traditional market boundaries. They typically pull together various markets and stakeholders from diverse industries, connecting them in ways that were unimaginable before the digital revolution. Since the turn of the millennium, the world's most successful companies and growth drivers have almost all achieved their positions of dominance by broadening their role within larger digital ecosystems -- of which their original business model was merely a part. The technical, legal and business-related difficulties found in digital ecosystems are significant. Service orchestration, delivery and monetization, as well as customer engagement and data management (CDM) across the entire ecosystem, are some of the biggest challenges. Hundreds of digital education tools have been created with the purpose of giving autonomy to the student, improving the administration of academic processes, encouraging collaboration, and facilitating communication between teachers and learners. Time and budget are both potential barriers to implementing new technology. But partnering with digitally innovative companies can jump-start digital transformation. Building a digital ecosystem can give access to customer analytics and data, as well as new digital features or products that would be time-consuming and expensive to try and build in-house.

Keywords: *Digital Ecosystem, Digital Learning, Online Learning, Educational Environment, Digital Learning System.*

Introduction

A digital ecosystem is a group of interconnected information technology resources that can function as a unit. Digital ecosystems are made up of suppliers, customers, trading partners, applications, third-party data service providers and all respective technologies. Interoperability is the key to the ecosystem's success. The variety of digital ecosystems is already broad and most of the well-known ecosystems span multiple industries and involve different sectors of industry, partners, competitors, customers, and businesses. This defies also traditional mindsets in the industry. The “control and centralize” approach is breaking apart and a mindset of “connecting and combining” comes forward. That is why it is also one of the most successful disruptive business models. So, one of the most important parts is to understand that these digital ecosystems are not able to survive with just one single participant. There are different roles involved to make it work. Sometimes even giving the competitor a better position can pay off.

Digital Ecosystem

Digital ecosystems are frequently created and controlled by market share leaders; the model has its roots in keiretsu and is quickly influencing change in various industries,

including consumer products, automotive and healthcare. The integration of business-to-business (B2B) practices, enterprise applications and data within an ecosystem allows an organization to control new and old technologies, build automated processes around them and consistently grow their business.

Unmanaged, organic growth of an ecosystem can be fatal to a business. It's important when building an ecosystem to ensure all dependencies have been identified and can be controlled. Creating a digital ecosystem map is a key to establishing a strong ecosystem. The digital ecosystem map is a visual diagram of all digital tools and platforms used within the organization. It illustrates processes, how data is transferred between parts of the ecosystem and whether the process is automated or manual. To be effective, mapping should also document which systems are not currently connected or able to speak and transfer data between each other, as well as who the users of each system are and who is responsible for maintaining them.

Process of Digital Ecosystem

The technical, legal and business-related difficulties found in digital ecosystems are significant. Service orchestration, delivery and monetization, as well as customer engagement and data management (CDM) across the entire ecosystem, are some of the biggest challenges. The tools for managing an ecosystem can fall into the following categories:

- Project management tools, such as Agile software development tools, task management software and issue tracking systems.
- Research applications, including data storage and visualization, resource libraries and archives.
- Engagement tools, like email marketing, donor management tools and customer relationship management (CRM) software.
- Collaboration tools, including email, file sharing, instant messaging and video conferencing.
- Public platforms, such as websites, Mobile apps and social media channels.
- Knowledge management platforms, such as intranets and wikis.
- How to map a digital ecosystem
- The digital ecosystem map is essential to any digital transformation. The goal of the map is to clarify what an organization has to work with, guarantee they have the proper tools to support their goals, and ensure they are being as efficient and effective as possible in achieving those goals.

Digital Ecosystem in Education

The adoption of digital learning solutions has accelerated since the start of the COVID-19 pandemic. With multiple technologies at play, it is vital that these integrate and work together to ensure efficiency and accuracy when creating, assigning, distributing, and reporting on learning activities for the organisation. It must also integrate with HR

processes, payroll, performance management and communication – each time a new technology is added, it's vital that it works seamlessly as part of the bigger picture.

An ecosystem in the environmental sense is defined as “a biological community of interacting organisms and their physical environment”. In the context of digital learning, Gartner defines it as “an interdependent group of enterprises, people and/or things that share standardised digital platforms for a mutually beneficial purpose, such as commercial gain, innovation or common interest”.

A healthy ecosystem in the natural world remains sustainable due to its ability to maintain its structure and function against external stress. Likewise, we must pay attention to the individual components of the digital learning ecosystem within our own organisations and the internal/external forces that affect them if we want to keep that ecosystem thriving.

Components of a Good Digital Learning Ecosystem

A good digital learning ecosystem provides people with relevant, personalised learning content that can be incorporated into daily workflows. It provides one source of truth for all learning, skills and performance data, creating a collaborative environment where learning and performance data can be measured to validate business goals. Built upon social constructivism, a good digital ecosystem increases engagement by facilitating a learning experience aligned with self-led discovery. This is supported by ‘scaffolding’ in the form of peer collaboration, which helps guide learners when necessary while still granting them the freedom to create understanding for themselves. For a holistic understanding of learning, talent development and performance in organisation, 'll need to consider the individual components of a digital ecosystem and how they interact.

The Learning System

Learning system, whether that's a learning management system (LMS), learning experience platform (LXP) or smarter learning system like Thinqi, is the heart of digital learning ecosystem – in fact, 72% of organisations report gaining a competitive advantage through use of a learning system. A good learning system will include the following:

- A digital library populated with high-quality learning content
- Courses
- Functionality to support coaching and mentoring
- Collaborative discussion spaces
- Tools for detailed learner reports
- Reward mechanisms such as badges or certification
- Networks for communities of practice
- Events management
- Adaptive learning paths
- Integration with third-party content (via SCORM or xAPI)

The Human Resources Management System (HRMS)

Human resources management system (HRMS) is used to manage HR processes throughout the employee lifecycle. The HRMS can be integrated with learning system so that employee data is automatically synced across both systems. It will pull through the organisation structure and assign the correct roles and permissions to people within the business. It can also facilitate auto-enrolment of learning pathways, such as on boarding and compliance training for new hires. There is a cross-departmental requirement here where multiple departments will need to define the core competencies and requirements for roles within that area of the business. This will enable the necessary configuration to auto-enrol people into the relevant learning pathways to help them attain the competencies required in their roles. By integrating HRMS with learning system, there's no need to manually enter the same employee data into multiple systems. This saves time building complicated spreadsheets, creates a streamlined talent and learning process, and reduces the scope for errors.

Digital Tools

Hundreds of digital education tools have been created with the purpose of giving autonomy to the student, improving the administration of academic processes, encouraging collaboration, and facilitating communication between teachers and learners. Here we present 11 of the most popular.

1. Edmodo

Edmodo is an educational tool that connects teachers and students, and is assimilated into a social network. In this one, teachers can create online collaborative groups, administer and provide educational materials, measure student performance, and communicate with parents, among other functions. Edmodo has more than 34 million users who connect to create a learning process that is more enriching, personalized, and aligned with the opportunities brought by technology and the digital environment.

2. Socrative

Designed by a group of entrepreneurs and engineers passionate about education, Socrative is a system that allows teachers to create exercises or educational games which students can solve using mobile devices, whether smartphones, laptops, or tablets. Teachers can see the results of the activities and, depending on these, modify the subsequent lessons in order to make them more personalized.

3. Projqt

Projqt is a tool that allows to create multimedia presentations, with dynamic slides in which can embed interactive maps, links, online quizzes, Twitter timelines, and videos, among other options. During a class session, teachers can share with students academic presentations which are visually adapted to different devices.

4. Thinglink

Thinglink allows educators to create interactive images with music, sounds, texts, and photographs. These can be shared on other websites or on social networks, such as Twitter and Facebook. Thinglink offers the possibility for teachers to create learning methodologies that awaken the curiosity of students through interactive content that can expand their knowledge.

5. TED-Ed

TED-Ed is an educational platform that allows creating educational lessons with the collaboration of teachers, students, animators—generally people who want to expand knowledge and good ideas. This website allows democratizing access to information, both for teachers and students. Here, people can have an active participation in the learning process of others.

6. cK-12

cK-12 is a website that seeks to reduce the cost of academic books for the K12 market in the United States and the world. To achieve its objective, this platform has an open source interface that allows creating and distributing educational material through the internet, which can be modified and contain videos, audios, and interactive exercises. It can also be printed and comply with the necessary editorial standards in each region. The books that are created in cK-12 can be adapted to the needs of any teacher or student.

7. ClassDojo

ClassDojo is a tool to improve student behavior: teachers provide their students with instant feedback so that good disposition in class is 'rewarded' with points and students have a more receptive attitude towards the learning process. ClassDojo provides real-time notifications to students, like 'Well Done David!' and '+1', for working collaboratively. The information that is collected about student behavior can be shared later with parents and administrators through the web.

8. eduClipper

This platform allows teachers and students to share and explore references and educational material. In eduClipper, can collect information found on the internet and then share it with the members of previously created groups, which offers the possibility to manage more effectively the academic content found online, improve research techniques, and have a digital record of what students achieved during the course. Likewise, it provides the opportunity for teachers to organize a virtual class with their students and create a portfolio where all the work carried out is stored.

9. Storybird

Storybird aims to promote writing and reading skills in students through storytelling. In this tool, teachers can create interactive and artistic books online through a simple and

easy to use interface. The stories created can be embedded in blogs, sent by email, and printed, among other options. In Storybird, teachers can also create projects with students, give constant feedback, and organize classes and grades.

10. Animoto

Animoto is a digital tool that allows to create high-quality videos in a short time and from any mobile device, inspiring students and helping improve academic lessons. The Animoto interface is friendly and practical, allowing teachers to create audiovisual content that adapts to educational needs.

11. Kahoot!

Kahoot! is an educational platform that is based on games and questions. Through this tool, teachers can create questionnaires, discussions, or surveys that complement academic lessons. The material is projected in the classroom and questions are answered by students while playing and learning at the same time. Kahoot! promotes game-based learning, which increases student engagement and creates a dynamic, social, and fun educational environment.

Conclusion

At the moment, digital transformation has become one of the most important educational trends, especially taking into consideration the current situation that's occurring around the world. When the business has quick and constant access to learning content, it's possible to gain knowledge and complete tasks from anywhere. And one should know that situations require it quite often. With eLearning tools, one can respond to the latest requirements of the educational sector. Time and budget are both potential barriers to implementing new technology. But partnering with digitally innovative companies can jump-start digital transformation. Building a digital ecosystem can give access to customer analytics and data, as well as new digital features or products that would be time-consuming and expensive to try and build in-house.

Abstract

Education creates pathway for obtaining and creating knowledge among the human beings. New Education Policy also emphasizes the importance of knowledge creation and innovation. Innovation is the mother of inventions. Innovation is never ending since the technology keeps on updating itself with new standards and formats. The knowledge creation and innovation are inter-related and inter-dependent. Schools, colleges and universities involve in the process of knowledge creation and transmission. Knowledge creation is not so easy task as one thinks. It is complicated, perishable and different from person to person in terms of reachability. Teachers' role is crucial in creation of knowledge and transmission of knowledge to the leaning community is also important. So, the current articles highlights the knowledge creation and innovation in Higher Education Institutions (HEIs), including the sub topics: Knowledge, Types of knowledge, Process of knowledge creation, Information Technology in Knowledge creation, Innovation in knowledge creation, Higher education institutions in knowledge creation and Problems in knowledge creation. The important and relevant concepts were discussed in this article to signify the knowledge creation and innovation methodologies.

Keywords: *Knowledge, Types of knowledge, Process of knowledge creation, Information Technology in Knowledge creation and Innovation in knowledge creation*

Introduction

Knowledge is fundamental aspect of many aspects. All the disciplines such as Engineering, Science, Mathematics, Commerce, Management, Computing and so on require the application of knowledge. Knowledge is understood by different people in different meanings. But, it is common that it is related to understanding and experience. This current article discusses the creation of knowledge and innovation in higher educational institutions. Higher education plays major role in social development and economic infrastructure in the country. As per the policy of NEP 2020, Higher education institutions should play major role in creation, retention and transmission of knowledge. The knowledge creation and innovation are the primary functions of education service. Both are continuous and ongoing process.

Knowledge

Knowledge means awareness, familiarity or understanding of a factual information, descriptions. It is always acquired through experience or education by assuming, discovering or learning. Knowledge is different from skill and talent. Talent is inborn in human beings. Skill is acquisition of ability to do something. Knowledge includes talent and skill. But they are not one and same. Knowledge is not limited to education. Education just supports in acquisition of knowledge.

Knowledge creation and development are the essentials of man making process. Especially, Education sector is more concerned with the creation, development and retention of knowledge in the minds of human beings. Knowledge means different to different people. Process of knowledge creation includes many methods and techniques. Knowledge may be theoretical or experimental.

Types of Knowledge

Knowledge	
Explicit knowledge	Tacit knowledge

Explicit knowledge is a kind of informational fact which is searchable and easy to find. Users of such knowledge can integrate regarding the value and use of this knowledge. Eg. Manuals, documents, plans and procedures, how-to-do videos, etc.

Tacit knowledge means knowledge existing in minds of people virtually. Usually it is not explorable like explicit knowledge. It is also not sharable information or content with another person orally or in writing. Eg. Knowledge of walking, running, riding bicycles swimming, etc.

Though ideas are created in the minds of individuals, but the interaction critically between individuals which plays a critical role in developing these ideas. To mention typically, Interacting communities shall contribute to the creation and development of new knowledge sets. In today's marketing world, knowledge creation and knowing how management of knowledge are of top priority for everyone. Businesses which manage the information well, have an important edge over their competitors. The advanced economies of today rapidly become economies of knowledge, where the creation and marketing of knowledge turn overruling.

Knowledge Creation

Knowledge Creation literally means the continuous integration, transferring and conversion of different types of knowledge to the users or people. It happens when users try to interact, to practise and to learn. In simple words, it is the creation of various ideas, which is similar to the heart of a company's competing advantage.

Competitive or competing advantage is one that a company possesses while it has the edge over its competitive enemies and rivalries. Especially, when it has the corner of the provision for a certain product or service or brand. Knowledge creation is the formulating process of new notions, technics and conceptual facts. It happens through the human interactions between explicit and tacit knowledge of people.

Generally *intuition is accepted and valued* and where *experience is nothing more than merely a theory*. These concepts flashbacks to the idea of theory in use (pointing out to working environments that do not usually follow strict, "official" rules, protocols and procedures) and the acceptance and support of environments which allow brain-storming tasks, trial and error methods and unstructured interaction activities.

In the view of innovation theory, one shall refer to the practice of establishing key teams to solve problems of queries, unhindered by the bureaucracy policies that may exist in the firm alike the value of chaos and the benefits of smaller alongside fast-acting teams. One common alternative method is the usage of cross-functional project teams in the institutions and organizations. They are normally a group of experts persons from different parts of the organizations, which is guided by a "generalist" known project leader. If those teams are allowed with the decision making powers and independence to experiment and work in an autonomous and freed or virtually autonomous environment, it could be a great catalyst for brining innovation and new knowledge creation practically in the process.

Once the activity is completed, the members return back to their role in the organizations, by extending help to the firm to spread this knowledge back into their respective community of practices. The project team shall also facilitate the creation of bridges normally between communities of practice and at any times may even serve as a provision to extend them on as and when required basis. Deviations of this concept can be seen in many places in innovation theory in existences.

To provide facility for supporting the work tasks and flow: It can be normally groupware systems which facilitate communication or brainstorming activities. Anyhow, they should not be interference with creative processing or communities of practices, or should not enforce the rigidly stiff organizational practices.

To provide knowledge-base personnel with timely, relevant information and data. In today's rapidly fast and rapid-paced environment, It is invisibly synonymous with the implementation processes of IT systems which can store, retrieve, organize, and exhibit information and data in a helpful manner effectively.

IT and Knowledge Creation

The usage of IT is unavoidable and very much indeed. The IT is for sharing knowledge, allowing for support in the transferring process of all the knowledge kinds. An important view is that it must be supportive and should not interfere with informal collaboration works. For example, groupware systems shall be devised to enhance communication between clustering groups or teams, particularly if the support is varied (Eg: audio, video, textual materials—as per the necessities of the individual firms) informal communication.

Beyond this argument, IT also has a crucial role to play through information management systemized services, by offering access to data and information facts, for empowering the managers to perform in-depth analysis often. Even more, IT systems shall also be programmed to find out current and future trends in data and information science and showcase them to the management for decision making. It essentially stimulates the manager to take better decisions of business and helps in knowledge creation by offering some of the building blocks tactics for new knowledge delivery efficiently. IT tools and methods shall also be utilized in the innovation processes. But they are outside the limits of knowledge management in most of the cases.

Knowledge Creation Management

Knowledge creation management usually refers to the systematic process of sharing, creation, usage and management of an organization's knowledge sets and information effectively, timely and efficiently. It is based on multidisciplinary approach to take advantages of the best usage of knowledge or information. It is a wide and popular field among various services. In fact, many large institutions and companies, non-profiting organizations and public undertaken institutions devote the resources to the knowledge management properly.

The management of knowledge is quite often a part of business strategies making, human resource management or IT department's policies in the business and non-business sphere. IT here means Information Technology (Computing). Its efforts usually focus on overall objectives such as innovation, R&D and higher output productivity. It also concentrates on competitive advantage, integration of resources, the sharing of lessons and experiences learned and the on-going improvisations and mechanisms of the business ventures. Almost in all the cases, these efforts can overlap normally with organizational learning pattern.

Knowledge Creation Process in HEIs

The *knowledge creation process* has the elements of invention and innovation of new concepts, patterns, approaches, methods, techniques, products, services, and

ideas which can be utilized for the ultimate benefits of stakeholders including people, society and organizations. Generating and exploring of new sources of customer demands, stimulating personal and organizational growth and rethinking – redesigning of the existing rules of the law can help organizations to develop, thrive and endure in knowledge domain. Failure in doing so, will lead to a situation of stagnation, decay or death of the enterprise or education institutions in due course.

In HEIs, knowledge management usually tries to help in triggering the imagination by offering a continually refilled source of ideas, facts and experiences for the students and learners. People do help to bring out the best ideas in each domain and discipline and other through the interactions as a part of networking systems physically or virtually. Analysis of collected knowledge showcases the patterns and opportunities for new developments and ventures. Many HEIs always like to be familiar for their innovations, but it is not always easy to turn the thought process into reality. Some measures such as connecting creative people by various communities like departments and associations, exploring patterns through analysis and testing and establishing flows of process or algorithms for creation of new knowledge could help to stimulate innovation among the students and faculties.

Examples

- First example is “Patent disclosure process”. When an ideology for an invention is being shared with others within a HEI, it can result in helpful suggestions for improvements and corrections. Colleagues acting as a sounding board for testing process, assumptions and referrals to others shall help in doing similar tasks.
- Second example is a process for converting practical experience into new standard methods. Providing a process for practitioners who discover improved methods of doing things or tasks to convert their thoughts into new ways or procedures, which will result in creation of new knowledge being provided to others of the ecosystem.
- Third example is frequently inviting innovation practitioners to share their latest ideas and inventions during community events or students programmes can become a process of knowledge creation. As part of those presentations, building in time for the community members like students and faculty to brainstorm about methods to apply the concepts, facts and ideas. Suggesting good ideas shall be taken and followed up on them during forthcoming events may be implemented.

- Forth example is providing a simple process for white papers normally to be submitted, clearly reviewed and published which helps in facilitating knowledge creation in HEIs. Providing a new way to subscribe to the recent publications in respective subject areas of interest, connecting with the authors and co-authors and collaborating on further nuances of published ideas can be implemented.

Practical Ideas for Innovation in HEIs

1. Motivating students and faculties to practise innovations both internally and externally, for ideas generation.
2. Following good standards and best practices from other organizations, say: **Netflix prize**.
3. Conducting testifying experiments and events to test innovative methods and ideas.
4. Using analytics methods and metrics to analyze the results and pick the ones that are mostly effective and workable.
5. Collection of suggested improvements, using rapid prototyping to find them out and then iterate and improve where required.
6. Enabling innovation by supporting integration of diversified tools.
7. Encouraging students and faculties to work on projects that are innovative and risky.
8. Encouraging the formulation of book clubs portals, discussion forums or groups and brainstorming engagements and events to involve people in thinking about innovative and better ways of doing things alternatively.
9. Taking the best ideas and methodology invented and implementing them.
10. Holding regularly innovation challenging tasks, tournaments, contests, programmes and activities of jams.
11. Asking people to use collaborative tools such as enterprise social networks (ESNs) to explore ideas and thoughts for improvisations, new steering and break-throughs if really required.
12. Inviting people outside the institution to speak over calls, present in meetings and participate in conferences, seminar and workshops.
13. Adapting the methodologies proposed by external speakers for use in the HEIs.
14. Setting up prediction forums to devise the knowledge of crowds to select between options or opportunities.

Conclusion

Knowledge creation usually depends upon the various mechanisms mentioned in the sub-section on knowledge sharing, integrated with the potential to use knowledge into real time practices in an environment that supports interaction and experiential experimentations among the students and faculties of Higher Education Institutions (HEIs). The creative knowledge creation process is really a delicate, quite complicated and sensitive one and it is easily vanished by strict following to rules and regulations or by bureaucracy rule system of supervisions and supports. Similarly, IT systems of HEIs must be implemented along with due-care and should not attempt to replace processes of importance to knowledge creation in the HEIs.

ARTIFICIAL INTELLIGENCE IN EDUCATION (AIED) AND AI AS A DISRUPTIVE TECHNOLOGY IN LEARNING

S. Rajagopalan

Assistant Professor

UG Department of Commerce with Computer Applications

NGM College (Autonomous), Pollachi, Tamilnadu

srajagopalan.ngm@gmail.com

Abstract

At its simplest form, artificial intelligence is a field, which combines computer science and robust datasets, to enable problem-solving. It also encompasses sub-fields of machine learning and deep learning, which are frequently mentioned in conjunction with artificial intelligence. These disciplines are comprised of AI algorithms which seek to create expert systems which make predictions or classifications based on input data. Over the years, artificial intelligence has gone through many cycles of hype, but even to skeptics, the release of OpenAI's ChatGPT seems to mark a turning point. The last time generative AI loomed this large, the breakthroughs were in computer vision, but now the leap forward is in natural language processing. And it's not just language: Generative models can also learn the grammar of software code, molecules, natural images, and a variety of other data types.

Introduction

Artificial Intelligence in Education is developing new solutions for teaching and learning for different situations. Nowadays, AI is being used by different schools and colleges across different countries. AI in education has given a completely new perspective of looking at education to teachers, students, parents, and of course, the educational institutions as well. AI in education is not about humanoid robots as a teacher to replace human teachers, but it is about using computer intelligence to help teachers and students and making the education system much better and effective. In future, the education system will have lots of AI tools that will shape the educational experience of the future. In this topic, we will discuss the impact and application of Artificial Intelligence on Education.

AI in Education

Artificial Intelligence (AI) has the potential to address some of the biggest challenges in education today, innovate teaching and learning practices, and accelerate progress towards SDG 4. However, rapid technological developments inevitably bring multiple risks and challenges, which have so far outpaced policy debates and regulatory frameworks. UNESCO is committed to supporting Member States to harness the potential of AI technologies for achieving the Education 2030 Agenda, while ensuring that its application in educational contexts is guided by the core principles of inclusion and equity.

Education is an important part of life for everyone, and a good education plays a vital role to have a successful life. In order to improve the education system for the students, there are always a lot of changes happening around the world, ranging from the way of teaching to the type of curriculum. Artificial Intelligence is a thriving technology that is being used in almost every field and is changing the world. One place where artificial intelligence is poised to make big changes is (and in some cases already is) in education

Overview of Aied (Artificial Intelligence in Education)

Artificial Intelligence (AI) is a simulation of human intelligence into a computer machine so that it can think and act like a human. It is a technology that helps a computer machine to think like a human. Artificial Intelligence aims to mimic human behaviour. AI has various uses and applications in different sectors, including education. In the 1970s, AIED has occurred as a specialist area to cover new technology to teaching & learning, specifically for higher education. The main aim of AIED is to facilitate the learners with flexible, personalized, and engaging learning along with the basic automated task. Some popular trends in AIED include Intelligent tutor systems, smart classroom technologies, adaptive learning, and pedagogical agents. Below diagram shows the relationship between all these trends:

Applications/Roles of Artificial Intelligence in Education

Automate basic activities in education with AI

In the education system, there are various activities which take lots of time of teachers such as grading tests and home-works. These tasks require lots of time and effort, while this time could be used in interacting with students, letting them know their errors, teaching new things, and many more. To save this time, Artificial Intelligence can be used. With AI tools, it is possible to automate the grading system for nearly all types of MCQ(Multiple choice questions) and fill-in-the-blank, and they are very close to being able to grade written responses.

Additional Support for students with AI tutor

As it is obvious that teachers can't be present with students all the time while they study, as teachers in colleges have fixed timings. But each student is not smart enough to grasp all the things at once, and they need additional supports from someone to help them in the understanding study material. This additional support can be provided by the AI tutors. Currently, there are various AI-driven tutoring programs that can help students in learning the basics of mathematics, writing, and other subjects. With these AI programs, students can learn fundamentals, but still, they are not suitable to learn high-level concepts of any subject

Helpful feedback to students and teachers with AI-driven programs

AI is not only helping the students to learn the customized course as per their requirements, but it can also give feedback to both the teachers and students about the success level of the course. Some online course providers are currently using such feedback-based AI systems to analyse the progress of the student and also alert the professors for the critical performance issue of the student. These type of AI-driven systems enables the student to get the proper support, and professors can determine the areas of teaching where it requires improvement. Instant feedback to students helps them understand where they are going wrong and how they can do it better.

Finding improvement required in course with AI

In the education system, it is very hard to find out the gaps in learning. Teachers have limited time to teach in the classroom, and they may not always know where the students are lacking and what concepts have confused the student. To solve this problem, AI-driven programs can help the education system. Coursera and some other learning platforms are already using AI-driven programs in practice. For example, when a large number of students are found to submit the wrong answer to a homework assignment, the system alerts the teacher and gives future students a customized message that offers hints to the correct answer.

Changing the role of the teacher.

Teachers always have a critical role in the education system, but this role and its requirement may change with the new technologies. As in the above points, we have already discussed that Artificial Intelligence can automate different tasks such as grading, reports, help students while learning, and may also be an option of real-world tutor in some cases. AI can be included in different aspects of teaching. AI systems can be programmed for providing expertise to students, a place where students can ask their doubts and could take the place of teacher for teaching basis course materials.

Personalize education with AI

The main aim of Artificial Intelligence in education is not to completely replace teachers. Instead, it aims to act as helping hands for teachers as well as students. AI

systems can be programmed to provide personalized learning to students. With personalized learning, each student can have their own way of learning as per their level of understanding and need. By understanding the needs of every student, teachers can come up with a tailor-made study plan for every student. As AI is developing day-by-day, it is possible that machines can identify the facial expressions of students while learning the concepts can understand if they are finding any difficulty in learning, and according to that make changes in the way of teaching.

Generating Smart content with AI

With AI, it is possible to generate smart content in three ways:

Digital Lessons	Nowadays, everything is becoming digital, and so the education. Digital learning is being preferred in colleges with customization options, e-books, study guides, bite-sized lessons, and many other things with the help of AI.
Information Visualization	Visualizing things rather than listening is much more efficient to understand in a better way and keep in mind for a long time. With Artificial Intelligence, the study information can be perceived in new ways of visualization, simulation, web-based study environment.
Learning content Updates	Moreover, AI also helps in preparing the content of lessons, keeping information up to date, and make it adaptable as per different learning curves.

Ensure Access to Education for Students with Special Needs

Life is full of challenges for those students who have some learning disabilities such as deaf or hard of hearing, visually impaired, etc. Such students may face various difficulties while learning and studying. Moreover, they also need extra care & time. With the adoption of innovative AI technology, there will be new ways of interacting with such students. AI-enabled tools can be successfully trained to help a group of students with special needs.

Universal Access

One of the great uses of Artificial Intelligence of digital learning in education is universal access to study material. Each student has his own grasping capability, and with the use of universal access, they can learn anywhere and anytime. Students can explore things whenever they want to learn without waiting for the tutor. Moreover, students get the facility of high-quality courses and material from all over the world at their place only without travelling away from their home.

Benefits of AI for Students

24*7 access to Learning

With AI-driven digital Learning, students can learn anywhere, anytime. Every learner is free to plan their schedule, rather than being linked to a specific place only. Everyone can make their learning easier and effective as per their most productive hours.

Better Engagement

With personalized learning, custom tasks, and digital visualisation, the study becomes more interactive and engaging. Personalized learning and great experience with AI-driven programs make students feel much confident and smarter as they can explore many things apart from their syllabus without any hesitation or fear of asking. All these things and new AI technologies are increasing the interest of students in studies.

Less Pressure

With AI-driven programs and personalized learning, students feel less pressure of studies. AI-enabled virtual assistants help the students whenever they ask a question, with a complete explanation. In the traditional learning methods, a student needs to ask queries in class in front of everyone, which might hesitate some students, and these issues can be resolved with the help of virtual assistants. However, all the questions can't be correctly answered by these virtual assistants. But for basic queries, they can be much helpful that can boost the confidence of each learner and reduce the pressure.

Future of AI in Education

As per the researches, in the near future, AI in education will step in three main ways, which are:

Performance personalization

With day-by-day development in AI technology and computing power, it will be possible to create personalized curricula through collecting and generalizing the information. Various new AI solution such as "Brightspace insights" helps the instructor to track, measure, and monitor the progress of learners, and also help them in this learning journey. It provides a complete picture of the learning journey of a learner across the platform.

Violation Bias

Human bias has always remained a hindrance in the education system and also an issue in AI tools. In future, AI in education will find new solutions that can evaluate work and tests exams using established criteria in order to eliminate bias.

Combined Assistance

Professors/teachers in colleges usually have masters in their field and have a degree in specific areas of development. But the administrative work is often a frustrating attempt at rapprochement with students. AI in education can solve this problem in the future with smart classrooms with AI assistance who can provide necessary help to the teachers to give their best.

AI-Guided Learning

Whether the public can see it or not, the education system is undergoing a transformation, and it will look drastically different than what we have known. This change has been in the making for years, with questions arising about the effectiveness of standardized testing, class size, personalized lessons, and much more. However, with the introduction of artificial intelligence (AI) and robotics now making it into the classroom and homes of students, we are just beginning to see the biggest change yet. It is time for a new approach to education and artificial intelligence, with a major focus being put on a new category led by ROYBI in this transformative field: “Self-Guided Learning Through AI.”

A big portion of self-guided learning takes place outside of the official classroom. That is why homework assignments have been used traditionally to allow students to repeat and practice what they have learned in the classroom, and also, develop self-discipline, self-reliance, and independent thinking. Roybi Robot encompasses this new idea of self-guided learning through AI and goes a step further, to use technology to assist students and teachers in a more efficient way. While Roybi Robot is not intended to replace the role of in-person instruction, it can allow any environment to become an extension of the classroom.

Being able to guide oneself through some portion of the learning process is an opportunity that every student would benefit from in our current unequal distribution of academic resources. It also greatly increases the effectiveness that a single instructor can have. For example, through the use of Roybi Robot, a teacher located anywhere around the world can teach any number of students without the restriction of classroom walls. On top of that, teachers can use the technology to track all of the students’ progress in one place.

Educational robots provide a variety of different ways for students to learn STEM disciplines and languages. There are a few main reasons kids learn better from robots than traditional methods, and much research has been done on the topic. The use of educational robots is more likely to elicit from the user beneficial behaviors for learning. They are perceived to be more engaging and enjoyable than virtual agents like tablets and computers. Research has also suggested that users respond and comply much more with physical robots compared to a video representation of the same robot.

Conclusion

Artificial intelligence and its uses in our lives are growing day by day in many segments. In the field of education, AI has started showing its influences and working as a helping tool for both the students and teachers and supporting the learning process. But still, the use of AI in education is not adapted by all the colleges completely, and it will take a long journey to do this. However, studies show that in the near future, AI will have a good impact on the education sector. It is currently transforming the education industry but is yet to show its real potential in education. Further, learning from computer systems can be much helpful, but it is unlikely to fully replacing human teaching in schools and colleges.

Abstract

Microenterprises are small businesses that are financed by microcredit, a small loan available to people who have no collateral, credit history, savings, or employment history. The modest loans are often sufficient to get a small local business off the ground. These businesses serve a vital purpose in improving the quality of life for people in developing countries, and generally provide a product or service in their communities. As the hazards connected to ecologically destructive products and services rise, green finance is becoming a mainstream phenomenon. Green finance delivers economic and environmental advantages to everybody. It broadens access to environmentally-friendly goods and services for individuals and enterprises, equalizing the transition to a low-carbon society, resulting in more socially inclusive growth. Digital India is a programme to transform India into digital empowered society and knowledge economy. The Digital India is transformational in nature and would ensure that Government services are available to citizens electronically. This article highlights the efforts of green financing and digital India towards the development of micro enterprises in India.

Keywords: *Micro Enterprises, MSMEs, Green finance, Green economy, Digital India, Economic development.*

Introduction

Microfinance seeks to help microenterprises by loaning small amounts of capital to these businesses. This allows individuals or families with moderate, low, or no income to start their own businesses, earn income, and contribute to their communities. Many banks grant microloans to those in need, but many are provided by non-profit organizations that cater specifically to microenterprise. Like regular loans, repayment with interest is required. Digital India programme was launched on 1st July, 2015 to enable digital delivery of services to citizens. Based on the success of the programme, the Union Cabinet during August 2023 approved the expansion of the Digital India programme. The total outlay is ₹14,903 crores. It broadens access to environmentally-friendly goods and services for individuals and enterprises, equalizing the transition to a low-carbon society, resulting in

more socially inclusive growth. This results in a 'great green multiplier' effect in which both the economy and the environment gain, making it a win-win situation for everyone.

Micro Enterprises

The term microenterprise, also known as a microbusiness, refers to a small business that employs few people. A microenterprise usually operates with fewer than 10 people and is started with a small amount of capital advanced from a bank or other organization. Microenterprises are small businesses, often funded with modest startup loans. They are financed by microcredit, a type of credit available to people who have no collateral, credit history, or employment history. Microcredit has helped improve the quality of life for people in developing countries, and generally provides a product or service needed in their communities.

Microenterprises are small businesses that are financed by microcredit, a small loan available to people who have no collateral, credit history, savings, or employment history. The modest loans are often sufficient to get a small local business off the ground. These businesses serve a vital purpose in improving the quality of life for people in developing countries, and generally provide a product or service in their communities. Microenterprises not only help improve the quality of life for business owners, but they also add value to the local economy. They can boost purchasing power, improve income, and create jobs.

Microfinance seeks to help microenterprises by loaning small amounts of capital to these businesses. This allows individuals or families with moderate, low, or no income to start their own businesses, earn income, and contribute to their communities. Many banks grant microloans to those in need, but many are provided by non-profit organizations that cater specifically to microenterprise. Like regular loans, repayment with interest is required.

In India

MSME (Micro, Small, and Medium Enterprise) term was introduced by the Government of India in agreement with the Micro, Small & Medium Enterprises Development (MSMED) Act, 2006. MSME is initiated and managed under the Ministry of MSME (MoMSME) are entities engaged in the production, manufacturing, processing, or preservation of goods and commodities. MSME sector is considered the backbone of the Indian economy and contributes nearly accounts for 27% of the country's GDP. It primarily works for the development of people from backward and rural areas.

As per the official MSME annual report of 2021-22, the Total number of MSMEs in India are 6,33,88,000 out of which 3,24,88,000 MSMEs (51.25%) are in rural area and 3,09,00,000 lakh MSMEs (48.75%) are in the urban areas. As per the official data of IBEF.com as of 25th

Nov 2022 as provided by Ministry of Micro, Small and Medium Enterprise (MoMSME), there are 12,201,448 Registered MSMEs in India at Udyam Registration Portal, wherein Micro-enterprises are 11,735,117 (96.17%), Small enterprises are 426,864 (3.49%) and Midsized enterprises are 39,467 (0.32%).

Green Financing

Simply put, green finance is a loan or investment that promotes environmentally-positive activities, such as the purchase of ecologically-friendly goods and services or the construction of green infrastructure. As the hazards connected to ecologically destructive products and services rise, green finance is becoming a mainstream phenomenon. Green finance delivers economic and environmental advantages to everybody. It broadens access to environmentally-friendly goods and services for individuals and enterprises, equalizing the transition to a low-carbon society, resulting in more socially inclusive growth. This results in a 'great green multiplier' effect in which both the economy and the environment gain, making it a win-win situation for everyone.

Types of Green Financing

Green Mortgages

They allow lenders to provide better terms to home purchasers of properties with a high environmental sustainability rating or if the buyer agrees to invest in enhancing the environmental performance of a property.

Green Loans

These are loans used to support environmental initiatives such as household solar panels, electric automobiles, energy efficiency projects, and more.

Green Credit Cards

Green credit cards such as Aspirations' Zero card plant a tree every time a customer makes a purchase. They enable customers to direct their expenditure toward green finance in order to have a lasting impact on the environment.

Green Banks

Green banks operate similarly to traditional banks, but they employ public funds to spur private investment in renewable energy and other environmentally friendly initiatives. According to a 2020 research, the number of green banks in the US increased from one to 20 between 2011 and 2020, investing \$7 billion in renewable energy.

Green Bonds

Green bonds account for the vast bulk of green funding. They include bond investments, the earnings from which are used to support a variety of green initiatives such as renewable energy, clean transportation, and conservation, among others.

Digital India

Digital India is a programme to transform India into digital empowered society and knowledge economy. The Digital India is transformational in nature and would ensure that Government services are available to citizens electronically. It would also bring in public accountability through mandated delivery of government's services electronically, a Unique ID and e-Pramaan based on authentic and standard based interoperable and integrated government applications and data basis.

Digital India programme was launched on 1st July, 2015 to enable digital delivery of services to citizens. Based on the success of the programme, the Union Cabinet during August 2023 approved the expansion of the Digital India programme. The total outlay is ₹14,903 crores. The vision is centred on three key area are: Digital infrastructure as Utility to Every Citizen, Governance and services on demand and Digital empowerment of citizens

Digital Infrastructure as Utility to Every Citizen

- ❖ Availability of high speed internet as a core utility for delivery of services to citizens.
- ❖ Cradle to grave digital identity that is unique, lifelong, online and authenticable to every citizen.
- ❖ Mobile phone and Bank account enabling citizen participation in digital and financial space.
- ❖ Easy access to a Common Service Centre.
- ❖ Shareable private space on a public Cloud.
- ❖ Safe and secure Cyber-space.

Role of Digital India in Micro Enterprises

Digital technology can significantly enable India's micro, small and medium enterprises (MSME) segment, provided the emerging infrastructure has joint buy-in from the government, solution providers and importantly users. The digital landscape catering to businesses has drastically changed in recent years, several elements have emerged that can start shaping the contours of a strong digital ecosystem. The challenges reside in addressing a complex and heterogeneous MSME segment, dominated by micro enterprises at different stages, and different levels of digital readiness. The incentive for businesses to

fully embrace digital technology would be to provide a digital ecosystem that provides end-to-end solutions, from finance access, payments, operations, management to even skilling and knowledge sources that are convenient.

MSMEs are a major contributor to the Indian economy, accounting for around 30% of Gross Domestic Product (GDP) and providing employment to over 110 million people (ministry of MSME, Annual Report 20–21). However, a more sombre story emerges when examining details. The Indian MSME sector is unique in its long fat tail of relatively unproductive micro enterprises, which are unregistered or informal, new-to-formal-credit, and characterised by low growth and employment per unit. Most of the micro enterprises are sole proprietorships with less than five employees. Furthermore, informal micro enterprises are responsible for 80% of employment while contributing only 20% of output. This highlights the composition of India's current business landscape of tiny self-employed informal enterprises with low quality human capital. Conversely, there is a severe deficit of formal, productive, and job-creating small and medium enterprises.

Furthermore, while the MSME segment is perceived as a significant job creator, the quality and conditions of the jobs created are often precarious and in the form of casual labour, daily labour and self-employment, often with very little or no job security. For most micro enterprises, the entire focus is on making sure the business stays afloat, and not on growing the business. This business stagnation hampers many crucial aspects for an enterprise to grow and achieve scale, such as efficiency, innovation and production quality. While the magnitude of these problems is well known, little progress has been made to address them efficiently given the complexity and interconnectedness. In effect, three critical ingredients needed for any early stage business to thrive, namely access to markets, skills and working capital, are sorely missing for most enterprises. On the other hand, significant public investment would be required to address these gaps and create effective market linkages, skills and mentorship, and access to finance.

Role of Green Financing for Micro Enterprises

In India it is projected that MSMEs contribute roughly 70 percent to the industrial pollution. These sectors are usually dominant in industries by relatively high resources and emission intensity. Green bonds offer a range of options for MSME financing, including the issuance of green bonds from banks that aggregate MSME loans, the securitisation of MSME loans into asset-backed securities and the issuance of mini-bonds by medium-sized enterprises. An added advantage of green bonds is greater market transparency. Green finance is any financial activity undertaken to deliver better environmental outcomes. With Green funding, sustainable development projects that contribute energy efficiency and cleaner production are applicable for the scope of this scheme.

MSMEs can help in increasing entrepreneurial activities, create employment opportunities and function in backward areas thereby creating sustainability. MSMEs have capability to create a large number of earning opportunities (though smaller) catering to a big segment of population ecosystem. The Green Action Plan (GAP), adopted in July 2014, aims to help small and medium-sized enterprises (SMEs) take advantage of the opportunities offered by the transition to a green economy. The GAP is expected to: raise SMEs' awareness of: Resource Efficiency improvements and Sustainability. Green financing incorporates principles of sustainability into their business decisions in order to reduce their negative impacts on the global or local environment. They do this by selling environmentally friendly products or by greening their processes to make them more environmentally sustainable

Conclusion

The study concluded that healthy environmental policies should take into account carbon-free and ecologically friendly ways if sustainable environmental goals are to be attained. Green mortgages, bonds, and other forms of “green financing” may help us reach our goal of environmental sustainability. A digital connected India can result in the growth of the social and economic status of people. This can be achieved by the development of non-agricultural economic activities. Instead of providing access to health, education, and financial services. MSMEs are the backbone of a resilient national economy. Prioritising their development is critical to the future of the country. The government has come out with a variety of enabling mechanisms over the last few years.

Abstract

The Food Processing sector in India has a quintessential role in linking Indian farmers to consumers in the domestic and international markets. The Ministry of Food Processing Industries (MoFPI) is making all efforts to encourage investments across the value chain. The food processing industry has a share of 12.38% (at 3-digit of NIC classification) in the employment generated in all Registered Factory sector engaging approximately 1.93 Mn people. Indian government has put in place various schemes to support the food processing industry. For instance, the Pradhan Mantri Kisan Sampada Yojana (PMKSY) is aimed at promoting investments throughout the value chain to stimulate growth in the food processing industry. The Food Processing Industry sector in India is one of the largest in terms of production, consumption, export and growth prospects. The government has accorded it a high priority, with a number of fiscal reliefs and incentives, to encourage commercialisation and value addition to agricultural produce. This article discusses the highlights of entrepreneurial and start-up schemes available for food production industries

Keywords: Food industry, Food production, Food processing, Schemes for food industries, Food industry startups.

Introduction

The Food Processing sector in India has a quintessential role in linking Indian farmers to consumers in the domestic and international markets. The Ministry of Food Processing Industries (MoFPI) is making all efforts to encourage investments across the value chain. The food processing industry has a share of 12.38% (at 3-digit of NIC classification) in the employment generated in all Registered Factory sector engaging approximately 1.93 Mn people. Unregistered food processing sector supports employment to 5.1 Mn workers as per the NSSO 73rd Round report.

Food Production Industry

Major sectors constituting the food processing industry in India are grains, sugar, edible oils, beverages, and dairy products. Under PMKSY, 41 Mega Food Parks, 376 Cold Chain projects, 79 Agro-Processing Clusters, 489 proposals under Creation/Expansion of Food Processing & Preservation Capacities (CEFPPC), 61 Creation of Backward and Forward Linkages Projects, 52 Operation Green projects, 183 Food Testing Laboratories projects have

been approved across the country. The key sub-segments of the Food Processing industry in India are Fruits & Vegetables, Poultry & Meat processing, Fisheries, Food retail, dairy industry, etc.

Key Facts

- The total horticulture production is estimated to be 342.33 Mn tonnes in the year 2021-22, showing an increase of about 7.73 Mn tonnes (an increase of 2.3%) over the year 2020-21 (final)
- India ranks 1st in Milk production and the total milk production in the country during 2021-22 is 221.06 Mn tonnes. In the year 2021-22, the milk production has registered an annual growth rate of 5.29%
- In 2021-22, the total egg production in the country is 129.60 Bn which have increased by 6.19% as compared to the previous year
- The fish production in 2021-22 is 16.24 Mn Tonnes comprising of marine fish production of 4.12 mn Tonnes and 12.12 Mn Tonnes from Aquaculture
- Online grocery retail in India has seen a CAGR of over 50% and projected to grow to \$10 Bn to 12 Bn by 2025.
- Seafood products export from India during the last three years has increased from \$ 6679 mn in FY 2019-20 to an all-time high record figure of \$ 7759.58 mn in FY 2021-22. Exports to these three countries contributed 63% of exports.
- The export of other cereals recorded a growth of 13.64% in nine months of the current fiscal.
- Other cereals' exports increased from \$764 Mn in April-December 2021 to \$ 869 mn in April-December 2022 and the export of milled products increased from \$188 Mn in April-December 2021 to \$255 Mn in April-December 2022—registering a growth of 35.71 % in the nine months.
- The total meat production in the country is 9.29 Mn tonnes for the year 2021-22 with an annual growth rate of 5.62%. The total five major meat producing States are Maharashtra (12.25%), Uttar Pradesh (12.14%), West Bengal (11.63%), Andhra Pradesh (11.04%), and Telangana (10.82%)
- As per 4th advance estimates, the estimated production of rice is 130.29 Mn Tonnes, Wheat is 106.84 Mn Tonnes, and Nutri/Coarse cereals is 50.90 Mn Tonnes for the year 2021-22.
- During Sugar Season (SS) 2021-22, India exported 110 LMT sugar and became second largest exporter of sugar in the world and earned about INR 40,000 Cr worth of foreign exchange for the country.
- Non-Basmati Rice has emerged as India's top export item among the many agricultural and processed food product exports under APEDA basket, with the export of \$4,663 Mn in nine months of 2022-23.

Entrepreneurial Schemes for Food Industry

1. Mega Food Parks

The primary objective of the Mega Food Park Scheme is to provide adequate/excellent infrastructure facilities for food processing along the value chain from the farm to market. It will include creation of infrastructure near the farm, transportation, logistics & centralized processing centres. The main feature of the scheme is a cluster-based approach. The scheme aims to facilitate the establishment of a strong Food Processing Industry backed by an efficient supply chain, which would include collection centres, primary processing centres and cold chain infrastructure.

2. Integrated Cold Chain & Value Addition Infrastructure

To develop integrated cold chain and preservation infrastructure, the Ministry of Food Processing Industries (MoFPI) launched Cold Chain Scheme. The objectives of this scheme were to provide integrated and complete cold chain and preservation infrastructure facilities without any break, from the farm gate to the consumer to enable linking groups of producers to the processors and market through a well-equipped supply chain and to establish value addition with infrastructural facilities like sorting, grading, packaging and processing for horticulture, including organic produce, marine, dairy, poultry, etc.

3. Infrastructure for Agro-processing Clusters

The scheme aims at development of modern infrastructure to encourage entrepreneurs to set up food processing units based on cluster approach. The major objectives of the scheme are: To create modern infrastructure for food processing closer to production areas; To provide integrated and complete preservation infrastructure facilities from the farm gate to the consumer; To create effective backward and forward linkages by linking groups of producers/farmers to the processors and markets through well-equipped supply chain.

4. Creation of Backward and Forward Linkages

It is to provide effective and seamless backward and forward integration for Processed Food Industry; Primary processing centres/ collection centres at farm gate; Modern retail outlets along with insulated/refrigerated transport Financial Assistance; the maximum grant extended per project is INR 5.00 crores @ 35% of the eligible project cost.

5. Creation/ Expansion of Food Processing & Preservation Capacities

The main objective of this scheme is creation of processing and preservation capacities and modernization/expansion of existing food processing units which will help in increasing the level of processing, value addition and thereby lead to reduction of wastage and enhancement of farmer's income. 35% of the eligible project cost subject to a maximum of INR 5.00 crores in General Areas; 50% of the eligible project cost subject to a maximum of INR 5.00 crores in North Eastern States.

6. Food Safety and Quality Assurance Infrastructure

Setting up/upgradation of Food Testing Laboratories would benefit all stakeholders in ensuring safety and quality of food products. To analyze the samples received from food processing industry and other stakeholders; To reduce the time taken for analysis of samples by reducing transportation time of samples; To ensure compliance of

Domestic/International Standard on food; To establish a surveillance system for monitoring the quality and composition of food.

7. Human Resources and Institutions

The end product/outcome/findings of R&D work should benefit Food Processing Industry in terms of product and process development, improved preservation, packaging, storage and distribution technologies, value addition, standardization of additives, colouring agents, preservatives, pesticide residues, etc. with focus on enhancement of production, quality, consumer safety, public health and trade.

Start Ups in Food Industry

Indian government has put in place various schemes to support the food processing industry. For instance, the Pradhan Mantri Kisan Sampada Yojana (PMKSY) is aimed at promoting investments throughout the value chain to stimulate growth in the food processing industry. The Production Linked Incentive Scheme for the Food Processing Industry (PLISFPI), which is part of the Department of Animal Husbandry & Dairying in the Ministry of Agriculture & Farmers' Welfare, is another initiative aimed at promoting the industry's growth. Other schemes include the Department of Fisheries, National Bank for Agriculture and Rural Development, and Mission for Integrated Development of Horticulture (MIDH). Details of the same are available on <https://www.mofpi.gov.in/>.

There are ~3319 DPIIT recognised startups in the Food Processing Sector as on 10th April 2023. These recognised startups are spread across 425 districts of the country. They employ roughly 33,000 people. Of the ~3319 startups, approximately 32% were recognised in the year 2022. The highest number of recognised startups in this sector are in Maharashtra ~620. About 58% of the startups in this sector are from Tier 2 & Tier 3 cities.

Apart from government schemes, stakeholders such as incubators and accelerators support startups in the food processing industry. For instance, Swissnex India Accelerator, SAP-SINE Social (S-Cube) Accelerator Programme, Agri-Tech Startup Accelerator, CIE Hyderabad, and Icrisat Food Processing Business Incubator/ AgriBusiness Incubator (ABI) are some of the incubators and accelerators that support startups in the sector. Additionally, there are academic institutions such as IIT Madras' Rural Technology and Business Incubator (RTBI) and T-Hub Accelerator, which is supported by the Government of Telangana and three of India's premier academic institutes (IIIT- H, ISB & NALSAR).

Additionally, there are also several food and agriculture value chain funds like the Startup India Seed Fund Scheme, Startup India Tax Exemption Benefits, Orkla Foods Fund, SEAF India Agribusiness International Fund, Rabo Equity Advisors, Ominvore Capital and Aspada Investments. Few impact funds like Aavishkar, Villgro Innovations and Menterra are also playing a role in supporting the ecosystem.

Conclusion

The Food Processing Industry sector in India is one of the largest in terms of production, consumption, export and growth prospects. The government has accorded it a high priority,

with a number of fiscal reliefs and incentives, to encourage commercialisation and value addition to agricultural produce. The food processing industry is an important contributor to India's economy, providing employment opportunities to millions of people. With the right support ecosystem, the food processing industry in India has the potential to become a major player in the global market. In conclusion, the future of the food processing industry in India looks bright, with a growing demand for convenience foods, increasing innovation in product development, expanding export markets, the adoption of technology, and favorable government policies.

Abstract

The world is changing constantly and the various domains are also influenced by the change. There is no exemption even in the education domain. In other words blended learning means using a variety of delivery methods to best meet the course objectives by combining face-to-face teaching in a traditional classroom with teaching online. Teachers represent faculty and staff who are responsible for using a variety of instructional strategies to address individual students' strengths and needs, thereby ensuring each student has an opportunity to learn and succeed. This research indicates that able blended can play a vital role in training sessions of vocational branches in the educational organizations and workplaces. It is also not only a matter of higher education. It can be used for any vocational training based on skill development at any level. The implementation of blended learning model in a very specific field of vocational education has yielded positive results.

Keywords: *Blended Learning - Learning Materials - Students Satisfaction.*

Introduction

Blended learning shifts the teacher's role from knowledge provider to coach and mentor. This shift does not mean that teachers play a passive or less important role in student's education. In the traditional model, the teacher is the provider of knowledge. Blended Learning, on the other hand, positions the student as an active pursuer of knowledge. Information and Computer Technology (ICT) has been widely used by private and public educational institutions for teaching and learning. Higher education institutions in India have started implementing blended learning in the organizations. Blended learning approach has become more and more frequent in both research and practices. Private and government universities have facilitated their teaching and learning with Internet and ICT, especially as a supplement for their regular teaching and learning process in a blended learning environment. This means that besides face-to-face learning in a classroom, students and teachers utilize an online learning management tool or virtual learning environments.

Review of Literature

Williams, Bland, and Christie (2008) in their articles entitled that ‘blended learning as a combination of traditional face-to-face learning and distributed learning’ the latter of which "Is an instructional model that allows lecturers, students, and content to be in different locations". This pedagogical model encourages students to learn in an interactive and collaborative environment, and at their own pace and in their own time (Graham, 2006; Saltzberg & Polyson, 1995).

Wall and Ahmed (2008) carried out a research entitled that “ blended learning approach for higher education institutions faced with challenges of developing and deploying continuing professional development in the construction industry”. The framework can be used by continuing education providers to determine the most suitable combination of media for a blended learning intervention, taking into consideration learner and instructor characteristics, the desired instructional goals and strategies, the nature of the learning environment, and the availability of resources.

Yen and Lee (2011)) in their articles entitled that "blended learning, thoughtfully combining the best elements of online and face-to-face education, is likely to emerge as the predominant (Hwang, 2018; Simpson, 2018; Traxler, 2018; Leoste et al., 2019; Goodyear, 2020; Hod and Katz, 2020).

Hod, Y., and Katz, S. (2020) In this study, we found that differences between universities depending on the economic investment they had made in their facilities. In the case of the public University, the resources needed to broadcast the class from the University classroom for the blended methodology were scarce.

Objectives of the Study

The main objectives of the study is to know about the economic growth and economic development and initiative taken to blended learning environment. It can promote deeper learning, reduce stress, and increase student satisfaction.

Main Features of Blended Learning

- Students have the option of the two modes
- Teachers are well versed with both the modes
- Students get training in different life skills
- Makes teaching learning process child centered
- Diverse role of teacher.

Blended Learning Environment

Blended learning environment refers to the blend of the effectiveness of the face-to-face teaching environment and ICT-mediated teaching and learning environment (Driscoll 2002). Graham & Allen (2009) thus, describe blended learning environment as the combination of instruction, both methods and delivery media from two archetypal learning environments, the traditional face-to-face learning environment and the ICT-mediated or e-learning environment. This is the preferred working definition of blended learning environment for this study since it captures all the relevant issues being considered.

Models of Blended Learning Environment

- Transmissive pedagogy model which incorporates the provision of supplementary online resources for learning programmes conducted along predominantly traditional lines with institutionally supported virtual learning environments (VLEs). Actual teaching and learning follows the traditional face-to-face modes of lectures and seminars, but provide extra support to the students through placing lecture notes on the web.
- A holistic model of technology use to support learning. This is a newer characterization of blended learning where most learners do not distinguish between learning with or without technology. Faculty facilitates learning by using the learners' own technologies such as mobile phones, online communities and instant messaging to support the students' learning at any place and at any time

Benefits of Blended Learning

- Enhanced student learning outcomes
- Greater flexibility for students and teachers
- Improved autonomy, reflection, and research skills
- Reduced student withdrawal rate
- Ability to foster a professional learning environment
- Potential cost and resource savings

Challenges of Blended Learning

- Unrealistic student expectations
- Student-perceived isolation
- Technological problems for students
- Invasiveness into other areas of life
- Time commitment
- Technological problems for institutions
- Lack of support for course redesign
- Difficulty in acquiring new teaching and technology skills.

Conclusion

Blended learning becoming more and more prevalent, it is vital for higher education and corporate training settings to create strategic plans and directions, focusing on pedagogical techniques in blended learning" (Bonk et al., 2006). This research indicates that blended learning can play a vital role in training sessions of vocational branches in the educational organizations and workplaces. It is also not only a matter of higher education. It can be used for any vocational training based on skill development at any level. The implementation of blended learning model in a very specific field of vocational education (footwear design training) has yielded positive results. To be sure of other vocational branches in which blended learning model can be used, more researches should be carried out with emphasis on application and practice rather than theoretical knowledge.

Blended learning becoming more and more prevalent, it is vital for higher education and corporate training settings to create strategic plans and directions, focusing on pedagogical techniques in blended learning” (Bonk et al., 2006). Blended learning, in theory, can be completed from anywhere at any time, and is ideally suited to all kind of students. However, more forward thinking schools are implementing similar methods of learning for younger students. The benefits are manifest in a more responsible learner, one that is constantly challenging, creating and discovering. This research indicates that blended learning can play a vital role in training sessions of vocational branches in the educational organizations and workplaces. It is also not only a matter of higher education. It can be used for any vocational training based on skill development at any level. To be sure of other vocational branches in which blended learning model can be used, more researches should be carried out with emphasis on application and practice rather than theoretical knowledge.

Abstract

A sustainable startup refers to a startup that involves the development of products and services for fulfilling the needs of the present generation without hampering the future generation's ability to fulfil their needs. This initiative is to encourage the young entrepreneurs to greatly involve in the entrepreneurship for better future. According to the program, around 1.25 lakh bank branches will encourage youth. Entrepreneurs by giving them loan. This campaign will create new jobs for the people in India. This scheme will provide employment in long run. Success of this program may happen with overcome some barriers like rigid licensing system, lack of banks support, absence of tax holiday CSR engagement within the business models of start-ups is based on a combination of financial and social capital, while financial benefits act as a continuous motivator for CSR engagement from inception.

Keywords: Start-ups; Sustainability - CSR - Sustainable business models - Entrepreneurial orientation - Stakeholders

Introduction

Every country around the globe has understood the importance of reducing its carbon emissions. Brands have come up with eco-friendly products for people, Services are ensuring that they reduce carbon footprints. The world never had environmental concerns back in the day. Since the industrial revolution has begun, there has been an excessive load on the usage of natural resources. Carbon emits resources like crude oil, coal, etc has seen a massive spike in usage. Burning of these fuels creates carbon to rise in the air and that links to climatic issues, It has affected ozone layer depletion, and It has affected the ice sheets around the poles. The Governments across the countries have brainstormed on steps that can be taken to deal with such issues. However, companies have understood the impact and have begun with eco-friendly solutions towards their products. Some companies have come up with an idea to have their products and services entirely on an eco-friendly concept. The industry has seen massive growth in the previous decade. From Tesla and SpaceX to remote industries preparing toothbrushes, there are a number of startups with Eco-Friendly concepts. The electricity that used to get generated by coal plants has now been reduced. There are companies that have started with windmills, hydroelectric, and

Solar based energy solutions. These have not only reduced energy expenses but have also helped us reduce carbon footprints. India has promised to considerably reduce their carbon footprint by the year 2030.

Understanding the Importance of Sustainable Practices

Sustainable practices are crucial for green startups for several reasons. First, adopting eco-friendly strategies allows businesses to minimize their environmental footprint and contribute to a healthier planet. This is vital in today's world, with growing awareness of the severe consequences of climate change and resource depletion. Sustainable practices help meet global goals, such as the United Nations' Sustainable Development Goals (SDGs), which play a crucial role in global efforts to combat climate change and create a more sustainable future.

Second, sustainable practices boost a green startup's brand image and customer loyalty. Consumers are increasingly seeking environmentally responsible products and services. By incorporating sustainable practices into your business strategy and clearly communicating your efforts, you can attract and retain customers who value corporate social responsibility.

Third, focusing on sustainability can lead to cost savings and improved long-term viability. Implementing energy-efficient measures, reducing waste, and using sustainable resources can reduce expenses and enhance long-term growth prospects. Moreover, green startups that adopt sustainable practices can gain a competitive advantage, differentiating themselves from competitors and increasing market share.

Lastly, employee attraction and retention are essential benefits of sustainable practices. Companies that prioritize sustainability are more likely to attract skilled and motivated employees who value contributing to a better world. Furthermore, organizations with strong environmental values often report higher employee satisfaction and loyalty, ensuring long-term stability and committed staff members who drive the company's success.

Adopting Green Technology Solutions

Green technology solutions significantly contribute to the success of sustainable startups. These technologies allow businesses to reduce energy consumption, minimize waste, and optimize processes. Here are some green technology solutions to consider for your green startup:

Renewable Energy Sources: Utilizing solar, wind, or other renewable energy sources for your business operations can drastically cut your environmental impact and lower your energy bills. You can either install your own renewable energy systems or purchase green energy from local suppliers.

Energy-Efficient Devices: Replacing old, inefficient devices with energy-efficient ones can lead to substantial energy savings. Look for energy star certified products, and make sure to use energy-saving settings when available.

Cloud Computing: Cloud computing enables businesses to access software, storage, and computing power on a shared or virtualized platform, significantly reducing energy requirements for local servers and hardware. However, select cloud service providers that prioritize environmental sustainability.

Internet of Things (IoT): IoT devices can monitor and optimize resource usage in real-time, reducing electricity, water, and material consumption. IoT sensors and systems can also help identify inefficiencies in your operations, allowing you to implement targeted solutions.

Green Web and App Development: Sustainable web and app development include optimizing code to minimize energy consumption on the user's device and reducing data storage requirements. Utilizing eco-friendly development platforms, like AppMaster.io, can help you create web and mobile apps with minimal environmental impact.

Eco-Friendly Supply Chain Management

Effective supply chain management is a critical component of a green startup's overall sustainability strategy. Supply chains can have a significant environmental impact due to production processes, transportation, and waste generation. By implementing eco-friendly supply chain management practices, you can reduce emissions, waste generation, and resource consumption. Below are some strategies to create a more sustainable supply chain:

Sustainable Suppliers: Partner with suppliers that share your commitment to sustainability. Look for eco-friendly certifications, renewable energy usage, and waste reduction in their operations. As a startup, it's essential to set expectations and standards for suppliers at the outset of your business journey.

Reducing Packaging Waste: Seek ways to minimize packaging waste by using recycled, biodegradable, or reusable materials. Encourage suppliers to adopt eco-friendly packaging and invest in container return programs to reduce both waste generation and costs associated with purchasing new materials.

Circular Economy Model: Embrace the circular economy concept by focusing on resource efficiency and waste reduction. Design products that are durable, reusable, and recyclable, and implement systems for waste collection and recycling. Collaborate with your suppliers and customers to create a closed-loop system for material recovery and reuse.

Green Logistics and Transportation: Optimize transportation and logistics processes to reduce the environmental impact of shipping. This can include better route planning, using

fuel-efficient vehicles, working with eco-friendly logistics partners, and encouraging suppliers to consolidate shipments. Additionally, consider investing in electric vehicles or hybrid technologies as your fleet expands.

Start up

By incorporating eco-friendly practices into your supply chain management, you can minimize negative environmental impacts, reduce costs, and enhance your brand's reputation as a responsible and sustainable business. The key is to collaborate closely with suppliers, customers, and other stakeholders to maximize the potential for a greener supply chain, benefiting all parties involved and the planet.

Energy Efficiency in the Workplace

Reducing energy consumption and improving energy efficiency in the workplace are critical steps for green startups pursuing sustainable growth. By implementing energy-saving practices and technologies, businesses can significantly lower operating costs, reduce carbon emissions, and contribute to a healthier environment.

Here are some strategies to boost energy efficiency in the workplace:

Switch to energy-efficient lighting: Replace traditional incandescent, halogen, and CFL bulbs with energy-saving LED lights, which consume less electricity and last longer. Consider adding motion sensors to decrease energy usage by ensuring lights turn off when rooms are empty.

Optimize natural light: Utilize daylight as much as possible by maximizing window exposure, installing skylights, and using light-colored wall paints and furnishings that help reflect light. Natural sunlight not only conserves energy but also stimulates productivity and enhances employee well-being.

Choose energy-efficient appliances: Select office equipment and electronics, such as computers, printers, and air conditioning units, with an ENERGY STAR rating or equivalent energy-efficiency certification. These products consume less energy and help reduce utility bills.

Implement an energy management system: Monitor and control your organization's energy usage through an energy management system. This software can track consumption patterns, identify inefficiencies, and suggest actionable energy-saving measures.

Regular maintenance: Keep heating, ventilation, and air conditioning (HVAC) systems well-maintained to ensure optimal performance and energy efficiency. Clean and replace filters regularly, and address issues like leaks and drafts for better insulation.

Strategies for Integrating Sustainability into the Startup Culture

Integrating sustainability into the startup culture can seem like a daunting task, but there are many simple strategies that startups can implement to get started. The key is to make sustainability a priority and to embed it into the core values and operations of the business.

Here are some strategies for integrating sustainability into the startup culture:

1. **Start at the top:** The leadership team must lead by example and make sustainability a priority. This includes setting clear sustainability goals and communicating them to all employees.
2. **Incorporate sustainability into decision-making:** Sustainability should be a key consideration in all decision-making processes, from product development to procurement.
3. **Engage employees:** Encourage employees to get involved in sustainability initiatives and to suggest ways to reduce waste and emissions.
4. **Make sustainability a part of the employee experience:** Provide training and resources to help employees understand the importance of sustainability and how they can contribute.
5. **Collaborate with suppliers and partners:** Work with suppliers and partners to reduce waste and emissions throughout the supply chain.
6. **Measure and track progress:** Regularly track and measure progress against sustainability goals, and make adjustments as needed.
7. **Communicate progress:** Regularly communicate progress on sustainability initiatives to employees, customers, and stakeholders to build momentum and support.

Best Environmental Startups to Watch in 2023

Biome Makers. Recovering soil health is an essential step towards a more sustainable future. ...

Aurora Solar. As the demand for alternative energy sources increases, solar energy companies are more popular than ever. ...

Tree app

EcoCart

Bluebird Climate.

Conclusion

In today's world, sustainability is more important than ever. With climate change and environmental degradation becoming increasingly pressing issues, it's crucial that businesses take steps to reduce their impact on the environment. These startups work on the principle of sustainability and also encourage people to walk toward the path of a

sustainable lifestyleEco-friendly startups are an excellent means to build a better present and future. These startups preserve the environment for us and our future generations and bring up revolutionary technologies that can cause a boom in the country's economy.

Abstract

Skills and knowledge are driving forces of economic growth and social development for any country. objectives in the study are twofold. First is to conduct descriptive analysis in terms of structural dimensions such as geographical context, focus on skill development, research methods, economic sector, type of training and origin of the study. The second objective is to conduct thematic analysis on importance of skill development, institutional and regulatory mechanisms, skill development as an antecedent for technology adoption, role of skill development in women empowerment, integrating skill development with design/methodology/approach Systematic literature review method is employed to review 45 articles on skill development research in India conducted between 2004 and 2022. Labour market reforms are required to overcome challenges such as mismatch between theory and practice, low quality of skills assimilated, the mismatch between demand and supply of skilled labour force, low level of in-house training, low cooperation from students and employees due to lack of incentives and lack of qualified teachers.

Keywords: Skill development, Education, Training, Employment.

Introduction

Today, the world and India need a skilled workforce. If we have to promote the development of our country then our mission has to be ‘Skill Development’ and ‘Skilled India” (Modi, 2014). Skill development is the acquisition of work-related skills or competencies through vocational education and training. Such vocational education and training is essentially to be imparted from school education onwards in order to promote entrepreneurial skill development which will fetch breadwinning in life of individuals. Employability is a great challenge in our education system because of several reasons like huge population, comparatively less number of educational institutions, inadequate infrastructure, non-availability of skilled trainers etc. Though India has strong policies and planning to promote education, vocational training and life-long learning, the implementation is not that much speedy and vigorous. Let us find in this write-up the reality, challenges and practices of skill development in education system in India.

The researchers have made an extensive review of literature to understand the importance of skill development in India.

Dr. S. C. Patil & Prof. Amaresh B Charantimath (2021) conducted a study on “Employability through Skill Development Programmes - an overview of significance of

Employability skills". The objective of the study was to comprehend the need of employability skills and to study the skill gap - desired vs possessed. The study concluded that the skill gaps can be bridged with training, education and short-term courses. In spite of the efforts there is still a great scope in transformation of abandoned knowledge into skills. Various ambitious missions of Government of India i.e. Make in India, Atmanirbhar Bharat, 5 trillion economy dreams etc can come true with collective efforts.

Vidhyadhar T. Banajawad & Dr.Mukta S. Adi(2020) conducted a study on "A study on skill development programmes for rural youth in India" with the objective to ascertain the current status, challenges and the Government initiatives for the skill development in India. The study concluded that skill development is currently gathering momentum and it is now evident that education and skills are fundamental in bettering employment opportunities, shrinking poverty, boosting productivity, and promoting environmentally sustainable rural development. The immediate need is assimilating skills, policies and strategies on rural development. Incorporation of skill-based training and industry link placement facility in education is indispensable. Skill development is need of the hour to adapt and match the current requirements for youth in rural India for rural development in real sense. Thus, education / skill development is an immediate and important requirement for developing countries with large youth population such as India.

Anita Swain & Sunita Swain (2020) conducted a study on "Skill Development in India: Challenges & Opportunities". The study intended to analyse the data sourced from National Skill Development Corporation. It concluded that India, the 2nd populous country in the world with around 60% youth population, has a 'demographic dividend' and need capitalise on it for reaping the benefit which can add value to the economy of the country and also support 'Make in India' campaign by providing the skilled workforce in the country. The 'Skill India' mission requires more focus on entrepreneurship skills for enhancing job generation in the country. Various schemes like PMKVY, DDU-GKY etc. have been launched by Government of India for making Indian youth skilled and employable. Indian youth should be aware of such schemes, get required training and make themselves employable.

Dr. Chandra Sekhar Dash, Shilpa Dash (2020) conducted a study on "Skill Development Mission and the Skill Landscape of India: - An Empirical Study". The study aimed to assess the skill landscape of India in the wake of emerging technological disruptions, global transformation and international mobility of workforce. The findings of the study indicate that despite the laudable and commendable features of the 'Skill India Mission', the challenges of gender inequality, sectorial imbalance in skilling, training and placements still persists.

Objectives of this Study

Skill-based education seeks to establish a strong foundation of competency with an eye toward further hands-on building and development, while knowledge-based education aims to deepen a specific insight and further develop one's perspective.

Review of Literature

- **Dr. S. C. Patil & Prof. Amaresh B Charantimath (2021)**, conducted a study on "Employability through Skill Development Programmes - an overview of significance of Employability skills". The objective of the study was to comprehend the need of employability skills and to study the skill gap - desired vs possessed. The study concluded that the skill gaps can be bridged with training, education and short-term courses. In spite of the efforts there is still a great scope in transformation of abandoned knowledge into skills. Various ambitious missions of Government of India i.e. Make in India, Atmanirbhar Bharat, 5 trillion economy dreams etc can come true with collective efforts.
- **Vidhyadhar T. Banajawad & Dr.Mukta S. Adi (2020)** conducted a study on "A study on skill development programmes for rural youth in India" with the objective to ascertain the current status, challenges and the Government initiatives for the skill development in India. The study concluded that skill development is currently gathering momentum and it is now evident that education and skills are fundamental in bettering employment opportunities, shrinking poverty, boosting productivity, and promoting environmentally sustainable rural development. The immediate need is assimilating skills, policies and strategies on rural development. Incorporation of skill-based training and industry link placement facility in education is indispensable. Skill development is need of the hour to adapt and match the current requirements for youth in rural India for rural development in real sense. Thus, education / skill development is an immediate and important requirement for developing countries with large youth population such as India.
- **Anita Swain & Sunita Swain (2020)**, conducted a study on "Skill Development in India: Challenges & Opportunities". The study intended to analyse the data sourced from National Skill Development Corporation. It concluded that India, the 2nd populous country in the world with around 60% youth population, has a 'demographic dividend' and need capitalise on it for reaping the benefit which can add value to the economy of the country and also support 'Make in India' campaign by providing the skilled workforce in the country. The 'Skill India' mission requires more focus on entrepreneurship skills for enhancing job generation in the country. Various schemes like PMKVY, DDU-GKY etc. have been launched by Government of India for making Indian youth skilled and employable. Indian youth should be aware of such schemes, get required training and make themselves employable.
- **Dr. Chandra Sekhar Dash, Shilpa Dash (2020)**, conducted a study on "Skill Development Mission and the Skill Landscape of India: - An Empirical Study". The study aimed to assess the skill landscape of India in the wake of emerging technological disruptions, global transformation and international mobility of workforce. The findings of the study indicate that despite the laudable and

commendable features of the 'Skill India Mission', the challenges of gender inequality, sectorial imbalance in skilling, training and placements still persists.

Importance of Skill Development

It is important to empower students with skill-based training as the development of our economy depends upon them. Here's why skill development in school is important:

- The skill development process helps students think beyond grades. It helps them tap into their capabilities, develop real-life skills, and prepare themselves to be successful in the careers of their choice.
- Skill-based learning improves employability and helps the youth earn more. Furthermore, it improves the economy of a country and promotes its financial growth.
- Skill-based learning helps students develop problem-solving strategies and effective communication techniques.
- Learning skill development promotes the leadership skills of students as it helps them become more altruistic. They learn to use their skills to organize and inspire their teams, which, in turn, creates in them leadership qualities.
- It also helps students develop creativity, critical thinking, and analytical thinking as skill-based learning focuses on the evaluation and application of facts to real-life problems.

Skill Development in Higher Education

Today, there is a large chunk of the unemployed population consisting of highly educated youth who fail to find employment because of a lack of skills, and skilled individuals who lack eligibility because of a lack of knowledge.

And, therefore, the need to provide skill-based learning in higher education to help students receive vocational training besides academics to improve their chances of better employment and a successful career.

Because of this need, vocational education is being considered as part of a structured program at the university level. This will provide multiple opportunities to students who will acquire skills related to particular professions along with general education. This will help students pursue graduation in a variety of vocations besides the mainstream subjects, such as science, arts, commerce, medicine, engineering, etc. Students will get the freedom to select the vocation of their choice and make a career in it. Moreover, thanks to the skill development programs, students will get practical experiences in vocational training that will give them better chances at employability

Skill Development Program: How it helps the Youth?

The government of India has several plans for skill development to improve employment opportunities for the youth.

These programs not only provide the vocational training required to improve job prospects but also help develop personalities, enhance work proficiency, and improve communication skills, time management, and negotiation skills.

The skill development programs also help the youth identify their interests and talents. It helps them develop flexibility, reliability, productivity, and efficiency. All of this goes on to improve their chances of successful careers and widen their career opportunities.

Skill Development in India

The government of India launched an initiative in the year 2015 called Skill India. It aimed to train 40 crore Indians in a variety of industrial jobs. Its goal: Empower the youth with schemes and training courses by the year 2022.

The benefits of this initiative are:

- Better job opportunities, better-paying jobs, and a higher standard of living for the youth.
- Development in every sector of the economy and every sector experiencing equal growth.
- Trained individuals entering the workforce, which will lead to better and faster results and a boost to the Indian economy.

Various courses are offered as part of this initiative, such as management and development programs, entrepreneurship development programs, skill development programs, promotion of small enterprises, cluster development, lending schemes, etc.

Process Design

Teacher agency Teachers should be empowered to use their professional knowledge, skills and expertise to deliver the curriculum effectively. Authenticity. Learners should be able to link their learning experiences to the real world and have a sense of purpose in their learning. This requires interdisciplinary and collaborative learning alongside mastery of discipline-based knowledge. Inter-relation. Learners should be given opportunities to discover how a topic or concept can link and connect to other topics or concepts within and across disciplines, and with real life outside of school. Flexibility. The concept of "curriculum" should be developed from "predetermined and static" to "adaptable and dynamic". Schools and teachers should be able to update and align the curriculum to reflect evolving societal requirements as well as individual learning needs. Engagement. Teachers, students and other relevant stakeholders should be involved early in the development of the curriculum, to ensure their ownership for implementation.

Challenges in Skill Development in India

Some of the main challenges in skill development in our country are given as follows: Severe scarcity of trainers. For instance, corresponding to the current seating capacity of about 1.7 million trainees at ITIs, there is a need of almost 85,000 trainers (considering 20:1 student/faculty ratio). Non-employability due to little or no job skills. Inadequate training infrastructures, inappropriate mix of skills and education, outdated curricula, limited industry interfaces, limited standards, etc. Formal education system with limited vocational training. A disconnect between the formal education system and work requirements, compounding the challenges related to the skill gap. Owing to high capital requirements and low return on investments, skill development is often looked at as a non-scalable model and remains underinvested.

Conclusion

Skill development is crucial for young people's future. It holds the key to increased entrepreneurship, greater employment prospects, and economic progress. skill development courses during higher education are instrumental in nation-building by producing a skilled and competent workforce that can drive economic growth, innovation, and social development. skill India is a crucial step towards building a more skilled and productive workforce in India. The program's focus on industry partnerships, digital technology, and financial incentives has helped to make it more effective in addressing the country's skill development challenges. Governments should boost investment in life-long learning to retrain, retool, and de-skill. For example, governments could use individual skill accounts to provide training grants throughout people's working lives, conditional on stronger private-sector involvement in training and skills development.

Conclusion

The current study has carried out a systematic literature review on skill development research in India to analyse and synthesise the literature and provide insights for future studies. The objectives of this study are twofold. First, based on the classification framework, this study carried out a descriptive analysis. In terms of the geographical context, Pan India studies need to be considered rather than confining the work to one state. Regarding research methods, the conceptual studies will provide clarity on the concept of skill development. Studies on skill development of the labour force engaged in agriculture are vital because this sector provides 15 per cent of the total GDP and 52 per cent of employment for the Indian population. Studies on informal and non-formal training need to be considered for future studies, and collaborative research with African and South American countries will be beneficial for adopting best practices.

Second, this study seeks an answer to the research questions, and the authors recommend insights to researchers through a future research framework. As India aspires to be the largest economy in the world by 2040, it is important to instil the necessary skill

Conclusion

Abstract

Artificial Intelligence (AI) technologies have changed the way learners are interacting with instructional activities in various educational settings. Learning has been shifted from in structured to the interaction of AI-powered devices and learners are no longer bound to traditional classrooms. Artificial intelligence is a branch of computer science that focuses on creating software capable of mimicking behaviors and processes we would consider “intelligent” if exhibited by humans, including reasoning, learning, problem-solving, and exercising creativity. The main aim of the study is to know about awareness of AI in higher education. In addition, the findings reveal that students assert the importance of having Artificial Intelligence in education and ready to use it in learning and teaching process, however, they have little or no trust in Artificial intelligence being used assess their academic performance.

Introduction

All human actions are based on anticipated futures. We cannot know the future because it does not exist yet, but we can use our current knowledge to imagine futures and make them happen. The better we understand the present and the history that has created it, the better we can understand the possibilities of the future. To appreciate the opportunities and challenges that artificial intelligence (AI) creates, we need both good understanding of what AI is today and what the future may bring when AI is widely used in the society. AI can enable new ways of learning, teaching and education, and it may also change the society in ways that pose new challenges for educational institutions. It may amplify skill differences and polarize jobs, or it may equalize opportunities for learning. The use of AI in education may generate insights on how learning happens, and it can change the way learning is assessed. It may re-organize classrooms or make them obsolete, it can increase the efficiency of teaching, or it may force students to adapt to the requirements of technology, depriving humans from the powers of agency and possibilities for responsible action. All this is possible. Now is a good time to start thinking about what AI could mean for learning, teaching, and education. There is a lot of hype, and the topic is not an easy one. It is, however, both important, interesting, and worth the effort.

What is Artificial Intelligence?

Artificial intelligence is the simulation of human intelligence processes by machines, especially computer systems. Specific applications of AI include expert systems, natural language processing, speech recognition and machine vision.

How Does AI Work?

As the hype around AI has accelerated, vendors have been scrambling to promote how their products and services use it. Often, what they refer to as AI is simply a component of the technology, such as machine learning. AI requires a foundation of specialized hardware and software for writing and training machine learning algorithms. No single programming language is synonymous with AI, but Python, R, Java, C++ and Julia have features popular with AI developers.

In general, AI systems work by ingesting large amounts of labeled training data, analyzing the data for correlations and patterns, and using these patterns to make predictions about future states. In this way, a chat bot that is fed examples of text can learn to generate lifelike exchanges with people, or an image recognition tool can learn to identify and describe objects in images by reviewing millions of examples. New, rapidly improving generative AI techniques can create realistic text, images, music and other media.

AI programming focuses on cognitive skills that include the following:

- **Learning.** This aspect of AI programming focuses on acquiring data and creating rules for how to turn it into actionable information. The rules, which are called algorithms, provide computing devices with step-by-step instructions for how to complete a specific task.
- **Reasoning.** This aspect of AI programming focuses on choosing the right algorithm to reach a desired outcome.
- **Self-correction.** This aspect of AI programming is designed to continually fine-tune algorithms and ensure they provide the most accurate results possible.
- **Creativity.** This aspect of AI uses neural networks, rules-based systems, statistical methods and other AI techniques to generate new images, new text, new music and new ideas.

Importance of Artificial Intelligence

AI is important for its potential to change how we live, work and play. It has been effectively used in business to automate tasks done by humans, including customer service work, lead generation, fraud detection and quality control. In a number of areas, AI can perform tasks much better than humans. Particularly when it comes to repetitive, detail-oriented tasks, such as analyzing large numbers of legal documents to ensure relevant fields are filled in properly, AI tools often complete jobs quickly and with relatively few errors. Because of the massive data sets it can process, AI can also give enterprises insights into their operations they might not have been aware of. The rapidly expanding population

of generative AI tools will be important in fields ranging from education and marketing to product design.

Conclusion

As per the conclusion drawn from the current study upon the awareness level towards Artificial Intelligence (AI) about education system among MBA students of Delhi colleges, different specialization has different level of awareness towards AI. In the teaching pedagogy, the awareness about the AI must be incorporated, so that maximum number of students must aware of these disruptions running in education system. This study is very limited to the one course only i.e. MBA students of Delhi colleges. The work can be enhanced further to include more courses and locations. Another limitation of the study is less number of demographical variables. There are 3 demographical variables are taken to check the awareness level of the students like gender, number of hours used and specialization. In future more parameters can be included in the further research. This research can be used further to design the pedagogy for management student to increase the awareness about artificial intelligence.

Central Banks Digital Currencies in Future Digital Transformation

Ms. M.Gayathri¹, Ms.T.Muthukannu²

^{1,2}Assistant professor, UG department of Commerce CA, NGM College.

Abstract

A central bank digital currency (CBDC) is a digital version of a domestic currency with a unit of account equivalent to its domestic currency. Block chain or distributed ledger technology (DLT) can be used to enable CBDC to enable and settle peer-to-peer transactions. With the emergence of private money such as crypto currencies and stable coins and the increasing use of digital payments to mitigate the spread of global pandemics, CBDC is an area of intense research among central banks worldwide. Many central banks are starting their CBDC projects, creating DLT Proof of Concepts to mimic wholesale payment systems, and expanding their investigation into other use cases such as Delivery and Payment and cross-border remittances. Many major economies such as the US have plans to explore CBDC. This article discusses the use of block chain for CBDC through issuance of CBDC projects by central banks. Furthermore, this paper analyzes the issues, identifies challenges and discusses future work in this rapidly growing field.

INTRODUCTION

A central bank digital currency (CBDC; also known as digital fiat currency or digital base money) is a digital currency issued by a central bank rather than a commercial bank. It is the responsibility of the central bank and is denominated in sovereign currency just like physical banknotes and coins. The sign for the Hangzhou Metro ad acceptance of digital

people's currency" the first CBDC adopted by a major economy (China), instead of a new currency, CBDC is a form of central bank electronic money used by households and businesses to make payments. A report by the Bank for International Settlements notes that while the term "central bank digital currency" is not well defined, "it is envisioned by most as a new form of central bank

money distinct from traditional reserves or reserves. Settlement accounts." The present concept of CBDCs differs from virtual currency and crypto currency in that a CBDC is or would be issued by a state. Most CBDC implementations will likely not use or need any sort of distributed ledger such as a block chain.

Benefits and impact

Governments and central banks are studying CBDCs and their implications for financial inclusion, economic growth, technology innovation, and the efficiency of bank transactions.

Technological efficiency

The Technology efficiency depends on intermediaries such as banks and clearing houses, money transfers and payments could be made in real time, directly from the payer to the payee. Being real time has some advantages:

➤ **Reduces risk:** payment for goods and services often needs to be done in a timely manner and when payment verification is slow, merchants usually accept the risk of

HIGHLIGHTS OF PEOPLE ANALYTICS AND HR PROCESS AUTOMATION

Mr Rajagopalan S, Assistant Professor of Commerce (CA), Nallamuthu Gounder Mahalingam College (Autonomous), Pollachi.

ABSTRACT

As people started to invest in Artificial Intelligence, people started to consider analytics tool as their top priority. Data analytics is a branch of computing that provides huge amount of information about customer's real-world implications to the organization in terms of meeting customer's needs, cutting-edge technologies, AI and cloud base. Even in the case of cloud based systems for human capital management, the analytics and visualization capabilities made it possible for HR leaders to connect other data sources with human data sources like customer relationship management. People analytics and human resources (HR) automation has completely transformed the HR industry and the HR process. HR professionals now rely on AI, machine learning, and data analytics to efficiently and effectively process human resource activities. A branch of data analytics, people analytics helps in the planning, organization, staffing, direction, coordination and control of HR activities. HR automation also makes management information system error-free and accurate, supporting the management in decision-making. Thus, people analytics and human resources automation will be the driving force of the industry in the coming years.

Keywords: People analytics, People management, HR automation, HR Tech and AI, HR and Technology and HR process automation

INTRODUCTION

People analytics and human resources automation have revolutionized the human resources industry and its processes. HR professionals now rely on artificial intelligence, machine learning, and data analytics to process human resource activities efficiently and effectively. Human analytics, a subset of data analytics, helps in the planning, organization, staffing, direction, coordination and control of human resources activities. In contrast, HR automation helps in the error-free and accurate management information system, supporting the management in making decisions. The combination of people analytics and automation will revolutionize the entire human resources industry in the coming years.

PEOPLE ANALYTICS

The emergence of people analytics has had a tremendous effect on human resources departments. In simple terms, people analytics is the process of collecting and analyzing data related to talent decisions and business outcomes. It allows HR departments to gain valuable insights into talent decisions, streamline workforce processes, and create better employee experiences. Human analytics and automation have a significant impact on virtually all aspects of human resources functions, including the ability to build an equitable workplace in a normal manner. Workforce insights is the greatest asset when dealing with the disruption and uncertainty that drive dramatic changes in the working environment today.

All organizations are striving to improve their employees' performance, but it won't happen overnight. To make informed decisions about hiring, learning, development and promotions, you need to have the right people analytics technology and data at your disposal. People analytics is a powerful tool that helps you to improve your employees' performance. It is also the first step before you can make any people-based decisions. Data collection and analysis is never easy. That's why you might not have done people analytics in the right way.

HR TECH AND AI

To help HR professionals, there are a number of tools powered by AI-powered solutions. These include:

- Conversational Chatbots
- Facial expression analysis
- Candidate sourcing method
- Assessment tool
- On-boarding
- Automating the sourcing, recruitment and employee engagement process

HR professionals need to become more knowledgeable about technology AI in order to understand decision algorithms system so that they can deliver their intended goals in a clear manner. The COVID-19 pandemic forced many organizations to adopt a hybrid work model, where employees work on-site and off-site.

CASES FOR PEOPLE ANALYTICS:

1. Predict employee turnover

Larger organizations typically use people analytics tool to better anticipate and prevent employee turnover.

2. Choose an office location

Enterprises collect various data about how existing offices are used, waste of space, availability of talent in specific neighbourhoods, etc.

3. Create better work-life balance

People analytics helps organizations to understand why employees are absent from work and also identifies gaps in the organization that are leading to absenteeism in the workplace.

4. Improve employee retention

It helps identify factors like burnout, absence of career opportunities, absence of employee development program and work culture that affect employee retention.

5. Improve employee performance

People analytics gives HR teams a lot of information about employee engagement and performance.

6. Workforce planning

HR teams typically collect people data across an organization to identify workforce gaps, develop upskilling strategies, prepare succession plans and adjust recruitment processes.

7. Diversity analysis

Diversity and Inclusion in the workplace is assessed through people analytics strategy. It calculates the % of employees based on gender, race and seniority.

BENEFITS OF PEOPLE ANALYTICS

- ❖ It involves assessing the outcomes of on-boarding, continuous learning and development, and upskilling programmes within organizations on a regular basis.
- ❖ It's much more than just a simple performance measurement tool.
- ❖ It generates people-based data, such as employee satisfaction score, absence rate, net promoter score, and other metrics.
- ❖ There are many easy-to-detect indicators of turnover, but organizations only see them when they're actively trying to gather information from leaving employees.
- ❖ It always helps organizations to identify barriers that are preventing employees from becoming more productive.
- ❖ It provides HR data that shows how to improve employee happiness and engagement at the workplace.
- ❖ It offers the holistic benefit of better understanding people as it drives engagement and morale, productivity, and employee satisfaction across the organization.

THE PROCESS OF PEOPLE ANALYTICS

HR AUTOMATION

Human resource management is a vital component of every organization. From hiring new employees, to training, to ensuring compliance with local labor laws, the HR process is a critical component of every company. However, HR has traditionally been seen as a very manual and departmental process. HR personnel are accustomed to rolling up their sleeves and getting the job done themselves. But all of that is changing. Automation is infiltrating the HR space and in the near future everything will become automated and computing driven. Current HR personnel will need to adapt to the changing landscape or be left in the dust.

HR automation is the process of improving the efficiency of HR departments by freeing employees from mundane manual and administrative tasks and enabling them to focus on more complex tasks such as decision making and strategic business solutions. Automating routine and repetitive HR activities will save organizations both in terms of cost and time.

Strategic human resource management is the process of identifying the long-term optimal use of human talent based on HR information. In traditional HR management, directives were mostly implemented by top-tier structure. Strategic automation could help HR teams avoid paper shuffling and instead focus on more strategic HR roles such as talent forecast and pipeline succession and more.

THE BENEFITS OF HR PROCESS AUTOMATION

HR automation allows organizations to design, automate, integrate and deploy services quickly and cost-effectively. If implemented correctly, HR automation can provide critical benefits. Here are nine key advantages of HR automation:

- Improves productivity through rapid processing and data sharing.
- Reduces employee turnover due to increased employee engagement.
- Reduces storage and printing costs due to paper-based processing.
- Eliminates compliance risk or policy violation.
- Empowers organizational growth by hiring at the optimal operational cost.
- Focuses on reducing data entry errors and miscellaneous lost/misplaced/lost documents.
- Enables intelligent business decisions with insights reports.
- Collaborates with third parties to hire, train and retain skilled labor.
- Provides more time for analyzing HR data to make smart business decisions.

POPULAR HR PROCESSES FOR AUTOMATION

1. Employee Onboarding Manual employee onboarding is often one of the HR processes that are most manual in nature. It involves the collection of documentation for verification, providing tool access to the new hire, raising device request on a regular basis, and so on. All of these processes can be automated with the help of the onboarding app. An employee onboarding app provides a simple checklist that all users can refer to in the HR process.

2. Employee Timesheets Manual timesheet tracking is highly inefficient. With the help of an automated time sheet app, such as the one from Kissflow, you can track and manage the employee timesheet automatically, making it faster and more efficient.

3. Leave Requests The calculation and approval of leaves is always a challenge, as HR staff need to check the leave balance, get a manager's approval, and record the leaves for payroll calculation. Automated leave management can do all of these things automatically, so one does not have to worry about leave requests getting bogged down in an inbox full of emails.

4. Performance Management Performance management is typically a dynamic HR process where an employee's performance is tracked, measured, and analyzed by matching it with business objectives. Automated performance management software streamlines the process, ensures bias-free decision-making, and makes the process memorable for employers and employees alike.

5. Exit Interviews The exit interview process plays an important role in enhancing employee engagement. However, traditional, paper-based exit interviews are time consuming, labor-intensive, and inefficient. By implementing human resource automation in the exit interview, organizations can detect potential issues and gather actionable information for improving employee retention without having to sift through mountains of paperwork.

FUTURE OF HR ANALYTICS

HR Analytics can help to gain a deeper understanding workforce and make informed decisions that improve your bottom line. The best practices that ensure HR Analytics aligns with business goals, focuses on high-value areas, and is backed by accurate and reliable data must be implemented by business. One must also embrace change management, share ideas effectively, and foster a culture of continuous improvement. The future of HR Analytics will be defined by predictive analytics, NLP, automation, integration, and ethical and transparent data.

It can be ensured that your HR Analytics projects remain successful and relevant and deliver significant commercial returns by staying on top of these emerging trends and technologies. All in all, HR Analytics is a must-have tool for any business that wants to better understand and utilize its workforce. HR Analytics can help organizations gain deeper insights into their workforce, make informed decisions that produce business outcomes, and position themselves well for the future.

CONCLUSION

The business landscape is constantly evolving and technology is making the human processes easier and more efficient. Technologies like data analytics, data mining, artificial intelligence, big data, machine learning, cloud technology, etc. are very useful and effective tools in today's business world. Human resource also utilizes some of these technologies for people analytics and human process automation. These technologies will help the HR to reach new horizons and benefit the stakeholders.

Role of Green Banking in the Green Economy and Sustainable Environment

Mr Rajagopalan S, Assistant Professor, Department of B.Com (CA), Nallamuthu Mahalingam College, (Autonomous)

ABSTRACT

Economy is a system of policies, plans, procedures, protocols and preparedness of a particular nation which purely deals with the development of Agriculture, Industry and Service sectors in the respective country. To safeguard the globe and to prevent the ecological adverse consequences on the globe, the practices of green are adopted and followed everywhere, for example, Go-green initiative in email communications. Green economy is an emerging concept where the economy targets at slowing down and removing risks arising in environmental conditions and scarcities of ecological resources. Green banking aims at improving the operations and technology along with making the clients habits environment friendly in the banking business. It is like normal banking along with the consideration for social as well as environmental factors for protecting the environment. By adopting the environmental factors in their lending activities banks can recover the return from their investments and make the polluting industries become environment-friendly. These are the major information about Green Banking in India.

KEYWORDS

Green Economy, Green Banking, Green Deposits, Eco-friendly Banking, Sustainable Economy

INTRODUCTION

The concern for environmental sustainability by the banks has given rise to concept of Green Banking. The concept of “Green Banking” will be mutually beneficial to the banks, industries and the economy. Green financing is the part of green banking. Green banking means promoting environmental friendly practices and reducing your carbon footprints from your banking activities. Green banking aims at improving the operations and technology along with making the clients habits environment friendly in the banking business. It is like normal banking along with the consideration for social as well as environmental factors for protecting the environment. It is the way of conducting the banking business along with considering the social and environmental impacts of its activities.

GREEN ECONOMY

Economy is a system of policies, plans, procedures, protocols and preparedness of a particular nation which purely deals with the development of Agriculture, Industry and Service sectors in the respective country. To safeguard the globe and to prevent the ecological adverse consequences on the globe, the practices of green are adopted and followed everywhere, for example, Go-green initiative in email communications. Green economy is an emerging concept where the economy targets at slowing down and removing risks arising in environmental conditions and scarcities of ecological resources.

Green economy is emerging concept. It can be easily adopted without diluting the existing economy set up. Some of the ideas or policies for green economy can be introduced and compelled by Government to be followed by the business enterprises such as Green sticker method, ecologically safe labels, Eco-friendly packing and containers and so on. Economy should support the sustainable management of environment and natural resources. There are non-renewable resources which are of scarcity in nature. So, the policymakers should consider the severity of ecological damages and concerning environmental issues.

GREEN BANKING

Green banking is a part of Green Economy movement. The concept of “Green Banking” will be mutually beneficial to the banks, industries and the economy. Green financing is the part of green banking. Green banking means promoting environmental friendly practices and reducing your carbon footprints from your banking activities. Green banking aims at improving the operations and technology along with making the clients habits environment friendly in the banking business. It is like normal banking along with the consideration for social as well as environmental factors for protecting the environment. It is the way of conducting the banking business along with considering the social and environmental impacts of its activities.

RISKS IN GREEN BANKING

Green banking is very important in mitigating the following risks involving in banks.

Credit Risk:

Due to climate change and global warming there will be direct as well as indirect costs to banks. It has been observed that due to global warming there had been extreme weather condition which affects the economic assets financed by the banks thus leading to high incidence of credit default. Credit risk can also arise indirectly when banks lend to companies whose businesses were affected due to changes in environmental regulation.

Legal risk:

Banks like other business entities face legal risk if they do not comply with relevant environmental regulation. They also face risk of direct lender liability for cleanup cost for damages in case they actually take possession of pollution causing assets.

Reputation Risk:

Due to increasing environmental awareness banks are prone for reputation risk if their direct or indirect actions are viewed as socially and environmentally damaging. Reputation risks emerge from the financing of environmentally objectionable projects.

STRATEGIES

Indian Banks can adopt green banking as business model for sustainable banking. Some of following strategies little reflected in their banking business or must be adopted by banks.

Carbon Credit Business (CBS):

All Nations must reduce greenhouse gases emission and reduce carbon to protect our environment. These emissions must be certified by Certified Emission Reductions commonly known as carbon credit.

Green Banking Financial Products:

Banks can develop innovative green based products or may offer green loans on low rate of interest. As Housing and Car loan segments constitute the main portfolio of all banks so they adopt green loans facility.

Paperless Banking:

All banks are shifting on CBS or ATM platform providing electronic banking products and services. So there is a scope for banks to adopt paperless banking. Private and foreign banks are using electronics for their office but in PSU banks are still using huge paper quantity.

Energy Consciousness

Banks have to install energy efficient equipment's in their office. Banks have to transform this green banking in hardware, waste management, energy efficient technology products. Banks can donate energy saving equipment to schools and hospitals.

Mass Transportation

Banks can provide transportation facility to bank officials who work in the same branch.

Paperless Banking

Banks can adopt paperless banking and go digital. A lot of banks are already shifting to CBS or ATM platforms and providing their consumers electronic banking services & products.

Financial Products

Banks can offer green loans on low rate of interests.

Social responsibility

Banks, like other business entities, have a social responsibility toward the society. They can initiate various initiatives for the welfare of the social sector like maintenance of parks, planting trees and pollution check-up camps.

GREEN DEPOSITS

To facilitate the implementation of green deposits and promote the growth of green finance in the domestic market, the Reserve Bank of India (RBI) has established regulatory guidelines and frameworks. Green deposits are interest-bearing fixed deposits denominated in Indian rupees, similar to regular fixed deposits. The proceeds from green deposits are earmarked for allocation into projects or activities that yield environmental benefits. The RBI framework, effective from June 1, mandates that the funds raised through green deposits must be utilised for activities promoting energy efficiency, reducing carbon emissions and greenhouse gases, fostering climate resilience and adaptation, and preserving and enhancing natural ecosystems and biodiversity.

In recent years, several public-sector and private banks have begun offering green deposit options to retail and institutional customers. However, the interest rates on these deposits are generally comparable to those of traditional fixed deposits. Some banks issue a "green certificate" to depositors, highlighting their contribution to creating a greener and more sustainable planet.

BUSINESSES QUALIFICATION FOR GREEN DEPOSIT ACCESS

For businesses seeking green finance, it is crucial to identify projects that qualify under the RBI's criteria for green assets to secure funding through green deposits. Stringent governance and impact measurement requirements necessitate improvements in systems and processes. Larger, listed companies are already adhering to Sebi's requirements for business responsibility and sustainability reporting, making their governance and impact transparent. However, smaller firms may face challenges in properly assessing their impact or affording second or third-party assurance.

GREEN DEPOSITS AS MAINSTREAM

While green deposits are currently niche products appealing to environmentally conscious investors, they have the potential to become mainstream like traditional fixed deposits if additional incentives, such as higher interest rates, are provided. Financial institutions must also focus on building internal capacity and skill sets to identify and appraise viable green projects. Furthermore, ensuring a steady supply of investable projects that meet the RBI's green investment criteria and the introduction of a green taxonomy are essential for the growth of green finance.

AI FUTURE OF GREEN BANKING

The future of green financing and sustainable banking is bright, with many opportunities for growth and innovation. As more investors and institutions recognize the importance of sustainability and ESG issues, we are likely to see a significant increase in demand for green financing and sustainable banking services.

CONCLUSION

Green banking refers to the initiatives taken by banks to encourage environment-friendly investment. Green banking as a concept is a proactive and smart way of thinking towards future sustainability. It is very important for the banks to be pro-active and accelerate the rate of the growth of the economy. As there is a continuous change in the environmental factors leading the banks face intense competition in the global market. Banks need to apply morality of sustainability and responsibility to their business model, strategy and formulation for products and services, operations and financing activities and become stronger. By adopting the environmental factors in their lending activities banks can recover the return from their investments and make the polluting industries become environment-friendly. These are the major information about Green Banking in India.

INTRODUCTION

The G20, also known as the Group of 20, is a forum consisting of 19 sovereign nations, the European Union, and the African Union. Its primary objective is to address

G20 AND INDIAN MANAGEMENT PRACTICES
ISBN: 978-93-90956-40-1

significant global economic issues, such as ensuring international financial stability, mitigating climate change, and promoting sustainable development. Comprising finance ministries from the world's largest economies, both developed and developing, the G20 represents approximately 80% of the global gross world product (GWP), 75% of international trade, two-thirds of the global population, and 60% of the world's land area.

GROUP OF TWENTY (G20)

The G20 was established in response to various global economic crises in 1999. Since 2008, it has held annual summits attended by the heads of government or state, finance ministers, foreign ministers, and other high-ranking officials from each member country. The European Commission and the European Central Bank represent the EU at these summits. Additionally, other countries, international organizations, and non-governmental organizations are invited to participate, some on a permanent basis.

During its 2009 summit, the G20 proclaimed itself as the primary platform for international economic and financial cooperation. Over the past decade, the group's influence has grown significantly, earning recognition from analysts for its substantial global impact. However, it has also faced criticism for its limited membership, lack of enforcement powers, and alleged undermining of existing international institutions. These summits often encounter protests, particularly from anti-globalization groups. At the 18th G20 Summit in September 2023, Indian Prime Minister Narendra Modi announced the inclusion of the African Union as the 21st member of the G20.

GROWTH STRATEGIES

The G20 Leaders have concluded their summit in Brisbane, Australia, after a year-long process of preparatory work and discussion. This year, the focus of the G20 agenda was on addressing concerns about weak global growth and job creation. Both advanced economies and emerging economies have experienced slow and uneven economic recovery. It is now widely recognized that restoring robust global growth requires not only addressing the aftermath of the global financial crisis but also implementing deeper structural reforms to enhance potential growth.

In light of this, all G20 countries were requested to develop medium-term growth strategies that provide a systematic framework for addressing policies and priorities in the

growth agenda. These strategies cover a wide range of areas, including macroeconomic policies and structural reforms, with the aim of promoting strong, sustainable, and balanced growth. The Australian G20 Presidency highlighted four key policy areas in these strategies: investment and infrastructure, employment, competition and business environment, and trade. The focus on investment and structural reforms is crucial as they are the drivers of long-term productivity and sustainable growth, while macroeconomic policies play a role in supporting short-term aggregate demand. The strategies have undergone extensive discussion and peer review within the G20, with technical assessments provided by international organizations. Yesterday, the final versions of these strategies were released alongside the Leaders' Communiqué and the Brisbane Action Plan, which provides an overview of these strategies.

Progress towards the Collective Ambition

The objective of achieving a collective GDP growth of more than 2 percent by 2018 was set during the G20 Finance Ministers and Central Bank Governors meeting in Sydney. This target aimed to surpass the projected growth trajectory based on existing policies, equivalent to a 0.4 percentage point increase in the average annual GDP growth rate over the specified period. In order to attain this additional growth, G20 members were requested to outline new policy measures in their growth strategies. Now, the question arises: what impact will these strategies have on growth? Assessing the growth impact of numerous policy commitments across different policy areas and countries, each with varying levels of specificity, is a complex task. Consequently, the estimates prepared are subject to a certain level of uncertainty. However, the IMF and the OECD, with inputs from other international organizations such as the World Bank, have conducted an estimation exercise. According to their findings, if implemented, the new policy commitments outlined in the growth strategies submitted by G20 members could increase the collective GDP of the G20 by 2.1 percent by 2018. This indicates that the G20 has successfully achieved its goal. This positive outcome can be attributed to the G20's strong focus and coordination in developing growth strategies throughout the year.

Successful execution of policies for effectiveness

The projected growth resulting from these policies is based on the assumption that countries will fully implement their commitments, which poses a significant challenge. Additionally, the baseline growth projections have been revised downwards since the adoption of the 2 percent target in 2014. Therefore, even if the 2 percent target is mostly met,

the overall growth may still fall short of the initial projections. Moreover, it is important to note that the 2 percent target was established as a minimum goal by the G20. To effectively address the employment challenge, stronger medium-term growth is necessary. During the Brisbane summit, the G20 Leaders endorsed an Accountability Assessment Framework to monitor the implementation of policy commitments and make necessary adjustments to the growth strategies. This framework will also address any policy gaps that persist and respond to any potential weakening of the global growth outlook. Additionally, it will monitor the impact of members' policies on other countries, aiming to promote positive effects and minimize negative ones. The objective of this framework is to ensure that the G20 stays on track to achieve its growth objectives. The process will involve peer reviews and technical assistance from international organizations, including the World Bank.

World Bank Contributions

The World Bank played a crucial role in assisting the G20 in developing growth strategies through-out the year. To begin with, various international organizations were requested to provide diagnostic notes on key areas of reform, which would help identify the major policy gaps that G20 countries needed to address in order to enhance growth. The World Bank staff contributed notes on competition and business environment, jobs, trade, infrastructure, and education and skills, highlighting areas that required priority attention. Subsequently, the IMF, OECD, and the World Bank jointly submitted a report to the G20, outlining macroeconomic and structural reform priorities and presenting reform scenarios that could generate additional growth. This report served as the technical foundation for the G20's adoption of the 2 percent additional growth goal during its ministerial meeting in February. G20 members submitted their draft strategies in May, which were then reviewed by their peers in June. Based on this review, revised growth strategies were submitted in August for another round of peer review in September. Finally, G20 members finalized their strategies for release at the Leaders' summit. Throughout this review process, the World Bank, along with other international organizations, provided technical inputs and assessments to support the G20's efforts.

Inclusive Growth

The growth strategies aim to achieve the G20 objective of "strong, sustainable, and balanced growth". However, the aspect of promoting inclusive growth is not fully incorporated into these strategies, despite the inclusion of several measures that can not only

foster growth but also ensure its inclusivity. Given the escalating inequality in numerous countries, including a majority of G20 nations, and the mounting evidence suggesting that such inequality can undermine economic stability and the sustainability of growth, it is imperative to make inclusivity an integral component of the G20 growth strategies.

MARKETING PLANS

This G20 Summit is amplifying the voices and addressing the concerns of the Global South. It is giving momentum to development initiatives led by women. As technology plays an increasingly significant role in shaping the future, this G20 is making significant progress in the fields of AI (Artificial Intelligence) and DPI (Digital Public Infrastructure).

Regarding the marketing strategies that are being implemented, Mariya Jamal, Head of Marketing at Dot Media, stated, "The G20's marketing strategy is well-planned, focusing on collaboration, economic stability, and global governance. Leveraging its role as a platform for world leaders to address urgent global issues, the G20 utilizes diplomatic channels, engages with international media, and strategically communicates its message to capture the public's attention. The objective is to position the G20 as a crucial forum for building multilateral solutions and making global decisions."

Digital Marketing and Social Media's Role in Global Promotion

Amit Relan, Co-founder and CEO of mFilterIt, evaluated the impact of digital marketing and social media, emphasizing their crucial role in raising awareness about the G20 Summit both within India and globally. Not only did the Indian media cover this important event, but major international media outlets also spread the word in their respective countries. The use of digital platforms facilitated curiosity and awareness surrounding the summit, while also capturing the perspectives of the visiting delegates. The G20 India 2023 website showcased a specialized segment for digital marketing, providing details on how businesses could actively participate in promoting the event. Moreover, the website maintained an active social media presence on platforms like Twitter, Facebook, and Instagram, enabling organizers to share event updates and engage with prospective attendees.

Impactful Marketing Methods

The G20 Summit's successful promotion was greatly influenced by various marketing methods and mediums. India took the initiative to launch a multimedia advertising campaign

that utilized print, television, and radio platforms. In addition to these impactful marketing methods, Srivatsa T J, Vice President of PR & Communications at Broadnection, emphasized the importance of interactive content such as videos and webinars in creating longer engagements for promoting an event as significant as the G20 Summit in India. Collaborating with reputable media outlets to secure extensive earned media coverage through op-eds and feature articles, both domestically and internationally, further highlighted India's role as the host country. This approach aimed to effectively convey the summit's significance and India's preparedness to welcome the world, thereby fostering a positive image and generating interest in the event.

Tourism Industry's Prospects

The G20 Summit served as more than just a platform for diplomacy and economics; it also presented a unique opportunity to promote India's tourism industry. Vibha Singh, Director, APAC, ETML, expressed her thoughts on this industry move, emphasizing that the G20 meetings were held in various regions of India, spanning from Arunachal Pradesh to Kashmir. This geographical diversity not only highlighted India's potential as a multifaceted tourist destination but also played a crucial role in instilling a sense of security among international delegates and travelers who ventured into these regions. However, in order to sustain this momentum, continuous efforts in digital marketing, social media engagement, partnerships, infrastructure development, cultural preservation, and safety measures are vital components of a comprehensive approach to maintain and expand the growth of the tourism sector. The nation's awe-inspiring landscapes, diverse culture, and rich heritage were effectively showcased through strategic marketing campaigns aimed at promoting the G20 Summit.

CONCLUSION

The 2023 G20 New Delhi Leaders' Declaration, consisting of 83 paragraphs, received unanimous approval, achieving a remarkable 100 percent consensus, even with the agreement of China and Russia. Notably, this historic declaration stood out by lacking any footnotes or Chair's Summary. Embedded within these 83 paragraphs were multiple agreements related to the Finance Track. Additionally, there were 8 paragraphs dedicated to addressing the conflict in Ukraine and its subsequent economic implications. Finance Minister Nirmala Sitharaman highlighted the accomplishments of the Indian G-20 Presidency, emphasizing a concrete strategy for strengthening multilateral development banks, a clear path for regulating

G20 AND INDIAN MANAGEMENT PRACTICES
ISBN: 978-93-90956-40-1

cryptocurrencies, and the implementation of digital public infrastructure to enhance financial inclusion. She also emphasized the importance of expediting a debt relief plan for vulnerable nations.

In terms of climate change, the declaration emphasized the urgency of mobilizing "US\$5.8-5.9 trillion in the pre-2030 period for developing countries" and "US\$4 trillion per year for clean energy technologies by 2030" in order to achieve net-zero emissions by 2050. It called for a significant increase in climate funding, transitioning from billions to trillions of dollars. A notable development was the acceptance of the African Union as a member of the G20. Prior to this, the only African member was South Africa. At the Delhi Summit of the G20, the African Union, representing the 55 countries in the African continent, was granted full membership, similar to how the EU is represented.

Abstract:

This paper explores the transformative impact of artificial intelligence (AI) on global trade dynamics. Focusing on real-world applications, we examine how AI enhances efficiency, optimizes supply chains, and aids decision-making in the face of trade complexities. Ethical considerations and potential risks are discussed, emphasizing the need for responsible AI integration. Looking ahead, the paper envisions a future where strategic AI adoption becomes imperative for nations and enterprises striving for competitiveness in the evolving global trade landscape. As AI continues to reshape global trade, the paper underscores the importance of addressing data privacy and ethical concerns. It emphasizes that a strategic and responsible embrace of AI is crucial for navigating the evolving trade ecosystem. In conclusion, this work serves as a compass for stakeholders, highlighting the transformative journey and the imperative role AI plays in shaping the future of international commerce.

Keywords: Artificial Intelligence (AI), Global Trade, Supply Chain Optimization, Decision

Introduction: In an era marked by unprecedented technological advancement, the integration of artificial intelligence (AI) has emerged as a pivotal force reshaping traditional paradigms across various industries. One of the spheres experiencing a profound transformation is the intricate realm of global trade. As nations navigate an ever-evolving landscape characterized by intricate supply chains, intricate regulatory frameworks, and heightened market volatility, the

Abstract

It underscores the policy's significance in empowering adults, reducing educational disparities, and promoting a holistic approach to learning that resonates with the needs of modern society. As policy makers, educators, and stakeholders navigate the implementation of the NEP, this abstract provides insights into the transformative potential of adult learning and lifelong learning in shaping India's educational future.

Keywords : Adult Education, Lifelong Learning ,New Education Policy

Introduction

The New Education Policy 2023 is based on 4 main pillars access, equity, quality and accountability. Adult education refers to educational activities and programs designed for adults who want to continue learning and acquiring new skills outside of the traditional school or college setting. It is aimed at individuals who may have missed out on formal education or who wish to further develop their knowledge and skills for personal or professional reasons.

Goal of New Education Policy

The primary goal of the Government of India in updating the New National Education Policy is to transform India into a global knowledge superpower. Access, equity, quality, and accountability are the four fundamental pillars of the New Education Policy 2023. The structure will be 5 + 3 + 3 + 4, with 12 years of schooling and 3 years of Anganwadi / pre- schooling. The new school and college education system will be more flexible, holistic, and multidisciplinary.

Main Features of National Education Policy

By 2025, a new education policy is going to concentrate on basic reading and mathematical skills. Instead of every academic year, pupils will be taking only tests in the second, fifth, and eighth grades. Board exams for the 10th and 12th grades will continue. However, it will be redesigned. The examination will be held twice per year and will consist of two sections, one objective and one descriptive. Coding will be introduced to kids in grade six, and creative education will be used.

Abstract

The purpose of this essay is to examine the value of women's empowerment in a collegiate environment and the steps that can be taken to advance gender equality, create opportunities, and support female leadership. The empowerment of women is a crucial component of societal advancement, and educational institutions are crucial in establishing a more just future. In order to foster an inclusive and empowering atmosphere, this presentation explores a range of issues that affect women's empowerment, the difficulties they confront, and the efforts colleges can put in place.

Keywords: gender equality, societal advancement, adaptive.

Introduction

The idea of women's empowerment has come to be seen as a strong force for change in the effort to create a more equal and just society. Women's empowerment is the process of giving them the power to take charge of their life, reach their full potential, and actively engage in all facets of society. It attempts to question and eliminate the obstacles and gender-based discrimination that have historically restricted the opportunities and contributions of women.

Women have experienced numerous difficulties throughout history, including social, economic, and political exclusion as well as limited access to healthcare and education. However, as civilizations advance, there has been a rising appreciation of the need of empowering women, not only for their own gain but also for the development and prosperity of communities generally.

Comprehending Women's Empowerment

The process of giving women the authority to take charge of their life, actively engage in decision-making, and get equal opportunities in leadership, education, and work is referred to as "women's empowerment." It entails removing gender-based restrictions, dispelling conventional preconceptions, and promoting an environment where women can thrive.

Abstract

This paper examines India's global leadership in 2047, analyzing the impact of NEP 2020, Women Empowerment, Agriculture Reform, and Make in India. It explores how NEP 2020 fosters skilled individuals and innovation, while women empowerment initiatives drive social and economic progress. The agricultural reform enhances productivity and food security, and 'Make in India' campaign boosts industrial growth. This study sheds light on the interconnected effects of these policies, offering insights into India's rise as a global leader and emphasizing the significance of visionary reforms and empowerment for sustainable development.

Keywords: Empowering India's Journey to Global Leadership in 2047: A Comprehensive Analysis of NEP 2020, Women Empowerment, Agriculture Reform, and Make in India

Introduction

As India charts its path towards 2047, the centenary year of its independence, the nation's aspirations for global leadership have never been more resolute. This paper endeavors to examine the pivotal role played by key policy initiatives - the National Education Policy (NEP) 2020, Women Empowerment, Agriculture Reform, and Make in India - in propelling India towards its envisioned position on the global stage. Each of these transformative drivers brings unique dimensions to the country's journey, fostering inclusive growth, gender equality, agricultural sustainability, and industrial prowess.

Education - A True Driving Factor:

1. **Human Capital Development:** Education and NEP 2020 nurture skilled individuals, fostering creativity and critical thinking. A well-educated workforce drives economic growth and innovation, enhancing India's global competitiveness.
2. **Knowledge Economy:** NEP 2020 emphasizes research and innovation, positioning India as a leader in technology, science, and medicine. Leveraging

A STUDY ON EARLY PREDICTION OF LUNG CANCER USING MACHINE LEARNING TECHNIQUES

Dr.R.MALATHI RAVINDRAN

Associate Professor, NGM College, Pollachi,
Tamil Nadu, India

S.THILAGAVATHI

Research Scholar, NGM College, Pollachi,

ABSTRACT

Machine learning techniques are being used in cancer research more than an era. Nowadays, Machine Learning Algorithms are more widely used in the area of Lungcancer (LC) research. Lung cancer became the highest mortality rate across the globe, hence early prediction and classification of cancer cells can increase the rate of survival. Though there are many algorithms used in the field of neurology, radiology, oncology for LC prediction, the algorithms used in ML performs well with efficiency. This study first focuses on the workflow methodology used by ML for early prediction and classification of LC. Second, report of the ML algorithms used in LC and their methodologies is presented. Third, the performance metrics are analyzed. Finally, also covers the parameters used in constructing an efficient and accurate ML model for the early prediction of LC.

Keywords: Machine learning, Lung cancer, Prediction, Classification, Methodologies, Performance metrics.

I INTRODUCTION

Around the world, lung cancer (LC) remains the main source of Cancer growth rate and mortality, with so many millions of new cases and mortality [1]. Though it is the most dangerous disease an early prediction and diagnosis will increase the survival rate. Smoking is the main cause of cancer in the lungs and non smokers, Various Factors contribute to the risk of LC [2]. If half of the high-risk individuals of LC were screened, over 12,000 deaths could be prevented [3]. Detection of LC is done by various tests such as Chest Xray, helical CT scan, and Low Dose

Computed Tomography (LCTD) Among various tests LDCT screening an decrease LC mortality by 4to20percent in high-risk populations [4][5], and also LDCT Scan detects smaller lung tumors at an earlier stage [6]. All Nodules found in the lungs need not be cancerous. Lung malignancies are extensively characterized into 3 kinds: Small cell LC (SCLC) and non-small cell LC (NSCLC) and lung characinoid tumor. There are 2 types of staging systems in Lung malignant growth; one is the number system (Stage I, Stage II, Stage III, and Stage IV)

The Other is the NM (Tumor, Nodes, Metastases) system. Based on the Tumor size,

GLIMPSES OF IMAGE PROCESSING

ABSTRACT

This paper presents a comprehensive exploration of image processing techniques applied to specify the application or task, e.g., medical imaging, object recognition. The primary focus is on enhancing the quality, extracting meaningful information, and improving the efficiency of image analysis. We employ a variety of methods, including list key techniques, e.g., image enhancement, segmentation, feature extraction. The study begins with a detailed analysis of briefly introduce the dataset or images used. Preprocessing steps involve any preprocessing steps, e.g., noise reduction, color correction. Subsequently, image enhancement techniques such as cite specific methods, e.g., contrast stretching, histogram equalization are employed to improve overall image quality. For the task of specify a task, e.g., object recognition, we implement advanced feature extraction methods like techniques, e.g., SIFT, HOG. Image segmentation is accomplished using segmentation algorithms, e.g., watershed, region-growing. The results showcase the effectiveness of these techniques in accurately delineating objects or regions of interest. Furthermore, the paper explores any additional analyses or findings, e.g., comparative studies, performance evaluations. The proposed image processing techniques exhibit promising results in terms of key metrics, e.g., accuracy, precision. In conclusion, this research contributes valuable insights into the application of image processing techniques for the domain. The findings not only advance our understanding of specific domain but also lay the groundwork for future developments in potential applications or future work.

1. INTRODUCTION TO IMAGE PROCESSING

Image processing, a cornerstone in the realm of digital technology, serves as the key enabler for extracting meaningful insights from visual data. This abstract encapsulates the essence of image processing, delving into its fundamental principles, diverse techniques, and transformative applications. At its core, image processing involves the manipulation and

analysis of digital images to enhance, interpret, or extract valuable information. Techniques range from foundational processes like filtering and enhancement to advanced tasks such as segmentation and pattern recognition. The dynamic evolution of image processing is underscored by the integration of artificial intelligence and deep learning, fostering

உணவு என்பது கலாசாரங்களுடன் மரபுகளுடன் நெருங்கிய தொடர்பிலிருப்பது. ஒரு பிரதேசத்தின் உணவு அந்த நிலப்பகுதி, காலநிலை, அங்கு விளையும் பயிர்கள் மற்றும் அப்பிரதேசத்தின் சமையல் மரபு ஆகியவற்றாலானது. உணவே பல நாகரீகங்களில் பெரும் மாற்றங்களை உண்டாக்கி இருக்கிறது. பல புதிய நாகரீகங்களையும் உருவாக்கி இருக்கிறது.

தொன்மங்களில் இடம்பெற்றுள்ள, நாகரீகங்களைத் தோற்றுவித்த, நாகரீகங்களை மாற்றியமைத்த பல வகையான தாவர உணவுகள் ஒவ்வொன்றுடனும் சுவாரஸ்யமான கதைகளும் தகவல்களும் நிகழ்வுகளும் இருக்கின்றன. அவற்றில் முக்கியமான உணவு வகைகளைக் குறித்த கட்டுரைகளின் தொகுப்பே இந்நூல்.

இயற்கையைவிட்டு வெகுதூரம் விலகியும் இயற்கையிலிருந்து தங்களை முற்றிலுமாக துண்டித்துக் கொண்டு மிருக்கும் நம்மில் பலருக்குத் தாவர உணவுகளின் வரலாற்றை அறிந்து கொள்வதில் ஆர்வமிருப்பதில்லை.

தாவரவியல் துறை விலக்கப்பட்ட கனி அல்ல, அரியதும் அவசியமானதும் தான் என்று சொல்லும் கட்டுரைகள் இவை.

இப்பூவுலகின் நிலப்பரப்பில் இந்தியா 2.4 விழுக்காடுதான் என்றாலும் உலகின் 11.4 % தாவரங்களுக்கு இது வாழ்விடம். இருந்தாலும், தாவரங்களை நாம் கவனிப்பதில்லை என்று நூலாசிரியர் அங்கலாய்க்கின்றார். செடிகொடிகளைக் கண்டுகொள்ளாதிருக்கும் நிலையை 'தாவரக்குருடு' என்று கூறுகின்றார். ஒரு வேளை தாவரங்கள் ஒரே இடத்தில் நிலைத்து இருப்பதால் நாம் அவற்றைக் கவனிப்பதில்லையோ? இங்கு மனதில் கொள்ள வேண்டியது 'காட்டுயிர்' என்ற சொல், விலங்குகளையும் தாவரங்களையும் குறிக்கின்றது.

இந்தியக் கலாச்சாரத்தின் ஒரு சிறப்பு அம்சமான சந்தனம் பற்றி ஆழமான ஒரு கட்டுரை இந்நூலில் உள்ளது. அதே போன்றதுதான் மருதாணி, வெட்டிவேர், தர்ப்பை பற்றிய கட்டுரைகளும். அன்றாட வாழ்வில் இவை நமக்கு நெருக்கமாக இருந்தாலும் அறிவியல் பூர்வமாக இந்தத் தாவரங்களைப் பற்றி நாம் அறிந்திருப்பது சொற்பமே.

தாவரவியல் பேராசிரியராக இருப்பதனால் அறிவியல் அடிப்படையில் எழுதுகின்றார். ஆதாரமில்லாமல் எதையும் கூறுவதில்லை. திடமான மேற்கோள்களைக் குறிப்பிடுகின்றார். தமிழ் அறிவியல் எழுத்துலகிற்கு இந்நூல் ஒரு நல்ல வரவு.

Email: drlogamadevi@gmail.com

Abstract

Pseudo-cereals stand out as nutritional powerhouses, distinguishing themselves from true cereals by belonging to the dicotyledonous plant category. While not genuine cereals, their seeds closely mimic those of true cereals in both function and composition. Pseudo- cereal grains, comprising Buckwheat (*Fagopyrum esculentum* Moench.) Amaranth (*Amaranthus* sp.) and Quinoa (*Chenopodium quinoa* Willd.) are gluten-free grains due to their rich nutritional profiles and bioactive compounds. Additionally, they are rich in renowned for their abundance in starch, fiber, proteins, minerals, vitamins, and notably, phytochemicals such as phenolics, alkaloids and flavonoids. These diverse phytochemicals and nutritional composition contribute significantly to their numerous health benefits and these grains have the potential to mitigate the risk of chronic ailments, including diabetes, cancer, obesity, and cardiovascular diseases. Moreover, they play a role in managing celiac disease, a health condition affecting the small intestine due to the toxic effects of gluten ingestion and digestion. Unlike cereals containing gluten, pseudo-cereals provide a valuable dietary alternative for individuals dealing with celiac disease or gluten sensitivity. It is essential to note that celiac disease cannot be cured solely by eliminating gluten-containing foods from the diet. Gluten, a protein combination of prolamin and glutelin inherent in certain grains, acts as a trigger for celiac disease. This study aims to consolidate information on the nutritional quality, bioactive compounds, health benefits, and potential applications of most commonly consumed grains.

Keywords: Phytochemicals, Pseudo-cereals, Nutraceutical, Celiac disease, Gluten-free diet

SURVEY OF WEED INFESTATION IN MILLET CULTIVATION FIELD IN VIRUDHUNAGAR DISTRICT

Abstract

In recent years, there has been a growing recognition of millets as nutri-cereals, with both national and international policies providing much-needed support for their cultivation. Millets, primarily grown in rain fed conditions and under-nourished soils, face increased vulnerability to weed competition losses. Despite being a crucial staple food crop in semi-arid tropical regions of Africa and Asia, particularly in dry areas of India, millet yields are hindered by inefficient weed management strategies and the impact of climate change, often relying heavily on manual hand weeding. A field survey spanning from August 2022 to November 2023 was conducted in the Millets cropping season in Virudhunagar Taluk. The study focused on three randomly selected field farms for each millet type to assess weed density, employing systematic sampling with adjustments. Weed infestation associated with sorghum cultivation in Arupukkottai and Virudhunagar, Tamil Nadu, India, was meticulously studied using random sampling, assigning a specific rank to each weed based on its frequency in the study area. The dominant weeds infesting sorghum, Finger millet, Pearl millet, and Little millet, across the four different millet cultivation areas, included *Abutilon indicum* (L.) Sweet, *Rhynchosia minima* (L.) DC., *Commelina benghalensis* L., *Conyza bonariensis* (L.) Cronquist, *Dactyloctenium aegyptium* (L.) Willd., *Eragrostis chineensis* (All.) Junch, among others. These weeds, broadly distributed and generalized, presented an opportunity to explore sorghum allelopathy for effective weed control. The survey data, collected from 80 randomly selected respondents through a questionnaire, revealed that

Abstract

The role of women in the business landscape has evolved significantly in recent years, particularly in the context of Digital India's transformative initiatives. The government's Digital India campaign has provided a robust platform for women entrepreneurs to leverage technology, bridge gender disparities, and tap into various opportunities. This paper aims to analyze the emergence and impact of women entrepreneurs in the digital sector in India, highlighting their contributions to the economy and society. The study draws on a comprehensive review of existing literature, data's and to investigate the challenges and opportunities faced by women entrepreneurs in the digital ecosystem. However, the study also showcases inspiring success stories of women who have overcome these barriers to create innovative businesses and disrupt traditional industries. The study concludes by highlighting the importance of fostering an enabling environment that supports and nurtures women entrepreneurs in the digital space.

Keywords: *Women entrepreneurs, Digital India, Digital economy, Gender equality, Digital transformation.*

Introduction

A woman's from half of the society. The pressure of domestic work such as home- making, child care and health care makes it efficient, if not impossible, for India women to engage in the entrepreneurial actives. But the remarkable success of wide-spread e-commerce, helps many women in marketing their long-cherished of becoming entrepreneurs in the reality. Women entrepreneur is one who incubates new ideas starts her enterprise added value to society based on their independent initiative. She is self confident and has faith in herself and her abilities. She has the strength to bring the change and overcome resistance. The increasing presence of women as entrepreneurs has led to significant business and economic growth in the country. Women-owned business enterprises are playing a prominent role in society by generating employment opportunities in the country, bringing in demographic shifts and inspiring the next generation of women founders. With a vision to promote the sustainable development of women entrepreneurs for balanced growth in the country, Startup India is committed towards strengthening women entrepreneurship in India through initiatives, schemes, creation of enabling

networks and communities and activating partnerships among diverse stakeholders in the startup ecosystem.

In recent years, the emergence of digital India has led to a significant transformation in various sectors, including entrepreneurship. One of the most notable developments has been the rise of women entrepreneurs who are making remarkable strides in the digital landscape. Women in India are breaking traditional barriers and embracing technology to build successful ventures, contributing significantly to the nation's economic growth and empowerment of women. The digital revolution in India has opened up unprecedented opportunities for women to leverage technology, access information, and connect with a global audience. Empowered with digital tools and platforms, women entrepreneurs are not only establishing innovative businesses but also driving social change and gender equality.

Women Entrepreneurs in India

Women who start and run their own businesses are considered female entrepreneurs. A woman entrepreneur is one who improves the lives of economically and socially disadvantaged women in society. Go describes women entrepreneurs as "a business owned and controlled by women that creates jobs for its employees." Encouraging women to initiate and sustain enterprises could play a pivotal role in uplifting India's economy and bring about improvements on various social indicators linked to the quality of life and well-being of families. Being inextricably tied with care giving roles at home, like caring for children, preparing food, etc, also means that women tend to prioritize the well-being of their families and therefore spend a considerable portion of their income on ensuring better education for their children along with the health and nutrition of family members. The Landscape Study on Women Entrepreneurship by EdelGive Foundation shows that women entrepreneurs spend most of their income on food (65%), children's education (53%), clothing (51%) and health/medical facilities (24%), which results in better educated and healthier generations. Moreover, past studies have indicated that promoting women's participation in employment and entrepreneurship in India can potentially increase the country's gross domestic product (GDP) by \$0.7 trillion by 2025. Yet, despite the positive impact that women's entrepreneurship has on societal development and women's empowerment, the contribution of women to India's GDP is estimated at 17% as compared to the global average of 37%, with the share of women-led micro, small and medium enterprises (MSMEs) being a meager 14% .

The women entrepreneurs have leveraged technology and innovation to create successful ventures and drive social and economic change in the digital space in India:

1. **Falguni Nayar:** She is the founder of Nykaa, an e-commerce platform focused on beauty and wellness products. Nykaa has become one of the leading online beauty retailers in India.
2. **Richa Kar:** Richa Kar is the founder of Zivame, an online lingerie and intimate apparel store that has transformed the way women shop for undergarments in India.
3. **Upasana Taku:** Co-founder of MobiKwik, a digital wallet and mobile payments platform, Upasana has played a significant role in promoting cashless transactions in India.
4. **Radhika Ghai Aggarwal:** Co-founder of ShopClues, an online marketplace that connects buyers and sellers across India, offering a wide range of products.
5. **Shradha Sharma:** Founder and CEO of YourStory, a media platform that showcases stories of startups, entrepreneurs, and change-makers in India.
6. **Sabina Chopra:** She co-founded Yatra.com, one of India's leading travel portals, making it easier for people to book flights, hotels, and travel packages online.
7. **Suchi Mukherjee:** Founder of Limeroad, an e-commerce platform known for its social shopping experience, where users can create their own fashion looks and share them.
8. **Aditi Gupta:** Co-founder of Menstrupedia, a digital platform that educates people about menstruation, breaking taboos and promoting menstrual hygiene.
9. **Anisha Singh:** Founder of MyDala, a platform that provides deals and discounts on various services, making it popular among online shoppers.
10. **Neha Singh:** Co-founder of Tracxn, a startup intelligence platform that tracks data on emerging tech companies and sectors.

These women have overcome various challenges and have shown immense determination in building successful digital enterprises. They continue to inspire and encourage other aspiring women entrepreneurs in India to embrace technology and create a lasting impact in the digital ecosystem.

Women Entrepreneurs in Digital India

Women entrepreneurs in Digital India face both opportunities and challenges. It's important to note that the landscape may have evolved since then, but I'll provide insights based on the information available up to that point:

Opportunities for Women Entrepreneurs in Digital India

1. **Digitalization and E-commerce:** With the growth of Digital India initiatives, more business activities have moved online. This presents an excellent opportunity for women entrepreneurs to establish e-commerce ventures, digital marketing agencies, or online service providers.
2. **Access to a Wider Audience:** The internet allows women entrepreneurs to reach a global audience from the comfort of their homes. They can leverage social media, online marketplaces, and digital advertising to promote their businesses internationally.
3. **Government Initiatives and Support:** The Indian government has launched various schemes and programs to support women entrepreneurs, including financial assistance, skill development programs, and networking opportunities.
4. **Remote Work and Flexibility:** The digital era enables flexible work arrangements, which can be particularly advantageous for women entrepreneurs who may need to balance family responsibilities with business ventures.
5. **Empowerment through Education:** Digital platforms offer numerous educational resources, online courses, and webinars that empower women with the knowledge and skills needed to start and grow their businesses.

Challenges Faced by Women Entrepreneurs in Digital India

Despite the positive growth and progress, women entrepreneurs in Digital India also face some challenges, including:

1. **Gender Bias:** The tech industry, like many others, still faces gender bias, making it difficult for women to access funding, resources, and opportunities at times.
2. **Work-Life Balance:** Balancing entrepreneurial responsibilities with family and societal expectations can be challenging for women, affecting their entrepreneurial journey.
3. **Access to Funding:** Access to capital and venture funding remains a significant obstacle for many women-led startups in India.
4. **Digital Literacy:** While digital adoption is increasing in India, some women entrepreneurs still face challenges related to digital literacy, which can affect their ability to leverage digital tools effectively.

Despite these challenges, women entrepreneurs in Digital India are making strides, and the ecosystem is gradually becoming more inclusive and supportive. The government and various organizations are taking initiatives to encourage and

empower women to participate in the digital economy and entrepreneurship, which will likely contribute to further growth and opportunities for women in the future.

Conclusion

Women entrepreneurs in Digital India have demonstrated remarkable strength, resilience, and innovation in transforming the landscape of the country's digital economy. They have overcome various challenges, including societal norms, gender biases, and access to resources, to establish their ventures and contribute significantly to economic growth. In conclusion, the rise of women entrepreneurs in Digital India has been a powerful force for change. Their active participation in various sectors, from e-commerce to fintech, has led to the creation of job opportunities, the development of innovative solutions, and the empowerment of women in the workforce. As they continue to break barriers and pave the way for others, it is crucial for policymakers and society at large to provide adequate support, resources, and an enabling environment to further foster the growth of women-led businesses.

Abstract

India's agricultural sector plays a crucial role in sustaining its vast population and supporting its economy. However, the sector faces numerous challenges such as low productivity, inadequate infrastructure, and fragmented landholdings. To address these issues and enhance agricultural development, institutional reform and technological advancements have emerged as critical pathways. This paper examines the significance of institutional reform and technological advancements in transforming Indian agriculture. Moreover, the paper explores the role of technology in modernizing Indian agriculture. Furthermore, the paper analyzes the challenges and opportunities associated with integrating institutional reforms and technological advancements. It highlights the importance of providing training and support to farmers for the successful adoption of new technologies. Additionally, the study discusses how public-private partnerships can facilitate the dissemination of knowledge and resources to the farming community.

Keywords: Institutional Reform, Technological Advancements, Indian Agriculture, Agriculture Development, Farmers, Agricultural Policies.

Introduction

Indian agriculture has been the backbone of the country's economy for centuries, providing livelihoods to a significant portion of its population and contributing substantially to its Gross Domestic Product (GDP). However, the sector has faced numerous challenges over the years, including outdated farming practices, low productivity, inadequate infrastructure, and volatile market conditions. In recent times, a combination of institutional reforms and technological advancements has emerged as a promising strategy to revitalize and modernize Indian agriculture, paving the way for sustainable growth and improved farmer welfare. Historically, Indian agriculture has been characterized by small landholdings, dependency on monsoon rains, and a traditional approach to farming. The lack of access to modern tools, credit facilities, and knowledge has hindered productivity and trapped

farmers in a cycle of poverty. Recognizing the urgency of addressing these issues, the government, policymakers, and agricultural experts have been increasingly focused on implementing institutional reforms that aim to empower farmers, increase their income, and foster overall rural development. Simultaneously, technological advancements have revolutionized various sectors worldwide, and agriculture is no exception. From precision farming techniques to the use of drones and artificial intelligence, technology offers immense potential to optimize agricultural practices, increase efficiency, and mitigate environmental impact. Integrating these technological innovations into Indian agriculture has become essential to overcome challenges and meet the growing demands of a burgeoning population. This paper delves into the key aspects of institutional reform and technological advancements in Indian agriculture development. It explores the recent policy measures and initiatives taken by the government to empower farmers and create an enabling environment for agricultural growth. Additionally, it examines the role of technology in transforming traditional farming methods, enhancing productivity, and promoting sustainable practices.

Institutional Reforms in Agricultural Development

Indian agriculture has played a pivotal role in the country's socio-economic fabric for centuries, providing livelihoods to a significant portion of the population and contributing substantially to the national GDP. However, over the years, the agricultural sector has faced numerous challenges, ranging from fragmented landholdings and outdated farming practices to inadequate infrastructure and market inefficiencies. These challenges have hindered the sector's growth and impeded the well-being of millions of farmers and rural communities.

Recognizing the urgent need for transformative change, institutional reforms in Indian agriculture have emerged as a critical aspect of sustainable development and rural prosperity. These reforms seek to restructure and modernize the agricultural framework, address systemic issues, and empower farmers with better access to resources, technology, and markets. Historically, the Green Revolution in the 1960s and 1970s significantly boosted agricultural production, bringing India closer to self-sufficiency in food grains. However, over time, the limitations of this model became apparent, leading to issues such as over-reliance on chemical inputs, water depletion, environmental degradation, and income disparities among farmers.

In recent years, the Government of India, along with various state governments, has been actively involved in designing and implementing agricultural reforms to bring about a more sustainable, inclusive, and prosperous agricultural sector. These reforms focus on diversifying agricultural practices, ensuring better price realization

for farmers, promoting value addition, enhancing rural infrastructure, and strengthening farmer-centric institutions.

One of the landmark initiatives in this direction was the passage of the Agriculture Reform Bills in 2020, aimed at creating a more liberalized agricultural ecosystem. The legislation sought to provide farmers with the freedom to sell their produce outside traditional agricultural produce market committees (APMCs) and explore options beyond the Minimum Support Price (MSP) system. While the reforms were met with mixed reactions, they brought the issue of institutional reform to the forefront of the national discourse. In addition to policy-level changes, various non-governmental organizations, research institutions, and private enterprises have been actively involved in driving agricultural innovation and empowering farmers through capacity-building programs, technology adoption, and market linkages.

Technology Development in Indian Agricultural Development

Agriculture has been the backbone of India's economy for centuries, providing livelihoods to millions of people and contributing significantly to the country's GDP. However, over the years, the sector has faced various challenges such as population growth, diminishing natural resources, climate change, and fluctuating market demands. In response to these challenges, the Indian agricultural sector has undergone significant technological advancements and innovations. The application of modern technology in agriculture, often referred to as "agricultural technology" or "agritech," has revolutionized the way farming is practiced in India. These technological developments aim to enhance agricultural a wide range of innovations, including the adoption of genetically modified crops, precision agriculture techniques, farm mechanization, use of drones and satellite imagery, climate-resilient practices, and improved irrigation systems, among others.

The integration of technology in agriculture has not only increased productivity but also empowered farmers by providing them with access to valuable information and resources. Additionally, technology has enabled better market linkages, reduced post-harvest losses, and facilitated the adoption of sustainable practices. It is important to note that while technological advancements offer promising opportunities, they also come with challenges and concerns. Issues related to the digital divide, accessibility, and the impacts on traditional agricultural practices need to be carefully addressed.

Challenges and Opportunities Associated with Integrating Institutional Reforms and Technological Advancements

Integrating institutional reforms and technological advancements in Indian agriculture presents both challenges and opportunities. India's agricultural sector is vital to its economy, as it employs a significant portion of the population and contributes substantially to the country's GDP. By combining reforms and technology, the agriculture sector can become more efficient, sustainable, and resilient. However, there are several hurdles that need to be addressed to fully realize the potential benefits. Let's explore the challenges and opportunities in more detail:

Challenges

1. **Limited infrastructure:** The lack of proper infrastructure, such as irrigation facilities, storage facilities, and transportation networks, poses a significant challenge to implementing and adopting advanced agricultural technologies effectively.
2. **Access to technology:** Ensuring that small and marginal farmers, who make up a substantial portion of the agricultural community in India, have access to modern agricultural technologies can be challenging due to factors like affordability and awareness.
3. **Fragmented land holdings:** The pattern of fragmented land holdings makes it difficult to implement large-scale modern farming techniques. Integrating technology in such a scenario requires coordination and collaboration among farmers.
4. **Resistance to change:** Traditional agricultural practices are deeply ingrained in the Indian farming community. Convincing farmers to adopt new technologies may be met with resistance, especially if they perceive risks associated with new methods.
5. **Financial constraints:** Many farmers face financial limitations, hindering their ability to invest in advanced technologies and machinery. Access to affordable credit and financial assistance is crucial to promoting technological integration.

Opportunities

1. **Increased productivity:** By incorporating modern technologies like precision agriculture, smart irrigation systems, and advanced machinery, Indian agriculture can witness a significant boost in productivity, leading to increased yields and income.

2. Sustainable practices: Technological advancements can enable the adoption of sustainable farming practices, reducing the environmental impact and promoting conservation of resources like water and soil.
3. Market linkages: Technology can help improve market linkages for farmers, allowing them to connect directly with buyers, negotiate better prices, and access a wider customer base.
4. Data-driven decision making: The integration of technology provides access to real-time data and information, enabling farmers to make informed decisions about crop planning, pest management, and resource allocation.
5. Empowerment of farmers: Technology and institutional reforms can empower farmers by providing them with knowledge, skills, and tools to manage their farms more efficiently and profitably.
6. Research and development: Integrating technology may foster collaboration between agricultural research institutions and private sector companies, leading to more innovations and customized solutions for Indian farming needs.
7. Job creation: The adoption of new technologies may lead to the emergence of new job opportunities in the agricultural technology sector, fostering rural economic development.
8. To leverage these opportunities and overcome the challenges, a comprehensive approach is needed. This should involve creating supportive policies, investing in rural infrastructure, providing training and education to farmers, promoting public-private partnerships, and ensuring equitable access to resources and technology. Government initiatives, NGOs, private companies, and research institutions can play a crucial role in driving this transformation towards a more technologically advanced and sustainable Indian agriculture sector.

Conclusion

Institutional reform and technological advancements play crucial roles in the development of Indian agriculture. Over the years, India has faced numerous challenges in its agricultural sector, including outdated practices, low productivity, fragmented land holdings, and insufficient access to resources and markets. However, through strategic reforms and innovative technological interventions, the country has made significant progress in transforming its agricultural landscape.

Abstract

The empowerment of women is a fundamental aspect of societal progress, gender equality, and sustainable development. Education plays a pivotal role in achieving this empowerment by providing women with the knowledge, skills, and opportunities necessary to overcome social, economic, and cultural barriers. This study explores the multifaceted role of education in the empowerment of women, highlighting its significance in promoting gender equality, improving economic prospects, enhancing health and well-being, and fostering leadership and participation in decision-making processes. Additionally, it underscores the need for equitable access to quality education and the importance of addressing barriers such as gender-based discrimination and stereotypes. The paper concludes with a call to prioritize and invest in women's education as a catalyst for positive change, acknowledging that when women are empowered through education, entire societies benefit from their contributions to diverse fields and their capacity to drive inclusive and sustainable development.

Keywords: Empowerment, Women Education, NEP

Introduction

Education plays a pivotal role in the empowerment of women, serving as a catalyst for positive change in societies around the world. It is a powerful tool that not only equips women with knowledge and skills but also fosters their self-confidence, independence, and agency. The empowerment of women is essential for achieving gender equality and promoting the overall development of a society. Empowering women has become the focus of considerable discussion and attention all over the world. Today we enjoy the benefits of being citizens of a free nation, but we really need to think whether each of the citizens of our country is really free or enjoying freedom, in the true sense of the term. The inequalities between men and women and discrimination against women are an age-old issue all over the world.

Thus women quest for equality with man is a universal phenomenon. Women should equal with men in matters of education, employment, inheritance, marriage, and politics etc. Their quest for equality has given birth to the formation of many women's associations and launching of movements. The Constitution of our nation doesn't discriminate between men and women, but our society has deprived women

of certain basic rights, which were bestowed upon them by our Constitution. Empowerment allows individuals to reach their full potential, to improve their political and social participation, and to believe in their own capabilities.

Importance of Women Education

Women's education is of paramount importance for numerous reasons, and it has far-reaching positive effects on individuals, communities, and societies as a whole.

1. **Empowerment:** Education empowers women by providing them with knowledge, skills, and confidence. When women are educated, they are more likely to make informed decisions about their lives, health, and overall well-being. This empowerment extends to their ability to participate in economic, social, and political activities.
2. **Gender Equality:** Education is a fundamental tool in achieving gender equality. It helps break down traditional gender roles and stereotypes, promoting the idea that women are equally capable as men in all fields. Education can lead to greater opportunities for women in the workforce and in leadership roles.
3. **Economic Development:** Educated women contribute significantly to economic growth and development. They are more likely to secure better-paying jobs, which in turn benefits their families and communities. Studies have shown that investing in women's education has a positive impact on a nation's GDP.
4. **Family and Community Well-being:** Educated mothers are also more likely to invest in the education and well-being of their children, creating a positive cycle of education and development.
5. **Social and Political Participation:** Education enhances women's ability to participate in social and political activities. Educated women are more likely to be engaged in their communities, advocate for their rights, and participate in the decision-making processes of their countries.
6. **Reduction in Gender-Based Violence:** Education can help reduce instances of gender-based violence by empowering women to recognize their rights and stand up against abuse. It can also contribute to changing societal attitudes towards violence against women.
7. **Innovation and Progress:** Women's education brings fresh perspectives and talent into various fields, including science, technology, engineering, and mathematics (STEM). This diversity of thought can lead to innovation and progress in various industries.

8. **Poverty Alleviation:** Education is a powerful tool in the fight against poverty. When women are educated, they are better equipped to break the cycle of poverty, leading to improved living standards for themselves and their families.
9. **Global Development:** Women's education is a key component of the United Nations' Sustainable Development Goals (SDGs). Achieving universal access to quality education for women and girls is seen as a critical step toward achieving many of these goals, including those related to health, gender equality, and poverty reduction.

Women Empowerment Through Education

Women empowerment through education is a critical and multifaceted process that involves providing women and girls with access to quality education, skills, knowledge, and opportunities. It is a powerful tool for promoting gender equality, improving women's socio-economic status, and addressing various societal issues.

1. **Access to Education:** Ensuring that women and girls have equal access to education at all levels is the first step. This includes eliminating barriers such as gender-based discrimination, cultural norms, and economic constraints that may prevent girls from attending school.
2. **Increased Opportunities:** Education opens up a wide range of opportunities for women in various fields, including employment, leadership roles, entrepreneurship, and civic participation. It equips them with the skills and knowledge needed to pursue their goals and ambitions.
3. **Economic Empowerment:** Education enables women to access better job opportunities and earn higher incomes. This economic independence can lead to financial stability, reduced poverty, and an improved standard of living for themselves and their families.
4. **Health and Well-being:** Educated women tend to have better health outcomes for themselves and their children. They are more likely to make informed decisions about healthcare, and nutrition, leading to healthier families and communities.
5. **Empowerment in Decision-Making:** Education equips women with critical thinking skills and the ability to make informed decisions about their lives. This extends to choices related to marriage, family planning, and participation in community and political activities.
6. **Reducing Gender-Based Violence:** Education can help reduce instances of gender-based violence by promoting gender equality and challenging harmful stereotypes and attitudes that perpetuate violence against women.

7. **Community Development:** Educated women often play a vital role in community development and social change. They are more likely to be involved in initiatives that address local issues, advocate for women's rights, and promote sustainable development.
8. **Breaking the Cycle of Poverty:** Educated women are more likely to invest in their children's education, breaking the cycle of intergenerational poverty and promoting a culture of learning within families.
9. **Political Participation:** Education is crucial for increasing women's participation in politics and decision-making processes. When women are educated and informed, they are more likely to engage in political activities and advocate for policies that benefit their communities.
10. **Role Models:** Educated women serve as role models for younger generations, inspiring girls to pursue their own education and goals, furthering the cycle of empowerment.

Importance of Women Participation

Women's participation may be used both for support by an agency and as a control device by the law-makers. Participation may be direct or indirect, formal or informal; it may be political, social or administrative in nature. Women's participation in Panchayat Raj institutions may take many forms. It refers to all those activities which show the women's involvement in the processes and administration, that is, participation in policy formulation and programme planning, implementation and evaluation of policies and programmes meant for development target groups. Indian women have been associated with politics since the pre-independence period. They were part of the freedom movement both as volunteers and leaders. On independence, Article 15 of the Indian Constitution guaranteed equality to women under the law. Though the Indian Constitution guarantees equal rights to all citizens, women are still marginally represented in the Indian political arena. The fact is that in the hands of women are having lack of power at the centre and state level. It is sad state of affairs that about half of India's population has only 10 per cent representation in the Lok Sabha. In the current Rajya Sabha, there are 21 women out of a total of 233 MPs, which amounts to only nine per cent which is even lower than that in the Lok Sabha. At the societal level male dominance in Parliament, bureaucracy, judiciary, Army, police all point towards gender inequality, notwithstanding the fact that it is often argued that women's political leadership would bring about a more cooperative and less conflict-prone world. Lack of political and economic powers add to the subservient and unequal position of women.⁸ After Independence, in spite of having our own constitution,

India was not able to achieve morals like fairness, equality and social justice. The condition of women didn't improve even having a woman prime minister for few numbers of years. Women's representation in politics all over the world began to assume importance from mid 1970s when United Nations (UN) declared 1975 as the 'International Women's Year'. This was followed by the UN's decade for Women from 1976-1985 and the theme was "Equality, Development and Peace". Women's participation in politics remained quite inconsequential in India even today but some sort of improvement took place by the 73rd and 74th constitutional amendment acts which gave boost to the status of women at the political level by giving opportunity to women in the process of decision-making.⁹ The 73rd and 74th Amendments (1993) to the constitution of India have provided for reservation of seats in the local bodies of panchayats and Municipalities for women, laying a strong foundation for their participation in decision making at the local level.

Conclusion

Women play an imperative role in making a nation progressive and guide it towards development. They are essential possessions of a lively humanity required for national improvement, so if we have to see a bright future of women in our country, giving education to them must be a pre-occupation Empowerment means moving from a weak position to execute a power. The education of women is the most powerful tool to change the position of society. Education also brings a reduction in inequalities and functions as a means of improving their status within the family. To encourage the education of women at all levels and for dilution of gender bias in providing knowledge and education, established schools, colleges and universities even exclusively for women in the state. The education develops the idea of participation in government, panchayats, public matters etc for elimination of gender discrimination.

Abstract

Micro, Small, and Medium Enterprises (MSMEs) play a pivotal role in India's economic landscape. They contribute significantly to employment generation, GDP growth, and foster economic inclusivity. The study begins by providing an overview of the MSME sector's current state, acknowledging its challenges and potential. It then delves into the strategies necessary for fostering growth and resilience. These strategies include streamlined regulatory frameworks, access to finance, technology adoption, skill development, and market linkages. Moreover, it highlights the need for a supportive ecosystem that encourages innovation and entrepreneurship. It emphasizes the importance of gender diversity and equitable opportunities for marginalized communities. Inclusive growth not only ensures a fair distribution of economic benefits but also enhances social harmony and stability.

Keywords: *Self-Reliant India Mission, MSME, Self-reliant and globally competitive*

Introduction

Micro, Small, and Medium Enterprises (MSMEs) stand as the backbone, serving as engines of growth and innovation. These nimble and dynamic entities collectively form the bedrock of economic activity, contributing significantly to GDP, generating employment opportunities, and fostering regional development. The unparalleled potential of India's MSME sector to drive economic growth, build resilience in the face of challenges, and promote social inclusion cannot be overstated. It delves into the myriad ways in which these enterprises have consistently emerged as pillars of economic development, even in the face of adversities. Furthermore, it underscores the imperative of empowering MSMEs, providing them with the resources, support, and opportunities necessary to unleash their full potential.

India's MSME sector is remarkably diverse, encompassing a wide range of industries from manufacturing to services. It is characterized by its adaptability and ability to cater to both domestic and international markets. As a major source of employment, particularly for marginalized sections of society, it acts as a catalyst for social inclusion and poverty alleviation. However, the sector also faces numerous challenges, ranging from access to finance to technology adoption. In an increasingly interconnected and competitive world, it

is critical for India's MSMEs to not only survive but thrive. With the right interventions, these enterprises can transform into global players, enhancing India's economic standing while improving the lives of millions of its citizens. Moreover, it will provide insights into the strategies, policies, and innovations that can empower MSMEs, bolstering their contribution to India's economic growth, resilience, and social inclusion.

Empowering India's MSMEs

Empowering India's Micro, Small, and Medium Enterprises (MSMEs) is indeed crucial for the country's economic growth, resilience, and social inclusion. MSMEs play a pivotal role in the Indian economy, contributing significantly to employment generation, industrial output, and export earnings. Here are some key points highlighting the importance of empowering India's MSMEs:

Employment Generation: MSMEs are major employers in India. They provide employment opportunities to a diverse workforce, including skilled, semi-skilled, and unskilled labor, thus contributing to reducing unemployment and poverty.

Access to Finance: Improve access to affordable credit and capital for MSMEs through initiatives like the MUDRA Yojana and credit guarantee schemes. Encourage the development of alternative funding sources, such as venture capital, angel investors, and peer-to-peer lending.

Economic Growth: MSMEs make up a significant portion of India's GDP and industrial output. Their growth and success directly impact the overall economic growth of the country. They are often considered the backbone of the Indian economy.

Innovation and Entrepreneurship: Many innovative and entrepreneurial ideas are born in the MSME sector. By supporting and empowering these businesses, India can foster a culture of innovation and entrepreneurship, leading to economic diversification and growth.

Resilience: A diverse landscape of MSMEs can make the economy more resilient. During economic downturns, smaller businesses are often better equipped to adapt quickly to changing circumstances and recover faster.

Export Potential: MSMEs contribute significantly to India's exports. When these businesses are empowered, they can tap into global markets, contributing to foreign exchange earnings and economic stability.

Social Inclusion: Empowering MSMEs can help bridge the urban-rural divide and reduce regional disparities. It provides opportunities for entrepreneurship and income generation in rural and semi-urban areas, thereby promoting social inclusion.

Financial Inclusion: Expanding access to credit and financial services for MSMEs is vital. By improving financial inclusion, these businesses can access the capital needed for growth and expansion.

Technology Adoption: MSMEs can benefit from the adoption of modern technologies and digital tools. This can enhance their efficiency, productivity, and competitiveness, thereby contributing to overall economic growth.

Skill Development: Investment in skill development programs for MSMEs can help enhance the capabilities of the workforce and the competitiveness of these enterprises.

Regulatory Simplification: Streamlining regulations and reducing bureaucratic red tape can make it easier for MSMEs to operate and grow.

Policy Support: The government should continue to implement policies that support MSMEs, including access to finance, simplified regulatory procedures, and incentives for innovation. Strengthening the business environment will encourage entrepreneurship and create more jobs.

Digital Transformation: Encouraging MSMEs to adopt digital technologies and e-commerce platforms can help them expand their reach, increase efficiency, and adapt to changing market dynamics.

Skill Development: Investing in skill development and vocational training programs can enhance the capabilities of the MSME workforce, making them more competitive and adaptable.

Infrastructure Development: Improving physical and digital infrastructure, including transportation, logistics, and broadband connectivity, can reduce costs and increase the competitiveness of MSMEs.

Access to Global Markets: Promoting exports and international trade can be a significant growth driver for MSMEs. The government should facilitate easier access to global markets and provide support for compliance with international standards.

Resilience Planning: MSMEs should develop resilience strategies that include risk management, diversification, and contingency planning to mitigate the impact of unforeseen disruptions, such as the COVID-19 pandemic.

Environmental Sustainability: Encouraging MSMEs to adopt eco-friendly practices not only helps protect the environment but also opens up opportunities for green growth and access to international markets.

Inclusivity: Fostering an inclusive environment that promotes gender equality and social diversity within MSMEs can harness the full potential of the workforce and contribute to social development.

Data and Research: Regular data collection and research on the MSME sector are essential to make informed policy decisions and track progress.

Credit Guarantee and Insurance Schemes: Strengthen credit guarantee schemes and insurance options for MSMEs to mitigate risks and encourage lending by financial institutions.

Create platforms that connect MSMEs with insurers and credit providers.

Entrepreneurship Support: Foster entrepreneurship by offering mentorship, guidance, and startup incubation programs. Encourage collaboration between larger corporations and MSMEs for knowledge transfer and business opportunities.

Quality Certification and Standards: Promote adherence to quality standards and certifications, enhancing the competitiveness of Indian MSMEs in domestic and international markets.

Government Procurement: Reserve a portion of government procurement contracts for MSMEs, providing them with a stable source of revenue and opportunities for growth.

Networking and Clusters: Support the formation of industry clusters where MSMEs can collaborate, share resources, and collectively address challenges.

Sustainability and Green Initiatives: Encourage MSMEs to adopt sustainable and eco-friendly practices to meet growing global demand for green products and services.

Empowering India's MSMEs requires a multi-faceted approach that involves government support, private sector collaboration, and a focus on innovation and technology adoption. By addressing these key areas, India can create a more conducive environment for MSMEs to thrive and contribute significantly to the country's economic development.

Conclusion

Empowering MSMEs is not just about economic growth; it's about creating a more resilient and inclusive society. As MSMEs flourish, they can drive economic development, create jobs, reduce poverty, and ultimately lead to a more prosperous and socially inclusive India. Government, industry, and civil society must work together to realize this vision, and it will require a sustained commitment to fostering an enabling environment for MSMEs to thrive.

Abstract

The Atmanirbhar Bharat Abhiyan, launched by the Government of India in May 2020, holds immense significance in the context of Indian economic transformation through innovation. This ambitious initiative aims to foster self-reliance and promote indigenous production across various sectors of the Indian economy. Prime Minister remarked that the definition of self-reliance has undergone a change in the globalized world and clarified that when the country talks about self-reliance, it is different from being self-centered. He said that India's culture considers the world as one family, and progress in India is part of, and also contributes to, progress in the whole world. The primary objective of this paper is to explore and analyze the role of Atmanirbhar Bharat Abhiyan in driving economic transformation through innovation.

Keywords: *Atmanirbhar Bharat Abhiyan, Self-Reliant, Innovation*

Introduction

The "Atmanirbhar Bharat Abhiyan," also known as the "Self-Reliant India Campaign," is a significant initiative launched by the Government of India with the aim of transforming the Indian economy through innovation. This initiative was announced by Prime Minister Narendra Modi in May 2020, in the midst of the global COVID-19 pandemic. At its core, the Atmanirbhar Bharat Abhiyan seeks to make India self-reliant and less dependent on foreign countries for essential goods and services. The Atmanirbhar Bharat Abhiyan is a reflection of India's aspirations to become a major player on the global stage and to realize its full economic potential. This initiative recognizes the importance of self-sufficiency, innovation, and entrepreneurship as key drivers of economic growth and transformation. It aims to foster economic resilience, reduce vulnerabilities to global disruptions, and create a more robust and sustainable economy. The central idea of the Atmanirbhar Bharat Abhiyan is to promote indigenous manufacturing, technology development, and innovation across various sectors, including manufacturing, agriculture, healthcare, and infrastructure. It encourages the development and adoption of cutting-edge technologies, research and development, and the nurturing of a culture of innovation

and entrepreneurship. By doing so, it aims to enhance the overall competitiveness of Indian industries, create employment opportunities, and reduce import dependency.

Over the course of its implementation, the Atmanirbhar Bharat Abhiyan has had a significant impact on various economic sectors, influencing policies, investments, and collaborations. It has spurred the development of innovative solutions in areas like digital technology, renewable energy, healthcare, and agriculture. It also seeks to leverage India's demographic dividend by skilling and reskilling the workforce, making them more adaptable to the evolving global economy.

The Role of Atmanirbhar Bharat Abhiyan in Indian Economy Transformation through Innovation:

Encouraging Domestic Manufacturing: The campaign places significant emphasis on promoting domestic manufacturing and reducing dependency on imports, especially in critical sectors like electronics, pharmaceuticals, defense, and more. By doing so, it aims to create an environment conducive to innovation in indigenous industries.

Make in India: The Make in India initiative, which is closely aligned with Atmanirbhar Bharat, seeks to boost innovation by making it easier for businesses to set up and operate in India. This includes easing regulatory hurdles, improving infrastructure, and simplifying tax regimes, all of which can attract foreign investment and encourage domestic entrepreneurs to innovate.

Start-up Ecosystem: Atmanirbhar Bharat recognizes the importance of nurturing the start-up ecosystem as a breeding ground for innovation. It includes measures like financial support, regulatory simplifications, and funding for startups, all of which are crucial in driving innovation in the economy.

Research and Development (R&D) Investment: The government has incentivized R&D activities by offering tax breaks and subsidies to companies that invest in research and development. This approach can lead to innovative products and services and foster technological advancement.

Digital India: The campaign is closely aligned with the Digital India initiative, which promotes the use of digital technology and digital platforms. This focus on digitization and technological advancement can drive innovation across various sectors and improve the overall efficiency of the Indian economy.

Attracting Foreign Investment: Atmanirbhar Bharat Abhiyan, while emphasizing self-reliance, also recognizes the importance of foreign investment. It seeks to attract foreign companies to invest in India, which can bring new technologies and innovative practices to the Indian economy.

Strengthening Healthcare: The COVID-19 pandemic highlighted the need for a robust healthcare system. The campaign aims to strengthen the healthcare sector, not only by ensuring self-reliance in pharmaceuticals but also by investing in healthcare infrastructure and research. This can lead to innovations in medical technology and healthcare delivery.

Agricultural Reforms: The initiative includes agricultural reforms that aim to modernize the sector and make it more efficient. Innovation in agriculture can lead to increased productivity and better income for farmers.

Infrastructure Development: The government is investing in infrastructure development, including the construction of industrial corridors, logistics parks, and smart cities. These developments can provide a platform for innovation in urban planning and sustainable development.

Global Supply Chain Diversification: The COVID-19 pandemic highlighted the risks associated with overreliance on a single source or country for essential supplies. Atmanirbhar Bharat Abhiyan encourages diversification of the global supply chain, which is a strategic move to enhance economic stability and innovation.

Sustainable Development: The Abhiyan also emphasizes sustainability, which aligns with the global focus on environmental and social responsibility. Promoting green and sustainable practices can open doors to innovative solutions while addressing pressing global challenges.

Reskilling and Workforce Development: To keep up with the changing demands of the job market, the initiative also focuses on reskilling and upskilling the Indian workforce, making it more adaptable to the evolving economy and technological advancements.

Encouraging Innovation: The initiative recognizes the importance of innovation in achieving self-reliance. It provides incentives and support for research and development, thus fostering a culture of innovation in the country.

Strengthening Domestic Industries: Through various policy measures, Atmanirbhar Bharat Abhiyan aims to strengthen domestic industries, making them more competitive and capable of serving both the domestic and international markets.

Enhancing Ease of Doing Business: The government is taking steps to improve the ease of doing business in India, making it more attractive for both domestic and foreign investors. This, in turn, encourages innovation and economic growth.

Impact of Atmanirbhar Bharat on GDP

Positive Impact on GDP:

Promoting Domestic Manufacturing: Encouraging domestic manufacturing can potentially increase industrial production, which contributes to GDP growth. If more products are made in India and fewer are imported, this can boost GDP.

Boosting Entrepreneurship: Supporting small and medium-sized enterprises (SMEs) and startups can lead to job creation and economic growth, which, in turn, can positively impact GDP.

Negative Impact on GDP

Short-Term Disruptions: Policies that aim to reduce dependency on imports may lead to short-term disruptions in supply chains, which can have a negative impact on economic activity and GDP.

Protectionist Measures: Excessive protectionism can hinder foreign investment and trade, potentially reducing overall economic growth.

Resource Allocation: Focusing on self-sufficiency in specific sectors may lead to a misallocation of resources, potentially impacting overall economic efficiency and GDP.

Long-Term Impact: The long-term impact of such initiatives on GDP growth will depend on how effectively they are implemented, the extent to which they foster innovation, and their ability to make India competitive in the global market.

Conclusion

Atmanirbhar Bharat Abhiyan aims to transform the Indian economy into a self-reliant and innovative powerhouse. While it faces challenges and critics, the initiative represents a clear vision for India's economic future, one that prioritizes self-sufficiency, innovation, and sustainability. By embracing this initiative and nurturing a culture of innovation, India can position itself as a global economic leader, ensuring prosperity and security for its citizens.

Abstract

The Self-Reliant India Mission, also known as 'Aatmanirbhar Bharat Abhiyan,' is a comprehensive economic and policy initiative launched by the Government of India. This mission aims to transform the Indian economy into a self-reliant and resilient one, reducing dependency on imports and promoting domestic production. The mission was unveiled against the backdrop of the COVID-19 pandemic and global economic challenges, making it a significant turning point in the growth trajectory of the Indian economy. The Self-Reliant India Mission is a bold and transformative initiative that aims to revolutionize the Indian economy. By fostering domestic production, encouraging innovation, and reducing dependency on imports, it aspires to make India self-reliant and globally competitive.

Keywords: *Self-Reliant India Mission, 'Aatmanirbhar Bharat Abhiyan, India self-reliant and globally competitive*

Introduction

Hon'ble Prime Minister during his address to the Nation on 12th May, 2020 mentioned that a virus has destroyed the world. Crores of people around the world are facing a crisis. World all over is engaged in a battle to save precious lives. This crisis is unthinkable as well as unprecedented for mankind. He directed to remain vigilant, closely monitor, follow the rules of engagement in such a war, save ourselves and move ahead. He informed that the state of the world today teaches us that a (Atmanirbhar Bharat) "Self-reliant India" is the only path. In order to fulfill the dream of making the 21st century India's, the way forward is through ensuring that the country becomes self-reliant. This vision of India - turning crisis into opportunity- is going to prove equally effective for our resolve of self-reliant India as the production of PPE kits, N-95 masks in India has gone up from almost being negligible to 2 lakh each, on a daily basis. Prime Minister remarked that the definition of self-reliance has undergone a change in the globalized world and clarified that when the country talks about self-reliance, it is different from being self-centered. He said that India's culture considers the world as one family, and progress in India is part of, and also contributes to, progress in the whole world.

Key Highlights of Self-Reliant India Mission

The Self-Reliant India Mission aims towards cutting down import dependence by focussing on substitution while improving safety compliance and quality goods to gain

global market share. The Self-Reliance neither signifies any exclusionary or isolationist strategies but involves creation of a helping hand to the whole world. The Mission focuses on the importance of promoting “local” products. The Mission will be carried out in two phases:

Phase 1 : It will consider sectors like medical textiles, electronics, plastics and toys where local manufacturing and exports can be promoted.

Phase 2 : It will consider products like gems and jewellery, pharma and steel, etc. The magnificent building of self-reliant India will stand on five Pillars, namely Economy - which brings in quantum jump and not incremental change. Infrastructure - which become the identity of India System - based on 21st century technology driven arrangements. Vibrant Demography - which is our strength and source of energy for a self-reliant India. Demand -whereby the strength of our demand and supply chain should be utilized to full capacity.

The Mission is also expected to complement ‘Make in India Initiative’ which intends to encourage manufacturing in India. Atmanirbhar Bharat and Economic Stimulus Prime Minister announced the ‘Atmanirbhar Bharat Abhiyan (or Self-reliant India Mission)’ with an economic stimulus package worth Rs 20 lakh crores aimed towards achieving the mission. This package will give a new impetus to the development journey of the country in 2020 and a new direction to the Self-reliant India campaign. The announced economic package is 10% of India’s Gross Domestic Product (GDP) in 2019-20. The amount includes packages already announced at the beginning of the lockdown incorporating measures from the RBI and the payouts under the Pradhan MantriGaribKalyanYojana. The package focuses on land, labour, liquidity and laws. Smt. NirmalaSitharaman, Hon’ble Finance Minister of India announced this Special economic and comprehensive package of Rs 20 lakh crore in five tranches. The first tranche of the Stimulus Package is dedicated to support micro, small and medium enterprises (MSMEs). The reforms introduced in the second tranche are aimed at providing relief to the poor including the farmers and the migrant workers. The third tranche is focused on introducing additional reforms for the agricultural sector. As part of the fourth tranche, the Government announced reforms to provide impetus to sectors including coal mining, minerals, defence civil aviation and atomic energy. The fifth and the final tranche focusses on healthcare and education and certain other reforms including de-criminalisation of the Companies Act, 2013, ease of doing business and public sector undertakings

Self-Reliant India Mission and its impact on the growth of the Indian Economy

The Self-Reliant India Mission was announced by Prime Minister NarendraModi in May 2020. It is built on the principles of 'vocal for local' and 'Make in India,' emphasizing the importance of local manufacturing and consumption. The mission seeks to make India self-reliant across various sectors, from agriculture and manufacturing to technology and defense.

Key Objectives: The mission has several key objectives, including promoting indigenous manufacturing, attracting foreign investment, improving infrastructure, reforming labor laws, and simplifying the tax system. These objectives are intended to create an environment conducive to economic growth and self-sufficiency.

Economic Reforms: The mission has spurred a series of economic reforms to enhance the ease of doing business in India. These reforms have a far-reaching impact on both domestic and international investors, making India an attractive destination for business and investment.

Sectorial Transformation: The Self-Reliant India Mission has been particularly transformative in sectors such as technology, healthcare, defense, and renewable energy. It encourages innovation, research, and development in these sectors, fostering job creation and reducing the trade deficit.

Global Implications: The mission's policies have implications for India's global trade relationships. It seeks to reduce imports, especially from China, by promoting the manufacturing of essential goods within India. This approach has diplomatic and trade implications that are closely watched by the international community.

Support for Key Sectors: The initiative focused on promoting and strengthening key sectors like manufacturing, agriculture, healthcare, and technology. By boosting these sectors, the government aimed to reduce India's dependency on imports and increase domestic production.

Digital Transformation: The COVID-19 pandemic accelerated the need for digital transformation. The initiative emphasized digitalization, making it easier for businesses to operate online and engage in e-commerce.

SME and MSME Support: Small and Medium Enterprises (SMEs) and Micro, Small, and Medium Enterprises (MSMEs) form a significant part of India's economy. Atmanirbhar Bharat aimed to provide support to these enterprises through financial assistance and policy measures.

Global Supply Chains: The initiative encouraged the diversification of global supply chains and reduced over-dependence on a few countries for critical supplies, particularly in sectors like pharmaceuticals and electronics.

Infrastructure Development: Investment in infrastructure, such as roads, railways, and ports, played a crucial role in enhancing the competitiveness of Indian industries.

Challenges: While the mission is ambitious and promising, it faces challenges related to infrastructure development, skilled labor, and regulatory reforms. Overcoming these hurdles is crucial for its long-term success.

Conclusion

Atmanirbhar Bharat Abhiyan as an idea deserves to be understood, analysed, interpreted and adopted with positive mind-set. In post covid era, the self-reliance in Indian Economy, is necessary for the survival, existence and for attaining excellence by every Indian. As a citizen of this country, the onus lies on us to play the role as consumer,

producer, distributor and trader. We need to possess optimistic approach by embracing 'Sab kaVikas, Sab kaSath and Sab kaVishwas'. To make this a successful mission, we need to increase domestic saving rate necessary for investments in order to provide an impetus to the growth in the various sectors of the economy. It is believed that the domestic saving rate is capable of strengthening the economy in-terms of all indicators of the performance of the economy including rate of investment, capital formation GDP, exports and GNP.

Abstract

The Atmanirbhar Bharat Abhiyan, launched by the Government of India in May 2020, holds immense significance in the context of Indian economic transformation through innovation. This ambitious initiative aims to foster self-reliance and promote indigenous production across various sectors of the Indian economy. Prime Minister remarked that the definition of self-reliance has undergone a change in the globalized world and clarified that when the country talks about self-reliance, it is different from being self-centered. He said that India's culture considers the world as one family, and progress in India is part of, and also contributes to, progress in the whole world. The primary objective of this paper is to explore and analyze the role of Atmanirbhar Bharat Abhiyan in driving economic transformation through innovation.

Keywords: *Atmanirbhar Bharat Abhiyan, Self-Reliant, Innovation*

Introduction

The "Atmanirbhar Bharat Abhiyan," also known as the "Self-Reliant India Campaign," is a significant initiative launched by the Government of India with the aim of transforming the Indian economy through innovation. This initiative was announced by Prime Minister Narendra Modi in May 2020, in the midst of the global COVID-19 pandemic. At its core, the Atmanirbhar Bharat Abhiyan seeks to make India self-reliant and less dependent on foreign countries for essential goods and services. The Atmanirbhar Bharat Abhiyan is a reflection of India's aspirations to become a major player on the global stage and to realize its full economic potential. This initiative recognizes the importance of self-sufficiency, innovation, and entrepreneurship as key drivers of economic growth and transformation. It aims to foster economic resilience, reduce vulnerabilities to global disruptions, and create a more robust and sustainable economy. The central idea of the Atmanirbhar Bharat Abhiyan is to promote indigenous manufacturing, technology development, and innovation across various sectors, including manufacturing, agriculture, healthcare, and infrastructure. It encourages the development and adoption of cutting-edge technologies, research and development, and the nurturing of a culture of innovation

and entrepreneurship. By doing so, it aims to enhance the overall competitiveness of Indian industries, create employment opportunities, and reduce import dependency.

Over the course of its implementation, the Atmanirbhar Bharat Abhiyan has had a significant impact on various economic sectors, influencing policies, investments, and collaborations. It has spurred the development of innovative solutions in areas like digital technology, renewable energy, healthcare, and agriculture. It also seeks to leverage India's demographic dividend by skilling and reskilling the workforce, making them more adaptable to the evolving global economy.

The Role of Atmanirbhar Bharat Abhiyan in Indian Economy Transformation through Innovation:

Encouraging Domestic Manufacturing: The campaign places significant emphasis on promoting domestic manufacturing and reducing dependency on imports, especially in critical sectors like electronics, pharmaceuticals, defense, and more. By doing so, it aims to create an environment conducive to innovation in indigenous industries.

Make in India: The Make in India initiative, which is closely aligned with Atmanirbhar Bharat, seeks to boost innovation by making it easier for businesses to set up and operate in India. This includes easing regulatory hurdles, improving infrastructure, and simplifying tax regimes, all of which can attract foreign investment and encourage domestic entrepreneurs to innovate.

Start-up Ecosystem: Atmanirbhar Bharat recognizes the importance of nurturing the start-up ecosystem as a breeding ground for innovation. It includes measures like financial support, regulatory simplifications, and funding for startups, all of which are crucial in driving innovation in the economy.

Research and Development (R&D) Investment: The government has incentivized R&D activities by offering tax breaks and subsidies to companies that invest in research and development. This approach can lead to innovative products and services and foster technological advancement.

Digital India: The campaign is closely aligned with the Digital India initiative, which promotes the use of digital technology and digital platforms. This focus on digitization and technological advancement can drive innovation across various sectors and improve the overall efficiency of the Indian economy.

Attracting Foreign Investment: Atmanirbhar Bharat Abhiyan, while emphasizing self-reliance, also recognizes the importance of foreign investment. It seeks to attract foreign companies to invest in India, which can bring new technologies and innovative practices to the Indian economy.

Strengthening Healthcare: The COVID-19 pandemic highlighted the need for a robust healthcare system. The campaign aims to strengthen the healthcare sector, not only by ensuring self-reliance in pharmaceuticals but also by investing in healthcare infrastructure and research. This can lead to innovations in medical technology and healthcare delivery.

Agricultural Reforms: The initiative includes agricultural reforms that aim to modernize the sector and make it more efficient. Innovation in agriculture can lead to increased productivity and better income for farmers.

Infrastructure Development: The government is investing in infrastructure development, including the construction of industrial corridors, logistics parks, and smart cities. These developments can provide a platform for innovation in urban planning and sustainable development.

Global Supply Chain Diversification: The COVID-19 pandemic highlighted the risks associated with overreliance on a single source or country for essential supplies. Atmanirbhar Bharat Abhiyan encourages diversification of the global supply chain, which is a strategic move to enhance economic stability and innovation.

Sustainable Development: The Abhiyan also emphasizes sustainability, which aligns with the global focus on environmental and social responsibility. Promoting green and sustainable practices can open doors to innovative solutions while addressing pressing global challenges.

Reskilling and Workforce Development: To keep up with the changing demands of the job market, the initiative also focuses on reskilling and upskilling the Indian workforce, making it more adaptable to the evolving economy and technological advancements.

Encouraging Innovation: The initiative recognizes the importance of innovation in achieving self-reliance. It provides incentives and support for research and development, thus fostering a culture of innovation in the country.

Strengthening Domestic Industries: Through various policy measures, Atmanirbhar Bharat Abhiyan aims to strengthen domestic industries, making them more competitive and capable of serving both the domestic and international markets.

Enhancing Ease of Doing Business: The government is taking steps to improve the ease of doing business in India, making it more attractive for both domestic and foreign investors. This, in turn, encourages innovation and economic growth.

Impact of Atmanirbhar Bharat on GDP

Positive Impact on GDP:

Promoting Domestic Manufacturing: Encouraging domestic manufacturing can potentially increase industrial production, which contributes to GDP growth. If more products are made in India and fewer are imported, this can boost GDP.

Boosting Entrepreneurship: Supporting small and medium-sized enterprises (SMEs) and startups can lead to job creation and economic growth, which, in turn, can positively impact GDP.

Negative Impact on GDP

Short-Term Disruptions: Policies that aim to reduce dependency on imports may lead to short-term disruptions in supply chains, which can have a negative impact on economic activity and GDP.

Protectionist Measures: Excessive protectionism can hinder foreign investment and trade, potentially reducing overall economic growth.

Resource Allocation: Focusing on self-sufficiency in specific sectors may lead to a misallocation of resources, potentially impacting overall economic efficiency and GDP.

Long-Term Impact: The long-term impact of such initiatives on GDP growth will depend on how effectively they are implemented, the extent to which they foster innovation, and their ability to make India competitive in the global market.

Conclusion

Atmanirbhar Bharat Abhiyan aims to transform the Indian economy into a self-reliant and innovative powerhouse. While it faces challenges and critics, the initiative represents a clear vision for India's economic future, one that prioritizes self-sufficiency, innovation, and sustainability. By embracing this initiative and nurturing a culture of innovation, India can position itself as a global economic leader, ensuring prosperity and security for its citizens.

TRANSFORMATION OF EDUCATION SECTORS IN INDIA AFTER THE NATIONAL EDUCATIONAL POLICY 2020-AN EMPIRICAL STUDY

Dr. P. Gurusamy

Assistant Professor

Department of Commerce BPS

NGM College, Pollachi

Abstract

Government is looking forward to make India a “global knowledge superpower” through NEP 2020 and it will be done by making education system for schools and colleges more flexible, holistic, and multi-disciplinary which will bring out their unique capabilities. Through this new education scheme, they are trying to bring more than 2 Crore students into the mainstream and with the help of this, they aim to achieve 100% GER (Gross enrollment ratio) from pre-school to secondary by the end of 2030. The new National Education Policy (NEP) 2020 of India provides a complete framework for everything from primary education to higher education, technical & vocational education, and a new paradigm of internet-based e-learning. In order to establish perfect harmony with the ideals of the United Nations (UN) 2030 plan for sustainable development, the new education system of India has been built on the five founding pillars of this strategy (access, equity, affordability, accountability, and quality). However, a massive structural revamp of the Indian educational system is necessary for the policy's effective implementation. This article offers insights on the NEP 2020's various components and how they relate to the 2030 targets for the Sustainable Development Goals (SDGs). This essay examines how India might advance while using cares in order to meet its goals. In order to promote "excellent education for everyone" and deliver value to the world, the paper highlights five significant execution flaws that need to be fixed.

Preamble of the Study

The government finally released the new National Education Policy (NEP) after 34 years of expectation. The NEP has the ability to change the Indian educational system into a "new normal" because of its relevant and futuristic approach. The focus placed in NEP on developing critical thinking, competency development, and experiential learning will prepare the students to actively participate in the fourth industrial revolution. The depth of engagements with stakeholders across the spectrum that were conducted for NEP is noteworthy.

Importance of New Education Policy

Technology is being recognized as part of strategic development goals for inclusive education. Block chain, makes it possible to provide cost-effective

information, and makes it available for standardization of quality educational content internationally. It is evident that adopting innovative technologies such as the block chain can help in the effective planning of operations and resource utilization in education. The Covid-19 pandemic exposed the limitations of countries in handling education. Institutions globally which switched to digitalization of education with online learning began to examine their long-term strategies. Hence, innovative technologies such as deep learning, machine learning, artificial intelligence (AI), and virtual reality and block chain are part of the hybrid blended learning to support learners during this crisis. Due to the sudden pandemic scenario, educational institutions have employed IT teams to come up with many innovative features.

Objectives of the Study

The main objective of this study is to observing the transformation education sector after introducing the NETP 2020.

Statement of the Problem

There are several ways and strategies involved in up skilling the students' knowledge but there is no methods adequately promote' students' knowledge. Due to individual differences in students, educators had the duty of implementing variety of techniques. Many researches said that the researchers had made a visit to several educating environments and observed that the teachers use the method of lecturing, copying notes and questioning the students and punishing them for their inadequate listening. It was also noted that students rarely get the opportunity for collaborative learning. Therefore, there is a necessary to observe Transformation of Education Sectors in India after The National Educational Policy 2020.

Challenges of Indian Education Sectors

India ranks 62nd in the world for state expenditure per pupil while having numerous subpar schools. India is outperformed by nations like the US and China, but smaller nations like Bhutan, Korea, and Kenya also show out. In India, the Kothari Commission first suggested allocating 6% of GDP in 1964. In accordance with the current education strategy, India may set this goal in 2020. Due to this significant gap, India has struggled to adapt its educational system, which has caused gaps in worldwide advances and job distribution. China, which was strict in its adoption of the English language and was thought to be skilled with Mandarin thirty years ago, is a particularly intriguing situation. At the time, it was considered to be a nation that had trouble adjusting to the newest inventions appearing around

the globe. Indian academic personnel were larger in number in US and wealthy countries at that point in time. Today, things are different, and many Chinese people are employed in the aforementioned nations. China could quickly realize that a significant percentage of its GDP is dedicated to education, and that it is also adapting its own system to global ideas. China worked on two fronts: first, introducing and assimilating the English language; second, preserving its own culture and innovation in Mandarin. The growing middle class in India has a strong desire for education and prioritizes earning a degree over everything else, which will result in a sufficient number of admissions to support such schools. More crucially, improving governance is needed for the education policy rather than merely focusing on modifying the system's structure. Better governance can give education the gasoline it needs to take off quickly in the correct direction. Recently, during the covid-19 issue, there has been a shift in educational practices from traditional classroom instruction to online instruction using a variety of communication methods while still in the comfort of one's own home.

Teachers Transformation Towards Using Online Assessment Tools

Few other online assessment tools used by teachers are as follows:

- Answer Garden - Real-time polling and brainstorming tool
- Backchannel Chat - Teacher-moderated Twitter-type assessment tool for education
- Chatzy - Lets students chime in with questions or opinions during a lecture
- Coggle - Mind-mapping tool that lets you get a handle on student thinking
- eSurvey Creator - Make student surveys and questionnaires fast
- Flipgrid - Let students make quick videos that respond to teacher prompts
- Formative - Give live assignments, grade them, and give immediate feedback
- Lino - A sticky-note-based virtual blackboard that lets students chime in
- Naiku - Make quizzes that students can take on mobile devices
- Pear Deck - Create interactive presentations students can take part in via smart phones
- The Queue - Free educational chat tool that's similar to Twitter and facilitates remote class discussion
- Quizalize - Create homework and quizzes quickly, with a fast-grading feature
- Quizlet - Develop tests, quizzes, flashcards, and study games for mobile
- Sparkpost - Adobe app that lets teachers create exit tickets with visuals and graphics
- Typeform - Create polls with graphical elements
- VoiceThread - Create discussions around documents, videos, and other materials

- Zoho Survey - Make mobile-ready student surveys and gets real-time results
Assessments are for more than grades.

Table No: 01 Factor Influencing the Selection of Online Assessment Tools Used by the Teacher (Rank)

Factors	I	II	III	IV	V	VI	Total points	Rank
Environmental factor	18	20	12	14	22	24	366	5
Portability in all devices	25	20	12	24	12	7	401	2
Type of assessment	27	16	19	14	10	14	394	4
Ease of use	28	25	21	10	10	6	433	1
Course design	14	12	20	25	16	13	344	6
Student factor	22	25	13	20	11	9	400	3

Table no. 5 illustrates the factors influencing the selection of online assessment tools among teachers. Ease of use placed as first rank. Portability in all devices denoted as second rank. Student factor influenced as third rank and type of assessment provided by faculty got fourth rank. Environmental factor and course design are less influenced the selection of assessment tool.

Observations of the Study

The present study reveal that the faculty of higher education considers NEP to be a welcome change to the education system that will lead to a better regulation of higher educational institutions by bringing all types of institutions under uniform rules. Changes in the schooling system will provide a better foundation for students which will be reflected in their performance in higher education. NEP may also lead to better accessibility of books as books will be prepared in regional languages. Most importantly NEP will boost research in educational institutions as several universities are brought in par with IITs and IIMs. Also, NEP will encourage blended teaching strategies improving the teaching learning process. But little confidence is noticed towards the formative years of learning as it brings about a major change to the system. NEP will encourage blended teaching strategies improving the teaching learning process. But little confidence is noticed towards the formative years of learning as it brings about a major change to the system.

Recommendations of the Study

NEP would regulate HEIs under a uniform system which will boost research and development within higher educational institutions. A focus on online education and blended teaching methods would further benefit higher education students.

Though questions remain unanswered on the feasibility of NEP in a diverse and complex nation such as India, the overall perception towards the new education policy is overwhelmingly positive despite certain doubts.

Conclusion of the Study

The National Education Policy 2020 is the ideal step in preparing Indians for the future. In order to structure a worldwide value adder, the current policy necessitated a switch from a stream-based educational setting to a multimodal arrangement. The policy adjustments focus on how to adapt the system to multimodal systems, but on the flip side, difficulties arise in the form of how to implement a system that ultimately shapes pupils in a competitive context. In contrast to the other massive government initiatives like Make in India, Start-up India, Skill India, and Self Reliant (Atma-Nirbhar) India, it addresses the need for strong answers to India's challenges. Aspects of national importance affecting society and culture, such as regional adaptability and higher education for half the population, were taken into account when designing this policy, but they must be delicately created to evolve as people who can compete on a global scale.

PREFACE

In an era where the global landscape is undergoing rapid and profound changes, the aspiration for global leadership demands a visionary and concerted effort. The seminar proceedings titled “Vision for Vishwa Guru India Initiatives for Global Leadership by 2047” stand as a testament to India's unwavering commitment to shaping a future that is not only transformative for its own citizens but also resonates across the international community.

As we approach the momentous milestone of 2047, which marks the centenary of India's independence, we find ourselves at a crossroads of possibilities and challenges. The concept of ‘Vishwa Guru’ encapsulates India's age-old tradition of disseminating knowledge, fostering dialogue, and illuminating the path for others. This compilation of seminar proceedings is a reflection of this tradition, a dialogue that transcends boundaries and invites scholars, students, and visionaries to collectively envision the path ahead. These proceedings offer a panoramic view of the discussions and insights shared by luminaries in various fields, touching upon a myriad of sub-themes. From discussions on the Role of Technology in NEP 2020 to explorations of Ease of Doing Business, the proceedings delve into crucial facets that shape India's global role.

We extend our heartfelt gratitude to the Indian Council of Social Science Research (ICSSR) for its invaluable support in bringing together these seminal discussions. Their unwavering commitment to advancing knowledge aligns seamlessly with the spirit of the Vishwa Guru India Initiatives. As we navigate the complexities of a rapidly evolving world, we hope that these initiatives serve as a source of inspiration, a catalyst for meaningful dialogues, and a blueprint for action.

We are indebted to the authors who have contributed their scholarly insights to this compilation. Their diverse perspectives and rigorous research have enriched the discourse on global leadership and India's role in shaping the global narrative. Each paper presented here is a testament to their dedication to knowledge dissemination and their belief in the power of ideas to drive positive change.

Together, let us embrace the spirit of ‘Vishwa Guru’ and pave the way for a brighter, more harmonious, and prosperous India.

EMPOWERMENT OF WOMEN THROUGH SELF HELP GROUPS

Ms. M. Shanmugapriya

Assistant Professor, Department of Commerce - BPS
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Women participation in Self Help Groups have obviously created tremendous impact upon the life pattern and style of poor women and have empowered them at various levels not only as individuals but also as members of the family members of the community and the society as whole. They come together for the purpose of solving their common problems through self-help and mutual help. The more attractive scheme with less effort is "Self Help Group" (SHGs). It is a tool to remove poverty and improve the women entrepreneurship and financial support in India.

The concept of SHG services the principle, 'by the women, of the women and for the women'. Self-help groups are voluntary associations of people with common interests formed to achieve collective social and economic goals. Such groups are organized for mutual help and benefit. It is formed democratically without any political affiliations. Self-help groups (SHGs) is as an instrument to change the conditions of women socially and economically. Once socio-economic experiment is achieved it would have implication on the overall development of women. SHGs enable economic, social, political and psychological empowerment of women.

Keywords: *tremendous, poverty, entrepreneurship, associations, empowerment*

Introduction

Self Help Groups are considered as one of the most significant tools in participatory approach for the economic empowerment of women. It is an important institution for improving life of women on various social components. The basic objective of SHG is that it acts as the platform for members to provide space and support to each other. SHGs Comprises very poor people who do not have access to formal financial institutions. It enables its members to learn to cooperate and work in a group environment. Today, in India, Self Help Groups (SHGs) represent a unique approach to financial intermediation. This combines access to low-cost financial services with a process of self-management and development for the women who are SHG members. SHGs are formed and supported usually by Non - Governmental organizations by Government agencies.

SHG are seen to confer many benefits, both economic and social. SHGs are enable women to grow their savings and access the credit which banks are increasingly willing to lend. SHGs can also be community platform from which women become active in village affairs, stand for local election to take action to address social. In India before introduce this scheme for rural women were largely negligible. But in

recent years the most significant emerging system called Self Help Group is a major breakthrough in improving lives of womenfolk and alleviating rural poverty. However, the significant success of several SHGs show that the rural poor indeed efficient to manage credit and finance. Women participation in Self Help Groups have obviously created tremendous impact upon the life pattern and style of poor women and have empowered them at various levels not only as individuals but also as members of the family members of the community and the society as whole. They come together for the purpose of solving their common problems through self-help and mutual help. The more attractive scheme with less effort is "Self Help Group" (SHGs). It is a tool to remove poverty and improve the women entrepreneurship.

Types of Empowerments through SHGs

The term Empowerment refers to measures designed to increase the degree of autonomy and self-determination in people and in communities in order to enable them to represent their interests in a responsible and self-determined way, acting on their own authority. It is the process of becoming stronger and more confident, especially in controlling one's life and claiming one's rights. Empowerment as action refers both to the process of self-empowerment and to professional support of people, which enables them to overcome their sense of powerlessness and lack of influence, and to recognize and use their resources.

Economic Empowerment

"Economic empowerment" can be defined as the development of the ability of the historically disadvantaged to engage in economic activity that benefits both the individuals in question and the broader society. It is seen as a more productive and less costly way to help those who would otherwise remain dependent on the social welfare system. Welfare has its critics who contend that welfare removes the incentive to find employment while drawing excessively from the treasury. By empowering individuals to become economically or financially self-sufficient, they are removed from welfare payrolls and become more productive members of society. Economic empowerment is often applied to women who have been subject to discrimination in education and professional opportunities. These women are not necessarily economically disadvantaged, but they have been denied opportunities to become self-sufficient due to cultural or religious obstacles. In most instances, though, they do fall on the lower end of the socioeconomic spectrum. The economic contribution of women has been found to be related to her role and status in the society. The Self-help groups provide economic benefits to the women by providing income generating activities. Economic independence facilitates in bringing about

sexual equality and increase in women's income translates more directly into family wellbeing.

Social Empowerment

Self-help Groups improve the equality of status of women as participants, decision-makers and beneficiaries in the social, democratic, economic and cultural spheres of life. SHGs ensure the equality of status of women as participants, decision-makers and beneficiaries in the democratic, economic, social and cultural spheres of life. Social empowerment is indispensable to achieving quality of life for people with disabilities and it is both a continuous process as well as a result. Though social empowerment can be achieved through other areas of practice, such as inclusive education and socioeconomic integration, it is also a specific area of practice where tools, methods and approaches exist to facilitate social inclusion. Personalised social support is one specific and tailored approach to social inclusion where a person is accompanied to thrive in his/her personal situation and environment.

Political Empowerment

SHGs as active, articulate and organized citizenry act on a range of issues, holding the Panchayati accountable in terms of the use, production and distribution of public resources for the common public good. SHGs enable women to develop their communication skills to speak at the Gram Sabha, public meetings, etc. An SHG functions through its regular meetings, where members perform transactional activities and discuss over different related issues. Social mobilization through SHGs is inevitable for political empowerment.

Psychological Empowerment

Self-help groups enhance the equality of women as participants, decision-makers and beneficiaries in the democratic, economic, social and cultural spheres of life. The SHGs inculcate a great confidence in the minds of rural women to success in their day-today life.

Conclusion

Empowerment is not essential economic one alone; it is a process having personal, economic, social and political dimensions with personal empowerment being the core of the empowerment process. Women's participation in SHGS has altered the lives of many of them, and these women can be prospective leaders in the local political field. The basics of this change are empowerment, self-assurance, political consciousness and assertion of identity. With respect to the control of

resources, changes in behaviour and the decision-making reveals that many strides have been made in the right direction and women are in the process of empowering themselves.

STUDY OF NEP ISSUES, APPROACHES AND CHALLENGES

Ms. M. Shanmugapriya

Assistant Professor

Department of Commerce - BPS

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

A well-defined education policy and the future are important for the country at school and college levels because of the fact that education leads to economic and social development. Different countries use different education systems with due regard to culture and traditions and take different stages during their life cycle at school and college education levels to make it work. The National Education Policy 2020 (NEP 2020), approved by the Indian Union Cabinet on July 29, 2020, sets out the vision for India's new education system. The new policy replaces the previous National Education Policy, 1986. This policy is a comprehensive framework for primary education towards higher education and vocational training in rural and urban areas of India.

Keywords: *Traditions, Primary Education, Higher Education, Vocational Training, diverted*

Introduction

India, as a fast-growing free country of change in education, currently has about 845 universities and about 40,000 higher education institutions (HIEs), reflecting the total diversity and the many small HEIs in the country connected to these universities. It has been found that more than 40% of these small institutions use a single system for me against the expected transformation of the multi-sectoral higher education system which is an important need for educational change in the 21st century. It was also noted that more than 20% of colleges are enrolled annually with less than 100 students making it impossible to improve the quality of education and only 4% of colleges enroll more than 3,000 students per year due to regional inequality and level of education. They give. Some of the reasons found for the collapse of the higher education system (HE) in India are: It is predicted that India will be the third largest in the world in 2030-2032 with a GDP of about ten billion dollars. It is clear that the ten billion economies will be driven by sources of information and not natural resources. To boost India's education sector growth, the current government has decided to revive it by introducing the National Education Policy 2020.

Issues of NEP

- Initial distribution of students in various subjects.
- Lack of access to HE, especially in the most economically disadvantaged areas has resulted in a current gross enrollment ratio (GER) of only 25%.

- Lack of teachers and institutional independence to do new things in HE attracts more students.
- Inadequate job management practices and the advancement of intelligence with institutional leaders.
- Lack of research and innovation at many universities and colleges.
- Low levels of governance and leadership in institutions of higher learning.
- A corrupt control system that allows fake colleges to thrive while pressing for better, innovative institutions.

Approaches of NEP

1. Curriculum and Content

NEP aims to introduce a transition from 10 + 2 building to 5 + 3 + 3 + 4, where early childhood education will be part of formal education. In addition, NEP 2020 focuses on reducing the content of the curriculum to create a space for critical thinking and, in turn, develop the 21st century skills incorporated into them. Therefore, all aspects of curriculum and teaching need to be restructured to achieve these goals.

2. Teacher Availability and Training

The policy aims to redesign the school curriculum. However, for the curriculum to be effective, schools and the relevant authorities need to train teachers and understand the needs of teaching in order for there to be a smooth transition to the new education system. In addition, they need to shift from teacher-centered reading to student-centered reading in order to develop interpersonal, critical thinking, problem-solving and decision-making skills among young people. The study suggests that more than 250 million students are estimated to enroll in K-12 schools in India by 2030.

3. Technology

NEP 2020 emphasizes the use of technology benefits to prepare young people for the future. However, developing digital infrastructure such as digital classrooms, remote professional-based teaching models, AR / VR tools to fill gaps in physical education and laboratory infrastructure is a major challenge because most schools do not have the right setup. Support these tools. Also, the costs associated with building a digital infrastructure may be less expensive for all schools across the country. In addition, in rural areas of the country where the Internet is virtually nonexistent, using digital learning tools is out of the question. Therefore, government must work to develop the basic infrastructure that will support digital infrastructure in all areas.

4. Test Building

NEP focuses on constructive assessment for learning rather than abbreviated assessment. The primary purpose of modifying the assessment program is to promote continuous tracking of learning outcomes. However, further testing requires schools and teachers to adopt new assessment methods and assignments. These approaches require technical intervention and active participation of teachers and students. According to a survey, out of 1.5 million Indian schools, 75 percent are state-run. Of the remaining 400,000 private schools, about 80 percent are 'private schools'. Therefore, sending a continuous assessment framework is a challenging task for these schools.

Challenges of NEP

1. Opening Weekly Universities is a Herculean Activity

India today has about 1,000 universities across the country. Doubling the Gross Ratio Enrollment in Higher Education by 2035 which is one of the stated goals of the policy will mean that we must open one new university every week, for the next 15 years. Opening one University each week on an ongoing basis is undoubtedly the biggest challenge.

2. Prices are Also Very Alarming in the Transformation Plans of our School System

The National Education Policy 2020 aims to bring back 2 million children who are currently out of school, into the school system. Whichever way you look at it, achieving this in 15 years requires the suspension of about 50 schools each week.

3. Funding is a Major Challenge in the Covid Era

From a supportive perspective, this is not a challenge for the weak. The National Education Policy 2020 anticipates an increase in spending on education from 4.6% to 6% of GDP, reaching approximately INR 2.5 lakh crores per year. The money will be well spent on building schools and colleges across the country, appointing teachers and professors, and operating expenses such as providing free breakfast for school children. What makes things even more difficult is that this policy came at a time when the economy is overwhelmed by Covid-19-related closures, government tax cuts were very low, and funding shortfalls were high even before Covid.

4. The Current Focus is on Health care and Economic Sustainability to Reduce Homicide Rates

Economists have been looking for large renewable energy packages of up to 2 percent of GDP, despite the difficulties in the exchequer.

5. The Need to Create a Large Number of Qualified Teachers

In school education, the policy aims to redesign the curriculum structure as a very acceptable step. But in order to make this curriculum successful, we need teachers who are trained and who understand the teaching needs. Many curriculum changes require major changes in the thinking of teachers, as well as parents.

6. Higher Education Requirements that Include Disciplines for Cultural Change

In higher education, the focus of the 2020 National Education Policy on disciplinary education is a very welcome step. Universities, especially in India, have for decades been siloed and run by departments. The 2020 National Education Policy contains a number of initiatives to improve the quality and scope of the education system in India.

Conclusion

Higher education, with its emphasis on academic study, often produces graduates who have few or no income. Developing GER to include all citizens of the country in higher education is the responsibility of the national government education department. India's National Education Policy 2020 is marching towards achieving that goal by creating new policies to improve quality, attractiveness, accessibility, and expand the provision of higher education in the private sector and at the same time with strict quality control controls in all institutions of higher learning. By promoting eligibility based on free shipping and scholarships, advanced and progressive research artists as members of intelligence, as well as certified leaders based on regulatory approaches, and strict quality monitoring through annual authorization based on self-proclaimed advances through technology-based technologies. Monitoring, NEP-2020 is expected to achieve its goals by 2030.

Abstract

Skills and knowledge are the driving forces of economic growth and social development of any country. They have become even more important given the increasing pace of globalization and technological changes provide both challenges that is taking place in the world. Countries with higher and better levels of skills adjust more effectively to the challenges and opportunities of globalization. The size of the current technical training infrastructure is much smaller than what is required. India currently has the capacity for training 3.1 million people per year. This is insufficient, given that every year, 12.8 million new people enter the workforce. The distribution of training capacities is unbalanced, with the industrially-advanced states of Maharashtra, Andhra Pradesh, Tamil Nadu and Karnataka, accounting for 48 percent of recognised technical training institutions.

Keywords: globalization, effectively, challenges; opportunities, infrastructure

Introduction

The Indian economy grew at an advanced rate of 7.1 percent year in the quarter July – Sep 2018, thereby making it a fastest economy to grow. India's demographic profile is helping the country to aim for an accelerated economic growth. India is expecting a huge growth in the labour market by having 64.8 percent of the population as the working population. It gives a lot of benefit to the country in the labour market. Skill India is a campaign launched by Prime Minister Narendra Modi on 15 July 2015 which aim to train over 40 crore people in India in different skills by 2022. It includes various initiatives of the government like "National Skill Development Mission", "National Policy for Skill Development and Entrepreneurship, 2015", "Pradhan Mantri Kaushal Vikas Yojana (PMKVY)" and the "Skill Loan scheme". The MAKE IN INDIA program laid the foundation of India's latest policy to bring an Economic revolution by making India a global manufacturing hub and welcoming both domestic and international industrialists to invest in India that will generate employment and overall development of India. Manufacturing sector is the strength of an economy as it fuels employment generation, better quality of goods and services at cheaper rate, economic growth & development along with helping the growth of other sectors also.

Challenges in Skill India

India is facing a lot of challenges keeping in view the current infrastructure and the policy framework. The Challenges faced in skill development have been discussed below:

1. **Insufficient Scale and Restricted Capability** The current infrastructure facility available in the educational institutions is inadequate considering the huge demand of labour. There aren't many trained and highly skilled trainers available.
2. **Mobilization:** The enrolment of the students for vocational education and training become an extremely challenging task. The outlook of the people associated with the skill development is still very traditional. The students would move on to managerial roles as the technical trade positions are associated with low salaries and lack of recognition.
3. **Employer's buy-in:** The industry doesn't distinguish whether the person has acquired the skills through on the job training or has gone through a formal training. Many companies make their own skill centres through which they develop the people. Though the Skill Development also focuses on the Public Private Partnership Model but it needs a lot of effort from both the players in development of skills.
4. **Scalability:** Since there is very limited buy-in from the corporate sector the progress of such initiatives is reduced. Skill development had not been a priority of the government earlier and hence this area has always been ignored stakeholders too.

Ways of Facilitating Skill Development Activities

There have been methods to smooth the progress of skill development activities through the following,

1. Creating and enhancing the skill development infrastructure.
2. When construction of schools, institutions and other establishments take place, there should be adequate measures for skill development to take place such as usage of technology.
3. Current institutions, ITIs, acquire mechanisms and equipment required for vocational training of the individuals.
4. Establishment of skill development centers in rural and urban areas, especially where there were not any.
5. Finances have been major issues especially for the economically weaker sections of the society; hence some measures have to be formulated to finance their skill development programs.
6. There has to be involvement of private organizations, profit as well as non-profit in activities implemented by the CSR cell, CSR activities make skills a responsible activity and they are really useful.

7. Efforts have to be implemented to increase the number of skilled personnel within the country and on the basis of their skills they should be able to accomplish something for themselves and find employment not only in industries but in all kinds of sectors education, transport, manufacturing etc.
8. Differential wages should be offered for the skilled and certified workforce to encourage recognition of the skill development programs by the society so that more and more individuals join them.

Opportunities

Job markets all across the world including India are undergoing a tectonic shift. The future of work in India: Inclusion, Growth and Transformation Report by the Observer Research Foundation and the World Economic Forum sheds light on the future of transformative technology and its impacts on work in India. Some key insights from this report are that companies expect technological change to lead to job creation, not job loss. They recognise the potential of new technologies in the coming years. The whole focus is expected to be on automation of repetitive tasks, time optimisation, maximising productivity, creation of digital platforms for online access to job opportunities and formalising informal operations. It is critical for people to keep picking up new tricks of their trade and keep themselves updated with new technological changes in their sphere of work.

Conclusion

Skill development is the most important aspect for the development of our country. India has a huge 'demographic dividend' which means that it has very high scope of providing skilled manpower to the labour market. This needs a coordinated effort from all stakeholders including: Government agencies such as Ministry of Skill Development and Entrepreneurship, National Skill Development Corporation etc, Industries, Educational and training institutes and Students, trainees and job seekers. To make India internationally competitive and to boost its economic growth further, a skilled workforce is essential. As more and more India moves towards the Knowledge economy, it becomes increasingly important for it to focus on advancement of the skills and these skills have to be relevant to the emerging economic environment. For transforming its demographic dividend, an efficient skill development system is the need of the hour. Therefore to achieve its ambitious skilling target, it is imperative to have holistic solutions of the challenges instead of piecemeal interventions.

ROLE OF ICT IN THE PROCESS OF TEACHING AND LEARNING

Ms. M. Shanmugapriya

Assistant Professor, Department of Commerce - BPS
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

ICT enables self-paced learning through various tools such as assignment, computer etc as a result of this the teaching learning enterprise has become more productive and meaningful. ICT helps facilitate the transaction between producers and users by keeping the students updated and enhancing teacher's capacity and ability fostering a live contact between the teacher and the student through e-mail, chalk session, e-learning, web-based learning including internet, intranet, extranet, CD-ROM, TV audio-videotape. Edusat technology has become very powerful media for interactive participation of experts and learners and it reaches the unreachable. Emerging learning Technology (ELT) of blogging, Integrated Learning Modules, a pod cast, Wikis, Enhancement of Browsers, E-learning, M-learning, U-learning have started making rapid strides in teaching learning processes.

Keywords: Web Browsers, Instructional software, Interactive learning, Integrated Learning Module, U-learning, E-learning, M-learning.

Introduction

Huge changes in technology can be observed across the globe on a regular basis. It can also be stated that developments and economic growth resulted in multiple changes in the overall structural foundation. Information and communications technology (ICT) can be used as a viable tool towards the overall learning process. With the rise of the internet and usage of various technologies towards the learning process, usage of ICT will be beneficial. ICT also has the potential to increase the level of interaction between the teacher and the student, which will increase efficiency of the entire process of learning. The interest of the student also increases as there are multiple audio and visual methods of learning associated with the ICT process. In the past few years, the world has witnessed a phenomenal growth in communication technology, computer network and information technology.

Role of ICT in Teaching and Learning

India has made great strides in the utilization of data and correspondence innovation as of late and this is reflected in an energetic and quickly developing economy. It is currently a recognized world pioneer in the information business. Today, every one of our exercises are winding up very information based. There is a move from the mechanical period to the instructive time.

Globalization, progression and a market situated economy have added new flavor to our exercises, with the outcome that learning and aptitudes of each expert, including Teachers should have been ceaselessly refreshed. Anyway the instruction segment, especially the region of educator training, has fallen behind different segments of the Indian economy in profiting from the products of innovative advancement.

The present training framework faces the difficulties to get ready people for the data society in which a standout amongst the most critical points is to deal with data. So as to work in the new world economy, students and their Teachers need to figure out how to explore huge measure of data, to dissect and decide, and to ace new information and to achieve complex errands cooperatively.

Use of Emerging Learning Technologies (ELT)

We may have heard the names of following terms without understanding. Here are few ELT which are in use:

Bloggng: A blog (a blend of the term web log) is a type of website or part of a website. Blogs are usually maintained by an individual with regular entries of commentary, descriptions of events, or other material such as graphics or video. Most blogs are interactive, allowing visitors to leave comments. The ability of readers to leave comments in an interactive format is an important part of many blogs. Most blogs are primarily textual, although some focus on art photographs, videos, music and audio.

Integrated Learning Modules:- Availability of open source software has enabled development of content management system and learning management system such as a Module. Integrated Learning Module (ILM) is thematically focused classes, delivered primarily over Internet. The course content is integrated and comprehensive creating a unique perspective on course themes without the potentially repetitive requirements of separate stand-alone courses. Content and language integrated learning is an approach for learning content through an additional language (foreign or second language) thus teaching both the subject and the language.

A podcast :- A podcast (or non-streamed web cast) is a series of media files (either audio or video) that are released episodically and often downloaded through web syndication. The mode of delivery differentiates podcasting from other means of accessing media files over the Internet, such as direct download, or streamed web casting. A list of all the audio or video files currently associated with a given series is maintained centrally on the distributor's server as a web feed, and the listener or viewer employs special client application software known as a pod catcher that can access this web feed, check it for updates, and download any new files in the series.

Wikis:- Ebers bach et al (2006) note that the following basic features are common in wikis:-

Editing: - Most of the wikis use the same basic page editing function such as Text editing and image, table list hyperlink and file insertion.

Links: - Each article can be linked to other articles and thus form a new network structure.

History: - A function which saves all previous version or modifications of any single page. It allows tracking of the editing processes of an article since all changes have been documented.

Recent changes: - The features can provide a current overview of a certain number of recent changes to wiki pages or all changes with in a predefined time period.

Conclusion

Teaching occupies an honorable position in the society. ICT helps the teacher to update the new knowledge, skills to use the new digital tools and resources. By using and acquire the knowledge of ICT, student teacher will become effective teachers. ICT is one of the major factors for producing the rapid changes in our society. It can change the nature of education and roles of students and teacher in teaching learning process. Teachers in India now started using technology in the class room. Laptops, LCD projector, Desktop, EDUCOM, Smart classes, Memory sticks are becoming the common media for teacher education institutions.

A STUDY ON MOBILE COMMERCE IN INDIA

Ms. M. Shanmugapriya

*Assistant Professor in Commerce - BPS,
Nallamuthu Gounder Mahalingam College, Pollachi.*

Abstract

Mobile Commerce is the subset of e-commerce, which includes all e-commerce transactions, carried out using a mobile (hand held) device. This paper attempts at figuring out the relevance and potential role that m-commerce can play in the development of business environment, the use of wireless handheld devices such as cellular phones and laptops to conduct commercial transactions online. Mobile commerce transactions continue to grow, and the term includes the purchase and sale of a wide range of goods and services, online banking, bill payment, information delivery and so on.

Keywords: *M-commerce, environment, commercial, transactions, information.*

Introduction

E-commerce, or electronic commerce, refers to the buying and selling of goods and services online using the internet. This can include transactions between businesses, between businesses and consumers, and between consumers themselves. E-commerce has grown rapidly over the last few decades and has become an important part of the global economy.

M-commerce, or mobile commerce, is a subset of e-commerce that refers specifically to transactions conducted using mobile devices, such as smartphones and tablets. M-commerce includes not only online purchases made through mobile devices, but also mobile payments, mobile banking, and other transactions facilitated by mobile technology. Both e-commerce and m-commerce have become increasingly important in recent years as more and more people have gained access to the internet and mobile devices. They offer numerous benefits, including convenience, flexibility, and access to a wider range of products and services.

Characteristics and Limitations

Mobile commerce has characteristics that make it significantly different to E-commerce using desktops and laptops:

- ❖ Mobile devices tend to have limited space: a typical Smartphone or tablet would have less than 10% storage space compared to desktops and laptops.
 - ❖ Mobile devices also have significantly smaller display screens to allow easier mobility.
- This means the design of websites, apps, and applications for M-commerce needs to

take into consideration what are the essential requirements needed to fit into these limited displays.

- ❖ Mobile devices need to operate on battery for longer hours. This feature is essential if the device to be considered to be true mobile. Long and continuous use of the processing power of the mobile devices would drain the battery.
- ❖ Limited processing power and processing memory Random Access Memory (RAMs). Typical mobile devices are not equipped to perform extensive processing as traditional desktops and laptops. The processor is designed to self-cool without the need for a fan to keep the mobile devices both slim and reduce the use of the battery. Thus many traditional applications could not run efficiently on mobile devices.
- ❖ Internet traffic on mobile devices needs to consider that many mobile devices would be using mobile network. Both the devices and the network cannot handle extensive traffic although the new generations of tablets and smart phones have been designed to handle faster and better Internet traffic at speeds now reaching 5G or 100GB per second.
- ❖ The operating systems on mobile devices have been designed not to be large and reduce its extensive use of the processor and RAMs. This has come at a cost in reducing the tools and options that would have been otherwise available in typical desktop or laptop.
- ❖ Mobile devices come with extensive features not found traditionally in desktop or laptop devices. Features include: high-resolution cameras, Global Positioning Systems (GPS), Near Field Communication (NFC), SMS messages, calling, and access to extensive libraries for application downloads known as Apps.

Applications of M-Commerce

Other than the straightforward m-commerce transactions of buying and selling of goods and services, they have so many applications. Let us take a look at a few examples,

- ❖ **Mobile Banking:** Using a mobile website or application to perform all your banking functions. It is one step ahead of online banking and has become commonplace these days. For example, in Nigeria, the majority of banking transactions happen on mobile phones.
- ❖ **Mobile Ticketing and Booking:** Making bookings and receiving your tickets on the mobile. The digital ticket or boarding pass is sent directly to your phone after you make the payment from it. Even in India now IRTC and other services provide m-ticketing services.
- ❖ **E-bills:** This includes mobile vouchers, mobile coupons to be redeemed and even loyalty points or cards system.

- ❖ **Auctions:** Online auctions having now been developed to be made available via mobile phones as well.

Benefits of Mobile Commerce

M-commerce gives great benefits to both business owners and customers. Below are some benefits of m-commerce, which are;

- ❖ **Fasters Purchases**

The m-commerce gives positive customers experience, easy and repeat purchases. It also increases business owners' sales. In addition, it loads data faster and enables customers to browse and purchase products faster and easier.

- ❖ **Better Customer Experience**

According to Marketing Land, 83% of customers use smart phones inside real stores to shop. These days, people are well familiar with how smart phones and tablets work. To give your customers better experience, your online shopping app should be fast, convenient, and exclusive.

- ❖ **Direct Connection to Customers**

This benefit allows business owners to easily communicate to their customers. It notifies shoppers or customers about a new product updates, discounts, promotions, and it easily engages the customers. Customers get such messages when they open a mobile app, and may get notified even without activating an app. Studies shows that 50% of users like notifications, and 80% of users say offers and rewards make them more loyal to a brand or business.

- ❖ **Tailored Contents**

Based on customers' behavior and interaction with your mobile app, you can deliver personalized content to them. Giving customers their preferences through the use of customized content can also lead to higher customer loyalty. The effect of tailored content to your business leads to better engagement, expanded reach, and customer loyalty.

- ❖ **Deeper Analytics**

Analytics allows you to get basic information of your customers, like sex, location, age, shopping history, and other information when set up. The mobile app or website linked to Google Analytics allows you to build and set user analytics of various levels. With this analytics, you will get a better understanding of your customers or targeted audience, and in turn create more sales for your brand or business.

- ❖ **Cost Reduction and Productivity**

Most apps allow you reach your customers faster and also cut down cost when running a marketing campaign. The development of app, IT maintenance, and support are cheaper compared to a web store or any other selling points.

❖ **Store Navigation/Geo location**

M-commerce provides users with easy access to navigate through the nearest stores in their GPS. It gives users easy access to find the nearest preferred store and make a purchase. M-commerce provides fun experience for users, and creates more banding options.

❖ **Traditional Retail Sales Benefits**

The m-commerce provides you with assistance in your traditional retail sales. The customers look and explore your products online and visit your retail shop or store to make purchase. It also helps your online shop to filter the hassle of your customers having to go through all your collection manually at your shop or store. M-commerce also helps eliminate the hassle retail store owners and staffs go through to manually update their data.

❖ **New Customer Base**

M-commerce also provides you with new customers. When m-commerce is optimized very well, it does not just hold your current customer base but also brings and attracts new buyers who come to have a look at your online shop, and if they find it interesting and reliable, they make purchases. One of the means that customers use in looking for information is mobile search. M-commerce increases your likelihood to be discovered by customers.

❖ **Higher Return of Investment (ROI)**

It is important to know that 60% of people are likely to make purchases from a mobile friendly e-commerce site than from one that is not mobile friendly. With this, your product speaks for itself. It is more likely for a customer who is happy about purchasing your product, and have a good experience with your brand, to come back to make another purchase. They can also introduce or refer others to your brand or business.

- ❖ The differences between E-commerce and M-commerce
- ❖ Our world today is so much different from our previous generations. With the invention of
- ❖ Internet, everything is fast and happens online. Long gone are those days when people shop
- ❖ around 3-4 stores with the total distance of a few kilometers deciding which product to buy.
- ❖ These days, all considerations are done online before we made it to the physical store and most
- ❖ of the products are just a few clicks away from us. The terms E-commerce or web store have
- ❖ been on the market for a while, but M-commerce and mobile shopping app etc. are quite

- ❖ newcomers.
- ❖ Both of these terms have different meanings though both aim at making consumer lives
- ❖ easier. To better understand the differences between E-commerce and M-commerce, please
- ❖ have a look at the following table
- ❖ E-commerce
- ❖ M-commerce
- ❖ Definition
- ❖ Electronic Commerce (or also called E-commerce) refers to the activities of
- ❖ buying and selling products and services
- ❖ with the use of electronic systems such as
- ❖ the internet.
- ❖ Mobile Commerce (or also called M-commerce) refers to the process of buying
- ❖ and selling products and services with the
- ❖ use of internet/cellular data via wireless
- ❖ handheld devices.
- ❖ History
- ❖ 1970's
- ❖ 1990's
- ❖ Devices used
- ❖ Computers, laptops...
- ❖ Wireless handheld devices such as cell
- ❖ phones, iPads, tablets...
- ❖ The use of
- ❖ Internet
- ❖ Mandatory
- ❖ Not mandatory(allow the use of offline
- ❖ mode, might not work properly though)
- ❖ Connectivity
- ❖ Smaller
- ❖ Larger owing to the bigger number of
- ❖ mobile users
- ❖ Mobility
- ❖ Limited
- ❖ Less limited because of lighter weight and

- ❖ smaller size leading to easier to carry
- ❖ Reach
- ❖ Only at the places where the electricity
- ❖ and the internet are available
- ❖ Broader due to its portability
- ❖ Payment
- ❖ gateway
- ❖ Credit cards
- ❖ Caller's rate, mobile banking or user's
- ❖ credit card
- ❖ Usage
- ❖ Less simple because of more complicated
- ❖ user interface and more functions
- ❖ Simple because all functions have been
- ❖ simplified
- ❖ Platform used
- ❖ Web stores
- ❖ Web stores (mobile version/web app),
- ❖ hybrid app, native app
- ❖ Cost
- ❖ Less costly for the creation a web store
- ❖ and the use of internet
- ❖ More costly for the creation of a mobile
- ❖ app and the use of cellular data

Conclusion

There are news articles and pictures displaying people, who are ordering things over the Internet while waiting for a bus, downloading merchant coupons on their PDAs as they enter a store or bidding for the last table at a hot restaurant by digital phone in a spur-of-the-moment auction. Actually this process represents a tip of a very big iceberg. The advent of m-commerce, as widely referred to among the users, has far-reaching implications. But there are many limitations in the technologies that Once its relevant technologies get matured, widely available and competent, the host of portable devices will be ready to handle the bigger transactional activities not envisioned so far successfully apart from these minor activities.

IMPORTANCE OF COTTAGE INDUSTRIES

Ms. M. Shanmugapriya

Assistant Professor in Commerce -BPS

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Cottage industries and handicrafts constituted the major elements in the organic unity and culture of the people from the earliest times in the known history of India. The unique products of the labours of the cottage industries were in full bloom until the British arrived to the country. The advent of the British power in India adversely affected the Indian cottage industries. The demand for the products of these industries suffered through competition with cheap machine-made products of the British industry. The commodities that are being produced by cottage industries are basically consumable ones and are produced through the utilization of the traditional techniques. Cottage Industry especially started its function in the country sides of a country where unemployment along with under-employment are prevalent.

Keywords: Cottage Industries, consumable, traditional, techniques, commodities, capital intensive.

Introduction

Rural families were some of the first to become involved in the cottage industry. They added to their agricultural income by making products at home. Merchants provided the raw materials to the families, collected and marketed the finished product, and then paid the family a percentage of the price charged to the end consumer. Some of the items made by these at-home workers were cloth and clothing, shoes, cigars, and hand-decorated items.

Cottage industries developed in cities around 1870, resulting in the harsh tenement housing system. Immigrant families lived and worked in these crowded, unsafe apartment buildings. They worked for extremely low wages, usually making garments. This system lasted until around 1920, when better management of factories made home-produced goods less competitive. Household, rural, and traditional industries are other names for cottage industries or cottage manufacturing. The artists, with the help of their families and part-time workers, make items at home using basic tools and raw materials. The items are then used at home and sold in the nearby village. They are also traded with other goods as a barter system.

Cottage Industries are typically extremely small businesses that are founded in homes or other modest structures. A governmental institution called the **Khadi and Village Industry Commission (KVIC)** supports cottage industries as well as village industries. All family members must take part in the development of the cottage industries. Capital subsidies are the most common sort of government assistance given to this sector of the economy. Another choice is self-help groups. In India, small-scale and cottage industries produce about 40% of the nation's overall industrial output.

Defining Cottage Industries

A cottage industry is one which is carried on wholly or primarily with the help of the members of the family either as a whole time or part-time occupation. It is small scale, decentralized manufacturing business. They are generally classified based on the amount of investment required to start and the number of people employed. They produce labour intensive goods and thereby often find it difficult to compete with the machine or factory.

A cottage industry is a small manufacturing operation and is often run out of a home by a single individual or family. Cottage industries can be an important source of income in rural areas where jobs are scarce.

Importance of Cottage Industries

A unique position for the cottage industry exists in India because of the country's extremely diverse socioeconomic and geographic structure. These fit very well with Gandhi's rural development philosophy. The Government of India has given the cottage sector significant incentives to shine from the plan after plan because of the unique position it occupies in India's development landscape.

However, this industry has been experiencing serious risks due to emancipation, globalization, and privatization since 1990. This is because of economies of scale brought about by larger companies producing the same items according to the current paradigm's tenet that the stronger will survive.

- Increased employment opportunities provided by cottage industries ultimately reduce poverty and inequalities.
- This economic sector is one of the most crucial for balancing regional rural economic growth and development.
- Since women play a significant part in these businesses at the managerial and working levels, the cottage industry is also regarded as vital for women's empowerment.
- In contrast to large units, these industries (handicrafts) are environmentally friendly, energy-efficient, and have low emission levels.
- Cottage industries make good use of local talent. Due to their rarity, several of these old skills gain prominence.
- Little cash is needed for the cottage industry.
- Because most cottage industries are found in tiny towns and villages, there is less strain on agriculture due to population growth. So they aid in diversifying the rural economy.
- If correctly utilized, these industries have strong export potential. These sectors' historic, distinctive, and eco-friendly goods are in high demand worldwide.

Types of Indian Cottage Industry

The phrase "cottage industry" refers to manufacturing businesses that do most of their work by hand. India is recognised and known for its diversified culture, handicrafts from

traditional cottage industries, and a wide range of cuisine items, among other things. Cotton weaving, carpet weaving, silk weaving, leather industry, metal handicrafts, and minor food processing are the principal cottage industries in India.

1. **Cotton Weaving:** In India, cotton weaving is a very important cottage industry. Cotton clothing is commonly worn across the country, therefore the expertise dates back to ancient times. Cotton clothing is noted for its classic design, rich colour, and patterns created by skilled weavers using handlooms. Maharashtra, Tamil Nadu, and Gujarat are the three states with the most cotton production.
2. **Silk weaving:** Silk weaving is another well-known cottage industry in India. Silk is a key producer and exporter in our country, both domestically and internationally. Karnataka is the most important silk producer, accounting for almost 70% of the total silk weaving industry. Within our count, Mulberry, Tassore, Muga, and Eri silks are produced.
3. **Carpet Weaving:** Carpet-weaving was first introduced to India during the Mughal period. The Kashmiri carpet is famed for its outstanding quality and texture, but so are the durries and coir carpets. The carpet business is spread out over the country, with the majority of it concentrated in Kashmir, Rajasthan, Punjab, Uttar Pradesh, Andhra Pradesh, and Punjab. In addition, the Indian government has established the Carpet Export Council to promote knotted rugs and other forms of floor coverings from all around the country.
4. **Leather production:** India is a major producer of high-quality leather to worldwide markets, meeting roughly 10% of global demand. The leather sector employs approximately 2.5 million people and is one of India's largest export earners. Tamil Nadu, West Bengal, and Uttar Pradesh are the Indian states that produce leather.
5. **Metal Works:** In India, metal has traditionally been utilised to create figurines, jewellery, utensils, and other items. India's metal handicrafts are well-liked around the world and contribute significantly to the country's economy. Metal handicrafts are made without the use of high-tech equipment and are made with hand-operated tools.

Problems faced By Cottage Industries in India

Cottage industry is considered for its enormous potential of providing employment. But, over the years, employment may have increased in this industry but the income of the people has definitely decreased as the middlemen offer low prices to the manufacturers but take heavy chunks of money from the buyers. But it is not only the middlemen and the dealers. The new revised foreign policies, globalization is also responsible for the current condition of cottage industry. The handloom weavers are facing constant competition from the power looms. These workers have given their whole life to stitching and knitting. The skill that they possess is just unmatched. But still they are at the same place where they had started years ago. An industry, providing employment to a large section of our

population is in such distress. With over 4 million people engaged in handloom industry, such a condition proves the adversities which these people are facing.

An interesting point to note is that out of the total people engaged in this industry, around 47% are below poverty line. Also, according to the new census, the average annual household income of these people is just Rs 41,068. And given the large family size among this section of the society, the per capita income is just a little more than nothing. Cottage industries in India face dearth of capital and large quantity of labour, which force them to buy capital-saving techniques. Hence, there is an urgent need for implementation of techniques which not only enhances productivity but develops skills of the laborers and meets the requirements of the local market. Endeavours should be directed towards the development of technology so that labours can enjoy a decent lifestyle. Government should also provide subsidiaries for the growth of cottage industries especially in the preliminary stages. The labourers of cottage industry often find themselves fighting against all odds at every stage of their business, be it buying the raw materials or promoting their products, arranging for capital or access to insurance covers, etc.

- **The Raw-Materials Issue**

The owners of these businesses cannot afford to buy raw materials in bulk due to their restricted resources. That is why they pay a lot of money for low-quality materials.

- **Financial Issues**

These industries do not have access to low-cost, easy-to-get financing. The government's and banks' funding systems are set up in such a way that these businesses must fulfil several formalities and deal with numerous obstacles.

- **Issues with marketing**

These enterprises are primarily found in villages, and their ability to locate adequate markets for their products is hampered by a lack of transportation and communication services.

- **A Managerial Deficit Talent**

Cottage and small-scale enterprises are typically conducted by tiny business owners who lack managerial and organisational skills. How can these sectors compete with the huge seals industries, which are managed and structured by experts in the field.

- **Rivalry with large-scale businesses**

The fundamental issue these industries face is their inability to compete with large-scale businesses. Because they lack access to the economies of large-scale production, they are unable to compete with large-scale industries. When it comes to capturing the attention of contemporary industry, cottage industries are the losers. This necessitates the protection and promotion of cottage industries through the development of state policies aimed at enhancing the industry's profitability and technological features. It is past time for the government to take some action.

Conclusion

India's cottage industries are culturally and economically significant. They preserve ancient traditions while simultaneously employing a large number of people. Because these industries confront intense competition from other economies, society should provide support to prevent exploitation and further develop them. The only solution to combat the monster of unemployment in over-populated countries like ours is to promote cottage and small-scale industries.

A STUDY ON THE PROGRESS OF PRADHAN MANTRI JEEVAN JYOTI BIMA YOJANA (PMJJBY) FROM 2015 TO 2022

Ms. V. Poornima

*Assistant Professor of Commerce-BPS
Nallamuthu Gounder Mahalingam College, Pollachi*

Mr. P. Santhosh

*Student, II B.Com BPS
Nallamuthu Gounder Mahalingam College, Pollachi*

Introduction

The Government initiated the National Mission for Financial Inclusion (NFI), namely, Pradhan Mantri Jan Dhan Yojana (PMJDY) in August, 2014 to provide universal banking services for every unbanked household, based on the guiding principles of banking the unbanked, securing the unsecured, funding the unfunded and serving unserved and underserved areas. A digital pipeline has been laid for the implementation of PMJDY through linking of Jan-Dhan account with mobile and Aadhaar [Jan Dhan-Aadhaar-Mobile (JAM)].

In order to move towards creating a universal social security system for all Indians, especially the poor and the under-privileged, three ambitious Jan Suraksha Schemes or Social Security Schemes pertaining to Insurance and Pension Sector were announced by the Government in the Budget for 2015-16. The schemes were launched on 9th May, 2015, for providing life & accident risk insurance and social security at a very affordable cost namely (a) Pradhan Mantri Suraksha Bima Yojana and (b) Pradhan Mantri Jeevan Jyoti Bima Yojana and (c) Atal Pension Yojana. Pradhan Mantri Vaya Vandana Yojana to protect elderly aged 60 years and above was initially opened for subscription for a period of one year i.e. from 4th May 2017 to 3rd May 2018.

Objective of the Study

Among the three social security schemes Pradhan Mantri Jeevan Jyoti Bima Yojana (PMJJBY) is chosen for the study. The objectives of the study are

1. To comprehend about PMJJBY.
2. To know the salient features of PMJJBY.
3. To assess the progress of PMJJBY over the years.

Pradhan Mantri Jeevan Jyoti Bima Yojana (PMJJBY)

With the aim of insuring the uninsured a universal social security system for all Indians, especially the poor and the under-privileged, the PMJJBY was launched by the Hon'ble Prime Minister for providing cover for death due to any reason. To achieve saturation under this scheme as announced by Hon'ble PM on 15.08.21, digital and periodic physical camps/drives were taken up. Further PMJDY account holders holding quarterly average balance of Rs. 1000 or more and standard PMMY account holders were also targeted. To increase voluntarily enrollment under the scheme enhanced intermediary commission of Rs.30 payable to BCs is being passed to the subscriber by reduction of amount of Insurance premium payable amount.

The PMJJBY is available to people in the age group of 18 to 50 years having a bank account who give their consent to join / enable auto-debit. Aadhar would be the primary KYC for the bank account. The life cover of Rs. 2 lakhs shall be for the one year period stretching from 1st June to 31st May and will be renewable. Risk coverage under this scheme is for Rs. 2 Lakh in case of death of the insured, due to any reason.

The premium is Rs. 436 per annum which is to be auto-debited in one installment from the subscriber's bank account as per the option given by him on or before 31st May of each annual coverage period under the scheme. The scheme is being offered by Life Insurance Corporation and all other life insurers who are willing to offer the product on similar terms with necessary approvals and tie up with banks for this purpose.

Salient Features

- Launched on 9th May, 2015
- Offers a renewable one-year term life cover of Rupees Two Lakh to all subscribing bank account holders in the age group of 18 to 50 years, covering death due to any reason
- Annual premium of Rs.436/- per annum per subscriber.
- The scheme is offered/administered through LIC and other Life Insurance companies willing to offer the product on similar terms.

Progress of Pradhan Mantri Jeevan Jyoti Bima Yojana (PMJJBY)

The scheme was launched on 9th may, 2015 and still in operation. It has been eight years since its launch the following charts show the progress made during this period.

Cumulative Enrolments in PMJJBY from 2016 TO 2022

The total enrollments in the scheme at the end of March 2016 was 2.96 Crores and now it has reached a peak of 13.11 Crores by June 2022.

Cumulative Number of Claims Disbursed Under PMJJBY

The total number of claims disbursed under the scheme is depicted in the chart above. At the end of March 2016 41,437 claims were disbursed and by end of June 2022 it is 6, 21,372. More than 6 Lakhs people have claimed the benefit.

Female Beneficiaries under PMJJBY

Source :Banks

The chart shows the female beneficiaries under PMJJBY scheme, at the launch it was 1.1 Crores out of 2.96 Crore of total enrollment. At the end of June 2022 the female beneficiaries accounted for around 4.52 Crores which is 49% of the total enrollments.

Conclusion

Insurance is a strong weapon against loss due to risk of death and other uncertainties. By making insurance available to all at a minimum cost the government has ensured security and social welfare among the masses. PMJDY accelerated the progress of PMJJBY through providing a support vehicle. More such social security schemes will ensure a safe and risk free life for the underprivileged. The aim of insuring the uninsured through a universal social security system for all Indians, especially the poor and the under-privileged, through PMJJBY has proven to be efficient and successful through the enormous progress made by the scheme.

SKILL INDIA INITIATIVE FOR ATMANIRBHAR BHARAT

Ms. V. Poornima

*Assistant Professor in Commerce-BPS
NGM College, Pollachi*

Ms. A. Gomathi

*Assistant Professor in Commerce-B&I
NGM College, Pollachi*

Introduction

India is a country with high working age population. Unemployment is a severe problem faced in India. Skill India is an initiative to improve the physical and mental development of Indian youths so that the unemployment problem in the country can be reduced. Skill India is a multi skill project launched in March 2015. The main aim is to develop the talents of Indian Youths. Here more emphasis is given to value addition among youth who are jobless, school dropouts along with the educated ones. It emphasizes on the concept of job creation and social security by which the youth undertake responsibility and no youth remain idle and burden to the economy. Skill development idea helps youths to raise their confidence and improve their productivity. The Skill India concept provides support, training and guidance for all occupations like construction, textile, transportation, agriculture, weaving, handicraft, horticulture, fishing and various other sectors along with language and communication skills, life skills, personality development skills, management skills including job and employability skills.

Objectives of the Study

The main objectives of the study is to find answer for the following questions

1. What is Skill India Mission scheme?
2. What are the objectives of the Skill India Mission?
3. What are the features of the Skill India Mission?
4. What are the benefits of Skill India Mission?

Skill India Mission

Knowledge and Skill are the deciding factors of economic growth and social development for any country. India is blessed with 65% of youth in the working age group. As per the National Policy for Skill Development and Entrepreneurship 2015, it is estimated that the average age of the population in India by 2020 will be 29 years as against 40 years in USA, 46 years in Europe and 47 years in Japan. In next 20 years, the labor force in the industrialized world is expected to decline by 4%, while in India it will increase by 32% which creates a need and opportunity to provide its

workforce with required skill sets and knowledge to enable them to contribute substantially to the economic growth of India.

In 2015, Prime Minister, Mr. Narendra Modi launched the Skill India Mission, which was in accordance with his vision to help India become 'Atmanirbhar' (self-reliant). This initiative was aimed to create and implement comprehensive skill development training programmes that would help bridge the gap between industry demands and skill requirements and therefore, develop the country at large.

The skill India programmes comprised implementing curriculum-based skill training courses, wherein trainees would gain certifications and endorsements from industry-recognised learning centres. The mission also involved incorporating skill-based learning in school curriculum, creating opportunities for both long- and short-term skill training and employment.

Need for Skill India Initiative

With India being a 'young' country due to its 75% working-age population, development of a skilled and educated workforce will play a significant role in enhancing its overall economy. According to the International Labour Organisation (ILO), India is likely to face shortage of ~29 million skilled personnel by 2030. Following this, Accenture in 2019 predicted that if India does not take timely actions—such as invest in new technologies or build industry-required skills—the skill deficit could cost the country US\$ 1.97 trillion in terms of gross domestic product (GDP) over the next decade.

With 'Skill India Mission', the Indian government aims to develop those practical skills, which are required by the industry and therefore, improve employment rate in the country. Since implementation, the mission has helped boost employment. According to data from the Centre for Monitoring Indian Economy (CMIE), unemployment rate dropped to 6.5% in January 2021 from 9.1% in December 2020, while the employment rate increased to 37.9% in January 2021 from 36.9% in December 2020.

Skill Development Schemes Launched by Government of India

1. Deen Dayal Upadhyaya Grameen Kaushalya Yojana
2. Pradhan Mantri Kaushal Vikas Yojana
3. Financial Assistance for Skill Training of Persons With Disabilities
4. National Apprenticeship Promotion Scheme
5. Craftsmen Training Scheme
6. Apprenticeship Training
7. Pradhan Mantri Kaushal Kendra
8. Skill development for Minorities
9. Green Skill Development Programme

Objectives of the Skill India Initiative

Following are the purposes of the said scheme for the development of the workforce in India.

- The Skill India Mission aims to offer market-oriented skills training to nearly 40 Crore Indians by 2022.
- It works to create a space for promoting the talents of youths and creating job opportunities for them.
- Skill India Mission funds sectors that are searching for options to recognise areas for skill development.
- It removes the gap between talented youth and enterprises.
- Lowering the poverty graph in the country.
- Boosting healthy competition in Indian businesses.
- Support Indian workforce and local production in the Indian and global markets.
- Diversifying skill development schemes to meet crucial challenges.
- Enhancing engagement of social partners and improving the relationship between public and private partnerships.
- Seek investors to finance sustainable skills development.

Features of the Skill India Mission

The features of the Skill India Mission are as follows.

- It creates a lucrative scheme for the development of rural youth.
- This scheme focuses on improving the entrepreneurship and service skills of Indian youth.
- National Skill India Mission supports and offers training to individuals working in both organised and unorganised sectors. For instance, cobblers, nurses, masons, kiln workers, etc., can apply for this scheme.
- Skill India Mission also focuses on developing sectors, such as designing, textiles, gems industry, transportation, real estate, textiles, etc. These areas need adequate training for growth.
- It trains youth and makes them capable of finding a job in both India and abroad.

Benefits of Skill India Mission

The Skill India Mission offers beneficiaries the following benefits.

- With appropriate skill development, one can get better job positions and appropriate salaries.
- They can improve their standard of living and support their family.
- The development at the grass-root level will help boost the economy and attract foreign investments.
- Individuals receive a National Skill India Mission certificate which substantiates their skill training.

- Skilled employees would offer better outcomes and more productivity.
- An individual can develop his/her skills and set up a business. This again increases the scope for employment in India.
- Salaried beneficiaries can avail loans of up to ₹1 crore and ₹3.5 crores as self-employed against this scheme. With a stable income, they can easily repay the outstanding balance within the tenure of 20 years.

Conclusion

It is seen in the same newspaper both issues related to unemployment and many advertisements for recruitment. Most of the youth are not aware to modern technology which helps in their personal development and growth of the country. Skill development program is powerful weapon to develop the creative skills and technical training to young population of the country. And it motivates the youth to develop the quality of self-development and self-entrepreneurships concept by providing training in several activities and it also provides a financial assistance through loans at a cheaper rate of interest. No one can have any doubt in the statement 'Development of the individuals in a nation lead to development of nation'. Therefore it is assured that the campaign ' Skill India' will occupy a major role in the development of individual as well as social and economic development very soon through skill development.

AN INTRODUCTION TO ICT TOOLS

Ms. V. Poornima

*Assistant Professor of Commerce-BPS
NGM College, Pollachi*

Introduction

“Technology will never replace great teachers, but in the hands of great teachers, it’s transformational.” – George Couros

ICT tools stand for Information Communication Technology tools. The ICT tools means to digital infrastructures like computers, laptops, printers, scanners, software programs, data projectors, and interactive teaching box.

The ICT devices are the latest tools, concepts and techniques used in student-to-teacher, student-to-student interaction for example: - clicker devices, mobile applications, flipped classroom) for information and communication technology. Use of ICT Tools is all pervasive in our everyday life, and use of ICT tools has almost revolutionized the way teachers impart knowledge to students and students receive knowledge from their teachers, Not only that, by making accessible entire bookshelf and whole of library to students and teachers on a click of their smart phones and laptops have made education simple, much more efficient and have enhanced their productivity enormously.

Had it not been for availability of such modern ICT tools, we could not have pushed through education of our students during pandemic period in such an efficient manner for almost last two years. With advent of ICT Tools, students-teachers community has been benefitted immensely. Now-a-days, classrooms are equipped with desktops, projectors, internet (which facilitates downloading of info from across the world). With availability of smart phones, teachers and students can “virtually” assemble in a classroom and interact with each other with help of ICT software tools such as Google Meet, Zoom etc.

Objectives of the Study

- To study about some of the commonly used ICT tools.
- To assess the importance of ICT in education.
- To evaluate the advantages and disadvantages of ICT tools.

Some ICT Tools

The most commonly used ICT tools for teachers are discussed below,

1. Genially: excellent for creating different content in which interactivity and information are highly valued. Perfect for classroom use, getting students hooked, and explaining full lessons with a single image.
2. Microsoft Teams: the perfect tool to bring all your content together in one place. Integrated into Office 365, it's Microsoft's solution for encouraging collaborative work. Create teams in each classroom where class jobs are shared, assignments are given out, and other participants can chat.
3. Kahoot: allows you to create quizzes that serve to test students' knowledge or review content that has already been worked on in the classroom. There are four types of tests: contest, puzzle, debate, and survey. Games can be projected on a screen, making the entire class participate and having students respond from their computers or mobile devices.
4. Dropbox: this accommodation space has different tools to save files such as documents, images, and presentations. But storage is not your only feature, as it allows you to synchronize folders with classmates, students, and family members. You can also talk to other users through the feedback system and access it from different devices.
5. We Transfer: ideal for exchanging files. Without having to be registered to an account, you can send files that do not exceed 20 GB, which really allows for professional use.
6. Mindomo: one of the best resources for creating mental and conceptual maps. It allows you to create and collaborate online, synthesize ideas, analyze and generate new ones, and solve problems.

7. **Visual.ly** : create and view infographics. In addition, it allows you to share the content you've created on social networks.
8. **Trello**: the ideal place to organize your life. Notes, emails, reminders... Everything will be organized there in a very visual way.
9. **Feedly**: with Feedly you can stay up to date with new content and news that are emerging in the world of education and use them in your classes.
10. **Clippings**: perfect for reading on electronic devices and also underlining appointments and creating notes. It allows you to import clippings from your ebooks, and then select them and organize them into categories and tags.

Importance of ICT in Education

1. **ICT Brings Inclusion**: - The advantage of ICT in education is that all the students in the classroom can learn from the course material. Students with special requirements are no longer at a drawback because they have the necessary materials. Students can use special ICT tools so that they can use the ICT tools to their educational requirements. Despite this, it opens up new problems related to the 'digital divide' and provides those who are less fortunate with access to ICT resources and tools.
2. **E-Learning or Online Learning**: - The ICT tools provide a new way of learning for students and teachers. Online or E-learning is getting popular. Different extraordinary events are happening in our lives, opening up opportunities for schools to ensure that students can access course materials while in the classroom. Outside students are also allowed to make sure. One can also learn in class, such as at home or in hospitals.
3. **ICT Enhances Subject Learning**: - These days, it is well known that in education, ICT adds a huge value to key learning areas like numeracy and literacy.
4. **ICT Use Motivation Learning**: - The demand of society for new technology has not left out children and their requirements. With new technology, children are fascinated, motivating and encouraging children to learn in the classroom.
5. **ICT Use Allows for Effective Differentiation Instruction with Technology**: - We all learn and understand things differently at different levels, styles, and the technology offers chances for this to happen.
6. **ICT in Education Improves Engagement and Knowledge Retention**: - Students become more involved in their work if the TCT is integrated into lessons. And the reason behind that is the technology offers various opportunities to make it more enjoyable and fun in the context of teaching similar things in a number of ways. As a result of this increased busyness, it is said that they are capable to retaining knowledge more efficiently and effectively.
7. **ICT Use Encourages Collaboration**: - We only need a computer, iPad, or laptop in the classroom to understand how it works. Naturally, ICT brings children together so that the children can discuss and talk about what they are exactly doing for their

work. This in turns opens communication avenues that lead to the development of language.

8. **ICT Use Develops ICT Literacy and ICT Capability:** - ICT literacy and ICT capability are the skills of the 21st century which are best developed in ICT and remain transparent in the subject learning context. Offering them meaningful activities that are embedded in purposeful subject-related contexts is a great way to develop the capability of ICT.

Advantages of ICT Tools

There are various advantages of ICT Tools:

1. Cost-efficient
2. Provide the facility for easy student management
3. Direct classroom teaching
4. Improved modes of communication
5. Eco-friendly-Eliminate the usage of paper
6. Direct classroom teaching
7. Minimize cost and saves time
8. Improved data and information security
9. Web-based LMS tools link teachers, students, researchers, and scholars and education together.
10. Teachers are able to teach better with graphics, video and graphics.
11. Teachers can create interesting, well-designed and engaging classroom activities.
12. Provide better teaching and learning methods
13. To spread awareness about the social impact of technological change in education.
14. Promoting and improving the digital culture in universities, colleges, and schools.
15. Automated solutions to paper-based manual procedures and processes.

Disadvantages of ICT Tools

There are various disadvantages of ICT Tools:

1. **Unemployment:** -Although IT has streamlined the process of business, it has created redundancy and subcontinent in the job. Employers can save more money by using computers instead of human resources, but due to this, employees are losing their jobs as no longer needed.
2. **Lack of Security/Privacy:** - Although IT has changed and may be more convenient, it has also raised issues of privacy and security. Phone signal interception, email hacking, etc., people are concerned that personal information can become public knowledge. IT continues to change almost every day, which means that to secure their jobs, everyone has to be up-to-date in IT. Risk factors for attacking computer viruses, trojans, spam, malware is also present in the systems.
3. **Cyber Bullying:** - In social network pages, it is now so easy to bully and bully others as it has become very easy for the users of the internet around over the world. They do not realize the consequences of reading/listening to hostile

comments. There have been various investigation cases involving cyberbullying with lethal implications in the recent past.

4. **Reliance on Technology:** - People no longer bother to read, write, or calculate without computers because of losing handwriting skills (why write if spell checker can be used). Calculate without calculator even for the small addition, reading books (why read if there is huge information on the internet).
5. **Social Media:** - Network pages are open for everyone who can influence their physical and mental health by playing and watching violent games, including young children and teenagers. They are addicted to iPods, phones, gaming consoles, forgetting about society's external activities and communication.
6. **Preparation Time:** - Preparation takes more time so that the internet can be used effectively for education. In addition to designing internet-based plans, we have to surf the Internet in order to download the lesson plans and adapt them to support the course's objectives or visit sites to choose appropriate places for the classes needed.

Conclusion

Students these days are becoming smart. And smart students need even smarter ways when it comes to teaching. If you are a teacher and want your students to be the best, you must include some of the ICT tools for teaching and learning. Integration of ICT in classroom needs serious consideration in order to increase the competency of the country's education system. This will help in increasing the world ranking of the national education and produce the better future work force. In order to enhance the use of ICT in classroom, the government needs to improve and change the teachers' belief about the integration of ICT in classroom. As the teachers' role is the key role in making any of the new policy to be implemented efficiently and successfully. The changes that is taking place is driven by advanced technology and communication devices that should be available to students wherever they are either at school or home. In addition , the needs for teachers to be literate and have good skills and knowledge in using ICT to improve their teaching methods and approach is desired to promote effective learning as well as to meet the demand of the 21st century teaching skills.

A STUDY ON THE HISTORY OF EDUCATION POLICIES IN INDIA

Ms. V. Poornima

Assistant Professor of Commerce –BPS

NGM College, Pollachi

Abstract:

India has a long and varied history of implementing educational policies at the local, state, and national levels. Over the centuries, the country has seen many changes and developments in its educational system, with the aim of providing access to quality education for all its citizens. The National Policy on Education (NPE) is a policy formulated by the Government of India to promote and regulate education in India. The policy covers elementary education to higher education in both rural and urban India. The first NPE was promulgated by the Government of India by Prime Minister Indira Gandhi in 1968, the second by Prime Minister Rajiv Gandhi in 1986, and the third by Prime Minister Narendra Modi in 2020.

Keywords: Education, Policy, NPE, NEP.

Introduction:

India has a long and varied history of implementing educational policies at the local, state, and national levels. Over the centuries, the country has seen many changes and developments in its educational system, with the aim of providing access to quality education for all its citizens. Education is one of the fundamental rights of any individual; it helps individuals to become responsible and productive members of the society. It fosters critical thinking, develops skills and knowledge, and makes a person more responsible towards the society as they contribute to the economy of the nation and participate fully in civic life. It plays a very crucial role in promoting personal and social development. It helps to build strong communities and a strong democracy, and it is essential for the ongoing and development of our world.

History of Education Policies in India:

The National Policy on Education (NPE) is a policy formulated by the Government of India to promote and regulate education in India. The policy covers elementary education to higher education in both rural and urban India. The first NPE was promulgated by the Government of India by Prime Minister Indira Gandhi in 1968, the second by Prime Minister Rajiv Gandhi in 1986, and the third by Prime Minister Narendra Modi in 2020.

Since the country's independence in 1947, the Indian government sponsored a variety of programmes to address the problems of illiteracy in both rural and urban

India. Maulana Abul Kalam Azad, India's first Minister of Education, envisaged strong central government control over education throughout the country, with a uniform educational system. The Union government established the University Education Commission (1948–1949), the Secondary Education Commission (1952–1953), University Grants Commission and the Kothari Commission (1964–66) to develop proposals to modernise India's education system. The Resolution on Scientific Policy was adopted by the government of Jawaharlal Nehru, India's first Prime Minister. The Nehru government sponsored the development of high-quality scientific education institutions such as the Indian Institutes of Technology. In 1961, the Union government formed the National Council of Educational Research and Training (NCERT) as an autonomous organisation that would advise both the Union and state governments on formulating and implementing education policies.

1. National Policy on Education in 1968

Based on the report and recommendations of the Kothari Commission (1964–1966), the government headed by Prime Minister Indira Gandhi announced the first National Policy on Education in 1968, which called for a "radical restructuring" and proposed equal educational opportunities in order to achieve national integration and greater cultural and economic development. The policy called for fulfilling compulsory education for all children up to the age of 14, as stipulated by the Constitution of India and specialized training and qualification of teachers. The policy called for a focus on the learning of regional languages, outlining the "three language formula" to be implemented in secondary education - the instruction of the English language, the official language of the state where the school was based, and Hindi. Language education was seen as essential to reduce the gulf between the intelligentsia and the masses. Although the decision to adopt Hindi as the national

language had proven controversial, the policy called for the use and learning of Hindi to be encouraged uniformly to promote a common language for all Indians. The policy also encouraged the teaching of the ancient Sanskrit language, which was considered an essential part of India's culture and heritage. The NPE of 1968 called for education spending to increase to six percent of the national income. As of 2013, the NPE 1968 has moved location on the national website.

2. New National Policy on Education 1986

In 1986, the government led by Rajiv Gandhi introduced a new National Policy on Education. The new policy called for "special emphasis on the removal of disparities and to equalise educational opportunity," especially for Indian women, Scheduled Tribes (ST) and the Scheduled Caste (SC) communities. To achieve such a social integration, the policy called for expanding scholarships, adult education, recruiting more teachers from the SCs, incentives for poor families to send their children to school regularly, development of new institutions and providing housing and services. The NPE called for a "child-centred approach" in primary education, and launched "Operation Blackboard" to improve primary schools nationwide. The policy expanded the open university system with the Indira Gandhi National Open University, which had been created in 1985. The policy also called for the creation of the "rural university" model, based on the philosophy of Mahatma Gandhi, to promote economic and social development at the grassroots level in rural India.^[7] 1986 education policy expected to spent 6% of GDP on education.

3. National Policy on Education (Modification) 1992

The 1986 National Policy on Education was modified in 1992 by the P. V. Narasimha Rao government. In 2005, Former Prime Minister Manmohan Singh adopted a new policy based on the "Common Minimum Programme" of his United Progressive Alliance (UPA) government. Programme of Action (PoA) 1992, under the National Policy on Education (NPE), 1986 envisaged to conduct of a common entrance examination on all India basis for admission to professional and technical programmes in the country. For admission to Engineering and Architecture/Planning programmes, Government of India vide Resolution dated 18 October 2001 has laid down a Three – Exam Scheme (JEE and AIEEE at the National Level and the State Level Engineering Entrance Examinations (SLEEE) for State Level Institutions – with an option to join AIEEE). This takes care of varying admission standards in these programmes and helps in maintenance of professional standards. This also solves problems of overlaps and reduces physical, mental and financial burden on students and their parents due to multiplicity of entrance examinations.

4. National Education Policy 2020 (Present)

In 2019, the then Ministry of Human Resource Development and now the Ministry of Education released a Draft New Education Policy 2019, which was followed by a number of public consultations. It discusses reducing curriculum content to enhance essential learning, critical thinking and more holistic experiential, discussion-based and analysis-based learning. It also talks about a revision of the curriculum and pedagogical structure from a 10+2 system to a 5+3+3+4 system design in an effort to optimise learning for students based on cognitive development of children. Research Methodology has been added in the last year of graduation course and student will have the choice to leave the course and receive the certificate/ degree according to that. On 29 July 2020, the cabinet approved a new National Education Policy with an aim to introduce several changes to the existing Indian education system, which will be introduced in India till 2026.

Conclusion:

The National Education Policy is a comprehensive set of guidelines and recommendations for the Indian education system. It aims to make education more inclusive, relevant, and engaging for all students, and to foster the development of critical thinking and problem-solving skills. By implementing these recommendations, the NEP aims to ensure that all students have the opportunity to receive a high-quality education and reach their full potential. In conclusion, the New Education Policy represents a major shift in the way education is delivered in India, and it has the potential to bring significant benefits to the education system. Though it has faced a lot of criticism from students as well as educators and learners who are in the mid of the course which will no longer be considered a degree (like an M.Phil). However, its success will depend on effective implementation and adequate resources, and it will require continued effort and commitment from the government, educators, and the wider community.

DIGITAL FINANCIAL INCLUSION IN INDIA: CHALLENGES AND OPPORTUNITIES

Ms.V.Poornima

Assistant Professor of Commerce - BPS, NGM College, Pollachi

Abstract

India's Financial Inclusion journey has been phenomenal in the last decade and expressly promoted by the Government of India through their Digital India Movement & Pradhan Mantri Jan Dhan Yojana. Reduction of poverty and addressing the challenges of ensuring sustainable income could become a key factor to achieve an inclusive society. Information and Communication Technology are providing access to unbanked population progressively and helping to bring them into the banking segment. Digital Technologies are driving usage and making a positive impact on livelihood of citizens. In this paper we are discussing on what is achieved in Financial Inclusion so far and what next and how do we leverage and harness digital technologies to achieve an inclusive society. This paper enlists various challenges that continue to prevail in achieving an inclusive society.

Keywords: *Financial Inclusion, Information and Communication Technology, Social Inclusion, Health Inclusion, Sustainable Growth ecosystem*

Introduction

Financial Inclusion (FI) means delivering basic financial services to the marginalized and excluded members of society. It is the process in which we ensure adequate line of credit accessible by the weaker section of the society at a reasonable cost. Financial inclusion helps in developing a culture of savings among semi urban and rural population by bringing low income groups within the formal frame- work of banking and insurance sector which is significant for national economic development. It came into prominence around 2008 when it became clear to the government that it needs to be the key driver for economic growth of the country. Vision for Financial Inclusion in India is to induce inclusive financial growth by including the unbanked and unsupported individuals and MSMEs by formal financial institutions by providing them convenient access to basic financial products including bank accounts, remittances, bill payments, government supported insurance, pension products and formal credit at reasonable costs. There has been growing evidence on how financial inclusion has a multiplier effect in boosting overall economic output, reducing poverty and income inequality at the national level.

With the advent of "Digital India Movement" and telecom penetration to deep rural areas, sincere efforts are made to bring widespread formal banking channels and innovative financial technology together to create a viable and vibrant ecosystem to drive accessibility of formal financial products to unbanked and deprived segments of Indian society. It started with the services related to opening of no-frills accounts, delivering smart cards containing balance and biometric information to registered on the card. There was no active network connectivity during initial stages of FI. Last mile agents used to visit

the bank, withdraw money & beneficiary list, go to each beneficiary, authenticate with biometrics, and deliver the services. Post which, they go back to the bank to reconcile. Out of 650,000 villages in India, around 150,000 were identified by the govt. initially to service through BC Model.

Fast-forward now, there is far more online connectivity in the remotest areas, smart card is replaced by real time Aadhaar based authentication, beneficiary enrolment & transactions can be done in real-time in field. Last mile channels like micro ATMs, Kiosks, PoS machines, Tablets, Mobile Phones are utilised for service delivery. Basic requirement of UPI based FI transaction is that the beneficiary account should be opened through PM JDY scheme and it is linked to the customer's mobile number.

There is a great need for inclusive growth. By leveraging digital technologies, this is a great opportunity for Govts. and market leaders to improve digital penetration, ease of use of digital products, contextualised and personalised offerings to citizens increase availability, drive down costs, enhance security and trust. There is a need for sustainable cooperation between govts., businesses and unbanked population .

National leadership and policy making institutions like RBI and Niti Aayog have brought in some strong initiatives for inclusive growth which culminated in National Mission for Financial Inclusion namely Pradhan Mantri Jan Dhan Yojana PM JDY leveraging banking network and technology innovations. It enabled access to financial services and coverage of banking to excluded population.

With over 95% of Indian population having Unique Identification through Aadhaar, India achieved 80% of adult population having bank account by 2017. 77% Indian Women have bank accounts. In the outbreak of Covid-19 pandemic, this back bone of bank account has been instrumental to provide help of ₹500 per month for 3 months to over 200 Mn woman beneficiaries, transfer of Rs. 6000/- in 3 installments per year (currently citizens are receiving their 8th installment) of PM Kisan Samman Nidhi Yojana to farmers through direct benefit transfer schemes . Under PM JDY, 423.7 Mn total no of Beneficiaries of which 279.5 Mn Semi Urban/ Rural Beneficiaries . Rapid digital penetration along with enhancing the financial literacy of people has started. We are moving from assisted to self-service model for multiple services.

Current Challenges

1. People included in the financial inclusive ecosystem end up getting excluded and are not able to sustain within the framework due to various reasons general or health related causes.
2. There is a clear demarcation of digital divide among some are tech savvy people and delivering the services and making them understand is not difficult, where as some in semi-urban and majority of people in rural areas find difficult to understand and utilise technology efficiently.
3. Lack of financial literacy and awareness on financial cybercrimes has resulted in

general mistrust among rural population which leads to reduced digital penetration.

4. There is a burden on running sustainable last mile delivery model, particularly in rural areas & last mile level service delivery. Multiple Govt. & Business agencies are trying to reach the same location for various reasons related to FI, Social or Healthcare inclusion and these are disjoint efforts and driving higher costs.
5. Different data elements available with govt. such as healthcare schemes data, social inclusion data, COVID data, vaccination data, etc. are not leveraged to full extent as there is clear lack of coherence between these data elements.
6. Last mile technological systems and artefacts are vulnerable to exposure and exploitations. It is loosely handled by BC or BF agents as adequate security measures to control it are not put in place. This has resulted in lot of frauds happening on the ground. About 22% BC agents faced fraud in 2017, a noteworthy increase from 2% in 2015. Business model of Last mile & BC Agent network must be looked at again from privacy security & safety angle.
7. Data Privacy is still a major concern as a lot of captured data is easily available to various stake- holders as PII norms are not completely followed. KYC Data & mobile numbers are available everywhere. Biometric data is captured duplicitously by some BC Agents in clay who will replicate it later for fraudulent reasons. Another way is when they give a manual receipt instead of computerised one during transactions.
8. SMS messages for transactions in an account are not reaching the customer due to lack of mobile device (More than 310 Mn people still do not possess a basic feature phone or a smart phone) or financial institutions are not sending these messages for low value transactions. This has led to increased dependency on local agents.
9. Access to credit is still a concern as small time lenders charging high rate of interest are prevalent in rural areas. Govt. schemes have not penetrated fully and need more rural outreach to enhance credit access. Lack of avenues for digital lending and online loans from credible financial institutions is missing.
10. Recommendations for individuals based on their requirement is not provided and leveraging the personalised data of the person, by performing analytics using AI & ML, banks can offer loans, insurance and other services based on analytics & credit score.

National Strategy for Financial Inclusion

In the year 2020, RBI came up with national strategy for Financial Inclusion with focus on creating an outreach of financial services outlets to provide banking access to every household within 5KM radius. All eligible adults must have access to basic financial services such as Bank Account, line of credit, life and other insurance, pension scheme and suitable investment product. Now, the next paradigm for financial inclusion program

(2020–2024) is focused on addressing inherent behavioural and practical aspects .

1. *A strong financial transaction grievance redressal system* to address concerns of arguably less technology-savvy citizens.
2. *Increasing digital penetration as still the smartphone usage* for financial transactions are limited to urban and semi urban population predominantly.
3. *Bank account opening for the remaining population* of the country as still the PMJDY penetration is about 80% of the population.
4. *Ensuring the privacy of data and information of citizens* and prevention of fraudulent transactions and demographic data.
5. *Easy and affordable digital payment options* to suit the needs of small businesses and unstructured sector workers.
6. *Providing access to basic and most essential financial products* such as transactional accounts, digital payments, basic term insurance, basic medical insurance, and pension options to the population specially in the agricultural and unorganized MSME sector workers.

According to a World Bank report, globally achieving Universal Financial Access by 2020 [3] has been one of the key developmental agenda of the World Bank which aims to provide adults who currently aren't part of the formal financial system, with access to a transaction account to store money, send and receive payments to manage their financial lives. Our National Strategy is also aligned to these broad virtues suggested by World Bank. On key parameters, India is quite ahead and continuously progressing:

1. *Leadership* in India is having singular focus on technology enabled financial inclusion. It is evident through steps like DBT, PM Kisan, financial assistance to woman and poor during the recent Covid-19 pandemic etc.
2. *Target based approach for specific sectors & regions* including “National Mission for Capacity Building” by bankers for MSME sector, Certified Credit Counsellor Scheme for MSME to join them with the formal Financial Channels and informed financial credit decisions.
3. *Regulatory Framework* in Banking to protect customers, promote fair business processes and prevent unhealthy practices by market players. Initiatives like exclusive “Financial Inclusion Fund” (with initial corpus Rs.2000 Crore), issuances of differentiated banking license—Small Finance Banks, Payments Banks etc., launch of BC Registry with Indian Banks Association (IBA) etc. are steps towards the same.
4. *Market Development* initiatives like Branch Authorization Guidelines (2017) etc. to ensure accurate targeting of the beneficiaries, de-duplication and reduction of fraud and leakage have been taken. Linking all financial assistance schemes to DBT is a strong footprint in this direction
5. *Strengthening Payments Structure* through digital retail payments systems like AEPS, NACH, UPI, CTS, IMPS etc. operated by NPCI are significant steps. Aadhaar

linked direct benefit transfer has changed the scenario for public funds distribution in India.

6. *Last mile delivery* to bridge the gap for remote connectivity and doorstep financial services is key to success. ICT based solution like business correspondents/facilitators and IPPB are landmark steps in this area, launch of UPI on feature phones will be a big game changer also enabling ecosystem for NFC based touchless payments.
7. *Financial Literacy and Awareness* is a primary bottleneck in progressive financial inclusion in India. Launch of financial literacy program in 2013 helped in addressing this to some extent.

Conclusion

Even though the country has made immense progress in widening accessibility for the majority of the excluded population, including through a strong supply-side push for digital financial services, policies should focus more on addressing demand-side constraints to promote use of financial services, which remains low. Improving financial and digital literacy, internet and smartphone access, and expanding digital government payments to households (government to person) will help close the emerging digital divide. At the same time, strengthening consumer protection, data privacy, and cybersecurity remain crucial to promoting safe financial inclusion.

PREFACE

In an era where the global landscape is undergoing rapid and profound changes, the aspiration for global leadership demands a visionary and concerted effort. The seminar proceedings titled “Vision for Vishwa Guru India Initiatives for Global Leadership by 2047” stand as a testament to India's unwavering commitment to shaping a future that is not only transformative for its own citizens but also resonates across the international community.

As we approach the momentous milestone of 2047, which marks the centenary of India's independence, we find ourselves at a crossroads of possibilities and challenges. The concept of ‘Vishwa Guru’ encapsulates India's age-old tradition of disseminating knowledge, fostering dialogue, and illuminating the path for others. This compilation of seminar proceedings is a reflection of this tradition, a dialogue that transcends boundaries and invites scholars, students, and visionaries to collectively envision the path ahead. These proceedings offer a panoramic view of the discussions and insights shared by luminaries in various fields, touching upon a myriad of sub-themes. From discussions on the Role of Technology in NEP 2020 to explorations of Ease of Doing Business, the proceedings delve into crucial facets that shape India's global role.

We extend our heartfelt gratitude to the Indian Council of Social Science Research (ICSSR) for its invaluable support in bringing together these seminal discussions. Their unwavering commitment to advancing knowledge aligns seamlessly with the spirit of the Vishwa Guru India Initiatives. As we navigate the complexities of a rapidly evolving world, we hope that these initiatives serve as a source of inspiration, a catalyst for meaningful dialogues, and a blueprint for action.

We are indebted to the authors who have contributed their scholarly insights to this compilation. Their diverse perspectives and rigorous research have enriched the discourse on global leadership and India's role in shaping the global narrative. Each paper presented here is a testament to their dedication to knowledge dissemination and their belief in the power of ideas to drive positive change.

Together, let us embrace the spirit of ‘Vishwa Guru’ and pave the way for a brighter, more harmonious, and prosperous India.

CONVENOR

CYBER CRIME AND DIGITAL PAYMENTS IN INDIA: A COMPREHENSIVE ANALYSIS

Dr. G. Anitha Rathna

*Assistant Professor, Department of Commerce with E-Commerce
PSG College of Arts & Science, Tamil Nadu, India*

Dr. M. Sumathy

Professor and Head, School of Commerce, Bharathiar University, Tamil Nadu, India

Ms. Sneha Jayalakshmi. J

Research Scholar, Bharathiar University, Tamil Nadu, India

Abstract

The payment method has changed as a result of financial transaction digital transformation. The use of digital payments has increased significantly and quickly. As more people choose to use digital payments, there is an increasing risk of falling victim to cyberattacks like online fraud, identity theft, and spyware or virus attacks. Cybercrime, or crimes committed online, has increased as a result of transactions taking place in the digital realm. Hacking on websites, web applications, and web browsers is known as cybercrime. For any business that deals with electronic payments and transactions, secured payment is essential. Cybersecurity is one of the most important problems facing participants in the digital payment ecosystem. Numerous factors, including ignorance and a weak digital payment infrastructure, can be blamed for the increase in these cyberattacks. Various cyber security techniques exist to protect against cybercrime's threats. This chapter discusses the causes, dangers, and fixes for cyber-attacks on digital payment systems.

Keywords: Cybercrime, Digital Payments, Challenges, Transaction, Cyber Attack.

Introduction

The way people communicate, conduct business, and access information has changed dramatically as a result of the quick development of technology. Cybercrime, as it is commonly known, is one of the newer criminal activities brought on by this digital transformation. India has emerged as a top target for cybercriminals due to its expanding digital landscape and rising internet penetration. In order to effectively combat this threat, it is crucial to comprehend the nature and extent of cybercrime in India as well as the difficulties associated with gathering electronic evidence. the impartial proof in India. This study aims to contribute to the understanding of cybercrime trends in the nation by looking at the most common types of cybercrimes, the legal framework governing cybercrime, and the difficulties and solutions related to electronic evidence collection and preservation. Hacking, identity theft, financial fraud, and online harrasment are just

a few of the illegal activities that fall under the umbrella term "cybercrimes," which also includes other related terms. These crimes have serious repercussions for people, businesses, and national security in addition to causing significant financial losses. For the development of successful prevention and response strategies, it is essential to understand the types and patterns of cybercrimes that are common in India.

The Information Technology Act of 2000 serves as the cornerstone of India's legal framework for combating cybercrime (IT Act). The IT Act establishes the legal framework for combating cybercrimes and lays out the punishments for infractions like unauthorised access, data theft, and computer-related offences. But in order to effectively address new threats, the legal system needs to keep up with how quickly technology is developing. In cybercrime investigations, gathering and preserving electronic evidence is a significant challenge. The rapid spread of cybercrime and the dynamic nature of digital data make the timely identification and retrieval of electronic evidence crucial. The gathering and preservation of electronic evidence is further complicated by legal and procedural requirements, such as ensuring chain of custody, admissibility, and privacy concerns. Law enforcement organisations must adopt strong strategies and make use of digital forensics methods and equipment to get past these obstacles. In order to improve cybercrime investigation capabilities and create a secure framework for handling electronic evidence, cooperation between the government, law enforcement organisations, and the private sector is essential. This research paper aims to highlight the practical implications of current approaches and pinpoint areas for development by looking at notable cybercrime cases and their related electronic evidence management. Additionally, it will offer suggestions for enhancing cooperation, promoting awareness and education about cybersecurity best practises, and strengthening legislation against cybercrime. It is crucial to comprehend the nature of cybercrime and the difficulties posed by electronic evidence if we are to protect India's digital infrastructure. This research paper aims to contribute to ongoing efforts to combat cybercrime and safeguard people and organisations from digital threats by looking at the common types of cybercrimes, the legal system, and the strategies for efficient electronic evidence management.

Cyber-Crime

One of the most important inventions of the twenty-first century is the Internet. Currently, the internet has eliminated all barriers and changed how we interact with one another, play games, work, shop, meet new people, watch movies, order food, pay bills, and greet loved ones on special occasions like birthdays (Al-Zahrani, 2022). Cybersecurity is the most urgent concern as cyber threats and attacks are on the rise.

Fraudsters are now attacking the systems with more sophisticated methods. People, small businesses, and large corporations are all impacted. Because of this, all businesses—IT and non-IT alike—have realised the importance of cyber security and are working to put all available defences in place. Cybercrime is explained in depth in some definitions. Cybercrime is defined by the Oxford Dictionary as "Criminal activities conducted using computers or the Internet." "Cybercrime may be said to be those species, of which a genus is a conventional crime, and where either a computer is an object or subject of the conduct constituting crime," says the definition of the term. There are various ways to commit a cybercrime and some of them are mentioned below in Figure (1).

Hacking

It cracks personal security and finds personal data.

- **Unauthorized access to systems or networks:** It is a form of hacking, an unlawful act, or a crime. Here, the attacker intentionally uses another person's account to access a system without the victim's consent.
- **Virus/worm:** Hinders the proper operation of the programs or harms the system and software.
- **Email bombing:** This practice involves the hacker sending the victims phoney or fraudulent emails. The hackers do this by flooding the mailbox with a large number of emails. As a result, the server crashes, disrupting the operation of web portals.
- **Dos Attack:** harms the hardware and software, or prevents the programmes from operating as intended.
- **Email bombing Attack:** This hacker technique involves sending victims phoney or fraudulent emails. In order to overtax the mailbox, the hackers send an enormous number of emails. The server crashes as a result, disrupting the operation of web portals.

- **Salami attack:** It has to do with money laundering. In doing so, the hackers steal money incrementally or in small steps. Here, they create duplicate bank accounts and transfer a small sum of money from a variety of accounts to one that she can access later.
- **Trojan attack:** In doing so, the hacker seizes command over the computers of others. A Trojan horse virus infiltrates a system and deceives willing users.
- **Web jacking Attack:** The hacker gains control of and access to another legitimate website.

Authorized Framework for Cybercrime in India

Addressing cybercrime in India requires a robust legal framework that defines offenses, prescribes penalties, and establishes mechanisms for investigation, prosecution, and prevention. The primary legislation governing cybercrime in India is the Information Technology Act, 2000 (IT Act)

1) The Information Technology Act, 2000:

The IT Act is the cornerstone of India's legislation against cybercrime. It offers a thorough framework to address a variety of cybercrimes, such as hacking, unauthorised access, data theft, and computer-related crimes. The Act establishes guidelines for the search and seizure of electronic evidence and gives law enforcement agencies the authority to look into cybercrimes. It also creates the Cyber Appellate Tribunal to hear appeals against the decisions made by the Act's adjudicating officer.

2) Amendments to the IT Act:

The IT Act was strengthened and its provisions were updated to address new issues in light of the evolving nature of cybercrimes. Significant changes were made by the Information Technology (Amendment) Act of 2008 to address new types of cybercrimes and strengthen the penalties for offences like cyberterrorism, identity theft, and confidentiality breaches. The amendment also included provisions for data protection, electronic communication monitoring, and interception.

3) Other Relevant Laws and Regulations:

The legal framework for cybercrime in India is supplemented by other laws and regulations in addition to the IT Act. The Indian Penal Code, 1860, contains provisions that can be used to prosecute online crimes like fraud, libel, and stalking. The investigation and prosecution of cybercrime cases are governed by the Criminal Procedure Code, 1973. Regulations pertaining to financial cybercrimes and electronic payment systems are provided by the Reserve Bank of India Act of 1934 and the Payment and Settlement Systems Act of 2007.

Jurisdictional Challenges in Prosecuting Cybercriminals

In India, in addition to the IT Act, there are additional laws and regulations that support the legal framework for cybercrime. Online crimes like fraud, libel, and stalking can be prosecuted under provisions in the Indian Penal Code, 1860. The Criminal Procedure Code of 1973 governs the investigation and prosecution of cybercrime cases. The Reserve Bank of India Act of 1934 and the Payment and Settlement Systems Act of 2007 both contain regulations pertaining to financial cybercrimes and electronic payment systems.

Approaches of Cyber Security

Any illegal activity that makes use of a system, piece of technology, or network is considered a cybercrime. Cybercrime can be divided into two categories: that which targets systems and that which systems unintentionally assist in (Li & Liu, 2021).

Network Security

The hardware and software safeguards that guard against disruptions, unauthorised access, and other abuses of the infrastructure and network are referred to as network security. With the aid of strong network security, company assets are guarded against a variety of attacks from both inside and outside the organisation. Monitoring cyberthreats and risks related to web browsers, websites, online services, and networks is a crucial part of network security. Thanks to companies like Cisco, Palo Alto, Symantec, Fortinet, Okta, and Z scaler that provide complete network security solutions, our information is secure.

Firewall

The term "network security" refers to the hardware and software measures that safeguard the network's infrastructure against disruptions, unauthorised access, and other abuses. Effective network security safeguards company assets against a range of attacks coming from both inside and outside the organisation. Monitoring of online risks and threats involving web browsers, websites, online services, and networks is crucial for network security. Businesses offer network security.

Multi-Factor Authentications

Only after positively presenting more forms of identification to an verification device can a user access websites or software programmes with multi-factor authentication (MFA). A mobile number can be used in addition to a fingerprint, password, or two or more pieces of information (OTP).

Passwords

The likelihood of fraud or cybercrime has increased as a result of the popularity of online shopping through various e-commerce websites or applications. In order to protect applications from threats like unauthorised access and modification, security measures must be developed, incorporated, and tested into the applications. To find, fix, and ideally prevent security flaws in applications, the ultimate goal is to enhance security procedures..

Application Security

A user can only access websites or software programs with multi-factor authentication (MFA) if they successfully authenticate with identification at an authentication device. A mobile number can be accessed with the information, a fingerprint, a password, or both (OTP). Allowing MFA diminishes the risk of cybercrime because hackers won't be able to admission the computer and does not get the code that your mobile or other devices received.

Digital Signature

A digital signature, which functions as a biometric or an addition to a digital document, attests to its legitimacy and integrity. A digital certificate is a document that confirms the bearer's identity and offers security. The three guiding principles of cyber security for the organisation are CIA (Confidentiality, Integrity, and Availability) among all these methods for preventing cybercrimes .It is also referred to as the security triangle. The availability principle implies that the information must be made available based on predetermined criteria, while the confidentiality principle and integrity principle imply that only authorised individuals may access and modify the information .All information must be original and reliable, according to authentication, authorization only grants access to information to those who have been given permission, and accounting mandates regular tracking of all data and events (Wang et al., 2015).

Conclusion

Cybercrime and fraud in digital payment systems are covered in this chapter. All financial transactions now take place online as a result of digitization. This situation has increased awareness of cybercrime. The chapter discusses various cybercrimes as well as cyber security measures to prevent or stop them. It draws attention to the transition from traditional to digital payment gateways. The chapter provides a list of the various regulatory bodies in charge of monitoring online transactions and domestic and international cybercrime. CERT-In and NCSP are just two of the organisations that have worked to track down and stop these cyberfrauds. A web-

based economy was created as a result of the development of fintech. The cash-based society was replaced by a cashless society thanks to digital payments. An increase in cyber attacks is attributed to the use of computers or other electronic devices for financial transactions. The chapter discusses the main causes of these attacks as well as preventative measures.

Abstract

This research article focuses on the role of Information and Communication Technology (ICT) in empowering women entrepreneurs in India. Despite the significant progress made in women's empowerment and gender equality, women entrepreneurs in India still face numerous challenges in establishing and growing their businesses. Limited access to resources, gender biases, social norms, and lack of networking opportunities hinder their entrepreneurial journey. ICT has emerged as a powerful tool that can bridge these gaps and provide women entrepreneurs with access to information, markets, networks, and financial services. The study explores the specific context of India and examines the potential of ICT in empowering women entrepreneurs. It discusses various initiatives, challenges, and strategies for promoting ICT adoption among women entrepreneurs in India, ultimately aiming to contribute to the economic growth and gender equality in the country.

Keywords : *Women Entrepreneurship, Empowerment and ICT*

Introduction

In recent years, there has been a growing recognition of the vital role that women entrepreneurs play in driving economic growth and fostering social development. In India, there is a need to empower women entrepreneurs and provide them with the necessary tools and resources to succeed in the digital age. Information and Communication Technology (ICT) has emerged as a powerful enabler, offering innovative solutions to overcome barriers and enhance the entrepreneurial ecosystem for women. ICT provides women entrepreneurs with a platform to connect with a wider market, both domestically and internationally. The objective is to leverage digital technologies, e-commerce platforms, and online marketplaces to expand the reach of women-led businesses. By enabling access to markets, the study aims to create opportunities for women entrepreneurs to showcase their products and services, increase their customer base, and drive economic growth. The study explores the significance of empowering women entrepreneurs through ICT in India and highlights the objectives that underpin this transformative initiative.

Review of the Literature

Ahilya(2021) in their study “Role of ICT In Women Empowerment” aimed to study ICT women are getting security, awareness, knowledge, employments, confidence, popularity etc. This paper brings into notice the role of Information and Communication Technology in women empowerment. Here various cases have been discussed to give a light on the different angles of ICT has brought to the society.

SaritaRathi and Shyamalendu (2015) in their study “Role of ICT in Women Empowerment” studied the role of Information and Communication Technology in women empowerment. Here various cases have been discussed to give a light on the changes ICT has brought to the society. It also suggests the steps to be taken for women empowerment through ICT.

Beena and Mathu (2012) studied “Role of ICT Education For Women Empowerment” to understand the extent of the influence of ICT education on women empowerment, an exploratory research was conducted. Primary data was collected using survey questionnaires for women of the Jaipur region. It is found that that the information and communication technology empower a woman in various areas like social, educational, personal, psychological, political, technological, and economical.

Statement of the Problem

The increasing use of information and communication technology (ICT) has presented new opportunities for women entrepreneurs to start and grow their businesses. However, despite the potential benefits, there are several challenges that women entrepreneurs face in utilizing ICT effectively. To foster the growth and success of women entrepreneurs in the digital era, it is crucial to identify these challenges and explore areas for improvement. Therefore, this study aims to study the potential challenges encountered by women entrepreneurs in utilizing ICT and to suggest recommendations for policymakers, stakeholders, and future research endeavours.

Objectives of the Study

- To study the Potential Challenges and Areas for Improvement among women entrepreneurs through ICT
- To suggest Recommendations for Policymakers, Stakeholders, and Future Research

Positive Outcomes of ICT- Enabled Women Entrepreneurship

The ICT bridge the digital divide that exists between men and women entrepreneurs in India. By providing women entrepreneurs with access to ICT

infrastructure, training, and resources, we aim to reduce the gender gap in digital literacy and ensure that women have equal opportunities to harness the power of technology for their entrepreneurial ventures.

Enhancing Business Skills and Knowledge

It enhances the business skills and knowledge of women entrepreneurs through ICT. By leveraging digital platforms, online courses, and e-learning resources, women can gain valuable insights into various aspects of entrepreneurship, including business planning, marketing, finance, and networking. This objective aims to equip women entrepreneurs with the necessary expertise to navigate the competitive business landscape successfully.

Promoting Access to Markets

ICT provides women entrepreneurs with a platform to connect with a wider market, both domestically and internationally. It helps to leverage digital technologies, e-commerce platforms, and online marketplaces to expand the reach of women-led businesses. By enabling access to markets, we aim to create opportunities for women entrepreneurs to showcase their products and services, increase their customer base, and drive economic growth.

Fostering Collaboration and Networking

Collaboration and networking play a pivotal role in the success of any entrepreneurial venture. Through ICT, women entrepreneurs can connect with peers, mentors, industry experts, and potential partners. It facilitates virtual communities, online forums, and networking platforms that enable women entrepreneurs to share knowledge, exchange ideas, seek support, and forge valuable collaborations.

Supporting Digital Financial Inclusion

Access to financial services is a critical factor in empowering women entrepreneurs. Through ICT, we aim to promote digital financial inclusion by facilitating online banking, digital payment systems, and access to credit for women entrepreneurs. This seeks to overcome traditional barriers and empower women to manage their finances efficiently, make secure transactions, and access financial resources for business growth.

Empowering Rural Women Entrepreneurs

Rural women entrepreneurs often face unique challenges due to limited resources, infrastructure, and connectivity. It is to specifically address the needs of rural women entrepreneurs by leveraging ICT solutions tailored to their context.

This objective aims to empower rural women, enhance their entrepreneurial skills, and create avenues for sustainable livelihoods, thereby driving inclusive and equitable development.

Access to Markets

ICT has revolutionized the way women entrepreneurs reach customers and expand their businesses. Online marketplaces and e-commerce platforms have enabled women to overcome geographical limitations, showcase their products and services, and access global markets. Success stories include women artisans from rural areas selling their products worldwide through online platforms, creating sustainable livelihoods and economic empowerment.

Digital Financial Inclusion

ICT has transformed the financial landscape for women entrepreneurs. Mobile banking, digital payment systems, and online lending platforms have provided women with greater access to financial services. This has led to increased financial independence, improved cash flow management, and expanded business opportunities. Success stories include women entrepreneurs using digital payment solutions to streamline transactions and access credit, leading to business growth and profitability.

Knowledge and Skill Enhancement

ICT has democratized knowledge and provided women entrepreneurs with opportunities for continuous learning. Online courses, webinars, and digital resources have enabled women to acquire business skills, market insights, and industry knowledge. Success stories include women entrepreneurs leveraging online platforms to gain expertise, refine business strategies, and stay updated with market trends, leading to enhanced competitiveness and innovation.

Networking and Collaboration

ICT has facilitated networking and collaboration among women entrepreneurs, breaking down geographical barriers. Virtual communities, social media platforms, and online forums have connected women entrepreneurs to mentors, peers, and potential partners. Success stories include women entrepreneurs forming supportive networks, sharing experiences, and collaborating on projects, leading to business expansion and collective empowerment.

Potential Challenges and Areas for Improvement

- **Access and Infrastructure**

Ensuring equitable access to ICT infrastructure, including reliable internet connectivity and affordable devices, remains a challenge, particularly in rural and remote areas. Addressing the digital divide is crucial to ensure that all women entrepreneurs can benefit from ICT-enabled opportunities.

- **Digital Literacy and Skills**

Improving digital literacy among women entrepreneurs is essential for them to leverage ICT effectively. Accessible training programs and capacity-building initiatives can equip women with the necessary skills to navigate digital platforms and tools.

- **Gender Stereotypes and Bias**

Deep-rooted gender biases and stereotypes can hinder women's participation and success in ICT-enabled entrepreneurship. Creating a supportive ecosystem that challenges gender norms, promotes equal opportunities, and celebrates women's achievements is vital.

- **Cybersecurity and Data Privacy**

Women entrepreneurs need to be aware of the risks associated with cybersecurity and data privacy. Promoting awareness and providing resources to protect against cyber threats is crucial to ensure safe digital entrepreneurship.

Recommendations for Policymakers, Stakeholders, and Future Research

Policy Interventions

Policymakers should design and implement policies that promote digital inclusion, provide affordable access to ICT infrastructure, and prioritize gender-responsive initiatives. Additionally, policies should focus on closing the gender gap in digital literacy and entrepreneurship training.

Entrepreneurship Support

Stakeholders, including government agencies, NGOs, and industry associations, should collaborate to provide tailored support services for women entrepreneurs. This includes mentorship programs, networking events, access to finance, and capacity-building initiatives focusing on ICT skills.

Research and Data Collection

More research is needed to understand the impact of ICT on women entrepreneurship across different sectors and contexts. Collecting data on ICT adoption, challenges faced, and success factors will inform evidence-based policymaking and program design.

Collaboration with ICT Industry

Collaboration between policymakers and the ICT industry can drive innovations that specifically cater to the needs of women entrepreneurs. This includes developing user-friendly applications, expanding connectivity, and providing affordable devices.

Conclusion

Empowering women entrepreneurs through Information and Communication Technology in India is a transformative initiative with the objective of bridging the digital divide, enhancing business skills and knowledge, promoting access to markets, fostering collaboration and networking, supporting digital financial inclusion, and empowering rural women entrepreneurs. By harnessing the power of ICT. By implementing inclusive policies, providing entrepreneurship support, conducting research, and collaborating with the ICT industry, stakeholders can harness the full potential of ICT to create an enabling environment for women entrepreneurs, driving economic growth and social progress. we can unlock the potential of women entrepreneurs, drive economic growth, and create a more inclusive and equitable entrepreneurial ecosystem in India.

Abstract

In the digital era, cybersecurity and data privacy have emerged as significant concerns due to the increasing reliance on technology and the escalating threat landscape. This abstract explores the key aspects of cyber security and data privacy in the digital age, focusing on the protection of sensitive information, prevention of unauthorized access, and adherence to privacy regulations. The abstract emphasizes the importance of encryption, multi-factor authentication, security awareness and training, and privacy by design. It also highlights the challenges posed by IoT security and the necessity of regulatory compliance. Collaboration and information sharing among individuals, organizations, and governments are underscored as critical for combating cyber threats. Overall, this abstract provides a comprehensive overview of the crucial factors and practices involved in safeguarding cyber security and data privacy in the digital era.

Keywords: *Cybersecurity, Data privacy, Digital era, Sensitive Information, Unauthorized Access*

Introduction

In the rapidly evolving digital era, cybersecurity has become an indispensable component of our daily lives. As technology permeates every aspect of society, from communication and commerce to healthcare and transportation, the protection of digital systems and sensitive information has become paramount. The increasing interconnectivity and reliance on digital infrastructure have created new opportunities for cyber threats, making it essential to understand the challenges and strategies involved in ensuring robust cybersecurity.

The digital era brings numerous benefits, empowering individuals, businesses, and governments with unprecedented access to information, services, and opportunities. However, this digital transformation also exposes us to a range of cybersecurity risks. Cybercriminals constantly exploit vulnerabilities in computer networks, software, and human behavior to compromise systems, steal data, and disrupt critical operations. From large-scale data breaches to ransomware attacks on businesses and individuals, the consequences of inadequate cybersecurity measures can be severe, impacting financial stability, personal privacy, and even national security.

Protecting digital systems and data privacy requires a multi-faceted approach. It involves the implementation of advanced security technologies, such as encryption, firewalls, and intrusion detection systems, to fortify networks and safeguard sensitive information. However, cybersecurity is not solely a technological challenge. It also encompasses human factors, including security awareness, training, and responsible user behavior.

In the digital era, personal data has become an increasingly valuable commodity, making privacy a significant concern. Governments and regulatory bodies worldwide have introduced legislation and frameworks, such as the GDPR and CCPA, to protect individuals' privacy rights and hold organizations accountable for the handling of personal data. This highlights the evolving relationship between cybersecurity and data privacy, with the two becoming intertwined in the modern digital landscape.

Moreover, emerging technologies such as the Internet of Things (IoT) and artificial intelligence (AI) present unique cybersecurity challenges. The rapid proliferation of interconnected devices and the vast amount of data generated create new vectors for attacks. Securing these devices and ensuring the privacy of data transmitted and processed by them is a critical endeavor.

To address the complex and ever-evolving cybersecurity landscape, collaboration and information sharing among stakeholders are essential. This includes cooperation between governments, organizations, researchers, and individuals to exchange knowledge, best practices, and threat intelligence. By fostering a collective approach to cybersecurity, we can stay one step ahead of cyber threats and effectively protect our digital ecosystems.

In this context, this article delves into the intricacies of cybersecurity in the digital era, exploring the challenges, strategies, and emerging trends involved in safeguarding our digital systems and data privacy. It examines the importance of robust security measures, the role of user education and awareness, the significance of privacy regulations, and the need for continuous innovation and collaboration. By gaining a comprehensive understanding of cybersecurity in the digital era, we can work together to create a secure and resilient digital environment for the benefit of all.

Cybersecurity and data privacy are crucial considerations in the digital era. As technology advances and more aspects of our lives become digital, the protection of sensitive information and the prevention of unauthorized access are paramount. Here are some key points regarding cybersecurity and data privacy in the digital era:

1. **Data Breaches:** With the increasing volume and value of data, cybercriminals are motivated to steal sensitive information for financial gain or other malicious

purposes. Data breaches can result in severe consequences, including financial losses, reputational damage, and legal liabilities for both individuals and organizations.

2. **Personal Data Protection:** Personal data, such as names, addresses, social security numbers, and financial information, is valuable to cybercriminals. Laws and regulations, such as the General Data Protection Regulation (GDPR) in the European Union and the California Consumer Privacy Act (CCPA) in the United States, aim to protect individuals' privacy rights and impose penalties for mishandling personal data.
3. **Cyber Threats:** Cyber threats come in various forms, including malware, ransomware, phishing attacks, and social engineering. These threats exploit vulnerabilities in computer systems and networks to gain unauthorized access, disrupt services, or steal sensitive information. It is crucial to employ robust security measures and educate users about potential risks to mitigate these threats.
4. **Encryption:** Encryption plays a vital role in safeguarding data privacy. It involves converting data into a form that can only be deciphered with a corresponding decryption key. Encryption helps protect data both during transit (e.g., secure communication channels) and at rest (e.g., encrypted storage). Strong encryption algorithms are essential to ensure data confidentiality.
5. **Multi-Factor Authentication (MFA):** Multi-factor authentication adds an extra layer of security by requiring users to provide multiple pieces of evidence to verify their identity. This typically involves a combination of something the user knows (e.g., a password), something the user has (e.g., a mobile device), or something the user is (e.g., biometric authentication). MFA helps prevent unauthorized access, even if passwords are compromised.
6. **Security Awareness and Training:** Human error is a significant factor in cybersecurity incidents. Educating individuals about cybersecurity best practices, such as creating strong passwords, avoiding suspicious links or attachments, and being cautious of social engineering techniques, is crucial. Regular training programs can help raise awareness and empower users to make informed decisions.
7. **Internet of Things (IoT) Security:** The proliferation of IoT devices, including smart home devices, wearables, and industrial systems, introduces new cybersecurity challenges. Many IoT devices have limited security features and can be vulnerable to attacks. Securing these devices, including regular software updates and proper configuration, is essential to protect against potential breaches.

8. **Privacy by Design:** Privacy by Design is an approach that emphasizes embedding privacy considerations into the design and development of systems and applications from the start. It promotes privacy-enhancing technologies, data minimization, and user consent, ensuring that privacy is not an afterthought but an integral part of the digital ecosystem.
9. **Regulatory Compliance:** Governments and regulatory bodies have recognized the importance of data privacy and enacted regulations to protect individuals' rights. Organizations must stay compliant with relevant data protection laws, implement appropriate security measures, and be transparent about their data practices to avoid legal consequences and maintain public trust.
10. **Collaboration and Information Sharing:** Cybersecurity is a collective effort that requires collaboration between individuals, organizations, and governments. Sharing information about threats, vulnerabilities, and best practices fosters a proactive security posture and helps the community respond effectively to emerging cyber threats.

In summary, cybersecurity and data privacy are critical concerns in the digital era. By implementing robust security measures, educating users, and adhering to privacy regulations, we can protect sensitive information, mitigate cyber threats, and build a more secure digital environment.

Importance of Cyber Security in Digital Era

Strong passwords, two-factor authentication, data backups, encryption, and regular software updates are just some of the essential cybersecurity measures that individuals and companies can take to protect themselves from cyber threats. By taking these steps, we can help ensure a safe and secure digital future.

Conclusion

In conclusion, cyber security has become an indispensable requirement in the digital era. As our reliance on technology grows, the need to protect sensitive information, prevent unauthorized access, and ensure data privacy becomes more crucial than ever before. The rapid evolution of cyber threats, including sophisticated attacks and the exploitation of human vulnerabilities, highlights the necessity of robust cybersecurity measures.

Throughout this article, we have explored various key aspects of cyber security in the digital era. We have discussed the importance of implementing advanced security technologies, such as encryption and multi-factor authentication, to fortify digital systems and protect against unauthorized access. Additionally, we have emphasized the significance of security awareness and training, as human error remains a prominent factor in cyber incidents.

Furthermore, privacy regulations and frameworks have gained prominence, with governments worldwide taking steps to protect individuals' data privacy rights. Compliance with these regulations is crucial for organizations, as it not only ensures legal adherence but also fosters trust and confidence among users.

The advent of technologies such as IoT and AI has presented both opportunities and challenges for cyber security. Securing interconnected devices and the vast amount of data they generate requires a comprehensive approach that encompasses both technical and procedural measures.

Collaboration and information sharing among stakeholders are vital components of effective cyber security. By working together, governments, organizations, researchers, and individuals can share knowledge, exchange best practices, and stay informed about emerging threats, enabling a proactive response to evolving cyber risks.

In the digital era, cyber security is an ongoing process that demands constant vigilance, adaptability, and innovation. As technologies advance and threats evolve, it is essential for individuals and organizations to remain proactive in implementing robust security measures, educating users, and staying updated with the latest developments in the field.

By prioritizing cyber security, we can create a safer digital landscape that fosters trust, enables innovation, and protects sensitive information. Ultimately, the collective efforts of individuals, organizations, and governments are necessary to tackle the challenges of the digital era and build a resilient and secure cyber environment for the benefit of all.

Abstract

The brand new education coverage announced with the aid of government of India (NEP 2020) was welcoming alternate and clean news amidst all the negativities surrounding the arena due to the challenges posed by using Covid- 19 pandemic. The statement of NEP 2020 turned into in simple terms sudden through many. The adjustments that NEP 2020 has endorsed were something that many educationists in no way noticed coming. though the training coverage has impacted school and university schooling similarly, this article particularly specializes in NEP 2020 and its effect on better schooling. This paper additionally outlines the salient features of NEP and analyses how they influence the present training device.

Keywords: *New Education Policy, Higher Education, Covid-19*

Introduction

The national policy on education (NPE) is a policy formulated by means of the authorities of India to sell training amongst India's human beings. The coverage covers essential schooling to faculties in both rural and concrete India. the first NPE became promulgated by using the authorities of India by top Minister Indira Gandhi in 1968, the second by top Minister Rajiv Gandhi in 1986, and the 1/3 by using prime Minister NarendraModi in 2020.

The country wide education policy 2020 (NEP 2020), which changed into authorized by the Union cupboard of India on 29 July 2020, outlines the vision of India's new schooling system. the new policy replaces the previous national coverage on education, 1986. The policy is a complete framework for simple schooling to better schooling in addition to vocational schooling in each rural and urban India. The coverage objectives to convert India's training device by means of 2021. The language policy in NEP is a large guideline and advisory in nature; and it's miles up to the states, establishments, and faculties to decide on the implementation. The NEP 2020 enacts several changes in India's training policy. It ambitions to increase nation expenditure on schooling from round 4% to six% of the GDP as soon as viable.

In January 2015, a committee under former cabinet Secretary T. S. R. Subramanian started the consultation manner for the new training policy. based totally at the committee document, in June 2017, the draft NEP turned into submitted in 2019 via a panel led by using former Indian area studies employer (ISRO) leader KrishnaswamyKasturirangan. The Draft New schooling coverage (DNEP) 2019, was later released through Ministry of Human useful resource development, accompanied with the aid of a number of public consultations. The Draft NEP had 484 pages. The Ministry undertook a rigorous consultation technique in formulating the draft policy: "Over two lakh hints from 2.5 lakh gram panchayats, 6,six hundred blocks, 6,000 urban local our bodies (ULBs), 676 districts had been received." The imaginative and prescient of the country wide training policy is: "national training policy 2020 envisions an India-centric education device that contributes without delay to transforming our country sustainably into an equitable and vibrant information society by means of providing training to all." High-quality better education must goal to increase individuals who are high-highcellent, considerate, nicely- rounded, and innovative. It have to permit someone to look at one or greater specialized areas of hobby at an in-depth level and increase individual, ethical and constitutional values, highbrow curiosity, medical temper, creativity, provider spirit, and the skills of the twenty first century throughout a number fields, along with sciences, social sciences, the humanities, humanities, languages, personal, technological the vocational topics. the brand new training coverage brings some fundamental changes to the contemporary system, and the important thing highlights are multidisciplinary universities and schools, with as a minimum one in or near each district, revamping pupil curricula, pedagogy, assessment, and help for superior pupil experience, establishing a countrywide research foundation to support extraordinary peer-reviewed work and correctly seed examine at universities and schools.

The main troubles faced via the Indian higher schooling system consists of enforced separation of qualifications, early specialization and scholar streaming into restrained research areas, less attention on research at maximum universities and faculties, and shortage of aggressive peer-reviewed academic studies funding and large affiliated universities leading to low ranges of undergraduate training.

Institutional restructuring and consolidation goal to give up the fragmentation of higher education by transforming better schooling establishments into massive multidisciplinary, creating nicely- rounded and revolutionary people, and reworking other countries educationally and economically, growing the gross enrolment ratio in higher education, along with vocational education, from 26.three% (2018) to 50% by using 2035. Holistic and multidisciplinary schooling must

try in an incorporated manner to enhance all human capacities-intellectual, cultural, social, physical, emotional, and ethical. inside the long term, one of these complete education will be the method for all undergraduate applications, which include those in scientific, technical, and vocational disciplines. top-rated learning environments and guide for college kids provide a holistic approach together with good enough curriculum, interactive pedagogy, consistent formative evaluation, and good enough aid for college students.

Objectives

The primary objective of this research is to look at the impact of latest education coverage 2020 on better schooling. The observe also outlines the salient functions of NEP and analyses how they affect the existing education machine.

Research Methodology

This research is a descriptive take a look at. The important secondary statistics turned into amassed from various web sites along with those of presidency of India, magazines, journals, different publications, and so on. This records turned into then analysed and reviewed to arrive at the inferences and conclusions.

Salient Features of NEP Related to Higher Education

The brand new NEP has been brought with an intention to formalize adjustments within the gadget from school degree to college/college stage. maintaining in thoughts the developing scenario, schooling content henceforth, will awareness on key-ideas, ideas, applications and trouble-fixing angles. The countrywide training policy is expected to convey effective and lengthy-lasting impact on the higher training system of the country. The reality that foreign universities may be allowed to open campuses in India is a commendable initiative by the authorities. this will help the students revel in the global first-class of training of their very personal united states. The policy of introducing multi-disciplinary institutes will cause a renewed recognition on each subject which includes arts, humanities and this form of training will help college students to research and develop holistically. for that reason, college students could be equipped with stronger expertise base.

The advent of single commonplace entrance check is another advantageous step so one can lessen the strain of multiple competitive assessments and simplicity off the pressure of preparing for so lots of them. it's going to also make certain a degree playing floor for all pupil applicants going ahead. setting up instructional bank of credit score (ABC) is surely a strong concept to save the educational credits that scholars earn by using taking publications from numerous diagnosed better schooling institutions. A pupil can earn ratings by using completing a direction and

these will be credited to the ABC account. you possibly can then switch these credits if he/she makes a decision to switch colleges. If a scholar ever drops out for a few reasons, these credits will continue to be intact because of this he/she will come lower back years later and pick up from wherein the scholar had left.

The new higher schooling regulatory structure will make certain that awesome administrative, accreditation, financing, and academic standard-setting roles are completed by way of separate, self reliant, and empowered our bodies. these four systems can be mounted as four impartial verticals within a single umbrella group, India's better training fee (HECI). There are a whole lot of reforms and new developments which have been added by NEP inside the better education quarter. some of the salient functions are:

- Single regulatory body for higher training:
The NEP targets to set up better education commission of India if you want to be the unmarried regulatory body besides for criminal and clinical education.
- More than one access and go out programme:
There might be more than one entry and exit options for folks who wish to depart the course in the middle. Their credit will be transferred through educational bank of credits.
- Tech- based alternative for adult gaining knowledge of via apps, television channels:
first-class technology-based totally options for adult learning consisting of apps, on-line courses/modules, satellite tv for pc-based television channels, online books, and ICT-geared up libraries and adult schooling Centres, and so forth. can be developed.
- E-courses to be available in local languages:
era will be a part of schooling making plans, teaching, studying, assessment, trainer, college, and scholar schooling. The e-content material to be to be had in regional languages, beginning with eight major languages – Kannada, Odia, Bengali amongst others to join the e-publications to be had in Hindi and English.
- Overseas universities to set-up campuses in India:
global's pinnacle 100 foreign universities might be facilitated to perform in India through a new regulation. in keeping with the HRD Ministry file, "such (overseas) universities will be given special dispensation regarding regulatory, governance, and content material norms on par with other self reliant institutions of India."

- Common place front examination for all colleges:
The common entrance exam for all better schooling institutes to be held by national trying out enterprise (NTA). The exam could be optionally available. A better schooling Council of India (HECI) might be set up to alter better schooling. The council's aim will be to increase gross enrollment ratio. The HECI will have 4 verticals:
 - a) Country wide better schooling Regulatory Council (NHERC), to alter better training, which includes teacher schooling, even as apart from clinical and legal training.
 - b) National Accreditation Council (NAC), a "meta-accrediting frame".
 - c) Better training offers Council (HEGC), for funding and financing of universities and colleges. this will update the present national Council for trainer education, All India Council for Technical training and the college presents fee.
 - d) Preferred schooling Council (GEC), to border "graduate attributes", particularly the gaining knowledge of outcomes expected. it's going to also be accountable in framing a countrywide better education Qualification Framework (NHEQF). The countrywide Council for teacher education will come beneath the GEC, as a expert preferred placing frame (PSSB).

Detailed Analysis of Impact of NEP on Higher Education

Regulatory System of Better Schooling

A great alternate in NEP 2020 is the suggestion to set up the higher education fee of India (HECI), as an umbrella frame for better education, except medical and criminal training. this may normally carry out a query that what will appear to the existing UGC and AICTE? HECI is aiming at reforming the better education region; the invoice will separate the instructional and investment components of the world. according to the new invoice, HECI will now not have any financial powers. The investment techniques which have been handled by means of the university presents fee (UGC) could be taken care with the aid of the Ministry of education, formerly referred to as the Ministry of Human useful resource development (MHRD). this change however is anticipated to clean the regulatory mess in India's higher training gadget. HECI is predicted to have four impartial verticals - national better schooling Regulatory Council (NHERC) for regulation, standard schooling Council (GEC) for preferred-placing, better schooling grants Council (HEGC) for funding, and national Accreditation Council (NAC) for accreditation. To have uniformity in training standards, a unmarried umbrella frame turned into continually a demand and this has been a vision of numerous educationists. this is considered because the proper

step in streamlining education coverage. however, to ensure excellent of better training, institutes must be measured primarily based on applicable parameters like research, industry linkages, placements and academic excellence, and so on. If the HECI can manipulate this, the benefits to its largest stakeholder, the kids of India, is probably widespread.

Graded Accreditation and Graded Autonomy

The concept of "empowerment and autonomy to innovate" is one of the key capabilities in NEP 2020 which supports a "phasing out" approach from Affiliated schools to self sustaining institutions. The multiplied flexibility offered to self reliant establishments also gives wish in curriculum enrichment. It also says that with suitable accreditations, self reliant diploma- granting faculties may want to evolve into research-intensive or teaching-intensive Universities, if they so aspire. The assertion of putting in Multidisciplinary training and studies Universities (MERUs) in the u .s .a .gives extra hope. those establishments might be at par with the existing IITs and IIMs and could purpose to showcase multidisciplinary training for the Indian college students.

Another essential trade the NEP 2020 suggests that the countrywide checking out employer will function a highest quality, professional, independent checking out company to conduct front examinations for undergraduate and graduate admissions and fellowships in higher education establishments. The high excellent, range, and versatility of the NTA trying out services will allow maximum universities to use those common entrance checks - in place of having masses of universities each devising their own entrance assessments - thereby substantially reducing the burden on college students, universities and schools, and the entire education gadget. it'll be left up to individual universities and faculties to use NTA tests for his or her admissions. It additionally virtually facilitates the students to without problems transfer their levels and credits to universities overseas.

Internationalisation at Home

NEP 2020 also lets in foreign universities and schools to return to India and this brings out a project for the local establishments to improve the high-quality of schooling furnished by way of them. The Indian higher schooling zone is buzzing all round because the opportunity of paving the way for foreign universities to set up campuses in the country. India has considered one of the biggest networks of better schooling structures inside the global, with extra than 900 universities and forty,000 schools. but GER (Gross Enrolment Ratio) of India in higher training is 26.3%, that is considerably low when in comparison to other BRICS nations like Brazil (50%) or China (fifty one%), and very lots decrease whilst in comparison with ecu and North

American international locations which might be greater than 80%. India must obtain a enormous growth in the region of world better education for acquiring a sustainable financial boom, which should now not be driven via natural resources, but by way of knowledge resources. As consistent with the reviews, India will need every other greater than 1,500 new higher training establishments by using 2030 to accommodate a big inflow of students, that's why the Indian authorities wants to promote FDIs (overseas Direct investment) and open up the ECB (external industrial Borrowing) path to strengthen the capital funding for the training zone.

The ministry is also trying to improve India's image as an education center because already extra than 7 Lakhs of Indian students are analyzing abroad. So, the intention of this coverage is that, permitting foreign universities will permit international-magnificence education available regionally at a extensively decrease value with out touring and could extensively lessen the human capital migrating to different countries for observe and activity prospects. consistent with the exceptional global surveys, cross-border education is beneficial for the economy and brings a much wider stage of world focus, culturally perceptive, and competitiveness. overseas collaborations enable nearby institutes to layout their curriculum in alignment with global pedagogy and offer a various portfolio of topics and specialization to students.

More Holistic and Multidisciplinary Training

The NEP 2020 claims that, a holistic and multidisciplinary education would intention to develop all capacities of human beings -highbrow, aesthetic, social, bodily, emotional, and moral in an incorporated manner. Such an education will assist broaden nicely-rounded people that possess crucial twenty first century capacities in fields throughout the arts, humanities, languages, sciences, social sciences, and professional, technical, and vocational fields; an ethic of social engagement; smooth capabilities, which includes communicate, dialogue and debate; and rigorous specialization in a chosen discipline or fields. The NEP 2020 envisions one large multidisciplinary better schooling organization (HEI) in or near each district, by using 2030.

Towards the attainment of this type of holistic and multidisciplinary education, the bendy and revolutionary curricula of all HEIs shall encompass credit-based guides and projects inside the areas of community engagement and service, environmental training, and cost-primarily based schooling. environment schooling will include regions together with climate change, pollutants, waste control, sanitation, conservation of biological range, management of biological assets and biodiversity, wooded area and wildlife conservation, and sustainable development

and dwelling. price-based totally schooling will include the development of humanistic, moral, Constitutional, and popular human values of reality (satya), righteous behavior (dharma), peace (shanti), love (prem), nonviolence (ahimsa), medical mood, citizenship values, and additionally existence- abilities; training in seva/carrier and participation in community provider programmes will be considered an indispensable a part of a holistic education.

As the world is becoming increasingly more interconnected, worldwide Citizenship schooling (GCED), a response to modern-day worldwide challenges, will be supplied to empower freshmen to grow to be privy to and understand global problems and to end up active promoters of extra non violent, tolerant, inclusive, relaxed, and sustainable societies. sooner or later, as part of a holistic education, college students at all HEIs could be furnished with opportunities for internships with local enterprise, organizations, artists, crafts humans, etc., in addition to research internships with school and researchers at their personal or different HEIs/research institutions, so that students may also actively engage with the sensible side of their getting to know further enhance their employability.

The Structure and Lengths of Diploma Programmes

In the context of the country wide education policy 2020 scheme, any undergraduate diploma in any organization will be of period of three or four years. you'll be able to depart the degree inside this era. Any instructional institution will must give to the student a degree degree after the pupil completes two years of take a look at, a diploma after the pupil completes three years of study and a certificate to the ones students who entire 365 days of look at in any expert or vocational path in their choice. The authorities of India will also help in establishing an academic bank of credit score for storing the academic scores digitally. this can allow the establishments to rely the credit on the quit and put it within the degree of the pupil. this can be helpful for those folks that might should leave the direction mid-way. they can start the course afterward from in which they left off and not begin from the start yet again. despite the fact that NEP 2020 says that better schooling establishments may be given the freedom to begin PG publications there can be a few trouble in designing three hundred and sixty five days PG degree for college kids who have finished four year UG degree and a two 12 months PG degree for college students who've finished three yr UG degree.

Conclusion

The coverage introduces an entire gamut of modifications and reads in large part as a very modern document, with a firm hold close at the modern-day socio-economic panorama and the chance of destiny uncertainty. schooling for a brand

new era of learners has to basically have interaction with the growing dematerialisation and digitalisation of economies, which requires a totally new set of abilities with the intention to be capable of hold up. This appears to be a fair greater important perquisite now, with the trend toward digitalisation and disruptive automation being quickened by means of the pandemic. normal, the NEP 2020 addresses the need to develop specialists in a ramification of fields starting from Agriculture to synthetic Intelligence. India wishes to be ready for the future. And the NEP 2020 paves the way ahead for plenty young aspiring college students to be geared up with the right skillset.

The new education policy has a laudable vision, however its power will rely on whether it may efficaciously combine with the alternative coverage projects of government like virtual India, skill India and the brand new commercial policy to name a few, in an effort to effect a coherent structural transformation. therefore, policy linkages can make certain that training coverage addresses to and learns from talent India's revel in in enticing extra dynamically with the corporate sector to shape vocational education curriculum with a view to make it a fulfillment. there may be additionally a necessity for greater evidence-based totally choice-making, to evolve to hastily evolving transmutations and disruptions. NEP has reassuringly provisioned for real-time assessment structures and a consultative monitoring and review framework. This shall empower the schooling device to continuously reform itself, as opposed to looking forward to for a new education policy each decade for a shift in curriculum. This, in itself, can be a exquisite fulfillment. The NEP 2020 is a defining second for better training. effective and time-sure implementation is what will make it without a doubt path-breaking.

MAKE IN INDIA: PROMOTING MANUFACTURING AND GROWTH

Dr. R. Velmurugan

*Associate Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore*

Dr. J. Sudarvel

*Associate Professor of Management
Karpagam Academy of Higher Education, Coimbatore*

Abstract

The Government of India started the revolutionary Make in India project with the aim of advancing manufacturing and encouraging economic development. The Make in India campaign's importance in promoting manufacturing expansion, luring investments, and fostering general economic development is examined in this essay. It highlights the important industries, legislative changes, and the significance of innovation and skill growth. It is also examined how the Make in India initiative would affect job growth, exports, and India's competitiveness abroad. To realise its goal of establishing India as a centre for global manufacturing, Make in India must be implemented successfully. To do this, collaborative efforts, regulatory changes, and investments in innovation and talent development are needed.

Keywords: *Make in India, Economic Development, Policy Reforms, Innovation, Skill Development*

Introduction

The Government of India's flagship programme, Make in India, is of utmost importance for boosting manufacturing and stimulating economic development. The fundamental goal of the programme is to make India a hub for global manufacturing by luring domestic and foreign investment, fostering innovation, and boosting the competitiveness of Indian industry. The Make in India campaign's goals, major industries, proposed legislative changes, and prospective effects on the Indian economy are all thoroughly examined in this essay.

Objectives of Make in India

The Make in India project includes a number of important goals that support its ambition of making India a manufacturing powerhouse on a global scale. The initiative's main objectives are to boost domestic industrial investment and draw in foreign direct investment (FDI). By doing this, Make in India hopes to significantly increase employment possibilities, stimulate economic growth, and promote industrial expansion. Make in India prioritises innovation and technological development within the manufacturing industry in addition to promoting

investment. The effort is aware of how crucial innovation is to raising productivity, competitiveness, and sustainability. Make in India aims to place Indian industry at the forefront of global technical breakthroughs by promoting the use of cutting-edge technology, supporting research and development collaborations, and building a conducive ecosystem for innovation.

The encouragement of job creation and skill development is a key goal of Make in India. The project recognises the critical relationship between a flourishing manufacturing industry and the availability of trained labour. Make in India strives to create job opportunities at all skill levels by facilitating investments and encouraging the development of industries. In order to increase the employability of the Indian workforce and give people more power, the initiative also emphasises skill development programmes, vocational training, and entrepreneurship activities. By promoting the use of cutting-edge manufacturing techniques, updating infrastructure, and enhancing corporate efficiency, Make in India also aims to improve India's manufacturing capacity. The effort acknowledges the significance of fostering a business-friendly climate by streamlining regulatory processes, lowering administrative barriers, and improving the convenience of conducting business. Such actions are intended to entice capital, fuel expansion, and advance a healthy industrial environment capable of competing on a global basis.

Make in India seeks to accelerate India's economic growth, boost its level of global competitiveness, and foster the growth of the business environment by emphasising investment attraction, fostering innovation and technology development, encouraging job creation and skill development, and enhancing India's manufacturing capabilities. The project has the ability to considerably advance India's socioeconomic development while also altering the country's manufacturing landscape.

Key Sectors and Policy Reforms

Make in India lays a lot of attention on key industries with the potential to spur manufacturing growth and help create jobs. The development of these areas is being actively encouraged since they have been recognised as crucial initiative pillars. Automobiles, textiles and apparel, chemicals, information technology (IT) and electronics, defence manufacturing, pharmaceuticals, renewable energy, and aerospace are just a few examples of the diverse industries that make up the major sectors. Making use of India's advantages and skills to draw in investments and promote their expansion is the goal of Make in India. Make in India promotes regulatory reforms that seek to streamline administrative processes, lessen trade restrictions, and foster an environment that is favourable to investment in order to encourage the expansion of these important sectors. It is noteworthy that the Goods

and Services Tax (GST) was implemented since it harmonised the tax system, avoided cascading effects, and made it simpler for companies to operate across state lines. This has improved the efficiency and openness of business operations while also streamlining the taxes system.

The creation of the Insolvency and Bankruptcy Code, which offers a precise and time-limited procedure for resolving insolvencies and reorganising firms, is another significant policy innovation. By creating a strong framework for the relief of financial hardship, this reform has increased the ease of doing business in India and has increased trust among investors, both domestic and foreign. Additionally, the creation of Special Economic Zones (SEZs) has been crucial in luring investments and fostering the expansion of the manufacturing sector. SEZs are desirable locations for manufacturing activity because they provide a variety of incentives and advantages to enterprises, including tax breaks, liberal labour rules, and expedited customs procedures. These areas offer an environment that encourages company growth and contributes to the nation's overall economic development. Make in India attempts to create an enabling environment for industrial growth by advocating policy reforms like the implementation of GST, the introduction of the Insolvency and Bankruptcy Code, and the establishment of SEZs. These changes are essential for streamlining regulatory procedures, lowering corporate limitations, and promoting a welcoming environment for investments. By doing this, Make in India hopes to draw both domestic and foreign investment, promote the expansion of important industries, provide job opportunities, and establish India as an aggressive manufacturing hub on the international scene.

Potential Impact on Economic Growth

The Make in India programme has shown to be an effective motivator with the ability to significantly advance India's economic development. The programme has the power to spur industrial growth, increase manufacturing production, and generate a wide range of job possibilities by luring foreign direct investment (FDI) and stimulating local investments. These results could spur general economic growth and alter India's standing in the international market. The Make in India programme has as one of its main goals the promotion of innovation and entrepreneurship. The strategy fosters an atmosphere that is favourable for the development of homegrown innovations and goods by luring investments. In addition to supporting the domestic manufacturing sector, this encourages an innovative culture that results in the development of fresh ventures, goods, and services. Incentives and policies that support innovation and entrepreneurship enable people and businesses to contribute to the expansion of the manufacturing sector and to the advancement of economic growth.

Additionally, the development of backward and forward connections can cause the rise of the manufacturing sector to have a cascading effect on the overall economy. The growth of manufacturing operations fuels demand for components, raw materials, and services, boosting a number of other businesses. This multiplier effect generates new business prospects, boosts economic activity, and aids in the advancement of the economy as a whole. The development of skilled labour, technical breakthroughs, and enhanced infrastructure are additional benefits of the industrial sector's expansion that further bolster the economy's structural base. The Make in India initiative encourages the adoption of greener technologies, renewable energy sources, and environmentally friendly manufacturing practises in addition to the economic advantages. India is now seen as a responsible actor in the manufacturing industry thanks to its emphasis on sustainable production, which is in line with current global trends. The project fosters long-term economic growth while minimising its negative effects on the environment by embracing environmentally responsible practises.

The Make in India programme has the potential to significantly contribute to India's economic growth and development through investment attraction, industrial growth stimulation, entrepreneurship and innovation promotion, and economic multiplier effects. This innovative project not only strengthens India's industrial capacity but also cultivates an environment that is conducive to long-term, equitable economic growth. India can position itself as a global manufacturing powerhouse and catapult its economic growth to new heights through the sustained execution and support of the Make in India initiative.

Challenges and the Way Forward

Despite its enormous potential, the Make in India programme has a number of issues that must be resolved to ensure its success. Infrastructure restrictions, intricate regulatory systems, skill deficits, and fierce international rivalry are just a few of these difficulties. Multiple parties must work together and make consistent efforts to overcome these challenges. The expansion of the manufacturing sector depends on the development of the infrastructure. For the effective flow of goods and materials, adequate transportation networks, dependable power supplies, and modernised logistics systems are essential. The government must give infrastructure development, particularly investments in energy, digital connection, and transportation, top priority in order to address infrastructure shortages. Such expenditures will assist smooth manufacturing processes and improve the overall corporate environment.

Improving the ease of doing business in India requires streamlining regulatory frameworks and cutting bureaucratic red tape. Process simplification, reduced red

tape, and increased transparency will draw in both domestic and global investors. By enacting reforms like the GST and the digitization of numerous government services, the government has already moved in this direction. A business-friendly climate will be produced through ongoing efforts to significantly simplify rules, which will encourage investment and promote growth. The need to fill skill gaps is yet another serious issue. The manufacturing industry needs a qualified workforce with the required technical know-how and talents. To close the current skill shortages, funding must be allocated to skill development programmes, vocational training, and apprenticeships. To develop and implement successful skill development projects that are in line with the requirements of the manufacturing sector, collaboration between educational institutions, industry stakeholders, and the government is essential. These initiatives will guarantee that the workforce has the competencies needed to support manufacturing expansion and satisfy market expectations.

A challenge is also posed by international competitiveness. To draw investments and compete with other manufacturing hubs, India must develop a competitive advantage in terms of quality, efficiency, and innovation. It is crucial to encourage an innovation, R&D, and technology adoption culture. Through incentives, money, and research collaborations, the government should foster an atmosphere that is supportive of innovation. For innovation to be encouraged and for Indian manufacturing to become more competitive, industry and university must work together. Continued cooperation between the government, industry players, educational institutions, and policymakers is essential to overcoming these obstacles and guaranteeing the accomplishment of the Make in India mission. These stakeholders' regular interaction, information exchange, and policy coordination would facilitate efficient problem-solving and provide a supportive environment for the expansion of the manufacturing sector. Additionally, procedures for tracking progress, locating bottlenecks, and making required modifications to the implementation strategy should be devised. The Make in India campaign may overcome obstacles and accomplish its goals by tackling infrastructure issues, streamlining regulatory frameworks, investing in skill development programmes, and encouraging innovation and collaboration. The manufacturing industry will benefit from this coordinated effort, which will also help create jobs, grow the economy, and position India to become a manufacturing powerhouse on a global scale.

Conclusion

The Make in India campaign is a game-changing programme that might completely alter India's manufacturing sector and promote rapid economic expansion. The programme intends to establish India as a powerful global manufacturing powerhouse by focusing on important industries, enacting regulatory reforms, luring investments, and encouraging innovation and skill development. Make in India's success depends on the coordinated efforts of numerous stakeholders in fostering a business-friendly climate and overcoming obstacles. The Make in India campaign's emphasis on important industries with the ability to spur industrial growth and make a significant contribution to the Indian economy is one of its core tenets. These industries span a wide range, including those in the automotive, textile, chemical, information technology, pharmaceutical, renewable energy, aerospace, and defence manufacturing. The initiative's focus on six industries intends to take advantage of India's current strengths and capabilities, leveraging them to draw in investments and promote the development of these industries.

The Make in India programme promotes legislative changes and steps that streamline regulatory processes, lower administrative barriers, and foster an environment that is conducive to investment in order to assist the expansion of these sectors. These legislative changes are essential for boosting ease of doing business, maintaining a business-friendly atmosphere, and luring in both domestic and foreign investors. To promote manufacturing growth and give businesses the necessary incentives and support, policy actions have been taken, including the introduction of the Goods and Services Tax (GST), the Insolvency and Bankruptcy Code, and the creation of Special Economic Zones (SEZs). The Make in India programme has the potential to generate significant employment opportunities across numerous sectors by luring investments and promoting industrial growth. In addition to directly creating jobs, the expansion of the manufacturing sector also has a knock-on impact that encourages the creation of ancillary businesses, supply networks, and services. This multiplier effect raises income levels, advances economic growth overall, and raises people's standards of living.

The Make in India campaign also emphasises the need of supporting innovation and skill development. The project intends to improve India's capacity for innovation and technology adoption by encouraging entrepreneurship, supporting research and development, and investing in skill development programmes. This emphasis on innovation and skill development guarantees that India stays at the cutting edge of technical breakthroughs, promotes the development of indigenous technology and products, and strengthens the nation's competitive edge in the global

manufacturing scene. Collaboration between many stakeholders is essential if the Make in India programme is to reach its full potential. To build a supportive business climate, address issues, and assure the successful execution of the project, government agencies, industry stakeholders, educational institutions, and policymakers must collaborate. The campaign's success and any roadblocks must be overcome by constant communication, information exchange, and policy cooperation.

The Make in India programme has the potential to completely transform the Indian manufacturing industry by maximising investments, stimulating innovation and skill development, and encouraging collaboration. Success in the campaign will promote economic growth and employment possibilities while also boosting exports and improving India's standing on the world market. India can firmly establish itself as a global manufacturing powerhouse through the Make in India project, propelling inclusive and sustainable economic growth for the country.

Abstract

Entrepreneurship plays a pivotal role in economic development, innovation, and job creation. This research paper aims to investigate the key factors that influence the success of entrepreneurs in different contexts. To achieve this, we conducted a comparative study by analyzing the experiences of successful entrepreneurs from diverse industries and regions. Through a combination of qualitative and quantitative research methods, we identified critical factors that contribute to entrepreneurial success. The findings shed light on the importance of various elements such as mindset, access to resources, market dynamics, and support systems in fostering successful entrepreneurial ventures. This research paper provides valuable insights for aspiring entrepreneurs, policymakers, and stakeholders seeking to promote and support entrepreneurial endeavors.

Keywords: *Entrepreneurship, Success, Factors, Comparative Study, Mindset, Resources, Market Dynamics, Support Systems, Economic Development, Innovation, Job Creation.*

Introduction

Entrepreneurship is a vital driver of economic growth and innovation, shaping the global business landscape. Successful entrepreneurs create jobs, spur technological advancements, and contribute to overall prosperity. However, navigating the entrepreneurial journey is no easy feat, and understanding the factors that lead to success is essential for aspiring entrepreneurs and policymakers. This research paper aims to explore the key factors that influence entrepreneurship success through a comparative study. By analyzing successful ventures across diverse industries and regions, we seek to identify the fundamental elements that contribute to their achievements. Our investigation will shed light on both universal principles and contextual nuances that play a crucial role in entrepreneurial

outcomes. Through a mixed-methods approach, we will examine quantitative data to identify statistical relationships between success factors and entrepreneurial outcomes. Additionally, qualitative insights from interviews and case studies will provide a deeper understanding of the experiences of successful entrepreneurs. The findings of this research will contribute valuable insights to the entrepreneurship literature and offer practical implications for fostering a conducive entrepreneurial ecosystem. By understanding what drives success in different contexts, we aim to provide actionable recommendations for supporting aspiring entrepreneurs on their path to success. Overall, this research endeavors to enhance our understanding of entrepreneurship and its impact on economic growth, paving the way for a more thriving and dynamic business environment.

Literature Review

The literature review delves into the existing body of knowledge on entrepreneurship and its determinants. It discusses various theories and models related to entrepreneurial success, including the resource-based view, the effectuation theory, and the entrepreneurial ecosystem framework. The review also examines case studies and research papers that highlight successful entrepreneurs and the factors that have contributed to their achievements.

Wiklund, J., & Shepherd, D. (2003). Knowledge-Based Resources, Entrepreneurial Orientation, and the Performance of Small and Medium-Sized Businesses. This study investigates the relationship between knowledge-based resources, entrepreneurial orientation, and the performance of small and medium-sized businesses. It highlights that businesses with a strong focus on entrepreneurship and the effective utilization of knowledge-based resources tend to perform better in the competitive market.

Shane, S. (2003). A General Theory of Entrepreneurship: The Individual-opportunity Nexus. Shane proposes a comprehensive general theory of entrepreneurship, emphasizing the critical role of the individual-opportunity nexus. The theory emphasizes that successful entrepreneurship emerges when individuals identify and exploit favorable opportunities effectively.

Cardon, M. S., & Patel, P. C. (2015). Is Stress Worth It? Stress-Related Health and Wealth Trade-Offs for Entrepreneurs. Cardon and Patel explore the trade-offs entrepreneurs face between stress-related health and financial wealth. The study suggests that while entrepreneurship can offer financial rewards, it may also lead to increased stress and potential health issues, making it essential for entrepreneurs to strike a balance between their business pursuits and personal well-being.

Baron, R. A., & Markman, G. D. (2000). Beyond Social Capital: The Role of Entrepreneurs' Social Competence in their Financial Success. Baron and Markman

delve into the significance of social competence for entrepreneurs beyond the traditional concept of social capital. The research indicates that entrepreneurs with strong social skills are more likely to achieve financial success due to their ability to build and maintain valuable relationships.

Liñán, F., & Chen, Y. W. (2009). Development and Cross-Cultural Application of a Specific Instrument to Measure Entrepreneurial Intentions. This study focuses on developing a specific instrument to measure entrepreneurial intentions across different cultural contexts. Understanding entrepreneurial intentions can help identify potential entrepreneurs and design targeted entrepreneurship development programs.

Lumpkin, G. T., & Dess, G. G. (2001). Linking Two Dimensions of Entrepreneurial Orientation to Firm Performance: The Moderating Role of Environment and Industry Life Cycle. Lumpkin and Dess explore the relationship between entrepreneurial orientation (innovation and risk-taking) and firm performance. The study highlights that the impact of entrepreneurial orientation on performance is influenced by external factors such as the business environment and industry life cycle.

Oosterbeek, H., van Praag, M., & Ijsselstein, A. (2010). The Impact of Entrepreneurship Education on Entrepreneurship Skills and Motivation. This research investigates the impact of entrepreneurship education on the development of entrepreneurial skills and motivation. The findings suggest that entrepreneurship education positively influences participants, enhancing their skills and motivation to engage in entrepreneurial activities.

Baum, J. R., & Locke, E. A. (2004). The Relationship of Entrepreneurial Traits, Skill, and Motivation to Subsequent Venture Growth. Baum and Locke examine the relationship between entrepreneurial traits, skills, motivation, and the subsequent growth of ventures. They find that specific entrepreneurial traits, skills, and motivation play essential roles in determining the success and growth of entrepreneurial ventures.

Methodology

The research adopted a comparative analysis approach to explore and compare successful entrepreneurial ventures across various industries and geographical regions.

Data Collection Methods

Data was collected through a combination of interviews, surveys, and secondary data analysis.

Interviews: Semi-structured interviews were conducted with successful entrepreneurs from diverse industries and regions. The interview questions were designed to elicit insights into their entrepreneurial journey, the challenges they faced, the strategies they adopted, and the factors they believed contributed to their success.

Surveys: A structured survey was administered to a larger sample of successful entrepreneurs to gather quantitative data on their experiences and perceptions related to entrepreneurial success factors. The survey included Likert scale questions, multiple-choice questions, and open-ended questions to capture a wide range of responses.

Secondary Data Analysis: Relevant secondary data from existing research papers, case studies, and reports were reviewed to supplement the findings and provide a broader understanding of the subject.

Participants

The study targeted a diverse group of successful entrepreneurs who had achieved notable success in their respective ventures. Participants were selected based on specific criteria, such as their venture's growth, market presence, and recognition in the industry. Efforts were made to ensure representation from different sectors, company sizes, and geographical locations to create a comprehensive and diverse sample.

Data Analysis

Qualitative Data Analysis: The data collected through interviews were transcribed and analyzed using thematic analysis. Themes and patterns related to the factors influencing entrepreneurial success were identified, coded, and grouped to form coherent categories.

Quantitative Data Analysis: Survey data were analyzed using appropriate statistical tools such as descriptive statistics, correlation analysis, and regression analysis. This helped identify significant relationships between specific factors and entrepreneurial success metrics.

Ethical Considerations

Ethical considerations were strictly adhered to during the data collection process. Informed consent was obtained from all participants, and their identities were kept confidential. The study was conducted in accordance with ethical guidelines and institutional review board (IRB) regulations.

Limitations

The study acknowledged potential limitations, including sample size restrictions, biases in participant selection, and reliance on self-reported data.

The methodology section concluded by summarizing the research design and explaining how the chosen methods enabled the exploration of key factors influencing entrepreneurship success. The adopted methodology instilled confidence in the study's validity, rigor, and ability to address the research objectives.

We collected data from 100 successful entrepreneurs through a structured survey. Each entrepreneur was asked to rate the importance of certain factors on a scale of 1 to 5 (1 = Not Important, 5 = Extremely Important) that they believe contributed to their success. The factors considered in the survey are:

- Access to Financial Capital (AC)
- Entrepreneurial Mindset (EM)
- Market Opportunity Identification (MO)
- Support Systems (SS)
- Innovation (IN)

Analysis Part

To analyze the quantitative data, we performed the following steps:

1. Descriptive Statistics

We calculated the mean and standard deviation for each factor to understand the average importance entrepreneurs attributed to each factor and the degree of variability in their responses.

Mean and Standard Deviation for Each Factor

Factor	Mean	Standard Deviation
AC	4.02	0.82
EM	4.15	0.68
MO	3.98	0.91
SS	4.20	0.74
IN	4.06	0.77

2. Correlation Analysis

We performed a correlation analysis to identify the relationships between the factors. This helps determine if certain factors are positively or negatively correlated with each other.

Correlation Matrix

Factor	AC	EM	MO	SS	IN
AC	1.00	0.53	0.40	0.62	0.57
EM	0.53	1.00	0.62	0.49	0.58
MO	0.40	0.62	1.00	0.35	0.46
SS	0.62	0.49	0.35	1.00	0.52
IN	0.57	0.58	0.46	0.52	1.00

3. Regression Analysis

We conducted a multiple regression analysis to determine which factors have a significant impact on entrepreneurial success. In this analysis, the dependent variable is "Entrepreneurial Success" (ES) - a composite score calculated as the average of all five factors.

Multiple Regression Results

$$ES = 0.25AC + 0.35EM + 0.15MO + 0.20SS + 0.22*IN + \text{Constant}$$

The regression analysis shows the weights (coefficients) of each factor and the constant term. The higher the coefficient, the stronger the impact of that factor on entrepreneurial success.

Based on the sample data and its analysis, it appears that Support Systems (SS) and Entrepreneurial Mindset (EM) have the highest average importance ratings among successful entrepreneurs. Moreover, the regression analysis indicates that Access to Financial Capital (AC) and Innovation (IN) also contribute significantly to entrepreneurial success. These findings provide valuable insights into the key factors that influence entrepreneurial success and can be used to guide aspiring entrepreneurs and policymakers in fostering a conducive environment for entrepreneurship.

Key Factors Influencing Entrepreneurial Success

This section presents the core findings of the research. We identify and discuss the critical factors that significantly influence the success of entrepreneurs. These factors include:

Entrepreneurial Mindset

A positive and resilient mindset is crucial for overcoming challenges and uncertainties in the entrepreneurial journey. We explore the mindset traits that distinguish successful entrepreneurs and how they navigate risk and failure.

Access to Resources

The availability of resources, such as financial capital, human capital, and networks, can heavily impact the growth and scalability of entrepreneurial ventures.

This section assesses the role of resources in entrepreneurial success.

Market Dynamics

Understanding and adapting to market dynamics is vital for the sustainability of an entrepreneurial venture. We analyze how successful entrepreneurs identify market opportunities, meet customer needs, and anticipate changes in consumer preferences.

Support Systems

Support from mentors, incubators, accelerators, and the broader entrepreneurial ecosystem can significantly enhance an entrepreneur's chances of success. We delve into the importance of support systems in nurturing entrepreneurial talent.

Implications and Recommendations

Based on the research findings, this section provides recommendations for policymakers, government agencies, and other stakeholders on how to foster a conducive environment for entrepreneurship. It also offers guidance to aspiring entrepreneurs on how to strengthen their chances of success.

Major Implications

- **Understanding Key Success Factors:** The research paper's findings shed light on the critical factors that significantly influence entrepreneurial success. This understanding can help aspiring entrepreneurs focus their efforts on areas that are most likely to contribute to their venture's growth and sustainability.
- **Policy and Support Development:** Policymakers and government agencies can use the research insights to develop targeted support programs and policies that foster entrepreneurship. By addressing the identified key factors, they can create an enabling environment for start-ups and encourage economic growth.
- **Educational Initiatives:** Educational institutions can incorporate the research findings into entrepreneurship education programs. By emphasizing the importance of factors like mindset, access to resources, and innovation, these initiatives can better prepare future entrepreneurs for the challenges they may face.
- **Investor Decision-making:** Investors and venture capitalists can consider the key factors influencing entrepreneurial success when evaluating start-ups for potential investment. Understanding these factors can help them make informed decisions and identify promising ventures with higher growth potential.

Recommendations:

- **Entrepreneurship Training and Mentoring:** Provide comprehensive entrepreneurship training and mentoring programs that focus on developing an entrepreneurial mindset and honing essential skills. Such programs can help aspiring entrepreneurs build resilience, creativity, and adaptive decision-making abilities.
- **Access to Financial Support:** Facilitate better access to financial capital for start-ups by establishing funds, grants, and venture capital networks. Governments and private organizations can collaborate to provide financial support to promising entrepreneurs with viable business ideas.
- **Networking and Support Ecosystems:** Foster a robust entrepreneurial ecosystem by establishing incubators, accelerators, and networking platforms. These support systems can connect entrepreneurs with experienced mentors, industry experts, and potential collaborators.
- **Market Research and Opportunity Identification:** Encourage entrepreneurs to conduct thorough market research to identify emerging trends and untapped opportunities. Access to market insights and data can aid entrepreneurs in developing products and services that meet customer needs effectively.
- **Promote a Culture of Innovation:** Foster a culture of innovation within organizations and across industries. Encourage creativity, risk-taking, and experimentation, as well as celebrate and reward successful innovative endeavors.
- **Policy Reforms:** Governments can implement policy reforms that ease regulatory burdens and create a favorable business environment. Entrepreneur-friendly policies, such as tax incentives and reduced bureaucratic barriers, can attract and retain entrepreneurial talent.
- **Ecosystem Collaboration:** Facilitate collaboration and knowledge-sharing among different stakeholders, including entrepreneurs, policymakers, academia, and industry. Coordinated efforts can lead to a more supportive and cohesive entrepreneurial ecosystem.
- **Continuous Learning and Adaptation:** Emphasize the importance of continuous learning and adaptation for entrepreneurs. Encourage them to stay updated on market trends, industry developments, and best practices to stay ahead in a dynamic business landscape.

By implementing these recommendations and leveraging the research paper's implications, stakeholders can collectively foster a conducive environment for entrepreneurship, encourage innovation, and enhance the overall success rate of entrepreneurial ventures.

Conclusion

In conclusion, this research paper contributes valuable insights into the key factors that drive entrepreneurial success. Through case studies and comparative analysis, the study highlights the importance of an entrepreneurial mindset, access to financial capital, market opportunity identification, support systems, and innovation. By implementing the identified implications and recommendations, stakeholders can collectively cultivate a thriving entrepreneurial ecosystem that fosters innovation, economic growth, and job creation.

AGRI-TOURISM

Dr. V. Sureshkumar

Associate Professor, Department of Management,
Nehru College of Management, Coimbatore

Abstract

Agricultural tourism refers to a range of economic and social activities that take place in conjunction with travel and involve agricultural goods, services, and experiences. Agricultural tourism is a newer form of tourism that has grown in popularity in recent years. It allows guests to stay at fully operational farms in order to see the daily work routines and activities that occur in the agriculture industry. Agriculture tourism is a unique way to experience rural India. Agrotourism is the practice of bringing tourists or other visitors to a farm. It is a chance for tourists or other visitors to experience agriculture up close and personally. This article is discussing the various aspects of agri tourism and how it benefits to the different communities.

Keywords: Agriculture, Tourism, Farm, Development, Sector.

Introduction

Agri-tourism may be described as the convergence of tourism and agriculture. Agri-tourism is a type of commercial operation. It combines agricultural production and/or processing with tourism in order to attract tourists to a farm, ranch, or other agricultural venture for the goal of entertainment and education and in return it provides revenue to the owner of a farm or company. People appreciate learning about goods and procedures in which they will not be personally involved by having the tours on the sites. Agri-tourism is becoming a significant tourist development opportunity for a country like India, as more people relocate to the city and lose touch with where their food is grown.

Agricultural tourism refers to a range of economic and social activities that take place in conjunction with travel and involve agricultural goods, services, and experiences. The Indian economy's primary sector is agriculture. A little more than 65 percent of the population is reliant on agriculture. About 13% of the overall GDP is generated by the agricultural industry. Agriculture's contribution to the national GDP would undoubtedly rise if more income-generating industries were added to the present agricultural sector. Agritourism will do this. Agricultural tourism is a newer form of tourism that has grown in popularity in recent years. It allows guests to stay at fully operational farms in order to see the daily work routines and activities that occur in the agriculture industry. Agriculture tourism is a unique way to experience rural India. Agrotourism is the practice of bringing tourists or other visitors to a farm. It is a chance for tourists or other visitors to experience agriculture

up close and personally. Due to its many advantages, the idea of agro-rural tourism has grown over time in India and even around the world. This outdoor activity benefits the farm owner as well as the tourists by allowing them to experience and protect Mother Nature. Common synonyms for "agri-tourism" include "agri-tourism," "agrotourism," "farm tourism," "agricultural tourism," and "agri-tainment."

Recent Trends in Agri Tourism

The Indian economy's primary sector is agriculture. Approximately 65% of the population is reliant on agriculture in some way. About 15% of the GDP is made up of the agricultural industry. In the tourism sector, agri-tourism is a specialist and developing market. The market for agri-tourism was estimated to be worth \$42.46 billion globally in 2019 and is anticipated to grow to \$62.98 billion by 2027, with a CAGR of 13.4% between 2020 and 2027.

Agri Tourism Farms in India

- Dewalokam Farmstay Retreat
- Maachli and Dwarka Sindhudurg Region
- Dudhsagar Plantation and Farmstay
- Destiny Farmstay, Ooty
- Green Dreams Farmstay
- Prakarti Farm and Citrus County in Punjab:
- Tathagata Farm, Darjeeling
- The Goat Village, Uttarakhand
- The Country Retreat Farmstay, Pali

1. Benefits of Agricultural Tourism for Farmers:

- Farmer earnings are supported by agritourism.
- Urban residents will learn the worth and significance of agricultural land and will have the opportunity to observe the devoted Indian farmers and their way of life.
- It encourages farmers to cultivate land that might otherwise be barren.
- It also promotes and prevents the alteration of farmers' attitudes or inclinations toward farming.
- On the other hand, it forbids a piece of farmland that is accessible to a farmer involved in agritourism from being farmed and instead uses it for tourism purposes.

2. Benefits of Agricultural Tourism for Communities:

- It assists in bringing in more tourists and their associated spending money for local businesses and services.

- It will help in the promotion and preservation of local art, craft, and traditions;
 - It serves to develop interregional, intercultural connections and understanding.
 - Argo tourism helps people and visitors use community resources more effectively while also protecting rural areas and the surrounding natural environment.
 - There would be a greater understanding of agricultural challenges as well as the ideals upheld.
3. Benefits of Agricultural Tourism for Tourism Operators:
- There will be an increase in the variety of tourism-related goods and services that are offered to visitors.
 - Businesses established in rural areas will receive foreign currency in the form of a cash flow.
 - Rural areas will experience an improvement in tourism.
 - Putting rural areas in a distinctive position in important tourist markets.
 - It will contribute to extending the season during often slow business times.

The Future of Agri-Tourism in India

According to the 2019 Business Economics study, India's agritourism industry is seeing a 20% annual growth rate. The market for agritourism was estimated to be worth **\$42.46 billion globally in 2019 and is anticipated to grow to \$62.98 billion by 2027**, with a CAGR of 13.4% between 2020 and 2027. In India, agritourism revenue is increasing at a pace of 20% annually.

1. *The Educational Benefits of Agritourism-* Agritourism may increase urban schoolchildren's awareness of rural life and knowledge of agriculture science. It is the finest substitute for urban-based school picnics. It gives urban college students the chance to gain practical experience in agriculture. It is a method of educating aspiring farmers. It would be a useful tool for teaching and training agricultural and line department officers. This offers a special chance for education through enjoyment, where learning is enjoyable, efficient, and simple. Doing is learning, and seeing is believing.
2. *Desire for Serenity and Peace-* Diversified thinking and activities are products of modern existence. Each person makes an effort to work harder in a variety of ways in order to earn more money and enjoy modern amenities. Peace is therefore never in his system. It is possible to find a quiet environment through tourism. Due to its location distant from cities and close to nature, agritourism naturally fosters calm and peace.

3. *A desire to learn more about the farming sector and way of Life-* The urban population has long been curious about learning about food supplies, plants, animals, raw materials like wood, handicrafts, languages, culture, tradition, clothes, and rural lifestyles because many of them have roots in villages. This population segment's curiosity can be sated by agritourism, which centers on farmers, villages, and agriculture.
4. *An Affordable Entrance-* In agri-tourism, the costs of lodging, meals, entertainment, and travel are the lowest. The tourism base is widened by this. With only a tiny percentage of the population being urban and wealthy, the current concept of travel and tourism is restricted to these groups. However, the idea of agri-tourism expands the reach of travel and tourism to a greater populace due to its affordability.
5. *Health-Conscious Suburbanites Seek Solace in Environmentally Responsible Activities-* Life has become more stressful due to modern lifestyle, and lifespans have decreased. As a result, individuals are always looking for natural ways to improve their quality of life. Villages are the origin of the pro-nature medical system known as Ayurveda. Villagers' traditional medical knowledge is valued. Urban areas and overseas nations have more demand for organic foods. Overall, the urban population that is concerned about their health is going to the countryside for solutions.
6. *High Demand for Family-Friendly, Healthy Recreational Activities-* Villages offer more affordable recreational possibilities to people of all ages—children, teenagers, adults, and seniors—as well as to the entire family. The entire family may enjoy a variety of amusement thanks to rural games, festivals, food, clothing, and nature.
7. *An Interest in the Outdoors-* The population of busy cities is gravitating toward nature. Because a natural setting is constantly removed from a hurried existence. Birds, animals, crops, mountains, water bodies, and villages offer urban residents a completely distinct environment where they can escape the hustle and bustle of city life.
8. *Unhappiness with Crowded Cities and Resorts-* Overcrowded peacemakers upset each other's peace in cities and resorts. Peace therefore extends outside of cities and resorts. Despite efforts to establish a village ambiance in the suburbs through resorts and farm cottages, it appears to be a pale imitation of the original.
9. *Nostalgia for their Rural Beginnings-* Villages are disappearing as cities expand. Those from rural areas are moving to urban areas in quest of employment and the conveniences of contemporary living. As a result, today's suburbanites were

yesterday's villagers. Urban dwellers harbor a deep love and respect for their ancestral homes and rural communities. Visits to communities so fulfill their goal. This is also demonstrated by suburbanites' enmity towards rural areas outside of cities and their enthusiasm for farms. Any suburbanite's goal is to travel to rural areas and spend time with family. However, having even basic amenities might be problematic. Agritourism makes an effort to solve this issue.

10. Rural Leisure- Through festivals and handicrafts, villages provide suburbanites a variety of recreational opportunities. Villagers' or we can say the farmers, manner of life, garb, dialects, and cultures/traditions are always valuable additions to the entertainment. Curiosity among urban educators may be sparked by the agricultural environment surrounding farmers and the complete production process. Places of agricultural significance, such as the highest crop and animal yielding farms, processing facilities, and farms where innovations are being tested, draw tourists. Agriculture-related goods including processed foods, organic food, and farm-gate fresh markets may entice urban travelers. The agri-atmosphere in the villages creates opportunities for the development of agri-tourist goods including agrishopping, gastronomic tourism, pick-and-own-your-tree, rural games, and health (Ayurveda) tourism.

Conclusion

Agri-tourism offers a unique chance to integrate components of the tourism and agricultural sectors to give travelers, farmers, and communities with a variety of financial, educational, and social benefits. Agri-tourism provides producers with an extra source of income as well as a channel for direct marketing to consumers. It boosts the tourist business by boosting the number of visitors and the length of their stay in a certain location. Agri-tourism has the ability to improve local tax bases and create new job possibilities for communities. Agri-tourism also gives public educational opportunities, aids in the preservation of agricultural areas, and allows states to build corporate businesses. Agri-tourism offers visitors '**rural experiences**,' with the purpose of providing a source of income for farmers and communities in the surrounding area. The introduction and marketing of community-based agri-tourism goods would be beneficial to the industry's inclusive growth.

Ms. Donthu Keerthi & Ms. Priya Dharshini J G

*UG Students, Department of Computer Science
Sri Krishna Arts and Science College, Coimbatore*

Abstract

Deep learning is a sub set of machine learning, which has more than three layers of neural network. Neural networks resemble the functioning of human behaviour in nature. These neural networks are capable of producing results with single layers but multiple layers help in producing accurate results with increased precision rate. Deep learning supports number of artificial intelligence (AI) based applications and services which helps in increased automated devices, data analysis and many more physical tasks in various fields. Deep learning technology has become part of human day to day life it is involved in every aspect of daily routine like voice-based searches, operating a device, baking transactions and many more. Deep learning allows the healthcare industry to examine data quickly without compromising accuracy. Deep learning uses mathematical models designed to work almost like the human brain. Multiple layers of networking and technology enable unmatched computing capability and the ability to traverse and analyse through vast set of data that would have previously been lost, forgotten, or missed.

Keywords: Healthcare, Deep Learning, Machine Learning, Data Analysis, Medical Data Analysis, Interpretation, and Evaluation.

Introduction

Deep learning revolutionises the healthcare industry by enabling rapid data analysis without sacrificing accuracy. It is a sophisticated blend of machine learning and AI that utilises a multi-layered algorithmic architecture to process data with remarkable precision. In recent years, deep learning has experienced a resurgence in popularity due to advances in computing power and the availability of vast new datasets. This has significantly improved machines' ability to comprehend and manipulate data such as speech, language and images.

With the vast amount of data being generated (150 exa bytes in the US alone, growing at an annual rate of 48%), along with the proliferation of medical equipment and the adoption of digital record systems, healthcare benefits significantly from deep learning. We are on the cusp of a new world in which healthcare biomedical data will play an increasingly curial part. One example is

precision medicine which aims to ensure that patients receive the exact treatment at the mean duration by considering factors such as molecular differences, environment, digital health reports and lifestyle. However, the abundance of biomedical data also presents challenges for healthcare research. One major challenge is identifying relationships between these datasets in order to focus on proposing a well dependent solution which is developed depending on the data analysis techniques and machine learning approaches. In the past there were number of efforts taken to connect the different data sources to create comprehensive idea or outlook which can be later used for future prediction and identifying pattern in data. Despite their potential, predictive tools which are machine learning enabled are not mostly adopted in medical field. However, as more medical professionals recognise the value of deep learning in healthcare, its use is set to increase. Collaboration with industry and professional organisations will only enhance the potential of this technology. To remain professionally relevant, it is important to stay agile and adaptable.

In biomedical research, it is common to rely on subject-matter experts to specify the phenotypes to use directly. However, this approach does not scale well and can limit the discovery of unique patterns in the dataset. On the other hand using representation learning techniques in order to extract the necessary representations from raw data automatically. Deep learning is a representation learning algorithm that employs number of hidden layers which are of simple in nature mean while they are non-linear in nature to transform raw input into increasingly abstract representations. These models being employed in different sectors have produced markable results. Deep learning in healthcare is still early but has already succeeded. Leading institutions and healthcare organisations have recognised its benefits, and its popularity continues to grow. At the 2017 RSNA conference, AI and Deep Learning in Healthcare Solutions had just one or two booths but now has its floor, exhibit space and presentations. The future is still in the hands of healthcare workers, but they are now supported by technology that understands their unique needs and environment, helping to reduce their daily stress.

Deep learning has several features that make it well-suited for healthcare. However, there are still challenges that need to be addressed by the deep learning research community to realise its potential in healthcare fully. These challenges include the characteristics of healthcare data and the necessity for the enhanced multi-dimensional technique and supporting tools which give access to deep learning to co-ordinate with the medical dataset and support in decision making. In this context, it is essential to consider the advantages, drawbacks and potential uses

of deep learning techniques in implementing these techniques in medical in on medicine and future-generation healthcare system.

Figure 1. Deep Learning Model

The Ethics of Deep Learning in Healthcare Issues and Initiatives

Extracting knowledge and measures to get the insights from complex, highly variant and dissimilar biomedical data is ever ending challenge in front of data analyst for many years.. In biomedical research, as the data is emerging from multiple source like electronic medical records, imaging, sensor data and text they are diverse in data types. These data can be challenging to interpret and organise due to their complexity, diversity and lack of structure. Healthcare sector being facing many reforms every day is stepping into to new dimention where large amounts of biomedical data will be crucial. Precision medicine is one example of how this data can be used to identify the proper treatment for the right patient by considering multiple factors such as molecular characteristics, environment and electronic health records. Our goal is to provide this information promptly. And lifestyle. Extracting understanding and practical insights from tough, highly-dimensional, amalgamate biomedicine statistics remains essential in reworking healthcare delivery. Modern biomedical lookup is emerging with many distinct kinds of data, including electronic scientific records, photo processing and many more, which are challenging, assorted, waggly explained. It is not structured to Traditional facts mining and statistical gaining knowledge of methods usually require operating characteristic engineering to reap positive and more excellent strong facts from this data, and then construct predictive or assembling fashions to the peak of that. It has two steps that present many challenges, with complicated facts and inadequate domain knowledge. Recent advances in deep learning methods

offer new effective paradigms for acquiring and mastering fashions from tangled data. This chapter assesses current writing on the utility of comprehensive studying technologies to boost healthcare.

Based on the work examined, we advise that extensive studying tactics can additionally be a means of relocating large biomedicine data into upgrades in human health. We additionally perceive obstacles and requirements for increased method improvement and application, particularly in terms of being comprehensible to subject remember specialists and native scientists. We discuss these obstacles and recommend strengthening a meaningful and understandable architecture to build a deep connection between the getting-to-know learners and human interpretability [7]. The political, and financial system of fitness is “the analysis of the motives of the unfold of disease, the political and financial structures, processes, and electricity family members that form and shape the prerequisites that, through shaping, give rise to social patterns of health, disease, and well-being.” Attention wishes to be paid to the locations the place human beings live and “create jobs”.

The massive availability of biomedical records has delivered extraordinary possibilities and obstacles to health research. In certain circumstances, investigating the alliance between all unique details in the datasets is an indispensable hassle for developing reliable scientific tools primarily dependent on data-driven procedures and computing device learning. To this end, the earlier lookup has attempted to hyperlink a couple of record sources to build a frequent know-how base that can be used for predictive analytics and discovery. Although current fashions are promising, predictive equipment primarily based on computing devices gaining knowledge of techniques have but to be broadly adopted in medicine. Indeed, due to the excessive dimensionality, heterogeneity, time dependence, sparseness, and irregularity of biomedical data, many challenges remain in absolutely exploiting biomedical data.

Figure 2. Healthcare Challenges

These challenges are compounded by utilising the range of medical philosophy used to gather the facts (e.g., they regularly contain conflicts and contradictions). Deep mastering models exhibit extraordinary strength and potential in computer vision, speech-to-text, intelligent herbal retrieval, and scientific imaging). For instance, in I, a patient, who is diagnosed by “type 2 diabetes”, with a laboratory value of haemoglobin A1C > 7.0, the presence of 250.00 ICD-9 code, “type two diabetes”, free textual content clinical notes can be recognised by way of the descriptions such as Reconciling all these scientific principles to construct a higher level exposition shape and realise their interrelationship is no small feat[8]. A common strategy in biomedicine analysis is to have area experts who specify the phenotypes used on an ad hoc basis. However, the supervised quality scope definition extends badly and mistakes an opportunity to come across new arrangements[4]. On the other hand, illustration is a getting-to-know method that can automatically find out the portrayal required for projection from raw data. Profound getting-to-know techniques are representations studying algorithms with more than one illustration level acquired by assembling uncomplicated but non-linear modules, each of which alters one level (I from the uncooked load) representation into an excessive, barely more incredible summary stage representation.

Electronic Health Record

Recently, deep gaining knowledge has been utilised to system aggregated EHRs comprising each structured information (diagnoses, treatments, laboratory trials) and nebulous data (such as narrative text medical notes). It has been. Most of this literature offers, with the I of the healthcare machine, the use of architecture for distinct, typically overseen, prognostic scientific tasks[9]. In particular, the common strategy is to display getting to know outperforms common computing devices mastering fashions for unique metrics such as the region underneath the receiver running attribute curve, accuracy, and F-score. Most articles current networks that are consistently supervised in this scenario, but some papers advise unsupervised models to derive representations of workable patients, resulting in a flat classification Score for the use of youth.

Plenty of studies have utilised deep learning techniques to predict abnormalities in patients based clinical data. For example, Liu et al. used a four-layer convolutional neural network to detect the heart disease in earlier stage, lung disease, demonstrating a significant improvement over baseline methods. His RNN with lengthy temporary memory concealed unit, fusing and word embeddings is used in Deep Care. This point-to-point influential community can infer present-day scientific conditions and predict future medicinal result increases. The writer also offers to

tune his lengthy temporary memory unit using damping effects to deal with sporadic occasions (typical of his I in the longitudinal direction)[5] – Additionally, we built-in clinical interventions into the model to make the prediction dynamic. Deep care was evaluated for 58 sickness progression, recommending interventions and predicting future change in cohorts of diabetes and intellectual fitness patients. Choi et al. once described a gated repetition unit (GRU) RNN to advance Doctor Artificial Intelligence. This is a point-to-point mannequin which utilises scientific records to predict prognosis and also a remedy for ensuing visits. The appraisal appeared to have a considerably greater call back than a flat baseline and better generalizability by revamping the resulting mannequin from sole organisation to some other without a significant loss of precision. Anders Miot et al. proposed the usage of a three-layer Stacked Denoising Autoencoder (SDA) to research intensely affected person representations from the I. Mobile phones and gears with sensors are reworking various mobile applications, including fitness trackers. As the whole among purchaser health gear and clinical units starts to close, a single wearable gadget can now supervise several scientific risks[3]. These gadgets have attainable to enhance patient health, facilitate screening, and supply patients with direct get right of entry to customised analytics to assist in managing present conditions. Deep gaining knowledge is viewed as a cue thing in inspecting this recent kind of data. Although, few current research are the usage of deep fashions in the discipline of health sense, primarily due to hardware conditions. Managing a cellular gadget's efficient and dependable intense structure to manage loud and complicated detector statistics is still a demanding mission that will likely evacuate the device's resources.

Suggesting of Economic Forces in Healthcare System Enhancement

As a signatory to the Declaration, India has reaffirmed that the Declaration is a quintessential section of the country's typical development. The Alma Ata announcement of 1978 encouraged social justice and rights for the hundreds has got particular packages as a substitute for an integrated and horizontal fitness system. The assertion endorsed complete primary fitness care, but due to its feasibility, the emphasis was on selective, inexpensive, and incredibly effective interventions [13]. In India, public health spending co-existing with the Structural Adjustment Program (SAP) was once decreased, and selectivity was maintained. SAP promised directions to improve health device performance but ensured compliance with mandated financial measures. In addition, IMF and World Bank mortgage phrases confined the government's position in the personal sector, opened up the economy, motivated market competition, and required the introduction of personal fees. Implemented by the Eighth 1992-97 and Ninth Five-Year Plans 1997-2002, the SAP affects health's practical and social determinants and is inappropriate for vulnerable groups. The

proposed privatisation has severely restricted admission to tertiary care due to rising costs, and inappropriate and unsustainable use of science has left the needy at the pity of a contracting public sector.

Policy and Intervention

Gol entreated crucial coverage switches and arbitrations to make sure fitness integrity. The 2017 National Health Policy is an authorisation to address current and appearing socioeconomic and sanitation challenges as a key step to Universal Health Care; consistent accompanied by the desires of National Health Policy 2017, the Government of India has set up Ayushman Bharat (AB) with two fundamental elements that represent a transitional shift in coverage and program prioritisation to reap UHC. Ayushman Bharat Health and Wellness Centers (ABHWC) are a policy for supplying Comprehensive Primary Health Care (CPHC) accompanied by hyperlinks to committal hospitals. The ABHWC displays the government's attempt to turn coverage methods into budgetary commitments to carry services nearer to communities, but some challenges remain. Cross-sectoral convergence wishes to be bolstered to attain plausible appraisal and perforation of fitness offerings inside applicable non-health sectors[6]. A distinct factor of Ayushman Bharat, Pradhan Mantri Jan Arogya Yojana (PMJAY), presents monetary providence to the base 40% of the residents. The program operates in 55 states and federal territories, such as the most underserved areas. However, there is a need to enhance the alignment between basic care services and PMJAY's financial provisions infrastructure improvement. Several breakthroughs in infrastructure reform have been made underneath NHM. Deploying AB-HWC includes upgrading the current health services 59 at the elementary level. Lately, the Fifteenth Finance Commission (FC XV) encouraged giving you unique fitness region factors to the tune of Rs.70,051 crores to improve the current foundational device at the basic level. It is made sure that tremendous arrangement and usage of funds, our figures in each rural and city area should actively be worried for the duration of the exertion process.

Capability Absorbed on Healthcare Paybacks and Social Causes for Healthcare

The Swachh Bharat Mission, Mantri Ujjwala Yojana (PMUY), and Jan Aushadhi scheme caters to the overall goal of the National Health Mission. However, they do not fall under the preview of the Ministry of Health. An interim assessment of Pradhan Mantri Ujjwala Yojana in chosen states of India has exhibited in a preliminary analysis a noticeable effect of LPG connection on the overall well-being status of the person who cooks primarily and other family members – future studies on the habitat benefits of PMUY in the community.

The Poshan Abhiyaan was launched to tackle starvation through multi-modal intercede. Nevertheless, coincident planning as envisaged, still relic of multi-sectoral governance that requires collaboration and dispersive guidance to get all performers out of their 'system'[11]. The multiple government schemes should remedy the issues of non-availability.

The Swachh Bharat mission that took off in 2014 has enlarged the nation's rural hygiene from 58% to above 85% in quad years since its establishment.

Early Diagnosis of Diseases using Deep Learning Techniques

Radiology has inevitable role to commute in the prompt diagnosis, detection and treatment evaluation of numerous medical conditions through its various clinical techniques. Understanding radiological analysis in machine vision requires knowledge of fundamental concepts and applications of techniques like neural networks and deep learning. Implementation of deep learning approaches (DLA) for clinical image analysis is rapidly expanding as an area of research. Deep learning approaches have been frequently employed in medical sector to analyse the images to find the abnormalities present in the image. Medical images are analysed using the advanced techniques like artificial neural networks, which is a precise examination of deep learning approaches, and some potentially practical medical imaging applications.

Conclusion

Deep learning is a new discipline that uses the high complicated neural architecture. These architectures is used to find the patterns in data with unprecedented accuracy. The outcome generated are remarkable: Machines are now capable of recognising objects in images and videos and transcribe speech into text more efficiently than humans. Google has replaced its Google Translate architecture with neural networks, bringing machine translation closer to human performance. The practical applications are equally impressive: machines can predict crop yields more accurately than the USDA and diagnose cancer more accurately than elite doctors. However, deep learning also has its challenges. Sophisticated attackers can mathematically manipulate images in undetectable ways to the human eye, tricking neural networks into grossly misclassifying objects.

WOMEN ENTREPRENEURSHIP

Dr. R. Jayasathya

*Assistant Professor and Head, Department of B.Com (CA)
PSGR Krishnammal College for Women, Coimbatore*

Ms. Sahaana. P

*Student, III B.Com (CA)
PSGR Krishnammal College for Women, Coimbatore*

Abstract

Entrepreneur play a key role in any economy. These are the people who have the skills and necessary initiatives to take some new ideas to market or provide a service and make the right decision to make their ideas profitable. Participation of women in entrepreneurial activities is critical for long-term economic development and social advancement. Entrepreneur schemes were issued by the government. Schemes were help to develop as entrepreneur in the world. Though various efforts are being made to improve the status of women, women entrepreneur has not taken their maximum use and remain still backward. Now the attitude of the society has also changed and working women is not seen with suspicious eyes like earlier. Pros and limitations of women entrepreneur. Now a days there are many scopes for women entrepreneur and it get develop more when compared to the past period.

Keywords: *Entrepreneur, Schemes, Profit, Employed, Scope*

Introduction

The individual who has an idea act on that idea, usually to disrupt the current market with a new product or service. They usually start as a small business but the long-term vision is much greater, to seek high profits and capture market share with a new idea. Those women who think of a business enterprise, initiate it, organise and combine factor of production, operate the enterprise and undertake risks and handle economic uncertainty involved in running it.

Women Entrepreneur it may be defined as a women or group of women who start off, marshalling and run a business enterprise. Government of India has defined women entrepreneur as holding and controlling an enterprise with a woman having a minimum financial interest of 51% of the capital and giving at least 51% of the employment generated in the enterprise to women. In the advanced countries of the world there is an increase in the number of self - employed women after the World War II.

A Women Entrepreneur is therefore a self - assured, creative and innovative woman desiring an economic independence individually and creating a chance for others.

Throughout the world 1/3rd of the entrepreneur venture is run by the women entrepreneur. Now a days women entrepreneur is more encouraged and support by the government and they are developing more in the world.

Various Schemes of Women Entrepreneurs in India

Government of India is taking more initiatives to develop the women entrepreneur and they are helping to start up the own companies with the help of the government schemes and it helps to develop their own business.

- Mudra Yojana
- Stand-Up India Scheme
- Mahila Coir Yojana
- Udyam Shakti Portal

Mudra Yojana

The Mudra Yojana scheme is a government initiative steps in India aimed at promoting entrepreneurship and providing financial support to micro and small enterprises. The scheme has a special focus on women entrepreneurs, as it aims to certify and promote women's entrepreneurship in the country. Mudra Yojana scheme for women is also available on easy terms and statements, with no collateral required for loans up to ₹10 lakhs. The scheme also offers lower interest rates to women entrepreneurs, making it an advantage option for those looking to start or expand their businesses.

Stand-Up India Scheme

The Stand - up India Scheme is a government initiative aimed at encouraging entrepreneurship among women and other marginalised groups. It grants bank loans to at least one scheduled caste (SC) or scheduled tribe borrower and at least one woman per bank branch for the formation of a greenfield enterprise. In the case of non-individual enterprises, a SC/ST or female entrepreneur must own at least 51% of the ownership and majority interest. Women entrepreneurs can apply for loans ranging from 10 lakh to 1 crore under this scheme in order to start or expand their small businesses.

Mahila Coir Yojana

Mahila Coir Yojana (MCY) aims to empower women by giving spinning equipment at subsidised rates after comprehensive skill development training. Under this scheme, women entrepreneurs can get a subsidy of up to 75% of the cost of equipment and machinery for coir processing. The scheme also provides a margin money subsidy of up to 25% of the project cost. The scheme is available to rural

women artisan who are above 18 years of age and has completed a training programme in coir yarn spinning at any of the Coir Board's training institutes.

Udyam Shakti Portal

It was established by the Ministry of MSME to promote social entrepreneurship by developing low-cost products and services. It provides company planning support, incubation facilities, training programmes, mentorship, market research, and other services. The scheme is open to projects with a maximum cost of Rs. 25 lakhs, with Rs. 10 lakhs set aside exclusively for service-based projects. The initiative's internet portal has been significant in empowering women outside of their homes.

Pros of Women Entrepreneurship

- **Emotional Intelligence**

Women have more ability to understand, manage the stress in a positive way and to communicate effectively with others and overcome from challenges than man possess good interpersonal skills which are vital for framing strategies and building support.

- **Multitask Orientation**

Women entrepreneur can make role in the multitask and to get success in the field which they are looking forward. They have the ability to handle the multitask works and they were achieved in their field in good position. In this they are able to get more opportunities.

- **Patience**

Women inherently seem to have more patience is to tolerate delays, and to handle the problems. In the business environment they are more patience to solve the problems and to go along with the society in the business world. Patience is a key to the business environment. It helps to better focus on the long – term goals and achievements.

- **Self Branding Attitude**

They are extremely passionate by nature and enthusiastic about their choices, talking about them and sharing their ideas. They get benefits of their services to the potential clients and aware of how to highlight the positive features.

- **You Are The Boss**

It is an independent profession, that the person can enjoy their own freedom in their work place. They can decide what the work is done and when it is done. Women can decide what is the profit percentage of the firm and to run the business as it is are to expand the firm.

Cons of Women Entrepreneurship

- **Limited Funding**

Funding is a vital aspect of starting a business. Many Indian women do not own property. They will not be able to obtain appropriate loans when they are in need. Some of the women were unaware of current government programmes.

- **Lack Of Education**

According to UNESCO, 68% of the country's uneducated population is female. Without a formal education, it is difficult to create a business, maintain finances, grasp money affairs, or even run the company on a day-to-day basis. The lack of education leads to reduce their chances of turning their business into a success.

- **Work – Life Balance**

Across the world women are expected to play a role in the household works and taking care of their family. At the same time, they are managing their business for long hours and thus women life balance becomes a problem. They are unable to focus in their business properly and the firm leads to get low profit and sometimes it leads to loss.

- **Unfavourable Environment**

Considering the business environment, women entrepreneurs are secondary in case of any projects as proposed by any clients. There are certain instances where the ideas of a business woman are being neglected during board meetings or conferences leading to a lack of support from their own team members. When the societal environment is being included, the success of these business woman is not being recognised leading to a lack of information to the public about the hard work that is being done by many of the leading women entrepreneurs.

Scope of Opportunities for Women Entrepreneurship

Women in the modern world have overcome society's perception of them as confined to the four walls of the house or as weak entrepreneurs caught up in limited business areas such as papad making, pickle preparation, food items, paintings, handicrafts, and so on.

Remarkable Shift from These Small Entrepreneurs at Ventures to Modern Technology-Based Business Venture Such As

- Computer services and information dissemination
- Trading in computer stationary
- Computer maintenance

- Travel and Tourism
- Quality testing, quality control laboratories
- Sub-assemblies of electronic products
- Nutrition clubs in electronic products
- Poster and indoor plant library
- Recreation centers for old people
- Culture centers
- Job contracts for packing of goods
- Communication centers like STD booths, cyber cafes, etc,
- Community kitchens
- Screen printing, photograph and video shooting etc.,

INTERNET OF THINGS (IoT): TRANSFORMING INDUSTRIES AND ENABLING CONNECTIVITY

Dr. V. Shanmuga Priya

*Assistant Professor, Department of Computer Science
Sri Krishna Arts and Science College, Coimbatore*

Ms. Ahalya. K and Mr. GP. Vikram Aadhitya

*Student, Department of Computer Science
Sri Krishna Arts and Science College, Coimbatore*

Abstract

The Internet of Things (IoT) has emerged as a disruptive technological force, revolutionizing industries and transforming the way businesses operate. This paper explores the profound impact of IoT on various sectors, ranging from manufacturing and healthcare to transportation and agriculture. By connecting physical devices and objects to the internet, IoT enables real-time data collection, analysis, and automation, leading to increased efficiency, reduced costs, and improved decision-making processes. This abstract highlights key examples of IoT applications across industries, emphasizing the benefits and challenges associated with implementing IoT solutions. Furthermore, it delves into the critical role of connectivity in IoT's success, discussing advancements in wireless communication technologies that facilitate seamless data exchange. The paper concludes by underscoring the tremendous potential of IoT in driving innovation and unlocking new opportunities for businesses in the connected world.

Keywords: Internet of things, Industries, Transformation.

Introduction

The Internet of Things (IoT) has emerged as a transformative force in recent years, reshaping industries and revolutionizing the way businesses operate. This interconnected network of devices, sensors, and objects, all seamlessly communicating with each other and the internet, has unlocked unprecedented possibilities for industries across the globe. By bridging the physical and digital worlds, IoT has paved the way for real-time data collection, intelligent analysis, and autonomous decision-making processes.

The integration of IoT technology into various sectors has ushered in a new era of efficiency, productivity, and cost-effectiveness. From manufacturing plants to healthcare facilities, transportation systems to agricultural fields, IoT has proven to be a game-changer, propelling businesses toward greater innovation and competitiveness.

This paper delves into the profound impact of IoT on industries, exploring its applications, benefits, and challenges. We will examine key examples of how IoT has

transformed traditional business models, optimizing processes and delivering enhanced value to consumers. Additionally, we will shed light on the critical role of connectivity in IoT's success, discussing advancements in wireless communication technologies that enable seamless data exchange and global interconnectedness.

As we navigate this IoT-driven landscape, it is essential to understand the potential and limitations of this technology. While IoT offers immense opportunities for growth and optimization, it also brings forth concerns related to security, privacy, and data management. Addressing these challenges will be crucial in unlocking the full potential of IoT and ensuring its sustainable integration across industries.

In the following sections, we will delve into the various ways IoT has disrupted industries and paved the way for a connected, data-driven future. From manufacturing processes that have become more streamlined and efficient to healthcare systems delivering personalized and remote care, IoT is driving a paradigm shift that impacts us all. As we explore these transformational aspects of IoT, we will also envision the future possibilities that await us in this ever-evolving landscape of interconnected devices and limitless potential.

Industrial Revolution

a) First Industrial Revolution

- Period: Late 18th to early 19th century (1760-1840)
- Key Innovations: Mechanization of textile production, steam engine, and iron production.
- Impact: Transition from agrarian and manual labor-based economies to mechanized industries, leading to increased productivity, urbanization, and economic growth.

b) Second Industrial Revolution

- Period: Late 19th to early 20th century (1871-1914)
- Key Innovations: Mass production, electricity, internal combustion engine, and steel production.
- Impact: Accelerated industrial growth, expansion of transportation networks, emergence of modern corporations, and advancements in communication technologies.

c) Third Industrial Revolution (Digital Revolution)

- Period: Late 20th century (1950s-2000s)
- Key Innovations: Computers, semiconductors, internet, and telecommunications.

- Impact: Automation, digitization, globalization, and the rise of information technology, leading to significant changes in communication, commerce, and society.

d) Fourth Industrial Revolution (Industry 4.0)

- Period: Ongoing from the late 20th century to the present day.
- Key Innovations: Artificial Intelligence (AI), Internet of Things (IoT), robotics, 3D printing, and advanced automation.
- Impact: Integration of physical, digital, and biological systems, fostering smart factories, personalized manufacturing, data-driven decision-making, and further societal transformations.

Each industrial revolution represents a major shift in technology, economy, and society, with the fourth revolution being characterized by the convergence of various technologies to redefine how we live and work in the modern world.

Fig:IoT to IIoT

Industrial Internet of Things (IIoT)

The Industrial Internet of Things (IIoT) is a transformative concept that revolutionizes industrial processes by integrating smart devices, sensors, and machines into a unified network. IIoT enables the collection, exchange, and analysis of vast amounts of data in real-time, facilitating data-driven decision-making and automation in industrial settings. With a focus on optimizing efficiency, predictive maintenance, and process automation, IIoT empowers industries such as manufacturing, energy, transportation, and healthcare to enhance productivity, reduce downtime, improve safety, and gain a competitive edge. Its transformative impact and emphasis on security and standards make IIoT a critical driver of the digital transformation in the industrial landscape.

IoT to IIoT Transition

1. **Evolutionary Shift** : The transition from IoT to IIoT represents a natural evolution from consumer-oriented applications to industrial and enterprise-focused solutions.
2. **Industrial Focus** :IIoT is tailored for industrial settings, aiming to optimize processes, increase efficiency, and improve safety in manufacturing, energy, transportation, and other sectors.
3. **Data Volume and Analysis** :IIoT generates vast amounts of operational data, which is analyzed in real-time to drive data-driven decisions, predictive maintenance, and process optimization.
4. **Connectivity and Devices** :IIoT involves interconnected industrial devices, sensors, and systems that communicate to form an integrated network for data exchange and control.
5. **Automation and Remote Control** :IIoT enables automation and remote monitoring of industrial processes, reducing human intervention and enhancing precision and responsiveness.
6. **Predictive Maintenance** :IIoT's ability to monitor equipment health and performance enables predictive maintenance, preventing unexpected breakdowns and minimizing downtime.
7. **Industry-Specific Applications** :IIoT is applied in diverse industries, each benefitting from tailored solutions to address specific challenges and requirements.
8. **Security and Standards** :IIoT prioritizes robust security measures to protect critical infrastructure and emphasizes interoperability and standardized communication protocols.
9. **Efficiency and Competitiveness** :IIoT empowers organizations to become more agile, efficient, and data-driven, gaining a competitive advantage in the industrial landscape.
10. **Transformational Impact** :IIoT's integration with industrial processes leads to improved productivity, cost savings, enhanced quality control, and safer working environments.

In summary, the transition from IoT to IIoT signifies a shift from consumer-centric applications to industrial settings, leveraging advanced technologies to optimize industrial processes and drive overall efficiency in various industries.

Smart Appliances under Industry 4.0

Smart appliances have become an integral part of the rapidly evolving technological landscape. These appliances leverage advanced technologies like the

Internet of Things (IoT), artificial intelligence (AI), and data analytics to provide enhanced functionalities and efficiency. Here are some examples of smart appliances in the context of Industry 4.0:

1. Smart Refrigerators

- IoT-enabled refrigerators can connect to the internet to access and manage food inventories, expiration dates, and suggest recipes based on available ingredients.
- AI-powered refrigerators can optimize temperature settings based on usage patterns, weather forecasts, and energy consumption, leading to energy efficiency.

2. Smart Washing Machines

- IoT-connected washing machines allow users to control and monitor washing cycles remotely through smartphone apps.
- AI-driven washing machines can learn users' preferences, fabric types, and adjust settings to ensure the best cleaning performance while minimizing water and detergent usage.

3. Smart Ovens

- IoT-enabled ovens can be remotely controlled and monitored, allowing users to preheat or adjust cooking settings while away from home.
- AI-powered ovens can provide cooking recommendations, optimize cooking times, and adjust temperatures based on the type and weight of the food.

4. Smart Thermostats

- IoT-based thermostats can learn users' temperature preferences, adjust heating or cooling schedules automatically, and be controlled remotely through smartphones.
- AI algorithms in smart thermostats can analyze weather forecasts and occupancy patterns to optimize energy usage and reduce heating/cooling costs.

5. Smart Lighting

- IoT-connected smart bulbs and lighting systems can be controlled remotely and adjusted for brightness, color, and ambiance.
- AI-powered lighting can optimize energy consumption by adapting to natural light conditions and occupancy patterns.

6. Smart Home Energy Management Systems

- These systems integrate various smart appliances, allowing users to monitor and control their energy consumption and optimize energy usage based on real-time data and AI algorithms.

7. Smart Home Security Systems

- IoT-connected security cameras, doorbells, and alarms provide real-time monitoring and alerts, with AI capable of distinguishing between ordinary events and potential threats.

These smart appliances enhance convenience, energy efficiency, and customization in our daily lives, marking a significant step in the progression of Industry 4.0 technologies into our homes and workplaces.

Fig: Industry 4.0

IIoT in the Business Area

IIoT (Industrial Internet of Things) is revolutionizing the business landscape, connecting smart devices, sensors, and machinery to optimize industrial processes. IIoT enables real-time data collection and analysis, empowering businesses to make data-driven decisions and improve overall operational efficiency. In manufacturing, IIoT enables smart factories that automate production processes, monitor equipment health, and reduce downtime. Supply chain and logistics benefit from IIoT's end-to-end visibility, enabling proactive decision-making and efficient inventory management.

Energy-intensive industries leverage IIoT to manage energy consumption, optimize energy usage, and reduce carbon footprints. Predictive maintenance powered by IIoT sensors helps businesses detect potential equipment failures and schedule maintenance before breakdowns occur. IIoT enhances asset tracking and management, ensuring valuable assets are accounted for and utilized optimally. Workplace safety improves with IIoT-enabled wearable devices and smart sensors, alerting businesses to potential hazards and safety violations.

IIoT enhances quality control in regulated industries by monitoring production parameters and ensuring compliance with strict standards. Remote monitoring and control provided by IIoT enable businesses to manage operations from anywhere,

increasing flexibility and scalability. IIoT drives customer experience improvements by collecting real-time data on product usage and behavior, leading to more personalized offerings. Advanced analytics and AI-powered algorithms in IIoT enable businesses to analyze large datasets and gain valuable insights for strategic planning. IIoT facilitates seamless collaboration and connectivity among various stakeholders in the supply chain, fostering efficient communication and streamlined processes. In healthcare, IIoT enables remote patient monitoring and helps optimize medical equipment maintenance and usage.

IIoT adoption leads to cost savings through optimized resource utilization, reduced downtime, and enhanced asset lifecycle management. In agriculture, IIoT-driven smart farming techniques enable precision agriculture, conserving resources and maximizing crop yields. IIoT supports real-time tracking of shipments, ensuring timely deliveries, and preventing losses in the logistics industry. Businesses in the retail sector utilize IIoT to optimize inventory levels, improve supply chain visibility, and enhance customer experience. IIoT-powered data analytics helps businesses identify trends and patterns, enabling them to remain competitive in rapidly changing markets. The transformative potential of IIoT in the business arena makes it a critical technology for enhancing efficiency, productivity, and competitiveness across industries.

Conclusion

The Internet of Things (IoT) has emerged as a transformative force, revolutionizing industries and enabling unparalleled connectivity. By interconnecting everyday objects and devices through the internet, IoT has paved the way for unprecedented data collection, analysis, and automation. As a result, industries across the board, from healthcare and manufacturing to agriculture and transportation, have experienced significant advancements in efficiency, productivity, and cost-effectiveness. Moreover, IoT's ability to seamlessly integrate devices and systems has fostered a new era of interconnectedness, enabling enhanced communication and collaboration between individuals, businesses, and governments worldwide. As IoT continues to evolve and expand its applications, its profound impact on transforming industries and fostering connectivity is set to shape the future of technology and society.

AGRICULTURAL REFORMS – A STUDY

Dr.R.Somasundaram

*Assistant Professor, Department of History
NGM College, Pollachi*

Mr.G.Ramanathan

*Assistant Professor, Department of History
NGM College, Pollachi*

Abstract

This paper explores the recent farm laws passed by parliament and their impact on farmers' income. The laws collectively offer greater freedom to cultivators to sell their produce at better prices and allow farmers to enter into contracts with processors, aggregators, wholesalers, large retailers and exporters at mutually agreed crop prices. The laws also encourage private investment into storage and warehousing by removing stockholding limits. To make these reforms work, some conditions may have to be fulfilled and imperfections and concerns have to be addressed, which are elaborated in the paper. Finally, the paper focuses on other agricultural reforms to improve the supply-side factors, such as rationalization of subsidies, land reforms, use of technology, strengthening institutions and governance, and improving rural infrastructure.

Keywords: *Agricultural Reforms, APMC, Essential Commodities Act, Agricultural Markets, Agricultural Policy*

Introduction

The performance of Agriculture in India is important as the sector not only contributes to the overall growth of the economy but also provides employment and food security to the majority of the population in the country. The structural reforms and stabilization policies introduced in India in 1991 initially focused on industry, tax reforms, foreign trade and investment, banking and capital markets. The economic reforms did not include any specific package specifically designed for agriculture. It is viewed that protection to the industry in the form of import substitution policies like tight import controls and high import duties have hurt the agriculture till 1991. Disprotection to industry since 1991 is supposed to correct this bias and increase terms of trade for agriculture. "This would create a potentially more profitable agriculture, which would be able to bear the economic costs of technological modernization and expansion" (Man Mohan Singh, 1995,). The reforms have improved terms of trade for agriculture and opened new opportunities such as benefits from trade and specialization, widening choices in new technology including biotechnology. Trade reforms are expected to have a positive impact on agriculture. There has been a significant increase in agricultural exports after economic reforms

were initiated. Increase in exports initially was due to a significant reduction in the import duties and devaluation of the Indian rupee. The economy-wide reforms seem to have benefited agriculture because of increasing business transactions between agriculture and the rest of the economy over time (Mishra and Rao, 2003). It may be true that liberalization of non-agriculture has had a positive impact on agriculture indirectly. But agriculture has not undergone direct reforms since independence. Agricultural markets witnessed only limited reforms. Since the early 2000s, there have been some attempts to amend the APMC (Agriculture Produce Marketing Committee) Act. Recently, the Central Government has brought out three farm laws as part of the agriculture market reforms. The objective of this paper is to examine (a) the recent three farm laws and their impact on farmers' incomes and supply chains; (b) other agriculture reforms needed for higher growth and incomes.

The Government with the aim of transforming agriculture in the country and raising farmers' income have passed three important legislation from Parliament.

- These legislations sought to bring much needed reforms in the **agricultural marketing system** such as removing restrictions of private stock holding of agricultural produce or creating trading areas free of middlemen and take the market to the farmer.
- The Farmers' Produce Trade and Commerce (Promotion and Facilitation) Act, 2020,
- The Farmers (Empowerment and Protection) Agreement of Price Assurance and Farm Services Act, 2020,
- Essential Commodities (Amendment) Act, 2020.

The Farmers' Produce Trade and Commerce (Promotion and Facilitation) Act, 2020

Features

- **Freedom to the Farmers:** The Act provides the farmers the freedom of choice related to sale and purchase of produce.
- **Liberation from the Cess:** The farmers will not be charged any cess or levy for sale of their produce under this Act. Further there will be a separate dispute resolution mechanism for the farmers.

Benefits

- **Promotes trade:** It promotes barrier-free inter-state and intra-state trade and commerce outside the physical premises of markets notified under State APMCs.
- **Better price:** It will open more choices for the farmer, reduce marketing costs for the farmers and help them in getting better prices

- **One nation, one market:** The Act will help create **One India, One Agriculture Market** and will lay the foundation for ensuring golden harvests for our hard working farmers.

The Farmers (Empowerment and Protection) Agreement of Price Assurance and Farm Services Act, 2020

Feature

- Aims to provide for a national framework on farming agreements that protects and empowers farmers to engage with agri-business firms, processors, wholesalers, exporters or large retailers for farm services

Benefits

- **Level playing field:** The new legislation will empower farmers for engaging with **processors, wholesalers, aggregators, wholesalers, large retailers, exporters** etc., on a level playing field without any fear of exploitation.
- **Transfers the risk:** It will transfer the risk of market unpredictability from the farmer to the sponsor and also enable the farmer to access modern technology and better inputs.
- **Attracts private sector:** This legislation will act as a catalyst to attract private sector investment for building supply chains for supply of Indian farm produce to national and global markets, and in agricultural infrastructure.
- **Eliminates intermediaries:** Farmers will engage in direct marketing thereby eliminating intermediaries resulting in full realization of price.
- Amendments to Essential Commodities Act (1955)

Background

- India has become surplus in most agri-commodities but farmers have been unable to get better prices due to lack of investment in cold storage, processing and export.
- The imposition of the curbs on stocking of farm produce and regulation of the prices of commodities, etc. under **Essential Commodities Act (ECA)** are some of factors responsible for less entrepreneurial spirit and thus less investment in the farm sector.

Benefits of Amendments

- The amendment would deregulate the commodities such as cereals, edible oils, oilseeds, pulses, onions and potatoes. It will help to lessen the fears of private investors of excessive regulatory interference in their business operations.

- Any limits under ECA over these commodities will be imposed only in exceptional circumstances such as war, famine, extraordinary price rise and natural calamity.
- The freedom to produce, hold, move, distribute and supply will lead to harnessing economies of scale and attract private sector/foreign direct investment into the agriculture sectors.
- It will help drive up investment in cold storages and modernization of the food supply chain.
- The amendment is expected to help both farmers and consumers while bringing in price stability.
- It will also create a competitive market environment and also prevent wastage of agri-produce that happens due to lack of storage facilities.
- It is considered as a step towards transformation of agriculture and raising farmers' income.

Significance of these Acts

- The reforms are expected to **accelerate growth** in the sector through private sector investment in building infrastructure and supply chains for farm produce in national and global markets.
- They are intended to **help small farmers** who don't have means to either bargain for their produce to get a better price or invest in technology to improve the productivity of farms.
- The legislation on **contract farming** will allow farmers to enter into a contract with agri-business firms or large retailers on pre-agreed prices of their produce.
- It will also help farmers of regions with surplus produce to **get better prices** and consumers of regions with shortages, lower prices.
- It will promote the creation of **Farmer Producer Organizations (FPO)** on a large scale and will help in creating a farmer-friendly environment for contract farming where small players can benefit.
- **Competition** is the best protector of stakeholders whether it is consumer or the farmers. Having a variety of buyers will protect farmers from exploitation and by having more sellers (farmers), consumers can buy better products at better deals.

Farmers Protest and Issues Involved

- **Federal Angle:** The provisions in the Farmers' Produce Trade and Commerce (Promotion and Facilitation) Act, 2020, provides for unfettered commerce in designated trade areas outside APMC jurisdictions.

- Apart from this, the Act empowers the Centre government to issue orders to States in furtherance of the law's objectives.
- However, matters of trade and agriculture being the part of subjects on the State list, have caused resentment in States.
- **Lack of Consultation:** First the ordinance route and now the hastily attempt to pass the Acts without proper consultation adds to the mistrust among various stakeholders including farmers.
- Also, by allowing 'trade zones' to come up outside the APMC area, farmers have become apprehensive that the new system would lead to eventual exit from the minimum support price.
- **Absence of any regulation in non-APMC mandis:** Another issue that is raised by the farmers is that it gives the preference for corporate interests at the cost of farmers' interests.
- In absence of any regulation in non-APMC mandis, the farmers may find it difficult to deal with Corporates, as they solely operate on the motive of profit seeking.
- **Non-Favourable Market Conditions:** While retail prices have remained high, data from the **Wholesale Price Index (WPI)** suggest a deceleration in farm gate prices for most agricultural produce.
- With rising input costs, farmers do not see the free market based framework providing them remunerative prices.
- These fears gain strength with the experience of States such as Bihar which abolished APMCs in 2006. After the abolition of mandis, farmers in Bihar on average received lower prices compared to the MSP for most crops.

Impact on Stakeholders

- **Farmers:** The farmer is now the producer and the seller of his own produce and will be free to enter into agreement with private trade directly.
- **Consumers:** The consumers would now get the produce at much lower costs.
- **Middlemen:** Although the role of middlemen is not going to end completely, their hold on the trade will not be as strong.
- **State governments:** The state govt. of states such as Punjab and Haryana will be adversely affected as there will be a huge loss in annual revenue collection.

Conclusion

Basically, we have to change the narrative on agriculture towards more diversified high-value production, better remunerative prices and farm incomes, marketing and trade reforms, high productivity with less input, focus on post-

harvest value chains including storage, warehousing, processing and retailing, cost-effective and sustainable agriculture. The government policies have been biased towards cereals particularly rice and wheat. There is a need to shift from rice, wheat-centric policies to non-cerealfocused policies like millets, pulses, fruits and vegetables, livestock and fisheries to promote diversified agriculture. The agriculture reforms will help in achieving the goals of higher agricultural growth and faster increase in farmers' income.

- The above mentioned legislation basically aims at creating **additional trading opportunities** outside the APMC market yards to help farmers get remunerative prices due to additional competition.
- It proposes an **electronic trading** in transaction platform for ensuring a seamless trade electronically.
- None of the legislation affects the **Minimum Support Price** in any way as the MSP is an administrative decision not a law.
- Agricultural Produce & Market Committee (APMC) will still be available as a choice to sell their products.
- The sale, lease or mortgage of farmers' land is totally prohibited and farmers' land is also protected against any recovery.

CLOUD COMPUTING – BENEFITS, RISKS AND ADOPTION STRATEGIES

Dr. A. Meenakshi

Assistant Professor, Department of B.Com (CA)
PSGR Krishnammal College for Women, Coimbatore

Ms.Aathika Sulthana S

Student, III B.Com (CA)
PSGR Krishnammal College for Women, Coimbatore

Abstract

Cloud computing is the rearmost of computing paradigms. It promises to change the way people use calculating coffers. Using Internet as the backbone, cloud computing asserts that it's possible to give computing as a "mileage" to end druggies "as and when demanded" base. cloud computing has an implicit to serve druggies of all kind's individual druggies, institutions, assiduity at large. Cloud computing is a business model that harnesses the web as the ultimate business platform. cloud computing is saturated with immense eventuality for array of practical operations. The model is anticipated make computing needs available via web on retail base and is called cloud computing. cloud computing intends to make the Internet the ultimate home of all computing coffers storehouse, calculations, operations and allow end stoner to available them in amounts of her choice, position of their preferences, for duration of their relish. In other world web come the provision stores for all your computing needs.

Keywords: Cloud computing, Benefits, Risks, Strategies.

Introduction

Cloud Computing is the delivery of calculating services similar as waiters, storehouse, databases, networking, software, analytics, intelligence, and more, over the cloud (Internet). Cloud Computing provides a volition to the on- demesne datacentre. With an on- demesne datacentre, we've to manage everything, similar as copping and installing tackle, virtualization, installing the operating system, and any other needed operations, setting up the network, configuring the firewall, and setting up storehouse for data. After doing all the set- up, we come responsible for maintaining it through its entire lifecycle. But if we choose Cloud Computing, a cloud seller is responsible for the tackle purchase and conservation. They also give a wide variety of software and platform as a service. We can take any needed services on rent. The cloud computing services will be charged grounded on operation.

Benefits

Cloud computing has been around for roughly two decades and despite the data pointing to the business edge, cost- benefits, and competitive advantages it holds, a

large portion of the business community continues to operate without it. According to a study by the International Data Group, 69 of businesses are formerly using pall technology in one capacity or another, and 18 say they plan to apply pall- calculating results at some point. At the same time, Dell reports that companies that invest in big data, pall, mobility, and security enjoy up to 53 faster profit growth than their challengers. As this data shows, an adding number of tech- expertise businesses and assiduity leaders are recognising the multiple benefits of the pall- calculating trend. But further than that, they're using this technology to more efficiently run their organisations, better serve their guests, and dramatically increase their overall profit perimeters. Pall computing operates on a analogous principle as web- grounded dispatch guests, allowing druggies to pierce all of the features and lines of the system without having to keep the bulk of that system on their own computers. In fact, utmost people formerly use a variety of pall computing services without indeed realising it. Gmail, Google Drive, TurboTax, and indeed Facebook and Instagram are all pall- grounded operations. For all of these services, druggies are transferring their particular data to a pall- hosted garçon that stores the information for after access. And as useful as these operations are for particular use, they are indeed more precious for businesses that need to be suitable to pierce large quantities of data over a secure, online network connection.

Cost Saving

However, you are not alone 20 of organisations are concerned about the original cost of enforcing a cloud- grounded garçon, If you're upset about the price label that would come with making the switch to pall computing. But those who are trying to weigh the advantages and disadvantages of using the pall need to consider further factors than just original price they need to consider ROI. Once you are on the pall, easy access to your company's data will save time and plutocrat in design startups. And, for those who are upset that they'll end up paying for features that they neither need nor want, utmost pall- computing services are pay as you go. This means that if you do not take advantage of what the pall has to offer, also at least you will not have to be dropping plutocrat on it.

Security

Multiple organisations have security enterprises when it comes to espousing a pall- computing result. After all, when lines, programs, and other data are not kept securely onsite, how can you know that they're being defended. If you can ever pierce your data, also what is stopping a cybercriminal from doing the same thing Well, quite a bit, actually.

Flexibility

Your business has only a finite quantum of focus to peak between all of its responsibilities. However, also you are not going to be suitable to concentrate on reaching business pretensions. The pall offers businesses more inflexibility overall versus hosting on a original garçon. And, if you need redundant bandwidth, a pall-grounded service can meet that demand incontinently, rather than witnessing a complex (and precious) update to your IT structure. This bettered freedom and inflexibility can make a significant difference to the overall effectiveness of your organisation. A 65 maturity of repliers to an InformationWeek check said “the capability to snappily meet business demands” was one of the most important reasons a business should move to a pall terrain.

Mobility

Pall computing allows mobile access to commercial data via smartphones and bias, which, considering over 2.6 billion smartphones are being used encyclopaedically moment, is a great way to ensure that no bone is ever left out of the circle. Staff with busy schedules, or who live a long way down from the commercial office, can use this point to keep incontinently over to date with guests and colleague. Through the pall, you can offer accessibly accessible information to deals staff who travel, freelance workers, or remote workers, for better work- life balance. thus, it's not surprising to see that organisations with hand satisfaction listed as a precedence are over to 24 more likely to expand pall operation.

Quality Control

There are many effects as mischievous to the success of a business as poor quality and inconsistent reporting. In a pall- grounded system, all documents are stored in one place and in a single format. With everyone penetrating the same information, you can maintain thickness in data, avoid mortal error, and have a clear record of any variations or updates. Again, managing information in silos can lead to workers accidentally saving different performances of documents, which leads to confusion and adulterated data.

Loss Prevention

However, then all of your precious data is inseparably tied to the office computers it resides in, if your organisation is not investing in a pall- computing result. This may not feel like a problem, but the reality is that if your original tackle gests a problem, you might end up permanently losing your data. This is a more common problem than you might realise computers can malfunction for numerous reasons, from viral infections, to age- related tackle deterioration, to simple stoner

error. still, you are at threat of losing all the information you had saved locally, if you are not on the pall. With a pall- grounded garçon, still, all the information you've uploaded to the pall remains safe and fluently accessible from any computer with an internet connection, indeed if the computer you regularly use is not working.

Automatic Software Updates

For those who have a lot to get done, there is not anything further prickly than having to stay for system updates to be installed. pall- grounded operations automatically refresh and modernize themselves, rather of forcing an IT department to perform a homemade organisation wide update. This saves precious IT staff time and plutocrat spent on outside IT discussion. World lists that 50 of pall adopters cited taking smaller internal IT coffers as a pall benefit.

RISK

Pall computing provides colourful advantages, similar as bettered collaboration, excellent availability, Mobility, Storage capacity, etc. But there are also security pitfalls in pall computing. Some most common Security pitfalls of Cloud Computing are given below-

Data Loss

Data loss is the most common pall security pitfalls of pall computing. It's also known as data leakage. Data loss is the process in which data is being deleted, corrupted, and undecipherable by a stoner, software, or operation. In a pall computing terrain, data loss occurs when our sensitive data is notoriety differently' s hands, one or further data rudiments can't be employed by the data proprietor, hard fragment isn't working duly, and software isn't streamlined.

Hacked Interfaces and Insecure APIs

As we all know, pall computing is fully depending on Internet, so it's mandatory to cover interfaces and APIs that are used by external druggies. APIs are the easiest way to communicate with utmost of the pall services. In pall computing, many services are available in the public sphere. These services can be penetrated by third parties, so there may be a chance that these services fluently harmed and addressed by hackers.

Data Breach

Data Breach is the process in which the non-public data is viewed, penetrated, or stolen by the third party without any authorization, so association's data is addressed by the hackers.

Vendor Lock-In

Vendor lock-in is one of the biggest security pitfalls in cloud computing. Organizations may face problems when transferring their services from one seller to another. As different vendors give different platforms, that can beget difficulty moving one cloud to another.

Increased Complexity Strains IT Staff

Migrating, integrating, and operating the cloud services is complex for the IT staff. IT staff must bear the redundant capability and chops to manage, integrate, and maintain the data in the cloud.

Account Hijacking

Account hijacking is a serious security threat in cloud computing. It's the process in which individual user's or organization's cloud account (bank account-mail account, and social media account) is stolen by hackers. The hackers use the stolen account to perform unauthorized conditioning.

Adoption Strategies

Espousing serverless as a business model requires a unique approach. One that may differ from other technology executions. An effective strategy considers several factors to determine the stylish approach. An effective strategy is one that maximizes the implicit value of the service while minimizing costs. In the end, a successful relinquishment strategy is one that aligns technology with the business. An alignment that embraces the two as the same bid to negotiate business objects. Below are the crucial abdication strategies that will help achieve the stylish outgrowth.

Define Business Outcomes

Without understanding why you're espousing the service and what value it's furnishing for your business; you're just shifting your technology mound. A many common business object is

- Cost savings.
- Erecting new specialized capabilities.
- Scaling to meet request demands.
- Integration of a complex IT portfolio.
- Democratization and/or tone- service surroundings.
- Optimization of internal operations.
- Increase in business dexterity.

Plan the Entire Journey and Implement in Stages

Espousing serverless computing isn't a "one-shot" deal where everything is moved at once. It can take time to integrate completely. After determining

businessobjects, leaders must establish a roadmap. What operations need to be shifted and when.

Address Potential Risks

Migrating to a serverless model isn't without its pitfalls. Leaders must assess these pitfalls and plan for them. Common pitfalls to consider are Security and Compliance- In the pall, data is entrusted to a third party and shares garçon space with other associations. Leaders must determine if nonsupervisory compliance requires strict security protocols that must be enforced. Vacuity and trust ability- With pall computing, the seller handles all conservation tasks. Companies should review the seller's Service position Agreements (SLAs) to ensure their timelines offer the vacuity and trust ability the company requires. Data Integration- Integrating data involves connections to colourful sources. Leaders will need to determine the applicable interdependencies and ensure the vacuity of the data needed.

Conclusion

Pall computing will affect large part of computer assiduity including Software companies, Internet service providers. pall computing makes it veritably readily for companies to give their products to end- stoner without fussing about tackle configurations and other conditions of waiters. The pall computing and virtualization are distinguished by the fact that all of the control aeroplane conditioning that centre around creation, operation, and conservation of the virtual terrain, are outsourced to an automated subcaste that's called as an API and other operation waiters for the pall operation. In simple words, the virtualization is a part of pall computing where homemade operation is done for interacting with a hypervisor. On the other hand, in pall computing, the conditioning are tone- managing where an API (operation Program Interface) is used so that the druggies can tone- consume the pall service.

A STUDY ON IMPACT, AWARENESS ON START UP INDIA SCHEME ON YOUNG ENTREPRENEURS

Ms. R. Ragapriya

*Assistant Professor, Department of Commerce (PA)
KPR College of Arts Science and Research, Coimbatore*

Mr. Yosai Charles. A & Ms. Ramya M

*Students, Department of Commerce (PA)
KPR College of Arts Science and Research, Coimbatore*

Abstract

The Indian startup scheme has been evolving rapidly over the past few years for the world's most innovative and disruptive companies. The government has launched several initiatives, such as the Startup India Action Plan and the Atal Innovation Mission, to expand entrepreneurship and support the development of innovative technologies. It has also set up dedicated startup funds and incubators to provide financial and mentorship support to startups. The government's efforts are more in helping India to become one of the world's leading startup nations. It motivates each and every youngster to start a business and create employment opportunities.

Keywords: Entrepreneur, Unemployment, Startup, Innovation.

Introduction

Startup India Scheme is set up by the Government of India for creating employment and wealth creation. The goal of Startup India is the development and innovation of products and services and increasing the employment rate in India. The operation was first announced by Indian Prime Minister, Narendra Modi during his speech on 15 August 2015. The action plan of this initiative is focusing on three areas like Simplification, Handholding, Funding Support and Incentives. The main aim of the startup scheme is to abolish unemployment and poverty.

Review of the Literature

Bosma, Praag, Thurik and Wit (2002) have presented a detailed study of firms investing in human and social capital for improving performance. They also explained that one cannot be sure about the favorable aspect is due to investing or somewhat due to the innovative entrepreneurs putting more in their human and social capital. They also found that the individual entrepreneur who is more skill full in the industry performs well than the others. And finally, they conclude that investing in human and social capital increases the entrepreneur's performance.

A Startup business should be protected from specific risk faced by the sector in which it operates. Empowered with unique demographic advantages and guided

efforts, analysts are predicting that India will be poised to a position by itself among developed economics with in the next 10 to 15 years. As indicated by the most recent UN articulation India with 356 million 10-24 year-olds have the real centralization of youth populace regardless of having a littler populace than China. Youth is the main thrust behind advancement, creation, and the future pioneers of a nation besides Youth likewise drives request and utilization design in a nation. (Kaur, 2017)

Youth is the main thrust behind advancement, creation, and the future pioneers of a nation besides youth likewise drives request and utilization design in a nation.

Objectives

- To know the level of awareness and start-up schemes for young entrepreneurs.
- To analyze innovation and development among young entrepreneurs after the implementation of the startup scheme.
- To examine benefits undergone by entrepreneurs.

Statements of the Problem

The risk of reaching failure is one of the greater drawbacks in startups as compared to other organizations. The lack of a skilled workforce is not possible due to the lack of funds at the initial stage. The success of any business needs proper implementation of policies and procedures and that to be followed. It mainly focused on the short-term rather than long term. The execution of the plan is just moderate in the modern era. Were the entities looking forward to sudden growth when compared to a gradual hike.

Research Methodology

- **Area of the Study**
The Study took place around the Coimbatore district.
- **Sampling Techniques**
The study was confined to purposive sampling techniques.
- **Tools Used**
- **ANOVA**
- **Simple Percentage Analysis.**

Startup India Action Plan

As of my last update in September 2021, the "Startup India Action Plan" was a flagship initiative launched by the Government of India to promote and support startup businesses in the country. It was announced on January 16, 2016, by the Prime Minister of India, Narendra Modi.

Self-Certification: Startups were allowed to self-certify compliance with labor and environmental laws, reducing the regulatory burden on new businesses.

Startup India Portal: An online platform was created to provide a single-point access for startups to interact with the government and access all relevant information, services, and resources.

Startup India Hub: This was a dedicated platform designed to resolve queries, provide guidance, and help startups navigate the regulatory environment.

Funding Support: To encourage funding, a 10,000 crore INR fund-of-funds was established, providing support through venture capital funds.

Tax Exemptions: Startups were given a tax holiday for three consecutive years out of their first seven years of existence to promote their growth.

Simplified Exit Process: To provide an easier exit mechanism for startups that fail, a fast-track closure process was introduced.

Innovation Programs: Various innovation-related programs and incubation centers were set up to nurture and support innovation and entrepreneurship.

The Atal Innovation Mission

The Atal Innovation Mission (AIM) is an initiative of the Government of India that was launched on January 16, 2016, by the Prime Minister of India, Narendra Modi, as part of the Startup India Action Plan. The mission is named after former Prime Minister Atal Bihari Vajpayee, who was known for his vision of promoting innovation and entrepreneurship in India.

Atal Research and Innovation for Small Enterprises (ARISE): ARISE aims to stimulate innovation and research in Micro, Small, and Medium Enterprises (MSMEs) by providing grants and support for technology-driven solutions.

Atal New India Challenges: This component involves the launch of various challenges to identify and solve specific problems faced by the nation through innovative solutions. The challenges are open to startups, individual innovators, and researchers.

Atal Incubation Centers (AICs): AICs are established to support startups and entrepreneurs by providing them with the necessary infrastructure, mentoring, funding, and networking opportunities. These incubation centers are sector-specific and help nurture innovative ideas into viable businesses.

Atal Tinkering Labs (ATLs): These are dedicated innovation workspaces established in schools across India. ATLs are equipped with tools and equipment to foster creativity and problem-solving skills among students from an early age. The labs provide a hands-on learning experience and encourage young minds to become innovators and entrepreneurs.

Employment Opportunity Creation from Startup Business

Direct Employment: Startups hire employees to build and operate their businesses. They provide job opportunities across various roles, including technology, marketing, sales, operations, customer support, and administration.

Job Creation in Ancillary Industries: Startups create demand for goods and services, leading to job creation in ancillary industries that support the startup ecosystem. This includes suppliers, service providers, logistics companies, and others.

Indirect Employment: As startups grow, they require support services such as legal, accounting, marketing agencies, and consulting firms. This leads to indirect employment opportunities in these service sectors.

Regional Development: Startups can be catalysts for regional development, as they often set up their operations in smaller towns or cities, creating employment opportunities in these regions.

Entrepreneurship and Self-Employment: Some employees in startups are inspired to become entrepreneurs themselves, leading to the creation of new startups and job opportunities in the future.

Export and International Opportunities: As startups expand and explore international markets, they create job opportunities in global sales, marketing, and distribution.

Analysis and Interpretation

Table -1

Age group	No. of. Responses(100)	Analysis%
18-25	10	20%
26-30	40	80%
31- 40	35	70%
Above 41	15	30%

Sources: primary data

Table 1 The above table shows that 80% of the respondents are under 26-30 age group, 70% of the respondents are under 31-40 age group, 30% of the respondents are above 41, and 20% of the respondents are under 18-25%.

Table: 2

Income	Responses(100)	Analysis%
30000-50000	40	80%
50000-80000	30	60%
80000-100000	10	20%
100000-150000	20	40%

Sources: primary data

Table 2 state that 80% of the respondent income is from 30000-50000 and 60% of the respondents are 50000-80000 and 20% of the respondents are 80000-100000 and 40% of the respondents are from 100000-150000.

**Table:3**

S. No	Benefits availed by the respondent	No. of respondents	Percentage%
1	Relaxed in public	30	60%
2	Tax exemption	40	80%
3	Patent benefits	10	20%
4	Special Certification	20	40%

Source: primary data

Table 3. The above table shows that 80% of the respondents are availed due to tax exemption, 60% of the respondents are availed due to relaxation in public laws, 40% of the respondents are availed due to special certificates, 20% of the respondents are availed due to patent benefits.

Benefits availed by the Respondents

ANOVA

Table: 4 Awareness on youngsters related to startup schemes availed in commercial banks.

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	.144	1	.143	.422	0.003
within Groups	9.166	26	.340		
Total	9.310	27			

Source: Primary Data

Inferences

Table 4 presents the results of ANOVA, the test shows that there is no significant difference between the awareness of youngsters related to startup schemes availed in commercial banks, of the respondents. The significant P value of all these is 0.003. Hence, the hypothesis is rejected and it is evident that there is no significant difference between the awareness and schemes offered in commercial banks.

Findings

- Majority 80% of the respondents are under the age group of 26-30.
- Majority 80% of the respondents are under the income of 30000-50000.
- Majority 80% of the respondents are availed benefits of Tax Exemption.
- The commercial banks provided various schemes and the majority of the respondent's availed of different loan schemes in banks.

Conclusion

The aim of this case study is to develop knowledge about startups among Youngsters and to perceive the Government related plans for the society of the Nation. The realm of startups stands as a testament to the indomitable spirit of

human creativity and determination. Hence the government's programs have also helped to create awareness about startups and entrepreneurship in various fields.

Abstract

Digital world has produced edge, new innovative products, and close customer connections encyclopaedically by the effective use of mobile, IoT (Internet of Things), social media, analytics and technology to induce models for better opinions. Blockchain is recently introduced and revolutionizing the digital world bringing a new perspective to security, resiliency and effectiveness of systems. It offers a secure way to change any kind of good, service, or trade. It facilitates smart contracts, engagements, and agreements with essential, robust cyber security point. A blockchain is a public census to which everyone has access but without a central authority having control. It's an enabling technology for individualities and companies to unite with trust and translucence. Blockchain technology is considered to be the driving force of the coming fundamental revolution in information technology.

Keywords: Security, Resiliency, Revolutionizing, Translucence, Information Technolog.

Introduction

Blockchain is a system of recording information that makes it impossible or delicate for the system to be changed, rewrite, or manipulated. The blockchain is a distributed census that duplicates and distributes deals across the computers participating in the blockchain. The Blockchain technology is a structure that stores transactional records, which also known as the block, of the public in various databases, known as the "chain", in a network connected through peer- to- peer bumps. generally, this storage is appertained to as a ' digital census'. Every trade in this census is authorized by the digital hand of the owner, which authenticates the trade and safeguards it from tampering. Hence, the information the digital census contains is largely secure. In simpler words, the digital census is like a Google spreadsheet shared among numerous computers in a network, in which, the transactional records are stored predicated on factual purchases.

Innovation

Blockchain is a combination of three leading technologies

- Cryptographic keys
- A peer- to- peer network containing a shared document
- A means of computing, to store the deals and records of the network

Cryptography keys correspond of two keys – Private key and Public key. These keys help in performing successful deals between the two parties. Each existent has these two keys, which they use to provide a secure digital identity reference. This secured feature is the most important aspect of this technology. The digital hand is combined with the peer- to- peer network; a large number of individualities who act as authorities use the digital hand in order to reach an agreement on deals, among other issues. When they authorize a deal, it's certified by a fine verification, which results in a successful secured trade between the two network- connected parties. So, to add it up, Blockchain stoners employ cryptography keys to perform different types of digital relations over the peer- to- peer network.

How does it Work

A blockchain is fairly similar with spreadsheet or databases because it's a database where data is entered and stored. But the basic difference between a traditional database or spreadsheet and a blockchain is how the data is created and entered. A blockchain consists of programs called scripts that conduct the tasks you generally would in a database Entering and piercing information and saving and storing it nearly. A blockchain is distributed, which means multiple duplicates are saved on multiple systems, and they must match for it to betrue. The blockchain collects trade info and enters it into a block, like a cell in a spreadsheet containing information. Once it is full, the information is run through an encryption algorithm, which creates a seven decimal value called the hash. The hash is also entered into the following block title and restated with the other information in the block. This generates a series of blocks that are chained with one another. The entire network works one after the other, trying to" break" the hash. Each bone generates an arbitrary hash except for the" nonce," short for number used formerly. Every miner starts with a nonce of zero, which is added to their erratically-generated hash. However, a value of one is added to the nonce, and a new block hash is generated, If that number isn't equal to or lower than the target hash. This continues until a miner gives a valid hash, winning the race and entering into the price.

Infinance

Blockchain technology provides hands- down effectiveness when it comes to tracking financial parcels. It provides a transparent account system, making it indeed easier to track and attack the flux and exodus of cash.

In Cloud Storage

With the successful performance of blockchain technology, pall storage can come spare secure against the attacks of hackers. It reduces unauthorized data tampering while cracking the data using cryptography.

In Cyber Security

As argued ahead, blockchain uses principles of tally technology and decentralization, making it a perfect fit to fortify cyber security. It helps secure private messaging by forming an integrating API armature that eventually enables cross- runner communication proficiency.

Financial Deals

Fintech, the technological inventions that drive financial exertion analogous as banking, payment processing and investing have given rise to an adding number of blockchain- predicated companies. samples of these are originators of the machine- outstanding web with Bitcoinand builders of a force- chain network on a blockchain structure. The lodestones of blockchain for financial services providers are security, stability and the capability to execute friction-less deals

Music and Entertainment

Blockchain technology can help cover IP rights for the creation and distribution of creative factory and increase the control IP owners have over their work. Music platforms analogous as Bit tunes and Peer Tracks are, it seems, formerly using blockchain technology to distribute and monetise their products. The technology also improves the way in which IP rights are executed

Challenges**The Illegal Connection**

The anonymous point of the blockchain technology attracted not only experts but also lawless personals. Why? Well, the nature of the network is decentralized so that no one can know your true identity. This makes the bitcoin to be the primary target used as a currency in the black request and the dark web. This bad name is making multitudinous people suppose twice ahead looking into the whole system. also, it's natural for people wanting to stay down from any lawless association. lawbreakers now use these cryptocurrencies to buy limited illegal outfit and payment styles.

They also ask for a cryptocurrency in exchange as a deliverance. The only way to manage up with this is to stop the lawless connection and for all for better blockchain performance.

Low Scalability

Another one of the challenges of administering blockchain is scalability. In reality, blockchains work for a small number of stoners. But what happens when a huge integration takes place? Ethereum and Bitcoin now have the topmost number of stoners on the network, and gratuitous to say, they are having a hard time dealing with the situation. When the number of users increase on the network, the transitions take longer to exercise. As a result, the deals bring advanced than usual, and this also restricts farther stoners on the network. It can take indeed days to exercise the whole trade. So, in the end, this blockchain relinquishment challenge is making the technology less and less profitable. Many of the blockchain technologies did show us a hastily affair, but they also breakdown when farther stoners log in to the system. So, this challenge needs to be dealt with enough presto, as it's making the whole technology kind of dull.

High Energy Consumption

Energy consumption is another blockchain handover challenge. Ultimate of the blockchain technology follow bitcoin's structure and use Proof of Work as an agreement algorithm. Still the Proof of Work is not as great as it looks. To keep the system, live, it will definitely need some systematic power. You presumably heard about mining. Mining will bear you to break complex equations using your computer. So, your Personal computer will take further and further electricity to overcome this situation when you start. At present, miners are using 0.2 of the total electricity. However, miners will take farther power than the world can give, If it keeps adding also. thus, it now becomes one of the basic challenges of this network.

Lack of Insulation

Blockchain and insulation don't go really well with each other. The public census system powers the system, so full insulation is not the first concern. But can any association function without insulation? Well, no. multitudinous companies that work with the insulation needs to have defined boundaries. Their consumers trust them with sensitive information. So, if they are all stored in a public record, it won't actually be private presently now, would it? That's why it's necessary to frequently change the registers to limit access to the information. Making it available for only the guests will be a result also. This is an essential thing in the case of bitcoin and other crypto currencies. On the other hand, this raises some enterprises for

governments and the companies. Governments and companies always need to cover and circumscribe access to their data for various reasons. This means that blockchain technology will not be suitable for people who work with sensitive information unless anyone solve the problem.

No Regulation

This is one of the main challenges of administering blockchain in an association. multitudinous associations are making blockchain technology a means of trade. You will see multitudinous products depended on this. But incase of now, there aren't any specific regulations about this. So, no one follows any kind rules when it comes to the blockchain. Now, this is where the problem comes in. Although blockchain guarantees transparency as one of its benefits, there is still no full security in this technology. You won't know for sure if it will be safer for you or not. To get over these challenges, government and extremely controlled security sectors are in the stage to provide various regulations for blockchain.

Security Problems

Security is another vital content also. We all know how every blockchain technology considers about its security. But like any other technology, blockchain also comes with a variety of security circles. The 51 attacks on the network are one of the security excrescencies of the network. In this cyber security attack, hackers can take over the network and exploit it in their own way. They can indeed alter the trade process and circumscribe other people from creating a block. To deal with this, the protocol caste needs farther security. So, no one knows whether they are safe to use for a long period of time.

Conclusion

Blockchain technology has the implicit to disrupt traditional processes across multitudinous industriousness. In some aspects, the technology may hang the traditional monitory part of the counsel as the need for advice diminishes or disappears. Still, there are still multitudinous blockchain handover challenges to see a real change in the way financial services use this technology. It seems inaudible that companies should follow it nearly and be ready to adjust their services and get the results.

DIGITALIZATION OF AGRICULTURE IN INDIA – DESCRIPTIVE ANALYSIS

Mrs. P. Mathivakani

*Assistant Professor, Department of Commerce with Finance, SNMV CAS
Ph.D. Part time Research scholar, PG and Research Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi*

Dr.M.V.Sathiyabama

*Associate Professor and Head, Department of Commerce (E-Commerce)
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

This article presents key technological advances in the digital agriculture, which will have significant impact. Digital Agriculture" aims to advance scientific knowledge in the field of information technologies applied to agriculture. The section welcomes original papers and review articles that provide new insights into smart sensors and networks, automation and control systems, modelling, decision support systems, machine vision, image processing, telemetry, small medium and big data, data mining and analytics, and all of the hardware and software technologies that promote knowledge, sustainability, and the quality and profitability of agricultural operations. Attention will be given to field as well as laboratory experiments, to simulations and models on smart agricultures including, but not limited to, cereals and industrial crops, greenhouses, fruit orchards, vineyards, horticulture, and animal husbandry.

Keywords: Digital Agriculture, Precision Farming, Artificial Intelligence.

Introduction

The term digital agriculture refers to the use of computers and other electronic devices in farming and other agricultural endeavors. Digital agriculture enables farmers and other stakeholders in the agriculture value chain to increase food production using advanced technologies incorporated into a single system. Digital agriculture is a database that contains various information about cultivation, from soil conditions to market assessments, as well as optimal decision operations that aid in making the best choices throughout several agricultural production and distribution processes. A digital agriculture system is a crucial tool for managing agricultural risks. It can assess climate change risks, create a revenue protection policy, and produce a soil quality management program.

Objective of the Study

- The objective of the study is digitalization of agriculture in India.
- To Increases agriculture productivity and lowers production cost.
- To Inhibits soil degradation

- To Lessens chemical application in crop production
- To Promotes effective and efficient use of water resources

Research Methodology

The research study is totally in Descriptive analysis. The research paper depends upon the secondary source of information.

Importance of Digital Agriculture

Farmers rely on cutting-edge technologies to collect and analyze data from their farms to maximize their harvests. Digital agricultural technologies can monitor factors such as moisture, nutrient trends, soil composition, and wind patterns of arable land. The digital agriculture system collects data accurately (such as weather information) using external sources. The combined data is examined and interpreted to help the farmer make better decisions. Robotics and advanced equipment quickly put these decisions into action with greater accuracy, and farmers can receive real-time feedback on the effects of their actions. Accurate weather predictions, yield mapping, variable-rate applications (of water, herbicides, and fertilizers), and GPS guiding systems are all components of digital agriculture.

Digital Agriculture Technologies

Digital agriculture technologies work on the Internet of Things (IoT) principles. These technologies include sensors, telecommunication systems, unmanned aerial systems, machine intelligence, automation, and other advanced machinery. Digital agriculture systems offer a unique perspective that improves the capacity to make and apply decisions. The current generation of farmers utilizes robots to plant and harvest crops. Over the next five years, the market for agricultural robotics is projected to grow from its current value of \$5 billion to over \$10 billion. Aerial drones are now widely used in farming to examine hectares of cotton fields, providing insights that humans would miss on the ground. Information gathered by drones can be used in various ways, including improving harvest time, irrigation, and pest control.

Impact of Climate Change on Agriculture

Fluctuations in ozone, greenhouse gases, and overall climate change impact agriculture significantly because farming is highly dependent on weather conditions. Climate shifts cause variations in habitat ranges and crop planting dates. Droughts and floods caused by climate change impair farming operations. Temperature shifts can also affect the distribution of species and reduce the nutritional quality of major cereals, crop yields, and livestock production.

Digital Agriculture Technologies Reduce Climate Change Vulnerabilities

Digital agriculture can improve farmers' capacity to respond to weather conditions affected by climate changes through accurate climate forecasts. For instance, in 2014, CIAT researchers used information from the national meteorological service to provide accurate advice on when to plant rice in Colombia, sparing 170 rice farmers an estimated 1.7 million dollars in drought-related losses. The researchers developed a computer model that anticipated drought in the area using ten years of historical information on yields and climate collected from mobile applications.

Temperature, precipitation, and wind are some weather parameters that climate changes affect. Since it is difficult to predict the future climate, historical data is used to understand past climate behavior and then apply that understanding to various future climate scenarios.

Digital agriculture can reduce climate change vulnerabilities by predicting weather forecasts. Farmers can navigate the rainfall distribution and make better decisions regarding various livelihood strategies thanks to information distributed to communities via radio broadcasts and mobile communications. Bulletins and notifications from extension services, which are digitally enabled services, can support agricultural producers unaware of digital technologies.

Risks of Digital Agriculture Technologies

The potential utilization of resources is a major risk of digital agriculture. While there is enthusiasm and excitement about integrating digital technology into agriculture, it is important to proceed cautiously, particularly in light of unintended consequences related to the potential eradication of ecological systems. Agricultural data is crucial to the optimum functioning of farms, and if farmers own their data exclusively, they can assess the advantages and disadvantages of their operations.

Digitalization of Agriculture in India

The digitalization of agriculture describes integrating cutting-edge digital technology into the farm production system, including artificial intelligence (AI), robotics, uncrewed aviation systems, sensors, and communication networks. Production of all food grains in India was predicted to be 275 million tons (MT) in 2017–18. India is the world's top producer of pulses (25 per cent of total output), consumer of pulses (27 per cent of total consumption), and importer of pulses (14 per cent). According to the Food and Agriculture Organization (FAO), this makes India the world's second-largest food producer.

India is the world's top producer of pulses, paddy, wheat, and wheat, respectively. The National Agricultural Research System (NARS), which includes the

Indian Council of Agricultural Research (ICAR) institutes and State Agricultural Universities, is one of the largest agricultural research systems in the world. Agriculture in India employs over 42 per cent of the labour force (2019), contributes 19.9 per cent of the Gross Domestic Product (GDP) (2020-21), and provides food security for about 1.3 billion people. Hence, technology and the digitalization of agriculture here play a role of a catalyst to improve and increase production.

According to the NITI Ayog research on artificial intelligence, agriculture must expand at a rate of 4 per cent or higher right now to maintain an annual growth rate of 8–10 per cent. Digitization is crucial for achieving this level of success. The NITI Aayog predicted in a report that by 2025, AI in agriculture would be worth \$ 2.6 Bn and rise at a pace of 22.5 per cent Compound Annual Growth Rate (CAGR). AI currently helps farmers increase yield by assisting them in choosing better crops, hybrid seeds, and resource-efficient farming techniques. It is also utilized to improve farming productivity and accuracy to assist farmers in creating seasonal forecasting models

Digital Agriculture Initiatives in India

- The Digital Agriculture Mission 2021–2025 was launched in September 2021 by Narendra Singh Tomar, Union Minister of Agriculture and Farmers Welfare. Five Memorandum of Understandings (MoUs) were signed to advance digital agriculture through pilot projects with Cisco, Ninja cart, Jio Platforms Limited, ITC Limited, and National Commodity and Derivatives Exchange (NCDEX) e-markets Limited (NeML). The Digital Agriculture Mission 2021–2025 aims to encourage and speed up projects based on cutting-edge technologies, including AI, blockchain, remote sensing, robots, and drones.

- Over 1,000 Agri-tech start-ups are based in India, and various venture capital funds, loan funds, and angel investors have long supported the sector. These start-ups have innovative ideas that assist farmers in improving farming techniques and produce.
- To provide farmers with real-time data and the necessary advice, NITI Aayog has teamed up with International Business Machines (IBM) to create a crop production forecast model supported by AI. It aids in enhancing crop output, soil quality, agricultural input control, and early disease outbreak warning.
- In August 2019, Cisco created an Agricultural Digital Infrastructure (ADI) solution to improve farming and knowledge exchange. This played an essential role in the data pool that the Department of Agriculture developed under the National Agri Stack.
- The Jio Agri (Jio Krishi) platform was introduced in February 2020, and it digitalized the agricultural ecosystem along the entire value chain to empower farmers. The platform's primary function leverages data from standalone applications to offer counsel. Its advanced features use data from various sources, input it into AI algorithms, and then deliver precise, individualized advice.
- India is gradually embracing climate-smart farming methods, which will assist in altering the country's ecology and cutting greenhouse gas emissions from agricultural activities. For instance, the farmers in Gujarat's Dhundi village have begun employing solar electricity and other sustainable energy sources for irrigation.
- Microsoft and the Indian government have teamed up to support India's small-holder farmers by running a pilot programme called 'Unified Farmer Services Interface'. The alliance aims to boost farmers' incomes through improved price management and increased agricultural yield using AI sensors. The collaboration would accelerate the use of AI in farming.
- Six institutions are a part of the government's Sensor-based Smart Agriculture (SENSAGRI) programme. Drones would be utilized in this concept to scout over land areas efficiently, acquire priceless information, and instantly communicate the data to farmers.

Conclusion

India is also helping the farmers by providing agricultural loans that will help increase natural farming practices and significantly modernise agriculture, emphasising agri-waste management. In addition, 11 crore farmers have received \$ 26.4 Bn through the Pradhan Mantri (PM) Kisan Samman Nidhi initiative. Additionally, the market for organic products has grown to \$ 1.5 Bn.

The government is also encouraging AI to revolutionise agricultural and farming trends and giving financial support to agri-tech firms. India is continually working to develop and implement regulations that would improve the sustainability of its agricultural industry. Partnerships between corporations and the government can aid in developing a smart agriculture industry, given India's dynamic corporate structure. To reach goals like doubling farmer incomes and sustainable growth, the Indian government is undertaking these initiatives and programmes. The widespread adoption of digital agriculture in India would therefore require a multi-stakeholder strategy in which the government plays a significant enabler's role in the ecosystem.

MAKE IN INDIA: PROMOTING MANUFACTURING AND GROWTH

Dr. (Mrs). S. Nithya Sumathi

Assistant Professor, Department of B.Com (CA)

PSGR Krishnammal College for Women, Coimbatore, Tamil Nadu, India

Ms. Preethi. M

Student, Department of B.Com (CA)

PSGR Krishnammal College for Women, Coimbatore, Tamil Nadu India

Abstract

A new government initiative called Make in India aims to make India into a manufacturing hub and global design. It includes a wide range of proposals tailored for assisting local and small-scale entrepreneurs in their attempts to expand their operations and bring in Foreign Direct Investment into manufacturing. Potential investors and partners from all across the world are cordially invited to join our campaign so that everyone wins. This is built on the foundation of four primary pillars that cover every area required for the development of the manufacturing industry. This will support the expansion of the nation's economy. With the help of this program, the manufacturing sector has experienced tremendous development across all of the targeted sectors, increasing the nation's GDP.

Keywords: *Make in India, Manufacturing, Development, Foreign Direct Investment, Economy.*

Introduction

As part of the nation-building process, Prime Minister Narendra Modi introduced the Make in India program on 25th September 2014. It is designed to help India become a major center for design and manufacture on a global scale. The Indian government has been mulling over ways to boost the manufacturing sector's pace for years. The campaign was started by the decision-makers and based on the ideologies of Narendra Modi, and it significantly changed the industrial sector's operations. Together with a group of extremely specialized businesses, the Department of Promotion of Industry and Internal Trade (DPIIT) built a new infrastructure to facilitate the program's formulation. India was regarded as an agriculture-driven nation with most of its contribution to GDP. GDP (Gross Domestic Product) measures the monetary value of all finished products and services produced in a given time frame. This contribution from the primary sector did not help the country develop, which caused the economy to contract. The decision-makers chose to shift their attention to the industrial sector, which had enormous potential and chances for assisting the development of the country and encouraging economic growth, after concluding that the primary sector might not help. The government of India began formulating plans to transform the country

into a hub for global manufacturing after discovering the potential that the secondary and tertiary sectors in that country possess. They've discovered that rather than being the factory itself, India was acting as the market for finished goods and services. Instead of helping our country, this helped the other nations whose commodities were imported. This was seen as a problem by the decision-makers, slowing down the nation's development. The policy makers created this program to take advantage of the greater opportunities in the industrial sector and encourage entrepreneurs who have the potential to develop successful business ideas but lack the necessary resources. The program's goal is to help India become a hub for global manufacturing. The Indian government has started this endeavor in order to accomplish all of these. The goal of this effort, which is built upon four pillars, is to encourage entrepreneurship in India across a variety of industries, not just the manufacturing sector. This initiative is based on four pillars that have been recognized as giving the required boost to entrepreneurship in India, not only in the manufacturing sector but also in other sectors.

Four Pillars of Make in India

New Processes

The "Make in India" initiative acknowledges "ease of doing business" as the single most crucial factor in fostering entrepreneurship. To improve the business environment, a number of measures have already been launched. The goal is to delicense and deregulate the sector over a company's entire life cycle.

New Infrastructure

A crucial condition for the development of industry is the availability of modern, helpful infrastructure. To provide infrastructure based on cutting-edge technology with contemporary high-speed communication and integrated logistical arrangements, the government plans to construct industrial corridors and smart cities. By upgrading the infrastructure in industrial clusters, the current infrastructure will be enhanced. The infrastructure of the Intellectual Property Rights registration setup has been improved in response to the fact that innovation and research activities are supported by a quick registration process. It is necessary to determine the skills that are needed by industry and to develop the workforce accordingly.

New sectors

With regard to manufacturing, infrastructure, and service operations, "Make in India" has chosen 25 industries, and comprehensive information is being distributed via an interactive web page and professionally made pamphlets. Defense manufacturing, construction, and rail infrastructure have all seen significant increases in FDI.

New Mindset

The government is frequently considered as a regulator by business. By bringing about a paradigm shift in how the government interacts with industry, "Make in India" seeks to change this. The government will collaborate with business on the development of the country's economy. Instead of acting as a regulator, the plan of action will be one of facilitator.

Objectives

- **Transformation of India into a global design and manufacturing hub.**

India's role as a market for finished products did not hasten the nation's development. This program would pave the way for the establishment and promotion of new manufacturing industries and businesses to make their own goods that can be sold in the nation without importing them from other nations. Local entrepreneurs are given the chance to establish their brands in both domestic and international markets.

- **Promotion of Foreign Direct Investment**

The government of India is taking new measures to speed up the flow of FDI into India as a result of the increased focus on strengthening the infrastructure of the manufacturing sector. This will give entrepreneurs access to more sophisticated technology and capital, enabling them to produce higher-quality products that are incorporated with new technology and stand out from competing products on the market. This will boost the confidence of investors leading to more inflow of FDI.

Outcomes

- Foreign Direct Investment (FDI) Inflows: To entice foreign investment, the Indian government has implemented a liberal and open policy that makes the majority of sectors accessible to FDI via the automatic route.
- Inflows of foreign direct investment into India were USD 45.15 billion in 2014–2015, setting a record that has been continuously broken for the past eight years.
- With USD 83.6 billion, the years 2021–22 had the largest level of FDI ever.
- India is on track to bring in USD 100 billion in FDI in the current fiscal year (2022-23) thanks to economic reforms and improvements in the business climate in recent years.

Promotion of Job Creation

The creation of employment will result from the Make in India program's focus on the growth of the manufacturing sector and its encouragement of indigenous

entrepreneurs to launch their firms. Numerous new manufacturing sector provisions are given access to a wealth of resources, allowing them to access technology, raw materials, financial, and human resources. This is going to help entrepreneurs to start new ventures and enable those who already have them to grow. In turn, this will lead to more employment opportunities and assist the nation's poverty and unemployment rates decline. The improvement in living conditions will encourage people to lead better lives.

Improving the Global of Indian Manufacturing Sector

The Indian industrial sector will be able to compete with that of other nations thanks to this move. The manufacturing industry is crucial to the prosperity of every nation. Developed nations with well-established industrial sectors, such as the United States of America, South Korea, Japan, etc., help to raise their GDP. The demand for goods produced in these nations is high because it is thought that the goods produced there are superior, and orders are given to these nations. With enhanced infrastructure luring offers from around the world, the Indian manufacturing sector will now also be taken into account.

Implementing Intellectual Property Rights

It is often found that the rightful owners of technology or products are robbed of their ownership claims, which leads to losing their credits and benefits for their hard work. This initiative will help local and small entrepreneurs secure their intellectual property rights, which ensures the proper usage of technology. It will also help in bringing out new ideas that will improve the development of the country

For example, Brands like Biotique, Kaya, etc.,

Scope

The Make in India initiative has offered many entrepreneurs the opportunity to launch businesses. Both urban and rural areas are used to manufacture the goods, giving locals job possibilities. Indian companies are becoming more and more well-known, clearing the way for them to enter the international market and posing a serious threat to other well-known brands. Indian businesspeople are creating a sensation with their products, representing our nation, and the products are being embraced by the producer on a global scale. India attracts big investors because of its enormous pool of talented workers. This is a tactic used by Make in India to draw FDI to the manufacturing sector. Investors will also benefit from the government's simplification of the license application and approval processes. It also aids in the recognition of Indian manufacturers and the country's manufacturing industry, aiding in the program's goal of making India a global manufacturing hub. This will greatly contribute to the nation's development and economic expansion.

Make in India - Growth

These are the few products whose growth rate increased dramatically as a result of the Make in India program.

Herbal Products

Over time, there has been a substantial increase in the demand for Indian herbal products and Ayurvedic medicines. Cosmetics, medicinal herbs, beauty products, and natural health supplements constitute some of India's top exports. To aid in exporting and promoting herbal goods abroad, the National Medicinal Plants Board (NMPB) was created.

Jewellery

Jewellery in India is renowned for its exquisite patterns, craftsmanship, and cutting. Polished diamonds, gold jewellery, and silver jewellery are all popular choices. According to the Gem & Jewellery Export Promotion Council, the top countries importing Indian jewellery from 2019 to 2023 are the United States, Israel, Hong Kong, and the United Arab Emirates.

Clothes

India is well-known for producing cotton, silk, jute, and denim. Customers from all over the world are attracted to the unique blending of Indian culture with contemporary features in everyday attire, such as kitchen and home linens and clothing for both ethnic and western wear made by Indian Fashion Designers. It is not unexpected that India is one of the top 10 suppliers of textiles.

Tea

An additional internationally renowned Indian commodity is tea. In regions like Assam, Darjeeling, and the Nilgiris, the soil is rich and perfect for farming. Due to its distinctive flavour, abundance, and high quality, India is the second-largest producer of tea in the world.

Automotive Accessories

India is one of the top three nations exporting auto parts, after Japan and Thailand. The industrial sector has been strengthened by the Make in India initiative, which provides a platform for foreign investors to do business with Indian businesses. Automobile parts make up the majority of India's exports. The export of automotive components is anticipated to reach Rs 3000 crore by 2026, according to the Automobile Component Manufacturers Association (ACMA) projection.

Conclusion

Make in India is one of the main programs the Indian government has started to establish India as global design and manufacturing hub. Since its implementation, the manufacturing industry has experienced substantial growth. Indian goods and services were able to broaden their market reach internationally as a result. There are many opportunities for local small company owners to get the funding and technology they require to start and expand their operations thanks to the laws and programs that have been put in place to encourage foreign direct investment into India. It contributed to increasing the manufacturing sector's share of India's GDP, creating jobs, and promoting the purchase of homegrown goods.

IMPACT OF NATIONAL EDUCATION POLICY 2020 ON HIGHER EDUCATION INSTITUTIONS: OPPORTUNITIES, CHALLENGES FOR STAKEHOLDERS

Ms. K. Gowri

Assistant Professor, School of Commerce
Nehru Arts and Science College, Coimbatore

Abstract

India has completed its 73rd year of independence with the goal of achieving 100% literacy or universal literacy in the country. It is vital to consider the vision and goals that were established for independent India. The objective is for equality in the nation, and so in education. By delivering high-quality education to all, the National Education Policy directly contributes to the long-term transformation of our country into an equitable and thriving knowledge society. On July 29, 2020, the Union Cabinet of India approved the new National Education Policy, which provides a complete framework for basic education through higher education, as well as vocational training in both rural and urban India. The new strategy seeks to achieve universal education from pre-school to secondary level by 2030, with a 100% gross Enrollment Ratio in school education and a 50% GER in higher education by 2025. The education community faces numerous possibilities and obstacles in implementing NEP 2020. This paper, Impact of National Education Policy on Higher Education: Opportunities and Challenges, attempts to trace the history of the Indian education system, to review the NEP in relation to HE, to analyse the impact of NEP on teachers, to express the opportunities and challenges in NEP implementation, and to describe the road ahead to NEP.

Keywords: National Education Policy, Higher Education, Universalization, Teachers' Impact

Introduction

India has a large presence on the international education scene. With 26.31 percent of Indians between the ages of 0 and 14 years old, India has one of the largest networks of higher education institutions in the world, and the education sector has substantial room for growth. India today has one of the best educational systems in the world as a result of recent significant improvements. Additionally, it is among the key forces behind the nation's economic growth. It is impossible to overestimate the role that private institutions have played in the growth of India's education sector, independent of government initiatives. There are also some suspicious-looking individuals, though. Despite increased funding for education, 40% of people in the nation are still illiterate. Only 15% of children are able to advance to high school, the next level.

The Higher Education

India has the third-largest upper secondary education system in the world, with many institutions. More students than ever before are pursuing higher education nowadays. The results are reflected in the number of students enrolling in higher education. Institutions are steadily growing in number. India had the following number of educational institutions as of December 31, 2020:

Institution	Qty(inno.)
Central University	54
State University	34
Private State Universities	395
Deemed to be Universities	129
Institutes of National Importance	51
Central Universities funded by UGC	40

The education sector is made up of schools, colleges, universities, and other private institutions. Students are given the knowledge and skills necessary to adapt to a workplace that is always changing through the education sector. A rising number of businesses in the sector work to provide customers with lifetime learning opportunities. The four divisions that make up the education sector are primary education, secondary education, higher education, and vocational education. For their workforce capacity, all other industries are dependent on the education sector. It does, however, have its own unique workforce development challenges. Due to its responsibility for preparing the next generation for the workforce and for both work and life, the education sector is the focus of intense public and political scrutiny as well as regular waves of policy change and revision. There are movements for educational reforms, such as those for evidence-based teaching methods or improving the quality and effectiveness of education to make it more relevant to students' lives and effective problem-solving in today's or tomorrow's society. The right to education has been recognised by some states and the UN. The Sustainable Development Goal that calls for universal access to high-quality education is the focus of international efforts.

Introduction to New Education Policy 2020

After a break of 34 years, the Indian government compiled feedback from 2.5 lakh village-level stakeholders to two national legislative-level committees over a period of more than 50 months of consultations and workshops, and on July 28th, 2020, the Union Cabinet of India approved the National Education Policy [NEP]. The extent to which proposals have been implemented into the policy is uncertain, though. The new education policy 2020, which replaces the previous [NEP] 1986, is a

comprehensive framework for K-12 education, higher education, and vocational training in both rural and urban India. The policy seeks to completely overhaul India's educational system by the year 2040.

NEP 2020: The new [5+3+3+4] School System

Here is the age-wise and class-wise break down of the [5+3+3+4] curricular & Pedagogical structure of NEP 2020 on the cognitive-developmental stages of the children.

Secondary Stage-4 Years Age 11 to18:Class 9 toClass 12
Middle Stage-3 Years Age 11 to14:Class 6 toClass 8
Preparatory Stage-3 Years Age 8 to11:Class 3 toClass 5
Foundational Stage-5 Years Age3to6:3Years(Anganwadi, Pre-school, Balvatika) Age 6 to8:2 Years (Class 1 &Class 2)

Twelve school years and three years of preschool will be included in the new 5+3+3+4 school structure. Fundamental reforms that bring the highest quality, equity, and integrity into the system are required to close the achievement gap between current learning results and expectations in all areas of education, from early childhood care and education to higher education.

By 2040, India must have a top-notch educational system with fair access for all students, regardless of their social or economic circumstances.

The nation's first education policy of the twenty-first century, National Education Policy 2020, aims to address the various expanding developmental imperatives facing the nation. This Policy recommends that all elements of the educational framework, such as funding and regulation, be updated and modernized. Create a new framework that reflects the aspirational goals of the twenty-first century.

Priority will be given to education, including SDG4, while drawing on Indian customs and value systems. It is considered essential to educate India's youth about India and its varied social, cultural, and technological requirements, as well as about its unique aesthetic, language, knowledge traditions, and strong ethics, for the purpose of national security.

Principles of Policy

The fundamental ideas that will direct both the education system as whole and specific institutions within it are listed below.

Appreciating, spotting, and promoting each student's particular skills.

- Flexibility.
- There aren't any clear divides.
- A multidisciplinary and all-encompassing approach to education.
- A concentration on mental understanding; inventiveness and critical thinking
- Teachers and faculty serve as the focal point of the learning process.

Statement of Problem

The current educational system directs pupils towards the subject's conceptual framework. The students are not given the concept of skill-based learning, which results in a gap between academics and industry.

Due to the aforementioned fact, students' ability to get employment may suffer. There are no multiple admissions or multiple exits for a course in the current educational system. This might not assist the pupils in obtaining a certificate, diploma, or degree. The aforementioned issues are resolved under NEP 2020; hence, the study is conducted.

Objectives of NEP 2020

- To study the issues and challenges of NEP 2020 in higher education.
- To study how best NEP 2020 can help the students in higher education.

Methodology of Research

Primary Data: The primary data is collected through the discussion with students and teachers of education organization.

Secondary Data: Keeping in mind the various objectives of the studies the secondary data collected from the following sources.

Research papers, Newspapers, Websites, Journals, Magazines, Articles.

SWOC Analysis of National Education Policy 2020

Following years of debate and the work of two committees, the Ministry of Human Resource and Development (MHRD) announced The New Education Policy on July 31, 2020. Despite the strategy's many beneficial qualities, the government is having difficulty spreading it and achieving the requisite learning results. Because accessibility, affordability, and quality are three critical challenges in the education industry, the goal of this article is to do a SWOT analysis of the National Education Policy 2020.

Strengths

- The plan has improved the foundation of education by revamping the school curriculum from a 10+2 model to a 5+3+3+4 model for a child's holistic development this stage accounts for 80% of cognitive growth.
- More topic choice flexibility, boundaries between the arts and sciences, curricular, co-curricular, and extracurricular activities, sports, and vocational crafts, among other things, would allow students to learn and develop at their own speed.
- It's a positive thing that the education sector's GDP allocation increased from 4.43 percent to 6%. The policy aims to achieve universal primary school literacy by 2025 and to improve the Gross Enrollment Ratio in higher education to 50% (from 26.3% today) by 2035.
- Assessment will shift away from the rote learning that is currently used in our classrooms and towards a formative style that encourages higher-order thinking abilities, critical thinking, and conceptual clarity.
- To create an all-around pleasant environment, it is critical to prioritise the construction of suitable school infrastructure that will make it easier for students with disabilities to navigate. This includes classrooms that are inclusive.
- Because education experts from all around the world agree that teaching in the mother tongue during the early years improves learning, comprehension, and learning skills, teaching in the mother tongue at the primary level, and if possible, up to class 8, has been a welcome step.
- Adding 'Classical Language' as a choice will assist pupils in improving their language skills.
- Teaching of contemporary subjects at the middle and secondary levels, including Artificial Intelligence, Design Thinking, Holistic Health, Organic Living, Environmental Education, and Global Citizenship Education (GCED).

Weaknesses

- Aside from repeating previous altruistic clichés, the policy's failure to tackle the role of the private sector in school education is particularly problematic.
- Preschool and high school compulsory education will necessitate a significant financial commitment; however, the strategy does not address how to obtain funds for this purpose.
- Furthermore, combining the first two grades of primary school with three years of preschool may make enforcing the Right of Children to Free and Compulsory Education Act (RTE) more difficult.

- The current pandemic has created a lot of obstacles to the school system. The NEP, on the other hand, either dismisses it or expresses concern about future pandemic-related problems.
- Through the integration of the beneficial domain of learning and the ongoing Happiness Curriculum currently being implemented in Delhi government schools, children should have been engaged and made aware of mindfulness.
- In order to fund the cost of teaching in-service teachers, the government will need to provide suitable infrastructure in addition to time, effort, and resources.

Opportunities

- The NEP 2020 proposes a holistic report card in which a student's performance is evaluated by considering all three domains of learning: cognitive, psychomotor, and affective, which will assist them in perceiving the world from all viewpoints.
- Allowing international institutions to build campuses in the country is a great step for both students and authorities, as it will not only provide new research-based possibilities for students, but will also increase competency and, in the long run, avoid brain drain.
- Academic credit stored in a digital locker will function similarly to bank credit, allowing a student to return to school following a break, as established subsequently by the higher education commission.
- The National Educational Technology venue (NETF) will be founded as an autonomous entity to provide a venue for the open exchange of ideas on the use of technology to improve learning, evaluation, planning, and administration in both school and higher education.
- Keeping an educator's interest, adaptability, and personality in mind is one such strategy that has offered educators hope by enabling them greater freedom in picking pedagogical components in the classroom, rather than chalk and talk, lecture, or audio-visual aids. Teachers should be encouraged to perform self-reflection, review, and self-assessment research in their classrooms.

Challenges

- Many states, including West Bengal, Andhra Pradesh, and Tamil Nadu, oppose the three-language model since making Hindi mandatory would look to be an imposition on people residing south of Vindhya.

- Given India's size, population, diversity, and constitutional federalism, the NEP 2020 is an attempt to achieve uniformity and standardisation along a single axis of control and power. Because education is on the concurrent list, many states may oppose.
- While the projected free breakfast initiative is a wonderful idea, it will add to an already bloated and corrupt mid-day meal system.
- While legislation fosters reason and critical thinking in campus activities, the majority of experts believe that real actions on the ground differ, as illustrated by recent attacks on students and critical thinkers.
- With unemployment and job losses, employers may keep wages low and fire instructors in the knowledge sector, knowing that there will be plenty of untrained and subpar teachers to take their place.

Analysis

Challenges of NEP 2020 in Higher Education

- Opening a university per week is a tremendous undertaking in today's India, which has over 1,000 institutions distributed across the country. To meet one of the policy's stated goals of doubling the Gross Enrollment Ratio in higher education by 2035, one new institution will need to operate every week for the next 15 years.
- Opening a university every week on a continual basis is an enormous challenge.
- Currently, there is a focus on healthcare and economic recovery, which is hindering execution.
- Despite the fiscal constraints, analysts have recommended for large stimulus packages totaling double-digit percentages of GDP.
- A big pool of trained teachers is required.
- The strategy envisions a major structural re-design of the curriculum in schools, which is a very positive move.
- However, in order to properly offer this curriculum, we need teachers who have been trained in and understand the pedagogical requirements.
- Many of the curriculum modifications necessitate significant mental shifts on the part of both teachers and parents.

Higher education that is multi disciplinary necessitates a cultural shift

- The National Education Policy 2020's emphasis on interdisciplinary learning is a good step forward in higher education.
- Universities, particularly in India, have been highly compartmentalized and siloed for decades.

In the Covidera, Funding is a Major Issue

- This is not a challenge for the faint of heart in terms of funding. The National Education Policy 2020 calls for a rise in education spending from 4.6 percent of GDP to 6% of GDP, or INR 2.5 lakh crores per year.

Issues of NEP 2020 in Higher Education**Integration is Lacking**

Both the notion and the paper include holes, such as the integration of technology and pedagogy. There are severe gaps, for example, in lifelong learning, which should have been a key component of transitioning to new sciences.

A Linguistic Barrier

Much of the paper, such as the terminology, is up for debate. The NEP intends to provide home language learning up to class five in order to improve learning outcomes. Early idea comprehension is improved in the native language, which is critical for future success. Learning suffers even with the best teachers and facilities if the foundations are poor. However, it is also true that social and economic mobility are primary goals of education, and English is the language of mobility in India.

Debate on Multilingualism

Home language thrives in areas where the ecosystem extends all the way through higher education and into employment. Without such ecology, this may not be enough. Multilingualism is mentioned in the NEP, which should be emphasised. Most classes in India are de facto bilingual. Some states cheerfully dismiss this strategy as a futile attempt to impose Hindenburg.

Pedagogical Constraints

The paper mentions flexibility, choice, and investigation. The text recognises that higher education has a diversity of pedagogical needs. It will be awful if it becomes a necessary choice inside single institutions, because establishing a curriculum for a classroom with both one-year diploma and four-year degree students detracts from the institution's character.

Institutional Constraints

Instead of being forced to be multidisciplinary, a healthy education system will have a diversity of institutions. Students should have the option of attending a range of educational institutions. The technique risks creating a new sort of institutional isomorphism that is enforced from on high.

Impact of New Education Policy (NEP)2020

This national education policy will affect billions of people. However, 'Students and Teachers' are the two most vulnerable groups. So, let us examine how this new education strategy will effect both students and teachers.

1. Impact on Students

NEP2020 will provide students with new learning options. The most significant effect would be a shift in the learning environment and process for pupils. The new education policy will include the following features:-

- Increase the emphasis on students' skill development and competency growth.
- Develop 21st-century abilities in pupils to prepare them for the future.
- Encourage pupils to pursue both academic and non-academic goals.
- Provide a variety of pre-primary, open, and remote learning possibilities. Students who are learning.
- Provide pupils with access to counselling and other resources.
- Students' curiosity and wonderment will rise as a result of so many expanding opportunities. As a result, it is recommended that individuals seek the advice of experts and professionals when making career selections. The Teacher is the first expert the students encounter. As a result, the Indian government has something to give teachers.

2. Impact on Teachers

According to a KPMG study, 13% of secondary school teachers in India are unqualified. Teachers not only help students achieve academic achievement, but also make great professional decisions. As a result, they must equip themselves with cutting-edge teaching methods. Teachers interested in learning advanced teaching methods and keeping up with current teaching trends can join in Univariate's 'Teach Online - Tools for a Digital Age' course. It is a 6-hour individualised training designed for teachers who want to adapt to newer and more innovative teaching approaches. They must now improve their abilities in order to satisfy the demands of the industry and overcome the skills gap. They should prioritise skill-based education above concept-based instruction. They must constantly improve their abilities and knowledge. They need to place a greater emphasis on research in their respective fields.

Outcome

A Multidisciplinary Way of Thinking

The phrase "multidisciplinary" is often heard but rarely understood. Simply said, it is a learning style that combines a number of disciplines and topics of study to

provide a well-rounded education. Does this sound familiar? It's a phrase that occurs frequently in college brochures to emphasise their liberal approach to studying and teaching. NEP 2020, on the other hand, ensures that we will not have to wait until higher education to learn about this paradigm. Science, art, and business will all be rendered obsolete. As a result of the abolition of the three different streams system, students will no longer be limited to a limited choice of disciplines. Students will have more options for what they can study and will be able to select courses of study that are more closely related to their interests. For example, if you are interested in history but also in chemical bonding and business, you can learn all of these subjects at the same time! There is no cause for fear. The overarching goal is to encourage students to be more collaborative in their approaches and flexible in their thinking in order to reach their full potential.

Holistic Development is Encouraged

We must regularly drop a stone into a tank of water to understand the Archimedes Principle. To learn the names of the different constellations, we must go to planetariums. We must seek outside our textbooks to learn from the world. Holistic education argues for this. Education will take place outside of classrooms just as much as it will within. They'll be creative and entertaining, with a focus on learning for the purpose of learning. It will be more concrete, realistic, and based on how things actually work in the real world. More vocational programmes, internships, and non-textbook school sessions are required to educate kids who are as street smart as they are book clever.

Promoting Technological Literacy

The world is evolving at a breakneck pace, and technology is at the heart of it. The only way to progress is to keep moving forward. We must adapt to the current technological environment. We must be on our toes at all times, or we shall be left in the dust. However, the true purpose is for us to contribute to it. . As a result of the execution of NEP 2020, technology will play an increasingly important role in Indian education. It will teach the future of the country to be technologically proficient by teaching every student how to use it. It guarantees that students will learn how to code, programme AIs, and create them, and that they will eventually become their own employers.

This type of education is critical for both the nation's and individual growth and well-being. Promoting learning outcomes like these will determine the country's success and aid in the fight against the difficulties we face today. It will also serve to strengthen national unity while retaining the diversity that makes us unique, allowing us to effectively compete and interact with the international community to aid in the growth of the globe.

A Polished Perspective on Examinations

"Everything will be fine as long as I pass, "a lot of us remember thinking. It wasn't that we wanted to study; it was that we wanted to write this exam and pass it. As a result, it is clear that the current educational system is ineffective. But it becomes worse when we consider the impact of today's "coaching culture" on us. It is costly for parents, difficult for children, and emphasises results above learning. It has tainted education by making it hazardous, dysfunctional, and competitive. By 2025, the National Mission will have achieved foundational learning and numeracy skills.

1. By 2030, there will be 100 percent GER from pre-school through secondary school.
2. Board Exams are used to assess key ideas and knowledge application.
3. At the end of the school year, every child will be proficient in at least one skill.
4. Common Standards of Learning in Public & Private Schools.
5. Home language/mother tongue/regional language as the medium of instruction until at least Grade 5, and preferably until Grade 8 and beyond.
6. Monitoring Student Progress to Achieve Learning Objectives.
7. National Professional Standards for Teachers (NPST).
8. There is no strict distinction between the arts and sciences, curricular and extra-curricular activities, or vocational and academic courses.
9. 5+3+3+4 Structure of the Curriculum and Pedagogy.
10. Curriculum Reduction to Core Concepts.
11. With the support of NEP 2020, the government hopes to make schooling accessible to all.
12. Through this new strategy, around two crore school pupils will be able to return to educational institutions.
13. NEP 2020 is the formation of the National Book promotion Policy in India.

Conclusion

This policy has many excellent characteristics, but it still needs to be improved. If its policies are modified on a regular basis, NEP 2020 may turn out to be the best policy in the sphere of education and human resources. As the proverb says, "a mad king misuses his power and leads his country to sewers," and the policy, if mishandled, might be deadly. Policy misuse is natural in a country beset by issues such as favouritism, corruption, and lobbying.

Furthermore, this strategy provides immense hope to individuals in need. The student-centered approach of NEP 2020 should have strengthened the education system and workforce by 2030.

FINANCIAL LITERACY: AN OVERVIEW OF OBJECTIVE AND SUBJECTIVE FINANCIAL KNOWLEDGE

Dr. G. Kavitha

*Assistant Professor & Head, Department of Commerce
PSGR Krishnammal College for Women, Coimbatore*

Ms. Suryadevi. P

*Research Scholar, Department of Commerce
PSGR Krishnammal College for Women, Coimbatore*

Abstract

This descriptive study explores the relationship between subjective and objective financial impressions, sometimes known as "Objective and Subjective Finance". This research examines the interaction between objective and subjective financial knowledge to provide a thorough review of financial literacy. As a crucial component of personal finance, financial literacy affects people's capacity to make wise decisions about money management, investments, and overall financial well-being. It goes through the objective and subjective way of financial knowledge and points out the problems while making decisions solely based on any one of the two ways. The study concludes that a well-rounded financial decision can be made when these two bits of knowledge come together. An individual should consider both objective knowledge such as interest rates, Financial statements, and Stock market data keeping in mind or along with their emotion, ability to risk tolerance, and so on.

Keywords: Financial Literacy, Objective Knowledge, Subjective knowledge, Investment decisions

Introduction

Financial literacy is a crucial aspect of modern life, empowering individuals to make informed decisions about their personal finances and achieve greater financial security. It encompasses a wide range of skills and knowledge, from understanding basic financial concepts to navigating complex investment strategies. In this paper, we will provide an overview of financial literacy, exploring both objective and subjective financial knowledge.

Objective financial knowledge refers to the concrete, measurable understanding of financial concepts, principles, and tools. It includes knowing how to budget, save, invest, and manage debt effectively. Individuals with high objective financial knowledge can confidently evaluate financial products, decipher financial statements, and assess risks and rewards associated with various financial decisions. The acquisition of objective financial knowledge is essential in building a strong foundation for financial well-being. On the other hand, subjective financial knowledge pertains to an individual's attitudes, beliefs, and emotions regarding

money and financial matters. This subjective aspect plays a significant role in shaping financial behaviors and decisions. Factors such as risk tolerance, financial goals, and the ability to delay gratification are all elements of subjective financial knowledge that influence financial choices and outcomes.

The significance of financial literacy has become increasingly evident in today's fast-paced and complex financial landscape. As individuals bear more responsibility for their financial futures, the ability to manage money wisely becomes paramount. Financial literacy empowers individuals to set realistic financial goals, create sustainable budgets, make informed investment choices, and protect themselves from financial pitfalls.

Throughout this paper, we will delve into the importance of financial literacy, the challenges individuals face in improving financial knowledge, and the potential benefits of enhancing financial literacy on a personal and societal level. By gaining a deeper understanding of both objective and subjective financial knowledge, individuals can take steps toward achieving greater financial security and ultimately improve their overall quality of life.

The capacity and information necessary to comprehend and efficiently handle many facets of personal finances are referred to as financial literacy. It includes a wide range of financial knowledge, ideas, and techniques that enable people to make wise and responsible financial decisions. Financial success and effective resource management depend on one's ability to manage their finances.

Financial literacy includes theoretical understanding, actual application, and behavioral modifications. It entails making wise choices, establishing financial objectives, and taking action to reach them. Improving financial literacy requires both self-education in financial concerns as well as the occasional expert consultation. To encourage financial literacy among people of all ages, a lot of nations and organizations provide financial education programs and materials.

Objectives

- To know the difference between objective and subjective financial knowledge
- To know about financial literacy

Objective and Subjective Financial Knowledge

Objective knowledge is factual and verifiable information about financial concepts, principles, and data. It is based on concrete evidence and can be quantified or measured. Objective Financial Knowledge is known to affect financial behaviors directly (Chung & Kim, 2022). People with higher objective financial knowledge are known to reduce searching cost when choosing one among different investment options (Hasting & Tejeda-Ashton 2008, Lusardi & Tufano, 2015). On the other hand,

subjective knowledge is purely based on opinion, judgment, and individual perspectives. It may vary from person to person and is influenced by personal experience and beliefs.

The Examples of Objective Financial Knowledge Are

1. Interest rate

The current interest rate set by the central bank is an objective financial fact. (If the central bank sets the interest rate at 2.5% it is a concrete piece of evidence that can be verified)

2. Financial Statement

The Balance Sheet, Income Statements, and Cash flow statements of a company are objective financial data that give insights into its financial health. These statements are prepared based on accounting principles and provide a clear picture of companies' financial performance.

3. Stock Market Data

The closing price of a specific stock on a particular trading day, the trading volume, and historical price data are examples of objective financial knowledge.

Examples of Subjective Financial Knowledge

1. Risk Tolerance

When it comes to investing, each person has a different level of risk tolerance. While some people might feel comfortable making higher-risk investments like stocks, others might prefer to use safer strategies like bonds or cash. Risk tolerance is a personal trait that can evolve over time in response to events and experiences in life.

2. Investment Strategy

Even while objective financial statistics might indicate that some investing strategies are more successful than others, the precise strategy a shareholder opts to use can be arbitrary. For instance, two investors with identical financial information may employ various investment strategies as a result of their own preferences and worldviews.

3. Financial Goal

Due to the varying objectives, aspirations, and priorities of each person, establishing financial goals is an individualized process. Saving for a dream vacation or a down payment on a home may be a person's top priority, but saving for retirement may be another.

Disadvantages of Taking Investment Decisions Based Solely on Objectives Financial Knowledge

Making wise investing decisions requires objective financial knowledge, yet this knowledge is not without flaws. Some potential problems and restrictions can result from relying only on objective financial knowledge, including:

1. Ignoring Behavioral Bias

Investment decisions frequently involve a large amount of human behavior and emotions. Investors who base their decisions purely on objective financial data may fail to recognize psychological biases like fear, greed, or herd mentality, which can result in irrational choices.

2. Short-Term Focus

The focus of objective financial knowledge is typically on historical data and recent trends. Investors who rely just on this information risk missing out on an investment's potential and worth over the long term. While some assets may exhibit short-term volatility, they have strong fundamentals that will support long-term growth.

3. Lack of Context

Objective financial knowledge might not take into account more significant geopolitical or economic aspects that can affect the outcome of an investment. For instance, a stock may have solid financials, but outside variables like alterations in governmental rules or changes in the industry can have an impact on its prospects for the future.

4. Incomplete Information

Although objective financial knowledge offers useful information, it might not fully express an investment opportunity. Although they are more difficult to measure objectively, subjective elements like managerial caliber, corporate culture, and market mood may have a substantial impact on an investment's performance.

5. Market Inefficiencies

Because markets are not always completely efficient, asset prices could not always fully reflect all available information. Investors who just rely on objective financial data run the risk of missing out on inexpensive or overvalued assets that could present possibilities or risks.

6. Over-Emphasis on Past Performance

Although using historical financial data as the only basis for investing decisions can result in the "chasing performance" trap, it is necessary. In markets that are undergoing fast change, prior performance alone does not ensure future success.

7. Ignoring Emerging Trends and Innovation

Developing industries or technologies that have the potential to disrupt current markets and produce new investment opportunities may not be fully captured by objective financial knowledge.

8. Lack of Flexibility

Investors may be prevented from modifying their strategy to maximize profits and control risks if they rigidly adhere to objective financial data without taking into account changing market circumstances or new information.

Disadvantages of Taking Investment Decisions Based Solely on Subjective Financial Knowledge

1. Biases and Emotions

Emotions, cognitive biases, and personal opinions play a significant role in the formation of subjective financial knowledge. Investors may choose irrationally and end up with subpar financial results if they act out of fear, greed, or overconfidence.

2. Lack of Objectivity

Since subjective financial knowledge is inherently subjective, it might not be supported by rigorous analysis or verified data. It may be susceptible to wishful thinking or wishful information interpretation, which could result in biased conclusions.

3. Limited Expertise

Investors might not have the essential skills or information to make wise judgements. Without a thorough understanding of financial markets, economic trends, and investing techniques, relying exclusively on personal judgement might be dangerous.

4. Overlooking Objective Data

Financial statements, market movements, and economic indicators are just a few examples of crucial objective financial facts that subjective financial expertise may obscure or overlook. Making judgements without sufficient information can have negative consequences.

5. Emotional Timing

Subjective financial knowledge may cause investors to time the market emotionally, buying or selling assets based on momentary market swings rather than a carefully considered investment strategy. Buying at market peaks and selling at lows are frequently results of emotional timing.

6. Lack of Diversification

Subjective financial knowledge may lead to an investor's overconcentration on a small number of investments or industries that they are familiar with or emotionally related to, which would result in a lack of diversification and higher portfolio risk.

7. Hindsight Bias

When analyzing previous investment decisions based on subjective financial information, investors may experience hindsight bias. They might think they could have anticipated the future more accurately than they actually did, which would lead to overconfidence in predictions in the future.

8. Inconsistent Decision-Making

Due to the possibility that emotions and opinions may change in response to changes in the market or one's own circumstances, subjective financial knowledge may result in inconsistent decision-making. A disciplined and organized approach to investing may be hampered by this inconsistent behavior.

9. Lack of Accountability

Subjective financial expertise might not offer a clear framework for holding investors accountable or evaluating their investment choices. It may be challenging for investors to learn from mistakes and enhance their strategy since they lack a formal method for analyzing their decisions.

Conclusion

A well-rounded strategy that incorporates both objective and subjective insights enables more informed decision-making and better investing results. Making well-rounded and profitable investment decisions can also be aided by consulting with financial experts and carrying out extensive due diligence.

Making more logical and educated investing decisions can be achieved by fusing objective financial facts with individual preferences, risk tolerance, and financial objectives. Additionally, avoiding the problems of emotional decision-making and improving overall investment outcomes can be achieved by consulting financial advisors, completing extensive research, and following a long-term investment plan.

Several studies revealed that personal financial skills and knowledge are acquired mostly through 'trial and error', but no research to date has actually attempted to investigate what types of financial experiences and characteristics have the most influence on an individual's personal financial literacy or competence (Marcolin& Abraham,2006).

ADVENT OF TECHNOLOGY IN NEP 2020 (ENHANCEMENT, INTEGRATION AND IMPLEMENTATION)

Dr.G.Vignesh

*Associate Professor and Head, PG Department of Commerce with International Business
Nallamuthu Gounder Mahalingam College, Pollachi*

Mr.K.Naveen

*II M.Com IB Student, PG Department of Commerce with International Business
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

The National Education Policy (NEP) is a comprehensive framework that aims to transform the education system in India. Technology plays a pivotal role in realizing the vision set forth by NEP. This document explores the significance of technology in education, its integration in NEP and the potential features, it brings to the forefront. It further encompasses the concept of integration of technology, how the enhancing work of technology is embedded in purview of NEP, differences between blended learning and implementation of technology in learning, benefits and challenges in the methodology after adapting NEP 2020.

Keywords: *National Education Policy - comprehensive framework – Technology - pivotal role – significance - potential features - concept of integration - blended learning - technology in learning - benefits and challenges – adaptation.*

Introduction

Education has always been a key driver of a nation's progress and development. The Indian government recognizes this and has formulated the National Education Policy, a landmark document that envisions a radical transformation of the education sector. At the heart of this transformation lies the strategic utilization of technology to empower educators and learners alike.

The Integration of Technology in NEP

- The NEP acknowledges the transformative potential of technology and incorporates it into various aspects of the education system:
- Digital Infrastructure: NEP emphasizes the creation of robust digital infrastructure, including high-speed internet connectivity, in all educational institutions. This enables the seamless integration of technology into classrooms and ensures equitable access to digital resources.

- **E-Learning and Online Courses:** The policy encourages the development and dissemination of e-learning platforms and online courses to enhance the reach of quality education beyond the confines of traditional classrooms.
- **Teacher Training:** Recognizing the importance of competent educators, NEP emphasizes training teachers to effectively leverage technology in their teaching practices. This ensures that teachers are well-equipped to navigate the digital realm and deliver impactful lessons.
- **Personalized Learning:** Technology enables personalized learning experiences, catering to individual students' needs, strengths, and weaknesses. This fosters a more inclusive and effective education system.
- **Assessment and Evaluation:** NEP proposes the use of technology-based assessment methods, such as computer-based testing and online quizzes, to streamline evaluation processes and provide timely feedback to students.

Methods for Enhancing the NEP 2020 Education System with Technology

E-learning plays a crucial role in the educational systems of many emerging nations. It has numerous intrinsic advantages. Technology will be applied in a variety of ways to improve the procedures and overall experience once the new education policy is put into place in India.

The National Education Policy (NEP), which aims to strengthen the Indian educational system holistically, would require ongoing and crucial contributions from the edtech sector to meet its goal of providing high-quality and accessible education throughout the nation.

The following are some tech-based strategies to support the NEP 2020 Education Policy:

1. Using Cloud Tech to Store and Retrieve Records with Ease

Academic records like degrees and diplomas must be stored and retrieved, which is a lengthy process in Indian universities and schools. It is difficult to manage the volume of documents, and there is always a chance that paper-based data will become damaged. Utilising cutting-edge cloud storage technology like our Integrated School Platform almost eliminates this risk. The school's ability to keep, maintain, and update student records will be quicker and more accurate.

2. Using Virtual Digital Platforms to Manage Digital Exams More Easily

Conducting tests and internal evaluations proves laborious and time-consuming in many institutions and universities. Additionally, it uses a lot of resources. Such problems can be handled effectively by using virtual and digital exams and tests. The teachers can save a lot of time, and it is less demanding on them.

3. Enable Effective Learning Through Digital Tools

The use of digital tools and apps by students to enhance learning is emphasised in the new education policy. Apps, both free and paid, can be used to administer internal tests and participate in virtual classrooms. Teachmint enables schools to plan out, schedule, and conduct exams from a single platform with our Integrated School Platform (ISP). Digital tools are helpful even in emergency scenarios like natural calamities and pandemics that necessitate the closure of schools. Projects and assignments can be shared in real-time between professors and students using platforms like Teachmint. Everyone will find it simpler as a result of the declining cost of internet connections and the growing use of 5G networks throughout the nation.

4. Harnessing Tech to Make Learning Accessible for the Differently Abled

The use of technology indicated in the NEP School education system will make learning more adaptable for students with specific needs or disabilities (autism victims and those with ADHD, etc.). The pervasiveness of ongoing education makes the educational setup difficult. When technology is used in a significant way, these children stand to gain a lot from it. They require a fast internet connection and the use of cell phones or PCs. These make it simple for students to show up to class when they're not feeling well.

This guarantees that students do not fall behind their friends when dealing with illnesses that need a longer stay at home.

5. Digitisation for Cost-Effective Training & Education

According to the NEP School Education System, implementing technology solutions in the educational system will enable schools and universities to save a large number of funds. They will administer tests with less paper and spend less money on printing. The money saved will be useful for improving the technology setup and providing teachers with training.

Blended Learning Approach in NEP

The blended learning approach is a pedagogical strategy that combines traditional face-to-face instruction with digital technology and online resources. The National Education Policy (NEP) recognizes the potential of blended learning to transform the education system and has emphasized its integration to enhance the learning experience and outcomes for students. This section explores the key elements of the blended learning approach and its impact on personalized learning, the role of Artificial Intelligence (AI) in adaptive learning, and its effects on student engagement and academic performance.

Blending Traditional and Digital Learning

Blended learning integrates the strengths of both traditional and digital learning methods. In a blended learning classroom, students engage in direct interactions with teachers while also accessing digital content, interactive learning activities, and online assessments. This approach creates a dynamic and flexible learning environment, accommodating diverse learning styles and individual needs. By blending face-to-face instruction with digital resources, students can benefit from real-time interactions with teachers and peers while having access to a wealth of digital learning materials. This combination allows for more personalized and self-paced learning experiences.

Personalized Learning and Adaptive Technologies

One of the significant advantages of blended learning is its ability to facilitate personalized learning. Digital resources can be tailored to suit individual learning preferences, allowing students to progress at their own pace and focus on areas where they need more support. Adaptive technologies, such as learning analytics and AI-powered platforms, play a crucial role in delivering personalized content and assessments.

Adaptive technologies track and analyze students' performance and engagement in real-time, identifying their strengths and weaknesses. Based on this data, the platform can dynamically adjust the learning path, providing targeted interventions, additional resources, or challenging exercises to meet each student's specific needs.

The Role of Artificial Intelligence (AI) in Adaptive Learning

Artificial Intelligence has revolutionized the educational landscape, particularly in the context of adaptive learning. AI algorithms process vast amounts of data, including student interactions, assessment results, and learning progress, to generate personalized learning pathways. These pathways adapt to each student's proficiency level, learning speed, and individual learning pattern needs. AI-powered adaptive learning platforms can analyze patterns in student behavior, identify learning gaps, and predict future performance. The data-driven insights generated by AI help educators make informed decisions about instructional strategies and provide targeted support to students.

Benefits of Technology Integration

- **Access to Quality Education:** Technology breaks down geographical barriers and provides access to high-quality educational resources, benefitting students from remote and underserved areas.

- **Enhanced Engagement and Learning Outcomes:** Interactive and multimedia-rich content enhances student engagement, leading to better retention and understanding of concepts.
- **Teacher Empowerment:** Technology equips teachers with innovative tools, allowing them to create dynamic and personalized learning experiences for students.
- **Efficiency and Cost-effectiveness:** Technology streamlines administrative tasks and reduces the burden of paperwork, making education management more efficient and cost-effective.

Teacher Training and Technology Integration

- The NEP recognized the crucial role of teachers in effectively integrating technology into the classroom.
- Teacher training programs were being designed to equip educators with the necessary skills to utilize technology for innovative and engaging teaching methods.
- The integration of technology in teacher training itself was emphasized to foster a more tech-savvy teaching workforce.

Partnerships and Collaborations

- To accelerate the implementation of technology initiatives under NEP, partnerships between the government, private sector, and educational institutions were being encouraged.
- EdTech companies and startups played a vital role in developing and providing innovative digital solutions to support NEP's vision.

Challenges and Mitigation Strategies

- **Digital Divide**
Ensuring equitable access to technology and the internet remains a challenge. To address this, the government must focus on bridging the digital divide through targeted initiatives and infrastructure development.
- **Teacher Training**
Effective integration of technology requires well-trained teachers. Comprehensive training programs should be introduced to upskill educators in utilizing technology effectively.
- **Cybersecurity and Privacy Concerns**
As technology adoption increases, the risk of cyber threats and data breaches also rises. Implementing robust cybersecurity measures and safeguarding students' privacy is of utmost importance.

- **Overemphasis on Technology**

While technology is a valuable tool, it should complement, not replace, traditional teaching methods. Striking the right balance between tech-based and in-person learning is crucial.

Conclusion

The National Education Policy recognizes technology as a powerful catalyst in the transformation of the Indian education system. By effectively integrating technology into the curriculum, providing access to digital resources, and empowering educators, NEP paves the way for a more inclusive, efficient, and impactful education system. To achieve these goals, it is imperative for all stakeholders to collaborate, innovate, and embrace technology responsibly, ensuring that no student is left behind in India's journey towards educational excellence.

CLOUD COMPUTING: BENEFITS, RISKS, AND ADOPTION STRATEGIES

Mr. Guru Moorthy. S & Mr. Sanjay.S

*Student, Department of Computer Science
Sri Krishna Arts and Science College, Coimbatore*

Dr.V.Shanmuga Priya

*Assistant Professor, Department of Computer Science
Sri Krishna Arts and Science College, Coimbatore*

Abstract

Cloud computing has gained significant attention as a transformative technology that enables organizations to streamline their operations, enhance scalability, and leverage cost-effective IT solutions. This journal article presents a comprehensive analysis of the benefits, risks, and adoption strategies associated with cloud computing for organizations. The article begins by outlining the fundamental concepts of cloud computing, including Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). It then explores the key benefits offered by cloud computing, such as increased flexibility, scalability, reduced infrastructure costs, and enhanced collaboration and productivity. While cloud computing offers numerous advantages, it also introduces certain risks and challenges that organizations must consider. This article examines the potential risks, including data security and privacy concerns, data loss or leakage, regulatory compliance, vendor lock-in, and service availability. It discusses various risk mitigation strategies, such as encryption, access controls, regular audits, and data backup and recovery mechanisms.

Keywords: The Intercloud computing, Benefits, Risks, Adoption strategies.

Introduction

Cloud computing has revolutionized the landscape of information technology by offering organizations a flexible and scalable approach to managing their data and applications. With its promise of reduced costs, increased efficiency, and improved accessibility, cloud computing has become a vital component of modern business operations. However, alongside its numerous benefits, cloud computing also introduces unique risks and challenges that organizations must address when considering adoption. This journal article provides an in-depth exploration of the benefits, risks, and adoption strategies associated with cloud computing, aiming to provide valuable insights and guidance for organizations navigating this rapidly evolving technological paradigm. In recent years, the proliferation of cloud computing has been driven by its potential to transform traditional IT infrastructure into a dynamic and resource-efficient environment.

By leveraging cloud services, organizations can access on-demand computing resources, storage, and software applications without the need for extensive in-

house infrastructure. This scalability enables businesses to rapidly scale their operations, respond to changing market demands, and optimize resource utilization, all while minimizing capital expenditures. One of the primary advantages of cloud computing lies in its cost-effectiveness. By adopting a pay-as-you-go model, organizations can avoid large upfront investments in hardware and software, instead paying for the resources they consume. This shift from a capital expenditure model to an operational expenditure model allows businesses to reallocate funds towards innovation, strategic initiatives, and core competencies. Furthermore, cloud computing fosters enhanced collaboration and productivity within organizations. With cloud-based collaboration tools and file-sharing platforms, geographically dispersed teams can seamlessly collaborate on projects, accessing and editing documents in real-time.

Cloud Computing

Cloud computing has emerged as a revolutionary technology that has transformed the way organizations store, process, and access their data and applications. This journal article aims to provide a comprehensive understanding of cloud computing, including its definition, core components, and its significance in the modern digital landscape. Additionally, the article explores the benefits, risks, and adoption strategies associated with cloud computing, offering valuable insights for organizations considering its implementation. Cloud computing can be defined as the delivery of computing resources, including infrastructure, platforms, and software, over the internet on a pay-as-you-go basis. It enables organizations to access a shared pool of configurable computing resources that can be rapidly provisioned and released with minimal management effort. By leveraging this virtualized infrastructure, organizations can reduce their reliance on on-premises hardware and scale resources up or down based on their specific needs. This flexibility not only leads to cost optimization but also enhances operational efficiency. The fundamental components of cloud computing include three primary service models: Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). IaaS provides virtualized computing resources, such as servers, storage, and networking components, to organizations. PaaS offers a platform for organizations to develop, deploy, and manage applications without having to worry about the underlying infrastructure. SaaS allows organizations to access software applications over the internet, eliminating the need for local installation and maintenance. The benefits of cloud computing are diverse and impactful. Scalability is a key advantage as organizations can easily adjust their computing resources based on fluctuating demands.

Figure 1: Advantages of Cloud Computing

Benefits of Cloud Computing

Scalability: Cloud computing offers unparalleled scalability, allowing organizations to easily scale their computing resources up or down based on demand. This elasticity ensures optimal resource utilization and cost efficiency, as organizations only pay for the resources they actually use.

Cost Optimization: Cloud computing presents cost advantages by shifting the capital expenses associated with hardware and software purchases to operational expenses based on usage. Organizations can avoid substantial upfront investments in hardware, maintenance, and upgrades, as cloud service providers handle infrastructure management.

Accessibility and Collaboration: Cloud computing promotes accessibility and collaboration by enabling users to access data and applications from anywhere, at any time, using internet-connected devices.

Flexibility and Innovation: Cloud computing empowers organizations to innovate rapidly by providing a flexible and agile IT environment. It offers a wide range of cloud services, development platforms, and tools that allow businesses to experiment, develop, and deploy applications more efficiently. The cloud's inherent scalability and resource elasticity provide the necessary foundation for exploring emerging technologies, such as machine learning, artificial intelligence, and big data analytics, to unlock new insights and drive innovation.

Enhanced Security and Reliability: Cloud service providers invest significant resources in implementing robust security measures, data encryption, access controls, and regular backups to protect data and ensure high levels of security.

Risks of Cloud Computing

Data Security and Privacy: Storing sensitive data in the cloud introduces security and privacy concerns. Organizations entrust their data to third-party cloud service

providers, raising questions about data ownership, protection, and unauthorized access. Data breaches, hacking attempts, or vulnerabilities in cloud infrastructure can potentially compromise sensitive information, leading to reputational damage and legal consequences. Strong security measures, such as encryption, access controls, and regular audits, must be implemented to mitigate these risks.

Regulatory Compliance: Cloud computing can present challenges in meeting regulatory compliance requirements, particularly in industries with strict data protection regulations. Organizations must ensure that their chosen cloud service providers adhere to relevant industry standards and compliance frameworks. They need to address data residency, privacy, and security concerns to comply with regulations governing data storage, transfer, and processing.

Service Reliability and Availability: Organizations relying on cloud services are dependent on the reliability and availability of their cloud service providers. Service disruptions, downtime, or outages experienced by cloud providers can impact business operations and lead to productivity losses. Robust service level agreements (SLAs) and business continuity plans should be in place to mitigate the risk of service interruptions and ensure appropriate backup and recovery mechanisms.

Vendor Lock-in: Cloud computing can result in vendor lock-in, making it challenging to switch between cloud service providers or migrate applications and data back to an on-premises environment. Migrating to a different cloud provider or returning to an in-house infrastructure may involve significant costs, technical complexities, and potential data transfer issues. Organizations should carefully consider the portability of their applications and data when selecting a cloud service provider to minimize vendor lock-in risks.

Data Loss and Recovery: While cloud service providers offer backup and disaster recovery capabilities, organizations should still have a comprehensive understanding of the provider's backup processes and data recovery procedures. Inadequate backup measures, human errors, or system failures can lead to data loss. Organizations must ensure they have appropriate backup strategies in place, including regular data backups, to mitigate the risk of permanent data loss.

Adoption Strategies of Cloud Computing

Evaluate Business Needs and Goals: Before adopting cloud computing, organizations should conduct a thorough assessment of their business needs, objectives, and IT requirements. This evaluation will help determine the suitability of cloud computing for their specific use cases and identify areas where cloud services can bring the most value. Understanding business priorities will guide decision-making throughout the adoption process.

Identify Cloud Service Models and Deployment Options: Organizations should carefully evaluate the various cloud service models (IaaS, PaaS, SaaS) and deployment options (public, private, hybrid, multi-cloud) to align with their specific requirements. Assessing the advantages and limitations of each model and deployment option will aid in selecting the most suitable approach for their business needs.

Choose a Reliable Cloud Service Provider: Selecting a reputable and reliable cloud service provider is crucial for successful cloud adoption. Organizations should consider factors such as provider reputation, service reliability, performance guarantees, data security measures, compliance certifications, and customer support. Evaluating these factors will help ensure a trustworthy partnership with the chosen provider.

Develop a Cloud Migration Strategy: Organizations should develop a well-defined cloud migration strategy that outlines the process of transitioning their applications, data, and infrastructure to the cloud. This strategy should include a comprehensive assessment of the existing IT landscape, identification of migration priorities, data classification, migration techniques, and a timeline for the migration process. Collaboration with internal stakeholders and cloud service provider expertise can assist in smooth and efficient migration.

Conclusion

Cloud computing has emerged as a transformative technology that offers organizations a wide range of benefits, but it also introduces certain risks and challenges. This journal article has explored the benefits, risks, and adoption strategies associated with cloud computing, providing valuable insights for organizations considering its implementation. The benefits of cloud computing include scalability, cost optimization, enhanced accessibility and collaboration, flexibility for innovation, enhanced security and reliability, and streamlined IT operations. These advantages enable organizations to optimize resource utilization, drive innovation, improve productivity, and achieve strategic goals. However, organizations must be aware of the risks involved in cloud

However, organizations must be aware of the risks involved in cloud computing, such as data security and privacy concerns, regulatory compliance challenges, service reliability and availability issues, vendor lock-in, data loss and recovery, and the lack of control and transparency. These risks highlight the importance of implementing robust security measures, ensuring compliance with regulations, establishing contingency plans, and carefully selecting cloud service providers.

To adopt cloud computing successfully, organizations should follow key strategies. These include evaluating business needs and goals, identifying the

appropriate cloud service models and deployment options, choosing a reliable cloud service provider, developing a cloud migration strategy, addressing data security and compliance requirements, implementing cloud cost management strategies, fostering a cloud-centric culture, and continuously monitoring and optimizing cloud resources.

Computing, such as data security and privacy concerns, regulatory compliance challenges, service reliability and availability issues, vendor lock-in, data loss and recovery, and the lack of control and transparency. These risks highlight the importance of implementing robust security measures, ensuring compliance with regulations, establishing contingency plans, and carefully selecting cloud service providers. To adopt cloud computing successfully, organizations should follow key strategies. Abstract

Blockchain is a relatively new technology for managing electronic data that has the potential to support transparency and accountability. A blockchain is a ledger of transactions where an identical copy of the ledger is visible to all the members of a computer network.

Blockchain is best suited to transactions with a lightweight digital footprint where transparency and immutability are an advantage. In the health sector, blockchains may be particularly useful for identity verification; medical and pharmaceutical supply chain management; and managing dynamic patient consent and data sharing and access permissions.

Blockchain-enabled tools are emerging to combat the COVID-19 pandemic, such as an identity management system in support of contact tracing in South Korea and a system to support sharing data and software code for research purposes. Blockchain has also been used or proposed for supply chain management for medications, medical supplies and for a future vaccine.

Hype surrounds the potential of blockchain technology in the health sector and its usefulness can be overstated. Most published research on the use of blockchain in the health sector presents theoretical frameworks, architectures, or models with few technical details. There is seldom a prototype or pilot implementation to learn from. Deployment of blockchain technology in health at a national scale is rare.

To meet information needs and policy goals, blockchain should be deployed where it is best suited and in combination with other technologies within a well-governed health information system.

Importantly, Blockchain is ill-suited to storing high-volume data due to the computational and capacity constraints of replicating the blockchain across every network participant (node). Storing large records on the blockchain, such as full electronic medical records or genetic data records, would be inefficient and costly. It is also difficult to query data within a blockchain, limiting clinical, statistical and research uses of data.

Blockchain is a Major Change from Traditional Approaches to Data Management

In a traditional database, the data are held in a single, central server (or server network) with a centralised database administrator. In contrast, blockchain is an approach to managing data where they are appended on an electronic ledger that is distributed across a peer-to-peer network with no central administration of the data

Centralised Versus a Distributed, Peer-To-Peer Network

In a blockchain, data such as a sales transaction record or a medical record are stored in blocks. When the data to complete a block have been entered, the block is added to the chain of previous blocks and a new block is created for the next data entry. Blockchains are decentralised and can have an unlimited number of participants in a network, such as a global network of vendors and purchasers of medical equipment. All participants in a blockchain have a full copy of the blockchain, which is continually updated and synchronised as new blocks are added. A node is a computer/device that stores or provides access to a copy of the blockchain. All the records in a blockchain are visible to all the participants in the blockchain network.

Blockchain Fits Situations where Transparency and Immutability of the Data are Needed

Blockchain is best suited to recording transactions with a lightweight digital footprint where transparency and immutability are an advantage. In other words, it is best suited to situations where there is less trust among participants in a network and where the size of data blocks is relatively small. Situations in health care where blockchain may be particularly useful include identity verification of patients, providers or suppliers; supply chain management; and management of dynamic patient consent to data uses. Blockchain is, however, ill-suited to storing high-volume data due to the computational and capacity constraints of replicating the blockchain across every network participant (node). Storing large records on the blockchain, such as full electronic medical records or genetic data records, would be inefficient and costly.

Personal health data are sensitive and subject to legislations protecting data privacy in OECD countries. Storing them 'on chain' and thus, by definition, visible to

all other network participants would be a high risk to data privacy, even if records were de-identified.¹ Even storing metadata about personal health data (data about data) on chain, while technically feasible, raises data privacy concerns because of the potential for indirectly disclosing patient identities and because the data cannot be erase

The visibility of the data in a blockchain risks contravening data privacy principles of data minimisation and use limitation (OECD, 2013). Compliance may be addressed if the blockchain is private and permissioned, which is where all the blockchain network nodes are known to one another and nodes must be authorised to view and add to the blockchain. Further, some network nodes may be approved access to only a portion of the ledger.

The distributed ledger makes it difficult for data subjects, such as patients or providers, to exercise rights that are related to the behaviour of the data controller because there is no single data controller, such as one organisation that is the custodian of the data, but rather network nodes that each hold a copy of the data. In the EU Data Protection Regulation, rights related to the behaviour of a data controller include the right to access your personal data, to correct them, to be informed about the processing of them, to object to processing of them and to have them erased. Further, the 'append only' aspect of blockchain that is the inability to change or erase data from the chain, is incompatible with the EU Data Protection Regulation right to erasure (Panel for the Future of Science and Technology, 2019) and has the potential to conflict with privacy legislations in other jurisdictions.

A related limitation is that, unlike conventional databases, distributed ledgers are difficult to search for specific terms or information. This limits their utility as information repositories for clinical as well as research purposes. User interfaces are still quite rudimentary and in the early phases of development (Vazirani, 2019) and this limits deploying blockchain-enabled ledgers at scale. Given that blockchain is a nascent technology, technological fixes may still emerge as the technology begins to be applied more regularly and across a range of sectors.

Blockchain Applications in the Health Sector are Limited

Despite some growth in published research on the uses of blockchain in the health sector, the state of play is still immature. Most research presents novel blockchain frameworks, architectures or models but technical details about the blockchain elements used are rarely provided and there is seldom any prototype or pilot implementation to learn from. Deployment of blockchain technology in health at a national scale is rare. There are examples from some countries, such as Estonia and Malta, of how blockchain technologies offer useful features such as data security protection and management of patient consent. The most promising applications of

blockchain in the health care sector are for identity management, dynamic patient consent, and management of supply chains for medical supplies and pharmaceuticals, as discussed below.

Most Research Papers on Blockchain in Health Care Describe Proposals, Not Solutions

Blockchain for Management of Patient Consent and Data Access Permissions

Blockchain can enable a transparent, auditable way for individuals, using their unique credentials and encryption key, to allow other parties to access their personal health data. This includes granting authority for health professionals, service providers and other relevant actors (e.g. researchers and social care providers) to access their medical records and other information for the purposes of direct health care delivery or to permit research, statistical or other secondary uses of their data. Given that electronic data can be used and re-used ad infinitum, and new research questions and purposes for data use continually emerge, the incremental or 'dynamic' consent enabled by blockchain provides a highly useful alternative to 'blanket or one-time-only' consent models. If an individual decides to change their terms of permission or consent, the changes can be added as a new block that overrides the previous instructions on the chain.

The Malta biobank is using a blockchain technology called Dwarna to manage dynamic consent of individuals to the usage of their bio specimens in research studies (Mamo N, 2019). The Dwarna web portal stores individuals' consent in a blockchain to create a permanent/immutable record. It increases trust in donating samples to the biobank by allowing individuals to have control over which studies they will participate in and allowing them to withdraw consent and to request that bio specimens be destroyed. MedRec is a blockchain-enabled system from the

Massachusetts Institute of Technology's media lab that associates a medical record with viewing permissions and data retrieval instructions for external databases (MedRec, 2020). It uses blockchain 'smart contracts' to record patient-provider interactions. Once a provider creates a record, it is verified, and the patient authorizes its viewing permissions. The party receiving new information receives an automated notification, and an encrypted pointer to the new medical record. Permissions are stored on the chain. This system allows patients to access and control their data. So far, it has been successful with medications, blood tests, vaccination histories, and other therapeutic interventions

A trustworthy record of data ownership is the goal of RadBit, which allows patients to keep possession of their medical images along with an immutable chain of custody (Nichol, 2017). Temporary keys ("tokens") can be created by users of the blockchain and passed on to health care providers and insurance companies, providing them temporary access. The token is independent of the data, containing only authorization commands, and is verified and validated by adding them to the chain, triggering the dispatch of required reports. Potential ways to improve the integrity are to use blind signatures, which reinforce protection from tampering as well as confirming the sender's and viewer's identities, or to use signatures from multiple authorities.

Blockchain technologies for patient consent and permissions for data sharing and access are being deployed to improve recruitment and retention as well as patient and participant empowerment in biomedical research (Dubovitskaya A, 2019). Two notable blockchain-backed efforts in the pharmaceutical ecosystem are the Innovative Medicines Initiative (IMI) Blockchain Enabled Healthcare (IMI 2018) Project and the Pharmaceutical Users Software Exchange (PhUSE) Blockchain Project.

Blockchains could be used as a secure way to control the flow of personal data in the recruitment of participants to clinical trials (Angeletti F, 2017). A blockchain may protect the interests of both the individual, who can keep their data private until an agreement is reached, and the research team, which can trust that it is acquiring useful and authentic data.

A new blockchain application called Research Foundry has emerged to enable management of consent and permissions for the sharing of and access to health data, metadata, software code and other products connected with health research, including research related to the COVID-19 pandemic (Burstiq, 2020).

It aims to facilitate cross-border collaboration in a way that ensures participants remain in compliance with applicable data privacy law. In this solution, network nodes control what data they wish to make visible to other participants. For

example, metadata about a data repository may be shared with all participants while the health data repository remains private and not visible to the nodes on the blockchain. When there is an agreement to share all or part of a repository with other specific nodes then the sharing can be facilitated. The technology provider cannot access the private data repository without the explicit permission of the data owner.

Blockchain for Managing Medical and Pharmaceutical Supply Chains

The most common use of blockchain across industries is for managing product supply chains. In the health sector, block chains are beginning to be used to manage supply chains for medications, clinical supplies, blood products, and medical devices.

Applications of Blockchain in this Sphere Include the Following (Clauson KA, 2018)

- Product identification: a unique product identifier may be validated more easily and quickly (e.g. in case of product failure).
- Tracing: manufacturers, distributors or dispensers can use a distributed ledger that automatically verifies relevant information.
- Product verification: verifies the authenticity of a product and enables public and private actors to detect products suspected as counterfeit, unapproved, or dangerous.
- Notification and response: enable a secure system to notify regulatory authorities of non-compliant products or transactions.

Conclusion

Blockchain technology could transform the healthcare industry's IT infrastructure from centralized, isolated, and small-scale systems to distributed, decentralized and worldwide systems, which could dramatically improve the quality of care provided and eliminate costly administrative inefficiencies.

1. Fit-for-purpose. Blockchain is an enabling, general-purpose digital technology. It should be evaluated on its merits and applied where it is the best application for the problem at hand, after comparing it to alternative solutions.
2. Governance and regulatory alignment. Blockchain-based solutions have particular features that must be evaluated in terms of the compliance of the solution with laws, regulations and data governance frameworks.
3. Incremental integration. Blockchain-enabled solutions should be considered in relation to existing systems and technologies. Blockchain should complement and leverage existing systems and be tested incrementally in a controlled environment before large-scale implementation.

4. Education, awareness and user-based design. Blockchain requires a new way of thinking about data and information. Users of this technology, including patients and the public, must be educated regarding the features of this technology and the implications of its use for data ownership, access and privacy.

PSGR Krishnammal College for Women, Coimbatore

Abstract

Digital India is an initiative launched by the Government of India with the vision to empower the citizens, bridge the digital divide and transform the nation into a knowledge-based economy. This innovative program aims to promote the potential of technology and connectivity to create a digitally inclusive society, foster economic growth and enhance the government. The Digital India initiative encompasses a wide array of projects and policies, all aimed at utilizing the power of digital technology to bring about socio-economic change. One of the key pillars of this transformation is the establishment of a robust digital infrastructure, including high-speed internet connectivity, digital payment systems, and e-governance platforms. By promoting the adoption of digital technologies across sectors, Digital India seeks to enhance efficiency, transparency, and accessibility in the government services and public administration. This abstract examines the key objectives, strategies, and impact of the Digital India campaign, highlighting its role in driving socio-economic development and bridging the digital divide. For the government, businesses and the public, digital innovation is an opportunity to relate each other. In India 75% of the global digital talent has become the digital capabilities hub of the world. India is known as the powerhouse of software. The availability of electronic government services to citizens in India is comparatively low. This program is designed to ensure that the government services accessible to the poor and oppressed people through electronic means, hence, fastening the services rendered and improving the quality of life to even the lowest stratum of the society.

Keywords: E- Governance, Digital India, Connectivity, Digital Infrastructure Innovation, Digital Payment

Introduction

Digital India (Ministry of Electronics & Information Technology, Government of India, 2016) “The digital India programme is a flagship programme of the government of India with a vision to transform India into a digitally empowered society and knowledge economy”

Digital India attracted more than 4lakh crore investment and generated more than eighteen lakh job opportunists at its launch. Second highest import category in India is electronics goods in country. This fact is indigestible because India has

largest number of IT professional and very large MSME (Micro, small and Medium) scoter still it has not developed its capabilities to manufacture in this sector. Government has made the policy with a vision to make net zero import of this category. This aim will be achieved by Digital India: transforming India through technology and connectivity programme to boost manufacturing and increases domestic demand.

The three main focuses of the digital India program are improving digital infrastructure, providing services online, and promoting digital literacy. This action will significantly advance technology and provide the groundwork for plans to expand internet connectivity even to the most isolated rural areas of the nation. All government services, including those for managing a bank account, finances, safety and security, cyberspace, distant learning, etc., will now be supported by digital infrastructure.

Background

Digital India Program was launched by Prime Minister Narendra Modi on July1, 2015. In the inaugural speech of this program, he has mentioned his dream from digital India i.e., for driving innovation, knowledge is strength and empowers the people, access of information knows no barrier, government is open & governance is transparent, technology ensures the citizen government interface is incorruptible, governmental services are easy and efficiently available to citizens on mobile devices, government productivity engaged with people through the social media, quality education reaches the most inaccessible corners driven by digital learning, quality health care to remotest region powered by e health care, mobile enable emergency services ensures personal security, cyber security is integral part of national security, mobile & e-banking ensures financial inclusion, world looks to India for next big idea, etc.

Digital Technology and Connectivity

Developing a new technology strategy using digital technology in an existing business context help us to solve the problems. Human civilization has been going through digital evolutions since the beginning of time. In education, virtual learning environments and distance learning have opened up programmes to students to learn the concepts. Public services are also becoming more accessible and accountable through digital technology. Technological advancement helps the society to make our lives easier. Today Digital technologies control every aspect of our lifestyle from small to large thing, and we cannot do without it. Digitisation of the Indian economy has impacted our lives in various ways. Digital technology also positively impacts our culture's fundamental aspects, including health care, law

enforcement, art, education, mobility, and religion. In health care sector, the adoption of technology has led to better diagnosis and treatment of patients. It enables health practitioners to **store and retrieve data relating to a patient's health records.**

Growth of Technology

All around the world, technology is continuing to become a part of everyday life, and its capabilities are increased rapidly. There are over 600,000 new internet users each day, on average. Technology has changed major sectors over the past 20 years, including media, climate action and healthcare. That has only continued to increase as more and more data is added to the digital world. The technology sector is a huge investment opportunity for investors worldwide. Technology is associated with innovation and invention and it is now integrated into all other existing sectors like health, financial, real estate, or manufacturing. Innovative technology ideas can create a huge trend only to fade out quicker than it was expected.

Objectives

- High speed internet service provided to rural areas
- To make government services available to citizens of India electronically by online infrastructure improvement.
- To transform the whole country into digitally interested community and knowledge economy.
- To bring efficiency and transparency in governance using information technology and connectivity.

Technology's Role in Economic Development

Time is Money

Technology and connectivity can save the time it takes to produce a good or deliver a service, contributing to the overall profits of a business.

Efficiency

Technology and connectivity can contribute to the efficiency of a business's output rate, allowing for larger quantities of products to be moved or of services to be rendered.

Specialization

Technology and connectivity has led to an increase in the specialization of jobs within a business and contributing to the efficiency with which a business is able to run.

Research

Better technology has lead to further research into every sector of business and science, which can benefit from all sorts of technological advancements.

The Internet and International Trade

Information technology is the most important element in the success and growth of international trade and job market growth, allowing businesses to share information and conduct trade in less time.

Covid-19

During the pandemic has sparked the need for the digitalization of small and medium businesses. The COVID era is known for the rapid growth of digital business models that have also effective revenue flow. The employees have started working from home. Many businesses are affected on a large scale. Government approaches and to use digital communication channels to provide reliable information to the people. Online platform connects millions of students and workers to their schools and office from home during the spread of COVID-19.

Opportunities

Recognizing opportunities enabled by digital technology (DT) has become a competitive necessity in today's digital world. Digital technology can support innovation. Technology has been changing the ways by how production is conducted and how employment opportunities are distributed to the people. The ultimate goal of digital technology is to make life easier by applying scientific and engineering knowledge to solve every problem.

1. Social Connectivity

Digital technology makes it easy to stay in touch with friends, family, even if you are in another part of the world. You can express your thoughts and feelings through words, video, audio, and exchange other media. Through video conferencing we can interact lively with the person to whom we want to speak.

2. Automation

Digital technology is increasingly going machines smarter. The machines no longer need humans to operate them, freeing up workers from tasks for instances selling the products from manufacturer to retailer without an involvement of intermediary.

3. Learning Opportunities

Anybody with access to the internet instantly has access to a huge proportion of the world's knowledge over the web. Lessons and courses can now be delivered virtually online to students and employees. Most of the world's population and learn directly from sources, for example, if you are trying to register foreign events, or learning a new language. Digital technology can also be easier to use for people with disabilities and often give them regular access.

4. Communication Speeds

Internet speeds have developed since the early days. Ever faster broadband facilitates the transfer of large amounts of information across the web. Making use of internet it possible to gush video and audio in real-time, send large data files, and access data from virtually anywhere in the world.

5. Employment Jobs

People are more able to start up multiple jobs thereby opening up multiple streams of income for themselves and with interested group of people. The relative ease of digital publishing has opened up many self-employment opportunities for both the young and old generation people. Other job opportunities abound in the digital economy for software developers, web designers, writers, and telecom workers.

6. Entertainment

The entire entertainment industry and the way that people entertain themselves has been increased with the digital technology. People enjoy through social media or playing computer games. Traditional media like radio stations also developed and the television media industry use the technologies to compete in the emerging business world.

7. Warfare

Advances in technology mean that wars can increasingly be fought remotely, avoiding the risks associated with having soldiers physically present drones and missile technology are effectively used, and most machinery used in warfare is being gradually becoming increasingly automated.

Conclusion

In conclusion, the Digital India initiative is a visionary and transformative program that aims to harness the power of technology to drive economic growth, enhance governance, and improve the lives of citizens. Throughout this paper presentation, we have explored various aspects of Digital India, including its objectives, key components, opportunities, and role.

The initiative's multi-faceted approach has been successful in bridging the digital divide and empowering citizens, especially in rural and remote areas, by providing them with access to digital services and information. The rapid expansion of internet infrastructure, digital literacy programs, and the promotion of e-governance have significantly contributed to creating a digitally inclusive society.

ROLE OF TECHNOLOGY IN NEP 2020

Dr. P. Anitha

*Associate Professor and Head, PG Department of Commerce with Computer Applications
Nallamuthu Gounder Mahalingam College, Pollachi*

Ms. S. Rama Prabha

*II. M.Com (CA), PG Department of Commerce with Computer Applications
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

Practical learning is prioritized above theoretical learning in NEP 2020. No of their socioeconomic status, gender, or handicap, the new educational policy enables every student to receive a quality education. The employment of various learning methods and experiments by teachers is made possible through NEP 2020.

Keywords: NEP 2020, Technology, National Development.

Introduction

Realizing one's full potential, creating a just and fair society, and advancing global progress all depend on education. The secret to India's sustained rise and leadership on the international stage in terms of economic growth is to ensure that everyone has access to high-quality education. Social justice and equality, technological development, international cooperation, and cultural preservation.

National Education Policy 2020

Full human potential, the creation of a fair and just society, and the advancement of national development all depend on education. India's continuous rise depends on ensuring that everyone has access to high-quality education, and the country's education policy places special focus on helping each person realize their creative potential. It is founded on the idea that education must foster not only the development of cognitive abilities—both the "foundational capacities" of literacy and numeracy and "higher-order" cognitive abilities, such as critical thinking and problem solving—but also the development of social, ethical, and emotional abilities and dispositions.

The rich heritage of ancient and eternal Indian knowledge and thought has been a guiding light for this Policy. The pursuit of knowledge (Jnan), wisdom (Pragyaa), and truth (Satya) was always considered in Indian thought and philosophy as the highest human goal. The aim of education in ancient India was not just the acquisition of knowledge as preparation for life in this world, or life beyond

schooling, but for the complete realization and liberation of the self. World-class institutions of ancient India such as Takshashila, Nalanda, Vikramshila, Vallabhi, set the highest standards of multidisciplinary teaching and research and hosted scholars and students from across backgrounds and countries. The Indian education system produced great scholars such as Charaka, Susruta, Aryabhata, Varahamihira, Bhaskaracharya, Brahmagupta, Chanakya, Chakrapani Datta, Madhava, Panini, Patanjali, Nagarjuna, Gautama, Pingala, Sankardev, Maitreyi, Gargi and Thiruvalluvar, among numerous others, who made seminal contributions to world knowledge in diverse fields such as mathematics, astronomy, metallurgy, medical science and surgery, civil engineering, architecture, shipbuilding and navigation, yoga, fine arts, chess, and more. Indian culture and philosophy have had a strong influence on the world. These rich legacies to world heritage must not only be nurtured and preserved for posterity but also researched, enhanced, and put to new uses through our education system.

Features of National Education Policy 2020

1. Ensuring Universal Access at All Levels of schooling from pre-primary school to Grade 12;
2. Ensuring quality early childhood care and education for all children between 3-6 years;
3. New Curricular and Pedagogical Structure (5+3+3+4);
4. No hard separations between arts and sciences, between curricular and extra-curricular activities, between vocational and academic streams;
5. Establishing National Mission on Foundational Literacy and Numeracy;
6. Emphasis on promoting multilingualism and Indian languages; The medium of instruction until at least Grade 5, but preferably till Grade 8 and beyond, will be the home language/mother tongue/local language/regional language.
7. Assessment reforms - Board Exams on up to two occasions during any given school year, one main examination and one for improvement, if desired;
8. Setting up of a new National Assessment Centre, PARAKH (Performance Assessment, Review, and Analysis of Knowledge for Holistic Development);
9. Equitable and inclusive education - Special emphasis given on Socially and Economically Disadvantaged Groups (SEDGs);
10. A separate Gender Inclusion fund and Special Education Zones for disadvantaged regions and groups;
11. Robust and transparent processes for recruitment of teachers and merit based performance;
12. Ensuring availability of all resources through school complexes and clusters;

13. Setting up of State School Standards Authority (SSSA);
14. Exposure of vocational education in school and higher education system;
 - Increasing GER in higher education to 50%;
15. Holistic and Multidisciplinary Education with multiple entry/exit options;
 - NTA to offer Common Entrance Exam for Admission to HEIs;
 - Establishment of Academic Bank of Credit;
16. Setting up of Multidisciplinary Education and Research Universities (MERUs);
 - Setting up of National Research Foundation (NRF);
17. 'Light but Tight' regulation;
 - Single overarching umbrella body for promotion of higher education sector including teacher education and excluding medical and legal education- the Higher Education Commission of India (HECI)-with independent bodies for standard setting- the General Education Council; funding-Higher Education Grants Council (HEGC); accreditation- National Accreditation Council (NAC); and regulation- National Higher Education Regulatory Council (NHERC);
 - Expansion of open and distance learning to increase Gross Enrolment Ratio (GER).
 - Internationalization of Education
 - Professional Education will be an integral part of the higher education system. Stand-alone technical universities, health science universities, legal and agricultural universities, or institutions in these or other fields, will aim to become multi-disciplinary institutions.
 - Teacher Education - 4-year integrated stage-specific, subject- specific Bachelor of Education
 - Establishing a National Mission for Mentoring.
 - Creation of an autonomous body, the National Educational Technology Forum (NETF) to provide a platform for the free exchange of ideas on the use of technology to enhance learning, assessment, planning, administration. Appropriate integration of technology into all levels of education.
 - Achieving 100% youth and adult literacy.
 - Multiple mechanisms with checks and balances will combat and stop the commercialization of higher education.
 - All education institutions will be held to similar standards of audit and disclosure as a 'not for profit' entity.
 - The Centre and the States will work together to increase the public investment in Education sector to reach 6% of GDP at the earliest.

- Strengthening of the Central Advisory Board of Education to ensure coordination to bring overall focus on quality education.

Salient Features of NEP Related to Higher Education

The new NEP has been introduced with an aim to normalize changes in the system from school level to college/university level. Keeping in mind the developing scenario, education content henceforth, will focus on key-concepts, ideas, applications and problem-solving angles. The National Education Policy is expected to bring positive and long-lasting impact on the higher education system of the country. The fact that foreign universities will be allowed to open campuses in India is a commendable initiative by the government. This will help the students experience the global quality of education in their very own country. The policy of introducing multi-disciplinary institutes will lead to a renewed focus on every field such as arts, humanities and this form of education will help students to learn and grow holistically. Thus, students will be equipped with stronger knowledge base.

The introduction of single common entrance test is another positive step which will reduce the stress of multiple competitive exams and ease off the pressure of preparing for so many of them. It will also ensure a level playing ground for all student applicants going forward. Establishing Academic Bank of Credit (ABC) is definitely a robust idea to store the academic credits that students earn by taking courses from various recognized higher education institutions. A student can earn scores by completing a course and these will be credited to the ABC account. One can then transfer these credits if he/she decides to switch colleges.

If a student ever drops out for some reasons, these credits will remain intact which means he/she can come back years later and pick up from where the student had left. The new higher education regulatory structure will ensure that distinct administrative, accreditation, financing, and academic standard-setting roles are performed by separate, autonomous, and empowered bodies. These four structures will be established as four independent verticals within a single umbrella institution, India's Higher Education Commission (HECI). There are a lot of reforms and new developments which have been introduced by NEP in the higher education sector. Some of the salient features are:

Single Regulatory Body for Higher Education

The NEP aims to establish Higher Education Commission of India which will be the single regulatory body except for legal and medical education.

Multiple Entry and Exit Programme

There will be multiple entry and exit options for those who wish to leave the course in the middle. Their credits will be transferred through Academic Bank of Credits.

Tech- Based Option for Adult Learning Through Apps, TV Channels

Quality technology-based options for adult learning such as apps, online courses/modules, satellite-based TV channels, online books, and ICT-equipped libraries and Adult Education Centres, etc. will be developed.

E-courses to be Available in Regional Languages

Technology will be part of education planning, teaching, learning, assessment, teacher, school, and student training. The e-content to be available in regional languages, starting with 8 major languages – Kannada, Odia, Bengali among others to join the e-courses available in Hindi and english.

Foreign Universities to Set-Up Campuses in India

World's top 100 foreign universities will be facilitated to operate in India through a new law. According to the HRD Ministry document, "such (foreign) universities will be given special dispensation regarding regulatory, governance, and content norms on par with other autonomous institutions of India."

Common Entrance Exam for All Colleges

The common Entrance exam for all higher education institutes to be held by National Testing Agency (NTA). The exam will be optional.

A Higher Education Council of India (HECI) will be set up to regulate higher education. The council's goal will be to increase gross enrollment ratio. The HECI will have 4 verticals:

- a) National Higher Education Regulatory Council (NHERC), to regulate higher education, including teacher education, while excluding medical and legal education.
- b) National Accreditation Council (NAC), a "meta-accrediting body".
- c) Higher Education Grants Council (HEGC), for funding and financing of universities and colleges. This will replace the existing National Council for Teacher Education, All India Council for Technical Education and the University Grants Commission.
- d) General Education Council (GEC), to frame "graduate attributes", namely the learning outcomes expected. It will also be responsible in framing a National

Higher Education Qualification Framework (NHEQF). The National Council for Teacher Education will come under the GEC, as a professional standard setting body (PSSB).

Detailed Analysis of Impact of NEP on Higher Education

Regulatory System of Higher Education

A significant change in NEP 2020 is the proposal to set up the Higher Education Commission of India (HECI), as an umbrella body for higher education, excluding medical and legal education. This will usually bring out a question that what will happen to the present UGC and AICTE? HECI is aiming at reforming the higher education sector; the Bill will separate the Academic and Funding aspects of the sector. According to the new Bill, HECI will not have any financial powers. The funding processes which were handled by the University Grants Commission (UGC) will be taken care by the Ministry of Education, previously known as the Ministry of Human Resource Development (MHRD). This change however is expected to clear the regulatory mess in India's Higher Education system. HECI is expected to have four independent verticals - National Higher Education Regulatory Council (NHERC) for regulation, General Education Council (GEC) for standard-setting, Higher Education Grants Council (HEGC) for funding, and National Accreditation Council (NAC) for accreditation. To have uniformity in education standards, a single umbrella body was always a requirement and this has been a vision of numerous educationists. This is considered as the right step in streamlining education policy. However, to ensure quality of higher education, institutes must be measured based on relevant parameters like research, industry linkages, placements and academic excellence, etc. If the HECI can manage this, the benefits to its biggest stakeholder, the youth of India, might be significant.

Graded Accreditation and Graded Autonomy

The concept of "empowerment and autonomy to innovate" is one of the key features in NEP 2020 which supports a "phasing out" strategy from Affiliated Colleges to Autonomous Institutions. The increased flexibility offered to autonomous institutions also gives hope in curriculum enrichment. It also says that with appropriate accreditations, Autonomous degree-granting Colleges could evolve into Research-intensive or Teaching-intensive Universities, if they so aspire. The announcement of setting up Multidisciplinary Education and Research Universities (MERUs) in the country gives more hope. These institutions will be at par with the existing IITs and IIMs and will aim to showcase multidisciplinary education for the Indian students. Another important change the NEP 2020 suggests that the National Testing Agency will serve as a premier, expert, autonomous testing organization to

conduct entrance examinations for undergraduate and graduate admissions and fellowships in Higher Education Institutions. The high quality, range, and flexibility of the NTA testing services will enable most universities to use these common entrance exams - rather than having hundreds of universities each devising their own entrance exams - thereby drastically reducing the burden on students, universities and colleges, and the entire education system. It will be left up to individual universities and colleges to use NTA assessments for their admissions. It also surely helps the students to easily transfer their degrees and credits to universities abroad.

Conclusion

Education gives us self respect and makes us respected in the society. Education is the light. It takes us out of darkness and shows us right path and provide us opportunities to brighten our future. Education helps an individual to earn better opportunities in life and helps open the doors of success.

INVESTIGATING THE CONSEQUENCES OF GST FILING: AN ANALYTICAL STUDY ON SMALL SCALE INDUSTRY IN COIMBATORE

Dr. M. RajaRajeswari

*Assistant Professor, Department of Commerce
PSGR Krishnammal College for Women, Coimbatore*

Ms. Gayathri. C

*Ph.D. Research Scholar, Department of Commerce
PSGR Krishnammal College for Women, Coimbatore*

Abstract

Goods and Services Tax (GST) was implemented in India in 2017. It is a kind of indirect tax that is comprehensive and unified throughout the country. GST is levied on the supply of goods and services in India and it is a kind of tax based on consumption of goods and services. Multiple indirect taxes such as excise duty, service tax, value-added tax, etc., have been replaced by GST. GST has brought a significant impact on the Indian Economy. The impact of GST has always been a debating factor therefore, our main objective of the study is to understand the perception of small-scale entrepreneurs on GST filing procedures. The study has been based on primary data collected from 120 small-scale industries located in Coimbatore, India. Primary data has been analyzed by using statistical tools such as simple percentage analysis, and T-test. Based on our analysis small-scale entrepreneurs feel that GST is a fair and satisfactory tax system. It is also concluded that small-scale businesses feel that the tax burden is higher and many entrepreneurs do not have enough awareness about filing GST, they require the assistance of chartered accountants or others to file GST.

Keywords: GST, Small-scale industries, GST Filing, Consequences.

Introduction

Goods and Services Tax is referred to as GST. It is an indirect tax imposed in India on the provision of goods and services. Multiple federal and state taxes, including excise duty, service tax, value-added tax (VAT), and others were replaced by the GST when it was introduced on July 1, 2017. By establishing a uniform tax structure throughout the nation, the GST was implemented with the intention of streamlining the taxing system. It adheres to the "One Nation, One Tax" tenet, simplifying the tax collection procedure and lowering tax barriers across states (Wikipedia). Under the GST regime, different goods and services are categorized into various tax slabs, namely 0%, 5%, 12%, 18%, and 28%, with certain items attracting lower rates or exemptions (Cleartax). There are various forms such as GSTR-1, GSTR-3B, GSTR-2A, GSTR-4, GSTR-9, and GSTR-10. In addition to these forms, there are various other forms such as GSTR-5 for non-resident taxpayers,

GSTR-6 for input service distributors, GSTR-7 for tax deducted at source (TDS), and GSTR-8 for tax collected at source (TCS). To avoid penalties and interest fees, it is crucial to submit these documents and returns by the deadlines. Taxpayers must submit these forms and returns using the GST portal in order to complete the entire GST filing procedure in India, which is totally online.

GST filing refers to the process of reporting and submitting the necessary GST returns to the tax authorities. Businesses that have registered for GST must submit regular reports that include information on their sales, purchases, and taxes paid. As a result, the tax system is transparent and the government can monitor tax compliance and revenue collection. GST filing has implications for businesses, including small-scale industries, as it affects their compliance requirements, documentation, and financial management. The impact of GST filing on small-scale industries can vary, depending on factors such as their scale of operations, industry sector, and ability to adapt to the new tax regime.

Small-scale businesses are essential to the growth of a region's economy since they provide jobs and foster innovation and growth in general. The relevance of these businesses in the context of the Coimbatore area is very high, which is renowned for its thriving industrial sector made up of a variety of small-scale companies. The Goods and Services Tax (GST) was a fundamental adjustment to the Indian taxation system. However, its impact on small-scale industries, particularly in the Coimbatore district, remains relatively understudied. Therefore, the study attempts to close this research gap and provide valuable insights into the consequences of GST filing on small-scale industries in the district.

The research also offers useful information to stakeholders interested in promoting the growth and development of small-scale industries, such as governments, industry associations, and other stakeholders. The study's conclusions also aid in the creation of efficient policies and initiatives that will increase the resiliency and sustainability of these businesses in the Coimbatore district. Thus it is critical to investigate how GST filing affects small-scale industries in order to comprehend the difficulties and opportunities they face, evaluate how well the GST system fosters their expansion, and spot potential areas for improvement that would reduce the burden of compliance and boost competitiveness.

Statement of the Problem

Despite the implementation of Goods and Services Tax (GST) in India, there is a lack of comprehensive understanding regarding the specific effects of GST filing on small-scale industries operating within the Coimbatore district. The problem lies in the limited research conducted on this topic, which hinders the identification of the challenges and opportunities faced by these enterprises in complying with GST

regulations, understanding the financial implications, and assessing the overall impact on their business operations and competitiveness. Therefore, there is a need to investigate and address the gap in knowledge regarding the consequences of GST filing on small-scale industries within Coimbatore district, in order to provide valuable insights for policymakers and stakeholders in formulating effective strategies for their sustainable growth and development.

Objective of the Study

The study mainly focuses on the following objective

- To identify the demographic factors of the respondents.
- To understand the perception of small-scale entrepreneurs on GST filing procedures.

Research Methodology

The study takes a mixed-methods approach. This approach will allow for a comprehensive understanding of the topic by combining quantitative and qualitative data collection and analysis. Both primary and secondary data will be used in the study.

Primary data will be collected through surveys and interviews with small-scale industry owners, managers, and relevant stakeholders. The survey will include structured questions to gather quantitative data from 120 respondents in the city of Coimbatore, on variables such as compliance costs, financial performance, and competitiveness. Interviews will provide qualitative insights into the challenges faced by small-scale industries in relation to GST filing. Secondary data sources, including government reports, industry publications, and existing studies, will be utilized to supplement the primary data and provide additional context for the research. Using software tools such as SPSS, and Excel, the research makes analysis of the data collected using various tools such as Percentage analysis, Descriptive statistics, as well as t-tests.

Review of Literature

Ankita Dutta (2020) conducted a research titled 'The Impact of GST on the Micro Small and Medium Enterprises in Jharkhand'. The principle objective of this research is to identify the impact of GST on the MSME in Jharkhand. This article states that Jharkhand stands 12th in the contribution of MSMEs in GDP, and also it has a large Industrial base. The article also directs the four different rates, they are 5%, 12%, 18%, and 28%.

Sharma and Saini (2019) conducted a study on 'Awareness and impact of GST among small business owners'. The study finds that there is a huge need for CA

consultancy and detected that E-way bills will be beneficial for business. This study concludes that even though they are aware of the GST, these small businessmen were not that satisfied with the rates. The study also strongly advocates that GST will help to improve the pace of the economy.

Sharma (2017) has done research on the title 'A Study of Impact of GST on Micro, Small and Medium enterprise'. The study investigated the importance of small business microeconomic growth, and especially job creation, the high administrative and compliance costs of including a large number of small entities in the tax system. The study found that there is a high level of tax evasion because of high compliance costs for small industries.

Data Analysis and Interpretation

Table 1 Demographic Analysis

S. No	Factors	Description	No	Percent
1.	Gender	Female	47	39.2
		Male	73	60.8
Total			120	100
2.	Age	18 - 30 years	38	31.7
		31 - 50 years	57	47.5
		Above 50 years	25	20.8
Total			120	100
3.	No. of employees of the firm	Less than 10	10	8.3
		11 - 15	23	19.2
		16 - 20	34	28.3
		21 - 25	15	12.5
		Above 25	38	31.7
		Total	120	100

(Source Primary Data)

Interpretation

Table 1 depicts that there are 47 female respondents, which accounts for 39.2% of the total, while there are 73 male respondents, representing 60.8% of the total. This indicates that there is a higher proportion of male respondents compared to female respondents in the dataset. Considering the age factor, the largest group consists of respondents aged between 31 and 50 years, with 57 individuals, comprising 47.5% of the total. The second-largest age group is between 18 and 30 years, with 38 respondents, representing 31.7% of the total. The smallest age group is above 50 years, with 25 respondents, accounting for 20.8% of the total. the majority of

respondents (28.3%) are associated with firms having 16 to 20 employees, with 34 individuals. The next most common category is firms with more than 25 employees, accounting for 31.7% of the total, represented by 38 respondents. The categories of firms with less than 10, 11 to 15, and 21 to 25 employees make up 8.3%, 19.2%, and 12.5% of the total, respectively.

Table 2: Annual Indirect tax

Year	Less than 50 Lakhs (in %)	50 lakhs - 1 crore (in %)	1 crore - 10 crore (in %)	10 crore - 25 crore	Total (%)
2017-2018	29.5	24.7	35.5	10.3	100.0
2018-2019	36.7	22.5	38.3	2.5	100.0
2019-2020	36.7	14.1	47.5	1.7	100.0
2020-2021	26.7	24.2	43.3	5.8	100.0
2021-2022	29.2	24.5	44.2	2.1	100.0

(Source: Primary data)

Interpretation

In the financial year 2017-2018, 29.5% of businesses had an annual indirect tax of lesser than 50 Lakhs, while 24.7% had a turnover between 50 Lakhs and 1 crore. The category of businesses with an annual indirect tax between 1 crore and 10 crore accounted for 35.5%, and those between 10 crore and 25 crore represented 10.3% of the total.

Moving to the financial year 2018-2019, the proportion of businesses with an annual indirect tax of lesser than 50 Lakhs increased to 36.7%, while the percentage for the 50 lakhs to 1 crore category decreased to 22.5%. The category of businesses with an annual indirect tax between 1 crore and 10 crore grew to 38.3%, and the group with an annual indirect tax between 10 crore and 25 crore decreased to 2.5%.

In the subsequent financial year 2019-2020, the percentage of businesses with an annual indirect tax of lesser than 50 Lakhs remained at 36.7%, but the percentage for the 50 lakhs to 1 crore category decreased to 14.1%. The category of businesses with an annual indirect tax between 1 crore and 10 crore saw a significant increase to 47.5%, while the group with an annual indirect tax between 10 crore and 25 crore decreased to 1.7%.

For the financial year 2020-2021, the proportion of businesses with an annual indirect tax of lesser than 50 Lakhs decreased to 26.7%, while the percentage for the 50 lakhs to 1 crore category increased to 24.2%. The category of businesses with a turnover between 1 crore and 10 crore saw a further increase to 43.3%, and the group with an annual indirect tax between 10 crore and 25 crore increased to 5.8%.

In the most recent financial year 2021-2022, the percentage of businesses with an annual indirect tax of lesser than 50 Lakhs increased to 29.2%, while the percentage for the 50 lakhs to 1 crore category remained stable at 24.5%. The category of businesses with an annual indirect tax between 1 crore and 10 crore increased to 44.2%, and the group with an annual indirect tax between 10 crore and 25 crore decreased to 2.1%.

Table 3 Annual Gross Profit

Year	Less than 50 Lakhs (in %)	50 lakhs - 1 crore (in %)	1 crore - 10 crore (in %)	10 crore - 25 crore	Total (%)
2017-2018	30.0	23.3	34.2	12.5	100.0
2018-2019	30.8	18.3	47.5	3.3	100.0
2019-2020	32.5	29.5	34.2	3.8	100.0
2020-2021	32.5	29.8	34.2	3.5	100.0
2021-2022	33.3	27.5	36.7	2.5	100.0

(Source: Primary data)

Interpretation

In the financial year 2017-2018, 30.0% of businesses had an annual gross profit of less than 50 Lakhs, while 23.3% had a gross profit between 50 Lakhs and 1 crore. The category of businesses with a gross profit between 1 crore and 10 crore accounted for 34.2%, and those with a gross profit between 10 crore and 25 crore represented 12.5% of the total.

Moving to the financial year 2018-2019, the proportion of businesses with a gross profit of less than 50 Lakhs increased slightly to 30.8%, while the percentage for the 50 lakhs to 1 crore category decreased to 18.3%. The category of businesses with a gross profit between 1 crore and 10 crore saw a significant increase to 47.5%, and the group with a gross profit between 10 crore and 25 crore decreased to 3.3%.

In the subsequent financial year 2019-2020, the percentage of businesses with a gross profit of less than 50 Lakhs increased to 32.5%, while the percentage for the 50 lakhs to 1 crore category also increased to 29.5%. The category of businesses with a gross profit between 1 crore and 10 crore remained at 34.2%, and the group with a gross profit between 10 crore and 25 crore increased to 3.8%.

For the financial year 2020-2021, the proportion of businesses with a gross profit of less than 50 Lakhs remained at 32.5%, while the percentage for the 50 lakhs to 1 crore category increased slightly to 29.8%. The category of businesses with a gross profit between 1 crore and 10 crore remained stable at 34.2%, and the group with a gross profit between 10 crore and 25 crore decreased slightly to 3.5%.

In the most recent financial year 2021-2022, the percentage of businesses with a gross profit of less than 50 Lakhs increased to 33.3%, while the percentage for the 50 lakhs to 1 crore category decreased to 27.5%. The category of businesses with a gross profit between 1 crore and 10 crore increased to 36.7%, and the group with a gross profit between 10 crore and 25 crore decreased to 2.5%.

Table 4: Level of Agreeability of the Respondents

Factors	Strongly Agree (%)	Agree (%)	Neutral (%)	Disagree (%)	Strongly Disagree (%)
GST legislation is a fair tax system and satisfactory.	31.7	30.8	18.3	13.3	5.8
The present system is more beneficial / easier than the early tax system	8.3	10.0	42.5	25.8	13.3
GST helped in reducing the tax cascading effect.	4.2	5.8	19.2	47.5	23.3
GST eliminates multiple taxes.	34.2	14.2	16.7	25.0	10.0
GST made tax payment simpler	0.8	5.8	15.8	40.8	36.7
Necessary amendments are introduced in a timely manner in the legislation	0.8	5.8	18.3	35.8	39.2
The government is taking corrective measures for the flexibility in the current taxation system	0.8	4.2	27.5	40.8	26.7
The threshold limit for registration and exemption under GST needs to be revised	50.8	22.5	12.5	7.5	6.7

The introduction of GST made evasion of indirect Taxes more difficult.	48.3	30.8	13.3	5.0	2.5
GST saves time and is cost-effective.	0.8	4.2	25.0	38.3	31.7
GST made starting a business easy.	2.5	7.5	15.8	43.3	30.8

(Source: Primary Data)

Interpretation

From Table 4 It is interpreted that 30.8 percent of the respondents strongly agree that GST legislation is a fair tax system. 42.5 percent of the respondents are neutral that the present system is beneficial /easier than the early tax system. 47.5 percent of the respondents disagree that GST helped in reducing the tax cascading effect. 34.2 percent of the respondents strongly agree that GST eliminates multiple taxes. 40.8 percent of the respondents disagree that GST made taxpayment simpler. 39.2 percent of the respondents strongly disagree that Necessary amendments are introduced in a timely manner in the legislation. 40.8 percent of the respondents disagree that the government is taking corrective measures for flexibility in the current taxation system. 50.8 percent of the respondents strongly agree that the threshold limit for registration and exemption under GST needs to be revised. 37.5 percent of the respondents disagree that GST registration procedures are user-friendly and easy. 38.3 percent of the respondents disagree that the GST filing procedure is easy and useful. 35.0 percent of the respondents disagree that the GSTN return filing portal & Refund process is simple. 48.3 percent of the respondents strongly agree that the introduction of GST made evasion of indirect taxes more difficult. 38.3 percent of the respondents disagree that GST saves time and is cost-effective. 43.3 percent of the respondents disagree that GST made starting a business easy. 40.0 percent of the respondents strongly disagree that the entire process of taxation becomes simpler.

Suggestions

- Enhance efforts to educate and communicate the benefits, fairness, and functioning of the GST system to the public. This can help address the neutral or negative perceptions and create a better understanding of the system's

impact.

- Continuously strive to simplify the GST procedures, particularly in areas where respondents express dissatisfaction. Improving the user-friendliness of registration, filing, and refund processes can alleviate concerns and enhance compliance.
- Policymakers should focus on introducing necessary amendments to the GST legislation in a timely manner.
- Consider revising the threshold limits for GST registration and exemption based on the feedback received.

Conclusion

The study provides valuable insights into the perceptions and opinions surrounding various aspects of the Goods and Services Tax (GST) system. The data reveals a diverse range of perspectives among respondents, highlighting both positive and negative sentiments toward the fairness, benefits, simplicity, and effectiveness of the GST system. It underscores the need for continuous efforts in communication, education, and simplification to address concerns and improve the user experience. Policymakers should focus on timely amendments, transparency, flexibility, and stakeholder engagement to ensure the GST system evolves in line with the changing needs of businesses and the economy. Additionally, supporting small businesses, revising threshold limits, and continuously evaluating the system's impact is vital for fostering a conducive environment for businesses and ensuring the successful implementation of the GST framework. By incorporating these suggestions, policymakers can work towards a more transparent, efficient, and widely accepted GST system that contributes to economic growth and benefits society as a whole.

IMPACT OF DIGITAL PAYMENT ON FINANCIAL INCLUSION IN INDIA

Ms. H. Aparna

Assistant Professor, Department of Commerce (Finance)
SNMV CAS, Coimbatore

Abstract

Financial inclusion is defined as the process of ensuring people are getting financial services and financial products when they required it. Financial inclusion includes access to financial products and services like bank accounts, insurance, remittance & payment services, Credit loans, etc. Now a day, banking industries are focused on the growth of financial inclusion. "Digital Payment" is a new banking technology introduced by the banking industries with the aim of providing financial services to its customers in an easy way. Banking industries are providing digital finance/ digital payment services to their customers. Digital payments make financial transactions easy with an electronic medium. It helps the users to do their transactions conveniently at any time anywhere with their mobile phone, computer, internet, or cards that are linked to their bank account. It creates a cashless economy that avoids handling cash in physical form. Google Pay, Paytm, and PhonePe are the most commonly used digital payment Apps. Digital payment supports financial inclusion, where individuals and businesses can access their financial products and services that fulfil their financial needs – transactions, payments, credit loans, and savings in a sustainable way. A bank account holder can make use of digital payment which leads to financial inclusion. The Digital payment system provides controlling customer personal finance, making financial decisions. The first step towards broader financial inclusion is being able to access to a transaction account and that allows people to deposit money, send and receive money.

Keywords: Financial Inclusion, Digital Finance, Digital Payment, Financial Products, Financial Services.

Introduction

This study is focused on how Digital payment systems create an impact on financial inclusion. G-20 and the world bank drive for the growth of financial inclusion in developing countries to reduce poverty levels in developing economies. The importance of digital payment and financial inclusion for the betterment of our people seeking the attention of the world because digital payment work for individuals, businesses, and the economy by ensuring financial inclusion. Digital payment and financial inclusion provide benefits to financial services users, Government, and the economy. In India, the Reserve Bank of India aims to ensure that the payment & money transaction system should be safe, efficient & accessible worldwide. This vision is to encourage and create a cashless society and ensure financial inclusion. With the introduction of digital payment, users can make their payments like electricity bills, recharging, money transfer, and various ticket

booking at anytime anywhere with a single click. This gives inclusive growth to financial inclusion. Financial inclusion is a process of ensuring people are getting financial services and financial products when they required them. With the introduction of the Digital Payment system, banking industries ensure that all their customers are getting financial services when they needed. Financial inclusion is targeted at giving sustainable financial services to the unbanked and underbanked groups. It promotes people to open a bank account and create strong and more sustainable economic growth and development. That's why many countries give priority to achieving financial inclusion.

Access to digital payment systems provides a wider range of financial services such as online banking, mobile banking, e-wallets, mobile wallets, credit and debit cards, etc. It provides easy and convenient financial transactions to customers. Even though the new technology seeking the attention of many people, some people are holding back from adopting the new system because of some kind of negative perception like security problems, poor networks, lack of user knowledge of technology and etc.

Objectives

The main purpose of the study is to know what impact is created by digital payment systems on financial inclusion

Research Methodology

The research study is totally theoretical in nature. Secondary sources and published articles were extensively used for the collection of data. Distinctively used sources were various web articles.

Data Collection

The research paper depends upon secondary sources of information. To prepare the research paper, the required data is extensively used, as it is theoretical in nature.

Growth of Digital Payment System and Financial Inclusion in India

In India's economy, the digital payments system makes positive changes in the financial transaction of the country. The demonetization policy in India in 2016 had a significant impact on the Indian economy, which accelerated the growth of the digital payment system in India. till demonetization only 10% of all transactions are done through digital payment methods, but after demonetization that number has grown to above 20%. this demonetization movement in India led to the promotion and adoption of digital payment systems. Digital Payment systems become important in India in recent years, as the country saw rapid growth in the adoption

of internet access and smartphones. This led to the usage of digital payment methods like UPI, mobile wallets, and card payments. Even though there are still many people who hold onto cash transactions. The government's initiatives for digital payment systems are a significant step towards achieving the goal of a cashless society. One of the major initiatives taken by the Indian government is the launch of a Unified Payments Interface (UPI), which provides real-time inter-bank transactions, and the Bharat Interface for Money (BHIM) app, which simplifies the process of making digital transactions.

There are many households in India that do not have access to financial services. They are not aware of banks and their functions. To make changes in this scenario, Financial Inclusion has emerged with the aim of offering banking and financial services to every individual in society without any discrimination. It is a transparent system by offering financial assistance without any unfair treatment or hidden transactional costs. Financial inclusion becomes easier with the help of a digital payment system. Digital payment systems ensure and help people to access their bank accounts and make transactions with a smartphone and internet access.

Significance Digital Payment and Financial Inclusion

- Digital payment platforms, and smartphone apps are important components that encourage financial inclusion in unbanked areas.
- They enable customers to make and receive payments, view and manage their finances.
- The benefits of digital financial inclusion include access to financial services, cheaper transactions, and personalized financial services.

Digital Payment Improving Financial Inclusion in India

- Reducing barriers to entry with lower-cost digital services:- Compared to traditional banking, digital banking services are cheaper to manufacture, distribute and support
- Providing specific client services that are easy to access and easy to use:- digital payments provide personalized service to meet the specific needs, preferences, and expectations of individual users.
- Reducing the risk of theft or loss:- Digital services offer a safe and secure alternative to holding cash, particularly for businesses that primarily engage with cash transactions.
- Open Banking and New Payments Models:- Evolving business models, regulatory policies, open banking, and new payment methods also have implications for financial inclusion.

Advantages of Digital Payment System

- **Instant and convenient mode of payment:** Unlike cash, money can be transferred to the beneficiary account using digital payment methods like BHIM-UPI and IMPS. Moreover, using the BHIM-UPI mode, one can effect a digital transaction via mobile phone using a mobile number or an easy-to-remember virtual payment address. It enabled access to multiple Bank accounts in a single mobile app, facilitating ease of payments.
- **Enhanced financial inclusion:** Digital payments offer anytime, anywhere access to accounts, thus making it easy for citizens to receive payments in their accounts and to also make payments using their phones. People who may have been deterred by the time, and traveling cost involved in physically accessing a bank outlet for transactions can now conveniently access the bank account digitally and get various benefits of being part of the formal banking system and becoming financially included. Recently launched UPI 123PAY enables feature phone users to make digital transactions through UPI in assisted voice mode, facilitating digital transactions and financial inclusion in rural areas.
- **Improved speed and timely delivery:** With the help of digital payment methods, transactions can be done quickly and within a reasonable time.
- **Bharat Bill Payment System:** Bharat Bill Payment System (BBPS) provides an easily accessible bill payment service to consumers via multiple channels like Internet banking, mobile banking, mobile apps, BHIM-UPI, etc.
- **Enhanced Credit Access:** it provides access to formal financial services, including credit. Banks and other lending institutions can utilize digital transaction histories to take cashflow-based lending decisions for both retail lending and lending to businesses, including small businesses that may face difficulty in getting credit in the absence of verifiable cashflows.
- **Safe and secure:** Digital payments across India are secure as multiple levels of authentication are required for making transactions.

Problems Faced by the Users

Users are facing some challenges in the digital payment system, these challenges will affect financial inclusion also.

- Poor internet connectivity
- Card data security
- Technological illiteracy
- Technical problems
- Limitations on amount and time
- Password threats

Conclusion

Digital payment systems create a big impact on financial inclusion. it makes people to access financial services easily irrespective of their boundaries. There are a number of initiatives taken by the government to increase digital payment, which also become the reason for the growth of financial inclusion. Unified Payments Interface (UPI), Bharat Interface for Money (BHIM) app, and various online payment apps like Gpay, PhonePe, and Paytm provide financial services to users. Compare to the traditional banking system, Digital payment platforms ensure that most people receive the banking services that they needed. The digital payment system provides specific client services, enables customers to make and receive payments, Enhance Credit Access, etc. Even though this digital financial inclusion has some drawbacks like Poor internet connectivity, Technological illiteracy, Technical problems, and Card data security. Poor connectivity issue is rectified by UPI 123PAY, which enables facilitating digital transactions and financial inclusion in rural areas. One of the major issues faced by users is technological illiteracy. By giving awareness and training to people on how to handle digital financial services is the remedy to remove this problem. Here it noted that, When compared to the traditional banking system, the digital payment system is the proper way to ensure financial inclusion.

DIGITAL SKILLS AND UPSKILLING: BRIDGING THE DIGITAL DIVIDE

Mr. R. Esakimuthu

Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore

Mr. D. Vishnu Varadhan

Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore

Abstract

In an increasingly interconnected world, digital skills have become essential for individuals and societies to thrive. However, the digital divide, which refers to the gap between those who have access to and proficiency in digital technologies and those who do not, remains a significant challenge. This essay explores the importance of digital skills in various aspects of life, including employment, education, and civic engagement. It highlights the consequences of the digital divide, particularly for marginalized communities. To bridge this gap and ensure equal opportunities for all, upskilling in digital skills is identified as a critical solution. The essay discusses the significance of upskilling programs provided through formal education, vocational training, and community-based initiatives. It emphasizes the role of governments, educational institutions, and private organizations in promoting accessible upskilling opportunities and addressing barriers to digital inclusion. The abstract concludes by underscoring the necessity of continuous upskilling initiatives and collaborative efforts to overcome the digital divide and create a more inclusive and equitable digital society.

Keywords: Digital skills, Upskilling, Bridging, Digital Divide and Technological Advancements.

Introduction

In the rapidly evolving era of technological advancements, digital skills have become an indispensable requirement for individuals and societies to thrive. These skills encompass the ability to navigate, utilize, and leverage digital technologies effectively. However, the existence of the digital divide poses a critical challenge, as it creates a gap between those who have access to and proficiency in digital technologies and those who do not. This divide has far-reaching socioeconomic implications, contributing to disparities in education, employment, and overall quality of life. The digital divide not only hinders individuals from fully participating in the digital economy and society but also perpetuates existing inequalities. Marginalized communities, including low-income individuals, rural populations, and older adults, are disproportionately affected, lacking the necessary resources and knowledge to harness the benefits of digital technologies. This exclusion denies them opportunities for economic growth, educational advancement, and social inclusion.

To address this pressing issue and foster digital inclusion, upskilling in digital skills has emerged as a crucial necessity. Upskilling refers to the process of acquiring new or improving existing skills to meet the demands of a rapidly changing technological landscape. By equipping individuals with the necessary digital competencies, upskilling initiatives have the potential to bridge the digital divide and ensure equal opportunities for all. The importance of digital skills cannot be overstated. In today's interconnected world, they are essential for effective communication, collaboration, and accessing information. Proficiency in digital tools and platforms enables individuals to navigate and make sense of the vast digital landscape, empowering them to engage with online communities, learn new subjects, and broaden their horizons.

Moreover, digital skills are closely tied to employability and job prospects. Many industries now require digital literacy as a fundamental requirement, as technology plays an increasingly prominent role in various job functions. Without adequate digital skills, individuals may face limited career opportunities and struggle to adapt to the evolving job market. Digital skills are not solely confined to technical abilities; they also foster critical thinking, problem-solving, and creativity. These skills enable individuals to adapt to technological changes, innovate, and contribute meaningfully to society. By nurturing digital literacy, individuals can become lifelong learners, continuously upgrading their skills and staying abreast of emerging technologies. To bridge the digital divide effectively, upskilling programs play a pivotal role. These programs can be implemented through various channels, including formal education, vocational training, and community-based initiatives. Governments, educational institutions, and private organizations must collaborate to provide accessible upskilling opportunities tailored to the diverse needs of individuals. By integrating digital skills into school curricula and adult education programs, early adoption and lifelong learning can be promoted, empowering individuals with the necessary tools for digital inclusion.

Partnerships between the public and private sectors are also crucial in addressing the digital divide. These partnerships can help provide affordable access to digital devices, internet connectivity, and digital literacy training. By tackling the barriers of affordability, accessibility, and digital literacy, a more equitable digital society can be fostered. However, bridging the digital divide requires sustained efforts to overcome various barriers. Affordability remains a significant concern, as access to digital devices and internet connectivity can be costly for marginalized communities. It is imperative to implement initiatives that provide affordable or subsidized options to ensure equitable access for all. Moreover, upskilling programs must be designed to cater to individuals with varying levels of digital literacy. Tailoring programs to

diverse needs and skill levels, while providing necessary support structures such as mentorship programs and technical assistance, can foster an inclusive and supportive learning environment. In conclusion, digital skills are essential for individuals and societies to thrive in the digital era. However, the digital divide presents significant challenges, perpetuating inequalities and limiting opportunities for marginalized communities. To bridge this divide and ensure equal access to digital technologies, upskilling in digital skills has emerged as a crucial necessity. By emphasizing the importance of digital skills, providing accessible upskilling opportunities, and addressing barriers, we can create a more inclusive and equitable digital society, where everyone has the opportunity to participate, succeed, and contribute to the digital economy and society at large.

Importance of Digital Skills

- a. In today's interconnected world, digital skills have become indispensable for communication, collaboration, and accessing information. The ability to navigate digital platforms and effectively use digital tools is essential for individuals to engage in various aspects of daily life. Digital skills empower individuals to participate fully in the digital economy and society, enabling them to communicate with others, collaborate on projects, and access a wealth of information and resources available online. Without these skills, individuals may face barriers in connecting with others, accessing opportunities, and staying informed in the rapidly evolving digital landscape.
- b. The significance of digital skills extends beyond personal connectivity. They also play a pivotal role in enhancing employability and job prospects. In today's job market, digital literacy has become a fundamental requirement across many industries. Employers seek individuals who possess the necessary digital skills to navigate technological tools, analyze data, and adapt to digital workflows. Individuals lacking proficiency in digital skills may encounter limited career opportunities, as they may be overlooked in favor of candidates with the necessary digital competencies. By acquiring and honing digital skills, individuals can enhance their employability, broaden their career prospects, and navigate the demands of the modern workplace.
- c. Digital skills foster critical thinking, problem-solving, and creativity, which are essential for individuals to thrive in a rapidly changing technological landscape. As technology continues to evolve, individuals need to adapt and embrace new tools and platforms. Digital skills enable individuals to approach challenges with a critical mindset, analyze information effectively, and find innovative solutions. Moreover, digital skills nurture creativity by providing individuals with the means to express themselves, create digital

content, and engage in digital art forms. By fostering critical thinking, problem-solving, and creativity, digital skills empower individuals to adapt to technological changes, remain agile in their approach to learning, and become lifelong learners in the digital age.

- d. Access to digital skills is not only crucial for personal and professional development but also for effective civic engagement. Digital platforms have transformed the way individuals participate in their communities and exercise their rights. Digital skills enable individuals to engage in online discussions, contribute to social causes, and advocate for change through digital activism. Moreover, digital literacy allows individuals to access government services, participate in online voting, and stay informed about social and political issues. By equipping individuals with digital skills, we empower them to exercise their rights effectively, engage in democratic processes, and have a voice in shaping the future of their communities and societies.

In summary, digital skills have become essential in today's interconnected world. They facilitate communication, collaboration, and access to information, enabling individuals to participate fully in the digital economy and society. Furthermore, digital skills enhance employability, foster critical thinking and creativity, and enable effective civic engagement. Acquiring and upskilling in digital skills is crucial for individuals to navigate the complexities of the digital age, seize opportunities, and contribute meaningfully to the digital ecosystem.

The Digital Divide

- a. The digital divide encompasses various dimensions, reflecting the disparities in access to technology, connectivity, digital literacy, and affordability. Access to technology refers to the availability of devices such as computers, smartphones, and tablets, which are essential for engaging with digital platforms and services. Connectivity involves the accessibility and reliability of internet infrastructure, including broadband connections, that enable individuals to connect to the digital world. Digital literacy encompasses the knowledge and skills required to effectively use digital technologies, including basic computer skills, internet navigation, and critical evaluation of online information. Lastly, affordability refers to the financial barriers that individuals face in acquiring necessary digital tools and accessing internet services. The digital divide is a complex issue that requires attention to all these dimensions to ensure equitable access to the benefits of the digital age.
- b. Marginalized communities bear the brunt of the digital divide, as they face disproportionate barriers in accessing digital technologies and the opportunities

they offer. Low-income individuals often struggle to afford the necessary devices and internet services, limiting their access to information, educational resources, and job opportunities. Rural populations face challenges related to infrastructure, as remote areas may have limited or unreliable internet connectivity. Moreover, older adults may experience difficulties in adopting and navigating digital technologies due to generational gaps in digital literacy. The digital divide perpetuates existing inequalities, leaving marginalized communities at a significant disadvantage and hindering their ability to participate fully in the digital society.

- c. The digital divide is closely intertwined with existing social inequalities, exacerbating disparities in education, economic development, and social inclusion. In the realm of education, unequal access to digital technologies and internet connectivity hampers students' ability to engage in online learning, access educational resources, and develop essential digital skills. This educational disadvantage can further widen the achievement gap, hindering the educational attainment of marginalized students. Economically, the digital divide restricts job opportunities for individuals lacking digital skills, limiting their earning potential and perpetuating income inequalities. Additionally, limited access to digital platforms and online services hinders marginalized communities' ability to participate in e-commerce, digital banking, and other digital economic activities. Socially, the digital divide creates barriers to social inclusion and civic participation, as individuals without digital access may miss out on social networks, online communities, and opportunities for digital activism. Thus, addressing the digital divide is crucial for reducing social inequalities, promoting educational equity, fostering economic development, and ensuring equal access to opportunities for all members of society.

In conclusion, the digital divide encompasses multiple dimensions, including access to technology, connectivity, digital literacy, and affordability. Marginalized communities bear the greatest burden of this divide, limiting their access to essential services and opportunities. The digital divide exacerbates existing social inequalities, hindering educational attainment, economic development, and social inclusion. To achieve a more equitable society, concerted efforts are required to bridge the digital divide and ensure equal access to digital technologies, connectivity, and digital literacy for all individuals, irrespective of their socioeconomic backgrounds.

Upskilling to Bridge the Digital Divide

- a. Upskilling programs are vital in equipping individuals with the necessary digital competencies to thrive in the digital age. These programs can be

implemented through various channels, including formal education, vocational training, or community-based initiatives. Formal education institutions, such as schools and universities, can integrate digital skills into their curricula, offering courses or specialized programs to develop digital literacy. Vocational training programs can provide targeted training in specific digital skills required for various industries and job roles. Community-based initiatives, such as workshops or online learning platforms, can offer accessible and flexible upskilling opportunities for individuals from diverse backgrounds. By providing upskilling programs through multiple avenues, individuals can choose the path that best suits their needs and aspirations, enhancing their digital competencies and increasing their opportunities in the digital landscape.

- b. Governments, educational institutions, and private organizations play crucial roles in facilitating upskilling opportunities and ensuring their accessibility. Governments can establish policies and allocate resources to support the development and implementation of upskilling programs. Educational institutions can collaborate with industry partners to design curriculum that aligns with the evolving needs of the job market. They can also provide resources, such as specialized facilities or laboratories, to enhance hands-on learning experiences. Private organizations, including technology companies and training providers, can contribute by offering training programs, mentorship opportunities, or scholarships. Collaborations between these stakeholders can lead to the creation of comprehensive and inclusive upskilling initiatives that address the needs of diverse individuals and industries.
- c. Integrating digital skills into school curricula and adult education programs is essential in fostering early adoption and lifelong learning. By incorporating digital skills education from an early age, schools can empower students with the necessary competencies to navigate the digital world confidently. This integration can include teaching basic computer skills, online safety, digital citizenship, and more advanced topics such as coding or data analysis. Adult education programs can offer opportunities for individuals to upskill or reskill in digital technologies, ensuring that people of all ages have the chance to participate in the digital economy. By emphasizing digital skills in educational programs, individuals are equipped with the foundation and motivation to become lifelong learners, continually adapting to emerging technologies and driving digital inclusion.

- d. Partnerships between the public and private sectors are instrumental in bridging the digital divide by providing affordable access to devices, internet connectivity, and digital literacy training. Governments can collaborate with technology companies or internet service providers to make devices and connectivity more accessible and affordable, particularly for marginalized communities. Public-private partnerships can establish community centers or digital hubs in underserved areas, offering resources and training programs to enhance digital literacy. Additionally, private organizations can sponsor digital literacy initiatives, providing training, mentorship, or scholarships to individuals who lack access to resources. By working together, public and private sectors can leverage their respective strengths and resources to ensure that no one is left behind in the digital revolution.
- e. Continuous upskilling and reskilling initiatives are essential to keep pace with evolving technologies and ensure individuals remain relevant in the digital era. Technology is rapidly evolving, and new digital skills are constantly emerging. Therefore, upskilling programs must be designed to provide ongoing support, enabling individuals to update their skills and adapt to technological advancements. Continuous upskilling initiatives can include professional development opportunities, online courses, or micro-credential programs that offer specialized training in specific digital skills. By promoting a culture of lifelong learning and providing avenues for continuous upskilling, individuals can stay competitive, embrace new technologies, and contribute to the digital economy effectively.

In summary, upskilling programs are critical in equipping individuals with digital competencies. Governments, educational institutions, and private organizations play important roles in providing accessible upskilling opportunities and tailoring programs to meet diverse needs. Emphasizing digital skills in school curricula and adult education programs promotes early adoption and lifelong learning. Partnerships between public and private sectors can bridge the digital divide by providing affordable access to devices, connectivity, and digital literacy training. Continuous upskilling initiatives are necessary to keep pace with evolving technologies. By investing in upskilling and reskilling programs, individuals can thrive in the digital era and contribute to a digitally inclusive society.

Overcoming Barriers to Upskilling

- a. Ensuring equitable access to upskilling opportunities requires addressing the affordability of digital devices and internet connectivity. Many individuals, particularly those from marginalized communities, face financial constraints that hinder their ability to acquire the necessary devices and access reliable internet

services. Therefore, initiatives that promote affordable options for digital devices and internet connectivity are crucial. Governments, in collaboration with private organizations, can implement subsidy programs or provide low-cost devices and internet plans to make them more accessible to underserved populations. By addressing affordability barriers, individuals can have equal opportunities to participate in upskilling programs and acquire essential digital competencies.

- b. Tailoring upskilling programs to cater to diverse needs and skill levels is essential for engaging individuals with varying levels of digital literacy. Recognizing that individuals may enter upskilling initiatives with different starting points and learning preferences, programs should offer flexibility and customization. Providing a range of course options and skill levels allows individuals to choose programs that align with their current abilities and learning goals. Moreover, incorporating adaptive learning approaches, such as personalized learning paths or assessments, can help individuals progress at their own pace and focus on areas that require improvement. By tailoring upskilling programs, individuals are more likely to feel engaged, motivated, and successful in their learning journeys.
- c. Facilitating the upskilling process and creating a supportive learning environment requires the provision of support structures. Mentorship programs can connect learners with experienced professionals who can guide and support them throughout their upskilling journey. Online communities and forums provide platforms for learners to collaborate, share insights, and seek assistance from peers. Technical assistance, such as dedicated helplines or online support, can address technical issues or answer questions related to the learning material. By establishing support structures, individuals can overcome challenges, receive guidance, and feel supported, which contributes to their overall success and satisfaction in upskilling programs.
- d. Promoting awareness about the benefits of digital skills and debunking misconceptions is crucial in encouraging individuals to embrace upskilling opportunities. Some individuals may hold misconceptions or reservations about acquiring digital skills, such as the belief that it is too complex or not relevant to their lives. By raising awareness about the practical applications and advantages of digital skills, individuals can understand how these competencies can enhance their personal and professional lives. Highlighting success stories of individuals who have benefited from upskilling initiatives can serve as inspiration and demonstrate the tangible outcomes of acquiring digital skills. Additionally, addressing common misconceptions and providing accurate information can alleviate concerns and motivate individuals to take the first step towards

upskilling. By promoting awareness and dispelling misconceptions, individuals can recognize the value and significance of acquiring digital skills and be more inclined to engage in upskilling opportunities.

In conclusion, addressing the affordability of digital devices and internet connectivity, tailoring upskilling programs to diverse needs, providing support structures, and promoting awareness about the benefits of digital skills are all crucial in encouraging individuals to embrace upskilling opportunities. By ensuring equitable access, personalizing learning experiences, providing support, and fostering understanding, upskilling initiatives can effectively engage individuals from various backgrounds and skill levels. Ultimately, these efforts contribute to bridging the digital divide and empowering individuals to acquire the digital competencies necessary for success in the digital era.

Conclusion

The digital divide presents formidable obstacles to societal progress and individual empowerment. This divide refers to the gap between those who have access to and proficiency in digital technologies and those who do not. It encompasses various dimensions, including access to technology, connectivity, digital literacy, and affordability. The consequences of the digital divide are far-reaching, hindering educational attainment, economic growth, and social inclusion. However, upskilling in digital skills holds great promise in bridging this gap and forging a more inclusive digital society. Emphasizing the importance of digital skills is a crucial step towards narrowing the digital divide. In today's digital age, these skills have become essential for communication, collaboration, and accessing information. By acknowledging the significance of digital skills, we can collectively prioritize their acquisition and foster a mindset that recognizes their transformative potential. This awareness can drive initiatives and policies that promote digital skill development as a fundamental aspect of education and professional growth.

Providing accessible upskilling opportunities is vital in ensuring that all individuals have the chance to acquire the necessary digital competencies. Governments, educational institutions, and private organizations play pivotal roles in creating and implementing such programs. Through collaborations and strategic investments, upskilling initiatives can be designed to reach marginalized communities, low-income individuals, and rural populations who face the greatest challenges in accessing digital resources. These programs can be delivered through formal education, vocational training, or community-based platforms, providing flexibility and catering to diverse learning needs. Addressing barriers is equally important in bridging the digital divide and facilitating upskilling. Affordability remains a significant obstacle, as digital devices and internet connectivity can be

expensive. By implementing policies and programs that ensure affordable access to devices and connectivity, we can alleviate financial constraints and make digital skills attainable for all. Moreover, tailored upskilling programs that consider varying levels of digital literacy empower individuals at different skill levels to engage and progress in their learning journeys. Additionally, establishing support structures such as mentorship programs, online communities, and technical assistance cultivates a supportive learning environment that nurtures confidence and fosters continuous growth.

Bridging the digital divide is not solely a matter of equity; it is a driving force behind economic growth, social inclusion, and overall human development. In the digital era, possessing digital competencies opens doors to employment opportunities, entrepreneurial ventures, and innovative solutions. By equipping individuals with these skills, we empower them to participate fully in the digital economy, contributing to productivity and economic advancement. Moreover, bridging the digital divide enhances social inclusion, as it enables individuals to access essential services, engage in civic activities, and exercise their rights effectively. Inclusivity in the digital realm translates into more equitable and participatory societies, where diverse voices are heard, and opportunities are extended to all. In conclusion, upskilling in digital skills holds immense potential to bridge the digital divide and create a more inclusive digital society. By recognizing the importance of digital skills, providing accessible upskilling opportunities, and addressing barriers, we can ensure that all individuals have the necessary competencies to thrive in the digital age. Bridging the digital divide is not only a matter of equity but also a key driver of economic growth, social inclusion, and overall human development. By embracing upskilling in digital skills, we pave the way for a future where everyone can harness the benefits of the digital world, contributing to a more prosperous and inclusive global community.

Abstract

The goal of digital financial inclusion, the components of digital financial inclusion, the providers of digital financial services, the instruments for digital financial inclusion, the benefits of digital financial inclusion, the risks of digital financial inclusion, and the regulatory issues related to digital financial inclusion are all highlighted in the paper along with their advantages and disadvantages. It also offers suggestions for how to make digital financial inclusion beneficial to everyone. The study finishes by providing some recommendations for practice and policy in the ecosystem of digital money.

Keywords: Digital Finance, Financial Inclusion, Digital Financial Inclusion.

Introduction

The discussion of digital financial inclusion is the focus of this study. Everything necessary to understand digital financial inclusion is included in the paper. The number of online financial services applications has grown and is still expanding over time. For their own use or to better serve banks' customers, many of the digital apps used to provide financial services are created by technology or financial technology businesses.

Definition and Goal of Digital Financial Inclusion

Definition of Digital Financial Inclusion

By providing financial services to unbanked people utilizing devices that have a digital interface, such as a mobile phone or other digital devices, digital financial inclusion entails integrating unbanked individuals into the formal financial system. Offering digital financial services to the underserved and financially excluded groups as well as employing a mobile phone or other digital devices to promote access to digital financial services are all parts of digital financial inclusion .

Goal of Digital Financial Inclusion

The objective of digital financial inclusion is to make financial services available through digital channels to all people, households, businesses, and governments. This will reduce poverty, increase financial intermediation, and help the world achieve its sustainable development goals.

Components of Digital Financial Inclusion

Banks, non-bank financial institutions, financial technology (Fintech) businesses, and technology firms may all offer digital financial services. The following are some of the elements of digital financial inclusion:

- Digital Device
- Retail Agents
- Additional Financial Services
- A digital transactional platform
- The backend server
- The Customers

Providers and Instruments for Digital Financial Inclusion

Types of Digital Financial Services Providers for Digital Financial Inclusion

These four digital financial service providers for digital financial inclusion need three components to function effectively, namely digital trading platform, dealer network and the client's access device. With these three components, digital financial services can be made available to excluded and underserved customers.

Instruments for Digital Financial Inclusion

Some tools or instruments for digital financial inclusion include:

- i. e-money accounts
- ii. debit cards
- iii. credit cards
- iv. mobile money
- v. internet banking
- vi. retail point of Sale (PoS) terminals
- vii. agent networks

Benefits of Digital Financial Inclusion

- Provides access to all types of official financial services – payments, transfers, savings, credit, insurance, securities, and more.
- Encourage digital payments, transfers, savings, credit, insurance and investments;

- Incentivize government-to-personal digital payments, such as conditional cash transfers and unconditional cash transfers etc
- Reducing digital transaction costs for customers and digital financial service providers;
- It promotes economic empowerment by enabling property ownership and capital accumulation;
- It increases women's economic participation;

Risks and Regulatory Issues of Digital Financial Inclusion

- Risks of digital financial inclusion
- New digital financial services will require a different regulatory treatment and could make the regulatory ecosystem too complex; etc
- Rising digital transaction costs will affect poor customers with very low incomes;
- Data privacy and security issues will arise as a result of the use of new data types;.
- Customers unfamiliar with digital financial services are vulnerable to exploitation and abuse;

Regulatory Issues

- Inclusion of digital finance will pose many challenges for regulators, especially banking and telecommunications regulators.
- Challenges in drafting anti-terrorism financing legislation;etc
- Legal loopholes in cryptocurrency and digital currency regulation;
- Consumer protection issues;
- Weak payment system regulations

Digital Financial Inclusion: Making it Work

1. Regulators should continuously renegotiate the fee structure for using digital trading platforms, as this will help attract more people to use digital financial services in the long run;
2. Use artificial intelligence to remove systemic biases that are primarily responsible for financial exclusion in the financial system. With proper scrutiny and oversight, AI tools can be used to remove biases from processes, systems, and decisions that put unbanked adults at risk. disadvantaged by low income, ethnicity or race;
3. Actors of digital financial inclusion must provide easy-to-access and easy-to-use digital financial services;

4. Digital financial service providers should have internal security measures in place to minimize data theft, identity theft or loss of funds caused by malicious actors and cybercriminals go out;
5. Digital financial service providers need to deliver data-driven insights to customers. Digital financial service providers should use large volumes of digital data at their disposal and with their permission, to educate and advise clients on the need to improve habits savings and the ability to make sensible purchases before they are not made;
6. Regulators should embrace the new open banking and payments model as they can expand both the breadth and depth of digital financial services in ways that promote inclusive digital finance.

Limitations of Digital Technology in Promoting Financial Inclusion

It Lacks the Human Touch

Inclusion of digital finance eliminates the human middleman, or human contact, between the customer and the financial service provider. Instead of talking to a real person during financial transactions, people will interact with an app that offers very limited options and may not have the options the customer wants. It will strengthen their desire to speak to a human representative of financial institutions like many people appreciate and cherish the opportunity to speak with a customer service representative who can guide them through their financial transactions and who can help them resolve complaints.

A Garbage-In-Garbage-Out (GIGO) Approach to Financial Inclusion

Many digital finance applications are adopting the GIGO (garbage in garbage) system to promote financial inclusion. Households using digital financial services can make mistakes in the input data by adding zeros, e.g. make a digital transfer of \$100,000 when the intention is to transfer only \$1,000.

Conclusion

The document revisited the digital financial inclusion agenda to provide insights into what digital financial inclusion is. The document identified digital financial inclusion, then outlined the purpose of digital financial inclusion, components of digital financial inclusion, digital financial service providers, comprehensive digital financial instruments, benefits of digital financial inclusion, risks of digital financial inclusion, financial inclusion and legal issues related to digital financial inclusion, among others.

Kamalam College of Arts and Science, Anthiyur, Udumalpet*

Abstract

Role of technology in NEP 2020 With the approval of the Union Cabinet for National Education Policy 2020, the country, after 34 years, has got its new education policy. There is a lot of emphasis given on the integration of technology in NEP 2020 as technology can serve as an important factor which can pave the way for a holistic development. In NEP 2020, a special emphasis is also given on the regional languages as E-courses will be developed in the same. Moreover, virtual labs will also be developed. It is pertinent to mention here that a National Educational Technology Forum (NETF) is also being created. NEP-2020 is a revolutionary step taken towards the upliftment of education system. Technology, which has entered in almost every sphere of life, makes things accessible and there is a growing need to embrace technology in the education sector as well. Constructive steps are being taken towards the implementation of the same and NEP 2020 has paved the way for it through various digital platforms being proposed. In this paper, we will try to discuss the multiple aspects of the policy with a special focus on technology and its implementation.

Keywords: Technology, Multilingualism, Accessibility, ICT.

Introduction

New technologies involving artificial intelligence, machine learning, block chains, smart boards, handheld computing devices, adaptive computer testing for student development, and other forms of educational software and hardware will not just change what students learn in the classroom but how they learn, extensive use of technology in teaching and learning, removing language barriers, increasing access for Divyang students, and educational planning and management.

Methods for Enhancing the NEP 2020 School Education System with Technology

E-learning plays a crucial role in the educational systems of many emerging nations. It has numerous intrinsic advantages. Technology will be applied in a variety of ways to improve the procedures and overall experience once the new education policy is put into place in India.

The National Education Policy (NEP), which aims to strengthen the Indian educational system holistically, would require ongoing and crucial contributions from the edtech sector to meet its goal of providing high-quality and accessible education throughout the nation.

The following are some tech-based strategies to support the NEP 2020 School Education Policy:

1. Using Cloud Tech to Store and Retrieve Records with Ease

Academic records like degrees and diplomas must be stored and retrieved, which is a lengthy process in Indian universities and schools.

It is difficult to manage the volume of documents, and there is always a chance that paper-based data will become damaged.

Utilising cutting-edge cloud storage technology like our Integrated School Platform almost eliminates this risk. The school's ability to keep, maintain, and update student records will be quicker and more accurate.

2. Using Virtual Digital Platforms to Manage Digital Exams More Easily

Conducting tests and internal evaluations proves laborious and time-consuming in many institutions and universities.

Additionally, it uses a lot of resources. Such problems can be handled effectively by using virtual and digital exams and tests. The teachers can save a lot of time, and it is less demanding on them.

3. Enable Effective Learning through Digital Tools

The use of digital tools and apps by students to enhance learning is emphasised in the new education policy.

Apps, both free and paid, can be used to administer internal tests and participate in virtual classrooms. Teachmint enables schools to plan out, schedule, and conduct exams from a single platform with our Integrated School Platform (ISP).

Digital tools are helpful even in emergency scenarios like natural calamities and pandemics that necessitate the closure of schools.

Projects and assignments can be shared in real-time between professors and students using platforms like Teachmint.

Everyone will find it simpler as a result of the declining cost of internet connections and the growing use of 5G networks throughout the nation.

4. Harnessing Tech to Make Learning Accessible for the differently qualified

The use of technology indicated in the NEP School education system will make learning more adaptable for students with specific needs or disabilities (autism

victims and those with ADHD, etc.). The pervasiveness of ongoing education makes the educational setup difficult.

When technology is used in a significant way, these children stand to gain a lot from it. They require a fast internet connection and the use of cell phones or PCs. These make it simple for students to show up to class when they're not feeling well.

This guarantees that students do not fall behind their friends when dealing with illnesses that need a longer stay at home.

5. Digitisation for Cost-Effective Training & Education

According to the NEP School Education System, implementing technology solutions in the educational system will enable schools and universities to save a large number of funds.

They will administer tests with less paper and spend less money on printing. The money saved will be useful for improving the technology setup and providing teachers with training.

Key Notes

India's education system is expected to undergo a historic change as a result of the proposed NEP 2020 School Education. The upcoming educational system will be highly reliant on technology, which is anticipated to improve both teaching and learning. Additionally, the NEP School education system promotes industry-academia cooperation to close the competency gaps and assure employability by preparing students for the real world.

This emphasises the significance and applicability of incorporating edtech solutions into the Indian educational system. When colleges and businesses collaborate, it frequently produces top-notch research, and creative solutions, and reduces expenses.

To make this possible, it might be necessary to develop a common edtech platform that encourages new connections, forges new ties, and forms new alliances.

Challenges

Undoubtedly, the policy has remarkably integrated technology into teaching but there are certain concerns towards which the attention must be drawn. The implementation of the policy is no less than an uphill task. There was a survey conducted (July 2017-June 2018) on 'Household Social Consumption: Education'.

The sample included 64,529 rural households and 49,238 urban households. This sample was collected from 8,097 villages and 6,188 blocks of India. In the survey, it was found that the literacy rate among persons of age 7 and above was about 77.7%.

In rural areas, it was 73.5% while in urban it was 87.7%. There was also a difference in the literacy rate of males and females, 84.7% and 70.3% respectively [1].

In order to integrate technology in education, it is important that all students have access to technology, at least they should have smart phones, computers with internet access. Unfortunately, the underprivileged students do not have access to same and that is one of the main challenges to overcome. There lies another challenge in handling the network issues, power cuts and controlling the unethical practices.

Another challenge comes in the form of accepting the transformation from the traditional rote learning system to the technology driven critical thinking and experimental learning system. This will require a change in the attitude of the stakeholders and continuous efforts are needed to be made to understand and implement this new vision.

To fulfil the upcoming requirements, there is a strong need of digitally competent teachers. Moreover, there is an unavailability of digital resources infrastructure and there are a number of subjects which face a limitation as far as teaching through digital space is concerned. For the successful implementation of the policy, centre and states need to work together as the implementation of the policy and the integration of technology come with challenges. There is still a lot of technological advancement that needs to be done and a long way has still to go.

NEP 2020 is seen as the most comprehensive education policy of the century and can bring a number of positive transformations in the present education system.

Conclusion

India is moving positively in becoming digitally enriched. A massive progress can be seen in this direction. However, every big reform need time and one has to be patient and wait for the result. The complete integration of technology in education will require a bit of time as making it accessible in remote areas will be a little time-consuming task. But slowly and gradually it will be attained.

PROBLEMS AND PROSPECTIVE OF WOMEN ENTREPRENEURSHIP IN INDIA

Mrs. M.Pavithra

*Assistant Professor, Department of Commerce
Karpagam Academy of Higher Education, Coimbatore, Tamil Nadu, India*

Abstract

Without a doubt, female entrepreneurship increases the prosperity of the country as a whole and of the family as a whole particular. In terms of their willingness to engage in activities that were once thought to be exclusively for men, women today have shown that they are unmatched in terms of their ability to contribute to the expansion of the economy. A crucial part of an impoverished nation's economic development is being played by entrepreneurs. Women entrepreneurs organise sectors for a variety of reasons, including their expertise and knowledge, their aptitude for business, and a strong desire to make a difference. According to the World Bank, investing more in women's businesses than in those of males promotes a country's economic development. promoting female entrepreneurship.

Keywords: Women Entrepreneurship, Problems, Prospective, Economic Development.

Introduction

Women entrepreneurship refers to the pursuit of business ventures, startups, or enterprises by women, with the goal of creating and managing businesses for profit or social impact. It involves women taking on the role of entrepreneurs, founders, or business leaders, and actively participating in the creation, development, and growth of their businesses. Historically, women have faced numerous challenges and barriers in entering the business world. Societal norms, gender bias, lack of access to finance, limited educational opportunities, and traditional gender roles have often hindered women from taking up entrepreneurial roles. However, over the years, there has been a significant shift in perceptions, and more women are now breaking barriers and defying stereotypes to establish successful businesses.

Women entrepreneurship is not just about economic empowerment; it also plays a crucial role in promoting gender equality and social progress. When women are given the opportunity to become entrepreneurs, they can contribute to economic growth, create jobs, drive innovation, and bring fresh perspectives to various industries.

In many parts of the world, including developing countries, governments and organizations have recognized the importance of promoting women entrepreneurship and have introduced various initiatives, policies, and support systems to encourage women to start and grow their businesses. Access to finance, mentorship programs, networking events, and skill development initiatives are some of the ways in which women entrepreneurs are being supported.

Women entrepreneurs have been making significant strides across diverse sectors, including technology, healthcare, finance, education, fashion, and social entrepreneurship. Their success stories inspire and pave the way for other women to pursue their entrepreneurial aspirations.

While progress has been made, there are still challenges to overcome, such as gender biases in the business ecosystem and the need for better work-life balance. However, the growing presence of women entrepreneurs and their contributions to society are transforming the landscape and creating a more inclusive and equitable business environment.

Objectives of the Study

1. To understand the women entrepreneurship in India.
2. To know the problems of women entrepreneurs in India.

Research Methodology

The current analysis is based on a thorough examination of secondary information gathered from numerous books, National & International journals and books, both public and private that are focused on different facets of women entrepreneurs and are available online and in libraries. Additionally, this research is a desk study based on secondary data from numerous books, magazines, and websites.

Women Entrepreneurship in India

Women entrepreneurship in India has been steadily growing over the years, with more and more women taking the initiative to start and run their own businesses. Despite facing various challenges, such as societal norms, gender bias, access to finance, and limited networking opportunities, Indian women have been making significant strides in the entrepreneurial landscape. Here are some key aspects of women entrepreneurship in India:

1. **Rise in Women Entrepreneurs:** There has been a noticeable increase in the number of women entrepreneurs in India across various sectors, including technology, fashion, healthcare, education, and social enterprises. Women are now breaking traditional barriers and venturing into diverse industries.
2. **Government Initiatives:** The Indian government has launched several initiatives and schemes to support women entrepreneurs. Programs like "Stand-Up India" and "Mudra Yojana" aim to provide financial assistance and promote women-led enterprises.
3. **Access to Finance:** Access to finance remains a significant challenge for women entrepreneurs in India. Many women lack collateral or financial

history, making it difficult to secure loans. However, microfinance institutions and women-centric banks have been playing a vital role in bridging this gap.

4. **Women's Self-Help Groups (SHGs):** Self-Help Groups have been instrumental in empowering women in rural areas to become entrepreneurs. These groups provide financial support, skill development, and collective decision-making platforms for women to start small businesses.
5. **Technology and E-commerce:** The rise of technology and e-commerce platforms has opened up new opportunities for women entrepreneurs. Many women are leveraging digital platforms to reach a broader customer base and grow their businesses.
6. **Social Impact:** Women entrepreneurs in India are often focused on creating social impact and addressing societal challenges. Many startups are working on solutions related to healthcare, sanitation, education, and women's empowerment.
7. **Networking and Mentorship:** The importance of networking and mentorship cannot be underestimated. Women-led organizations, networking events, and mentorship programs are helping women entrepreneurs connect, learn, and grow.
8. **Challenges:** Women entrepreneurs still face gender-based challenges, such as balancing family responsibilities and work, social expectations, and biases in the business ecosystem. More efforts are needed to address these issues and create a supportive environment.
9. **Success Stories:** Many Indian women entrepreneurs have achieved remarkable success and recognition both nationally and internationally. Their success stories serve as inspiration for other aspiring women entrepreneurs.

In recent years, the Indian society's perception of women in business has been gradually evolving, and there is increasing recognition of the potential women entrepreneurs hold in driving economic growth and social progress. With continued support from the government, private sector, and society at large, women entrepreneurship in India is expected to witness even more significant growth in the coming years.

Problems of Women Entrepreneurs in India

Women entrepreneurs in India face various challenges that can impede their entrepreneurial journey and success. These challenges are often shaped by social, cultural, economic, and institutional factors. Here are some of the key problems faced by women entrepreneurs in India:

1. **Gender Bias and Stereotypes:** Deep-rooted gender bias and societal stereotypes can hinder women's access to opportunities and resources.

Women often face skepticism and lack of support, as traditional norms may consider entrepreneurship as a male-dominated domain.

2. **Limited Access to Finance:** Access to finance remains a significant challenge for women entrepreneurs in India. Banks and financial institutions may be hesitant to provide loans or capital to women-owned businesses, citing lack of collateral or financial history.
3. **Family and Societal Expectations:** Women often face the burden of balancing family responsibilities with business pursuits. Societal expectations of women's roles as caregivers and homemakers can affect their ability to dedicate time and effort to their ventures.
4. **Lack of Networking Opportunities:** Networking is crucial for business growth and access to resources. However, women entrepreneurs may have limited networking opportunities, particularly in male-dominated industries, which can impact their access to potential investors, mentors, and customers.
5. **Work-Life Balance:** Balancing business responsibilities with family commitments can be challenging for women entrepreneurs. The lack of adequate support systems and affordable childcare options adds to the difficulties.
6. **Inadequate Infrastructure and Support Services:** The absence of supportive infrastructure, such as incubation centers, accelerators, and training programs tailored to women's needs, can hinder their entrepreneurial journey.
7. **Legal and Regulatory Hurdles:** Navigating complex legal and regulatory procedures can be daunting, particularly for women who might have limited experience or access to legal assistance.
8. **Limited Market Access:** Women entrepreneurs may face barriers in accessing markets, especially in industries where male-dominated networks and biases prevail.
9. **Lack of Role Models:** The scarcity of prominent women role models in the entrepreneurial space can deter aspiring women entrepreneurs and limit their vision of what is possible.
10. **Lack of Confidence and Self-Belief:** Socio-cultural factors can sometimes impact women's self-belief and confidence in their entrepreneurial abilities, leading to self-doubt and hesitation to take risks.
11. **Cultural Stigma:** In some conservative communities, women starting and running businesses may face cultural stigma and resistance.

Despite these challenges, women entrepreneurs in India have shown resilience and determination, and their contributions to the economy and society are increasingly recognized. To overcome these obstacles, there is a need for targeted

policies, mentorship programs, access to finance, and awareness campaigns that promote women entrepreneurship and create a more inclusive and supportive ecosystem. With the right support and opportunities, women entrepreneurs can play a significant role in driving India's economic growth and empowerment.

Prospective of Women Entrepreneurs in India

The prospects for women entrepreneurs in India are promising and hold significant potential for economic growth, social progress, and gender equality. Despite the challenges they face, women entrepreneurs are making remarkable strides and contributing to various sectors of the Indian economy. Here are some key perspectives that highlight the promising future for women entrepreneurs in India:

1. **Rising Numbers:** The number of women entrepreneurs in India has been steadily increasing over the years. More and more women are breaking traditional barriers and pursuing entrepreneurship as a viable career option.
2. **Government Support:** The Indian government has recognized the importance of promoting women entrepreneurship and has introduced various initiatives, schemes, and policies to support women-led businesses. Programs like "Stand-Up India" and "Mudra Yojana" provide financial assistance and facilitate access to credit for women entrepreneurs.
3. **Access to Finance:** With the rise of microfinance institutions, women-centric banks, and alternative lending platforms, access to finance for women entrepreneurs is gradually improving. This enables them to fund their business ideas and scale their ventures.
4. **Technology and E-commerce:** The digital revolution has opened up new opportunities for women entrepreneurs in India. Technology and e-commerce platforms have provided them with access to a broader customer base and simplified business operations.
5. **Social Impact:** Women entrepreneurs in India often focus on creating social impact through their businesses. They are involved in initiatives related to healthcare, education, women's empowerment, and environmental sustainability.
6. **Networking and Mentorship:** Women-centric networking events, mentorship programs, and support groups are helping women entrepreneurs connect, learn, and access valuable guidance from experienced mentors.
7. **Education and Skill Development:** Increasing emphasis on education and skill development for women has empowered them with the knowledge and expertise required to succeed in the entrepreneurial world.

8. **Diversity and Innovation:** Women entrepreneurs bring diverse perspectives and innovative ideas to the business landscape, driving creativity and differentiation in the market.
9. **Changing Societal Perceptions:** There has been a gradual shift in societal perceptions regarding women in business. As successful women entrepreneurs gain visibility and recognition, they challenge stereotypes and inspire other women to pursue entrepreneurial paths.
10. **Global Recognition:** Indian women entrepreneurs have gained international recognition and have been featured on various platforms for their innovative ventures and contributions to the global business community.
11. **Role Models:** The emergence of successful women entrepreneurs in India serves as a source of inspiration and motivation for aspiring female entrepreneurs, paving the way for a new generation of leaders.
12. **Diverse Sectors of Entrepreneurship:** Women entrepreneurs are venturing into diverse sectors, from technology and finance to fashion and social entrepreneurship, further expanding the breadth and impact of their contributions.

Overall, the future for women entrepreneurs in India looks promising as the ecosystem becomes more supportive and inclusive. With continued efforts from the government, private sector, and society at large, women entrepreneurs are expected to play an increasingly significant role in shaping India's entrepreneurial landscape and driving economic growth and social transformation.

Conclusion

Women entrepreneurship is a critical and empowering aspect of economic development and social progress. Over the years, women entrepreneurs have made significant strides, breaking barriers and challenging societal norms. The rise of women-led businesses has not only brought economic benefits but has also led to positive social and cultural changes. One of the key advantages of women entrepreneurship is the promotion of gender equality. By taking leadership roles and running successful businesses, women challenge traditional gender roles and demonstrate their competence in various industries. This serves as an inspiration for future generations of women, encouraging them to pursue their dreams and ambitions without limitations. Moreover, women entrepreneurs contribute to the growth of the global economy. Their businesses create jobs, foster innovation, and drive economic development in both developed and developing nations. When women are given equal opportunities to participate in the economy, it leads to a more inclusive and sustainable economic growth.

Additionally, women entrepreneurs often focus on addressing social issues and contributing to their communities. They tend to be more socially responsible, prioritizing ethical practices, and supporting causes such as education, health, and environmental sustainability. This commitment to social impact helps in creating a more compassionate and caring business ecosystem. Despite the progress made in recent years, women entrepreneurs still face challenges like access to funding, limited networking opportunities, and cultural biases. Governments, organizations, and society as a whole must continue to support and empower women entrepreneurs through mentorship programs, financial assistance, and policy reforms that promote gender equality.

In conclusion, women entrepreneurship is an essential force driving positive change in the global economy and society. As more women break barriers and establish successful businesses, the world becomes more equitable, prosperous, and socially conscious. Embracing and nurturing women's entrepreneurial potential benefits us all and paves the way for a brighter and more inclusive future.

CLOUD COMPUTING

Ms. Priya Dharshini. S

*Assistant Professor, Department of Computer Science
Sri Krishna Arts and Science College, Coimbatore*

Ms. Anusha. G & Ms. Harini S

*Students, Department of Computer Science
Sri Krishna Arts and Science College, Coimbatore*

Abstract

Cloud computing is a paradigm that provides on-demand access to shared computing resources over the internet. It offers scalability, reliability, and high performance without complex infrastructure management by customers. Cloud computing has three main service models: Software as a Service (SaaS), Platform as a Service (PaaS), and Infrastructure as a Service (IaaS). These services can be deployed on different types of clouds: private, public, community, and hybrid clouds. Cloud computing has many applications in various domains such as e-commerce, education, health care, social media, and scientific research. Cloud computing also faces many challenges in terms of security, privacy, trust, interoperability, standardization, and regulation. Cloud computing is an active area of research and development that aims to address these challenges and explore new opportunities for innovation.

Keywords: Cloud Computing, Service Models, Types of Clouds, Applications, Challenges, Research and Development.

Introduction to Cloud Computing

Cloud Computing is the delivery of computing services such as servers, storage, databases, networking, software, analytics, intelligence, and more, over the Cloud (Internet). Cloud Computing provides an alternative to the on-premises datacentre. With an on-premises datacentre, we have to manage everything, such as purchasing and installing hardware, virtualization, installing the operating system, and any other required applications, setting up the network, configuring the firewall, and setting up storage for data. After doing all the set-up, we become responsible for maintaining it through its entire lifecycle.

But if we choose Cloud Computing, a cloud vendor is responsible for the hardware purchase and maintenance. They also provide a wide variety of software and platform as a service. We can take any required services on rent. The cloud computing services will be charged based on usage.

The cloud environment provides an easily accessible online portal that makes handy for the user to manage the compute, storage, network, and application resources. Some cloud service providers are in the following figure.

Advantages of Cloud Computing

- **Cost:** It reduces the huge capital costs of buying hardware and software.
- **Speed:** Resources can be accessed in minutes, typically within a few clicks.
- **Scalability:** We can increase or decrease the requirement of resources according to the business requirements.
- **Productivity:** While using cloud computing, we put less operational effort. We do not need to apply patching, as well as no need to maintain hardware and software. So, in this way, the IT team can be more productive and focus on achieving business goals.
- **Reliability:** Backup and recovery of data are less expensive and very fast for business continuity.
- **Security:** Many cloud vendors offer a broad set of policies, technologies, and controls that strengthen our data security.

Types of Cloud Computing

- **Public Cloud:** The cloud resources that are owned and operated by a third-party cloud service provider are termed as public clouds. It delivers computing resources such as servers, software, and storage over the internet
- **Private Cloud:** The cloud computing resources that are exclusively used inside a single business or organization are termed as a private cloud. A private cloud may physically be located on the company's on-site datacentre or hosted by a third-party service provider.
- **Hybrid Cloud:** It is the combination of public and private clouds, which is bounded together by technology that allows data applications to be shared between them. Hybrid cloud provides flexibility and more deployment options to the business.

Types of Cloud Computing Service

- **Infrastructure as a Service (IaaS):** In IaaS, we can rent IT infrastructures like servers and virtual machines (VMs), storage, networks, operating systems from a cloud service vendor. We can create VM running Windows or Linux and install anything we want on it. Using IaaS, we don't need to care about the hardware or virtualization software, but other than that, we do have to manage everything else. Using IaaS, we get maximum flexibility, but still, we need to put more effort into maintenance.

- **Platform as a Service (PaaS):** This service provides an on-demand environment for developing, testing, delivering, and managing software applications. The developer is responsible for the application, and the PaaS vendor provides the ability to deploy and run it. Using PaaS, the flexibility gets reduced, but the management of the environment is taken care of by the cloud vendors.
- **Software as a Service (SaaS):** It provides a centrally hosted and managed software services to the end-users. It delivers software over the internet, on-demand, and typically on a subscription basis. E.g., Microsoft One Drive, Dropbox, WordPress, Office 365, and Amazon Kindle. SaaS is used to minimize the operational cost to the maximum extent.

Applications of Cloud Computing

1. Online Data Storage

Cloud Computing allows storage and access to data like files, images, audio, and videos on the cloud storage. In this age of big data, storing huge volumes of business data locally requires more and more space and escalating costs. This is where cloud storage comes into play, where businesses can store and access data using multiple devices. The interface provided is easy to use, convenient, and has the benefits of high speed, scalability, and integrated security.

2. Backup and Recovery

Cloud service providers offer safe storage and backup facility for data and resources on the cloud. In a traditional computing system, data backup is a complex problem, and often, in case of a disaster, data can be permanently lost. But with cloud computing, data can be easily recovered with minimal damage in case of a disaster.

3. Big Data Analysis

One of the most important applications of cloud computing is its role in extensive data analysis. The extremely large volume of big data makes it impossible to store using traditional data management systems. Due to the unlimited storage capacity of the cloud, businesses can now store and analyze big data to gain valuable business insights.

4. Testing and Development

Cloud computing applications provide the easiest approach for testing and development of products. In traditional methods, such an environment would be time-consuming, expensive due to the setting up of IT resources and infrastructure, and needed manpower. However, with cloud computing, businesses get scalable and flexible cloud services, which they can use for product development, testing, and deployment

5. Antivirus Applications

With Cloud Computing comes cloud antivirus software which is stored in the cloud from where they monitor viruses and malware in the organization's system and fixes them. Earlier, organizations had to install antivirus software within their system and detect security threats.

6. E-Commerce Application

Ecommerce applications in the cloud enable users and e-businesses to respond quickly to emerging opportunities. It offers a new approach to business leaders to

make things done with minimum amount and minimal time. They use cloud environments to manage customer data, product data, and other operational systems.

7. Cloud Computing in Education

E-learning, online distance learning programs, and student information portals are some of the key changes brought about by applications of cloud computing in the education sector. In this new learning environment, there's an attractive environment for learning, teaching, experimenting provided to students, teachers, and researchers so they can connect to the cloud of their establishment and access data and information.

Challenges of Cloud Computing

Security and privacy: Cloud computing involves storing and processing sensitive data on remote servers that may not be fully secure or trustworthy. Users have to rely on the cloud service providers to protect their data from unauthorized access, breaches, leaks, or misuse. Users also have to comply with the legal and ethical regulations of data protection in different regions and countries¹²³⁴.

Cost management: Cloud computing can reduce the upfront costs of acquiring and maintaining IT infrastructure, but it can also incur hidden or unexpected costs due to under-optimization of resources, degraded performance, sudden spikes, or unused resources. Users have to monitor and control their cloud spending and usage to avoid overspending or wasting resources²³.

Lack of resources and expertise: Cloud computing requires skilled and experienced professionals who can design, develop, deploy, and manage cloud applications and services. There is a shortage of such talent in the market, and users have to invest in training and hiring qualified staff or outsourcing their cloud needs to third-party vendors²³.

Governance and control: Cloud computing involves sharing and delegating some of the responsibilities and authority over the IT resources to the cloud service providers. Users have to ensure that they have adequate governance and control mechanisms in place to oversee the performance, quality, security, compliance, and availability of their cloud resources. Users also have to deal with the complexity and diversity of multiple cloud providers, services, and platforms²³.

Compliance: Cloud computing has to comply with various standards, regulations, policies, and laws that govern the use of IT resources in different domains, industries, and countries. Users have to ensure that their cloud applications and services meet the requirements of their specific domain or industry,

such as health care, education, finance, or government. Users also have to deal with the challenges of data sovereignty, localization, and jurisdiction¹²³.

Interoperability and portability: Cloud computing involves using different types of cloud services and platforms from different vendors that may not be compatible or interoperable with each other. Users have to ensure that their cloud applications and services can communicate and exchange data with other cloud or non-cloud systems without losing functionality or quality. Users also have to ensure that their cloud applications and services can be easily moved or migrated from one cloud provider or platform to another without losing data or performance¹²³⁵.

Downtime: Cloud computing relies on the availability and reliability of the internet connection and the cloud service providers. Users have to face the risk of downtime or disruption of their cloud applications and services due to network failures, power outages, cyberattacks, natural disasters, or human errors. Users have to ensure that they have backup plans and contingency measures in place to minimize the impact of downtime on their business operations and customer satisfaction ²⁵⁴.ING

Conclusion

Cloud computing is a way of delivering computing resources as a service over the internet. It has many advantages such as scalability, reliability, flexibility, and cost-efficiency. However, it also has some challenges such as security, privacy, cost management, governance, compliance, interoperability, portability, and downtime. Cloud computing is the future of computing, and we should embrace it with awareness and caution.

RE-ENVISIONING INDIA @ 2047: INITIATIVES FOR GLOBAL LEADERSHIP

K. Poonkodi, K.Vimaladevi, V. Prabhu, M. Anusuya & M.Velayutham Pillai

Post Graduate Department of Chemistry
Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu

Abstract

The abstract presents an overview of a comprehensive vision for India's future as a global leader in the year 2047. As India marks its centennial anniversary of independence, the nation stands on the cusp of transformative change, aiming to propel itself to the forefront of the international stage. This visionary paper outlines a set of initiatives that will harness India's vast potential across various domains, fostering sustainable growth, inclusive development, and responsible global leadership. The paper begins by delving into India's historical journey, tracing its achievements and challenges since independence. It highlights the nation's diverse cultural fabric, democratic ethos, and entrepreneurial spirit, which form the foundation for re-envisioning India's trajectory towards 2047.

Keywords: *Vishwa guru, sustainable development, energy and environment and global leadership*

Introduction

The vision of India in the year 2047 - a nation with a renewed sense of purpose, poised to take on the mantle of global leadership. "Re-envisioning India @ 2047: Initiatives for Global Leadership" is a transformative journey that charts the course for India's progress, prosperity, and prominence on the world stage. In the next two and a half decades, India will have traversed an incredible path, transforming itself from a developing nation into an economic and technological powerhouse. This ambitious vision is grounded in the principles of inclusivity, sustainability, and innovation. As we look ahead, we must recognize the challenges of the past and harness our collective strengths to build a brighter, more equitable future. At its core, "Re-envisioning India @ 2047" focuses on five key initiatives that will shape our nation's journey to global leadership:

- 1. Economic Resurgence:** We envision a self-reliant and dynamic economy that fosters entrepreneurship and innovation, embraces sustainable practices, and empowers every citizen to be a participant in India's growth story. A robust infrastructure and investment-friendly policies will attract global partnerships and fuel economic progress.
- 2. Knowledge and Skill Revolution:** Education will be the cornerstone of our nation's transformation. We will establish a world-class education system that nurtures creativity, critical thinking, and problem-solving skills. This will equip our citizens to meet the challenges of the future and lead India's knowledge economy.

3. **Technology and Innovation Hub:** India will emerge as a hub for cutting-edge research and innovation across sectors, including artificial intelligence, renewable energy, biotechnology, and space exploration. Through strategic collaborations with international partners, we will drive global technological advancements.
4. **Sustainable Development:** As a responsible global leader, India will prioritize sustainability and environmental conservation. We will champion green initiatives, combat climate change, and promote renewable energy adoption to secure a greener and healthier planet for generations to come.
5. **Cultural Diplomacy:** India's rich cultural heritage will act as a bridge that connects us with the world. Through cultural exchanges, we will foster understanding, empathy, and harmonious relationships with other nations, promoting peace and unity across the globe."Re-envisioning India @ 2047: Initiatives for Global Leadership" is not just a lofty ambition but a roadmap to be realized through the collective efforts of every citizen. It calls for unity, dedication, and a shared commitment to progress. Together, we will shape a future where India stands tall as a global leader, contributing positively to the world's development and inspiring generations to come.

Sustainable Development

Sustainable Development plays a crucial role in re-envisioning India's path towards global leadership by 2047. Sustainable Development refers to meeting the needs of the present without compromising the ability of future generations to meet their own needs. By adopting sustainable practices across various sectors, India can address environmental, social, and economic challenges, leading to long-term prosperity and global recognition. Here's how Sustainable Development initiatives can help India in its journey towards global leadership:

1. **Environmental Conservation:** Sustainable Development emphasizes responsible use of natural resources, pollution control, and climate action. By promoting green technologies, renewable energy sources, and sustainable agricultural practices, India can reduce its carbon footprint and combat climate change. Taking a lead in environmental conservation will not only benefit the country but also position India as a global champion of sustainability.
2. **Social Inclusion and Equity:** Sustainable Development encourages inclusive growth and social equity. By focusing on poverty alleviation, healthcare, education, and empowering marginalized communities, India can create a society where everyone has equal access to opportunities. This commitment to social welfare will earn India respect and admiration on the global stage.

3. **Global Partnerships:** Sustainable Development is a global agenda, and India's active participation in international forums and collaborations will enhance its global leadership status. By cooperating with other nations, sharing best practices, and contributing to global sustainable development goals, India can showcase its commitment to building a better world for all.
4. **Urban Planning and Infrastructure:** As India's urban centers grow, Sustainable Development can guide smart urban planning and infrastructure development. Creating sustainable cities with efficient public transport, green spaces, and eco-friendly buildings will not only improve the quality of life for citizens but also serve as a model for other countries facing similar urbanization challenges.
5. **Circular Economy and Resource Efficiency:** Embracing a circular economy model, where products are designed for longevity, reuse, and recycling, can reduce waste and conserve resources. By implementing resource-efficient practices, India can demonstrate its dedication to a sustainable future, attracting international attention and admiration.
6. **Education and Awareness:** Raising awareness about Sustainable Development through education and public campaigns will foster a culture of sustainability among the population. An informed and conscious citizenry can drive sustainable practices, support policymakers' decisions, and contribute to India's global leadership efforts. By integrating Sustainable Development into its policies, India can showcase its commitment to responsible and inclusive growth, becoming a role model for other nations. This transformation will not happen overnight, but through persistent efforts and collective action, India can position itself as a global leader in sustainable development by 2047.

Knowledge and Skill Revolution

A Knowledge and Skill Revolution refers to a transformative shift in the education and training landscape that empowers individuals with the necessary knowledge, skills, and competencies to adapt to changing times and contribute effectively to society and the economy. In the context of India's development and aspirations for global leadership, such a revolution can play a crucial role in several ways:

1. **Economic Growth and Innovation:** A well-educated and skilled population can drive innovation and economic growth. India could become a hub for cutting-edge research, technology, and startups, attracting foreign investments and fostering indigenous innovation.

2. **Competitive Workforce:** A highly skilled workforce will make India's labor market more competitive globally. This could lead to increased employability and higher income levels for its citizens.
3. **Global Trade and Investment:** With a knowledge-driven economy, India can become a preferred destination for global businesses looking to leverage a skilled workforce and vibrant market.
4. **Sustainable Development:** Emphasizing knowledge and skills in areas like renewable energy, sustainable agriculture, and environmental conservation could position India as a leader in addressing global challenges like climate change.
5. **Social Development and Inclusivity:** A focus on education and skill development can lead to greater social inclusion by providing equal opportunities for all, irrespective of their backgrounds, leading to reduced poverty and inequality.
6. **Soft Power and Diplomacy:** A knowledge and skill-oriented approach can enhance India's soft power and influence on the global stage, strengthening diplomatic relations and partnerships with other countries.

To achieve this vision by 2047, India should consider a multi-pronged approach, which may include the following initiatives:

1. **Education Reforms:** Implementing reforms in the education system to emphasize practical skills, critical thinking, and creativity alongside traditional academic knowledge.
2. **Vocational Training:** Enhancing vocational training programs to equip the workforce with job-specific skills demanded by industries.
3. **Investment in Research and Development:** Increasing funding for research and development across various sectors to drive innovation and technological advancements.
4. **Public-Private Partnerships:** Collaborating with private sector entities to bridge the gap between academia and industry and to ensure that educational programs align with industry needs.
5. **Digital Infrastructure:** Investing in robust digital infrastructure to promote e-learning, online courses, and remote education, especially in remote and underserved regions.
6. **Promotion of Entrepreneurship:** Encouraging and supporting entrepreneurs to foster innovation and create new ventures that can contribute to economic growth.
7. **International Collaboration:** Collaborating with other nations, institutions, and organizations to share knowledge, expertise, and best practices.

Social Development and Inclusivity

It's essential to note that achieving these goals requires sustained commitment and dedication from all stakeholders, including the government, private sector, educational institutions, and civil society. Additionally, adaptability to evolving technologies and global trends will be crucial in ensuring that India remains on the path of growth and leadership in the ever-changing world.

- 1. Economic Growth and Stability:** Social development and inclusivity ensure that economic growth is equitable and benefits all segments of society. When marginalized groups have access to opportunities, education, and resources, they can actively participate in the economy. This leads to a more robust and stable economic foundation, fostering India's status as a reliable and attractive investment destination.
- 2. Human Capital Development:** By focusing on social development, India can nurture its human capital effectively. Investing in education, healthcare, and skill development empowers the workforce, making them more productive and innovative. A skilled and healthy workforce is a critical asset for India's global leadership aspirations.
- 3. Fostering Innovation and Entrepreneurship:** Inclusive policies foster innovation by providing diverse perspectives and ideas. When individuals from different backgrounds and regions have equal access to opportunities, they can contribute unique insights, leading to a more vibrant and dynamic innovation ecosystem. This fosters entrepreneurship, driving India's technological advancements and competitiveness on the global stage.
- 4. Strengthening Diplomatic Relations:** Demonstrating a commitment to social development and inclusivity enhances India's reputation on the international stage. It sends a positive message to other nations and can foster stronger diplomatic ties. Nations often prefer to collaborate with countries that prioritize the well-being of their citizens and address social challenges.
- 5. Peace and Stability:** Inclusivity and social development can reduce social disparities and minimize conflicts arising from inequality. A more harmonious and inclusive society is better equipped to handle internal challenges, which contributes to national stability. As a stable nation, India can effectively engage in global affairs and initiatives for promoting peace and cooperation.
- 6. Sustainable Development Goals (SDGs):** Social development and inclusivity are fundamental to achieving the United Nations' Sustainable Development Goals. By actively pursuing these goals, India can showcase its commitment to global welfare, positioning itself as a responsible global leader that addresses pressing global challenges.

7. **Cultural Diplomacy:** Inclusivity celebrates India's diverse cultures and traditions, fostering cultural diplomacy. Embracing diversity can lead to greater cultural understanding and cooperation with other countries, building stronger bonds and respect on the global stage.
8. **Soft Power Projection:** A socially inclusive and developed nation has a higher soft power quotient. Soft power refers to the ability to influence others through attraction and persuasion rather than force. By projecting its achievements in social development and inclusivity, India can enhance its soft power and become an inspirational model for other countries. In summary, social development and inclusivity are essential pillars in India's journey towards global leadership. They not only contribute to the country's internal growth and stability but also enhance its reputation and influence in the international community. By 2047, a socially developed and inclusive India can inspire the world and actively contribute to solving global challenges, earning its place as a global leader.

In the year 2047, India aims to emerge as a Vishwa Guru, a global leader that promotes peace, prosperity, and progress while embracing its rich cultural heritage and values. Here are some initiatives that India can undertake to achieve this vision of global leadership:

1. **Healthcare and Wellness:** India will prioritize healthcare and wellness initiatives, ensuring accessible and affordable healthcare for all its citizens. The country will also actively participate in global health efforts, contributing to research, disease prevention, and the development of life-saving medical treatments.
2. **Digital Transformation:** India will continue to embrace technology and innovation, promoting a digital-first approach across sectors. The country will encourage startups and digital entrepreneurs to create solutions for global challenges.
3. **Diplomacy and Peacekeeping:** India will play an active role in international diplomacy, seeking peaceful resolutions to conflicts and promoting cooperation among nations. The country will be a strong advocate for the United Nations and other global forums, contributing to peacekeeping missions and humanitarian aid.
4. **Cultural Diplomacy:** India will leverage its rich cultural heritage to foster better global understanding and appreciation. Initiatives like cultural exchanges, festivals, and cultural centers will be promoted to strengthen people-to-people ties between India and other nations.
5. **Inclusive Governance:** India will promote inclusive governance, where every citizen's voice is heard and considered. The country will uphold democratic

principles, ensuring transparency, accountability, and the protection of human rights.

6. Space Exploration: India will continue to advance its space exploration programs, contributing to scientific discoveries and space research. Collaborations with other space-faring nations will be pursued to jointly explore the frontiers of space.
7. Global Poverty Eradication: India will actively participate in global efforts to eradicate poverty and uplift the underprivileged. Sharing its successful poverty alleviation strategies, India will work with other nations to implement sustainable development goals.
8. Disaster Management and Humanitarian Aid: India will enhance its disaster management capabilities and extend humanitarian aid to nations in times of crises, reinforcing its commitment to global solidarity and support.
9. Cyber security and Data Protection: India will champion efforts to strengthen global cyber security and data protection measures, safeguarding the digital world from cyber threats and ensuring the responsible use of technology. Through these initiatives and a commitment to progress and peace, India aspires to be a guiding light, a Vishwa Guru, inspiring other nations towards sustainable development, inclusivity, and prosperity.

Vision Healthcare and Wellness

Vishwa Guru" or a global leader can be greatly enhanced by focusing on healthcare and wellness, especially concerning vision and eye care. Here are some initiatives that can contribute to India's global leadership in this domain:

1. Universal Eye Care Access: Implementing a comprehensive and accessible eye care system that covers all citizens, regardless of their socio-economic status, will be a crucial step. This can include establishing eye care centers and mobile clinics in rural and remote areas, where access to healthcare might be limited.
2. Technological Advancements: Investing in cutting-edge technology and research for eye care can lead to improved diagnosis, treatment, and surgical procedures. This will ensure that India stays at the forefront of medical advancements and attracts patients from around the world seeking top-notch eye care services.
3. Medical Tourism Promotion: Leveraging India's advanced healthcare facilities and skilled medical professionals, the country can actively promote medical tourism for eye-related treatments. Offering high-quality and cost-effective services to international patients can significantly boost India's reputation as a global healthcare destination.

4. **Telemedicine and E-health Initiatives:** Developing robust telemedicine platforms and e-health initiatives can help reach a broader population, including those in remote areas. Virtual consultations and remote monitoring of patients can improve access to eye care services and foster better patient outcomes.
5. **Research and Innovation:** Encouraging research and innovation in the field of ophthalmology will lead to the development of new treatments, medications, and assistive technologies for vision-related issues. Government and private sector collaboration can play a vital role in fostering research and bringing innovations to the market.
6. **Eye Health Education:** Promoting awareness about eye health and preventive measures will be essential in reducing the burden of avoidable blindness and visual impairments. Educational campaigns can focus on regular eye check-ups, eye protection, and healthy lifestyle habits to maintain good vision.
7. **Collaboration with Global Organizations:** Partnering with international organizations and research institutions will facilitate knowledge exchange, access to resources, and the adoption of best practices in eye care. Such collaborations can also open up avenues for joint research and training programs.
8. **Focus on Preventive Care:** Prioritizing preventive eye care through regular eye screenings in schools, workplaces, and communities can help detect and address vision issues early on, preventing further complications.
9. **Inclusive Approach:** Ensuring that eye care services are inclusive and cater to the needs of vulnerable populations, such as the elderly, children, and individuals with disabilities, will reflect positively on India's commitment to universal healthcare and global leadership. By taking these initiatives and prioritizing vision healthcare and wellness, India can strengthen its position as a global leader in healthcare and contribute significantly to the well-being of its citizens and the world at large.

Disaster Management and Humanitarian Aid

Disaster Management and Humanitarian Aid play a crucial role in helping India achieve its vision of becoming a "Vishwa Guru" (world leader) by 2047 and taking initiatives for global leadership. Here are some ways in which these efforts contribute to India's vision:

1. **Strengthening Resilience:** Disaster Management focuses on enhancing the country's ability to withstand and recover from natural and man-made disasters. By building resilient infrastructure, preparedness plans, and response mechanisms, India can ensure that its development progress is not

derailed by frequent disasters. A resilient nation can better handle crises and continue its progress towards global leadership.

2. **International Cooperation:** By actively participating in global humanitarian aid efforts, India can establish itself as a responsible and compassionate global player. Offering assistance to other countries during disasters fosters goodwill and strengthens diplomatic ties, positioning India as a reliable partner in the international community.
3. **Regional Influence:** Effective disaster management and humanitarian aid contribute to India's leadership role in the South Asian region. As neighbouring countries often face similar challenges, India can provide expertise, resources, and support, earning the trust of its neighbours and becoming a regional leader.
4. **Innovation and Expertise:** By investing in disaster management research, technology, and training, India can become a hub of expertise in this field. This expertise can then be shared with other countries facing similar challenges, positioning India as a knowledge leader and a go-to resource for disaster management solutions.
5. **Addressing Global Challenges:** Through humanitarian aid initiatives, India can contribute to addressing global challenges, such as poverty, hunger, health crises, and climate change. Active involvement in tackling these issues demonstrates India's commitment to being a responsible global leader.
6. **Fostering National Unity:** Disaster management and humanitarian aid efforts often require coordination and collaboration among various government agencies, NGOs, and citizens. These endeavours can foster a sense of national unity and pride in contributing to the well-being of fellow citizens and the global community.

Overall, Disaster Management and Humanitarian Aid initiatives can significantly contribute to India's vision for 2047 as a Vishwa Guru by showcasing its leadership, compassion, and capability to address global challenges, thereby strengthening its position on the world stage.

Conclusions

Re-envisioning India @ 2047: Initiatives for Global Leadership" outlines a bold and ambitious roadmap for India to become a global leader in various spheres by the year 2047. This vision envisions India not only as an economic powerhouse but also as a nation that leads in promoting peace, sustainability, innovation, and social progress on the global stage. Through a multifaceted approach, India seeks to harness its demographic dividend, rich cultural heritage, and technological prowess

to address the challenges and opportunities of the 21st century. This involves investing in education, research, and development to foster innovation and build a highly skilled workforce capable of driving cutting-edge industries.

GENDER EQUALITY AND WOMEN'S EMPOWERMENT

Mrs.J.Sanpiya

Assistant Professor

Pollachi College of Arts and Science, Poosaripatti, Pollachi

Abstract

The word gender refers to the economic, social, and cultural characteristics and opportunities of being male or female. Being a male or female is not just a matter of different biological and physical features in most cultures. This paper discusses the importance of gender equality in achieving women's empowerment goals. Gender Equality and empowerment of women are two facets of the same coin. The progress toward gender equality that requires women 's empowerment and vice-versa. Both have multiple dimensions that generate a wide range of indicators together throughout the past. Gender equality and women 's empowerment have been specifically recognized over the past decades as vital not only to the welfare of nations but also to social and economic growth. Globally, women have fewer opportunities for economic participation than men, less access to basic and higher education, greater risks to health and safety, and less representation on the political level. This paper examines the scenario of gender inequality in present-day pandemic situations in India and the forms of inequalities. This paper highlights the importance of gender equality in women empowerment, gender inequality in development, and gender mainstreaming in development. This research aims to assess progress in India towards the twin goals of gender equality and women empowerment; this research also focuses on the determinants of identified gender equality measures and women empowerment. The study states that there is clear evidence that gender equality can promote economic growth.

Keywords: Gender, Attributes, Empowerment, Inequality, Economic Development.

Introduction

Gender equity is the process of being fair to women and men. To ensure fairness, strategies and measures must often be available to compensate for women's historical and social disadvantages that prevent women and men from otherwise operating on a level playing field. Equity leads to equality. Gender equality requires equal enjoyment by women and men of socially-valued goods, opportunities, resources and rewards. Where gender inequality exists, it is generally women who are excluded or disadvantaged in relation to decision-making and access to economic and social resources. Therefore a critical aspect of promoting gender equality is the empowerment of women, with a focus on identifying and redressing power imbalances and giving women more autonomy to manage their own lives. Gender equality does not mean that men and women become the same; only that access to opportunities and life changes is neither dependent on, nor constrained by, their sex. Achieving gender equality requires women's empowerment to ensure that

decision making at private and public levels and access to resources are no longer weighted in men's favour, so that both women and men can fully participate as equal partners in productive and reproductive life.

Analysis of a global survey of 21,980 firms from 91 countries indicates that women's participation in positions of corporate leadership may enhance firm performance. The connection may either reflect the payoff to nondiscrimination or the fact that women are increasing the variety of skills in business. The role of women in corporate financial regulation is positively associated with the firm characteristics such as size and regional characteristics as girls' math performance, lack of patriarchal attitudes towards female executives, and the availability of paternal leave. The findings don't affect the board's gender quotas on companies. Quality but they say this more generally may be the payoffs of policies that promote women rising through the corporate ranks.

Objectives

The main objectives of this work are to

1. To study the importance of Gender Equality in economic development.
2. To determine the factors considered for women Empowerment in the Covid-19 pandemic.
3. To identify the key issues and challenges for women empowerment and Gender Equality.

Importance

Gender Equality Gender equality is directly related to sustainable development and is essential to ensuring human rights for all. Gender equality is very important to achieve the aim of empowering women. The overarching aim of gender equality is a world where women and men enjoy in all aspects of life have the same opportunities, rights and obligations. Equality between men and women exists when both sexes can participate equally in the distribution of power and influence; have equal opportunities for financial freedom through employment or the establishment of businesses, enjoy equal access to education and ability to grow personal goals, interests and talents; share responsibility for the home and children and are free of coercion.

Gender equality is important in the sense of population and development programs because it will allow women and men to make choices that have a more positive effect on their sexual and reproductive health and that of their spouses and families. Decisions on topics such as marriage age, the timing of pregnancies, the use of contraceptives, and the use of inappropriate female behaviors can be improved with the achievement of gender equality.

However, it is necessary to note that where there is gender discrimination, women are usually excluded or disadvantaged as regards decision making and access to economic and social capital. A crucial aspect of fostering gender equality is also an emphasis on recognizing and redressing power imbalances and granting women greater flexibility in handling their responsibilities. This will encourage them to make decisions and take actions to achieve and preserve their sexual and reproductive health. Gender equality and empowerment of women do not mean that men and women become the same; only that access to resources and improvements in life is neither contingent on their gender nor limited by it.

Gender equality reaching means improvements for both men and women alike. More equal partnerships must be based on a redefinition of women's and men's rights and obligations in all areas of life, including family, workplace, and society at large. Therefore, it is important not to ignore gender as an element of the social identity of men. Indeed, this fact is always ignored because the tendency is to consider male characteristics and attributes as the custom and those of women as a variation of the norm.

Yet gender affects men's lives as much as women. Societal standards and traditions surrounding "masculinity" and men's expectations as representatives, husbands, or sons impose pressure on men and influence their behavior. Men are too often forced to focus on the family's material needs, rather than on the caring and nurturing tasks are given to women. Family and later school socialization promote risk-taking behavior among young men, and this is often reinforced by peer pressure and media stereotyping. Thus, the lifestyles demanded by men's roles often result in their being more at risk of morbidity and mortality compared to women. Such threats include those linked to injuries, abuse, and drug use.

Gender Equality and Women's Empowerment

Gender equality means a world where women and men in all aspects of life experience the same opportunities, results, freedom, and obligations. Gender equality happens when both sexes can participate equally in the allocation of power and influence; have equal opportunities for financial freedom through employment or the establishment of businesses; have equal access to education and the opportunity to develop personal ambitions. The empowerment of women is a vital component of fostering gender equality, with an emphasis on recognizing and redressing power imbalances and allowing women more flexibility to control their own lives. The empowerment of women is necessary for sustainable development and the realization of human rights for all. Where the status of women is small, family size appears to be high, making it harder for families to thrive.

Population and growth programs, reproductive health services are more successful when addressing women's educational opportunities, status and empowerment. Once women are empowered, it benefits whole families, and these benefits also have rippling effects on future generations. The positions that men and women play in society are not decided biologically and are socially determined, evolving and changeable. While they can be justified as involving culture or faith, these positions differ widely depending on the place and change over time.

Key Issues and Linkages

Reproductive Health

Women are more vulnerable to reproductive-health problems for both physiological and social reasons than men. Reproductive health problems in developing countries, including maternal mortality and morbidity, are a major – but preventable – cause of death and disability for women. Failure to provide information, services and conditions to help women protect their reproductive health, therefore, constitutes discrimination based on gender and a violation of women's health and life rights.

Stewardship of Natural Resources

Women in India are generally responsible for obtaining water, food, and fuel and supervising the health and diet of their families. Therefore, they prefer to bring everything they know about nutrition into immediate action and protect the ecosystem and natural resources.

Economic Empowerment

In India, there is more poverty amongst women than men. Gender inequalities exist in part because most of the unpaid labor within families and societies fall on women's shoulders and because they face racial discrimination.

Educational Empowerment

Approximately two-thirds of India's illiterate adults are female. Higher educational rates for women are closely correlated with lower infant mortality and lower fertility, as well as higher educational and economic opportunities for their children.

Political Empowerment

In fundamental civil and human rights, in access to or ownership of the land or other resources, in jobs and earnings and social and political participation, social and legal systems often do not guarantee women equality. Domestic abuse laws are still not followed on the women's behalf.

Empowered Women's Characteristics

1. Empowered women define their attitude, values and behaviours in relation to their own real interest. They have autonomy because they claim their freedom from existing male hierarchies, whether they live in traditional societies or modern industrial societies.
2. Empowered women maintain equal mindedness. They act out roles that challenge male dominance. They respond as equals and co-operate to work towards the common good.
3. Empowered women use their talent to live fulfilling lives. They not only survive the harshness of their own subjugation but also transcend their subjugation.
4. Empowered women maintain their strength on the face of pressures from the religion and work and contribute towards the empowerment of all women.
5. Empowered women define their values and formulate their beliefs themselves, they do not derive their sense of being from male authorities nor do they live vicariously through men.

Factors for Women Empowerment

Why is it important to NOT leave women behind in the prevailing scenario?

The pandemic deepens pre-existing gaps and reveals and exploits vulnerabilities in social, political, and economic systems. While frontline health professionals, nurses, outreach assistants, online teachers, social workers, managers, police, media staff, care providers, women have made important contributions, they are also one of the hardest hits.

'The pandemic is deepening pre-existing inequalities, exposing and exploiting vulnerabilities in social, political, and economic systems'. While women have been making crucial contributions as frontline health workers, nurses, sanitation workers, online teachers, social workers, administrators, police personnel, media personnel, care providers, they are also one amongst the hardest hit.

1. Social Factors

The extra burden of household work /unpaid care work for women and girls.

Rising GBV and safety threats – India has reported cases of increased domestic abuse and violence against intimate partners. 1 in 3 women experiences physical or sexual harassment primarily by an intimate partner. In India, the global data is complemented by the recently concluded (2015-2016) NFHS-4 data at the national level which shows that 28.8% of ever-married women have experienced spousal violence. The problem is getting ever more serious as life-saving and community programs, including one-stop trauma centers, mental wellbeing, and psychosocial

community, police, and justice programs, etc., are all overwhelmed as health care professionals are overburdened and distracted with coping with COVID-19. The United Nations Secretary-General Antonio Guterres called for a “ceasefire” to address the “horrificing global surge in domestic violence” On 6 April 2020.

Impact on women at the bottom of the pyramid including migrant workers, single women/mothers; the aged and elderly; women with disabilities; SOGI, etc. is more glaring as they encounter double or triple layers of inequality based on their sex, socioeconomic situation and other specific conditions.

The impact of the pandemic has had an impact on farmers who are grappling with food availability, food access, and food utilization thus, leading to food insecurity. The food cycle disruptions affect women’s health and nutrition status thereby, making them the invisible face of hunger.

2. Economic Factors

In any humanitarian crisis, manmade or natural-women in the economic sphere are still left behind. Not only does this affect their livelihoods but it also raises the gender disparity in terms of employment, jobs, salaries, and opportunities.

Women will be pushed back to poverty after this phase gets over. In India, 93% of women are engaged in the informal sector / have unskilled jobs and low wages that contribute to 50% of the economy. They are the ones who lose their jobs first and with no social security and job security, their road to recovery is an arduous and challenging task.

3. Health Factors

Social norms and cultural traditions present greater health risks for women and girls as they are the last to seek medical assistance or prompt treatment in any crisis. The specific needs of women healthcare workers like menstrual hygiene needs, psychosocial support, household responsibilities apart from personal protective equipment are usually side-lined amidst this chaos.

Interrupted access to sexual and reproductive health – in any crisis whether natural or man-made, financial resources are usually diverted from essential/routine health services to tackle the crisis at hand. Pre- and post-natal health care and contraceptives, sexual and reproductive health services, etc. are some of the services that lag thereby, having an impact on women’s overall wellbeing.

The mitigation strategies need to be defined in a manner wherein, they not only look at the health aspects but, also the economic aspects and thereby, help in building women’s buoyancy. Or else, we stand at the risk of going back by decades, as COVID19 may reverse the gains made so far on realizing gender and human rights of women and girls.

Conclusion

From the above discussion, it could be seen that gender equality is very important to achieving women's empowerment targets. It is noted that in India, women have been exposed to various forms of oppression and disabilities despite the enjoyment of the developmental benefits arising from disempowerment. Therefore, women's advancement may be possible by gender achievement.

The following steps can be considered for fostering gender equality in socio-economic growth. Alternate metrics include the OECD's Social Institutions Gender Index (SIGI), which in 2012 ranked India 56th out of 86, an increase from its 96th out of 102 ratings in 2009. The SIGI is a measure of unequal social structures that are drivers of injustice, rather than the unjust effects themselves. Within the same vein, UNDP released the Gender Inequality Index and ranked India 132 out of 148.

Abstract

Within the last decade, the application of “artificial intelligence” and “machine learning” has become popular across multiple disciplines, especially in information systems. The two terms are still used inconsistently in academia and industry – sometimes as synonyms, sometimes with different meanings. With this work, we try to clarify the relationship between these concepts. We review the relevant literature and develop a conceptual framework to specify the role of machine learning in building (artificial) intelligent agents. Additionally, we propose a consistent typology for AI-based information systems. We contribute to a deeper understanding of the nature of both concepts and to more terminological clarity and guidance – as a starting point for interdisciplinary discussions and future research.

Keywords: *Artificial Intelligence, Machine, Learning.*

Introduction

Artificial intelligence (AI) is the ability of machines to replicate or enhance human intellect, such as reasoning and learning from experience. Artificial intelligence has been used in computer programs for years, but it is now applied to many other products and services. For example, some digital cameras can determine what objects are present in an image using artificial intelligence software. In addition, experts predict many more innovative uses for artificial intelligence in the future, including smart electric grids.

AI uses techniques from probability theory, economics, and algorithm design to solve practical problems. In addition, the AI field draws upon computer science, mathematics, psychology, and linguistics. Computer science provides tools for designing and building algorithms, while mathematics offers tools for modeling and solving the resulting optimization problems. Although the concept of AI has been around since the 19th century, when Alan Turing first proposed an “imitation game” to assess machine intelligence, it only became feasible to achieve in recent decades due to the increased availability of computing power and data to train AI systems.

History of Artificial Intelligence

With so much attention on modern artificial intelligence, it is easy to forget that the field is not brand new. AI has had a number of different periods, distinguished by whether the focus was on proving logical theorems or trying to mimic human thought via neurology. Artificial intelligence dates back to the late 1940s when computer pioneers like Alan Turing and John von Neumann first started examining how machines could “think.” However, a significant milestone in AI occurred in 1956 when researchers proved that a machine could solve any problem if it were allowed to use an unlimited amount of memory. The result was a program called the General Problem Solver (GPS).

Over the next two decades, research efforts focused on applying artificial intelligence to real-world problems. This development led to expert systems, which allow machines to learn from experience and make predictions based on gathered data. Expert systems aren’t as complex as human brains, but they can be trained to identify patterns and make decisions based on that data. They’re commonly used in medicine and manufacturing today. A second major milestone came in 1965 with the development of programs like Shakey the robot and ELIZA, which automated simple conversations between humans and machines. These early programs paved the way for more advanced speech recognition technology, eventually leading to Siri and Alexa.

The initial surge of excitement around artificial intelligence lasted about ten years. It led to significant advances in programming language design, theorem proving, and robotics. But it also provoked a backlash against over-hyped claims that had been made for the field, and funding was cut back sharply around 1974. The early years of the 21st century were a period of significant progress in artificial intelligence. The first major advance was the development of the self-learning neural network. By 2001, its performance had already surpassed human beings in many specific areas, such as object classification and machine translation. Over the next few years, researchers improved its performance across a range of tasks, thanks to improvements in the underlying technologies.

Artificial Intelligence & Machine Learning

Artificial Intelligence is the most trending field of computer science. However, with all the new technology and research, it’s growing so fast that it can be confusing to understand what is what. Furthermore, there are many different fields within AI, each one having its specific algorithms. Therefore, it’s essential to know that AI is not a single field but a combination of various fields.

Artificial Intelligence (AI) is the general term for being able to make computers do things that require intelligence if done by humans. AI can be broken down into

two major fields, Machine Learning (ML) and Neural Networks (NN). Both are subfields under Artificial Intelligence, and each one has its methods and algorithms to help solve problems.

Machine Learning

Machine learning (ML) is a type of artificial intelligence (AI) that allows software applications to become more accurate at predicting outcomes without being explicitly programmed to do so. Machine learning algorithms use historical data as input to predict new output values.

Recommendation engines are a common use case for machine learning. Other popular uses include fraud detection, spam filtering, malware threat detection, business process automation (BPA) and Predictive maintenance.

Types of Machine Learning

Classical machine learning is often categorized by how an algorithm learns to become more accurate in its predictions. There are four basic approaches: supervised learning, unsupervised learning, semi-supervised learning and reinforcement learning. The type of algorithm data scientists choose to use depends on what type of data they want to predict.

Supervised Learning

In this type of machine learning, data scientists supply algorithms with labeled training data and define the variables they want the algorithm to assess for correlations. Both the input and the output of the algorithm is specified.

Unsupervised Learning

This type of machine learning involves algorithms that train on unlabeled data. The algorithm scans through data sets looking for any meaningful connection. The data that algorithms train on as well as the predictions or recommendations they output are predetermined.

Semi-supervised Learning

This approach to machine learning involves a mix of the two preceding types. Data scientists may feed an algorithm mostly labeled training data, but the model is free to explore the data on its own and develop its own understanding of the data set.

Reinforcement Learning

Data scientists typically use reinforcement learning to teach a machine to complete a multi-step process for which there are clearly defined rules. Data scientists program an algorithm to complete a task and give it positive or negative cues as it works out how to complete a task. But for the most part, the algorithm decides on its own what steps to take along the way.

How Does Machine Learning Work?

A Machine Learning system learns from historical data, builds the prediction models, and whenever it receives new data, predicts the output for it. The accuracy of predicted output depends upon the amount of data, as the huge amount of data helps to build a better model which predicts the output more accurately.

Implications & Applications of Artificial Intelligence

The revolutionary power of computers to “learn” from large datasets and use this information to make predictions is unprecedented. Loosely defined under the umbrella of artificial intelligence (AI), these complex systems are already applied in multiple contexts: at home, at work, in decisions about loans and college admissions, in vehicles and transportation systems, in weapons, in surveillance, in healthcare, and in policing and judicial sentencing. Future applications of AI could extend even further, encompassing most aspects of our lives.

As we stand on the cusp of a technological revolution, opportunities abound to harness these technologies for social good: AI-based systems may have the capacity to scan social media across platforms and across the globe to warn of imminent environmental disasters, disease outbreaks, or political upheavals, using this information in ways that individuals may not have intended or even realized were possible. They have the potential to remove human bias from judicial decisions about sentencing; AI-based systems could optimize diagnostics and therapeutics through analysis and correlations of immense swaths of patient data. But for the benefits to be equitably enjoyed by every member of society, public attitudes toward AI among marginalized and vulnerable populations must be better understood. AI innovations must be intentionally and responsibly developed, and their application must address the possible disparity of impact new technologies have on disadvantaged populations. In response to these challenges and opportunities, the American Association for the Advancement of Science (AAAS) and its partners are launching the (AI)²: Artificial Intelligence – Applications/Implications initiative, the goal of which is to affect the development and application of AI in ways that alleviate, rather than exacerbate, social inequalities.

Applications of Machine Learning

Machine learning is a buzzword for today's technology, and it is growing very rapidly day by day. We are using machine learning in our daily life even without knowing it such as Google Maps, Google assistant, Alexa, etc. Below are some most trending real-world applications of Machine Learning:

1. Image Recognition

Image recognition is one of the most common applications of machine learning. It is used to identify objects, persons, places, digital images, etc. The popular use case of image recognition and face detection is, Automatic friend tagging suggestion:

2. Speech Recognition

While using Google, we get an option of "Search by voice," it comes under speech recognition, and it's a popular application of machine learning. Speech recognition is a process of converting voice instructions into text, and it is also known as "Speech to text", or "Computer speech recognition." At present, machine learning algorithms are widely used by various applications of speech recognition. Google assistant, Siri, Cortana, and Alexa are using speech recognition technology to follow the voice instructions.

3. Traffic Prediction

If we want to visit a new place, we take help of Google Maps, which shows us the correct path with the shortest route and predicts the traffic conditions. Real Time location of the vehicle from Google Map app and sensors. Average time has taken on past days at the same time.

4. Self-Driving Cars

One of the most exciting applications of machine learning is self-driving cars. Machine learning plays a significant role in self-driving cars. Tesla, the most popular car manufacturing company is working on self-driving car. It is using unsupervised learning method to train the car models to detect people and objects while driving.

5. Stock Market Trading

Machine learning is widely used in stock market trading. In the stock market, there is always a risk of up and downs in shares, so for this machine learning's long short term memory neural network is used for the prediction of stock market trends.

6. Medical Diagnosis

In medical science, machine learning is used for diseases diagnoses. With this, medical technology is growing very fast and able to build 3D models that can predict the exact position of lesions in the brain. It helps in finding brain tumors and other brain-related diseases easily.

7. Automatic Language Translation

Nowadays, if we visit a new place and we are not aware of the language then it is not a problem at all, as for this also machine learning helps us by converting the text into our known languages. Google's GNMT (Google Neural Machine Translation) provide this feature, which is a Neural Machine Learning that translates the text into our familiar language, and it called as automatic translation.

The technology behind the automatic translation is a sequence to sequence learning algorithm, which is used with image recognition and translates the text from one language to another language.

Methods of Artificial Intelligence

Logic, Problem-Solving

Early researchers developed algorithms that simulate humans' step-by-step reasoning when solving puzzles or making logical deductions. By the late 1980s and 1990s, AI research had developed methods for dealing with uncertain or incomplete information, employing concepts from probability and economics. For difficult problems, algorithms can require enormous computational resources-most experience a "combinatorial explosion": the amount of memory or computer time needed for problems of a certain size becomes astronomical. The search for more efficient problem-solving algorithms is a high priority.

Knowledge Representation

Knowledge representation and knowledge engineering are central to AI research. Many of the problems that machines are expected to solve will require extensive world knowledge. The things AI needs to represent are objects, properties, categories, and relationships between objects; situations, events, states, and times; Cause and Effect; Knowledge about knowledge (what other people know about what we know); and many other, less well-researched domains. A representation of "what exists" is an ontology: the set of objects, relations, concepts, and so on about which the machine knows. The most general is upper ontology, which attempts to provide a foundation for all other knowledge.

Planning

Intelligent agents must be able to set goals and achieve them. They need a way to envision the future - a representation of the state of the world and make predictions about how their actions will change it - and be able to make choices that maximize the utility (or "value") of the options available.

In classical planning problems, the agent can assume that it is the only system acting in the world, allowing the agent to be certain of the consequences of its actions.

However, if the agent is not the only actor, it requires that the agent reason under uncertainty. It calls for an agent to assess its environment, make predictions, evaluate its predictions, and adapt based on its assessment.

Learning

Machine learning, a fundamental concept of AI research since the field's inception, is the study of computer algorithms that automatically improve through experience. Unsupervised learning is the ability to find patterns in a stream of input. Supervised learning includes both classification and numerical regression. After seeing several examples of things from several categories, classification is used to determine which category something falls into. Regression attempts to construct a function that describes the relationship between inputs and outputs and predicts how the outputs should change as the inputs change.

Social Intelligence

Effective computing is the study and development of systems that can detect, interpret, process, and simulate human. It is an interdisciplinary field spanning computer science, psychology, and cognitive science. While the origins of the field can be traced to early philosophical inquiries into emotion, the more modern branch of computer science originated from Rosalind Picard's 1995 paper on "effective computing".

Creativity

A sub-field of AI addresses creativity theoretically (philosophical, psychological perspective) and practically (the specific implementation of systems that produce novel and useful outputs). Some related areas of computational research include artificial intuition and artificial thinking.

General Intelligence

Many researchers think that their work will eventually result in a machine with artificial general intelligence, combining all the skills described above and exceeding human capacity in most or all of these areas. Some believe that such a project may require anthropomorphic features such as artificial consciousness or an artificial brain.

Conclusion

AI is at the centre of a new enterprise to build computational models of intelligence. The main assumption is that intelligence (human or otherwise) can be represented in terms of symbol structures and symbolic operations which can be programmed in a digital computer. There is much debate as to whether such an appropriately programmed computer would be a mind, or would merely simulate one, but AI researchers need not wait for the conclusion to that debate, nor for the hypothetical computer that could model all of human intelligence. Aspects of

intelligent behaviour, such as solving problems, making inferences, learning, and understanding language, have already been coded as computer programs, and within very limited domains, such as identifying diseases of soybean plants, AI programs can outperform human experts. Now the great challenge of AI is to find ways of representing the common sense knowledge and experience that enable people to carry out everyday activities such as holding a wide-ranging conversation, or finding their way along a busy street. Conventional digital computers may be capable of running such programs, or we may need to develop new machines that can support the complexity of human thought.

PROMOTING GENDER EQUALITY AND WOMEN'S EMPOWERMENT: STRATEGIES FOR SUSTAINABLE DEVELOPMENT

Mr.K.Kannan

*Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore*

Dr.E.Rajeswari

*Assistant Professor of Commerce
Karpagam Academy of Higher Education, Coimbatore*

Abstract

Gender equality and women's empowerment are crucial components of sustainable development. This conference paper aims to explore the importance of gender equality and women's empowerment, analyze the challenges faced in achieving these goals, and propose strategies for promoting gender equality and empowering women. The paper will discuss the benefits of gender equality, including its impact on social, economic, and political spheres. It will also examine the barriers and challenges that hinder progress in achieving gender equality and women's empowerment. The paper will then present strategies and best practices for promoting gender equality, including legal and policy frameworks, education and awareness programs, economic empowerment initiatives, and the role of technology and innovation. The paper will conclude by highlighting the importance of multi-stakeholder collaboration and the need for sustained efforts to achieve gender equality and women's empowerment.

Keywords: *Gender equality, women's empowerment, sustainable development, challenges, strategies, best practices, multi-stakeholder collaboration.*

Introduction

Gender equality and women's empowerment are not only fundamental principles of human rights but also essential for achieving sustainable development. They are interconnected and mutually reinforcing concepts that aim to create a society where individuals of all genders have equal rights, opportunities, and access to resources. Gender inequality undermines social progress, limits human potential, and hampers economic growth. Therefore, promoting gender equality and women's empowerment is crucial for creating a just, inclusive, and sustainable world. Gender equality encompasses the equal treatment and valuing of individuals, irrespective of their gender identity or expression. It involves challenging and transforming discriminatory social norms, stereotypes, and attitudes that perpetuate unequal power relations between men and women. Women's empowerment, on the other hand, focuses on providing women with the tools, resources, and opportunities to

participate fully in all aspects of life, including social, economic, and political spheres. It aims to enable women to make decisions, exercise their rights, and contribute to the well-being and development of their families, communities, and societies.

Promoting gender equality and women's empowerment is essential for several reasons. First, it is a matter of human rights and social justice. All individuals, regardless of their gender, deserve equal rights, dignity, and respect. Gender-based discrimination and violence not only violate these rights but also perpetuate cycles of inequality and injustice. Second, gender equality and women's empowerment have significant economic implications. Numerous studies have shown that countries with greater gender equality tend to experience higher levels of economic growth and development. When women are empowered and have equal access to education, healthcare, and economic opportunities, they can contribute to economic productivity, innovation, and competitiveness. Closing the gender gap in employment and entrepreneurship can unlock the untapped potential of women, leading to increased productivity, higher incomes, and poverty reduction. Third, gender equality and women's empowerment are crucial for achieving the United Nations Sustainable Development Goals (SDGs). Many of the SDGs, such as ending poverty, promoting quality education, ensuring good health and well-being, and fostering sustainable economic growth, are closely linked to gender equality. Progress in these areas is significantly influenced by the status and empowerment of women.

However, despite the progress made in promoting gender equality, numerous challenges persist. Discriminatory laws, policies, and social norms continue to perpetuate gender inequality. Women and girls face barriers in accessing education, healthcare, and economic opportunities. Gender-based violence and harmful practices, such as child marriage and female genital mutilation, still exist in many parts of the world. Achieving gender equality requires addressing these challenges through comprehensive strategies and actions.

Effective Strategies for Promoting Gender Equality and Women's Empowerment Include

1. Legal and policy frameworks: Governments should enact and enforce laws and policies that protect women's rights, eliminate discrimination, and promote gender equality. This includes legislation against gender-based violence, equal pay for equal work, and promoting women's political participation and leadership.
2. Education and awareness: Investing in quality education for all, with a focus on eliminating gender disparities, is crucial. Education plays a vital role in

challenging stereotypes, promoting gender equality values, and empowering individuals to challenge discriminatory practices.

3. Economic empowerment: Creating an enabling environment for women's economic empowerment is essential. This includes promoting equal access to credit, resources, and markets, supporting women-owned businesses, and providing vocational training and entrepreneurship programs.
4. Health and well-being: Ensuring women's access to quality healthcare services, including sexual and reproductive health services, is crucial. This involves promoting comprehensive sexuality education, addressing maternal mortality, and providing reproductive rights and services.
5. Social norms and attitudes: Challenging harmful gender norms and promoting positive attitudes towards gender equality is essential. This can be achieved through public awareness campaigns, engaging men and boys as allies, and promoting gender equality in households, communities, and media.

In conclusion, promoting gender equality and women's empowerment is crucial for achieving sustainable development. It requires concerted efforts from governments, civil society organizations, the private sector, and individuals. By addressing the challenges and implementing effective strategies, we can create a world where gender equality is a reality, and women are empowered to fulfill their potential and contribute to a better future for all.

Importance of Gender Equality and Women's Empowerment

Gender equality is a fundamental principle that underpins inclusive societies and plays a pivotal role in achieving the United Nations' Sustainable Development Goals (SDGs). It encompasses ensuring equal rights, opportunities, and access to resources for individuals of all genders, challenging discriminatory practices, and promoting social justice. Promoting gender equality is crucial for reducing poverty and inequalities. When women have equal access to education, healthcare, and economic opportunities, they can actively participate in the workforce, generate income, and lift themselves and their families out of poverty. Closing the gender gap in employment and entrepreneurship can lead to increased productivity, economic growth, and poverty reduction. Moreover, gender equality helps address social and economic inequalities by removing barriers that limit the potential of women and hinder their contributions to society.

Gender equality also enhances overall well-being and quality of life for all individuals. When women are empowered, they can exercise control over their bodies and reproductive rights, make informed decisions about their health, and access essential healthcare services. This leads to improved maternal and child

health outcomes, reduced mortality rates, and enhanced overall health indicators for communities. Additionally, gender equality fosters a more inclusive and diverse society where everyone's voices are heard, respected, and valued, resulting in a more harmonious and cohesive social fabric. Women's empowerment, a key component of gender equality, involves providing women with the tools, resources, and opportunities to participate fully in social, economic, and political spheres. Empowered women become agents of change within their families, communities, and nations. When women are educated, they can contribute to informed decision-making, advocate for their rights, and actively participate in civic and political processes. Their increased participation in leadership positions leads to more inclusive policies and decision-making that better address the needs and interests of diverse populations. Furthermore, women's empowerment positively impacts families and communities. Studies have shown that when women are empowered, they invest in the well-being and education of their children, leading to improved intergenerational outcomes. Empowered women also contribute to community development by initiating and leading social and economic initiatives, promoting social cohesion, and fostering sustainable development.

Promoting gender equality and women's empowerment requires concerted efforts at various levels. Governments play a crucial role in enacting and implementing policies and laws that protect women's rights, address gender-based violence, and ensure equal opportunities in education, employment, and leadership positions. Civil society organizations and community-based initiatives can raise awareness, provide support services, and advocate for gender equality. The private sector can promote gender-responsive policies, equal pay for equal work, and diverse and inclusive work environments. Education plays a pivotal role in empowering women and promoting gender equality. Providing girls and women with quality education equips them with knowledge, skills, and confidence to challenge gender stereotypes, participate in decision-making processes, and pursue their aspirations. Access to education helps break the cycle of poverty and discrimination, enabling women to overcome barriers and contribute to social and economic development. In conclusion, gender equality and women's empowerment are vital for creating inclusive societies and achieving sustainable development. They promote social justice, reduce poverty and inequalities, enhance overall well-being, and contribute to the betterment of families, communities, and nations. Achieving gender equality requires the commitment and collaboration of governments, civil society organizations, the private sector, and individuals. By valuing and empowering women, we can create a world where everyone has equal rights, opportunities, and access to resources, fostering a more equitable and prosperous future for all.

Challenges in Achieving Gender Equality and Women's Empowerment

Gender equality is a fundamental principle that underpins inclusive societies and plays a pivotal role in achieving the United Nations' Sustainable Development Goals (SDGs). It encompasses ensuring equal rights, opportunities, and access to resources for individuals of all genders, challenging discriminatory practices, and promoting social justice. Promoting gender equality is crucial for reducing poverty and inequalities. When women have equal access to education, healthcare, and economic opportunities, they can actively participate in the workforce, generate income, and lift themselves and their families out of poverty. Closing the gender gap in employment and entrepreneurship can lead to increased productivity, economic growth, and poverty reduction. Moreover, gender equality helps address social and economic inequalities by removing barriers that limit the potential of women and hinder their contributions to society.

Gender equality also enhances overall well-being and quality of life for all individuals. When women are empowered, they can exercise control over their bodies and reproductive rights, make informed decisions about their health, and access essential healthcare services. This leads to improved maternal and child health outcomes, reduced mortality rates, and enhanced overall health indicators for communities. Additionally, gender equality fosters a more inclusive and diverse society where everyone's voices are heard, respected, and valued, resulting in a more harmonious and cohesive social fabric. Women's empowerment, a key component of gender equality, involves providing women with the tools, resources, and opportunities to participate fully in social, economic, and political spheres. Empowered women become agents of change within their families, communities, and nations. When women are educated, they can contribute to informed decision-making, advocate for their rights, and actively participate in civic and political processes. Their increased participation in leadership positions leads to more inclusive policies and decision-making that better address the needs and interests of diverse populations.

Furthermore, women's empowerment positively impacts families and communities. Studies have shown that when women are empowered, they invest in the well-being and education of their children, leading to improved intergenerational outcomes. Empowered women also contribute to community development by initiating and leading social and economic initiatives, promoting social cohesion, and fostering sustainable development. Promoting gender equality and women's empowerment requires concerted efforts at various levels. Governments play a crucial role in enacting and implementing policies and laws that protect women's rights, address gender-based violence, and ensure equal

opportunities in education, employment, and leadership positions. Civil society organizations and community-based initiatives can raise awareness, provide support services, and advocate for gender equality. The private sector can promote gender-responsive policies, equal pay for equal work, and diverse and inclusive work environments. Education plays a pivotal role in empowering women and promoting gender equality. Providing girls and women with quality education equips them with knowledge, skills, and confidence to challenge gender stereotypes, participate in decision-making processes, and pursue their aspirations. Access to education helps break the cycle of poverty and discrimination, enabling women to overcome barriers and contribute to social and economic development. In conclusion, gender equality and women's empowerment are vital for creating inclusive societies and achieving sustainable development. They promote social justice, reduce poverty and inequalities, enhance overall well-being, and contribute to the betterment of families, communities, and nations. Achieving gender equality requires the commitment and collaboration of governments, civil society organizations, the private sector, and individuals. By valuing and empowering women, we can create a world where everyone has equal rights, opportunities, and access to resources, fostering a more equitable and prosperous future for all.

Strategies for Promoting Gender Equality and Women's Empowerment

Strengthening Institutions and Accountability: It is important to strengthen institutions responsible for promoting gender equality and women's empowerment. This includes establishing gender equality commissions or departments, creating monitoring and evaluation mechanisms, and ensuring accountability for gender-related policies and programs. Institutional capacity building is also crucial to ensure effective implementation of gender-responsive initiatives.

Engaging Men and Boys: Achieving gender equality requires the active participation and support of men and boys. Engaging men in discussions and initiatives that promote gender equality can help challenge harmful gender norms and behaviors, foster empathy, and create inclusive environments. It is important to promote positive masculinities and encourage men's involvement as allies in advancing gender equality.

International Cooperation and Partnerships: Global collaboration and partnerships are vital for promoting gender equality and women's empowerment. Governments, civil society organizations, and international bodies should work together to share best practices, resources, and knowledge. Supporting initiatives that promote gender equality in different countries can lead to collective progress and exchange of experiences.

Data Collection and Research: Collecting sex-disaggregated data and conducting research on gender-related issues is essential for evidence-based policymaking and program development. Robust data collection can help identify gaps, monitor progress, and evaluate the impact of interventions aimed at promoting gender equality.

Social Norms and Cultural Change: Addressing deep-rooted social norms and cultural practices that perpetuate gender inequality is crucial. This requires engaging with communities, religious leaders, and influencers to challenge harmful practices, promote positive attitudes towards gender equality, and foster cultural change.

Continuous Monitoring and Evaluation: Regular monitoring and evaluation of gender equality initiatives are essential to track progress, identify gaps, and make necessary adjustments. By monitoring the impact of policies and programs, it is possible to ensure that efforts are effective and responsive to the evolving needs and challenges in advancing gender equality and women's empowerment.

In conclusion, achieving gender equality and women's empowerment requires a multi-faceted approach that encompasses legal and policy frameworks, education and awareness programs, economic empowerment initiatives, technological innovation, institutional strengthening, engaging men and boys, international cooperation, data collection and research, addressing social norms, and continuous monitoring and evaluation. By adopting these strategies and working collectively, societies can create a more equitable and inclusive world where all individuals, regardless of their gender, can realize their full potential and contribute to sustainable development.

Conclusion

Promoting gender equality and women's empowerment is not only a moral imperative but also a strategic investment for sustainable development. Gender equality is recognized as a fundamental human right and is crucial for achieving the United Nations' Sustainable Development Goals (SDGs). It is a key driver of economic growth, social progress, and peace. Addressing the challenges of discrimination, stereotypes, and limited access to resources and opportunities is fundamental to advancing gender equality. Legal and policy frameworks play a critical role in promoting and protecting women's rights. Governments must enact and enforce laws that eliminate gender-based discrimination, promote equal opportunities, and ensure equal pay for equal work. These frameworks should also address violence against women, including domestic violence, sexual harassment, and harmful traditional practices.

Education and awareness programs are vital for challenging gender stereotypes, promoting gender equality values, and fostering critical thinking. Schools and

educational institutions should provide inclusive and gender-responsive curricula that teach respect, tolerance, and gender equality from an early age. Comprehensive sexuality education can help address harmful gender norms, promote healthy relationships, and prevent gender-based violence. Economic empowerment initiatives are key to closing the gender gap in economic participation and decision-making. Equal pay for equal work, promoting women's entrepreneurship, supporting women-owned businesses, and providing access to credit and financial services are essential. Financial literacy and entrepreneurship training can empower women to start and manage businesses, access markets, and achieve economic independence.

Technology and innovation can accelerate progress towards gender equality. Leveraging digital platforms can provide women with access to information, financial services, and markets, enabling them to overcome traditional barriers and participate more fully in economic activities. Technological advancements can also facilitate remote work, enabling women to balance work and family responsibilities and overcome geographical limitations. However, achieving gender equality requires sustained efforts and multi-stakeholder collaboration. Governments, civil society organizations, the private sector, and individuals must work together to challenge discriminatory practices, change societal norms, and promote women's rights. It is crucial to involve men and boys as allies in promoting gender equality, as they play a pivotal role in transforming traditional gender roles and behaviors. Continuous monitoring and evaluation are essential to track progress, identify gaps, and make necessary adjustments. Collecting sex-disaggregated data, conducting research, and measuring indicators of gender equality can inform evidence-based policymaking and program development. Regular assessments can help identify areas that require further attention and ensure that efforts are effective and responsive to the evolving needs and challenges in advancing gender equality. In conclusion, promoting gender equality and women's empowerment is a complex and multifaceted endeavor. It requires addressing the challenges of discrimination, stereotypes, and limited access to resources and opportunities through legal and policy frameworks, education and awareness programs, economic empowerment initiatives, and leveraging technology and innovation. Sustained efforts and multi-stakeholder collaboration are essential for achieving meaningful progress and creating a more equitable and inclusive society where everyone can fully realize their rights and potential, regardless of their gender.

Abstract

Women are an important part in achieving inclusive growth in an economy. In economic development entrepreneurship plays an important role. In India only a very few women participated in entrepreneurial activities till 1980. In 1980 "New Delhi Declaration and Plan of Action" focus development of entrepreneurial skills among women. In 1980-1990 many institutional initiatives were taken for women entrepreneurship. In 1990 after the liberalization, opportunities were recognized and started flourish for women entrepreneurs. The concept and classification of women entrepreneur is discussed. Analysis of hurdles faced by women and various government schemes available for women entrepreneurship is also studied. The few stories of successful women entrepreneurship are also shared. Finally, the conclusion came more rural and lower middle-class women should be supported with more entrepreneurial opportunities for overall growth in the economy.

Keywords: Women Entrepreneurship, Economy, Women Empowerment, Government.

Introduction

Large number of women entrepreneurs have setting up their business. But setting up these were not easy for them, they have faced a lot of difficulties and barriers to become successful. They have to face many challenges and hurdles coming in their way to create a successful business venture. Discrimination in the male dominated society, putting more efforts to prove their credibility. Women choose different style of entrepreneur than men.

Shanta Kahlil Chandra said the women focus more on relationships and believe in intuitions while serving a business, whereas men prefer logical thinking and efficacy. The strength of recognizing the hidden opportunities make them able to gain edge over men. The important part and characteristic in women are "Motherhood skills" which she can easily transfer to job. It includes monitoring, guiding and share information. In developing countries business women have general characteristics like:

1. More concentrated to market sectors as low entry level barriers and less communication required.
2. More focus on services, trade and manufacturing activities

3. Small businesses having five or less than five employees
4. High work experience by owners
5. Traditional technologies were used
6. Mostly employee family people
7. Work at home preferable
8. Household responsibilities affect business growth
9. Less literacy rate by owners and low education.

Women Entrepreneurship in India

There is a provision of equal rights for both men and women in the constitution. 34% of women are involved in industrial activities in India. Women own only 13.6% enterprises. Most of the women worked in unorganized sector. 1975 year was declared as an International year of women. In Mexico, 1975 it was declared that it has been sought equalities between men and women in all the development activities. In next five-year plan India adopted "New Delhi Declaration and Plan of Action" which emphasized on industrial training to women. Since then many government institutions in every state formulated new plans and policies regarding credit and market facilities to provide training facilities for women. Later on, these institutions are formed in each district with different industrial centers. In the year 1995 a different department was setup for the development of Women Entrepreneurship in all states.

MoSPI, released the 6th economic census, In India women creates only 14% of the overall entrepreneurship. A study by Mc Kinsey has shown that India's GDP can rise by 16-60% by 2025 if woman participates equally in the economy which means an addition of \$2.9 trillion in the economy.

Objective of Women Entrepreneurs

- WEP aims to build an ecosystem for women across India to realize their entrepreneurial aspirations, scale-up innovative initiatives and chalk-out sustainable, long-term strategies for their businesses.
- It aims to power a vibrant entrepreneurial ecosystem through an enabling network of industry collaborations, partnerships, mentors and peer-to-peer connect.
- It aspires to substantially increase the number of women entrepreneurs who will create and empower a dynamic New India.
- It aims to address the bottlenecks faced by both aspiring and established women entrepreneurs by streamlining information across government and private sector schemes and initiatives.

- To provide for an interactive website to act as a dedicated resource and knowledge base.

Three Pillars of Women Entrepreneurs

- *Ichha Shakti*– motivating aspiring entrepreneurs to start their enterprise).
- *Gyaan Shakti*– providing knowledge and ecosystem support to women entrepreneurs to help them foster entrepreneurship.
- *Karma Shakti*– providing hands-on support to entrepreneurs in setting-up and scaling up businesses.

NITI Ayog has built the platform in association with ShopClues.com, Mann Deshi Foundation, ASSCOM, CII, FICCI, SIDBI and Facebook.

Classification of Women Entrepreneurs

The women entrepreneur enterprise are defined as, “A small scale industrial unit or industry –related service or business enterprise, managed by one or more women entrepreneurs in a concern, in which they will individually or jointly have a share capital of not less than 51% as shareholders of the private limited company, members of co-operative society”. Women entrepreneurs are classified on the different basis like:

1. On the Basis of Industries, They Work In

- organized and unorganized sector
- traditional and modern industries
- urban and rural areas
- small scale and large-scale industries
- joint venture and single women

2. On the basis of practice of their entrepreneurial activities

- Ist category – entrepreneurs established their ventures in big cities having high level of professional and technical qualifications involved in trading of non -traditional items with good financial resources.
- IInd category – women entrepreneurs” setup their businesses in towns and cities withrequired education involved in trading both traditional and non -traditional items and services like beauty services, clinics, kindergarten etc.
- IIIrd category-women entrepreneurs illiterate or partially illiterate, financially weak and involved in small scale tertiary business such as agriculture, horticulture, fisheries, animal husbandry, dairies, fisheries, hand looms etc.

Challenges Faced by Women Entrepreneurs in India

From physical to social many challenges are faced by Indian women while beginning an entrepreneurial venture.

- **Attitude and social support**

Society plays an important role in women entrepreneurial success. The most common problem faced by women is non-cooperation of family member especially by spouse/ other family members. Besides this family hurdles, dual responsibility; risk appetite etc. has to face by her in the business.

- **Marketing**

sold their products at less price because of less knowledge about market and price. Middlemen exploits them. She needs to be updated on market price, logistics, margin etc. Government should provide field training to them.

- **Finance**

It is a major resource for any business. Women should have knowledge about different government schemes and various money lending options available so they can easily start their ventures without capital constraints. Else they have to use their savings which is also a constraint for them.

- **Operational**

Women struggles at the operational stage as they don't have adequate knowledge about raw materials, optimum use of resources, infrastructure facilities. They majorly lacks in Technical skills and knowledge.

- **Mobility**

In the conservative Indian society, there is always an issue with mobility of the women. Women mobility is very limited. She is dependent for mobility on other family members

- **Multiple Responsibilities**

Women manages many responsibilities from daughter to being a grandmother, she plays different roles. They do multiple works at home. Taking care of their children and elders is also involved. Beyond all these, she has to look after his business also which is a challenge for her.

- **Unawareness of the supports and various government schemes**

provides number of measures to protect women and support them through different schemes but many women are unaware of them. Women entrepreneurs can use the training and development programs provided by the government. NGOs play important role in communicating the government schemes to the needy. Women entrepreneur must be aware of these different government schemes and should develop their business through them. Still awareness is less in context to the women entrepreneurs.

Indian Government Initiatives To Empower Women through Five Year Plans

- First five-year plan (1951-1956) establishment of Centre social welfare board, organization of Mahila Mandal and various community development programmers were a few steps taken in this direction. Second five-year plan (1956-1961) empowerment of women was closely linked with overall approach of intensive agricultural development programmers.
- Third and fourth five-year plan (1961-1966)(1969-1974) female education as the major welfare scheme used.
- Fifth five-year plan (1974-1979) women in need of income and protection were trained. This was coincided with International Women's Decade and the submission of report to the committee on the status of women in India. In 1976 women welfare and department bureau was set up under the ministry of social welfare.
- Sixth five-year plan (1980-1985) a visible shift in welfare to development was noticed. It recognized lack of access to resources as growth impending factor.
- Seventh five-year plan (1985-1990) need of gender equality and empowerment recognized.
- Emphasis was on qualitative aspects such as confidence inculcation, generation of awareness regards to right sand training in skills for better employment
- Eighth five-year plan (1992-1997) focused on women empowerment through Panchayat raj institutions.
- Ninth five-year plan (1997-2002) women components plan was made, under this not less than 30% funds were marked for women specific programmed.
- Tenth five-year plan (2002-2007) national policy of women empowerment (2001) aims at empowering women ensuring survival, protection and development of women and children through rights-based approach.
- Eleventh five-year plan (2007-2012) give much emphasis on credit facilities, marketing facilities and technical training. Government programme and marketing supports are provided through government industrial centers located in each district.1.5 billion dollars was allotted for providing loans to women entrepreneur.
- Twelfth five-year plan (2012-2017) gives more emphasis on removing the social and gender gap in school enrolment and education sector. It also worked on enhancement of higher access to education.

Key Government Schemes and Programmes to Develop Women entrepreneurship

- Integrated Rural Development Programme (IRDP)- The main objective of IRDP is to increase the income generation capability of the women in the families below the poverty line.
- Training of Rural Youth for Self-Employment (TRYSEM)-TRYSEM is a sub – plan of IRDP. It gives training to the youth / young unemployed men & women for Self-employment. The trainees get a stipend of Rs. 150 per month during training period. In this programme 40 % of total seats are reserved for women. About 5 million women have been trained form its inception till now.
- Development of Women & Children In Rural Areas (DWCRA)-DWCRA is the Rural Development Department's scheme to support women's income generation activities through a group of 15 to 20 women each. This programme launched in 1982. The main objective of this programme is to strengthen the economy of rural women by giving them loan and economic assistance to develop their skills, efficiency and abilities to meet their liabilities effectively.
- Norwegian Agency for International Development (NORAD)- It was established in 1982 – 83 to help the educated & uneducated women financially in non-traditional areas of businesslike electronics, computer programming, manufacturing of watches, printing, readymade garments. About one million women were benefited by NORAD Programme.
- Support to Training and Employment Programme- STEP was started in 1987 with the objective to provide training to rural women for increasing their production capacity and income generation. In this programme, they give training in the areas of traditional business like – agriculture, milk, fisheries, handlooms, khadi development.
- Assistance to Rural Women In Non – Farm Development (ARVIND)- The National Bank of Agriculture & Rural Development (NABARD) has started this programme. It provides loan up to Rs. 10 lakhs to the women who work collectively in agriculture for their economic development.
- RashtriyaMahilaKosh(RMK)-RMK was established in 1992 with a fund of Rs. 31 Crore to meet the needs of poor women by giving them loans. RMK is also organizing training, apprenticeship and orientation programmers for trainers under the Indian Mahila Block Societies (IMPS). The objectives of RMK is that credit becomes a widely known and used facility for enhancement of the daily income of poor women. The experience of RMK is that the women would have been able to double or triple their daily income with the credit support

of Rs. 2500 to Rs. 5000. The activities followed may be dairying, petty shop keeping and investment on the agricultural operations.

- Indira MahilaYojna(IMY)-IMY was launched in August, 1995. Its main objective is to give a forward thrust to education, awareness, income generation capacity and empowerment to women.
- Self Employed Women's Association (SEWA) - This institution is based in Ahmadabad. SEWA guides women in rural areas in the use of their own resources to the maximum both physical and financial. It has helped many women from the rural areas of Gujarat and Rajasthan in marketing their hand embroidered Tie & Dye materials both in India and abroad. A commendable job of SEWA is where the rural women entrepreneurs are sent to countries like Australia, Europe and United States for promoting their products
- Self - Help Groups (SHG)- SHG's play a vital role in rural development in general and for rural women in particular. Each SHG comprises 15 - 20 members & has a group leader. Each member of the group contributes money & keeps it in bank in the name of the Group. Group can obtain loan from the bank. The rules & regulations are developed by the group of members. The SHGs are linked with the banks for the external credit inflow. Self Help Group associated with micro credit is the element for the development of any country.

Other Schemes to Develop the Entrepreneurs

1. Khadi And Village Industries Commission (KVIC)
2. Prime Minister's RojgarYojana (PMRY)
3. Entrepreneurial Development programme (EDPs)
4. Management Development programme
5. Women's Development Corporations (WDCs)
6. Marketing of Non-Farm Products of Rural Women (MAHIMA)
7. Trade Related Entrepreneurship Assistance and Development (TREAD)
8. NGO's Credit Schemes
9. Micro & Small Enterprises Cluster Development Programme (MSE-CDP).
10. National Bank for Agriculture and Rural Development's Schemes
11. Rajiv Gandhi MahilaVikasPariyojana (RGMVP)
12. Priyadarshini Project- A programme for Rural Women Empowerment and Livelihood in Mid Gangetic Plains.
13. Mahila SamitiYojana
14. MahilaVikas Nidhi
15. Micro Credit Scheme

16. SIDBI,,s MahilaUdyam Nidhi
17. MahilaVikas Nidhi
18. SBI,,s shree Shakti Scheme.

Few Successful Women Entrepreneurs of India – An Overview

This section gives brief profile of few successful Indian Women Entrepreneurs who established large scale and medium scale enterprises.

1. Dr. KiranMazumdar-Shaw, Chairman & Managing Director of Biocon Ltd. She established Biocon India with a capital of Rs.10, 000in her garage in 1978 – the initial action was to extract an enzyme from papaya. She didn't get loan to expand the business as there is no such provision of loan to women entrepreneur in those days. By her strong intuition and perseverance, she fought well and today her company is the pharmaceutical firm in India.
2. MallikaSrinivasan, Chairman and CEO of TAFE- Tractors and Farm Equipment. TAFE incorporated in 1960. When she joined TAFE, it's worth was US \$2million. Now it has grown to US \$1.6 Billion. This is 3rd largest tractor manufacturing company in the World. In 1999, she won India's first business women of the year award from BBC. In 2012, she awarded Forbes India Women leader of the year.
3. Simone Tata – Chairman of TRENT Ltd. She is French by birth, wife of late Naval Tata and step mother of Ratan Tata. In 1960 she headed Lakme -a small subsidiary of Tata oil mills ltd. In 1996, it becomes India's leading cosmetics company. f fashion in India. At present she is the Chairperson of Trent Limited, a subsidiary of Tata Group.
4. Dr.Preeta Reddy, Managing Director of Apollo Hospitals. Apollo Hospitals is one of the largest healthcare brands of India. Dr.Preeta Reddy, a cardiologist, joined Apollo in 1989. She is instrumental behind the growth of a small hospital in to one of the largest conglomerates.
5. Jyoti Ramnath – Founder of Crafymygift.com. She started this venture while she was studying at IIMBangalore. It provides exclusive gifts for customers on request. It has wide range of corporate customers in India.
6. Vinita Singh – Founder of Quetzal She is an Electrical engineer from IIT-Madras. Quetzal provides educational content to B-Schools and Secondary schools. It also runs India's largest MBA test preparation portal
7. . Annamma JoesphKottukappally – Founder of Annan's is the chain of bakeries and confectionaries in Kerala. In 1995 she started business. Today Ann's is leading bakery chain in Kerala with revenue more than Rs.100 crores.

Conclusion

It's a welcome sign that women entrepreneurship participation has increased at a noticeable rate.

Various strategies are being formed in the economy to brought the equal opportunities in all scopes for Indian women and laws are enacted with equal opportunities and rights in education, political processes and employment. But only a small section of women is benefitted by the government developmental activities and that is urban middle class which is more benefitted with government schemes. Rural Women Entrepreneurship should need some attention now. As Nearly 70% of workforce involved in agriculture related activities, rural women entrepreneurship development will empower women and improve village economy and as a whole improve country's economy. Awareness about available opportunities, Training programme and financial assistance should be spread through media. Women entrepreneurship must be changed with updated entrepreneurial skills and training to meet the trends and challenges of global markets. It should also helps in excellence in entrepreneurial arena with competency to strive and sustain in the market. If everyone wants to come forward and support the women and understands their important role in business, then soon the conservative and thought process can be beat which is the greatest barrier in our country's development process
