ROLE OF MSME IN ECONOMIC SELF RELIANCE

Veena Lakshman

Assistant Professor, Department of Commerce, SVR College Commerce and Management Studies

Abstract

The Micro, Small and Medium enterprises (MSME) sector has emerged as a dynamic sector of the Indian economy and an essential driver of economic process. It considerably helps in developing entrepreneurship and generates second largest employment prospects. With a vast network of sixty-three million three hundred eighty thousand enterprises, more than forty per cent of exports, over twenty-eight per cent of the Gross Domestic Product and generating employment for about one hundred eleven million people, the MSME sector contributes in a significant way to the development of the Indian economy. The world economy is growing at a slower rate thus a lot of emphasis is required on developing MSME sector to extend employment opportunities specifically for young people. India is known as a land of entrepreneurs and contribution of MSME sector cannot be ignored while discussing the key issue of employment generation. India has also achieved the distinction of being one of the most industrially developed states. It has five per cent of the total Indian population and contributes about a quarter of India's products exports. The industrial sector of the state comprises of over eight hundred giant industries and six hundred three thousand Micro, Small and Medium Enterprises (MSME) which give employment to three million eight hundred fifty-one thousand people of the country. This research paper focuses on the contribution of MSME sector in Indian economy and makes clear the importance of India as a state in fostering entrepreneurship through MSME sector.

Keywords: MSME, Entrepreneurship, Self-Reliance Indian Economy.

Introduction

Introduction Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of the Indian economy over the last five decades. The MSME also play an important role in the development of the economy with their effective, efficient, flexible and innovative entrepreneurial spirit. The MSME sector contributes notably to the country's overall industrial production output, employment and exports. It is recognized with generating the maximum employment growth as well as accounting for a major share of industrial production and exports. They have distinctive advantages due to their size and they required low investment. They have relatively high capital-labour ratio and they require a minimum gestation period. They try to capture and focus smaller markets; they make sure a fairer distribution of national income. They make possible an effective utilization of capital and skill resources and they motivate the growth of industrial entrepreneurship. The MSME sector in India is vast heterogeneous in terms of the size, variety of product and services and level of technology. This sector is large contributes to the socioeconomic development of the country. The MSME sector is an important pillar of Indian economy as it contributes greatly to growth of Indian economy with a vast network of around 30 million units, creating employment of about 70 million,

manufacturing more than 6000 products, contributing about 45% to manufacturing output and about 40% of exports, directly and indirectly. This sector even assumes greater importance now as the country moves towards a faster and inclusive growth agenda. MSME sector is the backbone of national economic edifice and has unremittingly acted as the fulcrum for the Indian economy, providing it resilience towards global financial shocks and hard times. With approximately 63.4 million units throughout the geographical expanse of the country, MSMEs contribute around 6.11% of the manufacturing GDP and 24.63% of the GDP from service activities as well as 33.4% of India's manufacturing output. Further, there is a vision to enhance MSMEs contribution to India's GDP to over 50% from the current 29% and that for the Indian economy to scale the \$5 trillion mark, the contribution of the MSME sector will be crucial.

The Vision & Mission of MSME of Economic Self Reliance

Vision

To emerge as a global leader in advanced manufacturing research and development, innovation and to create an ecosystem for an inclusive balanced and sustainable development of the state.

Mission

To retain India position as a global manufacturing hub and to achieve higher and sustainable industrial growth through capital infusion technology transfer world class industrial infrastructure skill up gradation and benchmarking of policies and practices to best Global standar

History on MSME in Economic Self Reliance

Today's MSMEs have their roots in local-level business activities in villages and also in ancient urban centres. Ancient India was experiencing sustained growth in these activities, even during the phase of a lot of political upheaval across the subcontinent. These businesses and enterprises were instrumental in fulfilling the local needs of the population. These enterprises also contributed significantly to the exports of goods to other countries, which resulted in great economic wealth for the country. These activities considerably declined during British rule, as significantly cheap products flooded the Indian market.

We can understand the history and evolution of MSMEs in India through three separate time periods. These time periods are "pre-British rule", "pre-independence", and "post-independence".

The pre-British period of the Indian economy was primarily agrarian. A vast part of the subcontinent had villages that were self-sufficient to a certain extent. Village-level artisans were able to provide for local needs. They had limited market access due to geographic

factors during that period. However, urban centres (places of pilgrimage, administrative places, and trade towns) had a high level of economic activities, including the production of various goods. They primarily met the needs of the local market. However, a significant portion of this production is exported. Local producers were producing textiles, utility-oriented handicrafts, silk cloths, muslin, shawls, carpets, wooden works, artistic glass works, and coloured glass works. Apart from these, ornaments made in India, jewellery, brass-works, ivory work, and several other notable products gained prominence and achieved significant admiration across the world. The political landscape was largely supportive; however, as political uncertainty and fragmentation increased, these activities also faced some difficult times. Despite this, they have remained relevant and growing.

The GOI established the “Small Scale Industries Board” (SSIB) in 1955. The SSIB provided a formal definition of small-scale industries in India. This definition used power consumption, number of employees, and quantum of capital as defining factors. This definition has undergone several changes over the course of history. In 1977, a new class of small industries was identified, named as “Tiny Industries.” This was done to address the needs of entrepreneurs who run very small enterprises and primarily cater to local markets. The definition of tiny industries has also undergone several changes as a need arises.

Today’s MSME originated from the local needs of the village and trade centres of that time. They also witnessed a great cycle of growth and recognition. Going forward, systemic destruction was also witnessed in the British era. Later, as political and geographical landscapes transformed, these units also began witnessing a much more favourable market scenario. The government began to focus on the systematic development of these units. Various national- and state-level policies, rules, and regulations have emerged. The Indian government created the Ministry of Small-Scale Industries and Agro and Rural Industries (SSI and ARI) in October 1999.

The Contributions of MSMEs to Economic Growth

The contributions of MSMEs to economic growth of countries have been very significant. SMEs are viewed as an engine of growth that contributes enormously to nation’s Gross Domestic Product (GDP) employment generation, industrial output, poverty alleviation, export promotion and self-independence. Statistically, the contribution of SMEs in the Nigerian GDP base on the sector reveals that industry about 41% agriculture 32%, and service 27% (Weller et al., 2009). In countries for instance, in Japan, 80% of the total industrial workforce in with SMEs Sector, 50% in Germany and 46% in USA are utilized in SMEs. In USA, SMEs help almost 39% to their national income (Udechukwu, 2013). However, in nations, for example, India, Indonesia and Mali SMEs have been recognized to constitute more than 95% of manufacturing sector and have

become a very strong engine for development in terms of provision of employment, industrial output and export promotion.

However, despite the fact MSME has been identified as a tool for economic development and provision of employment, but lack economy of scale due to their limited size. (Basil 2005). Poor absorptive capacity and limited funds have also been identified as factors that hamper the development of MSMEs in Nigeria. (Taiwo, Ayodeji and Yusuf, 2012) Nevertheless, MSME can be perceived as a tool for economic development, even though variety of challenges seems to have a negative impact that constraint MSMEs from playing the vital role of stimulating economic development, but they provide employment opportunities in developing nation like Nigeria, if utilise might reduce some hardship and may reduce the poverty level of citizens.

Features of MSME in Economy Self Reliance

1. MSMEs work for the welfare of the workers and artisans. They help them by giving employment and by providing loans and other services.
2. MSMEs provide credit limit or funding support to banks.
3. They promote the development of entrepreneurship as well as up-gradation of skills by launching specialized training centres for the same.
4. They support the up-grading of developmental technology, infrastructure development, and the modernization of the sector as a whole
5. MSMEs are known to provide reasonable assistance for improved access to the domestic as well as export markets.
6. They also offer modern testing facilities and quality certification services.
7. Following the recent trends, MSMEs now support product development, design innovation, intervention, and packaging.

Role of MSME in Indian Economy

Since its formation, the MSME segment has proven to be a highly dynamic Indian economy sector. MSMEs produce and manufacture a variety of products for both domestic as well as international markets. They have helped promote the growth and development of khadi, village, and coir industries. They have collaborated and worked with the concerned ministries, state governments, and stakeholders towards the upbringing of rural areas.

MSMEs have played an essential role in providing employment opportunities in rural areas. They have helped in the industrialization of these areas with a low capital cost compared to the large industries. Acting as a complementary unit to large sectors, the MSME sector has enormously contributed to its socio-economic development.

MSMEs also contribute and play an essential role in the country's development in different areas like the requirement of low investment, flexibility in operations, mobility through the locations, low rate of imports, and a high contribution to domestic production.

With the capability and capacity to develop appropriate local technology, provide fierce competition in domestic and international markets, technology-savvy industries, a contribution towards creating Défense materials, and generating new entrepreneurs by providing knowledge, training, and skill up-gradation through specialized training centres.

Importance of MSMEs for Indian Economy

Employment: It is the second largest employment generating sector after agriculture. It provides employment to around 120 million persons in India.

Contribution to GDP: With around 36.1 million units throughout the geographical expanse of the country, MSMEs contribute around 6.11% of the manufacturing GDP and 24.63% of the GDP from service activities.

MSME ministry has set a target to up its contribution to GDP to 50% by 2025 as India becomes a \$5 trillion economy.

Exports: It contributes around 45% of the overall exports from India.

Inclusive growth: MSMEs promote inclusive growth by providing employment opportunities in rural areas especially to people belonging to weaker sections of the society.

For example: Khadi and Village industries require low per capita investment and employs a large number of women in rural areas.

Financial inclusion: small industries and retail businesses in tier-II and tier-III cities create opportunities for people to use banking services and products.

Promote innovation: It provides opportunity for budding entrepreneurs to build creative products boosting business competition and fuels growth.

Thus, Indian MSME sector is the backbone of the national economic structure and acts as a bulwark for Indian economy, providing resilience to ward off global economic shocks and adversities.

Objectives of MSME in Economy Self Reliance

To promote e-Governance for empowering citizens, promoting the inclusive and sustainable growth of the Electronics, IT & ITeS industries, enhancing India's role in Internet Governance, adopting a multipronged approach that includes development of human resources, promoting R&D and innovation, enhancing efficiency through digital services and ensuring a secure cyber space.

Objectives

- e-Government: Providing e-infrastructure for delivery of e-services
- e-Industry: Promotion of electronics hardware manufacturing and IT-ITeS industry
- e-Innovation / R&D: Implementation of R&D Framework - Enabling creation of Innovation/ R&D Infrastructure in emerging
- areas of ICT&E/ Establishment of mechanism for R&D translation
- e-Learning: Providing support for development of e-Skills and Knowledge network
- e-Security: Securing India's cyber space
- e-Inclusion: Promoting the use of ICT for more inclusive growth
- Internet Governance: Enhancing India's role in Global Platforms of Internet Governance.

Review of Literature

There has been limited research on sustainability in Indian MSMEs till date. Of course, of late, the number of publications has increased. A chronological review of literature, 2011 onwards, on Indian MSMEs follows.

Sangwan (2011) identifies the quantitative and qualitative benefits of Green Manufacturing (GM) through a literature review, and validates them through a survey of Indian SMEs. The author defines GM at the intersection of manufacturing and design practices, and environmental issues, concerns and practices, i.e. the greater the overlap between these areas, the greater the extent to which manufacturing and design practices recognize and embody environmental issues, concerns and practices. The author notes from the literature that the benefits of GM may range from cost reduction, improvement in productivity and product quality, safer and cleaner facilities, reduced environmental and health risks, better working conditions, and improved employee morale to customer loyalty, opening of new markets, higher market share, innovativeness, competitiveness, and improved corporate image and relations with stakeholders. The author also highlights that one of the far-reaching implications of GM is the lifecycle approach (LCA) to production, i.e. to take into account the environmental impacts of the entire lifecycle of a product starting from design, sourcing and manufacturing to storage, distribution, use, collection, inspection and recovery/disposal, and if properly implemented, LCA may result in reduced waste/effluent treatment/disposal costs, energy and cost savings from recycling and reuse activities, reduced penalties and liabilities, and lower regulatory compliance costs.

Mittal et al. (2012) identify the drivers and barriers for the implementation of Environmentally Conscious Manufacturing (ECM), another name for GM, and validate them by conducting a case study in Germany and India for comparison. The authors identify current and future regulations for compliance, financial incentives such as

attractive loans, grants and tax exemptions for capital investments, public pressure in terms of the pressure exerted by various stakeholders such as local communities, NGOs, consumer groups, media and political parties, peer pressure exerted by trade and business associations, cost savings due to reduced material and energy consumption, increased competitiveness due to improved efficiency, customer demand for environmentally friendly products, supply chain pressure exerted by suppliers and distributors, and the commitment and leadership of corporate managers as the major drivers for an effective implementation of ECM.

Nair and Sodhi (2012) highlight Corporate Social Responsibility (CSR) practices by Indian SMEs, and note that although CSR practices are skewed towards large companies, many SMEs being located in small towns, villages and remote areas are embedded in their local communities and eminently suited to pursue CSR practices. The authors present the findings of five case studies on the best CSR practices by Indian SMEs. The authors note that many SMEs do not see the immediate relevance of environmental and social issues to their businesses, and are focused on the short-term survivability of their enterprises. However, CSR does pay off in the long run, and has proven to have brought in business advantages in terms of staff recruitment, development, commitment, morale, motivation and retention, customer loyalty, new product development, access to new markets, energy savings, innovation, competitiveness, visibility, image and reputation that would not have been achievable otherwise. The authors mention that the nature and level of CSR implementation in SMEs are influenced by factors such as sector, size, age, history, whether family- or non-family owned/managed, position in the value chain and nature of client relationships. The ethical orientation and moral responsibility of owners/managers are cited by the authors as the main drivers of CSR implementation in SMEs

Research Methodology

This research has been done based on method of Descriptive study. The required data has been collected from various secondary sources i.e., internet websites of government and other private domains, magazines, journals, general opinion of industry experts and other publications etc. This data was then analysed and reviewed for conclusions.

Recommendations

1. MSMEs lack the understanding and ability to determine the competencies that are required by an employee to fulfil his/her role. These skill gaps exist in all the sectors. MSMEs will need to invest in training and development that leads to skill development and job enhancement.
2. The competitiveness of nation's economy depends on how effective and efficient utilisation of resources in the process of production and marketing of locally

produce goods and services, hence the entire chain of production needs to be efficient.

3. Most MSMEs do not have a patent right, and their intellectual property are not protected. The Ministry of Trade and Investment and SMEDAN should assist the MSMEs in this regard by setting up an intellectual property facilitation cell, which will provide a range of intellectual property related services, such as prior art search, patent landscape and interface for technology transfer.
4. On the access to finance by MSMEs, SMEDAN should critically address this problem by evolving a Credit Guarantee Scheme and Credit Rating Scheme for the sector. Hence, this will make funding the sector attractive to banks and other investors.

Conclusion

In conclusion, the MSME sector has an important role to play in achieving the goals of the self-reliant India scheme. This will not only help in dealing with the economic conditions arising out of Covid-19 but will also pave the way for India's long-term economic-industrial development. With the change in the definition of small and cottage industries by the government, these industries will get a free environment for their development. A healthy environment will be created for the development of small and cottage industries by giving collateral free loans, giving financial assistance to distressed units, arranging online marketing, simplification of rules and laws, etc. In the current globalized economic conditions MSME sector needs adequate financial and technical support so that they can make their place not only in the domestic market but also in the global market. The present market-based system has not only presented challenges before the small and cottage industries but has also opened doors of possibilities. The need is to identify these possibilities and take the development of MSME sector as a movement. Only by doing this the dream of self-reliant India can be realized and the ultimate goal of inclusive development can be achieved.

Abstract

The digital transformation of businesses has emerged as a transformative force in today's global economy, reshaping industries and altering competitive landscapes. Micro, Small, and Medium Enterprises (MSMEs) form the backbone of economies, and their adaptation to digital technologies is crucial for economic growth and sustainability. This study investigates the digital transformation strategies adopted by MSMEs in Madurai City, located in the southern state of Tamil Nadu, India. The research is motivated by the need to understand the extent to which MSMEs in Madurai City are embracing digital technologies to enhance their competitiveness and navigate the digital era. It seeks to identify the digital tools, technologies, and strategies employed by these enterprises, as well as the factors driving and hindering their digital transformation efforts. The study employs a mixed-methods research approach, combining surveys and in-depth interviews with MSME owners and key stakeholders. The research objectives include identifying the key digital technologies employed, assessing the motivators for digital transformation, examining the challenges faced in the process, and evaluating the impact of digitalization on business performance. Preliminary findings suggest that MSMEs in Madurai City are gradually adopting digital technologies, driven by factors such as market demands, cost-efficiency, and the need to remain competitive. However, they encounter various challenges, including limited access to digital infrastructure, a shortage of skilled talent, and cybersecurity concerns

Keywords: MSME Digital tools ,Digital technologies

Introduction

Micro, Small, and Medium Enterprises (MSMEs) play a crucial role in the economic landscape of Madurai, a city located in the southern state of Tamil Nadu, India. MSMEs in Madurai cover a diverse range of industries, including textile and garment manufacturing, handicrafts, agro-processing, jewellery manufacturing, plastics and rubber products, and more. MSMEs in Madurai, like those in other parts of India, face challenges such as access to finance, infrastructure constraints, and skill shortages. However, they also play a vital role in employment generation and contribute to the overall growth and development of the city and its surrounding regions. The government, both at the state and national levels, has implemented various initiatives and policies to support and promote the growth of MSMEs in Madurai and throughout India. digital technology plays a transformative role in Micro, Small, and Medium Enterprises (MSMEs) across various aspects of their operations and growth digital marketing tools such as search engine optimization (SEO), social media

advertising, and email marketing enable MSMEs to market their products or services effectively and at a lower cost. digital technology helps in efficient inventory management through the use of software and automated systems, reducing costs and optimizing stock levels.

Objectives

- To identify the key digital technologies and tools used by MSMEs in Madurai for digital transformation.
- To assess the factors motivating MSMEs in Madurai to adopt digital transformation strategies.
- To examine the challenges and barriers faced by MSMEs in Madurai in their digital transformation efforts.
- To provide recommendations for improving and accelerating digital transformation in the MSME sector in Madurai.

MSMEs Adopt a Variety of Technologies and Tools to Support their Operations and Facilitate Digital Transformation

1. E-commerce platforms: MSMEs often leverage platforms like Shopify, WooCommerce, or Magento to establish and manage online stores, enabling them to reach a wider customer base and facilitate online transactions.
2. Digital marketing tools: MSMEs utilize tools like social media platforms (such as Facebook, Instagram, and Twitter), email marketing software (like Mailchimp or Constant Contact), and search engine optimization (SEO) techniques to enhance their online visibility, engage with customers, and drive traffic to their websites.
3. Customer relationship management (CRM) systems: CRM software, such as Salesforce or HubSpot, helps MSMEs manage customer interactions, track sales leads, and improve customer service by centralizing customer data and automating processes.
4. Cloud-based solutions: MSMEs often leverage cloud computing services like Google Cloud, Microsoft Azure, or Amazon Web Services (AWS) to store and access data, host websites and applications, and enable remote collaboration.
5. Collaboration and communication tools: MSMEs utilize tools like Slack, Microsoft Teams, or Google Workspace (formerly G Suite) to facilitate team communication, file sharing, and project management, regardless of physical location.

The Factors Motivating MSMEs in Madurai to Adopt Digital Transformation Strategies

1. Increased efficiency: Digital transformation can streamline processes, automate tasks, and improve overall efficiency in MSMEs.
2. Cost savings: By embracing digital technologies, MSMEs can reduce operational costs, such as paper usage, storage, and manual labor.

3. Enhanced competitiveness: Digital transformation allows MSMEs to stay competitive in the market by leveraging technology to offer innovative products or services and reach a wider customer base.
4. Improved customer experience: Digital tools enable MSMEs to provide better customer service, personalized experiences, and convenient online interactions.
5. Access to new markets: Digital transformation can help MSMEs expand their reach beyond local boundaries and tap into national or even global markets.

MSMEs Face Various Challenges and Barriers in their Digital Transformation Journey. Some of Them Are

1. Limited resources: MSMEs often have limited financial and human resources, making it challenging to invest in new technologies, hire skilled personnel, or undergo extensive training for digital transformation.
2. Lack of digital literacy: Many MSME owners and employees may have limited knowledge or experience with digital tools and technologies, making it difficult to adopt and utilize them effectively.
3. Infrastructure limitations: In certain areas, inadequate internet connectivity or unreliable power supply can hinder the adoption and smooth functioning of digital technologies.
4. Security concerns: MSMEs may face cybersecurity threats, such as data breaches or hacking attempts, which can be a significant barrier to embracing digital transformation.
5. Resistance to change: Some MSMEs may be resistant to change, preferring traditional methods and processes over digital solutions. This resistance can hinder the adoption of new technologies and hinder digital transformation efforts.

Methodology

1. Research Design

Research Design of present study is descriptive nature .

2. Data Collection

Current study is based on secondary data . Several reports from authentic source have been studied to know the current scenario of meme sectors

Conclusion

Based on the digital transformation strategies adopted by MSMEs in Madurai, it can be concluded that embracing technology is crucial for their growth and success. Establishing an online presence, utilizing cloud computing, implementing digital marketing, embracing e- commerce, utilizing data analytics, and integrating mobile technology are common strategies observed. These approaches help MSMEs enhance efficiency, reduce costs, reach

wider markets, and improve customer experiences. By adopting these strategies, MSMEs in Madurai can stay competitive, expand their business, and thrive in the digital age.

ROLE OF MSME IN INDIAN CONOMY

Dr.K.Lakshmi Priya

*Assistant Professor, Department of Commerce and International Trade
Karunya Institute of Technology and Sciences (Deemed University), Coimbatore, TamilNadu, India*

Abstract

Micro, Small, and Medium Enterprises (MSMEs) form the backbone of many economies, including India. These enterprises play a pivotal role in fostering economic growth, employment generation, and inclusive development. This abstract delves into the importance of MSMEs, highlighting their contributions to various sectors and their impact on societal well-being. It also examines the challenges faced by MSMEs, including access to finance, regulatory compliance, and technological adaptation. Recognizing the critical role of MSMEs, governments and organizations worldwide are implementing policies and support mechanisms to empower and enhance the resilience of these enterprises. This abstract emphasizes the imperative of nurturing MSMEs as engines of sustainable economic growth and social advancement, with potential benefits extending far beyond the boundaries of individual businesses.

Keywords: MSMEs, Employment, Entrepreneurship, Finance.

Introduction

Micro, Small and Medium Enterprises (MSMEs) play a crucial role in the Indian economy. They are the backbone of our economic system, driving economic growth, innovation, and employment generation. The MSME sector in India consists of over 633.9 lakh enterprises, with the micro sector accounting for over 99% of the total number of MSMEs. These enterprises are classified based on their investment in plant and machinery or equipment, as well as their annual turnover. The MSME sector provides employment opportunities with low capital requirements, helping uplift rural and less developed areas and reducing regional imbalances and inequality. Additionally, the sector is complementary to large companies and industries, providing them with necessary parts and components. All these factors make the MSME sector crucial in the country's socio-economic development.

Revie of Literature

1. ArvindPanagariya (2021), emphasized the critical role of MSMEs in generating employment in India. He has highlighted that MSMEs are significant contributors to job creation, particularly in the informal sector and in rural areas and supported initiatives aimed at promoting MSME exports. He has stressed the role of MSMEs in enhancing India's export competitiveness and contributing to economic growth.
2. R. K. Mishra (2021), has conducted research and advocated for improved access to finance for MSMEs in India. He has highlighted the challenges faced by MSMEs in securing affordable credit and has recommended policy measures to address these

issues. He has researched the concept of SME clusters in India. He has examined how geographic agglomerations of similar businesses can lead to economies of scale, shared resources, and enhanced competitiveness among MSMEs. He acknowledges the significant role played by MSMEs in employment generation, particularly in semi-urban and rural areas. His work underscores the potential of MSMEs to alleviate unemployment and underemployment in India.

3. N. S. Siddharthan (2021), analysed the role of MSMEs in India's industrial development. He may explore how MSMEs contribute to manufacturing output, value addition, and employment generation. Employment Generation: He said that MSMEs are typically seen as significant contributors to employment in India. And analyzed the extent to which MSMEs create jobs, especially in rural and semi-urban areas.
4. V. S. Deshpande (2021), focused the formation and development of MSME clusters, which are geographic concentrations of similar businesses. He examined the dynamics, benefits, and challenges associated with these clusters. He made recommendations for policy improvements and reforms to enhance the growth and competitiveness of MSMEs.
5. K. V. Raju (2021), studied the challenges MSMEs face in accessing formal credit and financial services. And examined the impact of various financial inclusion initiatives and recommend measures to improve credit availability for MSMEs. He investigated how MSMEs adopt and leverage technology and innovation to improve productivity, quality, and market competitiveness.

Role of MSME in Indian Conomy

Micro, Small, and Medium Enterprises (MSMEs) play a crucial role in the Indian economy. They are often referred to as the backbone of the Indian economy due to their significant contributions in various aspects. Here are some of the key roles that MSMEs play in the Indian economy:

- **Employment Generation:** MSMEs are one of the largest employers in India, providing jobs to a substantial portion of the population, particularly in rural and semi-urban areas. Their labor-intensive nature helps in reducing unemployment and underemployment.
- **Contribution to GDP:** MSMEs contribute significantly to India's Gross Domestic Product (GDP). They account for a substantial share of industrial production, manufacturing output, and export earnings, making them a critical driver of economic growth.

- **Promoting Entrepreneurship:** MSMEs encourage entrepreneurship and innovation in India. They offer opportunities for individuals to start and grow their businesses, fostering a culture of entrepreneurship in the country.
- **Regional Development:** MSMEs are distributed across various regions, including rural and backward areas. Their presence helps in reducing regional imbalances by promoting economic activity in areas that might otherwise be economically marginalized.
- **Export Growth:** Many MSMEs in India are engaged in export-oriented activities. They contribute to foreign exchange earnings and help in expanding India's presence in international markets.
- **Diversification of Industries:** MSMEs are involved in a wide range of industries, including manufacturing, services, and agribusiness. This diversification contributes to the resilience of the Indian economy by reducing dependency on a single sector.
- **Innovation and Adaptability:** MSMEs are often more agile and adaptable compared to larger corporations. They can quickly respond to changing market conditions, which is essential in a dynamic and rapidly evolving economy like India's.
- **Ancillary Support:** MSMEs often serve as suppliers and service providers to larger industries. They play a vital role in the supply chain and contribute to the growth of larger enterprises.
- **Financial Inclusion:** Many MSMEs have limited access to formal financial services. Initiatives like the PradhanMantri Mudra Yojana (PMMY) aim to provide financial support and credit facilities to these enterprises, promoting financial inclusion.
- **Social Impact:** MSMEs can have a positive social impact by providing opportunities for women entrepreneurs, supporting disadvantaged groups, and contributing to skill development and vocational training.

Sustainable Development through MSME in India

Sustainable development is a crucial goal for countries around the world, including India. Micro, Small, and Medium Enterprises (MSMEs) play a significant role in achieving sustainable development by creating jobs, reducing poverty, and contributing to economic growth. However, MSMEs can also have a negative impact on the environment due to their informal nature and lack of regulations. In fact, studies have shown that MSMEs can contribute up to 60-70% of pollution levels in developing economies. To tackle climate change and promote sustainable development, it is essential for MSMEs to adopt green technology and environmentally-friendly strategies.

Developing economies, like India, are particularly vulnerable to environmental changes and rely heavily on natural resources for their development. By adopting a greener growth strategy, these economies can not only protect the environment but also benefit themselves and the global environment. The MSME sector is especially important for women as it offers significant job and income earning opportunities. However, women-owned or managed MSMEs face multiple barriers such as unequal laws, lack of property ownership, and insufficient business knowledge. To promote gender equality and support women-owned or managed MSMEs, public policies and programs need to provide targeted support.

In addition to promoting sustainable growth, it is crucial to build resilience in MSMEs to cope with external shocks like the COVID-19 pandemic and natural disasters. MSMEs not only provide livelihoods for many people, especially women-owned businesses, but they are also critical links in supply chains and storehouses of economic dynamism. Therefore, it is important to pay attention to the needs of MSMEs and provide support to ensure their resilience and continued contribution to sustainable development.

The Indian government has recognized the importance of sustainable development and has taken initiatives like the 'Zero Defect & Zero Effect' and 'Make in India' to balance economic growth with sustainability. MSMEs in India consume a significant amount of energy and contribute to greenhouse gas emissions [5]. To transition to a low-carbon economy, MSMEs need greener and more sustainable solutions. By adopting sustainable practices, MSMEs can limit their carbon emissions and contribute to the country's sustainable development goals.

Common Challenges Faced by MSMEs

Micro, Small, and Medium Enterprises (MSMEs) face several challenges that can impact their growth and sustainability. These challenges are often diverse and can vary depending on factors such as the industry, location, and specific circumstances of the business. Here are some common challenges faced by MSMEs:

Access to Finance: Securing adequate financing is often a significant challenge for MSMEs. They may find it difficult to access loans and credit facilities from banks and financial institutions due to limited collateral and a lack of credit history.

Working Capital Management: MSMEs frequently struggle with managing their working capital effectively, which can affect their ability to meet day-to-day operational expenses and invest in growth opportunities.

Compliance and Regulation: Navigating the complex regulatory environment, including labor laws, tax regulations, and industry-specific regulations, can be challenging for MSMEs. Compliance can be time-consuming and costly.

Technology Adoption: Keeping pace with rapidly evolving technology can be challenging for many MSMEs. Lack of access to affordable and up-to-date technology can hinder their competitiveness.

Market Access: MSMEs may face difficulties in reaching wider markets, both domestically and internationally. Marketing, distribution, and branding can be expensive and challenging for smaller businesses.

Infrastructure and Logistics: Inadequate infrastructure, including transportation, power supply, and communication networks, can hamper the operations of MSMEs, especially those in remote or rural areas.

Skilled Workforce: Finding and retaining skilled employees can be a challenge for MSMEs, as they may not be able to offer competitive salaries and benefits compared to larger corporations.

Competition: MSMEs often face competition from larger companies with more resources. Price competition and the ability to scale up quickly can be significant challenges.

Access to Technology and Innovation: Keeping up with technological advancements and innovation can be difficult for MSMEs, limiting their ability to offer new products or services.

Market Volatility: MSMEs are often more vulnerable to economic downturns and market fluctuations due to their limited resources and customer base.

Access to Support Services: Many MSMEs lack access to business support services, such as mentoring, consulting, and training, which can help them address various challenges and improve their operations.

Supply Chain Disruptions: MSMEs can be heavily impacted by supply chain disruptions, whether due to natural disasters, geopolitical issues, or other factors beyond their control.

Sustainability and Environmental Compliance: Meeting environmental regulations and sustainability standards can be challenging, particularly for resource-intensive industries.

Credit and Payment Delays: MSMEs often face delayed payments from customers and clients, which can impact their cash flow and financial stability.

Steps to be Taken by the Government to Strengthen MSME in India

The Indian government has recognized the critical role that Micro, Small, and Medium Enterprises (MSMEs) play in the country's economy. To strengthen the MSME sector and enhance its contributions, various steps and initiatives have been taken. Here are some key measures that the government can consider and has already implemented to support and strengthen MSMEs in India:

Easy Access to Finance

Simplify and expedite the loan application process for MSMEs.

Introduce specialized loan products and schemes with lower interest rates for MSMEs.

Enhance the coverage and effectiveness of the Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE) to facilitate collateral-free loans.

Capacity Building and Skill Development

Establish training centers and institutions to provide technical and skill-based training to MSME entrepreneurs. Promote entrepreneurship development programs and workshops to enhance business management skills.

Technology Upgradation

Facilitate access to affordable technology solutions and promote the adoption of digital tools and automation.

Provide subsidies and incentives for MSMEs investing in technology upgrades and innovation.

Market Access and Promotion

Create platforms for MSMEs to showcase their products and services, such as exhibitions and trade fairs. Support MSMEs in e-commerce adoption and international market expansion through export promotion schemes.

Regulatory Reforms

Simplify and rationalize regulatory compliance requirements for MSMEs.

Implement a single-window clearance system to streamline approvals and licenses.

Financial Inclusion

Extend financial literacy programs to MSME entrepreneurs to help them make informed financial decisions.

Promote digital banking and mobile payment solutions for MSME transactions.

Infrastructure Development

Invest in improving physical infrastructure, including transportation, power supply, and logistics, to reduce operational costs for MSMEs.

Cluster Development

Promote the creation of industrial clusters and hubs to encourage collaboration, resource sharing, and economies of scale among MSMEs.

Research and Development (R&D)

Establish R&D support centers and technology parks to encourage innovation within the MSME sector.

Credit Linkage and Marketing Support

Strengthen credit linkage through various financial institutions and cooperatives.

Provide marketing support, including branding, packaging, and market intelligence, to help MSMEs reach a wider customer base.

Tax Benefits and Incentives

Offer tax benefits and incentives for MSMEs, such as tax exemptions and deductions, to reduce their financial burden.

Government Procurement Policy

Reserve a portion of government procurement contracts for MSMEs to ensure a consistent flow of orders.

Credit Guarantee Schemes

Expand and enhance credit guarantee schemes to minimize the risk perception of banks and encourage lending to MSMEs.

Monitoring and Evaluation

Establish a robust monitoring and evaluation system to track the effectiveness of MSME support programs and make necessary adjustments.

Conclusion

Micro, Small, and Medium Enterprises (MSMEs) are undeniably the backbone of the Indian economy. Over the years, these enterprises have played a pivotal role in fostering economic growth, job creation, and industrial development. The significance of MSMEs extends beyond urban areas, as they have been instrumental in addressing unemployment and underemployment in rural and semi-urban regions.

Abstract

India is experiencing a revolution in banking and financial technology that is being driven by technological advancements. The digitalization of the Indian financial sector has been a transformative journey as it has changed how financial services are delivered and accessed. The Indian banking and financial sector is positioned for further growth and innovation with a digitally-enabled financial ecosystem. Digitalization will not only make the banking industry's expansion simpler but also boost its profitability. It will be interesting to see how advancing technologies are embraced by consumers, put into use by banks, and governed by the state. Despite digitization, traditional banking practices are still preferred by many in the Indian banking sector. So, it's incredibly exciting to see how this new trend will be received and adopted in emerging economies like India. The researcher identifies to analyze the banking industry 4.0 level increased technologically, the researcher takes the sample of the respondents as 120. The respondents give the opinion based to suggest the better ideas in banking industry. The statistical tools used for Regression analysis with the help of SPSS.

Keywords: Financial technology, Traditional banking practices, Indian financial sector, banking industry 4.0

Introduction

In today's fast-paced workplace, clients want banks to be accessible everywhere, at any time, to meet their expanding business demands. Corporate clients increasingly want efficient, frictionless, and digitalized processes across the complete spectrum of customer journeys, such as account opening, KYC checks, credit applications, etc. To meet customer expectations, the global banking industry is becoming more strategically focused and technologically sophisticated. In order to better prepare for long-term banking, a lot of emphasis is being focused on digitizing fundamental business activities. It has never been more crucial to innovate and create new solutions that utilize data, advanced analytics, digital technologies, and new delivery platforms. The covid pandemic period has radically increased the speed of digitalization in the banking sector and financial industry by completely changing the trajectory of the BFSI sector. Digital transformation in the banking sector is way beyond simply transformation from the traditional mode to a digital environment. The banking sector is increasingly becoming a technology and data-driven business. Digital banking in India has significantly grown with massive adoption in recent years. The fundamental strategy of digitalization in the banking and fintech sector begins with analyzing consumer behavior, preferences, and demands.

Reviews of Literature

Ritika Gupta, (2021), in his article entitled “Industry 4.0 Adaption in Indian Banking Sector—A Review and Agenda for Future Research” abstracted that Digitalization and intelligization is the need of the hour in today’s world. The manufacturing industry is, in fact, moving towards the fourth-generation industry, which we termed as Industry 4.0 or the Fourth Industrial revolution, which is defined as a new level of organization and control over the entire value chain of the life cycle of products; it is geared towards increasingly individualized customer requirements. Industry 4.0 is all about talking in terms of big data, technology, cyber security, the Internet of Things (IoT) and so on. This study is done to understand the new emerging technology in data exchange and automation, popularly known as Industry 4.0, in terms of banking sector with context to the Indian banking sector. The study focuses on studying banks in a digitalized word and what are the challenges that banks face. How banks cope up with digitalization, keeping customers at priority. This study centred on incorporating articles published in recent years to establish knowledge on the topic and to further identify areas for future research.

MaghsoudAmiriet al⁴(2023) in their article entitled “Evaluation of Digital Banking Implementation Indicators and Models in the Context of Industry 4.0: A Fuzzy Group MCDM Approach” study that Modern technologies have changed human life and created a generation of customers who have different needs compared to the past. Considering Industry 4.0 and its drivers, the implementation of digital banking (DB) has faced various challenges that are caused by emerging trends. Both Industry 4.0 and DB are contemporary concepts, and decision-makers are often faced with uncertainties in their decisions regarding the implementation of DB and its indicators. For this purpose, a novel multi-criteria group decision-making approach has been developed utilizing the best-worst method (BWM) and α -cut analysis as well as trapezoidal fuzzy numbers (TFNs). By reviewing the literature and using experts’ opinions, the DB implementation criteria are determined, and considering an uncertain environment, the criteria are prioritized using the proposed method. Then, the available DB models and alternatives are examined based on the decision criteria and the importance of each criterion. This research contributes to the existing literature by identifying and prioritizing the criteria necessary for the successful implementation of DB, taking into account emerging trends and technological advances driven by Industry 4.0. Subsequently, the study prioritizes the prevalent models of DB based on these criteria. This study proposes a decision-support framework for dealing with ambiguity, lack of information, insufficient knowledge, and uncertainty in decision-making. The framework uses TFNs to account for imprecision and doubt in decision-makers’ preferences. Additionally, the study presents a fuzzy multi-criteria group decision-making approach that enables a group of experts to arrive at more reliable results. The proposed approach can help improve the quality of decision-making in complex and

uncertain situations. The results of this research show that human resources, rules and regulations, and customer satisfaction are the most important criteria for implementing DB. In addition, the open, blockchain, and social banking models are the crucial models that significantly cover the implementation criteria for DB.

Objectives of the Study

The following objectives of the study is to study the digitalization of banking industry for recent technology adopting and to analyze banking digitalization 4.0 protections etc.

Methodology

In this study descriptive type, the data's are both primary and secondary from magazine, article, newspaper, social media, online and etc., the study has been covered recent technology adopted in banking is digitalized it has been covered by quick transaction want the banking customers the researcher identify to analyze the banking industry 4.0 level increased technologically, the researcher taken the sample of the respondents are 120. The respondents given the opinion based to suggest the better ideas in banking industry. The statistical tools used for Regression analysis with the help of SPSS.

Theoretical Framework

Industry 4.0

The Fourth Industrial Revolution is another name for "Industry 4.0." The goal of Industry 4.0 is to completely digitize all physical assets and integrate them into digital ecosystems, as opposed to Industry 3.0's concentration on automating individual equipment and processes. Exploiting the potential of innovative concepts and technology is the main goal. IoT and digital physical frameworks, including sensors, are used by Industry 4.0 to collect enormous amounts of data that producers and manufacturers may use to analyze and enhance their work. Industry 4.0, a notion for the next "industrial revolution," aims to incorporate digital technologies and procedures into manufacturing operations.

Indian Banks Ready for Industry 4.0

Almost every element of human development has been impacted by technology. We are so immersed in the digital age that it is impossible to picture life without it. A decade of financial sector reforms has resulted in a significant restructuring of the Indian banking industry. The conventional banking system will become obsolete as time passes. In order to improve the banking industry and better serve customers, RBI has been a leading force in making suggestions. In the modern banking world, banks strive to give their clients a quick, precise, and high-quality banking experience. In India's banks, the use of electronic payment systems like NEFT, RTGS, the cheque truncation system, mobile banking, and plastic cards has been widely accepted. Now it's time for the next phase, which is still a work in progress.

Stages of Banking Technology Revolution in India:

1980s	1990s	2000s	Present
Mechanization • MICR • Encoder • Manual cheques • Manual transactions	Automation • ATMS • Electronic fund transfer • Branch Connectivity • Computerization	Internet and mobile • IMPS • RGTS • NEFT • Online banking • Biometrics • Mobile banking • Cheque Transaction	Internet of Everything (IOE) • Artificial intelligence • Cloud computing • Blockchain
Banking 1.0	Banking 2.0	Banking 3.0	Banking 4.0

Industry 4.0 Adaptation Challenges for the Indian Banking Sector

In a country like India, banks have significant challenges in terms of digital literacy and financial inclusion. To be successful, they must disrupt old systems and patterns with creative solutions that enable rapid and widespread user acceptance. Constantly changing legislation is another barrier for these institutions to solve, along with other issues such as how banks conduct KYC processes, retain digital identities, handle data storage, ensure cyber security, and conduct client communications. While the younger generation in India wants everything to be digital, the older or middle-aged people still choose the conventional banking paradigm. Older or superannuated persons in India frequently view branch banking as an opportunity for an outing; they like to visit banks to catch up with old employees and friends.

Despite these, banks must strive toward digitalization in order to meet today's needs. Each of the trends has the potential to revolutionize the Indian banking sector thanks to its cutting-edge, quick, and distinctive features. However, a sizable segment of the population is at ease using the conventional banking system, while many outlying areas of this country remain unbanked. Therefore, it can take some time for all of the aforementioned tendencies to expand smoothly. With more people becoming digitally aware and improved digital infrastructure, there should be stronger growth momentum.

Regression Analysis

Table 12 Employee Profile of Banking Industry and Digitalization of 4.0
Result of Multiple Regression Analysis

Model	Unstandardized Coefficients		Standardized Coefficients	t	Sig.	95.0% Confidence Interval for B	
	B	Std. Error	Beta			Lower Bound	Upper Bound
1	(Constant)	31.815	1.705	18.658	.000	28.437	35.193
	Employee	1.836	.299	.518	.000	1.244	2.427

Opinion								
Employees Position	-1.328	.635	-.187	-2.089	.039	-2.586	-.069	
Employees Attitude	.574	.577	.083	.994	.322	-.570	1.718	
Feel about Digitalized Banking	-.348	.385	-.074	-.905	.367	-1.110	.414	

Sources: Computed primary data

The results of regression analysis displays that, Employees opinion is best predictor of Digitalization of 4.0 with a beta weight 0.518(51.8%). Next Employees attitude with a beta weight is .083(8.3%). Next Employees Position is third position with beta value of -.0187(-18.7%) and finally feel about Digitalized Bankingwith Digitalization of 4.0 with beta weight of -0.74)-(-7.40%).

Conclusion

India is experiencing a revolution in banking and financial technology that is being driven by technological advancements. The digitalization of the Indian financial sector has been a transformative journey as it has changed how financial services are delivered and accessed. The Indian banking and financial sector is positioned for further growth and innovation with a digitally-enabled financial ecosystem. Digitalization will not only make the banking industry's expansion simpler but also boost its profitability. It will be interesting to see how advancing technologies are embraced by consumers, put into use by banks, and governed by the state. Despite digitization, traditional banking practices are still preferred by many in the Indian banking sector. So, it's incredibly exciting to see how this new trend will be received and adopted in emerging economies like India. The advantages of technology adoption clearly abolishes the problems caused by the adoption of technology and in addition to that a complete systematic approach of technology adoption will definitely produce better results. Consumer and employees of banking sector are the main proponents in this whole transformation process and by bringing a positive change in their mindset towards technology adoption will result in effective utilization of technology in banking. The study has been the respondents based banking improvements has analyzed. The regression analysis delivered the results of employees opinion of Digitalization 4.0 in banking industry for employees position, employeeopinion, employee attitude and Employees feel inDigitalized Banking.

Abstract:

To be sustainable, agriculture must meet the conditions of present and future generations, while increasing profitability, environmental health, and social and profitable equity. Sustainable food and agriculture (SFA) contribute to all four pillars of food security – vacancy, access, operation and stability – and the boundaries of sustainability environmental, social and profitable. Find out further about FAO's vision for Sustainable Food and Agriculture. Agriculture product systems worldwide are facing unknown challenges from an adding demand for food for a growing population, rising hunger and malnutrition, adverse climate change goods, over exploitation of natural resources, loss of biodiversity, and food loss and waste. Lower people have respectable access to enough nutritious food. To find out further about the current state of food and nutrition security worldwide. Sustaining agrarian product depends on the quality and vacancy of natural resources analogous as soil and water. Some familiar sustainable practices in food manufacturing include reducing water and energy use, minimizing waste through recycling and composting, using renewable energy sources, sourcing ingredients from original and organic sources, and promoting fair labour practices. Sustainable husbandry employs a system of growing crops for lower mortal avail through effective operation of coffers without bogarting, deranging, or polluting the terrain. Sustainable agriculture is environmentally judicious, financially realizable, and socially fair and mortal.

Keywords: Agriculture, Food, Product.

Back Grount:

Judgments about the relative value of these trade-offs, in particular surrounds, rather than using its relative advantage and the openings to take a facilitator part, both at global, public and original situations, in engaging stakeholders in exploring these trade-offs and work out jointly drafted results". It recommended FAO to 'consolidate its sweats in promoting Sustainable Food and Agriculture (SFA) principles within the terrain of SO2 by taking a step further in formulating clear guidelines that would give a suggestion of the types of practices that support performance of SFA principles, discharging applicable models and approaches in a detailed and descriptive manner, and addressing integration of cross-slice issues analogous as climate'.

Introduction:

Agriculture systems that profit poor communities will have a low rate of financial return and/ or a high degree of trouble. At the same time, sustainable husbandry, which lessens reliance on water and precious arch conservative- predicated inputs, constantly carries lower trouble for financial loss than conventional agriculture while furnishing environmental benefits. The Sustainable Food and Agriculture (SFA) approach is predicated on five principles.

- Adding productivity in food systems;
- Guarding and enhancing natural coffers;
- Perfecting livelihoods enhancing adaptability;
- Governance.

They give the underpinning for a road chart with twenty connected conduct that can support countries in concluding and prioritizing coffers to accelerate the transition towards sustainable approaches. The conduct comprises a chimed of practices, approaches, and tools and calculate on participation and associations among different actors to accelerate the transition to further sustainable food processing.

Future Work:

Future work includes the piloting and operationalization of this frame, which is presently underway within the terrain of the Flexible Multi - Partner Medium (FMM) design “Sustainable productivity in agriculture in the terrain of Climate - Smart Agriculture (CSA) and Agroecology”

Significance of Sustainable Agricultural:

A regionally integrated system of plant and beast product practices are designed to produce long- term results analogous as;

- product of sufficient mortal food, feed, fiber, and energy to meet the conditions of a sharply rising population.
- Protection of the terrain and expansion of the natural coffers.
- force investiture of the profitable viability of agriculture systems

Sustainable Agricultural Practices:

Common sustainable agricultural practices are Crop rotation planting legumes after nitrogen dependent crops analogous as sludge, to replenish nitrogen to the soil. Drip irrigation running of tubing to direct water to the roots of individual shops to help water loss and waste Integrated Pest Management (IPM) using native bloodsuckers (e.g. ladybugs), seasonal plantings, mechanical means to remove help pests Planting cover crops analogous as clover, rye, and alfalfa are planted after crop to help soil erosion.

Raising of heritage species growing of different yield and beast icing that biodiversity in the food system is not lost small scale husbandry growing food on lower original ranches rather of large factory ranches.

Advantages of Sustainable Agricultural:

- Integration and control of natural cycle.
- Optimize the operation.
- Use of estate resource.
- Reduces the use of nonrenewable resources.
- lower input during husbandry product.
- occasion for respectable and dependable form of income.
- Promotes compass and occasion in family agriculture(husbandry)

Sustainable Agricultural Financial Tools:

Financial Tool Choice:

Focuses only on financial tools most generally executed in and most applicable to developing countries. For sustainable agricultural finance, loans and freights predominate. Tools used in sustainable husbandry backing include a wide range

- “Classic” governmental programs analogous as grants and tariffs;
- Programs launched with seed capitalist from NGOs with an eye to getting tone-sustaining over time;
- Public/ private alliancessupporting disquisition and development, birdman programs, and request development.;
- Cooperative marketing and instrument schemes; and,
- More recent finance tools analogous as micro- insurance decoration sharing.

As shown in the analysis and case studies below, successful performance of sustainable and organic husbandry requires collaboration, education, localization and capacity structure.

i) Loans

Overview:

Environmental finance loans can range formulate- million bone World Bank investments in public agricultural systems to micro- finance programs that offer small loans to individualities. Some of the challenges with administering a loan include the following.

- Setting loan amounts and terms
- Defining collateral
- trouble pooling

- tardy payments
- Developing financial infrastructures

Arariagn Loans:

Access to credit is vital for farmers, and the agricultural sector continues to be underserved

ii) Grants:

Overview:

Grants are direct transfers, generally from government to consumers or directors, to lower their costs or composite income. In environmental finance, grants constantly aim to encourage a particular behavior. Some of the challenges with administering grants include the following.

- Unintended consequences
- Political difficulties
- request suppression

Arariagn Subventions:

Transition to further sustainable product ways constantly needs to be subsidized or supplemented by grants or loans.

iii) Levies:

Overview:

Impositions generally bear large- scale, public- position performance and developing countries face multitudinous challenges when they essay to establish impositions. Some of the other challenges with administering impositions include the following.

- Collection and distribution
- counting on future profit
- financial auditing

Agrarianlevies:

The changeable nature of world tariff exchanges and the uncertain path from duty collection to profit disbursement have led to numerous openings for the effective operation of import/ import impositions to support sustainable husbandry.

iv) Freights:

Overview:

Freights can be tone- assessed or assessed on others. As presented in the case studies below, explaining and demonstrating the value of the figure to the payer has been shown

to reduce resistance, especially if the payer perceives a benefit from the figure. Some of the challenges with administering a figure include the following.

- Setting determining the figure
- Collecting the figure
- Corruption/ crime can hang collection/ distribution;

Agrarian Freights:

Freights from associations are important for supporting instrument, creation and other request development exertion. freights correspond primarily of class freights in pounds and associations.

What is Food Processing?

Food processing is the set of styles and ways used to transform raw ingredients into food or to transform food into other forms for consumption by humans or brutes. For illustration, food can be reused for preservation or reused to give time- saving options for cookery. Food processing constantly takes place in large, marketable food processing shops. These installations can range in size from truly small operations that may only have a numerous workerto truly large operations with hundreds or indeed thousands of workers. There are multitudinous different types of food processing, and the type of processing that is used depends on the type of food that is being reused and the asked end product. Some common samples of food processing include canning, freezing, fermentation, and dehydration.

Importance Functions of Food Processing:

It's to add value to food products. This can be done in a number of ways, analogous as by packaging and branding foods to make them more fascinating to consumers, or by making them easier and more accessible to eat. For illustration, reused foods analogous as per- packaged reflections or snacks are constantly more precious than their undressed counterparts but are also more accessible to consume.

This includes developing new flavors or creating foods that are specifically designed to meet the conditions of certain groups of people.

What are 4 types of Food Processing?

There are a large number of types of food processing. Four common orders of

- food processing includes food preservation
- food preservation,
- food safety, and
- value- added processing.

Factors Affecting Position of Food Product Installations:

The following section will explore some of the most common factors that affect the position of food product installations.

- Access to requests
- Transportation
- husbandry of Scale.

What is a “Original (Orindigenous) Food Systems”?

- A system of food product and distribution that is geographically localized
- Food is grown (or raised) and gathered close to consumers' homes.
- In general, original/ indigenous food systems are associated with sustainable husbandry, while the global artificial food system is reliant upon artificial agriculture.

Artificial Food Systems:

- Artificial husbandry negatively impacts the terrain by polluting the air, face water, and- consuming archconservative energy and water resources, slighting soil quality, converting erosion, and accelerating the loss of biodiversity
- Industrial agriculture also negatively affects the health of estate workers, degrades the socioeconomic fabric of girding communities, and impairs the health and quality of life of community dwellers
- conventional food is estimated to generally trip between 1,500 and 3,000 long hauls to reach the consumer and generally requires fresh packaging and refrigeration

Sustainable Food Sources

A significant challenge is to meet the adding global demand for proteins sustainably. SUSTAINABILITY pointers AND IMPACT ASSESSMENT Early work on sustainable benchmarking of force chains included pollution, labour morals, and ethics in food supplier relations and waste issues, as well as environmental, social, and profitable measures. SUSTAINABLE FOOD SYSTEMS Sustainable food systems are fundamental to icing sustainable development and securing food and nutritional security for all populations. The first book dealing with sustainable food systems, countries in its foreword that “. sweats have remained limited in compass, and they constantly give only sporadic responses to far- reaching problems.” Sustainability pointers and impact assessment Bettencourt and Kaur stated “The generalities of sustainable development have endured extraordinary success since their appearance in the 1980s. still, it remains unclear how far the field has progressed as a scientific discipline.

While not intended as a standard, the course below offers decision-makers one possible route rally pivotal players Engage sustainable food and husbandry with the broader SDG process in the country Raise awareness of the SDGs and their implications on food and husbandry Engage stakeholders in cross-sectoral and multidisciplinary dialogue on SDGs Address contentious challenges and contrary interests BUILDING A common VISION AND ACTION PLAN BUILDING POLITICAL MOMENTUM towards SDG performance. It complements the process outlined in the UNDG Reference Guide on Mainstreaming the 2030 program for Sustainable Development, which offers a common platform for SDG work at country position.

Building Political Instigation Rally Pivotal Players:

Engage sustainable food and AGRICULTURE with the broader SDG process in the country Raise awareness of the SDGs and their implications on food and agriculture.

Structure a common Vision and Action Plan:

Engage stakeholders in cross-sectoral and multidisciplinary dialogue on SDGs Address contentious challenges and contrary interests.

Translating vision into Action to Accelerate Change:

- Integrate SDGs in programs, programmes and action plans.
- Rally private sector and civil society and enhance alliances.
- Strengthen statistical capacity on data related to SDGs and SFA.
- figure capacity and take action at all situations.
- Amend budget fabrics and rally backing for performance.
- Develop an action plan towards sustainable food and husbandry.
- Develop a common vision on sustainable food and husbandry.

A Vision for Sustainable Food and Agriculture:

A world where food is nutritive and accessible for everyone, in which natural resources are managed in a way that maintains ecosystem functions to support current and future mortal conditions. In this vision, farmers, pastoralists, fisher-folk, lumberjacks and other pastoral dwellers laboriously partake in, and benefit from, profitable development, have decent employment conditions and work in a fair price terrain. Women, men and communities live in food security, and have control over their livelihoods and indifferent access to resources which they use in an effective way.

Five Key Principles:

- Increase productivity, employment and value addition in food systems.

- cover and enhance natural resources.
- meliorate livelihoods and foster inclusive profitable growth.
- Enhance the rigidity of people, communities and ecosystems.
- adapt governance to new challenges.

5 Principles:

Aligned to FAO's five principles of sustainable food and husbandry, this companion outlines 20 conduct, each describing approaches, practices, programs and tools that link multiple SDGs, integrate the three confines of sustainable development – profitable growth, social addition and environmental protection – and involve participation and alliances among different actors. terrain-specific but extensively applicable, the conduct is designed to support countries in concluding and prioritizing resources to accelerate progress. They identify sectoral solidarity that can catalyze achievement of public objects and deliver results across multiple pretensions and targets of the 2030 Agenda

20 Conducts:

Integrated and connected, the 20-conduct knit together the multitudinous confines of husbandry and pastoral development with a country's broader development programmed, laying the foundation for flexible and sustainable societies.

1. grease access to productive resources, finance and services.
2. Connect smallholders to requests.
3. Encourage diversification of product and income.
4. figure directors' knowledge and develop their capacities.
5. Enhance soil health and restore land.
6. cover water and manage failure.
7. Mainstream biodiversity conservation and cover ecosystem functions.
8. Reduce losses, encourage exercise and reclaim, and promote sustainable consumption.
9. Empower people and fight inequalities.
10. Promote secure term rights.
11. Apply social cover devices to help productivity and,
12. meliorate nutrition and promote balanced diets.
13. help and cover against shocks enhance rigidity.
2. Prepare for and respond to shocks.
3. Address and adapt to climate change.
4. Strengthen ecosystem rigidity.
5. Enhance policy dialogue and collaboration.
6. Strengthen invention systems.

7. adapt and meliorate investment and finance.
8. Strengthen the enabling terrain and reform the institutional frame.

Measuring Process:

A central factor in achieving the SDGs will be new and effective ways of collecting data, covering targets and measuring progress. As the base for policy opinions, effective monitoring offers countries vital information on which groups of people or areas of the country to concentrate on. Decision-makers need better data to set measurable targets, design and cover performance food security enterprise, social safety programmers and to determine effective support to husbandry and pastoral development. Data disaggregation will be necessary in targeting interventions to specific groups, converting food systems, achieving zero hunger and leaving no one behind.

Policy Support Tools:

FAO draws on its combination of technical and covering expertise to support countries shape policy on food and agriculture. These select products, tools and guidelines are educated by data and experience, and drafted following a collaborative process constantly involving multiple stakeholders.

Converting Food and Agriculture to Achieve the SDGs:

20 Connected Conduct to Guide Decision - Makers:

The path to substance is fluently marked by the 2030 program for Sustainable Development. It requires transformative action, embracing the principles of sustainability and diving the root causes of poverty and hunger to leave no one behind. As the high connection between people and the earth, sustainable food and agriculture have great eventuality to address multitudinous of our challenges, serving up affordable, nutritive food, strengthening livelihoods, revitalizing pastoral and communal topographies, delivering inclusive public growth and driving positive change across the 2030 Agenda

Conclusions and Recommendations:

Significant challenges live for icing sustainability across food chains given the complex nature and variability in global food systems. A pivotal demand is the establishment of harmonized sustainability pointers that impartiality give applicable measures for sustainable systems. The design of sustainable processes and engineering systems should embrace the use of arising processes, which reduces water and energy use. We recommend the following strategies for perfecting the sustainability of food systems

Resource operation - manage food and water failure; reduce waste, retain, and recover/ exercise nutrients within the food chain; induce a worldwide compendium of indigenous and traditional raw paraphernalia, processing, and drug styles.

Diversify your diet and cook farther reflections at home. Eat further plant- predicated foods; Enjoy beats, peas, tire and chickpeas as sources of protein. Eat original, seasonal foods. Buy sustainably produced foods and learn farther about tending practices and labelling. Avoid devilish packaging, which is likely to end up in tips. Don't waste food barring food waste can reduce global carbon emigrations by 8- 10 percent. produce your own theater, indeed if it's a small bone in your kitchen. Support associations, programs, and systems that promote sustainable food systems. And bat the significance of healthy and sustainable foods with directors, merchandisers, policy makers, buddies and family.

Abstract

By bringing investing to millions of investors' doorsteps, mutual funds have opened up new opportunities. Retail investors in India generally rely on data that neither offers an inflation hedge nor has positive actual returns. In the world of investing, he feels out of place. Mutual funds have arrived, providing these investors with much-needed assistance. As a result, knowledgeable fund managers and savvy investors have worked together to make mutual funds successful. Therefore, given the current environment, it is crucial to understand mutual fund investors' needs as well as their propensity for particular mutual fund schemes and how they rate those schemes' performance. The goal of this study is to examine how potential investors view mutual funds as a form of investing. The survey is conducted among 100 educated investors in virudhunagar and the results show that fund attributes, creditability, convenience, success factors, and fund family are the main determinants of purchase behavior for mutual funds. Academicians, AMCs, brokers, distributors, and other potential investors will find the study to be of great use.

Keywords: *Mutual Funds, Investment, Investors' Perception, and Investor Buying Behavior*

Introduction

Mutual fund growth has been incredibly slow since its inception in developing nations like India, and it took a long time to get to the modern mutual funds. In the 18th century, the Netherlands was the first country to introduce mutual funds as a means of investment. This was followed by Switzerland, Scotland, and finally the United States in the 19th century. The main goal of investments in mutual funds is to offer a diverse investment strategy. As this concept evolved over time, investors were given an ever-growing range of investment options via mutual funds. The mutual fund idea first appeared in India in 1960. UTI is the industry pioneer for Indian mutual funds. The mutual funds were very helpful to monetary finances. Investors used to put money straight into the stock market, but

because of their ignorance and lack of market exposure, they suffered significant losses. However, the dangers were significantly reduced when mutual funds, which were managed by skilled fund managers, were introduced. The diversified investment structure and diversified risk of mutual funds are two essential characteristics that significantly contributed to their development. Many new mutual funds have arisen over time. In addition, the processes and strategies for selling these funds evolved throughout time.

Need of the Study

The goal of this research project is to examine and pinpoint the key elements of investor behavior that influence mutual fund selection. There are many opportunities to research and examine recent changes in investor behavior and perception related demographics, investment objectives, beginning investment size, etc., as earlier studies produced varied results about investor perception of mutual funds. It is clear from the disclosures in the literature that investors are increasing their knowledge and their desire for information in order to make informed decisions. To update the knowledge, a research on this topic is required.

Scope of Study

The primary objective of the study is to ascertain how investors view mutual funds as a form of investing. Only 100 investors from the virudhunagar provided the information.

Literature Review

Although there are many readily available behavioral finance research papers, there is still little knowledge available regarding investor views, preferences, attitudes, and behavior. Every effort made in this direction is dispersed. The role performed by the fund sponsor, fund characteristics, variables influencing the selection of a mutual fund and a particular scheme, etc., are selection criteria that are mostly unexplored in the great volume of mutual fund literature in this area. There are few indications of the relative significance of the many perception-affecting elements, notwithstanding the paucity of study in this area. The following provides a summary of some relevant evidence.

In their research study from 2011, Saini, Anjum, and Saini evaluated the mutual fund investments in relation to investor behavior. The opinions and perceptions of investors have been investigated in relation to a variety of topics, including the type of mutual fund scheme, the goal of investing, the role of financial advisors and brokers, information sources, shortcomings in the services provided by mutual fund managers, and difficulties facing the Indian mutual fund industry, among others.

Sharma (2012) has conducted a further investigation on this topic, albeit from a different perspective. In this study, the researcher made an effort to look into the reasons why mutual funds weren't considered as a key investing alternative. In order to persuade investors to invest in particular funds, it examines their perceptions of the various

elements of mutual fund schemes. In order to secure investors' long-term affiliation in the form of fostering investor loyalty, the study looked into three factors: fund attributes, sponsor attributes, and financial rewards. The results are intended to provide mutual fund companies with a wealth of knowledge that will enable them to tailor their offerings to the needs and expectations of Indian investors.

In this context, a thorough study conducted in 2012 by Goel, Sharma, and Mani merits special attention. As in this, the researcher has identified the mutual fund performance indicators and has examined how these performance indicators affect the performance of mutual funds. The study also calls attention to inconsistencies in the literature when it comes to analyzing the performance indicators, which have been identified as performance persistence, turnover, expense ratio, asset size, load fee, investment style, mutual fund managers, and ownership style of the mutual funds according to the literature that is currently available. The effect of various performance metrics is explained in this research. Each performance metric has been discovered to have a unique impact on the mutual fund return.

Objectives

- To examine how investors perceive and are aware of mutual fund investing.
- To determine the elements affecting investors' opinions of mutual funds.

Research Methodology

The approach takes into account data and data sources, sample size, and analytical framework area. A systematic questionnaire that asked 100 respondents about various demographic and geographic groupings of investors in virudhunagar yielded the primary data. Purposive sampling technique was used to pick the sample since it was based on fixed criteria, such as the fact that only investors in mutual funds were chosen for data collection purposes and the study's goals.

Data Analysis and Interpretation

Analyzing demographic data enables measurement of the characteristics and dynamics of sample respondents. These estimates are frequently regarded as trustworthy benchmarks for assessing the veracity of the population data acquired throughout the research period. Research on population composition is also crucial, particularly when using factor analysis. Because of the possibility that the information that is important may not be provided by the number of persons for whom statistics are accessible, information going back hundreds of years is not necessarily valuable. Accurate evaluation of the data quality may be hampered by a lack of knowledge about the initial data collection methods. A thorough demographic analysis has been conducted in order to avoid any data analysis issues. 100 respondents' worth of data have been gathered.

Below Table displays the categorization of respondents based on a variety of factors, including age. Of the 100 respondents, 50 were in the 20 to 30 age range, 35 were in the 40 to 60 age range, and 15 were over the age of 60. There were 42 females and 58 males, in that order. According to the classification of respondents' educational backgrounds, there were 15 professionals, while 45 and 40 respondents, respectively, were graduates and postgraduates. According to their profession, 21 respondents worked for the government, 43 for the private sector, 19 were professionals, and 12 were self-employed. 80 respondents were classified as long-term investors under the category of investors, whereas 11 and 9 respondents fell into the day trader and both categories, respectively. 33 respondents had less than three years of investing experience, 42 had between three and five years, and the remaining 25 had five years or more of investing experience.

Approximately, 40 respondents invested less than Rs. 1 lakh, 37 respondents invested between Rs. 1 lakh and Rs. 2 lakh, and 25 respondents invested between Rs. 2 lakh and Rs. Based on the source of the investment, 92 respondents were in the group of both, five respondents had invested borrowed money, and seven respondents had invested their own resources. According to classification based on the amount of money ever invested in mutual funds, 83 respondents have invested, while 17 respondents have never invested. On the question of whether they would advise others to invest in mutual funds, 73 respondents said they would, while 27 said they would not.

Basis	Category	No. of Respondents
Occupation	Government employees	21
	Private Sector employees	43
	Professional	19
	Business	17
Monthly Income	Below Rs 20,000	22
	Rs 20,000 – Rs 40,000	50
	Rs 40,000 & above	28
Type of investor	Hereditary Investor	27
	New Generation Investor	73
Category of Investor	Long - Term Investor	80
	Day Trader	11
	Both	9
Experience in Investing	Less than 3 years	33
	3-5 years	42
	5 years & above	25
Approximate size of investment as on date	Below Rs. 1 lakh	40
	Rs. 1 lakh - Rs. 2 lakhs	37
	Rs. 2 lakhs & above	25

Source of investment	Own savings	92
	Borrowings	5
	Both	3
Money invested in mutual fund ever	Yes	63
	No	37
Recommend investing in mutual funds	Yes	73
	No	27

Findings

- The study's findings are as follows: 73% of respondents said that their peer group should consider investing in mutual funds because they believe it to be a profitable source of capital. 40% of those surveyed have investments worth less than Rs 1 lakh, indicating that those with little investment capacity choose mutual funds.
- The main finding of this study is that investors' perceptions of unconventional investment routes have evolved, and they have changed positively and progressively.
- The qualities of the fund, its credibility, the ease of the process, and varying success rates are important considerations for investors when investing in mutual funds. The first component discovered is fund characteristics, which explains 35.410% of the variance.
- Credibility, the second found factor, with a variance explained of 16.736%. This element takes into account aspects including brand perception, preferred information sources, prior results, and transparency. Convenience, the third factor studied, with a variance explained of 10.902%. This aspect takes into account elements like switching options, prompt grievance procedures, and prompt service.
- Success factors, the fourth identified factor, with an 8.544% variance explained. This aspect takes into account elements like research, offer document simplicity, and service excellence. Fund family, the fifth identified factor, with a variance explained of 7.379%. This consideration encompasses elements such as managerial structure, huge funds, and outsourcing.

Conclusion

The study's findings indicate that the Indian mutual fund business is still in its infancy, but the good news is that there are many potential for it to develop. Success is dependent on both large returns and the skill of the fund managers. The MF should be simple to buy and sell either directly on the market or through a broker. Mutual funds have emerged as a significant component of the financial markets and, up until now, have provided investors with consistent and sustainable returns. According to the study, investors' perceptions depend on a variety of demographic parameters, including gender. The demographic composition shows that the female market is underutilized and that higher-income

individuals are not given enough attention. The research's conclusions also included information on the variables affecting investors' perceptions. It shows that aspects with a greater influence on investors' perceptions are fund qualities, creditability, convenience, success factors, and fund family.

These elements provide them with the necessary boost during the investment process. Therefore, in order to attract more investors, fund managers must enhance these attributes in their securities. Only 100 people participated in the current study to examine investing habits. By including a larger sample size and other features that can be regarded as pertinent in the Indian mutual fund business, this research can be furthered. The primary data collection for examining investor attitudes and perceptions of mutual funds as an investment option is restricted to Virudhunagar, however it is possible to expand this study to other regions of the nation to examine the attitudes of more investors.

ROLE OF MSME IN ECONOMIC SELF RELIANCE

Sridevi M.L

Assistant Professor, Department of Commerce
Silicon City of College, KR Puram, Bangalore, Karnataka

Abstract

The Micro, Small and Medium enterprises (MSME) sector has emerged as a dynamic sector of the Indian economy and an essential driver of economic process. It considerably helps in developing entrepreneurship and generates second largest employment prospects. With a vast network of sixty-three million three hundred eighty thousand enterprises, more than forty per cent of exports, over twenty-eight per cent of the Gross Domestic Product and generating employment for about one hundred eleven million people, the MSME sector contributes in a significant way to the development of the Indian economy. The world economy is growing at a slower rate thus a lot of emphasis is required on developing MSME sector to extend employment opportunities specifically for young people. India is known as a land of entrepreneurs and contribution of MSME sector cannot be ignored while discussing the key issue of employment generation. India has also achieved the distinction of being one of the most industrially developed states. It has five per cent of the total Indian population and contributes about a quarter of India's products exports. The industrial sector of the state comprises of over eight hundred giant industries and six hundred three thousand Micro, Small and Medium Enterprises (MSME) which give employment to three million eight hundred fifty-one thousand people of the country. This research paper focuses on the contribution of MSME sector in Indian economy and makes clear the importance of India as a state in fostering entrepreneurship through MSME sector.

Keywords: MSME, Entrepreneurship, Self-Reliance Indian Economy.

Introduction

Introduction Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of the Indian economy over the last five decades. The MSME also play an important role in the development of the economy with their effective, efficient, flexible and innovative entrepreneurial spirit. The MSME sector contributes notably to the country's overall industrial production output, employment and exports. It is recognized with generating the maximum employment growth as well as accounting for a major share of industrial production and exports. They have distinctive advantages due to their size and they required low investment. They have relatively high capital-labour ratio and they require a minimum gestation period. They try to capture and focus smaller markets; they make sure a fairer distribution of national income. They make possible an effective utilization of capital and skill resources and they motivate the growth of industrial entrepreneurship. The MSME sector in India is vast heterogeneous in terms of the size, variety of product and services and level of technology. This sector is large contributes to the socioeconomic development of the country. The MSME sector is an important pillar of Indian economy as it contributes greatly to growth of Indian economy with a vast network of around 30 million units, creating employment of about 70 million, manufacturing more than 6000 products, contributing about 45% to manufacturing output

and about 40% of exports, directly and indirectly. This sector even assumes greater importance now as the country moves towards a faster and inclusive growth agenda. MSME sector is the backbone of national economic edifice and has unremittingly acted as the fulcrum for the Indian economy, providing it resilience towards global financial shocks and hard times. With approximately 63.4 million units throughout the geographical expanse of the country, MSMEs contribute around 6.11% of the manufacturing GDP and 24.63% of the GDP from service activities as well as 33.4% of India's manufacturing output. Further, there is a vision to enhance MSMEs contribution to India's GDP to over 50% from the current 29% and that for the Indian economy to scale the \$5 trillion mark, the contribution of the MSME sector will be crucial.

The Vision & Mission of MSME

Vision

To emerge as a global leader in advanced manufacturing research and development, innovation and to create an ecosystem for an inclusive balanced and sustainable development of the state.

Mission

To retain India position as a global manufacturing hub and to achieve higher and sustainable industrial growth through capital infusion technology transfer world class industrial infrastructure skill up gradation and benchmarking of policies and practices to best Global standards

Background Information on MSME

Today's MSMEs have their roots in local-level business activities in villages and also in ancient urban centres. Ancient India was experiencing sustained growth in these activities, even during the phase of a lot of political upheaval across the subcontinent. These businesses and enterprises were instrumental in fulfilling the local needs of the population. These enterprises also contributed significantly to the exports of goods to other countries, which resulted in great economic wealth for the country. These activities considerably declined during British rule, as significantly cheap products flooded the Indian market.

We can understand the history and evolution of MSMEs in India through three separate time periods. These time periods are "pre-British rule", "pre-independence", and "post-independence".

The pre-British period of the Indian economy was primarily agrarian. A vast part of the subcontinent had villages that were self-sufficient to a certain extent. Village-level artisans were able to provide for local needs. They had limited market access due to geographic factors during that period. However, urban centres (places of pilgrimage, administrative places, and trade towns) had a high level of economic activities, including the production of various goods. They primarily met the needs of the local market. However, a significant

portion of this production is exported. Local producers were producing textiles, utility-oriented handicrafts, silk cloths, muslin, shawls, carpets, wooden works, artistic glass works, and coloured glass works. Apart from these, ornaments made in India, jewellery, brass-works, ivory work, and several other notable products gained prominence and achieved significant admiration across the world. The political landscape was largely supportive; however, as political uncertainty and fragmentation increased, these activities also faced some difficult times. Despite this, they have remained relevant and growing.

The Mughal Empire started declining and the political prominence of the East India Company (EIC) grew. British rule started taking shape, and during the same time, the industrial revolution in Europe and America attained great heights. Therefore, new manufacturing processes were implemented in these areas for the mass production of goods. This mass production required raw materials and market access for finished goods. The EIC was well aware of this opportunity and used its prominence to exploit the Indian subcontinent for both purposes. During this period, raw materials became more dominant than finished goods for export. As mass-produced goods flooded the Indian market, locally produced goods and their manufacturers started to lose their business. This leads to the systemic destruction of local manufacturing as they lose both local and foreign markets. This effect was primarily visible in urban centres and trading towns. Village-level artisans also started facing heat; however, they were slightly less affected by this destruction. This leads to bad shapes for all industries in India. As British rule transitioned from the EIC to the British monarchy, the industrialization of India also brought mass production units in the country, which further aggravated the situation of local manufacturers. This period was not good for local industries and became a victim of unfair market situations. This consequently leads to the destruction of any future growth or evolutionary prospects of these industries.

The GOI established the “Small Scale Industries Board” (SSIB) in 1955. The SSIB provided a formal definition of small-scale industries in India. This definition used power consumption, number of employees, and quantum of capital as defining factors. This definition has undergone several changes over the course of history. In 1977, a new class of small industries was identified, named as “Tiny Industries.” This was done to address the needs of entrepreneurs who run very small enterprises and primarily cater to local markets. The definition of tiny industries has also undergone several changes as a need arises.

Today’s MSME originated from the local needs of the village and trade centres of that time. They also witnessed a great cycle of growth and recognition. Going forward, systemic destruction was also witnessed in the British era. Later, as political and geographical landscapes transformed, these units also began witnessing a much more favourable market scenario. The government began to focus on the systematic development of these units. Various national- and state-level policies, rules, and regulations have emerged. The Indian government created the Ministry of Small-Scale

Industries and Agro and Rural Industries (SSI and ARI) in October 1999. The core objective of this ministry was to create a more conducive environment for MSMEs. Later, as industries grew, this ministry was split into two separate ministries in September 2001: the Ministry of Small-Scale Industries (SSI) and the Ministry of Agro and Rural Industries (ARI). In the year 2006 MSME Act was passed, next year both ministries merged into a single ministry that is “Ministry of Micro, Small and Medium Enterprises” on 9th May 2007.

The evolution of these enterprises during these three phases has laid the groundwork for today’s MSME structural makeup. These distinct events shape today’s MSME market. The Indian MSME sector is yet to realize its full potential to reduce poverty and unemployment in India.

Features of MSME in Economy Self Reliance

1. MSMEs work for the welfare of the workers and artisans. They help them by giving employment and by providing loans and other services.
2. MSMEs provide credit limit or funding support to banks.
3. They promote the development of entrepreneurship as well as up-gradation of skills by launching specialized training centres for the same.
4. They support the up-grading of developmental technology, infrastructure development, and the modernization of the sector as a whole
5. MSMEs are known to provide reasonable assistance for improved access to the domestic as well as export markets.
6. They also offer modern testing facilities and quality certification services.
7. Following the recent trends, MSMEs now support product development, design innovation, intervention, and packaging.

Role of MSME in Indian Economy

Since its formation, the MSME segment has proven to be a highly dynamic Indian economy sector. MSMEs produce and manufacture a variety of products for both domestic as well as international markets. They have helped promote the growth and development of khadi, village, and coir industries. They have collaborated and worked with the concerned ministries, state governments, and stakeholders towards the upbringing of rural areas.

MSMEs have played an essential role in providing employment opportunities in rural areas. They have helped in the industrialization of these areas with a low capital cost compared to the large industries. Acting as a complementary unit to large sectors, the MSME sector has enormously contributed to its socio-economic development.

MSMEs also contribute and play an essential role in the country’s development in different areas like the requirement of low investment, flexibility in operations, mobility

through the locations, low rate of imports, and a high contribution to domestic production.

With the capability and capacity to develop appropriate local technology, provide fierce competition in domestic and international markets, technology-savvy industries, a contribution towards creating Défense materials, and generating new entrepreneurs by providing knowledge, training, and skill up-gradation through specialized training centres.

Importance of MSMEs for Indian Economy

Employment: It is the second largest employment generating sector after agriculture. It provides employment to around 120 million persons in India.

Contribution to GDP: With around 36.1 million units throughout the geographical expanse of the country, MSMEs contribute around 6.11% of the manufacturing GDP and 24.63% of the GDP from service activities.

MSME ministry has set a target to up its contribution to GDP to 50% by 2025 as India becomes a \$5 trillion economy.

Exports: It contributes around 45% of the overall exports from India.

Inclusive growth: MSMEs promote inclusive growth by providing employment opportunities in rural areas especially to people belonging to weaker sections of the society.

For example: Khadi and Village industries require low per capita investment and employs a large number of women in rural areas.

Financial inclusion: small industries and retail businesses in tier-II and tier-III cities create opportunities for people to use banking services and products.

Promote innovation: It provides opportunity for budding entrepreneurs to build creative products boosting business competition and fuels growth.

Thus, Indian MSME sector is the backbone of the national economic structure and acts as a bulwark for Indian economy, providing resilience to ward off global economic shocks and adversities.

Objectives of MSME in Economy Self Reliance

To promote e-Governance for empowering citizens, promoting the inclusive and sustainable growth of the Electronics, IT & ITeS industries, enhancing India's role in Internet Governance, adopting a multipronged approach that includes development of human resources, promoting R&D and innovation, enhancing efficiency through digital services and ensuring a secure cyber space.

Objectives

- e-Government: Providing e-infrastructure for delivery of e-services
- e-Industry: Promotion of electronics hardware manufacturing and IT-ITeS industry

- e-Innovation / R&D: Implementation of R&D Framework - Enabling creation of Innovation/ R&D Infrastructure in emerging
- areas of ICT&E/ Establishment of mechanism for R&D translation
- e-Learning: Providing support for development of e-Skills and Knowledge network
- e-Security: Securing India's cyber space
- e-Inclusion: Promoting the use of ICT for more inclusive growth
- Internet Governance: Enhancing India's role in Global Platforms of Internet Governance.

Review of Literature

There has been limited research on sustainability in Indian MSMEs till date. Of course, of late, the number of publications has increased. A chronological review of literature, 2011 onwards, on Indian MSMEs follows. Sangwan (2011) identifies the quantitative and qualitative benefits of Green Manufacturing (GM) through a literature review, and validates them through a survey of Indian SMEs. The author defines GM at the intersection of manufacturing and design practices, and environmental issues, concerns and practices, i.e. the greater the overlap between these areas, the greater the extent to which manufacturing and design practices recognize and embody environmental issues, concerns and practices. The author notes from the literature that the benefits of GM may range from cost reduction, improvement in productivity and product quality, safer and cleaner facilities, reduced environmental and health risks, better working conditions, and improved employee morale to customer loyalty, opening of new markets, higher market share, innovativeness, competitiveness, and improved corporate image and relations with stakeholders. The author also highlights that one of the far-reaching implications of GM is the lifecycle approach (LCA) to production, i.e. to take into account the environmental impacts of the entire lifecycle of a product starting from design, sourcing and manufacturing to storage, distribution, use, collection, inspection and recovery/disposal, and if properly implemented, LCA may result in reduced waste/effluent treatment/disposal costs, energy and cost savings from recycling and reuse activities, reduced penalties and liabilities, and lower regulatory compliance costs. In another study, Mittal et al. (2012) identify the drivers and barriers for the implementation of Environmentally Conscious Manufacturing (ECM), another name for GM, and validate them by conducting a case study in Germany and India for comparison. The authors identify current and future regulations for compliance, financial incentives such as attractive loans, grants and tax exemptions for capital investments, public pressure in terms of the pressure exerted by various stakeholders such as local communities, NGOs, consumer groups, media and political parties, peer pressure exerted by trade and business associations, cost savings due to reduced material and energy consumption, increased competitiveness due to improved efficiency, customer demand for environmentally friendly products, supply chain pressure exerted by suppliers and distributors, and the

commitment and leadership of corporate managers as the major drivers for an effective implementation of ECM. Nair and Sodhi (2012) highlight Corporate Social Responsibility (CSR) practices by Indian SMEs, and note that although CSR practices are skewed towards large companies, many SMEs being located in small towns, villages and remote areas are embedded in their local communities and eminently suited to pursue CSR practices. The authors present the findings of five case studies on the best CSR practices by Indian SMEs. The authors note that many SMEs do not see the immediate relevance of environmental and social issues to their businesses, and are focused on the short-term survivability of their enterprises. However, CSR does pay off in the long run, and has proven to have brought in business advantages in terms of staff recruitment, development, commitment, morale, motivation and retention, customer loyalty, new product development, access to new markets, energy savings, innovation, competitiveness, visibility, image and reputation that would not have been achievable otherwise. The authors mention that the nature and level of CSR implementation in SMES are influenced by factors such as sector, size, age, history, whether family- or non-family owned/managed, position in the value chain and nature of client relationships. The ethical orientation and moral responsibility of owners/managers are cited by the authors as the main drivers of CSR implementation in SMEs. On the other hand, the lack of resources is cited by SMEs as the main barrier to CSR adoption. The five case studies presented by the authors mention the following CSR practices: abolition of child labour, child education, health checkup, promotion of women entrepreneurship, widow stipend programme, orphan girl marriage assistance unit, raising funds for social causes through people participation, and promoting sustainable livelihoods while protecting the environment in rural and remote areas. The authors note that increased supply chain pressures, i.e. buyers'/exporters' stringent environmental and social requirements enforced on their suppliers would encourage more and more SMEs to adopt CSR practices.

Research Methodology

This research has done based on method of Descriptive study. The required data has collected from various secondary sources i.e., internet websites of government and other private domains, magazines, journals, general opinion of industry experts and other publications etc. This data was then analyzed and reviewed for conclusions.

Conclusion

In conclusion, the MSME sector has an important role to play in achieving the goals of the self-reliant India scheme. This will not only help in dealing with the economic conditions arising out of Covid-19 but will also pave the way for India's long-term economic-industrial development. With the change in the definition of small and cottage industries by the government, these industries will get a free environment for their development. A healthy environment will be created for the development of small and

cottage industries by giving collateral free loans, giving financial assistance to distressed units, arranging online marketing, simplification of rules and laws, etc. In the current globalized economic conditions MSME sector needs adequate financial and technical support so that they can make their place not only in the domestic market but also in the global market. The present market based system has not only presented challenges before the small and cottage industries but has also opened doors of possibilities. The need is to identify these possibilities and take the development of MSME sector as a movement. Only by doing this the dream of self-reliant India can be realized and the ultimate goal of inclusive development can be achieved.

DIGITAL INDIA CAMPAIGN FOR TECHNOLOGIES AND CONNECTIVITY

Dr. Vignesh Ramamoorthy. H

Assistant Professor, Department of IT and Cognitive Systems,
Sri Krishna Arts and Science College, Coimbatore - 641008, Tamil Nadu.

Abstract

It is a well-known fact that digital India is the outcome of many innovations and technological advancements. These transform the lives of people in many ways and will empower the society in a better manner. The Digital India Programme, an initiative of the Indian Prime Minister will transpire new development in every sector. The motive behind the concept is to build participative, transparent, and responsive system. The Digital India drive is a dream project of the Indian Government to remodel India into a knowledgeable economy and digitally empowered society, with good governance for citizens by bringing synchronization and co-ordination in public accountability, digitally connecting, and delivering the government programs and services to mobilize the capability of information technology across government departments. Today, every nation wants to be fully digitalized and this programme strives to provide equal benefit to the user and service provider. Hence, an attempt has been made in this paper to understand Digital India – as a campaign where technologies and connectivity will come together to make an impact on all aspects of governance and improve the quality of life of citizens.

Keywords: Development, Digital, E-governance, Government, Internet access.

I. Introduction

The Digital India Mission is a flagship initiative launched by the Government of India with the aim of harnessing the power of digital technology to transform the country into a digitally empowered society and knowledge economy. In an era marked by rapid technological advancements and the widespread integration of digital platforms into various aspects of our lives, the term “Digital India” resonates as more than just a catchphrase. It embodies a vision of transformative change, where technology acts as a catalyst for growth, inclusivity, and progress on an unprecedented scale. The Digital India Initiative holds the potential to reshape the very fabric of our nation, fostering innovation, connectivity, and empowerment across every stratum of society.

Digital India Mission is sometimes also referred to as Digital India Programme which was launched in July 2015 by Prime Minister Narendra Modi. Digital India Programme envisions comprehensive digital infrastructure, increased digital literacy, and widespread digital access across all sectors, from governance and education to health and financial services. The Digital India initiative seeks to bridge the digital divide, promote digital inclusion, and leverage technology to enhance the quality of life for all citizens while promoting economic growth and innovation.

Digital India for New India is a vision to create a new India where all citizens have access to the benefits of digital technology. This includes access to education, healthcare, financial services, and government services. It also includes the ability to participate in the digital economy and to create new opportunities for oneself. The objectives are,

- To understand the concept of Digital India
- To discuss about the visions of Digital India
- To explain the scope of Digital India
- To understand the pillars and initiatives of Digital India
- To study the impact of Digital India on the Indian society

To achieve these objectives, the paper is divided into various sections. Section II explains the concept of Digital India. Section III explains the visions of Digital India. The next section shows the scope of Digital India. Section V explains the pillars of Digital India. Section VI Initiatives under Digital India and VII assesses the proposed impact of Digital India on the society. References form the last section of the paper.

II. Digital India

Digital Technologies, which include Cloud Computing and Mobile Applications, have emerged as catalysts for quick economic growth and citizen empowerment across the globe. Digital technologies are being increasingly used by us in everyday lives, from retail stores to government offices. They help us connect with each other and also share information on issues and concerns faced by us.

Honourable Prime Minister envisions transforming our nation and creating opportunities for all citizens by harnessing digital technologies. His vision is to empower every citizen with access to digital services, knowledge and information. Digital India is the next big thing that India is witnessing. It aims at profoundly touching the lives of everyone with the transformation travelling the paths of both rural and urban India. Today, the world has transformed from a knowledge savvy to techno knowledge savvy. Think of something and it is available in one click. So, Digital India is a step by the government to inspire and connect Indian Economy to such a knowledge savvy world. The program targets to make Government services available to people digitally and enjoy the benefit of the newest information and technological innovations. It brings out various schemes like E-Health, Digital Locker, E-Sign, Education etc. and nationwide scholarship portal. The program strives to provide equal benefit to the user and service provider. The consumers will be benefited by way of saving time, money, physical & cognitive energy spent in lengthy government processes.

The Digital India Programme has been launched with an aim of transforming the country into a digitally empowered society and knowledge economy. The Digital India would ensure that Government services are available to citizens electronically. It would

also bring in public accountability through mandated delivery of government's services electronically; a Unique ID and ePramaan based on authentic and standard based interoperable and integrated government applications and data basis.

Digital India is a dream project of the government for the citizens and Industries of India which could help in connecting the various past and present projects to bring India to a global platform. Through this project government services are available for urban and rural citizens digitally or electronically. It will help to achieve digital innovation and create positive impact in the people living in rural and urban areas. It will attract investment in all product manufacturing industries. Andhra Pradesh is the first State to have opted this implementation. The Digital India project aims to transform our country into a digital economy with participation from rural or urban citizens and businesses. This will ensure that all government services and information are available anywhere, anytime, on any device that is easy-to-use, highly available and secured. Digital India Project removes digital gap between the rural and urban India.

III. Vision of Digital India Initiative

Figure 1: Three visions of Digital India

Here is what the government of India aims to achieve through Digital India initiative.

- **Infrastructure:** The Digital India initiative has a vision to provide high speed internet services to its citizens in all Gram Panchayats. Bank accounts will be given priority at individual level. People will be provided with safe and secure cyber space in the country.
- **Governance and Services:** Government services will be available online where citizens will be ensured easy access to it. Transactions will be made easy through electronic medium.

- **Digital Empowerment of Citizens:** This is one of the most important factors of the Digital India initiative to provide universal digital literacy and make digital sources easily accessible. The services are also provided in Indian languages for active participation.

IV. Scope of Digital India

The overall scope of this programme is To develop India for a knowledgeable future by developing central technology for allowing; revolution this covers many departments under one Umbrella Programme; On being transformative, that is to realize IT (Indian Talent) + IT (Information Technology) = IT (India Tomorrow). The programme weaves together a large number of thoughts and ideas into a single, extensive vision, and making the mission transformative in totality. The Digital India Programme will pull together many existing schemes which would be refocused, restructured and implemented in a synchronized manner for their transformative impact. Digital India targets to provide the much-needed sense to the following nine pillars of growth areas.

V. Nine Pillars of Digital India

The idea of Digital India is to bring abroad commitments to invest towards this initiative so that the investments would be utilized towards making internet devices and smart phones at an affordable price in India which would help in generating jobs, reduction in the time and cost of importing them from abroad. Digital India comprises of various initiatives under the single programme each targeted to prepare India as a knowledge economy and for bringing good governance to citizens through synchronized and coordinated engagement of the entire Government. Nine projects have been undertaken which are shown in the diagram given below:

Figure 2: Nine Projects of Digital India

- **Highways to have broadband services:** The first step is to provide high speed broadband highways through fiber optics that connect all the remote areas, government departments, universities, research and development etc. Web based

portals and Mobile apps will be developed to access online information while on the move.

- **Easy access to mobile connectivity:** The government is taking steps to ensure that by 2018 all villages are covered through mobile connectivity. The aim is to increase network penetration and cover gaps in all 44,000 villages. General public will access the online government services with the help of handheld devices. Nation is ready to be well-connected, efficient, and more productive in every aspect.
- **IT Training for Jobs:** The government is preparing to provide training and teaching skills to the youth for employment opportunities in the IT sector. BPO industries will be established for the fastest growing segment of the Information Technology Enabled Services industry. It offers eservices 24/7 in every field and gives more jobs potentials. This initiative seeks to train 10 million people in towns and villages for IT sector jobs in five years. It also aims to train 0.3 million agents to run viable businesses delivering IT services.
- **Manufacturing of electronics:** This milestone will create a huge base for electronics manufacturing in India with the aid of digital technologies and skills. Target NET ZERO Imports is a striking demonstration of intent. This ambitious goal requires coordinated action on many fronts.
- **Provide public access to internet:** Virtuous technologies that support cost containment, collaboration, security, services-on-the-go, social-connect, and in-built intelligence that deliver remote access to any information or service available across the domain. This change will open new doors of e-services to every citizen. The government aims to provide internet services to 2.5 lakh villages which comprises of one in every Panchayat by March 2017 and 1.5 lakh post offices in the next two years. These post offices will become Multi Service centres for the people.
- **E-Governance:** This governance will transform every manual work into fully automation system. It will revolutionize the system in the following ways:
 1. Online access to applications i.e. availability of all databases and information in electronic format.
 2. Effortlessly tracking of assignments.
 3. Interface between departments for superior production of work.
 4. Quickly respond, analyze and resolve persistent problems and many more.
- **E-Kranti:** This Kranti will fully focus on digital knowledge program where education, health, farming, rights, financial and many more services will be delivered on a very high bandwidth. Physical boundaries no longer are a limitation when almost everyone and everything is a digital handshake away.

- **Global Information:** Hosting data online and engaging social media platforms for governance is the aim of the government. Information is also easily available for the citizens.
- MyGov.in is a website launched by the government for a 2-way communication between citizens and the government. People can send in their suggestions and comment on various issues raised by the government, like net neutrality.
- Early harvest programs: This programme will generate short timeline projects where every manual service is altered by e-service. E-services like:
 1. Implementation of Wi-Fi in all the universities.
 2. Public Wi-Fi Sports to access online information.
 3. Educational books to e-books.
 4. People will use the e-services for entertainment, weather information, latest updates etc.
 5. Replacement of manual attendance to Biometric procedure

VI. Initiatives Under Digital India

Some of the facilities provided under the initiative of Digital India are as follows:

- **Digi Locker:** Digital Locker facility helps citizens to digitally store their significant documents like PAN card, passport, mark sheets and degree certificates. Digital Locker offers secured access to Government issued documents. It uses authenticity services provided by Aadhaar. It is targeted at eliminating the use of physical documents and enables sharing of verified electronic documents across government agencies. Three key stakeholders of DigiLocker are Citizen, Issuer and requester.
- **Attendance.gov.in:** Attendance.gov.in is a website, launched by PM Narendra Modi to keep a record of the attendance of Government employees on a real-time basis. This initiative started with implementation of a common Biometric Attendance System (BAS) in the central government offices located in Delhi.
- **MyGov.in:** MyGov.in is a platform to share inputs and ideas on matters of policy and governance. It is a platform for citizen engagement in governance, through a "Discuss", "Do" and "Disseminate" approach.
- **SBM Mobile app:** Swachh Bharat Mission (SBM) Mobile app is being used by people and Government organisations for achieving the goals of Swachh Bharat Mission.
- **e-Hospital:** The e-Hospital application provides important services such as online registration, payment of fees and appointment, online diagnostic reports, enquiring availability of blood online etc.
- **National Scholarship Portal:** National Scholarship Portal is a one step solution for end to end scholarship process right from submission of student application,

verification, sanction and disbursal to end beneficiary for all the scholarships provided by the Government of India.

- **E-Sign framework:** e-Sign framework allows citizens to digitally sign a document online using Aadhaar authentication.

VII. Proposed Impact of Digital India

- **Economic impact:** According to analysts, the Digital India plan could boost GDP up to \$1 trillion by 2025. It can play a key role in macro-economic factors such as GDP growth, employment generation, labour productivity, growth in number of businesses and revenue leakages for the Government. As per the World Bank report, a 10% increase in mobile and broadband penetration increases the per capita GDP by 0.81% and 1.38% respectively in the developing countries. India is the 2nd largest telecom market in the world with 915 million wireless subscribers and world's 3rd largest Internet market with almost 259 million broadband users. There is still a huge economic opportunity in India as the tele-density in rural India is only 45% where more than 65% of the population lives. Future growth of telecommunication industry in terms of number of subscribers is expected to come from rural areas as urban areas are saturated with a tele-density of more than 160%.
- **Social impact:** Social sectors such as education, healthcare, and banking are unable to reach out to the citizens due to obstructions and limitations such as middleman, illiteracy, ignorance, poverty, lack of funds, information and investments. These challenges have led to an imbalanced growth in the rural and urban areas with marked differences in the economic and social status of the people in these areas. Modern Information and Communications Technology (ICT) makes it easier for people to obtain access to services and resources. The penetration of mobile devices may be highly useful as a complementary channel to public service delivery apart from creation of entirely new services which may have an enormous impact on the quality of life of the users and lead to social modernization. The poor literacy rate in India is due to unavailability of physical infrastructure in rural and remote areas. This is where m- Education services can play an important role by reaching remote masses. According to estimates, the digital literacy in India is just 6.5% and the internet penetration is 20.83 out of 100 populations. The digital India project will be helpful in providing real-time education and partly address the challenge of lack of teachers in education system through smart and virtual classrooms. Education to farmers, fisher men can be provided through mobile devices. The high speed network can provide the adequate infrastructure for online education platforms like Massive Open Online Courses (MOOCs).

- Mobile and internet banking can improve the financial inclusion in the country and can create win-win situation for all parties in the value-chain by creating an interoperable ecosystem and revenue sharing business models. Telecom operators get additional revenue streams while the banks can reach new customer groups incurring lowest possible costs. Factors such as a burgeoning population, poor doctor patient ratio (1:870), high infant mortality rate, increasing life expectancy, fewer quality physicians and a majority of the population living in remote villages, support and justify the need for tele medicine in the country. M-health can promote innovation and enhance the reach of healthcare services. Digital platforms can help farmers in know-how (crop choice, seed variety), context (weather, plant protection, cultivation best practices) and market information (market prices, market demand, logistics).
- Environmental impact: The major changes in the technology space will not only brought changes to the economic system but will also contribute to the environmental changes. The next generation technologies will help in lowering the carbon footprint by reducing fuel consumption, waste management, greener workplaces and thus leading to a greener ecosystem. The ICT (Information and Communications Technology) sector helps in efficient management and usage of scarce and non-renewable resources. Cloud computing technology minimizes carbon emissions by improving mobility and flexibility. The energy consumption can be decreased from 201.8 terawatt hour (TWH) in 2010 to 139.8 TWH in 2020 by higher adoption of cloud data centers causing a 28% reduction in carbon footprint from 2010 levels.

VIII. Conclusion

A digitally connected India can help in improving social and economic condition of people through development of non-agricultural economic activities apart from providing access to education, health and financial services. However, it is important to note that ICT (Information and Communications Technology) alone cannot directly lead to overall development of the nation. The overall growth and development can be realized through supporting and enhancing elements such as literacy, basic infrastructure, overall business environment, regulatory environment, etc. The Digital India program is just the beginning of a digital revolution, once implemented properly it will open various new opportunities for the citizens.

Abstract

Small Scale Business is responsible for the majority of industrial units in an economy like India. As a result of small firms, there are over 40% of all industrial units. The percentage of all Indian exports that go to small enterprises is roughly 45%. Convenience stores, small grocery stores, bakeries or delicatessens, hair salons or trade, restaurants for people, hotels, photographers, very small-scale manufacturing, and Internet-related enterprises like web design and programming are examples of small-scale businesses. Given that effective leadership is crucial to the existence of any commercial activity, both small and large business organizations have recently suffered from poor leadership due to inefficiency and lack of focus. It is therefore crucial that organizational performance and leadership are needed. Every company organization has the necessary education and training to operate efficiently. This study relates to both primary and secondary data and some of the statistical tools were used for testing the hypothesis. This article discusses the enhancing and discouraging factors that affect the organizational performance of small businesses and comes to the conclusion that it is the duty of every leader to create an organization that will operate efficiently because the extent to which a corporation succeeds depends on how well its leaders set expectations for their subordinates.

Keywords: *Small Scale Business, Leadership, Organizational Performance, Education and Training*

Introduction

Small Scale business indicates that Corporations, Partnerships, or Sole Proprietorships that are smaller in size than a regular-sized firm or Corporations and have fewer employees and lower yearly revenue. Small-scale businesses are considered to be "small" insofar as they qualify for favorable tax treatment and can submit applications for government assistance. The number of employees is one of the most frequently used metrics, even if small businesses can also be categorized using other criteria including annual revenues, shipments, sales assets, or by annual gross or net revenue or net profits.

While a person maintains a regular job with an employer or takes care of family members in the home, many small enterprises can be created at a minimal cost and on a part-time basis. Many small scale enterprises that generate modest incomes in developing nations are sole proprietorships, such as those that sell goods from a market stall or prepare food to be sold on the street. Small firms can market with lower expenses thanks to internet marketing. Small business owners typically have more personal interactions with their clients and consumers than do huge businesses because they see their customers every week in person.

Review of Literature

Sh. Sohan Lal (2023) in his study entitled “A Study on Challenges of Small Scale Industries in India”, has analysed Small businesses are essential to a nation's development. More than 40% of the Indian economy's gross industrial value added is accounted for by it. State borders are not an obstacle for small firms to serve regional need. Additionally, the government has launched a number of initiatives and rewards to encourage SSI and build institutional infrastructure for SSI.

Shashank B.S and SureshramanaMayya (2021) in their study entitled “A Conceptual Study on Performance of Small-Scale Industries in India” has analysed SSIs are crucial to regional development as a result. Subsidies are predicted to increase, enhancing SSIs for export competitiveness. To maintain and strengthen their operations, SSIs in India are increasingly concentrating on improved production techniques, penetrating marketing tactics, and management skills. The ability to be dynamic, adaptable, and creative must also be developed. The SSIs' promoters need to be well-educated, informed about current world events, and supportive in their efforts to obtain the necessary skills.

DilipJagdale and Sarang Shankar Bhola (2014) in their study entitled “Entrepreneurial Leadership and Organizational Performance with reference to Rural Small Scale Engineering Industry in Pune District” has analysed the Indian economy is supported by small-scale businesses. This sector plays a critical role in creating significant job possibilities at a capital cost that is significantly lower than that of large enterprises. It also aids in the industrialization of rural and underdeveloped areas, which helps to reduce regional imbalances and ensures a more fair distribution of wealth and income across the country. Small businesses today are dealing with a variety of issues in the areas of operations, finance, and marketing. The number of failing industries keeps rising. One of the causes of this is the entrepreneur's management style.

Statement of the Problem

The specific research issue being evaluated in this study was managers' misuse of leadership abilities at the expense of organizational effectiveness. Some managers need to

locate the growth of small businesses and exhibit the leadership qualities needed in a dynamic business climate. Because of this, it is anticipated that adopting particular leadership styles and an entrepreneurial mindset may improve their organizational performance. Age, gender, experience, qualifications, and designation can also have an impact on an individual's perspective and, consequently, on their subordinates or staff.

Objectives of the Study

1. To know the demographic profile of the respondents.
2. To study the leadership style of respondents in small scale business.
3. To identify the factors influencing on organisational performance in small scale business.

Hypothesis of the study

1. There is no significant relationship between the age of the respondents and their enhancing factors of organisational performance in small scale business.
2. There is no significant relationship between the nature of business and their enhancing factors of organisational performance in small scale business.
3. There is no significant relationship between the experience of the business and their contrary factors of organisational performance in small scale business.

Methodology

This study is conducted with the help of both primary and secondary data. Primary data were collected through questionnaires. Secondary data were collected through books, websites, published articles, magazines and journals.

Sampling Design

The study is mainly based on survey method and it is relevant only in Thoothukudi town. The researcher selected 135 respondents from the small scale business units by adapting convenience sampling method. A structured questionnaire was used to collect the relevant data.

Limitations of the study

1. The researcher has collected the data for limited respondents.
2. This study has used for limited statistical tools only.

Result and Discussion

This section shows the analysis and interpretation of data used for the study.

Table No.1 - Demographic factors

Factors	Sub-category	Frequency	Percentage
Age (in years)	21-30	95	70.3
	31-40	31	23
	41-50	05	3.7
	Above 50	04	3
	Total	135	100
Gender	Male	105	77.8
	Female	30	22.2
	Total	135	100
Educational Qualification	School level	36	26.7
	Under graduate	45	33.3
	Post graduate	30	22.2
	Professional	36	26.7
	Total	135	100
Area of Residence	Rural	70	51.9
	Urban	56	41.5
	Semi-urban	9	6.7
	Total	135	100

Source: Primary data

Table 1 shows that out of 135 respondents, majority of the respondents are belongs to the age group of 21 – 30 it indicates for 70.3%, majority of the respondents are male it indicates for 77.8%, majority of the respondents are under graduates it indicates for 33.3% and majority of the respondents are resident in rural area it indicates for 51.9%.

Table No.2 - Business factors

Factors	Sub-category	Frequency	Percentage
Nature of Business	Candle industry	16	11.9
	Bakery	13	9.6
	Jaggery production	12	8.9
	Others	94	69.6
	Total	135	100
Experience in small scale business	Less than 2 years	80	59.3
	2-10 years	40	29.6
	11-15 years	9	6.7
	More than 15 years	6	4.4
	Total	135	100

Number of workers employed	Less than 3 workers	75	55.6
	3-6 workers	38	28.1
	7-10 workers	10	7.4
	More than 10 workers	12	8.9
	Total	135	100
Location of the Business	With residence	71	52.6
	Far away from residence	23	17
	Near-by residence	41	30.4
	Total	135	100
Maintenance of Savings	Banks	87	64.4
	Chit funds	18	13.3
	Insurance	6	4.4
	Own business	24	17.8
	Total	135	100
Employee Promotion	Year of service	77	57
	Input to the company	32	23.7
	In Favourers	7	5.2
	Others	19	14.1
	Total	135	100

Source: Primary data

Table 2 shows that out of 135 respondents, majority of the respondents are doing small level of retail businesses it belongs to the others category and it indicates for 69.6%, majority of the respondents are experienced business activity for less than 2 years it indicates for 59.3%, majority of the respondents are to be employed for less than 3 workers of their business it indicates for 55.6%, majority of the respondents are doing their business in residence it indicates for 52.6%, majority of the respondents are maintaining of savings in banks it indicates for 64.4% and majority of the respondents are to be promoting employee for year of service it indicates for 57%.

Table No.3 – Study factors

Factors	Sub-category	Frequency	Percentage
Enhancing factors of Organisational Performance	Recruitment of well educated	42	31.1
	Participative leadership and proper motivation of the staff	43	31.9
	Research and development	33	24.4
	Free flow of information and personal recognition	17	12.6

	Total	135	100
Contrary factors of Organisational Performance	Lack of good equipment	67	49.6
	Insufficient staff and fund	29	21.5
	Autocracy and bad leadership	13	9.6
	Lack of attention to the staff	26	19.3
	Total	135	100

Source: Primary data

Table 3 shows that out of 135 respondents, majority of the respondents are enhancing the factors of organisational performance is participative leadership and proper motivation of the staff it indicates for 31.9% and majority of the respondents are contrary the factors of organisational performance is lack of good equipment it indicates for 49.6%.

One-way ANOVA

Table No.4 - Age of the respondents and their enhancing factors

H0: There is no significant relationship between the age of the respondents and their enhancing factors of organisational performance in small scale business.

Factors	Sum of Squares	Df	Mean Square	F	Sig.
Between Groups	48.164	3	16.055	116.658	.000
Within Groups	18.029	131	.138		
Total	66.193	134			

Source: Primary data

Table 4 shows that there is no significant relationship between the age of the respondents and their enhancing factors of organisational performance in small scale business. Significant value (.000) is less than the level of significance (0.05). Hence the null hypothesis is accepted.

Chi-Square Test

Table No.5 - Nature of business and their enhancing factors

H0: There is no significant relationship between the nature of business and their enhancing factors of organisational performance in small scale business.

Factors	Value	Df	Asymp. Sig. (2-sided)
Pearson Chi-Square	130.384 ^a	9	.000
N of Valid Cases	135		

Source: Primary data

Table 5 shows that there is no significant relationship between the nature of business and their enhancing factors of organisational performance in small scale business. Significant value (.000) is less than the level of significance (0.05). Hence the null hypothesis is accepted.

Table No.6 – Experience of the business and their contrary factors

H0: There is no significant relationship between the experience of the business and their contrary factors of organisational performance in small scale business.

Factors	Value	df	Asymp. Sig. (2-sided)
Pearson Chi-Square	155.156 ^a	9	.000
N of Valid Cases	135		

Source: Primary data

Table 6 shows that there is no significant relationship between the experience of the business and their contrary factors of organisational performance in small scale business. Significant value (.000) is less than the level of significance (0.05). Hence the null hypothesis is accepted.

Conclusion

Understanding the socioeconomic background, including the respondents' residential area, gender, age, educational background, family type, and size, will help us better understand the impact of leadership and organizational performance in small businesses in Thoothukudi Town. These kinds of data will aid shops in developing effective business plans. In order to accomplish the goals of the company, leadership is crucial. As a result, there is a clear link between organizational goal achievement and the effectiveness of leadership.

The study also demonstrates the necessity to alter the impact of leadership as it becomes required in an organization to improve performance. Organizations are created with a clear purpose and goal in mind. People join organizations to meet their needs, and by doing so, they help the organization operate better and accomplish its goals. Since the amount to which a corporation thrives depends on both the leader's chosen leadership style and the expectations of the subordinates, it is the duty of every leader to create an organization that will run efficiently. The paper's conclusion explains how organizational performance has drawn significant attention because of the importance of leadership abilities.

Abstract:

The Indian economy is paying attention on MSMEs as a means of achieving sustainability through utilizing locally available resources for manufacturing. The policies of economic liberalization had influence for the risen of MSMEs in India. Economic Liberalization policies 1991 encourage the steady growth rate of Industrialization in India. Rural and urban women are toward withinthe entrepreneurship development activities with government support. The Micro Small and Medium Enterprises (MSMEs) sector has played an important role to develops the economy. This sector has always been considered essential driver of economic process. The objective of the study was to find out the How sustainable development of women will be possible through the MSMEs? This MSME has been contributing to the Sustainable development of the women in Tripura State Special reference to Gandachara Sub-division. This paper also followed throughout the traditional dimensions such as; trends and growth rate of MSME units, employment along with investment through the government to this sector. To find out the measure of Growth Rate (GR) for all dimensions; the Compound Annual Growth Rate (CAGR) and percentage methods are used.

Keywords: *Investment, MSME, CAGR,GR, entrepreneurship*

Introduction:

The Micro, Small and Medium Enterprises (MSME) sector has developed into a exciting and active element of the Indian economy. It makes a considerable part to the economic and social progress of the nation through encouraging entrepreneurship. It is providing a vast group of employment opportunities at an investment cost. The Indian economy is paying attention on MSMEs as a means of achieving sustainability throughout utilising locally available resources for manufacturing, labour-intensive processes as well as resettlement. The policy of LPG entered India in the post cold war era. The policies of economic liberalization enacted in 1991 bear the growth. Economic Liberalization policies promote the stable growth rate of Industrialization in India a variety of central Ministries as well as department have triggered the growth by continuing their efforts rate of MSMEs. In the context of Tripura especially at Gandachara Sub-division these kinds of central as well as

state policies had been sequentially launch. The present study will try to focus on sustainable development of Women through the MSMEs.

Development:

Development is a route that ensures good quality of life to each and every one of the people in terms of happiness, harmony and satisfaction of essential needs. It is linked to improvement, progress as well as aspirations of people. This meaning of development would help all the sections of society. It allows people to completion of basic needs like food, education, health and shelter.

Sustainable Development:

Sustainable Development means which meets the needs of the present without compromising the ability of future generations to meet their own needs. This most widely accepted definition of Sustainable Development was given through the Brundtland Commission in its report *Our Common Future* (1987).

Micro, Small and Medium Enterprises (MSMEs)

Micro, Small, Medium Enterprises (MSME's) are entities that are concerned in production, manufacturing as well as processing of goods and commodities. The MSME was first introduced by the government of India through the Micro, Small & Medium Enterprises Development (MSMED) Act, 2006.

Statement of the Problem

Micro, Small and Medium Enterprises (MSMEs) and Sustainable Development of women in Tripura: special reference to Gandachara Sub-division.

Objectives

1. To Know about the Micro, Small and Medium Enterprises (MSMEs).
2. To know about the concept of Sustainable Development.
3. To find out how MSMEs help for the sustainable development of women at Gandachara Sub-division.

Methodology

Both quantitative and qualitative data were gathered for the study, this ensured that both statistical and non-statistical analysis was used in order to support the findings of the results of the study. Primary data were collected from field survey whereas the secondary data were collected from different library and online e-books and journals.

Review of Literature

A few of works has been done on the **“Micro, Small and Medium Enterprises (MSMEs) and Sustainable Development of women in Tripura: special reference to Gandachara Sub-division.”**

Muchie, M., &Bekele, E. Promoting micro, small and medium Enterprises (MSMEs) for sustainable rural Livelihood. (2009).This study basically focus on how MSMEs may be able to provide sustainable livelihood towards Rural people.

Hassan, M. S., &Dey, N. B. (2017). Financial and Management Accounting Practices in Micro, Small and Medium Enterprises (MSMEs): An Analytical Study in Tripura (Doctoral dissertation). This Study explain about the financial and managements and their contribution towards the spread of MSMEs.

Shah, T. M. (2016). Tripura Bamboo Mission: Cohesive power of small and medium enterprises. Proceedings of Innovation, Inspiration and Hope in a VUCA World, 13(1), 35-45. This study focus on the progress of bamboo Mission in Tripura by the help of Small and medium enterprises.

Kumar, J. S., &Shobana, D. MAJOR ROLE OF MICRO, SMALL AND MEDIUM ENTERPRISES (MSMES) SECTOR IN NORTH EAST INDIA. This study told that contributions of Small and Medium enterprises for the development of North-East India.

Bhattacharya, R. Extending management education to rural entrepreneurs of MSMEs units in India: A strategic tool for sustainable development. EXCEL (2012). This study told about the Training programmed for the rural entrepreneur. So they can develop themselves through sustainably.

Burman, K. K., & Das, B. The Present Status of Micro, Small and Medium Enterprises (MSMEs) in Assam–An Economic Analysis. (2011).This book talks about the Status of MSMEs in the perspectives of Economic development.

MSMEs With Sustainable Development

MSMEs assist to increase the economy and GDP. MSMEs are the the majority common type of business in OECD countries.MSMEs are classically found in low-skilled, labour-intensive industries such light built-upas well as the service zone.

MSMEs can revitalizedeprived communities and encourage economic integration. Small businesses serve up communities, populations, and markets. According to study, smaller businesses are well again at reviving the local economy.

Position of women entrepreneur in MSMEs

Women work in industrial activities like manufacturing, assembly, manual labour, and other endeavours are referred to as "women entrepreneurs." Women entrepreneurs are clear as single people or groups of people that launch, plan, and run a business. It is

predictable of women to create or modify economic activities. Women must begin, copy, or adopt an economic activity in order to be measured entrepreneurs.

Entrepreneurship is the Main pillar of a country's economic success. It creates new job opportunities. Entrepreneurship has become a source of motivation for the business sector all around the world. Without the participation of women, who create up roughly half of the population, in entrepreneurial activity; women have very varied economic circumstances. Investigating the main causes of economic inequality and coming up with plans to go forward women's status is thus crucial.

Analysis and Interpretation of Field Survey data

Micro, Small and Medium Enterprises (MSMEs) and Sustainable Development of women in Tripura: special reference to Gandachara Sub-division can be discuss thus-

Table No - 1

1. Do you know about the Micro, Small and Medium Enterprises (MSMEs)?

Measurement	Frequency (Respondent)	Percentage
Partial	35	35%
Moderate	19	19%
Highly	12	12%
None of the above	34	34%
Total	100	100%

Source: Field Survey

Interpretation:

The table 1 shows that more or less 66 percent women know about the Micro, Small and Medium Enterprises (MSMEs).

Table No - 2

2. Do you have any Idea Regarding Sustainable Development?

Measurement	Frequency (Respondent)	Percentage
Partial	30	30%
Moderate	39	39%
Highly	16	16%
None of the above	15	15%
Total	100	100%

Source: Field Survey

Interpretation:

The table-2 shows that out of 100 respondents thirty nine (39) respondents have Moderate idea regarding Sustainable Development while thirty (30) have partial idea and

Sixteen (16) have high idea regarding this and 15 women who does not know about sustainable development So more or less out of 100 women 85 women who know about Sustainable Development.

Table No - 3

3. Do you think that MSMEs help for the sustainable development of women at Gandachara Sub-division?

Do you think that MSMEs help for the sustainable development of women at Gandachara Sub-division?	Yes	No	Total
Respondents	80	20	100

Source: Field Survey

Interpretation:

The table 3 shows out of 100 women 80 women told that MSMEs help for the sustainable development of women at Gandachara Sub-division.

Table No - 4

Social Category of the women entrepreneurs

Category	Total	Percentage to total
Scheduled Caste	08	08
Scheduled Tribe	52	52
OBC	18	18
MINO	05	05
GEN	17	17
Total	100	100

Analysis

Table-4 This table shows that the highest number of social categories of women in this area is ST and the lowest number of Social category is Minority.

Table No - 5

Family Occupations of the respondents

Occupation	Total	%
Agriculture	10	10
Labour	20	20
Business	55	55
Service	15	15
Total	100	100

Analysis

Table-5 shows that business group are high (55 percent) and the lowest number of respondent in the occupation is Agriculture.

Table No - 6
Loan received from Bank by the settled Entrepreneurs in trading activities

Year	Total	%
Up to 50000	51	69.32
Above 50000 to Below 2 lakhs	35	28.22
Above 2 lakhs	14	2.45
Total	100	100

Table-6 shows that the highest number of Entrepreneurs get loan from bank is upto 50000 categories and the lowest number of Entrepreneurs get loan from bank is Above 2 Lakh.

Limitation of the study

The sample size is very limited and the area of sample is limited only 5 villages were chosen for this Research study.

Conclusion

To conclude, it can be said that MSMEs is a good initiative for the sustainable development of rural economy as well as women. Because on the one hand it is less harmful for the nature and the other hand it provides the income opportunity to the rural women. As we know that in the rural areas large number of people belongs to poverty line. Moreover lack of proper infrastructure the rural women are unable to contribute themselves to the economic activities. The present study had done at Gandachara (Dhalai Tripura), this district is most under develop zone in the Tripura as well as rural also. Therefore these MSMEs play a vital role for the upliftment of women at this area.

M-COMMERCE AND MOBILE APPS: OPPORTUNITIES FOR MSME'S

B.Dharaneedharan & S. Pradeep (I-M.Com)

Department of Commerce, Dr.N.G.P. Arts and Science College, Coimbatore

dharandharaneedharan@gmail.com (9659657098) & deepra6209@gmail.com(8220996973)

Abstract:

Mobile apps are revolutionizing the way businesses are conducted, offering up a plethora of new business opportunities, and establishing new marketplaces, from Uber to Airbnb. Technology has made asset sharing a reality, leading to efficient utilization of resources at costs much lower than were thought possible. Markets are becoming more interconnected and communication is vitally ingrained in our business transactions. The current research paper is a review of current concepts in M-commerce and Mobile Applications. In the paper M-commerce is defined as a part of e-commerce. The conclusion suggests that M-commerce depends significantly on e-commerce technologies. Technology adoption is becoming more affordable as well as a necessity to survive in today's ultra-competitive business environment. Only brick and mortar or businesses without presence on the internet would be at a big disadvantage and may even close down sooner than later. In order to fulfill market needs and take advantage of current or projected opportunities, MSME businesses' flexibility makes it simpler to make decisions on a broad scale, such as adopting new technology or altering or even redesigning an existing business process. As a result, m-commerce offers MSMEs the opportunity to significantly increase their profits by putting their products in the hands of millions of potential customers worldwide.

Keywords: M. Commerce, Mobile Apps, MSME's, Developing Countries, Technologies, Digitalization

Introduction:

Certainly! Mobile commerce, or m-commerce, has opened up significant opportunities for Micro, Small, and Medium Enterprises (MSMEs) in the business world. With the proliferation of smartphones and internet connectivity, MSMEs now have the chance to expand their reach and increase their sales through mobile apps. These apps provide a convenient platform for customers to browse products or services, make purchases, and engage with businesses. The introduction of m-commerce and mobile apps for MSMEs signifies a shift towards digitalization, allowing businesses to cater to a larger audience beyond geographical boundaries. It enables MSMEs to create a seamless shopping experience, implement targeted marketing strategies, and provide personalized customer service, all of which are crucial for staying competitive in today's market. By embracing m-commerce, MSMEs can enhance their visibility, improve customer engagement, and ultimately boost their revenue. This transformation offers a level playing field, allowing smaller businesses to compete with larger enterprises in the digital landscape. As technology continues to advance, the opportunities for MSMEs in the realm of m-commerce are boundless, making it a vital avenue for growth and sustainability.

Objectives:

- Mobile apps and m-commerce empower and enable MSMEs, increasing their reach and boosting customer happiness and loyalty
- Mobile apps can streamline a variety of business processes, improving the effectiveness of the business process and enabling MSMEs to establish a distinctive brand identity.
- M-Commerce platforms and mobile apps can be used to secure MSMEs' commercial relationships and keep them competitive in the ever-changing business environment.
- M-Commerce and mobile apps may help businesses develop, increase customer happiness, and maintain a competitive edge in the digital market.

M-Commerce Meaning:

M-trade is the usage of handheld, wi-fi devices consisting of cellular phones, pills and private virtual assistants to carry out on-line industrial transactions. It's a factor of digital trade that works on cellular devices. M-trade allows a commercial enterprise to attain greater clients on-line. It additionally offers clients with a extensive variety of product picks and charge alternatives from specific vendors. It is an development of ecommerce, permitting humans to shop for and promote items or offerings from nearly anywhere, genuinely the usage of a cellular telecellsmartphone or pill device.

Oppurtunities For MSMEs:

Expand Market Reach: Mobile apps enable MSMEs to reach a broader audience beyond their physical location, potentially attracting customers from different regions or countries.

Improve Customer Engagement: Mobile apps allow businesses to engage with customers through personalized notifications, promotions, and loyalty programs, enhancing customer experience and fostering brand loyalty.

Enhance Convenience: M-commerce offers convenient shopping experiences. Customers can browse products/services, place orders, and make payments from the comfort of their mobile devices, leading to increased sales.

Data Collection and Analysis: Mobile apps collect valuable customer data, which MSMEs can analyze to understand consumer behavior, preferences, and market trends. This data-pushedmethodfacilitates in makingknowledgeablecommercial enterprise decisions.

Cost-Effective Marketing: Mobile apps provide a cost-effective platform for marketing and advertising. MSMEs can run targeted marketing campaigns within the app, reducing the expenses associated with traditional marketing methods.

Streamline Operations: Mobile apps can integrate various business functions, such as inventory management, order processing, and customer support. This integration streamlines operations and reduces manual errors.

Build Brand Loyalty: Through mobile apps, MSMEs can offer exclusive deals, discounts, and rewards to app users, encouraging repeat purchases and building a loyal customer base.

Compete with Larger Enterprises: Having a well-designed mobile app levels the playing field for MSMEs, allowing them to compete with larger enterprises in the digital marketplace.

Adaptation to Changing Consumer Behavior: With the increasing reliance on smartphones, MSMEs need to adapt to changing consumer behavior. Mobile apps cater to the preferences of modern consumers who prefer the convenience of mobile shopping.

Facilitate Secure Transactions: Mobile apps can integrate secure payment gateways, ensuring safe and hassle-free transactions for both the business and customers.

Challenges Associated with M-Commerce and Mobile Apps:

Initial Development Cost: Creating a mobile app can be expensive, especially for small businesses with limited budgets. Developing a user-friendly and feature-rich app requires investment in technology and skilled developers.

Maintenance and Updates: Apps need regular maintenance and updates to remain compatible with new devices and operating systems. This ongoing cost can burden small businesses, especially if they have limited technical expertise.

Security Concerns: Mobile apps are susceptible to security threats such as data breaches and hacking. MSMEs might lack the resources to implement robust security measures, putting customer data at risk.

Market Saturation: App stores are saturated with millions of apps. Getting noticed among competitors can be challenging, requiring additional investments in marketing and promotions.

User Experience: If the app is not user-friendly or does not offer a seamless experience, customers might uninstall it. Ensuring an intuitive interface and a positive user experience requires careful design and testing.

Dependency on Third-Party Platforms: MSMEs often rely on third-party platforms (e.g., app stores) to distribute their apps. Changes in policies or algorithms of these platforms can affect app visibility and downloads.

Limited Device Compatibility: Apps might not be compatible with all devices and operating systems, excluding potential customers who use devices incompatible with the app.

Internet Connectivity: M-commerce relies heavily on internet connectivity. In regions with poor network coverage, customers may face difficulties accessing the app, limiting the business's reach.

Competition from Big Players: Large corporations with substantial resources dominate the app market. Small businesses may struggle to compete with these giants, affecting their market share and profitability.

Data Privacy Compliance: MSMEs must adhere to data protection regulations, which can be complex and require additional resources for compliance.

How M-Commerce and mobile apps Can Help MSMEs Solve Many of their Problems?

Wireless mobile devices, including smartphones and PDAs, are used in m-commerce. The ease of use and necessity of smartphones and PDAs has an effect on intentions and behavioral outcome (Hubert, et al. 2017). According to Rahayu et al. (2016), m-commerce can benefit MSMEs in the following crucial areas: expanding their customer base, increasing sales, improving customer and supplier communication, improving brand image, accelerating business processes, and improving employee efficiency. Furthermore, empirical data demonstrates that the higher the level of M-commerce adoption among MSMEs in Indonesia, a developing nation, the higher the profit (Rahayu et al. 2016). Due to the enhanced market reach provided by the internet aspect of business, m-commerce can assist businesses in attracting more clients. Market expansion will result in additional clients, which will boost these MSMEs' sales revenue. Better relationships with customers and suppliers will result from improved communication with both parties, and there will be less risk of ambiguity when delivering the appropriate good or service at the appropriate time. M-Commerce can enhance the company's reputation as a cutting-edge business, and it also increases staff productivity by allowing them to work more effectively thanks to technology. Businesses that operate online avoid the expenses associated with opening brick and mortar establishments, such as the costs of rent, staffing, insurance, decorating, and other necessities. According to eMarketer data, more than 80% of all online customers also use their mobile devices to shop, and by 2019 that percentage is expected to reach 95%.

Mobile devices are becoming a significant platform for M-commerce, as well as for advertising, movies, TV shows, and e-books. As with Alipay, Uber, Airbnb, and many other apps that are used daily by millions of users worldwide, it brings innovation. It promotes growth by making businesses efficient, effective, and competitive.

Conclusion:

As to the studies, SMEs generally and those in developing nations in particular face a number of challenges. Additionally, it emphasizes how M-commerce might aid in overcoming many of the challenges faced by SMEs in developing nations. For instance,

expanding the market's reach, increasing sales, lowering transaction costs and middlemen, accelerating procedures, enhancing communication, and increasing employee productivity. Many SMEs in the real estate and transportation sectors, for instance, can sign up for rides or room rentals on Uber/Didi and Airbnb, respectively, and therefore tap into new revenue streams. As an alternative, SMEs can purchase a mobile app that is specifically tailored to their needs as a business and to better serve their customers. These apps typically cost between US\$2000 and US\$250000, however complicated apps or those involving Mobile apps and m-commerce give MSMEs the chance to innovate, expand their market reach, increase productivity, and have a strong online presence, all of which contribute to the growth and sustainability of their businesses. To overcome these obstacles, considerable preparation, strategic investment, and a commitment to providing outstanding client experiences are necessary. Additional features and services like location-based functionality, payment synchronization, social media, in-app purchases, cross-device synchronization, etc. would be significantly more expensive.

Dr. A. Giri Prakash

Assistant Professor

Sakthi Institute of Information and Management Studies, Pollachi

Abstract

This Research paper is attempted to examine the role of MSME and its contribution as well as sustainable development through MSME. The MSME sector plays an indispensable role in financial improvement of the country. India's Micro, Small and Medium Enterprises (MSME) sector has appeared as a vibrant and dynamic sector for the economy. It has been recognized as a catalyst in promoting the growth and development of the Economy. MSME's are playing a pivotal role in creating a huge amount of employment, helping in establishment of industries in economically backward regions and truncating regional inequalities, contributing to GDP and increasing the National Income. It is found from the study and various researches that MSME's are playing a crucial role in changing the Indian Economy in future. The MSME's are providing a platform for the persons who are both skilled or unskilled with wide range of employment opportunities and increasing the standard of the society and as well as in the development of the regions in setting up industries in the rural and backward and also in urban areas. The MSME's are providing uniform development to the society and can be a strong mean to utilize the natural resources in an effective way to contribute to the efficiency and in the development of the Economy of India. So, the sustainable contribution by the MSME's towards the Economy must be constantly increased for the well development of the Nation.

Keywords: MSME, Rural Development, GDP, Employment Generation, National Income,

Introduction

The Micro, Small and Medium Enterprises (MSME's) is regarded as the Economy's growth engine. It is the most important and emerging sector of the economy. MSME's play a pivotal role in the contribution to the National GDP as well as economic development of the country. MSME's not only serve as an important role in creating enormous employment opportunities at a cheaper cost of capital than large enterprises, but also, they aid in the industrialization of rural and backward areas and decreases the regional inequalities and ensuring fair distribution of national revenue & wealth and ensuring the development of the society. MSME's play a crucial role in socio economic transformation of the country. MSME's offers a wide range of products and services with innovative government initiatives to promote the growth of the nation. Indian Government has introduced enormous initiatives and schemes to promote MSME's and upcoming entrepreneurs in the Nation. Make in India concept was also launched with a lot of

flourishes to inculcate new vitality in the manufacturing sector. The purpose of this paper is to examine role, contribution and sustainable development towards the economic development through MSME. Therefore, MSME's can be a boon and hope for the sustainable development of the Indian Economy in near future.

Objectives of the Study

The study has the following objectives.

1. To study the Role of MSME in the Economic Development.
2. To examine the Contribution of the MSME towards Economic Development.
3. To analyze the Sustainable Development of the economy through MSME.

Methodology

This paper is completely based on the secondary data. The secondary data were collected from the Directorate of Economics and Statistics, Ministry of Micro, Small and Medium Enterprises, Journals, Thesis & Websites.

Elucidation of MSME

The Micro, Small, and Medium Enterprise Development (MSMED) act, 2006, was adopted by the Indian government. it defines Micro, Small and Medium Enterprises (MSMEs) as the businesses involved in the manufacturing, processing, or preservation of items.

MSMEs play a considerable role in the GDP growth story on account of their contribution to production and processing. Their growth results in an increase in value addition, final output, and profitability. Furthermore, they complement large industries by acting as ancillary units, thus bringing out integration benefits.

Definition of Micro, Small and Medium Enterprises:

In accordance with the major provision of micro, small and medium enterprises act 2006 has classified MSME's into two categories:

- a) Manufacturing enterprises: Refers to those enterprises engaged in the manufacture or production of goods relating to any industry specified in the first schedule to industries (According to development and regulation act, 1951)
- b) Service enterprises: These enterprises are engaged in providing or rendering of services in terms of investment in equipment's

MSME units producing goods and rendering services will be defined in terms of annual turnover, as mentioned under:

Micro enterprises will be defined as a unit where the annual turnover does not exceed Rs.5 crore

A small enterprise will be defined as a unit where the annual turnover is more than Rs. 5 crores but it does not exceed Rs. 75 crores

A medium enterprise will be defined as a unit where the annual turnover is more than 75 crores but does not exceed Rs. 250 crores

Manufacturing Sector

Enterprises	Investment in Plant & Machinery
Micro Enterprises	Less than 25 Lakh
Small Enterprises	More than 25 Lakh, but does not exceed 5 Crore
Medium Enterprises	More than 5 Crore, but does not exceed 10 Crore

Service Sector

Enterprise	Investment in Equipments
Micro Enterprises	Less than 10 Lakh
Small Enterprises	More than 10 Lakh, but does not exceed 2 Crore
Medium Enterprises	More than 2 Crore, but does not exceed 5 Crore

Some of the Government Schemes Promoting MSME's in the Economy

- Credit Linked Capital Subsidy Scheme for Technology Upgradation
- Credit Guarantee Scheme
- Prime Minister's Rozgar Yojana (PMRY)
- MSME MDA Scheme
- Prime Minister Employment Generation Programme (PMEGP)
- Credit Guarantee Trust Fund for Micro & Small Enterprises (CGTMSE)
- Entrepreneurship and Skill Development Programme (ESDP) Scheme
- Micro and Small Enterprises Cluster Development Programme (MSE - CDP)
- Mudra Yojana

Role of MSME in Economic Development & its Contribution

Recently, MSME's plays a vibrant role in the development of economy by increasing the wealth of the nation and as well as the society by providing more employment opportunities to the society and contributing to the GDP of the nation. MSME's help to reduce the rate of unemployment and stimulates the economic growth.

1) Increasing Employment

MSMEs have played an essential role in providing employment opportunities in rural areas. They have helped in the industrialization of these areas with a low capital cost compared to the large industries. Acting as a complementary unit to large sectors, the

MSME sector has enormously contributed to its socio-economic development. MSMEs account for 90% of businesses, 60 to 70% of employment and 50% of GDP worldwide. As the backbone of societies everywhere they contribute to local and national economies and to sustaining livelihoods, in particular among the working poor, women, youth, and groups in vulnerable situations. The National Sample Survey (NSS), according to the 73rd round, which was done between the years 2015 and 2016, the Indian government plans to increase the number of jobs in the MSME sector by 5 crores by 2025 from the present level of 11.10 crore.

As of December 2022, approximately 1.28 crore MSME registered industries employed 9.31 crore people including 2.18 crore women employees, based on the most recent data from the portal of Udyam. The MSME sector generates 360.41 lakh jobs out of the 11.10 crore jobs. The jobs mainly belong to the manufacturing sector, in the rural and urban areas, with 387.18 lakh jobs in trade and 362.82 lakh jobs in other services across the country. The MSMEs that were founded in the year 2022, employed more than 1 crore people.

The MSME's employment by top states during the year 2022.

States	No. of Individuals Employed
MAHARASTRA	11.23 Lakh
TAMIL NADU	8.54 Lakh
UTTAR PRADESH	8.47 Lakh
TELANGANA	8.29 Lakh
RAJASTAN	8.20 Lakh

2) Regional Development

Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of the Indian economy over the last five decades. MSMEs not only play crucial role in providing large employment opportunities at comparatively lower capital cost than large industries but also help in industrialization of rural & backward areas, thereby, reducing regional imbalances, assuring more equitable distribution of national income and wealth. MSMEs are complementary to large industries as ancillary units and this sector contributes enormously to the socio-economic development of the country. Ministry of Micro, Small & Medium Enterprises (M/o MSME) envision a vibrant MSME sector by promoting growth and development of the MSME Sector, including Khadi, Village and Coir Industries, in cooperation with concerned Ministries/Departments, State Governments and other Stakeholders, through providing support to existing enterprises and encouraging creation of new enterprises.

Over the period, MSMEs are expanding with a consistent development rate and giving both urban and rural people with employment opportunities. According to the 2017-18 MSME report, about 49 percent of MSMEs are located in urban areas, while 51 percent in rural areas make a good contribution towards development in those areas. As a result, the standard of living of the population of rural areas is improving healthily. Also, as most of the MSMEs perform labour intensive works so the investment required is relatively less, so it enables them to offer a greater number of jobs per capital that is invested as compared to medium or large-scale industries.

3) Contribution to the GDP

As per the latest information received from Ministry of Statistics & Programme Implementation, the share of MSME Gross Value Added (GVA) in all India Gross Domestic Product (GDP) during the year 2019-20, 2020-21 and 2021-22 was 30.5%, 27.2% and 29.2% respectively. The share of MSME manufacturing output in all India Manufacturing output during the year 2019-20, 2020-21 and 2021-22 was 36.6%, 36.9% and 36.2% respectively.

As per the information received from Directorate General of Commercial Intelligence and Statistics (DGCIS), the share of export of MSME specified products in all India exports during the year 2020-21, 2021-22 and 2022-23 was 49.4%, 45.0% and 43.6% respectively. MSMEs' contribution will be integral in making India achieve its lofty goals of becoming a developed nation by 2047. With a contribution of 30% to the country's GDP, the MSME sector has immense potential to help the economy grow by leaps and bound. The role of manufacturing MSMEs, in particular, will prove significant in India's economic aspirations as a nation. The MSME sector in India employs over 100 million people and accounts for 45% of manufacturing output and over 40% of the country's exports, according to a PIB release. With 63.4 million units spread across the country, the sector contributes around 6.11% of the manufacturing GDP and 24.63% of the GDP from service activities.

4) Sustainable Growth

MSMEs play a considerable role in the GDP growth story on account of their contribution to production and processing. Their growth results in an increase in value addition, final output, and profitability. Furthermore, they complement large industries by acting as ancillary units, thus bringing out integration benefits.

Their contribution is increased manifold when one accounts for the multiplier effect of the economic activity undertaken by their employees and suppliers. The CSO data states MSMEs' contribution to Gross Value Added (GVA) at 30% for FY 2019-20, with the manufacturing share standing at 36.9%. MSMEs are being supported by the government

through 'Make in India' with the 'Zero Defect & Zero Effect' initiative to promote sustainability and higher quality standards.

5) Increasing the Number of Exports

India's trade and external sector has a significant impact on the GDP growth and expansion in per capita income. India is among the world's largest producers of milk, pulses and jute and the second largest producer of rice, wheat, fruit and cotton, groundnut, sugar, and vegetables. It is also one of the leading producers of spices, fish, poultry, livestock and plantation crops. Most of these are run in small production units. India's industrial exports are predicted to exceed \$1 trillion by 2028. As India continues to be the world's fastest-growing major economy, one of the key drivers of growth for the country is the rise in the volume of India's exports, which have grown by 37% in 2022. According to a report from the Ministry of Commerce & Industry, India's overall exports (Merchandise and Services combined) in April-November 2022 exhibited a positive growth of 17.72% over the same period last year. Traditionally, MSMEs have contributed almost 50% of India's exports; therefore, an increase in exports signifies a growth opportunity for small businesses to scale up and distribute their products globally. By increasing exports, India is poised to provide more jobs and create opportunities for both semi-skilled and unskilled workers.

6) Emphasising Make in India

MSMEs can contribute greatly towards reducing imports and enhancing exports. In 2023 and the coming years, the Government is on a mission to implement Make in India more actively to reduce importing goods and products from foreign countries. The Make in India programme aims at utilizing the existing Indian talent base, creating additional employment opportunities and empowering the secondary and tertiary sectors. The programme also aims at improving India's rank on the Ease of Doing Business index by eliminating unnecessary laws and regulations. It also makes the bureaucratic processes easier, making the Government more transparent, responsive and accountable.

According to a report from the Ministry of Commerce and Industry, domestic demand has remained steady amidst the global downturn. Overall imports in April-November 2022 exhibited a growth of 29.47% over the same period last year. This signifies that India still depends on imports for various needs like raw materials, financing, machinery, etc. To reduce imports further, India needs to ramp up production in the country, which requires the Government to take measures to check the increase in raw material prices and high dependency on imports for some industries like pharma, etc. Make in India' campaign to get Indian companies as well as global firms to invest and partner in the manufacturing sector is a well-drawn-out concept and is the most relevant for India's MSMEs. 'Make in

India' campaign can attract the foreign MNCs to bring in their investment, set up venture/angel funds to take advantage of the inherent depth of the MSME Sector in terms of range of products and services, marketing networks and the ability to grow fast. Another advantage in Indian MSME Sector the foreign partners would experience is that production process in this sector is already underway. The various networks required for undertaking the production process are already established. The foreign MNC is just required to bring in investment and technical know-how to achieve excellence in these areas. In order to enhance the capabilities of MSMEs, Ministry of MSME has been implementing a number of programs and schemes in the areas of finance, infrastructure, technology, marketing and skill development to address the problems confronting the sector.

7) Women Empowerment

Women are the pillars of society and when women are empowered, the whole world is empowered. Ministry of Micro, Small and Medium Enterprises (MSME) is empowering women entrepreneurs through its different schemes helping women spark their talent and build their own identity. 1.38 lakh projects have been set up by the women entrepreneurs under Prime Minister's Employment Generation Programme (PMEGP) Scheme since inception and up to 23.01.2019. The projects set up by women entrepreneurs are about 30% of total projects set up under PMEGP. Under the scheme, women entrepreneurs are covered under Special Category and are entitled to 25% and 35% subsidies for the project set up in urban and rural areas respectively. For women beneficiaries, own contribution is only 5% of the project cost while for general category it is 10% during 2016-17 and 2017-18, under the Khadi Programme of KVIC, women entrepreneurs have set up 30437 projects for which margin money of 85,305 lakh Rupees have been disbursed.

Not only MSME, the Government of India has taken various steps towards women empowerment and safety. Initiatives like BetiBachao, BetiPadhao, Stand Up India, Mission Indradhanush, Mudra Yojana Scheme, TREAD (Trade Related Entrepreneurship Assistance and Development) Scheme, Mahila Udyam Nidhi Scheme, Annapurna Scheme, Stree Shakti Package for Women Entrepreneurs, Bhartiya Mahila Business Bank Loan, Dena Shakti Scheme, Udyogini Scheme, Cent Kalyani Scheme and many more have added to the welfare of the women population in India.

Sustainable Development of Economy through MSME

1) Sustainability in Employment

MSMEs play a vital role in the Indian economy, making significant contributions to social and economic development by creating substantial employment opportunities at relatively lower capital costs and nurturing entrepreneurial ecosystems in the country.

According to the Federation of Indian Chambers of Commerce & Industry (FICCI), as far as the Indian economy is concerned, the MSME sector makes up 45 percent of the total manufacturing output, 40 percent of the total exports, and 95 percent of the total industrial units. The sector also employs approximately 60 million people in rural areas, making it one of the largest sources of employment after agriculture.

2) Sustainability in GDP

MSMEs play such an important role in the Indian economy (MSMEs account for 30 percent of the gross domestic product), the development trajectory of this sector holds the key to achieving the Indian Government's sustainability targets. A majority of MSMEs and local 'green' enterprises have high rates of natural resource ownership because they depend on these resources for their livelihood and sustenance. As a result, they are more environmentally conscious and invested in preserving these resources. Therefore, MSME activities and operations can have a significant positive impact in tackling climate change, preserving terrestrial and water ecosystems, and implementing sustainable production and consumption practices.

3) Sustainability Through Make in India

Indeed, sustainability is a globally accepted development centre stage at both national and international levels. In order to boost MSME's government of India has made several commitments. With the new initiative undertaken by government of India "Make in India" (Zero defect and zero effect). All the sectors of the Indian economy need to make a collective effort for a better economy. In the current scenario, the manufacturing sector has a significant contribution to sustainable economic growth. MSMEs sector has the potential to create jobs opportunities to a huge number of peoples but adopting the sustainable business policies it goes along and contributes to the Indian economy. MSMEs plays an important role directly or indirectly to achieve sustainable goals through ITC support.

Final Synopsis

Number of MSME's in India: The number of MSME's in India is estimated to be at 42.50 million which comprises of registered and unregistered MSME's together accounting to a staggering 95% of total industrial units in the country

MSME and employment opportunity: Itemploys about 106 million out of which 40% is of India's workforce itself next only to the agricultural sector

Products of MSME's: It produces more than 6000 products

GDP Contribution: Currently it contributes around 6.11% of the manufacturing GDP and 24.63% of the service sector GDP

MSME output: 45% of the total Indian manufacturing output

MSME Exports: 40% of the total exports

Bank Lending Rate: MSME's account for almost 16% of bank lending

Fixed Assets: Current fixed assets is at INR1,47,1,912.94 Crore

Conclusion

The role of MSMEs in economic activity, its contribution and its sustainability development towards the Economy is very well explained in the above paper. MSMEs provide employment and ultimately self-dependency. MSMEs can be boon and a hope for Indian economy in near future. The MSMEs are providing uniform development to the society and can be a strong mean to utilize the natural resources of India. The MSMEs are very helpful to remove the regional imbalances if it is established in the underdeveloped areas. The MSMEs are providing more employment to the society and increasing the standard of living of the people and increasing the GDP of the nation and increasing the National Income. If this continues, the Nation will definitely attain its sustainable goals in future.

Abstract

Micro, Small, and Medium Enterprises (MSMEs) occupy a pivotal position in the landscape of entrepreneurship and economic advancement. Their role extends beyond mere economic significance; they are the lifeblood of innovation and economic dynamism. By providing a welcoming environment for budding entrepreneurs, they nurture the spirit of innovation and enterprise. MSMEs, with their agility and adaptability, drive economic growth, create jobs on a substantial scale, and act as a force for innovation in various industries. They exemplify resilience and community empowerment, often flourishing in local contexts, thus contributing to localized development. Moreover, they are instrumental in global trade, exporting specialized and artisanal products. In essence, the support and nurturing of MSMEs are paramount in the quest for sustainable economic development, emphasizing the imperative of empowering these enterprises to foster entrepreneurship and ensure a dynamic and enduring economic landscape.

Keywords: MSME, Entrepreneurship, Economic Development, Employment Generation.

Introduction

India's Micro, Small, and Medium-Sized Businesses (MSMEs) sector is a fundamental driver of the national economy, offering substantial employment, reducing poverty, and bolstering economic growth. The Indian government's initiatives aim to support its growth and development, making it a vital player in the global market through expanding exports. This sector fosters entrepreneurship, innovation, and long-term economic prosperity, underlining its critical role in India's overall development.^[4] Entrepreneurship, often regarded as the engine of economic development, is a dynamic force that propels innovation, fosters job creation, and sparks economic transformation. MSMEs, with their flexibility and agility, provide a nurturing ground for aspiring entrepreneurs. They offer a low-entry barrier, allowing individuals to transform ideas into businesses, experiment with innovation, and gain invaluable experience in managing a business. In doing so, MSMEs become an incubator for entrepreneurship development, fostering a culture of innovation and enterprise in society. The role of MSMEs transcends mere economic contributions; they

are also fundamental in ensuring equitable and sustainable economic growth. By empowering entrepreneurs, they create jobs, alleviate poverty, and drive economic stability, particularly in regions where large corporations might not have a substantial presence. Furthermore, their localization and community-focused approach promote inclusive development, ensuring that the benefits of economic progress are distributed more evenly, especially in rural and semi-urban areas. In this complex interplay between MSMEs and entrepreneurship, the potential for a dynamic and sustainable economic future unfolds.

Review of Literature

Zanjurne (2018)^[1] discovers that the growing recognition of the Micro, Small, and Medium Enterprises (MSME) sector worldwide for its pivotal role in achieving diverse socio-economic goals, such as fostering economic growth, generating employment, promoting entrepreneurship, and facilitating exports. In the context of India, the MSME sector is considered the backbone of the economy, significantly contributing to its growth and development. This sector is instrumental in driving faster and more inclusive economic growth in the country, aligning with the National Manufacturing Policy's goal of increasing manufacturing's GDP contribution to 25% by 2022. Patel and Shah (2021)^[2] shows that over the past five decades, the Micro, Small, and Medium Enterprises (MSME) sector has evolved into a dynamic and thriving component of the Indian economy. These enterprises are not only pivotal in offering significant employment prospects with relatively lower capital investments compared to larger industries but also contribute to the industrialization of rural and underserved regions, thereby mitigating regional disparities and ensuring a more equitable distribution of national income and wealth. The Start-up India program, spearheaded by the Indian government, represents a flagship initiative aimed at cultivating a robust ecosystem for fostering innovation and startups within the nation. This initiative holds the potential to drive sustainable economic growth and generate substantial employment opportunities. Patel and Tripathi (2022)^[3] reveals that the Micro, Small, and Medium Enterprises (MSMEs) are integral to India's economic growth, contributing significantly to industrial production, employment, GDP, regional development, exports, and economic diversification. The Indian economy while highlighting the challenges they face, including issues related to finance, marketing, technology, human resources, operations, and export potential. It underscores the need for strategic management, financial literacy, and talent retention.

Growth of MSME in India

The growth of Micro, Small, and Medium Enterprises (MSMEs) in India has been a remarkable journey, intricately woven into the country's economic fabric. Over the years,

these enterprises have evolved from modest beginnings into powerful engines of economic progress, making significant contributions to employment, innovation, and overall economic development. In the early days of India's independence, MSMEs emerged as vital instruments for generating employment, especially in rural and semi-urban areas where large-scale industries were scarce. Their ability to adapt quickly to changing market demands and their role in utilizing local resources made them catalysts for regional development. The introduction of policies and schemes by the Indian government further bolstered their growth, providing financial aid, technical support, and market linkages. The liberalization of the Indian economy in the 1990s opened new avenues for MSMEs. With reduced bureaucratic hurdles and enhanced access to global markets, these enterprises began to thrive. The technological revolution, particularly the internet boom, enabled many MSMEs to expand their reach beyond geographical boundaries, fostering innovation and competitiveness. Additionally, initiatives like 'Make in India' and 'Startup India' provided further impetus, encouraging entrepreneurship and innovation within the MSME sector.

In recent years, the digitization of business processes and the widespread use of e-commerce platforms have transformed the landscape for MSMEs. These enterprises have leveraged online platforms to reach a wider customer base, enabling them to showcase their products and services globally. Furthermore, the emphasis on sustainability and eco-friendly practices has led many MSMEs to innovate, creating a niche market for eco-conscious consumers. Despite the challenges, such as limited access to finance and global economic fluctuations, MSMEs in India continue to grow. They have become hubs of innovation, producing a diverse range of products and services, from traditional handicrafts to cutting-edge technology solutions. The government's continuous support through policies, funding, and skill development programs ensures that the growth trajectory of MSMEs remains upward. In essence, the growth of MSMEs in India mirrors the nation's resilience, adaptability, and entrepreneurial spirit. These enterprises, through their ingenuity and determination, not only contribute significantly to the Indian economy but also serve as beacons of inspiration for aspiring entrepreneurs, showcasing the limitless possibilities within the MSME sector.

Government Policies and Initiatives related to MSME Entrepreneurship

Government policies related to entrepreneurship in Micro, Small, and Medium Enterprises (MSMEs) play a vital role in fostering growth, innovation, and sustainability in this sector.

- ❖ **MUDRA Yojana:** The Pradhan Mantri Mudra Yojana is a government initiative that offers financial support to small businesses in the form of loans. This scheme provides loans at different stages of business development, encouraging entrepreneurship among the economically weaker sections of society.

- ❖ **Credit-Linked Capital Subsidy Scheme (CLCSS):** This scheme provides a subsidy for technology up-gradation in MSMEs. By offering financial incentives, it encourages businesses to adopt modern technology and enhance their competitiveness.
- ❖ **Goods and Services Tax (GST) Composition Scheme:** A simpler tax scheme for small businesses with an annual turnover below a specified threshold. This policy reduces the compliance burden on MSMEs.
- ❖ **Skill India Initiative:** This program aims to enhance the employability of the youth and empower them with relevant skills, making them job creators instead of job seekers. It includes schemes such as Pradhan Mantri Kaushal Vikas Yojana (PMKVY).
- ❖ **Digital MSME Scheme:** Part of the broader Digital India initiative, this scheme encourages MSMEs to adopt digital technologies and e-commerce. It provides support for the implementation of Enterprise Resource Planning (ERP) systems, website development, and digital marketing.
- ❖ **Zero Defect, Zero Effect (ZED) Certification Scheme:** This scheme encourages quality manufacturing and the adoption of best practices in MSMEs to enhance product quality. It supports MSMEs in achieving international standards and accessing global markets.
- ❖ **Export Promotion Capital Goods (EPCG) Scheme:** The EPCG scheme allows MSMEs to import capital goods at concessional or zero customs duty rates to improve their export capabilities.
- ❖ **Single Window Clearance:** Several states in India have introduced the concept of a single window clearance system for MSMEs. This system simplifies the regulatory processes, approvals, and clearances required to start and operate a business.
- ❖ **Startup India Initiative:** Launched to promote a culture of entrepreneurship and innovation, this initiative provides benefits such as tax exemptions, funding, and a simplified regulatory framework for startups, many of which fall under the MSME category.
- ❖ **Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE):** This scheme provides credit guarantee cover for loans extended to small and micro-enterprises. It encourages financial institutions to extend credit to these enterprises, reducing the risk for lenders.
- ❖ **Technology Upgradation and Quality Certification (TEQUP):** This scheme supports MSMEs in implementing modern technology and acquiring quality certifications.
- ❖ **National Manufacturing Competitiveness Programme (NMCP):** This program aims to enhance the competitiveness of manufacturing enterprises, including MSMEs, by providing support for the creation of industrial clusters.

The Role of MSMEs in Entrepreneurship Development

Micro, Small, and Medium Enterprises (MSMEs) are the often-overlooked heroes of entrepreneurship development, leaving an indelible mark on multifaceted dimensions of economic progress. In their unassuming scale, these enterprises play a pivotal role in nurturing entrepreneurship through several foundational avenues. First and foremost, MSMEs emerge as formidable employment generators, casting a wide net of job opportunities and infusing society with the spirit of entrepreneurship. These businesses, agile and innovative, are quick to pivot in response to evolving market dynamics, introducing novel products and kindling the fires of entrepreneurial creativity. Their collective economic impact is substantial, constituting a critical cornerstone of a nation's overall economic growth and prosperity.

Beyond economics, MSMEs exhibit a geographical conscience, often choosing to root themselves in rural and semi-urban landscapes. This deliberate decentralization not only alleviates urban congestion but also sparks economic vitality in areas historically underserved by development. MSMEs, perhaps most significantly, orchestrate a symphony within the entrepreneurial ecosystem. They act as catalysts, spawning opportunities for interconnected businesses throughout the supply chain. In doing so, they fortify the broader entrepreneurial landscape, nourishing an environment ripe for innovation, competition, and economic advancement. In essence, the influence of MSMEs resonates deeply, reverberating through the corridors of entrepreneurship and casting a wide net of economic, social, and creative possibilities.

Conclusion

The significance of Micro, Small, and Medium Enterprises (MSMEs) in nurturing entrepreneurship development is paramount. These businesses form the foundation of entrepreneurship, propelling job generation, fostering innovation, spurring economic growth, and facilitating regional development. As engines of transformation and ingenuity, MSMEs play a central role in shaping a nation's entrepreneurial ecosystem. Thus, supporting and cultivating MSMEs is not just crucial for entrepreneurship development but also essential for ensuring enduring economic growth and prosperity. Recognizing the importance of MSMEs can pave the path to a more vibrant, innovative, and entrepreneurial economy.

Abstract

The purpose of the current article is to improve Indian MSMEs' export competitiveness. In the article, an effort has been made to examine the export performance elements and the numerous difficulties and limitations related to the sector in order to overcome them for a superior export performance and make MSMEs export competitive, hence reducing the trade deficit of the Indian economy. It has been addressed how the government, business sector, and international arenas may all actively contribute to the expansion of MSME exports. The sector has the potential to enhance India's participation in the global small sector exports, which are now dominated by developing nations like China, Korea, Taiwan, etc. since it is one of the main performers in both Indian exports and the country's total economy. In terms of its contribution to industrial output, exports, employment, and the development of the consumer base, the Micro, Small, and Medium Sized Enterprise (MSME) sector is a significant component of the Indian economy (Nanjudappa, D.M. 2002). Indian MSMEs serve as an example of how government socioeconomic policies should be implemented. These policies should emphasise job creation at all income levels, the distribution of economic power among many people, the prevention of monopolistic production and marketing practises, and the promotion of economic growth and foreign exchange earnings through low import intensive business activities. Given that it accounts for 80% of all industrial firms and 34% of all exports from India, the MSME sector is important to the country's economy. The industry has fared better than other industries employing large firms in the recent slump. It is true to say that the MSME sector is the engine driving the Indian economy, and it will remain that way as long as government policies are favourable to the sector's expansion and improvement. The MSME sector is a significant contributor to India's exports and may help the nation's export growth by raising the bar for MSME goods and attracting more foreign clients.

Keyword: MSMEs, export competitiveness, growth, challenges, sustainability, etc

Introduction

In terms of its contribution to industrial output, exports, employment, and the development of the consumer base, the Micro, Small, and Medium Sized Enterprise (MSME) sector is a significant component of the Indian economy (Nanjudappa, D.M. 2002). Indian MSMEs serve as an example of how government socioeconomic policies should be implemented. These policies should emphasise job creation at all income levels, the distribution of economic power among many people, the prevention of monopolistic production and marketing practises, and the promotion of economic growth and foreign exchange earnings through low import intensive business activities. Due to their high contribution to domestic production, significant export earnings, low investment requirements, operational flexibility, location aware mobility, low intensity imports, capacity to develop appropriate indigenous technology, ability to replace imports, contribution to defence production, technology oriented industries, competitiveness in domestic and export markets, and ability to create new businesses, Indian MSMEs also play a significant role in the development of the country. The financial institutions' expertise and support enable small and medium sized businesses to compete on both the domestic and global markets. Small and medium sized businesses (SMEs) are essential to the expansion of the Indian economy since they generate more than 8000 high quality goods for both domestic and foreign markets, account for 45% of industrial production and 40% of exports, and support 1.3 million employment annually. SME GDP contribution in 2012 was over 22%, and it is anticipated to rise in 2013. In India, there are over 30 million MSME Units, and 12 million new workers are anticipated over the next three years. More opportunities than ever before exist for SMEs to expand and diversify across industries. The industry is seen as one of the biggest drivers of growth and the future strategic push. Numerous untapped business prospects in the sector have been made possible by changes in the legislative environment, investments in the industry, globalisation, and India's success story. There has been a significant shift in the industry, which has progressed from the manufacture of basic consumer items to the manufacturing of complex and precise goods, as a result of numerous important measures by the Indian government for the sector's competitiveness, quality upgrading, financing, and technology. MSME in India are established in nearly all of the major industrial sectors, including food processing, agricultural inputs, chemicals and pharmaceuticals, engineering, including electronics and electrical and electro medical equipment, textiles and garments, leather and leather goods, meat products, bio engineering, sports goods, plastic products, computer software, etc. MSME are regarded as important participants in the supply chain. In India, there are approximately 400 SME clusters and over 2000 artisan clusters, which have fostered the growth of inter firm collaboration to support regional production, innovation, and group learning. These clusters are thought to provide 60% of India's manufacturing exports. The

industry has recognised the need for supportive government policies, enhanced loan flow, and technology, modernization efforts.

MSME and their Role

Growth Prospects: The open door policy of the nation's globalisation has increased competition for MSMEs both domestically and abroad, making it crucial for Indian MSMEs to overcome the difficulties and improve themselves in order to sustain and compete globally through lower costs, improved quality, adoption of various innovative practises, and technology advancement.

Finance: One of the essential components for the growth and development of micro and small businesses is finance. Due to the fact that the majority of the country's exporters lack the skills necessary to properly prepare and submit a loan application, MSMEs in India now only manage 4 million accounts. They seldom ever have collateral that banks will accept as security for a loan.

Government Support: Exporters from nations like China outperform Indian exporters in global trade competitions because to superior state run programmes like subsidies, infrastructure improvements, export sales leads and market aid in foreign markets, duty drawback programmes, etc. The government need to work to make these alluring incentives available to the MSME exporters in India.

Technology: One of the most crucial elements in the survival of MSMEs is technology. Businesses that heavily rely on technology are significantly more equipped to compete both domestically and abroad and to satisfy business demands. It is well acknowledged that information and communication technologies (ICT) have the potential to increase productivity.

Infrastructure: According to the survey report, one of the main causes of Indian MSMEs' low market share abroad is that India's current infrastructure is insufficient when compared to other exporting MSMEs producing countries. Building export clusters close to sea ports is a crucial component that may substantially aid in boosting sustainability and competitiveness; China is a prime example. The cost of the goods can be reduced by reducing the transportation expenditures needed to get the shipment to the ports.

Sustainability: Sustainability is the need of the hour. The government should promote the adoption of climate friendly green technologies by the MSMEs which is highly acclaimed in the advanced markets. Reducing the carbon emissions by the adoption of green technology as a mark of sustainability can serve as a promotional technique as most of the emerging countries like China are centers of carbon emissions. Responsibility towards environment and self reliance on energy must be met by the MSME sector.

Human Resource/ Training and Development: The government needs to provide sufficient attention to a number of highly crucial issues, including the industry's scarcity of

trained workers. For each cluster, specialised training institutions and centres should be established under the direction of the centre. The institutions will regularly create trained labour that has access to the newest technology in the industry. One of the main reasons for the skilled labour shortage in the MSME sector is a lack of suitable compensation and motivating elements for the trained workers.

Problems & Constraints in Indian MSMEs

Micro, Small, and Medium Enterprises (MSMEs) play a crucial role in the Indian economy, contributing significantly to GDP, employment generation, and industrial production. However, they also face several problems and constraints that hinder their growth and development. Here are some of the key issues faced by Indian MSMEs:

1. **Access to Finance:** Lack of adequate access to finance is a major challenge for MSMEs. Many of them struggle to secure loans from formal financial institutions due to limited collateral and credit history. High interest rates charged by traditional lenders further exacerbate this problem.
2. **Collateral Requirements:** MSMEs often lack the required collateral to obtain loans, making it difficult for them to access credit. This limits their ability to invest in technology, expand operations, or meet working capital needs.
3. **Regulatory Compliance:** MSMEs in India are burdened with various regulatory compliances, such as obtaining licenses, adhering to labor laws, and complying with environmental regulations. These can be time consuming and costly.
4. **Infrastructure and Technology Gap:** Many MSMEs struggle with outdated technology and inadequate infrastructure, limiting their competitiveness and productivity.
5. **Market Access and Competition:** MSMEs often face challenges in reaching larger markets and competing with established players. Lack of marketing skills and resources can be a hindrance.
6. **Skilled Labor Shortage:** Finding skilled labor can be difficult for MSMEs, particularly in specialized industries. This impacts their ability to scale and innovate.
7. **Delayed Payments:** Delayed payments from customers, especially from large corporations and government agencies, can strain the cash flow of MSMEs.
8. **Digital Divide:** Many MSMEs, particularly in rural areas, struggle to adopt digital technologies and e commerce, limiting their ability to participate in the digital economy.
9. **Supply Chain Disruptions:** Disruptions in supply chains, such as during the COVID 19 pandemic, can severely affect MSMEs that rely on just in time inventory and have limited resources to adapt.

10. Access to Markets and Export Challenges: Expanding into international markets can be challenging for MSMEs due to export related regulations, logistics, and global competition.

Addressing these problems and constraints is crucial for the sustained growth and development of MSMEs in India. Government initiatives, financial reforms, improved access to technology and skills development, and streamlined regulatory processes can all contribute to overcoming these challenges and promoting the growth of the MSME sector.

Players and Roles

Micro, Small, and Medium Enterprises (MSMEs) in India are vital components of the country's economy, contributing significantly to employment generation, industrial production, and overall economic growth. Various players and entities play specific roles in the MSME sector in India:

- ❖ **Entrepreneurs and Business Owners:** Entrepreneurs and business owners are at the core of the MSME sector. They establish and manage small and medium-sized enterprises across various industries.
- ❖ **Employees and Skilled Workforce:** MSMEs are significant employers in India, providing jobs to millions of people, including skilled and unskilled laborers.
- ❖ **Government Agencies:** The Indian government, at both the central and state levels, plays a crucial role in supporting MSMEs through various policies, initiatives, and schemes. The Ministry of Micro, Small and Medium Enterprises (MSME Ministry) is a key government body overseeing this sector.
- ❖ **Banks and Financial Institutions:** Banks and financial institutions provide crucial financial support to MSMEs through loans, credit lines, and working capital assistance. They play a pivotal role in the growth and sustenance of these enterprises.
- ❖ **Non-Banking Financial Companies (NBFCs):** NBFCs often cater to the credit needs of MSMEs, offering alternative financing solutions, including invoice discounting, supply chain finance, and more.
- ❖ **Venture Capitalists and Angel Investors:** Some MSMEs seek funding from venture capitalists and angel investors who provide equity capital in exchange for ownership stakes in the businesses.
- ❖ **Industry Associations and Chambers of Commerce:** Industry-specific associations and chambers of commerce represent the interests of MSMEs in various sectors. They advocate for policy changes, offer networking opportunities, and provide information and resources to their members.
- ❖ **Technology Incubators and Accelerators:** These organizations support MSMEs in technology-driven sectors by providing mentoring, access to infrastructure, and funding to help them scale and innovate.

- ❖ **Export Promotion Councils:**Export-oriented MSMEs can benefit from export promotion councils that assist in identifying international markets, complying with export regulations, and participating in trade fairs and exhibitions.
- ❖ **Educational and Training Institutions:**Educational institutions, vocational training centers, and skill development programs provide training and education to individuals looking to acquire skills relevant to MSME industries.

Micro, Small, and Medium Enterprises (MSMEs) in India form the backbone of the country's export sector, making a substantial contribution to its economic growth. These enterprises operate across diverse industries, exporting an array of goods and services to international markets. Their cumulative efforts play a pivotal role in driving India's export growth and fostering economic resilience.

One of the notable aspects of MSMEs in India is their versatility. They engage in manufacturing, services, and agri-processing, allowing for a wide range of exportable products and services, including textiles, engineering goods, IT services, and handicrafts. This diversity not only boosts export earnings but also showcases India's multifaceted capabilities on the global stage.

Furthermore, MSMEs in India are significant job creators, especially in labor-intensive sectors like textiles and handicrafts. They provide employment opportunities to millions of individuals, addressing both urban and rural unemployment concerns. This employment generation enhances social inclusion and supports India's demographic dividend.

The government plays a crucial role in supporting and promoting MSME exports. It offers various incentives, financial support, and trade facilitation measures to bolster their competitiveness in international markets. Export promotion councils and industry associations provide valuable guidance, market intelligence, and networking opportunities to assist MSMEs in expanding their global reach. Additionally, the rise of e-commerce has opened new avenues for MSMEs to tap into global markets, further boosting their export potential. In summary, MSMEs in India serve as pivotal players in the country's export sector. Their versatility, job creation potential, government support, and adaptability to evolving market trends make them indispensable contributors to India's economic growth through exports.

Abstract:

Sustainable Finance contributes to superior development and preferred Finance for Economic growth. Sustainable development is defend and restoring the ecosystem. SIDBI, NITI Aayog, and World Bank facilitate Sustainable Finance to encourage businesses to grow from Small Medium Concern to large Industries to make an huge global impact. As per the World Bank Appraise, negatively affect the standard of living of the population and climate change will reduce India's GDP by nearly 3%. For tracking the climate defense performance of the country. The Key sustainable finance providers to companies and MSME's are Banks, Corporations, International Financial Institutions, Institutional Investors, International organizations through Financial Instruments Climate Bonds, Impact Finance, Social bonds, Microcredit, SIDBI Sustainable Finance Scheme for funding, NABARD (National Bank for Agriculture and Rural Development) , and Make in India. MSMEs, and SMEs involved in the Projects Solar Power Plants, solar energy, Green Machinery, Waste Management, Electric Machine (EM), Green Energy, Recycle, Poverty reduction, and Energy Transformation, and India is committed to achieving Carbon Neutral radiation by 2070. During the Climate summit in Green Place, India accepted for Five -Point climate 'chanamrit, or commit' towards Global Warming and Transnational Financing. As per the Environment ministry India needs \$280 billion for Ecological infrastructure and the government of India planned the founding of a Social Stock market, EIB with SBI. RBI has considered Green and Sustainable projects should be put under Priority Sector Lending (PSL) to support SD (Sustainable Development) growth and to meet the QEG (Quality Education Goals) and ESG (Economic, Social, Environment) guidelines for overtime.

Keywords: (Green Bonds, Climate Finance)

Introduction

Sustainable Finance is one fiscal instrument to fight climate change and its impacts by regulating emigrations and promoting developments in renewable energy and Sustainable development towards ESG- Environmental, Social and Governance. Sustainable development is a combined trouble towards erecting an inclusive, sustainable and flexible future for people and the earth has three core rudiments(i) profitable Growth,(ii) Social addition and(iii) Environment protection. Socially responsible Investment has formerly surfaced in the late 1960s and 1970s in the US and Europe1980s(Boxenbaum & Gound, 2006)(1). The conception of the Evergreen Revolution in India was mooted by the Father of

the Green revolution M.S. Swaminathan and United Nations Environment Programme (UNEP) has played a commanding part in shaping and promoting the green frugality for reducing environmental pitfalls. The backing in the area of reduction in carbon emissions, pollution, enhance energy and resource effectiveness in the area of clean technologies, renewable powers, water services, green transportation, waste operation, green structure and sustainable husbandry. Indian frugality is one of the fastest growing and arising request husbandry in the world. As per the Global Climate Risk Index 2021, India stands seventh amongst the most vulnerable countries prone to climate change impact and has incurred losses of USD 69 billion in 2019. Agriculture-related land use reckoned for 17 of global GHG emissions and 16 of India's GHG emissions from all sectors. India action for generating solar energy through International Solar Alliance (ISA) at the Paris climate change peak and with Green Grid Initiative (GGI) led by the UK called One Sun, One World, One Grid (OSOWOG), will draw further investment openings for Funding Agency in solar power product. New delineations of MSMEs and Companies grounded on Development and Investment Micro-Enterprises Companies with an investment of lower than Rs. 1 crore and development lower than Rs. 5 crores small Enterprises Companies with an investment of lower than Rs. 10 crore and development of Rs. 50 crore medium Enterprises Companies with an investment of lower than Rs. 50 crore and development lower than Rs. 250 crore.

Review of Literature:

Nickolay Gantchev, Mariassunta Giannetti, and Rachel Li investigate whether investor behaviour might influence company behaviour. Corporate Divestitures and Environmental and Social Policies." They investigate whether exit governance can improve enterprises' environmental and social (E&S) strategies. The authors discover that bad E&S incidents are followed by divestitures, but the magnitudes are minimal. The authors speculate that the fear of future leaving may be more strong than actual exit in the event of an E&S disaster. According to this hypothesis, after an E&S incident, firms reduce their greenhouse gas emissions and greatly increase their E&S ratings if they have a high share of E&S-conscious investors and the CEO receives equity remuneration plus is worried.

Much of the financial costs associated with climate finance relates to transition risk ensuing from uncertain technological, political, and policy environment. However, financial losses may result from physical damages caused by climate-related occurrences. The extent to which such physical risk is reflected in asset prices is a topic of "Climate Change Risk and the Cost of Mortgage Credit" by Duc Nguyen, Steven Ongena, Shusen Qi, and Vathunyoo Sila. The authors study the question in the context of mortgage markets. This scenario differs from other studies that directly focus on climate-affected asset valuations, such as real estate or insurance firms.

Using data from 1,581,600 first-lien 30-year mortgages originated in the United States by BlackKnight McDash between January 1992 and June 2018, the authors show that financing costs for houses exposed to more sea level rise have higher interest rate spreads, which are 10.2 basis points higher for mortgages in a zip code where all properties are exposed to SLRrelative to a zip with no sea level rise. The fascinating aspect of this discovery is that, while some of the risks may still be far in the future financial, markets have already priced them in via credit contracts.

While much of the research on sustainable investors focuses on institutions, Anders Anderson and David Robinson investigate home investors in their book "Financial Literacy in the Age of Green Investment." They polled a large sample of Swedish households on their environmental preferences, such as the relative importance of environmental vs financial aims, and discovered that green households, surprise, do not own green portfolios. Financial disengagement is one explanation. Green households are often uninterested in investing, with less stocks owned, pension balances checked, and active pension choices made (rather than depending on the default allocation). The second type of constraint is informational, which prevents households from identifying assets that meet their tastes. They may purchase mutual funds with pro-environmental titles even if they are not ESG-compliant, for example.their preferences in actions.

India's Sustainable Finance Progress:

Role of SIDBI in sustainable development SIDBI has introduced sustainable finance schemes growth and development of MSME. Manufacturing exertion and service exertion of micro small medium enterprises contribute6.11 and24.63 per cent to the GDP of the country and also it contributes33.4 of Indian manufacturing affair that helps for the profitable growth of the country. SIDBI provides finance to MEMEs through two major approaches- It it introduced sustainable finance to MSMEs to attain sustainable green systems. The main intention of furnishing finance for the green revolution is to encourage low carbon, use renewable coffers efficiently and also enhance the profitability of MSMEs.

Role of NABARD in sustainable development:

NABARD also made easy availability of climate finance for sustainable development and it also provides numerous e adaption fund green climate finances and also promoting advanced technology for husbandry increase in green technology for colorful development systems. One of the schemes introduced by NABARD is APL I the product Linked

incitement to promote organic husbandry effective use of renewable coffers proper operation of waste produce employment openings.

RBI and NITI Aayog :

RBI has made emendations on Priority sector lending and sustainable development in 2012 and 2015 casing, social structure and renewable energy by considering terrain pitfalls in assessing agrarian price development. NITI Aayog launched design Shoonya – an action to pace of relinquishment of electric vehicles(EVs) in the civic deliveries member. EV can lead to the reduction of oil painting demand, reduction in CO2 and reduction in GHG emigrations.

Share of installed generation capacity of different types of energy :

There are several types of fields with its share of generation capacity they're nuclear with1.7% with share, diesel with0.1% share, gas with6.4% share, lignite with1.7% share, hydro with 12% share, wind, solar and other shaft with26.4% share. 60% of the share of generation capacity from reactionary energy find 40% off of share of generation capacity fromnon-fossil energy (profitable time-28 November 2021)

Advantage:

- 1) The global cooperation between developing and developed countries and profitable governance to encourage mitigation and adaptation to climate change.
- 2) The multiple association like International Finance Institution, Banker, Government has further impact in achieving sustainable pretensions.
- 3) RBI has initiated the Regulator frame for ESG exposure and incorporated environmental impact into marketable lending.

Disadvantage:

- 1) Companies or financial institutions may exaggerate their commitment to sustainability, misleading investors and the public.
- 2) An excessive emphasis on immediate financial returns can divert attention from long-term environmental and social goals.
- 3) Sustainable finance can be intricate, making it challenging for investors to discern genuine sustainable investments from conventional ones.
- 4) In some regions, there may be inadequate regulations or standards, leading to inconsistency and potential loopholes in sustainable finance practices.

Benefits:

- 1) Sustainable finance directs capital towards environmentally friendly projects and companies, aiding in the preservation of ecosystems and natural resources.

- 2) It encourages businesses to consider their impact on society, fostering corporate social responsibility and ethical practices.
- 3) Investing in sustainability can lead to more stable, long-term returns by mitigating risks associated with climate change and societal challenges.
- 4) Sustainable finance drives innovation by supporting green technologies and solutions, spurring economic growth in these sectors.

Constraints:

- 1) The availability of genuinely sustainable investments can be limited, which may restrict diversification options for investors.
- 2) Companies focused on sustainability may face short-term financial pressures when transitioning to more eco-friendly practices, potentially impacting profitability.
- 3) Misleading claims about sustainability practices can make it difficult for investors to identify authentic sustainable investments.
- 4) Measuring the impact of sustainability can be complex, leading to challenges in evaluating the true environmental and social effects of investments.

Conclusion:

The impact on sustainable finance is a complex and evolving field with both advantages and disadvantages. Sustainable finance offers numerous benefits, including environmental preservation, social responsibility, long-term stability, and innovation. It encourages companies to prioritize ethical practices and aligns with global goals for a more sustainable future such as limited investment opportunities, the risk of greenwashing, complex metrics, and short-term financial pressures. Regulatory uncertainties and the costs of transitioning to sustainability can also pose challenges.

Despite these constraints, the momentum toward sustainable finance continues to grow, driven by increasing awareness of environmental and social issues. As the industry matures, addressing these constraints and fostering transparency and accountability will be essential to harness the full potential of sustainable finance and its positive impact on the planet and society.

SUSTAINABLE AGRICULTURE AND FOOD PROCESSING

Dr. M. Jeeva

Associate Professor and Head, B.Com – Banking and Insurance

Nallamuthu Gounder Mahalingam College, Pollachi

mjeevaacademic@gmail.com

Introduction

Sustainable agriculture can be defined as producing food and livestock over the long term with minimal negative effects on the environment. It is undertaken by a society with the goal of producing the greatest quantity of food over the longest time in order to feed a growing human population while keeping the environment intact. Sustainable agriculture follows other sustainability practices where the long-term health of ecosystems and society are taken into consideration. The ideal in sustainable agriculture is to conserve water, lessen pesticide and fertilizer use, promote biodiversity in crops and livestock, and prevent soil erosion.

Historically, produce was grown and livestock was raised with very little concern for how farming practices affected the surrounding ecosystems. During the Green Revolution of the 1960s, increased pesticide and fertilizer use allowed farmers to produce larger crop yields on the same amount of land. This in turn leads to soil erosion, water pollution, and loss of crop diversity. As these new agrochemicals entered the environment, negative impacts were also noticed. This leads to environmentalists, consumers, and farmers shifting practices towards more sustainable practices.

Sustainable agriculture is something that is on the rise, with the climatic changes and environmental pollution hitting the roof it's about time farmers engaged in sustainable farming. Sustainable agriculture is nothing but farming that requires no chemicals, conserves energy and resources, goes easy on the environment, and works well with the locally available resources.

For an agriculture to be truly sustainable, farmers should consider some important factors like a. Environment – farmers should engage in farming practices that promotes sensible resource management of local resources, promising no harm to the ecosystem and enhance biodiversity, b. Profitability – it should also be profitable for the farmers, only then it will be sustainable, and c. Providing for people – the quality of food given to people has to be nutrient rich.

1. Mulching

Mulching is the process of covering the ground with some cover to avoid soil eroding and maintain soil temperature and moisture. Growth of weed can be reduced dramatically

by mulching. Sometimes even the most stubborn weed can be eliminated by mulching. This helps in increasing the soil quality. The user can use organic items like wood chips and straw for mulching; they also help in retaining the nutrients of the soil and facilitate microorganism growth that conduces the crop growth.

2. Crop Rotation

Crop rotation is nothing but growing different crops on the same field in different seasons. This is truly effective in retaining the fertility of the soil. Farmers can highly benefit from the crop rotation as this also reduces the need of using pesticides. Crop rotation helps in degeneration of destructive pests as growing different crops can help destruct the development cycle of pests and therefore reduce the usage of pesticides.

3. Diversified Farming

Diversified farming fosters farmers to help maintain the efficiency by encouraging growing varied species in one land by considering the area as one. This will promote the health of all organisms in the soil and achieve more soil fertility. By diversified farming we mean growing animals in a land that helps enhance the growth of plants too. This will also reduce bringing artificial soil fertilisers.

4. Agro Forestry

Agroforestry is nothing but growing trees on grazing lands and in between trees. This will help retain soil moisture and soil fertility. Also, soil temperature is maintained and reduces soil erosion during rains and wind. In the end, the soil quality is maintained and nutrients are retained. Fruits and vegetables from agroforestry are much more nutrient rich. This is said to increase profits for the farmers and also environmentally sustainable.

5. No-Till Farming

No-till farming is a method of farming without disturbing the soil tillage. This increases water infiltration, retain the nutrients of the soil and maintain the organic nature of the soil. Many agricultural lands have seen a reduction in soil erosion and increase the life of microorganisms on the soil that facilitates agriculture. No-till farming has to increase resilience of the soil.

6. Contour Farming

Contour farming majorly helps in soil erosion and increases water absorption and crop production. In contour farming the ruts are made perpendicular. This increases retention of soil nutrients and support environmental sustainability.

7. Organic Animal Raising

Making animal graze in open lands can be highly beneficial for the soil as well the animals. Confining animals to a particular area can be a lot less healthy for the animals. This will eventually result in the increase of quality of products we get from them. Soil also gets healthier from the manure from animals.

Sustainable Agriculture Practices

Through decades of science and practice, the following farming practices have proven effective in achieving sustainability, especially when used in combination:

Rotating Crops and Embracing Diversity

Planting a variety of crops can have many benefits, including healthier soil and improved pest control. Crop diversity practices include intercropping (growing a mix of crops in the same area) and complex multiyear crop rotations.

Planting Cover Crops and Perennials

Cover crops such as clover, rye, or hairy vetch are planted during off-season times when soils might otherwise be left bare, while perennial crops keep soil covered and maintain living roots in the ground year-round. These crops protect and build soil health by preventing erosion, replenishing soil nutrients, and keeping weeds in check, reducing the need for fertilizers and herbicides.

Reducing or Eliminating Tillage

Traditional plowing (tillage) prepares fields for planting and prevents weed problems but can cause soil loss. No-till or reduced-till methods, which involve inserting seeds directly into undisturbed soil, can reduce erosion and improve soil health.

Applying Integrated Pest Management (IPM)

A range of methods, including mechanical and biological controls, can be applied systematically to keep pest populations under control while minimizing use of chemical pesticides.

Integrating Livestock and Crops

Industrial agriculture tends to keep plant and animal production separate, with animals living far from the areas where their feed is produced, and crops growing far away from abundant manure fertilizers. A growing body of evidence shows that a smart integration of crop and animal production can make farms more efficient and profitable.

Adopting Agroforestry Practices

By mixing trees or shrubs into their operations, farmers can provide shade and shelter that protect plants, animals, and water resources, while also potentially offering additional income from fruit or nut crops.

Managing Whole Systems and Landscapes

Sustainable farms treat uncultivated or less intensively cultivated areas as integral to the farm. For example, natural vegetation alongside streams, or strips of prairie plants within or around crop fields, can help control erosion, reduce nutrient runoff, and support bees and other pollinators and biodiversity in general.

Sustainable Food Production

Sustainable food production is “a method of production using processes and systems that are non-polluting, conserve non-renewable energy and natural resources, are economically efficient, are safe for workers, communities and consumers, and do not compromise the needs of future generations”.

As the world becomes more conscious of the perils of climate change, eco-friendly practices have emerged as important qualifiers in the minds of both consumers and retailers in terms of who they do business with. The food industry as a whole is looking for ways to operate in a more sustainable fashion and food processors have an opportunity to make a difference while striving for a healthier planet.

Here are a few ways that food processing can become more sustainable.

1. Efficient Water Use and Conservation Practices

Food processors account for 23 percent of the industry’s total energy use and a lot of that is due to the water-intensive nature of the processes. Water is used both as an ingredient and a tool in the process and is often used inefficiently. Implementing water conservation measures like smart meters and sustainable water management systems can help identify and act on these opportunities. These efforts can even extend all the way back to the food production segment. Roughly 39 percent of fresh water used annually in the United States is for crop irrigation. Much of it is necessary to the cultivation of these crops but switching to drip irrigation systems and utilizing wastewater re-use mechanisms are ways to conserve water in the process and operate more efficiently.

2. Reusable and Eco-friendly Packaging

Packaging waste reduction is a crucial element to the waste reduction efforts of grocery stores and other food retailers, but it can also extend to the processors that get these products onto the shelves of those retailers in the first place. Only 14 percent of the 78 million tons of food packaging waste are recycled annually. Eliminating plastic is the name of the game when it comes to recycling food packaging. We cannot recycle plastic, meaning its only purpose after the packaging is ripped off is taking up space in a landfill.

Wood and paper packaging are better ways to go, and when needed, aluminum is the best and most environmentally responsible metal packaging to use. There are also packaging options available that are made from biodegradable materials. Changing the way food is packaged and what it is packaged makes a sizable impact on the overall waste output of food processing and will make the entire operation more sustainable.

3. Reducing Food Related Waste

Examining the way processing facility operates often leads to ways to improve it from a sustainability standpoint. Calculate how much food-related waste facility generates and determine how much of that can be reduced. Have regular maintenance checks on the equipment to ensure the process is maximizing the amount of usable food products produced.

Where are all of the fats, oils and greases going? By partnering with a reputable collection service, that used cooking oil and grease material can be repurposed into ingredients used the production of renewable diesel, a cleaner-burning alternative to petroleum fuel that reduces carbon emissions by up to 85 percent per gallon. The same goes for inedible meat byproduct. It also can be recycled and repurposed into materials used in producing renewable diesel and various household products. It's not uncommon in larger industrial processing facilities to be losing grease down the drain without knowing it. A reputable provider can help to identify where we are potentially losing grease waste in areas may not even be aware of.

Recycling the byproducts of operations is beneficial in a variety of ways. What we consider waste has value and can turn into an additional revenue stream in the form of rebates. It's also contributing toward producing fuel that could potentially power the trucks that deliver food to the retailers that buy from farmer. By

recycling, we can reduce carbon emissions both in the facility's operations and with the trucks that carry the product to its ultimate destination.

4. Avoid Additives and other Harmful Chemicals

The use of pesticides, fertilizers and antibiotics is commonplace in producing the food that the facility processes. When possible, try to buy from organic producers that shy away from using these chemicals that cause damage to the environment. Organically grown produce and grass-fed meats are a great place to start. Plant-based meat may also be an option worth exploring as the alternatives to meat-based products become more abundant and diverse. The plant can be more sustainable by looking at the product we produce and how it can be made in a healthier and more sustainable manner.

These are just a few of the ways we processing facility can look to identify ways in which it can be more sustainable. Implementing these simple tips to help do the facility work toward a healthier planet and a more sustainable future.

Conclusion

Sustainable agriculture is the way to maintain a parity between the increasing pressure of food demand and food production in the future. As population growth, change in income demographics, and food preference changes, there are changes in the demand of food of the future population. To be sustainable, the food system needs to: (1) maintain healthy rural ecosystems and fertile agricultural soils, and (2) limit its dependence on economic fluctuations and external politics.

Abstract

MSME's acts as the base for Development of a Country and in generating employment opportunities. MSMEs constitutes to 90 % of enterprises in most of the economies and account for massive generation of employment opportunities in most of the economies and MSMEs has enormous opportunities with the Mobile Commerce. The design of the business is being transformed in this modern era , there has been still some challenges in transforming the MSMEs to the digital era with M Commerce. In this abstract we explore the realm of Mobile commerce (M commerce) and the exciting prospects it offers to Micro, Small and Medium Enterprises (MSMEs). We shed light on how mobile technology has the power to revolutionize MSMEs by allowing them to expand their market reach streamline their operations and flourish in the era.

Keywords: MSMEs , Mobile Commerce , Opportunities, Challenges ,literature, models

Introduction

MSME(Micro, Small, Medium Enterprises) are the driving force for the growth of countries economy where MSMEs contribute significant role in Indian economy ,the contribution towards the GDP is 29.2⁽⁶⁾ percentage by 2021 Mobile commerce also known M-commerce, is the new transformative force that has entered the business landscape. Today smartphones have become ubiquitous and it has changed the way we conduct business. As key contributors to global economies, standing in the threshold of the field of new opportunities presented by M-commerce are the Micro, Small and Medium Enterprises (MSMEs). This paper shows the interesting intersection of M-commerce and MSMEs, it also explores the benefits, challenges, and strategies that these MSMEs can follow to thrive in this digital medium.

In recent times with the increasing use of smart phones and with the increase in the internet accessibility to everyone, M-commerce has become the forefront of economic

activities. MSMEs are known for the innovation and M-commerce provides the perfect opportunity for MSMEs to compete on a broader scale. As the boundaries between traditional and online business blur, it only becomes natural for MSMEs to get adapted to the mobile-centric ecosystem, it is important for the MSMEs to understand M-commerce to not only survive but also to flourish in this highly competitive business environment.

This paper aims to show MSMEs the opportunities that are provided by M-commerce and further exploration of M-commerce. As most MSMEs are unaware on how to navigate M-commerce, by discussing various case studies, key advantages, and addressing the obstacles that may arise, we aim to provide actionable knowledge on how to navigate M-commerce.

Definitions

MSME : Micro ,small, and medium enterprises are the business which is been within a specific turnover or investment in fixed assets of the business, Where these were used by governments & organisations to categorise based on the level, size , operations of business.

In a broader sense the micro level business has limited number of workers or employees, a maximum of 10 employees identified as a micro scale , meanwhile a enterprise with 10-49 considered as small enterprise and a enterprise with 50-249 identified as middle enterprise

M-commerce : Mobile commerce often referred to as m commerce is the process of buying and selling goods and services using devices, like smartphones and tablets. This innovative approach takes advantage of the convenience offered by technology enabling users to shop browse products and complete transactions wherever and whenever they want. M commerce includes a range of activities such as purchasing through apps accessing mobile optimized websites utilizing wallets and making payments using mobile systems. Its impact on the industry has been transformative providing shopping experiences that can be enjoyed on the go. Moreover businesses benefit from m commerce through opportunities for marketing strategies location based promotions tailored to customers needs and increased customer engagement. As smartphones become increasingly prevalent in our society m commerce continues to expand its influence, on the future of commerce.

Objectives

1. **To examine the importance of M-commerce :** This paper aims to provide an understanding of how M commerce's relevant and impactful, in todays business landscape. Specifically in focusing on to transform the operation of MSMEs
2. **To highlight the opportunities :** By examining real world case studies this study aims to shed light on the opportunities that M commerce presents to MSMEs. These

opportunities include expanding market reach cost efficiency and improved customer engagement.

3. **To identify the challenges :** This research aims in identifying and analysing the challenges that MSMEs may face when adopting to M commerce. These challenges can range from technological adoption to securities concerns.

Importance of M Commerce and MSME

Need of MSMEs

Micro, Small and Medium Enterprises (MSMEs) play a role, in any economy as they make contributions to job creation, economic growth and innovation. Their significance lies in factors that establish them as a component of both developing and developed economies.

In foremost MSMEs serve as a source of employment opportunities. They generate jobs on a scale. Accommodate diverse workforces encompassing skilled and unskilled labour. This not reduces unemployment rates but also fosters growth particularly in regions with limited industrialization.

MSMEs in rural & urban

Sector	Micro	Small	Medium	Total
Rural	324.09	0.78	0.01	324.88
Urban	306.43	2.53	0.04	309.00
All	630.52	3.31	0.05	633.88

Source: Ministry of MSMEs annual report 2018-19

MSMEs contribute to growth and stability due to their agility and adaptability. They can swiftly respond to market demands. Seize opportunities, thereby infusing dynamism into the economy. This dynamic nature fosters competition enhances productivity levels and fuels innovation. Moreover MSMEs encourage entrepreneurship by fostering local entrepreneurship ecosystems. They inspire individuals to embark on business ownership journeys while cultivating a culture of innovation and risk taking. This entrepreneurial spirit leads to the development of products, services and technologies that ultimately benefit society at large. Additionally MSMEs play a role in development by decentralizing economic activities. Often located in urban or rural areas they help bridge the gap, between urban and rural sectors/As they continue to develop they allocate resources, towards improving infrastructure enhancing the quality of life and boosting the economy.

Why MSMEs Need M-Commerce?

Mobile commerce or m commerce holds importance for Micro, Small and Medium Enterprises (MSMEs) in today's era. It provides a platform, for MSMEs to expand their reach and increase sales. With the rising number of smartphone users, m commerce offers a channel for MSMEs to connect with customers and tap into a wider market. Moreover it breaks down barriers to entry in the marketplace enabling MSMEs to compete on a footing with larger businesses. The flexibility and accessibility of m commerce empower MSMEs to boost visibility streamline transactions. Establish an online presence – all crucial factors for business growth and sustainability, in an increasingly competitive world.

Opportunities and Challenges of MSME in M Commerce

Opportunities

M-commerce provides the opportunity for the MSMEs to reach a wider market. As the market widens and the audience increases there is an increase in the revenue. As the M-commerce doesn't require a physical location for customer interaction there is an improved communication with the customers and suppliers as the communication can be carried out remotely. Through online website the company image develops. Due to online accessibilities the whole process picks up some pace and the overall productivity increases. There are already signs that show that when an MSME adopts E-commerce the level of profit is higher. The online nature of the business results in saving a lot of money that is spent on the brick and mortar stores. The data obtained from various sources show that almost 80% of online shoppers use mobile shopping and it is only expected to grow from this number. M-Commerce can help SMEs in the following important aspects: increasing market reach, increased revenues, improved communication with customers and suppliers, better company image, speedy process, better staff productivity.

Mobiles are the major platform for E-commerce. Therefore M-commerce was born. M-commerce uses wireless mobile devices such as smartphones and Personal Digital assistants, as smartphones and PDAs are easy to use and have become a necessity. As the online platform continues to grow everyday this gives more competition to the MSMEs and therefore gives more room for the MSMEs to grow, which provides growth.

Challenges in transformation

The conversion of Micro, Small and Medium Enterprises (MSMEs), to Mobile Commerce (M Commerce) is a venture that offers potential for growth and competitiveness. However this journey is not without its challenges.

One major obstacle is the lack of skills among MSMEs. While M Commerce relies on technology numerous small businesses struggle with navigating the landscape. This knowledge gap can hinder their ability to effectively embrace M Commerce solutions and

fully capitalize on the opportunities presented by technology. Another significant challenge arises from resources. MSMEs often operate on budgets with financial means. The development and maintenance of apps or responsive websites can be costly while hiring skilled personnel can strain their financial capacities. This financial constraint restricts their ability to invest in the infrastructure for a transition to M Commerce. Moreover issues related to infrastructure and connectivity can impede the adoption of M Commerce in regions, with internet access or unreliable connectivity.

In order to have smooth transactions and ensure that websites are mobile friendly it is important to have a digital infrastructure. However access, to infrastructure is not equal across all areas, in rural or underdeveloped regions. The biggest trouble for MSMEs is the difficulty in borrowing for business. There is not adequate support from the government, there is inadequate credit and infrastructure facilities in the MSMEs. The biggest problem is the lack of funding from the banks to MSMEs due to this there is a problem in buying the raw materials that is required and the on time delivery of the product. It is observed that banks don't expect MSMEs to be capable of repayment as the amount and they avoid extending loan amounts and the amount also remains small. Even worse, they pose strict regulations on start-ups. Those businesses also cannot maintain their credit score and it affects their prospects to avail loans. In addition, it becomes harder in traditional lending for businesses to meet strict demands and lengthy procedures for approval of MSME loans. It further affects their spirits. Strict collateral procedure further increases difficulty in seeking MSME loans. Small businesses usually don't have any property to fulfil the requirements. Due to the lack of availability of resource the transformation to Mobile commerce still becomes a question mark. Most MSMEs don't have the awareness or knowledge about technology, due to this the MSMEs are not able to develop the business in a technological mode.

Eventhough the entrepreneurs are constantly exploring new strategies most entrepreneurs don't have financial expertise so, the MSMEs entrepreneurs should be provided more resources to understand the financial situation and how to invest the finance in the required sectors and to be able to effectively use the finance.

Suggestions for Development of MSME through M-Commerce

1. Awareness about Mobile Commerce :

In India about 90 %⁽⁴⁾ of the enterprises are MSMEs where only 43% ⁽⁶⁾of the MSMEs are using it , Raising awareness to Micro ,Small , Medium Enterprises about M-commerce plays a vital role in development. Governments, Organisations and Industry associations has to aware about the digital era with campaigns, seminars, advertisement to make M commerce a powerful tool for MSMEs development

2. Government policies in connecting MSMEs :

Government has to provide financial incentives, simplifying the regulation process, technology supports, development of digital infrastructure in rural areas to the MSMEs which should directly connect MSMEs with common general public. And has to provide regulation that can defend against competition from large scale enterprises

3. Creating user- friendly applications :

Enhancing user friendly experience in Mobile commerce is the important part in connecting the MSMEs to the general public. It should also need to have instructions in using the application. Should provide the satisfaction of both buyer and seller.

4. Improvement in logistics and delivery support :

To enhance the performance Micro, Small, Medium Enterprises in realm of Mobile Commerce , it is important to enhance the area of Logistics and Delivery support . As the mobile commerce is completely depends on digital, one should not come to the particular location to examine the product , thus creating a standard , safe , cost efficient and supportive delivery logistics is a broader area to be focused for enhancing the development opportunities for MSMEs

5. Marketing the Enterprises :

Selling a product in Mobile Commerce is the biggest barrier for most of the MSMEs. The base for selling a product is marketing, and the product perhaps be unique, qualitative, cost efficient than the competitors. For analysing and marketing , creating a software is a huge need for marketizing the products of MSMEs.

Conclusion

This study shows that M-commerce is the growing trend in this digital era and it only seems natural for the MSMEs to merge together with M-commerce. There seems to be a tread that when MSME is able to integrate itself into M-commerce their profits also tend to rise due to wider audience and market. M-commerce is still in its growing stage so there are still some obstacles in the way to be overcome but once the MSMEs are able to figure out the best way that works for them, they will be able to overcome the challenges that might occur in the way of integration of MSMEs with M-commerce. And it shows promise for a smooth integration and a better future.

Abstract

The present research work looks into the critical role that Micro, Small, and Medium Enterprises (MSMEs) play in encouraging sustainable development in rural economies. In rural areas around the world, MSMEs have emerged as critical engines of economic growth, poverty alleviation, and environmental sustainability. The purpose of this paper is to evaluate the available literature, assess case studies, and provide insights into the diverse contributions of MSMEs to rural sustainable development. It addresses the economic, social, and environmental aspects of their influence, emphasizing the significance of legislative support and innovative approaches to realizing their full potential. MSMEs provide around 30% of India's GDP, 45% of manufacturing output, and 40% of exports. It is not wrong to call them the 'Backbone of the Indian Economy.' MSMEs play an essential role in the economy.

Keywords: MSMEs, Entrepreneurship, Economic Development, Economy, Indian economy

Introduction

The Micro, Small, and Medium Enterprises (MSME) sector has emerged as an essential component for the Indian economy over the previous few decades. It makes a significant contribution to the country's socioeconomic growth by encouraging entrepreneurship and offering vast employment prospects at substantially lower capital costs, second only to agriculture.

The MSMEs sector is an important part of India's legacy economic model and a vital supply network for goods and services. This industry is recognized as a job creator, and it is crucial to providing widespread employment and industrialization in rural and underserved areas. MSMEs are crucial to emerging countries like India's economic development. SMEs account for the great majority of businesses worldwide, and they play an important role in job creation and global economic growth. SMEs make for the vast majority of enterprises globally, and they play a significant role in employment creation and global economic development. They account for around 90% of firms and more than

50% of global employment. In emerging economies, formal SMEs generate up to 30% of national income (GDP). When informal MSMEs are included, these figures skyrocket.

An Overview of MSME

The Government of India established Micro, Small, and Medium Enterprises (MSMEs) in accordance with the Micro, Small, and Medium Enterprises Development (MSMED) Act of 2006. These businesses are typically involved in the production, manufacture, processing, or preservation of goods and commodities. There are two types of Indian MSMEs. These are manufacturing and service businesses. Manufacturing enterprises are those that participate in the manufacture of things, whereas service enterprises are those that provide / provide services. These constitute the majority of Indian MSMEs.

Indian MSMEs also defined on the bases of employee before 2006 because India does not have fix standard and definition for MSMEs before 2006. In 2006 government of India introduce an act "Micro, Small and Medium enterprises Development (MSMED) Act, 2006. This act defines MSME in India on the basic of employee as follows.

SMEs classification on the basis of number of Employees:

Classification of SMEs	Number Of Employees
Micro	2-9 Employees
Small	10-49 Employees
Medium	50-249 Employees

The Union Cabinet amended the SME definition on June 1, 2020. The investment and turnover statistics were increased, resulting in a greater number of medium-sized businesses. New MSME definition based on investment and turnover, effective July 1, 2020. The distinction between manufacturing and service organizations has been eliminated by lowering the investment amount and annual turnover for businesses in both sectors. Revised Classification applicable w.e.f. 1st July 2020

Classification of Micro, Small and Medium Enterprise (MSME) Sector			
Composite Criteria Investment in Plant & Machinery/equipment and Annual Turnover			
Classification	Micro	Small	Medium
Manufacturing and Service Sector Enterprises	Investment in Plant and Machinery or Equipment up to Rs.1 crore and Annual Turnover does not exceed Rs. 5 crore	Investment in Plant and Machinery or Equipment upto Rs.10 crore and Annual Turnover does not exceed Rs. 50 crore	Investment in Plant and Machinery or Equipment upto Rs.50 crore and Annual Turnover does not exceed Rs. 250 crore

An Overview of Indian Economy

India is a growing country with a mixed economy that includes both the public and private sectors. Because of its robust democracy and strong ties, India has emerged as the world's fastest-growing major economy and is expected to be one of the top three economic powers in the next 10-15 years. India's economy is described as an emerging market economy with a middle-income. It has the world's sixth-largest nominal GDP and the third-largest purchasing power parity (PPP) economy. According to the International Monetary Fund (IMF), India ranks 145th in nominal GDP and 122nd in PPP GDP. Since the turn of the century, annual average GDP growth has been 6% to 7%, and from 2013 to 2018, India was the world's fastest-growing major economy, surpassing China. For the majority of the two millennia, India had the world's largest economy from the first to the nineteenth century.

Indian Economy and MSME

Micro, Small, and Medium Enterprises (MSMEs) play a vital part in a country's economic development. Their function in terms of production, job creation, export contribution, and supporting equitable income distribution is crucial. MSMEs play a vital role in the Indian economy since they create jobs with minimal government intervention. SME development benefits both urban and rural areas. SMEs benefit the Indian economy in the following ways: they create jobs, reduce poverty, close the urban-rural income gap, encourage regional development, increase exports, and so on. SMEs in India face a number of issues, including suboptimal operational size, technical obsolescence, and supply chain inefficiencies, growing domestic and global competition, fund shortages, changes in manufacturing practices, and a chaotic and uncertain market climate. If MSMEs are to prosper in this environment, compete with national and global enterprises, and contribute meaningfully to GDP, they must be innovative in their operations. SMEs are inventive, innovative, and global in nature.

Review of Literature

De, Sankar (2009) in his article has viewed that SME's in India face many challenges, but perhaps none are as difficult as the challenge of financing, both short term and long term.

K,Vasanth,Majumdar M., K. Krishna (2012) in their paper have stated that since several successful models of the sustainable SME are gradually evolving; networks of SMEs would become essential for addressing the systemic problems under lying the industrial ecology, enterprise resilience, and global supply chain sustainability.

Subrahmanya (2004) highlighted the impact of globalization and domestic reforms on small scale industries sector by emphasizing that small industry had suffered in terms of

growth of units, employment, output and exports. He also suggested that the focus must be turned to technology development and strengthening of financial infrastructure in order to make Indian small industry internationally competitive and contribute to national income and employment.

Srinivas (2013) analysed about the performance of MSMEs, their contribution in India's economic growth, identified the number of enterprises, employment in MSMEs and concluded that MSMEs play a significant role in inclusive growth of Indian economy.

Yogesh C. Joshi and Kaushal Kishore (2018) found in their research that considerable proportion of MSMEs are practicing energy conservation but a lot of efforts are required to increase the number of units practicing the Data Collection model of energy conservation.

Nihar Ranjan Jena and Lina R Thatte (2018) analyzed that the difference in performance of the MSME sector in different states existed due to the differences in presence or absence of adequate enabling factors like labour force, economic infrastructure, regulatory national level. Present research is mainly based on the framework, size of GSDP and density of MSME clusters etc. and found that Maharashtra was the leader in terms of performance of the MSME sector which was closely followed by Gujarat, Tamilnadu, Andhra Pradesh, Uttar Pradesh, West Bengal and Kerala.

Papiya Manna and Dr. Tapas Mistri (2017) analyzed in their research that MSMEs are increasing year by year and its share in national or state GDP has also Data Analysis: shown increasing trend with some fluctuations.

Objectives of the Study

1. To understand the present scenario of MSME sector of India.
2. To study the role of MSME sector in economic development of India.

Data Collection

This study based on secondary data. Several reports from authentic sources have been studied by researcher to know the present scenario of Small, and Medium Enterprises (MSME) sector. Other secondary data have been collected by researcher from various published research papers which related to MSME field. This research is based on annual report of MSME 2022-23 which is published by Government of India. Facts and figures given in this study have been considered for analysis purpose.

Present scenario of MSME sector of India

MSMEs in India play an important role by creating large employment opportunities at a lower capital cost than large industries, as well as industrializing rural and backward areas, reducing regional imbalances, and ensuring a more equitable distribution of national income and wealth. According to the 73rd round of the National Sample Survey (NSS)

conducted by the National Sample Survey Office, Ministry of Statistics and Programme Implementation in 2015-16, there were 633.88 lakh unincorporated non-agriculture MSMEs in the country engaged in various economic activities (196.64 lakh in Manufacturing, 230.35 lakh in Trade, 206.84 lakh in Other Services, and 0.03 lakh in Non-captive Electricity Generation and Transmission).

Estimated Number of MSMEs (Activity Wise)

Activity Category	Estimated Number of Enterprises (in lakh)			Share (%)
	Rural	Urban	Total	
(1)	(2)	(3)	(4)	(5)
Manufacturing	114.14	82.50	196.65	31
Electricity*	0.03	0.01	0.03	0
Trade	108.71	121.64	230.35	36
Other Services	102.00	104.85	206.85	33
All	324.88	309.00	633.88	100

Source- MSME Annual Report 2021-22

Micro sector with 630.52 lakh estimated enterprises accounts for more than 99% of total estimated number of MSMEs. Small sector with 3.31 lakh and Medium sector with 0.05 lakh estimated MSMEs accounted for 0.52% and 0.01% of total estimated MSMEs, respectively. Out of 633.88 estimated number of MSMEs, 324.88 lakh MSMEs (51.25%) are in rural area and 309 lakh MSMEs (48.75%) are in the urban areas. Statement No. 2.2 and figure 2.2 shows the distribution of enterprises in rural and urban Areas.

Distribution of Enterprises Category Wise (Numbers in lakh)

Sector	Micro	Small	Medium	Total	Share (%)
R u r a l	324.09	0.78	0.01	324.88	51
Urban	306.43	2.53	0.04	309.00	49
All	630.52	3.31	0.05	633.88	100

Source- MSME Annual Report 2021-22

Micro sector with 630.52 lakh estimated enterprises accounts for more than 99% of total estimated number of MSMEs. Small sector with 3.31 lakh and Medium sector with 0.05 lakh estimated MSMEs accounted for 0.52% and 0.01% of total estimated MSMEs, respectively. Out of 633.88 estimated number of MSMEs, 324.88 lakh MSMEs (51.25%) are in rural area and 309 lakh MSMEs (48.75%) are in the urban areas.

To study the role of MSME sector in economic development of India

Since its formation, the MSME segment has proven to be a highly dynamic Indian economy sector. MSMEs produce and manufacture a variety of products for both domestic as well as international markets. They have helped promote the growth and development of khadi, village, and coir industries. They have collaborated and worked with the concerned ministries, state governments, and stakeholders towards the upbringing of rural areas. MSMEs have played an essential role in providing employment opportunities in rural areas. They have helped in the industrialization of these areas with a low capital cost compared to the large industries. Acting as a complementary unit to large sectors, the MSME sector has enormously contributed to its socioeconomic development. MSMEs also contribute and play an essential role in the country's development in different areas like the requirement of low investment, flexibility in operations, mobility through the locations, low rate of imports, and a high contribution to domestic production. With the capability and capacity to develop appropriate local technology, provide fierce competition in domestic and international markets, technology-savvy industries, a contribution towards creating defense materials, and generating new entrepreneurs by providing knowledge, training, and skill up-gradation through specialized training centers. The below-mentioned data, represented in a tabular format, is by the Central Statistics Office (CSO) and Ministry of Statistics & Program Implementation.

The below-mentioned data, represented in a tabular format, is by the Central Statistics Office (CSO) and Ministry of Statistics & Program Implementation.

Share of Gross Value Added (GVA) of MSME in all India GDP

Year	Total MSME GVA	Growth %	Total GVA	Share of MSME in GVA %	All india GDP	Share of MSME in All India GDP %
2014-15	3658196	-	11504279	31.80	12467959	29.34
2015-16	4059660	10.97	12574499	32.28	13771874	29.48
2016-17	4502129	10.90	13965200	32.24	15391669	29.25
2017-18	5086493	12.98	15513122	32.79	17098304	29.75
2018-19	5741765	12.88	17139962	33.50	18971237	30.27

Source- MSME Annual Report 2020-21

MSMEs employ around 40% of India's workforce, which is an estimated 80 million people, who are given an opportunity for livelihood and employment via low-skilled jobs. Around 1.3 million SMEs contribute 45% to India's manufacturing output and 40% of

India's total export. In a way, they form the backbone of the Indian economy. There are around 6000 products manufactured by 31.7% SMEs while the remaining 68.2% are engaged in delivering various services. This sector, if extended the right support, has the potential to spread industrial growth throughout the country. Small and Medium Enterprise currently contributes to about 30% of India's GDP now (source: financial express). MSMEs occupy an important place in Indian economy because they provide employment without much government interference. SMEs encourage both urban and rural growth. Broadly, the SMEs help the Indian economy in the following ways: Generate employment, reduce poverty rate, reduce urban-rural income gap, encourage regional development, boost exports, increase production, etc.

Conclusion

To summarize, Micro, Small, and Medium Enterprises (MSMEs) play a significant part in a country's economic development. Their function in terms of production, job creation, export contribution, and supporting equitable income distribution is crucial. MSMEs now account for roughly 30% of India's GDP. However, this industry must be properly nurtured and supported. To reap the greatest benefits from this industry, the government must work together.

FINANCIAL HEALTH OF FIRMS AVAILING MSME FINANCE A STUDY

Dr. D. Kanakavalli, M.Com., M.Phil., DCA., Ph.D.,
*Coordinator (B.Com CA), Assistant Professor, Department of Commerce
The American College, Madurai.*

C. Niruba Shri, M.Com.,
Department of Commerce, The American College, Madurai.

Abstract

India's Micro, Small, and Medium Enterprises were known as Small Scale Industries (SSIs). After much reconsideration of the procedural discussions, the Central Government of India decided to broaden the definition and concept of SSI units. In 2006, the Micro, Small, and Medium Enterprises Development (MSMED) Act were rolled out. After the passing of the Act, the sector has been identified as MSMEs in place of SSIs. This article describes the development of SSI units into MSMEs and then the result of MSMEs. In the global economic scenario, the MSMEs are seen as engines to growth for developing countries. Due to its contribution to employment generation, this sector occupies a significant position in the economy of every country irrespective of its nature of development. As the unemployment rate is high in India due to its vast population base, MSMEs have become a significant contributor to the development and inclusive growth.

Introduction

The SSI sector, now known as Micro, Small, and medium enterprises, contributed enormously to the development of the economy. It was a long-standing demand of the entrepreneurs and small business owners to have a comprehensive legislative framework, gave birth to Micro, Small and Medium Enterprises Development (MSMED), Act 2006. The Act was initiated to solve all policy-related issues of SSI Units and the investment ceilings for the sector. The Act supports various agendas like setting up of National Board for MSMEs to resolve policy-related issues, solving memoranda filing related topics, classification of Micro, Medium, and Small Enterprises according to nature and investments made, credit facilities, promotion criteria, ensuring development and competitiveness of the sector, controlling delays payment schemes, along with providing guidelines to issue State guidelines to pass Act regarding MSMEs in respective States in India. All the non – agricultural sectors have been integrated, and all heterogeneous sectors are brought in under a single umbrella, including the Services Sector and bringing in the medium enterprises under its purview.

Review of Literature

L.C. Jain 1990, The author pointed out that institutional assistance is needed to set up new industrial units, and proper infrastructure facilities should also be provided to help the units grow up. The industrial and fiscal policies should be formed by taking into account the need of SMEs.

P. C. D. Nambiar 1977, The role of Commercial Banks restricts the provision of finance and has to evaluate the feasibility of the project and help the entrepreneurs select the right kind of project according to their needs. Government agencies and Commercial Banks should also coordinate among themselves for better results and priority sector development.

Objectives

- ❖ To identify and analyse the Industrial Policy and trends of MSME loans & advances by different financial institutions.
- ❖ To analyse the Growth Perspective of firms availing MSME Finance.

Findings of the Study

- i. West Bengal have not formulated the Industrial Policy eyeing the growth of business before 2013. As it is an agrarian economy, earlier emphasis was given to the development of agriculture rather than industries.
- ii. (ii) The Govt. started the sustainable development process, providing support for inclusive growth, development of infrastructure like roads, lands for setting up for industries much later. To date no separate package is available for establishing new industries, acquiring a large quantity of land is still difficult because of middlemen, political environment.
- iii. Earlier the Government was eyeing for middle and large-scale industries, intending to provide large-scale employment. Skilled labor is not a problem here due to the high literacy rate in the state. After the new industrial policy, due consideration is also given to micro and small enterprises, as they require a lesser amount of space, and labor-intensive in nature. The establishment of industrial parks, markets for the artisans, arranging different fairs for the artisans, business summits for MSMEs, and other initiatives, let the industries get a positive impact and support to grow.

Suggestions

(i) Creating a Business Friendly Environment –

- ❖ A specific portal needs to be developed where all information and support can be found for the MSMEs. All schemes, all policies will be uploaded there. The site needs to be updated at regular intervals.

- ❖ Annual surveys to keep track of the growth of the firms or sickness. Based on the data collected, proper action need to be taken.
- ❖ Rural industrialization needs to be promoted

(ii) Initiatives for Entrepreneurship Development

- ❖ Capital subsidy schemes for purchase of machinery
- ❖ Development of incubation centers
- ❖ Financial assistance to test products, ideas, in the market
- ❖ Grooming the female entrepreneurs

(iii) Access to Finance –

- ❖ Lower interest rates for micro and small enterprises, comparatively higher rate of interest for medium enterprises to boost up the seed finance
- ❖ More and more sensitization initiatives to be taken by banks.

Conclusion

In conclusion, we can say that MSMEs always need support from the Govt. as they start with turbulent scenarios. The journey from SSI to MSME was a long path traveled, the initiative was taken on the assumption that, if all the units can be brought into one single control, then policy decisions can help them grow inclusively. But only the MSMED Act of 2006 can not do this single-handedly. If the state industrial policy is not aligned to the same objective, then it will be tuff to bring in the change. Therefore a policy framework has been proposed wherein the issues identified despite having a good potential to grow and stable financial health of those firms who have availed any kind of MSME Finance under four categories – the creation of a business-friendly environment, financial aspects, inclusive growth, and assistances to innovation and technology

Abstract

The Micro, Small, and Medium Enterprises (MSME) sector in India holds immense promise for economic growth, employment generation, and inclusive development. In recent years, the Digital India initiative has gained momentum, aiming to transform the nation into a digitally empowered society and knowledge economy. This descriptive study seeks to provide a comprehensive overview of the current state of digitalization within the MSME sector, shedding light on the adoption trends, challenges, and opportunities.

This research employs a mixed-methods approach, combining quantitative and qualitative data collection techniques. Data is gathered through surveys, interviews, and an analysis of relevant government reports and industry literature. The primary objectives of this study are to:

- 1. Assess the extent of digital technology adoption among MSMEs in India, including the use of e-commerce platforms, digital payment systems, cloud computing, and online marketing.*
- 2. Identify the key drivers and motivations for MSMEs to embrace digital technologies, such as improving operational efficiency, expanding market reach, and enhancing customer engagement.*
- 3. Examine the barriers and challenges faced by MSMEs in their digital transformation journey, including issues related to digital literacy, access to finance, and cyber security concerns.*
- 4. Analyze the role of government policies, incentives, and support mechanisms in facilitating digitalization within the MSME sector.*
- 5. Explore the potential impacts of digitalization on MSME competitiveness, innovation capabilities, and overall business sustainability.*

The findings of this descriptive study will provide valuable insights into the current landscape of digitalization within the MSME sector in India. It will serve as a foundational resource for policymakers, industry stakeholders, and MSMEs themselves, offering a clear understanding of the opportunities and challenges associated with Digital India. By highlighting the status quo, this research aims to contribute to informed decision-making and the formulation of strategies that can accelerate digital transformation and inclusive growth in the MSME sector.

Introduction:

The MSME (Micro, Small, and Medium Enterprises) sector in India plays a pivotal role in the country's economy. It is a diverse sector encompassing a wide range of industries and businesses. Here's an overview of the MSME sector in India. MSMEs are a significant contributor to India's GDP, accounting for around 30% of the country's GDP. The MSME sector also contribute significantly to employment generation.

MSMEs are classified based on their investment in plant and machinery or equipment and annual turnover. As of 2021, the classification is as follows:

- ❖ Micro Enterprises: Investment of less than INR 1 crore and revenues of less than INR 5 crores
- ❖ Small Businesses: Investments of less than 10 crores and yearly revenue of less than 50 crores
- ❖ Medium Enterprises: Investment of under 50 crore rupees and a yearly revenue of under 250 crore rupees

MSMEs are known for their labor-intensive nature and contribute significantly to job creation, particularly in rural and semi-urban areas. The MSME sector covers a wide range of industries, including manufacturing, services, agriculture, and trade, making it highly diverse. Many MSMEs are engaged in export-oriented activities, contributing to India's exports and foreign exchange earnings. MSMEs face various challenges, including access to finance, technology adoption, marketing, and regulatory compliance. These challenges can hinder their growth and competitiveness. The Indian government has implemented various schemes and initiatives to support MSMEs, including credit facilitation, technology upgradation, and skill development programs. Digital India and Make in India are among the initiatives aimed at bolstering the sector. Digitalization has been a key driver of growth for MSMEs in recent years. The adoption of digital tools, e-commerce, and online marketplaces has expanded their market reach and improved efficiency. MSMEs have demonstrated resilience in the face of economic challenges, including the COVID-19 pandemic. Their adaptability and ability to pivot quickly have been notable. The MSME sector is poised for further growth with ongoing government support and increasing digitalization. It is expected to play a crucial role in India's economic development and job creation.

Overall, the MSME sector in India is a dynamic and vital component of the economy, with the potential for continued growth and innovation. Government policies and private sector initiatives are essential in addressing the challenges and unlocking the full potential of this sector.

Overview of digital India for MSME:

Digital India, launched by the Government of India in 2015, has ushered in a transformative era for the Micro, Small, and Medium Enterprises (MSME) sector. This ambitious initiative aims to harness the power of digital technologies to empower MSMEs, enhance their competitiveness, and drive economic growth. With a comprehensive vision encompassing various facets of digitization, Digital India has laid the foundation for a vibrant digital ecosystem that benefits MSMEs in numerous ways.

Through the extensive rollout of high-speed internet connectivity, the provision of digital infrastructure, and the promotion of digital literacy, Digital India has opened up new opportunities for MSMEs to thrive in the digital age. This initiative has not only facilitated market expansion but also improved financial inclusion, making it easier for MSMEs to access capital and manage finances through digital payment systems.

Moreover, Digital India has streamlined administrative processes and reduced bureaucratic hurdles, simplifying compliance and regulatory procedures for MSMEs. The adoption of digital tools and platforms has boosted operational efficiency, enabling MSMEs to optimize their processes and adapt to rapidly changing market dynamics.

In essence, Digital India has become a catalyst for the growth of the MSME sector, offering advantages such as increased market reach, cost savings, improved access to government schemes, data-driven insights, and resilience in the face of evolving challenges. As the digital landscape continues to evolve, MSMEs in India are poised to leverage these opportunities to achieve greater success and contribute significantly to the nation's economic development. This transformation is a testament to the power of digital innovation in fostering inclusive growth and empowerment in the MSME sector.

Impact of digital India in MSME sector:

Digital India has had a significant impact on the MSME (Micro, Small, and Medium Enterprises) sector in India. Here are some key ways in which Digital India has benefited MSMEs:

1. **Access to Markets:** Digital platforms and e-commerce have provided MSMEs with a broader market reach, allowing them to sell their products and services to a global audience.
2. **Financial Inclusion:** Digital payment systems like UPI and mobile wallets have improved financial inclusion for MSMEs, making it easier for them to receive payments and access credit.
3. **Government Services:** MSMEs can leverage digital platforms to access various government services and schemes, simplifying compliance, registrations, and approvals.
4. **Ease of Doing Business:** Digital initiatives have reduced bureaucratic hurdles, making it easier for MSMEs to start and operate businesses.
5. **Skill Development:** Digital India has promoted digital literacy and skill development, empowering MSMEs to adapt to new technologies and trends.
6. **Cost Efficiency:** Cloud computing and digital tools have reduced infrastructure costs for MSMEs, allowing them to operate more efficiently.
7. **Data Analytics:** MSMEs can harness data analytics to gain insights into customer behavior, market trends, and optimize their operations.

Advantages of digital India towards MSME sector:

Digital India has brought several advantages to the MSME (Micro, Small, and Medium Enterprises) sector in India:

1. **Increased Market Reach:** Through e-commerce platforms and online marketing, MSMEs can reach a larger customer base locally, nationally, and even internationally, expanding their market presence.
2. **Cost Savings:** Digital tools and platforms reduce the need for physical infrastructure, leading to cost savings in terms of rent, utilities, and operational expenses.
3. **Efficient Operations:** Automation and digital solutions streamline business processes, enhancing operational efficiency and productivity within MSMEs.
4. **Financial Inclusion:** Digital payment systems and mobile banking services have improved financial inclusion for MSMEs, making it easier to manage finances and access credit.
5. **Access to Government Schemes:** MSMEs can leverage digital platforms to access various government schemes, incentives, and subsidies designed to support their growth.
6. **Data Analytics:** Data-driven insights enable MSMEs to make informed decisions, optimize their product offerings, and better understand customer preferences.
7. **Ease of Compliance:** Digital platforms simplify regulatory compliance, tax filing, and other administrative tasks, reducing the administrative burden on MSMEs.
8. **Skill Development:** Digital India initiatives offer training and skill development programs, empowering MSMEs to adopt new technologies and stay competitive.
9. **Global Competition:** MSMEs can compete globally by utilizing digital platforms to offer niche products and services with unique value propositions.
10. **Resilience:** Digital tools help MSMEs adapt to changing market conditions, as they can pivot quickly and efficiently in response to emerging trends and challenges.

Problems faced by MSME sector in digital India:

While Digital India has brought numerous advantages to the MSME (Micro, Small, and Medium Enterprises) sector, there are also some potential disadvantages and challenges:

1. **Digital Divide:** Not all MSMEs have equal access to digital infrastructure and resources. This digital divide can leave some businesses at a disadvantage in terms of competing online or accessing digital services.
2. **Initial Investment:** Adopting digital technologies often requires significant upfront investments in hardware, software, and training, which can be a barrier for cash-strapped MSMEs.

3. **Cybersecurity Risks:** Increased digital presence exposes MSMEs to cybersecurity threats and data breaches, which can be financially and reputationally damaging.
4. **Skills Gap:** MSMEs may lack the necessary digital skills and expertise to fully leverage digital tools and platforms effectively.
5. **Market Saturation:** As more MSMEs go digital, competition in online marketplaces can become saturated, making it harder for individual businesses to stand out.
6. **Dependence on Online Platforms:** Relying heavily on online platforms and e-commerce marketplaces can leave MSMEs vulnerable to changes in platform policies, fees, or algorithms.
7. **Privacy Concerns:** Handling customer data digitally can raise privacy concerns and regulatory compliance issues, which MSMEs must navigate carefully.
8. **Infrastructure Challenges:** In some areas, poor internet connectivity and power supply issues can hinder the smooth adoption of digital technologies.
9. **Dependency on Tech Providers:** MSMEs may become overly reliant on technology providers and platforms, making them susceptible to disruptions caused by service outages or changes in provider policies.
10. **Digital Skills Shortage:** The shortage of skilled professionals in the digital domain can make it difficult for MSMEs to find and retain talent.

Suggestions to overcome the Problems faced by MSME sector in digital India:

To overcome the challenges faced by Micro, Small, and Medium Enterprises (MSMEs) in the context of Digital India, several measures can be taken. These measures aim to facilitate digital adoption, enhance competitiveness, and ensure sustainable growth within the MSME sector:

1. **Digital Literacy and Skill Development:** Invest in digital literacy programs and skill development initiatives tailored to the needs of MSMEs. These programs can help entrepreneurs and employees acquire the necessary digital skills to effectively use digital tools and technologies.
2. **Access to Affordable Technology:** Make affordable digital technologies, software, and hardware accessible to MSMEs. Government subsidies or incentives can help reduce the financial burden associated with technology adoption.
3. **Support for E-commerce Adoption:** Offer training and support to MSMEs looking to establish an online presence and engage in e-commerce activities. This includes guidance on setting up e-commerce websites, using online marketplaces, and leveraging digital marketing strategies.
4. **Digital Payment Infrastructure:** Improve digital payment infrastructure and promote cashless transactions. This includes encouraging the use of digital wallets, mobile payment apps, and point-of-sale (POS) systems.

5. **Cybersecurity Awareness and Assistance:** Raise awareness about cybersecurity threats and provide guidance on best practices for securing digital assets. Establish a mechanism for reporting and addressing cyberattacks or data breaches.
6. **Financial Inclusion:** Promote financial inclusion by facilitating easier access to credit and loans for MSMEs, especially those with limited financial histories. Encourage fintech innovations that cater specifically to MSMEs.
7. **Government Initiatives:** Continue to implement policies and initiatives like the Digital India campaign that focus on digital infrastructure development, innovation, and entrepreneurship within the MSME sector.
8. **Cluster-Based Approach:** Foster collaboration among MSMEs by promoting cluster-based development. This encourages knowledge sharing, economies of scale, and collective bargaining power.
9. **Market Access:** Facilitate access to national and international markets through digital platforms. Government-supported e-commerce platforms can help MSMEs expand their customer base beyond local boundaries.
10. **Data Analytics and Insights:** Promote the use of data analytics tools to help MSMEs make informed decisions, optimize operations, and identify market trends.
11. **Compliance Simplification:** Simplify and streamline regulatory and compliance procedures for MSMEs operating in the digital space. This can reduce administrative burdens and associated costs.
12. **Government Procurement:** Reserve a portion of government procurement contracts for MSMEs, incentivizing them to adopt digital technologies and become competitive in government tenders.
13. **Industry-Academia Collaboration:** Encourage collaboration between MSMEs and academic institutions to foster innovation, research, and development of digital solutions relevant to the sector.
14. **Mentorship and Networking:** Create mentorship programs and networking opportunities for MSMEs to learn from successful digital adopters and collaborate with peers.
15. **Monitoring and Evaluation:** Establish mechanisms to monitor the impact of these measures on MSMEs' digitalization and overall growth, adjusting policies and support accordingly.

By implementing these measures, policymakers, industry associations, and stakeholders can help MSMEs overcome digital challenges, unlock their potential, and contribute significantly to India's economic development in the digital age.

Conclusion:

The transformative journey of the Micro, Small, and Medium Enterprises (MSME) sector in India, fueled by the Digital India initiative, underscores the indomitable spirit of adaptability and innovation that characterizes this vital economic segment. As our exploration of the amalgamation of digital technologies and MSMEs draws to a close, it is evident that this union has heralded a new era of possibilities, challenges, and prospects. The advantages of Digital India for the MSME sector are multifaceted and profound. It has shattered geographic barriers, enabling MSMEs to access global markets and compete on an international stage. The cost efficiencies achieved through the adoption of digital tools have amplified competitiveness. Moreover, it has facilitated financial inclusion, reduced administrative complexities, and harnessed the power of data to drive strategic decision-making. The Digital India initiative has, in essence, been the wind beneath the wings of MSMEs, propelling them to new heights. However, the path to digitalization was not without its share of hurdles. MSMEs, particularly smaller ones, grappled with challenges such as access to capital for technology investments, the need for digital skill development, and the cybersecurity risks associated with digital operations. Navigating these obstacles required concerted efforts, collaboration, and targeted support from both public and private sectors.

In conclusion, the Digital India initiative has proven to be a potent catalyst in reshaping the MSME sector. It has unlocked doors to uncharted territories and positioned Indian MSMEs as global contenders. Yet, our journey has underscored that this transformation is not a destination but an ongoing process. Sustained commitment from all stakeholders – government, industry, and society – will be paramount in harnessing the full potential of Digital India for the MSME sector.

Abstract

The Industrial sector has received much attention, especially regarding the role of large businesses in economic recovery. However, the micro, small, and medium enterprise (MSME) sector is more crucial, as MSMEs are the largest employers in India outside of agriculture. The Union Budget 2022-23 has introduced several enabling provisions for the growth of MSMEs. However, MSMEs face several challenges. Addressing these challenges can ensure faster overall economic growth and make the growth process more sustainable and inclusive (The Union Budget 2022-23). In various regions of India, there are more than 63 million MSME units in operation with around 11 crore employees. They are seen as a crucial sector for reaching the Sustainable Development Goals due to their adaptable and dynamic nature and assist other goals to be achieved, either directly or indirectly. Hence, in this paper made an attempt to study the sustainable development goals and the significance of MSME in achieving the sustainable development goals.

Keywords: MSME, sustainable development, economic growth

Introduction

Numerous initiatives, such "Make in India" and "Zero Defect & Zero Effect," show how committed the administration is to achieving a balance between economic growth and sustainable development. The resources to upgrade operations and procedures to better achieve sustainability goals are often available to large businesses. MSMEs, however, face resource and financial constraints that make upgrading ineffective. In spite of all these obstacles, micro, small and medium-sized enterprises are important for the Indian economy since they contribute to its economic ecosystem by providing a wide range of employment possibilities at relatively low capital costs. As far as the Indian economy is concerned, the Federation of Indian Chambers of Commerce & Industry FICCI estimates that the Micro, Small and Medium Enterprises sector accounts for 95% of all industrial units, 40% of exports and 45% of production. With about 60 million people working in rural areas, the industry is one of the main sources of employment after agriculture. The

development of this sector holds the key to reaching the sustainability targets set by the Indian Government because MSMEs are so significant to the Indian economy (MSMEs account for 30% of the GDP). Natural resource ownership is highly prevalent among MSMEs and regional "green" businesses because these businesses rely on these resources for their survival. As a result, they care more about protecting the environment and these resources. As a result, MSME operations and activities can significantly improve efforts to combat climate change, protect land and aquatic ecosystems, and implement sustainable production and consumption methods. (MSME Annual Report 2020-21)

Review of Literature

Richa et al (2020) explored the growth in the number of MSME units, GDP contribution, employment, and exports of the Indian MSME sector; an analysis of the relationship between growth in the MSME sector and the achievement of the 2030 Sustainable Development Goals (SDGs); an examination of the role the MSME sector has played in generating green jobs in India; and an examination of the issues facing the MSME sector. Concluded that private players should be given a variety of incentives, such as tax reductions, business-friendly conditions, expanded infrastructure, favorable environments, etc. It's also important to address the issue of late payments, which makes these businesses' liquidity issues worse.

Sathish and Rajamohan (2020) identified the strategies and initiative assistance offered by MSMEs to promote entrepreneurship and discussed the opportunities created by the government to promote entrepreneurship in India. The Ministry of MSME makes a considerable and important contribution to giving MSMEs substantial financial support. In order to create job possibilities and promote entrepreneurial growth of the country by promoting entrepreneurship opportunities, it expanded its domain across all sectors of the Indian industry. As a result, the study highlighted the important role that MSMEs have played in enabling sustainable growth in India.

Verma (2019) divided the function of MSMEs in achieving various objectives into various activity aspects and also included some suggested actions that can help MSMEs become more sustainable, which will ultimately aid in the achievement of the SDGs. discovered that MSMEs have enormous potential for achieving all sustainable development. MSMEs significantly influence the advancement of the sustainable development goals, either directly or indirectly. Additionally, discovered that due to a variety of issues, micro businesses themselves struggle to function to their full potential. MSMEs must be promoted and supported effectively if they are to participate and contribute as much as possible to the accomplishment of sustainable development goals.

Nitya (2015) indicated that MSME business owners in Punjab believe that the sector's abilities and sustainability are threatened by a high tax system, difficulties in bank

financing, regulatory machinery, and inadequate infrastructure. In order to reduce the burden of administrative rules and enhance the business environment, the State Government has a significant role to play. It is advised that supportive business environments must be offered to foster and promote entrepreneurship so that this sector can grow independently competent to dominate the market and give economic sustainability. It was concluded that the company's strategy must be developed in a way that takes advantage of external opportunities and internal strengths while avoiding external threats and internal weaknesses.

Objectives

1. To understand the concept of sustainable development goals.
2. To study the significance of the MSME in achieving sustainable development goals.

Methodology

The study is based on secondary data and is descriptive in nature. Researchers have collected the data from reliable and published secondary sources. These sources include Journals, Magazines, Reports, Websites and others. Majority of the information is taken from the United Nations website (<https://sustainabledevelopment.un.org>) and Ministry of MSME website (<http://msme.gov.in>) of Government of India. The statistical data from various reports have been mentioned in order to emphasise the importance of the sustainable development and determine the highlights of sustainable development through MSME. However, this research can be used as a basis for further studies on various aspects of the sustainable development and the results are highlighted based on the researcher's suggestions and recommendations.

The sustainable development

The word „Sustainable Development“ was first coined by Barbara Ward in the ‘Cocoyoc Declaration’ in 1974 and has been well discussed in various international summits, conferences and reports like IUCN Report (1980,1990) and World Commission on Environment and Development (WECD). The WECD report named „Our common future“ became a landmark report and reckoned sustainability as the only way to wipe out the danger on the survival of mankind. The idea was later, well discussed in Earth Summit 1992 and The Norway Round Table in 1995. The Earth Summit, 1992 proposed two major documents concerning sustainable development, namely, Agenda 21 and the Rio Declaration on Environment and Development. Norway Round Table also laid down principles to achieve sustainable development. (Freimann, Ham, & Mijoc, 2014) (Verify Sustainability, n.d.) Major summits and agreement have raised concerns over Sustainable Development but failed to provide a comprehensive approach at the global level. The

member states of united nations had adopted the millennium development goals in 2000 which had a major aim to reduce poverty across the globe. This millennium Development Goals (MDGs) has been now replaced by SDGs. The 2030 Agenda for Sustainable Development Goals contains 17 SDGs and 169 targets to be achieved before 2030. These goals and targets are aimed at bringing peace and prosperity around the globe. All developed and developing nations have to achieve those goals and targets through global partnership. The major focus is to end poverty by 2030, improve health and education, reducing inequalities, and achieving economic growth while tackling the problem of climate change and preserving the oceans and forest. (Division for Sustainable Development Goals (DSDG), n.d.)

The sustainable development goals are as follows:

Source: <https://www.gavi.org/sites/default/files/about/global-health/sdgs-rec.png>

In 2015, 195 nations joined the UN to declare that they have the power to transform the world. By bringing together their respective governments, corporations, media, higher education institutions, and local NGOs, each country's citizens' lives will have transformed by the year 2030.

1. Eliminate Poverty
2. Erase Hunger
3. Establish Good Health and Well-Being
4. Provide Quality Education
5. Enforce Gender Equality
6. Improve Clean Water and Sanitation
7. Grow Affordable and Clean Energy
8. Create Decent Work and Economic Growth

9. Increase Industry, Innovation, and Infrastructure
10. Reduce Inequality
11. Mobilize Sustainable Cities and Communities
12. Influence Responsible Consumption and Production
13. Organize Climate Action
14. Develop Life Below Water
15. Advance Life On Land
16. Guarantee Peace, Justice, and Strong Institutions
17. Build Partnerships for the Goals

Significance of MSME in Achieving Sustainable Development Goals

Sustainable development can be achieved if we follow the following points:

- ❖ It can be achieved by restricting human activities.
- ❖ Technological development should be input-effective and not input-utilizing.
- ❖ The rate of consumption should not surpass the rate of salvation.
- ❖ For renewable resources, the rate of consumption should not surpass the rate of production of renewable substitutes.
- ❖ All types of pollution should be minimized.
- ❖ It can be achieved by sensible use of natural resources.

The SDGs are international objectives that were developed upon the previous Millennium Development Goals. They are comprehensive, inclusive, and integrated and place a focus on key aspects of poverty, inequality, and economic development sustainable consumption, innovation, and productivity, global warming, justice, and peace and collaborations.

According to estimates, financing these goals globally will cost between US\$5 and US\$7 trillion year, with US\$3.9 trillion needed in developing nations. However, the estimated US\$1.4 trillion in investments currently made in developing nations leaves an annual shortage of US\$2.5 trillion (UNCTAD, 2014). Strong coordination between various governments, development organizations, the corporate sector, and financial institutions is required for global action of this size in order to be effectively financed and implemented around the world.

The SDGs' Progress in India

Every country must carefully execute numerous schemes and programs in accordance with local difficulties, capacities, and resource availability in order to achieve sustainable development. India uses a wide range of programs to implement a holistic strategy for achieving the SDGs.

The policies which are initiated by the government are as follows:

1. Swachh Bharat Mission (SBM)
2. Beti Bachao Beti Padhao (BBBP)
3. Pradhan Mantri Awas Yojana (PMAY)
4. Pradhan Mantri Jan-Dhan Yojana (PMJDY)
5. Deen Dayal Upadhyay Gram Jyoti Yojana (DDUGJY)
6. Pradhan Mantri Ujjwala Yojana (PMUY)

The Performance of States and UTs of Sustainable Development Goal Index 2020-21

Source: NITI Aayog's SDG India Index Baseline Report, 2020-21

Kerala and Chandigarh were the top performers of States and UTs respectively SDG India Index 2020-21 followed by Tamil Nadu and Himachal Pradesh, Puducherry, and Lakshadweep.

Conclusion

MSMEs considerably contribute to the Indian economy by providing a long-study solution to persistent societal issues—eradicating poverty, providing goods and services, and promoting economic resilience. The MSME sector in India will emphasis on technological innovation and expanding into new markets if it is to realize its full potential. Finally, the Government of India may promote innovation by improving finance alternatives and assisting MSMEs in developing industries like eco-tourism, organic farming, hydroponics, and decentralized renewable energy through helpful regulatory frameworks. To create job possibilities and promote entrepreneurial growth in the country by promoting entrepreneurship opportunities, it expanded its domain across all sectors of the Indian industry. As a result, the study highlighted the significance of MSMEs have played in enabling sustainable growth in India.

Abstract

Rural women's entrepreneurship has been a domain enchanting academicians and the government. Being a significant demographic portion, rural women's empowerment through entrepreneurship is an important contributor to economic growth. Women constitute about 50% of the total population, but only about 14% of women entrepreneurs are playing an active role to boost economic and social stability. By guaranteeing social equality and enabling rural women entrepreneurs to live within the parameters, the Indian government had a significant influence on this population.

Keywords: India, Rural women, Empowerment, Entrepreneurship.

“Women are the largest unstopped reservoir of talent in the World”

- Hilary Clinton

Introduction:

Gandhiji made it quite apparent that the Indian economy is built on villages. One of the most crucial elements in accelerating economic and social growth is entrepreneurship. The primary players in fostering change and progress on the social and economic fronts are entrepreneurs. Entrepreneurs are those who have the initiative to start something new, plan production, take on challenges, and handle the risks associated with operating a business. Only entrepreneurship can contribute to creating jobs within the social system. Rural women benefit greatly from this since it enables them to increase family income while still caring for their own homes and cattle and provides them with a variety of opportunities to start their own businesses. As a result, she may effectively agree to both production- and process-oriented businesses.

A key role for women entrepreneurs in an emerging economy is really possible. Nearly 150 million people would be employed by women-owned MSMEs in India by 2030, according to estimates. This illustrates the women entrepreneurs are a driving force behind

change in society as a whole and are essential to fostering opportunity and enhancing the societies they work in. In rural India, women may become entrepreneurs by bridging the gender gap and assembling allies who can support one another. To promote the growth and development of the country, it is necessary to equip women with a complete environment that includes equal economic possibilities. Through digital technology and exclusivity promoting rural women's entrepreneurship is possible.

Statement of Problem:

The expansion and sustainability of Micro, Small, and Medium-Sized Enterprises (MSMEs) have become important drivers of economic growth on a global scale. In this setting, rural women business owners are essential to promoting inclusive economic growth and empowerment. With a focus on the possibilities and obstacles they face along the way to entrepreneurship, the current study seeks to understand how MSMEs affect rural women entrepreneurs. While MSMEs provide potential for rural female entrepreneurs, they also confront a number of obstacles that limit their expansion and viability. The main goal of this study is to examine the major difficulties that rural women face when running MSMEs.

Need of the Study:

MSMEs are essential to economic growth, making a substantial contribution to the creation of jobs, innovation, and GDP growth globally. Understanding how MSMEs affect rural women business owners is essential for creating effective policies that will support and enhance this sector of the economy as a whole. It is essential to alleviate gender imbalances, encourage economic empowerment, and increase the role of MSMEs in promoting sustainable economic development that the research "Impact of MSMEs on Rural Women Entrepreneurs: Opportunities and Challenges" be completed. The research can help create a more inclusive and encouraging environment for rural women's entrepreneurship by highlighting the possibilities and difficulties experienced by rural female entrepreneurs in the MSME sector.

Objectives of the Study:

1. To grasp the idea and development of rural women's entrepreneurship in India.
2. To learn about the options available to rural women entrepreneurs.
3. To learn about the many government programmes for rural women business owners.
4. Offer suggestions for resolving challenges in a way that creates potential possibilities to self reliant.

Research Methodology:

Research papers, journals, and articles from many fields are seen and examined in Google Search. Government websites for observing the current statistics of aspects of women's entrepreneurship in India, as well as articles about women entrepreneurs, are all included in the research. The information is gathered by tabulating and analyzing the data from numerous government websites. Conclusions have been drawn using secondary information from several government websites. Various government programmes for women's entrepreneurship are being implemented in India to boost the growth of MSMEs. Women's empowerment is examined and featured in this study, assisting in the advancement of women entrepreneurs.

Women Entrepreneurs: A Historical Perspective:

Ancient Indian women's empowerment faced conflicting viewpoints, with women having equal rights and training in self-directed combat. The Indian Constitution ratified in 1950, clarifying women's status, and "Nari Shakti" being named Hindi word of the year in 2018.

➤ Thinking Ahead- connecting Skill to Industry

The Ministry of MSME held its inaugural Conclave on Empowering Women Entrepreneurs of Marginalized Sections, addressing female entrepreneurship and highlighting hidden disparities. The event attracted influential individuals to discuss important issues.

➤ MSME- Transforming Homemaker to Entrepreneur

The Ministry of Micro, Small and Medium Enterprises (MSME) is empowering women entrepreneurs through various schemes, boosting their talent and identity. Since inception, 1.38 lakh projects have been set up by women entrepreneurs under the Prime Minister's Employment Generation Programme (PMEGP). Women entrepreneurs are covered under Special Category and receive 25% and 35% subsidies for urban and rural projects. The Khadi Programme of KVIC has also supported women entrepreneurs, with 30437 projects established between 2016-17 and 2017-18.

Women Workforce Participation (2019-2021)

Year	Area	Percentage
2019	Urban	34.31%
	Rural	41.8%
2020	Urban	36%
	Rural	41%

2021	Urban	36.4%
	Rural	42%

Source: Bain & Co. Report (March 23, 2022)

With above table we can identify that working force of women in rural area is more than the women working force in urban area. Rural Women Entrepreneurship is an important part of human resources and economic development. Rural India is envisioned as a resource in the New India that offers opportunities to accelerate economic growth and achieve Sustainable Development Goals.

Rural Women in Msmes:

Rural women's participation in Micro, Small, and Medium Enterprises (MSMEs) has been increasing over the years. MSMEs play a crucial role in the global economy as they contribute significantly to employment generation, innovation, and economic growth. Women's participation in this sector has several benefits for both women themselves and the economy as a whole.

Indian rural women are increasingly playing an important role in the nation's economic progress as a result of their engagement in MSMEs. However, in India, the percentage of female entrepreneurs is currently approximately 14%. Increased female entrepreneurship has the ability to benefit the nation monetarily as well as directly benefit its residents in a variety of ways, some of which are as follows:

- ❖ **Economic impact:** The country's economy has grown considerably in recent years as a result of the establishment of new businesses. This has enabled female entrepreneurs to engage equally in the country's thriving economic environment.
- ❖ **Employment creation:** The availability of MSME financing has made it easier than ever to start a firm. Successful firms can hire employees, which leads to the development of jobs for both other people and female business owners.
- ❖ **Emerging new domains:** Creating new fields given the diversity of options and possibilities available today, women have the same employment resources as men. With the advent of the internet, it is now easier than ever to start a business online and apply for an MSME loan. As the number of female entrepreneurs in the country grows, the government is creating opportunities and MSME programmes to help them succeed.

Broad Activity Wise Total Number of Establishments under Women Entrepreneurship by Type of Establishment:

Broad Activity	Without Hired Workers	With at least One Hired Worker	Total	Percentage share in total establishments	Remarks
Agricultural Activities	2531540	230227	2761767	34.3	❖ Activities relating to agriculture other than crop-production & plantation, ❖ Livestock,- Forestry and Logging,- Fishing and aqua culture.

Source: www.mospi.gov.in

From the above table it is found that the total number of agricultural establishments were 2.76 million constituting 34.3% of the total establishments owned by women.

Governmental Actions:

Recently, there have been programmes aimed at the welfare and emancipation of rural women. India is well known for its gender disparity. The government is making every effort to improve the status of women. There are numerous such well-intentioned programmes that have been established, but the effectiveness and style of implementation will determine the final outcomes. Such are following:

- ❖ **Beti Bachao, Beti Padhao programme:** The Programme aims to empower the women in the field of women's education.
- ❖ **The Sukanya Samriddhi Account,** designed to assist families in setting aside money for their daughters, is part of the This programme, which debuted in January 2015, is an expansion of the first described scheme. In addition to making efforts to preserve more and more girls, the government is also committed to providing them with a brighter future and economic security. India is a country where society is more progressive, despite the fact that women are revered in all religions.
- ❖ **One-stop centers:** Are designed to provide quick access for women who are victims of domestic violence or abuse and require help. Women are suffering from exploitation, torture, and abuse all around us, and these issues must be addressed.

Any type of abuse might be used, including economic, psychological, sexual, mental, or physical assault. Giving citizens a just and secure environment in which to thrive is the main duty of every government. The One Stop Centre Scheme was launched in April 2015 with the intention of advancing women.

- ❖ **Pradhan Mantri Ujjwala Yojana:** Women who are below the poverty line are eligible for free LPG connections via the This initiative, which the Indian government launched in March 2016, promises to feed every home and provide free LPG connections to women who are living in poverty. Due to the social campaign and plea to the wealthy class to stop receiving LPG subsidies in favour of the lower classes, it attracted a lot of attention.
- ❖ **Mahila Haat:** Aimed to aid female self-help organizations and businesswomen. A shout-out to the entire group of female business owners and future leaders, The empowerment of women entrepreneurs, NGOs, self-help organizations, and small producers is a key component of this approach. This multilingual portal, which was launched in March 2016, offers women in our nation a digital marketing platform to promote the goods they produce and the services they provide to draw in clients. This portal will serve as a catalyst for their business and can be accessed anywhere, at any time, with just a cell phone number.
- ❖ **DDUG Deen Dayal Upadhyaya Grameen The Kaushalya Yojana:** This scheme aims of 180 million individuals between the ages of 18 and 34, or more than 69 percent of the nation's youth, reside in rural regions. About 55 million of these are low-income children from families with little or no work that is at the bottom of the food chain. DDUG Deen Dayal Upadhyaya Grameen The Kaushalya Yojana is a programme that targets rural children from low-income families between the ages of 15 and 35. This programme provides technical support, invests in the initiatives of its training partners, and provides high-quality skill training to disadvantaged rural youth.
- ❖ **Pradhan Mantri Matru Vandana Yojana (PMMVY):** Is a Centrally Sponsored DBT scheme with the cash incentive of ₹ 5000/- (in three instalments) being provided directly in the bank/post office account of Pregnant Women and Lactating mothers.
- ❖ **Deen Dayal Anthyodaya Yojana(DDAY):** The programme run by the Indian government to aid the underprivileged by offering skill development. It takes Aajeevik's place. The Indian government has set aside 500 crore (US\$63 million) for the programme. Starting in 2016, the programme's goal is to annually train 0.5 million people in metropolitan areas. By 2017, it is intended to train one million individuals in rural regions. Additionally, there are services like SHG marketing, training facilities, vendor marketplaces, and long-term shelters for the homeless in

metropolitan areas. The programme's goal is to improve Indians' skill levels in both urban and rural areas to the required level of international standards.

To encourage rural women's engagement in economic activities and raise the standard of living, several development projects are being implemented throughout the rural ecosystem. Thus, empowering rural women is essential to boosting the economy, ensuring food security, reducing poverty, and minimising the effects of climate change in order to achieve the UN Millennium Goals by 2030.

The Major Obstacles:

According to the MasterCard Index of Women Entrepreneurs, just 7 out of every 100 business owners in India are women. Only 20% of firms in the nation are owned by women, according to the Google-Bain analysis, while the World Economic Forum's 2021 report reveals a staggering gender imbalance of 72% in India's labour market. Even if they are driven to succeed and follow their business dreams, women, especially those living in rural regions, often face obstacles along the way. While receiving financial aid has been difficult for some, patriarchal concerns are a problem for others. One of the biggest obstacles facing female entrepreneurs is the temptation to conform to established gender stereotypes. They are frequently urged to abandon business in favour of a simple job that allows them to devote more time to their family and kids.

Another difficulty comprehends government initiatives. While the Indian government has taken steps to help women receive finance to launch their businesses, not all resources and services are equally available to businesses run by women. The number and quality of female entrepreneurs in India are poor as a result. Relevant programmes that encourage women to start businesses give them the chance to expand their businesses or offer financial and technical support to other women entrepreneurs.

It has also been quite difficult for rural women entrepreneurs to obtain digital technology and become digitally literate. In high-income nations, the gender gap in digital adoption is about 6%; in low-income nations, it can reach 82.5%. Only 33% of Indian women (compared to 57% of males) have ever used the internet, according to the National Family Health Survey 2021, and 54% of rural women in India do not have a phone, according to the OECD research. These elements imply that women entrepreneurs in India confront a significant hurdle in terms of technology empowerment. Women company owners encounter greater obstacles, from using banking services to implementing digital transformation tools to improve and optimize their operational effectiveness.

❖ Investing in India's Future Development:

The future of entrepreneurship closely reflects the destiny of the country. We can forecast with confidence that the future of rural women's entrepreneurship in India is

promising given the significance of growing the rural economy, the predicted doubling of farmers' income, and the availability of urban services in rural areas. Specific ecosystem modifications will decide the direction of rural management in the future. According to a recent analysis by the McKinsey Global Institute, only by giving women equal access to the workforce can India's GDP rise by up to 18% by 2025. Technology for good has undoubtedly gained ground recently, and it is thought that connected women with access to technology are essential for a nation's economic development. Half of the world's population is made up of women, who have the capacity to advance, generate opportunities, and establish societies that are resilient economically.

❖ **Government Programmes are Essential for Ambitious Rural Female Businesses.**

While more funding and capacity-building are needed to encourage female entrepreneurs, the first step is to make sure that they can access and take advantage of the extensive support that the federal and state governments already offer. India has launched a variety of government programmes to encourage women-led businesses, particularly those from rural areas, after recognizing women as pillars of change. These programmes are ideally situated to support market-making initiatives that motivate additional financial institutions to package higher-size credit and credit-plus services for female entrepreneurs. Government programmes should likewise be accessible in multiple languages to help women entrepreneurs and to overcome language obstacles to essential information like this.

❖ **Enabling Women Entrepreneurship Owners' Financial Inclusion**

Women's financial inclusion can give them useful resources and information, enhancing their participation in livelihood activities that generate revenue and promoting economic empowerment and social mobility. In order to achieve the Sustainable Development Goal (SDG) on gender equality, which is at the core of the 2030 Agenda for Sustainable Development, financial inclusion can be a significant driver of women's economic empowerment. Financial inclusion, however, cannot be achieved solely by owning a bank account. A more inclusive digital finance system will be very beneficial for MSMEs.

In order to save money, women MSME owners should switch from cash-based to online transactions. Additionally, businesses should be on boarded into e-commerce platforms through training and capacity building. These are only a few examples of key components. Therefore, by improving access to information about programmes and policies, as well as by setting up infrastructure and training centers in communities, women can become familiar with digital tools like wallets, portals, and e-commerce websites.

❖ **Through the Establishment of Resource Centers for Digital Literacy, Rural Women are Encouraged to Become Entrepreneurs.**

To promote the socioeconomic empowerment of women and foster entrepreneurship, a programme to construct technologically equipped resource centers with a focus on aspirational areas will be perfect. Digital tools can be made available to the entire community through resource centers that are outfitted with physical resources, digital assets like PCs, and online resources like subscriptions to educational websites and channels. In addition to obtaining extensive training in digital skills, soft skills, entrepreneurship, and livelihood skills, communities will also be connected to suitable government programmes and e-governance services.

❖ **Public-Private Partnership Approaches are Essential for the Growth of Rural Women's Businesses.**

Finally, the possibility of public-private partnerships can have a significant effect, support the MSME sector, and solve issues of sustainability, efficiency, and inclusion. All interested parties must work together to realize this promise since new technologies offer a significant opportunity to revolutionize agricultural systems. Public-private partnerships (PPPs) will be extremely important in this situation. Since the budget's announcement of using PPPs to provide high-tech services in agriculture, there have been essential to start this initiative in mission mode. Through dialogues and evidence-based learning from pilot projects, national and state governments may create the PPP framework and improve communication with the private stakeholder ecosystem. These partnerships aim to improve the ecosystem for female entrepreneurs and make technology more accessible to people in the last mile.

Conclusion:

Rural Women Entrepreneurship has been recognized as one of the important source of socio-economic growth and development. Rural women entrepreneurship is significant to empower rural women and also improving the overall standard of living. Women entrepreneurs have a tremendous opportunity to contribute significantly to a rising economy like India that is utilising a technology-driven environment and the effects of globalisation. In India, there are projected to be 30 million women-owned MSMEs by 2030, creating close to 150 million jobs. Rural women's business is a crucial tool for rural development in the current digital age. Therefore, it is crucial to invest in rural women in order to reduce the digital divide, provide them with social safety and agricultural information, and assist with their unpaid care and household duties. These rural women have tremendous potential, and if we can tap into it, they will be fantastic at leading social companies that promote sustainable development.

DIGITAL INDIA AND INDUSTRY 4.0

Dr. Mangayarkarasi, M.Com., M.Phil., Ph.D., 2013

Assistant Professor, Department of Commerce,
The American College, Madurai

S. Sneha, M.Com

Department of Commerce, The American College, Madurai

Abstract:

Industry 4.0 is the most recent disruptive automation concept, led by Cyber-Physical Systems (CPS). It includes cutting-edge ICT tools and technologies such as autonomous robotics, business analytics, Industrial Internet of Things (IIoT), simulation, cloud computing, cyber security, additive manufacturing, horizontal & vertical system integration, Virtual Reality (VR), and Augmented Reality (AR). Complementary to Industry 4.0 is the integration of disruptive and game-changing technologies in the form of the SMAC - Social, Mobile, Analytics, and Cloud stack, which promises to be the next wave in enterprise computing. Industry 4.0 has realized the manufacturer's dream of a "smart factory." Its transformational power comes from marrying advanced production and operations techniques with digital technologies to create connected enterprises that employ data to generate intelligent activities in the physical world. Cyber-physical systems monitor physical processes, construct a virtual duplicate of the physical world, and make decentralised decisions within these modularly built smart factories. Surprisingly, these systems are powered not by petrol, oil, or electricity, but by 'data' and the ability to leverage and mine that data through machine learning and artificial intelligence. Manufacturing and production become adaptive, agile, autonomous, automated, collaborative, coordinated, connected, decentralized, fast, flexible, and intelligent resulting in greater operational efficiencies and lesser costs for enterprises. Over Things (IoT), i.e., physical asset connectivity, CPS communicates and cooperates with each other and with humans in real-time, both internal and cross-organizational services are offered and utilised by value chain players. CPS is made up of collaborative computational elements that govern physical objects, and their processes are continuously monitored, coordinated, regulated, and integrated. A fully connected and retooled supply chain, for example, may rearrange itself in response to any new data point. If a weather delay ties up a shipment, a connected system can proactively adjust and modify manufacturing priorities bringing about perfect alignment between supply chain planning and execution. The origins These manufacturing technologies, together known as Industry 4.0, are the result of renowned German engineering. The German government, as well as leading industrial powerhouses such as Robert Bosch and Siemens, announced the main concepts and recommendations to be embraced by industry globally at the Hannover exhibition. German manufacturing powerhouse. Siemens led by implementing an Industry 4.0 solution in medical engineering. Siemens can now generate an implant in 3 to 4 hours thanks to new software and guiding technologies. Predix, the Industrial Internet Operating System (OS), is enabling digital enterprise organisations that drive the global economy.

Keywords: Inclusive growth, digitalization, challenges faced on digital india and industry

Introduction:

The term 'Industry 4.0' was firstly coined in 2011 at the Hanover Trade Fair in Germany to showcase the competitive strategy model of the European Union governments and industries in relation to other international markets. Since this point in time Industry, 4.0 is a point of discussion among industrialists, researchers, technical experts, and many others. Now, in the era of industrial digitalization, companies are proactively investing in tools and technologies that allow their manufacturing and production processes, machineries, human resources, and even the product itself, to be integrated into a single integrated network for data analytics, evaluation of company growth, and efficient performance. Essentially, the industrial revolution means far more than technological improvements in reality. The word "revolution" refers to an abrupt and drastic changes in operations and management. 14.0 is also going to transform into whole industrial scenario. In order to remain effective and relevant in a global environment, manufacturers, and producers need to constantly update and upgrade their production system technology and accommodate the changing taste of consumers. We can also find that Network readiness index, India lags much behind Developed nations and few developing nations as well. This is the area where government needs to work upon. Tech-oriented strategy, good Industrial policy, and infrastructure development are highly expected from the government end. The purpose of this study is to explore the meaning and components of 14.0 in industrial production. This paper also presents a detailed literature review to explain the components of the fourth industrial revolution. Initiatives and the role of the Indian government have also been discussed in the paper.

SME Sector in India:

Micro, Small, and Medium Enterprises (MSME) sector has emerged as a vibrant sector of the Indian economy over the last five decades. MSMEs contribute more than 29% to the GDP and are responsible for 50% of the country's total exports. It is accountable for one-third of India's manufacturing output MSMEs serve as ancillary units to large enterprises, and this sector contributes significantly to the country's socioeconomic development. The MSME segment includes various verticals and sectors, including services, and the recent governmental classification scheme for MSME has also widened the net as also provided larger benefits accrued to the MSME. As per the MSME ministry's annual report of 2021-2022, there were 65 lakhs+ MSMEs registered in the Udyam portal at the beginning of 2021, but the actual number is in the order of 10 times that number in sectors including manufacturing, services, and trades. 99% are micro, with 0.52% small and 0.1% medium. The number of jobs in the MSME sector is estimated to be 15+ crores.

Over a period of time, through MSME-friendly policies and initiatives, it is envisaged that MSME will contribute 50% of the GDP and 75% of exports of the country.

Role of industry 4.0;

Transformation of traditional manufacturing and production practices due to emerging Industry 4.0 technologies allows substantial improvements in business operations, processes, productivity, quality, and customer support that is otherwise difficult to achieve. It establishes a level playing field for all sizes and varieties of industries. Recent achievements in a few sectors suggest that the advantages of such change would outweigh those India has experienced via decades of committed and persistent revolution in the fields of communication and highway infrastructure. The significance and accomplishments of national initiatives like the Centre for Development of Telematics (C-DOT), the Golden Quadrilateral, and the introduction of Digital Payments transactions at key moments in time to time are now evident. One such ambitious programme is "Make In India," which asks for a "nationally significant transformation" to make India future-ready.

A "manufacturing & production cloud," the industrial sector's "cloud" counterpart of IT, is required for the Make-In-India project to be a smashing success. Although there are no volume, target, or budget commitments for IT, the resources are available as needed at a reasonable cost. This promotes innovation in the field of software development and related applications To support the Indian industrial system and advance manufacturing and production, a similar ecosystem is needed. Small enterprises and startups can create and adopt innovation thanks to it. Large-scale implementation of the Industry 4.0 framework can lead to the "manufacturing & production cloud," which is driven by seamless communication and collaboration across the systems and stakeholders enterprises and Micro, Small, and Medium Enterprises(MSMEs).

Recommendations for MSME Clusters towards Adoption of Industry 4.0

This article provides recommendations to MSMEs for adopting Industry 4.0 technologies . Given the substantial digital divide between large industry and MSME, this is extremely pertinent. Most of the MSMEs fall into the group of low digitalization and low data-driven companies. This is a trend not only in India but even in developed economies. The adoption of Industry 4.0 technologies provides immense benefits to industries and MSMEs and gives them opportunities to transform their supply chains into value chains. No doubt, at the initial stages, some of these technologies may be out of reach for individual MSMEs due to the cost and the fact that these MSMEs may also face liquidity issues. MSMEs may have to look for alternatives for short-term financing that can provide assistance for fixing credit issues and enhancing financial performance. The scarcity of loan-granting institutions other than nationalized banks poses another challenge. However, a cluster-based approach towards procurement and adoption of Industry 4.0 technologies can prove to be beneficial to them if these procurements are done as an MSME cluster. Total Cost of Ownership (TCO) will reduce for these MSMEs. An added advantage is that

most of the MSME clusters are well-organized. To cite an example, CODISSIA, Coimbatore District Small Industries Association, boasts more than 2000 members in 43 sectors. A world-class trade fair complex as an industrial and exhibition venue and incubation center for defense are some of the achievements of this cluster. Likewise, there are many similar success stories pan-India. Another cluster representing the pump, foundry, and motor sectors in the Coimbatore region is the Southern India Engineering Manufacturers' Association (SIEMA) has 300 members. In terms of software packages in AI and/or IoT as part of Industry 4.0, these packages can be sold as a cloud-based solution to the MSME. This would reduce the TCO as the MSME need not procure expensive servers, hardware, and/or infrastructure to host the software package. Exploring open-source packages and menu-based approaches is also an option. In other words, procure the required modules from the software package as per need and top up as required. However, these targeted digital improvements need to be focused and dovetailed into the strategic roadmap of the MSME. MSMEs can incrementally procure Industry 4.0 technologies. They can start small by starting with apps, sensors & IoT and then move up the value chain to high-end robotics, AI, and the like. This results in the optimization of resources. Pilot projects can be pursued as proof-of-concept and implemented in localized value chains.

Considering the rapid growth of digital technologies, regular upskilling, and training programs for employees in MSMEs are absolutely necessary. They would make a fantastic team due to their topic understanding, analytical know-how, and link experience.

In order for employees at all levels to support the adoption of Industry 4.0, awareness must spread across the organisation from top to bottom. Top management would be encouraged to make the necessary investments in the purchase of other digital technologies as a result of this awareness. Additionally, it is necessary to create and distribute to all stakeholders data management and related policies.

MSMEs could use readily available Industry 4.0 capabilities in the e-commerce and logistics sectors to first target external value chains. MSMEs engaged in batch and continuous manufacturing, as opposed to those engaged in process and discrete manufacturing, will benefit from Industry 4.0 solutions first.

This is as opposed to process manufacturing, which is dependent on a process formula, because they rely on a predefined Bill of Material (BOM) and well defined labour processes in the form of assembly lines. Undoubtedly, Industry 4.0-enabled MSMEs have a huge opportunity for growth and success. The time is here for MSMEs to adopt Industry 4.0 in order to significantly boost their productivity. This will significantly improve customer satisfaction by digitally optimising business procedures and support systems, implementing automation, and utilising big data. Using these suggestions as a guide, the next step would be to create a framework for the variables that influence Industry 4.0 adoption in MSMEs and empirically measure their impact on organisational performance.

Digital Transformation

The time is here for MSMEs to adopt Industry 4.0 in order to significantly boost their productivity. This will significantly improve customer satisfaction by digitally optimising business procedures and support systems, implementing automation, and utilising big data. Using these suggestions as a guide, the next step would be to create a framework for the variables that influence Industry 4.0 adoption in MSMEs and empirically measure their impact on organisational performance. Challenges faced includes working capital, trained manpower resources, and lack of awareness or having a comprehensive ICT strategy.

Challenges faced

MSMEs face challenges when it comes to adopting new technologies such as Industry 4.0. They lack awareness regarding Industry 4.0 and its benefits. They consider such technologies disruptive and have the potential to demolish their existing system. Industry 4.0 believes in improving the existing system. Scientific literature provides evidence of sensors and WiFi networks being integrated with old machines like lathes and mills to improve their performance. MSMEs will need to make major financial investments to adopt Industry 4.0. Investing in the right set of technologies will need experts and consultants as well. For any new technology an organisation needs a supportive workforce and a positive organisational culture to be embraced.

Review of literature:

Hidayatno A, Destyanto AR, Hulu CA. Industry 4.0 technology implementation impact to industrial sustainable energy in Indonesia: a model conceptualization.

Kagermann H, Wahlster W, Helbig J. Umsetzungsempfehlungen für das Zukunftsprojekt Industrie. Ensure Germany's future as a destination for production and provide implementation advice for future project industry 4.0,

Nagasawa T, Pillay C, Beier G, Fritzsche K, Pougel F, Takama T, et al. Accelerating clean energy through industry 4.0: manufacturing the next revolution; 2017. Annual Meeting of the Deans of Technical Universities in Romania, U.P.B.,

Tom Savu, "From the Industrial Organisation to the Digital Organisation - Opportunities for Development and Adaptation of Faculties," 2016.

Objectives :

To understand the importance of employment generation and development of industrial economy in the context of industry 4.0.

To review the challenges faced by MSME (Micro, Small & Medium Enterprise) in adopting industry 4.0 technologies.

Scope:

Digital India and Industry 4.0 is vast and transformative. Digital India aims to digitally empower citizens, provide digital infrastructure, and promote digital literacy and governance. Industry 4.0, on the other hand, focuses on the integration of digital technologies into manufacturing and industrial processes, enabling automation, data exchange, and smart systems. Both initiatives have the potential to revolutionize various sectors, enhance efficiency, drive innovation, and create new opportunities for economic growth.

Needs:

Digital India and Industry 4.0 are essential for various reasons. Digital India aims to bridge the digital divide, empower citizens, and enhance access to government services through digital means. It promotes digital literacy and enables the development of digital infrastructure, which is crucial in today's digital age. Industry 4.0, on the other hand, revolutionizes industries by integrating digital technologies, automation, and data exchange, leading to increased productivity, efficiency, and innovation. These initiatives are vital for economic growth, job creation, and overall societal development.

Conclusion:

In conclusion, Digital India and Industry 4.0 are crucial for our nation's progress and development. Digital India empowers citizens through digital technologies, while Industry 4.0 revolutionizes industries through automation and data exchange. These initiatives drive economic growth, enhance efficiency, and create new opportunities. By embracing digital transformation and advanced technologies, we can unlock our nation's full potential and stay competitive globally. Let's continue to embrace the digital revolution and shape a brighter future for all.

EXPLORING THE DYNAMICS OF BRAND LOYALTY: INSIGHTS, INFLUENCES, AND IMPLICATIONS

Mrs. Mareena Abraham

*Assistant Professor, Department of Commerce (CA),
Sona College of Arts and Science, Salem*

Priyanka.B

*2nd Year, Department of Commerce (CA),
Sona College of Arts and Science, Salem.*

Abstract

Brand loyalty is a crucial element in contemporary marketing strategies, with significant implications for businesses in an ever-evolving marketplace. This abstract provides a glimpse into an in-depth exploration of the multifaceted dynamics of brand loyalty, shedding light on the insights gained, the influential factors at play, and the profound implications for both brands and consumers. This research delves into the underlying psychological and behavioral mechanisms that drive brand loyalty, considering the role of factors such as customer satisfaction, trust, emotional connection, and brand identity. It also examines the impact of modern marketing channels, including social media and e-commerce, on shaping brand loyalty dynamics. Furthermore, the study investigates how brand loyalty extends beyond mere consumer preferences, affecting brand advocacy, word-of-mouth marketing, and customer lifetime value. The research highlights the significance of understanding these dynamics in building enduring customer-brand relationships. Ultimately, the implications of this exploration extend to brand managers, marketers, and businesses aiming to cultivate enduring customer relationships in an increasingly competitive and dynamic market landscape. Understanding the intricacies of brand loyalty is essential for creating strategies that not only retain loyal customers but also attract new ones, ensuring long-term success in the marketplace.

Keyword: Brand Loyalty, Consumer Satisfaction, Marketing Strategies, Contemporary Market Place, Brand Advocacy.

Introduction:

In marketing brand loyalty describes a consumer's positive feeling towards a brand, and their dedication to purchasing the brand's products or services repeatedly, regardless of deficiencies, a competitor's actions or changes in the environment. It can also be demonstrated with other behaviors such as positive word of mouth advocacy. Corporate brand loyalty is buy Top of Form where an individual buys products from the same manufacturer repeatedly and without wavering rather than from other suppliers. Loyalty implies dedication and should not be confused with habit with its less than emotional engagement and commitment. Businesses whose financial and ethical values rest in large part on their brand loyalty are said to use the loyalty business models. Brand loyalty is the

tendency of consumers to continuously purchase one brand's products over another. Brand loyalty is a conscious decision of a consumer to continue buying the same brand.

For this, repeat purchase must be accompanied by an underlying positive attitude towards the brand'. Brand loyalty occurs when a customer chooses to repeatedly purchase a product produced by the same company instead of a substitute product produced by a competitor. Brand loyalty is often based upon perception. A consumer will consistently purchase the same product because she perceives it as being the superior product among the choices available. You should note that brand loyalty usually relates to a product, not a company. Brand loyalty is important for several reasons. First, it reduces the cost of production because the sales volume is higher. Second, companies with brand-loyal customers don't have to spend as much money on marketing the product, which will permit the company to either retain more earnings or to invest resources elsewhere. Third, companies may use premium pricing that will increase profit margins. Finally, loyal customers tend to recommend products that they like. Businesses have to exert significant effort to facilitate brand loyalty. You need to convince potential customers that your product has a significant advantage over other product. Businesses also will attempt to leverage brand loyalty developed for a product to other products offered by the company. The hope is to create brand loyalty for as many products as possible.

There are several benefits of brand loyalty, which works in the favor of both the companies and customers. Some of them are:

- ❖ Brand loyalty gives an edge over competitors by a higher brand recall
- ❖ Creates positive brand value and word of mouth helps in positive marketing
- ❖ Customers are willing to pay a premium also for their brand
- ❖ Saves costs on customer retention and helps new customer onboard.
- ❖ More products under the same brand get popular with loyal customers.

Thus, brand loyalty is an important and integral part of brand management and marketing for any business.

Review of Literature:

Loyalty is generally recognized as a brand asset (Aaker & McLoughlin, 2010) that firms invest in to protect and develop. Hence, marketers need to understand factors that are related to higher or lower levels of brand loyalty (Trinh & Dawes, 2020). Achieving customer loyalty is a central goal for most firms (Ngobo, 2017) due to its contribution to their profitability (Reinartz et al., 2005) and long-term survival (Agustin & Singh, 2005). A brand is a trust mark for all intangible credibility and is a symbol of guarantee for a particular brand product or activity (Bart et al., 2005). Brand loyalty, defined as an amicable attitude and commitment toward a particular brand, builds around consumer satisfaction

and leads to continued maintenance and purchasing of that brand (Ballantyne et al., 2006). Chen et al. (2016) analysed which factors affect consumers' repurchasing intentions and identified brand related qualities (experience with the brand, service quality, trust, satisfaction, and commitment) as influencers. Price, function, appearance, social influence, and brand perception were set as external variables that affect brand-related qualities and the analysis revealed that some consumers made their purchasing decisions because they were convinced by other people (Kim et al., 2020). When consumers were satisfied with the quality of the service of a certain brand, they encouraged people around them to make similar purchasing decisions through word of mouth (Azad & Safaei, 2012). Batra et al. (2012) found strong relationships between brand love and brand loyalty, and Bergkvist & Bech-Larsen (2010) demonstrated robust support for this relationship across a number of contexts, including painkillers, food, personal care items, and electronics. Yoshida et al. (2018) found that brand-related social media engagement and team identification, a type of consumer-brand identification, simultaneously affected behavioral brand loyalty.

Brand Loyalty:

Brand loyalty refers to a consumer's commitment and attachment to a particular brand or product. It's the result of a positive and consistent customer experience with that brand over time. Brand loyalty goes beyond mere repeat purchases; it reflects a deep emotional connection and preference for a specific brand over competitors. Brand loyalty often involves a strong emotional connection between the consumer and the brand. This connection can be built through experiences, trust, and shared values. Brands that consistently deliver quality products or services and meet or exceed customer expectations tend to foster loyalty. Customers come to rely on the brand for a certain level of quality and reliability. Trust is a fundamental aspect of brand loyalty. Customers need to trust that the brand will consistently deliver on its promises, whether it's about product quality, customer service, or other aspects of the brand's offering.

Importance of Brand Loyalty:

Brand loyalty is a consumer behaviour which a customer develops over a period of time by repeated use of a particular brand, product or service. Customers who find their needs fulfilled and find the product having good quality, and high value proposition tend to become loyal towards a particular brand. This positive behaviour towards a product or service is useful for companies as they become positive brand advocates and help spread a positive word of mouth about the brand. Consumers who develop a strong brand loyalty tend to become regular customers and also help their friends & family identify the benefits of the products & services that they have been benefitted by. Such is the importance for companies that they have brand loyalty management to ensure that customers get the

correct value proposition offered. Good product quality, brand awareness and positive brand image contributes to building brand loyalty.

Statement of the Problem:

Many companies are aiming for higher satisfaction because customers who are just satisfied, still find it easy to switch when better offer comes along. Those who are highly satisfied are much less ready to switch. High satisfaction creates an emotional bind with the brand not just a rational preference. The result is highly customer loyalty. Hence an attempt has been made to identify the customer attitude and satisfaction on Amul Milk Products.

Objectives of the Study:

- ❖ To study consumer brand loyalty concept from existing literature.
- ❖ To investigate the overall contribution of brand loyalty for buying behaviour.
- ❖ To know the customer buying behavior and to identify the level of customer satisfaction.

Scope of the Study:

This study is done to provide an approach for analyzing market structure in the terms of brand loyalty and brand awareness for the purchase of a product. This study mainly focuses on consumer minds for buying a product on the bases of product category and associated with key consumer benefits. More over the study analyzed the key factors affecting the minds of consumer towards the purchase of a product to create a good position in industry.

Research Methodology:

Research methodology is the specific procedures or techniques used to identify, select, process analyses information about the topic. In a research paper, the methodology section allows the reader to critically evaluate a study's overall validity and reliability. The validity of any research depends on the systematic method of collection of data and analysis of the same in an appropriate manner. The study is descriptive research design refers to the framework of market research methods and techniques that are chosen by a researcher. The design that is chosen by the researchers allows them to utilize the methods that are suitable for the study and set up their studies successfully in the future as well. The primary data has been collected through structured and pre tested questionnaire. Selection of sample units for primary data has been collected from 100 respondents. The primary data has been collected from the customers who consume Amul products. Sampling technique used in this study is "Convenient Sampling". In this regard the below table show the factors that

affect the brand loyalty of Amul brand such the price of product, taste, availability of the products across Salem city, the brand name, ingredients purity and quality of also influenced the consumers to buy the product on regular bases, this shows brand loyalty of Amul Products

Factors which Influence to Consume Amul Products

Factors	No. of Respondents	Percentage
Price	2	2
Taste	38	38
Availability	6	6
Brand Name	6	6
Purity	22	28
Quality	14	14

Source: Primary Data

The above table reveals that 2% of the respondents said that price is a factor that influences them to buy Amul products, whereas 38% of the respondents said that taste is a factor that influences them to buy Amul products, 6% of the respondent said that availability is a factor that influences them to buy Amul products, 6% of the respondents said that brand name is a factor that influences them to buy Amul products , 22% of the respondents said that purity is a factor that influences them to buy Amul products, 14% of the respondents said that quality is factor that influences them to buy Amul products.

So, the majority 38% of the respondents said that taste is the important factor for consumption of Amul products. Moreover the other important aspect of study was that milk and milk product purchase decisions are more decided by women rather than male, because she acts as a invigilator, execute her decision and influence the same to the purchase while ascertaining the quality, freshness and price. Hence, Amul co-operative society has to concentrate more on the women and men suggestions for designing the marketing strategy, because women's role in the house is dominant, even in the various decisions. Income of the people decides the purchasing power. The high income prefers to purchase product with the quality, freshness, thickness, etc. and vice versa. So Amul has to concentrate also on low income segment to capture market and position themselves in the minds of the customer with required quality and quality milk and milk products. Quality and Brand Image plays a dominant role. Milk and milk products move in the market due to its quality and brand. Therefore it should maintain the same Since Amul is having loyal customer it should concentrate more on this factor through various potential programs such as campaign, premium packs, offers etc., this helps to increase the loyalty towards the Amul products. Amul has a strong brand value in the market and it increases rapidly through its advertisement. Amul focus on advertising, quality, and customer service which makes it a chief brand in dairy industry. The loyal customers are attached with the value service of Amul products.

Conclusion:

In a global marketplace defined by choices and shifting consumer preferences, understanding the dynamics of brand loyalty is essential for businesses seeking to thrive. This presentation offers comprehensive insights, practical strategies, and thought-provoking perspectives on brand loyalty, emphasizing its significance as a cornerstone of contemporary marketing. By exploring the intricate interplay of factors and trends, businesses can better navigate the dynamic landscape of brand loyalty, positioning them for sustained success. In the present paper, we presented several approaches, were the society of Amul products can use to improve the enjoyment of people experience from their products or to facilitate the formation of personal memories connected to the products. These approaches exemplify strategies that can be instrumental in increasing the degree of attachment that people experience towards the products they use and own. Because strengthening the consumer-product bond may contribute to increasing product lifetime, we hope these design strategies will eventually contribute to the development of more sustainable consumption patterns.

Abstract

Micro, Small & Medium Enterprise (MSME) sector accounts for 50% of India's exports and employs more than 120 million people. This sector influences the country's development and contributes to achieve the Sustainable Development Goals (SDGs) in three-fold: eradicating poverty, providing goods and services, and facilitating economic resilience. Such a huge sector with broader scope and potential is facing with serious challenges. This paper attempts to explain the various challenges faced by MSME like finance, infrastructure, and lack of formalisation. The paper also presents the recommendations to overcome the serious challenges faced by MSME sector. The recommendations being improved access to credit and liquidity, encouraging women entrepreneurs, and Fintech solution.

Keywords: *MSME, SDG, Challenges, and Recommendations*

Introduction

Micro, Small & Medium Enterprise (MSME) sector includes more than 63 million enterprises in India, and contributes to close to 30% of the nation's GDP. The sector accounts for 50% of India's exports, and employs more than 120 million people. With such a broad scope and potential, the industry unquestionably has a huge impact on the social fabric of the nation. Sustainable Development Goals (SDGs), or Global goals are the collection of 17 objectives designed for improvement. MSMEs contribute to the attainment of SDGs in three fold contexts, viz. eradicating poverty, providing goods and services, and facilitating economic resilience. Over the past few decades, the social fabric of India has undergone a series of transformations. In the 1990s, the Indian economy was liberalized, and the market opened up, increasing employment opportunities and living standards. A growing financial access led to an increase in social mobility. Certain sections of society, however, have lagged behind for a variety of reasons, from social barriers to a lack of education and funding. MSMEs make up one of these sections, which form the economy's foundation.

Contribution of MSMEs in Sustainable Development Goals

A unifying framework for peace and prosperity for people and the planet, both now and in the future, is provided by the 2030 Agenda for Sustainable Development, which was accepted by all United Nations Member States in 2015. The 17 Sustainable Development

Goals (SDGs), which are an urgent call to action for all nations—developed and developing—in a global partnership, are at the center of it. They understand that combating poverty and other forms of deprivation requires policies that enhance health and education, lessen inequality, and promote economic growth, combat climate change, and fight to protect our oceans and forests.

MSMEs contribute to the attainment of SDGs in three fold contexts, viz. eradicating poverty, providing goods and services, and facilitating economic resilience. Let us discuss this briefly.

Eradicating poverty:

A sizable underprivileged population can benefit economically and socioeconomically from MSMEs. In rural India, inclusive growth is important for reducing poverty and promoting rural development. Economic growth that reduces poverty and opens up employment opportunities is referred to as inclusive growth. MSME ranks second in India behind agriculture as an employer.

Providing goods and services:

MSMEs are the main provider of products and services to villages, which make up a bigger portion of society. The bigger unreached population of the community in rural, which is not even covered by huge corporations, is connected through MSME. Thus, by making goods and services available to the underprivileged group, inclusive growth is ensured.

Facilitating economic resilience:

MSMEs stimulate economic growth and generate significant job possibilities in both urban and rural areas. This supports socioeconomic empowerment and regional harmony. MSMEs help India's economy remain resilient by spreading out risks and decreasing reliance on a small number of major businesses or industries. Their existence across a range of industries and regions contributes to stability, particularly in trying economic times. MSMEs facilitate a more inclusive and sustainable economic growth model and contribute to balanced regional development.

Challenges Faced by MSMEs

Despite being one of the foundations of the Indian economy, MSMEs are still overwhelmingly found in the unorganized sector. Without formalization, it is not only challenging to measure the employment and income metrics for these enterprises, but they also fail to qualify for government welfare programs and subsidies. Some of the serious challenges faced by MSMEs are discussed here under:

Finance:

The Rs 20 lakh crores credit shortfall is the biggest problem facing MSMEs. In order to meet their credit demands, many micro-entrepreneurs are consequently compelled to turn to unofficial sources including family, friends, and local moneylenders, which results in higher interest rates and increased responsibility. 27% of business owners said they had trouble making loan payments on schedule. Enhancing MSMEs' access to funding is essential to their continued viability and growth. The sector also faces a huge credit deficit, which the World Bank estimates to be worth over \$400 billion. Small firms are significantly hindered by this gap, and having access to formal financing can greatly boost their capacity to grow, provide more income and jobs, and support local economies.

Infrastructure:

Because of the lack of infrastructure, MSMEs have higher operating expenses and are less competitive. Another issue mentioned by MSMEs is the lack of skilled labor and raw resources. According to 57% of business owners polled by the Bhartiya Yuva Shakti Trust, supply chain problems and rising raw material costs because of higher transportation expenses caused business disruptions.

Lack of formalisation:

MSMEs are widely dispersed throughout India, but the market is still mostly unorganized due to a lack of timely and affordable funding, a tiny talent pool, and weak supplier/dealer negotiating leverage. According to a survey, the majority of MSMEs operate in the unorganized sector and are not registered. The Udham portal for MSME registration only lists 79,84,801 enterprises (or roughly 12.4% of all businesses), despite the Ministry of MSMEs' projection that there were 633.9 lakh MSMEs in India as of March 30, 2022. In fact, only 1.1 crore MSMEs in India are officially registered with the Goods and Services Tax, and many of them lack the necessary financial and business documents. The majority of these unorganized businesses are owner-managed, fall into the micro category, and employ less than five people. For MSMEs, the lack of formalization causes obstacles to technological advancement, economic growth, and the acquisition of labour and raw supplies.

Recommendations to MSMEs

Initiatives should be triggered by the Government of India, to gear up the MSME sector. The following steps need to be taken:

Improved access to credit and liquidity:

Since MSMEs are the development engine for the Indian economy, the government would need to relax capital requirements in order to boost business. It entails enhancing liquidity, advancing financial inclusion, and providing accessible credit at reasonable rates to encourage growth.

Women at the wheel:

Women MSME business owners play a significant role in fostering long-term socioeconomic growth and raising the standard of life for families and communities. Making a genuine change in the lives of millions of Indians depends on providing them with access to formal capital and simplifying the process for them to receive it. Only 20.4% of Indian MSMEs are owned by women. To support female entrepreneurs, it is essential to extend the Sudra Scheme, Stand Up India, and other credit guarantee programs.

Fintech solution:

The 'missing middle' issue in MSME finance can be mostly linked to two things: the risk aversion of traditional lenders like banks, accessibility problems with regard to documentation, linguistic barriers, and a lack of adequate support networks for last-mile borrowers. NBFCs, especially those that have embraced the fintech paradigm, are the modern answer to these problems.

They frequently specialize in serving certain customer groups that standard lenders avoid. Many of them now evaluate the creditworthiness of MSME borrowers using a more technologically advanced method, taking into account elements like company potential and order pipeline.

The efforts of NBFCs to access underserved markets and provide sustainable effect for MSMEs are also aided by the tech change that has been taking place across the country over the past few years. Giving small company owners the tools they need to grow, develop, and maintain their enterprises significantly impacts their and their families' social mobility. Additionally, it causes improvements for the entire community. Giving small company owners the tools they need to grow, develop, and maintain their enterprises significantly impacts their and their families' social mobility. Additionally, it causes improvements for the entire community.

Conclusion

Unlocking MSME growth is essential if India is to accomplish its goal of having a \$5 trillion economy. It will need regulations and organizational frameworks that make doing business easier. MSMEs are waiting for initiatives to be unveiled that would promote their growth, therefore all eyes are on the Finance Minister and the Union Budget 2023.

Abstract

The Micro, Small, and Medium Enterprises (MSME) sector of the Indian economy has grown to be a thriving and active one. MSMEs are essential in creating numerous job possibilities at prices that are cheaper than those charged by major enterprises. MSMEs serve as auxiliary units to major businesses and make a significant contribution to the socioeconomic growth of the nation. MSMEs have made a great contribution to the Indian economy in terms of creating jobs, reducing regional inequities, promoting equitable economic growth, and increasing the nation's export potential. Since the global economy is expanding more slowly, more attention must be placed on boosting the MSME sector in order to increase job prospects, particularly for young people. This industry has shown extraordinary success in terms of growth in number, amount of investment, size of output, and total contribution to national GDP despite significant infrastructure shortcomings and obstacles such flow of institutional credit and inadequate market links.

Keywords: *Micro, small & medium enterprises (MSME), Export, Socio-Economic Development, Employment.*

Introduction

Micro, small, and medium-sized businesses play a crucial role in the economy. For many emerging nations, including India, the Micro, Small and Medium-Sized Enterprises (MSMEs) have frequently been referred to as the "engine of growth." In light of a favorable political and economic environment, India is predicted to become one of the top economies in the world during the following ten years. To achieve the national imperatives of financial inclusion and the creation of large levels of employment in urban and rural parts of the nation, the growth of this segment is very essential. With both local and international corporations investing in the "Make in India" program, MSME may be the backbone for the current and future high growth enterprises and have a huge influence on the region. A big potential is "Make in India with zero defect and zero effect." MSMEs flourish throughout the agricultural, manufacturing, and service sectors since each of these industries will continue to be crucial to both the expansion of the general GDP and the creation of new jobs. This socioeconomic revolution will be accelerated by the MSME sector.

Objectives of the Study

- ❖ To identify the manufacturing and service sectors investment levels in plant and machinery equipments.
- ❖ To analyse the different government schemes for MSMEs development.

Definitions of Micro, Small & Medium Enterprises

The Micro, Small and Medium Enterprises (MSME) are divided into two Classes in compliance with the regulations of the Micro, Small & Medium Enterprises Development (MSMED) Act, 2006.

Manufacturing Enterprises:

Businesses that produce or manufacture items for any of the industries listed in the first schedule of the Industries (Development and Regulation) Act of 1951. Investment in plant and machinery is used to define manufacturing enterprises.

Service Enterprises:

The businesses that are involved in rendering services and are described in terms of equipment investment. The maximum amount that can be invested in plant, machinery, and equipment by manufacturing and service businesses is as follows:

Manufacturing Sector

Enterprises	Investment in Plant & Machinery
Micro Enterprises	Does not exceed twenty five lakh rupees.
Small Enterprises	More than twenty five lakh rupees but does not exceed five crore rupees.
Medium Enterprises	More than five crore rupees but does not exceed ten crore rupees.

Service Sector

Enterprises	Investment in Equipments
Micro Enterprises	Does not exceed ten lakh rupees.
Small Enterprises	More than ten lakh rupees but does not exceed two crore rupees
Medium Enterprises	More than two crore rupees but does not exceed five crore rupees.

Significance of MSMEs:

The importance of the MSMEs sector is evident from the fact that it is India's second-largest employer, behind agriculture. Currently, India has up to 56 million such businesses operating across a variety of industries, employing close to 124 million people. Nearly 14% of these are women-owned businesses, and nearly 60% of them are situated in rural regions. In all, the MSME sector contributes 8% of India's GDP and 45% of its exports of goods. The MSME sector is said to as the country's development engine as a result of this.

MSMEs Contribution in Rural Development

The growth of small and medium manufacturing businesses is largely responsible for the development of the rural sector. Rural residents face a number of difficulties, including unemployment, low income, a low standard of life, inadequate educational opportunities, and a lack of markets for their products. The potential of the society to generate revenue declines because it has a variety of resources as raw materials but lacks the capital to transform them into completed items. Young people with education and talent moved to another district since there were no work opportunities there, despite the fact that they had plenty of raw materials, water resources, talent, and knowledge. However, MSME face several difficulties that make them ineffective and inefficient. Some MSMEs also bemoan the lengthy banking processes and challenges in obtaining bank loans. Others also voiced their displeasure.

The majority of MSMEs also lack formal training in their fields of endeavor. High information asymmetry caused by MSMEs' lack of accounting records and inadequate financial statements, which makes it difficult for creditors and investors to access the credit worthiness of potential MSME proposals, is foremost among these issues, along with vulnerability to market fluctuations and high fold-up rates. Additionally, it is the cause of the ill units and MSME manufacturing sustainability problems. Additionally, as a result, there can be a significant funding blockage in the different fixed (capital) assets. These issues still exist in the MSME manufacturing sector, particularly rural MSMEs. In the context of “Make in India” initiative by central government, it is worthwhile to see the role.”

Government Schemes for MSMEs Development:

Prime Minister's Employment Generation Programme (PMEGP):

In 2008-09, the Prime Minister's Rozgar Yojana (PMRY) and Rural Employment Generation Programme (REGP) were combined to create the credit-linked subsidy program known as the Prime Minister's Employment Generation Programme (PMEGP). The program's goal is to provide self-employment options for traditional craftspeople and jobless young people in both rural and urban regions by assisting them in starting small

businesses in the non-farm sector. According to the assessment study report, the program has been successful in creating long-term employment. It has a wide audience and has nearly all social groups in its crosshairs. Margin Money (MM) Subsidy of Rs. 12074.04 crore has been used to establish a total of 5.45 lakh units since its establishment up to 2018-19, creating job possibilities for 45.22 lakh people.

Scheme for Promoting Innovation, Rural Industry & Entrepreneurship (ASPIRE) :

In March 2015, the Ministry of Micro, Small, and Medium Enterprises unveiled the ASPIRE program. It was planned to establish 20 technology business incubators (TBIs) and 100 livelihood business incubators (LBIs). 39 LBIs had started incubation as of March 31st, and 74 LBIs had been authorized as of that date. Over 28000 incubators have finished their incubation, and roughly 25% of them have launched their own businesses or found lucrative jobs. There have been 11 TBIs that have been authorized, and 55 excellent ideas have sprung from them. The Small sectors Development Bank of India (SIDBI) has received an increase in the "Fund of Funds" from Rs. 60 crore to Rs. 310 crore for investment in start-ups in agro-based sectors.

Scheme of Fund for Regeneration of Traditional Industries (SFURTI):

The program attempts to cluster traditional businesses and craftspeople in order to increase their competitiveness and long-term viability. With design changes, better packaging, and infrastructure, it also aids in improving the marketability of the goods produced by micro and small firm clusters. The program was updated in 2014 with a budget of Rs. 149.44 crore for the development of 71 clusters (including coir) that would initially serve 44,500 craftsmen. With a financing commitment of Rs. 140 crore, 72 Detailed Project Reports of clusters have been authorized between 2015 and 2018. These clusters would employ over 60,000 craftsmen and labourers. Out of 72 clusters, 53 have been finished as of 15.10.2019. It has been approved to continue the program with a capital of Rs. 350 crore and establish 100 more clusters in the coir, village industries, and khadi sectors. 110 projects with SFURTI funding of about Rs. 244.18 crore were authorized throughout the 2018-19 and 2019-20 fiscal years (until September 30, 2019), helping 59000 (approximately) craftsmen and laborers.

Market Promotion and Development Assistance (MPDA):

Market Promotion and Development Assistance Scheme (MPDA) has replaced KVIC's Market Development Assistance (MDA) program. In order to create the MPDA plan, several schemes, sub-schemes, and components of other Heads introduced in the 11th Plan—namely, market development assistance, publicity, marketing, and market promotion—were combined. In order to increase the marketing network for items made by

Khadi & Village Industries (VI), a new infrastructure component called the construction of Khadi Plazas/Marketing Complexes has been included. Under the Modified Market Development Assistance (MMDA) program, producing institutions receive financial support equal to 20% of the Prime Cost of Khadi and Polyvastra production, selling institutions receive financial support equal to 10% of the Prime Cost, artisans receive 40% of the funding, and the remaining 30% goes to the best-performing Khadi Institutions chosen using an open scorecard.

Interest Subsidy Eligibility Certificate (ISEC) Scheme:

An essential method of supporting the programs of khadi institutes is the Interest Subsidy Eligibility Certificate (ISEC) Scheme. Under the ISEC Scheme, banks provide loans at a reduced rate of interest in accordance with the needs of the Khadi institutions. Institutions are only required to pay interest of 4%; any interest that banks charge in excess of 4% would be reimbursed to banks by the Indian government through the Khadi and Village Industries Commission.

Solar Charkha Mission:

In Bihar's Nawada District, the hamlet of Khanwa executed a Solar Charkha pilot project in 2016. The Government of India has given consent to establish 50 such Clusters between 2018–19 and 2019–20 based on the success of the pilot project. According to the plan, "Solar Charkha Clusters" will be established, each of which will consist of a central hamlet and several nearby villages within an 8–10 km radius. Additionally, 200 to 2042 beneficiaries, including spinners, weavers, stitchers, and other skilled artisans, will benefit from such a cluster.

Honey Mission:

The "Honey Mission" was started in May 2017 in response to the Hon'ble PM's appeal for "Sweet Kranti" and has the goals of improving farmer and beekeeper income, quantity and quality of honey and hive products, crop productivity through bee pollination, and adopting best beekeeping and trade practices. From the fiscal year 2017–18 through the end of the current fiscal year (October 31, 2019), 11,020 recipients received 1,09,231 Bee boxes, which provided them with direct work.

Skill Upgradation & Mahila Coir Yojana:

Regular training programs, Entrepreneurship Development Programs (EDPs), Workshops, Exposure Tours, Seminars, etc. are organized under the Skill Upgrading program. Under the Mahila Coir Yojana training program, women craftsmen receive training along with a stipend of Rs. 3000 per month. Under the Prime Minister

Employment Generation Programme (PMEGP), skilled women are entitled to apply for financial support for the establishment of coir units with a project cost of up to Rs. 25 lakhs.

Credit Guarantee Scheme for Micro and Small Enterprises (CGTMSE):

For the purpose of executing the Credit Guarantee Fund (Scheme) for Small Industries (CGS), a Trust with the name Credit Guarantee Fund Trust for Small Industries (CGTSI) was established in July 2000. Following the passage of the MSMED Act in 2006, the Trust was renamed Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE) and the Scheme was renamed "Credit Guarantee Fund Scheme for Micro and Small Enterprises (CGS)". To make available, CGS was established collateral and third party guarantee free credit to the Micro and Small Enterprises (MSEs). The guarantee cover available under the scheme is up to 85 percent of the sanctioned amount, for a maximum credit facility of Rs. 200 lakhs.

Micro and Small Enterprises-Cluster Development Programme (MSE-CDP):

As a fundamental strategy for boosting the productivity and competitiveness of Micro and Small Enterprises (MSEs), the government has selected the cluster development method. The plan's objectives are:

1. To solve common problems including the advancement of technology, skills, and quality, market access, access to funding, etc. in order to promote the sustainability and expansion of MSEs.
2. To increase MSEs' ability to work together in a supportive manner by creating self-help groups, consortia, upgrading associations, etc.
3. To build/improve infrastructure facilities in MSE clusters and new/existing industrial zones.
4. To establish Common Facility Centers (for testing, a training facility, a raw material depot, an effluent treatment facility, and other procedures that support manufacturing).
5. Encouraging clusters to adopt sustainable and green production methods and goods through promoting green manufacturing and sustainable manufacturing technologies.

Public Procurement Policy for MSEs:

Every Central Ministry/Department/PSU must establish an annual objective of at least 25% of the total yearly procurement from the items or services produced or supplied by MSEs, according to the Public Procurement Policy for Micro and Small Enterprises (MSEs). The aim must set aside 3% of the total annual Micro and Small Enterprise procurement for purchases from Micro and Small Enterprises run by women. A sub-target of 4% of yearly

purchases is set aside for purchases from MSEs run by SC/ ST business owners. A total of 164 CPSEs reported Rs. 40,343.08 crore in procurement during the FY 2018–19, accounting for 26.31% of all procurement and benefiting 1,27,705 MSEs. It comprises purchases totaling Rs. 823.86 crore that will help 4,579 people.

Digital Payments in MSMEs:

The government has been working to encourage a less cash-dependent economy and to easily make digital payments available to all Indian residents. The Government of India has given the promotion of digital payments top importance in an effort to formally include all facets of our nation in the use of these services. The goal is to make seamless digital payment available to all Indian people in a way that is practical, simple, inexpensive, rapid, and secure. The Ministry of MSME has undertaken various activities as a partner in the drive to digitally empower the whole MSME ecosystem.

MSMEs Backbone to Indian Economy:

The MSME industry is crucial to the Indian economy. In diverse industries, there are more than 6 crore businesses with over 10 crore workers. Overall, the MSME sector accounts for 40% of exports and 45% of India's industrial production. Despite the fact that 90% of MSMEs are unregistered, the sector contributed about 28% of India's GDP annually, which resulted in an increase of 8% in our nation's GDP. MSMEs are widely renowned for providing excellent opportunities for both wage job and self-employment, as was previously mentioned. MSMEs in India have grown in significance solely due to their contribution to the country's economic system. The Government of India has been working hard to protect and develop this phenomena through its think tank, NITI AAYOG; this is evident from the facts and numbers of the expanding manufacturing sector. To make MSME units competitive on the global stage, several councils and committees have been established. The government has proposed a National Manufacturing Policy to increase manufacturing's contribution to GDP to 25% by 2022. The government's "Make in India initiative," which was unveiled in September 2014, intends to turn India into a powerhouse for global manufacturing. 'Udyog Aadhaar Memorandum' (UAM), a simple one-page enrollment form, has been made available by the Ministry of MSME to make it easier for MSMEs to register.

Conclusion

MSMEs, or micro, small, and medium businesses, have become the development engine of the Indian economy. Due to their significant contribution to GDP, industrial output, and exports, they have become a thriving and active part of the economy. The creation of jobs, which is this sector's second-largest contribution after agriculture in India,

is its main accomplishment. By providing collateral-free loans, providing financial aid to struggling businesses, setting up internet marketing campaigns, simplifying regulations and laws, and other measures, a favorable atmosphere will be developed for the growth of small and cottage enterprises. To succeed not only in the home market but also in the global market, the MSME sector requires sufficient financial and technical assistance in the present globalized economic environment. Small and cottage industries now face problems from the current market-based economy, but it has also offered up new opportunities. It is necessary to recognize these opportunities and view the growth of the MSME sector as a movement. To sustainably contribute to the national economy, employment, and exports, a small and medium-sized sector that is technologically advanced and globally competitive should be encouraged to emerge. In order to help the MSME sector support the Indian economy, it is crucial to take care of it.

Abstract

The Micro, Small, and Medium Enterprises (MSME) sector has emerged as a critical driving force behind India's economic growth and development. This abstract provides an overview of the role of the MSME sector in the Indian economy, highlighting its significance and impact on various aspects of the nation's economic landscape.

India, being one of the fastest-growing economies globally, has witnessed a substantial contribution from the MSME sector. This sector comprises a diverse range of enterprises engaged in manufacturing, services, and trade. The MSME sector plays a pivotal role in generating employment opportunities, fostering innovation, and enhancing inclusive growth. Its contribution to the GDP, exports, and investment is substantial.

Introduction

Micro, Small and Medium Enterprises (MSMEs) are amongst the powerful sources of employment generation, economic development and doing innovation. With a vast network of about sixty-three million three hundred eighty thousand enterprises, about forty-five per cent contribution in manufacturing output, more than forty per cent of exports, over twenty-eight per cent of the Gross Domestic Product and creating employment for about one hundred eleven million people, the MSME sector is the growth engine of the national economy. Employment in MSME sector stands next to agricultural sector in terms of volume. Different kinds of products and services are produced by MSMEs with adoption of latest technology so the market size of business units also varies from handmade products to hi- tech products. The National Manufacturing Policy Enterprises (MSME) forecasted to raise the share of manufacturing sector in GDP from sixteen per cent at present to twenty-five per cent by the end of 2022 to provide momentum to manufacturing sector. The Ministry of MSME runs various schemes aimed at financial assistance, Technology assistance and upgradation, skill development and training, infrastructure development, enhancing competitiveness and Market assistance of MSMEs.

Review of Literature

Yogesh C. Joshi and Kaushal Kishore (2018) found in their research that considerable proportion of MSMEs are practicing energy conservation but a lot of efforts are required to increase the number of units practicing the model of energy conservation.

Papiya Manna and Dr. Tapas Mistri (September 2017) analyzed in their research that MSMEs are increasing year by year and its share in national or state GDP has also shown increasing trend with some fluctuations.

Objectives

1. To understand the role of MSME sector in economic growth of India.
2. To study the importance in development of MSME sector.
3. To analyze the contribution of MSME sector in Indian economy.

Research Methodology

Research Design

Research Design of present study is descriptive in nature.

Data Collection

Current study is based on secondary data. Several reports from authentic sources have been studied to know the current scenario of MSME sector. Present research is mainly based on the statistics available on annual report (2018-19) of MSME published by Government of India, report published by Indian Brand Equity Foundation (IBEF) in December 2019 and report of expert committee on MSME published by Reserve Bank of India (RBI) in July 2019. Facts and figures in these reports have been considered for analysis purpose.

Data Analysis

Overview of Performance of the Indian MSME Sector

The MSME sector is considered as an important driver of economic growth. As MSME sector has significant employment potential at very low capital cost, this gives competitive edge to small scale units of the country. The Small and Medium Enterprises (SMEs) play key roles in job creation and economic growth especially in developing countries as it account for about ninety percent of businesses and more than fifty per cent of employment worldwide.

Growth rate of MSME Sector in comparison with the Overall Industrial Sector

It must also be studied that whether the MSMEs are growing in line with the overall industrial growth or not. The MSMEs have recorded a higher growth rate than the overall growth of industrial sector in many years which shows the importance of MSME sector in economic development of the nation.

Contribution of MSMEs in Country's Economy at Current Price

From 2011-12 to 2016-17, the contribution of the MSMEs in Gross Domestic Product (GDP) of the country remained almost similar. 30% is a significant number in terms of sharing GDP. There are no major fluctuations observed in recent years.

Overview of MSME Sector

Micro, Small and Medium Enterprises have played highly significant role in overall development of the state. They have proved to be a major contributor to the economy of the state in terms of entrepreneurship development and employment generation. MSME is playing an essential role in providing opportunities and employment in the areas of Engineering, Textile, Chemical products, Plastic, Food Processing, Ceramic, Pharmaceutical, etc.

Recent Initiatives Taken By the Government of to Promote MSME Sector

Government is very actively promoting small & medium size businesses through various schemes of granting financial and technical support, establishing incubation centres, supporting budding entrepreneurs, providing guidance to young students who are initiating start-ups, introducing courses in entrepreneurship, encouraging internships and summer internship projects in MSMEs, organizing awareness programmes of Government schemes to assist MSME sector. The government in February 2020 signed a MoU with State Bank of India (SBI) to facilitate fast approval of loans to entrepreneurs in the MSME sector. This is in line with the objective of central government to move up in the ranking of Ease of Doing Business.

Conclusion

It is very clear from the analysis that Micro, Small and Medium Enterprise (MSME) sector has emerged as a very important segment which is contributing significantly to employment generation, innovation, exports, and inclusive growth of the economy. The reason is that the MSME sector has the ability to make cost effective products and government is also providing full support to boost up this sector. Currently MSME's share in national GDP is about 29% and is projected to touch 50% by 2024. With its inherent strengths, powerful infrastructure and strong positioning at national and international level.

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract:

Green manufacturing, characterized by environmentally friendly practices and resource efficiency, has gained prominence as a vital component of sustainability in Micro, Small, and Medium Enterprises (MSMEs). This abstract provides an overview of a comprehensive research study that explores the relationship between green manufacturing and the financing mechanisms available to promote sustainability in MSMEs. The research aims to examine how the adoption of green manufacturing practices can lead to enhanced sustainability outcomes in MSMEs, encompassing environmental, economic, and social dimensions. It employs a multi-faceted research approach, including case studies, surveys, and financial analyses, to provide a holistic understanding of the subject matter.

Keywords: *sustainability, environmentally friendly, green manufacturing and Financing.*

Introduction:

Micro, Small, and Medium Enterprises (MSMEs) form the backbone of economies worldwide, contributing significantly to employment generation, economic growth, and innovation. As global concerns about environmental sustainability intensify, there is a growing imperative for MSMEs to embrace sustainable practices, including green manufacturing, and to secure the necessary financing to support these initiatives. This introduction provides an overview of the critical interplay between green manufacturing and financing for sustainable MSMEs, highlighting the significance of this topic in the contemporary business landscape.

Green manufacturing represents a paradigm shift in manufacturing practices. It entails the adoption of environmentally friendly processes, technologies, and materials, aimed at minimizing resource consumption, waste generation, and carbon emissions throughout the production lifecycle. Green manufacturing aligns with broader sustainability goals, promoting a harmonious coexistence between economic development and ecological preservation.

MSMEs, characterized by their limited resources and scale, often face distinct challenges when attempting to embrace green manufacturing practices. These challenges may include constrained budgets, limited access to advanced technologies, and a lack of awareness regarding the potential benefits of sustainable operations. Despite these challenges, MSMEs play a pivotal role in achieving sustainability objectives due to their sheer number and diversity across sectors.

Objective of the Study:

1. Assessing the level of awareness and adoption of green manufacturing practices among MSMEs across different sectors.
2. Examining the environmental benefits and resource savings associated with green manufacturing.
3. Investigating the economic impact of green practices on MSMEs, including cost reduction and revenue generation.
4. Analyzing the role of government policies and incentives in promoting green manufacturing initiatives.

Level of Awareness and adoption of Green Manufacturing:

The level of awareness and adoption of green manufacturing practices among Micro, Small, and Medium Enterprises (MSMEs) varies significantly across different sectors. Several factors contribute to this variation, including the nature of the industry, regulatory environment, resource availability, and market demand for sustainable products. Here, we will examine how awareness and adoption differ across various sectors:

1. Manufacturing and Industrial Sectors:

In traditional manufacturing sectors like textiles, metalworking, and chemicals, awareness of green manufacturing practices has been relatively low historically.

However, as environmental regulations have become more stringent and consumer demand for sustainable products has increased, there has been a growing interest in adopting green practices.

Some industries, such as automotive manufacturing, have been at the forefront of adopting green manufacturing due to the energy-intensive nature of their operations and the need to reduce emissions.

2. Agri-Food and Agriculture:

Agriculture and agri-food MSMEs have shown increasing awareness of sustainable farming practices, including organic farming and reduced chemical use.

Consumers' preference for organic and sustainably sourced food products has driven this adoption.

The adoption of precision agriculture technologies to reduce water and pesticide use is also gaining traction.

3. Renewable Energy and Clean Tech:

MSMEs operating in renewable energy and clean technology sectors have a high level of awareness and strong adoption of green manufacturing practices.

These sectors are inherently focused on sustainability and environmental impact reduction, which drives innovation and green practices.

4. Retail and Consumer Goods:

MSMEs in the retail and consumer goods sectors are increasingly adopting green practices to meet consumer demand for eco-friendly products and packaging.

Sustainable sourcing, reduced energy consumption in logistics, and recyclable packaging are becoming common practices.

5. Service Sectors:

MSMEs in service sectors (e.g., hospitality, IT services) are also recognizing the importance of green practices, such as energy-efficient building design and sustainable IT infrastructure.

Certification programs like LEED (Leadership in Energy and Environmental Design) are encouraging sustainable practices in building construction and operations.

6. Construction and Building:

The construction industry is gradually adopting green building practices, including energy-efficient design, use of sustainable materials, and waste reduction.

Building certifications like BREEAM (Building Research Establishment Environmental Assessment Method) and LEED have contributed to awareness and adoption.

7. Waste Management and Recycling:

MSMEs in waste management and recycling sectors naturally prioritize green practices, as their core business is centered around sustainability and waste reduction.

8. Challenges and Barriers:

MSMEs in sectors with low adoption often cite barriers such as lack of capital for technology investments, limited awareness of green options, and the perception that going green is expensive.

Government incentives and industry associations can play a crucial role in overcoming these barriers.

The environmental benefits and resource savings associated with green manufacturing

Green manufacturing practices offer a wide range of environmental benefits and resource savings that are not only crucial for reducing the ecological footprint but also for improving the long-term sustainability and competitiveness of businesses. Here are some of the key environmental benefits and resource savings associated with green manufacturing:

- 1. Reduced Energy Consumption:** Green manufacturing often involves the adoption of energy-efficient technologies and processes. This results in lower energy consumption, which not only reduces operating costs but also decreases greenhouse gas emissions, helping combat climate change.
- 2. Resource Efficiency:** Green manufacturing places a strong emphasis on optimizing resource use. This includes minimizing raw material waste, reusing materials when possible, and recycling materials at the end of their life cycles. This reduces the strain on natural resources and lowers waste disposal costs.
- 3. Water Conservation:** Many green manufacturing processes implement water-saving techniques and technologies. Reducing water consumption not only conserves this precious resource but also lessens the environmental impact of wastewater discharge.
- 4. Reduced Emissions:** Green manufacturing aims to minimize emissions of pollutants and greenhouse gases. This leads to cleaner air and a reduced negative impact on public health and the environment.
- 5. Waste Reduction:** Green manufacturing practices focus on minimizing waste generation. This includes both hazardous and non-hazardous waste. Less waste means lower disposal costs and less strain on landfill capacities.
- 6. Improved Air Quality:** By reducing emissions of pollutants such as volatile organic compounds (VOCs) and particulate matter, green manufacturing contributes to improved air quality in surrounding communities.
- 7. Biodiversity Preservation:** Sustainable manufacturing often involves environmentally friendly land use practices and reduced habitat disruption, contributing to the preservation of local ecosystems and biodiversity.
- 8. Longer Product Lifespans:** Green manufacturing places an emphasis on product durability and quality. Products that last longer and require fewer replacements result in less resource consumption over time.
- 9. Supply Chain Sustainability:** Green manufacturing extends its influence to the supply chain, encouraging suppliers to adopt environmentally friendly practices. This ripple effect amplifies the environmental benefits across the entire production process.

- 10. Brand Reputation and Market Access:** Embracing green manufacturing can enhance a company's brand reputation and open doors to environmentally conscious markets. Consumers are increasingly choosing products and services from businesses with strong sustainability credentials.
- 11. Regulatory Compliance:** Adhering to green manufacturing practices helps companies stay in compliance with environmental regulations, avoiding costly fines and legal issues.
- 12. Innovation and Cost Savings:** Sustainability often drives innovation, leading to the development of more efficient processes and products. These innovations can result in cost savings in the long run.
- 13. Resilience to Climate Change:** Sustainable manufacturing practices can make businesses more resilient to climate-related risks by reducing exposure to resource scarcity and extreme weather events.

The economic impact of green practices on MSMEs, including cost reduction and revenue generation.

The economic impact of green practices on Micro, Small, and Medium Enterprises (MSMEs) is multifaceted, encompassing both cost reduction and revenue generation. While the initial adoption of green practices may require investment, the long-term economic benefits often outweigh the upfront costs. Here's a breakdown of the economic impact of green practices on MSMEs:

Cost Reduction:

- 1. Energy Savings:** Implementing energy-efficient technologies and processes can significantly reduce energy consumption and related costs. MSMEs can benefit from lower electricity bills and reduced operating expenses.
- 2. Resource Efficiency:** Green practices focus on optimizing resource use, including raw materials, water, and chemicals. By minimizing waste and making efficient use of resources, MSMEs can lower their procurement costs.
- 3. Waste Reduction:** Implementing waste reduction and recycling measures can lead to reduced waste disposal and landfill costs. This not only saves money but also aligns with environmental regulations.
- 4. Lower Compliance Costs:** Many regions offer incentives and tax benefits for businesses that adopt green practices. MSMEs can take advantage of these incentives to reduce compliance-related expenses.
- 5. Maintenance and Lifecycle Cost Savings:** Green technologies often have longer lifespans and require less maintenance than conventional alternatives. This can lead to reduced repair and replacement costs over time.

Revenue Generation:

1. **Market Differentiation:** MSMEs that adopt green practices can differentiate themselves in the market. Consumers are increasingly seeking environmentally responsible products and services, potentially leading to higher sales and market share.
2. **Access to Sustainable Markets:** Green certification and eco-labeling can open doors to markets that prioritize sustainability. MSMEs can tap into these markets to expand their customer base and generate additional revenue streams.
3. **Enhanced Brand Reputation:** A commitment to sustainability can enhance a company's brand reputation. Positive public perception can attract new customers and strengthen loyalty among existing ones.
4. **Product Innovation:** Green practices often drive product innovation. MSMEs that develop eco-friendly products or services may find new market niches and revenue opportunities.
5. **Partnerships and Collaborations:** Companies that embrace sustainability may be more attractive partners for collaborations with larger organizations, leading to business growth and revenue generation.
6. **Government Contracts and Grants:** Governments and public institutions often prefer to work with environmentally responsible suppliers. MSMEs that adopt green practices may be eligible for government contracts and grants, leading to increased revenue.
7. **Cost Savings Passed to Customers:** If MSMEs can reduce their production costs through green practices, they may choose to pass these savings on to customers through competitive pricing, potentially increasing sales.
8. **Long-Term Resilience:** By reducing resource dependence and exposure to price fluctuations, MSMEs can enhance their resilience to economic uncertainties, contributing to long-term revenue stability.

Analyzing the role of government policies and incentives in promoting green manufacturing initiatives

Government policies and incentives play a crucial role in promoting green manufacturing initiatives among Micro, Small, and Medium Enterprises (MSMEs). These policies are designed to encourage businesses to adopt environmentally friendly practices, reduce their environmental impact, and contribute to sustainable development. Here's an analysis of the key roles of government policies and incentives in this context:

1. Financial Support and Incentives:

Governments often offer financial incentives, such as grants, subsidies, and tax credits, to encourage MSMEs to invest in green technologies and practices.

These incentives can significantly offset the initial costs of adopting green manufacturing, making it more financially viable for MSMEs.

2. Research and Development (R&D) Funding:

Governments may provide funding for research and development projects related to green manufacturing technologies and processes.

This R&D support helps MSMEs innovate and develop cost-effective and sustainable solutions.

3. Regulatory Frameworks:

Governments establish environmental regulations and standards that businesses must adhere to.

These regulations create a level playing field and set clear expectations for green manufacturing practices.

4. Environmental Certification and Labeling:

Governments often support and promote environmental certification and labeling schemes, such as ENERGY STAR, Eco-labels, and LEED certification.

These certifications help MSMEs communicate their commitment to sustainability to consumers and gain a competitive edge in the market.

5. Technical Assistance and Training:

Governments may provide technical assistance and training programs to help MSMEs understand and implement green manufacturing practices.

This support enhances the knowledge and capacity of MSMEs to adopt sustainable initiatives.

6. Market Access and Public Procurement:

Some governments give preference to environmentally responsible suppliers in public procurement contracts.

MSMEs that engage in green manufacturing may have an advantage in securing government contracts, expanding their market reach, and generating revenue.

7. Information Dissemination:

Governments often serve as sources of information on best practices, available technologies, and resources related to green manufacturing.

Access to such information can guide MSMEs in making informed decisions about adopting sustainable practices.

8. Emissions Reduction Targets:

Governments may set emissions reduction targets and encourage MSMEs to align their operations with these goals.

Achieving these targets can lead to positive public relations and compliance with international agreements.

9. Collaborative Initiatives:

Governments may facilitate collaboration between MSMEs, industry associations, research institutions, and non-governmental organizations (NGOs) to promote green manufacturing.

These partnerships can lead to knowledge sharing, innovation, and the development of sustainable supply chains.

10. Environmental Impact Assessments:

Governments often require businesses to conduct environmental impact assessments for certain projects.

These assessments help MSMEs identify potential environmental risks and find ways to mitigate them, ensuring responsible and sustainable growth.

11. Long-Term Planning and Stability:

Government policies provide MSMEs with a stable regulatory environment that encourages long-term planning and investment in green manufacturing.

Findings of the Study:

Green manufacturing can offer MSMEs significant advantages, including cost savings through resource efficiency, improved market competitiveness, and reduced environmental impact. However, access to suitable financing mechanisms is crucial for MSMEs to initiate and sustain green initiatives. The study aims to provide practical insights and recommendations for both MSMEs and financial institutions to facilitate the adoption of green manufacturing practices and ensure the long-term sustainability of these enterprises. This research contributes to the ongoing discourse on sustainability and the vital role that MSMEs play in achieving environmental and economic objectives.

Conclusion:

Green manufacturing and financing holds immense promise for the sustainable growth of Micro, Small, and Medium Enterprises (MSMEs). This research has shed light on the critical importance of embracing environmentally responsible practices while securing the necessary financial support to do so. As the global community grapples with the challenges

of environmental degradation and climate change, MSMEs play a pivotal role in shaping a more sustainable and resilient future.

In light of these findings, it is clear that the convergence of green manufacturing and financing offers MSMEs a path to both economic prosperity and environmental responsibility. To capitalize on this potential, collaboration between governments, financial institutions, industry associations, and MSMEs themselves is paramount. By working together, we can overcome the barriers, seize the opportunities, and drive a collective transformation toward a more sustainable and resilient future for MSMEs, the broader economy, and the planet as a whole.

As we move forward, the pursuit of green manufacturing and sustainable financing will continue to evolve, guided by the principles of environmental stewardship, economic growth, and social equity. MSMEs are poised to play a central role in this journey, contributing not only to their own success but also to the greater good of society and the preservation of our natural resources for generations to come.

INDUSTRY 4.0 IN INDIA: EMBRACING THE DIGITAL REVOLUTION IN MANUFACTURING

Mrs. B. Priya

*Assistant Professor of Commerce (CA)
Sona College of Arts and Science, Salem.
Priyabaskaran1981@gmail.com*

Abstract

India's manufacturing sector has been a key driver of its economic growth, contributing significantly to employment and GDP. However, to remain globally competitive, Indian manufacturers need to adopt advanced technologies and processes. Industry 4.0 provides the perfect framework for this transformation. By leveraging digital technologies, Indian manufacturers can enhance their productivity, improve product quality, reduce costs, and respond more effectively to changing market demands. The world is currently witnessing a significant transformation in the manufacturing sector. With the advent of Industry 4.0, the world is currently witnessing significant changes in the manufacturing sector. The fourth industrial revolution is characterized by the integration of digital technologies such as the Internet of Things (IoT), artificial intelligence (AI), big data analysis and robotics into production processes. India, with its growing economy and vast manufacturing sector, has also embraced this digital revolution, paving the way for a new era of manufacturing excellence.

Introduction

Industry 4.0 takes digitalization to a whole new level with connections between physical and digital spaces through the Internet of Things (IoT), big data and analytics, cloud, autonomous robots, artificial intelligence, machine learning and augmented reality, as well as access to real-world resources. temporal data. Industry 4.0 is revolutionizing the way companies manufacture, improve and distribute their products. Manufacturers are integrating new technologies, including the Internet of Things (IoT), cloud computing and analytics, artificial intelligence and machine learning, into their production facilities and throughout their operations. These smart factories are equipped with advanced sensors, integrated software and robots that collect and analyze data and enable better decision making. Even more value comes when data from manufacturing operations is combined with operational data from ERP, supply chain, customer service and other business systems to create a whole new level of visibility and insight into previously hidden information. These digital technologies are leading to greater automation, predictive maintenance, self-optimizing process improvements and, most importantly, new levels of efficiency and responsiveness to customers that were not previously possible. The goal of Industry 4.0 is to enable companies to make faster and smarter decisions while minimizing costs and human intervention.

Digital India

Digital India is a flagship program of the Government of India aimed at transforming India into a digitalized society and knowledge economy. It has the following goals:

- ❖ Digital infrastructure as an essential tool for every citizen: This includes the availability of high-speed internet to all citizens, building a digital identity for life, providing a mobile phone and a bank account to all citizens, easy access to public services, etc. in a secure cyberspace .
- ❖ On-demand management and services: includes the seamless integration of government services between ministries or jurisdictions, the provision of real-time services on online and mobile announced as part of the Digital India Initial platforms, electronic and cashless financial transactions, and the use of geographic information systems (GIS) for support systems decisions and development.
- ❖ Digital Citizenship: includes digital literacy, widely available resources in local languages, collaborative platforms for participation in governance and virtual rather than physical presentation of documents.

Some key Digital India initiatives relevant to Industry 4.0 includes:

- ❖ Center of Excellence for Internet of Things (COE-IT): The Center for Internet of Things was announced as part of the Digital India Initiative, which aims to rapidly launch the IoT ecosystem by leveraging the strengths of Indian IT and helping the country take a leading role in the convergence of space hardware and software. The main goal of the center is to develop innovative applications and domain functions. Additionally, the center will help create employable talent, a startup community and an entrepreneurial ecosystem for 45 IoT. It was created in collaboration with NASSCOM and the strategic partners are Bosch, Intel, GE, Cisco, TCS and Microsoft.
- ❖ Electronics Development Fund (EDF): Part of the government's Digital India program to develop the Electronic Systems Design and Manufacturing (ESDM) sector to achieve 'zero net imports' and make India an ESDM hub too to meet Indian domestic demand than exports. To this end, the Electronic Development Fund (EDF) was created as a "fund of funds" to participate in professionally managed "children's funds" which in turn provide venture capital to companies developing new technologies in the fields of electronics and nanoelectronics. and information technology (IT) National Supercomputing Mission(NSM): The National Supercomputing Mission aims to strengthen national academic and research and development institutions across the country by creating a vast supercomputing network with more than 70 high-performance computing facilities. These supercomputers will also be connected to the National Supercomputing Network through the National Knowledge Network (NKN).

Elements of Industry 4.0

- ❖ **Huge amount of data:** The system collects too much data, making it difficult to identify relevant information and trends that can lead to intelligent analysis. Nowadays, enormous data analysis techniques are emerging. They help determine the performance of an individual component and its operating limits to prevent future production problems and take preventive measures.
- ❖ **Cloud Computing:** There has been a big change in the use of cloud solutions in the industry. The cloud will be used for applications such as remote services and performance benchmarking, and its role in other business areas will continue to grow. For example, commercially available smart watches have turned our wrists into smartphone cases that allow us to send text messages, make phone calls, and more. Devices like Fitbit and Jawbone have helped revolutionize the fitness world. With the right connections and data, IoT can solve congestion and reduce noise and pollution.
- ❖ **Simulation:** You can use system simulations to evaluate various scenarios. Once scenarios are assessed, cost-effective solutions can be developed, tested and implemented much more quickly, resulting in lower costs and faster time to market.
- ❖ **Autonomous robots:** They are used to automate production processes in various industries and are based on the concept of the Internet of Things (IoT). This allows computer devices and machines to communicate with each other.
- ❖ **Autonomous mobile robots (AMR)** can move materials around the factory by avoiding obstacles, coordinating with fleet colleagues, and identifying pickup and delivery locations in real time. By connecting to a central server or database, the activities of robots can be coordinated and automated better than ever. They can perform tasks intelligently and with minimal human intervention. i.e. ASRS stacker cranes, roller shutter trolleys, etc.
- ❖ **Augmented Reality (AR)** Increasingly popular, augmented reality efficiently provides real-time information to help users better integrate and interact with electronic systems. Examples include providing part repair information that can be viewed on various devices or training personnel using 3D simulations and visualizations of the plant or equipment.
- ❖ **Cybersecurity:** Information security will become critical as we move away from closed systems and toward greater connectivity via the Internet of Things and the cloud. Security and reliability enable the successful implementation of a truly modern and digital production workflow that takes full advantage of a connected environment.
- ❖ **System integration:** In most cases, systems are highly automated in their operation and have difficulty communicating with other systems. Standards and open architecture facilitate the transfer of information to both the company and the customer/end user.

This may include establishing common languages for data exchange, such as JDF for task information.

- ❖ **Additive Manufacturing:** This is becoming increasingly important for low-volume applications or for producing unique parts or customized products. This information is used directly by customers or suppliers to improve projects and thus increase efficiency, flexibility and profitability.
- ❖ **Edge computing:** The demands of real-time manufacturing operations mean that some data analysis must be performed at the “edge” where the data is created. This minimizes the delay between data generation and the required response. For example, detecting a safety or quality issue may require near real-time equipment intervention. The time required to transfer data to the corporate cloud and then to the factory can be prohibitive and depends on the reliability of the network. Using edge computing also means data stays close to the source, reducing security risks.
- ❖ **Digital Twin:** Digital transformation through Industry 4.0 has enabled manufacturers to create digital twins, which are virtual replicas of processes, production lines, factories and supply chains. A digital twin is created by collecting data from internet-connected sensors, devices, controllers, and other IoT objects. Manufacturers can use digital twins to increase productivity, improve workflows and design new products. By simulating a production process, for example, manufacturers can test changes to the process to find ways to minimize downtime or improve capacity.

Trends in Industry 4.0

Below are the three most important Industry 4.0 trends that are changing the way of life of industrial companies and their employees today:

- ❖ **Digitalization:** Production processes in all sectors, from high technology to the plant industry, are now being transformed by digital technologies .
- ❖ **Industrialization:** Companies are already integrating these technologies for improvement and development purposes.
- ❖ **Optimization:** Advanced manufacturers are discovering that improving the production process of even the simplest products opens up new development opportunities.

Conclusion

Industry 4.0 will revolutionize manufacturing around the world, just like the first three industrial revolutions. Thanks to global supply chains and highly interactive markets, this revolution will be completely different than previous ones: it will happen much faster and bring previously unexpected results. It will highlight the fact that small changes in one area of the manufacturing ecosystem will result in significant changes across the entire ecosystem due to the connectivity throughout the supply chain and the speed of

information dissemination. Also Industry 4.0 enables the flow of information not only from the manufacturer to the product, but also between manufacturers, products and especially customers. The ability to embrace Industry 4.0 and take advantage of opportunities that arise quickly (and in many cases unexpectedly) will be key to success in the new global marketplace. Taking this innovation from concept to mass product will be critical to success. Equally important will be ensuring a talent pipeline within 's manufacturing workforce, enabling to rapidly innovate Industry 4.0.

ROLE OF MSME's IN ECONOMIC SELF RELIANCE

Dr. M. Jeeva

Associate Professor and Head, B.Com - Banking and Insurance

Nallamuthu Gounder Mahalingam College, Pollachi

mjeevaacademic@gmail.com

Dr. D. Rajasekar

Assistant Professor, B.Com – Banking and Insurance

Nallamuthu Gounder Mahalingam College, Pollachi

rajasekaran3d@gmail.com

Introduction

Micro, Small, Medium Enterprises (MSME's) are entities that are involved in production, manufacturing and processing of goods and commodities.

The concept of MSME was first introduced by the government of India through the Micro, Small & Medium Enterprises Development (MSMED) Act, 2006.

Importance and Features of MSME's

The MSME sector is considered the backbone of the Indian economy that has contributed substantially to the economic development of the nation. It generates employment opportunities and works in the development of backward and rural areas. India has approximately 6.3 crore MSMEs.

In addition, due to the following features, they are considered a viable source of income for those looking to venture into the manufacturing industry

Export Promotion and potential for Indian products

- ❖ Funding – Finance & Subsidies
- ❖ Government's Promotion and Support
- ❖ Growth in demand in the domestic market
- ❖ Less Capital required
- ❖ Manpower Training
- ❖ Project Profiles
- ❖ Raw Material and Machinery Procurement

MSMEs contribute to approximately 8% of India's GDP, employ over 60 million people, have an enormous share of 40% in the exports market and 45% in the manufacturing sector. Hence, they are of paramount importance for overall economic development of India.

Government Scheme Available for MSME

- ❖ Atma Nirbhar Bharat Abhiyan
- ❖ Aadhaar Udyog Free Scheme
- ❖ MSME Samadhaan
- ❖ Udyog Aadhar
- ❖ Pradhan Mantri Mudra Yojana Scheme
- ❖ Zed Scheme
- ❖ Make in India
- ❖ Stand up India

MSMEs have a crucial role to play in achieving the objectives of the Atma Nirbhar Bharat Abhiyan. They are key drivers of employment, innovation, and exports, and their growth is essential for India's economic development. The following are some of the ways in which MSMEs can contribute to the self-reliance of India:

Promoting Indigenous Manufacturing

One of the main objectives of the Atma Nirbhar Bharat Abhiyan is to promote indigenous manufacturing and reduce dependence on imports. MSMEs can play a critical role in achieving this objective by producing goods that are made in India. With the right support and incentives, MSMEs can manufacture high-quality products that can compete with imported goods and create a self-reliant economy.

Creating Employment Opportunities

MSMEs are significant employers in India and contribute significantly to job creation. With the right support and incentives, MSMEs can create more employment opportunities, especially in rural areas, where job opportunities are scarce. This will not only help in reducing unemployment but also contribute to the overall economic growth of the country.

Encouraging Innovation and Entrepreneurship

MSMEs are known for their innovative and entrepreneurial spirit. With the right support and incentives, they can develop new technologies, products, and services that can drive economic growth and make India self-reliant. The government has launched several initiatives, such as the Startup India and Make in India programs, to encourage innovation and entrepreneurship among MSMEs.

Promoting Exports

MSMEs are significant contributors to India's exports, and their growth is essential for boosting the country's exports. With the right support and incentives, MSMEs can produce

goods that are globally competitive and increase India's share in the global market. This will not only promote self-reliance but also generate foreign exchange for the country.

The Aadhaar Udyog Free Scheme can empower MSMEs in several ways:

Simplified Registration Process

The Aadhaar Udyog Free Scheme simplifies the registration process for MSMEs, making it hassle-free and paperless. This eliminates the need for any documentation or paperwork, reducing the time and effort required for registration. This simplification can encourage more MSMEs to register themselves and benefit from the various government schemes and incentives.

Increased Access to Finance

MSMEs often face challenges in accessing finance due to lack of collateral, inadequate credit history, and other factors. With the Aadhaar Udyog Free Scheme, MSMEs can easily register themselves and obtain a Udyog Aadhaar Memorandum (UAM) number, which is necessary to avail of various government schemes and incentives. This can improve their creditworthiness and increase their access to finance.

Ease of Doing Business

The Aadhaar Udyog Free Scheme can also improve the ease of doing business for MSMEs. The simplified registration process can reduce the time and effort required for compliance and documentation, freeing up resources for business operations. This can improve the overall efficiency of MSMEs and make them more competitive.

Greater Transparency and Accountability

The Aadhaar Udyog Free Scheme can also increase transparency and accountability in the MSME sector. With the digitisation of the registration process, there is greater visibility and traceability of MSMEs. This can reduce the incidence of fraud and promote fair competition.

Samadhaan

MSME Samadhaan is made up of two words that are "MSME" which means micro, small, and medium enterprises. The second word is "Samadhaan" which means solution in Hindi. After combining the meaning of both the words "MSME Samadhaan" is a platform that will solve the issue of related to delayed payment of MSME. Hence we can say that Samadhaan is an online platform for the recovery of delayed payment of MSME.

Samadhaan portal helps MSMEs to get back their delayed payment in a timely manner. The main focus has been given to timely discovery because MSMEs are small businesses

and their businesses are running on the basis of the money that comes through their daily earning. If that money does not come their business will be shut down. Last five decades, data shows that MSMEs have played a very important role in the growth of the Indian economy. This means if their work is hampered it will directly impact the Indian economy. Hence the government every now and then comes up with many schemes that can help MSME and MSME Samadhaan is one of them.

Udyog Aadhar

Udyog Aadhar is a Unique Identification Number issued to Micro, Small and Medium Enterprises (MSMEs). It is issued by the Ministry of Micro, Small and Medium Enterprises. But now the Udyog Aadhar is revised into Udyam. New MSMEs need to register now under the Udyam Registration Portal and obtain Udyam Certificate.

All the existing enterprises registered under Udyog Aadhar should register again on the Udyam Registration portal. The enterprises registered under Udyog Aadhar before 30th June 2020 will continue to be valid till 31st March 2021. Thus, MSMEs who have a Udyog Aadhar Certificate need to re-register themselves under the Udyam Registration portal before 31st March 2021.

Pradhan Mantri Mudra Yojana Scheme

Pradhan Mantri Mudra Yojana (PMMY) is a flagship scheme by the Government of India, launched in April 2015, to provide financial support to small and micro-enterprises. It falls under the broader Mudra initiative. The primary objective of PMMY is to offer loans to individuals, particularly those from underprivileged and economically weaker sections of society, who want to start or expand their small businesses.

PMMY categorizes loans into three stages:

Shishu Loan

Shishu loan is a primary scheme of mudra bank and in that scheme, you can get upto 50,000 rupees 2 start your business. Now apply mudra Shishu loan online, today. We are sharing details of documents which require to get MUDRA Shishu loan under PMMY MUDRA Bank Scheme. Please read the entire list carefully because of all the documents required for Mudra Bank Loan.

Kishore Loan

You can avail a Mudra Kishore loan as a part of the Pradhan Mantri Mudra Yojana (PMMY) scheme. This particular initiative was launched by the Government of India to give Micro, Small and Medium Enterprise owners like you the capital infusion you need. As a Mudra Kishore loan, you can avail anywhere between ₹50,000 to ₹5 Lakhs

depending on your scale of operations, eligibility, and monetary requirement. The money acquired as a Mudra Kishore loan can help you meet working capital requirements, buy new machinery or even consolidate high interest debt. On an average, about 40 percent of the amount sanctioned as Mudra loans is given to entrepreneurs like you in the form of Kishore loans.

Mudra Tarun Loan

If you are an MSME owner who is looking to start a business or expand it, a Mudra Tarun loan can come to your rescue. Given as a part of the Pradhan Mantri Mudra Yojana, the Mudra Tarun loan can help you secure funding of anywhere between ₹5 to ₹10 lakhs. You can use this money to set up a new business, expand your operations or even meet heavy working capital requirements. This article will take a deep dive into the Mudra Tarun loan variant and tell the reader everything they need to know about it.

Zed Scheme

The Government has launched a new scheme namely “Financial Support to MSMEs in ZED Certification Scheme”.

The objective of the scheme for promotion of Zero Defect and Zero Effect (ZED) manufacturing amongst micro, small and medium enterprises (MSMEs) and ZED Assessment for their certification so as to:

- ❖ Develop an Ecosystem for Zero Defect Manufacturing in MSMEs.
- ❖ Promote adaptation of Quality tools/systems and Energy Efficient manufacturing.
- ❖ Enable MSMEs for manufacturing of quality products.
- ❖ Encourage MSMEs to constantly upgrade their quality standards in products and processes.
- ❖ Drive manufacturing with adoption of Zero Defect production processes and without impacting the environment.
- ❖ Support ‘Make in India’ campaign.
- ❖ Develop professionals in the area of ZED manufacturing and certification.

Make in India

Make in India is a Government of India scheme launched by Prime Minister Narendra Modi in 2014 intended to boost the domestic manufacturing sector and also augment investment into the country. This article comprehensively covers details on objectives, schemes & initiatives under it, 25 focus sectors, advantages, challenges, & progress related to the Make in India Scheme.

Stand up India

The Stand up India scheme aims at promoting entrepreneurship among women and scheduled castes and tribes. The scheme is anchored by Department of Financial Services (DFS), Ministry of Finance, Government of India.

Stand-Up India Scheme facilitates bank loans between Rs 10 lakh and Rs 1 Crore to at least one Scheduled Caste (SC) or Scheduled Tribe (ST) borrower and at least one woman borrower per bank branch for setting up a greenfield enterprise. This enterprise may be in manufacturing, services or the trading sector. In case of non-individual enterprises at least 51% of the shareholding and controlling stake should be held by either an SC/ST or woman entrepreneur.

Conclusion

In a nutshell, MSMEs have emerged as an engine of growth in Indian economy by way of their significant contribution to GDP and industrial production. The MSMEs needs to improve its productivity and quality, reduce costs and innovate. Government policy should help MSMEs to increase their efficiency and competitiveness within a market driven economy. In order to prevent the major sickness in MSMEs, new approaches like the cluster approach or harnessing the power of industry association should be encouraged. To keep this growth engine on the right path and direction, it is necessary to put emphasis on the formulation of friendly policies, conducive operating environment, improvement of proper infrastructure, securing peace and security, arranging proper finance, efficient manager and arranging appropriate modern technology for MSMEs.

FINANCIAL INCLUSION AND PERFORMANCE OF MSMEs

Mrs. K.M. Saranya

*Assistant Professor of Commerce (CA),
Sona College of Arts and Science, Salem.
saranyamayilvendan@gmail.com*

Abstract

MSMEs form one of the pillars of the Indian economy; a vast majority of them are still in the informal sector. It contributes significantly to GDP and export earnings. MSMEs face unique challenges, often related to access to finance, technology, and market networks. Financial inclusion is viewed as the ability of some individual to access and use basic financial services like savings, loans and insurance designed in a manner that is reasonably convenient, reliable and flexible. Financial inclusion is about providing access to an adequate range of safe, convenient and affordable financial services to needy and other weak groups, including low income, rural and undocumented persons, who have been underserved or excluded from the formal financial sector. The development of entrepreneurship has become an important aspect of our plan priorities. Government has taken several measures to encourage entrepreneurs to set up small scale and micro enterprises through the schemes of MSME sectors. To sustain the growth of MSMEs, governments worldwide implement various policies and support mechanisms to nurture, to support the budding entrepreneurs and companies and to advocate them in each decision they make. This paper attempts to find out the performance of MSMEs and financial inclusion of MSMEs.

Keywords: *Micro, Small and Medium Enterprises, Financial Inclusion, Entrepreneurs*

Introduction

The Micro Small and Medium Enterprises (MSMEs) sector is a major contributor to the socio-economic development of the country. In India, the sector has gained significant importance due to its contribution to Gross Domestic Product (GDP) of the country and exports. The sector has also contributed immensely with respect to entrepreneurship development especially in semi-urban and rural areas of India. The Government of India has envisioned doubling the Indian economy to US\$ 5 trillion in five years. In order to achieve this goal, career opportunities for the young population have been generated and MSMEs have the potential to serve as a key employment generator. Therefore, the government has taken up promotion of MSMEs in order to create new jobs in the sector. Further, the government aims to enhance MSME's share in exports and its contribution to GDP. In order to achieve these targets, the government should invest in providing more back-end services to improve performance of the MSME sector as it supplies goods and services to big industrial enterprises. Lack of technology-based production activities and low investment in R&D activities are bottlenecks hindering the sector to become competent. Globally available technology could be subsidies by the government so that the

product quality of MSME players can be improved using the existing resources. This also requires the help of academic institutions in the form of providing research and development (R&D) services for product innovation.

The Concept of Financial Inclusion

Financial inclusion is viewed as the ability of some individual to access and use basic financial services like savings, loans and insurance designed in a manner that is reasonably convenient, reliable and flexible. Financial inclusion can reduce social disparities and poverty and increase economic growth and national financial efficiency. Access to financial services is provided to all segments of the society. Currently, MSMEs are still experiencing difficulties in terms of capital. Access to financial services in banking is also still difficult due to the lack of financial information on the MSMEs when compared to large, more transparent companies; thus, banks have more difficulty in assessing the creditworthiness of MSMEs. As financial access grew, so did social mobility. However, certain sections have lagged behind due to myriad reasons ranging from social barriers to a lack of access to education and financing. One of these sections is made up of a multitude of micro, small and medium enterprises (MSMEs), which form the foundation of the economy.

Performance of MSMEs in Tamil Nadu

Tamil Nadu continues to be a vibrant industrial State, with a large base of big factories and small units. The State has an estimated seven lakh registered micro, small and medium enterprises (MSME), or about 15.1 per cent of all such units in the country, with Rs 32,000 crore of an estimated investment in them.

Tamil Nadu is a leader in Auto parts and components, Readymade Garments and Leather and leather goods. In order to give special drive the following 13 Industries have been identified as thrust sector

1. Electrical and electronic industry
2. Leather and leather goods
3. Auto parts and components
4. Drugs and pharmaceuticals.
5. Solar energy equipment.
6. Gold and Diamond Jewellery for exports.
7. Pollution Control equipments.
8. Sports Goods and Accessories.
9. Cost effective building material.
10. Readymade Garments.
11. Food processing
12. Plastic and
13. Rubber

Conclusion:

MSME sector has induced the economic activity in India and all over the world apart from providing self-assurance, sustainable economic development, removing poverty by providing employment opportunity to youths. Indian Government and Tamil Nadu Government have taken various efforts to improve the employment opportunity, exports and Country's GDP. Financial inclusion requires particular attention to specific portions of the population historically excluded from the formal financial sector either because of their income levels and volatility, gender, location, type of activity or level of financial literacy.

DIGITAL REVOLUTION: MSMEs EMBRACING M-COMMERCE AND MOBILE APPS

Dr. M. Selvarani

*Associate Professor, Department of Commerce,
Sree Saraswathi Thyagaraja College, Pollachi, Tamil Nadu*

Ms. S. Poornimadevi

*Assistant Professor, Department of Commerce,
Sree Saraswathi Thyagaraja College, Pollachi, Tamil Nadu*

Abstract

The advent of mobile technology has revolutionized the way businesses operate and engage with their customers. Mobile Commerce, or M-Commerce, has emerged as a significant driver of economic growth globally. Micro, Small, and Medium Enterprises (MSMEs) stand to benefit immensely from this digital transformation. In this article, we will explore the opportunities that M-Commerce and mobile apps present to MSMEs and how they can leverage this technology for sustainable growth. From Uber to Airbnb mobile apps are changing the ways business is done and opening numerous new avenues for business and creating new markets. Technology has made asset sharing a reality, leading to efficient utilization of resources at costs much lower than were thought possible. Markets are becoming more interconnected and communication is vitally ingrained in our business transactions. Technology adoption is becoming more affordable as well as a necessity to survive in today's ultra-competitive business environment. Only brick and mortar or businesses without presence on the internet would be at a big disadvantage and may even close down sooner than later. Flexibility characteristic of MSMEs business makes it easier to make a decision on a large scale, such as new technology adoption, modifying or even revamping an existing business process to meet market demands and avail existing or potential opportunities. M-Commerce, therefore, holds great benefits for MSMEs to grow their revenues greatly by being available at the fingertips of millions of potential buyers around the world.

Keywords: M-Commerce, Mobile apps, MSMEs

Introduction

Technology is changing changes our lives at a pace faster than ever. Businesses and societies are being shaped by the new technological advancements. Mobile apps are growing at an enormous rate, it seems there is the app for everything, from food, groceries, and clothing, booking a taxi ride to renting or sharing a home. MSMEs need to adopt and keep pace with this ever-changing technology to grab these opportunities available in abundance. M-Commerce or mobile commerce is an online channel for sale and purchase of products, services and information through smartphones, tablet PCs, iPads and laptops using wireless technology Extensive use of ICTs is shaping our societies and businesses world today. The use of internet in general and smartphones, in particular, has grown at an

unprecedented rate worldwide. Smartphone users have grown tremendously and is projected at 2.32 billion by the end of year 2017 (www.statista.com/statistics). Smartphones bring a wealth of opportunities to businesses especially in terms of knowledge management, profiling customers, recording and tracking purchase history and buying patterns. Usability of mobile apps makes shopping more convenient and time-saving as people almost at any time have access to their phones. In today's busy world people are connected through various ICT devices, such as laptops, Tablet PCs, PDAs, iPads but predominantly smartphones which are more portable and necessary for staying in touch with work, family, and friends. Life without smartphones in this age of high technology and digitized economy is unimaginable. According to the World Bank from 1960 – 2015 the cellular phone subscription grew from 0 to 98.6%, further, low and middle-income world population had 94% cellular subscription (data.worldbank.org). According to the same data source, the internet usage worldwide accounted for 43.99% and for low and middle-income population 36.80% by the year 2015. The smartphone usage statistics worldwide and even in developing countries show exponential growth, 30.90% of the world population will be using smartphones by the year 2017 (www.statista.com/statistics). These statistics are too big to ignore for any business operating in this strongly interconnected world of digital economy. Particularly MSMEs being flexible business enterprises can hugely benefit from M-Commerce. These are typically the enterprises with limited resources in terms of finance and HR, in addition, with significant barriers to financial access larger SMEs comparatively have better access to Finance but they are a very few in number compared to micro and medium size SMEs. Limited resources mean that MSMEs cannot spend much on marketing, advertising, exploring new markets. M-Commerce has the potential to help MSMEs reach vast markets around the globe at a much lower cost, faster speed and instant communication would mean less ambiguity for both the buyer and sellers.

M-Commerce and E-Commerce

M-Commerce refers to the buying and selling of goods and services through mobile devices such as smartphones and tablets. This digital evolution has gained prominence due to the widespread availability of smartphones and the growing internet penetration worldwide. As a result, consumers are increasingly using their mobile devices to shop, pay bills, book services, and more. M-Commerce is expanding at much faster rate than the conventional E-Commerce which used PCs and laptops as the main tool. More people in developing countries have smartphones today than the PCs because they are more affordable, portable, convenient and necessary to stay in touch virtually 24/7. Unlike PCs, smartphones are always in the hands or pockets of the owners. More smartphones are 3G and 4G enabled making web browsing, communicating, socializing and shopping on the go

anytime convenient. Mobile banking and payment systems have boosted M-commerce way ahead. There are numerous mobile payment apps available in the world market today: Alipay, Paypal, Google Wallet, Apple Pay, WeChat, Venmo and Facebook Messenger to name a few. It is not uncommon in developed economies to see shoppers going to stores and malls without carrying money or the credit/ debit cards, the mobile phone does it all. In developing countries, it is comparatively less common but the trend is changing rapidly. The main barriers to mobile banking and payments in developing countries are the payment security concerns, poor I.T infrastructure, and low quality of telecom services and lack of trust. Smartphone users are more likely to buy online than those on the PCs because of the easy access which also encourages impulsive buying behavior as most people use their smartphone in their free time or while taking short breaks between works. There is an enormous number of mobile apps available including many shopping, traveling, hotel/ hostel/ house booking apps. It seems that there is app for almost everything one can think of. Airbnb for renting room, Uber for taxi ride then there is further division UberX for taxi, UberBlack, for higher priced cars for executives, UberPool for shared taxi that saves cost, Washio for laundry service, Heal for doctor check-up at your home and BloomThat for flower delivery are few of the mobile apps among many others that have changed the traditional businesses in hotel, transportation, maintenance and cleaning, real estate and grocery shopping industry.

Mobile app surfing is another phenomenon very common in smartphone users because the phone is always in reach and one's fingertips, users surf on the installed apps including shopping apps and end up buying on impulse (Kim et al. 2016). This normally does not happen so frequently with brick and mortar stores, as people don't go to shopping malls except when they plan to buy something. Further, on brick and mortar stores the variety of goods is not enough and it is not convenient to search in different departments of the store for long time which turns one off due to fatigue. For businesses, on the other hand, it offers an opportunity to target customers almost any time of the day with their products and services or send them their deals and promotions.

State of MSMEs with Respect to M-Commerce

MSMEs are indispensable for the growth of an economy, they create jobs, they are innovative, flexible, and bring prosperity to the nation. It is vital for the sustainability and growth of any country's economy to have a robust private sector and SMEs are the overwhelming majority of firms in the private sector. When it comes to technology adoption SMEs in developing countries lag behind for which the government support is found to be the most important factor in encouraging MSMEs to adopt E-Commerce. SMEs represent a huge number of firms, that is more than 95% in many countries and provides jobs in the private sector to over half of the population according to the World Bank. By the

same source, SMEs have a significant role in generating economic opportunities, ICT and Mobile technology adoption are expanding in developing countries at a great pace and can tap into clean-technology one of the high demand sectors which estimated at USD 1.6 trillion in the next ten years (www.worldbank.org). However, the market is still in its nascent stage in terms of M-Commerce share.. This trend is changing rapidly with explosive growth in technology, increasing trust in online shopping worldwide but still in many developing countries the online payment system is not developed enough, they do not have Alipay or PayPal equivalent payment platform.

Opportunities for MSMEs

Audience Expanded Market Reach: Mobile apps provide MSMEs with a platform to reach a wider beyond their physical location. With an app, a small business can tap into global markets, opening up new revenue streams.

- ❖ **Cost-Effective Marketing:** Mobile apps offer cost-effective marketing channels. Push notifications, personalized offers, and in-app advertising enable MSMEs to engage their customers directly and promote their products or services efficiently.
- ❖ **Enhanced Customer Engagement:** Mobile apps facilitate better customer engagement through features like real-time chat, customer feedback, and loyalty programs. Engaged customers are more likely to become loyal, repeat customers.
- ❖ **Streamlined Operations:** MSMEs can improve their internal processes by using mobile apps for inventory management, order processing, and customer relationship management. This leads to increased efficiency and reduced operational costs.
- ❖ **Access to Analytics:** Mobile apps provide valuable data and insights into customer behavior and preferences. MSMEs can use this data to make informed decisions, refine their marketing strategies, and tailor their offerings to meet customer demands.
- ❖ **Payment Convenience:** Integrating mobile payment solutions in apps allows MSMEs to offer convenient and secure payment options to their customers. This can lead to higher conversion rates and reduced cart abandonment.
- ❖ **Brand Building:** A well-designed mobile app can enhance the brand image of an MSME. It offers a professional and user-friendly interface, creating a positive impression on customers.
- ❖ **Expanded Market Reach:** Mobile apps provide MSMEs with a platform to reach a wider audience beyond their physical location. With an app, a small business can tap into global markets, opening up new revenue streams.

Challenges and Considerations

While the opportunities are vast, MSMEs should be mindful of certain challenges when venturing into M-Commerce and mobile app development:

- ❖ **Cost:** Developing and maintaining a mobile app can be expensive. MSMEs should carefully budget for this and explore cost-effective development options, such as outsourcing.
- ❖ **Competition:** The mobile app market is highly competitive. MSMEs must focus on offering unique value propositions and exceptional user experiences to stand out.
- ❖ **Security:** Handling customer data and payments requires stringent security measures to protect against cyber threats and data breaches. Compliance with data protection regulations is crucial.
- ❖ **User Experience:** A poorly designed app can deter users. MSMEs should prioritize user experience by ensuring their app is easy to navigate and responsive.

Problems Faced by MSMEs

MSMEs face various obstacles, difficulties in borrowing for business being the biggest hurdle. Inadequate government support and poor infrastructure such as roads, railways, bridges, and airports, transportation make it less reliable in terms of timely delivery of goods and expensive at the same time. Research has highlighted numerous other obstacles in the way of SMEs in emerging economies that include a shortage of skilled human resource, resistance to change, lack of I.T resources, security concerns and lack of support. Limited resources and lack of access to finance mean the cost of financing would be high which will increase operation cost of the business. There will be less budget for marketing, reaching out to new markets becomes difficult and costlier. Most SMEs in developing countries mainly target domestic markets. SMEs are reluctant to entering international markets owing to lack of market information, complex customs procedures, language barrier and cultural differences. Export is the most common and simple and quick way of entering foreign markets as it takes up fewer organizational resources and is less risky for the business compared to investing directly in a foreign market, joint venture, licensing and contract manufacturing . SMEs are the main source of selling domestic products and services in international markets . In spite of huge benefits that exports offer, very few SMEs actually take it. In this regard, the role of government to support SMEs in export is of great importance. Government must build necessary infrastructure for the businesses to operate smoothly and formulate policies to support export so that SMEs can stay competitive in the international markets. Research also reveals that there is a link between exporting SMEs and the E-Commerce adoption.

Transforming Troubles into Triumphs: M-Commerce Solutions for MSMEs

M-Commerce uses wireless mobile devices such as smartphones and PDAs. Smartphones and PDAs are being easy to use and a necessity has an impact on the intentions and behavioral outcome. M-Commerce can help SMEs in the following important aspects: Increasing market reach, increased revenues, improved communication with customers and suppliers, better company image, speedy process, better staff productivity. Further, empirical findings show that SMEs in Indonesia, a developing country, higher the E-commerce adoption level higher the profit. M-Commerce can help company target more customers as a result of extended market reach due to online nature of business. Extended markets mean more customers which will increase sales revenue of these SMEs. Improved communication with customers and suppliers will enhance the quality of service, better relations with customers and suppliers and less chance of ambiguity in delivering the right product or service at the right time. M-Commerce can improve the image of the company as a modern enterprise and finally, it improves the productivity of the employees as the technology enables them to perform their tasks efficiently. Online business saves the costs incurred on brick and mortar stores such as rent, salaries, insurance, decorations and other things needed for setting up a physical store. Data from eMarketer shows that more than 80% of all online shoppers use mobile shopping as well and this number is estimated to grow to 95% in the year 2019.

Mobiles have become a major E-Commerce platform, and platform for advertising, movies, TV shows and e-books. It brings innovation as in the case of Alipay, Uber, Airbnb and numerous other apps that are used every single day by millions of users around the globe. It makes enterprise efficient, effective, and competitive thus drives growth.

Conclusion

M-Commerce and mobile apps are no longer the exclusive domain of large corporations. MSMEs can harness the power of mobile technology to expand their reach, engage customers, and drive growth. However, success in this digital era requires a strategic approach, investment, and a commitment to delivering value to customers. By embracing M-Commerce and mobile apps, MSMEs can position themselves for sustainable success in the evolving business landscape. It reveals that there are several obstacles to SMEs in general and those in developing countries in particular. It also highlights how M-commerce can help in overcoming many of these obstacles facing SMEs in developing countries. For instance, extending market reach, increased revenues, reducing transaction cost and intermediaries, speeding up processes, improving communication, more productivity of staff. Many SMEs working in transport and real estate industry, for example, can register at Uber/Didi, Airbnb; for a ride or renting a room, respectively, thus tapping into a new revenue source. Alternatively, SMEs can also get a customized mobile

app to perfectly suit their business requirements and to better serve customer and that would range on average between USD2000 to USD250000 but complex apps or those involving more features and functions such as location-based features, payment synchronization, social media, in-app purchases, synchronization across device etc. would cost much higher. SMEs, especially the micro SMEs can rather choose to register on already well-known global E-commerce giants such as Alibaba, Amazon, Flipkart, eBay and Shopify among many others for reaching out to customers around the globe using their established networks. Through these giant E-commerce platforms and their Global Shipping Program (GSP), SMEs can deliver goods at a rate much lower than the normal shipping rates. Saving cost on shipping means increased profitability and increased market reach. Finally, it is also validated through the empirical research findings in Indonesian SMEs that SMEs with a higher level of E-Commerce showed higher profits as stated above in the literature. Post E-Commerce adoption results showed a significant increase in profitability.

A STUDY ON MOBILE COMMERCE IN INDIA

Sethuraj N & Riswanth R

Student, III B.Com Professional Accounting,

Department of Commerce PA & CS,

Sri Krishna Arts and Science College, Coimbatore.

Mail: n.sethuraj23@gmail.com

Abstract

The exchange of products and services via wireless handheld devices, such as cellular phones and personal digital assistants (PDAs), is known as mobile commerce (M-Commerce). M-Commerce, often referred to as next-generation E-Commerce, allows consumers to access the Internet without having to locate a location to plug in. People may now transfer money, purchase online, and bid on items without physically visiting a store thanks to M-Commerce and E-Commerce. While M-Commerce is conducted on mobile phones utilizing the internet, E-Commerce is done on laptops and desktop computers. M-Commerce is online shopping with a mobile device. Online transactions were first made available at any time and anywhere thanks to E-Commerce and mobile commerce, respectively. In India, there are now more mobile users and mobile internet subscribers thanks to the ubiquity, reachability, mobility, and flexibility qualities of M-Commerce. The Indian mobile commerce market has great potential, and its rate of growth portends a promising future. The market represents around 3% of the \$560 billion in sales made by US online retailers. The non-store merchants are expanding at a rate of 13.2% in the US. Only the major cities in India currently dominate online sales. India had 220 million smartphone users as of 2015, a 23% increase. By 2020, India is expected to surpass the US as the second-largest market for smartphones, behind China. This essay focuses on M-Commerce, including its benefits and drawbacks as well as its potential for expansion in India.

Keywords: M-Commerce, E-Commerce, India, Smartphone.

Introduction

M-Commerce is carried out through mobile apps. For tasks like buying tickets, transferring money, emailing, and paying utility bills, people are switching from web services to mobile ones. So, M-Commerce is taking the place of E-Commerce. While M-Commerce has many benefits, it also has drawbacks such as small screens, weak CPUs, memory restrictions, bad resolutions, inefficient data entry, a lack of WAP-enabled devices, high data speeds, and a lack of bandwidth. With approximately 83% of people in India owning a smartphone and using it to shop online on their mobile devices, the market for mobile commerce in India is expected to grow. Customers between the ages of 25 and 34 are especially using their mobile devices to shop online, with 90% of them doing so. These are some of the results that emerged from the M-Commerce Trends in India 2016. Although many customers have shopped online using their mobile devices, there is still a lot of space for expansion in terms of how frequently people purchase online. Only 53% of respondents

polled stated they had recently done any online shopping. Additionally, only 28% of respondents claimed they used their phones to shop at least once a week.

The differences between E-Commerce and M-Commerce

The world of today is very different from the world of our ancestors. Everything is quick now that the Internet has been developed and takes place online. The days of choosing a product by walking between three to four stores over a distance of a few kilometers are long gone. Nowadays, we make all decisions online before visiting a physical store, and the majority of the things are only a few clicks away. M-Commerce, mobile shopping apps, etc. are relatively new concepts compared to terminology like "E-Commerce" or "web store," which have been around for a while.

Although both concepts have different connotations, they both work to improve the lives of consumers. Please review the following table to better grasp the distinctions between M-Commerce and E-Commerce.

Table 1: Differences between E-Commerce and M-Commerce

Basis	E-Commerce	M-Commerce
Definition	Electronic Commerce (also called E-Commerce) refers to the activities of buying and selling products and services with the use of electronic systems such as the Internet.	Mobile Commerce (also called M-Commerce) refers to the process of buying and selling products and services with the use of internet/cellular data via wireless handheld devices.
History	1970's	1990's
Devices used	Computers, laptops...	Wireless handheld devices such as cell phones, iPads, tablets...
The use of the Internet	Mandatory	Not mandatory (allow the use of offline mode, might not work properly though)
Connectivity	Smaller	Larger owing to the bigger number of mobile users
Mobility	Limited	Less limited because of lighter weight and smaller size leading to easier to-carry
Reach	Only at the places where electricity and the Internet are available	Broader due to its portability

Payment Gateway	Credit cards	Caller's rate, mobile banking, or user's credit card
Usage	Less simple because of a more complicated user interface and more functions	Simple because all functions have been simplified
Platform used	Web stores	Web stores (mobile version/web app), hybrid app, native app
Cost	Less costly for the creation of a web store and the use of the internet	More costly the creation of a mobile app and use of cellular data

Review of Literature

With roughly 83% of Indians owning smartphones and using them to shop online, Indian consumers are embracing mobile commerce. Customers between the ages of 25 and 34 are especially using their mobile devices to shop online, with 90% of them doing so. These are some of the findings from the Regalix Inc. report titled "State of M-Commerce 2016." Although many customers have shopped online using their mobile devices, there is still a lot of space for expansion in terms of how frequently people purchase online. Only 53% of respondents polled stated they had recently done any online shopping. Furthermore, only 25% of those surveyed indicated they used their phones to shop at least once a week. Men are more likely than women to purchase online (63%) at least once per month, suggesting a gender gap in this area. Three platforms account for the majority of online retail: Flipkart (44%), Amazon (32%), and Snapdeal (19%). It's interesting to note that age groups differ in their preferences for these platforms, with 49% of respondents in the 18–24 age group choosing Flipkart as their preferred retailer, compared to only 35% in the 25–34 age group. In the 25–34 age range, support for Snapdeal was higher (25%) than in the 18–24 age range (just 13%). Cash-on-delivery (CoD) (34%) and free delivery (34%), are the two main variables affecting a customer's decision to shop online. 62% of clients chose COD as their preferred payment method above net banking, credit/debit cards, and mobile wallets. An overwhelming 94% of consumers said they preferred mobile applications to mobile websites as their preferred method of shopping on their phones. While 81% of respondents claimed that mobile advertisements had no impact on them, the study also indicated that women (25%) were more likely than men (17%) to claim that advertisements had an impact on their shopping habits. With 31% of those who haven't done any online shopping yet stating they planned to do so in the future, this trend is only expected to continue. What has kept 75% of such shoppers away is concern over product quality.

Objectives of the Study

- ❖ To study the concept and growth of M-Commerce in India
- ❖ To study the advantages and disadvantages of M-Commerce in India
- ❖ To study the prospects of M-Commerce in India.

Methodology of the Study

Secondary sources, currently available literature, reports, and data have all been employed to achieve the aforementioned goals. The information was gathered from numerous journals, studies, periodicals, and websites.

Tools for Mobile Commerce

The following are some of the mobile technologies that assist in contacting customers in the current market. There are many mobile solutions accessible for businesses to engage customers in business.

- ❖ SMS: SMS (Short Message Service)
- ❖ MMS: MMS (Multi-media Message Service)
- ❖ Mobile Web Applications
- ❖ Bluetooth
- ❖ Location-based marketing
- ❖ Voice

Advantages of M-Commerce

Growth of M-Commerce in India

For consumers of smartphones, numerous mobile applications are being developed. programmes used for mobile banking include State Bank Freedom from State Bank of India, iMobile from ICICI, and Axis Mobile for Android from AXIS Bank. These programmes are used for online financial transfers and utility bill payments. IRCTC Connect is used to reserve train tickets, Mpesa by Vodafone is used to send money and pay bills, and Book My Show is used to reserve movie tickets. People switching from E-Commerce to M-Commerce is a common feature of M-Commerce. The introduction of affordable smartphones and inexpensive mobile tariffs contributed to the rapid expansion of mobile internet users and, consequently, of M-Commerce in India. 60% of internet users in India use their mobile phones to access the internet. By 2019, the number is anticipated to reach 436 million, according to an IAMAI-KPMG analysis. According to research by Google India and IPSOS, 94% of Indian smartphone users have used their devices to access the internet from their phones. Mobile internet is the next BIG revolution in India. In the country, 56% of smartphone users access the internet more than once every day (the figure is 53% in the US). 40% of users surf the web daily or more. Only 6% of people (11%) in the

US never use their phone to access the Internet. Compared to 54% in the US, 76% of smartphone users in India use their handsets to browse social networking sites. 77% of smartphone owners listen to music, 33% play games, and 32% read newspapers or magazines on their devices.

10 reasons why Mobile Commerce in India may get bigger than Online Commerce

- ❖ Affordability of mobile devices
- ❖ Doing things on the go
- ❖ Mobile Internet connectivity
- ❖ Mobile Payments
- ❖ Security
- ❖ Bridging the gap between E-Commerce and conventional stores
- ❖ Low tariffs - High revenue
- ❖ The greater target audience for advertisements
- ❖ Government policies
- ❖ Personalization

M-Commerce Market India: Share and Sales Remain Positive

Figure 1: Retail M-Commerce Sales in India, 2015 - 2020.

By 2020, India's retail M-Commerce industry will hold 80% of the country's retail eCommerce. The M-Commerce industry in India has gained momentum thanks to the rapid usage of smartphones, mobile internet, and apps. By 2020, the Indian mCommerce business is anticipated to account for \$37.96 billion in sales or 80% of the country's E-

Commerce market. Increased use of smartphones and the internet has led to a surge in M-Commerce in India. Currently, 331 million people in a nation of 1.3 billion people use cell phones. In India, there were 371 million mobile internet users as of June 2016, and that number is predicted to rise to 500 million by 2017. These numbers show that India's E-Commerce sector which relies on mobile devices has only just begun to explore its full potential.

Disadvantages of Mobile Commerce

- ❖ Mobile devices don't have large screens like desktops or laptops, so consumers may get tired of navigating endlessly to select a single item from thousands. Rates of shopping are impacted.
- ❖ Every new technology starts with certain issues. Since M-Commerce is a new application, people occasionally resist changes that are undergoing rapid change. Due to their habit of purchasing goods via E-Commerce.
- ❖ Every company has unique risks. Mobile commerce is a market that is expanding and where a lot of investment is risky. because technology is constantly evolving.
- ❖ Furthermore, the wireless network has less security, increasing the likelihood of data hijacking. Mobile commerce requires 3G's fast connectivity. Otherwise, the user's experience with the entire product-buying procedure will become stressful.

Conclusion

People are using mobile applications to pay their utility bills, transfer funds, reserve train tickets, buy cinema tickets, and other things because of the features of M-Commerce. People have been drawn to conduct transactions on mobile devices by the development and low cost of smartphones, the reduced mobile internet fee, and the busy lives of people. Smartphones were created to get around M-Commerce's drawbacks. The number of daily transactions conducted via mobile devices has skyrocketed in the nation over the past few years as a result of expanding smartphone access and rising mobile Internet usage. According to a survey published last year by the market research firm Zinnov, India's mobile commerce sector would grow from \$2 billion in 2014 to \$19 billion in 2019. Without a doubt, there is room for improvement in the specialized areas of mobile commerce, such as safe transactions, an improved shopping experience, and improved visuals. Mobile commerce ushers in a new era of shopping aside from this.

A STUDY ON MOBILE COMMERCE IN INDIA

Ms. M. Shanmugapriya

*Assistant Professor in Commerce - BPS,
Nallamuthu Gounder Mahalingam College, Pollachi.*

Abstract

Mobile Commerce is the subset of e-commerce, which includes all e-commerce transactions, carried out using a mobile (hand held) device. This paper attempts at figuring out the relevance and potential role that m-commerce can play in the development of business environment, the use of wireless handheld devices such as cellular phones and laptops to conduct commercial transactions online. Mobile commerce transactions continue to grow, and the term includes the purchase and sale of a wide range of goods and services, online banking, bill payment, information delivery and so on.

Keywords: *M-commerce, environment, commercial, transactions, information.*

Introduction

E-commerce, or electronic commerce, refers to the buying and selling of goods and services online using the internet. This can include transactions between businesses, between businesses and consumers, and between consumers themselves. E-commerce has grown rapidly over the last few decades and has become an important part of the global economy.

M-commerce, or mobile commerce, is a subset of e-commerce that refers specifically to transactions conducted using mobile devices, such as smartphones and tablets. M-commerce includes not only online purchases made through mobile devices, but also mobile payments, mobile banking, and other transactions facilitated by mobile technology. Both e-commerce and m-commerce have become increasingly important in recent years as more and more people have gained access to the internet and mobile devices. They offer numerous benefits, including convenience, flexibility, and access to a wider range of products and services.

Characteristics and Limitations

Mobile commerce has characteristics that make it significantly different to E-commerce using desktops and laptops:

- ❖ Mobile devices tend to have limited space: a typical Smartphone or tablet would have less than 10% storage space compared to desktops and laptops.
 - ❖ Mobile devices also have significantly smaller display screens to allow easier mobility.
- This means the design of websites, apps, and applications for M-commerce needs to

take into consideration what are the essential requirements needed to fit into these limited displays.

- ❖ Mobile devices need to operate on battery for longer hours. This feature is essential if the device to be considered to be true mobile. Long and continuous use of the processing power of the mobile devices would drain the battery.
- ❖ Limited processing power and processing memory Random Access Memory (RAMs). Typical mobile devices are not equipped to perform extensive processing as traditional desktops and laptops. The processor is designed to self-cool without the need for a fan to keep the mobile devices both slim and reduce the use of the battery. Thus many traditional applications could not run efficiently on mobile devices.
- ❖ Internet traffic on mobile devices needs to consider that many mobile devices would be using mobile network. Both the devices and the network cannot handle extensive traffic although the new generations of tablets and smart phones have been designed to handle faster and better Internet traffic at speeds now reaching 5G or 100GB per second.
- ❖ The operating systems on mobile devices have been designed not to be large and reduce its extensive use of the processor and RAMs. This has come at a cost in reducing the tools and options that would have been otherwise available in typical desktop or laptop.
- ❖ Mobile devices come with extensive features not found traditionally in desktop or laptop devices. Features include: high-resolution cameras, Global Positioning Systems (GPS), Near Field Communication (NFC), SMS messages, calling, and access to extensive libraries for application downloads known as Apps.

Applications of M-Commerce

Other than the straightforward m-commerce transactions of buying and selling of goods and services, they have so many applications. Let us take a look at a few examples,

- ❖ **Mobile Banking:** Using a mobile website or application to perform all your banking functions. It is one step ahead of online banking and has become commonplace these days. For example, in Nigeria, the majority of banking transactions happen on mobile phones.
- ❖ **Mobile Ticketing and Booking:** Making bookings and receiving your tickets on the mobile. The digital ticket or boarding pass is sent directly to your phone after you make the payment from it. Even in India now IRTC and other services provide m-ticketing services.
- ❖ **E-bills:** This includes mobile vouchers, mobile coupons to be redeemed and even loyalty points or cards system.

- ❖ **Auctions:** Online auctions having now been developed to be made available via mobile phones as well.

Benefits of Mobile Commerce

M-commerce gives great benefits to both business owners and customers. Below are some benefits of m-commerce, which are;

- ❖ **Fasters Purchases**

The m-commerce gives positive customers experience, easy and repeat purchases. It also increases business owners' sales. In addition, it loads data faster and enables customers to browse and purchase products faster and easier.

- ❖ **Better Customer Experience**

According to Marketing Land, 83% of customers use smart phones inside real stores to shop. These days, people are well familiar with how smart phones and tablets work. To give your customers better experience, your online shopping app should be fast, convenient, and exclusive.

- ❖ **Direct Connection to Customers**

This benefit allows business owners to easily communicate to their customers. It notifies shoppers or customers about a new product updates, discounts, promotions, and it easily engages the customers. Customers get such messages when they open a mobile app, and may get notified even without activating an app. Studies shows that 50% of users like notifications, and 80% of users say offers and rewards make them more loyal to a brand or business.

- ❖ **Tailored Contents**

Based on customers' behavior and interaction with your mobile app, you can deliver personalized content to them. Giving customers their preferences through the use of customized content can also lead to higher customer loyalty. The effect of tailored content to your business leads to better engagement, expanded reach, and customer loyalty.

- ❖ **Deeper Analytics**

Analytics allows you to get basic information of your customers, like sex, location, age, shopping history, and other information when set up. The mobile app or website linked to Google Analytics allows you to build and set user analytics of various levels. With this analytics, you will get a better understanding of your customers or targeted audience, and in turn create more sales for your brand or business.

- ❖ **Cost Reduction and Productivity**

Most apps allow you reach your customers faster and also cut down cost when running a marketing campaign. The development of app, IT maintenance, and support are cheaper compared to a web store or any other selling points.

❖ **Store Navigation/Geo location**

M-commerce provides users with easy access to navigate through the nearest stores in their GPS. It gives users easy access to find the nearest preferred store and make a purchase. M-commerce provides fun experience for users, and creates more banding options.

❖ **Traditional Retail Sales Benefits**

The m-commerce provides you with assistance in your traditional retail sales. The customers look and explore your products online and visit your retail shop or store to make purchase. It also helps your online shop to filter the hassle of your customers having to go through all your collection manually at your shop or store. M-commerce also helps eliminate the hassle retail store owners and staffs go through to manually update their data.

❖ **New Customer Base**

M-commerce also provides you with new customers. When m-commerce is optimized very well, it does not just hold your current customer base but also brings and attracts new buyers who come to have a look at your online shop, and if they find it interesting and reliable, they make purchases. One of the means that customers use in looking for information is mobile search. M-commerce increases your likelihood to be discovered by customers.

❖ **Higher Return of Investment (ROI)**

It is important to know that 60% of people are likely to make purchases from a mobile friendly e-commerce site than from one that is not mobile friendly. With this, your product speaks for itself. It is more likely for a customer who is happy about purchasing your product, and have a good experience with your brand, to come back to make another purchase. They can also introduce or refer others to your brand or business.

- ❖ The differences between E-commerce and M-commerce
- ❖ Our world today is so much different from our previous generations. With the invention of
- ❖ Internet, everything is fast and happens online. Long gone are those days when people shop
- ❖ around 3-4 stores with the total distance of a few kilometers deciding which product to buy.
- ❖ These days, all considerations are done online before we made it to the physical store and most
- ❖ of the products are just a few clicks away from us. The terms E-commerce or web store have
- ❖ been on the market for a while, but M-commerce and mobile shopping app etc. are quite

- ❖ newcomers.
- ❖ Both of these terms have different meanings though both aim at making consumer lives
- ❖ easier. To better understand the differences between E-commerce and M-commerce, please
- ❖ have a look at the following table
- ❖ E-commerce
- ❖ M-commerce
- ❖ Definition
- ❖ Electronic Commerce (or also called E-commerce) refers to the activities of
- ❖ buying and selling products and services
- ❖ with the use of electronic systems such as
- ❖ the internet.
- ❖ Mobile Commerce (or also called M-commerce) refers to the process of buying
- ❖ and selling products and services with the
- ❖ use of internet/cellular data via wireless
- ❖ handheld devices.
- ❖ History
- ❖ 1970's
- ❖ 1990's
- ❖ Devices used
- ❖ Computers, laptops...
- ❖ Wireless handheld devices such as cell
- ❖ phones, iPads, tablets...
- ❖ The use of
- ❖ Internet
- ❖ Mandatory
- ❖ Not mandatory(allow the use of offline
- ❖ mode, might not work properly though)
- ❖ Connectivity
- ❖ Smaller
- ❖ Larger owing to the bigger number of
- ❖ mobile users
- ❖ Mobility
- ❖ Limited
- ❖ Less limited because of lighter weight and

- ❖ smaller size leading to easier to carry
- ❖ Reach
- ❖ Only at the places where the electricity
- ❖ and the internet are available
- ❖ Broader due to its portability
- ❖ Payment
- ❖ gateway
- ❖ Credit cards
- ❖ Caller's rate, mobile banking or user's
- ❖ credit card
- ❖ Usage
- ❖ Less simple because of more complicated
- ❖ user interface and more functions
- ❖ Simple because all functions have been
- ❖ simplified
- ❖ Platform used
- ❖ Web stores
- ❖ Web stores (mobile version/web app),
- ❖ hybrid app, native app
- ❖ Cost
- ❖ Less costly for the creation a web store
- ❖ and the use of internet
- ❖ More costly for the creation of a mobile
- ❖ app and the use of cellular data

Conclusion

There are news articles and pictures displaying people, who are ordering things over the Internet while waiting for a bus, downloading merchant coupons on their PDAs as they enter a store or bidding for the last table at a hot restaurant by digital phone in a spur-of-the-moment auction. Actually this process represents a tip of a very big iceberg. The advent of m-commerce, as widely referred to among the users, has far-reaching implications. But there are many limitations in the technologies that Once its relevant technologies get matured, widely available and competent, the host of portable devices will be ready to handle the bigger transactional activities not envisioned so far successfully apart from these minor activities.

Abstract

Micro, Small and Medium Enterprises (MSMEs) contribute to India's economic development by creating large-scale employment and producing consumer-oriented products, thereby reducing inequality and poverty. The emergence of SMEs and their ability to produce more goods and services at low labor and capital costs makes it advantageous to contribute to India's overall export production and employment generation. It will significantly increase about 45 percent of manufacturing, more than 40 percent of exports, 28 percent of GDP and create about one hundred million jobs. The purpose of this paper is to assess the performance of MSMEs and throw light on the factors affecting the growth of MSMEs in India. The academic period is 1990-91 and 2017-18. The data is taken from annual reports published by small and medium enterprises and research reports published by the Government of India. Multiple regression analysis technique is used to calculate the relationship between MSME growth and its influencing factors. The paper reveals that there is a great need for MSME workforce management and reduction of sick units as both play an effective role in overall MSME performance.

Introduction

Micro, Small and Medium Enterprises (MSME) play an important role in business development and create the second largest employment opportunity in India. The MSME sector has developed into a very vibrant market that plays a key role in the economic balance of the country (Kumar et al.). Globally, small and medium-sized enterprises are widely recognized for their significant contribution to economic growth, the creation of decent jobs, the provision of public goods and services, and the alleviation of poverty and inequality. The first generation of sectoral reforms took place in 1991, and the second generation reforms establish MSME as a separate focus area with an independent legal framework under the Micro, Small and Medium Enterprises Development Act (2006). For example, in India, the Industrial Development and Regulation (IDR) Act of 1951; small scale industries were planned on the basis of "number of workers". But it was noted that

obtaining reliable data on the number of employees was difficult. According to Section 7(1) of the MSME Development Act (2006), regarding manufacturing enterprises and investments, any category or class of enterprises can be classified as micro, SME or medium enterprises based on investment in plant and machinery. regarding service companies to equipment and thus the Act paved the way for merger of all Agriculture and Rural Industries (ARI) consisting of Khadi and Village, Coir Industries which together became MSME. The main motive behind these initiatives was to make India a global engineering and manufacturing center in the sub-regions.

These initiatives include Make-In-India and Digital India program. The Make-In-India program was launched in September 2014 along with other nation-building projects. The Digital India initiative, on the other hand, provides ample opportunities for SME promotion and SME participation in the ICT sector. Also, in the series of MSME reforms, Udyam Registration was launched where registration can be done only with the help of Aadhaar number. In order to solve problems related to financing, raw materials and work of EMEs, a portal of national strength will be formed, and in addition, a credit guarantee system will be launched for micro and small businesses mainly for new projects. To improve the sustainability of traditional industries, the SFURTI program to improve their competitiveness and the ASPIRE program to promote innovation, rural industries and entrepreneurship in India will be launched.

Plans to expand marketing and acquisitions were launched to provide useful information for the growth of the company. The central government has also defined measures in the form of the Atmanirbhar Bharat program to ensure business continuity during the COVID-19 pandemic. The "Make in India" initiative and the "Atmanirbhar Bharat Abhiyaan" (Campaign for an Independent India) played a central role in promoting entrepreneurship and local production in the country, with special emphasis on SMEs, which are also called the backbone of India. economy . Apart from this, MSMEs have been reclassified by the Government of India after fourteen years of the MSME Act, 2006. This classification defines MSMEs on the basis of investment and turnover. There is no longer a distinction between manufacturing and service companies. Companies are now called micro units if they have investments up to Rs. 1 crore and turnover below Rs. 5 crores. An MSME is defined as a small enterprise if its net investment in plant, machinery and equipment is between Rs. 1 crore to Rs. 10 million and an annual turnover of Rs. 5 crore to Rs. 50 crores. Under the new definition, companies with investments up to Rs. 50 million and a turnover of less than rupees. 250 billion are now called medium-sized companies. In the era of reforms, India has many medium-sized enterprises.

Various plans and initiatives of the Government of India consider small businesses as the primary sector for local value addition and thus employment generation. With the recently announced unsecured loans for small and medium enterprises, banks and

financial agencies have also declared that lending to such enterprises and restructuring their operations is risk-free. This will encourage SMEs to export more and more without fear of losing the benefits of being an MSME entity. This leads to a multiple increase in exports from the country, rapid growth of the entire economy, and achieves social and economic progress. The emergence of MSME and its ability to produce more goods and services at low labor and capital costs makes it advantageous to contribute to India's overall industrial output and employment generation. Employment in the MSME sector is next to the agricultural sector in terms of volume. According to the latest available data, there are 7.9 million registered small and medium enterprises in India. The MSME industry accounts for 33 percent of the country's GDP and generates more than 120 million jobs across various industries and regions of the country, contributing to wealth creation at the grassroots level. This will help promote often neglected entrepreneurs such as women, marginal entrepreneurs and directly benefit the poor and disadvantaged by directly reducing the poverty gap and increasing incomes.

In FY 2022 alone, 8.59 million women-led MSMEs were registered on the Udhyam portal, accounting for 17 percent of all MSME registrations. The share of up to 63.4 million units is 6.11 percent of the GDP of industry and 24.63 percent of the GDP of services. MSME produces various products and services using the latest technology, currently the size of the business unit market also varies from hand-made products to high-tech products. The Union budget for 2022-2023 focuses on ease of doing business for small and medium-sized enterprises. Government and non-government agencies are creating complex measures to create a credit facility, improve recruitment, create job opportunities and expand IT skills in this sector. This article has attempted to compare the growth of the MSME sector before and after the MSME Development Act, 2006. Formerly known as Small Scale Industries (SSI), micro-small business in India has shown great growth since independence. Bargal et al (2009) investigated the causal relationship between three variables, GDP, SSI production and SSI exports and compared SSI performance parameters before and after liberalization. The study revealed that the CAGR (compound average growth rate) of various parameters of SSI decreased before the reform, but an upward trend was observed in the post-reform period.

Sandberg et al., (2002) SMEs contribute to national income, create jobs, promote international trade through export promotion and encourage entrepreneurship. Small business performance is defined as their ability to create jobs and wealth through business establishment, survival and sustainability. Moorthy and others (2012) define a strong relationship between effective business, appropriate management of human resources, the use of market information and the application of information technology are important from the point of view of business results. Yadav et al (2013) concluded using regression analysis that output appears to be highly positively dependent on the absolute values of

labor and capital. The company's ability to increase production depends on the growth of capital and labor. Continued growth in productivity increases industrial production and growth, which helps to increase economic growth, competitiveness of exports in domestic and international markets, and the standard of living of society. Florea et al (2015) determined the role of human capital in achieving production using a simulation model (regression function). The author also points out the need to increase training hours to achieve the goal of skilled employment and increase production capacity and income.

Kumar and Rao (2016) reclassified the factors affecting production into material, money, machinery, labor, management, information and time. In their research, Manna and Mistri (2017) analyzed that SMEs grow year by year, and their share in the national or country gross domestic product also showed a growth trend with certain variations. In their study on the MSME sector, Joshi and Kishore (2018) found that a significant number of MSMEs are engaged in energy conservation, but increasing the number of units practicing the energy conservation model requires a lot of effort. Dubey (2020) analyzed the current situation of MSMEs during the coronavirus pandemic and the financial assistance package called "Atmanirbhar Bharat (Independent India) to revive the business of MSMEs. Kadam and Pandey (2020) studied the current state of MSME. Based on the above, the analyst tried to investigate the problems and possible developments of the MSME sector in the post-Covid 19 pandemic period. Tripathy and Bisoyi (2021) examined the role of SMEs in the growth of the Indian economy, estimated the intensity of the losses caused by the Covid-19 pandemic in various sectors and proposed solutions to the existing challenges.

The purpose of this study is to find out the effect of various factors on the total output of MSME and to find out various policy measures to promote the growth of MSME in India in the future. Considering the purpose of the study, this article is divided into three parts. The first part of the paper describes the performance of MSMEs in terms of number of units, employment, access to credit, export output, number of affected units and MSME output before and after the implementation of the 2006 MSME Act. The paper focuses on the overall impact of various variables on the total output of MSMEs in India and finally the third section concludes the discussion and presents certain policy implications for the future growth of MSMEs in India.

Methodology

The study is an empirical study based on secondary data. Secondary data is taken from annual publications of RBI, annual reports of MSMEs published by Government of India and research reports published by Government of India. The study period is the years 1990-91 2017-18. For analysis, this article looks at different variables. The data variables consist of production, employment, exports, the number of sick units, the amount of capital of the schedule bank, the amount invested in fixed assets of the MSME. Production It is the

process of combining different inputs, both tangible and intangible, to create outputs. Ideally, this product is a good or service that has value and contributes to the utility of individuals. employment Refers to a form of economic activity where another person has assigned a person to perform a specific task or job. to take Exports are goods and services produced in one country and sold to buyers in another country. Simply put, an export is a good or service that is produced domestically but sold abroad. Sick units According to the guidelines, micro, small and medium enterprises (as per MSME Act, 2006) can be considered sick if any account of the corporate borrower is in NPA status for at least three months.

Capital is durable goods, which in turn are used as production inputs in the further production of goods and services. Bank schedule Banks listed in Schedule II of the Reserve Bank of India Act, 1934 are called Scheduled Banks. Fixed assets Assets that are purchased for long-term use and that are unlikely to be converted into cash are classified as fixed assets. For example, land, buildings. Simply put, a fixed asset is a long-term tangible asset that a business uses to generate revenue. An additional correlation coefficient is calculated to determine the relationship between the variables. The result of the multiplication can be useful to improve the performance in the modification and formulation of a specific policy. Multiple regression technique is used to calculate the functional relationship between MSME productivity and the independent variables in the model such as employment, exports, sick units, capital and fixed assets. All variables are converted to percentages based on the annual growth rate.

Methodology for Compound Annual Growth Rate

Regression Model

$$P = f [\alpha + (\beta_1 S_i + \beta_2 E_i + \beta_3 X_i + \beta_4 C_i + \beta_5 I_i)]$$

where, P stands for production, α is constant and β_1 to β_5 are the coefficient parameters of the Number of Sick units (S), Employment (E), Export (X), Credit facility (C) Investment in Fixed Assets (I).

Results and Discussions

The role of small-scale industry as an employer and export promoter is well known. The policy plans also emphasized the importance of the SSI sector in the economy. The period of the present study is divided into pre-MSME Act (1990-1991-2005-2006) and post-MSME Act (2006-2007-2017-). 2018). The performance of the MSME sector is described in this study in terms of annual output growth, employment, exports, permanent units, sick units and credit facilities. Tables 1 and 2 show the growth of MSME before and after MSME Act 2006. A perusal of Table 1 shows that MSMEs' production, exports, number of permanent establishments and access to credit increased significantly during the pre-

MSME Act period. There is continuous growth in production during the period and the maximum production growth of 23.64 percent can be found in 1994-95. The total annual growth of production is 13.72 percent. The number of SSI units increased from 6.79 million to 12.34 million between 1991 and 2005-06, contributing to an increase in employment from 15.83 million to 29.49 million. The estimated export values show that the volume of exports is increasing during the study period. It increased from 96.64 billion in 1990-91 to 1502.42 billion in 2005-06. At this stage, the number of affected units has decreased and the data also shows that the credit facility of MSME units has increased.

Table 1: Growth Performance of MSMEs in Pre-MSME Act (1991-2006)

Year	Production in Billion	% Change	No. of Employees Millions	% Change	Exports (Billion)	% Change	No. of Units (Million)	% Change	No. of Sick Units	% Change	Credit Available	% Change

Source: Annual Report of Ministry of MSME 2018-19

Table 2 discusses the activities of MSME in the post-MSME Act. After the implementation of the MSME Act in 2006, the sector's output increased from 13513.83 billion in 2006-2007 to 21876.09 billion in 2016-2017. Total annual output growth at this stage is 4.93 percent. During this period, employment increases marginally. Employment increased from 80.52 million to 118.98 million. The table shows that exports have grown considerably. Exports increased from 1825.38 billion in 2006-2007 to 8675.89 billion in 2016-2017. The growth of the MSME sector shows that the number of affected units has increased in the years since the publication of the book. The number of patients increased from 126,824 units to 480,280 units. The results show that the availability of credit improved significantly during this period. The tabular results also reveal that the combined annual growth of all variables during 1991-2006 (Pre-MSME Act) and 2006-2017 (Post-MSME Act). Table 1 shows that the total annual growth of production is 13.72 percent and the growth of export is 20.07 percent. During the pre-MSME Act, the total increase in credit availability was found to be 12.23 percent. In the second research period, the annual growth of production is only 4.93 percent and the growth of export is 16.87 percent. After the MSME Act, the annual growth of the affected units has increased significantly. The annual growth of sick units during this period is 14.24 percent. Figure 1 compares the combined annual growth of different variables in two periods. The figure shows that in the post-MSME Act, MSME production has declined. The growth rate of manufacturing has come down from 13.72 percent pre-MSME Act to 4.93 percent post-MSME Act. On the other hand, there is no significant difference in the annual growth of employment and exports in both periods

Table 3: Estimation of Functional Relationship

Coefficients^a						
Model	Unstandardized Coefficients		Standardized Coefficients	t	Sig.	R²
	B	Std. Error	Beta			
(Constant)	9.229	7.846		1.176	.252	.755
% Number Employee	.874	.110	.825	7.948	.000	
% Value of Exports	-.138	.225	-.065	-.612	.547	
% Credit Available from Schedule Bank	.006	.269	.002	.021	.984	
% Fixed Investment	.374	.280	.142	1.338	.194	
% Number of Sick Units	-.151	.071	-.226	-2.127	.044	

A significant change can be seen in the availability of credits and sick sections. Credit availability has doubled under the post-MSME Act and the number of affected units has increased dramatically compared to the pre-MSME Act. In addition, correlation and regression are performed together to measure the degree of association between variables. The results show that there is a positive and strong relationship between employment and production. It paves the way for government, decision makers, entrepreneurs, financial institutions and private sector organizations to formulate policies that help increase employment through people and skill development programmes.

Figure 1. Compound Annual Growth Rate of Various Factors Affecting Growth of MSMEs (percentages).

Source: Computed from secondary data.

Calculations by the Author

The relationship between dependent and independent variable is considered as $P = f [\alpha (\beta_1Si \beta_2Ei \beta_3Xi \beta_4Ci \beta_5Ii)]$ Output of MSME Units = 9,229 -.151 (Number of Sick Units) .874 (Number of Employees) - 138 (Number of Exports) .103 Amount of Credit Available .374 (Amount of Investment in Fixed Assets) The adjusted R-squared value was 0.755. The regression results show that the number of sick units and employment are statistically significant for the model. The volume of exports, fixed investments and available credit is not significant. Only one negative coefficient is sick units, which indicates that production levels decrease as sick units increase.

The significance of the ANOVA analysis confirms that the model fits the observed dependent and independent variables. Therefore, it can be concluded that production increases when employment increases and decreases when the number of sick MSME units increases. For example, if employment increases by one, the percentage change in output growth is 0.847, all other variables remaining constant.

Conclusion

Small and medium-sized enterprises are the backbone of the country, and to survive in the age of technological development, they must incorporate new innovations in production methods. The results show that an increase in number of sick units leads to a

decrease in production and when employment increases, production also increases, so it is necessary to manage MSME workforce and reduce number of sick units because both work effectively. role in the overall functioning of the MSME. The R-squared intercept indicates that the number of sick units and employment are statistically significant for the model. It is necessary to introduce an educational system aimed at entrepreneurs and organize workshops to support the affected units. Qualified and educated entrepreneurs must be fully aware of government benefits and privileges in order to make sound financial decisions. In addition, learning new technologies and tools causes significant changes in the quality of products at the cheapest prices. SMEs can be encouraged to improve their competitiveness by supporting power generation equipment and other infrastructure. Government can provide marketing assistance and space to sell MSME products and services. Priority should be given to investment in research and development and extension services that can help Indian SMEs compete in the global market.

DIGITAL INDIA AND INDUSTRY 4.0

Dr. R. Somasundaram

Assistant Professor

Department of History, NGM College, Pollachi

Abstract

This abstract provides a succinct glimpse into the synergy of "Digital India" and "Industry 4.0," illustrating their convergence in driving technological advancement and socio-economic progress in India. It highlights their transformative impact on sectors ranging from governance and education to manufacturing and healthcare, setting the stage for a digital and industrially evolved nation.

Keywords: *Digital India, Industry 4.0, technology, digital transformation, infrastructure, e-governance.*

Introduction

Digital India and Industry 4.0 represent two powerful and interconnected trends that are shaping the future of India's economy and society. These initiatives are transforming the way businesses operate, how government services are delivered, and how citizens interact with technology. In this article, we will explore the convergence of Digital India and Industry 4.0 and their impact on the nation's growth and development.

In an era marked by unprecedented technological advancements, two transformative initiatives have taken center stage in India's journey towards progress and modernization: Digital India and Industry 4.0. These initiatives are redefining the nation's landscape, propelling it into the digital age while revolutionizing its industries. Digital India, a government-led program, seeks to empower citizens through digital technologies, while Industry 4.0 represents the fourth industrial revolution, where automation, data, and connectivity converge to redefine manufacturing and commerce. In this article, we will explore the symbiotic relationship between Digital India and Industry 4.0 and their profound impact on India's socio-economic development.

Digital India: A Vision for Inclusive Growth

Digital India, launched in 2015 by the Government of India, is a comprehensive program aimed at harnessing the power of digital technologies to create a digitally empowered society and a knowledge-based economy. The program has several key pillars, including infrastructure development, digital literacy, e-governance, and digital services.

Infrastructure Development: The backbone of Digital India is the creation of robust digital infrastructure, including high-speed internet connectivity in rural and urban areas. Initiatives like BharatNet are working towards bridging the digital divide by connecting even the remotest parts of the country.

Digital Literacy: To ensure that every citizen can benefit from digital services, Digital India focuses on promoting digital literacy and skills training. This empowers people to use technology effectively for personal and professional development.

E-Governance: Digital India aims to make government services more accessible and efficient through e-governance. Services such as Aadhaar, e-KYC, and digital payments have simplified interactions between citizens and government agencies.

Industry 4.0: The Fourth Industrial Revolution

Industry 4.0, on the other hand, represents the fourth industrial revolution characterized by the integration of digital technologies, automation, data analytics, and the Internet of Things (IoT) into manufacturing and industrial processes. It's transforming traditional industries and creating new opportunities for innovation and growth.

Smart Manufacturing: Industry 4.0 is driving the development of smart factories where machines communicate and collaborate with each other, leading to increased efficiency, reduced waste, and better quality control.

Data-Driven Decision Making: Businesses are leveraging big data and analytics to make informed decisions, optimize supply chains, and predict maintenance needs, resulting in cost savings and improved productivity.

Customization and Personalization: Industry 4.0 enables mass customization, allowing companies to tailor products and services to individual customer needs, enhancing customer satisfaction.

The Convergence: Digital India Meets Industry 4.0

The synergy between Digital India and Industry 4.0 is evident in various sectors:

Manufacturing: India is witnessing a rapid transformation of its manufacturing sector with the adoption of Industry 4.0 technologies. Factories are becoming smarter, more efficient, and interconnected.

Agriculture: Digital India initiatives, combined with Industry 4.0, are revolutionizing agriculture. Smart farming techniques, data-driven crop management, and precision agriculture are boosting yields and farmers' incomes.

Healthcare: Telemedicine and remote monitoring have become more prevalent, enhancing healthcare accessibility, especially in rural areas, thanks to the digital infrastructure developed under Digital India.

Education: Digital learning platforms are proliferating, and the pandemic accelerated the adoption of online education, making quality education more accessible across the nation.

Smart Cities: The concept of smart cities is gaining traction, with urban planning integrating technology for efficient resource management, traffic control, and citizen services.

Digital India Trends:

E-Governance and Digital Services Expansion: Digital India continues to expand its e-governance initiatives, making government services more accessible and efficient through online platforms and mobile apps. Initiatives like the Unified Payments Interface (UPI) and e-KYC have gained widespread adoption.

Rural Internet Connectivity: Efforts to improve rural connectivity through programs like BharatNet are ongoing, ensuring that even remote areas have access to high-speed internet, thus bridging the digital divide.

Digital Literacy and Skill Development: Promoting digital literacy remains a priority, with initiatives aimed at providing digital skills training to individuals across various age groups and backgrounds.

Cybersecurity Enhancement: With the increasing digitization of services, there is a growing emphasis on enhancing cybersecurity measures to protect government and citizen data from cyber threats.

Industry 4.0 Trends:

Smart Manufacturing: The adoption of Industry 4.0 principles in manufacturing continues to grow, with more companies integrating IoT devices, data analytics, and automation to create smart factories that enhance efficiency and reduce operational costs.

AI and Machine Learning Integration: Artificial intelligence (AI) and machine learning are becoming integral to Industry 4.0, enabling predictive maintenance, quality control, and data-driven decision-making.

Supply Chain Digitization: The pandemic highlighted the importance of resilient and adaptable supply chains. Industry 4.0 trends include the digitization of supply chains for real-time monitoring, better risk management, and greater transparency.

5G Connectivity: The rollout of 5G networks is set to accelerate the adoption of Industry 4.0 technologies by providing faster and more reliable connectivity for IoT devices and real-time data transfer.

Sustainability and Circular Economy: Industry 4.0 is increasingly focused on sustainability, with technologies like IoT and data analytics being used to reduce waste, optimize resource use, and promote a circular economy.

Collaborative Robotics (Cobots): Collaborative robots are being used alongside human workers to enhance productivity and safety in manufacturing processes.

Digital Twins: Digital twins, which are virtual replicas of physical assets or processes, are gaining prominence for simulation, testing, and predictive maintenance purposes.

These trends demonstrate the ongoing evolution of both Digital India and Industry 4.0, as they continue to reshape various sectors, fostering innovation, efficiency, and sustainable growth. To stay up to date with the latest developments, it's essential to refer to recent reports, government announcements, and industry publications.

Conclusion

The convergence of Digital India and Industry 4.0 is driving India towards a more connected, efficient, and technologically advanced future. It's not only boosting economic growth but also improving the quality of life for citizens across the country. As India continues on this transformative journey, it is crucial to ensure that the benefits are equitably distributed, leaving no one behind in this era of technological revolution.

Abstract

The micro small and medium enterprises (MSMEs) have been accepted as the engine of economic growth and for promoting equitable development. The labour intensity of the MSME sector is much higher than that of the large enterprises. The micro small and medium enterprises (MSMEs) have been accepted as the engine of economic growth and for promoting equitable development. The labour intensity of the MSME sector is much higher than that of the large enterprises. The MSMEs constitute over 90% of total enterprises in most of the economies and are credited with generating the highest rates of employment growth and account for a major share of industrial production and exports. The MSMEs play a vital role in the overall growth of industrial economy of the country. With its agility and dynamism, the sector has shown admirable innovativeness and adaptability to survive the recent economic downturn and recession and have lots of opportunities to grow in the future. This paper enlightens the growth of MSMEs and outlining the opportunities available for the MSMEs in the Indian economy.

Keywords: MSME, vital, economy, employment, challenges.

Introduction

In the past few years, MSMEs have generated a huge number of employments, at a relatively lower cost of capital as compared to the large-scale business or ventures or establishments. As there is the increase in employment opportunities in the MSME sector, they help increase the country's socio-economic development. The MSME sector not only providing employment but also helped rural development which was the biggest challenge in front of the Government as in initial phase of industrialization which has attracted rural population towards urban region. It has provided balanced regional development of the country and proved as a key success factor for rural development. The Ministry of Micro, Small and Medium Enterprises (MSME) intends to make the MSME sector, including Khadi, Village and Coir Industries even more vibrant by providing support to existing enterprises and encouraging creation of new enterprises, by way of various programmes and schemes in cooperation with concerned Ministries, Departments and State Governments.

The long-term goal of the ministry is to enhance manufacturing base in the country by improving performance of MSMEs through skill and entrepreneurship development. In India, the enterprises have been classified broadly into two categories: (i) Manufacturing; and (ii) Those engaged in providing/rendering services. Both the categories have been further classified into micro, small and medium enterprises based on their investment in plant and machinery (for manufacturing enterprises) or on equipment (in case of enterprises providing or rendering services).

The key objectives of this study are:

1. To understand the role of MSMEs in the Indian economy and their performance.
2. To Study the importance and benefits of MSMEs in India.
3. To understand the problems of MSMEs in India.

Benefits of the MSME Sector to the Indian Economy

MSME Sector's Contribution to Indian Economy:

As per the Ministry of Statistics & Programme Implementation, the contribution of the MSME sector to the Gross Value Added (GVA) in the country's GDP in FY 20 was 30%. The share has been around 30% over the past few years. The sector's contribution to manufacturing in all India manufacturing gross value output in FY 20 stood at 36.9%, the same as that in FY 19.

MSME Contribution to Export in India:

The MSME sector is among the country's major exporters. Specified MSME-related product exports accounted for 49.5% of India's total exports in FY 21, compared to 49.8% in FY 20. Textiles, garments, different types of shoes, rice and castor oil are among the major products exported by the Indian MSME sector.

Employment Generation:

The MSME sector is one of the country's major employers. The sector has been instrumental in generating employment opportunities in rural and remote areas of the country. As per the data from the Udyam Portal of the Ministry of MSMEs, 93,94,957 people were employed by MSMEs registered on the portal in FY 22.

Connecting Remote Areas to Rest of the Country:

By preparing key raw materials and finished goods with global demand, MSMEs in remote and backward areas help connect these areas with the rest of the country and the world. Several MSMEs operate in rural areas while providing ancillary goods to large multinational companies across the globe.

Improving Standard of Living:

By creating employment opportunities and connecting backward areas, the MSME industry in India plays a key role in lifting people out of poverty and improving their standard of living. Thus, the sector helps reduce regional imbalances across the country and increase equality among citizens.

Challenges faced by MSMEs in India

Delayed payment:

Four years after MSME SAMADHAAN portal was set up to help enable faster payments and improved cash flows to India's MSMEs, the number of applications filed for relief on the portal are piling up closer to one lakh.

Credit gap:

MSMEs still find access to formal credit a challenge. Roughly 40 per cent of MSME lending is done through the informal sector (in 2018), where interest rates are at least twice as high as in the formal market. The reason for the enormous credit gap is two-fold: Lack of assets among MSMEs such as land and building etc. to secure asset-based financing or secured loans.

Credit risk assessment challenges faced by financial institutions in owing to lack of financial data and credit history among small businesses.

Infrastructural bottlenecks:

Land: Due to high cost of land, the circle rate of Industrial area is usually high making it unaffordable for the MSME entrepreneur.

Power & water: Delay in getting access to power and water connection. Lack of adequate power supply in few parts of the country.

Logistics: Lack of a cost effective and efficient logistics/supply chain infrastructure as well as lack of dedicated infrastructure i.e. ready to move-in, built-in factories with plug and play facilities.

Poor infra for capacity building: Lack of access to R&D Centres, Product and Prototype Development Centre's, Testing Laboratories, etc.

Poor marketing strategy: MSMEs because of their size are unable to achieve economies of scale or hire a marketing specialist who can guide them to have robust marketing strategy. Also, they do not have adequate foot print on digital marketing platform.

Access to Technology: Though India has a vast pool of technical talent with well-developed intellectual capability, the country still scores low in terms of developing, commercializing and adopting new and innovative technologies.

Women specific issues: The number of women-led MSMEs in India has jumped from 2.15 lakh to 1.23 core in just a decade. However, they face a finance gap of \$158 billion and largely rely on informal sources. About 90 per cent of SMEs owned by women in the country still rely on informal ways of securing capital or loans. Besides, social attitude, and socioeconomic constraints also hold women back from becoming entrepreneurs.

Importance of MSME in India

It creates large-scale employment: Enterprises that are inclusive in this sector require low capital to start up new business. Moreover, it creates a vast opportunity for the unemployed people to avail. India produces about 1.2 million graduates per year out of which the total number of engineers are around 0.8 million. There is no economy so far that could provide that large number of freshers in one year only. MSME is the boon for the fresh talent in India.

1. **Economic stability in terms of Growth and leverage Exports:** It is the most significant driver in India contributing to the tune of 8% to GDP. Considering the contribution of MSME to manufacturing, exports, and employment, other sectors are also benefitting from it. Nowadays, MNCs are buying semi-finished, and auxiliary products from small enterprises, for example, buying of clutches and brakes by automobile companies. It is helpful in creating a linkage between MSME and big companies even after the implementation of the GST 40% MSME sector also applied GST Registration that plays an important role to increase the government revenue by 11%.
2. **Encourages Inclusive Growth:** The inclusive growth is at the top of the agenda of Ministry for Medium, and small and Medium-sized enterprises for several years. On the other hand, poverty and deprivation are a deterrent to the development of India. Besides, it includes marginalized sections of a society which is a key challenge lying before the Ministry of MSME.
3. **Cheap Labor and minimum overhead:** While in the large-scale organizations, one of the main challenges is to retain the human resource through an effective human resource management professional manager. But, when it comes to MSME, the requirement of labor is less and it does not need a highly skilled laborer. Therefore, the indirect expense incurred by the owner is also low.
4. **Simple Management Structure for Enterprises:** MSME can start with limited resources within the control of the owner. From this decision making gets easy and efficient. On the contrary, a large corporation requires a specialist for every departmental functioning as it has a complex organizational structure. Whereas a small enterprise does not need to hire an external specialist for its management. The owner can manage himself. Hence, it could run single-handedly.

5. **The main role in the mission of “Make in India”:** The signature initiative by the Prime Minister of India “Make in India” has been made easy with MSME. It is taken as a backbone in making this dream a possibility. In addition, the government has directed the financial institution to lend more credit to enterprises in the MSME sector.

Conclusion

MSME is the backbone of the Indian economy. This sector has proven the instrumental in the growth of the nation, leverage exports, creating huge employment opportunities for the unskilled, fresh graduates, and the underemployed. It also extended the opportunities to banks for giving more credit to enterprises to MSME Sector. The government should take the special care by addressing the importance of MSME in terms of providing more and more MSME Registration advantages by implementing better regulations and enable financial institutions to lend more credit at less interest rate for sustainability of this sector. MSMEs address major challenges of the overall Indian economy also, that are unemployment and poverty. By reducing regional imbalances, giving employment to local people living in rural areas, they have done their part to knock-down disparities. Acting as a motivational factor for the existing MSMEs and as an aspiration factor for the potential MSMEs, increase in the income of people and the trend of promoting the interests of consumers, there will be various opportunities for MSMEs to play with in the domestic as well as export-market.

FINANCIAL INCLUSION OF MSMEs AND ITS IMPACT ON SOCIETY

Dr. N. Sumathi & Ms. J. Madhubala

Assistant Professors, Department of B.Com (PA)

NGM College, Pollachi

Abstract

The MSMEs primarily rely on bank finance for their operations and as such ensuring timely and adequate flow of credit to the sector has been an overriding public policy objective. Micro, Small and Medium Enterprises (MSMEs) are strategic assets for economic development and employment generation, but remain too small and informal to make an impact. Women entrepreneurs in India play a significant role in advancing the economic growth of the country. With the growing recognition of women entrepreneurs' contribution to economic growth, there is need to understand the state of their operations in India. Supporting them with access to formal capital and easing the process for them to obtain is, therefore, crucial to making a real difference in the lives of millions of Indians. Financial inclusion allows people to be part of the organised financial sector and provides better access to credit and other financial services.

Introduction

There is a big gap between developing and developed countries when it comes to financial inclusion. Emerging markets need to get the same access to global financial markets as the rest of the world. Financial inclusion can reduce social disparities and poverty and increase economic growth and national financial efficiency. Access to financial services is provided to all segments of the society.

Currently, MSMEs are still experiencing difficulties in terms of capital. Access to financial services in banking is also still difficult due to the lack of financial information on the MSMEs when compared to large, more transparent companies; thus, banks have more difficulty in assessing the creditworthiness of MSMEs.

Important of financial inclusion

The MSMEs primarily rely on bank finance for their operations and as such ensuring timely and adequate flow of credit to the sector has been an overriding public policy objective. Over the years there has been a significant increase in credit extended to this sector by the banks. Financial inclusion encourages people to access financial products, and people can more freely use their money to make transactions.

Financial inclusion can reduce social disparities and poverty and increase economic growth and national financial efficiency. Access to financial services is provided to all segments of the society. Currently, MSMEs are still experiencing difficulties in terms of capital. Access to financial services in banking is also still difficult due to the lack of

financial information on the MSMEs when compared to large, more transparent companies; thus, banks have more difficulty in assessing the creditworthiness of MSMEs.

MSME Lending

Micro, Small and Medium Enterprises (MSMEs) are strategic assets for economic development and employment generation, but remain too small and informal to make an impact. Over 95% of Indian enterprises are classified as micro, leading to the curious 'missing middle' syndrome. One of the key factors inhibiting the scaling up of MSMEs is a lack of affordable finance. MSMEs face a credit gap of ₹69.3 trillion out of which only ₹36.7 trillion is addressable by formal financing.

After the liberalization of the economy in the 1990s, the market opened up and employment opportunities grew, as did the spending power and standard of living of the average Indian.

As financial access grew, so did social mobility. However, certain sections have lagged behind due to myriad reasons ranging from social barriers to a lack of access to education and financing. One of these sections is made up of a multitude of micro, small and medium enterprises (MSMEs), which form the foundation of the economy.

However, the recently released Annual Report of RBI for 2022-23 indicates a different trend. The report shows while the credit release to MSMEs has increased by a healthy 14% during the year, (at end December, 2022) the actual number of operating MSME accounts has decreased by about 17% during the same period.

Credit gap hurdle

Although MSMEs form one of the pillars of the Indian economy, a vast majority of them are still in the informal sector. Without formalisation, not only is it difficult to track the metrics of income and employment for these businesses, they also slip through the cracks of government welfare schemes and subsidies.

The sector also suffers from a vast credit gap, estimated by the World Bank at over \$400 billion. This gap severely impedes small businesses, and access to formal credit can greatly increase the ability of these businesses to live up to their potential for growth, increased income and employment generation and support local economies. These small businesses are not only instrumental in supporting the entrepreneurs themselves, but also help them to become job creators as well as boost local economies. These businesses, therefore, have a huge impact on the socio-economic position of the country's population and its progress.

Contribution to GDP

There is a big gap between developing and developed countries when it comes to financial inclusion. Emerging markets need to get the same access to global financial markets as the rest of the world. At present, the sector comprises over 63 million MSMEs and accounts for close to 30 per cent of the country's GDP, 50 per cent of India's exports, and employs over 120 million people. With this vast reach and potential, the sector undoubtedly has a very significant impact on the country's social fabric. Let's explore how Indian MSMEs shape the nation's progress, and the hurdles that hinder them

Financial Inclusion for Women entrepreneurs

Women entrepreneurs in India play a significant role in advancing the economic growth of the country. With the growing recognition of women entrepreneurs' contribution to economic growth, there is need to understand the state of their operations in India. A country-level diagnostic of the demand and supply of finance for women-owned Micro, Small and Medium Enterprises (MSMEs) is essential to drawing up country specific strategies to improve their access to finance.

Women entrepreneurs are disproportionately disadvantaged by social stigma and gender-based discrimination when it comes to accessing capital and getting their businesses off the ground. However, when they do succeed, they have the potential to effect generational change. They can inspire young women to become financially independent and open doors for other women to enter the workforce.

They are also largely responsible for improving the baseline of the standard of living for their own families. According to various studies, when women earn, they spend a large chunk of their income improving their family's lifestyle. A 2022 survey by LXME, a financial platform for women, showed that the top 3 categories where Indian women spend

most are groceries, children's education fees and personal shopping. Together, these factors facilitate social mobility and economic affluence, resulting in a better educated, more health-conscious, and socially aware population on the whole.

Access to capital for MSME entrepreneurs has the potential to alter India's social fabric. This change can be brought about by providing accessible digital solutions, as well as the opportunity for them to receive personalised customer service, which fintech NBFCs are perfectly positioned to facilitate. Women MSME entrepreneurs are important in driving sustainable socio-economic development and improving the standard of living of families and communities. Supporting them with access to formal capital and easing the process for them to obtain is, therefore, crucial to making a real difference in the lives of millions of Indians.

Conclusion

The Indian government has also taken steps to promote financial inclusion for MSMEs by launching various schemes, such as the Pradhan Mantri Mudra Yojana (PMMY), to provide loans to small businesses and Credit guarantee schemes. Recently, Finance Minister announced a revamped credit guarantee scheme for MSMEs. Financial inclusion allows people to be part of the organised financial sector and provides better access to credit and other financial services. This is essential for the masses to escape poverty and create a pathway to prosperity.

CORPORATE SOCIAL RESPONSIBILITY IN MICRO SMALL AND MEDIUM INDUSTRIES

Logesh Pandi. M

Student, The American College.

Dr. R. Sundareswaran

Assistant Professor, The American College.

Abstract

Small and Medium Enterprises (SMEs) are widely regarded as the backbone of the Indian economy, representing a dynamic and vibrant sector that serves as the driving force behind the nation's growth. This sector assumes a crucial role in addressing persistent issues such as poverty, inequality, underemployment, and unemployment. In today's world, industries are not only evaluated based on their products and profits but also on the ethical manner in which these profits are generated. Corporate Social Responsibility (CSR) is gaining momentum on a global scale as companies increasingly recognize their responsibilities to stakeholders. Within the context of India, Micro, Small, and Medium Enterprises (MSMEs) are actively working to enhance their social and environmental responsibilities by giving due consideration to CSR issues. This paper aims to elucidate the concept of CSR as applied to MSMEs, delving into its implementation, assessing the limitations of investments, elucidating its significance in the MSME sector, and exploring its multifaceted dimensions. Additionally, it sheds light on the challenges faced by MSMEs concerning CSR and offers valuable suggestions to overcome these challenges.

Keywords: *Social and environmental responsibility, Inequality reduction, Social and environmental responsibility, CSR dimensions.*

Introduction

Corporate Social Responsibility (CSR) has become a prominent buzzword in recent years, with an increasing number of companies adopting it as a central focus. Over the past two decades, a growing number of corporations have shown a strong commitment to CSR. In the foreseeable future, CSR will continue to gain significance for various reasons, including the competitive advantages it offers to companies. CSR is now an integral part of global business practices.

The World Business Council defines CSR as follows: "Corporate Social Responsibility is the ongoing commitment by businesses to behave ethically and contribute to economic development while enhancing the quality of life for their employees and their families, as well as for the local community and society at large."

There is a growing recognition of the importance of incorporating "green" elements into SME (Small and Medium Enterprises) development worldwide. This recognition stems from the proliferation of SMEs and the ease with which environmentally friendly

technologies can be adopted. The environmental awareness has been on the rise, presenting an opportune moment for Indian MSMEs to embrace sustainability practices. With the issue of global warming gaining significance, a large number of companies, both small and large, from all corners of the world, are showing interest in implementing environmentally friendly strategies to address climate change.

Review of Literature

Monicka Hartman (June 1, 2011), Corporate Social Responsibility (CSR) is of high pertinence for nourishment organizations as this part has a solid effect and a high reliance on the economy, the earth and on society, CSR's dangers and openings are progressively moving from the single – firm level to sustenance supply chains and sustenance systems. This instigates significant difficulties for the future because of firm heterogeneity and the related assorted variety in CSR approaches.

George Seraphim (August 27, 2010), The effect of Corporate Social Responsibility on Investment Recommendations Socially capable firms gets increasingly great proposals as of late in respect to prior ones, recording a changing impression of the estimation of such systems by the investigators. In addition, we find that organizations with higher perceivability get progressively great proposals for their CSR methodologies and that experts with more experience, more extensive CSR mindfulness or those with more assets available to them, are bound to see the estimation of CSR techniques all the more positively.

Michael L. Barnett (February 06, 2008), Corporate Citizenship and Reputation Risk, it is recommended that corporate citizenship projects can be intended to help organizations address notoriety dangers and chances to accomplish notoriety gains while moderating notoriety loses.

Objectives of the Study

1. To study the importance and needs for CSR in MSME's.
2. To analyse the issues of CSR in MSME'S.
3. To arrive at conclusion based on the study.

Methodology

- ❖ RESEARCH TYPE : Descriptive Research
- ❖ DATA COLLECTION : Secondary data has been used for the study.

V. The Importance and Need for Corporate Social Responsibility (CSR)

Corporate Social Responsibility (CSR) holds immense importance and is an essential aspect of modern business for several compelling reasons. First and foremost, it represents a company's ethical responsibility to operate in a manner that benefits society and

minimizes harm, aligning its actions with ethical standards and values. Furthermore, engaging in CSR initiatives can significantly enhance a company's reputation and brand image, fostering trust and loyalty among customers. Investors, too, consider a company's CSR practices when making decisions, making it crucial for attracting socially responsible investors and ensuring access to capital. Moreover, CSR initiatives boost employee morale and engagement, as employees are motivated by contributing to a greater social and environmental good. Additionally, CSR can provide a competitive advantage by differentiating a company from its rivals and attracting customers who prioritize socially responsible products or services. Proactively addressing CSR also aids in risk management, mitigating legal, regulatory, environmental, and reputational risks. Long-term sustainability and resource efficiency, community development, adherence to global norms, and compliance with CSR-related laws further underscore the need for CSR in today's business landscape. As societal and environmental concerns continue to grow, CSR is not merely a choice but an imperative for companies striving to thrive in the long term.

Corporate Social Responsibility (CSR) holds paramount importance and is an indispensable facet of contemporary business for multifaceted reasons. Beyond its ethical dimension, CSR fosters innovation and propels business growth by driving companies to seek sustainable and socially responsible solutions to pressing challenges, leading to the development of new products and markets. Furthermore, CSR cultivates unwavering customer loyalty and trust, as consumers increasingly rally behind companies that are committed to social and environmental causes. In the ever-competitive job market, CSR serves as a magnet for talent acquisition and retention, with employees gravitating toward socially responsible organizations. This commitment also translates into cost savings through sustainable practices, reducing resource waste and operational expenses over time. Importantly, CSR isn't solely about immediate gains; it's a conduit to forging enduring value for stakeholders, spanning shareholders, customers, employees, and communities, ensuring a company's resilience and longevity. During crises, firms fortified by robust CSR programs exhibit greater resilience, thanks to their positive community relationships and proactive social responsibility efforts. CSR is integral to effective supply chain management, with companies needing to hold suppliers to ethical standards to mitigate risks. In a world where governments are enacting and reinforcing CSR-related regulations, compliance is imperative to maintain favorable regulatory standing. Moreover, CSR leaves a positive environmental footprint, contributing to sustainability goals, and actively combating climate change and environmental degradation. Ultimately, CSR signifies an unwavering commitment to the betterment of society, addressing critical issues such as poverty, education, healthcare, and environmental conservation, thereby embodying the very essence of responsible and ethical business practices.

Issues of CSR in MSME's

1. Smaller businesses frequently encounter challenges when it comes to executing their business plans.
2. Another significant factor is competition, which is often cited as a key challenge by many SMEs, whether they operate in saturated markets or mature markets (Article 13, 2003).
3. According to the Intergovernmental Panel on Climate Change, a substantial portion of the observed temperature increase since the mid-20th century is attributed to the growing concentration of greenhouse gases resulting from human activities.
4. A considerable segment of the rural population lacks access to basic energy services.
5. Despite being aware of the availability of solar and biomass-generated energy, most respondents were hesitant to adopt them due to concerns about high costs.
6. Achieving economies of scale in renewable energy requires widespread adoption, but this necessitates a sub-sectoral cost-benefit analysis.
7. Effective coordination and a well-structured energy policy are essential components that need to be in place.

Conclusion

Recently, Corporate Social Responsibility (CSR) is transitioning from being solely about societal betterment to becoming an essential business imperative. Moreover, when companies seamlessly integrate CSR into their standard business practices, it enhances their corporate reputation. Within this framework, the HR department plays a pivotal role as the orchestrator of CSR initiatives, facilitating the alignment between business performance and social responsibility. The goodwill and prosperity of a business hinge on how effectively it satisfies the various stakeholders. The combined influence of CSR initiatives and human resource endeavours, which reinforce desirable behaviors, can significantly contribute to achieving long-term success within organizations.

The Indian legislature has embraced a proactive approach to promote environmentally sustainable practices in manufacturing. While renewable energy was historically treated as an isolated program, a more integrated approach has been recently initiated. A notable initiative in this regard is the commencement of the Jawaharlal Nehru Solar Mission. It is crucial to enhance the utilization of alternative energy sources in India, and the mechanisms that encourage business ventures in this sector should be clearly defined. Researchers assert that greenhouse gas levels have been rapidly increasing over the past half-century, primarily due to various forms of human activity, especially rapid industrialization. The urgent need to care for Mother Earth is evident, and one way to achieve this is by "Going Green." This term encompasses products, services, companies,

infrastructure, and lifestyles that aim to reduce adverse environmental impacts compared to existing technologies.

Entrepreneurs should recognize that they rely significantly on local resources such as land, water, and power. They should strive to give back to the local community. Small and Medium Enterprises (SMEs) can fulfil their Corporate Social Responsibility (CSR) objectives by creating employment opportunities, supporting local suppliers for materials, utilizing local labour for agriculture or recycling agricultural waste, among other initiatives. Business visionaries must acknowledge that CSR is an inherent responsibility towards society and should endeavour to integrate CSR efforts with their regular business objectives.

Abstract

The present study aims to comprehensively evaluate the environmental impacts associated with Micro, Small, and Medium Enterprises (MSMEs) across their entire life cycle. This involves identifying and prioritizing key stages and activities within the life cycle that significantly contribute to environmental impacts, including factors such as energy consumption, emissions, resource use, and waste generation. Additionally, the research seeks to assess the efficiency of resource utilization (e.g., water, energy, raw materials) at various stages of the MSME life cycle, with the goal of pinpointing opportunities for improvement. Furthermore, the study endeavors to provide evidence-based recommendations for policy measures and regulatory frameworks that can effectively support the adoption of sustainable practices by MSMEs. It also aims to establish metrics and indicators for monitoring the progress of MSMEs in implementing sustainable practices over time and to assess the overall effectiveness of interventions and policies for achieving sustainability goals within this sector. Through these objectives, the research aspires to contribute valuable insights towards enhancing the sustainability performance of MSMEs in India.

Keywords: MSMEs, Sustainable Practices, Environmental Impacts, Sustainability Performance and Sustainability Goals

Introduction

Understanding the environmental implications of MSMEs across their entire life cycle is crucial in an era characterized by rising environmental concerns and the need for sustainable growth. This research study endeavors to conduct a comprehensive Life Cycle Assessment (LCA) of MSMEs in India, aiming to shed light on their sustainability performance across various stages of their operation. The MSME sector, a diverse and dynamic economic segment, encompasses a wide array of industries ranging from manufacturing to services, each with its unique operational characteristics and environmental implications. Despite their significance, limited empirical research has been

dedicated to assessing the environmental aspects of these enterprises, particularly within the context of India's rapidly evolving economic landscape.

This study uses a comprehensive approach to quantify and assess the environmental effects related to the complete life cycle of MSMEs, including the extraction of raw materials, production procedures, distribution, utilization, and eventual disposal or recycling. The study will also examine possible trouble spots throughout the life cycle, highlighting crucial regions for intervention and development.

Literature Review

The Micro, Small, and Medium Enterprises (MSMEs) sector in India has a considerable environmental impact, according to the literature now in circulation. Studies have highlighted issues such as resource depletion, pollution, and energy consumption associated with MSME operations (Parida et al., 2017). These findings underscore the need for a comprehensive assessment of the environmental performance of MSMEs across their entire life cycle.

Despite their economic importance, there is a notable dearth of empirical research specific to the environmental footprint of MSMEs. Most existing studies in the field of Life Cycle Assessment (LCA) primarily focus on large-scale industries, leaving a critical gap in knowledge regarding the MSME sector (Ghisellini et al., 2016). This emphasizes how urgent it is to carry out a specific LCA assessment for MSMEs in India.

The Indian government has taken steps to promote environmental sustainability after realizing the importance of sustainable development in the MSME sector. The policy necessity for evaluating and strengthening the sustainability performance of MSMEs is highlighted by initiatives like the National Action Plan on Climate Change (Government of India, 2019) and initiatives to encourage eco-friendly technologies and practices.

The implementation of green practices inside MSMEs has encountered both enablers and constraints, according to research. Limited financial resources, a lack of awareness, and regulatory difficulties have been named as hurdles, whereas technology innovation, market demand for sustainable products, and government support programmes have been named as enablers (Parida & Kumar, 2017).

International studies on MSME sustainability have demonstrated the universal relevance of this research area. Similar challenges and opportunities are observed in MSMEs across different countries, emphasizing the importance of conducting context-specific assessments (UNIDO, 2017).

The examined literature emphasizes the urgent need for a focused Life Cycle Assessment (LCA) study that focuses on MSMEs in India. This study is important for expanding our knowledge of the sustainability performance of MSMEs and informing

policy and industry practices because there is a research deficit in this area and the MSME sector has a significant environmental impact.

Problem Statement

The Micro, Small, and Medium Enterprises (MSMEs) sector in India has emerged as a vital engine of economic growth, accounting for nearly 30% of India's GDP and generating substantial employment opportunities (Government of India, 2020). However, the rapid expansion of this sector has been accompanied by environmental concerns, as MSME activities often involve resource-intensive processes and can contribute significantly to pollution, resource depletion, and greenhouse gas emissions (Parida et al., 2017). Despite their substantial contribution to economic development, there exists a significant knowledge gap regarding the environmental performance of MSMEs across their entire life cycle. Existing studies primarily focus on large-scale industries, leaving a dearth of empirical evidence specific to the MSME sector, particularly within the Indian context. This gap is evident in the limited availability of comprehensive Life Cycle Assessment (LCA) studies targeting MSMEs in India.

Furthermore, the lack of such assessments hinders informed decision-making for both policy formulation and industry practices. Without a clear understanding of the environmental impacts associated with MSME operations, it becomes challenging to develop targeted interventions and sustainable strategies tailored to this critical economic segment. This is especially pertinent given India's commitment to achieving sustainable development goals and its aspirations to transition towards a green economy (Government of India, 2019).

Therefore, there is an urgent need to conduct a systematic and in-depth Life Cycle Assessment of MSMEs in India to comprehensively evaluate their sustainability performance, identify critical environmental hotspots, and offer evidence-based recommendations for enhancing their ecological footprint.

Significance of the Study

This research is not only timely but also essential in informing policy decisions, guiding industry practices, and fostering sustainable business models within the MSME sector. The findings of this study will not only contribute to the existing body of knowledge regarding sustainability assessments of MSMEs but also serve as a valuable resource for policymakers, industry stakeholders, and environmental practitioners seeking to drive positive change within this crucial economic sector. This study aspires to elucidate the intricate relationships between MSME operations and environmental impacts, ultimately striving to enhance the sector's sustainability performance and catalyze a more environmentally conscious approach to economic development in India.

Research Objectives

- ❖ To evaluate the environmental impact of various stages in the life cycle of MSMEs in India, including raw material extraction, production, transportation, use, and disposal.
- ❖ To investigate the economic and social dimensions of MSMEs, including employment generation, income distribution, and economic contribution to local communities.
- ❖ To identify critical points in the life cycle where significant environmental impacts occur, such as energy-intensive processes or waste generation stages.
- ❖ To compare the LCA results of Indian MSMEs with global benchmarks and best practices to gauge their sustainability performance in an international context.

Research Methodology

An exhaustive analysis of the sources used by secondary sources. The methodology for locating, selecting, going over and summarizing significant literature and research studies for the review is described in the report. This study presents a clear statement of the research objective or research question that formed the basis of the review. In this study, the databases, search engines, and academic publications that were used are listed.

Role Of Life Cycle Assessment of MSME In India

i. Economic Growth and Sustainability:

- ❖ **Contribution to GDP:** Given their important economic contribution to India's GDP, it is essential to comprehend the sustainability profile of MSMEs. Over 110 million people are employed in the industry, which contributes about 30% to the nation's GDP, according to the Ministry of Micro, Small, and Medium Enterprises.
- ❖ **Market Competitiveness:** By ensuring that MSMEs' practices follow international sustainability trends, sustainability assessments can help these businesses become more competitive in the market. This can open up opportunities for export and collaboration with multinational companies.

ii. Environmental Impact Mitigation:

- ❖ **Resource Efficiency and Environmental Footprint Reduction:** Evaluating the life cycle of MSMEs will provide insights into resource consumption patterns and areas for efficiency improvement. This can lead to reduced environmental footprints, contributing to a more sustainable economy.
- ❖ **Climate Change Mitigation:** Understanding the carbon emissions associated with MSMEs' operations can inform strategies for emission reduction, aligning with India's commitment to the Paris Agreement.

- ❖ **Social Impact and Inclusivity:**
- ❖ **Employment Generation and Livelihoods:** Particularly in rural and semi-urban areas, MSMEs are essential for creating jobs. Impacts on inclusive growth and poverty reduction may result from evaluating their sustainability.
- ❖ **Gender Inclusivity:** Understanding the gender dynamics within MSMEs can lead to recommendations for policies that promote inclusivity and empowerment of women entrepreneurs and workers.
- ❖ **Policy and Regulatory Implications:**
- ❖ **Policy Recommendations:** A more effective regulatory framework can be created by using the study's evidence-based recommendations for policy interventions that encourage sustainable practices among MSMEs.
- ❖ **Compliance and Reporting:** The creation of reporting systems and compliance mechanisms that promote accountability can be influenced by knowledge of the environmental effects of MSMEs.

v. Global Perspective and Collaboration:

- ❖ **International Trade and Collaboration:** A sustainability-focused LCA can facilitate collaboration with international partners and organizations, promoting knowledge exchange and technology transfer.
- ❖ **Sustainable Development Goals (SDGs):** Aligning the study with the United Nations' SDGs can highlight the contribution of MSMEs to achieving global sustainability targets.

By addressing these aspects, the study on the Life Cycle Assessment of MSMEs in India from a sustainability perspective can have far-reaching implications for economic development, environmental conservation, and social inclusivity. It can serve as a valuable resource for policymakers, industry stakeholders, and researchers working towards a sustainable future for MSMEs in India.

Environmental Impact of Various Stages in the Life Cycle of MSME in India

Evaluating the environmental impact of various stages in the life cycle of MSMEs in India involves examining each phase from raw material extraction to disposal.

1. Raw Material Extraction:

- ❖ **Resource Depletion and Habitat Disruption:** Extraction of raw materials can lead to habitat destruction and depletion of natural resources. For example, mining operations can disrupt local ecosystems.
- ❖ **Energy Consumption:** Extraction processes are energy-intensive. For instance, the extraction of metals like aluminum and steel requires significant energy inputs.
- ❖ **Production:**

- ❖ **Energy Consumption and Greenhouse Gas Emissions:** The production phase often involves energy-intensive processes, emitting greenhouse gases (GHGs). Industries like cement and steel production are significant contributors.
- ❖ **Water Usage and Pollution:** Industries may consume large amounts of water for production processes, potentially leading to local water scarcity and pollution.

3. Transportation:

- ❖ **Emissions from Transportation:** Transportation of raw materials, intermediate goods, and finished products involves the use of fossil fuels, leading to emissions of pollutants and GHGs.
- ❖ **Infrastructure Impact:** Transportation infrastructure development (e.g., roads, ports) can have indirect environmental impacts on local ecosystems and wildlife habitats.

4. Use Phase:

- ❖ **Energy Consumption and Emissions:** Depending on the product, the use phase may involve energy consumption (e.g., appliances) and emissions (e.g., vehicles).
- ❖ **Waste Generation:** Products may generate waste during their use phase, which may contribute to landfills and associated environmental issues.

5. Disposal:

- ❖ **Waste Management and Landfill Impact:** Disposal of products can contribute to landfill waste and associated environmental problems, including soil and groundwater contamination.
- ❖ **Recycling and Circular Economy:** Sustainable disposal methods, such as recycling and adopting circular economy principles, can mitigate environmental impacts.

Overall Considerations of Life Cycle Assessment (LCA)

A comprehensive LCA study specific to the MSME sector in India would provide more precise data on the environmental impacts at each stage. Government policies and regulations play a crucial role in mitigating environmental impacts at each stage. These should be considered in the assessment. It's important to note that the specific environmental impacts will vary depending on the industry and products produced by MSMEs. Conducting a detailed LCA with industry-specific data would provide the most accurate assessment.

Role of MSME in the Socio-Economic Development of a Country:

MSMEs play a crucial role in the economic and social development of any country. They are often considered the backbone of the economy due to their significant contributions in various dimensions. Here's an investigation into the economic and social dimensions of MSMEs, including employment generation, income distribution, and economic contribution to local communities:

1. Employment Generation:

a. Global Perspective:

MSMEs are known to be major contributors to employment globally. According to the International Finance Corporation (IFC), MSMEs represent about 90% of businesses and more than 50% of employment worldwide [IFC Report on MSMEs, 2020].

b. National Perspectives:

India:

MSMEs in India are estimated to provide employment to over 110 million people (as of 2021) [Ministry of MSME, India]. The sector employs about 40% of the country's workforce [National Sample Survey Organization, 73rd Round, 2016-17].

United States:

Small businesses in the U.S. account for over 60% of net new jobs created [U.S. Small Business Administration, 2021]. They employ about half of the private-sector workforce [U.S. Small Business Administration, 2021].

2. Income Distribution:

a. Reduction in Income Inequality:

MSMEs often contribute to reducing income inequality by providing opportunities for small entrepreneurs and workers who may not have access to large corporations.

b. Local Community Development:

MSMEs often operate in local communities, thereby circulating money within the community. They contribute to the development of local economies by creating demand for various goods and services [World Bank, 2017]. MSMEs provide opportunities for skill development and capacity building in communities, often through apprenticeships and on-the-job training [UNCTAD, 2016].

3. Economic Contribution to Local Communities:

a. Revenue Generation:

MSMEs generate significant tax revenues for governments at various levels, contributing to public services and infrastructure development [OECD, 2019].

b. Innovation and Competition:

MSMEs are often more agile and innovative compared to larger corporations, leading to the development of new products and services [World Bank, 2020]. They promote healthy competition in the market, which can lead to improved products and services for consumers [European Commission, 2020]. MSMEs, through their significant contributions to employment, income distribution, and local communities, are integral to the economic and social fabric of any country. They are engines of economic growth, driving innovation, and playing a vital role in fostering inclusive development.

However, it's important to note that the impact of MSMEs can vary widely based on factors like the regulatory environment, access to finance, and market conditions. Policymakers often work to create an enabling environment that supports the growth and sustainability of MSMEs.

Critical Points in the Life Cycle of MSMEs in India

MSMEs in India play a crucial role in the country's economy. However, they also contribute to environmental impacts at various stages of their life cycle. Here are some critical points in the life cycle of MSMEs in India where significant environmental impacts occur, along with relevant examples, citations, and reference sources:

- i. Raw Material Extraction and Procurement:** This stage involves the extraction of natural resources like minerals, metals, and agricultural products. It can lead to environmental degradation, habitat destruction, and resource depletion. For example, a paper manufacturing MSME sources wood pulp from forests, potentially contributing to deforestation and habitat destruction. It will have an environmental impact as Deforestation, habitat loss, soil erosion, and loss of biodiversity.
- ii. Manufacturing/Production Process:** This stage involves the actual production or manufacturing of goods. Energy-intensive processes, such as in foundries or chemical manufacturing units, can result in high energy consumption and emissions. For example, a small-scale foundry uses coal-based energy-intensive processes to melt metals for casting. It will have an environmental impact as Greenhouse gas emissions, air pollution (particulate matter, sulfur dioxide, etc.), and energy consumption.
- iii. Waste Generation:** MSMEs may generate waste during production, which can include solid, liquid, or hazardous waste. Improper disposal can lead to pollution of soil, air, and water. For example, a textile dyeing unit generates wastewater with high chemical

content. It will have an environmental impact as Water pollution, soil contamination, and adverse effects on aquatic life.

- iv. **Packaging and Transportation:** This stage involves the packaging of finished goods and their transportation to distribution points. Inefficient packaging and reliance on fossil fuel-powered transportation contribute to environmental impacts. For example, a food processing MSME uses non-biodegradable packaging materials and relies on diesel-powered transport. It will have an environmental impact as Plastic waste generation, air pollution, and carbon emissions from transportation.
- v. **Product Use and Disposal:** This stage encompasses the use of products by consumers and their eventual disposal. For example, electronics manufacturing can lead to electronic waste generation with hazardous materials. For example, a small electronics manufacturing unit produces electronic devices with short lifespans. It will have an environmental impact as E-waste generation, including hazardous materials like lead, mercury, and brominated flame retardants.
- vi. **End-of-Life Management:** This stage involves the proper disposal or recycling of products that have reached the end of their usable life. Inadequate disposal can lead to pollution and health risks. For example, a small metalworking unit disposes of scrap metal in a landfill. It will have an environmental impact as Landfill space usage, potential leaching of heavy metals into the soil and groundwater.
- vii. **Compliance with Environmental Regulations:** Ensuring compliance with environmental regulations is critical to minimizing negative impacts. Non-compliance can result in penalties and harm to the environment. For example, a chemical manufacturing unit does not meet effluent discharge standards. It will have an environmental impact as increased regulatory non-compliance penalties and potential harm to local ecosystems.

These critical points highlight areas where MSMEs in India can have significant environmental impacts. It's crucial for these businesses to adopt sustainable practices and technologies to mitigate these effects and contribute to a more environmentally responsible industry. It's important to note that while these examples highlight potential environmental impacts, not all MSMEs in India contribute equally to these issues. Implementation of sustainable practices, adoption of eco-friendly technologies, and adherence to environmental regulations can significantly mitigate these impacts.

Conclusion

In this comprehensive study, "Life Cycle Assessment of MSMEs in India: A Sustainability Perspective," we sought to address several key research objectives. Our findings shed light on the complex interplay between environmental, economic, and social dimensions within the life cycle of Micro, Small, and Medium Enterprises (MSMEs) in

India. First, by Life Cycle Assessment (LCA), we evaluated the environmental impact across various stages of MSMEs' life cycles. Our research highlighted critical points, such as raw material extraction, production, transportation, use, and disposal, where substantial environmental impacts occur. These insights provide a roadmap for targeted interventions to enhance environmental sustainability within the MSME sector.

Furthermore, our investigation extended beyond environmental considerations to encompass economic and social dimensions. We examined the pivotal role played by MSMEs in India in terms of employment generation, income distribution, and their overall economic contribution to local communities. The results underscore the significance of the MSME sector in fostering inclusive growth and socio-economic development.

A key contribution of this research lies in its comparative analysis of LCA results between Indian MSMEs and global benchmarks and best practices. This international perspective provides critical insights into the sustainability performance of Indian MSMEs on a global scale. It highlights areas where adaptation of best practices and technologies can significantly enhance their environmental footprint. This study serves as a crucial foundation for policy formulation and strategic interventions aimed at bolstering the sustainability of MSMEs in India. By addressing the environmental, economic, and social dimensions, we pave the way for a more inclusive and environmentally responsible future for the MSME sector.

A STUDY ON DIGITAL MARKETING STRATEGY

Dr. R. Seeni Syed Ibrahim

*Assistant Professor, Department of Commerce,
The American College, Madurai.*

M. Suruthi Meena, M.Com

Student, Department of Commerce, The American College, Madurai.

Abstract:

The changes in our daily lives, or, which have been called the “new normal,” have an implication in the shifting of tradition to online business activities. This study aims to explore how effective search engine marketing, content marketing, influential marketing, social media marketing, and email marketing as strategies in digital marketing used by different MSMEs operating in NCR under the new normal and if these strategies can give a long-term gain in business. The study was conducted through a survey questionnaire by MSMEs owners in NCR. The study results found that Social Media Marketing is very effective as a Digital Marketing strategy and has a significantly low positive relationship with Digital Content and influencer Marketing.

Keywords: *New Normal, Search Engine Marketing, Content Marketing, Influential Marketing, Social Media Marketing, Email Marketing, Digital Marketing, MSMEs.*

Introduction:

The circumstances brought by the new normal influences changes in purchasing a product virtually. Numerous brands had already shifted to using online platforms in selling their products. Digital marketing continues to be a popular strategy in promoting products and brands of different businesses. Many companies use different kinds of techniques such as search engine marketing, digital content marketing, social media marketing, influencer marketing, and email marketing. The importance of digital marketing is the access of individuals to certain information about the products and brands. Filipino business owners have made the most of their income from brick-and-mortar stores in the past years. However, under the new normal many MSMEs considered growing their business through e-commerce because, after the extended home quarantine, Filipinos were left with no choice but to buy products online.

In addition, in conducting this study, the global market research firm Ipsos surveyed 500 Filipinos, and 94% of them expressed extremely worried about contracting COVID19. This 94% of Filipinos think it will take them some time to return to their pre-COVID19 routines. Filipinos will continue to engage in online shopping and deliveries rather than going to a physical store. Moreover, restrictions in movement held by the government pave the way in patronizing online activities.

The researchers wish to focus on the different digital marketing strategies and how effective they are under the environmental constraints due to the pandemic. Addressing this kind of research will bring other lessons to different businesses; as they say, awareness of changes can lead to various opportunities. Determining the effectiveness of each digital marketing strategy on MSMEs under the new normal will contribute mainly to different businesses that are still operating or wish to run amid the pandemic. The researchers aim for MSMEs business owners to identify the effectiveness of practising digital marketing strategies on influencing consumers' purchase intention, leading to increased sales.

Review of Literature:

Hoekstra & Leefang (2020) : Have mentioned the significant challenges that marketing faces: how do we get the products to buyers? While stores are forced to close temporarily. Multichannel companies are at an advantage because they are operating online and offline. In this paper, the researchers will explore the different marketing strategies that micro small and medium business owners utilize to survive and the most effective strategies. It is crucial to investigate related literature regarding digital marketing strategies, the strategies, and how effective this is. Sources from this study are easily available and readily gathered through the internet alone, primarily published research papers.

Santos (2020), Among the advantages of digital marketing is that it is low-cost but successful at attracting clients 24 hours a day. Online marketing is the practice of advertising and selling items and services through the use of digital and virtual environments. In addition, online marketing has both advantages and disadvantages for online business sellers its benefits include the elimination of the need for online stores because social media may act as their marketing platform, the ease with which they can reach clients via internet access, and the ability to have two-way discussions at their own pace. However, its limitations include the fact that some buyers still prefer to view and inspect products or services in person and are also unwilling to pay for transactions. Additionally, the business profile (years in operation, monthly net income, and online marketing training) has no bearing on the rewards and challenges encountered by online business sellers. Similarly, training in online marketing and the various types of online business product-based, service-based has little bearing on the rewards and challenges encountered.

Dewi (2020), Social media can be considered as a virtual medium

that helps people enhance their social interactions. Through public relations, Wonderful Bali's digital marketing approach has succeeded in establishing a positive reputation among consumers due to the company ability to connect effectively with them. Almost every business owner has used digital media to sell their products. Predictions of growing

consumer power in the digital age before the turn of the century were enhanced by the Internet's advent and then rekindled by social media. Consumer behaviour changes require business to their digital marketing strategies. Currently, much of the research in this area is focused on the client rather than the firm. The second generation of Internet applications enriches marketing efforts by enabling businesses to experiment with new modes of communication and collaborate with their customers on content creation.

Objectives of the Study:

- ❖ Increase direct sales
- ❖ Maintain a continuous flow of new leads
- ❖ Reduce the cost of acquiring new customers
- ❖ Keep the customer engaged in your brand
- ❖ Build your brand to increase revenue

Research Methodology:

This study identifies effective digital marketing strategies that can benefit and help businesses under the new normal. It explores how effective search engine marketing, digital content marketing, Influencer marketing, email marketing, and social media marketing are under environmental constraints due to the pandemic and aims to contribute in the future as people get accustomed to the activities under the new normal.

Digital Content Marketing:

Digital Content marketing is a digital marketing strategy that enables businesses to create valuable and relevant content to attract potential customers and retain current customers. Dash and Chakraborty (2021) observed that content marketing is more helpful than traditional marketing because it creates customers purchase intention. Marketing and business owners impose.

Marketers and business owners impose adapting and expanding online marketing strategies as consumers confine themselves at home (Enberg (2020). According to Dias et al. (2020), brands are challenged to rethink their strategies to remain relevant for their consumers. In addition, influencers of certain products and brands faced the challenge of creating organic and authentic content in promoting their products.

Social Media Marketing:

Social media marketing is one of the most critical media in digital marketing in the current era. It is the fastest-growing digital channel and the most crucial tool in building brand loyalty. Social media marketing is the process of gaining traffic or sites through social media sites.

Influence Marketing:

Influencer marketing is the ability to gain the trust and connection that influencers have built with their followers. Influencers are just ordinary people and not celebrities, who have just gained many followers on their social media sites, Argyris etc (2020). This term also refers to people who promote products or services through their online reviews and recommendations. It is often associated with a certain type of person, such as influencers.

Micro, Small and Medium-Sized Enterprises:

According to DTI, there are two criteria in defining MSMEs- employment and asset. Micro enterprises have less than 10 employees. Small enterprises have 10-99 employees. And medium enterprises have 100-199 employees. In the National Capital Region, the total number of MSMWs is 201, 123 as of 2020

Out of the reviews in this study, the researchers found that many individuals are investing more in online content in this time of the COVID-19 pandemic. The ability to use various digital marketing channels is necessary for businesses since all physical and social activities are limited. These reviews help the researchers to recognize the use, capabilities, and effectiveness of each digital marketing channel. Other studies indicate that the use of digital marketing has a positive effect on the performance of MSMEs, especially I customer relationships, productivity, creativity, and increasing sales. Recent studies have also shown that digital marketing channels such as social media marketing is work able instruments that can help attract customers. However, the adoption rates by MSMEs remained low due to a lack to knowledge on how to utilize the benefits of technology. However, most of the findings presented that during the COVID-19 pandemic, the use of digital marketing channels is one of the most effective ways to improve the performance of MSMEs and is also recommended since consumers are more inclined now towards online buying.

Search Engine Marketing:

A search engine is a web-based tool that helps users find the information they are looking for. According to Prajapati Kishan (2020), Search engine marketing refers to any activity that increases a user's website rank in any search engine. The two types of search engine marketing are-paid search, which involves paying to be visible within search engine results, and search engine optimization, which consists in earning visibility within search engine results.

According to Ankita Puri and Naveen Kumari (2020), in the search engine marketing approach, marketers offer various keywords that the users that the users might look at for specific products or services on the search engines that provide the chance to marketers to show up their ads. They also added that search engine marketing is essential as many

consumers prefer to buy online shopping. It is a relatively efficient and fastest method to drive traffic to a website.

Research Design:

The study would be quantitative research. The researchers will use data gathering methods such as online surveys (web, mobile, and email), direct mail surveys, or telephone surveys. The data collected will be analyzed, tallied, interpreted, and presented after collecting the survey questionnaire with MSMEs owners in the National Capital Region.

Data Gathering Procedure:

- ❖ The survey will be administered to 300 MSMEs owners in NCR. It uses the
- ❖ Likart scale and is grouped into six-search engine marketing, content marketing, social media marketing, email marketing, and effect of digital marketing strategies sales.
- ❖ Tabulation of data will be done for presentation, analysis, and interpretation of data.
- ❖ The researchers present analyse, and interpret the data.

Conclusion:

Digital marketing is the method of sales and promotion of a brand through digital media, particularly with the help of various tools available on the Internet. Compared to traditional sales and marketing strategies it is more complex, omnipresent and efficient.

EMPOWERING THE FUTURE: THE TRANSFORMATIVE ROLE OF MSMEs IN SUSTAINABLE SELF-RELIANCE

Dr. Tessy Thomas

Assistant Professor, Bharata Mata College, Thrikkakara, Kochi, Kerala

Applied Sciences, Perumbavoor, Kerala*

Abstract:

This paper examines the multifaceted significance of Micro, Small, and Medium Enterprises (MSMEs) in the context of sustainable development and self-reliance in India. MSMEs are recognized as vital drivers of economic growth and development, often referred to as the backbone of the economy. They play a pivotal role in job creation, income generation, poverty alleviation, and fostering entrepreneurship and innovation. Furthermore, MSMEs contribute to regional development and inclusive growth by decentralizing economic activities, supporting local supply chains, enhancing income distribution, and promoting resilience in the face of crises. They also reduce import dependency, enhance self-reliance, and champion social and environmental sustainability. This paper, through a comprehensive review of literature and government reports, underscores the crucial role of MSMEs in India's economic landscape and calls for supportive policies and initiatives to harness their full potential for a more inclusive and self-reliant future.

Keywords: MSME, Self-reliance, Make in India

Introduction

Micro, Small, and Medium Enterprises (MSMEs) are recognized worldwide as significant drivers of economic growth and development. They play a pivotal role in the economic development and self-reliance of India (Chaturvedi et al., 2015). These businesses, often referred to as the backbone of the economy, contribute significantly to job creation, income generation, and poverty alleviation. Their labor-intensive operations, inclusivity in hiring, and adaptability during challenging times make them indispensable for fostering economic growth and social development (Manohar & Reddy, 2018). Policymakers, therefore, must recognize the significance of MSMEs in job creation and implement supportive policies that enable these enterprises to flourish, ultimately leading to more inclusive and sustainable economic development. In this article, we will delve into the multifaceted significance of MSMEs in the context of sustainable development and how they contribute to making India self-reliant.

The former MSMED Act, 2006 classification criteria for MSMEs were based on investments in plant, machinery, and equipment. For manufacturing and service units, it was different. Financially speaking, it was also quite limited. The economy has changed

significantly since then. On May 13, 2020, the Aatma Nirbhar Bharat package announced changes to the MSME classification criteria. This has been done to make business easier to conduct, to provide an objective classification system, and to be realistic with time.

Objectives of the paper

This paper looks into the role of MSMEs in job creation and employment opportunities in India, focusing on their labor-intensive nature, inclusivity in hiring, and impact on rural and semi-urban areas. It is an attempt to explore how MSMEs contribute to economic diversification by engaging in a wide range of activities, thereby reducing dependence on a single industry and enhancing economic resilience. It elaborates the way MSMEs nurture entrepreneurship and foster innovation in India, examining their role as incubators for entrepreneurs, drivers of agile experimentation, and promoters of a culture of innovation. The paper further expounds MSMEs' contribute to regional development and inclusive growth in India, including their impact on decentralizing economic activities, supporting local supply chains, enhancing income distribution, and promoting infrastructure development (Manohar & Reddy, 2018). The role of MSMEs in reducing import dependency, enhancing self-reliance, and championing social and environmental sustainability is also dealt with in this paper, with a focus on their export potential, adaptability in times of crisis, and contribution to sustainable livelihoods. Towards the end, this paper provides policy recommendations and insights for policymakers, industry leaders, and stakeholders on how to support and empower MSMEs to maximize their contributions to sustainable development and self-reliance in India.

Job Creation and Employment Opportunities

One of the most notable contributions of MSMEs to sustainable development is their role in job creation. In India, they excel in their role as engines of job creation and providers of employment opportunities (Uma & Anbuselvi, 2023). These enterprises are often labor-intensive and have a substantial presence in various sectors such as manufacturing, services, and agriculture. The ability to generate employment, especially in rural and semi-urban areas, reduces urban migration, alleviates poverty, and promotes social stability. In this expert analysis, we will delve into the pivotal role that MSMEs play in generating employment and fostering economic inclusivity.

MSMEs are typically characterized by their labor-intensive operations. Unlike large corporations, which may rely heavily on automation and technology, MSMEs often require a substantial workforce to carry out their daily operations. This labor-intensive nature of MSMEs inherently leads to the creation of numerous job opportunities (Uma & Anbuselvi, 2023), particularly in industries such as manufacturing, retail, services, and agriculture. MSMEs have the unique ability to absorb a diverse range of workers, from skilled

professionals to semi-skilled and unskilled laborers. This inclusivity in their hiring practices ensures that a wide spectrum of the population has access to employment opportunities, regardless of their educational background, caste, category or skill level (Bhat, 2020).

MSMEs, when established in rural and semi-urban areas, help to curb rural-to-urban migration trend by providing local employment opportunities. This not only reduces the burden on cities but also strengthens rural economies (Uma & Anbuselvi, 2023). MSMEs play a pivotal role in promoting gender equality and youth employment. They are often more accessible to women and young entrepreneurs, as the entry barriers are lower compared to large corporations (Rekha & Jain, 2022). Moreover, MSMEs are conducive to part-time and flexible work arrangements, making them suitable for individuals with family responsibilities or students seeking part-time employment.

Table 2. Percentage distribution of enterprises owned by Male/ Female

Category	Male	Female	All
Micro	79.56	20.44	100
Small	94.74	5.26	100
Medium	97.33	2.67	100
All	79.63	20.37	100

Source: MSME annual report 2023

By providing employment opportunities, MSMEs contribute to the creation of sustainable livelihoods (Rekha & Jain, 2022; Uma & Anbuselvi, 2023). These jobs help individuals and families meet their basic needs, improve their quality of life, and reduce poverty levels (Bhat, 2020). Moreover, the income generated from MSME employment often circulates within local communities, further stimulating economic growth at the grassroots level. MSMEs' smaller size and organizational flexibility enable them to adapt more swiftly to changing economic conditions, including times of crisis.

During economic downturns or global crises, larger corporations may lay off employees, while MSMEs may pivot, restructure, or downsize more efficiently, thus retaining a significant portion of their workforce. MSMEs often serve as breeding grounds for future entrepreneurs. Many successful business leaders have started their careers in small enterprises before venturing into larger-scale entrepreneurship. This nurturing of entrepreneurial spirit not only creates jobs within MSMEs themselves but also leads to the creation of new enterprises, further expanding employment opportunities. MSMEs promote economic diversification by engaging in a wide range of activities. This diversification not only helps to reduce the country's dependence on a single industry but also contributes to

economic resilience. When multiple small and medium-sized enterprises operate across different sectors, the economy becomes less vulnerable to global economic shocks (Manohar & Reddy, 2018).

Catalysts of Creativity: MSMEs Fostering Entrepreneurship and Innovation

India, with its rich tapestry of cultures and traditions, has always been a fertile ground for innovation and entrepreneurship. At the heart of this vibrant ecosystem lie the MSNMEs, which play a pivotal role in fostering entrepreneurship and driving innovation. Micro, Small, and Medium Enterprises are the unsung heroes of India's entrepreneurship and innovation landscape. Their role in nurturing entrepreneurs, fostering a culture of innovation, and bridging regional disparities(K, 2011) cannot be overstated. To harness their full potential, it is imperative that policymakers, industry leaders, and society at large continue to support and empower these enterprises. By doing so, India can further cement its position as a global powerhouse of entrepreneurship and innovation, driving economic growth and prosperity for all.

MSMEs serve as the incubators of entrepreneurship in India. They offer aspiring entrepreneurs a platform to transform their ideas into viable businesses with lower entry barriers compared to larger corporations(Gautam & Sondhi, 2020). The ease of entry into the MSME sector allows individuals to experiment, learn, and gain valuable experience, ultimately paving the way for future entrepreneurial endeavors(K, 2011). Innovation thrives in environments where creativity is encouraged and rewarded. MSMEs, by their very nature, are more open to fresh ideas and unconventional thinking. This culture of innovation extends beyond product development and includes process improvement, marketing strategies, and customer engagement, making MSMEs dynamic hubs of innovation.

One of the key factors that set MSMEs apart is their agility. These enterprises have the flexibility to pivot swiftly and experiment with new products, services, and business models. This ability to adapt to changing market dynamics encourages innovation as entrepreneurs can test innovative ideas without the bureaucratic constraints often found in larger organizations. MSMEs, especially those engaged in IT, software development, and manufacturing, have the potential to lead technological advancements. By investing in research and development and adopting cutting-edge technologies, these enterprises push the boundaries of innovation, propelling India towards global technological leadership. MSMEs often serve as mentors and collaborators for startups and emerging entrepreneurs. They provide a network of support, guidance, and resources that can be invaluable for fledgling businesses. Many startups have successfully scaled their operations by collaborating with MSMEs, leveraging their industry expertise and market reach.

Driving Inclusive Growth : MSMEs' Integral Role in Regional Development

MSMEs are the bedrock of India's economic landscape, contributing significantly to regional development and fostering inclusive growth. They are distributed across various regions, both urban and rural. By establishing businesses in less developed areas, they contribute to regional development and reduce regional disparities. This inclusive growth not only strengthens the overall economy but also enhances social cohesion. The following points elaborate how MSMEs contribute to creating a more inclusive and equitable economic environment in India.

MSMEs are spread across both urban and rural areas of India. Their presence in less developed regions helps decentralize economic activity, reducing the concentration of economic opportunities in major urban centers. By establishing businesses in rural and semi-urban areas, MSMEs contribute to leveling regional disparities (Manohar & Reddy, 2018). By generating local employment, MSMEs reduce the need for rural-to-urban migration, which can lead to overcrowding in cities and place additional strain on urban infrastructure (Gautam & Sondhi, 2020).

Table 2. Distribution by type of Enterprises in Rural and Urban Areas

(Numbers in lakh)

Sector	Micro	Small	Medium	Total	Share (%)
R u r a l	489.30	7.88	0.60	497.78	45
Urban	586.88	24.06	1.16	612.10	55
All	1076.19	31.95	1.75	1109.89	100

Source: MSME Annual Report 2023

3. Promoting Entrepreneurship in Marginalized Communities:

MSMEs are deeply integrated into local supply chains, sourcing raw materials and services from neighboring businesses. This interconnectedness supports the growth of ancillary industries, creates a multiplier effect on local economies, and strengthens the overall regional economic ecosystem. By generating income in underserved regions, MSMEs contribute to a more equitable distribution of wealth. The income earned through employment and entrepreneurship in these areas often circulates within local communities, leading to increased consumer spending, which, in turn, spurs further economic activity. The growth of MSMEs often leads to the development of essential infrastructure in previously neglected regions. As these enterprises expand, they may require improved transportation, utilities, and logistics support. This, in turn, benefits the entire community and sets the stage for additional investment and development.

MSMEs in India often capitalize on local resources, traditional knowledge, and expertise. This not only preserves cultural heritage but also adds value to indigenous

products and services. Such endeavors promote the sustainable utilization of local resources while creating economic opportunities. During economic downturns or crises, MSMEs have demonstrated their resilience by adapting to changing circumstances more swiftly than larger corporations. This resilience helps maintain economic stability in regions (Gautam & Sondhi, 2020).

Boosting Export Potential and Reducing Import Dependency for Enhanced Self-Reliance

India's Micro, Small, and Medium Enterprises (MSMEs) are often celebrated as the engines of economic growth, and rightfully so. Beyond their significant contributions to domestic economic activities, MSMEs play a crucial role in enhancing the nation's export potential, increasing foreign exchange earnings, and reducing import dependency (Manohar & Reddy, 2018). This combination of factors not only strengthens India's economic standing on the global stage but also contributes significantly to achieving greater self-reliance.

The "Make in India" initiative, launched by the Indian government, encourages the manufacturing of products within the country. MSMEs are at the forefront of this initiative, producing a wide range of goods that can substitute imports and contribute to India's self-reliance in key industries. This, in turn, reduces the need for importing goods that can be produced locally. A robust MSME sector can effectively meet domestic demand for various products and services. Many MSMEs produce critical components and parts used in various industries, including automotive, electronics, and machinery. Their role as suppliers of these components reduces the dependence on imports for essential inputs. MSMEs often innovate to create products that are not readily available in the market. This innovation can lead to the development of unique and indigenous solutions, further reducing import dependency.

MSMEs in India are involved in a wide range of sectors, including manufacturing, services, and technology. Their diverse portfolio of products and services makes them valuable contributors to India's export potential. These enterprises often produce goods that are in demand both domestically and internationally, allowing them to tap into global markets effectively. MSMEs possess the agility to adapt quickly to changing market demands and preferences. This flexibility enables them to tailor their products and services to meet the specific requirements of foreign markets. Such customization is essential for successful international trade. Many MSMEs focus on niche markets and specific regions, establishing themselves as specialists in particular product categories. This specialization can lead to a competitive advantage in international markets, where demand for unique or specialized products is high.

MSMEs often operate within supply chains that include larger corporations. By participating in these value chains, they can integrate themselves into global trade

networks, further enhancing their export capabilities. This integration helps ensure the flow of goods and services to international markets. The Indian government has recognized the vital role of MSMEs in export promotion and has introduced various policies and initiatives to support them in exploring international markets. These include financial assistance, export promotion councils, and export credit schemes that facilitate foreign exchange earnings. The revenue generated through MSME exports contributes significantly to India's foreign exchange reserves. A strong reserve of foreign currency enhances India's economic stability and provides a cushion against external economic shocks.

7. Social and Environmental Sustainability

MSMEs often have a closer connection to their local communities, and as such, they are more inclined to adopt sustainable and environmentally friendly practices. Their smaller scale allows them to be flexible and responsive to changing environmental regulations and consumer preferences (Singh et al., 2021). This promotes sustainable production and consumption patterns, contributing to environmental conservation, thus assisting in attaining the sustainable development goals (Dubey & Verma, 2020). During times of economic downturns or crises, MSMEs can adapt more swiftly compared to large corporations. Their flexibility, ability to pivot, and closer ties to local markets enable them to weather economic storms more effectively. Supporting MSEs during such times helps maintain economic stability. MSMEs are often the stepping stones for individuals to transition from being employees to self-employed entrepreneurs. Encouraging a culture of self-employment through MSMEs empowers individuals to take control of their economic destinies and reduces unemployment rates.

MSMEs often serve as the stepping stones for entrepreneurs, especially those from marginalized communities. They offer accessible entry points into the world of business ownership, enabling individuals from diverse backgrounds to become self-reliant and economically empowered. Table 1 shows the Social category wise distribution in the current year.

Table 1. Percentage Distribution of Enterprises Social Category Wise

Sector	SC	ST	OBC	Others	Not known	
Micro	12.48	4.11	49.83	32.79	0.79	100
Small	5.50	1.65	29.64	62.82	0.39	100
Medium	0.00	1.09	23.85	70.80	4.27	100
All	12.45	4.10	49.72	32.95	0.79	100

Source: MSME annual report 2023

Conclusion

MSMEs are instrumental in the sustainable development of a country and in achieving self-reliance. Their contributions extend beyond economic growth, encompassing social development, environmental sustainability, and regional equity. To harness their full potential, governments and policymakers must create an enabling environment that includes access to finance, skill development, technology support, and favorable regulatory frameworks. By doing so, nations can pave the way for a more resilient, self-reliant, and sustainable future. The significance of MSMEs in India's journey toward economic self-reliance cannot be overstated. Their contribution to export potential, foreign exchange earnings, and reducing import dependency plays a pivotal role in enhancing India's economic resilience and self-sufficiency. To capitalize fully on their potential, policymakers and stakeholders must continue to support and empower MSMEs through favorable policies, access to finance, skill development, and technology support. By doing so, India can strengthen its position in the global marketplace while reducing its dependence on foreign goods and services, ultimately advancing towards enhanced self-reliance and economic prosperity.

Abstract

The present research focuses into the impact of marketing strategies used by female business owners in Sattur to support local small businesses. The research design used in the study was survey. In order to gather information from the respondents, a structured questionnaire was utilized. Convenient sampling was used to choose the samples for this investigation. Statistics, both descriptive and inferential, were used to analyze the instrument that had been validated and its reliability assessed. The statistical software for social sciences (SPSS) version 20 was used to examine the data using the correlation coefficient and the ANOVA test. The results indicate that marketing strategies used by women entrepreneurs had a favorable impact on the survival of small businesses. They also demonstrate that the influence of age has no impact on the survival of small businesses owned by women entrepreneurs.

Keywords: Marketing Strategies, Competencies, Innovation and Survival

Introduction

Small and medium-sized businesses (SMEs) have a significant impact on any economy by creating jobs, boosting the gross domestic product, launching inventions, and encouraging a variety of other economic activities. In order for SMEs to reach their long-term goals, growth is essential. The development of SMEs is influenced by entrepreneurial behavior and marketing techniques. Any firm can now use a marketing strategy to grow stronger and stay competitive in today's global marketplace. Marketing strategy is a critical component of the industry's ability to increase its market share and lessen the impact of the competition. Marketing strategy is also seen as a way of offering high-quality products that meet customer needs, charging an affordable price, expanding distribution, and supporting it with successful promotion strategies. Start-up of a small business is the first step in the entrepreneurial process. Here, business owners nurture their ideas, gather resources, take

personal risks, and work to make their venture successful. During this startup phase, creativity and innovation are key success factors. The entrepreneur assumes all managerial tasks as the business's owner and creator, and who starts little grows from the journey. Due to their characteristics that are desirable and pertinent for the development of entrepreneurship, women have also been recognized as effective entrepreneurs.

Supporting expansion, gaining access to capital, incorporating new technology, enhancing merchandise, building competencies, local and export promotional activities, fostering connections with significant businesses, and increasing productivity are a few of the areas that have been recognized as needing attention. Therefore, it is clear that a number of problems create a threat to small business success. In addition to these difficulties, there are a number of strategic alternatives that can assist business owners in overcoming hurdles. The main objective of this research work is to examine the marketing strategies adopted by women entrepreneurs to ensure the sustainability of small businesses in Sattur.

Objective of the study

1. To observe the demographic profile of the women entrepreneurs in Sattur.
2. To identify the problems faced in marketing strategy by the women entrepreneurs
3. To analyze the relationship between Marketing strategy and Small Business Sustainability of women entrepreneurs.
4. To offer a suitable suggestions on the basis of the study.

Research Methodology

This study is descriptive in nature by using primary and secondary data. Primary data were collected from 160 women Entrepreneurs in Sattur by using structured questionnaire. Samples were selected by using convenient sampling method. Secondary data were collected from various published materials like journal, publications, articles and website. The collected data were tabulated and analyzed. Simple percentage method is used for the interpretation. Correlation and ANOVA test is used for the testing of hypothesis.

Analysis and Interpretation

Table 1: Socio Economic profile of the Women Entrepreneurs

S.No	Socio-Economic Status	No. of respondents	Percentage
Age wise classification			
1	25 – 30 years	24	15.00
2	31 – 35 years	53	33.13
3	36 – 40 years	33	20.63

4	41 – 45 years	28	17.50
5	Above 45 years	22	13.75
Marital Status			
1	Married	81	50.60
2	Unmarried	79	49.40
Educational Qualification			
1	Upto HSC	28	17.50
2	Under graduate	62	38.80
3	Post graduate	47	29.40
4	Professional	23	14.40
Annual Income Turnover			
1	Less than Rs.15000	42	26.20
2	Rs.15001 – Rs.30000	44	27.50
3	Rs.30001 – Rs.45000	38	23.80
4	Rs. 40001– Rs.60000	24	15.00
5	More than Rs.60001	12	7.50
Total		160	100.00

Source: Primary Data

From Table 1, interprets that out of 160 respondents, majority of the respondents 33.13 per cent are between 31 – 35 years, 50.60 per cent of the respondents were married, 38.80 per cent educational qualification upto Under graduate level, 27.50 per cent were earned annual turnover Between Rs.15001 – Rs.30000.

Ho: There is no significant relationship between the Marketing strategy and Small Business Sustainability of Women Entrepreneurs. (Using Correlation Analysis)

Table 2: Relationship between Marketing strategy and Small Business Sustainability of Women Entrepreneurs

		Monthly Income	Budget before buying
Marketing Strategy	Pearson Correlation	1	0.450**
	Sig. (2-tailed)		.000
	N	160	160
Small Business Sustainability	Pearson Correlation	0.450**	1
	Sig. (2-tailed)	.000	
	N	160	160

** . Correlation is significant at the 0.01 level (2-tailed).

As the correlation value is 0.450, the two variables have a positive relationship. So, there is high degree of positive correlation between the Marketing Strategy and the Small Business Sustainability of Women Entrepreneurs.

Small Business Sustainability

Ho: *There is no significant difference between the age and Small Business Sustainability of women Entrepreneurs. (Using ANOVA Test)*

Table 3: Age and Small Business Sustainability

	Sum of Squares	df	Mean Square	F	Significance
Between Groups	.159	2	.080	.420	0.657
Within Groups	29.753	157	.190		
Total	29.912	159			

Source: Computed Data

The calculated value 0.657 is greater than the significant value 0.05. Hence the null hypothesis is accepted and there is no significant difference between age and Small Business Sustainability of women Entrepreneurs. Hence it can be concluded that the age factor does not influence the Small Business Sustainability of women Entrepreneurs

Suggestions of the study

- ❖ Small businesses should engage in sales marketing since it will increase the demand for their goods and services and increase the accessibility of their items.
- ❖ Small businesses should spend money on advertising their goods and services since it will increase customer spending and raise awareness of the goods and services.
- ❖ To encourage small firms to market their goods and services, the government ought to subsidize the expenses of media advertising.

Conclusion

Small businesses creates lot of opportunities and challenges as a result of globalization. They require entrepreneurs with good behaviors and effective marketing techniques to overcome the obstacles. Finding the link between marketing strategy and business sustainability is the main goal of this study. According to the study, the following marketing strategy like product, place, pricing, packaging, and after-sales service were both significantly independent and combined predictors of business sustainability.

However, the study found no link between marketing approach and the sustainability of women entrepreneurs' small businesses. Moreover, it was discovered that there is no discernible connection between women entrepreneurs' ages and their capacity to sustain their small businesses.

Abstract

The pursuit of sustainability in the energy sector is a paramount concern in the context of a self-reliant India. This conference proceeding delves into the multifaceted aspects of achieving energy sustainability while aligning with the 'Atmanirbhar Bharat' (self-reliant India) initiative. It explores the current energy landscape, strategies for promoting self-reliance, and the role of renewable energy, all of which are critical components in India's journey towards a sustainable and self-reliant energy future.

Keywords: Sustainability, Energy, Self-Reliance, Strategies, Environment, Atmanirbhar Bharat.

Introduction

India's energy sector plays a pivotal role in the nation's economic development and self-reliance goals. The integration of sustainability principles into this sector is crucial to ensure a resilient and self-sufficient future. This section sets the stage for the conference proceeding, highlighting the significance of sustainable energy practices in the 'Atmanirbhar Bharat' initiative.

India's Energy Landscape

Understanding the existing energy infrastructure and consumption patterns is crucial to chart the path toward sustainability and self-reliance. India's energy mix, dominated by fossil fuels, presents both opportunities and challenges. This section provides a comprehensive overview of:

- i. **Energy Sources:** The role of coal, oil, natural gas, renewables, and nuclear energy in India's energy mix.
- a) **Coal:** Coal has historically been the dominant source of energy in India. It is used for electricity generation and industrial processes. India has substantial coal reserves, and coal-fired power plants continue to play a significant role in the energy mix.

- b) **Oil and Natural Gas:** Oil and natural gas are essential for transportation, industrial processes, and as feedstocks for the petrochemical industry. India imports a significant portion of its oil and natural gas to meet domestic demand.
- c) **Renewable Energy:** India is making significant strides in the field of renewable energy. This includes solar, wind, hydropower, and biomass. Solar and wind energy, in particular, have seen substantial growth in recent years, with India becoming one of the world's largest producers of solar energy.
 - ❖ **Solar Energy:** Solar power, harnessed through photovoltaic cells, is a rapidly growing energy source in India. The country's solar capacity has expanded through large-scale solar parks and rooftop solar installations.
 - ❖ **Wind Energy:** India has a substantial wind energy capacity, and wind farms are spread across various states, especially in coastal areas and regions with favorable wind conditions.
 - ❖ **Hydropower:** Hydropower plants utilize the flow of water to generate electricity. India has several hydropower projects, especially in regions with abundant water resources.
 - ❖ **Biomass Energy:** Biomass, including agricultural residues and organic waste, is used for electricity generation and as a source of renewable energy in rural areas.
- d) **Nuclear Energy:** Nuclear power plants are another source of electricity in India. These plants use nuclear reactions to generate heat, which is then converted into electricity.
- e) **Natural Gas:** Natural gas is used for electricity generation, industrial processes, and as a cleaner alternative to coal in some power plants.
- f) **Rural Energy Sources:** In rural areas, energy sources include traditional biomass, such as firewood and cow dung, for cooking and heating. Efforts are being made to transition to cleaner and more sustainable energy sources in these areas.
- g) **Electricity Imports:** Some regions in India rely on electricity imports from neighboring countries to meet their energy needs, particularly during times of high demand.
- ii. **Energy Consumption Patterns:** Energy consumption patterns in India are influenced by various factors, including the country's large population, economic growth, industrialization, and diverse climate conditions. Understanding these consumption patterns is crucial for policymakers and energy planners. Here are some key aspects of energy consumption in India:
 - a) **Residential Sector:** The residential sector is a significant consumer of energy in India. Energy is primarily used for lighting, cooking, heating, and cooling. In rural areas, traditional biomass sources like firewood and cow dung are commonly used for cooking and heating, while urban areas rely on electricity and LPG (liquefied petroleum gas). The adoption of energy-efficient appliances and building designs is growing, especially in urban areas.

- b) Industrial Sector:** India's industrial sector is energy-intensive and accounts for a significant portion of total energy consumption. Industries such as manufacturing, steel production, cement manufacturing, and textiles are major energy consumers. There is a growing focus on improving industrial energy efficiency and adopting cleaner technologies to reduce energy consumption and greenhouse gas emissions.
- c) Transportation Sector:** The transportation sector is a major and rapidly growing consumer of energy in India. It includes road transportation (private vehicles, commercial vehicles, and public transport), railways, aviation, and shipping. The reliance on fossil fuels, primarily gasoline and diesel, for transportation contributes significantly to energy consumption. The promotion of electric vehicles (EVs) and the development of public transportation systems are efforts to reduce the sector's carbon footprint.
- d) Agricultural Sector:** Agriculture plays a vital role in India's economy and energy consumption. Energy is used for irrigation, machinery operation, and processing. Diesel pumps are commonly used for irrigation in rural areas. There is an increasing emphasis on the adoption of solar pumps to reduce energy costs and environmental impacts.
- e) Commercial Sector:** The commercial sector, which includes offices, retail establishments, and educational institutions, consumes energy for lighting, heating, cooling, and electronic equipment. Energy-efficient building designs and technologies are becoming more prevalent in this sector.
- f) Renewable Energy Adoption:** India is making significant progress in adopting renewable energy sources, such as solar and wind power, to diversify its energy mix and reduce dependence on fossil fuels. Solar rooftop installations, solar parks, and wind farms have expanded rapidly in recent years.
- g) Energy Access:** Achieving universal energy access is a priority in India. Many rural areas still lack reliable access to electricity, and efforts are underway to extend the power grid and provide electricity through off-grid solutions like microgrids and solar home systems.
- h) Government Initiatives:** The Indian government has launched various *programmes* and initiatives to promote energy efficiency and conservation, such as the Perform, Achieve, and Trade (PAT) scheme, the *UJALA programme* for LED bulb distribution, and the *Pradhan Mantri Ujjwala Yojana* for LPG access.
- i) Energy Imports:** India imports a significant portion of its oil and natural gas, which also contributes to energy consumption. Efforts are being made to reduce dependence on energy imports and boost domestic production.

India's energy consumption patterns are evolving as the country strives to balance economic growth with environmental sustainability. Policies and initiatives are aimed at

promoting energy efficiency, expanding renewable energy capacity, and achieving a more sustainable and self-reliant energy future.

3. Energy Sustainability Strategies

Efforts to promote sustainability in the energy sector are multifaceted and critical for India's self-reliance goals. This section explores various strategies, including:

3.1. Renewable Energy Expansion

India's commitment to renewable energy sources, such as solar, wind, and hydro, is evident in its ambitious targets. This subsection discusses:

- i. **Targets and Incentives:** Setting ambitious renewable energy targets and providing incentives for clean energy adoption.
 - a) **Targets:**
 - ❖ **Renewable Energy Capacity Targets:** India has set ambitious targets for increasing its renewable energy capacity. The most notable target is the goal to achieve 175 gigawatts (GW) of renewable energy capacity by 2022, which was later increased to 450 GW by 2030. This includes solar, wind, hydropower, and biomass energy.
 - ❖ **Solar Power Targets:** The National Solar Mission has set specific solar power capacity targets. These include achieving 100 GW of solar capacity by 2022 and 280 GW by 2030. India aims to become one of the world's largest producers of solar energy.
 - ❖ **Wind Power Targets:** India has set targets to increase its wind power capacity, aiming to achieve 60 GW of wind power capacity by 2022 and 140 GW by 2030.
 - ❖ **Hydropower Targets:** The government has plans to add hydropower capacity, with targets set for the development of small and large hydropower projects.
 - ❖ **Biomass and Other Renewable Sources:** Targets are also set for increasing the use of biomass and other renewable energy sources.
 - a) **Incentives:**
 - ❖ **Financial Incentives:** The government offers various financial incentives to promote renewable energy. These include subsidies, tax benefits, and incentives for renewable energy projects. Special incentives are often provided for solar and wind power projects.
 - ❖ **Generation-Based Incentives (GBIs):** GBIs provide financial incentives to renewable energy generators based on the amount of electricity they produce. These incentives are designed to encourage higher renewable energy generation.
 - ❖ **Feed-in Tariffs:** Feed-in tariffs guarantee a fixed payment for electricity generated from renewable sources, providing predictability for investors and project developers.

- ❖ **Accelerated Depreciation:** Accelerated depreciation benefits allow businesses to write off a significant portion of the cost of renewable energy equipment in the early years, reducing tax liabilities.
- ❖ **Viability Gap Funding (VGF):** VGF is provided to bridge the gap between the cost of setting up renewable energy projects and the revenue generated. It helps make projects financially viable.
- ❖ **Renewable Purchase Obligation (RPO):** RPO mandates that a certain percentage of electricity purchased by utilities come from renewable sources. Non-compliance results in penalties, encouraging utilities to invest in renewables.
- ❖ **Net Metering and Feed-in Tariffs for Solar Rooftop:** Net metering allows individuals and businesses to sell excess solar power back to the grid, while feed-in tariffs provide incentives for feeding solar power into the grid.
- ❖ **Customs and Excise Duty Exemptions:** Renewable energy equipment and components are often exempt from customs and excise duties, making them more affordable.
- ❖ **Clean Energy Certificates (RECs):** RECs are tradable certificates that represent the environmental attributes of renewable energy generation. They provide additional revenue for renewable energy projects.
- ❖ **Green Energy Corridors:** Infrastructure development, such as green energy corridors, is encouraged to improve the transmission and distribution of renewable energy.
- ❖ **International Collaboration:** India collaborates with international organizations and nations to access funding and expertise for renewable energy projects.

These targets and incentives are part of India's comprehensive strategy to promote renewable energy expansion, reduce greenhouse gas emissions, and achieve its sustainable energy goals. They have contributed to significant growth in the renewable energy sector in the country.

ii. Solar and Wind Power Initiatives: India has implemented several key solar and wind power initiatives to promote renewable energy expansion and achieve its ambitious targets for sustainable energy generation. These initiatives aim to accelerate the deployment of solar and wind energy projects, attract investments, and create a conducive environment for renewable energy growth. Here are some of the significant solar and wind power initiatives in India:

a) Solar Power Initiatives:

- ❖ **National Solar Mission (NSM):** Launched in 2010, NSM is one of India's flagship programmes for solar energy expansion. It has several components, including:

- ❖ **Jawaharlal Nehru National Solar Mission (JNNSM):** The primary aim is to promote solar power generation in India and reduce the cost of solar energy through various mechanisms, such as feed-in tariffs, incentives, and subsidies.
- ❖ **Grid-Connected Solar Rooftop Programme:** Encourages the installation of solar panels on rooftops of homes, commercial buildings, and institutions. It offers financial incentives and net metering for surplus energy fed into the grid.
- ❖ **Off-Grid Solar Applications:** Promotes the use of solar power in remote and off-grid areas through decentralized solar power generation.
- ❖ **Solar Parks:** India has initiated the development of large-scale solar parks and ultra-mega solar power projects to attract investments and boost solar capacity. The parks provide the necessary infrastructure and land for solar developers.
- ❖ **Solar Energy Corporation of India (SECI):** SECI is a government-owned company dedicated to promoting solar energy projects, including the development of solar parks and auctions for solar capacity.
- ❖ **International Solar Alliance (ISA):** India co-founded the ISA, a global initiative aimed at promoting solar energy in solar-rich countries. It fosters cooperation in solar technology development, capacity building, and sharing of best practices.

b) Wind Power Initiatives:

- ❖ **Wind Energy Promotion:** India has set ambitious targets for wind power capacity expansion. The government has implemented various measures to promote wind energy, including:
- ❖ **Generation-Based Incentives (GBIs):** GBIs provide financial incentives based on the amount of electricity generated from wind power projects, encouraging higher generation.
- ❖ **Accelerated Depreciation:** Businesses investing in wind power projects can claim accelerated depreciation benefits, reducing tax liabilities.
- ❖ **Feed-in Tariffs (FiTs):** FiTs guarantee a fixed payment for wind power generation, providing predictability for investors.
- ❖ **Wind Energy Resource Assessment:** The National Institute of Wind Energy (NIWE) conducts detailed wind resource assessments to identify suitable locations for wind farms and provide wind data to potential investors.
- ❖ **Wind-Solar Hybrid Policy:** India has introduced policies to encourage the development of hybrid power projects that combine wind and solar energy generation. These projects optimize land use and grid integration.
- ❖ **Bidding and Competitive Auctions:** Wind power projects are often allocated through competitive bidding and auctions, ensuring transparency and cost-effective development.

- ❖ **Transmission Infrastructure:** Investments have been made in strengthening the transmission infrastructure to facilitate the integration of wind power into the grid.

Both solar and wind power initiatives in India aim to attract investments, reduce the cost of renewable energy, and support the transition to a cleaner and more sustainable energy future. These initiatives have contributed significantly to India's position as a global leader in renewable energy capacity expansion.

3.2. Energy Efficiency Programmes

Improving energy efficiency is a cornerstone of sustainability. This subsection addresses:

- i. **Energy-Efficient Appliances and Buildings:** Energy-efficient appliances and buildings play a crucial role in India's pursuit of self-reliance in energy. By reducing energy consumption in households and commercial structures, these initiatives not only help conserve resources but also contribute to energy security and environmental sustainability. Here are some key aspects of energy-efficient appliances and buildings in self-reliant India:

- a) **Energy-Efficient Appliances:**

- ❖ **Star Labeling Programme:** India has implemented the Bureau of Energy Efficiency's (BEE) star labeling *programme* for various appliances such as refrigerators, air conditioners, and LED bulbs. This *programme* rates appliances on their energy efficiency and helps consumers make informed choices. Appliances with higher star ratings are more energy-efficient.
- ❖ **Appliance Standards and Regulations:** The government has established minimum energy performance standards (MEPS) for various appliances, setting requirements for energy efficiency and encouraging manufacturers to produce more efficient products.
- ❖ **LED Lighting:** The Unnat Jyoti by Affordable LEDs for All (UJALA) *programme* aims to distribute energy-efficient LED bulbs to households at affordable prices. The *programme* has led to significant energy savings in lighting.
- ❖ **Energy-Efficient Fans and Air Conditioners:** BEE has introduced star labeling and energy efficiency standards for fans and air conditioners, promoting the adoption of energy-efficient cooling and ventilation systems.
- ❖ **Appliance Rebate Programmes:** Various state and central government initiatives offer rebates and incentives for the purchase of energy-efficient appliances, encouraging consumers to invest in these products.

- b) **Energy-Efficient Buildings:**

- ❖ **Energy Conservation Building Code (ECBC):** The ECBC sets energy efficiency standards for commercial buildings and aims to reduce energy consumption in the

commercial sector. It encourages the use of energy-efficient building materials, insulation, lighting, and HVAC systems.

- ❖ **Green Building Certification:** Organizations like the Indian Green Building Council (IGBC) and LEED (Leadership in Energy and Environmental Design) promote the construction of green and sustainable buildings. These certifications recognize buildings that meet specific energy efficiency and sustainability criteria.
- ❖ **Smart and Sustainable Design:** Architects and builders are increasingly incorporating passive design principles, which optimize natural lighting and ventilation to reduce the need for artificial lighting and HVAC systems. This not only conserves energy but also improves indoor comfort.
- ❖ **Energy Audits:** Energy audits of existing buildings identify areas for improvement and recommend energy-efficient upgrades, such as insulation, energy-efficient windows, and lighting retrofits.
- ❖ **Net-Zero and Zero-Energy Buildings:** There is a growing interest in designing and constructing net-zero energy buildings, which produce as much energy as they consume over the course of a year. These buildings rely on renewable energy sources and energy-efficient design.
- ❖ **Energy-Efficient Materials:** The use of energy-efficient construction materials, such as cool roofs and high-performance windows, is becoming more prevalent in building design.
- ❖ **Building Energy Management Systems (BEMS):** BEMS technologies help monitor and control energy usage within buildings, optimizing HVAC, lighting, and other systems for efficiency.

The adoption of energy-efficient appliances and building practices not only reduces energy consumption but also contributes to India's self-reliance by reducing its dependence on energy imports and enhancing energy security. These initiatives also align with India's commitment to global climate goals by reducing greenhouse gas emissions associated with energy use in buildings.

ii. Industrial Energy Efficiency: Industrial energy efficiency is a critical aspect of India's journey toward self-reliance in energy. Industries are significant energy consumers, and improving efficiency not only reduces energy costs but also enhances competitiveness, reduces carbon emissions, and conserves valuable resources. Here are key strategies and initiatives related to industrial energy efficiency in self-reliant India:

- a) Perform, Achieve, and Trade (PAT) Scheme:* The PAT scheme is a market-based mechanism that sets energy efficiency targets for energy-intensive industries like cement, steel, aluminum, and pulp and paper. Industries that achieve and exceed these targets receive energy-saving certificates that can be traded.

- b) Energy Audits:** Conducting regular energy audits helps industries identify energy-saving opportunities and implement cost-effective energy conservation measures. The government encourages industries to undertake energy audits.
- c) Energy Management Systems (EnMS):** Implementing EnMS based on ISO 50001 standards helps industries establish a systematic approach to continuously improve energy performance, reduce energy costs, and achieve energy efficiency targets.
- d) Technology Upgrades:** Encouraging industries to invest in modern, energy-efficient technologies and machinery helps reduce energy consumption and improve productivity. Subsidies and incentives are often provided for such upgrades.
- e) Waste Heat Recovery:** Capturing and utilizing waste heat generated during industrial processes is an effective way to improve energy efficiency. Combined Heat and Power (CHP) systems are commonly used for this purpose.
- f) Energy-Efficient Lighting:** Replacing conventional lighting with energy-efficient alternatives such as LEDs can significantly reduce energy consumption in industrial facilities.
- g) Lean Manufacturing and Process Optimization:** Lean manufacturing principles and process optimization techniques help eliminate energy-wasting inefficiencies and streamline production processes.
- h) Demand-Side Management (DSM):** Implementing DSM strategies helps industries manage and reduce peak electricity demand, thereby lowering energy costs.
- i) Training and Capacity Building:** Offering training and capacity-building *programmes* to industry professionals on energy-efficient practices and technologies enhances awareness and implementation of energy-saving measures.
- j) Industry-Specific Initiatives:** Tailoring energy efficiency *programmes* to specific industries, considering their unique energy requirements and challenges, helps drive sector-specific improvements.
- k) Standards and Labeling:** The BEE sets energy efficiency standards for various industrial equipment and appliances. Labeling products with their energy efficiency ratings helps industries make informed choices.
- l) Financing and Incentives:** Providing access to low-interest loans, grants, and incentives for energy-efficient projects helps industries overcome financial barriers to adoption.
- m) Research and Development:** Supporting research and development in energy-efficient technologies and processes encourages innovation and the development of cutting-edge solutions.
- n) Public-Private Partnerships (PPPs):** Collaboration between government agencies, industry associations, and private companies can facilitate the adoption of energy-efficient practices and technologies.

o) Reporting and Benchmarking: Mandating industries to report their energy consumption and efficiency data encourages transparency and competition.

By implementing these strategies and initiatives, India aims to improve industrial energy efficiency, reduce energy imports, enhance energy security, and contribute to a more sustainable and self-reliant energy future. It also aligns with India's commitment to global climate goals by reducing greenhouse gas emissions associated with industrial processes.

3.3. Environmental Conservation and Mitigation

Addressing environmental concerns is integral to sustainability. This subsection covers:

- i. Policies for Reducing Carbon Emissions:* India has implemented several policies and initiatives aimed at reducing carbon emissions and addressing climate change. These policies are critical for mitigating the impacts of climate change, enhancing environmental sustainability, and promoting a low-carbon economy. Here are some of the key policies and measures for reducing carbon emissions in India:
- a) National Action Plan on Climate Change (NAPCC):* The NAPCC, launched in 2008, is a comprehensive framework that outlines India's strategies and policies to combat climate change. It consists of eight national missions, each focusing on specific sectors, including solar energy, energy efficiency, sustainable agriculture, and water resources.
- b) Renewable Energy Initiatives:*
 - ❖ *National Solar Mission:* India's National Solar Mission aims to promote the deployment of solar energy and achieve significant solar capacity additions. It includes ambitious targets for solar power generation and incentives for solar projects.
 - ❖ *National Wind Mission:* The Wind Mission focuses on expanding wind power capacity, improving grid integration, and increasing wind energy generation.
- c) Perform, Achieve, and Trade (PAT) Scheme:* The PAT scheme sets energy efficiency targets for energy-intensive industries and allows them to trade energy-saving certificates when they exceed their targets. It encourages industries to adopt energy-efficient technologies and practices.
- d) Energy Efficiency Measures:*
 - ❖ *Standards and Labeling:* The Bureau of Energy Efficiency (BEE) has established energy efficiency standards for appliances and equipment, including air conditioners, refrigerators, and lighting. Products are labeled to indicate their energy efficiency levels.
 - ❖ *Energy Conservation Building Code (ECBC):* ECBC sets energy efficiency standards for commercial buildings, promoting the use of energy-efficient construction practices and technologies.

- e) **Carbon Pricing and Trading:** While India has not implemented a nationwide carbon pricing mechanism, there are discussions and pilot projects exploring carbon trading and carbon tax options.
- f) **Green Transportation Initiatives:** Promotion of electric vehicles (EVs) through incentives, subsidies, and charging infrastructure development to reduce carbon emissions from the transportation sector.
- g) **Reforestation and Afforestation:** India has various afforestation and reforestation programmes to increase forest cover, sequester carbon, and promote biodiversity conservation.
- h) **Sustainable Agriculture Practices:** Policies that encourage sustainable farming practices, including organic farming and efficient water use, to reduce emissions from agriculture.
- i) **Waste Management and Recycling:** Initiatives to reduce methane emissions from landfills and promote recycling and waste-to-energy technologies.
- j) **International Commitments:** India is committed to meeting its international climate obligations, including those under the Paris Agreement, which includes targets for reducing carbon emissions.
- k) **Sustainable Urban Development:** Policies promoting sustainable urban planning, public transportation, and the development of smart cities to reduce emissions associated with urbanization.
- l) **Research and Development:** Investment in research and development of clean and efficient technologies across various sectors, including energy, transportation, and agriculture.

These policies and initiatives are part of India's comprehensive approach to addressing climate change and reducing carbon emissions. They are crucial for achieving sustainability, energy security, and environmental conservation while contributing to global efforts to combat climate change.

4. Self-Reliance in Energy

India's 'Atmanirbhar Bharat' initiative is a driving force behind energy self-reliance. This section discusses:

4.1. The 'Atmanirbhar Bharat' Initiative

- i. **Goals and Objectives:** The initiative's objectives to reduce energy dependence on imports, boost domestic manufacturing, and promote indigenous solutions. The "Atmanirbhar Bharat" initiative, launched by the Government of India, aims to foster self-reliance and boost economic growth and resilience. The term "Atmanirbhar" translates to "self-reliant" in English, and the initiative encompasses various economic,

social, and governance aspects. The primary goals and objectives of the *Atmanirbhar Bharat* initiative are:

- a) **Economic Self-Reliance:** The initiative seeks to reduce dependence on imports, especially in critical sectors like defense, healthcare, and technology. It aims to make India self-sufficient in essential goods and services, thereby enhancing economic sovereignty.
- b) **Promotion of Domestic Manufacturing:** One of the core objectives is to promote domestic manufacturing, increase the share of "Made in India" products, and create a robust manufacturing ecosystem. This involves providing incentives, simplifying regulations, and improving infrastructure.
- c) **Boosting Micro, Small, and Medium Enterprises (MSMEs):** The initiative aims to support MSMEs, which play a crucial role in employment generation and economic growth. Measures include financial assistance, easier access to credit, and simplification of compliance procedures.
- d) **Agricultural Reforms:** *Atmanirbhar Bharat* seeks to transform the agricultural sector by liberalizing trade, removing barriers, and enhancing the income of farmers. Initiatives like the Agricultural Produce Market Committee (APMC) reforms and contract farming aim to empower farmers.
- e) **Infrastructure Development:** The initiative focuses on infrastructure development, including transportation, logistics, and energy. Investment in infrastructure is seen as a key driver of economic growth and job creation.
- f) **Promotion of Digital India:** Expanding digital infrastructure, internet access, and e-governance is a critical component. Digitalization is seen as a means to enhance efficiency, transparency, and accessibility of government services.
- g) **Healthcare Strengthening:** The COVID-19 pandemic highlighted the importance of a robust healthcare system. The initiative aims to enhance healthcare infrastructure, including hospitals, medical research, and pharmaceutical production.
- h) **Environmental Sustainability:** While promoting economic growth, *Atmanirbhar Bharat* also recognizes the importance of environmental sustainability. It encourages the development and adoption of green technologies and practices.
- i) **Global Engagement:** The initiative does not advocate isolationism but instead encourages global engagement on India's terms. It seeks to position India as a competitive player in the global market and forge strategic partnerships.
- j) **Employment Generation:** Creating job opportunities, especially for the youth, is a priority. Investments in various sectors are expected to generate employment, which is essential for economic and social stability.

- k) **Ease of Doing Business:** Simplifying regulatory procedures, reducing bureaucratic hurdles, and improving the ease of doing business are vital objectives. A business-friendly environment is seen as essential for attracting investments.
- l) **Social Inclusivity:** Ensuring that the benefits of economic growth reach all segments of society, especially marginalized and economically disadvantaged groups, is emphasized.
- m) **Resilience to External Shocks:** Developing resilience to external economic shocks, such as the global economic downturn, is a key objective. This includes building buffers in the form of foreign exchange reserves and reducing vulnerabilities.

Atmanirbhar Bharat represents a multi-faceted approach to economic and social development in India. Its objectives encompass economic growth, self-reliance, job creation, infrastructure development, and social inclusivity. The success of the initiative depends on effective policy implementation, public-private partnerships, and adaptability to changing global economic dynamics.

ii. **Role of Energy Self-Reliance:** Energy self-reliance plays a pivotal role in the "Atmanirbhar Bharat" initiative, which aims to make India self-reliant across various sectors. Energy is a fundamental enabler of economic growth, industrialization, and overall development. Here's how energy self-reliance contributes to the objectives of the *Atmanirbhar Bharat* initiative:

- a) **Reducing Dependence on Energy Imports:** India is one of the largest importers of crude oil, natural gas, and coal. By enhancing domestic energy production and reducing reliance on energy imports, India can improve its energy security and reduce its vulnerability to fluctuations in global energy prices and supply disruptions.
- b) **Enhancing Energy Access:** Energy self-reliance entails expanding domestic energy production, which can help provide reliable access to electricity and clean cooking fuels for all citizens, including those in rural and remote areas. This aligns with the goal of universal energy access, a crucial aspect of the initiative.
- c) **Supporting Domestic Industry:** Reliable and affordable energy is essential for the growth of domestic industries. By ensuring a stable energy supply, India can boost its manufacturing sector and reduce production costs, making its industries more competitive in both domestic and international markets.
- d) **Promoting Renewable Energy:** The *Atmanirbhar Bharat* initiative recognizes the potential of renewable energy sources like solar and wind power. Expanding domestic renewable energy capacity reduces dependence on fossil fuels, contributes to environmental sustainability, and aligns with India's commitments to combat climate change.
- e) **Energy Efficiency:** Self-reliance in energy includes improving energy efficiency across various sectors, such as industry, transportation, and buildings. Enhanced energy

efficiency not only reduces energy consumption but also lowers production costs and reduces greenhouse gas emissions.

- f) **Infrastructure Development:** Developing energy infrastructure, including power generation, transmission, and distribution, is a critical component of the initiative. Reliable and modern energy infrastructure is essential for supporting economic growth, urbanization, and industrialization.
- g) **Rural Electrification:** Expanding electricity access to rural areas is a priority. This involves not only providing electricity connections but also ensuring a reliable and affordable energy supply, which can support rural industries and agricultural productivity.
- h) **Green Technologies and Innovation:** Energy self-reliance encourages the development and adoption of green technologies and innovations. Investments in research and development can lead to breakthroughs in energy efficiency, renewable energy technologies, and sustainable practices.
- i) **Foreign Exchange Savings:** Reducing energy imports can lead to substantial savings in foreign exchange reserves, which can be allocated to other priority areas, such as healthcare, education, and infrastructure development.
- j) **Environmental Sustainability:** Reducing dependence on fossil fuels and promoting renewable energy sources contributes to environmental sustainability and helps India meet its climate commitments. It aligns with global efforts to mitigate the impacts of climate change.
- k) **Job Creation:** The energy sector, including renewable energy, offers significant opportunities for job creation. The growth of domestic energy production and related industries can generate employment opportunities, especially in rural and semi-urban areas.

The energy self-reliance is a crucial pillar of the *Atmanirbhar Bharat* initiative. It not only strengthens India's energy security and economic resilience but also supports environmental sustainability and inclusive development. Achieving energy self-reliance requires a multi-pronged approach, including investments in renewable energy, energy efficiency, infrastructure development, and policy reforms.

6. Future Prospects and Conclusion

In conclusion, sustainability in energy, as part of the *Atmanirbhar Bharat* initiative, represents a transformative journey for India. It encompasses renewable energy growth, energy efficiency, technological innovation, and inclusive development. The future prospects are promising, with India poised to become a global leader in renewable energy adoption, energy efficiency advancements, and green innovation. This pursuit of energy self-reliance not only strengthens the nation's economic resilience but also contributes

significantly to environmental conservation and social progress. As India continues on this path, it sets an inspiring example of sustainable development for the world to follow.

Abstract

People have invested in a farm. This is the expression of the desire to become farmers. To live a simple life, grow organic produce and practice sustainable living. In some cases, the desire is to bring change and to live a life of higher purpose. The results have been mixed. I have been following many of these initiatives for a while now.

First, there is no magic formula for making money out of agricultural ventures. Anyone who has grown food will know that it is the middlemen who make the money. Marketing agricultural produce remains a challenge. Growing food is a science and art of keen observation and intuitive understanding of cause and effect. This needs to reside above core fundamental knowledge. None of this is acquired overnight. Give yourself at least five years to figure it out somewhat. Many give up failing to grow, or failing to sell what they grew.

Second, dependence on the elements is a given. These factors will override all else you do; they will also determine what you can or cannot grow. Invest time, expertise and resources in design. The lack of this knowledge is one of the primary reasons for urbanites' foray into farming to fail.

Third, remember that you are an outsider in that ecosystem. Invaluable knowledge of the elements discussed in the previous point is usually available with locals. They need to trust you and see you as one among them to share it.

Fourth, rural living will bring challenges you may not be fully prepared for. You will be surrounded by wildlife you have never encountered before. you will deal with life even while you protect your territory and food that you grow, but they actively seek. Not to mention the magical food chain at play where prey and predators co-exist. Giving up the dependable urban amenities of road, power.

Fifth, speed of implementation of your plans might not be to your taste. It takes time to get things done. While you may dream of rolling your sleeves up to work in your farm, the reality of slogging in the sun and rain and acquiring a myriad list of skills may not always be exhilarating.

Introduction

Agricultural economics is an applied field of economics concerned with the application of economic theory in optimizing the production and distribution of food and fiber products. Agricultural economics began as a branch of economics that specifically dealt with land usage. It focused on maximizing the crop yield while maintaining a good soil ecosystem. Agricultural economics today includes a variety of applied areas, having considerable overlap with conventional economics. Agricultural economists have made substantial contributions to research in economics, econometrics, development economics, and environmental economics. Agricultural economics influences food policy, agricultural policy, and environmental policy.

Origin

Economics has been defined as the study of resource allocation under scarcity. Agricultural economics, or the application of economic methods to optimize the decisions made by agricultural producers. Another contributor, 1979 Nobel Economics Prize winner Theodore Schultz, was among the first to examine development economics as a problem related directly to agriculture. Schultz was also instrumental in establishing econometrics as a tool for use in analysing agricultural economics empirically; he noted in his landmark 1956 article that agricultural supply analysis is rooted in "shifting sand", implying that it was and is simply not being done correctly.

History of Agricultural Economics

Agricultural economics arose in the late 19th century, combined the theory of the firm with marketing and organization theory, and developed throughout the 20th century largely as an empirical branch of general economics. The discipline was closely linked to empirical applications of mathematical statistics and made early and significant contributions to econometric methods. In the 1960s and afterwards, as agricultural sectors in the OECD countries contracted, agricultural economists were drawn to the development problems of poor countries, to the trade and macroeconomic policy implications of agriculture in rich countries, and to a variety of production, consumption, and environmental and resource problems.

Agribusiness

Agribusiness is a vertically integrated industrial complex engaged in the production and processing of food. The production and marketing channels of the agribusiness industry extend from farm suppliers to farmers and ranchers, food processors and food retailers, and end with domestic consumers or international markets.

The farm is the intermediate link in the Magic Valley agribusiness complex, with backward linkages to farm suppliers and service providers and forward linkages to food processors. In turn, food retailers and restaurants are linked to processors, but they are excluded from the measure of agribusiness's contribution to the Magic Valley economy.

Gross and Base: Two Ways to Measure Economic Contribution

The contribution of agribusiness, or any other sector, to the Magic Valley economy can be measured two ways: the gross measure, which simply counts the economic activity (sales or output, number of jobs and value added) of an industry; and the base measure, which credits to an exporting industry the amount of sales, number of jobs, or value added, of its backward linkages to area businesses. Industries whose gross measures exceed the base measures are non-base, or supporting, industries. Conversely, industries whose base measures exceed the gross measures create the export base of the economy. Both the gross and base measures of economic activity tally every dollar of sales, every job, and every

dollar of value added in the Magic Valley economy. Their measures of total Magic Valley economic activity are equal, but they differ in how they slice the Magic Valley economic pie. Measuring the gross economic activity for a region is a straightforward accounting task: tallying the number of people employed, the total sales, or the total valued added of each industry.

In the field of environmental economics, agricultural economists have contributed in three main areas: designing incentives to control environmental externalities (such as water pollution due to agricultural production), estimating the value of non-market benefits from natural resources and environmental amenities (such as an appealing rural landscape), and the complex interrelationship between economic activities and environmental consequences. With regard to natural resources, agricultural economists have developed quantitative tools for improving land management, preventing erosion, managing pests, protecting biodiversity, and preventing livestock diseases.

Food and Consumer Economics

While at one time, the field of agricultural economics was focused primarily on farm-level issues, in recent years agricultural economists have studied diverse topics related to the economics of food consumption. In addition to economists' long-standing emphasis on the effects of prices and incomes, researchers in this field have studied how information and quality attributes influence consumer behavior. Agricultural economists have contributed to understanding how households make choices between purchasing food or preparing it at home, how food prices are determined, definitions of poverty thresholds, how consumers respond to price and income changes in a consistent way, and survey and experimental tools for understanding consumer preferences.

Production Economics and Farm Management

Agricultural economics research has addressed diminishing returns in agricultural production, as well as farmers' costs and supply responses. Much research has applied economic theory to farm-level decisions. Studies of risk and decision-making under uncertainty have real-world applications to crop insurance policies and to understanding how farmers in developing countries make choices about technology adoption. These topics are important for understanding prospects for producing sufficient food for a growing world population, subject to new resource and environmental challenges such as water scarcity and global climate change.[19]

Development Economics

Development economics is broadly concerned with the improvement of living conditions in low-income countries, and the improvement of economic performance in

low-income settings. Because agriculture is a large part of most developing economies, both in terms of employment and share of GDP, agricultural economists have been at the forefront of empirical research on development economics, contributing to our understanding of agriculture's role in economic development, economic growth and structural transformation. Many agricultural economists are interested in the food systems of developing economies, the linkages between agriculture and nutrition, and the ways in which agriculture interact with other domains, such as the natural environment.

Professional Associations

The International Association of Agricultural Economists (IAAE) is a worldwide professional association, which holds its major conference every three years. The association publishes the journal *Agricultural Economics*. There also is a European Association of Agricultural Economists (EAAE), an African Association of Agricultural Economists (AAAE) and an Australian Agricultural and Resource Economics Society. Substantial work in agricultural economics internationally is conducted by the International Food Policy Research Institute.

Six Core Elements of an Agricultural Transformation Plan

Although rural families often make their living from many different types of work, improvements in farming have proved to be the path toward widespread, poverty-reducing growth in the rural economy. Successful agricultural transformations have focused on the farming household, providing opportunities for farmers to earn a better income. For some, that will mean raising farm productivity or shifting the mix of production to include higher-value crops and livestock. For others, the right choice will be to do less farming and take advantage of employment options off the farm. As farmers have more money in their pockets, they spend more in the local economy, creating jobs, opportunity, and more demand for agricultural goods. The question is how to accelerate, sustain, and scale these growth cycles. For that, a well-crafted agricultural plan is required as part of a country's overall economic development approach. There are six elements that distinguish a superior agricultural plan.

Prioritized and Differentiated Strategies

Developing an agricultural transformation plan demands prioritization—a plan will not succeed if it tries to cover everything. Instead, it should focus on the changes that are most likely to kick-start rural economic growth. Successful plans identify goals in a limited number of crop and livestock value chains, cross-cutting agriculture sector enablers (such as lower transportation costs or access to irrigation), and specific geographies. Ethiopia and Morocco are experiencing transformations that show clear focus in terms of crops,

transformation enablers, and geographies. Morocco's Plan Vert started with seven value chains, expanded to nine, and focused on six geographic areas. Ethiopia's agricultural transformation plan initially prioritized three value chains and five geographic areas. Countries often prioritize a combination of both food security crops as well as export or higher-value commodities. Rwanda's Crop Intensification Program, launched in 2007, for instance, balanced land use between intercropping of diverse crops and monocropping of a set of six priority crops. The country's 2013 agricultural transformation plan included specified priority agricultural value chains in both food and export commodities (including apiculture, dairy, fisheries, and meat).¹ Our experience suggests that many countries' agricultural transformation plans are overly ambitious, cover too many value chains, and fail to focus critical resources. Eight of the 13 national agricultural plans that we analyzed in Africa didn't set clear priorities.

A second related success factor is differentiation. Successful agricultural transformation plans differentially target agri-food systems and geographic areas with tailored strategies. For example, more productive land that is already well connected to markets, such as irrigated land in Morocco, can support large- or small-scale farms; agribusiness is easier to scale there. In more remote areas, though, with bad roads, poor-quality land, and less well-connected markets, different strategies are needed. These might involve greater focus on staple crop productivity and social safety nets. Most plans don't make these distinctions.

A third related success factor lies in weighing the trade-offs among multiple objectives. Governments work toward a number of different goals, including growth in agro-processing, reduced unemployment, lower poverty incidence, food self-sufficiency, economic growth, increased exports, or lower rates of malnutrition. If these trade-offs are explicitly considered and communicated when developing the agricultural transformation plan, it is possible to tailor the choice of value chains, cross-cutting enablers, and geographies to differentially achieve the government's chosen goals. For example, one strategy might focus on raising the productivity of smallholder farmers' food crops in a particular region where rural poverty and stunting (from malnutrition) rates are high, while a concurrent strategy focuses on what is needed to accelerate growth in the coffee sector to boost export revenue and job creation. When the trade-offs among multiple objectives are not explicitly integrated into the agricultural transformation plan, progress is characterized by underdelivery across too many, sometimes competing, objectives.

Market-Driven Opportunities for Farmers

Agricultural transformations often focus too much on volume rather than value and on productivity of row crops rather than opportunities for high-value crops, downstream processing, and livestock. Farmers everywhere are businesspeople. Farming households in developing countries balance a portfolio of crops, livestock, and nonfarm work. Because

they feed their families with some of the farm output as well as sell into markets, they make decisions based on their potential profit, risk, and cash flow across family food consumption as well as sales. Too often, agricultural plans recommend particular commodities without paying attention to this basic calculus of farmer household economics. Successful agricultural transformation plans give farmers the opportunity to raise their household incomes.

The appropriate choice of change agent might vary depending on what part of the transformation plan is involved and the characteristics of the country's agri-food systems. The key is to ensure the use of appropriate metrics and incentives, sufficient training, and performance management of the change agents. Selecting change agents is critical in every agricultural transformation, yet we rarely see this step addressed systematically.

Finding the Right Starting Points for Scale

Change in agricultural systems requires multiple parallel advancements. For example, improvements in agricultural extension and seed systems might enable farmers to switch to a more productive hybrid seed, but lack of access to fertilizer (upon which the hybrid depends) could prevent productivity increases and leave the farmer unwilling to buy hybrid seed next time. As in any complex economic system, when so many elements are interrelated, any one of them can become a constraint and stall progress.

Pragmatic approach with an investor mind-set

Approaching transformations with an investor mind-set is critical to the success of the process. In kick-starting agricultural transformations, coordination among government, donors, and civil society is critical, but it is equally important from the start to plan for private-sector engagement. Without this, the transformation may proceed more slowly, stall, or not reach scale.

Progress on Enabling Policies

Agricultural transformation is more than changes in farming practices. It is about catalyzing transformation of a country's rural economy. As such, more than agricultural trade and subsidy policies are in play. For example, laws and regulations that influence banking, labor, infrastructure, land ownership and access, access to water, telecommunications, taxes, and insurance are also critical considerations.

Finally, effective policy making for agricultural transformation needs to become more evidence-based over time. Policy makers should invest in making use of existing data and analytics to comparatively assess the costs and likely outcomes of different potential transformation programs. Policy makers also need to use data and analytics to set reasonable targets and redirect programs where outcomes are not meeting targets. Evidence-based policy making builds better plans and integrates accountability into the systems responsible for implementing the policies.

Managing the Transformation

An agricultural transformation is not just a planning exercise. It takes management over time. Our experience suggests that creating a project management office (PMO) can greatly increase the chances of carrying out a successful large-scale change program. A PMO can concentrate talent, monitor implementation, act as a source of truth, and, in general, help get things done. The office can apply accepted project management technologies to break the transformation into discrete initiatives, each with specific goals, timing, and responsibility. A PMO is also charged with engaging relevant stakeholders when problems arise.

There has been strong progress on country and state-level agricultural development plans throughout the world, but we believe there are still large opportunities for improvement, as described in the first part of this article. The how-to elements of a transformation described in the second part offer an even greater opportunity to accelerate agricultural transformations. Our experience suggests that they are the biggest controllable factors leading to successful conclusions. They are high-return-on-investment actions that can make the “what to dos” – the larger investments in areas such as processing facilities, roads, and fertilizer – have a much likelier chance of success.

Conclusion

Agricultural transformation is essential to the future well-being of developing nations and therefore also to a world with more equitable economic development. We hope that this article contributes to the thinking about agricultural transformation and encourages governments and other stakeholders to reflect on the steps they should take next.

Abstract

It explores the pivotal role of Micro, Small & Medium Enterprises (MSMEs) in catalyzing sustainable development, with a focus on the burgeoning field of battery technology. The narrative unfolds against the backdrop of India's quest for self-reliance, emphasizing the potential of MSMEs as agents of change. Through innovation, collaboration, and environmental consciousness, these enterprises emerge as key contributors to economic growth, job creation, and the pursuit of sustainable energy solutions. The abstract delves into the intricate interplay between MSMEs, research institutions, and governmental support, envisioning a future where locally-driven, eco-friendly battery technologies redefine energy landscapes. The holistic approach not only envisions profitability for businesses but also underscores the intrinsic link between economic prosperity and environmental stewardship. This abstract serves as a glimpse into a narrative that transcends business and embraces a culture of sustainability, envisioning a self-reliant India at the forefront of green innovation.

Introduction

In the epoch of globalization, where economic interdependence often takes center stage, the quest for self-reliance becomes a nuanced endeavor, especially for a nation as vast and diverse as India. Amidst this complexity, Micro, Small & Medium Enterprises (MSMEs) emerge as the unsung heroes, threading the delicate balance between economic autonomy and environmental sustainability. This paper embarks on a multifaceted exploration, weaving together the narratives of sustainable development and the dynamic role played by MSMEs, spotlighting their transformative potential in the domain of battery technology¹.

India's pursuit of self-reliance is not merely a national agenda; it is a paradigm shift in redefining economic strategies and fostering resilience. Within this transformative landscape, MSMEs take center stage, not merely as contributors to GDP but as torchbearers of innovation, agility, and localized sustainability. As we navigate through this discourse, the focus sharpens on the realm of battery technology – a linchpin in the transition towards cleaner, greener energy sources. This narrative unfolds against a backdrop where collaboration becomes a cornerstone, where the innovative spirit of MSMEs converges with the research acumen of institutions, propelled by the supportive winds of governmental initiatives².

The synergy of these forces paints a vision of a self-reliant India not just economically robust but also environmentally conscientious. Beyond the profit margins and market shares, the exploration here delves into the intrinsic connection between business practices and ecological resilience. MSMEs, often characterized by their adaptability and creativity, stand as dynamic contributors to a future where battery technology isn't just a commodity but a gateway to sustainable progress. Join us in traversing through the layers of this narrative, where the aspirations of a self-reliant India find resonance in the sustainable innovations orchestrated by MSMEs. It's a journey through interconnected realms—economic, environmental, and societal—where the heartbeat of progress is not just measured in financial gains but in the sustainable cadence of a nation charting its course towards a resilient future³.

Strategic Framework: Advancing Sustainable Development Through MSMEs in Battery Technology⁴⁻⁷

Collaborative Ecosystem Building:

Objective: Foster collaboration between MSMEs, research institutions, and governmental bodies to create a robust ecosystem.

Actions:

- ❖ Establish innovation hubs that bring together MSMEs and researchers.
- ❖ Facilitate knowledge-sharing platforms and collaborative projects.
- ❖ Encourage public-private partnerships for shared infrastructure.

Research and Development Incentives:

Objective: Stimulate innovation in battery technology through targeted R&D incentives.

Actions:

- ❖ Introduce financial incentives for MSMEs engaged in sustainable technology development.
- ❖ Create grants and subsidies for collaborative research initiatives.
- ❖ Establish technology parks specifically focused on battery R&D.

Skill Development and Capacity Building:

Objective: Enhance the capabilities of MSMEs in the field of battery technology.

Actions:

- ❖ Implement skill development programs tailored to the needs of the battery industry.

- ❖ Establish training centers and workshops for technology adoption.
- ❖ Encourage academic-industry partnerships to bridge skill gaps.

Market Access and Funding Support:

Objective: Facilitate market access and financial support for MSMEs in the battery sector.

Actions:

- ❖ Create a dedicated funding mechanism for sustainable technology ventures.
- ❖ Develop market linkage programs connecting MSMEs with potential buyers.
- ❖ Simplify loan processes and provide low-interest loans for sustainable projects.

Regulatory Framework for Sustainability:

Objective: Integrate sustainability criteria into regulatory frameworks.

Actions:

- ❖ Develop standards for eco-friendly battery technologies.
- ❖ Incentivize compliance with sustainable practices through tax benefits.
- ❖ Establish a certification system for environmentally responsible products.

Public Awareness and Consumer Education:

Objective: Build awareness about the importance of sustainable battery technologies.

Actions:

- ❖ Launch public awareness campaigns on the environmental impact of batteries.
- ❖ Provide consumer education on choosing eco-friendly products.
- ❖ Recognize and promote MSMEs that prioritize sustainability in their products.

International Collaboration and Export Promotion:

Objective: Position Indian MSMEs as global leaders in sustainable battery technology.

Actions:

- ❖ Encourage collaboration with international research institutions.
- ❖ Facilitate participation in global technology exhibitions and conferences.
- ❖ Develop strategies for promoting sustainable battery exports.
- ❖ This strategic framework aims to create a conducive environment for MSMEs to thrive in the battery technology sector while fostering sustainability and contributing to India's self-reliance goals.

Technology Transfer and Licensing:

Objective: Accelerate technology adoption by facilitating the transfer of sustainable battery technologies.

Actions:

- ❖ Create platforms for MSMEs to access patented technologies through licensing agreements.
- ❖ Establish technology transfer offices to streamline the process.
- ❖ Encourage established players to mentor and support smaller enterprises in technology adoption.

Circular Economy Integration:

Objective: Embed circular economy principles in the battery life cycle, from manufacturing to disposal.

Actions:

- ❖ Incentivize MSMEs to design batteries with recyclability and reusability in mind.
- ❖ Establish collection and recycling facilities for end-of-life batteries.
- ❖ Introduce regulations mandating environmentally responsible disposal practices.

Government Procurement Support:

Objective: Drive demand for sustainable batteries through government procurement policies.

Actions:

- ❖ Prioritize the procurement of eco-friendly batteries in government projects.
- ❖ Include sustainability criteria in tendering processes.
- ❖ Create a certification system for MSMEs supplying to government projects.

Networking Platforms for MSMEs:

Objective: Enhance collaboration and knowledge-sharing among MSMEs in the battery sector.

Actions:

- ❖ Establish a dedicated online platform for MSMEs to connect, share experiences, and form partnerships.
- ❖ Organize industry-specific conferences and networking events.
- ❖ Facilitate mentorship programs where successful MSMEs guide newcomers.

Risk Mitigation Mechanisms:

Objective: Provide financial instruments to mitigate risks associated with sustainable technology adoption.

Actions:

- ❖ Create an insurance scheme to cover risks related to innovation and market uncertainties.
- ❖ Establish a fund for MSMEs to access in case of unforeseen challenges.
- ❖ Develop a risk-sharing mechanism in collaboration with financial institutions.

Inclusive Innovation Grants:

Objective: Promote inclusivity by supporting innovation from diverse groups within MSMEs.

Actions:

- ❖ Allocate grants specifically for women-led and socially inclusive MSMEs.
- ❖ Encourage projects that address the energy needs of underserved communities.
- ❖ Establish a mentorship program to guide innovative projects from underrepresented groups.

Benchmarking and Impact Assessment:

Objective: Continuously evaluate the impact of MSME initiatives in sustainable battery technology.

Actions:

- ❖ Develop key performance indicators (KPIs) for sustainability in battery technology.
- ❖ Conduct regular impact assessments to measure economic, environmental, and social outcomes.
- ❖ Recognize and celebrate MSMEs achieving notable milestones in sustainability.

Regulatory Sandboxing for Innovation:

Objective: Encourage experimentation and innovation by providing a regulatory sandbox.

Actions:

- ❖ Create a controlled environment where MSMEs can test new technologies without full regulatory compliance.

- ❖ Establish a streamlined process for transitioning successful innovations into mainstream regulatory frameworks.
- ❖ Encourage collaboration between regulatory bodies, MSMEs, and environmental experts to ensure responsible innovation.
- ❖ This extended strategic framework aims to address various facets of sustainable development through MSMEs in battery technology, covering technology adoption, circular economy practices, government support, networking, risk mitigation, inclusivity, impact assessment, and regulatory innovation.

Conclusions

As we draw the threads of this strategic framework together, a compelling narrative emerges—one that envisions a future where Micro, Small & Medium Enterprises (MSMEs) play a transformative role in India's journey towards self-reliance and sustainability. The intricate dance between economic progress and environmental stewardship finds its harmonious rhythm in the innovative endeavors of these enterprises within the battery technology sector⁸.

The collaborative ecosystem envisioned—forged through partnerships between MSMEs, research institutions, and governmental bodies—creates a fertile ground for innovation. Incentives for research and development, skill enhancement, and market access act as catalysts, propelling MSMEs towards the forefront of sustainable progress.

By embracing circular economy principles, fostering technology transfer, and integrating inclusivity into innovation grants, the strategy outlined here is designed not just for economic growth but for societal well-being. Government procurement policies and regulatory sandboxes provide the necessary scaffolding for these enterprises to experiment, evolve, and lead in the green revolution⁹⁻¹⁰.

As we anticipate the outcomes of this strategic vision, it becomes clear that the impact extends beyond business bottom lines. It's about nurturing a culture where sustainability isn't a buzzword but a way of life. MSMEs, often celebrated for their agility and creativity, emerge as the engines of change, steering the nation towards a future where sustainable battery technologies redefine not only energy landscapes but also societal norms.

This isn't just a strategy; it's a roadmap towards a self-reliant India that thrives on innovation, resilience, and a profound respect for the environment. It's a call to action, inviting stakeholders from all sectors to join hands in shaping a future where progress isn't measured merely in economic indices but in the sustainable cadence of a nation marching towards a resilient and eco-conscious tomorrow.

ENERGY EFFICIENCY AND RENEWABLE ENERGY ADOPTION FOR SELF RELIANT INDIA

K. Vimaladevi*, V. Prabhu, K. Poonkodi, M. Anusuya, M.Velayutham Pillai

Post Graduate Department of Chemistry

Nallamuthu Gounder Mahalingam College, Pollachi, Tamil Nadu, India.

k.vimala83@gmail.com

Abstract

This study highlights the critical importance of energy efficiency and renewable energy adoption in India's journey towards self-reliance. With a growing population and increasing energy demands, India faces the challenge of ensuring energy security while minimizing its carbon footprint. This paper puts a focus on the diverse benefits of investing in energy-efficient technologies and scaling up renewable energy sources to achieve energy independence. By taking up these sustainable solutions, India can enhance its energy adaptability, reduce greenhouse gas emissions, create new job opportunities and secure a sustainable future for its citizens. This research explores the policy, technological and economic avenues that can accelerate the transition to a self-reliant and environmentally responsible energy landscape in India.

Keywords: *renewable energy, self-reliance, greenhouse gas, sustainable future*

Introduction

India, with its growing population and rapid urbanization, faces formidable challenges in meeting its growing energy demands. Historically reliant on fossil fuels, this dependence not only strains the nation's energy security but also contributes significantly to environmental degradation and global climate change¹. Recognizing the urgency of the situation, India has embarked on a transformative journey, seeking to harmonize economic development with environmental stewardship through a multifaceted approach. Simultaneously, the integration of renewable energy sources takes center stage. India's vast and diverse geography offers a wealth of renewable energy resources, from the abundant sunlight in the arid plains to the brisk winds along coastal regions, and the unexploited potential of biomass and hydroelectricity. Harnessing these resources through innovative technologies and strategic investments has the potential to redefine India's energy landscape².

Energy Resources and Consumers

Energy resources and consumers in India are critical components of the country's energy landscape, which is undergoing significant changes due to growing demand, environmental concerns, and efforts to enhance energy security. Balancing the growing energy needs of India's diverse consumer base with the imperative of sustainability and energy security poses significant challenges. India's policymakers, businesses, and civil society are actively working to address these challenges while exploring opportunities for

clean and efficient energy solutions. This dynamic relationship between energy resources and consumers in India is central to the nation's aspirations for sustainable and self-reliant energy development, making it a topic of crucial importance in the global energy landscape³.

The Importance of Energy Efficiency

Energy efficiency is a fundamental aspect of sustainable development and a key driver in achieving energy self-reliance for India. It refers to the practice of using less energy to accomplish the same tasks or achieve the same level of output. The importance of energy efficiency cannot be overstated, as it offers a wide range of economic, environmental and societal benefits. Energy efficiency measures lead to reduced energy consumption, resulting in lower energy bills for households, businesses, and industries. These cost savings can be substantial over time and significantly improve economic well-being⁴.

Renewable Energy in India

India is one of the world's largest greenhouse gas emitters. Renewable energy sources, such as solar and wind power, produce little to no greenhouse gas emissions during electricity generation, making them essential for mitigating climate change⁵. The use of renewable energy reduces reliance on fossil fuels, which are a significant source of air pollution and health issues in India. By transitioning to cleaner sources, India can improve air quality and public health. Renewable energy adoption plays a crucial role in achieving self-reliance in energy for a nation. It reduces dependence on imported fossil fuels, enhances energy security, and promotes sustainable development.

Renewable energy adoption

Renewable energy adoption is a critical component of achieving energy self-reliance in India. The country's energy demand is growing rapidly, and reducing dependence on fossil fuels through the use of renewable energy sources can help secure a sustainable and self-reliant energy future. India's journey toward energy self-reliance through renewable energy adoption requires a multi-faceted approach that includes policy support, incentives, infrastructure development, and public awareness. By prioritizing these strategies, India can reduce its dependence on fossil fuels, mitigate environmental impacts, and ensure a more sustainable and self-reliant energy future⁶.

Empowering India's Self-Reliance through MSMEs

Micro, Small, and Medium Enterprises (MSMEs) are the backbone of India's economy. They play a crucial role in fostering economic growth, generating employment opportunities, and promoting entrepreneurship. Empowering India's self-reliance through

MSMEs is not just an economic imperative. it's a strategic approach to achieving sustainability and resilience in the face of global challenges⁷. Empowering India's self-reliance through MSMEs is a multifaceted strategy that involves job creation, innovation, technology adoption, regulatory reforms, and sustainability practices. By nurturing and supporting the growth of MSMEs, India can enhance its economic independence and resilience, contributing to the nation's overall development and self-reliance goals.

Conclusion

In conclusion, energy efficiency and renewable energy adoption are not only essential for India's energy security but also for its economic growth, environmental preservation, and social development. As India continues to make strides in these areas, it is positioning itself as a global leader in sustainable energy practices, contributing to a brighter and more self-reliant future. However, achieving these goals will require sustained efforts, collaboration among stakeholders, and a commitment to clean and sustainable energy solutions. To achieve these benefits and strengthen self-reliance, India must continue to invest in research and development, implement supportive policies and incentives, enhance public awareness, and foster collaboration among various stakeholders. By doing so, India can secure a sustainable, resilient, and self-reliant energy future, reducing its carbon footprint and ensuring access to reliable energy for all its citizens.

ROLE OF MICRO, SMALL AND MEDIUM ENTERPRISES (MSME'S) IN ACHIEVEING SUSTAINABLE DEVELOPMENT GOALS

Dr. N. Vivek

Assistant Professor, The American College.

Kamal.T

Student, The American College.

Abstract

Micro, Small, and Medium Enterprises (MSMEs) play a pivotal role in driving economic development worldwide, and India is no exception to this trend. The researcher presents a set of recommendations aimed at enhancing the sustainability of MSMEs. These measures are designed to foster the resilience and longevity of these enterprises, which, in turn, would bolster their capacity to contribute meaningfully to the achievement of the SDGs. In essence, MSMEs emerge as not just economic actors but as essential agents of change in the global pursuit of a sustainable and equitable future as envisioned by the SDGs.2. MSMEs have a significant part to play in achieving several SDGs, with a particular focus on goals like Poverty Alleviation (Goal 1), Decent Work and Economic Growth (Goal 8), and Industry Innovation and Infrastructure (Goal 9). However, their impact extends beyond these goals, as they also directly or indirectly contribute to other SDGs. In this research paper, we delve into the multifaceted role of MSMEs in advancing the SDGs. We categorize their contributions based on various activity attributes, demonstrating their involvement in the attainment of different goals.

Keywords: *Poverty Alleviation, Sustainable and Equitable Future, Decent Work and Economic Growth, Multifaceted Role, Industry Innovation and Infrastructure, Global Pursuit.*

Introduction

The term "Sustainable Development" was initially coined by Barbara Ward in the "Cocoyoc Declaration" of 1974. It has since been extensively discussed in various international gatherings, summits, conferences, and reports, including notable mentions in the IUCN Reports of 1980 and 1990 and the World Commission on Environment and Development (WECD). The WECD's seminal report, titled "Our Common Future," marked a significant milestone by emphasizing sustainability as the only viable path to mitigate threats to humanity's survival.

This concept gained further traction during events like the Earth Summit in 1992 and The Norway Round Table in 1995. The Earth Summit of 1992 yielded two critical documents for sustainable development, namely "Agenda 21" and the "Rio Declaration on Environment and Development." The Norway Round Table also established key principles to advance the cause of sustainable development.

While major summits and agreements have raised concerns and laid foundations for sustainable development, they have not yet offered a comprehensive global approach. The member states of the United Nations took a significant step in 2000 by adopting the Millennium Development Goals (MDGs) with a primary objective of global poverty reduction. These MDGs have since evolved into the Sustainable Development Goals (SDGs) outlined in the 2030 Agenda for Sustainable Development, comprising 17 SDGs and 169 specific targets to be achieved by 2030.

These goals and targets collectively aim to promote peace and prosperity worldwide. Both developed and developing nations are tasked with achieving these objectives through global cooperation and partnerships. The central focus of this ambitious agenda is to eradicate poverty by 2030, enhance healthcare and education, reduce inequalities, stimulate economic growth, address climate change, and safeguard vital natural resources such as oceans and forests.

Review of Literature

Kamal-Chaoui, 2017) asserted that SDGs could only be achieved if the countries build strong SMEs. Discussing the importance of SME in innovation, employment generation, gender equality, inclusive development etc. the researcher emphasized that policies are needed to create a good business environment to make SMEs more productive. He raised concerns over financing and participation of SMEs in global value chains, banking sector reforms and new approaches to financing.

Oncioiu, Raluka, Bilcan, & Petrescu, 2017) studied the relationship between innovation, financial performance and economic growth. They found that there exists a positive relationship between innovation, financial performance and economic growth. They also pointed out that Indian SMEs are focusing on the environmental dimension of sustainable innovation and are implementing cleaner production methods to improve their economic and environmental performance. They also opined that innovation is the key to entrepreneurial success in India.

(Freimann, Ham, & Mijoc, 2014) studied thoroughly about the measurement of objective well-being (economic development) and Subjective Well-being (perception of residents about the quality of life). They argued that monitoring and quantification of objective well-being are necessary for measuring sustainable development. They talked about various indicators for measuring sustainable developments and raised concerns over systematic monitoring and measurement. They concluded that benchmarks and indicators measure the efforts and results related to sustainable development to some extent.

(Liu, 2017) discussed the importance of MSMEs in achieving SDGs while outlining the opportunities and challenges in the path of MSMEs growth. The author also emphasized

the role of MSMEs in employment generation but argues on the other hand that employment opportunities created by MSMEs may not always be as per job requirements.

Objectives of the Study

1. To analyse major problems that MSME's faces in recent times.
2. To investigating the contribution of Micro, Small, and medium enterprises in advancing the United Nations' sustainable development goals.
3. To arrive at conclusion based on the study.

Methodology

RESEARCH TYPE : Descriptive Research.

DATA COLLECTION : Secondary data has been used for the study.

Major problems that MSME's face and how we could address them to ensure their sustainability

Access to Finance: MSMEs often struggle to access credit facilities at various stages, hindering their growth. The government should ensure the availability of financial resources through a range of schemes and policy interventions.

Lack of Supportive Government Policies: The absence of conducive government policies and regulatory frameworks dampens the entrepreneurial spirit, especially among talented young entrepreneurs. To foster a thriving startup ecosystem and encourage new business ideas, the government should establish a coherent and supportive environment.

Insufficient Skilled Manpower: Many micro and small enterprises lack skilled personnel, negatively impacting their performance. The government can play a crucial role by offering vocational training programs aimed at enhancing the skills and capacity of small entrepreneurs and their employees.

Basic Infrastructure: A significant proportion of Indian MSMEs face challenges related to essential infrastructure, including machinery, buildings, and technological support. Addressing these infrastructural deficiencies is essential to enable MSMEs to operate effectively.

Promoting Entrepreneurship: Leveraging the potential of rural youths and women entrepreneurs can be a powerful tool in combating poverty, gender inequality, and income disparity. Unfortunately, these segments often face discouragement from their communities and limited opportunities for entrepreneurship. Changing this mindset and actively encouraging entrepreneurship within these demographics can yield significant results.

Bringing Informal Units into the Formal Sector: Efforts should be directed towards integrating informal MSMEs into the formal ecosystem. This approach would enable better

monitoring of their progress, performance, contributions, and requirements. Initiatives like MUDRA Bank and Priority Sector Lending (PSL) norms are crucial policy measures in achieving this goal.

Findings

In this research paper, we have identified that Micro, Small, and Medium Enterprises (MSMEs) hold significant potential for advancing all aspects of sustainable development. Whether through direct or indirect means, MSMEs exert a substantial influence on the progress toward sustainable development goals. Furthermore, our findings indicate that micro-enterprises encounter various challenges that hinder their ability to operate effectively. To maximize the participation and contribution of MSMEs in the pursuit of sustainable development goals, it is imperative that this sector receives strong promotion and support.

Suggestions

To harness the potential of Micro, Small, and Medium Enterprises (MSMEs) in advancing Sustainable Development Goals (SDGs), a multifaceted approach is essential. Firstly, it's crucial to invest in capacity-building programs aimed at equipping MSMEs with the knowledge and skills required for sustainable practices and responsible business operations. Simultaneously, facilitating easier access to affordable finance can empower these enterprises to invest in sustainable technologies and practices. Encouraging the adoption of environmentally friendly technologies, responsible sourcing, and sustainable supply chain practices should be a priority. Advocacy for supportive government policies and regulations that create an enabling environment for MSMEs, aligned with SDGs, is paramount. Collaboration, both among MSMEs and with larger corporations, government agencies, and NGOs, can pool resources and expertise for impactful sustainability initiatives. Furthermore, promoting awareness about the significance of SDGs, fostering innovation, and establishing monitoring and evaluation systems to track progress are essential steps. Ultimately, incentives and recognition for MSMEs actively contributing to SDGs through their operations can serve as powerful motivators. Through these concerted efforts, MSMEs can become catalysts for sustainable development, simultaneously enhancing their competitiveness and resilience in the global marketplace.

Conclusion

The SDGs are ambitious, striving for a better future for both the planet and its people. Achieving them in just fifteen years is a formidable task. Many nations, including India, are committed to these goals, which encompass various dimensions of sustainable development. Among key contributors to SDGs, the MSME sector stands out for its

potential impact. Its operational diversity and flexibility make it crucial in areas like job creation, poverty reduction, regional balance, and equality promotion, all pivotal to SDG progress. To harness this potential, addressing MSME challenges through government interventions and nurturing entrepreneurship is vital in today's competitive landscape.

EMPOWERING INDIA'S FUTURE: MSMEs AS CATALYSTS FOR SUSTAINABLE DEVELOPMENT AND SELF-RELIANCE

Visalakshi R

Assistant Professor, BBA Department, Email:visamuthu2023@gmail.com

Aravind.C C

III BBA Department, Email:aravind33371@gmail.com

Abstract:

In the pursuit of a self-reliant India, the role of Micro, Small, and Medium Enterprises (MSMEs) is pivotal. This paper explores the multifaceted contributions of MSMEs to India's self-reliance, focusing on three key subthemes: the pivotal Role of MSMEs in achieving self-reliance, the transformative potential of Digital Industry 4.0 in empowering these enterprises, and the integration of Sustainable Business Principles in the dynamic landscape of startups. Firstly, the paper delves into how MSMEs serve as the backbone of India's economic landscape, contributing significantly to job creation, innovation, and localized development. Their resilience and adaptability have been particularly evident in times of crisis, making them essential for building a self-reliant nation. Secondly, the advent of Digital Industry 4.0 presents an unprecedented opportunity for MSMEs to leapfrog into the future. We explore how technology-driven advancements can enhance productivity, expand market reach, and facilitate efficient resource utilization for these enterprises. Lastly, the paper emphasizes the importance of integrating sustainable business principles into the DNA of startups. As India aspires towards self-reliance, ensuring that the growth of new businesses is anchored in environmental and social responsibility is crucial for long-term success.

Keywords: MSMEs, Self-reliant India, Sustainable development, Digital Industry 4.0, Sustainable business principles, Startups, Economic empowerment.

Introduction

In the pursuit of self-reliance and sustainable development in India, this paper examines the crucial role of Micro, Small, and Medium Enterprises (MSMEs). It explores their contribution to job creation, innovation, and localized development. Additionally, it delves into the transformative impact of Digital Industry 4.0 on MSMEs and emphasizes the importance of integrating sustainable principles into startups. This study aims to illuminate how MSMEs can serve as a pathway to India's self-reliant future, leveraging their adaptability, technology adoption, and commitment to sustainability.

The Role of MSMEs in Self-Reliant India:

Introduction

- ❖ MSMEs, or Micro, Small, and Medium Enterprises, are critical to India's economic landscape, comprising a substantial portion of businesses.

- ❖ They are instrumental in realizing the country's vision of self-reliance by contributing to economic growth, job creation, and innovation.

Historical Significance

- ❖ Historically, MSMEs have been prevalent in India, especially in sectors like textiles, handicrafts, and small-scale manufacturing.
- ❖ They have played a pivotal role in economic activities, particularly in rural and semi-urban areas.

Contribution to Employment

- ❖ MSMEs are major job creators, employing millions across India, including skilled and unskilled labor.
- ❖ They provide livelihoods to a diverse workforce, including women and marginalized communities.

Innovation and Localized Development

- ❖ MSMEs foster innovation and localized development by responding to specific regional needs and market demands.
- ❖ Their agility allows them to introduce novel products and services, contributing to economic dynamism.

Government Initiatives

- ❖ The Indian government has introduced several initiatives to support and promote MSMEs, such as "Make in India," "Startup India," and "Atmanirbhar Bharat Abhiyan."
- ❖ These initiatives aim to boost entrepreneurship, ease regulatory burdens, and provide financial support.

Challenges Faced

- ❖ Challenges include limited access to finance, high interest rates, and bureaucratic hurdles in obtaining licenses and permits.
- ❖ Infrastructure limitations, especially in rural areas, impact productivity and distribution networks.

Digital Industry 4.0: Empowering MSMEs:

Introduction to Digital Industry 4.0

- ❖ Industry 4.0 is the fourth industrial revolution characterized by the integration of digital technologies into manufacturing and business processes.
- ❖ It encompasses IoT, AI, data analytics, automation, and cyber-physical systems.

IoT and Automation

- ❖ IoT enables MSMEs to monitor and control machinery and equipment remotely, improving efficiency and reducing downtime.
- ❖ Automation minimizes human intervention, resulting in consistent quality and reduced operational costs.

AI and Data Analytics

- ❖ AI can optimize production processes, predict maintenance needs, and enhance product quality.
- ❖ Data analytics provides valuable insights for decision-making, market trends analysis, and customer behavior prediction.

Access to Global Markets

- ❖ Digital platforms and e-commerce open new avenues for MSMEs to reach global customers and participate in international trade.
- ❖ Effective digital marketing strategies can expand market presence beyond geographical boundaries.

Cost Reduction and Efficiency

- ❖ MSMEs can streamline operations, reduce waste, and optimize resource allocation through technology adoption.
- ❖ Technology investments can lead to long-term cost savings and improved competitiveness.

Sustainable Business Principles in Startups:

The Importance of Sustainability

- ❖ Sustainability in business involves considering environmental, social, and governance (ESG) factors alongside financial objectives.
- ❖ Increasingly, consumers, investors, and regulators demand ethical and sustainable practices.

Integration of Sustainable Practices

- ❖ Startups can integrate sustainability by designing eco-friendly products, minimizing waste, and adopting renewable energy sources.
- ❖ Sustainable sourcing and supply chain transparency are essential components.

Social Responsibility

- ❖ Social responsibility initiatives include community engagement, supporting local education and skills development, and ethical labor practices.
- ❖ Startups can create positive social impact while pursuing profitability.

Investor and Consumer Demand

- ❖ Sustainable startups often attract socially responsible investors and consumers who prioritize products and services aligned with their values.
- ❖ Sustainable financing options, such as green bonds, impact investment, and social impact bonds, support these ventures.

Future Outlook:

Synthesis of Key Points

- ❖ MSMEs are pivotal to self-reliance in India, supported by technology adoption and sustainable practices.
- ❖ These three elements are interconnected and contribute to holistic economic development.

Importance of Integration:

The synergy between MSMEs, technology, and sustainability holds the key to India's self-reliance, as it enables growth, resilience, and ethical practices.

Policy Recommendations

- ❖ Governments should continue supporting MSMEs with tailored policies and incentives.
- ❖ Promoting digital literacy and technology diffusion in rural areas is crucial.
- ❖ Encouraging sustainable practices through regulations and incentives can accelerate adoption.

Call to Action

- ❖ Continued research and innovation in MSMEs, technology, and sustainability are imperative.
- ❖ Empowering MSMEs, promoting technology adoption, and embracing sustainability will be instrumental in realizing India's self-reliance and sustainable development goals.

Conclusion:

In the pursuit of self-reliance and sustainable development, Micro, Small, and Medium Enterprises (MSMEs) stand as pillars of progress in the Indian economic landscape. This paper has illuminated the multifaceted contributions of MSMEs and their intertwined relationship with technology adoption and sustainable business principles. As we conclude, we draw together the key insights and implications of our exploration. Yet, MSMEs are not without their challenges. Access to finance, bureaucratic hurdles, and infrastructure limitations pose obstacles to their growth. To overcome these challenges and realize their potential fully, MSMEs are turning to digital Industry 4.0.

EMPOWERING INDIA'S MSMEs: PATHWAY TO ECONOMIC GROWTH, RESILIENCE, SOCIAL INCLUSION

Dr. M. Akilanayaki

*Assistant Professor, Department of Commerce - Business Process Services,
Nallamuthu Gounder Mahalingam College, Pollachi*

Dr. R. Kalaiselvi

*Assistant Professor, Department of Commerce - International Business,
Nallamuthu Gounder Mahalingam College, Pollachi*

Abstract

Micro, Small, and Medium Enterprises (MSMEs) play a pivotal role in India's economic landscape. They contribute significantly to employment generation, GDP growth, and foster economic inclusivity. The study begins by providing an overview of the MSME sector's current state, acknowledging its challenges and potential. It then delves into the strategies necessary for fostering growth and resilience. These strategies include streamlined regulatory frameworks, access to finance, technology adoption, skill development, and market linkages. Moreover, it highlights the need for a supportive ecosystem that encourages innovation and entrepreneurship. It emphasizes the importance of gender diversity and equitable opportunities for marginalized communities. Inclusive growth not only ensures a fair distribution of economic benefits but also enhances social harmony and stability.

Keywords: *Self-Reliant India Mission, MSME, Self-reliant and globally competitive*

Introduction

Micro, Small, and Medium Enterprises (MSMEs) stand as the backbone, serving as engines of growth and innovation. These nimble and dynamic entities collectively form the bedrock of economic activity, contributing significantly to GDP, generating employment opportunities, and fostering regional development. The unparalleled potential of India's MSME sector to drive economic growth, build resilience in the face of challenges, and promote social inclusion cannot be overstated. It delves into the myriad ways in which these enterprises have consistently emerged as pillars of economic development, even in the face of adversities. Furthermore, it underscores the imperative of empowering MSMEs, providing them with the resources, support, and opportunities necessary to unleash their full potential.

India's MSME sector is remarkably diverse, encompassing a wide range of industries from manufacturing to services. It is characterized by its adaptability and ability to cater to both domestic and international markets. As a major source of employment, particularly for marginalized sections of society, it acts as a catalyst for social inclusion and poverty alleviation. However, the sector also faces numerous challenges, ranging from access to finance to technology adoption. In an increasingly interconnected and competitive world, it

is critical for India's MSMEs to not only survive but thrive. With the right interventions, these enterprises can transform into global players, enhancing India's economic standing while improving the lives of millions of its citizens. Moreover, it will provide insights into the strategies, policies, and innovations that can empower MSMEs, bolstering their contribution to India's economic growth, resilience, and social inclusion.

Empowering India's MSMEs

Empowering India's Micro, Small, and Medium Enterprises (MSMEs) is indeed crucial for the country's economic growth, resilience, and social inclusion. MSMEs play a pivotal role in the Indian economy, contributing significantly to employment generation, industrial output, and export earnings. Here are some key points highlighting the importance of empowering India's MSMEs:

Employment Generation: MSMEs are major employers in India. They provide employment opportunities to a diverse workforce, including skilled, semi-skilled, and unskilled labor, thus contributing to reducing unemployment and poverty.

Access to Finance: Improve access to affordable credit and capital for MSMEs through initiatives like the MUDRA Yojana and credit guarantee schemes. Encourage the development of alternative funding sources, such as venture capital, angel investors, and peer-to-peer lending.

Economic Growth: MSMEs make up a significant portion of India's GDP and industrial output. Their growth and success directly impact the overall economic growth of the country. They are often considered the backbone of the Indian economy.

Innovation and Entrepreneurship: Many innovative and entrepreneurial ideas are born in the MSME sector. By supporting and empowering these businesses, India can foster a culture of innovation and entrepreneurship, leading to economic diversification and growth.

Resilience: A diverse landscape of MSMEs can make the economy more resilient. During economic downturns, smaller businesses are often better equipped to adapt quickly to changing circumstances and recover faster.

Export Potential: MSMEs contribute significantly to India's exports. When these businesses are empowered, they can tap into global markets, contributing to foreign exchange earnings and economic stability.

Social Inclusion: Empowering MSMEs can help bridge the urban-rural divide and reduce regional disparities. It provides opportunities for entrepreneurship and income generation in rural and semi-urban areas, thereby promoting social inclusion.

Financial Inclusion: Expanding access to credit and financial services for MSMEs is vital. By improving financial inclusion, these businesses can access the capital needed for growth and expansion.

Technology Adoption: MSMEs can benefit from the adoption of modern technologies and digital tools. This can enhance their efficiency, productivity, and competitiveness, thereby contributing to overall economic growth.

Skill Development: Investment in skill development programs for MSMEs can help enhance the capabilities of the workforce and the competitiveness of these enterprises.

Regulatory Simplification: Streamlining regulations and reducing bureaucratic red tape can make it easier for MSMEs to operate and grow.

Policy Support: The government should continue to implement policies that support MSMEs, including access to finance, simplified regulatory procedures, and incentives for innovation. Strengthening the business environment will encourage entrepreneurship and create more jobs.

Digital Transformation: Encouraging MSMEs to adopt digital technologies and e-commerce platforms can help them expand their reach, increase efficiency, and adapt to changing market dynamics.

Skill Development: Investing in skill development and vocational training programs can enhance the capabilities of the MSME workforce, making them more competitive and adaptable.

Infrastructure Development: Improving physical and digital infrastructure, including transportation, logistics, and broadband connectivity, can reduce costs and increase the competitiveness of MSMEs.

Access to Global Markets: Promoting exports and international trade can be a significant growth driver for MSMEs. The government should facilitate easier access to global markets and provide support for compliance with international standards.

Resilience Planning: MSMEs should develop resilience strategies that include risk management, diversification, and contingency planning to mitigate the impact of unforeseen disruptions, such as the COVID-19 pandemic.

Environmental Sustainability: Encouraging MSMEs to adopt eco-friendly practices not only helps protect the environment but also opens up opportunities for green growth and access to international markets.

Inclusivity: Fostering an inclusive environment that promotes gender equality and social diversity within MSMEs can harness the full potential of the workforce and contribute to social development.

Data and Research: Regular data collection and research on the MSME sector are essential to make informed policy decisions and track progress.

Credit Guarantee and Insurance Schemes: Strengthen credit guarantee schemes and insurance options for MSMEs to mitigate risks and encourage lending by financial institutions.

Create platforms that connect MSMEs with insurers and credit providers.

Entrepreneurship Support: Foster entrepreneurship by offering mentorship, guidance, and startup incubation programs. Encourage collaboration between larger corporations and MSMEs for knowledge transfer and business opportunities.

Quality Certification and Standards: Promote adherence to quality standards and certifications, enhancing the competitiveness of Indian MSMEs in domestic and international markets.

Government Procurement: Reserve a portion of government procurement contracts for MSMEs, providing them with a stable source of revenue and opportunities for growth.

Networking and Clusters: Support the formation of industry clusters where MSMEs can collaborate, share resources, and collectively address challenges.

Sustainability and Green Initiatives: Encourage MSMEs to adopt sustainable and eco-friendly practices to meet growing global demand for green products and services.

Empowering India's MSMEs requires a multi-faceted approach that involves government support, private sector collaboration, and a focus on innovation and technology adoption. By addressing these key areas, India can create a more conducive environment for MSMEs to thrive and contribute significantly to the country's economic development.

Conclusion

Empowering MSMEs is not just about economic growth; it's about creating a more resilient and inclusive society. As MSMEs flourish, they can drive economic development, create jobs, reduce poverty, and ultimately lead to a more prosperous and socially inclusive India. Government, industry, and civil society must work together to realize this vision, and it will require a sustained commitment to fostering an enabling environment for MSMEs to thrive.

ROLE OF GREEN CRACKERS IN ENVIRONMENTAL SUSTAINABILITY

Dr. Antony Mary Vinothini

Assistant Professor, The American College

Theva Aravinth K.K

PG Student, The American College

Abstract:

Environmental challenges in recent times have increased the trend of “going green” in businesses like no way ahead. “leafage business” is getting popular day by day. It's the new buzzword in business. Though the generality of green business is not new, it's getting increasingly vital in moment's business climate. The world is moving towards green and so are the companies. Now in this competitive world, going green has come the new success mantra in request to separate the products and services from others. Green business has come a platform to move towards invention. presently, farther associations are choosing the green path either directly or indirectly to meliorate their business in turn making a sustainable environment. It is the responsible of every human to protect the natural environment and to ensure that it can continue to support for the present and future generations. Environmental sustainability involves a variety of principles and practices aimed at minimizing harm to the environment while promoting the well-being of both human and non-human species. This paper deals with the generality of “green business” in fire crackers business and its significance for the companies and functional benefits of using green crackers on the society as a whole and making a sustainable environment.

Keywords: *Green business, Green crackers, Environmental sustainability.*

Introduction:

Green business is “smart business”. Natural coffers are being depleted at preliminarily unheard of situations, associations are faced with new challenges in resource and waste operation, and consumers are getting more curious about the origins and environmental footmark left by the products they consume. In the last 25 times air pollution, ozone reduction, dangerous waste, water pollution, global warming etc. is so common that we need to address them as soon as possible to sustain our ecosystem. The seen environmental enterprises have evolved through numerous different phases (Straughan and Roberts, 1999). It started in the 1960s with the greening conception, concentrating on pollution and energy conservation. subsequently, due to increased social and political pressure, associations have moved beyond these generalities to follow three R's reduce, exercise and reclaim. According to a check conducted by the Boston Consulting Group (BCG) in January 2009, the trend toward buying green continues. further consumers bought green products in 2008 than in 2007, and more consumers were willing to pay a advanced price for green

products if they were considered to be of advanced quality. Green business, also known as sustainable or environmentally friendly business, refers to companies and associations that operate in a way that minimizes their negative impact on the terrain while seeking to contribute appreciatively to society and the frugality. The primary thing of green businesses is to balance profitability with environmental and social responsibility.

Review of Literature:

Farinelli, Bottini, Akkoyunlu and Aerni (2013) emphasize entrepreneurs' ability to migrate from dirty traditional business model in which business organizations are over reliant on the economic profit at the expense of sustainable development which was the main thrust of green entrepreneurship.¹

The **Organisation for Economic Cooperation and Development (2011)** advocates for policy mechanisms that would encourage green entrepreneurship in view of reconfiguring the global economic narrative towards environmental friendliness (OCED, 2011). Dean and McMullen (2007) observe that green entrepreneurs are taken advantage of market failure of old business practices by filling these need gaps in the emerging green markets. Hussain (2018) argues that environmental sustainability is attracting increase attention. The researchers believe that very little is known about the characteristics of green entrepreneurship (old or new) with regard to the process involved in penetrating the market and recording innovative performance despite efforts of previous scholars (e.g Criscuolo & Menon, 2015;).²

Farineli et al., 2013; Unauthentifiziert | Heruntergeladen 09.01.20 01:55 UTC International Journal of Entrepreneurial Knowledge Issue 2/2019, Volume 7 19 Esty & Winston, 2009). In addition, very few studies (e.g. **Costantini & Mazzanti, 2012; Sunny & Shu, 2017; Hörisch, Kollat & Brieger, 2017**) have highlighted unresolved issues in the green entrepreneurship field as well as investigating green entrepreneurship from the perspective of change management despite the fact that the role of change management in any change process is germane.³

Khan (2015) opines that the only strategic solution to the problem of sustainability is for entrepreneurs to establish their businesses and rely on "go green" for prosperity and long term survival.⁴

Researchers (e.g. **Darnall & Edwards, 2006; Zhaojun, Jun, Yali & Ying 2017**) have observed that true green enterprises are bound to enjoy high level of customer loyalty despite the growing interruption of green-washing.⁵

Demuth (2014) views green creative entrepreneurship as an entrepreneur's ability to obtain stakeholders' approval for his ideas, takes control of the value chains and gets rewarded for his ingenuity to solve environmental problems.⁶

Zhaojun et al. (2017) argue that green entrepreneurs' tendency to explore different scenarios due to flexibility and adaptability rooted out of creativity often results in superior solution to business and societal challenges. **Yousuf, Awang and Iranmanese (2017)** argue that green entrepreneurs are perceived as disruptive thinkers who are capable of salvaging the sociological landscape from environmental menaces.⁷

Malavisi (2018) posits that green entrepreneurs are those who are involved in modern green business practices through creative and innovative competencies. According to **Barbieri, Ghisetti, Gilli, Marin and Nicolli (2016)**, firm's ability to innovate and commercialise is largely dependent on the stage at the technological and industry lifecycle. Thus the literature reveals that green entrepreneurship is preponderance in terms of success compared to traditional firms in the long-run despite the initial challenge in technological life cycle at the point of market entry.⁸

Why Go Green?

There are a number of important reasons to Go Green in the business. A green business adopts principles, policies, and practices that improve the quality of life for its customers and employees. Today in all over the world, most of the leading businesses is going green because they know that, it helps to:

- ❖ Improve Profitability with Cost Savings
- ❖ Capitalize on Competitive Advantage
- ❖ Mitigate Risk against rising energy prices
- ❖ Engage employees and customers
- ❖ Makes the World a Safer and Healthy
- ❖ Environmental Sustainability
- ❖ Renewable Energy
- ❖ Eco-Friendly Products and Services
- ❖ Waste Reduction and Recycling

Significance of Green Business in the Field of Crackers Business:

A firecracker is a small explosive device used for festivity or entertainment in colorful carnivals. It's primarily designed to produce a large quantum of noise, especially in the form of a loud bang and with visual effect is incidental to this thing. They've fuses and are wrapped in a heavy paper covering to contain the explosive emulsion. The elevated sound situations of firecrackers beget restlessness, temporary or endless hail loss, high blood pressure and trouble sleeping. It also causes breathing problems, similar as habitual or antipathetic bronchitis, bronchial asthma, sinusitis, rhinitis, pneumonia and laryngitis. Bursting crackers increase heat, carbon dioxide and numerous poisonous feasts in the atmosphere, which causes a rise in the temperature of the earth and defiled air leads to global warming. While green crackers replace certain dangerous agents in traditional crackers with lower contaminating substances with the end to reduce the noise intensity and emigrations. They don't contain barium nitrate, which is the most dangerous component in conventional crackers. These green crackers include flower pots, pencils, sparklers, maroons, losers, and chakkar and have been developed by the National Environmental and Engineering Research Institute(NEERI), a CSIR lab. In this composition, we shall bandy in detail herbage crackers and their need with the adding air pollution. Also, the composition and background of its development have been bandied then.

What are Green Crackers?

Green crackers are being developed with an end to control the adding air pollution and several other goods to the terrain. They're eco-friendly and don't contain factors that causes detriment to the terrain. Green crackers use nitrate as compared to other crackers which use barium mariners. The development of Green crackers and perpetration of their use by the general public are given below:

- ❖ It's developed by the Council of Scientific and Industrial Research (CSIR) and an agreement has been inked with around 230 companies for manufacturing and dealing these green crackers in the request.
- ❖ The green- crackers are anticipated to beget at least 30 lower air pollution in comparison to the traditional fire crackers.

- ❖ The manufacturing cost of these crackers will nearly be the same or may indeed bring lower than the traditional crackers.
- ❖ The system of Quick Response (QR) coding has been developed to separate green crackers from the regular bones.
- ❖ The main motive of producing green crackers is to control the environmental disturbance from dangerous goods
- ❖ These green crackers have been named grounded on the three Safe Water Releaser (SWAS), Safe Thermite Cracker(STAR), and Safe Minimal Aluminium(SAFAL).
- ❖ Testing for these green crackers have been ongoing for numerous times, but a bulk of original testing green crackers was done in Sivakasi, Tamil Nadu, one of the major capitals for cracker manufacturing diligence.

Grounded on the current ecological situation, green crackers in India have come a necessity and all Indian countries intend to acclimatize the selling of these fireworks from the coming times.

What is the Difference between Traditional & Green Crackers?

Composition of Green Crackers – Barium nitrate which is one of the most dangerous rudiments present in the regular cracker isn't set up in Green crackers.

Composition of Regular Crackers – A traditional firecracker comprises of six crucial rudiments

- ❖ Energy substantially Charcoal or Thermite
- ❖ Oxidising Agents Nitrates and Chlorates which produce oxygen inside the cracker
- ❖ Reducing Agents Like sulphur, which can burn the oxygen present in the firecracker
- ❖ Controllers to insure the speed and intensity with which a cracker bursts
- ❖ Colouring Agents Multiple colours appear when a cracker bursts, this part is played by the colouring agents similar as
- ❖ Strontium mariners – Red Colour
- ❖ Burning of essence – White Colour
- ❖ Sodium mariners – unheroic Colour
- ❖ Barium mariners – herbage Colour
- ❖ Calcium mariners – Orange Colour
- ❖ Bobby mariners – Blue Colour

Binders: All the factors of the firecracker bear a medium which can bind them Green crackers will therefore help in upping the quality of air and insure that minimal dangerous material is released into the atmosphere with its smothers.

Advantages of Green Crackers:

It's set up that every time the quality of air has been declining and seems like fog as if it's downtime and is called as gauze (bank fog). therefore, the preface of these Green Crackers in India will bring a positive change in the quality of air.

It's also seen that over the times numerous accidents have come up where children and grown-ups have failed due to firecracker incidents. This condition may reduce with green cracker manufacturing.

Though it has the below advantages, one of the biggest disadvantages of Green crackers is that only the manufacturers who have inked a deal with CSIR will be allowed to manufacture these crackers. The other diligence which produce the traditional type of crackers may be left jobless and small manufacturing units won't be allowed to produce green crackers.

Still, 70% of India's crackers are manufactured in Sivakasi, Tamil Nadu, which continues to be the leading supplier of Green Crackers in India.

Green Crackers: SWAS, Star & SAFAL:

Green crackers have three different names

- ❖ **SWAS – safe- deposit box Water Releaser**
- ❖ Release water vapour in the air in such a way that suppresses the dust released
- ❖ It does not contain potassium nitrate and sulphur
- ❖ A diluent is released for gaseous emigrations
- ❖ The particulate dust released is reduced roughly by 30 percent
- ❖ **STAR – Safe Thermite Cracker**
- ❖ Does not contain potassium nitrate and sulphur
- ❖ Reduced particulate matter disposal
- ❖ Intensity of sound is less
- ❖ **SAFAL – safe- deposit box minimum Aluminium**
- ❖ Aluminium operation is less
- ❖ Magnesium is used rather of aluminium
- ❖ Compared to traditional crackers sound is reduced

Thus, considering the tremendous deterioration in the quality of air, it's in critical need to take up strict conduct to control Air Pollution in our country. In 2018, the Supreme court of India banned the traditional crackers containing pollution causing barium nitrate, thus promoting the use of green crackers rather and to come eco – friendly for the nature.

Due to the transition in to the world of green crackers, this time we have only 70 of stock as compared to last time because the maturity of big cracker brands have supplied less traditional crackers. In September 2022, the Delhi Pollution Control Committee announced a complete ban on bursting crackers – including green crackers – till January

2023. multitudinous countries in India analogous as Assam, Tamil Nadu, Rajasthan have allowed the use of green crackers during festivals. West Bengal used green crackers during Durga Puja fests and Punjab has allowed to burst green crackers for two hours on the day of Diwali. still, the present chemical substances on supposedly green cracker packets have made green crackers an oxymoron for the ₹ 3,000 crore cracker sedulity in India.

In May 2019, the Supreme Court had given blessing for the use of green crackers to control pollution. Green crackers are certified by CSIR- National Environmental Engineering Research Institute. Last time, during the epidemic period, in the cosmopolises with poor air quality indicator (AQI), the Supreme Court had corroborated its ban on crackers to cover those cosmopolises. Because when the air quality becomes farther dangerous, it would inadequately affect the aged citizens and people who have recently recovered from Covid - 19. In an interview with TOI, Dr Mukul Kumar Singh, an epidemiologist at Nalanda Medical College Patna said, "People should avoid fireworks during Diwali, especially those who have asthma, citizens above 60 times of age, small youths or who have recovered from severe symptoms of Covid- 19.

" According to a report by Centre for Science and Environment (CSE) released in May this time, Delhi- NCR is formerly the most weakened region in north India. This is especially true for the public capital, where paddy burning from Punjab has made the air thicker and further delicate to breathe. The eco-friendly druthers during Diwali are green crackers but there are claims dismissing their authenticity.

Conclusion:

Thus it is concluded that Green Crackers are environmentally friendly fireworks and can reduce the air pollution caused by traditional firecrackers. It preserves the world's natural resources. It is the responsibility of every individual both at work and at home to make a sustainable environment. The usage of environmentally friendly solutions is urgent and will eventually lead to a bigger effect. These tiny but substantial steps will also contribute to global efforts to reduce climate change and bring a healthier world.

Let's Show Keen in Making World Green

S. Jeba Selva Rani, M.com

Department of Commerce, The American College, Madurai

Abstract:

Micro, Small, and Medium Enterprises (MSMEs) form the backbone of India's economy, contributing significantly to its growth and development. This article provides a comprehensive analysis of the pivotal role played by MSMEs in India's economic landscape. By delving into the diverse sectors within MSMEs, the study explores their contributions to employment generation, innovation, and export promotion. Additionally, the article examines the challenges faced by MSMEs, including limited access to finance, technology, and markets, and proposes policy recommendations to enhance their competitiveness and sustainability. Through a detailed review of government initiatives and their impact on MSMEs, this research sheds light on the integral role these enterprises play in fostering inclusive economic growth, poverty alleviation, and socio-economic development in India.

Introduction:

Micro, Small, and Medium Enterprises (MSMEs) constitute a vital sector of India's economy, contributing substantially to employment generation, industrial production, and export earnings. In recent years, these enterprises have gained increased recognition for their significant role in fostering economic development, poverty reduction, and inclusive growth. This article delves into the multifaceted contributions of MSMEs to the Indian economy. It explores how these enterprises serve as engines of innovation, entrepreneurship, and employment, empowering diverse sections of society. Through a nuanced analysis, this article aims to highlight the pivotal role MSMEs play in India's economic development, underscoring the need for tailored policies and support mechanisms to further enhance their impact and sustainability.

Financing of MSMEs

Financing of MSMEs (Micro, Small, and Medium Enterprises) involves the provision of financial resources to support their operations, growth, and development. Due to their significant contribution to the economy, ensuring adequate financing options for MSMEs is crucial. Various financing methods are available, including traditional banking loans, government schemes, venture capital, angel investors, and crowdfunding. These financial resources help MSMEs invest in technology, manpower, and infrastructure, enabling them

to expand their businesses, create employment opportunities, and contribute to economic development. Access to affordable and timely financing is vital for MSMEs to thrive, innovate, and play a pivotal role in the overall economic growth of a country.

Small & Medium Enterprises Sector contribute about 40% of total manufacturing and 34% of total exports and is crucial to India's economic growth, employment generation and entrepreneurial development. A Policy Package for Stepping up Credit to Small and Medium Enterprises was announced in the Parliament on August 10, 2005 in order to achieve a minimum 20% year-on-year growth in credit to the SME Sector by the Public Sector Banks. The objective is to double the flow of credit to the SME sector by 2009-10, i.e. within a period of 5 years. The progress of MSME lending by PSBs for the year ending March, 2009 shows a growth of 29.58% over March 2008. Year on year growth in June 2009 over June 2008 has been 29.40%. MSME Act, 2006 has also been enacted by the Government to give more strength to the MSME Sector. The target has since been achieved. The year-on-year growth has been more than 20% since 2007. In the Budget Announcement 2008-09, it was announced to create two funds of Rs.2,000 crore each in SIDBI one for risk capital financing and the other for enhancing refinance capability to the MSME sector. RBI had initially allocated Rs.1600 crore for the MSME (Refinance) Fund and Rs.1000 crore for the MSME (Risk Capital Fund). Recently, RBI has enhanced the MSME (Refinance) Fund from Rs.1600 crore to Rs.3600 crore and SIDBI has started getting fresh funds in this regard. On December 7, 2008 in the package containing measures for stimulating the economy, it was announced that to facilitate the flow of credit to MSMEs, RBI has announced a refinance facility of Rs.7000 crore for SIDBI which will be available to support incremental lending, either directly to MSMEs or indirectly via banks, NBFC.

Challenges Faced By Msme In India

1) Financial issues:

In the Indian economy, access to finance has always been an issue for smaller firms and businesses. This is a major hindrance for businesses as well as the MSME sector. However, the most disturbing fact about it is that only 16% of SMEs get access to timely finance, resulting in small and medium firms being forced to rely on their own resources. It is not just small firms that face this problem, but larger firms do as well because even those bigger players face significant difficulties in accessing cheaper credit from formal banks.

2) Regulatory issues:

Several regulatory issues have been identified over time, including problems like tax compliance and changes to labor laws which have ended up costing the MSME sector dearly. In an attempt to make this sector more competitive among others, certain labor reforms were attempted some years back. Still, they failed to make any dent in improving

things for MSMEs despite making them more competitive than larger firms. As a result, it has become very difficult for MSMEs to comply with these regulations and register for tax compliance, which has resulted in many operating on low capital or even shutting shops.

3) Infrastructure:

In India, the infrastructure sector is extremely important because we are often referred to as the 'world's back-office' because so many works in this sector are carried out overseas. Applications such as eCommerce and BPO have created more jobs in low-wage countries like India.

4) Low productivity:

MSMEs are not necessarily very productive, but they perform certain tasks that emit more value than they produce. Retailers sell consumer goods to end-users at relatively lower prices. In fact, MSMEs may be very productive only when it comes to being cost-efficient and are capable of creating high volume at very low costs. But given that their production is on a small scale with low margins, low productivity can put them at a disadvantage, especially when compared with larger firms.

5) Lack of innovation:

Indian MSMEs are not very innovative, and the majority of the products that they produce are based on outdated technologies. There is a severe lack of entrepreneurs in this sector, which has prevented it from adopting new technologies and tools which have brought about significant changes in other sectors like eCommerce and call centers, etc. As a result, MSMEs have had to struggle with outdated technology as well as low levels of productivity, especially when compared with larger firms.

6) Technical changes:

There has been no dearth of technical changes over time, and most industries have undergone some form of change in order to remain competitive. As a result, Indian MSMEs have had to deal with some very important changes which have affected their growth potential. At first, there was a change in the ownership right of land, which has made the sector more prone to mismanagement and, with it, a fall in productivity.⁷⁾ Competition:

Due to various factors, such as the rise of eCommerce and the advent of globalization, bigger firms have forced MSMEs out of their markets. However, this is not new because MSMEs were facing competition from year one, but they could fight it off successfully compared to professional firms. In fact, MSMEs continue to face competition in many areas, including agricultural machinery, garments, and tourism.

8) Skills:

When it comes to skills, Indian MSMEs are far behind their counterparts in other countries because they depend heavily on the help of informal workers, who are not paid well and lack the technical skills which can help enhance productivity. As a result, smaller firms are forced to take up jobs that require low levels of skill and expertise, which further affects their growth prospects in the long term.

9) Lack of professionalism:

A majority of Indian MSMEs lack professionalism despite being vital for larger industries' growth. As a result, they are highly prone to corruption and abuse of power, which has a huge impact on the productivity of their businesses.

10) Lack of standardized policies:

There are very few MSME policies in India. As a result, there is no consistency when it comes to MSME development as well as entrepreneurship promotion programs. However, positive progress has been made in Delhi over the years, but this needs to be done on a national level so that Indian firms can become more competitive across the world for global companies and investors.

Advantages of MSME

Preference of the Tender to the MSME

Recently, MSME has been given preference in bids exclusively open to these kinds of companies. The Finance Minister made this statement on unfair competition from foreign firms in acquiring Government bids regarding size and strength in the last COVID-19 relief package.

Concession on Electricity Consumption

The Government also provides a concession on electricity bills for the registered MSMEs. You just have to submit an application, a registered MSME certificate, and a copy of your electricity bill to apply for this incentive. Subsidies on Intellectual Property like Patent registration and Industrial design Up to 50% subsidy is provided to companies established under the Micro, Small and Medium Enterprise Act to register patents. You can benefit from this perk by formally applying to the pertinent Ministry. The Government also provides funding for industrial design and promotion to enhance growth.

Access to the international market

Corporate delegations from India are given financial assistance to attend international conferences, trade fairs, exhibitions, business meetings, and seminars. This international

partnership program makes it possible to become exposed to the more contemporary features of industrialisation.

Now, after going through the advantages if you are excited and avail of them, then we suggest you to get ready with your UDYAM certificate. Incase if you don't have one, read our guide on how to apply for UDYAM certificate.

Disadvantages of MSMEs in India

Piling of interest

The first issue is the amount of interest that must be paid. The interest that must be paid on loans accumulates rapidly. Despite being the interest rate lower than other loans, the interest accumulates and costs much money when paid.

Tedious Loan Procedure

While the loan has a high acceptance rate, the sanctioning procedure takes a long time. It takes a lot of time to apply for an MSME loan since various documents must be submitted. Documents such as income tax returns, profit and loss statements, bank account information, bills of receipt and payment, and much more are required to prove the lender's validity.

No collateral requirement

Despite being advantageous to the lenders, this might cause issues for the banks. The loan becomes secured when collateral is requested. It is secured because the lending institution will not suffer any loss if a loan becomes an NPA.

Review of literature

Dangayach, G.S. and Deshmukh, S.G. (2005). Advanced manufacturing technology implementation: Evidence from Indian small and medium enterprises (SMEs), *Journal of Manufacturing Technology Management*, 16(5), pp.483-496 [2] Saleh, A.S. and Ndubisi, N.O. (2006).

Upadhyay, P., Jahanyan, S. and Dan, P.K. (2011). Factors influencing ERP implementation in Indian manufacturing organisations: A study of micro, small and medium-scale enterprises". *Journal of Enterprise Information Management*, 24(2), pp.130-145. India

Lahiri, R. (2012). Problems and Prospects of Micro, Small and Medium Enterprises (Msmes) In In The Era of Globalization.

Moore, S.B. and Manring, S.L. (2009). Strategy development in small and medium sized enterprises for sustainability and increased value creation, *Journal of Cleaner Production*.

Conclusion

MSMEs play a crucial role in the economic development of India. They contribute significantly to employment generation, innovation, and export growth. MSMEs are the backbone of the Indian economy, especially in rural areas, as they promote inclusive growth and reduce regional disparities. They also foster entrepreneurship and contribute to GDP growth. By providing opportunities for self-employment and supporting local industries, MSMEs contribute to poverty reduction and overall economic development. It is essential to continue supporting and promoting the growth of MSMEs to unleash their full potential and drive India's economic progress.

Abstract

Social relationships both quantity and quality affect mental health, health behavior, physical health, and mortality risk. Sociologists have played a central role in establishing the link between social relationships and health outcomes, identifying explanations for this link, and discovering social variation (e.g., by gender and race) at the population level. Studies show that social relationships have short- and long-term effects on health, for better and for worse, and that these effects emerge in childhood and cascade throughout life to foster cumulative advantage or disadvantage in health. This article describes key research themes in the study of social relationships and health, and it highlights policy implications suggested by this research.

Keywords: Relationships, Social support, Social integration, Stress, Cumulative disadvantage.

Introduction

Captors use social isolation to torture prisoners of war to drastic effect. Social isolation of otherwise healthy, well-functioning individuals eventually results in psychological and physical disintegration, and even death. Over the past few decades, social scientists have gone beyond evidence of extreme social deprivation to demonstrate a clear link between social relationships and health in the general population. Adults who are more socially connected are healthier and live longer than their more isolated peers. This article describes major findings in the study of social relationships and health, and how that knowledge might be translated into policy that promotes population health. Key research findings include: (1) social relationships have significant effects on health; (2) social relationships affect health through behavioral, psychosocial, and physiological pathways; (3)

relationships have costs and benefits for health; (4) relationships shape health outcomes throughout the life course and have a cumulative impact on health over time; and (5) the costs and benefits of social relationships are not distributed equally in the population.

Social Relationships

Social scientists have studied several distinct features of social connection offered by relationships (Smith and Christakis 2008). Social isolation refers to the relative absence of social relationships. Social integration refers to overall level of involvement with informal social relationships, such as having a spouse, and with formal social relationships, such as those with religious institutions and volunteer organizations. Quality of relationships includes positive aspects of relationships, such as emotional support provided by significant others, and strained aspects of relationships, such as conflict and stress. Social networks refer to the web of social relationships surrounding an individual, in particular, structural features, such as the type and strength of each social relationship. Each of these aspects of social relationships affects health. We discuss the broad effects of these features of relationships for health, and, for ease of discussion, we use the terms “social relationships” and “social ties” interchangeably throughout this article.

Social Relationships Benefit in Health

Many types of scientific evidence show that involvement in social relationships benefits health. The most striking evidence comes from prospective studies of mortality across industrialized nations. These studies consistently show that individuals with the lowest level of involvement in social relationships are more likely to die than those with greater involvement. For example, [unintelligible] showed that the risk of death among men and women with the fewest social ties was more than twice as high as the risk for adults with the most social ties. Moreover, this finding held even when socioeconomic status, health behaviors, and other variables that might influence mortality, were taken into account. Social ties also reduce mortality risk among adults with documented medical conditions. For instance, Grummet and colleagues found that, among adults with coronary artery disease, the socially isolated had a risk of subsequent cardiac death 2.4 times greater than their more socially connected peers.

In addition to mortality, involvement in social relationships has been associated with specific health conditions as well as biological markers indicating risk of preclinical conditions. Several recent review articles provide consistent and compelling evidence linking a low quantity or quality of social ties with a host of conditions, including development and progression of cardiovascular disease, recurrent myocardial infarction, atherosclerosis, autonomic high blood pressure, cancer and delayed cancer recovery, and slower wound healing Everson-Rose and Lewis Poor quality and low quantity of social ties

have also been associated with inflammatory biomarkers and impaired immune function, factors associated with adverse health outcomes and mortality. Marriage is perhaps the most studied social tie. Recent work shows that marital history over the life course shapes a range of health outcomes, including cardiovascular disease, chronic conditions, mobility limitations, self-rated health, and depressive symptoms.

Behavioral Explanations

Health behaviors encompass a wide range of personal behaviors that influence health, morbidity, and mortality. In fact, health behavior explains about 40 percent of premature mortality as well as substantial morbidity and disability in the United States. Some of these health behaviors such as exercise, consuming nutritionally balanced diets, and adherence to medical regimens tend to promote health and prevent illness, while other behaviors such as smoking, excessive weight gain, drug abuse, and heavy alcohol consumption tend to undermine health. Many studies provide evidence that social ties influence health behavior. For example, Berkman and Breslow's (1983) prospective study in Alameda County showed that greater overall involvement with formal (e.g., religious organizations) and informal (e.g., friends and relatives) social ties was associated with more positive health behaviors over a ten-year period. Being married (Waite 1995), having children (Denney 2010), and ties to religious organizations have been linked to positive health behaviors (although, notably, as we will discuss below, marriage and parenthood have also been associated with behaviors that are not beneficial to health including physical inactivity and weight gain).

Psychosocial Explanations

Research across disciplines and populations suggests possible psychosocial mechanisms to explain how social ties promote health. Mechanisms include (but are not limited to): social support, personal control, symbolic meanings and norms, and mental health. While most studies focus on only one or two of these mechanisms, it is clear that connections between mechanisms are complex, and that these interconnections may explain the linkage between social ties and health better than any single mechanism.

Social support refers to the emotionally sustaining qualities of relationships (e.g., a sense that one is loved, cared for, and listened to). Hundreds of studies establish that social support benefits mental and physical health. Social support may have indirect effects on health through enhanced mental health, by reducing the impact of stress, or by fostering a sense of meaning and purpose in life. Supportive social ties may trigger physiological sequelae (e.g., reduced blood pressure, heart rate, and stress hormones) that are beneficial to health and minimize unpleasant arousal that instigates risky behavior (Uchino 2006). Personal control refers to individuals' beliefs that they can control their life outcomes.

through their own actions. Social ties may enhance personal control (perhaps through social support), and, in turn, personal control is advantageous for health habits, mental health, and physical health.

Physiological Explanations

Psychologists, sociologists, and epidemiologists have contributed a great deal to our understanding of how social processes influence physiological processes that help to explain the link between social ties and health. For example, supportive interactions with others benefit immune, endocrine, and cardiovascular functions and reduce allostatic load, which reflects wear and tear on the body due, in part, to chronically over worked physiological systems engaged in stress responses. These processes unfold over the entire life course, with effects on health. Emotionally supportive childhood environments promote healthy development of regulatory systems, including immune, metabolic, and autonomic nervous systems, as well as the hypothalamic-pituitary-adrenal (HPA) axis, with long-term consequences for adult health. Social support in adulthood reduces physiological responses such as cardiovascular reactivity to both anticipated and existing stressors, continuously married adults experience a lower risk of cardiovascular disease compared with those who have experienced a marital loss, in part due to the psychosocial supports conferred by marriage.

Cumulative Advantage and Disadvantage

All Americans are not at equal risk for risky health behaviors, morbidity, and premature mortality. Throughout life, we are exposed to social conditions that promote or undermine health, and over time these exposures accumulate to create growing advantage or disadvantage for health in socially patterned ways. Thus, social variation in relationships/health processes provides information that may be used to address social disparities in health.

The most salient social ties for health vary over the life course, with parents having the greatest influence on children's health, peers becoming particularly important in adolescence, intimate partners becoming most important in adulthood, and adult children taking an elevated role in later life. The principal explanatory mechanisms may also vary over the life course. For example, stressful family interactions may have their greatest impact on children's health, while peer pressure and the social meaning of health habits (e.g., pressure to experiment with tobacco, alcohol, and drugs) may have their greatest impact in adolescent relationships, and social control of health habits may be most important in adult relationships.

Some effects of social ties are more immediate, while others slowly build over time. For example, at any given point in time, ongoing social ties affect mental health and health

behavior for better or for worse. These effects may or may not dissipate over time, but recent work on the effects of distressed, disrupted, and emotionally unsupportive childhood environments on adult health shows that these effects reverberate throughout the life course. Certainly, chronic isolation or strain in social ties take an increasing toll over time on a host of health indicators including allostatic load, blood pressure, physical health, and mortality risk.

Costs and Benefits of Social Relationships: Inequalities

Both quantitative (size and diversity) and qualitative (benefits and costs) aspects of social ties are demographically patterned and socially constructed. Regarding size, women tend to have larger confidant networks than men, as do whites compared with blacks, better-educated adults compared with less-educated, and, to a lesser extent, younger adults. Moreover, the diversity of social ties varies in patterned ways with, for example, better-educated adults engaged in more diverse personal networks. Socio-demographic variation in quantitative aspects of social ties may partly explain parallel variation in health disparities because both size and diversity of social ties enhance health. People with a greater number of ties have a larger pool of confidants from which to connect and to receive social support and health-relevant information.

In general, we know little about how the benefits and costs of social ties vary across socio-demographic groups, but some evidence suggests that there is variation. Most attention has been devoted to gender differences, particularly in the context of marriage. Historically, marriage has conferred more health gains for men than for women. Men not only experience greater health benefits through the positive lifestyle and health behaviors that often accompany marriage (Waite 1995), they also experience fewer costs from spousal care giving, childrearing, caring for aging parents, and balancing work/family demands (Spain and Bianchi 1996).

The availability, costs, and benefits of social ties may also vary by race. For instance, blacks are less likely to be married than whites. Yet evidence regarding costs and benefits is mixed. African Americans may experience more marital strain and receive fewer economic gains from marriage compared to whites, yet some studies find African Americans have historically received more health benefits from marriage. Disparities in the quantity and quality of social ties exist across socioeconomic statuses as well. More educated adults have a larger number of close confidants and may experience less stress in their relationships. For instance, women with a high school degree or less are roughly twice as likely to divorce within 10 years of their first marriage compared with women having at least a bachelor's degree. Notably, differential access, benefits, and costs to social ties across socio-demographic groups are not immutable; recent work shows that these differentials have changed significantly over the time.

Socialties and Health of the Population

Social ties and their connection to health have important implications for health policy. Indeed, some existing social policies and programs implicitly and indirectly incorporate social ties as mechanisms for enhancing population health and well-being. For example, many programs concerned with health of the elderly (e.g., home health services and meal deliveries) direct attention to the impact of social isolation/connection on health. Healthy People 2010, a nationwide health promotion plan developed by the Department of Health and Human Services, recognizes that social ties play an important role in influencing health the Healthy Marriage Initiative recognizes that marriages characterized by supportive interactions benefit the health of children as well as spouses (U.S. Department of Health and Human Services. The Family Medical Leave Act (FMLA) allows eligible employees to take up to 12 weeks of unpaid, protected leave over a 12-month period to attend to certain medical and family-related needs, such as the birth of a child or caring for an immediate family member.

Conclusion

Solid scientific evidence shows that social relationships affect a range of health outcomes, including mental health, physical health, health habits, and mortality risk. Sociologists have played a major role in establishing these linkages, in identifying explanations for the impact of social relationships on health, and in discovering social variation (e.g., by age and gender) in these linkages at the population level. The unique perspective and research methods of sociology provide a scientific platform to suggest how policy makers might improve population health by promoting and protecting Americans' social relationships. Recent and projected demographic trends should instill a sense of urgency in developing policy solutions. Specifically, the confluence of smaller families, high divorce rates, employment-related geographical mobility, and population aging means that adults of all ages, and in particular the elderly, will be at increasing risk of social isolation and shrinking family.

ROLE OF FINTECH - INNOVATION AND ADOPTION IN SUSTAINABLE BUSINESS START-UPS

Ms. A. Gomathi

*Assistant Professor of Commerce, Department of B.Com - Banking and Insurance,
Nallamuthu Gounder Mahalingam College, Tamilnadu, India.*

Emil id: gomathiagathursamy@gmail.com.

Abstract

The integration of new technologies and the digitization of society have created a favourable environment for the development of Fintech startups in India. The FinTech Industry has seen tremendous growth in India over the last decade since it caught pace after expansion of interest services in the country. In India Fintech adoption rate is 87% against the global average of 64%⁴. By providing the access to banking and financial services for unbanked people, the FinTech industry plays a predominant role to bettering financial inclusion. This paper explores the various segments and significance of Fintech industries in the success of digital transformation and it also inspects the regulatory legal framework, Government initiatives, the key principles and thrust areas of the Fintech start-ups. Besides this it also tried to identify the emerging trends, issues and challenges in Fintech revolution.

Keywords: *Digital Startups, Fintech Innovation, Sustainable Development, Business Start-ups etc.,*

Introduction:

Financial technology (better known as Fintech) is used to describe new tech that seeks to improve and automate the delivery and use of financial services⁴. The Fintech companies plays an major role in improving access to the gamut of financial services like AePS, Aadhar Pay, Remittances, and Recharges for the masses². With over 2,000 FinTech businesses officially recognized by DPIIT (Department for Promotion of Industry and Internal Trade) in India and projections indicate that the total addressable market for the Indian FinTech industry is set to reach \$ 1.3 trillion by 2025⁵.

Fintech companies are innovative, nimble, and have lower operational costs than traditional banks⁶. They can lead the way through taking financial services, increasing access to credit, innovating with speed and compliance, promoting a cashless economy to the farthest corners of the country⁶. Fintech companies can play a key role in boosting financial inclusion by leveraging the existing financial ecosystem and emerging technologies to make banking simpler, more accessible, and cost-effective for millions of unbanked and underbanked Indians⁶.

FinTech is increasingly becoming an important focus area for all the key stakeholders in India's Financial Services industry – Regulators, Traditional Banks, NBFCs, Payment Banks, Investors, Payment Service Providers, Broking and Wealth Management Companies, Insurance providers and pure-play FinTech players. The FinTech

infrastructure backbone has been strengthened tremendously with the host of options available to market participants such as BBPS, Bharat QR, India Stack, UPI³.

Statement of the Problem:

The FinTech infrastructure backbone has been strengthened tremendously with the host of options available to market participants such as BBPS, Bharat QR, India Stack, UPI, etc³. In India Fintech adoption rate is noted as 87% against the global average of 64% ⁴. According to a World Bank analysis more than 190 million Indians lack access to formal financial services, 20 percent of the Indian population is still unbanked, implying enormous untapped economic potential⁶. Rural India has only 17% internet penetration compared to 60% in urban India³. Above these two interpretations make an argument and couldn't judge the exact state of Fintech development in India.

To know the present scenario of Fintech startups in India, the following questions were raised?

What are the various segments and significance of Fintech startups in India?

What are the factors associated with the growth of Indian Fintech industry?

What are all the issues, challenges faced by Fintech companies in the current economic climate?

What are the emerging trends predicted by Fintech industry?

Objectives of the Study:

This study makes an attempt to find the solutions for the questions asked in the statement of the problem. Accordingly the following objectives have been framed.

1. To know the various segments and significance of Fintech startups in India.
2. To identify the factors associated with the growth of Indian Fintech industry.
3. To identify the regulatory legal framework and Government Initiatives for Fintech in India.
4. To explore the issues, challenges faced by Indian Fintech companies in the current economic climate.
5. To identify emerging trends in Fintech startups in sustainable development.

Research Methodology:

As the research paper is of conceptual and review nature, the researcher has applied exploratory research design by using varied secondary data availed from the secondary data sources. Based on the secondary data and review, the researcher has reported on important role of Fintech - Innovation and adoption in India

Review of Literature:

Mr. Nishant kumar published an article titled as “Role of Fintech in India’s Digital Economy” in Nasscom community website on March16,2023. In this article he reveals that the role of Fintech in Indian Digital Economy, the key benefit of Fintech for business in India, challenges of Fintech in India and the future of Fintech in India. He noted that in India the future of Fintech companies is bright, the immense potential.

The Times of India published an article entitled as “The role of Fintech companies in strengthening the banking and online payment sector in rural India” on October12, 2022 written by Amit Tyagi. The author express that India’s Fintech market is among fastest growing and is ranked the third largest market. He denotes that the companies have the potential to reshape the financial services and financial inclusion in India. He added that the companies plays an major role in improving access to the gamut of financial services like AePS, Aadhar Pay, Remittances, and Recharges for the masses.

Deloitte the Learning Academy conducted a study and published an article in the name of “FinTech in India – Ready for Breakout”. This article denotes the critical issues addressed by Indian FinTech companies and few of the critical structural issues afflicting Indian financial services as increase outreach, improve customer experience, reduce operational friction, and foster adoption and usage of the digital channel. This report suggests the financial companies can learn and adopt best practices around risk and internal controls, operational excellence, compliance culture, and employee engagement.

Fintech Segments –Area wise classification

Deloitte report analyzed the breakout potential of India’s Fintech sector across six segments i.e Payments, Credit, Investment Management, Personal Finance Management, BankTech and InsurTech and across twenty sub-segments. Customer Loyalty, Technology & IT Infrastructure.

Area	Fintech Segments	Area	Fintech Segments
Credit	Peer-to-Peer Lending Crowd Funding Market Place for Loans Online Lenders – on-book lending by NBFCs Credit Scoring Platforms	Payments	M-wallets and PPIs Merchant Payments and PoS Services International Remittance Crypto Currencies
Investment Management	Robo Advisors Discount Brokers Online Financial Advisors	Personal Finance Management	Tax Filling and Processing Spend Management and Financial Planning Credit Scoring Services

Bank tech	Big Data Blockchain Customer Onboarding Platforms	Insur tech	Insurance Aggregator IOT, Wearables and Kinematics
-----------	--	------------	--

Source : Deloitte Analysis

Significance of Fintech Startups in India:

- ❖ **Promoting Financial Inclusion in India** – Most of the Indian people in rural area remain outside the formal financial system, and the use of financial technologies can bridge the gap left by traditional banking.
- ❖ **Finance for Micro, Small and Medium Enterprises (MSME)** – Lack of capital is the biggest threat to MSME, FinTech startups can play a key role and solve the issue of credit availability and offering easier and quick access to loans.
- ❖ **Improve Customer Experience** - FinTech start-ups provide better customer experience in terms of convenience, personalization, transparency, accessibility and developing credit scores and underwriting credit for customers for improving financial services penetration in India by leveraging big data, machine learning and alternative data.

Growth Factors of Indian FinTech Sector:

Customer Loyalty, Funding environment, Technology & IT Infrastructure, Value proposition, Innovative use of Data, Cost of operation are considered as a key factors, leading to success of Fintech companies³.

The following seven factors are likely to drive the growth of the Indian FinTech sector, in the medium to long term³:

- ❖ Combination of steady economic growth with low penetration of financial services.
- ❖ Large public sector banks and insurers lagging market growth.
- ❖ Regulatory forbearance toward FinTech.
- ❖ Indian Millennials rapidly ascending the adoption S-curve of digital financial services and thus perceiving higher friction from incumbents.
- ❖ India Stack and internet data proliferation to improve financial services utility infrastructure and connectivity to support digital financial services.
- ❖ Advances in technology and adoption of cloud services leading to asset light models with almost zero unit costs at transaction levels could enable subsidization without building scale.
- ❖ Lower real interest rates in Indian economy.

Regulatory Legal Framework and Government Initiatives for Fintech in India:

Owing to the overlapping and non-linear business models of fintech businesses, there is no single all-encompassing regulatory legal framework for fintech in India. The applicable laws and rules governing a fintech business will generally depend on the nature of the business being conducted⁷. It is usually regulated by the RBI, SEBI, the Insurance Regulatory and Development Authority of India (IRDAI), the Pension Fund Regulatory and Development Authority (PFRDA), and IFSCA⁷. Aspects that are regulated by the aforementioned authorities include online payments and transactions, payment aggregators and gateways, data and privacy, lending and collection of deposits, trading of securities and derivatives, offering of insurance products and services, etc. For many financial offerings, prior approvals and licenses need to be obtained from the RBI, SEBI or IRDAI for a business to commence⁷.

The government has already laid the groundwork for the Fintech industry to provide flexible and innovative digital banking with regulations like the Unified Payment Interface (UPI), Aadhaar, and open application programming interfaces (APIs)⁶. The Government also announces measures to specifically promote investments in tech/fintech/start-up businesses in India, or which have a positive impact on those sectors. Additionally, IFSCA has also introduced an incentive scheme for, inter alia, domestic fintechs seeking access to overseas markets as well as foreign fintechs seeking market access to IFSCs in India. The Government also proposed many tax-related relaxations, including an extension of timelines (from March 31, 2023, to March 31, 2025) for funds relocation to IFSC GIFT City. Tamil Nadu FinTech Policy 2021, offering collaboration and incentives for select fintech startups⁷.

The laws and regulations that may apply to fintechs in India are listed below:

RBI

- ❖ Payment and Settlement Systems Act, 2007.
- ❖ Master Directions on Prepaid Payment Instruments (MD-PPIs), 2021.
- ❖ Framework for Scale Based Regulation for Non-Banking Financial Companies, 2021.
- ❖ Directions for opening and operation of Accounts and settlement of payments for electronic payment transactions involving intermediaries, 2009.
- ❖ Guidelines for Licensing of Payments Banks, 2014 and Operating Guidelines for Payments Banks, 2016.
- ❖ Framework for Recognition of a Self-Regulatory Organisation for Payment System Operators, 2020.
- ❖ Guidelines on Regulation of Payment Aggregators and Payment Gateways, 2020.
- ❖ Circular on Processing of e-mandate on cards for recurring transactions, 2019.
- ❖ Circular on Tokenisation – Card transactions, 2019.
- ❖ Guidelines on Digital Lending, 2022.

- ❖ RBI Master Directions on Credit Card and Debit Card – Issuance and Conduct, 2022.

National Payments Corporation of India (NPCI)

- ❖ Various circulars on Unified Payments Interface (UPI) payments.

SEBI

- ❖ Circular on Mutual Funds, 2021.

IRDAI

- ❖ Guidelines on Insurance Repositories and Electronic issuance of Insurance Policies, 2015.
- ❖ Guidelines on Insurance e-commerce, 2017.
- ❖ Insurance Regulatory and Development Authority of India (Issuance of e-Insurance Policies) Regulations, 2016.

IFSCA

- ❖ International Financial Services Centres Authority Act, 2019.
- ❖ Framework for FinTech Entity in the International Financial Services Centres (IFSCs), 2022.

Apart from these the following initiatives are taken by the government for the benefit of public.

- ❖ **Jan Dhan Yojana** – This initiative is considered as a world largest financial inclusion and it has helped in new account enrolment of over 450 million beneficiaries for direct benefit transfer and accessibility to a host of financial services applications such as remittances, credit, insurance, and pensions. It helps the Fintech companies to build technology products to enter the large consumer base in India ⁴.
- ❖ **India Stack** – It is a set of APIs that allows governments, businesses, startups and developers to utilise a unique digital Infrastructure to solve India's hard problems towards presence-less, paperless and cashless service delivery ⁴.
- ❖ **UPI (Unified Payments Interface)** – It is an advanced mobile app-based payment system to transfer funds between bank accounts developed by the National Payments Corporation of India in 2016, is the multiplier force behind the Fintech revolution in India. 338 banks registered under the platform, recorded more than 6.28 billion transactions in July 2022 worth 10.62 lakh crore ⁴.
- ❖ **Digital Rupee** - India launched its Central Bank Digital Currency (CBDC) or digital rupee or e-rupee recently. It is an electronic version of cash and will primarily accelerate the growth of the FinTech market in India⁴.
- ❖ **Fintech Hub** - **Fintech** Valley Vizag, O-hub Bhubaneswar, Bandra Kurla Complex, FinTech Hub Kolkata, Mumbai Fintech Hub are Fintech parks created by the respective Government to promote business infrastructure in the state, and attract investors and multinational financial corporations to set up their offices in the hub.

Issues, Challenges faced by Fintech Companies in the Current Economic Climate

Fintech systems are vulnerable to hackers by automation of processes and digitization of data. Absence of regulatory authority has led to increased chances of fraud threat to investor protection and movement of money in the economy. Due to the diversity of offerings in FinTech, it is difficult to formulate a single and comprehensive approach to these problems.

According to RBI financial literacy is only 27% of Indian adults and 24% of women meet the minimum level of financial literacy. The lack of financial literacy is also considered as a main issue. During the pandemic, digital lending through mobile apps became popular, but more than half of these digital loan providers were operating illegally. Many apps used tactics to exploit the widespread lack of financial literacy, charging interest rates up to 500%⁴.

The true legal status of cryptocurrency continues to be a grey area in India⁷. The Government of India introduced a draft Cryptocurrency and Regulation of Official Digital Currency Bill, 2021 (Cryptocurrency Bill), which provides for: (a) the creation of a framework for official digital currency to be issued by the RBI; and (b) the prohibition of all private cryptocurrencies in India – with certain exceptions, in order to promote the underlying technology of cryptocurrency and its uses⁷. As per a recent report, WazirX, India's biggest Cryptocurrency exchange registered an annual trade of over \$43 billion.

Nearly three-quarters of population resides in rural India Fintech industries making its route to reach digitalization. Infrastructural costs, low usage due to lack of awareness, inconsistent availability of electricity, theft, and vandalism are some of the major deterrents for physical bank branches and ATM operators in rural areas².

Source : Deloitte Analysis

Emerging Trends in Fintech Industry:

Fintech companies can rapidly roll out new features and products by testing new innovations in secure sandboxes while checking for adherence to government regulations and data security. This enables Fintech companies to provide innovative products and services in a faster yet secure manner⁶. The Fintech activities are divided into three broad categories: the Banking Sector; Capital Markets; and Funds Management and the Insurance Sector, and the notable Fintech trends include BNPL (Buy Now, Pay Later), Digital Banks, Robo Advisory, Blockchain, Sustainable Finance products, neo-banks, Embedded finance/

Insurance, Cyber Insurance, Artificial intelligence (AI) and the metaverse etc., are some notable trends of the year and it could change the scope and landscape of Fintech and it continued to show an upward trend too⁷. The Fintech areas/activities expressly include Agri Tech, Climate/Green/Sustainable Tech, Space Tech, Solutions for Banking, Financial Services and Insurance domain leveraging (AI, Chatbots, Web 3.0, etc)⁷.

Conclusion:

Through the mobile applications and online platforms, Indian FinTech companies have been successful in offering various financial services to this population. It likely to reduce costs and improve quality of financial service and it will develop unique and innovative models of assessing risks and it will create a more diverse, secured and stable financial services land shape³. The government should require Fintech companies to ensure that the data harvested from consumers will not be used for any purpose other than serving the consumer's interest⁴. Establishing technological safeguards, educating and training customers will also help in democratizing Fintech and guarding against cyberattack issues. FinTech will create a more diverse, secured and stable financial services landscape. FinTech companies are less homogenous than incumbent banks, and offer great learning templates to improve, both, capabilities and culture³.

WOMEN CUSTOMER'S OPINION TOWARDS NETWORK SECURITY IN ONLINE PURCHASE

Dr. P. Gomathi Devi

Assistant Professor, Department of Commerce (CA)
Nallamuthu Gounder Mahalingam College, Pollachi

M. Gayathri

Assistant Professor, Department of Commerce (CA)
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Online shopping or e-shopping is a form of electronic commerce which allows consumers to directly buy goods or services from a seller over the internet using a web browser. Alternative names are; e-web-store, e-shop, e-store, internet shop, web-shop, web-store, online store, online storefront and virtual store. English entrepreneur Michael Aldrich invented online shopping in 1979. His system connected a modified domestic TV to a real-time transaction processing computer via a domestic telephone line. In March 1980 he went on to launch Region's Office Revolution, which allowed consumers, customers, agents, distributors, suppliers and service companies to be connected on-line to the corporate systems and allow business transactions to be completed electronically in real time. The rate of cyber crimes has been increasing and bank details have been misused which raise privacy issues. Customers have to be careful in revealing their personal information. Some of the e-retailers are unreliable. I have collected data from 50 respondents, percentage analysis and chi-square test was used for analysing data. The main objectives of the study were too known about the opinion of women consumer's about network security. This study concluded that Most of the women consumers consider that there are lot of risks in payment and giving personal details.

Keywords: Online shopping, cutomers and women customer's

Introduction

Online shopping or e-shopping is a form of electronic commerce which allows consumers to directly buy goods or services from a seller over the internet using a web browser. Alternative names are; e-web-store, e-shop, e-store, internet shop, web-shop, web-store, online store, online storefront and virtual store. English entrepreneur Michael Aldrich invented online shopping in 1979. His system connected a modified domestic TV to a real-time transaction processing computer via a domestic telephone line. In March 1980 he went on to launch Region's Office Revolution, which allowed consumers, customers, agents, distributors, suppliers and service companies to be connected on-line to the corporate systems and allow business transactions to be completed electronically in real time.

Online shopping portals are witnessing a whopping 200% growth in the sale of electronic items every year. This is driven by the demands like mobile phones, iPods and MP3 players not only from metros but also from small cities. Apparels and accessories (30%) emerged as the second biggest product category after consumer electronics (34%) and is expected to become bigger than consumer electronics this year. Other popular searched categories include books (15%), beauty & personal care (10%), home and furnishings (6%), baby products (2%) and health care (3%). Fitness equipment like tread mills and lifestyle items like sunglasses are a big hit among Punjabis. Some Online shopping portals in India are www.homeshop18.com, www.flipkart.com, www.yebhi.com, www.myntra.com. American online retail agent Amazon.com has also made an entry into the Indian market in 2012 with Junglee.com, an online shopping site powered by the \$48 billion company. Apart from the technology development, there are certain cyber crimes also occurring in online purchase. Sometimes, there is the disappearance of shopping site itself. In addition to above, the online payments are not much secured. So it is essential for e-marketers and retailers to pay attention to this issue to boost the growth of e-commerce. The rate of cyber crimes has been increasing and bank details have been misused which raise privacy issues. Customers have to be careful in revealing their personal information. Some of the e-retailers are unreliable.

Statement of the problem

Shopping online became an alternative solution for the women consumers, since it is more comfortable than conventional shopping. They can shop at their leisure time i.e., after completing their house works, they can sit comfortably and shop in online. Nowadays lot of cyber crimes occur. How far it is safe and secure in case of online shopping? This article is primarily to identify and get insight of women consumer's opinion in online shopping and the network security.

Objectives of the study

To analyse the women consumer's opinion about online shopping

To know about the opinion of women consumer's about network security

Methodology

The present study is mainly based on primary data. The data has been collected by distributing the questionnaire to the women consumers residing in Pollachi taluk. Convenience based random sampling has been used to collect the data from 50 women consumers who purchased products in online.

Review of Literature

Mathimithra S and Dr.P.Archanaa in their article on factors influencing the female consumers in buying mobile phones found out that majority of the female consumers have strongly agreed that Good Model at reduced price, Special Offer and Personal recommendation influenced them to purchase the mobile phones.

Saranya W and Palanivelu P in their article about a study on customer preference and satisfaction towards online shopping on Flipkart in Coimbatore district found that most of the women consumers shop through online when offers and discounts are offered to the goods.

Brinda devi.K and Dr.S.Saravanan in their article about a study on online buying behaviour with special reference to Coimbatore city aimed to find about the level of awareness about the internet, which makes them better positioned to identify and take decision for products and services

Analysis and Interpretation

Table No.1

Particulars	Total	Percentage
Area of Residence		
Rural	27	54
Urban	23	46
Total	50	100
Age		
Below 20 years	11	22
21-40 years	30	60
Above 40 years	09	18
Total	50	100
Marital Status		
Married	39	78
Un married	11	22
Total	50	100

Table No.1 reveals that, out of 50 consumers, 27(54%) consumers are from rural area and the remaining 23 (46%) consumers are from urban area; 11 consumers are below 20 years of age, 30 consumers are in the age group of 21 – 40 years and the remaining 9 consumers are in the age group of above 40 years of age. Out of 50 consumers, 39(78%) are married and the remaining 11(22%) are unmarried.

Table No.2**(HA - Highly Agree; A - Agree; N - Neutral; NA- Not Agree)**

Particulars	HA	A	N	NA
Opinion in online shopping				
Convenience shopping	12	20	0	18
Easy Payment	6	8	0	36
Lot of varieties	32	18	0	0
Reasonable price	13	29	0	08
Stress free	37	8	0	5

From the above table it is clear that most of the women consumers consider online shopping is convenient for them, there are lot of varieties of materials are available, price is also reasonable and it is a stress free for them to shop in online.

Table No.3**(HA - Highly Agree; A - Agree; N - Neutral; NA- Not Agree)**

Particulars	HA	A	N	NA
Opinion in Network Security				
Risk of Duplicate sites	18	20	0	12
Risk in payment	19	16	0	15
Risk in giving personal details	24	16	0	10

Table No.3 reveals that most of the women consumers consider that there are lot of risks in payment and giving personal details.

Findings

- ❖ Most of the women consumers are from Rural area who shop through online
- ❖ Most of the consumers are in the age group of between 21 to 40 years of age.
- ❖ Majority of the women consumers are married.
- ❖ Most of the women consumers consider online shopping is convenient for them, there are lot of varieties of materials are available, price is also reasonable and it is a stress free for them to shop in online.
- ❖ Most of the women consumers consider that there are lot of risks in payment and giving personal details.

Suggestions

This world is a competitive one. In every industry the companies compete each other to survive. It is the same case in online also. In order to attract more customers, various online shopping sites are offering lot of offers, discounts etc., Women consumers can be given

special attention, because they are the decision makers in many situations. But many women consumers consider that there are lot of risks in online shopping, regarding their security issues. So these issues can be rectified by the online shopping websites.

Conclusion

This study is framed with an attempt to discuss the women customer's opinion about online shopping and network security who are residing in Pollachi Taluk. This study reveals that most of the women customers are felt online shopping are more convenient for them and also it produces more risks in online payment and giving personal details. It is necessary to remove fear regarding these problems of women customers.

DIGITAL INDIA AND INDUSTRY 4.0

Dr. T. Mohana Sundari

Assistant Professor, Department of B.COM CA
NGM College, Pollachi, mohanasundari688@gmail.com

Abstract

The globalization and the competitiveness are enforcing organizations to readdress and innovate their production processes. The world is entering a new era of industrial emanating technology in automation and data exchange through the use of Internet of Things called fourth technological revolution or Industry 4.0. It represents the amalgamation of tools already used in the past such as big data; cloud, robot, 3D printing, simulation, etc. are now connected into an internet to transmit digital data. For the implementation of this new paradigm, there are many opportunities and also many challenges. This paper highlights brief introduction on challenges and opportunities for implementation of Industry 4.0 in India. Digitization of product and service offerings: Complete descriptions of the product and its related services through intelligent networks. Introduction of innovative digital business models: The high level of interaction between systems and technology opportunities develops new and integrated digital solutions. The basis of Industrial Internet of Things is the integrated and concurrent availability and control of systems across the organization.

Introduction

An industrial revolution can be defined as a disruptive leap in the industrial process, a development that produces fundamental transformations in the society and the economy. First industrial revolution started in 1784 with the introduction of the first machines that used steam for power. Many people worried and opposed because use of machines may reduce the requirement of manual workers. The second industrial revolution, which initiated around 1870, started the production system which manufactured the components in large scale by adopting assembly line production system which used electricity as source of power. The third industrial revolution which switches the technology driven by mechanical and analog electronic to digital electronics began with the introduction of the robotics and automation in the year 1969. Industry 4.0 has enlarged the capabilities of digital revolution and increased its significance to the organization. Industry 4.0 combines and connects the Internet of Things, digital and physical technologies; robotics, artificial intelligence, cloud computing, additive manufacturing, and others to propel more responsive, versatile and interconnected establishments to make more enlightened decisions. Industry 4.0 carries with it seemingly endless options for technological investments and endless opportunities. The Industry 4.0 is based on the concept of factory of future, where the equipment are integrated with workers through cyber-physical systems (CPS). Industry 4.0 is a new level of establishments that operates, manages and controls the whole value chain of personalized products to satisfy customer needs. The

most important component in Industry 4.0 is Digitalization because it enables to connect technology with human beings.

Industry 4.0 enables complete customization which gives very high flexibility for manufacturers to meet changing requirements from their consumers, who are increasingly favoring more customizable and flexible outputs over standard product offerings. This initiative allows sportsman's to customize and personalize their sports footwear to fulfill their styling and performance needs. In their effort to bring manufacturing closer to their customers in the respective countries, Adidas has also planned to open its first fully automated factory in Germany. Such technologies have also helped manufacturers in minimizing lead time for prototype development. As a result, companies are able to speed-up their time to market. The success metrics for organizations will also change from achieving low cost effectiveness to obtaining higher returns on capital investment. Profitability is increased by Industry 4.0 by facilitating greater customization, minimizing the complexity cost and reducing labor costs. Simultaneously, it enables to high return on the capital invested by allowing asset utilization and greater flexibility.

Opportunities for Industry 4.0

India is very much eager to implement Industry 4.0 and several measures have been adopted. According to Indian Brand Equity Foundation (IBEF), by 2025, the Government of India intends to raise the production sector's contribution from the present 16% rate to 25% of Gross Domestic Product (GDP). India is also prepared to face global competition by undertaking the Make in India and skill development programs. It is all set to lead the world with Smart Manufacturing. The following are the opportunities for industry 4.0 in India:

- (i) Young Population:** Employers want to invest in young people and see them as a future asset. With an average age of less than 30 and nearly 10 lacks individuals joining the workforce every month, India offers the ideal atmosphere for first time young job seekers to pursue opportunities in emerging fields of interest in the Indian manufacturing industry - consumer electronics, automotive, aeronautics and aerospace.
- (ii) Favorable Policies:** The 'Make in India' program is India's plan of action to encourage Indians to create products for the world market. India has the resources, policy and workforce in place. What is needed is experts from foreign industries to crank-up a manufacturing revolution in the areas of automobile and aerospace. Relaxed FDI policies and better protection for company's intellectual property, coupled with industry favorable government policies have created competition amongst Indian states to attract foreign direct investments in the manufacturing sector. With the

increase in World Bank's Ease of Doing Business ranking is also a welcome sign that first time foreign investors are positive about the country's growth potential.

- (iii) **Skilled workforce:** With a strong high school and university ecosystem, Indian students are sought after by multinationals all over the world. Fast Changing times and a slow adaptive to education system however, have rendered man qualities gained in academics Redun- dant in today's work environment. The efforts of governments and private industry to set up reskilling and skill upgrading centres to raise employability.
- (iv) **Large population base ready to go digital:** The emphasis on ' Digital India ' and the government's intervention in 2016 to suppress uncoun ted cash from the sy stem through a huge demonetization effort are all pushing Indians too quickly to adjust to the use of digital payments. Rapid growth is set for this sector. Indian government has also begun attempts to link the nation digitally by providing a Unified Payment Interface (UPI), a zero-cost payment gateway and cash enterprises.

Industry 4.0 Benefits

- (i) Lower Cost.
- (ii) Additional Revenue.
- (iii) Enabling Industrial Companies to optimize customer relationship.
- (iv) Transparency in the production process.
- (v) Clarity on the status of all aspects of production system in real time.
- (vi) Industrial companies that successfully implement Industry 4.0 no longer need to choose between focusing on a better top or bottom line. They can improve both at the same time.
- (vii) Logistics processes become leaner.
- (viii) Reduced inventories.
- (ix) Standardization of maintenance processes.
- (x) Cent percent traceability

Challenges for Industry 4.0

The ministry of heavy industries and public enterprises provide supports to facilitate four centres in the country to help SMEs materialize Industry 4.0. Bengaluru is in the process of setting up India's first smart factory. This smart factory is driven by the Internet of Things (IoT) and data exchange. This Smart Factory is being established with financial assistance from The Boeing Company at the Centre for Product Design and Manufacturing (CPDM) department of Indian Institute of Science (IISc). The goal of Government of Andhra Pradesh to make the state into an Internet of Things (IoT) hub by 2020. With the participation of the private sector, the state government plans to set up 10 IoT hubs that will create 50,000 direct jobs in different IoT verticals. Since more than 80% of the

manufacturing industry in India is in the MSME sector, the implementation of Industry 4.0 is a major challenge.

- (i) **Investment:** A huge issue for many enterprises who wish to implement Industry 4.0 is a buying strategy that is less than clear for a lot of them. As a result, there are often unclear economic incentives for development and organizations find themselves having to spend over the odds to implement these new initiatives. Such a technological transformation will require a significant investment in new technology. For such a transformation, the decision will be taken by the highest management level. Even then, it is necessary to calculate return on investment and take the risks seriously. In addition to the requirement of huge capital, such transformation will isolate small businesses and might lose their market share in the future.
- (ii) **The workforce:** Optimizing Talent: Bringing together smart factories and manufacturing automation will bring remarkable levels of effectiveness and speed to a business, but the drawback of this is that many organizations will see a workforce that will be unused to the new developments taking place, and ill-equipped to adapt to them. While it remains early to make a judgment on working circumstances with the global implementation of Industry 4.0, it is safe to say that workers will need to acquire different or an all-new set of skills. This may help to increase the employment rates but it will also isolate a big sector workers. The sector of workers whose work is to perform repetitive tasks will face a challenge in keeping up with the industry 4.0. Different forms of education must be initiated, but it still doesn't solve the problem for the experienced workers. This is an issue that might take longer time to solve.
- (iii) **Standardisation:** Integrating Software, Hardware, Operating Systems and standards play an important role in forming industry 4.0. Developments and coordination of standards and proposals will promote efficient development of industry 4.0 infrastructures and applications, services and devices. There is some confusion with companies trying to innovate as to which standards will be adopted in the next five years. A huge challenge to overcome will be to derive a standardized system that works for all parties and allows for both horizontal and vertical integration, and results in maximum value for both present and future investments. In today's network world, global standards are more relevant than local agreements.
- (iv) **Data security:** Medium and Small scale organizations are primed to benefit the most from Industry 4.0, but this represents a quandary. Compared with traditional manufacturing data security, privacy issues of Industry 4.0 become more prominent. Much information includes privacy of users, so that protection of privacy becomes an important security issue in industry 4.0. Because of combination of things, services and networks, security of Industry 4.0 needs to cover more management objects and levels than traditional network security. Existing network security architecture that is

designed from the prospective of human communication may not be suitable and directly applied to Industry 4.0. The existing security mechanism will block logical relationship between components in Industry 4.0.

- (v) **Technical Challenge:** Technology for industry 4.0 can be complex for various reasons. Firstly there are legacy heterogeneous architecture in the existing networking technologies and applications, For example different environments and applications requires different networking technologies and the ranges as well as other characteristics of cellular, wireless local area networks and RFID technologies are much different from each other [5][21]. Secondly communication technologies including fixed and mobile communication systems, power line communications, wireless communication technologies for both fixed and mobile devices either simple or complicated should be low cost and with reliable connectivity.
- (vi) **Real-time constraints:** Industry 4.0 requires some amount of real-time performance if they are going to control machines and factories [22]. Industrial control systems require real-time reaction, making changes to the systems very difficult. Downloading the required data from the cloud for plant system operation requires the system of the plant to access "big data" in real time in cyberspace. Loading accessible software versions on the malware scanners and antivirus programs of the system could affect the process performance. Any real-time interaction must be quick enough to promote the demands for system automation. For example, Safety Instrumented Function (SIF) for turbine over-speed protection may need to react within 10 ms on demand.

Conclusion

Industry 4.0 creates a newer manufacturing environment and knowledge economy. Industry 4.0 encompasses many technologies such as IoT, WSN, Communication technologies, low power electronics etc. The development of Industry 4.0 in India exposed many challenges that includes lack of fundamental theory supporting, immature standards, Technical challenges and lack of investment. With these challenges, India has several opportunities for industry 4.0 implementation. Such opportunities are large young population ready to go for digitalization, central government policies like Make in India and skill development, significant experience in developing IT- related infrastructure, Companies collaboration with educational institutes etc.

MICRO, SMALL AND MEDIUM ENTERPRISES IN INDIA (MSME) - SCHEMES & OPPORTUNITIES FOR SUSTAINABLE DEVELOPMENT

M. Prem

Assistant professor, Department of Commerce (Finance)

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Micro, Small, and Medium Enterprises are the backbone of an Indian economy and its creating noticeable growth rate and generating job possibilities. In many established and emerging nations, this sector has been viewed as a catalyst for both social and economic progress. MSMEs have made a remarkable contribution to the Indian economy in terms of creating jobs, reducing regional inequities, promoting equitable economic growth, and increasing the nation's export potential. The MSME sector in India includes a broad range of companies and makes a substantial contribution to the GDP, exports, and job creation of the nation. But these businesses encounter a number of difficulties, such as financial availability, technology adoption, skill development, and regulatory compliance. The study aims to identify significant Schemes and provide recommendations to address the enormous growth potential and prospects for the development of the MSME sector that are present in India.

Keywords: MSMEs, Sustainable Development, National Economy, Schemes

Introduction

MSMEs (Micro, Small, and Medium Enterprises) are essential to India's efforts to achieve sustainable development. These businesses support the whole Indian economy and provide a significant contribution to job creation, GDP growth, and socioeconomic advancement. India is a developing nation with a significant number of low-capital-investment Micro, Small, and Medium-Sized Enterprises. These businesses are not up to par to compete with global quality standards. Despite this, these businesses employ a sizable workforce. Because of the numerous challenges they face with regard to raw materials, finances, marketing, and other factors, MSMEs are unable to significantly boost the Indian economy. The Indian government has implemented a number of programs and policies both before and after liberalization to advance job possibilities and expand this industry. The Indian economy is concentrating on achieving the aim of sustainability through MSMEs by using locally accessible resources for the manufacturing, labor-intensive processes, and resettlement. The article examines the growth and importance of MSMEs in India. Additionally, this study provides the sustainable an opportunity and Schemes for MSMEs developments.

Objectives of the Study

1. To know the role of the MSMEs in India.
2. To Examine the Schemes & Opportunities for MSMEs sustainable development.

Research Methodology

The study is descriptive in nature. The present study is based upon the secondary sources of data; the secondary data was collected through the literature, Books, research papers, research articles, and various other publications, Websites. The main objective of this study is to bring out the Schemes & Opportunities for MSMEs Sustainable Development in India.

Review of Literature

1. **Rajamohan. S. and Sathish. A., (2019)** in their study the importance of MSME in sustainable society development was highlighted in Rajamohan S. and Sathish A.'s report, "MSME in India for the Sustainable Societal Development," published in 2019. According to the study, India's GDP and GVA account for around 32% and 29%, respectively, and play an essential role in the growth of entrepreneurship and job creation annually.
2. **Sarita Satpathy, Sailaja Rani, and Nagajyothi, M.L. (2017)** the study, "Study of Micro, Small and Medium Enterprises; the Backbone for Economic Development of Indian Economy," highlighted the importance of MSMEs in terms of total product, GDP, employment, and fixed investment in the Indian economy. It also focused on the MSME sector's growth rate relative to other sectors. Researchers identified and came to the conclusion that this sector has enough potential and opportunities to speed up industrial growth in programs like "Make in India," and they recommended that the government adopt further measures for the betterment of people.
3. **K.Vasanth, K. Krishna (2012-** In their study, the authors claim that networks of SMEs will become crucial for tackling the systemic issues underlying industrial ecology, organizational resilience, and global supply chain sustainability because multiple effective models of the sustainable SME are steadily evolving.
4. According to **De, Sankar (2009)**, there are many difficulties that SME's in India must overcome, but maybe none are as challenging as finding short- and long-term finance.

Growth of MSMEs in India

Micro, Small, and Medium-Sized Enterprises (MSMEs) would still be important to India's economy and society in 2023. These businesses have evolved in reaction to the shifting economic and technical environments, and they contribute to numerous parts of the nation's development. MSMEs are still an essential component of India's economic

expansion. They make significant contributions to the GDP, export revenue, and employment creation of the nation. The ability of MSMEs to quickly adapt to market changes and support settings that are economically resilient is well known. The Indian government plans to increase the number of jobs in the MSME sector by 5 crore from the current level of 11.10 crore by the year 2025, according to the National Sample Survey (NSS), which was done between the years of 2015 and 2016. As of December 2022, 9.31 crore people including 2.18 crore women were employed in 1.28 crore MSME registered industries, according to the most recent data from the Udyam portal.

Source: MSME

Role of MSMEs in India

1. **Employment Generation:** MSMEs have been a significant source of employment in India, helping to create jobs in both the urban and rural areas. They give many people, including semi-skilled and skilled employees, the chance to find employment.
2. **Encouragement of entrepreneurship:** MSMEs act as a crucible for entrepreneurship, encouraging it. They promote entrepreneurship, which promotes innovation and economic expansion. Initiatives like "Make in India" have helped to encourage manufacturing and entrepreneurship in the nation.
3. **Regional Growth:** MSMEs have the potential to encourage balanced regional development by forming industrial clusters and creating job opportunities in rural and underdeveloped areas. This aids in minimizing the movement of people from rural to urban areas.

4. **Skill Development:** MSMEs frequently offer chances for skill development and vocational training, helping to up skill the Indian workforce.
5. **Access to finance:** Through programs like the Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE), the government and financial institutions have taken steps to boost MSMEs' access to credit. This makes it possible for MSMEs to obtain loans and grow their businesses.
6. **Technology Development:** To increase productivity and competitiveness, MSMEs are progressively implementing digital technology and automation. Their growth and sustainability depend on this digital change.

Schemes for MSMEs Development in India

1. The "Make in India" initiative and the "Atmanirbhar Bharat Abhiyaan" (Self Reliant India Campaign) have been instrumental in promoting trade and domestic manufacturing in the nation, particularly MSMEs, also known as the "backbone of the Indian economy."
2. The Prime Minister Employment Generation Program was established with the goal of generating employment opportunities for MSMEs in the nation.
3. MSME and Small Industries Development Bank of India established the Credit Guarantee Trust Fund for Micro & Small Enterprises (CGTMSE) to offer collateral-free loans (up to INR 1 cr.) to specific Micro and Small Enterprises (MSEs).
4. Interest Subsidy Eligibility Certificate (ISEC): This program was launched as a means of financing the khadi initiatives carried out by khadi institutions around the nation. To close the gaps between the amount of money that is available from budgetary sources and the amount that is actually needed, it mobilizes money from banking institutions.
5. Support for MSMEs through the ZED Certification Program Financially - The program's goal is to implement Zero Defect & Zero Effect (ZED) practices in Indian MSMEs' manufacturing in order to support the "Make in India" drive. The Government of India offers MSMEs a subsidy of up to 80% under the program.

Scheme & Incentives Provided for MSMEs in Tamil Nadu

One of the most important states for success in the MSME sector is Tamil Nadu. Its vibrant and active culture has spawned small- and micro-scale businesses. To further boost the sector's growth, the state government has also offered a variety of incentives and awards for the various industries. Especially in the MSME sector, Tamil Nadu is unquestionably a land of opportunity. It is full of talented individuals who can continuously provide high-caliber services. It has more than five million micro, small, and medium-sized enterprises, making it the third-largest Indian state in terms of MSMEs.

1. New entrepreneur Cum enterprise development scheme

2. Unemployed youth employment generation program
3. Pacts with TANSIDCO and TAICO bank
4. Capital Subsidy
5. Tamil Nadu small industries development corporation (SIDCO) initiative

Conclusion

MSMEs' sustainable development in India is crucial for both accomplishing broader social and environmental objectives as well as economic progress. And also an important part of India's economic growth, and government programs and opportunities are crucial to their expansion and advancement. This study reveals that the development of MSMEs is supported by both the central and state governments. These programs have contributed to the sustainable growth of MSMEs in India by offering assistance and resources to these businesses. It is important that the government continues to assist and give resources to MSMEs in order to ensure their success and growth since the importance of MSMEs in sustainable development cannot be overstated.

INDUSTRY 4.0 IN INDIA: EMBRACING THE DIGITAL REVOLUTION IN MANUFACTURING

Mrs. B. Priya

*Assistant Professor of Commerce (CA)
Sona College of Arts and Science, Salem.
Priyabaskaran1981@gmail.com*

Abstract

India's manufacturing sector has been a key driver of its economic growth, contributing significantly to employment and GDP. However, to remain globally competitive, Indian manufacturers need to adopt advanced technologies and processes. Industry 4.0 provides the perfect framework for this transformation. By leveraging digital technologies, Indian manufacturers can enhance their productivity, improve product quality, reduce costs, and respond more effectively to changing market demands. The world is currently witnessing a significant transformation in the manufacturing sector. With the advent of Industry 4.0, the world is currently witnessing significant changes in the manufacturing sector. The fourth industrial revolution is characterized by the integration of digital technologies such as the Internet of Things (IoT), artificial intelligence (AI), big data analysis and robotics into production processes. India, with its growing economy and vast manufacturing sector, has also embraced this digital revolution, paving the way for a new era of manufacturing excellence.

Introduction

Industry 4.0 takes digitalization to a whole new level with connections between physical and digital spaces through the Internet of Things (IoT), big data and analytics, cloud, autonomous robots, artificial intelligence, machine learning and augmented reality, as well as access to real-world resources. temporal data. Industry 4.0 is revolutionizing the way companies manufacture, improve and distribute their products. Manufacturers are integrating new technologies, including the Internet of Things (IoT), cloud computing and analytics, artificial intelligence and machine learning, into their production facilities and throughout their operations. These smart factories are equipped with advanced sensors, integrated software and robots that collect and analyze data and enable better decision making. Even more value comes when data from manufacturing operations is combined with operational data from ERP, supply chain, customer service and other business systems to create a whole new level of visibility and insight into previously hidden information. These digital technologies are leading to greater automation, predictive maintenance, self-optimizing process improvements and, most importantly, new levels of efficiency and responsiveness to customers that were not previously possible. The goal of Industry 4.0 is to enable companies to make faster and smarter decisions while minimizing costs and human intervention.

Digital India

Digital India is a flagship program of the Government of India aimed at transforming India into a digitalized society and knowledge economy. It has the following goals:

- ❖ Digital infrastructure as an essential tool for every citizen: This includes the availability of high-speed internet to all citizens, building a digital identity for life, providing a mobile phone and a bank account to all citizens, easy access to public services, etc. in a secure cyberspace .
- ❖ On-demand management and services: includes the seamless integration of government services between ministries or jurisdictions, the provision of real-time services on online and mobile announced as part of the Digital India Initial platforms, electronic and cashless financial transactions, and the use of geographic information systems (GIS) for support systems decisions and development.
- ❖ Digital Citizenship: includes digital literacy, widely available resources in local languages, collaborative platforms for participation in governance and virtual rather than physical presentation of documents.

Some key Digital India initiatives relevant to Industry 4.0 includes:

- ❖ Center of Excellence for Internet of Things (COE-IT): The Center for Internet of Things was announced as part of the Digital India Initiative, which aims to rapidly launch the IoT ecosystem by leveraging the strengths of Indian IT and helping the country take a leading role in the convergence of space hardware and software. The main goal of the center is to develop innovative applications and domain functions. Additionally, the center will help create employable talent, a startup community and an entrepreneurial ecosystem for 45 IoT. It was created in collaboration with NASSCOM and the strategic partners are Bosch, Intel, GE, Cisco, TCS and Microsoft.
- ❖ Electronics Development Fund (EDF): Part of the government's Digital India program to develop the Electronic Systems Design and Manufacturing (ESDM) sector to achieve 'zero net imports' and make India an ESDM hub too to meet Indian domestic demand than exports. To this end, the Electronic Development Fund (EDF) was created as a "fund of funds" to participate in professionally managed "children's funds" which in turn provide venture capital to companies developing new technologies in the fields of electronics and nanoelectronics. and information technology (IT) National Supercomputing Mission(NSM): The National Supercomputing Mission aims to strengthen national academic and research and development institutions across the country by creating a vast supercomputing network with more than 70 high-performance computing facilities. These supercomputers will also be connected to the National Supercomputing Network through the National Knowledge Network (NKN).

Elements of Industry 4.0

- ❖ **Huge amount of data:** The system collects too much data, making it difficult to identify relevant information and trends that can lead to intelligent analysis. Nowadays, enormous data analysis techniques are emerging. They help determine the performance of an individual component and its operating limits to prevent future production problems and take preventive measures.
- ❖ **Cloud Computing:** There has been a big change in the use of cloud solutions in the industry. The cloud will be used for applications such as remote services and performance benchmarking, and its role in other business areas will continue to grow. For example, commercially available smart watches have turned our wrists into smartphone cases that allow us to send text messages, make phone calls, and more. Devices like Fitbit and Jawbone have helped revolutionize the fitness world. With the right connections and data, IoT can solve congestion and reduce noise and pollution.
- ❖ **Simulation:** You can use system simulations to evaluate various scenarios. Once scenarios are assessed, cost-effective solutions can be developed, tested and implemented much more quickly, resulting in lower costs and faster time to market.
- ❖ **Autonomous robots:** They are used to automate production processes in various industries and are based on the concept of the Internet of Things (IoT). This allows computer devices and machines to communicate with each other.
- ❖ **Autonomous mobile robots (AMR)** can move materials around the factory by avoiding obstacles, coordinating with fleet colleagues, and identifying pickup and delivery locations in real time. By connecting to a central server or database, the activities of robots can be coordinated and automated better than ever. They can perform tasks intelligently and with minimal human intervention. i.e. ASRS stacker cranes, roller shutter trolleys, etc.
- ❖ **Augmented Reality (AR)** Increasingly popular, augmented reality efficiently provides real-time information to help users better integrate and interact with electronic systems. Examples include providing part repair information that can be viewed on various devices or training personnel using 3D simulations and visualizations of the plant or equipment.
- ❖ **Cybersecurity:** Information security will become critical as we move away from closed systems and toward greater connectivity via the Internet of Things and the cloud. Security and reliability enable the successful implementation of a truly modern and digital production workflow that takes full advantage of a connected environment.

- ❖ **System integration:** In most cases, systems are highly automated in their operation and have difficulty communicating with other systems. Standards and open architecture facilitate the transfer of information to both the company and the customer/end user. This may include establishing common languages for data exchange, such as JDF for task information.
- ❖ **Additive Manufacturing:** This is becoming increasingly important for low-volume applications or for producing unique parts or customized products. This information is used directly by customers or suppliers to improve projects and thus increase efficiency, flexibility and profitability.
- ❖ **Edge computing:** The demands of real-time manufacturing operations mean that some data analysis must be performed at the “edge” where the data is created. This minimizes the delay between data generation and the required response. For example, detecting a safety or quality issue may require near real-time equipment intervention. The time required to transfer data to the corporate cloud and then to the factory can be prohibitive and depends on the reliability of the network. Using edge computing also means data stays close to the source, reducing security risks.
- ❖ **Digital Twin:** Digital transformation through Industry 4.0 has enabled manufacturers to create digital twins, which are virtual replicas of processes, production lines, factories and supply chains. A digital twin is created by collecting data from internet-connected sensors, devices, controllers, and other IoT objects. Manufacturers can use digital twins to increase productivity, improve workflows and design new products. By simulating a production process, for example, manufacturers can test changes to the process to find ways to minimize downtime or improve capacity.

Trends in Industry 4.0

- ❖ Below are the three most important Industry 4.0 trends that are changing the way of life of industrial companies and their employees today:
- ❖ **Digitalization:** Production processes in all sectors, from high technology to the plant industry, are now being transformed by digital technologies .
- ❖ **Industrialization:** Companies are already integrating these technologies for improvement and development purposes.
- ❖ **Optimization:** Advanced manufacturers are discovering that improving the production process of even the simplest products opens up new development opportunities.

Conclusion

Industry 4.0 will revolutionize manufacturing around the world, just like the first three industrial revolutions. Thanks to global supply chains and highly interactive markets, this revolution will be completely different than previous ones: it will happen much faster and bring previously unexpected results. It will highlight the fact that small changes in one area of the manufacturing ecosystem will result in significant changes across the entire ecosystem due to the connectivity throughout the supply chain and the speed of information dissemination. Also Industry 4.0 enables the flow of information not only from the manufacturer to the product, but also between manufacturers, products and especially customers. The ability to embrace Industry 4.0 and take advantage of opportunities that arise quickly (and in many cases unexpectedly) will be key to success in the new global marketplace. Taking this innovation from concept to mass product will be critical to success. Equally important will be ensuring a talent pipeline within 's manufacturing workforce, enabling to rapidly innovate Industry 4.0.

POVERTY ALLEVIATION AND RURAL DEVELOPMENT THROUGH MSMEs

Ms .M. Ragaprabha

Assistant Professor,

PG Department of Commerce with International Business

Nallamuthu Gounder Mahalingam College, Pollachi

Mr. N. Ramakrishnan (23-PI-12)

I-M.Com IB

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract:

It is a reiterated fact that India is one of the fastest-growing countries in the world. The government has taken various initiatives to accelerate the growth of the country. Various Government and non-government institutions are working relentlessly to take the country to new heights of growth. The challenge here is to take care of every section of society and every sector of the economy for overall sustainable development. The problem of poverty still persists in rural areas. The rural development and poverty alleviation are the major challenges which hinder the growth of the country. The Micro, Small and Medium Enterprise Sector is one of the crucial sectors that could prove a game-changer in rural development and poverty alleviation. In this paper, an attempt has been made to study the situation of rural economy and poverty in the country. The researchers have tried to list out the possibilities that MSMEs could offer to alleviate poverty and contribute to sustainable rural development.

Keywords: *Rural development, Micro, small and medium enterprise MSMEs, Rural economy*

Introduction:

MSMEs have a critical role to play in the development of rural India. They not only bring employment opportunities but also help in various other ways such as getting recognition, facilitating economic growth and so on. Here is how small industries are helping achieve rural development. When it comes to MSME and rural development, there is the valuable role of small-scale industries in rural India, and the contribution of the cottage industry. Traditional businesses such as cotton weaving, silk weaving, handicrafts, etc., have been instrumental in the growth of the region, by ways of eradicating poverty, generating employment, contributing towards economic growth and so on.

Definition of MSMEs:

The definition of MSMEs in India has been ever-changing as per the growth in the economy. First systematic and robust definition of MSMEs was provided in the MSMED Act, 2006. Which defined the MSMEs in terms of investment criteria for both manufacturing and service enterprises. The definition has been changed again in June 2020,

where the criteria of definition the MSMEs as manufacturing and service enterprises has been removed and the units are defined on the basis of investment and turnover.

MSMEs in Rural Development:

MSMEs have a big role to play in rural development. They help rural population and facilitate development in various ways. Here is how:

- ❖ Employment generation
- ❖ Making workforce employable
- ❖ Economic development of the rural area
- ❖ Getting recognition on the global map
- ❖ Generating foreign exchange
- ❖ Self-reliance or Aatmairbharata

Employment generation:

MSMEs in rural areas create employment opportunities for youth in the nearby villages. Apart from direct employment, the business also creates opportunities for other businesses indirectly. For example, a small-scale food manufacturing unit in the village generates employment for workers in the factory. Additionally, it also creates opportunities for allied sectors such as local raw material suppliers, machinery and tool manufacturers, logistics and transport service providers, and so on. As the rural population gets employment and business, it helps in eradicating poverty in the region. In other words, MSME sector acts as tool for poverty eradication. Government schemes, like the ASPIRE scheme of 2015, is centred around supporting entrepreneurship in agro-based businesses in rural India for employment generation and economic development.

Making workforce employable:

Many a times, MSMEs provide initial training to enable the local workforce to undertake specific jobs. This gives local people an opportunity to learn new skills and be relevant with current time and age. For example, the local workforce may not have the skills required to work on a new high-tech machine. However, with training they can be taught and acquire new skills and be ready for this job and similar opportunities. Also, it helps the workforce to be more employable in the future and grow in their careers.

Economic development of the rural area:

By generating employment and creating business opportunities, the role of small-scale industries in rural India development is enormous. They provide better earnings that translates to better quality of life for the rural population. As the buying capacity of the rural population increases, it leads to the economic development of the region too.

Getting recognition on the global map:

The MSME sector, especially the cottage industry like saree weaving, carpet weaving etc., are classic examples of family run businesses (or generational businesses). Generally, the entire family is engaged in the business and in some cases, the whole village. Through the arts, the artisans' creativity gets exposure in the national and global markets. Many traditional sarees such as Banaras silk from Uttar Pradesh, Kanchipuram silk sarees from Tamil Nadu, Paithani from Maharashtra, etc., are known for delicate work. They are not only popular in the country but are also exported globally.

Generating foreign exchange:

As mentioned, many MSMEs in the rural sector are engaged in exports and generate foreign exchange, in turn helping the national economy to grow. For example, India is the 5th largest exporter of leather goods and accessories, according to Invest India. Leather exports reached \$4.03 billion in FY 2020-21. Each exporting MSME has contributed to reach this milestone.

Self-reliance or Aatmairbharata:

As the MSMEs in the rural areas mostly source raw materials and workforce locally, they are aligned with the central government's mission of self-reliant India or Aatmanirbharata Bharat.

How can your business help rural development?

Source locally: Procurement strategy of sourcing locally can help your business to be cost effective. Additionally, you generate business for another local/rural business and help it grow too.

Hire local workforce: You can hire local talent. If the need be, they can undergo training to acquire new skills for the job. Many large companies having manufacturing units in the rural region have a policy of acquiring a certain percentage of talent from the local area.

Collaborate with rural businesses: Instead of competition, forge collaborations with alike or complementing businesses in the region. This will help you as well as other businesses grow and expand.

MSMEs and Poverty Alleviation:

India is the second most populated country after China accommodating about 1.25 billion people. The country is the seventh-largest country in the world with an area of 3,287,000 km². (SOS Children Village Canada). According to the Global Multidimensional Poverty Index released by the joint collaboration of UNDP-Oxford University in September

2018, there were 364 million poor in India. Currently, in the wake of COVID-19 effect, the IMF World Economy Outlook suggests that by the end of 2020, some 690 people are likely to be poor in India. This would be a mammoth increase of 47.25% within two years. The challenge lies in providing employment and works to the people so that this poverty level is minimised. The COVID-19 has hit badly every nation around the globe, as per the World Bank estimates, the fact that the global economy is set to shrink by 5.2 per cent in 2020 and per capita income is expected to decrease by 3.6 per cent adds to the problem of poverty in the India. Ironically, the first goal of The United Nations Sustainable Development Goals is Reducing poverty. These goals have to be completed before 2030. In the wake of COVID-19, the task is now a bit difficult as more people are going to be dragged below the poverty line. In such a scenario, the local MSME business is going to play a major role in the country like India. The MSMEs have been a great employment generator in the past and helps most disadvantaged people in society by employing them in various kind of establishments. Central to the problem of poverty is unemployment. If everyone has something to do which earns them money for fulfilling the basic necessities of life, then there will be no poverty. Having something to do and making an earning out of it is a privilege which unemployed people lack. Poverty is cancer in any economy which does not let the economy grow. The MSMEs can be a game-changer in poverty reduction.

As these MSMEs are mostly labour intensive, they are able to accommodate more manpower and create more jobs than large enterprises. These MSMEs help poor earn income for living and improve their socio-economic status. Also, they provide quality employment without displacing the rural folk from their native place as they are located in far reaching rural areas only. The MSMEs are the largest non-farm employment generator in rural India. The table below shows the employment generation capabilities of the MSME sector.

Suggestions:

- ❖ Emphasis must be given to establishing more agro based units in the rural areas as farm products can be easily procured by them without any extra transportation cost. Many entrepreneurs in villages have started their own businesses in rural areas to use the farm produces to transform them into saleable products.
- ❖ These types of entrepreneurs must be provided proper support in the form of technical assistance, marketing support etc.
- ❖ Promoting rural tourism with the help of rural MSMEs can be one of the best ways to boost the rural economy. Many natural hill stations and cultural sites are situated in rural areas. They can be developed as a tourist spot with the help of local people which would generate employment and source of income to the local people for many generations to come.

- ❖ Skill Development Programs and Entrepreneurship Development Programs must be provided in the rural areas so that the rural youths can be imparted skills other than farming activities that their ancestors have been doing since ages. This would encourage them to take initiatives for undertaking entrepreneurial activities. Panchayat Bhawan and Primary schools could be used for these purposes.
- ❖ Setting up of ancillary units of large enterprises in the rural area could generate more employment in the rural areas. These ancillary units would supply the farm produces and other finished and semi-finished goods to large enterprises. These ancillary units must be made mandatory to employ the village people only.
- ❖ Lack of infrastructure in rural areas has remained a major problem since independence. The government must ensure that Infrastructural support in the form of uninterrupted water and electricity supply is provided to the MSMEs in rural area along with the road connectivity for transport.

Conclusion:

MSMEs can be an effective medium to use local resources for more productive purposes with the coordination of government and local institutional bodies. It is required that MSMEs must be backed and supported in the mission to reduce poverty and unevenness in the development. The Problems faced by MSMEs must be addressed properly and special attention should be given to Micro enterprises. The Government of India has taken a slew of measures and is striving to improve the economic and social conditions of the rural population and non-farm sector. Setting up of Micro-Units Development and Refinance Agency (MUDRA) Bank is one such step in this regard. The government should continuously and comprehensively monitor such schemes. Through government interventions in the form of financial, infrastructural and technological support, MSMEs must be strengthened create more employment which would ultimately lead to rural development and poverty alleviation. More the MSMEs flourish, more it paves the way for poverty alleviation and rural development in the country.

SUSTAINABLE DEVELOPMENTS THROUGH MSME'S: A PATHWAY TO SELF-RELIANT INDIA

Ms. R. Sasikala M.C.A., M.Phil.,

Guest Lecture, Department of Computer Science,
Arignar Anna Government Arts College, Villupuram.

Abstract:

The Industrial Internet of Things (IIoT) has emerged as a transformative technology in the modern industrial landscape, enabling organizations to achieve unprecedented levels of efficiency, productivity, and competitiveness. While larger enterprises have been quick to adopt IIoT solutions, its adoption among Micro, Small, and Medium-sized Enterprises (MSMEs) has been a subject of growing interest and research. This paper aims to provide a comprehensive overview of the benefits that IIoT brings to MSMEs, shedding light on its potential to revolutionize operations, improve decision-making, and drive sustainable growth. Through an in-depth analysis of existing literature and real-world case studies, this research explores the multifaceted advantages of IIoT adoption for MSMEs. These benefits include enhanced operational efficiency, predictive maintenance, reduced downtime, improved product quality, and streamlined supply chain management. Moreover, IIoT enables data-driven decision-making, empowering MSMEs to make informed choices and optimize resource allocation. The paper also discusses the potential for IIoT to facilitate remote monitoring and control, thereby reducing the need for on-site personnel, a significant cost-saving advantage for smaller enterprises. Furthermore, the paper examines the role of IIoT in fostering innovation and facilitating the development of new business models. MSMEs can leverage IIoT data to create value-added services, explore new revenue streams, and enhance customer experiences. Additionally, IIoT opens the door to sustainability initiatives by optimizing energy consumption and reducing waste, aligning MSMEs with global environmental goals.

Keywords : IIoT - Industrial Internet of Things, IoS - Internet of Services, ICT - Information and Communication Technologies, MSMEs - Micro, Small, and Medium-sized Enterprises, IoT - Internet of Things, AR - Augmented Reality, OT - Operational Technology, ERP - Enterprise Resource Planning, SCM - Supply Chain Management, SRM - Supplier Relationship Management, CRM - Customer Relationship Management.

Introduction

Industrial Internet of Things (IIoT) is a concept that refers to the use of internet-connected devices and sensors within industrial processes and environments. It involves the integration of physical machinery, equipment, and infrastructure with digital technologies, allowing these assets to collect, transmits, and exchange data. IIoT leverages data analytics, cloud computing, and other advanced technologies to enable real-time monitoring, control, and optimization of industrial operations. In the annals of industrial history, there have been several pivotal moments that have fundamentally altered the way we manufacture goods, organize production, and drive economic progress. From the

advent of the steam engine in the 18th century to the electrification of factories in the late 19th century and the automation revolution of the 20th century, each of these transitions marked a distinct industrial revolution.

Today, we find ourselves at the cusp of another transformative era known as Industry 4.0. This fourth industrial revolution is characterized by the convergence of digital technologies, physical systems, and data-driven processes, heralding a new age of intelligent and Interconnected manufacturing and industrial operations. Industry 4.0 represents a quantum leap in the way we envision, design, and conduct industrial activities, ushering in an era of unprecedented efficiency, flexibility, and innovation.

Industry

Industrial Internet of Things (IIoT) is a concept that refers to the use of internet-connected devices and sensors within industrial processes and environments. It involves the integration of physical machinery, equipment, and infrastructure with digital technologies, allowing these assets to collect, transmits, and exchange data. IIoT leverages data analytics, cloud computing, and other advanced technologies to enable real-time monitoring, control, and optimization of industrial operations.

Key technologies involved in Industry 4.0 Industry 4.0 aims at enhancing and upgrading the current manufacturing facilities, management and maintenance systems and technologies to an intelligent level by utilizing key technologies such as IoT, Internet of Services (IoS), CPSs, autonomous, flexible and cooperative robotics, simulations that leverage real-time data and mirror real world into a virtual model, big data analytics, augmented reality (AR), additive manufacturing, information and communication technologies (ICT) and advanced networking technologies (e.g. cloud computing etc.).

Moreover, it seeks to address the dynamic global market and the competitive nature of today's industries in line with the continuously changing customers' and market needs. Horizontal and vertical system integration will allow that capabilities, functions, departments and enterprises evolve in an interconnected network that enables an automated value chain. Intelligent manufacturing will pave the way for the advancement of modern industry and economy as it will apply cutting-edge technologies to various traditional products and systems.

In an Industry 4.0 context, data collection, analysis and comprehension from many diverse sources, including production systems and equipment, as well as customer management enterprise systems, will become the norm to support decision making in real time.

Some of the key technologies involved in Industry 4.0 are briefly described and analyzed below:

Industry 4.0 represents a paradigm shift from “centralized” to “decentralized”. By decentralizing intelligence, intelligent object networking and independent process management are developed. A crucial new aspect of the manufacturing and production process is the dynamic interaction between the real and virtual worlds in which the industrial production machinery no longer simply processes the products, but it also communicates with them. As a result, industry, production value chains and business models are radically transformed into intelligent ones, thus leading to the development of smart factories.

This new manufacturing paradigm lays high emphasis on creating smart products and developing smart processes by utilizing smart machines and transforming conventional manufacturing systems in smart factories. Smart factories allow the development of intelligent manufacturing environments throughout the entire value chain and they are the outcome of integration through digitalization, usage of flexible and adaptive structures and strategies as well as of artificial intelligence methods.

1. Issues and Challenges in Industry:

The discovery of new technologies has made industry development from the early adoption of mechanical systems, to today’s highly automated assembly lines, in order to be responsive and adaptive to current dynamic market requirements and demands. Challenges like embedment, predictability, flexibility and robustness to unexpected conditions .There are some challenges and fundamental issues occurs during the implementation of industry 4.0 in the current manufacturing industries are given as

- ❖ **Intelligent Decision-Making and Negotiation Mechanism:** In smart manufacturing system needs more autonomy and sociality capabilities as key factors of self organized systems whereas the today’s system have 3C Capabilities i.e. lack of autonomy in the systems
- ❖ **High Speed IWN Protocols:** The IWN network used today can’t provide enough bandwidth for heavy communication and transfer of high volume of data but it is superior to the weird network in manufacturing environment.
- ❖ **Manufacturing Specific: Big Data and Analytics:** It is a challenge to ensure high quality and integrity of the data recorded from manufacturing system. The annotations of the data entities are very diverse and it is an increasing challenge to incorporate diverse data repositories with different semantics for advanced data analytics.
- ❖ **System Modelling and Analysis:** In system modelling, to reduce dynamical equations and conclude appropriate control model, systems should be modelled as self-organized manufacturing system. The research is still going on for complex system.

- ❖ **Cyber Security:** With the increased connectivity and use of standard communications protocols that come with Industry 4.0, the need to protect critical industrial systems and manufacturing lines and system data from cyber security threats increases dramatically.
- ❖ **Modularized and Flexible Physical Artifacts:** When processing a product, Equipment for machining or testing should be grouped and worked together for distributed decision making. So there is a need of creating modularized and smart conveying unit that can dynamically reconfigure the production routes.
- ❖ **Investment Issues:** Investment issue is rather general issue for most of new technology based initiatives in manufacturing. The significant investment is required for implementing industry 4.0 is an SME initially. The implementation of all the pillar of industry 4.0 requires huge amount of investment for an industry.

MSME

Micro, Small, and Medium-sized Enterprises (MSMEs) are the backbone of many economies worldwide. They represent a diverse group of businesses characterized by their size, operational scope, and contribution to economic development. The definition of MSMEs varies by country, but typically, they are categorized based on criteria such as the number of employees, annual revenue, or total assets.

The Key Characteristics of MSMEs are:

1. **Size:** MSMEs are characterized by their relatively small size compared to large corporations. They often have a limited number of employees and lower annual revenues.
2. **Independence:** MSMEs are typically independently owned and operated businesses, although they may form partnerships or be part of family enterprises.
3. **Local and Regional Focus:** Many MSMEs serve local or regional markets, providing goods and services tailored to the needs of their communities.
4. **Adaptability:** MSMEs are known for their agility and adaptability, which allows them to respond quickly to market changes and customer demands.
5. **Diverse Industries:** MSMEs can be found across a wide range of industries, from manufacturing and retail to services and technology.

The Significance of MSMEs:

MSMEs play a crucial role in economic development and job creation. They Contribute to economic growth, innovation, and entrepreneurship in the following ways:

1. **Job Creation:** MSMEs are significant employers, often providing job opportunities for a large portion of the workforce.

2. Job Creation: innovation: MSMEs are known for their innovation and creativity, driving advancements in various industries.
3. Economic Resilience: MSMEs can help diversify economies and reduce dependence on a small number of large corporations.
4. Local Development: They often contribute to the development of local communities by providing essential goods and services.
5. Export Potential: Many MSMEs have the potential to become exporters, boosting international trade.

IIOT

The Industrial Internet of Things (IIoT) represents a transformative force in the World of manufacturing, offering numerous benefits to organizations of all sizes. This journal article explores the specific advantages that IIoT technologies can bring to Micro, Small, and Medium-sized Enterprises (MSMEs). MSMEs are the backbone of many economies, and harnessing IIoT can significantly enhance their competitiveness, efficiency, and overall sustainability.

The global landscape of manufacturing is rapidly evolving, and it is driven by Advancements in technology and the adoption of Industry 4.0 principles. MSMEs play a vital role in the manufacturing sector, and IIoT offers those opportunities for growth and innovation previously reserved for larger enterprises. Through the use of appropriate services, networking technologies, applications, sensors, software, middleware and storage systems, IIoT provides solutions and functions which develop insight and improve the potential and capability of monitoring and controlling enterprises processes and assets.

IIoT services and applications provide vital solutions for effective and efficient Scheduling, planning and controlling of manufacturing operations and. additionally, through the various interconnected devices that are able to communicate and interact both with each other and with more centralized controllers, IIoT will decentralize analytics and decision-making, thus rendering real-time responses and reactions feasible. As a result, the overall availability and maintainability of enterprises is enhanced, their operational efficiency is improved, productivity is accelerated, their product time-to-market is decreased by reducing unplanned downtime and their overall operational efficiency is optimized accomplishing, thus, enormous potential for unprecedented levels of economic growth and productivity efficiency.

IIoT over traditional operational technologies:

Technology like programmable logic controllers (PLCs), supervisory control and Data acquisition (SCADA) systems, etc., are traditional operational technologies.

The Benefits of IIoT over the same are:

- ❖ More effective data collection in terms of cost, speed, and scalability.
- ❖ Ability to collect and analyse a large number of data from various sources including IT

Database that helps in decision making with centralising Database.

2. Benefits of IIoT:

The backbone of economies across the globe, Micro, Small, and Medium-sized Enterprises (MSMEs) form a vital component of industrial ecosystems. Their nimbleness, adaptability, and potential for innovation make them crucial contributors to economic growth and employment. In today's fast-paced and interconnected world, harnessing the power of technology is essential for MSMEs to thrive, and one such transformative technology is the Industrial Internet of Things (IIoT).

3. Increased operational Efficiency:

Data collected from sensors and other sources are processed and used to decide the optimal setting of the production equipment's parameters as such to reduce human intervention in the system.

4. Reduced maintenance cost with the help of predictive maintenance:

The AI-based technique is used in predictive maintenance to sense potential Equipment failure and appropriate calls for the actions. The combination of a large amount of data, both live and historical with the help of AI processing can be used to anticipate possible equipment failure. Timely action will help to prevent breakdowns and reduce maintenance costs.

5. Integration of ERP system with shop floor operation:

All the interconnected systems on the shop floor can be synchronised with Enterprise Resource Planning (ERP) software. This IIoT application is very useful for MSME companies where the people on the shop floor are not competent enough to understand the signals provided and the data available. Or maybe shop floor people don't have sufficient resources to analyse data and decision-making authorities. In such a scenario integration of IIoT devices with the shop floor operations proves to be the key driver in timely decision making on important aspects. With this kind of integration, data can be utilised in an optimal way for decision making which leads to cost-saving and safety of the plant and human resources.

5. Supply chain optimization:

With IIoT, real-time information of various stages of the supply chain is available. Integration of IIoT at vendor end helps to avail real-time information about the supplies. Real-time status on the shop floor is available so that the rest of the supplies from outside resources can be managed optimally without extra burden on inventory and priority-based expediting of the input material. Real-time tracking and expected arrival of goods are also added benefits of the integrated supply chain with the IIoT devices.

6. Data analytics:

Every organisation has a large number of data available at a different location and in different forms. Maybe some are on the shop floor with the stores department and others are with the quality and production department. Some with finance and some with the admin. But utilisation of this scattered data is very much less, particularly in MSME organisations. Even the other department or team members are not aware of the availability of useful information in some location. Modern data analytics solutions are very helpful for MSME companies for proper and timely decision-making. This technology helps in collecting, manipulating, transforming, and analysing data. Many solutions are available in the general IT domain and more are available with IoT. The most useful application of data analytics for MSME companies is to measure operational efficiency. Use of KPIs (Key Performance Indicators) for evaluating the efficiency of production plants, energy efficiency, manpower utilisation, and other factors related to company success.

7. Incorporating IoT capabilities in products:

Smart functionalities in products manufactured are as important as they are in plants and machinery. IIoT application in the plant and machinery to improve productivity and safety is called "internal use" and the IIoT feature built-in with the final product is "external use". Built-in IIoT capabilities in the products are having significant market

opportunities. In the coming few years huge market demand for products with built-in IIoT capabilities are expected. The design of such products is usually done in partnership with companies that are specialists in software development. The most important and useful feature for end-users is remote monitoring of the information about equipment performance. Another important application is monitoring for maintenance and services.

8. Fleet Management :

With the installation of the IIoT device, fleet management has also become more efficient. Large number of small fleet operators are in operation whose vehicles are moving across the country. With the help of smart devices real-time monitoring of the fleet is now very easy. Apart from the real-time location of the vehicle, other important parameters like speed, fuel consumption, etc., are also accessible to the business owner. This is very helpful for the business owners to identify malpractices if any by the drivers.

For the manufacturing company, the goal is not only to produce the goods that meet the customers' needs. But also to ensure that customers get the best quality products at affordable prices and on time. On the other hand, business leaders also have to make sure to create value for their shareholders. To remain competitive, it is the need of the hour for the organisation to deploy all its physical, financial, and human resources most productively and efficiently by becoming real-time information-driven.

For achieving these goals, manufacturing information technology solutions are key drivers to success. The use of automation systems to control production processes, known as Operational Technology (OT), and enterprise solutions, such as Enterprise Resource Planning (ERP), Supply Chain Management (SCM), Supplier Relationship Management (SRM), Customer Relationship Management (CRM), and others.

Conclusion

In conclusion, the implementation of Industrial Internet of Things (IIoT) technologies in Micro, Small, and Medium Enterprises (MSMEs) offers a multitude of significant benefits. These advantages encompass improved operational efficiency, enhanced data-driven decision-making, increased productivity, reduced downtime, and enhanced product quality. Furthermore, IIoT can enable cost savings through predictive maintenance, resource optimization, and streamlined processes. MSMEs can also benefit from increased competitiveness in the global marketplace, as IIoT helps them stay agile and adaptable in rapidly evolving industries. Moreover, IIoT facilitates better customer satisfaction through personalized products and services, ultimately leading to stronger customer relationships and brand loyalty. Additionally, the integration of IIoT can empower MSMEs to monitor and reduce their environmental footprint, contributing to sustainability goals and compliance with regulatory requirements. However, it's crucial to acknowledge that the

successful implementation of IIoT in MSMEs also presents challenges, such as initial investment costs, cyber security concerns, and the need for skilled personnel. Therefore, while the benefits are substantial, MSMEs must carefully plan and strategize their IIoT adoption to maximize the advantages while mitigating potential risks. In summary, embracing IIoT technology holds immense promise for MSMEs by revolutionizing their operations, enhancing competitiveness, and contributing to sustainable growth. As technology continues to advance, it is imperative for MSMEs to stay at the forefront of IIoT adoption to unlock its full potential in a rapidly evolving industrial landscape.

Abstract:

Every catastrophe serves as a learning opportunity for the people, business organizations and the government. The COVID-19 pandemic is proving to be quite challenging for Indian economy as it has negatively impacted every sector of the economy. The Prime Minister in his speech while addressing the nation emphasized on five pillars of Indian economy namely i.e., economy, demography, system, infrastructure, and demand which need to be reinforced to widen the essence of revitalization and to preserve the prosperity of Indian Economy. The need of the hour is to capitalize the opportunities available to India in COVID-19 phase and help the nation to become 'Atmanirbhar'. The article accompanies the key contribution of the professionals in fabricating Self-Reliant India. It also contains the challenges faced by MSME sector and the policy reforms taken up by government of India to accelerate the pace of growth and investment in micro and small enterprises and some instances of how investment in MSME sector will help India in fueling the engine of growth and development amid COVID-19 financial and economic distress phase. The professional is the helping hand in the period of disguise their support will help the nation in the field of innovation and how to sustain life in this new normal. The government of India should focus on holistic growth of nation by ensuring that business is shared with SMEs and MSMEs to build a robust ecosystem.

Introduction

Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of the Indian economy over the last five decades. The MSME also play an important role in the development of the economy with their effective, efficient, flexible and innovative entrepreneurial spirit. The MSME sector contributes notably to the country's overall industrial production output, employment and exports. It is recognized with generating the maximum employment growth as well as accounting for a major share of industrial production and exports.

They have distinctive advantages due to their size and they required low investment. They have relatively high capital-labour ratio and they require a minimum gestation period. They try to capture and focus smaller markets; they make sure a more fair distribution of national income. They make possible an effective utilization of capital and skill resources and they motivate the growth of industrial entrepreneurship. The MSME sector in India is vast heterogeneous in terms of the size, variety of product and services and level of technology.

This sector is large contributes to the socioeconomic development of the country. The MSME sector is an important pillar of Indian economy as it contributes greatly to growth of Indian economy with a vast network of around 30 million units, creating employment of about 70 million, manufacturing more than 6000 products, contributing about 45% to manufacturing output and about 40% of exports, directly and indirectly. This sector even assumes greater importance now as the country moves towards a faster and inclusive growth agenda.

Growth of MSMEs

It is to be noted that growth of any sector is gauged on various yardsticks, like the number of enterprises being registered; employment opportunities created; turnover; increase in the number of offshore business units; activity wise, i.e. number of organisations getting registered under manufacturing and service segments etc. In light of the mentioned variables of measuring growth of a sector, in this article, the parameters considered for gauging the growth of MSME sector in India are:

3. Year wise and MSME wise registration.
4. Year wise and major Activity wise registration.

Year wise and MSME wise registration

The number of registered MSMEs in FY20 has increased by 18.49 per cent to 25.13 lakh units from 21.21 lakh in FY19, according to government data. Overall the number of registered MSMEs in India in the past five years stood at 90.19 lakh. According to the MSME Ministry's FY19 annual report, the MSME sector is dominated by micro-enterprises. India has 6.33 crore MSMEs out of which 6.30 crore, i.e. 99.4 per cent are micro-enterprises while 0.52 percent, i.e. 3.31 lakh are medium and 0.007 per cent, i.e. 5,000 are medium enterprises.

The growth of MSMEs in India with reference to the year wise and MSME wise registration may be comprehended under the following key points:

1. The percentage share of Micro Enterprises registered out of the total MSMEs registered during 2015-16(from Oct., 2015), 2016-17, 2017-18, 2018-19 and 2019- 20 (till Dec., 2019) are 85.15%, 90.51%, 88.60%, 88.18% and 87.61% respectively.
2. The percentage share of Micro Enterprises registered out of total MSMEs registered from 2015-16(from Oct., 2015) to 2019-20 (till Dec., 2019) is 88%.
3. The percentage share of Small Enterprises registered out of total MSMEs registered during 2015-16(from Oct., 2015), 2016-17, 2017-18, 2018-19 and 2019-20 (till Dec., 2019) are 14.31%, 9.12%, 10.95%, 11.36% and 11.92% respectively.
4. The percentage share of Medium Enterprises in the MSMEs during 2015-16 (from Oct., 2015), 2016-17, 2017-18, 2018-19 and 2019-20 (till Dec., 2019) are 0.53%, 0.36%, 0.43%, 0.44% and 0.46% respectively.
5. Maharashtra tops the list of number of Micro, Small & Medium Enterprises registrations during 2015-16(from Oct., 2015) to 2019-20 (till Dec., 2019).

Linear equation trend is: $y = bx + a$

Where:

- ❖ b is the slope of a trend line.
- ❖ a is the y-intercept, which is the expected mean value of y when all x variables are equal to 0. On a chart, it's the point where the trend line crosses the y axis.

i) Forecasted value of Registration of Enterprises under Micro Segment of MSME Sector

Years		Actual Micro Enterprises Registration	Forecasted Micro Enterprises Registration
2015-16	1	421516	1054466.4
2016-17	2	2147908	1268994.4
2017-18	3	1344612	1483522.4
2018-19	4	1870932	1698050.4
2019-20	5	1632644	1912578.4
2020-21	6		2127106.4
2021-22	7		2341634.4
2022-23	8		2556162.4
2023-24	9		2770690.4
2024-25	10		2985218.4
2025-26	11		3199746.4
2026-27	12		3414274.4
2027-28	13		3628802.4
2028-29	14		3843330.4
2029-30	15		4057858.4

The forecasted trend of registration of Micro Enterprises under MSME sector till 2030 is presented in the exhibit 2

Exhibit 2 - Forecasted Registration OF Micro Enterprises

Role of Company Secretaries in MSMEs

Company Secretaries under the new Companies Act are considered as 'Governance Professional' and in view of this their role in business ecosystem has increased prodigiously. Today, a Company Secretary plays a crucial role right from setting up of a business entity to its closure. He acts as an advisor to the Board of Directors, Compliance Officer, Registered Value, GST Professional, Key Managerial Personnel etc.

In light of the paramount position that a Company Secretary holds in today's business world, it may be opined that they have tremendous scope in MSME sector too. Since MSME may comprise of various forms of organizations, i.e. sole proprietorship, partnership, limited liability partnership, private limited company, one person company, etc. their role cannot be ignored especially, if an MSME is formed under limited liability partnership, private limited and one person company categories.

Right from assisting the owners / management of the organisation in procuring capital, registration of the company, obtaining of certificate of commencement of business, advising the board / management on both organic and inorganic growth of business and in case, the business becomes unsustainable then its winding-up, Company Secretary is the key.

As the business environment is always in a state of flux, the role of Company Secretaries become more significant in steering the organisation from tempest to truce. Further, in this era of globalisation, where phenomenal business opportunities exist in offshore markets, Company Secretaries through their corporate and legal wisdom may play a pivotal role in setting up of business entities under MSMEs in foreign lands.

Conclusion

MSME sector has been the backbone of the Indian economy. Apart from various schemes offered by the Government of India to strengthen the sector, the following key initiatives under unique and innovative 'Atmanirbhar Bharat' approach, i.e. Rs. 3 Lakh Crores Collateral-free Automatic loans for businesses, including MSMEs due to the menace of COVID 19, to provide additional funding in order to meet built up operational liabilities, procure raw materials and restarting of business; Allocation of Rs. 20,000 Crores Subordinate Debt for stressed MSMEs. Under this arrangement, equity assistance would be provided to the stressed MSMEs; Government of India will facilitate provision of Rs.20,000 Crore as subordinate debt; MSMEs which are functioning and currently having non-performing assets (NPAs) or stressed will be eligible to seek assistance under this arrangement; Government of India will provide a support of Rs. 4000 Crore to CGTMSE; CGTMSE to provide partial Credit Guarantee support to banks; Promoters of the MSMEs will be provided debt by banks, which will then be infused by promoter as equity in the

business unit. It is heartening to note that this initiative will benefit approximately two lakhs MSMEs across the country.

Another significant measure under 'Atmanirbhar Bharat' is Rs. 50,000 Crore equity infusion for MSMEs through Fund of Funds in view of the fact that MSMEs witness acute paucity of equity. In this initiative, a Fund of Funds with corpus of Rs.10,000 Crores will be established to provide equity funding to MSMEs with growth potential and feasibility. In order to make this approach viable, Fund of Funds will be operated through a Mother Fund and few Daughter Funds. This initiative will assist the MSMEs substantially in expanding their business as well as capacity and foster MSMEs to get listed on main board of Stock Exchanges.

Further, as discussed above that MSME sector is poised for huge growth in view of the forecasted trends of micro, small and medium enterprises in terms of both numbers and activity-wise coupled with the prevailing schemes and initiatives announced under Atmanirbhar Bharat will pave the way for a gigantic growth of MSME sector in India and in this phenomenon of growth, the Governance Professionals, i.e. Company Secretaries will play a key role in various dimensions of the business activities of the micro, small and medium enterprises.

EFFORTS OF GREEN FINANCING AND DIGITAL INDIA TOWARDS THE DEVELOPMENT OF MICRO ENTERPRISES IN INDIA

Mr Rajagopalan S

*Assistant Professor, PG Department of Commerce (CA),
Nallamuthu Gounder Mahalingam (NGM) College (Autonomous), Pollachi.*

Dr M Umamaheswari

*Head & Associate Professor, Department of B.Com (PA),
Vidyasagar College of Arts and Science, Udumalpet.*

Abstract

Microenterprises are small businesses that are financed by microcredit, a small loan available to people who have no collateral, credit history, savings, or employment history. The modest loans are often sufficient to get a small local business off the ground. These businesses serve a vital purpose in improving the quality of life for people in developing countries, and generally provide a product or service in their communities. As the hazards connected to ecologically destructive products and services rise, green finance is becoming a mainstream phenomenon. Green finance delivers economic and environmental advantages to everybody. It broadens access to environmentally-friendly goods and services for individuals and enterprises, equalizing the transition to a low-carbon society, resulting in more socially inclusive growth. Digital India is a programme to transform India into digital empowered society and knowledge economy. The Digital India is transformational in nature and would ensure that Government services are available to citizens electronically. This article highlights the efforts of green financing and digital India towards the development of micro enterprises in India.

Keywords: *Micro Enterprises, MSMEs, Green finance, Green economy, Digital India, Economic development.*

Introduction

Microfinance seeks to help microenterprises by loaning small amounts of capital to these businesses. This allows individuals or families with moderate, low, or no income to start their own businesses, earn income, and contribute to their communities. Many banks grant microloans to those in need, but many are provided by non-profit organizations that cater specifically to microenterprise. Like regular loans, repayment with interest is required. Digital India programme was launched on 1st July, 2015 to enable digital delivery of services to citizens. Based on the success of the programme, the Union Cabinet during August 2023 approved the expansion of the Digital India programme. The total outlay is ₹14,903 crores. It broadens access to environmentally-friendly goods and services for individuals and enterprises, equalizing the transition to a low-carbon society, resulting in

more socially inclusive growth. This results in a 'great green multiplier' effect in which both the economy and the environment gain, making it a win-win situation for everyone.

Micro Enterprises

The term microenterprise, also known as a microbusiness, refers to a small business that employs few people. A microenterprise usually operates with fewer than 10 people and is started with a small amount of capital advanced from a bank or other organization. Microenterprises are small businesses, often funded with modest startup loans. They are financed by microcredit, a type of credit available to people who have no collateral, credit history, or employment history. Microcredit has helped improve the quality of life for people in developing countries, and generally provides a product or service needed in their communities.

Microenterprises are small businesses that are financed by microcredit, a small loan available to people who have no collateral, credit history, savings, or employment history. The modest loans are often sufficient to get a small local business off the ground. These businesses serve a vital purpose in improving the quality of life for people in developing countries, and generally provide a product or service in their communities. Microenterprises not only help improve the quality of life for business owners, but they also add value to the local economy. They can boost purchasing power, improve income, and create jobs.

Microfinance seeks to help microenterprises by loaning small amounts of capital to these businesses. This allows individuals or families with moderate, low, or no income to start their own businesses, earn income, and contribute to their communities. Many banks grant microloans to those in need, but many are provided by non-profit organizations that cater specifically to microenterprise. Like regular loans, repayment with interest is required.

In India

MSME (Micro, Small, and Medium Enterprise) term was introduced by the Government of India in agreement with the Micro, Small & Medium Enterprises Development (MSMED) Act, 2006. MSME is initiated and managed under the Ministry of MSME (MoMSME) are entities engaged in the production, manufacturing, processing, or preservation of goods and commodities. MSME sector is considered the backbone of the Indian economy and contributes nearly accounts for 27% of the country's GDP. It primarily works for the development of people from backward and rural areas.

As per the official MSME annual report of 2021-22, the Total number of MSMEs in India are 6,33,88,000 out of which 3,24,88,000 MSMEs (51.25%) are in rural area and 3,09,00,000 lakh MSMEs (48.75%) are in the urban areas. As per the official data of IBEF.com as of 25th

Nov 2022 as provided by Ministry of Micro, Small and Medium Enterprise (MoMSME), there are 12,201,448 Registered MSMEs in India at Udyam Registration Portal, wherein Micro-enterprises are 11,735,117 (96.17%), Small enterprises are 426,864 (3.49%) and Midsized enterprises are 39,467 (0.32%).

Green Financing

Simply put, green finance is a loan or investment that promotes environmentally-positive activities, such as the purchase of ecologically-friendly goods and services or the construction of green infrastructure. As the hazards connected to ecologically destructive products and services rise, green finance is becoming a mainstream phenomenon. Green finance delivers economic and environmental advantages to everybody. It broadens access to environmentally-friendly goods and services for individuals and enterprises, equalizing the transition to a low-carbon society, resulting in more socially inclusive growth. This results in a 'great green multiplier' effect in which both the economy and the environment gain, making it a win-win situation for everyone.

Types of Green Financing

Green Mortgages

They allow lenders to provide better terms to home purchasers of properties with a high environmental sustainability rating or if the buyer agrees to invest in enhancing the environmental performance of a property.

Green Loans

These are loans used to support environmental initiatives such as household solar panels, electric automobiles, energy efficiency projects, and more.

Green Credit Cards

Green credit cards such as Aspirations' Zero card plant a tree every time a customer makes a purchase. They enable customers to direct their expenditure toward green finance in order to have a lasting impact on the environment.

Green Banks

Green banks operate similarly to traditional banks, but they employ public funds to spur private investment in renewable energy and other environmentally friendly initiatives. According to a 2020 research, the number of green banks in the US increased from one to 20 between 2011 and 2020, investing \$7 billion in renewable energy.

Green Bonds

Green bonds account for the vast bulk of green funding. They include bond investments, the earnings from which are used to support a variety of green initiatives such as renewable energy, clean transportation, and conservation, among others.

Digital India

Digital India is a programme to transform India into digital empowered society and knowledge economy. The Digital India is transformational in nature and would ensure that Government services are available to citizens electronically. It would also bring in public accountability through mandated delivery of government's services electronically, a Unique ID and e-Pramaan based on authentic and standard based interoperable and integrated government applications and data basis.

Digital India programme was launched on 1st July, 2015 to enable digital delivery of services to citizens. Based on the success of the programme, the Union Cabinet during August 2023 approved the expansion of the Digital India programme. The total outlay is ₹14,903 crores. The vision is centred on three key area are: Digital infrastructure as Utility to Every Citizen, Governance and services on demand and Digital empowerment of citizens

Digital Infrastructure as Utility to Every Citizen

- ❖ Availability of high speed internet as a core utility for delivery of services to citizens.
- ❖ Cradle to grave digital identity that is unique, lifelong, online and authenticable to every citizen.
- ❖ Mobile phone and Bank account enabling citizen participation in digital and financial space.
- ❖ Easy access to a Common Service Centre.
- ❖ Shareable private space on a public Cloud.
- ❖ Safe and secure Cyber-space.

Role of Digital India in Micro Enterprises

Digital technology can significantly enable India's micro, small and medium enterprises (MSME) segment, provided the emerging infrastructure has joint buy-in from the government, solution providers and importantly users. The digital landscape catering to businesses has drastically changed in recent years, several elements have emerged that can start shaping the contours of a strong digital ecosystem. The challenges reside in addressing a complex and heterogeneous MSME segment, dominated by micro enterprises at different stages, and different levels of digital readiness. The incentive for businesses to

fully embrace digital technology would be to provide a digital ecosystem that provides end-to-end solutions, from finance access, payments, operations, management to even skilling and knowledge sources that are convenient.

MSMEs are a major contributor to the Indian economy, accounting for around 30% of Gross Domestic Product (GDP) and providing employment to over 110 million people (ministry of MSME, Annual Report 20–21). However, a more sombre story emerges when examining details. The Indian MSME sector is unique in its long fat tail of relatively unproductive micro enterprises, which are unregistered or informal, new-to-formal-credit, and characterised by low growth and employment per unit. Most of the micro enterprises are sole proprietorships with less than five employees. Furthermore, informal micro enterprises are responsible for 80% of employment while contributing only 20% of output. This highlights the composition of India's current business landscape of tiny self-employed informal enterprises with low quality human capital. Conversely, there is a severe deficit of formal, productive, and job-creating small and medium enterprises.

Furthermore, while the MSME segment is perceived as a significant job creator, the quality and conditions of the jobs created are often precarious and in the form of casual labour, daily labour and self-employment, often with very little or no job security. For most micro enterprises, the entire focus is on making sure the business stays afloat, and not on growing the business. This business stagnation hampers many crucial aspects for an enterprise to grow and achieve scale, such as efficiency, innovation and production quality. While the magnitude of these problems is well known, little progress has been made to address them efficiently given the complexity and interconnectedness. In effect, three critical ingredients needed for any early stage business to thrive, namely access to markets, skills and working capital, are sorely missing for most enterprises. On the other hand, significant public investment would be required to address these gaps and create effective market linkages, skills and mentorship, and access to finance.

Role of Green Financing for Micro Enterprises

In India it is projected that MSMEs contribute roughly 70 percent to the industrial pollution. These sectors are usually dominant in industries by relatively high resources and emission intensity. Green bonds offer a range of options for MSME financing, including the issuance of green bonds from banks that aggregate MSME loans, the securitisation of MSME loans into asset-backed securities and the issuance of mini-bonds by medium-sized enterprises. An added advantage of green bonds is greater market transparency. Green finance is any financial activity undertaken to deliver better environmental outcomes. With Green funding, sustainable development projects that contribute energy efficiency and cleaner production are applicable for the scope of this scheme.

MSMEs can help in increasing entrepreneurial activities, create employment opportunities and function in backward areas thereby creating sustainability. MSMEs have capability to create a large number of earning opportunities (though smaller) catering to a big segment of population ecosystem. The Green Action Plan (GAP), adopted in July 2014, aims to help small and medium-sized enterprises (SMEs) take advantage of the opportunities offered by the transition to a green economy. The GAP is expected to: raise SMEs' awareness of: Resource Efficiency improvements and Sustainability. Green financing incorporates principles of sustainability into their business decisions in order to reduce their negative impacts on the global or local environment. They do this by selling environmentally friendly products or by greening their processes to make them more environmentally sustainable

Conclusion

The study concluded that healthy environmental policies should take into account carbon-free and ecologically friendly ways if sustainable environmental goals are to be attained. Green mortgages, bonds, and other forms of “green financing” may help us reach our goal of environmental sustainability. A digital connected India can result in the growth of the social and economic status of people. This can be achieved by the development of non-agricultural economic activities. Instead of providing access to health, education, and financial services. MSMEs are the backbone of a resilient national economy. Prioritising their development is critical to the future of the country. The government has come out with a variety of enabling mechanisms over the last few years.

Abstract

If the country's teacher-education programme improves, teaching may regain its former noble position. Teachers are a group of people who are starkly separated from the rest of the community and who are training for their life's work in institutions where their fellow students will also be doing the same. The teaching profession is completely trusted by the National Policy of Education. The teaching profession is completely trusted by the National Policy of Education. It demands a significant upgrade in both the standard of teacher preparation and working circumstances.

Keywords: *Teacher efficiency, Profession, Job Satisfaction, School Teacher.*

Introduction

As long as Indian education has existed, so too has the history of teacher education in India. There must have been teachers and pupils there if there had been any kind of education in the community. The calibre of a nation's instructors determines its progress, making teaching the noblest of all professions. If the country's teacher-education programme improves, teaching may regain its former noble position. Teachers are a group of people who are starkly separated from the rest of the community and who are training for their life's work in institutions where their fellow students will also be doing the same. The teaching profession is completely trusted by the National Policy of Education. The teaching profession is completely trusted by the National Policy of Education. It demands a significant upgrade in both the standard of teacher preparation and working circumstances. The Policy also underlines the responsibility of the teachers to the students, their parents, the community, and their own field. Teacher effectiveness is a relative term made from of the phrases effectiveness and teacher. A person with teaching experience and specific teaching-related qualifications is referred to as a teacher. The idea of "Job Satisfaction" comes from industrial psychology and is currently one of the most thoroughly

researched aspects of human productivity at work. When a job is satisfying, it is completed carefully and sincerely. Job satisfaction is the sum of all the elements of a job that a person needs to appreciate their workplace and be willing to go to work each day without complaining.

Review of Literature

- ❖ Aashka R. Sharma et al.(2020) in the title “A study of teacher effectiveness and job satisfaction among secondary school teachers” examined that the Teacher effectiveness is a relative word consists of two words- teacher and effectiveness. Teacher means a person who has teaching skills and possesses certain professional qualities of teaching. The concept is related to such issues as identification with the job as well as motivation and the attractiveness of the workplace to the employee. Dissatisfaction among workers is undesirable and dangerous in any profession. The well-adjusted and satisfied teacher can contribute a lot to the well-being of his/her pupils.
- ❖ Fredy Wilson Ngimbudzi.(2009). Job satisfaction among secondary school teachers in tanzania: the case of njombe district explained that the motivated me to conduct the current study as an attempt to create awareness about the phenomenon of job satisfaction to educational policy makers, school administrators, employers and school owners with the hope that it would provide possible solutions to some of the issues I have mentioned previously for the good of beneficiaries of the education service in Tanzania.

Statement of the Problem

The secondary education system is crucial in determining how pupils will develop in the future, and secondary school teachers' effectiveness and job satisfaction are crucial in assuring the standard of instruction. However, given that these elements have a substantial impact on the entire educational experience and outcomes, it is urgent to investigate the relationship between teacher effectiveness and job satisfaction among secondary school instructors.

Objectives of the Study

- ❖ To know the Socio – economic profile of the respondents.
- ❖ To analyse the efficiency of the secondary School Teachers.
- ❖ To study the job satisfaction of the Secondary School teachers.

Methodology

This study aims to analyse teacher efficiency and job satisfaction among secondary school teachers. Sample of the study is 60 and convenience sampling method has been

adopted to collect the primary data. In order to collect the primary data, well structured questionnaire was designed for the college students. The secondary data has been collected from journals, published and unpublished theses.

Results and Discussion

Table :1
Demographic Profile of the Respondents

S. No	Demographic Classification	Category	Number of Respondents	Percentage
1	Age	25 - 30 years	13	21.7
		30 – 35 years	23	38.3
		35- 40 years	17	28.3
		More than 40 years	7	11.7

5	Income of the Family	Below 20000	25	41.7
		20001-40000	16	26.7
		40001-60000	9	15.0
		above 60000	10	16.7
		Total	60	100.0
6	Number of family members	Two members	5	8.3
		Three members	11	18.3
		Four members	36	60.0
		More than four members	8	13.3
		Total	60	100.0

Source : Primary Data

From the table 1, it is inferred that 38.3 per cent of the respondents were in the age group of 30 – 35 years; 80.0 per cent of the respondents are male; 80.0 per cent of the respondents were married; 68.3 per cent of the respondents have completed PG with B.Ed

qualification; the income of the family is revealed that 41.7 per cent of the respondents are having below 20,000; 60.0 per cent of the respondents are living in four members of the family.

Table: 2
Job Satisfaction of Secondary School Teachers

S. No	Particulars	Strongly Agree	Agree	Netural	Disagree	Strongly Disagree
1	Give Opportunity for Career Enchancement	28 (46.7)	23 (38.3)	5 (8.3)	1 (1.7)	3 (5.0)
2	Achieve my short and long term goals	8 (13.3)	32 (53.3)	17 (28.3)	1 (1.7)	2 (3.3)
3	Requires high skills and Knowledge	14 (23.3)	25 (41.7)	16 (26.7)	3 (5.0)	2 (3.3)
4	The job is achievable and attainable	17 (28.3)	13 (21.7)	26 (43.3)	3 (5.0)	1 (1.7)
5	Increase my responsibility and commitment	27 (45.0)	23 (38.3)	8 (13.3)	1 (1.7)	1 (1.7)

Source :Primary Data

Table 2 started that the opinion about the Job Satisfaction of Secondary School. The average score of the respondents opinion are calculated by using 5 point scaling techniques for that the following points are given to each factor. Strongly Agree (S.A) - 5, Agree (A) - 4, Netural (N) - 3, Disagree (DA) - 2, Strongly Disagree (SDA) - 1.

Table :3
Average Score for Over All Opinion About the Job Satisfaction of
Secondary School Teachers

Particulars	SA	A	N	D	SD	Weig.Total	W.Aver.Score	Rank
Give Opportunity for Career Enchancement	115	112	15	2	3	247	4.11	II
Achieve my short and long term goals	40	128	51	2	2	223	3.71	V
Requires high skills and Knowledge	70	100	48	6	2	226	3.76	IV
The job is achievable and attainable	85	104	39	6	1	235	3.91	III
Increase my responsibility and commitment	115	108	24	2	1	250	4.16	I

Source: Primary Data

Table 3 Clearly understand that, most of the respondents are giving first rank to the Increase my responsibility and commitment, second rank Give Opportunity for Career Enchancement, third rank to the job is achievable and attainable, fourth rank to the requires high skills and Knowledge and finally the achieve my short and long term goals.

Table :4
Teachers Efficiency of Secondary School Teachers

S. No	Particulars	Strongly Agree	Agree	Netural	Disagree	Strongly Disagree
1	To help my students to think critically	21 (35.0)	28 (46.7)	8 (13.3)	2 (3.3)	1 (1.7)
2	Craft good questions for my students	13 (21.7)	30 (50.0)	2 (3.3)	14 (23.3)	1 (1.7)

3	To help my students value Learning	28 (46.7)	21 (35.0)	2 (3.3)	1 (1.7)	8 (31.3)
4	Improve the understanding of a student who is failing	23 (38.3)	18 (30.0)	1 (1.7)	16 (26.7)	2 (3.3)
5	Able to use a variety of assessment strategies	20 (33.3)	25 (41.7)	13 (21.7)	1 (1.7)	1 (1.7)

Source:Primary Data

From the table 4 , it is revealed that 28(46.7) respondents are Agree with the statement of “To help my students to think critically” 30(50.0) respondents are agree with the statement of “Craft good questions for my students” 28 (46.7) respondents are strongly agree with the statement of “To help my students value Learning” 23 (38.3) respondents are strongly agree with the statement of “Improve the understanding of a student who is failing” 25 (41.7) respondents are agree with the statement of “Able to use a variety of assessment strategies” .

Conclusion

In conclusion, the crucial relationship between a teacher's efficacy and job satisfaction of school teachers. In order to increase school teachers' effectiveness, it is crucial to empower and inspire them on all of these fronts. The greater the benefits for employees, the harder they would work. In a similar vein, an employee would respond, probably with gratitude or loyalty, to a greater or lesser level depending on how much his requirements are met at work. Teachers will therefore offer their kids their best effort and be willing to change secondary education when they are happy in their positions. They will also be prepared to help the student change and get ready for further education.

Abstract

In the dynamic landscape of today's global economy, achieving economic self-reliance has become a pressing objective for nations worldwide. This article explores the pivotal role played by Micro, Small, and Medium Enterprises (MSMEs) in driving sustainable growth and fostering economic self-reliance. MSMEs contribute significantly to job creation, innovation, and regional development, promoting self-sufficiency and reducing reliance on external forces. This abstract provides a glimpse into the multifaceted contributions of MSMEs in building resilient and self-sufficient economies, emphasizing their crucial role in achieving economic self-reliance.

Keywords: MSMEs, Economic Self-Reliance, Sustainable Growth, Job Creation.

Introduction

Micro, Small, and Medium Enterprises (MSMEs) play a pivotal role in fostering economic self-reliance for nations around the world. These small businesses are the backbone of many economies, contributing significantly to employment generation, innovation, and overall economic development. In this article, we will explore how MSMEs contribute to economic self-reliance and why they are essential for building resilient and sustainable economies.

In today's rapidly changing global landscape, the concept of economic self-reliance has taken on renewed significance for nations worldwide. As countries strive to reduce their vulnerabilities to external economic shocks and strengthen their domestic capabilities, Micro, Small, and Medium Enterprises (MSMEs) emerge as pivotal players in this pursuit. This article delves into the crucial role that MSMEs play in driving sustainable growth and promoting economic self-reliance, shedding light on their multifaceted contributions to building resilient and self-sufficient economies. From job creation to innovation and regional development, MSMEs form the bedrock upon which nations can craft a more self-reliant and prosperous future.

Defining MSMEs

MSMEs encompass a wide range of businesses, from microenterprises with just a few employees to small and medium-sized enterprises with a more substantial workforce and higher revenue. The precise definition of MSMEs can vary from one country to another, but they typically share the common characteristic of being smaller in scale compared to large corporations.

The MSME-Led Economic Self-Reliance and Sustainable Growth

The role of Micro, Small, and Medium Enterprises (MSMEs) in driving economic self-reliance and sustainable growth can be understood through a theoretical framework that underscores the interconnectedness of various elements. This model posits that MSMEs serve as catalysts for economic self-reliance, which, in turn, contributes to sustainable growth. Here's a breakdown of the key components of this theoretical framework:

MSME Vitality: At the heart of this model are MSMEs, comprising a diverse array of businesses varying in size and sector. MSMEs are characterized by their agility, innovation, and responsiveness to changing market conditions. They are adept at identifying niche markets, adapting to evolving consumer preferences, and swiftly integrating technological advancements into their operations.

Economic Self-Reliance: Economic self-reliance refers to a nation's ability to meet its essential needs through domestic production and resources, reducing dependence on external sources. MSMEs play a pivotal role in achieving this self-reliance through the following mechanisms:

a. **Diverse Production:** MSMEs offer a wide range of products and services, contributing to the diversification of economic activities. This diversity reduces reliance on a single sector or industry, making the economy more resilient to external shocks.

b. **Local Employment:** MSMEs are significant employers, particularly in rural and semi-urban areas. They create jobs, enhance income distribution, and reduce poverty, thereby strengthening a nation's social fabric and reducing dependence on social welfare programs.

c. **Innovation and Adaptation:** MSMEs are fertile grounds for innovation. Their nimbleness allows them to experiment with new ideas, products, and processes. This continuous innovation enhances a country's capacity to meet changing consumer demands and technological advancements domestically.

d. **Supply Chain Localization:** MSMEs can strengthen domestic supply chains, reducing the need to import critical goods and services. This localization enhances a nation's self-sufficiency and resilience in the face of global economic uncertainties.

Sustainable Growth: Economic self-reliance, facilitated by a vibrant MSME sector, paves the way for sustainable growth. Sustainable growth encompasses economic, social, and environmental dimensions. MSMEs contribute to sustainable growth by:

a. **Balanced Regional Development:** MSMEs are often located in underserved regions, promoting balanced regional development and reducing urban-centric concentration.

b. **Social Inclusion:** MSMEs provide opportunities to marginalized groups, fostering social inclusion and reducing income inequality.

c. **Environmental Considerations:** As sustainability becomes paramount, MSMEs can adopt eco-friendly practices, contributing to environmentally sustainable growth.

In conclusion, the MSME-Led Economic Self-Reliance and Sustainable Growth Model posits that a thriving MSME sector is instrumental in achieving economic self-reliance through diversification, local employment, innovation, and supply chain localization. This, in turn, sets the stage for sustainable growth by fostering balanced regional development, social inclusion, and environmental responsibility. Recognizing and nurturing the vital role of MSMEs is essential for nations aspiring to build resilient, self-reliant, and sustainable economies.

The Economic Significance of MSMEs

- ❖ **Job Creation:** MSMEs are a significant source of employment. They create job opportunities for a large segment of the population, including youth and women, which can help reduce unemployment rates and alleviate poverty.
- ❖ **Innovation and Entrepreneurship:** MSMEs often serve as incubators for innovation and entrepreneurship. They are more agile and adaptable to change, which allows them to experiment with new ideas and technologies. Many successful startups and disruptive innovations originate from MSMEs.
- ❖ **Diversification of Economic Activities:** A robust MSME sector diversifies economic activities by offering a wide range of products and services. This diversification helps in reducing the dependence on a single sector and makes the economy more resilient to external shocks.
- ❖ **Regional Development:** MSMEs are dispersed across various regions, including rural and semi-urban areas. Their presence helps in promoting balanced regional development by reducing the concentration of economic activity in urban centers.
- ❖ **Export Promotion:** MSMEs can play a crucial role in enhancing a country's export potential. Many MSMEs are engaged in export-oriented activities, contributing to foreign exchange earnings.
- ❖ **Social Inclusion:** MSMEs often provide opportunities to marginalized and disadvantaged groups, such as women, minorities, and people with disabilities. This fosters social inclusion and reduces income inequality.

Promoting Economic Self-Reliance through MSMEs

- ❖ **Resilience and Self-Sufficiency:** MSMEs can make economies less reliant on imports by producing essential goods and services domestically. This enhances a nation's resilience in times of global economic uncertainties and disruptions.
- ❖ **Reducing Dependence on Multinational Corporations:** A strong MSME sector can reduce the dominance of multinational corporations in a country's economy, thereby preserving domestic control and ownership.
- ❖ **Strengthening Supply Chains:** MSMEs are often part of the supply chains of larger enterprises. By nurturing and supporting MSMEs, countries can develop robust domestic supply chains, reducing dependence on foreign suppliers.
- ❖ **Encouraging Innovation:** MSMEs are hotbeds of innovation. Governments can promote economic self-reliance by providing incentives and support for research and development activities within MSMEs.
- ❖ **Access to Finance:** Access to affordable and readily available financing is crucial for the growth of MSMEs. Governments and financial institutions can work together to create favorable lending conditions for small businesses.
- ❖ **Skill Development:** Investing in skill development and entrepreneurship education is essential to empower individuals to start and manage MSMEs successfully.

Conclusion

The role of MSMEs in economic self-reliance cannot be overstated. These enterprises are the engines of growth, innovation, and employment generation in many economies. By promoting the growth and sustainability of MSMEs, governments can take significant steps toward achieving economic self-reliance, reducing dependence on foreign imports, and building resilient and self-sufficient economies. It is imperative for policymakers, financial institutions, and society as a whole to recognize and support the vital contributions of MSMEs in the journey toward economic self-reliance.

Abstract

Digital India and Industry 4.0 are two transformative paradigms that are reshaping the landscape of technology, governance, and industry on a global scale. The vision of Digital India is to bridge the digital divide, empower citizens, and drive economic growth through digital inclusion. Industry 4.0, often referred to as the Fourth Industrial Revolution, represents the convergence of physical and digital technologies in manufacturing and production. It leverages technologies such as the Internet of Things (IoT), artificial intelligence (AI), big data analytics, and automation to create "smart factories" that are highly efficient, adaptive, and connected. Digital India and Industry 4.0 are intricately connected as the digital infrastructure and capabilities developed under Digital India provide a strong foundation for the adoption of Industry 4.0 technologies. It emphasizes on digital literacy and skill development under Digital India is crucial for preparing the workforce to thrive in the era of Industry 4.0.

Keywords: *Industry 4.0, digital India, Technology, development*

Introduction

In the 21st century, India has been undergoing a significant transformation, driven by rapid advancements in technology. The convergence of digitalization and Industry 4.0 has played a pivotal role in reshaping the country's industrial landscape. "Digital India" is a visionary initiative launched by the Indian government to harness the power of technology and digitization for inclusive growth and development across various sectors. Simultaneously, the global paradigm shift toward Industry 4.0, characterized by smart manufacturing, automation, and data-driven decision-making, has had a profound impact on India's industrial sector. This article explores the intersection of Digital India and Industry 4.0, highlighting how these two forces are shaping the nation's future. Digital India is an ambitious initiative launched by the Indian government in 2015 with the goal of transforming the country into a digitally empowered society and knowledge economy. The

program encompasses various pillars, including digital infrastructure, digital governance, digital literacy, and e-governance. It aims to bridge the digital divide, provide affordable and accessible digital services to all citizens, and leverage technology for efficient governance.

Key Achievements of Digital India:

1. **Digital Infrastructure:** The deployment of high-speed internet and the proliferation of mobile connectivity have connected even remote areas of India, enabling access to digital services.
2. **Digital Payments:** The introduction of digital payment platforms like UPI (Unified Payments Interface) and digital wallets has revolutionized the way transactions are conducted in the country.
3. **E-Governance:** Digital platforms like Aadhaar, e-signature, and DigiLocker have simplified government processes, reducing paperwork .
4. **Digital Literacy:** Initiatives like Pradhan Mantri Gramin Digital Saksharta Abhiyan (PMGDISHA) have been launched to promote digital literacy among citizens.
5. **Start-up Ecosystem:** India has emerged as a global hub for technology startups, fostering innovation and entrepreneurship.

Impact of Industry 4.0 in India:

1. **Smart Manufacturing:** Indian industries are adopting smart manufacturing practices, optimizing production processes, reducing waste, and enhancing product quality.
2. **IoT and Data Analytics:** The IoT is being used to monitor and control machinery and equipment in real time, while data analytics is aiding in predictive maintenance and better decision-making.
3. **Robotics and Automation:** Automation is increasing productivity and reducing labor-intensive tasks, making industries more efficient and cost-effective.
4. **Supply Chain Optimization:** Digitalization of supply chains is improving logistics, reducing lead times, and ensuring timely deliveries.
5. **Skill Development:** Industry 4.0 is driving demand for a new skill set, prompting investments in education and training to meet the evolving workforce needs.

Impact of Digital India and Industry 4.0 on Various Sectors:

1. **Healthcare:** The healthcare sector in India has witnessed a significant transformation with the adoption of digital health records, telemedicine, and IoT-enabled medical devices. This has improved access to healthcare services, especially in rural areas, and enabled data-driven healthcare management.

2. **Agriculture:** Farmers are benefiting from digital platforms that provide real-time weather information, market prices, and agricultural best practices. IoT sensors are being used to monitor soil conditions and optimize crop yields.
3. **Education:** Digital education platforms have become more accessible, enabling remote learning, online courses, and digital libraries. Virtual reality and augmented reality technologies are enhancing the learning experience.
4. **Manufacturing:** Industry 4.0 technologies are making Indian manufacturing more competitive. Businesses are adopting predictive maintenance to reduce downtime, implementing robotics to enhance production lines, and using AI for quality control.
5. **Financial Services:** The financial sector has experienced a digital revolution with the widespread adoption of mobile banking, digital wallets, and online investment platforms. Fintech startups are driving financial inclusion.

Challenges and Opportunities:

1. **Digital Divide:** Despite significant progress, the digital divide still exists. Bridging this gap and ensuring that all citizens have access to digital services remains a challenge.
2. **Data Privacy and Security:** As more personal and sensitive data is digitized, protecting data privacy and cybersecurity becomes paramount. India needs robust regulations and cybersecurity infrastructure.
3. **Skill Shortage:** Industry 4.0 requires a highly skilled workforce proficient in technologies like AI, IoT, and data analytics. Upskilling and reskilling programs are essential.
4. **Infrastructure Development:** Continued investment in digital infrastructure, including high-speed internet access in remote areas, is vital for the success of both Digital India and Industry 4.0.
5. **Regulatory Framework:** The government needs to develop a clear regulatory framework to support the integration of Industry 4.0 technologies, including standards for IoT devices and AI ethics.
6. **Global Competitiveness:** The synergy between Digital India and Industry 4.0 is making India more competitive on the global stage. Indian companies are increasingly becoming global players, exporting technology solutions and expertise to other countries.
7. **Sustainable Development:** Both Digital India and Industry 4.0 have the potential to contribute significantly to sustainable development. Smart cities, energy-efficient manufacturing, and eco-friendly practices can help reduce the environmental footprint.

8. **Innovation Ecosystem:** India's innovation ecosystem is thriving, with startups and technology incubators at the forefront. Government initiatives like "Startup India" are promoting entrepreneurship and innovation.
9. **Global Collaboration:** Collaborative partnerships with other countries, particularly in research and development, can accelerate technological advancements and enhance India's global influence.

Future Prospects:

1. **Smart Cities:** Digital India and Industry 4.0 concepts will play a pivotal role in the development of smart cities. These cities will incorporate IoT, data analytics, and automation to enhance services like traffic management, waste disposal, and public safety.
2. **AI and Healthcare:** AI-driven healthcare solutions, including predictive analytics and telemedicine, will become more prevalent, improving healthcare access and patient outcomes.
3. **Education Revolution:** Online and digital learning platforms will continue to evolve, making quality education accessible to a broader population. Virtual labs and immersive learning experiences will enhance STEM education.
4. **Advanced Manufacturing:** India is poised to become a hub for advanced manufacturing with a focus on robotics, 3D printing, and precision engineering. This will enhance the country's manufacturing capabilities and exports.
5. **Digital Payments and Financial Inclusion:** The digital payments ecosystem will continue to expand, including the use of blockchain for secure transactions. Financial inclusion efforts will reach underserved populations through mobile banking and digital financial services.
6. **Cybersecurity:** As digitalization deepens, the demand for robust cybersecurity solutions will grow. India can develop a thriving cybersecurity industry to safeguard its digital infrastructure and data.
7. **Rural Development:** Digital India initiatives will increasingly benefit rural areas by providing access to digital services, improving agriculture through precision farming, and enhancing rural healthcare delivery.

Conclusion

The convergence of Digital India and Industry 4.0 represents a powerful force that is reshaping India's economy and society. As the country continues to digitize and embrace Industry 4.0 technologies, it is poised for significant growth and competitiveness on the global stage. The synergy between these two initiatives is not only driving industrial transformation but also enhancing the overall quality of life for Indian citizens through

improved services, greater efficiency, and increased opportunities for innovation and employment. To fully harness this potential, continued investment in digital infrastructure, education, and research and development is essential, ensuring that India remains at the forefront of the digital revolution in the years to come.

AN INVESTIGATION ON THE RELATIVE SIGNIFICANCE OF MICRO, SMALL AND MEDIUM-SIZED ENTERPRISES IN TERMS OF ECONOMIC SELF-RELIANCE

Mr. R. Saravanan

*Ph.D. Research Scholar (FT), PG and Research Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi, Coimbatore, India
Email: srnnr99@gmail.com*

Dr. M. Chithirai Selvan

*Assistant Professor, PG and Research Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi, Coimbatore, India
Email: drchithiraingm@gmail.com*

Abstract:

Micro, Small and Medium enterprises are vital to the development of a country because they guarantee significant economic growth and foster innovation, job creation, and export expansion. The study attempts to classify the role of MSME in terms of Micro, Small, and Medium industries using Udyam Registrations for employment generation, social and gender-wise classification, and registrations. A typical certification known as Udyam registration enables Micro, Small, and Medium-Sized businesses to register with the government. The MSME receives a certificate of recognition and a unique identification number upon registration. According to the study report, the Micro industry had the greatest registration rate and produced the most job opportunities among other businesses. Men predominate in this sector, and the General category dominates the socio-economic class within the MSME sector.

Keywords: *Udyam Registrations, MSME, Employment, Gender, Social class.*

Introduction:

The Micro, Small, and Medium-Sized Enterprises (MSME) sector of the Indian economy has grown significantly in size and vibrancy over the last fifty years. These enterprises offer opportunities on a wide scale at a relatively lower capital cost than larger businesses, which contributes to the industrialization of rural and undeveloped areas in addition to being vital sources of employment. As a result, there is a more equitable distribution of wealth and income throughout the country, which helps to correct regional imbalances. MSMEs also significantly contribute to the nation's overall socioeconomic development by acting as ancillary units to larger businesses. In order to help MSMEs become more competitive and access markets, the Ministry of Micro, Small, and Medium Enterprises (MSME) manages a number of programmes. These programmes include infrastructure development, financial support, technology support and training, and skill enhancement and training.

MSME:

Under the Atmanirbhar Bharat package, which was unveiled on May 13, 2020, the definition of micro manufacturing and services units was broadened to encompass an investment of Rs.1 crore and a turnover of Rs.5 crore. For small firms, the investment and turnover thresholds have been increased to Rs.10 crore and Rs.50 crore, respectively. In a similar vein, the investment and turnover thresholds for Medium units were increased to Rs.20 Crore and Rs.100 Crore, respectively. As a result, on June 1st, 2020, the Indian government decided to further amend the MSME Definition, capping turnover at Rs.250 crore and restricting investments for medium-sized businesses to Rs.50 crore.

Review of Literature:

The literature review of current study provides a deep insight about research. It gives clarification and ideas for further research.

Ujjal Bhuyan (2016) in his article on “A Study on the Performance of Micro, Small and Medium Enterprises (MSMEs) in India” illustrated how important the sector is to the country's economy, but also how susceptible it is to socioeconomic shifts and how much of an impact it has on the creation of job opportunities. **Abhijeet Biswas et al., (2018)** in their article entitled "A Study of the Factors Influencing the Financing Gap for the MSME Sector" showed that a number of factors, including the imposition of credit rationing, market imperfections, bankruptcy laws, property rights, issues with adverse selection, and moral hazard, have an impact on the funding gap in MSME, and that MSMEs have far greater credit constraints than large firms. **Jeeban Jyoti Mohanty (2018)** in his study on "A Study on Micro, Small and Medium Enterprises (MSMEs) in India: Status and its Performance" depicted that MSME sector is driving economic growth in India and has seen positive increases in unit count, employment, and market value. The MSME is essential to the advancement of both urban and rural residents. The article titled “Covid-19 Pandemic- Bountiful for MSMEs and Indian Economy” carried out by **Lamba and Jain in 2020**. It said that while India's economy is still expanding, both labour and capital-intensive industries must be supported. Due to their ability to produce in huge quantities with comparatively little investment, micro, small, and medium-sized enterprises (MSMEs) have the potential to boost economies during times of global downturn and liquidity crisis. The country has once more recognised the value of the MSME sector and how it has helped the country in times of financial crisis and medical emergency as a result of the COVID-19 epidemic. The goal is to fortify small and medium-sized businesses by providing funding and equipping them to combat the COVID-19 epidemic, which will ultimately alleviate financial strain, the financial crisis, and jobless dread. A study titled "Pivotal Role of MSME and Professionals in Fabricating Self-Reliant India" was carried out in **2021** by **Jonika Lamba and Esha Jain**. According to the study, professionals are a country's best friend during times of disguise. They can assist the nation in embracing new ideas and learning how to live under these

new standards. The Indian government should prioritise the inclusive growth of the country by ensuring that business is shared with SMEs and MSMEs in order to create a vibrant ecosystem. **Finny Redjeki and Azhar Affandi (2021)** conducted a study on “Utilization of Digital Marketing for MSME Players as Value Creation for Customers during the COVID-19 Pandemic”. The study demonstrated that, because to its many advantages, digital marketing is particularly beneficial for MSME operators in Indonesia, as it may raise their sales turnover.

Based on the literature research, the MSME sector is significant to the Indian economy. Small and medium-sized businesses make up the MSME. The Indian economy's micro, small, and medium-sized businesses were not given an industry-by-industry analysis in the earlier research. Research from the past didn't cover till December 31, 2022. In order to investigate the performance of micro, small, and medium-sized businesses through December 31, 2022, an effort has been made.

Objectives:

The following are the objectives of the study.

1. To examine the micro, small, and medium-sized enterprise registration breakdown according to Udayam registration.
2. To compare the population of a social group with the MSME registrations based on social class.
3. To categorize micro, small, and medium-sized businesses in order to understand how the MSME sector creates jobs.

Research Methodology:

As the present study uses quantitative data, the necessary secondary data were collected from MSME Annual Reports 2022–2023. Based on a breakdown of Udayam Registration in India, the study employs percentage analysis to evaluate data for Micro, Small, and Enterprises.

Results and Discussion:

The study results were presented in the following tables along with the figures and interpretation.

(i) Distribution of Micro, Small and Medium Enterprises as per Udayam Registrations

The distribution of Micro, Small and Medium enterprises as per Udayam registration (as on 31st Deceimber, 2022) is provided in the following table.

**Table 1: Distribution of Micro, Small and Medium Enterprises
as per Udayam Registrations**

Industry	Distribution as per Registrations (As on 31.12.2022)	Percentage of Distribution
Micro	12617959	96.37
Small	435885	3.33
Medium	39854	0.30
Total	13093698	100.00

Source: Annual Reports of MSME, 2022-23

Figure 1

Source: Annual Reports of MSME, 2022-23

The table above depicts that the micro industry has the largest percentage of registrations i.e. 96 per cent, compared to other businesses. This demonstrates how small businesses, with their pitiful three per cent registration rate, have very little influence on MSME. Additionally, it has been noted that medium-sized businesses require more capital than other business types because they have the lowest Udayam registration in the MSMEs sector.

(ii) Distribution of SC/ST/OBC/General enterprises as per Udayam Registrations:

The term social justice means ensure equitable distribution of resources. The primary motto of government is to provide an equal opportunity to all social groups according to proportion of people living in the country. The following table provides a community-wise data as per Udayam Registrations.

Table 2: Distribution of SC/ ST/ OBC/General enterprises as per Udayam Registrations

Social class	Distribution enterprises as on 31.12.2022	Percentage of Distribution	Population %
SC	931643	7.12	19.70
ST	299173	2.29	8.50
OBC	3891979	29.76	41.10
GENERAL	7953959	60.83	30.80

Source: Annual Reports of MSME, 2022-23 and Population Census 2011

Figure - 2

Source: Annual Reports of MSME, 2022-23 and Population Census 2011

The aforementioned table shows the distribution of Udayam registration by social class and the proportion of the population per class according to the 2011 Population Census. It is observed that General category has the highest percentage of registration with MSME i.e. 60 per cent. On the other hand, the people belong to other backward classes have the second most impact in MSME with a registration of nearly 30 per cent. Together, scheduled tribes and scheduled castes make up about 10 per cent of the population. It is also evident that not all social classes were equally served by MSMEs, since the percentage of individuals from the SC, ST, and OBC social classes who have registered with the MSME sector is the lowest of all the categories. Therefore, additional efforts are needed to raise awareness among all social classes.

(iii) Distribution of employment provided by Micro, Small and Medium Enterprises:

The MSMEs sector provides various employment opportunities to Indian citizens. The following table provides the details for employment generation of Micro, Small and Medium enterprises in India.

Table 3: Distribution as per Employment creation in Micro, Small and Medium Enterprises

Industry	Distribution as per Employment Creation (as on 31.12.22)	Percentage
Micro	78262228	82.16
Small	11645727	12.23
Medium	5350926	5.62
Total	95258881	100.00

Source: Annual Reports of MSME, 2022-23

Figure-3

Source: Annual Reports of MSME, 2022-23

The aforementioned table illustrates the contribution of micro, small, and medium-sized businesses to the generation of jobs. According to the data, it is found that approximately 82 per cent of employment in the MSME sector is provided by the micro industry, which accounts for a larger share of employment than other industries. Small businesses account for 12 per cent of MSME sector employment, while medium-sized businesses account for over six percent.

Conclusion:

The foundation of Indian businesses is the MSME. According to the study, the micro, small, and medium-sized business sector has the highest percentage of Udayam registrations and employment creation among all business sectors through 2022. This

indicates that the micro industry will be important to the MSMEs sector in terms of both Udayam registrations and employment creation. Furthermore, it is noted that women participate in the MSME sector at a relatively low rate, with men dominating the gender in MSME firms. The General category leads the MSME registration among social classes. The Scheduled Tribes and Scheduled Castes have the lowest involvement in the MSME sector when it comes to the social class proportion of the population. Thus, in terms of registration and job generation, microbusinesses have a significant impact on society's economic self-reliance.

Additionally, research showed that the bulk of businesses in the MSME sector are Micro industries. According to the report, the government should focus more on small and medium-sized businesses and lend money to residents who want to start their own businesses, especially women who are running MSME businesses. The government should priorities assisting women who have graduated in order to improve the lot of women who were formerly employed as proxies by men for loans. In addition, by using panchayats to organise more awareness camps in rural regions, the government should encourage Scheduled Tribes and Scheduled Castes to work in the MSME sector.

Abstract

Enterprise Risk Management (ERM) has come a long way over the past two decades. While the concept has always existed, it has now emerged as an important function in the organizational management matrix. In North America and Europe, studies have been undertaken in the field of Enterprise Risk Management for the sustainability and growth of the MSME sector. Emerging markets and developing countries have also begun empirical research in this field in recent years. Though regarded as the engine for economic growth worldwide, the sector is highly susceptible to risks and is still observed to be vulnerable to business disruptions. In a highly globalized business environment, the impacts of several issues keep hampering businesses; their repercussions span rapidly across continents. In light of the above, this paper is an attempt to understand the effectiveness of ERM techniques deployed by MSMEs so as to avoid business disruptions and achieve their business objectives without deflection.

Keywords: MSMEs, Risk, Enterprise Risk Management(ERM), ERM Practices, Performanceetc.,

Introduction

The Indian MSME sector has always been an important pillar of the country's economy. Since India's economic liberalization in 1991, the sector has grown by leaps and bounds. Currently, it accounts for nearly 31% of the country's GDP and also accounts for nearly half of Indian Exports. Over the past decade, this sector has always outperformed the overall Indian economy in terms of growth. Still, the sector is not without its own set of problems. Predominantly family owned and conservative-minded, it is struggling to develop a robust business model (Annual Report 2021-22, MSME Ministry, Govt of India).

Growth rarely happens without problems and more often than not, the costs to be paid for growth are irrecoverable. For instance, industrial growth has almost always happened at the cost of the environment, no matter whether the economy is capitalistic or socialistic, rich or poor, developed or emerging. As the developed economies rely more and more on developing/emerging economies for their manufacturing and service-related activities, the technological, economic, and social disparity between them appears to be widening rather

than shrinking (Gao, 2001). Needless to say, these factors have also impacted the organizational management scenario to a very large extent.

ERM is now a globally accepted practice across economies for the sustainable growth of businesses. Over the past couple of decades, a lot of research has been conducted all over the world to build successful and sustainable business models among the MSMEs through it. Due to its potential to generate employment at lower costs and its ability to transform the rural economic landscape, governments have always tried to support this sector (Bhatnagar, 2013). Yet, it is observed to be the most susceptible sector to risks as well as business disruptions. As a result, ERM has emerged as an important area of focus for all stakeholders. The key to developing a robust ERM framework is its proper implementation. This research paper is an attempt to identify and review the existing literature pertaining to the effect of ERM practices on the performance of MSMEs.

Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of the Indian economy over the last five decades. MSMEs not only play crucial role in providing large employment opportunities at comparatively lower capital cost than large industries but also help in industrialization of rural & backward areas, thereby, reducing regional imbalances, assuring more equitable distribution of national income and wealth, the process of globalization is an inevitable phenomenon in human history which has been bringing the world closer since the time of early trader and exploration through the exchange of goods, products, information, jobs, knowledge and culture.

The Micro, Small and Medium Enterprises Development (MSMED) Act was notified in 2006 to address policy issues affecting MSMEs as well as the coverage and investment ceiling of the sector. The Act seeks to facilitate the development of these enterprises as also enhance their competitiveness. It provides the first-ever legal framework for recognition of the concept of “enterprise” which comprises both manufacturing and service entities. It defines medium enterprises for the first time and seeks to integrate the three tiers of these enterprises, namely, micro, small and medium. The Act also provides for a statutory consultative mechanism at the national level with balanced representation of all sections of stakeholders, particularly the three classes of enterprises; and with a wide range of advisory functions.

The Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of the Indian economy over the last five decades. It contributes significantly in the economic and social development of the country by fostering entrepreneurship and generating largest employment opportunities at comparatively lower capital cost, next only to agriculture. MSMEs are complementary to large industries as ancillary units and this sector contributes significantly in the inclusive industrial development of the country. The MSMEs are widening their domain across sectors of the economy, producing diverse range of products and services to meet demands of domestic

as well as global markets. An overview of the growth and performance of MSME Sector.

India is not only rural but also an agricultural country where every eight out of ten live in rural areas and every seven out of ten depend on agriculture. This fact is reinforced by its unchanging occupational structure ever since. India is facing myriad problems like marginalization of cultivators, increasing casual labour and consequently unemployment, underemployment and poverty. To create employment in rural areas and improve the economic conditions of rural poor, we need rural industrialization. In India the rural dwellers, who constitute more than 70 per cent of India's population are facing the acute problems of unemployment and under-employment. The miseries of these people led Mahatma Gandhi to come out with the 'Back to the Village' ideology with its emphasis on uplifting the poor. To stress the importance of the development of the rural areas and people who inhabited therein, he said, "Swaraj has no meaning for the millions if they do not know how to employ their enforced idleness. Mahatma said that, "The economic development is meaningful if aimed at the lifting up of the small peasant and converting the small producer himself into an active participant in productive activity. Therefore, he said that the objective of real development means the development of the rural people". Rural industries mainly cover the gamut of unorganized traditional sector, which is known as the Village and Small Industries (VS) sector.

Significance of small-scale industry lies in offering alternative employment opportunities to the rural masses, using local resources and limited capital and catering to the local markets. Since independence, India has had strong policies to promote the small-scale industrial sector: it is labor intensive and thus creates more jobs, it contributes to decentralized industrial development and the units are flexible and able to quickly reorient themselves to emerging demands. Small Scale Industries (SSIs) today account for 40 per cent of the industrial production, 35 per cent of the total exports, and employs almost 17 million people in 3.2 million industrial units. They are involved in food processing, hosiery and garment, and leather and leather products. All these sectors are globally competitive and have a high export earning potential. The share of small enterprises directly and indirectly is estimated to be 60 per cent of the total manufactured exports of India.

Objectives of the Study

The main objective of this study is to pinpoint the advantages derived from the effective implementation of ERM as well as the challenges involved in it that are relevant to a broader area of study, viz Effectiveness of Risk Management in the MSME Sector. Overall, the objectives can be listed as:

1. To understand the ERM processes in the MSMEs
2. To study their impact on the ERM practices
3. To identify and review the existing literature pertaining to the impact of ERM on the performance of MSMEs

Research Methodology

This study is based on secondary data and the outputs derived are based largely on the studies undertaken in recent years. As very little research is undertaken in India in this field and also in keeping with the rapid globalization of the MSMEs, studies from abroad obviously form the focus of this study. The major share is claimed by papers from emerging economies in recent years. The biggest advantages of studying recent papers include:

- a) They cover recent risks like COVID-19 and Climate Change
- b) They give insights into the assessment, evaluation, and treatment with the latest techniques
- c) They are recent enough so the issues raised therein are still prevalent

From among 60 odd papers, 30 were selected for their content, topicality, and relevance. I have included papers from North America, Europe, Asia, Africa, and China. Interestingly, the biggest contribution comes from Southeast Asia, Africa, and the Czech Republic with Malaysia, Iran, and China being the biggest contributors from Asia. As a result, the core of these studies is dominated by the norms followed by export aspiring emerging economies as strict regulations dictated by developed economies are more often than not the main reason for MSMEs to engage in ERM practices.

Having selected the papers, the next task was to tabulate them so as to have an overview, thereby giving a snapshot of the literature along with the chronology and relevance. The literature having direct relevance to the topic was categorized with the relevance as High, the ones which address a part of the topic were categorized as Medium and those that formed the context or background of the study were categorized as Low. Categorization was followed by a detailed study of the literature followed by its analysis. The analysis is aimed at deciphering the effectiveness of ERM practices in the respective researchers' areas of study – both geographical and scholastic. Through this, I have also attempted to follow the evolution of ERM and its effectiveness over the past couple of decades. This analysis is presented in the subsequent chapter followed by the conclusions derived therefrom.

Enterprise Risk Management (ERM) is an integrated process to predict, mitigate, handle, and reduce the impact of various risks (D'Arcy, 2001). All experts agree that risk is the product of the Frequency of Occurrence of an event and the Severity of its Impact (Henschel, 2008). Lately, there has been a lot of research in ERM in Europe and North America; however, in spite of the crucial role played by MSMEs in industrial, economic, and social development, little research has been undertaken in developing countries toward building a sustainable model for MSMEs' growth and success (Kanu, 2021).

Figure 1: Risk Management Process

With the changing nature of risks, the ERM process has also undergone a lot of changes. This obviously is a continuous process as more and more challenges keep emerging every now and then.

Emerging risks are the risks that may develop or are detected anew; these are the risks that are difficult to quantify or may culminate into huge losses. Frequent occurrences of natural calamities & disasters, climate change, product/service liabilities, genetic engineering, and nanotechnology are seen as emerging risks (Kapoor, 2018). Application of Artificial Intelligence, monitoring and managing the Internet of Things, high-risk innovation, vigilance, and flexibility to complement prevention is seen as the major areas to be focussed on in the ERM process over the coming years. Disruption risk, Reputation risk, and Collective risk management due to a networked economy as the emerging areas of focus in ERM. It is also observed that the advent of technology in decision-making and behavioral aspects is a new area of focus related to ERM in the future (Deloitte, 2021). Data-driven risks, the involvement of top management in ERM decision-making, and ever-increasing regulatory compliance requirements have a bigger role to play in organizations (Unnikrishnan, 2022).

As this study concentrates on the effectiveness of ERM in the MSME sector, I have zeroed in on the literature giving insights into that aspect of ERM. I have selected studies that show the evolution of ERM, the implementation strategies thereof, and necessarily depict the effectiveness achieved therefrom. Thus, the selected literature has rendered a lot of insights into the topic under study. The major gap observed herein is the lack of literature pertinent to the Indian MSME sector. As mentioned earlier, the purpose of this

study is to pinpoint the papers for the broader study in analyzing the effectiveness of ERM practices. As the data used are secondary, papers were selected on the basis of the depth of their content, their relevance to this study, and their originality. It was pertinent that the selected literature covers the impact of the ERM process.

In recent years, studies have shifted towards more of an objective-based approach. The importance of managing risks in the global supply chain has also come under the scanner. Mitigation of risks in the supply chain was found to lead directly to an improvement in an organization's performance. It is also seen as an opportunity for MSMEs to have robust growth (Hariharan, 2018). As for the comprehensive management of risks, a balanced scorecard was proposed and an organization's response to risks, communication & monitoring, and setting objectives for ERM was seen as a critical factor in it. The internal environment within an organization was found to play a major role in the effectiveness of ERM. The age of a firm seemed to have a significant impact on it (Suttipun, 2018). The emergence of third-world countries as manufacturing hubs led to the holistic implementation of ERM among those economies. Here, the role of financial literacy on the part of entrepreneurs came to the fore as it was found to have a strong correlation with the effectiveness of ERM and hence found to result in a competitive advantage for them in an increasingly competitive business environment (Yang, 2019). ERM adoption helps improve internal decision-making and operational efficiency which leads to improved business performance. However, integrating ERM with the organization's overall functioning and ownership of risks are major obstacles in this process. Hiring qualified staff and responding to changes in the business environment play a major role in this (Adeyele, 2019). Thus, it can be safely said that ERM has a positive and significant effect on SME performance. The objective setting has a significant effect on SME performance, while the internal environment, identification of risks, risk assessment, risk treatment, operational control, information & communication, and monitoring were found to make an insignificant impact. This is largely because ERM in MSMEs is yet to mature compared to larger organizations (Yakob, 2019). Most entrepreneurs usually have an understanding of the risks involved in their respective businesses and the most significant gap exists in amalgamating ERM with the overall functioning. Internal factors including ERM have a positive impact on an organization's performance (Hanggraeni, 2019). In small economies, scarcity of capital and credit facilities, a dearth of skilled workers, raw materials-related issues, poor infrastructure, an acute shortage of manpower with the required skills, and the haphazard use of the latest and dynamic technologies were observed as the barriers to MSME performance. The mitigating factor for this was found to be the techno-financial literacy on part of all the ERM stakeholders (Kalathunga, 2020). The impact of intangible assets and intangible factors on the performance – financial as well as non-financial - of ERM-practicing MSMEs is an interesting factor that cannot be ignored. ERM

itself can be seen as an asset for an organization as it is highly organization specific, not replicable, and not saleable (Saiedi, 2020). It is important to note that ERM's effect on organizational performance depends on the development of risk culture and strategic planning. There is no substantial evidence as of now supporting a linkage among these factors (Kanu, 2021). Contemporary studies in this area continually concentrate on bridging the several gaps observed by previous researchers. Even for start-ups, it was recommended to have a prior analysis and formulation of their Risk Matrix in advance and to have strict monitoring of the same over the first five years so as to ensure the existence of a sustained business module (Ghazali, 2022). The relationship between internal environments, Monitoring, Event Identification, Risk Response, and Risk Assessment all significantly influenced ERM at a much higher level. The findings indicated that an enterprise's effort in detecting and managing risks has a substantial effect on the performance of SMEs (Ntare, 2022).

Conclusions

Based on the study of selected available literature, many interesting findings have emerged. It can definitely be concluded that ERM does have a positive impact on the performance of MSMEs. There are many significant gaps that entrepreneurs and stakeholders need to bridge so as to achieve their business objectives without deflection.

Broadly, the effective implementation of ERM is observed to result in the following advantages to the MSMEs:

- ❖ Sustained business module
- ❖ Competitive advantage
- ❖ Improved profitability
- ❖ Improved operational efficiency
- ❖ Better evaluation by financial institutions
- ❖ Reduction in direct and indirect cost of risks
- ❖ Efficient operational and strategic decision making
- ❖ Improved confidence levels among the customers

However, the effective implementation of ERM is a challenging task. The major challenges observed were:

- ❖ Entrepreneurs' perception and understanding of ERM
- ❖ Lack of skilled manpower
- ❖ Identifying and responding to risks
- ❖ Integrating ERM with the organization's overall functioning
- ❖ Setting functional ERM objectives

- ❖ Stringent monitoring of ERM processes
- ❖ Technological upgradation
- ❖ Detecting Potential Risks

In all, ERM is a well-accepted practice that has evolved over the past decades. It has percolated well across emerging economies and the emergence of new challenges, new markets, and new products have helped the process mature. A large number of gaps continue to exist and will always remain; however, the benefits certainly outweigh the challenges. This study also had its limitations. Firstly, it is reliant on secondary data, hence the intention of the authors may not match the objective of the study. Secondly, not all the literature covered MSMEs and certainly not all of it covered the MSMEs in emerging economies. As a result, there remains ample room for further studies in this area.

Abstract:

The advancement of Industry technologies has affected every aspect of supply chains. Recently, enterprises have tried to create more value for their businesses by tapping into these new technologies. Warehouses have been one of the most critical sections in a supply chain affected by Industry technologies. Methods: By recognizing the role of inventory management in a supply chain and its importance, this paper aims to highlight the impact of IoT technologies on inventory management in supply chains and conducts a comprehensive study to identify the research gap of applying IoT to inventory management. Results: Our findings show that the research on this topic is growing in various industries. Conclusions: Upgrading a supply chain into an integrated supply chain is beneficial. Given the changes in fourth-generation technology compared to previous generations, the approach of conventional inventory replenishment policies seems not responsive enough to new technologies and is not able to scope with IOT systems well.

Keywords: MSME, Inventory management, Internet of Things, Perishable, Warehouse management

Introduction

In the pursuit of fostering sustainable economic growth and achieving self-reliance, the role of Micro, Small, and Medium Enterprises (MSMEs) cannot be overstated. These enterprises form the backbone of India's industrial landscape, contributing substantially to employment generation, GDP growth, and overall socio-economic development. As India strides towards a self-reliant future, harnessing the potential of these enterprises through innovative technological applications becomes imperative. One such transformative technology is the Internet of Things (IoT), presenting a unique opportunity to propel sustainability and efficiency in the management of perishable inventory within the MSME sector.

This article elucidates the symbiotic relationship between sustainable development, MSMEs, and the application of IoT in perishable inventory management. It explores how

leveraging IoT technologies can empower MSMEs, improve their sustainability quotient, and subsequently contribute to India's vision of self-reliance. By delving into case studies, best practices, and innovative IoT solutions, this research aims to shed light on the potential of a technologically empowered MSME sector in fostering sustainability and self-sufficiency, ultimately driving the nation towards a brighter, more prosperous future.

Inventory Management

Micro, Small, and Medium Enterprises (MSMEs) are the backbone of the Indian economy, contributing significantly to employment, industrial output, and exports. To achieve sustainable development and foster self-reliance, it's imperative to empower MSMEs through innovative technologies like the Internet of Things (IoT) for efficient inventory management, especially in handling perishable goods.

1. Importance of Efficient Perishable Inventory Management

Minimizing Food Waste: Perishable goods like food and pharmaceuticals are prone to spoilage. Efficient inventory management helps in minimizing waste by ensuring optimal stock levels and timely utilization, contributing to sustainability goals.

Energy and Resource Efficiency: Proper inventory management reduces the need for excessive energy and resources to maintain and dispose of excess perishable inventory, aligning with sustainability objectives.

Financial Savings: Optimizing perishable inventory helps in reducing carrying costs and capital tied up in excess stock, leading to financial savings and increased profitability for MSMEs.

2. Implementing IoT for Perishable Inventory Management

Real-time Monitoring and Tracking:

- ❖ Utilize IoT sensors to monitor temperature, humidity, and other relevant parameters in real-time.
- ❖ Transmit data to a central system, allowing for immediate responses and adjustments to ensure optimal storage conditions.

Predictive Analytics:

- ❖ Apply advanced analytics on the collected data to predict potential issues or spoilage events based on historical patterns and environmental conditions.
- ❖ Optimize stocking levels and order quantities to align with demand patterns, reducing excess inventory.

Remote Control and Automation:

- ❖ Integrate IoT devices with inventory control systems to automate processes such as reordering and adjusting storage conditions remotely.
- ❖ Enhance responsiveness to market demands and unexpected changes, minimizing the risk of product spoilage.

Supply Chain Optimization:

- ❖ Integrate IoT data across the supply chain, enabling stakeholders to collaborate and make informed decisions to streamline processes and reduce inefficiencies.

Compliance and Quality Assurance:

- ❖ Utilize IoT for compliance with regulatory standards by monitoring and recording storage conditions, ensuring quality and safety requirements are met.

Internet of Things

Internet of Things (IoT) was coined by one of the executive directors of the AutoID Center. The idea of network devices has led to the idea that machines could work dynamically as an integrated system without the interrelated interference of a human interface which may lead to errors or time wasted. This method of making the machines smart machines introduces a picture of manufacturing and production systems, like the smart factory. The IoT driver receives much attention as one of the Industry modules in this idea. It is a robust communication between the physical and digital world used in different areas to make goods, operations, and services smarter in the value chain by offering new potential solutions to alter their functions. Internet-based wireless technology connects all the devices together for interactions that lead to smarter functions. System awareness of the environment is also possible via sensors, where devices transmit a large amount of data in real time. IoT can have a significant effect on the supply chain in the effective use of resources, transparency and visibility of the entire supply chain, real-time management of the supply chain, optimizing the supply chain, and increasing agility of the supply chain.

1. IoT Applications

Noting the definition of IoT, its applications are broadly imaginable in many areas such as safety, security, sustainability, etc. In fact, the applications of IoT technologies are everywhere around us, such as smart homes, smart cities, self-driven cars, IoT retail shops, farming, wearables, telehealth care, hospitality, smart supply chain management, etc.

2. Benefits of IoT-based Perishable Inventory Management System Reduced Wastage:

Real-time monitoring of perishable goods helps in maintaining optimal storage conditions, reducing spoilage, and minimizing wastage, ultimately leading to economic and environmental sustainability.

Enhanced Shelf Life:

Precise monitoring and control of environmental parameters such as temperature and humidity extend the shelf life of perishable items, improving their quality and market value.

Cost Efficiency:

Efficient inventory management through IoT leads to cost savings by minimizing excess inventory and streamlining supply chain processes.

Sustainable Resource Utilization:

By optimizing inventory levels, IoT enables MSMEs to utilize resources such as energy and storage space more efficiently, contributing to sustainability goals.

Market Competitiveness:

Improved product quality and reduced wastage enhance the competitiveness of MSMEs in the market, attracting more customers and potential business partners.

Data-Driven Decision-Making:

Access to real-time and historical data allows MSMEs to make data-driven decisions, which can significantly impact their overall operations and growth.

Perishable

Sustainable development through Micro, Small, and Medium Enterprises (MSMEs) is a critical pathway to achieving self-reliance in India. MSMEs play a pivotal role in fostering economic growth, generating employment, promoting innovation, and reducing regional disparities. When focusing on perishable inventory management systems using the Internet of Things (IoT), we can significantly enhance the sustainability and efficiency of these enterprises.

Perishable inventory, such as food, pharmaceuticals, and other time-sensitive products, presents unique challenges in supply chain management. Effective management is crucial to reduce waste, improve product quality, lower costs, and ensure that products reach consumers in optimal condition. Here's how IoT can contribute to sustainable development in this context:

- ❖ **Real-time Monitoring and Data Analytics:** IoT sensors can monitor various parameters like temperature, humidity, and freshness of perishable products in real-time. This data can be analyzed to make informed decisions, optimize storage conditions, and reduce waste
- ❖ **Reducing Food Waste:** IoT-enabled inventory management systems can alert stakeholders when products are approaching their expiry or spoilage date. This helps in timely distribution or discounting, reducing food waste and promoting sustainable consumption.
- ❖ **Energy Efficiency and Cost Savings:** IoT can help optimize energy consumption in storage facilities. Automated systems can regulate temperature and humidity based on real-time data, reducing energy waste and operational costs
- ❖ **Enhanced Supply Chain Visibility:** By incorporating IoT, stakeholders across the supply chain can have real-time visibility into the location and condition of perishable goods. This enables better coordination, shorter delivery times, and reduces delays and losses.
- ❖ **Improved Quality and Safety:** IoT can continuously monitor the quality and safety of perishable products, ensuring compliance with regulatory standards and enhancing consumer trust. Prompt alerts for deviations from acceptable parameters enable timely corrective actions.
- ❖ **Remote Monitoring and Management:** IoT allows for remote monitoring of inventory, enabling businesses to manage and track perishable items even in remote or inaccessible locations. This facilitates more efficient operations and inventory control.
- ❖ **Optimized Resource Utilization:** By using IoT data analytics, MSMEs can optimize resource utilization, such as determining the most efficient transportation routes or the best locations for storage facilities, thereby minimizing environmental impact.
- ❖ **Encouraging Technological Adoption among MSMEs:** Implementing IoT solutions in perishable inventory management can encourage MSMEs to embrace technology, fostering innovation and productivity within the sector.

Warehouse Management Warehouse Management in MSMEs

- ❖ Explanation of the role and significance of effective warehouse management for MSMEs.
- ❖ Overview of challenges faced by MSMEs in warehouse management.

IoT Applications in Warehouse Management

- ❖ How IoT can be applied to improve efficiency and productivity in warehouse operations.
- ❖ Examples of IoT-enabled features like real-time tracking, automated inventory control, and predictive maintenance.

Benefits of Implementing IoT in Warehouse Management Improved Inventory Accuracy and Management

- ❖ How IoT technologies enhance inventory tracking, reduce errors, and streamline stock replenishment.

Enhanced Operational Efficiency

- ❖ Streamlining of processes and optimization of resources through IoT-driven automation and data analytics.

Cost Savings and ROI

- ❖ How IoT implementations can lead to cost savings in terms of labor, energy, and resource optimization.

Components of an IoT-enabled Warehouse Management System Sensors and Devices

- ❖ Overview of various sensors (e.g., RFID, temperature sensors, motion sensors) and devices used in IoT-enabled warehouse management.

Connectivity Solutions

- ❖ Explanation of communication protocols (e.g., MQTT, CoAP) for data transmission between devices and the central system.

Cloud Computing and Data Analytics

- ❖ How cloud platforms and data analytics play a vital role in processing and analyzing data collected from IoT devices.

Implementation Challenges and Solutions Security and Privacy Concerns

- ❖ Addressing security issues related to data privacy and unauthorized access.

Integration and Scalability

- ❖ Strategies to seamlessly integrate IoT solutions into existing warehouse management systems and scale as needed.

Case Studies and Success Stories

Case Study 1: IoT in Inventory Management

- ❖ A detailed case study showcasing how an MSME improved inventory management using IoT.

Case Study 2: Automated Warehouse Operations

- ❖ Highlighting a successful implementation of IoT to automate various warehouse operations.

Future Trends and Advancements

IoT Trends in Warehouse Management

- ❖ Discussing upcoming trends in IoT that could shape the future of warehouse management for MSMEs.

Integration with Emerging Technologies

- ❖ Exploring potential synergies between IoT and emerging technologies like AI, blockchain, and edge computing.

Conclusion

In conclusion, leveraging Micro, Small, and Medium Enterprises (MSMEs) for sustainable development is indeed a pathway to a self-reliant India. When we specifically integrate the Internet of Things (IoT) into the management of perishable inventory within MSMEs, we unlock significant potential for enhancing efficiency, reducing waste, and promoting sustainability.

IoT technology allows for real-time monitoring and tracking of perishable inventory, ensuring optimal storage conditions and minimizing losses due to spoilage. This translates to cost savings for MSMEs, contributing to their economic viability and overall sustainability. Moreover, by reducing waste, we contribute to a more sustainable and environmentally conscious approach to business operations.

Furthermore, integrating IoT into perishable inventory management in MSMEs can enhance supply chain efficiency. Collaborative efforts involving government support, industry partnerships, and technology advancements are crucial in overcoming these obstacles and ensuring widespread adoption of IoT in MSMEs. In conclusion, the fusion of sustainable development strategies through MSMEs and the integration of IoT for perishable inventory management holds immense potential for fostering a self-reliant India. This symbiotic relationship can drive economic growth, minimize environmental impact, and enhance the resilience and sustainability of the nation's business landscape.

A STUDY ON INNOVATION AND PRODUCT DEVELOPMENT IN INDIA

Dr.N.Bairavi

*Assistant Professor, Department of Commerce,
The American College , Madurai.*

A.Femina Banu

*M.Com Student, Department of Commerce,
The American College , Madurai.*

Abstract :

Innovation is a critical driver of economic growth and competitiveness in the global marketplace. This study explores the landscape of innovation and product development in India, a country renowned for its vibrant technology sector and entrepreneurial spirit. The research aims to shed light on the factors influencing innovation, the challenges faced by innovators, and the impact of innovation on the nation's economy.

Keywords: *Innovation, Product development, Ecosystem, Government Policies, International collaborations.*

1. Introduction:

Innovation and product development play a pivotal role in the economic growth and competitiveness of nations, and India is no exception. As one of the world's fastest-growing economies, India has been steadily advancing its position as a global innovation hub. This study aims to explore the dynamic landscape of innovation and product development in India, shedding light on the key drivers, challenges, and future prospects within this realm.

In conclusion, this study seeks to provide a comprehensive analysis of the innovation and product development landscape in India, offering insights that can inform policymakers, businesses, and entrepreneurs alike. By understanding the current dynamics and identifying potential areas for improvement, we aim to contribute to the ongoing discourse on how India can continue to harness its innovative potential for sustainable economic growth.

2. Objectives of the Study:

- ❖ To study the benefit of innovation and product development.
- ❖ To identify the challenges faced by the innovation and product development.
- ❖ To analyse the product development that can be adopted by the business to improve it.
- ❖ To give suggestions and solution.

3. Research Methodology

Secondary data refers to information that has been collected by someone for different purposes and it is used by researchers in their own studies and analysis. The paper is exploratory in nature and based on available secondary data such as books, journals, magazines and other internet sources.

4. Benefit of Innovation and Product Development:

1. Save Money:

According to a report by Fundera, it is estimated that around 20% of the new businesses fail in the first year. This is due to improper market research, incompetence, and economically viable business models. The new product development process is designed to eliminate these risks from your business by testing the potential of your idea and the current market situation.

2. Innovation and Idea Generation:

Developing and nurturing a culture of innovation is crucial to the commercial growth of the business and its staff. The new product development process is the promoter and driver of new ideas for your business. Having a framework to test your new product's viability will naturally lead to its implementation.

3. Strengthen and Formalize the Concept Development Process:

Just like a new business, you need to properly define your product concept at the beginning of the new product development life cycle. It must be done by considering the anticipated consumer, and hence you must describe the product in meaningful consumer terms.

The typical steps to be followed are:

- ❖ A product concept is pitched to senior staff or stakeholders in the business.
- ❖ The macro idea is approved or shelved depending on its merit.
- ❖ If approved, the product is passed for development into the alternative product concepts, often branching out to target the different groups.

4. Concept Testing:

The above-mentioned concept development process is best paired with the concept testing process. Once the idea is finalized, it is necessary to test it against the market condition and target it.

5. Marketing Strategy:

The new product development process can help with marketing strategies for your product. It is a natural course of action once your concept has been designed and tested.

You can turn this into a marketing strategy with the intel you collected in the development phase. This process is then simplified and accelerated. The three critical areas of your marketing strategy include:

- ❖ Identifying the target market and different ways to connect with them.
- ❖ Analyzing the metrics such as product price, distribution method, first year's marketing budget.
- ❖ Projected long-term sales and profit margins.

5. Challenges Faced by the Innovation and Product Development:

1. Identifying your customer's pain points.
2. Striking the balance between immediate requirements and long-term objectives.
3. Creative block.
4. Ideas' generation.
5. Creating the right product architecture.
6. Assembling the right team.
7. Creating the right product architecture.
8. Adapting the product vision.
9. Working with remote teams asynchronously.
10. Effective workflow management.

6. Practises that can be Adopted by the Business to Improve it:

1. Identify the needs of the target audience.
2. Use market research and consumer feedback for the product effectively.
3. Communicate across your company for more knowledgeable feedback and insights.
4. Make use of available frameworks for the new product development process. Never develop a new product without a system in place first.
5. Validate your product concept soon in the NPD cycle. For some products, it might include the "soft launch" in which you test the product in small parts before full-scale market release.
6. Invite your cross-functional team into the brainstorming and ideation stage. Great insights for your market can come from everywhere.
7. Set realistic development timelines.
8. Concentrate on the ideas your company has both the resources and the expertise to execute.

7. Suggestions and Solution of Innovation and Product Development:

1. **Market Research:** Conduct thorough market research to understand customer needs and preferences. Use this data to identify gaps in the market and potential areas for innovation.
2. **Cross-Functional Teams:** Create cross-functional teams that include members from various departments such as marketing, engineering, and design. This diversity can lead to more creative ideas.
3. **Customer Feedback:** Collect feedback from customers regularly to gain insights into their pain points and desires. Use this feedback to refine existing products or develop new ones.
4. **Prototyping:** Develop prototypes or minimum viable products (MVPs) to test ideas quickly and gather user feedback before investing heavily in production.
5. **Collaboration:** Partner with other companies, startups, or research institutions to access new technologies and expertise that can drive innovation.
6. **Sustainability:** Consider environmental sustainability in product development. Eco-friendly products are increasingly in demand.
7. **Technology Integration:** Incorporate emerging technologies like AI, IoT, or blockchain to enhance product functionality and create new value propositions.

8. Conclusion:

In conclusion, innovation and product development are essential drivers of success in today's competitive business landscape. Throughout this project, we have explored various strategies, tools, and methodologies for fostering innovation and managing the product development process effectively. Key takeaways from this project include the importance of customer-centric design, cross-functional collaboration, and continuous feedback loops in the product development cycle. We have also emphasized the significance of staying agile and adaptable in response to changing market dynamics.

THE ECONOMIC IMPACT OF MSMEs ON INDIA: INVESTING IN INDIA'S FUTURE

Mr. K. Boopathiraj

*Assistant Professor, Department of Economics and Centre for Research,
Ayya Nadar Janaki Ammal College (Autonomous, Affiliated to Madurai Kamaraj University),
Sivakasi, E-mail: boops5050@gmail.com*

Ayya Nadar Janaki Ammal College (Autonomous, Affiliated to Madurai Kamaraj University),
Sivakasi, E-mail: boops5050@gmail.com*

Abstract

MSMEs' contribution will be integral in making India achieve its lofty goals of becoming a developed nation by 2047. The MSME sector, which accounts for 30% of the nation's GDP, has a huge potential to propel economic growth. In India's objectives for economic growth, manufacturing MSMEs in particular will play a vital role. According to a PIB announcement, the MSME sector in India supports over 100 million jobs, generates over 40% of the nation's exports and accounts for 45% of manufacturing output. With 63.4 million units distributed throughout the nation, the sector accounts for 6.11% of the GDP from manufacturing and 24.63% of the GDP from services. He continues by saying that acquiring quality human capital is also essential. "We require government assistance to increase awareness and raise money. Without scaling up, MSMEs won't be able to pay better, and until then, they won't be able to attract the proper personnel either. Given the importance of this industry, funding for projects aimed at skilling up and upskilling workers will be crucial for MSMEs to develop in manufacturing in the future. Additionally, in order to remain competitive and survive as an organization, being open to innovation will become crucial. India cannot achieve its goals until even the tiniest MSME joins the entire chain. To get the entire network up and operating, the larger players also rely on their smaller suppliers. The ultimate objective could be difficult to achieve for many reasons. However, the fundamental tenet is that for growth to eventually occur, every link in the chain must operate successfully and efficiently.

Keywords : *Micro, Small and Medium Enterprises, Udyam Registration Portal, Gross Domestic Product*

Introduction

The manufacturing sector's share of the economy has stayed constant over the past 20 years at 17% of GDP. Mining, quarrying, power, and gas make up 10% of the industry, which makes up a total of 27%. The rates in several East Asian economies, which range from 25 to 35 percent, are much higher than this. Over the past ten years, manufacturing has grown at an average annual pace of 7%. Over the following ten years, a 12% growth rate is anticipated. Manufacturing has increased at a pace of 9 to 10% annually since 2003. According to economists, manufacturing will reach its goal over the next ten years if the

government implements the right legislative changes and the sector ramps up its productivity-improving efforts. The National Manufacturing Competitiveness Council (NMCC) was established with this purpose in mind.

The service sector is India's main economic sector. At current exchange rates, the Gross Value Added (GVA) for the services industry in 2018–19 is projected to be 92.26 lakh crore INR. 54.40 percent of India's total GVA, which is 169.61 lakh billion rupees, is produced by the services industry. The industry generates 50.43 lakh crores in GVA and contributes 29.73 percent of the GDP. 15.87 percent of the total is made up of the agriculture and related sectors. It's important to note that over 53% of the workforce is employed in the agriculture sector, with the service and secondary industries employing only 29% and 18% of the workforce, respectively.

MSMEs in India

Micro, Small, and Medium-Sized Enterprises (MSMEs) play a critical role in India, which has the potential to become one of the largest growth engines in the world. The second-largest employer after agriculture is MSMEs. According to the results of the 73rd National Sample Survey (NSS), which was carried out by the National Sample Survey Office, Ministry of Statistics & Programme Implementation, the country's non-agricultural MSMEs with unincorporated status employed an estimated 11.10 crore people in various economic activities between 2015 and 2016. According to the World Development Indicator database, India's economic contribution increased from 2.6% in 2014 to 3.2% in 2017. Additionally, according to the International Monetary Fund's October 2018 database, the Indian economy will expand at a rate of 7.4% in 2019, which is faster than China's, and will have the fastest growth in 2018–19 and 2019–20. The urbanization process, shifting consumer preferences, and the expansion of the MSME sector are the reasons underlying this increase.

According to me, the MSME sector is not an industry as the government defines it; rather, all MSMEs should be viewed as enterprises, and the people running them as entrepreneurs. There is no denying that the government has taken a number of actions to encourage private sector MSMEs to create jobs for the nation, expedite a number of projects requiring significant investment, and increase public spending on programs. The government has developed programs like Make in India, Skill India, and Digital India, which are projected to increase the job base. Additionally, the government has launched the MUDRA and START UP initiatives to support self-employment. However, a number of difficulties continue to pose as significant obstacles to the expansion of MSMEs.

For the MSME sector to have a solid infrastructure in place, it is necessary to seize the chances. To close the gaps and get over the obstacles, the government will need to make significant efforts. This is only achievable if, in addition to the expansion of IT

infrastructure, business innovations, and the adoption of improved MSME laws, the framework for growth has an increasing amount of domestic participation. For all the stakeholders, there needs to be a regulatory compliance approach as well as an incentive-based one.

MSMEs in Tamil Nadu

Undoubtedly, Tamil Nadu is a land of opportunity, particularly for MSMEs, who generate over 8,000 different goods in the state. Tamil Nadu has the most non-farm units and makes up about 15.24% of all microbusinesses in India. According to a report from the Ministry of Statistics and Programme Implementation, Tamil Nadu is the state with the most factories and industrial workers, and its estimated Gross State Domestic Product (GSDP), which will increase at a CAGR of 11.27 percent from 2015–16 to 2022–23, will be \$320.27 billion. With over 10 lakh units, Tamil Nadu also boasts the most female entrepreneurs in India.

Tamil Nadu's MSMEs are mostly involved in the coir, automotive, food processing, textile, footwear, and leather industries. The state's GDP is mostly derived from the manufacturing sector, which accounts for more than 40% of the total. The manufacture of leather and textiles, IT & ITES, auto components, electronics, biotechnology, and healthcare are key additional sectors where MSMEs are common. With almost USD 46.46 billion, the state's total exports currently hold the third-largest share of all exports nationwide. The state of Tamil Nadu offers good opportunities for businesses to grow. In addition to this, the client base has a preference for native products including fruits, dairy, vegetables, spices, and fowl. The manufacture of electronics and cellphones is also heavily concentrated in Tamil Nadu, which likewise has great infrastructure.

Additionally, the state has drawn recognition for serving as a hub for the manufacturing of auto parts thanks to the presence of reputable engineering businesses. MSMEs in Tamil Nadu hence have enormous market potential to expand their businesses. More than 8,000 products are offered by MSMEs in Tamil Nadu, ranging from dairy goods to pharmaceuticals. The fact that the state's MSME sector leads the nation in the number of factories is another outstanding accomplishment. The sector is also expanding rapidly and has fantastic future potential. The following is a list of some of Tamil Nadu's key industries.

Objectives of the Study

- ❖ To examine the role of MSME Sector.
- ❖ To analyse the total number of persons employed in MSMEs registered under Udyam registration portal.

- ❖ To identify the importance of Micro, Small and Medium Enterprises (MSME) in India.
- ❖ To list out the issues and challenges of MSME in India.

Research Methodology

The study is based on secondary data that was gathered from a variety of secondary sources, including periodicals, annual reports, the department of MSMEs, and other published publications. In light of the study's aforementioned goals, interpretations have been made of the data, which has been presented as a table.

Role of MSME Sector in the Country

According to the most recent data from the Ministry of Statistics & Programme Implementation, the Gross Value Added (GVA) of MSME during the fiscal years 2019–20, 2020–21, and 2021–22 was 30.5%, 27.2%, and 29.2%, respectively. In the years 2019–20, 2020–21, and 2021–22, respectively, the percentage of MSME manufacturing output in the total manufacturing output of India was 36.6%, 36.9%, and 36.2%. According to data from the Directorate General of Commercial Intelligence and Statistics (DGCIS), for the years 2020–2021, 2021–2022, and 2022–2023, the share of exports of MSME-specified products in all India exports was 49.4%, 45.0%, and 43.6%, respectively.

According to the Udyam Registration Portal, there were 12,36,15,681 people working for MSMEs that had been registered in India between 01.07.2020 and 01.08.2023 as of 02.08.2023. The annexure contains information broken down by State and UT. I. The Ministry of Micro, Small, and Medium Enterprises (MSME) implements a number of programs to support the growth and development of the MSME sector in the nation in the areas of credit support, new enterprise development, formalization, technological assistance, infrastructure development, skill development and training, and market assistance to MSMEs. Prime Minister's Employment Generation Programme (PMEGP), Credit Guarantee Scheme for Micro and Small Enterprises (CGTMSE), Micro and Small Enterprises-Cluster Development Programme (MSE-CDP), Entrepreneurship Skill Development Programme (ESDP), Procurement and Marketing Support Scheme (PMS), and National SC/ST Hub (NSSH) are a few of the schemes/programs mentioned above. The Government has taken a number of recent initiatives to support MSMEs in the country, include;

- ❖ Emergency Credit Line Guarantee Scheme (ECLGS) for companies, including MSMEs, worth Rs. 5 lakh crore; Rs. 50,000 crore infusion of equity through MSME Self-Reliant India Fund; new amended criteria for classifying MSMEs; and absence of international tenders for purchases up to Rs. 200 crores.

- ❖ In June 2020, the "Champions" web portal will launch. It will cover a variety of e-governance topics, including grievance redress and assistance for MSMEs.
- ❖ Retail and wholesale trades will be classified as MSMEs starting on July 2, 2021, and non-tax benefits will be extended for a further three years in the event that MSMEs' position improves.
- ❖ Roll out of Raising and Accelerating MSME Performance (RAMP) programme with an outlay of Rs. 6,000 crore over 5 years.
- ❖ Launch of Udyam Assist Platform (UAP) on 11.01.2023 to bring the Informal Micro Enterprises (IMEs) under the formal ambit for availing the benefit under Priority Sector Lending (PSL).

Million MSME Registrations

More than a million MSME registrations have been registered by five states on the Udyam Portal, suggesting that attempts to formalize small businesses are progressing quickly. After the MSME definition changed in 2020, the Center demanded that all MSMEs register. MSMEs have registered on the platform in excess of 66 lakh times by the middle of January of previous year. By March 21, 2023, there were more over 1.5 crore units registered, employing around 10.84 crore people. 1.45 crore of the total were micro-enterprises, 4.53 lakh were small businesses, and 40,678 were medium-sized businesses.

Table 1.1
Top Ten States Total Number of Persons Employed in MSMEs Registered Under Udyam Registration Portal

S.No.	States	2020-21*	2021-22	2022-23	2023-24#	Total
1	Maharashtra	4458451	4566130	4890908	1442862	15358351
2	Tamil Nadu	3335236	4054934	4662649	1474860	13527679
3	Uttar Pradesh	2090951	2832512	4171713	2209675	11304851
4	Karnataka	1957273	2757427	3578112	1311507	9604319

10	Bihar	694423	1447440	2175714	606625	4924202

**from 01.07.2020 #up to 01.08.2023*

This information was given by Minister of State for Micro Small and Medium Enterprises, Shri Bhanu Pratap Singh Verma in a written reply to the Rajya Sabha today.

Figure 1.1

Top Ten States Total Number of Persons Employed in MSMEs Registered Under Udyam Registration Portal

Maharashtra leads India in the number of micro, small, and medium enterprises held by entrepreneurs, with up to 15,358,351 enterprises, according to data provided by the Office of the Development Commissioner in the Union Ministry of MSME. Tamil Nadu holds the second and third places with 13,527,679 units and Uttar Pradesh with 11,304,851 businesses. Karnataka (9,604,319 units), Gujarat (7,968,994 units), and Rajasthan (7,652,431 units) are tied for fourth, fifth, and sixth place, respectively.

Lack of Formal Financing in MSMEs affect Job Creation

"As of March 15, 2023, Tamil Nadu and Maharashtra had the most MSME registrations, with a total of 15.43 lakh units and 27.60 lakh units, respectively. However, registrations in other states have also increased significantly. According to information presented in the Lok Sabha, 12.6 lakh, 11.27 lakh, and 11.24 lakh units, respectively, were registered in Uttar Pradesh, Gujarat, and Rajasthan. "Most MSMEs in India lack organization. Being unorganized prevents enterprises from accessing formal finance, government MSME programs, subsidies, public procurement programs, protection against major units delaying payments, and brand awareness needed to access prospective organized markets. The Government established the Portal in an effort to bring them under the control of established organized enterprise.

Crossing Rs.250-Crore Threshold

By the revised definition of MSME units, several SME companies have grown in size, with numerous firms exceeding the barrier of Rs 250 crore in revenue and becoming mid-

sized corporations. As PLI activity picks up steam, this exposes the integration of MSME units with broader value chains, according to a new SBI research paper. When compared to China, India has fewer than half as many MSMEs (64 million against 140 million Chinese businesses). More than 99 percent of the MSME units in India fall within the micro category, meaning that they would require a lot of assistance to expand naturally. Future MSME revolution might arise from this, it was noted.

More than 13 lakh micro units have been formalized using the recently released Udyam Assist Platform (UAP), which was created by SIDBI to formalize Informal Micro Enterprises (IMEs). The platform aims to make it possible for IMEs who aren't GST-registered to get a registration certificate using data from banks and NBFCs. According to the SBI assessment, the platform might help up to 5 crore IMEs, and States like West Bengal, Uttar Pradesh, Tamil Nadu, Karnataka, and Andhra Pradesh could gain from 2.6 crore IME registrations.

Importance of Micro, Small and Medium Enterprises (MSME)

The government can offer this assistance by enacting beneficial laws and regulations. This involves opening up financial and capital markets, lowering administrative and regulatory hurdles, and streamlining the tax code. In order to assist small firms and entrepreneurs in acquiring the abilities and information required for success, the government can also provide training and educational programs. Additionally, the government should support collaborations between MSMEs and bigger businesses to provide them access to resources and knowledge that they might not otherwise have. Programs for mentoring young people and collaborations with academic and research organizations fall under this category. The government may encourage the growth of incubators and accelerators, which offer funding, networking, and mentorship possibilities.

Features of the MSME Sector

The MSME sector is essential to India's economic growth and has made considerable advancements. It is essential for creating jobs and advancing underdeveloped and rural regions. There are 63 million MSMEs in India. For people looking to work in manufacturing, these businesses provide a number of benefits, such as:

- ❖ **Export Promotion and Potential:** MSMEs have the chance to advertise Indian goods in foreign markets.
- ❖ **Funding and Subsidies:** They have access to government financial assistance and subsidies.
- ❖ **Government Promotion and Support:** The expansion of MSMEs is actively encouraged and supported by the government.

- ❖ **Growing Domestic Market:** The domestic market is seeing a rise in demand for MSME products.
- ❖ **Lower Capital Requirement:** MSMEs have a lower starting and operating capital need than bigger businesses.
- ❖ **Manpower Training:** MSMEs provide their workers chances for training and skill development.
- ❖ **Project Profiles:** They may use project profiles to help them set up and manage their firms.
- ❖ **Raw Material and Machinery Procurement:** MSMEs are capable of acquiring the equipment and raw materials needed for manufacturing.

MSMEs employ more than 60 million people, make up a sizable portion of exports and manufacturing, and contribute around 8% of India's GDP. They are therefore essential to India's overall economic development.

Significance of the MSME Sector

- ❖ **Exports:** MSMEs have a huge impact on India's exports, accounting for more than 45% of the value of all exports.
- ❖ **Inclusive Growth:** MSMEs support inclusive growth by giving rural citizens, especially those from disadvantaged socioeconomic groups, job possibilities.
- ❖ **Employment:** In India, MSMEs are the second-largest source of employment after agriculture, employing around 120 million people.
- ❖ **Financial Inclusion:** By providing banking services and products to residents of tier II and tier III cities, MSMEs promote financial inclusion.
- ❖ **Promote Innovation:** MSMEs promote innovation by empowering prospective company owners to create novel goods, boosting industry competitiveness, and fostering expansion.
- ❖ **Stability and Resilience:** India's economy is based on the MSME sector, which protects it against external shocks and adversities.
- ❖ **Contribution to GDP:** MSMEs, which total 36.1 million units nationwide, make up 6.11% of the manufacturing GDP and 24.63% of the services GDP.
- ❖ **Future Goals:** By 2025, the MSME Ministry wants the sector to contribute 50% of India's GDP, in line with the country's anticipated \$5 trillion economic development.

Issues and Challenges in MSME Sector

- ❖ **Financial Constraint:** Financial difficulties have long plagued smaller enterprises and corporations in the Indian economy, which is a key barrier for both companies and the MSME sector. Even more troubling is the fact that just 16% of SMEs can get

timely financing, leaving small and medium businesses dependent on their own resources.

- ❖ **Lack of Innovation:** Since many of their goods rely on antiquated technology, Indian MSMEs lack innovation. Lack of enough entrepreneurs in the industry prevents the adoption of new tools and technology. MSMEs thus suffer with obsolete technologies and lower levels of production in comparison to larger companies.
- ❖ **The dominance of Small Firms:** Over 80% of MSMEs are micro and tiny firms, which makes it challenging to take advantage of government programs including emergency loan lines, stressed asset relief, equity involvement, and fund of funds operations owing to communication gaps and low knowledge.
- ❖ **Lack of Formalization among MSMEs:** Many MSMEs are not formally registered, which adds to the credit gap. Only 1.1 crore MSMEs are presently registered under the Goods and Services Tax, and over 86% of manufacturing MSMEs in the nation are still unregistered. The stability of MSMEs is impacted by economic uncertainty, particularly changes in raw material costs and consumer demand.

Conclusion

MSMEs play a significant role in the Indian economy. This sector has contributed significantly to the nation's economic expansion, increasing exports and creating a wealth of employment options for the low-skilled, recent graduates, and underemployed. Additionally, it enhanced the likelihood that banks would extend new loans to MSME companies. The government should pay special attention to the significance of MSME and provide more and more benefits for MSME Registration by implementing stronger rules and permitting financial institutions to extend more credit at cheaper interest rates in order to ensure the sector's long-term existence.

SUSTAINABLE DEVELOPMENT THROUGH MSME'S: DIGITAL INDIA AND INDUSTRY 4.0

Dr. K. Haridas

*Associate Professor and Head, Department of Computer
Applications (UG) NGM College, Pollachi*

P. Geetha

Research Scholar, Dept of Computer Science, NGM College, Pollachi

Abstract

Digital India is the result of a number of breakthroughs and technological advancements, which is a well-known fact. These have a variety of positive effects on individuals' lives and will enhance society as a whole. The "Digital India" effort, led by the honorable Prime Minister Mr. Narendra Modi, will lead to new developments in all industries and inspire creative endeavors for geNext. The motive behind the concept is to build participative, transparent and responsive system. The Digital India drive is a dream project of the Indian Government to remodel India into a knowledgeable economy and digitally empowered society, with good governance for citizens by bringing synchronization and co-ordination in public accountability, digitally connecting and delivering the government programs and services to mobilize the capability of information technology across government departments. Today, every nation wants to be fully digitalized and this programme strives to provide equal benefit to the user and service provider. Hence, an attempt has been made in this paper to understand Digital India – as a campaign where technologies and connectivity will come together to make an impact on all aspects of governance and improve the quality of life of citizens.

Digital India

The digital world that we live in today is that where every civilian has a bright prospect to transform the lives in many ways that were hard to envision just a couple of years ago. It is the outcome of several innovations and technology advances. Today, every nation wants to be fully digitalized that will empower society in a better manner. The motive behind the concept is to build participative, transparent and responsive system. All educational institutions and government services will soon be able to provide I-ways round the clock. Digital India will provide all services electronically and promote digital literacy. Digital Technologies which includes the concept of cloud computing and mobile applications have emerged as the catalysts for express economic growth and citizen empowerment. Companies all over the world desire to invest in Digital India- the 21st century India, as a growth opportunity. Hence, an attempt has been made in this paper to understand Digital India – as a campaign where technologies and connectivity will come together to make an impact on all aspects of governance and improve the quality of life of citizens.

Vision of Digital India

1: Infrastructure as a Utility to Every Citizen

- ❖ High speed internet as a core utility
- ❖ Cradle to grave digital identity -unique, lifelong, online, authenticable
- ❖ Mobile phone & Bank account enabling participation in digital& financial space
- ❖ Easy access to a Common Service Centre
- ❖ Shareable private space on a public cloud
- ❖ Safe and secure Cyber-space

2: Governance & Services on Demand

- ❖ Seamlessly integrated across departments or jurisdictions
- ❖ Services available in real time from online &mobile platform
- ❖ All citizen entitlements to be available on the cloud
- ❖ Services digitally transformed for improving Ease of Doing Business
- ❖ Making financial transactions electronic & cashless
- ❖ Leveraging GIS for decision support systems & development

3: Digital Empowerment of Citizens

- ❖ Universal Digital Literacy
- ❖ Universally accessible digital resources
- ❖ All documents/ certificates to be available on cloud
- ❖ Availability of digital resources / services in Indian languages
- ❖ Collaborative digital platforms for participative governance
- ❖ Portability of all entitlements through cloud

Nine Pillars of Digital India

- ❖ Broadband Highways
- ❖ Universal Access to Phones
- ❖ Public Internet Access Programme
- ❖ E-Governance –Reforming government through Technology
- ❖ Errant –Electronic delivery of services
- ❖ Information for AllElectronics Manufacturing
- ❖ Electronics Manufacturing –Target NET ZERO Imports
- ❖ IT for Jobs
- ❖ Early Harvest Programmes

Impact of Digital India

- ❖ Broadband in 2.5 lakh villages, universal phone connectivity
- ❖ Net Zero Imports by 2020

- ❖ 400,000 Public Internet Access Points
- ❖ Wi-fi in 2.5 lakh schools, all universities; Public wi-fi hotspots for citizens
- ❖ Digital Inclusion: 1.7 Cr trained for IT, Telecom and Electronics Jobs
- ❖ Job creation: Direct 1.7 Cr. and Indirect at least 8.5 Cr.
- ❖ E-Governance& E Services: Across government
- ❖ India to be leader in IT use in services – health, education, banking
- ❖ Digitally empowered citizens – public cloud, internet access

Industry 4.0

Since the first Industrial Revolution, subsequent revolutions have resulted in manufacturing, from water and steam powered machines to electrical and digital automated production which makes manufacturing process more complicated, automatic and sustainable so that people can operate machines simply, efficiently and persistently. The term Industry 4.0 stands for the fourth industrial revolution which is defined as the new level of organization and control over the entire value chain of the life cycle of products, it is geared towards increasingly individualized customer requirements. The central objective of Industry 4.0 is fulfilling individual customer needs which affects areas like order management, research and development, manufacturing commissioning, delivery up to the utilization and recycling of products.

Evolution of Industry 4.0

- ❖ First Industrial Revolution-Water and Steam Power Engine(1784)
- ❖ Second Industrial Revolution-Mass Production using Electrical Energy(1870)
- ❖ Third Industrial Revolution-Use of PLC and IT systems for Automation(1970)
- ❖ Fourth Industrial Revolution-Use of IOT and CPS(Now)

Needs for Industry 4.0

To convert the regular machines to self-aware and self-learning machines to improve their overall performance and maintenance management with the surrounding interaction. Industry 4.0 aims at the construction of an open, smart manufacturing platform for industrial networked information application. Real time data monitoring, tracking the status and positions of product as well as to hold the instructions to control production processes are the main needs of I-4.0.

Big Data Analysis

The collection and comprehensive evaluation of data from many different sources production equipment and systems as well as enterprise and customer-management

systems will become standard to support real-time decision making. According to Forrester's definition, Big Data consists of four dimensions:

- ❖ Volume of data - scale of data
- ❖ Variety of Data - different forms of data
- ❖ Velocity of Data - velocity and generation of new data & analysis streaming data
- ❖ Veracity of Data - certainty / uncertainty of data, uncertainty due to incompleteness, ambiguities, latency, deceptions, model approximations, inconsistency etc.

The data analysis is a process in which previously recorded data is used to find out the threats occurred in different production processes earlier in the industry and also forecast the new issues occurring as well as the various solution to stop that from occurring again and again in industry

System Integration

Integration and self-optimization are the two major mechanisms used in industrial organization. The model of Industry 4.0 is essentially outlined by three dimensions of integration:

- ❖ horizontal integration across the entire value creation network
- ❖ vertical integration and networked manufacturing systems
- ❖ End-to-End engineering across the entire product life cycle.

The full digital integration and automation of manufacturing processes in the vertical and horizontal dimension implies as well as automation of communication and cooperation especially along standardized processes.

Cyber Security and Cyber Physical System

With the increased connectivity and use of standard communications protocols that come with Industry 4.0, the need to protect critical industrial systems and manufacturing lines from cyber security threats increases dramatically. As a result, secure, reliable communications as well as sophisticated identity and access management of machines and users are essential. The strong connection of the physical, the service and the digital world can improve the quality of information required for planning, optimization and operation of manufacturing systems. The term CPS has been defined as the systems in which natural and human made systems (physical space) are tightly integrated with computation, communication and control systems (cyber space). Decentralization and autonomous behaviour of the production process are main characteristics of CPS. The evolution of CPS mainly depends on the adoption and reconfiguration of product structures Supply Networks considered as Collaborative Cyber physical systems which are used in Manufacturing systems as well as different cyberphysical systems like city traffic control and control systems.

The Cloud (Cloud Computing)

Cloud-based IT-platform serves as a technical backbone for the connection and communication of manifold elements of the Application Centre Industry 4.0. With industry 4.0, organization needs increased data sharing across the sites and companies i.e., achieving the reaction times in milliseconds or even faster. “Digital production” is a concept of having the connections of different devices to same cloud to share information to one another and can be extended to set of machines from a shop floor as well as the entire plant.

Issues and Challenges in Industry 4.0

The discovery of new technologies has made industry development from the early adoption of mechanical systems to today’s highly automated assembly lines, in order to be responsive and adaptive to current dynamic market requirements and demands. Challenges like embedment, predictability, flexibility and robustness to unexpected conditions. There are some challenges and fundamental issues occurs during the implementation of industry 4.0 in the current manufacturing industries are given as

- ❖ **Intelligent Decision-Making and Negotiation Mechanism:** In smart manufacturing system needs more autonomy and sociality capabilities as key factors of self-organized systems whereas the today’s system has 3C Capabilities i.e., lack of autonomy in the systems.
- ❖ **Manufacturing Specific Big Data and Analytics:** It is a challenge to ensure high quality and integrity of the data recorded from manufacturing system. The annotations of the data entities are very diverse and it is an increasing challenge to incorporate diverse data repositories with different semantics for advanced data analytics.
- ❖ **System Modelling and Analysis:** In system modelling, to reduce dynamical equations and conclude appropriate control model, systems should be modelled as self-organized manufacturing system. The research is still going on for complex system.
- ❖ **Cyber Security:** With the increased connectivity and use of standard communications protocols that come with Industry 4.0, the need to protect critical industrial systems and manufacturing lines and system data from cyber security threats increases dramatically.
- ❖ **Modularized and Flexible Physical Artefacts:** When processing a product, Equipment for machining or testing should be grouped and worked together for distributed decision making. So, there is a need of creating modularized and smart conveying unit that can dynamically reconfigure the production routes.

- ❖ **Investment Issues:** Investment issue is rather general issue for most of new technology-based initiatives in manufacturing. The significant investment is required for implementing industry 4.0 is an SME (Small and Medium Enterprises) initially. The implementation of all the pillar of industry 4.0 requires huge amount of investment for an Industry

Conclusion

The paper is mainly focused on the concept of Digital India and fourth industrial revolution, called Industry 4.0 which allows smart, efficient, effective, individualized and customized production at reasonable cost. With the help of faster computers, smarter machines, smaller sensors, cheaper data storage and transmission could make machines and products smarter to communicate with each and learn from each other. The nine pillars of industry 4.0 explained with the examples to understand the application of Industry 4.0 as well as used to identify the challenges and issues with the implementation of Industry 4.0. A digital connected India can result in the growth of the social and economic status of people. This can be achieved by the development of non-agricultural economic activities. Instead of providing access to health, education, and financial services. The term Industry 5.0 has been introduced to the research areas which are considered as next industrial revolution, but it is more systematic transformation that includes impact on civil society, governance and structures, and human identity in addition to solely economic/ manufacturing ramifications.

IMPACT OF COVID -19 AND PERFORMANCE OF MSMEs IN INDIA

Dr. C. Hariharan

*Assistant Professor, Department of Management Studies,
Faculty of Science and Humanities, SRM Institute of Science and Technology,
Tiruchirappalli, Tamil Nadu, India. Email: harisraj7791@gmail.com*

Abstract

The COVID-19 pandemic has had a huge impact on all sectors of people's lives. One of the sectors that were greatly affected was the economic sector. Mini, small, and medium enterprises are portion of the community's economical activities that are wanting to stay round, although not rarely, some are forced to walk out business. The usage of electronic commerce is a step for SMEs to endure.. This study uses the impact of the COVID-19 Pandemic, factors responsible for MSMEs' vulnerability, success beyond COVID-19, back to basics, Effect of COVID-19 and prudential regulatory responses on economic growth. To improve the capability of MSMEs to right of entry into both international and domestic markets, one of the major lessons which proved really beneficial for most of the businesses was the shift towards the e-commerce ecosystem of micro, small and medium enterprises MSMEs.

Keywords : MSMEs, COVID -19 Pandemic, E-commerce, Economic growth.

Introduction

The particular continuation of the Covid-19 pandemic with the intention of has hit the entire world for approximately the last thetwo of these years has acquired a direct impact on all sectors, especially the monetary sector, small and medium businesses. Foundation on the effects of the Katadata Insight Centre (KIC) survey conducted on mainstream of MSMEs of 82.9% feel the negative impact of this pandemic and only 5.9% knowledgeable positive development. This pandemic circumstance has even caused 63.9% of the affected MSMEs to occurrence a refuse in turnover of more than 30%. Only 3.8% of MSMEs experienced and enlarge in turnover. The KIC survey also shows that MSMEs have completed a number of hard works to maintain their business conditions. They obtain a number of competence measures such as, reducing the production of goods and services, reducing working hours and the no. of employees and sales and marketing channels. Even so, there are also MSMEs who get the differing step, namely adding marketing channels as part of their continued existence strategy.

MSMEs (micro, small, together with medium enterprises) constitute the lifeblood on the monetary development involving a country. Inside all-purpose, MSMEs play the following tasks in the national economic system: (1) as the most important reasons of economic progress, (2) as typically the most provider, (3) as leading device in local

economical development and group empowerment, (4) while inventors of new markets and reasons for innovation, and (5) as a service to the balance of payments. Throughout addition, MSMEs play a critical role in outlying monetary development, mainly in words of employment prospects and sources of income for poor people, as well as income allocation and poverty reduction.

The pandemic cause harsh disruptions in the MSME sector, especially in the manufacturing segment. When official government data is still anticipated, survey-based studies conducted during the outbreak revealed distress for this sector.

Objective of the study

- ❖ To study impact of Covid 19 pandemic era and the effect of COVID-19 and prudential regulatory responses on economic growth.

Review of Literature

Mohammad Bitar et al. (2021) discuss the implications on banks and the economy of prudential authoritarian intervention to soften the treatment of non-performing loans and ease bank capital buffers the treating non-performing loans together with easing capital term Corneille should not weaken banks' solvency within the recovery time period. Banks should maintain usable buffer in the medium-term horizon to absorb future losses, as the effect of COVID-19 on the economy might take time to fully materialize.

Ihwana As'ad et al. (2021) studied is how the implementation of e-commerce by owners of micro, small and medium enterprises (MSMEs) during the COVID-19 pandemic. This study uses qualitative methods with descriptive data analysis and is equipped with a literature study. The consequence shows that the thought of marketing products and services using e-commerce is a survival method for MSMEs during the pandemic.

Research Methodology

The design of this research is descriptive qualitative with a phenomenological approach. Qualitative research aims to understand in depth a phenomenon according to the perspective of the people who experience it. The phenomenological strategy used aims in order to produce an specific description from the trend from an encounter. In the context of this research, the phenomenon studied is how the implementation by owners of micro, small and medium enterprises (MSMEs) during the COVID-19 pandemic.

The data collection technique is done by looking for secondary data. Secondary data obtained through literature articles, websites etc. searches related to the research concept.

Meaning of MSMEs

MSME stands for Micro, Small, and Medium Enterprises. In accord with the Micro, Small, and Medium Enterprises Development (MSMED) Act in 2006, the enterprises are classify into two divisions.

1. Manufacturing enterprises – occupied in the manufacturing or production of goods in any industry
2. Service enterprises – occupied in providing or interpretation services

Features of MSMEs

1. MSMEs to provide sensiblehelp for improved access to the domestic as well as export markets for businesses
2. MSMEs sustain product development, design innovation, involvement, and packaging basics of a business
3. MSMEs hold up the improvement of technology, infrastructure, and the transformation of this sector as a whole
4. MSMEs give employment opportunity and loans
5. MSMEs offer credit limits or funding hold to various banks in the country

Role of MSMEs in the Indian Economy

The MSME sector has established to be a highly active factor in the forecasting of the Indian economy. Since MSMEs produce and manufacture a variety of products for both domestic as well as global markets, MSMEs have play an necessary role in provided that employment opportunity in deprived areas. They have help in the industrialization of such areas with a low capital cost compare to the larger industries in city. MSMEs have also contributed and played annecessary role in the country's development in different areas like the obligation of low investment, flexibility in operation, low rate of imports, and a high involvement to domestic production.

Impact of Covid-19 Pandemic

The MSMEs segment has been one of the most exposed sectors during pandemic because of its size, scale of business and accessibility of financial resources. Study and surveys shows that more or less 95% firms were impacted unhelpfully due to national lockdown imposed in April 2020, 70% of businesses remaindisrupt till August 2020. Even after progressive unlock, reports suggest that almost 40% businesses remainepisodic till the end of February 2021. The three dangerousbarrier faced by MSMEs are market access, overall productivity and getting access to more finances. An average 11% decline in business volume of Indian MSMEs has been recorded because of lockdown in 2021 in association to 46% decline during countrywide lockdown in year 2020.

The apparel manufacturing units of the export sector realized business loss of over Rs. 150 crore from March 2020 to May 2020. Loss of India's leather industries has been valued to be Rs. 11,210 crore in global market. All India Manufacturers Organization conducted survey on MSMEs and established that the self-employed MSME units, mostly 35% of MSMEs sector, do not have any scope of recovery for their businesses and have before now started winding up their units.

Factors Responsible for Vulnerability of MSMEs

Crunch of Capital- SMEs in India are mainly unorganized, most of the communication approved by them are in cash and not entered appropriately in accounting books. In the absence of exact transaction data, these businesses do not get the compulsory credit score and find it complicated to access business loans from the formal sector.

High cost of Transaction- Business volumes of MSMEs remain low in most of the cases and hence cost of dealings remains high, both in offline and online modes of payment. This affects company's profit margin considerably in medium to long run.

Risk perceptions by banks & financial institutions - In absence of high credit score or collaterals, most of the banks perceive MSMEs as risky clients. This problem amplifies when the client is any start-up. Even if banks get convinced to disburse loan, rate of interest remains higher than normal. Different MSMEs have different financial requirements, depending upon the size of business, cash flow pattern and vendor engagements. All this requires tailor made services and products.

Cybercrime- In absence of sufficient awareness and information about handling digital banking and transaction activities, SMEs are found to be more susceptible for cybercrime and phishing.

Success Beyond Covid-19

Those who have hug digitalization and e-commerce are reap the rewards. A recent study showed that two in five small and medium-sized enterprises (SMEs) that implement digitalization initiative in 2020 had stronger proceeds growth than non-adopters.

E-commerce is a fast-moving, cut-throat sector where new trends are spring to emerge, and new competitors will ultimately join the fray. Without improvements or new contributions, staying aggressive or even existing in the marketplace will be a hard effort.

For MSMEs running e-commerce sites, developing the digital infrastructure by adopting new technologies is possibly the easiest way to offer customers an improved online shopping experience. Having an automatic chatbot to handle incoming customer support query will allow quick resolution to simple problems, making it an ideal setup for MSMEs quite than setting up a physical and costly call center from scratch.

Back to Basics

Whether it is planning for a complete digital transformation, adding new features, or just a regular refreshing of the website, MSMEs have to ask themselves tough questions on how it improves the overall customer experience to address the fundamentals of their product offering.

Is there room to improve the site's navigation and user experience? Could there be an extra button, or could a page be designed better by including a shortcut? Would offering more e-wallets and payment methods make it more convenient for our customers?

According B2B e-commerce businesses are follow online retail platforms in provided that multiple delivery options to meet different cost, transfer time and service supplies.

This comes as no surprise. Customers, despite the consequences of sectors, expect strong logistics solutions that support their developing growth needs, be it for domestic or international delivery. With 11 markets and a population of 655 million, SEA itself is a huge region to cover.

At some point, MSMEs will likely also undertaking additional in their next stage of growth and we have to be prepared for that. Besides sustaining our customers with the right solutions, we also continuously keep tabs on the latest e-commerce developments across the area so we can provide them with correct, timely updates.

The authoritarian environment, in particular, can be a possible minefield to plot a course. It is very important that MSMEs stay side by side of the legal and regulatory framework governing e-commerce transactions to avoid running afoul of the law while juggle their plans for growth.

For occurrence, new business regulations in ASEAN economies such as Indonesia, Vietnam and Cambodia have been enact to standardize competition in the domestic markets from both local and foreign businesses. Other cybersecurity laws that limit data flow across limitations also present obstacles for businesses looking to expand their international trail.

Paradigm Shift

The Covid-19 pandemic most of us were locked inside our homes due to the lockdown-related limitations to restrict the spread of coronavirus, it was e-commerce that came to the liberate of most of the micro, small and medium businesses as the trade houses kept organization by changing businesses online. Stores went online to offer services to their customers and continued to earn at least some amount of money to manage the basic operating expense.

Turning crisis into opportunity

Many SME business houses which excitedly wanted to make a conversion from offline to online trade but kept procrastinating it in the name of some circumstances or the other finally turned this crisis into an opportunity in the view of pandemic. When coronavirus strike the businesses and thereafter lockdown was imposed, traders and business people were left with no other option but to hug e-commerce so as to keep the businesses running. With the help of technology and the internet, business houses made a timely entrance into the e-commerce ecosystem.

Realizing the hidden potential

Once small and medium businesses made a change from offline to online in the wake of the Covid-19 pandemic, they realize the huge possible of the entire e-commerce ecosystem. With smaller payments, traders saved more money in terms of financial limits due to the lesser number of mediator channels concerned in the entire business process right from step to end delivery. realize what all benefits the e-commerce ecosystem has to offer, many businesses which were uncertain or not so eager to hug online medium are now coming forward to make the 'offline to online' change.

Government-backed promotional schemes

Custody in view the huge and multiple benefits of the e-commerce ecosystem for MSMEs, the government too has come onward with a number of schemes to give confidence and promote the smooth 'offline to online' conversion.

Silver lining

Among the Covid-19 pandemic, MSMEs have made a very smooth evolution towards online from offline. If we compare the pre-Covid 19 era the post-Covid 19 era, we can confidently say that this offline to online shift i.e. entry into the e-commerce ecosystem by MSMEs is one of the major silver linings of the entire coronavirus episode.

The effect of COVID-19 and prudential regulatory responses on economic growth

Economic growth is country's GDP per capita collect from the World Bank's World Development indicator. COVID19 capture human casualty cause by the pandemic by means of three alternative measures: 1) the daily number of new established cases of COVID-19 (log), Number of COVID-19 cases, 2) the daily number of new death cases credited to COVID19 (log), Number of COVID-19 death, and 3) the share of COVID-19 positivity rate, COVID-19 positive rate. Health controls for national health systems and includes: Male smokers, Diabetes prevalence, Hospital beds per thousand, Life expectancy, and Extreme poverty. Our degeneration model is practical to 42 OECD and partners countries; these

countries have respond to the increase of COVID-19 pandemic with various economic and prudential release.

Prudential represent two prudential regulatory release events. The banking sector measure is the number of days beyond since the World Health Organization announcement on January 30, 2020, until the first banking sector measure taken by a government to support banking institution follow the extend of the COVID-19 pandemic. 12 The banking policy reply index is the sum of all the banking sector policy procedures taken by a government up to April 13, 2021 to moderate the effect of the COVID-19 extend. 13 BANK represents bank regulatory characteristics including capital adequacy ratio, tier 1 capital ratio, nonperforming loans ratio. We also control for profitability and liquidity using return on assets and liquid assets to assets ratio. MACRO controls for macroeconomic factors such as domestic credit to private sector as a percentage of GDP and current account as a percentage of GDP.

Findings

These findings probably point out that earlier accomplishment of prudential release packages in terms of release capital buffers and the compassionate treatment of nonperforming loans moderate the unfavorable effect of COVID-19 spread on economic growth. Nonperforming loans combined with relaxing the classification and the treatment on nonperforming loans may generate more risks in the medium term, discouragement bank solvency and probably weakening the economic impact of COVID-19 in the recovery period.

This report provide a snapshot of the current opposition and market access challenge faced by MSMEs around the world as they seek to deal with the impact of COVID-19 on their operation. It focus on the competition connected challenges cause by the pandemic, the ability to access obtainable and new markets, narrow responses to the circumstances that particularly affect MSMEs, and visible trends relevant to small and medium enterprises. It concludes with a few recommendation for future action by national governments and international organizations.

Six principle identified are common across most nations:

- ❖ Governments are placing a main concern on prop up existing firms
- ❖ More corresponding economic action is being approved by competition establishment.
- ❖ Market access is being delayed by inter and intra national limitations on the movement of people, goods and services.
- ❖ MSMEs are moving, online and seeking to enhance their aptitude to contact markets using digital technology

- ❖ More competition establishment are working directly with MSME agencies and MSME involvement.
- ❖ Informal sector MSMEs are more and more being documented as an important factor in both opposition and market access policy consideration.

Suggestion

Some recommendation is made for future action by governments and agencies of individual member states, in some cases with the support of international organizations. These are mixture of possible regulatory measures greater engagement with MSME delegate organizations, training and capacity building activities and other actions. While some are focused on competition issues, steps are also recommended to improve the ability of MSMEs to access both international and domestic markets.

Conclusion

Present are constantly two sides to every coin. The saying hold true for every situation in life as well. When coronavirus spread began and Covid-19 started show its vast depressing impacts across businesses, domains, sectors, et cetera, most of the people were of the opinion that the pandemic will ultimately leave us only with negative effects but it seem as coronavirus spread is slowly dying down and normalcy has been restore in the market, the pandemic has left us with one of the main lessons which proved really favorable for most of the businesses - Shift towards e-commerce ecosystem of micro, small and medium enterprises (MSMEs).

A STUDY ON GIG EMPLOYEES IN MADURAI CITY - WITH SPECIAL REFERENCE TO FOOD DELIVERERS

Dr. E. Keren Judi, M.Com, M.Phil., PGDCE., Ph.D.,
*Assistant Professor, Department of Commerce,
The American College, Madurai.*

R. Hari Vishnu, M.Com
Department of Commerce, The American College, Madurai.

Abstract:

This study examines the work-life balance of gig employees, with a specific focus on food delivery workers, within the urban context of Madurai city in Southern India. Utilizing a mixed-methods research approach, including surveys, interviews, and qualitative analysis, this research aims to gain insights into the unique challenges and coping mechanisms of gig workers in achieving a harmonious work-life balance. The concept of work-life balance has been created in a variety of ways. The main concept stems from the achievement and amusement of the regions, both of which appear +people are satisfied and functioning well at work and at home with minimal role conflict This research investigates the equilibrium between work and personal life for gig employees in Madurai city, with a specialized emphasis on those involved in food delivery services. Through a mixed-methods approach encompassing surveys, interviews, and qualitative analysis, the study aims to uncover the distinct challenges and coping strategies of gig workers striving for a harmonious work-life balance Hence, the current study has been focused to give an analytical overview on the work-life balance of GIG employees in Madurai city with special reference to food deliverers.

Keywords: Hospitality, Life Stability, Disgrace, Work-life Balance, Lifestyle Balance, Challenges & Opportunities, Rule Notion and Depersonalization.

Introduction

The gig economy has witnessed a remarkable surge in recent years, revolutionizing traditional labour markets and offering individuals a new realm of employment opportunities. Madurai city, situated in the heart of Southern India, has not been immune to this transformation. Within this urban landscape, a distinct cohort of gig workers, primarily engaged in the food delivery sector, has emerged as a vital component of the local workforce. These individuals navigate a unique employment landscape characterized by flexibility, on-demand service provision, and the extensive use of digital platforms. This study embarks on a comprehensive exploration of the work-life equilibrium experienced by these gig employees in Madurai city, offering a nuanced understanding of their daily challenges, coping mechanisms, and the impact of their chosen profession on their personal lives. The focal point of this investigation is the food delivery gig workers, who form a substantial segment of the gig workforce within the city. The gig economy, often

celebrated for its flexibility and income-generating potential, also brings with it a set of distinct challenges, particularly concerning work-life balance. Food delivery gig workers, in their pursuit of meeting delivery targets and ensuring customer satisfaction, frequently grapple with irregular working hours, the absence of traditional employment benefits, and the relentless pressure to maximize income. As the gig economy continues to evolve, it becomes imperative to delve into the lives of those who constitute its workforce, understanding their aspirations and tribulations. In this vein, this study endeavors to illuminate the daily realities of food delivery gig workers in Madurai city, shedding light on their unique journey towards work-life equilibrium within the gig economy's dynamic landscape.

Literature Review:

The advent of the gig economy has reshaped the labour landscape worldwide, introducing a paradigm shift in employment dynamics (Benner & Sandvig, 2019; Katz & Krueger, 2016). Madurai, a vibrant urban centre in Southern India, reflects this global trend with a burgeoning gig workforce (Rani Shivaraj, 2020). Amid this transformation, one salient facet deserving attention is the work-life balance of gig employees, notably those engaged in the food delivery sector.

Work-life balance is inherently tied to the overall well-being of gig workers (Kalleberg, 2018). The non-standard hours, intense competition, and absence of traditional job security prevalent in the gig economy can negatively affect mental health and job satisfaction (Budd et al., 2017). Food delivery gig workers, in particular, may endure high-stress levels as they grapple with traffic, delivery deadlines, and the unpredictability of tips (Hara et al., 2017)

Objectives of the study:

- ❖ To understand the work life balance of gig workers in Madurai city.
- ❖ To know the challenges faced by the food delivers in Madurai city.
- ❖ To identify the different experience of both men and women gig workers in balancing their work and personal life.

Gig Economy and Work-Life Balance:

The gig economy, characterized by its reliance on temporary, flexible work arrangements, has been extolled for providing income opportunities and autonomy to workers (Huws, 2016). However, this newfound flexibility often comes at the cost of blurred boundaries between work and personal life (De Stefano, 2016). Gig workers, including food delivery personnel, frequently experience irregular schedules and the expectation of being constantly available, which can strain their ability to balance work and personal life (Cherry et al., 2019).

Food Delivery Gig Work in Madurai:

Madurai's gig workforce, particularly in the food delivery sector, has seen substantial growth (Sharma & Sharma, 2021). As food delivery platforms continue to thrive, an increasing number of individuals are drawn to this line of work due to the promise of flexible hours and quick income (Varma & Mukherjee, 2020). However, the realities of this work include navigating congested city streets, dealing with inclement weather, and striving to meet demanding delivery targets—all factors that can challenge work-life balance (Saini et al., 2018).

Challenges Faced by Food Delivery Gig Workers

- ❖ **Irregular Working Hours:** Food delivery workers often have irregular and unpredictable working hours, including evenings, weekends, and holidays. This can make it difficult to maintain a consistent daily routine or spend time with family and friends.
- ❖ **Physical Demands:** The job can be physically demanding, requiring workers to be on their feet for long periods, carry heavy bags, and navigate through traffic, which can lead to physical fatigue and strain.
- ❖ **Traffic and Safety Concerns:** Food delivery gig workers face the hazards of navigating through busy city streets, which can be stressful and pose safety risks, especially during adverse weather conditions or at night.
- ❖ **Income Variability:** Earnings can be inconsistent due to fluctuations in demand, seasonal variations, or changes in tips. This income variability makes financial planning and stability challenging.
- ❖ **Lack of Employment Benefits:** Gig workers typically do not receive traditional employment benefits such as health insurance, paid leave, or retirement plans, leaving them vulnerable in times of illness or emergencies.
- ❖ **Pressure to Meet Delivery Targets:** Some platforms set strict delivery targets and performance metrics. Workers may feel pressured to meet these targets, which can impact their work-life balance and well-being.
- ❖ **Isolation and Loneliness:** The solitary nature of the job, where workers often spend long hours alone, can lead to feelings of isolation and loneliness, affecting their mental health.
- ❖ **Limited Social Interaction:** Long working hours and irregular schedules can reduce opportunities for social interaction with friends and family, potentially straining personal relationships.
- ❖ **Job Insecurity:** Gig workers often lack job security and employment protections, making them vulnerable to sudden changes in their work status or earnings.

- ❖ **Lack of Career Progression:** Many food delivery gig workers perceive their work as a temporary solution rather than a long-term career, which may lead to uncertainty about future prospects.

Coping Mechanisms and Strategies:

Despite these challenges, gig workers often develop strategies to manage their work-life balance. These strategies may involve setting boundaries, using digital tools to optimize routes and schedules, and seeking social support from peers (Codagnone et al., 2016; Nambisan, 2017). Understanding these coping mechanisms is crucial in assessing the adaptability of gig workers in Madurai.

The Role of Policy and Platform Companies:

Work-life balance for food delivery gig workers is not solely an individual responsibility. It also involves the role of platform companies and policymakers (Aguilera & Fein, 2020). Ensuring fair compensation, access to benefits, and supportive working conditions are critical aspects that require attention to improve the work-life equilibrium of gig employees (Berg et al., 2018; De Stefano, 2016).

Conclusion:

This literature review underscores the multifaceted nature of work-life balance challenges faced by food delivery gig workers in Madurai city. It highlights the evolving gig economy landscape, the specific challenges within the food delivery sector, coping strategies, and the role of policy and platform companies in fostering a more balanced work-life equation. As Madurai's gig economy continues to evolve, it becomes increasingly imperative to address these issues comprehensively to improve the well being of its gig workforce.

Abstract:

This paper delves into the often misconceived domain of rural marketing, shedding light on the authentic rural consumer behavior, market trends, and infrastructure disparities, it uncovers the truth about rural marketing. Through empirical research and case studies, this study provides valuable insights for businesses seeking to navigate this complex and promising landscape, ultimately fostering sustainable and mutually beneficial relationships with rural consumers. It delves into the growth of companies, earnings from the rural market, dispels common rural marketing myths, examines the vast size of the rural market, and analyzes shifting rural consumption patterns.

Keywords

Hinterland, Consumer Engagement in Rural Areas, Market size, Consumption, Myths about Hinterland, Macro Scenario of Rural Market, Infrastructure.

Introduction:

Rural marketing, once considered a peripheral and often misunderstood aspect of the broader marketing landscape, has in recent years emerged as a dynamic and transformative arena of immense significance. Under the title "The Truth About the Hinterland," this project embarks on a comprehensive exploration of rural marketing, offering a nuanced understanding that encompasses key findings from esteemed experts such as Pradeep Kashyap. The hinterland, which represents rural areas in the context of marketing, is not a monolithic entity but rather a diverse landscape with unique characteristics and untapped potential. Our endeavor is to uncover the realities of rural marketing by dissecting various dimensions of this vibrant marketplace. Pradeep Kashyap, an authority in the field of rural marketing, has played a pivotal role in unraveling the complexities of rural markets. His extensive research, experiences, and contributions have

been instrumental in deciphering the unique characteristics of rural consumers and rural markets in general.

Kashyap emphasizes the importance of understanding and acknowledging the diverse and dynamic nature of rural India, which consists of different regions, cultural backgrounds, languages, and socio-economic statuses. Furthermore, he underscores the significance of adopting localized marketing strategies and a deep understanding of the cultural nuances and traditions that play a critical role in rural consumer behavior. By embracing these insights, companies and marketers can effectively tailor their products, services, and marketing approaches to resonate with rural consumers, thereby achieving successful market penetration.

As we delve deeper into the complexities of rural marketing, one cannot ignore the macro scenario of the rural market itself. Rural India is a vast and diverse landscape with distinct regional variations and economic disparities. Understanding this macro scenario is essential for marketers and businesses seeking to establish a presence in rural areas. It involves analyzing the demographic composition, income levels, and cultural diversity, which are vital components in shaping rural markets. It also requires acknowledging the rapid urbanization and changing lifestyles in rural areas, which are leading to shifts in consumer behavior and preferences.

Intriguingly, rural consumption patterns have evolved significantly over the years. Rural consumers are no longer confined to purchasing just agricultural or basic necessities; they have become significant consumers of a wide array of products, including fast-moving consumer goods (FMCG), electronics, healthcare, education, and more. This shift in consumption patterns reflects the changing aspirations, higher disposable incomes, and increased access to information and technology among rural consumers. Businesses that recognize and adapt to these evolving consumption patterns are better poised to tap into the burgeoning rural market successfully.

Moreover, the growth of companies in rural India has been nothing short of remarkable. Companies across various industries have recognized the vast potential of the rural market, and as a result, have experienced substantial growth in these areas. This growth can be attributed to the adaptability of businesses that have tailored their products, distribution networks, and marketing strategies to align with the specific needs and preferences of rural consumers. The success stories of these companies serve as invaluable case studies, shedding light on the strategies that have allowed them to establish a strong foothold in rural India.

The size of the rural market is monumental, with a significant proportion of the Indian population residing in rural areas. The demographic scale of rural India presents vast opportunities for business expansion. The sheer number of consumers, combined with the increasing disposable incomes, has made rural India a focal point for revenue generation.

This potential has become all the more apparent as financial inclusion expands in rural areas, enabling rural residents to participate more actively in the national economy and increasing their purchasing power.

Research Objectives:

1. To explore Pradeep Kashyap's insights
2. To analyze the growth of companies in rural market
3. To assess the earnings and revenue generation from rural market
4. To demystify common rural marketing myths
5. To quantify the size and economic significance of the rural market

Major Findings:

Macro Scenario of Rural Market:

Rural India = 1 trillion \$ market = Canadian Economy

Developed Rural India are Punjab, Haryana, Maharashtra, Gujarat and the least developed Rural India are Bihar, Madhya Pradesh, Rajasthan, Orissa, Uttar Pradesh. The macro scenario of the rural market is very positive. The rural economy is growing faster than urban economy. India is size of Europe, every state as big as any country in the world. So, In Rural market they have to use Region Specific strategy, instead of going usual root, rather than setting up something for long term.

Size of Rural Market:

The size of the rural market is monumental, with a significant proportion of the Indian population residing in rural areas. Total size of Rural India is Rs.1 trillion \$ market, which includes FMCGs, durables & agricultural products. Growth of Rural India in 2013.2014 is 12.2% of world population will continue to live in Rural India which is single largest market in the world.

Infrastructure:

The structure includes transportation networks, communicating systems, power grids, water supply systems, waste management facilities and other public services.70% of villages are connected with all weather roads, which accounts for 90% population and 95% of purchasing power.

Myth About Rural Market:

Rural market is shrinking: But the truth is that there is a trend of reverse migration from urban to rural.12.2% of world population is rural area and 65% of Indian population.

Rural is an agrarian economy: The Non-farming sector already accounts for 60% of income, in Rural India

Consumption:

FMCGs grew up to 11% in urban areas and 18% in rural area. By 2020 the market for FMCG will be 360% in rural and 200% in urban areas.

Growth of Companies:

Traditional Rural marketing companies like Unilever, ITC, Ever ready which were present from 50 years back are already reaping the benefits. Every 100 villages there is a town like a hub and spoke model.

Conclusion:

2030, India is suppose to be China in Population. The growth in China is largely urban, the growth in India is going to be in rural. So, therefore India will continue to remain a fairly isolated economy because our's is a domestically driven market largely driven by Rural India. As Mahatma Gandhi said many years back India lives in villages, but Pradeep Kashyap said India will continue to live in villages.

GREEN MANUFACTURING AND FINANCING FOR SUSTAINABLE MSMEs

Dr.A.Kanimozhi M.Com., M.Phil., Ph.D., NET.,
Assistant Professor, Department of Commerce (CA)
Sona College of Arts and Science, Salem.

Abstract :

Nowadays, financial corporations can gain a competitive edge by using sustainable financing (SF). A variety of activities fall under the umbrella of sustainable finance, from investing in green energy projects to buying stock in businesses that uphold ethical ideals like social inclusion or good governance. The European Union, whose Green Deal Investment Plan seeks to raise \$1.14 trillion to help cover the cost of making Europe net zero in terms of climate change emissions by 2050, claims that sustainable finance has a crucial role to play in the world's transition to net zero by channeling private money into carbon-neutral projects. The ecological system is safeguarded and restored through sustainable development. Sustainable finance is facilitated by NABARD, SIDBI, NITI Aayog, and the World Bank to support company growth from MSMEs to major Industries to have a significant global influence. Banks, corporations, international financial institutions, institutional investors, climate funds, green bonds, microfinance, Make-in-India, etc. are the main sustainable finance providers to businesses and MSME's. MSMEs are engaged in waste management, clean energy, electric vehicles, recycling, solar power plants, renewable energy, green machinery, waste management, and poverty reduction, Based on the ministry of the environment. The government of India proposed the establishment of a Social Stock Exchange, Europe Investment Bank with SBI in order to fund India's \$280 billion requirement for green infrastructure. Understanding the influence of sustainable finance on MSME with regard to green growth and sustainable development is a major goal of the study. Theoretical ideas are employed in this paper. Secondary data and the descriptive approach are utilized in this study. According to the study, climate finance is needed for MSME to build greener production infrastructure and for government of India climate change missions to increase ESG and encourage sustainable development. The findings suggest that SF is used to advertise fresh, profitable financial ventures.

Key Terms: Sustainable Finance, Green Growth, MSMEs, Climate Finance, Sustainable Development Goals.

Introduction:

The backbone of emerging nations, micro, small, and medium-sized companies (MSMEs) play a crucial role in delivering goods, services, and jobs. The performance, competitiveness, and sustainability of MSMEs and other businesses are significantly at risk due to climate change. Business operations are at risk from machinery and inventory damage to the disruption of MSME and other organizations' business models as a result of the increased frequency and intensity of extreme weather events and slow-onset disasters. One financial tool to combat climate change and its effects is sustainable finance (SF), which encourages the development of renewable energy sources and sustainable

development with an eye toward environmental, social, and governance (ESG) factors (Environmental, Social and Governance).

Sustainable development is a concentrated endeavor to create a future for people that is inclusive, sustainable, and resilient. Sustainable development is defined as meeting existing needs without sacrificing the capacity of future generations to meet their own needs. There are 169 targets to be met before 2030 and 17 SDGs (Sustainable Development Goals) in the 2030 Agenda for Sustainable Development. Ending poverty by 2030, enhancing health and education, lowering inequality, and attaining economic growth are the main goals, together with combating climate change and protecting the oceans and forests. In order to ensure that natural resources continue to offer the resources and environmental services that are essential to our well-being, green growth means promoting economic growth and development.

The main goal of green growth strategies is to make sure that natural resources can sustainably fulfill their full economic potential. The cash will be used to improve energy and resource efficiency, water services, renewable energy, green building, waste management, and sustainable agriculture, as well as to reduce pollution and carbon emissions.

Literature Review:

1. Freimann, A., Ham. M., & Mijoc. J (April 2014) -The authors conducted extensive research on the measuring of subjective well-being (the quality of life) and objective well-being (economic development). They discussed several sustainability indicators and voiced concerns regarding standardized measurement and monitoring. They came to the conclusion that benchmarks and indicators, measure the efforts and outcomes connected to sustainable development.
2. Acemoglu, D., Akcigit, U., Hanley, D., & Kerr, W. (2016)- The study highlights that many nations have created green economic growth infrastructure for resources. Environmental protection as a result of growing environmental awareness, particularly in the area of energy transformation. In order to achieve routes to green growth, green technological innovation, such as the use of renewable and non-renewable energy, is crucial. These initiatives are predicated on the idea that environmental technology continually foster both green and economic growth at the county level.
3. Kamal- Chaoui. L. (April 2017) According to author, governments can only accomplish the SDGs if they develop robust MSMEs. The researcher stressed the necessity to increase the productivity of MSMEs while discussing the significance of MSME in innovation, employment generation, gender equality, inclusive development, etc. He expressed worry about the funding of MSMEs, their

involvement in global value chains, banking sector reforms, and novel Financing strategies.

4. Shashwat Koirala. (November 2018) The paper represents that MSMEs' potential to offer equitable growth and environmental sustainability are not incompatible goals. In reality, greening has the ability to enhance the performance of MSME businesses (via cost reductions and improved sales), which can result in the creation of employment and money. However, being green can also come with fees and hassles for MSMEs, which could have the opposite result.
5. Verma, T. L., & Nema, D. K. (2019) The paper highlights the objectives of sustainable development and the ability of MSMEs to achieve sustainability because of their extensive subsidiary organisation and the use of policy approaches by the Ministry of MSME to promote industry-related waste management, lean manufacturing, credit support, collaboration, and awareness programmes for MSMEs entrepreneurs. The author focuses on MSMEs that have been supported and promoted through suitable government initiatives.

Objectives:

- ❖ To explain Sustainable Finance, Green Finance, and Climate Finance
- ❖ To comprehend MSMEs role in sustainable development and green growth
- ❖ To evaluate the development of sustainable finance in India
- ❖ To assess the steps made by the RBI, NABARD, SIDBI and Niti Ayog

Scope of the Study:

This section's focus is on informing the public about the many government initiatives to promote a sustainable green revolution, lessen pollution, and advance the nation's social and economic development. It offers a chance to save the environment and encourage financial support for these green revolutions across a range of economic sectors. This article also discusses several NABARD and SIDBI funding initiatives for sustainable development.

Methodology:

Here, using already existing sources, a comprehensive study on the effect of sustainable finance on MSMEs to promote green growth and sustainable development is conducted. Secondary data and the descriptive approach are used in this paper. Due to the utilization of just secondary sources in this methodology, the researcher's data was only gathered from reputable, published secondary sources. Journals, magazines, reports, websites, and other sources are among them. The majority of the data was gathered from the websites of the Indian government's Ministry of MSME.

Data Analysis and Interpretation:

Explanation of Sustainable Finance, Green Finance, and Climate Finance Any financial service that incorporates environmental, social, and governance concerns into company or investment choices for the long-term benefit of both clients and society at large is referred to as Sustainable Finance. Climate Finance is local, national, or international funding that is derived from public, private, and alternative sources of funding and aims to promote climate change adaptation and mitigation measures. Green Finance is a type of financing that contributes to environmentally sound initiatives and should promote sustainable development in the nation.

Role of MSMEs in Green Growth and Sustainable Development:

Role of MSMEs in green growth:

In addition to making up around 30% of the GDP, the six crore MSMEs in the nation also support inclusive growth by giving employment to about 11 crore people. MSMEs are expected to contribute 50% of India's GDP and generate 15 crore jobs over the next five to six years. MSMEs in the auto-component business are anticipated to be significantly impacted by the shift from internal combustion engine (ICE) vehicles to electric vehicles (EVs).

Role of MSMEs in sustainable development:

- ❖ Employs more than 60 million unemployed and underprivileged people in about 11 lakh businesses across India.
- ❖ Make up the vast majority of farmers and food producers, ensuring a system of food production that is sustainable.
- ❖ As part of their CSR initiatives, they assist in setting up awareness campaigns, healthcare facilities, ambulance services, free medical examinations, etc. in rural areas.
- ❖ Develop the talents of rural youngsters while educating them. MSMEs support the opening of schools in rural and underdeveloped communities.
- ❖ By advancing gender equality and women's empowerment, female entrepreneurs now own almost 123 lakh proprietary businesses.
- ❖ Reduce contaminant levels, eliminate dumping activities, and restrict the release of hazardous residual materials to aid in improving water quality.
- ❖ Generating renewable energy and energy-efficient goods.
- ❖ Raised the industries' contribution to employment, exports, and GDP (GDP).
- ❖ Accounts for 40% of the nation's entire manufacturing output and 45% of the nation's total exports.

- ❖ Through initiatives like the urban renewal project, assist cities in becoming more inclusive.
- ❖ Implemented sustainable consumption and production practices by utilizing effective technology, maximizing the use of renewable resources, reducing the release of harmful residues, etc.
- ❖ Adopting green manufacturing strategies and use resources with consideration for the environment.
- ❖ Observe the law on water purity, waste management, environmental cleanup, etc.
- ❖ Should not overuse the majority of the forest's resources.
- ❖ Should abstain from using child labour and exploiting female workers
- ❖ To attain self-sufficiency, collaboration between the public and commercial sectors is required.

Evaluation of the Development of Sustainable Finance in India

- ❖ The World Bank estimates that the variance in climate, which has conflicting effects on the living standards of the population, will cause India's GDP to decline by 3%.
- ❖ SBI, SBI cap ventures, and New funds each provided \$100 million USD to an Indian firm that prioritizes the development of electric vehicles, waste management, efficient use of raw materials, and water.
- ❖ Banks, international financial institutions, governments, institutional investors, and organisations like the UN, OECD, G20, and EIB that operate through CSR initiatives, social stock exchanges, international solar alliances with banks like the World Solar Alliance, as well as New Development Banks, are the main players in sustainable finance in India.
- ❖ Sales of the linked foreign bond have grown to \$10 billion.
- ❖ 50 million new jobs will be created by India's green economy by 2030, and 15 trillion will be created by 2070.
- ❖ To protect developing nations from numerous financial risks, the United Nations Framework Convention on Climate Change was established.

Sustainable Finance Management

Table no. 1: Sector-wise Sustainable Finance Requirement

Sr. No.	Sectors	Cumulative Investment Requirement by 2030 (USD Billions)
1	Sustainable Agriculture	194
2	Pollution abatement	50
3	Energy	404(2018-30)
4	Transport -EVs	667(2018-30)
5	Waste management	11(2018-30)
6	Afforestation	140
7	Green Buildings	1400
8	Climate-resilient cities	128

Source: IFC & India-UK Sustainable Finance Working Group (2021)

Table no. 2: The European Investment Bank Financing in India (USD 4.55 Billion)

Sr. No.	Sector	Percentage Financing
1	Industry	2.73%
2	Energy	40.63%
3	Credit Lines	8.18%
4	Transport	47.85%
5	Services	0.19%
6	Agriculture, Fisheries & Forestry	0.09%
7	Water Sewage	0.33%

Table no. 3: Amount Financed and Organized by Developed Countries on Climate Actions

Sr. No.	Year	Amount (USD Billions)
1	2013	52.2
2	2014	61.8
3	2015	44.6
4	2016	58.6
5	2017	71.2
6	2018	78.6
7	2019	79.6
8	2023	100

Source: Business India (November 2021) [https:// businessindia.](https://businessindia.)

Graph no. 1: Amount Financed and Organized by Developed Countries on Climate Actions

Interpretation: As per the data seen in Table 3 and Graph 1 above, developed countries funded and organized climate action projects worth 52.2 USD billions in 2013, 61.8 USD billions in 2014, and 44.6 USD billions in 2015. According to estimates, industrialized nations will finance and coordinate 100 USD billion worth of climate action in 2023.

Assessment of the Steps made by the RBI, NABARD, SIDBI and Niti Ayog:

RBI: Housing, social infrastructure, and renewable energy have all undergone changes as a result of the RBI's consideration of environmental concerns when evaluating agricultural price development in 2012 and 2015.

NABARD: Additionally, NABARD has made climate money for sustainable development easily accessible. It also offers numerous adaptation grants, green climate funds, and promotes cutting-edge agricultural technologies. APL-I, the production linked incentive, is one of the programmes NABARD launched to support organic farming, effective use of renewable resources, responsible waste management, the creation of employment possibilities, and other initiatives.

SIDBI: MSMEs' production and service activities provide 6.11 percent and 24.63 percent of the GDP and 33.4% of the manufacturing output in India, respectively, which supports the nation's economic expansion. SIDBI finances MEMEs to develop long- term green projects. The primary goals of financing the green revolution are to promote low carbon, efficient renewable resource utilization, and increased MSMEs' profitability [20].

NITI Aayog: Project Shoonya was started by NITI Aayog as a way to speed up the adoption of electric vehicles (EVs) for urban deliveries. The use of electric vehicles can reduce the need for oil as well as CO₂ and GHG emissions.

Discussions and Results:

NABARD has made climate finance easily accessible for sustainable development. It also offers numerous adaptation grants, green climate funds, and promotes cutting-edge agricultural technologies. SIDBI offers financing to promote low carbon, make optimum use of renewable resources, and increase the profitability of MSMEs. SBI, SBI cap ventures, each provided \$100 million USD to an Indian business that focuses on the development of electric vehicles, waste management, efficient use of raw materials, and water. By 2030, green building will require a total investment of 1400 USD billions, while EV transportation will demand 667 USD billions. The European Investment Bank made an investment of 4.55 billion US dollars. Transport received the highest investment (47.85%), followed by Energy (40.63%). In 2013, wealthy countries spent 52.2 USD billions financing and organizing climate action.

According to estimates, industrialized nations will finance and coordinate 100 USD billion worth of climate action in 2023. The regulatory framework for ESG disclosure was started by RBI, and commercial lending now takes environmental impact into account. Different forms of financing, such as Green Asset- backed Securities, must be employed to develop RE technology, and combined with increased subsidies, in order to achieve sustainable development. Emerging technologies like Blockchain, GPU, AI, and quantum computing have the potential to revolutionize environmental protection. Due to infrastructure and professional help in green and sustainable development, institutional engagement in ESG funds is more concentrated in the Western market than the Indian sector. The effectiveness of sustainable financing or climate finance, which is needed for MSMEs for greener production infrastructure and government of India missions on climate change, is to increase the ESG to support sustainable development, according to the final findings.

Conclusion and Suggestions:

Collaboration with international partners is essential to implementing climate change, and MSMEs are switching to green energy to reduce their activity's negative environmental impact and to focus regulatory attention on the green economy. Every ESG fund is Both investors and businesses can profit from sustainable finance, which also benefits the environment and the economy. Waste management, renewable energy, ecotourism, organic agriculture, and the development of cutting-edge technologies in MSME are all encouraged to attract more foreign direct investment. The policy actions to adopt green or sustainable finance in the ESG global wave must be started by the government.

On the basis of the study, we have some recommendations. Better connections between MSMEs and TNC (Transnational Corporations) affiliates would enable MSMEs to learn more advanced manufacturing techniques and could boost MSMEs' efficiency in terms of

value and quantity. Suppliers with a high level of development can encourage greater investment and enhance even the effects of foreign direct investment on development. To achieve the Sustainable Development Goals (SDGs) for MSMEs and to support a low-carbon, climate-resilient world, the Indian government must establish separate financial institutions for advising and re-financing financial intermediaries regarding appropriate policy, regulation, climate transition risks, legal, and market changes. These institutions must also integrate social, environmental, and governance. Charging stations and an environmentally sustainable, economically viable solution are needed to reduce pollution and accelerate the use of electric vehicles. It is necessary to improve the institutional credit support system. Along with lending options, a support network must be established so that MSMEs may talk about their issues and seek guidance from authorities. One such support scheme is Mudra Bank's credit plus strategy.

Abstract

Financial inclusion is a critical driver of economic growth and development, and it plays a pivotal role in fostering the sustainability and resilience of Micro, Small, and Medium Enterprises (MSMEs). This abstract provides a concise overview of the importance of financial inclusion for MSMEs, highlighting key themes, challenges, and benefits associated with expanding access to financial services for this vital sector of the economy.

Financial inclusion for MSMEs encompasses various dimensions, including access to credit, savings, insurance, and digital payment solutions. To achieve meaningful financial inclusion for MSMEs, policymakers, financial institutions, and development organizations must address several challenges.

Despite these challenges, the benefits of financial inclusion for MSMEs are substantial. Access to credit enables MSMEs to expand their operations, invest in technology and innovation, and create more jobs. Savings and insurance products provide a safety net against unexpected events, enhancing the resilience of MSMEs.

This abstract emphasizes the importance of a holistic approach to financial inclusion, combining policy interventions, innovative technology solutions, and financial education programs tailored to the unique needs of MSMEs. Achieving financial inclusion for MSMEs can help unlock their growth potential, drive economic development, and contribute to poverty reduction.

In conclusion, ensuring financial inclusion for MSMEs is a crucial step towards achieving sustainable economic growth and development. Policymakers, financial institutions, and other stakeholders must collaborate to overcome barriers and design inclusive financial ecosystems that empower MSMEs to thrive in an increasingly interconnected and dynamic global economy.

Keywords: *Sustainability, Financial Services, Technology, Economic Development, Poverty Reduction*

Introduction

Micro, Small, and Medium Enterprises (MSMEs) are the unsung heroes of economies around the world. They are the engines of innovation, job creation, and economic growth, contributing significantly to GDP and fostering entrepreneurship. However, despite their undeniable importance, many MSMEs face a significant hurdle on their path to success: limited access to formal financial services. This limitation impedes their growth potential,

hampers their ability to invest in productivity-enhancing activities, and increases their vulnerability to financial shocks. It is in this context that the concept of financial inclusion for MSMEs takes center stage.

Financial inclusion refers to the universal access, availability, and usage of a wide array of financial services, including savings, credit, insurance, and payment mechanisms, by individuals and businesses, regardless of their income level or location. In the case of MSMEs, financial inclusion is not merely a matter of convenience; it is a catalyst for transformation, unlocking their potential to thrive, innovate, and contribute to broader economic development.

This paper delves into the complex and multifaceted relationship between financial inclusion and MSMEs, shedding light on the challenges these enterprises face in accessing formal financial services and the strategies that can be employed to bridge this gap. It explores the significance of MSMEs within the global economic landscape, emphasizing their role as critical drivers of employment and wealth creation. Furthermore, it outlines the importance of financial inclusion as a means to empower MSMEs and enhance their capacity to navigate an increasingly interconnected and dynamic business environment.

As we embark on this exploration, we invite you to journey with us through the intricate realm of financial inclusion for MSMEs. Together, we will uncover the barriers that hinder their access to financial services, examine successful initiatives from around the world, and propose recommendations to foster an environment where MSMEs can thrive and contribute more robustly to the socioeconomic fabric of their respective nations. In doing so, we hope to underscore the imperative of financial inclusion as a cornerstone of inclusive economic growth and development.

Review of Literature

Research on financial inclusion for Micro, Small, and Medium Enterprises (MSMEs) is a well-established field, and numerous studies have been conducted to understand the challenges, opportunities, and impact of financial inclusion initiatives on these enterprises. Here are some key themes and findings from previous research on this topic:

1. Access to Credit:

- ❖ Previous research has consistently highlighted the importance of access to credit for MSMEs. Lack of access to affordable credit has been identified as a significant barrier to growth and expansion for these enterprises.
- ❖ Studies have shown that when MSMEs gain access to credit, they are more likely to invest in productive assets, expand their operations, and create jobs.

2. Role of Financial Institutions:

- ❖ Research has examined the role of various financial institutions, including traditional banks, microfinance institutions, and non-banking financial institutions, in serving the financial needs of MSMEs.
- ❖ Studies have explored the impact of different financial products and services, such as microloans, savings accounts, and insurance, on MSMEs' financial well-being.

3. Technology and Fintech Solutions:

- ❖ The advent of technology and fintech innovations has transformed the landscape of financial inclusion for MSMEs. Research has assessed the impact of digital payment platforms, mobile banking, and peer-to-peer lending on these enterprises.
- ❖ Fintech solutions have been found to improve access to financial services, reduce transaction costs, and enhance the convenience of financial transactions for MSMEs.

4. Regulatory Frameworks:

- ❖ Studies have examined the regulatory environment and policy initiatives aimed at promoting financial inclusion for MSMEs. Research has assessed the effectiveness of government policies, including credit guarantee schemes and financial literacy programs.
- ❖ Regulatory reforms that simplify know-your-customer (KYC) requirements and create an enabling environment for financial institutions have been recognized as important factors in enhancing access to finance.

5. Financial Literacy and Education:

- ❖ Research has emphasized the role of financial literacy and education in empowering MSMEs to make informed financial decisions. Financial literacy programs have been shown to improve MSMEs' ability to manage their finances effectively.
- ❖ Studies have explored the impact of financial education on MSMEs' savings behavior, investment choices, and risk management practices.

Overall, previous research on financial inclusion for MSMEs underscores the importance of inclusive financial systems in fostering economic development and reducing poverty. It provides valuable insights into the strategies, policies, and interventions that can enhance access to financial services for MSMEs and promote their growth and resilience.

Financial Inclusion and MSMEs

1. Defining MSMEs:

Micro, Small, and Medium Enterprises (MSMEs) represent a diverse and dynamic segment of businesses that vary widely in size, scope, and industry. The classification of MSMEs may vary from one country to another, but there are common parameters that generally define them:

- ❖ **Micro Enterprises:** These are the smallest among MSMEs, typically employing fewer than 10 people. They often operate informally and engage in low-level economic activities, such as street vending or small-scale farming.
- ❖ **Small Enterprises:** Small enterprises are slightly larger, with employee numbers ranging from 10 to 50. They may have more structured operations, offer more specialized products or services, and contribute to local and regional economies.
- ❖ **Medium Enterprises:** Medium-sized enterprises employ anywhere from 50 to 250 people. They are often more established, have a formal organizational structure, and engage in a wider range of activities, both domestically and sometimes internationally.

2. Significance of MSMEs in the Economy:

MSMEs play a pivotal role in economies worldwide, and their significance can be summarized in several key ways:

- ❖ **Employment Generation:** MSMEs are prolific job creators. They often serve as a major source of employment, particularly in developing economies. By offering job opportunities to a large segment of the population, they contribute to reducing unemployment and underemployment.
- ❖ **Innovation and Competition:** MSMEs are known for their agility and innovation. They often introduce new products, services, and business models, driving competition and pushing larger corporations to adapt and innovate as well.
- ❖ **Local and Regional Development:** MSMEs are deeply embedded in local communities and regions. They contribute to economic development by supporting local supply chains, purchasing from local suppliers, and investing in community development initiatives.
- ❖ **Economic Resilience:** A diverse ecosystem of MSMEs can enhance economic resilience. In times of economic downturns or crises, they can pivot quickly and adapt to changing circumstances, helping to stabilize local and national economies.

3. Link between Financial Inclusion and MSME Development:

Financial inclusion for MSMEs is intrinsically linked to their development and growth prospects. Here's how financial inclusion and MSME development intersect:

- ❖ **Access to Capital:** MSMEs often require capital to expand operations, purchase equipment, hire additional staff, or innovate. Financial inclusion ensures that they have access to credit and investment opportunities, allowing them to realize their growth potential.
- ❖ **Risk Mitigation:** Insurance and risk management tools, which are part of financial inclusion, provide MSMEs with protection against unforeseen events, helping them weather financial shocks and continue their operations.
- ❖ **Increased Productivity:** Access to financial services such as digital payments and savings accounts can enhance the efficiency of MSMEs' financial transactions, reducing costs and increasing productivity.
- ❖ **Financial Literacy:** Financial inclusion initiatives often include financial education programs. These programs can empower MSME owners and operators with the knowledge and skills to make informed financial decisions and manage their businesses more effectively.
- ❖ **Market Access:** Financial inclusion can also enable MSMEs to access new markets, both domestically and internationally, by facilitating cross-border payments, trade financing, and access to e-commerce platforms.

In essence, financial inclusion serves as a catalyst for MSME development by addressing critical financial needs, reducing vulnerabilities, and unlocking the full economic potential of these enterprises. The relationship between MSMEs and financial inclusion is symbiotic, with each supporting and reinforcing the other in the pursuit of sustainable economic growth and development.

Challenges to Financial Inclusion for MSMEs

Access to Formal Financial Services, Lack of Collateral and Credit History, Financial Literacy and Education, Regulatory Barriers, Infrastructure and Technological Challenges

1. Access to Formal Financial Services:

- ❖ **Geographic Accessibility:** Many MSMEs, particularly those in rural or remote areas, struggle to access physical bank branches or financial service providers. Limited banking infrastructure in these regions can make it challenging for these enterprises to open accounts or access other financial services.
- ❖ **Financial Inclusion Awareness:** Some MSMEs are not aware of the available financial services or are hesitant to engage with formal financial institutions due to mistrust or a lack of understanding.

2. Lack of Collateral and Credit History:

- ❖ **Limited Assets:** MSMEs often lack the assets or property required as collateral to secure loans from traditional financial institutions. This absence of collateral makes it difficult for them to access credit.
- ❖ **Inadequate Credit History:** MSMEs, especially newer or smaller ones, may not have a well-documented credit history, making it challenging for financial institutions to assess their creditworthiness.

3. Financial Literacy and Education:

- ❖ **Limited Financial Knowledge:** Many MSME owners and operators may have limited financial literacy, making it challenging for them to understand complex financial products, manage finances effectively, or make informed decisions regarding loans and investments.
- ❖ **Risks and Costs:** Lack of financial education can lead to MSMEs taking on loans or financial products without fully comprehending the associated risks, terms, and costs.

4. Regulatory Barriers:

- ❖ **Overly Stringent Regulations:** Regulatory requirements can be burdensome for MSMEs, particularly in terms of compliance costs and administrative complexities. These regulations may limit the ability of smaller enterprises to access financial services or operate freely.
- ❖ **Lack of Incentives:** Regulatory frameworks may not provide adequate incentives for financial institutions to offer affordable financial services to MSMEs, especially when compared to serving larger, more profitable clients.

5. Infrastructure and Technological Challenges:

- ❖ **Limited Digital Infrastructure:** In some regions, inadequate digital infrastructure and connectivity can hinder MSMEs from utilizing digital financial services, mobile banking, and online payment systems.
- ❖ **Technological Barriers:** MSMEs may lack the technological know-how or resources to adopt digital financial tools effectively. Cybersecurity concerns may also deter them from embracing digital financial solutions.

These challenges collectively underscore the complexity of achieving financial inclusion for MSMEs. Overcoming these barriers requires a multi-pronged approach involving governments, financial institutions, non-governmental organizations, and international bodies. Efforts should focus on expanding financial literacy, streamlining regulations, improving infrastructure, and developing innovative financial products

tailored to the unique needs of MSMEs. Addressing these challenges can pave the way for greater financial inclusion, enabling MSMEs to thrive and contribute more effectively to local and national economies.

Strategies for Promoting Financial Inclusion

Microfinance and Small Business Lending, Digital Financial Services, Government Initiatives and Policies, Public-Private Partnerships, Financial Education and Capacity Building

1. Microfinance and Small Business Lending:

- ❖ **Microloans:** Microfinance institutions (MFIs) can provide small, uncollateralized loans to MSMEs, often with more flexible terms and lower interest rates than traditional banks. These loans can help bridge the gap for enterprises without access to formal credit.
- ❖ **Credit Cooperatives:** Encouraging the formation of credit cooperatives or self-help groups can promote savings and lending among MSMEs. These cooperatives pool resources and offer members access to affordable credit.

2. Digital Financial Services:

- ❖ **Mobile Banking:** Mobile banking platforms and digital wallets can reach MSMEs in remote areas, allowing them to conduct transactions, save, and access credit through their mobile devices.
- ❖ **Online Lending:** Online lending platforms and peer-to-peer lending can provide MSMEs with quick and convenient access to financing without the need for physical collateral.

3. Government Initiatives and Policies:

- ❖ **Credit Guarantee Schemes:** Governments can establish credit guarantee schemes that provide partial or full guarantees for loans made to MSMEs. This reduces the risk for financial institutions and encourages them to lend to smaller enterprises.
- ❖ **Subsidized Interest Rates:** Governments can subsidize interest rates on loans to MSMEs, making borrowing more affordable and encouraging investment in these businesses.
- ❖ **Regulatory Reforms:** Governments can streamline and simplify regulations to reduce compliance burdens on MSMEs and financial institutions, making it easier for them to engage in financial transactions.

4. Public-Private Partnerships:

- ❖ **Collaboration with MFIs:** Public-private partnerships can involve governments working with microfinance institutions and banks to extend financial services to MSMEs. Governments can provide support, funding, or regulatory incentives to encourage these partnerships.
- ❖ **Fintech Partnerships:** Governments can partner with fintech companies to develop innovative digital financial solutions tailored to the needs of MSMEs. These partnerships can help reach underserved segments of the market.

5. Financial Education and Capacity Building:

- ❖ **Training Programs:** Governments, NGOs, and financial institutions can offer financial literacy and entrepreneurship training programs for MSME owners and operators. These programs can enhance their financial management skills and business acumen.
- ❖ **Access to Information:** Providing MSMEs with information on available financial services, market opportunities, and best practices can empower them to make informed financial decisions.

Effective implementation of these strategies should be context-specific, taking into account the unique challenges and opportunities present in different regions and markets. Additionally, monitoring and evaluation mechanisms should be in place to assess the impact of these initiatives and make necessary adjustments to ensure the continued promotion of financial inclusion for MSMEs.

Policy Recommendations for Promoting Financial Inclusion for MSMEs

1. Regulatory Reforms:

- ❖ **Streamlined Compliance:** Governments should work to simplify and modernize regulatory frameworks related to MSME financing, reducing the bureaucratic burden on both financial institutions and MSMEs.
- ❖ **Risk-Based Regulations:** Implement risk-based regulations that take into account the size and nature of MSMEs, allowing for more proportionate requirements that still protect consumers and financial stability.
- ❖ **Credit Reporting Systems:** Develop or enhance credit reporting systems to ensure that positive credit histories of MSMEs are recorded and used to assess creditworthiness.

2. Strengthening Financial Infrastructure:

- ❖ **Digital Connectivity:** Invest in digital infrastructure to expand internet access and mobile coverage to remote areas, enabling MSMEs to access digital financial services.

- ❖ **Banking Correspondents:** Encourage the use of banking correspondents, agents, or outlets in underserved regions to provide basic banking services.
- ❖ **ATM Networks:** Expand ATM networks and ensure their accessibility in rural and urban areas, reducing the cost of accessing cash and conducting financial transactions.

3. Fostering Innovation and Technological Adoption:

- ❖ **Support Fintech Ecosystems:** Create a conducive environment for fintech startups and companies to innovate in the financial services sector. This can include regulatory sandboxes, tax incentives, and access to funding.
- ❖ **Digital ID Systems:** Develop secure and universal digital identification systems to facilitate e-KYC (Know Your Customer) processes, making it easier for MSMEs to access financial services.
- ❖ **Blockchain and Smart Contracts:** Explore the potential of blockchain technology and smart contracts for secure and efficient financial transactions and contract enforcement.

4. Enhancing Financial Literacy and Education:

- ❖ **Curriculum Integration:** Integrate financial literacy education into school curricula and vocational training programs to ensure that future entrepreneurs and business owners are better prepared.
- ❖ **Adult Financial Education:** Offer accessible financial literacy programs and resources for adults, focusing on practical financial management skills and knowledge about available financial services.
- ❖ **Mobile-Based Education:** Utilize mobile technology to deliver financial education content in a format that is easily accessible to MSMEs.

5. Monitoring and Evaluation Frameworks:

- ❖ **Impact Assessment:** Establish mechanisms for regular impact assessments of financial inclusion initiatives targeting MSMEs. Measure outcomes such as increased access to finance, improved business growth, and job creation.
- ❖ **Data Collection:** Invest in data collection and analysis tools to track progress and identify areas where interventions may be falling short or where adjustments are needed.
- ❖ **Stakeholder Collaboration:** Foster collaboration between governments, financial institutions, fintech companies, and civil society organizations to share data and insights that can inform policy decisions.

These policy recommendations are designed to create an enabling environment for MSMEs to access formal financial services, promote economic growth, and enhance financial inclusion. Effective implementation of these policies should be an ongoing process, responsive to evolving market dynamics and the changing needs of MSMEs. Regular assessment and adaptation of these policies will be crucial to ensuring that financial inclusion for MSMEs remains a priority on the global economic agenda.

Conclusion

Summary of Key Findings

In this study, we have explored the critical topic of financial inclusion for MSMEs and have drawn several key findings:

1. Financial inclusion plays a pivotal role in fostering the growth and sustainability of MSMEs. Access to credit, savings, and insurance services empowers these enterprises, enabling them to expand their operations, create jobs, and contribute significantly to the overall economy.
2. Government policies and regulatory frameworks, coupled with proactive involvement from financial institutions, are instrumental in promoting financial inclusion. Initiatives such as targeted loan programs, simplified KYC procedures, and financial literacy campaigns have shown promising results in enhancing access to financial services for MSMEs.
3. The rise of fintech solutions has revolutionized financial inclusion by providing accessible, affordable, and convenient financial services to previously underserved MSMEs. Mobile banking, digital payment platforms, and peer-to-peer lending have opened up new opportunities for financial inclusion.
4. However, significant challenges persist, including low financial literacy levels, regulatory hurdles, and gender disparities in access to financial services. Overcoming these obstacles remains a critical task for policymakers, financial institutions, and development organizations.

Implications for Policymakers, Financial Institutions, and MSMEs

The findings of this research have several important implications for various stakeholders:

1. **Policymakers:** Governments should continue to prioritize financial inclusion as a key component of economic development. This involves creating an enabling regulatory environment, implementing targeted policies, and investing in financial education initiatives. Policymakers should also consider the integration of fintech innovations into their strategies to promote wider financial inclusion.

2. **Financial Institutions:** Banks, microfinance institutions, and fintech startups have a pivotal role to play in expanding financial services to MSMEs. They should continue to develop innovative and tailored products that meet the diverse needs of these enterprises. Moreover, fostering partnerships with government agencies and non-profit organizations can enhance outreach and impact.
3. **MSMEs:** Small and medium-sized enterprises should take advantage of the available financial inclusion opportunities. They should seek financial literacy training, explore various financing options, and leverage technology to access financial services efficiently. By doing so, they can enhance their competitiveness and resilience in a rapidly changing business environment.

Importance of Continued Efforts towards Financial Inclusion

The journey toward full financial inclusion for MSMEs is an ongoing one, with significant implications for economic growth, job creation, and poverty reduction. The importance of continued efforts in this regard cannot be overstated. Financial inclusion has the potential to unlock the latent entrepreneurial talents and economic contributions of millions of MSMEs around the world.

In conclusion, financial inclusion for MSMEs is not merely a social or economic imperative; it is a catalyst for inclusive growth and development. By addressing the challenges, seizing emerging opportunities, and maintaining a commitment to financial inclusion, we can build more resilient and prosperous economies, where MSMEs thrive, and where no one is left behind. It is a shared responsibility that requires collaboration among policymakers, financial institutions, MSMEs, and civil society.

Abstract:

The Micro, Small and Medium enterprises (MSME) sector has emerged as a dynamic sector of the Indian economy and an essential driver of economic process. It considerably helps in developing entrepreneurship and generates second largest employment prospects. With a vast network of sixty-three million three hundred eighty thousand enterprises, more than forty per cent of exports, over twenty eight per cent of the Gross Domestic Product and generating employment for about one hundred eleven million people, the MSME sector contributes in a significant way to the development of the Indian economy. The world economy is growing at a slower rate thus a lot of emphasis is required on developing MSME sector to extend employment opportunities specifically for young people. Technology has made it possible for people from all walks of life to have access to different resources. Further, technology is also being used to equip people who need a certain type of assistance to improve their quality of life and help them avail opportunities that would otherwise be inaccessible.

Keywords: MSMEs, Technology updating

Introduction

The Micro, Small and medium enterprises of India is an important driving factor for the growth of Indian Economy. These MSMEs not only provide the employment opportunities but helps in the process of industrialization in rural areas simultaneously reducing the unequal income distribution among the residents. The MSMEs contribute significantly in the development of Indian economy through export production, domestic production, low investment requirements, operational flexibility, technology oriented enterprises etc. In India, after agriculture, small business is the second largest employer of human resources. MSMEs constitute more than 80 percent of the total number of industrial enterprises and support industrial development, 40 per cent of industrial output, 80 per cent of employment in the industrial sector, 45 per cent of value added by the manufacturing sector and 40 per cent of total exports. In this paper an attempt is made to know the growth and contribution made by Micro, Small and Medium Enterprises in India and to understand the role of MSMEs in providing employment opportunities in India.

Definition of MSMEs

In accordance with the provision of Micro, Small and Medium Enterprises Development (MSMED) Act, 2006 the Micro Small and Medium Enterprises are classified in two classes:

- a) Manufacturing Enterprises – Investment in Plant and Machinery
- b) Service enterprises- Investment in Equipment.

a) Manufacturing Enterprises:

The enterprises engaged in the manufacture or production of goods, pertaining to any industry specified in the first schedule to the industries (development and regulation) act 1951, having investment in plant and machinery of Rupees up to 25 lacs, above 25 lacs and up to 5 crores. Above 5 crores and up to 10 crores called micro, small and medium enterprises, respectively.

b) Service Enterprises:

The enterprises engaged in providing or rendering services having investment in equipment of Rupees up to 10 lacs, above 10 lacs and up to 2 crores, above 2 crores and up to five crores called micro, small and medium enterprises, respectively

Technology

Technology has always been important everywhere including economy, business and enterprises. However, the technological obsolescence is a big challenge in developing countries like India, impacting the MSME market (Mukherjee, 2018). While India has a huge collection of technical talent with well-established intellectual skills, it still scores less in terms of designing, marketing, and implementing new and innovative technologies. After the implementation of 11th Five Year Plan by Government of India (GOI), although technology adoption has considerably increased, the usage of technology especially in MSMEs still takes a back seat (Planning Commission of India, 2008). To overcome many challenges, MSMEs need to update technology and modernise through policy interventions and financial incentives. The high speed of change in technologies is quickly motivating the customers, businesses and technology firms to merge with upcoming technologies. Consequently, there exists a strong requirement for speeding up technology acceptance in the small business community also (Singh and Singh, 2014). According to a survey carried out by Tally and Kantar among 2250 MSMEs from various vertical industries in 34 cities across the country, 35% of MSMEs have already implemented applications for business management and over 40% of MSMEs use digital banking and payment services, with another 40% likely to implement digital banking and payment services in the near future (Economic Times, 2019b). Information and communication technologies (ICTs) can help a

company's business strategy by overcoming barriers of entry into competition, building of suppliers and consumers' negotiation and selling specialised and low-cost commodities.

In recent years, the rapid development of ICTs has opened up a medium for MSMEs to meet global customers. ICT lets businesses manage customer information and determine the target business segments. Practically, there is no match or alignment between large corporations and MSMEs that can implement the adoption of technology in MSMEs. Organisations such as the Common Service Centers (CSC), Entrepreneurship Development Institute (EDI) etc. have started to bring MSMEs into the digital network to provide them with a digital identity. The Ministry of Micro, Small and Medium Enterprises has decided to establish 20 technology centres in the next 3–5 years, along with extension centers nationwide. There is a proposal to have approximately 100 extension centers, each with an investment of 20 crore (The Hindu, 2019). The technical aspects can be divided into different factors, which have an individual impact for MSMEs to embrace and enforce.

Benefits for Technology Updating for business in MSMEs

1. Improved Business Agility

Technology solutions allow small businesses to remain agile and quick to respond to change within the markets. Integration of various tech leads to increased collaboration among teams leading to better product development. Faster product launches, better quality innovations, and improved product features will drive your business growth.

2. Improved Staff Coordination and Collaboration

Significant advances in communication technologies have allowed corporations to organize their teams better. Software products such as Asana and G suite improve collaboration among your staff members. VOIP systems, conference calls, and telepresence software allow employees to interact remotely from any part of the world. It improves efficiency in the running of the business as well as promotes better work-life balance.

3. Automation and Productivity

The adoption of technology solutions for business allows small and medium-sized enterprises to run as efficiently as the larger corporations. Tapping into the benefits of high-speed internet and automation software allows for better handling of vital tasks. Automation tools can enhance your digital presence and engagement with your customers.

4. Increased Revenue Streams

Technology solutions for business allow executives to generate new sources of revenue for their enterprises. The creation of e-commerce stores enables sales teams to target a broader customer base. In 2019, consumers spent over \$601.75 billion with U.S. online

merchants, up 14% when compared to 2018. Businesses are also tapping into the wonders of SEO and PPC marketing to generate more leads and revenue.

5. Better Storage Solutions

IT infrastructure modernization enables businesses to drop outdated legacy systems for cloud storage solutions. Cloud storage systems are reliable, allowing for restricted access to business information from any place in the globe. It enables your teams to work remotely, accessing the necessary information. It also eliminates the need to maintain bulky servers, saving on space and cost.

6. Financial Savings

Business and corporate executives are adopting Infrastructure as a Service, outsourcing most of their IT solutions to consultancy firms. The managed services market was valued at approximately \$170 billion by 2019. Communication solutions such as video conferencing and VOIP enable businesses to save on travel costs and accommodation. Cloud services reduce data storage costs. Automation reduces the need for surplus staff, saving on labor costs.

7. Improved Data Security

Technology solutions for business can help you better protect your corporate information. Network security threats are at an all-time high, costing the average small business approximately \$3.92 million in damages. Tech support for small businesses can help create encryptions and firewalls that enhance your data security.

8. Better Customer Experience

Intuitive web designs can help streamline your operations on the first point of contact with your potential clients. Automated tools can enable customers to book appointments and consultations. IFTTT systems help address customer issues at any given moment. These technological systems can help build consumer trust and brand image. Improved Business Agility. ...

Conclusion

Overall, digital transformation can offer a range of benefits to MSMEs in India, including increased productivity, improved customer service, enhanced sales and marketing, improved access to finance, and enhanced innovation. Digitization is like a superpower that can transform small and medium businesses into unstoppable forces in the Indian economy, as these businesses contribute almost 33% of the country's Gross Domestic Product (GDP). The MSME sector has indeed seen a boom in the adoption of digital platforms and payments post-pandemic.

AGRICULTURAL REFORMS: NEED AND SCOPE

Ms. G. Nithya

Assistant Professor, Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi
tmgnithya@gmail.com

Abstract

Agricultural systems worldwide are under pressure due to various challenges, including unsustainable practices, income disparities, inadequate technology adoption, and vulnerability to climate change. This article examines the pressing need for comprehensive agricultural reforms and explores the potential scope of these reforms. The need for sustainable development, equitable income distribution, technology adoption, improved market access, and climate resilience are highlighted as driving factors. The scope of reforms encompasses land distribution, financial support, extension services, market enhancements, research and innovation, policy adjustments, and education. By addressing these areas, countries can harness the full potential of agriculture, ensuring food security, livelihood improvement, and environmental sustainability. Successful implementation of agricultural reforms necessitates collaborative efforts among stakeholders, fostering a balanced and thriving agricultural sector.

Keywords: Agricultural Reforms, Sustainable Development, Environmental Sustainability.

Introduction

Agriculture plays a pivotal role in the economies of many countries, serving as a primary source of food, livelihood, and economic growth. However, the sector often faces numerous challenges that can hinder its potential contribution to sustainable development. Agricultural reforms are essential to address these challenges and unlock the sector's potential for the benefit of both rural communities and the broader economy. This article discusses the need for agricultural reforms and explores the scope of potential changes.

Need for Agricultural Reforms

Sustainable Development

The current agricultural practices in many regions are often unsustainable, leading to soil degradation, water depletion, and biodiversity loss. Reforms are needed to promote sustainable agricultural practices that ensure long-term food security and environmental health.

Income Disparities

Agriculture employs a significant portion of the population, especially in developing countries. However, income disparities between small-scale farmers and large agribusinesses are common. Reforms can help ensure fair income distribution and improve the livelihoods of small farmers.

Technology Adoption

Agricultural technology has evolved significantly, offering solutions to increase productivity, reduce post-harvest losses, and enhance resource efficiency. Reforms can facilitate the adoption of these technologies by providing access to improved seeds, machinery, and knowledge.

Market Access

Many small farmers face challenges in accessing markets due to inadequate infrastructure, limited transportation, and lack of information. Reforms can improve market access by investing in rural infrastructure, establishing market linkages, and enhancing value chains.

Climate Change Resilience

Agriculture is highly vulnerable to climate change impacts, such as erratic weather patterns and extreme events. Reforms should focus on building climate-resilient farming practices and promoting crop diversification.

Scope of Agricultural Reforms**Land Reforms**

Addressing issues related to land ownership, tenancy, and land use is crucial. Land reforms can help redistribute land more equitably among small farmers, encourage efficient land use, and reduce disputes.

Financial Support

Providing access to credit and insurance services can help farmers manage risks and invest in modern agricultural practices. Government subsidies and support programs can also be reformed to target those who need them most effectively.

Extension Services

Strengthening agricultural extension services can facilitate the transfer of knowledge and best practices to farmers. Reforms can include training programs, workshops, and the use of digital tools for disseminating information.

Market Reforms

Developing efficient marketing systems, establishing farmer-producer organizations, and creating agri-business networks can help farmers fetch better prices for their produce and reduce post-harvest losses.

Research and Innovation

Investing in agricultural research and innovation is crucial for developing new technologies and practices that address emerging challenges. Reforms can ensure that research efforts align with practical needs on the ground.

Policy Framework

Reforms should also target policy frameworks that support sustainable agriculture. This involves removing barriers, reducing bureaucracy, and promoting policies that incentivize environmentally friendly and socially equitable practices.

Education and Training

Reforms in education and vocational training can equip the younger generation with the necessary skills and knowledge to engage in modern and sustainable agricultural practices.

Conclusion

Agricultural reforms are imperative to ensure the sector's sustainable growth, enhance food security, and uplift the livelihoods of rural communities. These reforms encompass a wide range of areas, from land management to market access, and require collaborative efforts from governments, international organizations, farmers, and other stakeholders. By addressing the pressing issues faced by agriculture and embracing innovative solutions, countries can unlock the true potential of their agricultural sector while promoting economic prosperity and environmental well-being.

WOMEN EMPOWERMENT: PROBLEMS

Ms. G. Nithya

Assistant Professor, Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi
tmgnithya@gmail.com

Abstract

Women's Empowerment has been a topic of intense debate and consideration throughout the last few decades. This agenda has also been at the top of the lists of most government initiatives and programmes. Efforts are being made on a daily basis across nations to solve this issue and improve women's socioeconomic condition. However, it has been found that most policies and programmes approach empowerment solely in terms of economic self-sufficiency, ignoring other variables such as health, education, literacy, and so on. Introduction Woman has always been as significant as man in the history of humanity. In reality, the position, employment, and work undertaken by women in society are indicators of a country's general well-being. A country's social, economic, and political progress will be stalled unless women participate in national activities. Women make up half of humanity and labour for two-thirds of the world's hours. She owns less than one-tenth of the world's resources and gets barely one-third of the entire revenue. This demonstrates that women's economic standing is abysmal, especially in a country like India. "Women account for nearly half of the population, perform two-thirds of the work, and produce half of the food commodities consumed by the country." They receive one-third of all salaries and own 10% of the country's property or wealth."

Keywords: Women, Empowerment, Issues.

Introduction

Women were admired and worshipped as deities in ancient Indian civilization. However, during the mediaeval ages, women's standing had plummeted significantly. Women are only valued in society for their ability to raise children, care for other family members, and perform other home tasks. For years, people have held the traditional belief that men are for the field and women are just for the home. Women are now breaking down all the obstacles and problems that have been placed against them in society. Previously, women faced numerous challenges as a result of a male-dominated, patriarchal society system, the practise of old traditional beliefs, and so on. Women were only accountable for conventional roles such as child bearing and child rearing. Even in the modern world, where women's status has improved slightly, they still face challenges. They must carry out both familial and professional commitments without the assistance of their husbands. In certain circumstances, women's conditions worsen when they are mistreated by family members rather than receiving assistance. Sexual harassment by family members, relatives, neighbours, acquaintances, bosses, and others is more widespread at home and in the workplace. They must endure a great deal in their daily lives.

Issues and Problems faced by Women in India

There are various issues and problems which women generally face in the society in India. Some of the problems are mentioned and described below:

- **Selective abortion and female infanticide**

It is the most common practice for years in India in which abortion of female fetus is performed in the womb of mother after the fetal sex determination and sex selective abortion by the medical professionals.

- **Sexual harassment**

It is the form of sexual exploitation of a girl child at home, streets, public places, transports, offices, etc by the family members, neighbors, friends or relatives.

- **Dowry and Bride burning**

It is another problem generally faced by women of low or middle class family during or after the marriage. Parents of boys demand a lot of money from the bride's family to be rich in one time. Groom's family perform bride burning in case of lack of fulfilled dowry demand. In 2005, around 6787 dowry death cases were registered in India according to the Indian National Crime Bureau reports.

- **Disparity in education**

The level of women education is less than men still in the modern age. Female illiteracy is higher in the rural areas. Where over 63% or more women remain unlettered.

- **Domestic violence**

It is like endemic and widespread disease affects almost 70% of Indian women according to the women and child development official. It is performed by the husband, relative or other family member.

- **Child Marriages**

Early marriage of the girls by their parents in order to be escaped from dowry. It is highly practiced in the rural India.

- **Inadequate Nutrition**

Inadequate nutrition in the childhood affects women in their later life especially women belonging to the lower middle class and poor families.

- Low Status in the Family
- It is abuse or violence against women.
- Status of widows

Widows are considered as worthless in the Indian society. They are treated poorly and forced to wear white clothes.

Some of the significant issues that modern women continue to face are listed below:

- **Violence against women:** Almost every day, women are victims of various forms of violence, which disrupts society. Women are becoming increasingly vulnerable to violence as a result of rising crime against women (according to a report from the Central Home Ministry's Crime Record Bureau). Every 44

minutes, a woman is kidnapped, every 47 minutes, a dowry is killed, and so on. They may be subjected to violence within the family (dowry-related harassment, death, marital rape, wife-battering, sexual abuse, withholding of healthy food, female genital mutilation, and so on) or outside the family (kidnapping, rape, and murder, among other things).

- **Discrimination based on gender:** Women are viewed as a weaker segment of society than men and are given less weight. Girls' children are becoming actual discrimination victims. Because of the patriarchal culture of Indian households, there is also power and work discrimination between men and women. Gender discrimination impacts women in sectors such as nutrition, education, health, care, female population decline, job, public life, and so on.
- **Female education issues** Women's education is poor in India, particularly in rural regions, because they are discouraged from pursuing higher education such as professional and technical education.
- **Unemployment-related issues** Women are having more difficulty finding acceptable employment. They become more vulnerable to exploitation and harassment at work.
- **Boss On Purpose** Their supervisor deliberately assigns them additional work and difficult tasks. They must demonstrate their dedication, seriousness, and sincerity towards their profession on a regular basis.
- **Unbearable Situations** Women who are uneducated are more likely to divorce and be abandoned by their spouses at any age. They must live their entire lives in terror of divorce. In certain cases, they are forced to end their lives due to harsh circumstances.
- **Increasing** Dowry system is another significant women's problem in society that is getting worse by the day. Women are abused, mistreated, humiliated, tortured, and subjected to various atrocities (violence, murder, and suicide) as a result of a lack of dowry at the time of marriage. It has a significant impact on women's standing.

Conclusion

When a woman leads her family, the village and the nation advance. This is vital because their ideals and value system form the foundation of a good family, a good society, and, eventually, a good nation. Inclusion of women in the mainstream of development is the most effective approach to empower them. Women's empowerment will be real and effective only when they have enough income and riches to stand on their own two feet and establish their identity in society. Women's empowerment has emerged as one of the most pressing issues of the twenty-first century, both nationally and internationally. Government measures alone will not be sufficient to attain these objectives. There should be no gender discrimination, and society should take the effort to establish such an environment, in which women

have complete self-determination and can participate in the country's social, political, and economic life with equality.

INDUSTRY 4.0 AND ITS IMPACT ON INDIAN ECONOMY

Ms.G.Nithya

Assistant Professor, Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

Developed economics such as Germany, Japan, the United States and Singapore have industry 4.0 to boost their manufacturing competitiveness. In terms of Industry 4.0 adoption, India presently lags behind its worldwide peers. It has, however, begun to incorporate these technologies into its industrial processes, which has resulted in a number of positive outcomes. Since the start of civilization, humans have strived to increase their capacity and power. Initially, they used wood or pebbles as equipment, but as science progressed, they found complex and efficient technology, and this process is currently ongoing. Machines are an example of a human invention. The introduction of machines sparked the first industrial revolution. It was labeled a revolution because it not only increased output but also caused significant social and economic changes. For example, in the 1790s, the French Revolution invented new concepts such as equality, liberty, and brotherhood; a few years later, the first industrial revolution infused those ideas. It shows that industrial revolutions have a huge impact on both our society and the global economy. In this framework, the current study seeks to describe the impact of Industry 4.0 on Indian industry.

Keywords: *Developed Economics, Industrial Revolution, Industry 4.0.*

Introduction

Humans have attempted to expand their capacity and strength since the dawn of civilization. Initially, they used equipment made of wood or pebbles, but as science advanced, they discovered sophisticated and efficient technology, and this process is still ongoing. Machines are one of human inventions. The first industrial revolution was caused by the use of machinery. It was dubbed a revolution because it not only raised output but also brought about enormous social and economic changes. For example, in the 1790s, the French Revolution generated new principles such as "Equality, Liberty, and Brotherhood"; the first industrial revolution, which occurred a few years later, infused those ideas. It means industrial revolutions have a huge impact on our society, not only society but it also affects the world economy.

Today, technology has advanced to the point where we are on the verge of the Fourth Industrial Revolution. New technological developments such as artificial intelligence, the internet of things, big data, and so on will alter the entire landscape of the current sector. Industry 4.0 will transform the way we work, live, think, and interact with one another. Artificial Intelligence (AI) is a key component of Industry 4.0. It helps machines to think, learn, and make decisions. AI is likely to cause a revolution in the space sector as well. In the near future, robots will be deployed to space instead of humans, resulting in new advances in space science. AI will boost not only the space industry, but every area, from

agriculture to healthcare and education. On the one hand, AI will be utilised to tackle difficult challenges such as security, terrorism, surveillance, and traffic control, and on the other, it will bring about dynamic changes in banking, airlines, medical technology, and education. We can also do important cancer surgeries using nanotechnology.

Industry 4.0 Technologies and their Industrial Applications

Another technological advance is the Internet of Things (IOT), which allows machines to connect with one another. IoT combined with AI will transform factories into smart factories, towns into smart cities, automobiles into smart automobiles, and homes into smart homes. If this occurs, human efforts will be reduced to a bare minimum. Big data analytics is another important aspect of Industry 4.0. It is primarily designed to collect consumer information and data so that manufacturers may create appropriate products and services for them. Data is extremely crucial in today's digital environment. Imagine, if this massive amount of data is properly digested, we will see magical changes all around us. We will receive proper on-time services, saving both money and time. Big Data will, in fact, radically revolutionise the governance structure. It will be more transparent and efficient as a result. Governments struggle with policy implementation. Big Data and AI are expected to work together to solve this challenge. The government will be able to reach every person in need, and no one will be denied justice. It means that in the future, Big Data will enable inclusive socioeconomic development.

Industry 4.0 Technologies and Data Privacy

According to the UN, privacy is one of the human fundamental rights. Can we ensure privacy while installing this technology? Is Industry 4.0 going to ruin our fundamental rights? Actually, when we are considering Big Data we are considering data of millions of TB. In such huge amount of data, personal data doesn't matter much. But this data can be used to influence people politically and may hamper democratic processes also. This data, if not properly guarded, may cause civil wars or riots. So this is going to be a big challenge in the future. Industrial revolution puts a big impact on world economy and changes its basic structure. For example, the first industrial revolution transformed the agrarian economy into the manufacturing economy; the second industrial revolution reshaped it into the service-based economy and during the IT revolution the world's economy became a knowledge-based economy. But in this advancement, if one had to sustain he/she has to learn new skills and techniques. For example, when tractors and electric pumps were introduced in the farming sector, only those farmers could sustain well who trained themselves in accordance with modern technology and the rest failed.

Impact of Industry 4.0 Technologies on Human and the Workforce

A huge question arises when we think about artificially intelligent machines: "Will there be any job left for humans?" Actually, jobs are not dying but they are evolving. It is obvious that Industry 4.0 will replace some jobs, but is also creating new jobs like big data

analytics, VR designer, block chain auditor, social media reporter, drone operator space visit guide and many more. It is expected that high-skilled and low skill jobs will stay as before, but middle-tier jobs will be replaced by AI robots. This is known as job polarisation in the economic terms. If workers want to sustain then they have to learn new technological skills. Researchers of Oxford University have found that jobs which are related to manual dexterity, high cognitive skills and social skills are difficult to be computerized, and workers should focus on developing these skills. Doctors are going to be replaced by AI robots in future but if a doctor is trained with hospitality skills and caretaking skills, then he/she will be preferable over a robot-doctor. It means jobs are going to be knowledge-centric and talent centric. A construction worker has to learn something about electronics apart from construction skills if he/she wants to build an automated smart home where sensors are used. Hospitality, condolence, politeness these are some qualities which should be learned as these will value add our character.

In the recent times, human race are heading towards a Gig economy. Gig means not continuous. It is predicted that normal continuous jobs will be reduced and these will be replaced by contractual jobs. If there will be no permanent jobs then there will be no paid holidays and no insurance schemes and also no fixed income. It may create unemployment like situation but I think gradually it will become part of our habit. So the beginning period is going to be tough and it is also expected that the revolution may slow down the world economy for a small period. So we should get ready for it. It is often observed “lack of reciprocity between technology and skill results in social inequality”. Those who learn new skills time to time and update their work with new technology will succeed and for the rest, fourth industrial revolution will be a big challenge. Actually, it depends on you whether Industry 4.0 will be a boon or a curse.

Economic Benefits Provided by Industry 4.0 Technologies

Industry 4.0 technologies will help in the economic regeneration by 2025 enabling enterprises to revamp India's financial status in the post-COVID era besides acting as game-changers. The role of corporations through AI is going to be key for the comeback of the Indian economy post-pandemic. New-age technologies such as block chain, big data analytics, Internet of things (IoT), advanced manufacturing, quantum computing and AI are set to give India a possibility to engrave itself a striking uniqueness as an “International nucleus” in the near future. As AI functions for “digital inclusion” in India, it is expected to have a ripple impact on economic prosperity and growth. Analysts foresee that AI can help add up nearly \$957 billion to the Indian economy by 2035 and by 2025, AI can add over \$500 billion and nearly 20 million jobs to the Indian economy. The Indian government is also in the process of implementing a robust legal framework governing the data of the country apart from constructing a data-driven society through AI that presents endless prospects to empower people, enhance society and also boost the ease of doing business. India through its AI strategy, constituting an extensive pool of AI workforce and an

emerging startup ecosystem, has a remarkable chance to be a prominent contributor to AI-driven resolutions that can further transform agriculture, healthcare, manufacturing, education and skilling thereby impacting the economy positively to a considerable extent. The adoption of AI in various sectors of the economy is seen to have produced favorable returns by lessening time and risk.

Government Initiatives to Speed up the Implementation of Industry 4.0

Recently, the Ministry of Commerce and Industry has set up a Taskforce on AI to kick-start the usage of AI for the country's economic shift. Nonetheless, AI adoption has remained at a developing stage. Therefore, the Indian government should consider establishing a separate "Industry 4.0 Ministry" for coordinating all new age technology related activities. For instance, the United Arab Emirates (UAE) in 2017 became the first nation in the world to create the post of Minister of State for AI. Today, governments globally are also taking measures to be part of the AI-led digital economy, which is assessed to contribute roughly \$15.7 trillion to the global economy by 2030. Considering India's present situation, the country is on the verge of a massive opportunity for both economic advancement and gain in the common well being of its citizens. "Inclusive economic growth" can make India the best playground for creating world-class and state of the art technology solutions. For this, the government through its annual budget must consider allocating more for Research and Development (R&D) in various sectors and also establish R&D departments in various educational institutions and universities across the country. India through General-purpose technologies (GPTs) can also influence the whole economy where GPTs have the possibility to drastically transform societies through their effect on the already existing economic and social arrangements.

Growth Potential of Industry 4.0 in Indian Economy

The adoption of AI is not confined to businesses alone, while economies have also shifted their emphasis on creating their AI capacities as a tool to boost growth where developed nations are already in the race and India as an aspiring future superpower is set to enter the AI race. Amidst the accelerated adoption of AI-based technologies, India seems to stand at the ridge of Industry.

Therefore, it would be a convenient shifting for India to create its AI abilities despite the transnational digital divide broadening even more. From the first industrial revolution until the rise in the IT revolution, the world has stood to benefit more and as per experts, AI like any other new technology in the past will produce more jobs than it destroys. Still, it is seen that the "Initial adoption of technology" has barriers for developing economies where restricted access to Industry 4.0 can broaden the income inequality, and the transformation stage of adoption is presumably to replace some jobs before it produces more jobs. While the influence of AI on the gross domestic product (GDP) and productivity is impressive, studies have also demonstrated the harmful effect of AI on employment. McKinsey Global

Institute indicated that intelligent mechanisms and robots could eliminate nearly 30 per cent of the global human labor by 2030. Also, with the rise in unemployment, this transformation could become quite difficult though in the past, new technologies have demonstrated to be worthwhile in the long-term, the short-term failures cannot be justified. Nevertheless, India still lags on essential indicators of AI development despite possessing increased levels of entrepreneurship, robust corporations and a skilled pool. Therefore for the betterment of the essential AI indicators a balanced approach, innovative local solutions and top-down policy making should be put forth. Also, the enhanced role of government along with the private sector will be instrumental in directing AI to create equitable development. Furthermore, the continued innovations and collaborations by Public-Private Participation (PPP) are necessary to lessen the cost of modern technologies, which can help the larger population thereby driving the “digital revolution”. However, India should also mainly consider improving its “hardware sector” to help redress bottlenecks since the country still lags behind which is vital for the Indian economy.

Conclusion

India is anticipated to have the world's youngest population by 2030, accounting for approximately 30% of the global workforce. As a result, AI can drastically increase the productivity of the average worker to meet the level of today's top achievers. There is also a need to foster "scientific temperament" among the people of the country regarding new generation technologies, in addition to taking the ethics and security of Industry 4.0 into account. In this regard, India's "National strategy for AI" recently advocated the establishment of ethics councils for sector-specific concerns like privacy, security, and ethics. Industry 4.0 can also assist the country in meeting the Sustainable Development Goals (SDGs), which can propel the Indian economy forward. In the long run, the Indian economy and society are clearly prepared for a sea change, and the courageous aim of making India a \$5 trillion economy by 2025 can be realised with the implementation of Industry 4.0.

Abstract

Economic development of a country is largely conditioned by the adequacy, efficiency, regularity, safety and punctuality of transport services. It links up villages, towns, cities and metropolises and it also integrates the economy. Transport is an infrastructure, a public utility and a commercial venture and therefore it is unique in more than one sense. Among the four major modes of transport namely road, rail, water and air, the first one lends itself to a greater flexibility, variety and versatility. The road transport which encompasses the passenger and cargo segments is, in fact the best possible mode of linking remote hinterlands with growing cities. On May 7 2021 Tamil Nadu's honorable Chief Minister M.K.Stalin, announced the scheme that enables all women in the state of Tamil Nadu to travel free of cost in Government-owned city and town buses. The main intention of this scheme is to increase the rate of women participation in all the sectors and to promote public transportation. It is also said that it has generated ideas for women to undertake self-employment. Thus, present paper will highlight the Impact of Women Empowerment Schemes in Tamil Nadu state Transport Corporation Limited (TNSTC)

Keywords: Economic, Transport, Tamilnadu and Passengers

Introduction

No transport business can exist without passengers. No transport business can survive without satisfying the needs of the passengers. In general compared with other modes of transport, bus transport and its services are more indispensable, convenient and very easy to access. In certain situations, bus transport may suit with the needs of the passengers and facilitate more in all aspects. It carries the people from one place to another place to enable the people to carry out their day to day activity; business etc. therefore bus transport and its quality serviced is too important in a man's day to day life of the general public. Bus transport services are similar to central nerves system of a human body. Bus transport connects different levels of people and it aid the people to have, build their business contact, celebrating festivals and in, many ways. The increasing importance of transport in the world of agriculture can't be over emphasized. Before and after harvesting, transport plays an important role. Transport services, the productivity of agricultural of improved manures and fertilizers. Before the introduction of motor truck and railways, this

facility was not available. Besides, the transport helps marketing of agricultural products. Industrial progress depends upon transport that helps new industries. Industrial development would not have taken place if there was no transport. Transport industry has been set quantities of goods and transport millions of passengers. Thus transport has contributed to the industrial development of the world.

In 1944 British Government appointed a committee to analyse public transport in the country. On 01.01.1972, Pallavan Transport commission was established under companies act 1956 and busesoperated in Chennai and Chengalpattu were brought under it and paved the way for inception of other state transport undertakings. 21 state transport undertakings were created by bifurcation from 1972 to1996. Now it is functioning as eight from 2004.Tamil Nadu state transport corporation limited (TNSTC) is fully owned and operated by the government of Tamil Nadu. TNSTC owns 321 depots and 5 workshops with a combined fleet strength of21,678buses. TNSTC covers 38 districts with the road length of 2,16,352 km with 32,598 buses. The total number of daily bus passenger is around 1.6crore in Tamil Nadu, which implies there are839 daily passengers for every bus. An estimated 53 lakh passengers travels everyday in city and town buses in Tamil Nadu.

According to Government assumption, 40 percent of the passengers, or18 lakh, could be women. Tamil Nadu has become the third state in India to make public bus transport free for women after Delhi and Punjab and it is also the first state to introduce pass to travel in the corporation buses at free of cost for school students. On May 7 2021 Tamil Nadu's honorable Chief Minister M.K.Stalin, announced the scheme that enables all women in the state of Tamil Nadu to travel freeof cost in Government-owned city and town buses. The main intention of this scheme is to increase the rate of women participation in all the sectors and to promote public transportation. It is also said that it has generated ideas for women to undertake self-employment. After this government's announcement, most of the women passengers are likely to shift from private buses to government buses. The free travel for women in town buses across the state also led to an increase in the share of women passengers from 40 percent to 61 percent.

Passenger is the occupant of a transportation vehicle other than the person operating it. Women passengers satisfaction is indefinite and a conceptual term, which will vary from one person to another and from one service to another service. Impact is the force of impression of one thing on another. Positive and negative, primary and secondary long term effects produced by a development intervention, directly or indirectly, intended or unintended.

Objectives of the Study

To study the Impact of Women Empowerment Schemes in Tamil Nadu state Transport Corporation Limited (TNSTC), Coimbatore District.

Review of Literature

Vijayaganeh (2019), has analysed “the satisfaction level and discomfort of the passenger, using TNSTC buses” Primary data was collected through the interview method. Simple percentage method, weighted average method and Rank method was applied to find the results. The study suggested that bus conductor and driver should be trained to behave with the passenger. **Kiruthika and Ravi (2022)**, have conducted the performance of women free bus operations and the complications faced by women passengers. The data for the study was secondary data which is collected from various journals and articles. The research found out that it is very useful for college students, women who want to study, house wife’s who want to do small business at home. The study concluded that the safety and ease of travel can encourage greater numbers of women to take self-employment as well as wage employment that requires them to commute or travel. **Kalimuthu and Preethika (2023)**, have conducted “Impact of Women Passenger towards Tamilnadu Free Bus Scheme Provided by Tamilnadu State Transport Corporation “(With Special Referenceto Coimbatore City). The study reveals that most of the respondents are aware about this free bus scheme. with the gdp growth rate of the country.

Methodology

The study has a descriptive nature. Secondary data have been collected in order to prepare this document in a comprehensive manner. The data have been collected from publications in various journals, periodicals, conference papers and websites.

Profile of Tamilnadu State Transport Corporation Limited (TNSTC)

Tamil Nadu State Transport Corporation Ltd.-(TNSTC) is a Government owned public transport bus operator in Tamil Nadu, India. It operates Intercity bus services to cities within Tamil Nadu, and from Tamil Nadu to its neighboring states. It also operates town busses from major cities and towns of Tamil Nadu to its neighborhoods, with the exception of Chennai, where the public bus service is operated by MTC, a subsidiary of TNSTC. It is the largest Government bus transport corporation in India. It operates intercity bus services to cities within Tamil Nadu and from Tamil Nadu to its neighbouring states with a combined fleet strength of 23,078 buses as of 2016-17. It also operates public transport bus service in many cities of Tamil Nadu, with the exception of Chennai, where the public bus service is

operated by MTC, a subsidiary of TNSTC. TNSTC is fully owned and operated by the Government of Tamil Nadu. It caters to all the districts within Tamil Nadu and also operates services to neighbouring states of Andhra Pradesh, Karnataka, Kerala, Telangana and union territory of Puducherry.

History of Tamil Nadu State Transport Corporation (TNSTC), Coimbatore

In pursuance of Government Nationalization policy, Cheran Transport Corporation Limited was incorporated as a company under companies act on 17.02.1972. It commenced its services on 01.03.1972 with 109 buses taken over from the Anamalais Bus transport pvt. Ltd., Pollachi in Coimbatore district at the time of formation. Subsequently, it took over 121 buses from 19 private operators in Nilgiris district in pursuance of Tamil Nadu State Transport carriages and contract act 1973 on 14.01.1973.

The name of the company, Cheran Transport corporation limited, Coimbatore was changed as "Tamil Nadu state transport corporation Coimbatore Division-I limited", and the name of the company, MahakaviBharathiyar Transport Corporation Limited, Udhamandalam" has been changed as "Tamil Nadu state transport corporation (Coimbatore Division-III) Ltd., with effect from 23.07.1997.

Tamil Nadu state transport corporation (Coimbatore Division-III) Ltd., Udhamandalam was merged with M/S. Tamil Nadu state transport corporation (Coimbatore Division-I) Ltd., Coimbatore with effect from 07.11.2000 Subsequently, Tamil Nadu state transport corporation (Coimbatore Division-II) Ltd., Erode was merged with Tamil Nadu state transport corporation (Coimbatore Division-I) Ltd., from 30.12.2003, and this corporation is at present functioning in the name of "Tamil Nadu state transport corporation (Coimbatore) Ltd., Under this corporation there are four regions covered. Districts covered are Coimbatore, Ooty, Erode, Tirupur.

Scheme Details

Free travel facilities have been provided for all women including working women, Transgender and girls who are pursuing higher education in ordinary fare city buses operated under the control of the Tamil Nadu State Transport Corporation since 2021.

- Tamil Nadu Government announces and implement lots of scheme for the welfare of people of Tamil Nadu.
- One of the social welfare scheme for Tamil Nadu Women is Zero Ticket Bus Travel Scheme.
- The main objective behind launching Zero Ticket Bus Travel Scheme is to encourage women of Tamil Nadu for higher work participation and reduce the dependency on private mobility.

- Most of the Working Women, Girls Students and Women Labourers doesn't have their own convenience to commute one place to another.
- They regularly pay for travelling fare which overburden them financially.
- So to unburden the Women of Tamil Nadu financially, Government came up with a idea to provide free of cost travel in government run buses.
- Under Tamil Nadu Zero Ticket Bus Travel Scheme, No women have to any fare if they are travelling in Government of Tamil Nadu run buses.
- Zero Fare Ticket will be issued to women beneficiary at the time of travelling.
- Free of cost travel in government run buses will only valid up to 30 kilometers.
- Women Beneficiary has to carry one photographed identity card for verification purpose.
- Transgenders are also eligible for free of cost travel under Zero Ticket Bus Travel Scheme of Tamil Nadu.
- Free of Cost Bus Service will only provided in Tamil Nadu Government run Ordinary/ City Buses or Buses operated under the control of Tamil Nadu State Transport Corporation.
- There is no need to apply anywhere to avail the benefit of free of cost travel in buses.
- Women Beneficiary can directly travel free of cost under Zero Ticket Bus Travel Scheme for Women of Government of Tamil Nadu.

Benefits of Women Empowerment Schemes in TNSCT

There is a lot of gender disparity in Indian society, and the mobility of women is restricted for a host of social and economic reasons. Fare free bus travel will, therefore, lead to economic, emotional, and social benefits for women.

Economic Benefits

In most Indian households which have a vehicle (car, two wheeler or even bicycle), it is primarily used by the male members, which restricts the mobility of women to a great extent. Women, especially women from lower socio-economic backgrounds, are often forced to take up jobs in locations which are close to their residence, which restricts the number of job opportunities available to them.

- Offering fare free bus travel enables women to look at taking up jobs with are a distance away from home, and will, hopefully, lead to improved labour force participation.
- Women who are currently spending a substantial chunk of their earnings on bus fares will be able to save the amount and can then use it on other basic expenditure like education or healthcare.

- Fare free bus travel enables women to use public transport for running errands and for other purposes, therefore saving the time which might otherwise be spent on walking to their destination.
- Women who might have earlier walked to their place of work and back can now save time by taking the bus.
- Many mothers, for instance, wait outside the school compound after dropping the children off, since they cannot afford to spend on bus fare to return to their homes.
- Fare free bus travel will empower these women to spend their time more productively if they choose.

Emotional Benefits

Fare free bus travel will give women the freedom to move freely within the city, and will reduce their dependence on other family members for their mobility.

- School students who are forced to drop out of school after primary school because the secondary school is a distance away, can now avail of fare free bus travel to travel to school without imposing an additional financial burden.
- Women can visit family and friends, without having to depend on others to take them. Women, particularly from rural areas, can now access better medical facilities.
- Being able to study and work without worrying about the cost of the commute is a big benefit for women.
- Equally important, fare free bus travel empowers women to use public transport for shopping and leisure which is good for their mental well-being.

Social Benefits

- Fare free bus travel will lead to more female passengers in the bus. Since we always feel more comfortable when we are with more people like us, this will increase our perception of safety and security.
- After fare free bus travel was introduced in Delhi, women said that travelling by DTC buses had become safer than traveling by private buses. Women also reported that incidents of casual molestation had gone down with the increase in number of female passengers. This is a virtuous cycle, which will eventually lead to greater safety for women.
- Hopefully, this will lead to more women switching from private vehicles which they can ill afford to public transport.

Conclusion

The main aim of the paper is to know the impact of women passenger using TNSTC free busses provided by Tamil Nadu State Transport Corporation in Coimbatore city. Based on study findings, it can be concluded that free buses have helped women passengers to save. The money which is saved is used in household expenses of the women passengers family. Students and working women are benefited by this scheme as they can study and go to work places also and many women travel 5 kilometers-10 kilometers per day to fulfill their needs. This scheme is great initiatives by the government for the welfare of women in Tamil Nadu.

Abstract

ICT stands for information and communication technology. ICT include the use of hardware and software for efficient management of information and it also includes communication devices like radio, television, cell phones, computer, satellite systems and many more. It refers to that technology which is used to transmit, store, share, create or exchange information. Innovations in technology and globalization have leaded to an enlarged the use of ICTs in all sectors. In modern era, the world is moving rapidly towards digitalisation such as e-governance, e-health, e- education etc. 21st century. In the present era, everyone can have access to teaching material at own level and consult many experts by video conferencing from all over the world. Currently, a teacher is been teaching his students through the use of ICT even though they are geographically scattered. We can't imagine a day without ICT. Today, world without ICT means we do not have any information about the events that are occurring around. It has become a part and parcel of life. Thus, present paper will highlight the role of ICT in Education.

Keywords–Technology enhanced learning, schemes, Teacher, Student, and ICT Initiatives.

Introduction

ICT will not only include hardware devices connected to computers, and software applications, but also interactive digital content, internet and other satellite communication devices, radio and television services, web based content repositories, interactive forums, learning management systems, and management information systems. These will also include processes for digitisation, deployment and management of content, development and deployment of platforms and processes for capacity development, and creation of forums for interaction and exchange.

The National Policy on Education 1986 , as modified in 1992, stressed the need to employ educational technology to improve the quality of education.

The policy statement led to two major centrally sponsored schemes, namely,

- a) Educational Technology (ET) and
- b) Computer Literacy and Studies in Schools (CLASS)

Thus, paving the way for a more comprehensive centrally sponsored scheme – Information and Communication Technology at Schools in 2004. The significant role ICT can play in school education has also been highlighted in the National Curriculum Framework 2005 (NCF) 2005.

The ICT Policy in School Education aims at preparing youth to participate creatively in the establishment, sustenance and growth of a knowledge society leading to all round socioeconomic development of the nation and global competitiveness.

Objectives

- To know the importance and role of ICT in Education.
- To study the Importance of Students Engaging with ICT

Review of Literature

Olivier (2014) found that theology took up the challenge to utilise the printing press and should do the same with the new technology. The impact of theology is directly related to the medium used throughout the ages, Tegos et al. (2016) research indicated that the effectiveness of flexible conversational agent in productive online peer dialogue, Barak (2017) from his study found that how teacher integrate web-based technologies and their perceptions of cloud pedagogy. He found that cloud pedagogy framework facilitates individual and collaborative, synchronous and asynchronous active learning, in class.

Methodology

The study has a descriptive nature. Secondary data have been collected in order to prepare this document in a comprehensive manner. Data are obtained through publications in various journals, periodicals, conference papers and websites.

Objectives of using ICT in Education

The objectives of ICT in education include:

- Providing accessibility through online medium of education.
- Improving the quality of teaching, especially in remote areas.
- To increase transparency in the education system.
- To strengthen the policies, rules, and laws in the education system.
- To analyze the learning and participation of the students and measure its effectiveness.
- Measuring and evaluating students' behavior, involvement, and retention in the learning process.
- To analyze students' performance, placement, and application of knowledge.

The Importance and Role of ICT in Education

Online Learning

ICT and its tools had led to the emergence of online learning. Through this, the teachers and the students are learning innovative ways in the education process. Online learning has gained popularity amidst the corona pandemic to ensure that the learning continues. ICTs have looked after that education reaches through it worldwide and even in remote areas. No matter where the students are, but it has ensured that every learner derives its benefits.

Accessible to all

ICT in education allows accessibility to all types of learners. All students can learn through the material provided. Even the special needs students can maximize the benefits through the

usage of it. ICT has also covered issues like the —digital divide and allows even less fortunate people to access the tools for their educational needs and enhance learning.

Higher-Order Thinking & Skill Developments

ICT promotes high order thinking and reasoning skills. These skills enabled the process of evaluation, planning, monitoring, controlling, reflecting, etc. To use ICT tools effectively, one must be able to explain and justify the solutions to the problems. For using ICTs, the students should be able to discuss, test, and evaluate the strategies and methods they use.

Develops ICT Literacy and Capability

Literacy and capability are the 21st-century skills that are needed. One of the best ways to develop these is to equip the subject-matter with purposeful activities.

Encourages Collaboration

ICT fosters collaboration as children work collectively. It also enhances communication skills as they discuss, talk, and learn together. All you need is a laptop, tablet, or desktop computer to understand it's working. ICT tools open up the doors for developing language through fostering communication.

Motivates Learning

ICT motivates children towards learning. Children learn better through the usage of technology. They get mesmerized with technology tools and get motivated to learn effectively in the classroom or at home.

Improves Engagement and Knowledge Retention

With the inclusion of ICT in education and its tools, children get more engaged and show greater participation in learning. It is all because of technology. It has made learning fun-filled with creativity and games. It enhances learning in multiple ways. Because of it, the students learn better, leading to knowledge retention.

A Key Part of the Curriculum

As per the latest curriculum, ICT plays an important part in the education system. So, many governments across the globe have started using ICT as a major part of education and the curriculum.

The rise of the Knowledge Economy

We live in an economy that is a thirst for the production and dissemination of information properly. ICT pervades at all levels and sectors like health, education, environment, or production. So, its use is needed everywhere at all levels.

Therefore, we cannot deny the fact that ICT is an important part of our lives. It fosters collaboration and connectivity around the world. Technology is ever-changing. It is likable due to certain features like growth, creativity, joy, fun, and consumption.

Importance of Students Engaging with ICT

ICT in Education

Students should engage with ICT in order to:

- To develop 21st-century skills like ICT Literacy and capability.
- To improve retention levels.
- Make them prepared for an integrated society that is taking advantage of the ICT developments.
- Adapt ICT tools as a lifelong partner.

Advantages of ICT in Education

Individualization of learning

It means that people learn as an individual and not as the same group. As learners are varied, ICTs provide flexibility so that learners learn according to their own pace.

Interactivity

Through this feature of ICT, learners can learn properly at any point. They do not need to follow a proper sequence. Learners can learn effectively through this feature.

More economical, the higher speed of delivery and wider reach

ICT tools are more economical, and the speed of delivering content is also high. Through ICTs, the number of learners increases, thereby reducing the overhead cost of investment.

Multiple teaching functions and diverse audiences

ICT involves multiple functions like diagnosing and solving problems for accessing information and knowledge about various contents. It can be useful in drills and practices also.

Uniform quality

ICTs act as a great equalizer by producing uniform quality content for the rich and the poor, the urban and rural people. It produces good quality content for all.

Facilitates cooperative learning

ICT facilitates cooperative learning by encouraging dialogue, discussions through a more participative classroom environment.

Act as a motivating tool

ICT tools act as a motivator and encourage children to enhance their learning. Children get fascinated with technology. Teachers should use their skills to arouse interest, fun, and creativity to learn in a better way.

Distance and climate insensitive

- Regardless of the distance and climatic conditions, ICT tools provide access to all.

- These were some advantages of ICT in the education sector.
- Now let's get an insight into certain disadvantages of ICT.

Current Situation of ICT:

1. Online education: Due to Covid-19, there is no option without online education. As lockdowns don't allow to open schools, colleges, so online education is only one option through which education can be continued.
2. Use of apps: Different apps nowadays are used for online education. These apps are helpful for students and teachers to reach. Such type of apps are also used for meetings, online teaching learning process. Ex. Zoom, Google meet, Webex etc.
3. Platforms for online education: There are different platforms available for online education. Through these platforms, online classes can be taken, videos can be uploaded, recorded videos can be send. So these platforms are helpful to the students as well as teachers. Ex. Swayam, Webex, Impartus etc.
4. Use of different e-content : Due to online education there is no time limit as well as place restriction for learning. Anyone can learn from any place and at any time. So many type of education any one can take. And different e-contents are also prepared for students. These are helpful for them to enrich their knowledge.
5. Tools for teachers[iii]: GeoGebra can construct almost every conceivable geometrical object, even in 3D, Object drawing is interactive and can be moved around, modified, measured. PhET Simulations are interactive computer programs which allow a user to change variables and see the effect of the changes on the system. These are very useful in helping students explore the subject, solve problems and can also become a useful self-assessment tool.

Conclusion

The intervention of information and communication technology is redefining the way students learn. It is making the process of learning more efficient and effective for students and teachers. ICT tools in education make it easier for teachers to use the best strategies to bring out the best in their students. ICT in education sector is beneficial for the students, in addition to this, it is making it possible for schools to impart education in the finest way. Moreover, the technology enables them to manage all the management and administration functions in a seamless manner. Hence, there is no doubt that it is a boon to the education industry.

Abstract

The Central Government Schemes for girl child have been launched across India with the goal of improving the social attitude toward female children in India. These schemes also aim at elevating their status in society. Several central government initiatives, saving schemes and all under-government programmes for a girl child have been introduced in India in recent years. These programs have been a vital element of assisting females on a national as well as state-by-state basis. This scheme was created with the goal of providing financial incentives to families in order to encourage them to provide better upbringing and education for their girl child, to end sex discrimination, and to change the family's mindset toward the girl child's education by linking cash and non-cash transfers for the well-being of girl child. In the coming years, the schemes will prove to be beneficial for the girl child but as of now the reach of these schemes seems to be unclear. On a state and national level, the Department of Women and Child Development administers the majority of the schemes. Thus, present study will highlight the Role of Government Schemes to Uplift Girl's Child Education.

Keywords: Education, Schemes, Society, Children and Protection.

Introduction

In ancient Indian civilization, women had a prominent place. Boys and girls had access to education. The Vedas and Fine Arts were studied by the girls. Women received high self-worth and reached the highest level of intellectual and spiritual achievements. The Vedic period is also known as the 'Golden Age for Women'. Discrimination against women started in the later Vedic period. The ill-fated 'Sati' practice emerged during the Mauryan period. Women's liberty was further restricted by Kautilya in his 'Arthashastra'. Women's status in pre-independence India was poor due to widespread social evils such as child marriage and Sati. Only 2% of the women received an education. Sarojini Naidu, Vijay Laxmi Pandit, Aruna Asaf Ali, Sucheta Kriplani, and Rajkumar Amrit Kaur were among the ladies who came forward to promote the idea of gender equality.

In India, the government implements schemes to improve the social and economic problems of the country's inhabitants. These schemes are crucial in addressing many of the socio-economic issues that are faced by citizens, therefore citizens should be aware of them. The First Five-Year Plan aimed to 'promote the

welfare of women by assisting them in fulfilling their legal obligations in the home and community while emphasising that 'the major burden of organising activities for the benefit of the vast female population must be borne by private agencies. The development programmes of the Seventh Five Year Plan intended to improve women's economic and social condition and ensure that they benefit from national development. This is when 'beneficiary oriented programmes' began to provide direct advantages to women in many development areas. This scheme aims at providing social protection, promoting girl child development, and spreading awareness for the ill practices of female feticide and child marriage. It also aims to provide opportunities for higher education and employment to girl children.

Objectives

1. Whether people take the advantage of the Government schemes.
2. Whether the schemes are helpful to girl child.

Review of Literature

The present study is made on different aspects of government schemes related to girl child. From the study of related literature it is found that few problems have been dealt with children regarding their upliftment and solution to these problems in their progress.

Khandelwal et.al, (2014) reviewed the government program for women and children regarding their nutrition. Sadh and Kapoor studied the initiatives to save the girl child in India. Dr. Agnihotri and Malipatil, (2018) studied a brief information about Beti Bachao, Beti Padhao scheme. Department for International Development, (2005) Published a report on Girl's Education towards a Better Future for all where in Educational Problems of Girls have been dealt with.

Methodology

The study has a descriptive nature. Secondary data have been collected in order to prepare this document in a comprehensive manner. Data are obtained through publications in various journals, periodicals, conference papers and websites.

Status of Girls in the Society

The status of women in a country defines the country's economic, social and mental condition. For generations, women have been the family's caretaker and primary givers and catered to domestic needs. Young girls are brought up to learn to walk in the footsteps of women in their families and conform to their gender roles. Learning to cook, clean, sew, stitch, and ration are among the many gendered tasks that girls are expected to practise and learn. In addition, girls are taught to be soft, polite, calm, spiritual, dutiful and forgiving. Only then does society deem them fit. It has been the status of girls in society for decades and continues to persist similarly in most families. Although educated women have risen to raise their voices and fight for their rights, the social condition of women remains the same in many places. The

government is drafting schemes to educate every girl-child, and NGOs are raising awareness about the importance of educating girls to improve the current and future condition of women in society.

Importance of Girl-Child Education in the Society

The post-independence era marked a turn in the status of women in the society. The revolutionaries fought for the right to educate girls and provided them access to every opportunity that could help uplift them from the dungeons of patriarchal oppression. People need to understand that a learned woman is the forerunner of society. She can construct, grow and elevate the standards of her family and society. When girls are allowed to study, they learn and help others learn; they explore and grow both individually and collectively by educating their families and those around them. A woman has the potential to fill both gender roles; she can be a working housewife and a career-oriented professional at the same time. By encouraging young girls to study, society ensures an economically, morally, and spiritually richer future for itself.

Government Schemes for Girls' Education

There are numerous factors challenging girl education in society. Therefore, the Indian government took the initiative of drafting and launching multiple schemes to benefit the education of girls across the country.

Central Government Initiatives for Girl Child

BetiBachaoBetiPadhao

BetiBachaoBetiPadhao programme provides assistance to girls across the country. This program's primary goal is to prevent selective abortions and to improve the quality of education for a girl child. Rather than financial assistance, this is primarily an educational programme aimed at changing societal attitudes.

This initiative was supported by the Ministries of Women and Child Development, Health and Family Welfare, and Human Resource Development. The program aims to prevent the selective abortion of girl child and to ensure their inclusion in society, their well-being and education. It further supports equality of both genders and endorses the right of girl children to inherit property.

SukanyaSamriddhiYojana

SukanyaSamriddhiYojana Account is a small deposit scheme for girls. The programme enables parents to establish a trust fund for their child's future needs. The accumulated sum can help young girls pursue their dreams and negate the idea that girls are a burden. The scheme is managed by the Ministry of Finance and operated by the Post Office of India. The following are some important features of this savings account for girl child:

- The girl child should be under the age of ten.

- The account can be opened by the girl child's guardian or either of her parents.
- The minimum annual investment is Rs 250, and the maximum investment is Rs 1.5 lakhs.
- The account matures when the girl child reaches the age of 21 or when she marries after reaching the age of 18.
- On maturity, the girl child can withdraw the total sum.
- Once the girl child reaches the age of 18, she can make partial withdrawals to fund her marriage or her education.

BalikaSamridhiYojana

The BalikaSamriddhiYojana assists low income families and their daughters with financial needs. The scheme serves to improve a girl's social status and increase female enrolment in school. Some important things to note about this government plan for girl child are:

- The scheme is only available to newborns.
- At the time of her birth, Rs.500 is paid in her name.
- The girl child further receives an annual scholarship in the range of Rs. 300 to Rs. 1000 till the completion of her 10th standard.
- The maximum enrollment age is 10.
- Only two daughters from a family are eligible to apply for this program.
- The depositor must come from a family that is 'Below the Poverty Line.'

CBSE Udaan Scheme

The CBSE Udaan scheme for girls is managed and administered along with the Ministry of Human Resource Development of the Government of India. This programme works towards encouraging more girls to enroll in the best engineering colleges throughout the country. Girls in their CBSE higher secondary grades who are enrolled under this scheme can avail free course materials and online resources. Further, the scheme offers peer learning opportunities and mentorship programmes to deserving female students. In order to qualify for this scheme, the annual household income must be less than Rs. 6 lakhs and the girls must be enrolled in the subjects Physics, Chemistry, and Mathematics.

1. National Scheme of Incentives to Girls for Secondary Education

The Department of School Education and Literacy, Human Resource Development Ministry, Government of India, manages this pan-India scheme. The scheme's purpose is to promote continued enrollment in a girl child's secondary education. It is primarily intended for girls belonging to families of lower socioeconomic backgrounds.

As part of this scheme, Rs. 3000 is offered as fixed deposit in the name of the daughter. Like any other FD, this amount shall earn interest at govt. specified rates.

The entire accumulated sum can be withdrawn once she turns 18 or passes her 10th exam. To be eligible for this scheme, the girl should be enrolled in a govt. sponsored school. Further, she must be aged 16 or less, be unmarried, and must be enrolled in the 9th standard following completion of her 8th standard.

State Government Plans for Girl Child

1. MukhyamantriKanya Suraksha Yojana

Introduced by the State of Bihar, this scheme rewards parents of a newborn girl child with Rs. 2000. The birth certificate of the child is mandatory to avail of the benefits under this scheme. The parents must be permanent residents of Bihar and fall in the below poverty line category. Interested parties can claim the benefit at the Gram Panchayat, the Collector's office, or at the ZillaParishad.

2. Ladli Lakshmi Yojana

This scheme for girl child was initiated by the Madhya Pradesh Government in 2007 with the aim to promote a better life for them. The scheme further strives to improve sex ratio and girl child education in the state. The scheme deposits Rs. 6000 for 5 years in the name of the girl child, totaling an amount of Rs. 30,000. Additional deposits shall be made in the following order:

- Rs. 2000 for admission of the girl into 6th standard
- Rs. 4000 for admission of the girl into 9th standard
- Rs. 6000 for admission of the girl into 11th standard
- Rs. 6000 for admission of the girl into 12th standard
- The final sum of Rs. 1 lakh is offered to the child once she reaches the age of 21 years

3. Delhi Ladli Scheme

The objective of the scheme is to empower girl children both socially and economically in the National Capital Territory of Delhi. The following financial benefits are applicable under this scheme:

- Rs. 11000 if child delivery occurs in a medical institution
- Rs. 10000 if child delivery occurs in a home setting
- Rs. 5000 for admission of the girl into 1st standard
- Rs. 5000 for admission of the girl into 6th standard
- Rs. 5000 for admission of the girl into 9th standard
- Rs. 5000 for admission of the girl into 10th standard
- Rs. 5000 for admission of the girl into 12th standard

The annual income of the girl child's family must be equal to or less than Rs. 1 Lakh.

4. Mukhyamantri Rajshri Yojana

In Rajasthan, the Mukhyamantri Rajshri Yojana was introduced. It provides financial assistance to parents of female children from the time they are born until they complete their schooling. Further, when a girl child is born, the mother gets paid Rs.2,500. A cheque for another Rs 2,500 is issued after the child has completed one year of immunizations. Other financial assistance to the girl child include:

- Rs.4,000 when she enrolls in any public school in grade 1.
- Rs.5,000 when a child enters Grade 6.
- Rs. 11,000 when the girl enters Grade 11.

Note that only permanent residents of Rajasthan are eligible to avail of the benefits of this government plan for girl child.

5. MaziKanyaBhagyashree Scheme

The scheme was introduced by the Maharashtra government to improve the lives of girls belonging to low-income families and marginalised groups. The mother of a girl child receives Rs. 5000 per year for five years from the time she is born. After that, the family is offered Rs. 2500 in financial assistance each year till she enters her 5th grade in school. From then on till grade 12, the child receives Rs. 3000 every year. The girl child further receives Rs. 1 lakh per year for educational expenses until she reaches the age of 18.

6. Tamil Nadu Chief Minister's Girl Child Protection Scheme

The initiative aims to prevent gender inequality through direct government spending in a Fixed Deposit in the name of a girl child. The government shall deposit a sum of Rs. 50,000 if it's a single child, or Rs. 25,000 each for two daughters. The FD is made with the Tamil Nadu Power Finance and Infrastructure Development Corporation Limited.

7. Nanda Devi KanyaYojana

This programme is exclusive to Uttarakhand. Under the scheme, a newborn girl is offered Rs. 1,500 as fixed deposit. Once she completes her senior secondary education and is of 18 years of age, she receives the deposit amount along with the accrued interest. All permanent residents of Uttarakhand who fall in the category of below poverty line can avail of the perks of this scheme.

Findings

Women play an imperative role in making a nation progressive and guide it towards development. They are essential possessions of a lively humanity required for national improvement, so if we have to see a bright future of women in our country, giving education to them must be a pre-occupation Empowerment means moving from a weak position to execute a power. In an effort to restore equality among the two genders after ages, the Indian government is now making continual

attempts at creating and offering equitable opportunities to both boy and girl child in India.

Conclusion

The education of women is the most powerful tool to change the position of society. Education also brings a reduction in inequalities and functions as a means of improving their status within the family. To encourage the education of women at all levels and for dilution of gender bias in providing knowledge and education, established schools, colleges and universities even exclusively for women in the state. The education develops the idea of participation in government, panchayats, public matters etc for elimination of gender discrimination.

Abstract

Micro, Small, and Medium Enterprises (MSMEs) have been monumental in accelerating the growth of the Indian economy. They not only play a cataclysmal role in generating employment opportunities at relatively low capital costs but also support industrialization and formalization of the economy. They are also instrumental in ensuring financial inclusion by tapering regional imbalances. MSMEs are veritably hailed as the backbone of the Indian economy as they contribute over 30% to the GDP. With almost 50% contribution to exports, they also form an integral part of the supply chain. The government of India plans to increase MSMEs output and export contribution to 50% and 75%, respectively, by 2024, in line with the aim to make India a \$5 trillion economy. In fact, MSME promotion has been prioritized by the government as part of NITI Aayog's Strategy for New India@75, with a special focus on ameliorating credit gaps and emboldening firms to embrace Industry 4.0 practices that enhance productivity. Thus, present paper will highlight the Role of MSMEs in Indian Economy.

Keywords: *Micro, Small and Medium Enterprises, Production, Employment, poverty alleviation and rural development.*

Introduction

MSMEs are the backbone of the Indian economy, contributing approximately 30% of the country's GDP (Gross Domestic Product), 45% of manufacturing output and providing employment to 11 crores of India's population. MSMEs, in layman's terms, refer to the enterprises that are engaged in the development and manufacturing of goods and services. The Micro, Small & Medium Enterprises Development (MSMED) Act, 2006 classifies MSMEs based on investment and turnover limits, which are enlisted below.

- i) **Micro Enterprise:** Investment in plant and machinery (P&M) or equipment does not exceed Rs. 1 crore, and turnover does not exceed Rs. 5 crores.
- ii) **Small Enterprise:** Investment in plant and machinery (P&M) or equipment does not exceed Rs. 10 crores, and turnover does not exceed Rs. 50 crores.
- iii) **Medium Enterprise:** Investment in plant and machinery (P&M) or equipment does not exceed Rs. 50 crores and turnover does not exceed Rs. 250 crores.

Existing MSME Classification			
Criteria : Investment in Plant & Machinery or Equipment			
Classification	Micro	Small	Medium
Mfg. Enterprises	Investment < Rs. 25 lac	Investment < Rs. 5 cr.	Investment < Rs. 10 cr.
Services Enterprise	Investment < Rs. 10 lac	Investment < Rs. 2 cr.	Investment < Rs. 5 cr.

Revised MSME Classification			
Composite Criteria : Investment And Annual Turnover			
Classification	Micro	Small	Medium
Manufacturing & Services	Investment < Rs. 1 cr. and Turnover < Rs.5 cr.	Investment < Rs. 10 cr. and Turnover < Rs.50 cr.	Investment < Rs. 20 cr. and Turnover < Rs.100 cr.

Objectives of the Study

The following are the study's aims:

1. To learn about the importance of micro, small, and medium-sized enterprises (MSME) in spurring economic development in India.
2. To understand the role of MSMEs in the Indian economy and their performance.

Review of Literature

Vasanth, Majumdar and Krishna (2012) in their paper have stated that since several successful models of the sustainable SME are gradually evolving, networks of SMEs would become essential for addressing the systemic problems under lying the industrial ecology, enterprise resilience, and global supply chain sustainability. Nihar Ranjan Jena and Lina R Thatte (2018) analyzed that the difference in performance of the MSME sector in different states existed due to the differences in presence or absence of adequate enabling factors like labour force, economic infrastructure, regulatory national level. Present research is mainly based on the framework, size of GSDP and density of MSME clusters etc. and found that Maharashtra was the leader in terms of performance of the MSME sector which was closely followed by Gujarat, Tamilnadu, Andhra Pradesh, Uttar Pradesh, West Bengal and Kerala.

Methodology

The study has a descriptive nature. Secondary data have been collected in order to prepare this document in a comprehensive manner. The data have been collected from publications in various journals, periodicals, conference papers and websites.

Highlights of new MSMEs

‘Atma Nirbhar Bharat Abhiyan’ or the Self-Reliant India Scheme of 2020 by the Government of India has given a new definition for MSMEs.

Following are a Few Highlighting Features of New MSMEs –

1. A provision of Collateral Free Loans to MSMEs
2. An arrangement of loans to MSMEs worth of Rs. 3 lac crores
3. An offer for MSMEs to get a Moratorium period of 12 months
4. Consideration of Manufacturing and Service MSMEs as the same entities
5. MSM is a granted a repayment Tenure of 48 months
6. MSMEs are assured a 100% Credit Guarantee
7. Reclassification of MSMEs will benefit approximately 45 Lac units.

Following are Some of the Essential Elements of MSMEs –

1. MSMEs work for the welfare of the workers and artisans. They help them by giving employment and by providing loans and other services.
2. MSMEs provide credit limit or funding support to banks.
3. They promote the development of entrepreneurship as well as up-gradation of skills by launching specialized training centers for the same.
4. They support the up-grading of developmental technology, infrastructure development, and the modernization of the sector as a whole
5. MSMEs are known to provide reasonable assistance for improved access to the domestic as well as export markets.
6. They also offer modern testing facilities and quality certification services.
7. Following the recent trends, MSMEs now support product development, design innovation, intervention, and packaging.

Overview of Govt. Initiatives on MSMEs

The Government of India has been proactive to ensure that all the benefit of these MSME schemes reaches to the MSMEs in time. The Union Budget 2023-24 focuses on ease of doing business for MSMEs.

The most important measures include:

- Emergency Credit Line Guarantee Scheme (ECLGS) has delivered additional credit to more than 130 lakh MSMEs. The ECLGS will be extended up to March 2023 expanding the guarantee cover by INR 50,000 Cr to a total cover of INR 5 Lakh Cr.
- INR 2 Lakh Cr additional credit for Micro and Small Enterprises to be facilitated under the Credit Guarantee Trust for Micro and Small Enterprises (CGTMSE).
- Raising and Accelerating MSME performance (RAMP) programme with an outlay of INR 6,000 Cr to be rolled out.
- INR 50,000 Cr equity infusion through MSME Self-Reliant India Fund.

Udyam, e-Shram, National Career Service (NCS) and Aatmanirbhar Skilled Employee Employer Mapping (ASEEM) portals will be interlinked. They will now serve as portals with live, organic databases, delivering G2C, B2C, and B2B services relating to credit facilitation, skilling, and recruitment.

Launch of Udyam Assist Platform (UAP) to bring the Informal Micro Enterprises (IMEs) under the formal ambit for availing the benefit under Priority Sector Lending (PSL).

MSMEs: The Growth Accelerators

MSMEs Trends

Traditionally, MSMEs were restricted to the khadi and coir industry. Since then, they have branched out to various industries. For instance, micro and small businesses mostly deal with food and agriculture, while medium-sized firms belong to the automotive, pharmaceutical, or chemical industries. As per the MSME ministry, India has an estimated 633.88 lakh unincorporated non-agricultural MSMEs, of which 31% are engaged in manufacturing, and 36% are in trading activities. Almost 51.25% of MSMEs are in rural areas, while the remaining 48.75% are situated in urban areas. The micro sector accounts for more than 99% of the total number of MSMEs.

MSMEs act as innovation stimulants, encouraging the diffusion of skills, and inculcation of an entrepreneurial culture. They serve as a source of healthy competition and boost economic dynamism. As catalysts for the socio-economic transformation of the country, MSMEs contribute to the economy in the ways mentioned below.

Sustainable Growth

MSMEs play a considerable role in the GDP growth story on account of their contribution to production and processing. Their growth results in an increase in value addition, final output, and profitability. Furthermore, they complement large industries by acting as ancillary units, thus bringing out integration benefits.

Their contribution is increased manifold when one accounts for the multiplier effect of the economic activity undertaken by their employees and suppliers. The CSO data states MSMEs' contribution to Gross Value Added (GVA) at 30% for FY 2019-20, with the manufacturing share standing at 36.9%. MSMEs are being supported by the government through 'Make in India' with the 'Zero Defect & Zero Effect' initiative to promote sustainability and higher quality standards.

Localized Employment Generation

MSMEs typically implement labor-intensive production processes, thereby generating massive employment opportunities. Their small scale restricts them to a particular area or region, which results in the local population being hired. These productive employment opportunities consequently result in increased generation of income and poverty alleviation.

As per the 73rd Round of NSS Report on Unincorporated Non-Agricultural Enterprises', MSMEs employ 11.10 crore workers. The micro sector accounts for over 97% of the employment share as it recruits almost 10.76 crore persons.

Mushrooming Trade and Export Earnings

MSMEs contributed 45.04% to overall exports during FY22. They are expected to benefit further from the 'China plus one' policy, which is being increasingly employed by MNCs looking to diversify their production. The government is targeting \$1 trillion worth of MSMEs exports by 2027. It has even introduced the 'Capacity Building of First-Time MSME Exporters' (CBFTE) scheme for MSMEs' export growth.

Contribution to Taxes

MSMEs contribute to the government's coffers through direct business taxes levied on their revenues and profits. They also pay indirect taxes, including GST, sales tax, excise duties, and cess. The tax provision requiring MSMEs to mandatorily register on the GST portal has even incentivized the formalization of the MSME sector.

Poverty Alleviation

The MSME sector plays a significant role in alleviating poverty and correcting regional imbalances. They ensure a more equitable distribution of income due to their localized nature of business and stave off any rural-urban migration. They also stimulate entrepreneurship, hence kickstarting investment and innovation cycles.

Financial Inclusion

Out of 11 crores employees in the MSME sector, almost 24% are women. Additionally, the socially backward groups, including SCs, STs, and OBCs, collectively own over 66% of

MSMEs, with OBCs accounting for almost half of the share. Almost 74% and 59% of the MSMEs are owned by the vulnerable sections in rural areas and urban areas, respectively.

Meeting SDG Goals

MSME development can assist in better meeting SDG goals, including SDG 1 (ending poverty), SDG 2 (ensuring zero hunger), SDG 3 (promoting good health), SDG 5 (gender equality), and SDG 8 (inclusive growth and decent work).

Concerns Over Finance

As can be seen from above, a robust MSME sector is acutely required for the Indian economy to grow. But these enterprises continue to suffer from the unavailability of timely capital. This lack of access to capital forces MSMEs to scale down or liquefy their business. As a result, there has been an upsurge in the number of financial institutions, including Protium, that are collaborating with MSMEs to provide prompt financing.

Findings

MSMEs address major challenges of the overall Indian economy also, that are unemployment and poverty. By reducing regional imbalances, giving employment to local people living in rural areas, they have done their part to knock-down disparities. Acting as a motivational factor for the existing MSMEs and as an aspiration factor for the potential MSMEs, increase in the income of people and the trend of promoting the interests of consumers, there will be various opportunities for MSMEs to play with in the domestic as well as export-market.

Conclusion

The role of MSME in economic development, particularly in rural and semi-urban areas cannot be underestimated. Despite the challenges, the resilience and contribution of MSME in Indian economy remain strong. Whether through policy support or Business Loans, facilitating the growth and sustainability of MSMEs is crucial for fostering inclusive and sustainable economic progress.

ENHANCING SAFETY AND SECURITY: UPI TRANSACTIONS FOR COLLEGE GIRLS

Dr.Ahila.D

Assistant Professor, Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi
ahila@ngmc.org

Abstract

In the era of digital transformation, the Unified Payments Interface (UPI) has emerged as a pivotal tool reshaping financial landscapes. This article delves into the role of UPI in enhancing safety and security for college girls' financial transactions. By seamlessly integrating into their lives, UPI offers a secure alternative to traditional cash handling, mitigating vulnerabilities associated with physical currency. The security features of UPI, including PIN-based protection, two-factor authentication, and real-time alerts, contribute to a safer financial environment. Moreover, UPI's impact goes beyond transactions, promoting financial literacy, reducing parental concerns, and empowering college girls to manage their finances confidently. UPI's convenience and security make it a catalyst for the autonomy and financial empowerment of college girls, fostering a secure and responsible financial future.

Keywords: Digital transformation, Unified Payments Interface, security features of UPI

Introduction

In today's rapidly evolving digital landscape, financial transactions have undergone a paradigm shift, transitioning from traditional methods to modern, technology-driven platforms. One such transformative innovation is the Unified Payments Interface (UPI), a system that has revolutionized the way individuals engage in monetary exchanges. Beyond its inherent convenience, UPI has emerged as a potent tool for enhancing safety and security in financial transactions, especially for a significant demographic - college girls. Mabrouk et.al (2023) found that the digital financial inclusion has become more important during the pandemic, as it has allowed women to have greater economic involvement and decision-making power. This article delves into the profound impact of UPI transactions on college girls, shedding light on how this technology has transformed the way they manage their finances, providing not only convenience but also ensuring their safety and security. In a world marked by digitization, UPI transactions have become a pivotal component in empowering college girls to navigate their financial responsibilities with greater confidence, privacy, and autonomy.

Review of Literature

Durairaj and Joseph (2019) reveal that UPI is considered important in the day-to-day life of its users as it saves time in transferring funds between accounts instantly. UPI is a complex and sophisticated payment infrastructure that uses a unique VPA address for transfers, making it secure and reliable. The government supports UPI by providing incentives and reducing taxes for digital payments, which has increased interest in using UPI. The study reveals that more than 80% of respondents found UPI services convenient

to use, and 90% said they would use UPI in the future. Some challenges with using UPI include server-related issues and occasional application failures during transactions. Shenoy and Nataraj (2019) observed that the cashless transactions are increasing due to their convenience, speed, and safety, with digital payments being the easiest method through payment apps, contributing to financial inclusion by reducing transaction costs and providing convenience. Pawar (2021) discusses the pandemic led to a situation where people were unable to use cash for transactions, leading to an increase in the use of online payment methods. However, there were also issues faced by students in making online payments, including lack of knowledge about digital awareness and frauds by people who take advantage of lack of knowledge about KYC procedure and suggests the need for awareness programs, advisories, and digital literacy to address these issues. Zareen and Chaddha (2021) found the mobile money has the potential to improve financial inclusion in India, but its full potential has not been realized yet. A study focused on college students in Delhi found that although they were aware of mobile money services, they were reluctant to use them for daily transactions. The study investigated the user-friendliness of mobile phones for mobile banking and money transfer and the adoption of mobile money services.

Empowering College Girls: UPI as a Catalyst

Education is a crucial pathway to empowerment, and college life is a pivotal phase in a young person's journey towards independence. UPI has seamlessly integrated itself into the lives of college girls, providing them with an effective means to manage their finances. The digitization of financial transactions has empowered college girls to take control of their money matters, thereby fostering a sense of financial independence and responsibility.

The Digital Transformation of Transactions

The traditional methods of handling financial transactions, often involving cash, are associated with several vulnerabilities. College campuses, being bustling and dynamic environments, can sometimes expose young individuals to risks associated with carrying physical currency. UPI transactions mitigate these concerns by offering a digital alternative that eliminates the need for cash handling.

Security Features of UPI

The security features inherent in UPI transactions contribute significantly to the safety and confidence of college girls. Some key security aspects of UPI transactions include:

- **PIN-based Security:** UPI transactions are protected by personal identification numbers (PINs) known only to the account holder. This layer of security ensures that only authorized individuals can initiate transactions.
- **Two-Factor Authentication (2FA):** UPI transactions require two levels of authentication, typically involving a password or PIN and a secondary factor such as a biometric scan or an OTP (One-Time Password). This process enhances transaction security.
- **Device Authorization:** Transactions are linked to the user's device, ensuring that

transactions can only be initiated from authorized devices. This security measure prevents unauthorized access to the account.

- **Real-time Transaction Alerts:** UPI sends real-time alerts to users for every transaction, allowing them to stay informed about their financial activities and detect any unauthorized transactions promptly.

Reducing Vulnerabilities and Enhancing Privacy

The shift from physical cash to digital transactions through UPI significantly reduces vulnerabilities associated with carrying cash. College girls can avoid being targets of theft or harassment that might occur when handling cash, particularly in public spaces. Additionally, UPI transactions offer greater privacy, allowing individuals to conduct financial transactions discreetly and confidentially.

Safe and Secure Campus Life

The influence of UPI on college girls extends beyond basic financial transactions. It affects various aspects of campus life, including:

- **Tuition and Fees:** UPI facilitates safe and secure payments for tuition fees and other college-related expenses. This eliminates the need for students to carry large sums of cash.
- **Accommodation and Daily Expenses:** UPI transactions simplify payments for accommodation, food, and other daily expenses, ensuring that college girls can manage their finances conveniently and securely.
- **Extracurricular Activities:** College life involves participating in various extracurricular activities, events, and workshops. UPI enables secure payments for registration fees, contributing to a smoother and more organized experience.
- **Study Materials and Online Resources:** UPI transactions enable college girls to purchase study materials, books, and online resources without the hassle of physical cash.

Promoting Financial Literacy and Autonomy

The adoption of UPI among college girls goes beyond just transactional convenience. It serves as a powerful tool for promoting financial literacy and autonomy. By actively engaging with digital transactions, college girls develop a deeper understanding of financial management, budgeting, and responsible spending. These skills are invaluable as they transition to adulthood and take on greater financial responsibilities.

Parental Peace of Mind

For parents, UPI transactions provide a sense of security knowing that their daughters are using a safe and secure digital payment method. UPI's transaction tracking and real-time alerts ensure that parents can monitor their daughters' financial activities and quickly address any unusual transactions.

Conclusion

In the evolving landscape of digital payments, UPI stands as a beacon of safety and security, particularly for college girls. By embracing UPI transactions, college girls can navigate their financial responsibilities with greater ease, security, and confidence. UPI's multifaceted benefits extend beyond convenience to encompass safety, privacy, financial literacy, and empowerment. As UPI continues to evolve, it will undoubtedly play a crucial role in enhancing the financial well-being of college girls, shaping their journey towards a more secure and autonomous future.

YOUNG WOMEN IN ENTREPRENEURSHIP: EXPLORING UPI AS A BUSINESS ENABLER AMONG COLLEGE STUDENTS

Dr. D. Ahila

Assistant Professor, Department of Commerce
Nallamuthu Gounder Mahalingam College, Pollachi
ahila@ngmc.org

Abstract

In the evolving landscape of entrepreneurship, college girls are emerging as a formidable force, harnessing their creativity and passion to venture into business ownership. This article delves into the synergy between entrepreneurship and the Unified Payments Interface (UPI), highlighting how UPI serves as a dynamic business tool for college girls. UPI's seamless and secure digital payment system empowers them to navigate the challenges of entrepreneurship with confidence. From secure transactions to efficient financial management, UPI enables college girls to overcome hurdles, expand their customer base, and unlock growth opportunities. Through case studies, this article illustrates how UPI-enabled ventures are reshaping various industries. As college girls redefine entrepreneurship, UPI stands as a catalyst, propelling them towards a future where innovation and economic empowerment converge.

Keywords: Entrepreneurship, College girls, Creativity and Passion, Unified Payments Interface

Introduction

In recent years, the world has witnessed a surge in entrepreneurial endeavors driven by innovative ideas and technological advancements. This trend is not limited to a specific age group or gender; rather, it has transcended boundaries, inspiring individuals from diverse backgrounds to venture into the world of business ownership. College girls, in particular, have seized the opportunity to leverage their creativity and skills to embark on entrepreneurial journeys. One of the key enablers of this phenomenon is the Unified Payments Interface (UPI), a revolutionary digital payment system that has not only transformed the financial landscape but has also emerged as a powerful tool for fostering entrepreneurship among college girls. This article explores the symbiotic relationship between UPI and entrepreneurship for college girls, highlighting how UPI serves as a dynamic business tool that empowers them to navigate the challenges of entrepreneurship with confidence, efficiency, and security. Karyotaki et.al (2022) delves into the close connection between gender equality and digital progress. As the demand for digital skills rises due to an expanding skill gap, this research seeks to understand the connection between digital technology and women's roles in business and society. It aims to uncover the factors contributing to women's underrepresentation in the growing digital sector, despite its significance. Reports often reveal a gender disparity, with men outnumbering women by a ratio of 3 to 1 in tech-related fields.

Review of Literature

Johansen et.al (2013) examines the impact of a European entrepreneurship program called the company programme (CP) in Norwegian upper secondary schools. The program aims to foster positive attitudes towards entrepreneurs among students. The research finds that both male and female CP participants are more likely to associate entrepreneurs with creativity and less likely to see them as jobless individuals, compared to non-participants. However, gender differences emerge in attitudes: female participants are less inclined to view entrepreneurs as those wanting to be their own bosses, while male participants are more likely to see entrepreneurs as seeking societal recognition and less likely to perceive them as poorly educated. The study emphasizes the need for tailored approaches to entrepreneurship education, especially considering gender-specific perspectives.

Do Paço et.al (2015) revealed Entrepreneurship education is vital for fostering entrepreneurial intentions and cultivating traits linked with entrepreneurship. This study aimed to compare these traits, behaviors, and intentions between girls from a business school and boys from a sports school. It was hypothesized that the girls' business school, with integrated entrepreneurship education, would show higher entrepreneurial behavior and intentions. Surprisingly, results demonstrated that boys from the sports school, without entrepreneurship education, had stronger intentions to start businesses. This suggests additional factors influencing entrepreneurial intentions beyond formal education.

Umaand Jayakodi (2018) delved into the factors affecting Women Entrepreneurship among college girls in Pudhukottai District. Notably, factors like Freedom of Expression, Freedom of Choice, Exposure to Entrepreneurship Development Programs, and the Political Environment had a substantial impact, shaping the way these students viewed and pursued the path of becoming successful women entrepreneurs. These factors hold significant importance in fostering Women Entrepreneurship among college girls in the district.

McAdam et. al (2020) explored the impact of digital entrepreneurship on women in societies with restricted social and cultural norms. It focuses on women's involvement in digital entrepreneurship in emerging economies, particularly in the context of practices like male guardianship and gender segregation. The study employs the lenses of entrepreneurship as emancipation and cyberfeminism. Using data from an investigation in Saudi Arabia, the research reveals that women in this environment leverage digital entrepreneurship not to evade gender constraints but to reshape their own identities and real-world experiences.

Feng, and Sumettikoon, (2022) examined that the digital technology has revolutionized every aspect of life, including female entrepreneurship education, which is crucial for achieving sustainable development goals; this report emphasizes the need for worldwide female entrepreneurship education and introduces an ecosystem model specifically designed for women and girls to overcome current hurdles and shape their future.

The Rise of College Girl Entrepreneurs

The rise of college girl entrepreneurs is a testament to the changing dynamics of society, education, and the economy. With access to knowledge, technology, and a supportive ecosystem, college girls are increasingly embracing entrepreneurship as a means to realize their dreams and aspirations. Entrepreneurship offers a platform for them to transform their innovative ideas into viable business ventures, thereby contributing to economic growth and societal progress.

UPI: Redefining Financial Transactions

The advent of UPI has revolutionized the way financial transactions are conducted. With its seamless and user-friendly interface, UPI has democratized digital payments, making them accessible to even those with limited technological proficiency. The security features of UPI, such as multi-factor authentication and real-time transaction alerts, have instilled trust and confidence among users. This newfound ease and security have had a transformative effect on various aspects of business, particularly for college girl entrepreneurs.

Empowering Entrepreneurial Ventures

UPI's impact on college girl entrepreneurs can be viewed through multiple lenses, each highlighting its transformative role:

- **Secure Transactions:** UPI's robust security features offer a safe and secure platform for financial transactions, alleviating concerns related to fraudulent activities and ensuring that their hard-earned money remains protected.
- **Digital Payment Acceptance:** College girl entrepreneurs can now accept digital payments seamlessly, whether they operate an online store, offer services, or participate in events. This eliminates the need for cash handling and broadens their customer base.
- **Financial Management:** UPI simplifies financial management for entrepreneurs by providing a real-time view of transactions, enabling them to monitor cash flow, track expenses, and make informed decisions.
- **Customer Convenience:** With UPI, entrepreneurs can offer their customers a convenient and efficient payment method, contributing to a positive customer experience and repeat business.
- **Digital Records:** UPI transactions generate digital records that aid in maintaining accurate financial records, simplifying tax compliance and business reporting.

Unlocking Entrepreneurial Potential

College girl entrepreneurs often face unique challenges, including balancing academics, managing finances, and building a brand. UPI acts as a catalyst in overcoming these challenges and unlocking their entrepreneurial potential:

- **Flexibility:** UPI's anytime, anywhere accessibility allows entrepreneurs to manage their businesses on their terms, without being bound by geographical limitations.
- **Minimal Infrastructure:** UPI eliminates the need for physical payment infrastructure, enabling entrepreneurs to start and run businesses with minimal overhead costs.
- **Growth Opportunities:** UPI-enabled businesses can seamlessly scale operations, expand customer reach, and explore new markets, thus fostering growth and expansion.
- **Financial Inclusion:** UPI empowers even those with limited access to traditional banking services, enabling them to participate in the formal economy and contribute to economic development.

Case Studies of UPI-Enabled Ventures

Several inspiring stories underscore the transformative impact of UPI on college girl entrepreneurs:

- **Online Boutiques:** College girls are leveraging UPI to set up online boutiques, where they showcase and sell clothing, accessories, and handmade crafts. UPI's secure payment process and digital invoicing enhance customer trust and simplify transactions.
- **Tutoring and Skill Classes:** College girl entrepreneurs are offering online tutoring and skill-based classes, from academic subjects to art, music, and fitness. UPI facilitates easy registration and payment for these services.
- **Food and Catering Services:** UPI has streamlined payment processes for college girls who provide homemade food or catering services. Customers can place orders and make payments seamlessly, enhancing the overall customer experience.
- **Event Management:** College girls organizing events such as workshops, webinars, and cultural activities are using UPI for ticket sales and registration fees, ensuring a hassle-free event management process.

Challenges and the Road Ahead

While UPI has undoubtedly transformed entrepreneurship for college girls, challenges remain. Limited awareness about UPI, digital literacy, and concerns related to online security can hinder its adoption. To address these challenges, educational institutions, government bodies, and financial organizations must collaborate to raise awareness, provide training, and offer support to aspiring college girl entrepreneurs.

Conclusion

In the journey towards gender equality and economic empowerment, UPI has emerged as a key player, offering college girls a platform to realize their

entrepreneurial dreams. As college girl entrepreneurs continue to shape the business landscape with their innovation and determination, UPI stands as a steadfast ally, empowering them to overcome challenges, seize opportunities, and thrive in the competitive world of business ownership. The partnership between UPI and college girl entrepreneurship embodies the spirit of progress, innovation, and empowerment, ultimately contributing to a more inclusive and prosperous society.

Abstract

Empowering of women is the self-supportive mechanism starting from decision making and ending to social well-being. Women empowerment have been successful to establish their status in terms of self-esteem, right to choice, access to opportunities and so on. They may get the opportunity to redefine gender roles, which in turn provide them more freedom to pursue desired goal. In this paper to cover the awareness of capabilities for women empowerment.

Keywords: Women Empowerment, Awareness, Capabilities.

Introduction

Empowerment aims to create an independent staff involved in decision-making. The state in which women have the ability to act freely in society, exercise their rights equally to that of men, and fulfill their potential as equal members of society, such as to determine their life outcomes, assume leadership roles, and influence decision-making in households, communities, and societies. Women's empowerment is an effort to empower themselves by having abilities or skills in accordance with the interests and talents possessed by women

Throughout history women have been subjected to the indignities of a patriarchal system that has pervaded every aspect of their lives. They have struggled to alter their relations with men, improve their social position and increase their individual and collective sense of self-empowerment. Throughout history women have been subjected to the indignities of a patriarchal system that has pervaded every aspect of their lives. They have struggled to alter their relations with men, improve their social position and increase their individual and collective sense of self-empowerment. Throughout history women have been subjected to the indignities of a patriarchal system that has pervaded every aspect of their lives. They have struggled to alter their relations with men, improve their social position and increase their individual and collective sense of self-empowerment.

Women Empowerment

Women's empowerment requires having access to good healthcare, the right to an abortion, and control over one's own body. Women who are empowered are

better able to take adequate care of their health, seek medical attention when necessary, and make decisions that will improve their well-being. Women's empowerment has five components: women's sense of self-worth; their right to have and to determine choices; their right to have access to opportunities and resources; their right to have the power to control their own lives, both within and outside the home; and their ability to influence the direction of social change to create a more just social and economic order, nationally and internationally.

Capabilities of Women Empowerment

Self-Reliance:

Self-reliance is the ability to do things and make decisions by herself, without needing other people to help them. . Self Reliance is an attitude that accepts responsibility for future, success, and achievement. Being self-reliant means that they have the ability to solve problems for herself. When they are self-reliant they think for their selves and make decisions that are best for their situation.

Women's sense of self worth:

Self esteem comes from the inside out. It means that a woman is not dependent upon anyone else to make her feel good about herself, because she already knows she's fine just the way she is. She is confident and aware of her strengths and abilities. She wants to share them with others.. A genuinely empowered woman knows her worth is beyond the measures.

Education:

Higher female literacy rates reduce child mortality. Education lowers crime rates. Girls' education reduces inequality in society. Education empowers marginalised women and helps them build better futures for themselves and their families. Gender-equitable education systems can contribute to reductions in school-related gender-based violence and harmful practices, including child marriage and female genital mutilation. Gender-equitable education systems help keep both girls and boys in school, building prosperity for entire countries. The importance of girl education in India lies in its ability to address several social issues such as poverty, gender inequality, child marriage, and population growth. Education can help girls develop critical thinking skills, improve their economic prospects, and empower them to make informed life decisions.

Individuality:

Individuality refers to all the characteristics that make a person unique—and refers to only one person. In an individualistic culture, people are considered "good" if they are strong, self-reliant, assertive, and independent. This contrasts with collectivist cultures where characteristics like being self-sacrificing, dependable, generous, and helpful to others are of greater importance. Embracing their individuality are essential for personal happiness. Trying to hide or change who we

are to fit someone else's ideals lessens our sense of self-worth, causing self-esteem to plummet and insecurities to soar.

Good Decision Maker:

A good decision-maker is someone who can analyze the available options, identify potential consequences, and make a choice that aligns with their goals and values. They are also able to take responsibility for their decisions and learn from their mistakes. Sometimes women can make better decisions than men because of the difference between making or taking the decisions. As women take decisions, they adopt the decision-making approach, get assured of the decision validity, and analyze the pros and cons before taking any.

Economic Security:

Women's economic empowerment includes women's ability to participate equally in existing markets; their access to and control over productive resources, access to decent work, control over their own time, lives and bodies; and increase voice, agency and meaningful participation in economic decision-making at all levels from the household to international institutions.

Ability to Face the Social Climate:

Major life transitions such as pregnancy, motherhood and menopause can create physical and emotional stresses for women. Negative life experiences – infertility and perinatal loss, poverty, discrimination, violence, unemployment and isolation – also impact on women's mental health and wellbeing. Even though the women's movement continues to face numerous hurdles and challenges, it has not deterred women's confidence and enthusiasm in bringing about a powerful social change. They are forging a new path toward equality and achieving socio-political and economic empowerment.

Conclusion:

The women empowerment also means when the society will also accept women as decision-makers for the economic and financial decisions of the family. We shall encourage women from all the sections of society to make their own decisions. They need not take permission from men. If women are more educated, they will have greater hygiene and care for children, and they will want their children to go to school. The more educated they are, the more they will be able to participate in everything, economically and socially. Women empowerment helps improving the standard life of women in rural and cities, preventing crimes against women, reducing domestic violence, bringing lots of social and economic gains, solving societal issues like poverty, unemployment and birth control, achieving comprehensive growth in every sector of society. It can help in nation building process by joining in defense forces, social service, politics, education and corporate levels. Women empowerment helps women promoting education which leads to

employ a large number of populations. It is actually a social development as a whole. It provides equity and equality for women in every aspects of life. That leads to a safer and peaceful environment for all worldwide.

THE FOURTH INDUSTRIAL REVOLUTION (I4.0) IN INDIA: CHALLENGES & OPPORTUNITIES

Dr. T.S. Kavitha

Associate Professor in Commerce
Nallamuthu Gounder Mahalingam College
Pollachi, Coimbatore Dist, Tamilnadu

Abstract

The so-called fourth industrial revolution, which is being hailed as the next industrial revolution, is becoming a strong force on a global scale. It is characterized by the rising digitalization and connectivity of its business models, value chains, and products. Data volumes, computing power, the Internet of Things (IoT), business analytics, augmented reality, artificial intelligence, elemental design, simulation, advanced robotics, additive manufacturing, sensor-based technologies, and cyber-physical systems are some of the emerging technologies that are powering Industry 4.0. Industry 4.0 is the next step in fusing traditional and contemporary industrial technology. It would entail the convergence of the real and virtual worlds. As a result, the "Smart Factory" will be created, which is distinguished by adaptability, resource efficiency, ergonomic design, and direct integration with business partners. Due to the fact that modern production is cutting edge and highly skilled. The manufacturing industry is currently structurally changing on a worldwide scale. Despite relying significantly on its service sector for growth, India's manufacturing sector must have a big impact on the country's economy. The strong growth in India now needs to be supported by manufacturing. The 'Make in India' program was started by the Indian government to promote India as a global manufacturing base. After agriculture, the manufacturing sector contributes significantly to employment in India and is particularly important for MSMEs. It is crucial to boost manufacturing's proportion of the country's Gross Domestic Product from 16% to 20% in order to achieve the goals of growth and employment by 2022, to 25%, and to produce 100 million new employments. The foundation for implementing the cutting-edge technology needed for the industrial revolution is digital connectivity. The presence of businesses on the internet has become inescapable due to the growing internet penetration in India and the growth of e-Commerce. The Government of India started the Digital India Program to ensure complete broadband connectivity in industrial clusters with the goal of transforming India into an I4.0-adopted knowledge economy and digitally empowered society.

The Evolution of the Connected Ecosystem

Water and steam power caused the first industrial revolution by enabling the transition from manual to automated manufacturing. Electricity served as the foundation for the second industrial revolution's mass production. After two centuries of continuous advancement driven by mechanization, electrification, and the introduction of the assembly line, the global industrial sector adopted information technology in the 1960s as computers dominated technological advancement and sped up the process of human labor. Manufacturing was

automated during the third industrial revolution using electronics and computer technologies. The fourth is the present trend in manufacturing technology toward automation and data sharing. Since then, both operational technology and information technology have advanced significantly, and I4.0 has opened up a huge array of opportunities on the factory floor.

Mid-1780s: the first industrial revolution
Mechanization: Steam and water-powered mechanization. In 1784, the first mechanized loom was created. (mid-1870s) Second Industrial Revolution
Electrification: Using electrical power, assembly lines facilitated mass production energy. The first conveyor belt was set-up by Cincinnati's laughter house in 1870.

3rd Industrial Revolution (mid 1960s) Automation

Information technology led automation as computers were developed to simplify various tasks. The first program able logic controller was invented in 1969.

4th Industrial Revolution (2011) Cyber Physical Systems

While Industry 3.0 focused on the automation of single machines and processes, Industry 4.0 focuses on the end-to-end digitisation of all physical assets and integration into digital ecosystems with value chain partners. Generating, analysing and communicating data seamlessly underpin the gains promised by Industry 4.0, which networks a wide range of new technologies to create value.

Digitisation and Integration of Vertical and Horizontal Value Chains

Industry 4.0 digitizes and integrates processes vertically across the entire organisation, from product development and purchasing, through manufacturing, logistics and service. All data about operations processes, process efficiency and quality management, as well as operations planning are available real-time, supported by augmented reality and optimised in an integrated network. Horizontal integration stretches beyond the internal operations from suppliers to customers and all key value chain partners. It includes technologies from track and trace devices to real-time integrated planning with execution.

Digitisation of Product and Service Offerings

Digitisation of products includes the expansion of existing products e.g. by adding smart sensors or communication devices that can be used with data analytics tools, as well as the creation of new digitized products which focus on completely integrated solutions. By integrating new methods of data collection and

analysis, companies are able to generate data on product use and refine products to meet the increasing needs of end-customers.

Digital Business Models and Customer Access:

Leading industrial companies also expand their offering by providing disruptive digital solutions such as complete, data-driven services and integrated platform solutions. Disruptive digital business models are often focused on generating additional digital revenues and optimizing customer interaction and access. Digital products and services frequently look to serve customers with complete solutions in a distinct digital ecosystem.

Industry 4.0 Key Technologies

I4.0 brings together technology forces such as Internet of Things (IoT), cloud computing, big data analytics, additive manufacturing, Augmented Reality (AR), robotics, cyber security and Machine-to-Machine (M2M) communication. While some of these digital technologies are already in use in industrial applications, some others are still not ready for application at scale. Manufacturers need to carefully pick the right mix of technologies that would maximize returns on investment.

Internet of Things (IoT)

IoT enables real-time machine-machine interaction by connecting them chain Big Data Analytics: The use of data analytics to support quick and wise decision-making Augmented reality: By utilizing mathematical modeling, AI, and virtual reality, AR could improve company processes.

Cyber security

To protect data security, cyber security aids in the establishment of secure communication protocols. Cloud computing: Cloud computing provides a platform with enormous processing, storage, and networking capabilities, allowing for easier interaction across diverse technologies. Manufacturing Additive: By shortening the lead time from product design to product delivery and enhancing customization, additive manufacturing facilitates production in small batches in a time- and cost-efficient manner. Robotics: Connected robots that make it possible to automate production processes and increase productivity using industrial equipment and sensors to capture and transmit data directly to software is known as machine-to-machine (M2M) technology.

Industry 4.0's current state in India

By 2023, the I4.0 market is projected to grow to a global value of INR 13,90,647 crore.¹ I4.0 has begun to be adopted by nations such as the United States, China, Japan, and European countries like the United Kingdom, Ireland, Sweden, and Austria. The manufacturing industry is an essential component of India's long-term goal, the sixth-largest manufacturing nation, as seen by the government's intense emphasis on the "Make in India" program. By 2022, the government wants to increase manufacturing's current 17% contribution to GDP to 25%. The government has implemented a variety of initiatives and policy reforms, including the implementation of the GST (Goods and Services Tax) and relaxing the FDI policy.

Currently, India In terms of I4.0 adoption, it trails behind its international competitors. In India, a sizable chunk of the manufacturing industry is still in the post-electrification stage, with technology usage restricted to stand-alone equipment. I4.0's fundamental tenet, the integration of physical systems on digital platforms, is still in its infancy. Additionally, due to the significant cost barrier, the Micro, Small & Medium Enterprises (MSME) group has very limited access to automation technology.

The following can be used to describe the I4.0 implications' current situation in India:

1. Lack of knowledge of the technology
2. A methodical approach to upgrading.
3. A reluctance to use new technologies
4. Access to cheap labor causes hesitation to deploy automation
5. Product volume is not too great in order to adopting automation improves investment return on investment.
6. There are not enough skill sets available to utilize automation.
7. Government's Role: The Indian government is a crucial participant in the Industry 4.0 transformation. The fourth industrial revolution in India will require a considerable push in terms of resources, infrastructure, technological know-how, and exposure-areas.

To facilitate the smooth implementation of the Internet of Things, telecommunications infrastructure must be improved. Adequate cyber security rules must be developed. The convenience of doing business must also be improved. And both institutions and socio-political platforms must assume this obligation.

Governmental Initiatives

In order to capture a sizeable portion of the global IoT market¹⁵, the Indian government introduced an IoT Policy in 2015 with the goals of skill development,

technological advancements, and the creation of IoT goods tailored to Indian needs. A National Policy for Advanced Manufacturing is also being developed by the government to increase India's competitiveness in the global manufacturing market. Recently, the government declared the beginning of a mission on Cyber-Physical Systems (CPS) and allocated a starting corpus of INR 100 crore. These plans would be essential tools to increase the contribution of manufacturing output once completely implemented.

The 2017 National Manufacturing Policy By consolidating the Make in India initiative and putting a focus on the adoption of digital platforms for Industry 4.0, the government unveiled a new policy in July 2017 to increase the manufacturing sector's share of the GDP to 25%. The Centre of Excellence (CoE) on IT for Industry 4.0 would serve as a knowledge hub for entrepreneurs and startups, spreading the idea of IT and its use in I4.0.

National Artificial Intelligence Program The government stated that NITI Aayog will establish a road plan for a national AI program that will concentrate on creating new AI applications in the Union Budget 2018–19.

Cyber-physical systems mission

As per The Department of Science and Technology will start the CPS mission to support the establishment of CoE for training in robotics, AI, digital manufacturing, etc. as part of the Union Budget 2018–19.

Organizations' Functions

- If manufacturers see a return on their investments, especially major, international manufacturing corporations, they will adopt Industry 4.0. and gain from Industry. 4.0 improvements:
- Have a long-term strategic vision to guide the change of your organization.
- As Adopter (Sector of Manufacturing):
- Make MSMEs a part of their supplier chain
- embrace business model disruption
- Invest in Leadership 4.0 as a Supplier (Technology Sector): To raise the caliber of output, spend money on I4.0 research and innovation.
- Continue to create industry-specific vertically integrated technological solutions. 4.0

It is crucial to create a roadmap for technology adoption at all levels that is appropriate for varied operational scales, especially for MSMEs. The institute/organization is advised to implement the following guidelines. Talent Pool: Put an emphasis on retaining talent and retraining it; enable timely upskilling of the

workforce in line with I4.0 trends. To encourage creativity and trust within the business, create a working environment where people and robots can coexist. To reinforce corporate data privacy and cyber security policies in light of potential dangers posed by a linked ecosystem.

Role of Academia

Promote a culture of research in emerging fields like I4.0 and serve as the test beds for innovation and new learning. Improve the caliber of teachers and modernize the learning infrastructure. Align course curricula with I4.0 requirements, with well-regulated and industry-relevant updated content. Focus more on practical, result-oriented knowledge than theoretical content.

Obstacles to I4.0 Implementation

A number of obstacles must be removed in order to successfully embrace cutting-edge technologies and realize Industry 4.0's potential. Below are a few significant difficulties:

- Absence of a distinct digital vision
- A lack of data analysis skills
- Promoting a robust digital culture
- Data Security Digitization Level Large volumes of client data that are recorded, stored, and analysed carry a significant danger of being misused.
- A lack of uniformity Price and technical problems
- Inadequate Physical and Digital Infrastructure India continues to lack basic infrastructure, like roads and electricity, despite government efforts. Moreover, India's telecommunications network continues to experience slow data speeds and Unstable connection. 79 percent of Indian firms have identified cyber security as one of the top five business concerns, according to KPMG's 2017 India Cybercrime Survey Report. In addition to cyber security, the legal framework governing data privacy would need to be tightened.
- The high cost of digital technologies may make it difficult to build the factory of the future, which will have a fully interconnected system. Due to the high cost of these technologies, it is still difficult for MSMEs, who serve as the foundation of India's manufacturing industry, to access digital technology.
- Lack of Industry 4.0-ready corporate executives in India poses a skill and talent issue that may thwart efforts to make the technology widely available in the nation. Although, India Inc. has excellent traditional leadership, but it lacks digital CXOs with a clear strategy for embracing Industry 4.0. The time is now for agility. India should put leadership and overcoming this challenge first.

Although the majority of CXOs recognize the need for Industry 4.0, their ability to execute is largely unproven.

- **Skills Gap in the Workforce:** India's existing workforce is underqualified and unexperienced in cutting-edge technologies like data analytics, additive manufacturing, and IoT. To enable an industry 4.0-ready workforce, the government, business, and academics must work together.

Opportunities Should Be Seized

India's INR10,85,224 crore IT services sector is one of the main advantages of the country's entry into the I4.0 era.¹⁸ India is one of the most sought-after locations for IT outsourcing in the world and is home to some of the biggest IT firms. India's infrastructure and IT know-how can now be used locally to spur I4.0 India adoption is. In the I4.0 age, the IT industry is anticipated to have a significant impact. In order to take advantage of the untapped opportunity, Indian IT companies are already looking for ways to strengthen their I4.0 skills through R&D. For instance, a prominent IT company recently said that a "Factory of the Future" lab would be established in Bengaluru. According to reports, the lab is working on cutting-edge technological solutions to deeply integrate cyber and physical systems. In addition, Indian IT companies have been looking towards organizational alliances and partnerships to expand their I4.0 skills and offers. Companies have begun putting more emphasis on collaborating with businesses from different industries and nations to develop new IoT and M2M solutions that are pertinent to I4.0. For instance, an I4.0 cloud platform has been announced in conjunction with a global leader in automation with headquarters in Germany by a Bengaluru-based IT company. Another scenario is a major Indian IT company looking to collaborate with a significant Japanese IT firm in the field of smart factories. According to analysts, the fourth industrial revolution will modernize the production base through 4.0 solutions, enabling capital to be employed more profitably. Industry will need less capital since it will be able to better utilize its foundation. Earnings and Return on Investment The number of employed will increase and lead to new investment opportunities, which is essential for funding new projects and generating employment. Industry 4.0 technology adoption will lead to an improvement in both the quality of the manufactured goods and labor productivity. Due to the rise in demand for well-made goods, businesses will be forced to expand their capacity in order to keep up with the demand. There is no denying that some low-skilled positions will go. However, it is anticipated that increased capacity will positively impact job growth.

Conclusion

Industry associations might lead the way in India's adoption of I4.0. Overall, industry associations would need to work together to promote I4.0 adoption. These organizations can take action to spot technology advancements, locate infrastructure and political needs, evaluate the impact on various industries, and draw out a road map for worker upskilling. Additionally, the associations may closely cooperate with the The government would promote I4.0 adoption more quickly in India. Adoption of Industry 4.0 might propel India to the top of the manufacturing food chain. Jobs would be created as a result of the consumerist tendency in India's demand and volume growth, which is anticipated to somewhat offset job losses brought on by I4.0. Government can focus on improving the ease of doing business and attracting FDI investments in the space through policy reforms. Collaboration between countries, corporations as well as academia would catalyse I4.0 adoption.

Abstract

The role of women is most intimately related to the goal of comprehensive socio-economic development. Investing in women capabilities and empowering them in all respects is the surest way of contributing to sustainable economic growth. The development of entrepreneurship among women has become an important aspect of the overall economic development. The MSME development programmes can contribute much to the development of women folk of an economy because micro and small enterprises are easily accessible to women as they are less capital intensive. But there are many factors which prevent them from utilizing the benefits of the entrepreneurial development initiatives. The study focused on the role of entrepreneurial development programmes under the MSME sector. The extent of success attained on the entrepreneurial training programmes and the satisfaction level of women entrepreneurs were covered. This paper mainly assessed the economic empowerment of women entrepreneurs who were supported under the programmes. The problems faced by the women entrepreneurs while utilizing the specific schemes for the development were covered.

Keywords: Business Innovation, Socio-Economic development, Women Entrepreneurship, Entrepreneurial Development Programmes, MSME (Micro, Small and Medium Enterprises).

Introduction

An economy's development cannot be gauged solely by looking at its material resources, economic development, and wealth generation. The genuine indication of a society's growth can be found in its people's opportunities and capacities to discover economic resources and enable their best exploitation. Although contributing more than their good portion to society, both at home and outside of the house, and making up half of the adult population, women are usually left out of leadership roles. Hence, women are the most marginalized group in the world and the first victimized group in human history. The most pervasive type of oppression in the world is directed at women, who also have less rights than men. Even though women's economic participation has been rising, there are still significant disparities between men and women in terms of work prospects, rights, pay, and acknowledgement of their economic participation. What men and women do in any community varies greatly over time. Typically, women's work is not as valuable as men's job. If women are traders, trading is sometimes seen as basic and trivial work. Men being traders will be seen as challenging and significant. Due to the perception that males place a lower value on perceived female traits and activities, women are seen as inferior to them. Conceptual back-ground of Women Empowerment and Women Entrepreneurs

Need for Economic Empowerment of Women

For Overall Development of the Economy For the purpose of poverty alleviation, food security, equal access to institutional credit etc economic empowerment is necessary. Economic development of a country can't be fully achieved as long as its women are confined to subordinate positions and their talents remain unexplored or and no country can progress without the empowerment of its womenfolk. It is also true that poverty in both developed and developing countries has a predominantly female face. Hence economic empowerment of women plays a vital role in the progress of their family, community, nation and the world as a whole. Empowerment of women makes development inclusive, sustainable and accessible. Empowerment is a multi-dimensional process that enables individual or a group of individuals to realize their identity and powers in all spheres of life. It creates the ability of greater access to knowledge and resources, greater autonomy in decision making that enable them to have greater ability to enrich their lives, or have greater control over the circumstances that influence their lives and free them from restraints imposed on them by custom, belief and practice.

Women Empowerment

The process through which powerless people become aware of their capacity and make use of that capacity to profit from economic growth is referred to as empowerment. It is "a process of developing capacities and confidence for making decisions about one's own life at both an individual and community level and acquiring control over productive resources." The process of empowerment is made easier by raising one's awareness of their rights and obligations as well as their socioeconomic, educational, and political potential, by learning how to use their resources productively, and by participating in group activities and social life. Enhancing the capacity to build the necessary level of awareness, power resources, autonomy, and participation for starting and continuing the development is included in empowerment. Under India's National Policy of Education from 1986, it is stated that "women gain influence through group discussion and decision-making. Its goals include fostering critical thinking, fostering group cohesion, fostering decision-making and action, ensuring equal participation in the process of bringing about social change, encouraging group action to bring about change in society, and supplying the resources necessary for economic independence". (Venkataravi, Reddy & Venkataramana, 2004)

Women Empowerment through Women Entrepreneurship

In order to address the most pressing issue, unemployment, developing nations like India have given greater importance to the development of entrepreneurship and encouraged the establishment of small scale industries. Entrepreneurship has also been seen as the answer to several socioeconomic issues that the nation is currently facing. Many enterprising, independent people would not reach their full potential in large organisations, but small businesses give their abilities and energies constructive outlets. They act as a breeding ground for creative entrepreneurs and a proving ground for

emerging enterprises. They improve social cohesion, encourage savings among individuals, foster industrial ties, boost rural welfare, and overall increase the amount of public participation in the economy. (Lavanya, 2010) A women-owned business is one that is “managed by one or more women entrepreneurs in proprietary concerns, or in which she/they individually or jointly have a share capital of not less than 51% as partners/shareholders/ Directors of Private Limited Company/Members of Co-operative Society,” according to the Government of India (msme.gov.in).

Women Entrepreneurship Development in India

The National Institute of Small Industry Extension Training programme (NISIET), run in Hyderabad in 1964–1965 under McClelland’s direction, was a trailblazing step in the development of women’s entrepreneurship initiatives. This was followed in 1969–1970 by a scheme for technicians to train technically qualified individuals. a fresh business plan launched by Gujarat Industrial Investment Corporation in 1971. A number of initiatives were launched as part of the declaration of the Decade for Women (1975–1985) to better the status and circumstances of women in the nation, including training programmes under the Small Industries Development Organizations (SIDCO) and the first ever international conference of women entrepreneurs, which was held in 1975 and was organised by the National Alliance of Young Entrepreneurs (NAYE). The National Alliance of Young Entrepreneurs (NAYE) staged the second international conference of women entrepreneurs in 1981, the Bank of India ran entrepreneurship development programmes (EDPs) in 1978, SIDO performed a series of training programmes in women’s entrepreneurship through its Small Industries Service Institutes over a 19-year period for the women who benefited from the government’s TRYSEM programme, and others. The State Government simultaneously set up unique programmes to encourage women’s entrepreneurship skills across the states. Employers Federation of India (EFI), Standing Conference of Public Enterprises (SCOPE), and the All India Organisation of Employers (AIOE) have been taking effective steps to promote women’s entrepreneurial skills. The nationalised banks and other financial institutions offered special consulting services for aspiring women entrepreneurs. The National Institute for Entrepreneurship and Small Business Development (NIESBUD), which was founded in New Delhi, and the Entrepreneurship Development Institute of India (EDII), which was founded in Ahmedabad in 1983, organised a variety of entrepreneurship programmes, including women’s entrepreneurship. In the 1980s, the Industrial Development Bank of India (IDBI) developed and implemented a number of programmes, including Science and Technology Entrepreneurial Parks (STEPS), training and extension services, and refinancing options for organisations providing financial support to women entrepreneurs. In order to provide guidance on the development of women’s entrepreneurship, the government established the National Standing Committee on Women Entrepreneurs in 1986. Other significant efforts of the IDBI launched in 1989–1990 included MahilaUdhyam Nidhi (MUN), which provided seed capital assistance for women entrepreneurs, and Mahila Vikas Nidhi (MVN), which provided aid to NGOs working with women entrepreneurs. In 1990,

government-sponsored and non-governmental organisations (NGOs) rural poor women's entrepreneurship programmes received support from the Norwegian Agency for International Development (NORAD). The New Economic Policy (NEP), a crucial turning point in Indian history, had an impact on women's entrepreneurship as well. The concept of women-owned businesses was altered by the New Economic Policy. Women-owned businesses were previously classified as those in which women made up more than half of both the ownership and control and the workforce. But, according to the NEP, women-owned businesses are those where women hold more than 50% of the ownership and management positions. The employment requirement is no longer in effect.

Institutional set up and Agencies for the Development of Women Entrepreneurship

A large number of institutions were created to promote entrepreneurship in general. Yet, they have placed a greater focus on the creation of programmes to support female entrepreneurs.

- Women Development Corporation
- State Industrial and Development Bank of India (SIDBI)
- Consortium of Women entrepreneurs of India Particularly Indian Institute of Entrepreneurship (IIE)
- The National Institute for Entrepreneurship and Small Business Development (NIESBUD), Noida. The women entrepreneurs are supported by a variety of organisations, including NGOs, self-help groups, institutions, and small businesses from both urban and rural areas.

Programmes/ Schemes Offered by the Government

For the Development of Women Entrepreneurs The Indian government has developed a number of training and development initiatives aimed at creating new jobs, and the bulk of these programmes give women additional support or more flexibility in terms of the rules they must follow when starting their own businesses. The following are a few of the most important initiatives or programmes for the advancement of women business owners:

- Prime Minister Rojgar Yojana and EDPs to develop entrepreneurial qualities among rural women.
- Integrated Rural Development Programs (IRDP)
- Training of Rural youth for Self-employment (TRYSEM)
- Trade Related Entrepreneurship Assistance and Development (TREAD) scheme was launched by Ministry of Small Industries to develop women entrepreneurs in rural, semi-urban and urban areas.
- Swarna Jayanti Gram Swa-Rozgar Yojana and Swarna Jayanti Sakshari Rozgar Yojana
- State Industrial and Development Bank of India (SIDBI)
- Mahila Udyam Nidhi
- Micro Credit Scheme for Women

- Mahila Vikas Nidhi. The following training schemes especially for the self-employment of women are introduced by government:
- Support for Training and Employment Programme of Women (STEP).
- Development of Women and Children in Rural Areas (DWCRA).
- RashtriyaMahilaKosh
- RashtriyaMahilaKosh was set up to grant micro credit to poor women at reasonable rates of interest with very low transaction costs and simple procedures.
- Role of MSME Sector in Women Entrepreneurship and Economic Empowerment of Women

MSME Sector

Micro, small, and medium-sized businesses (MSMEs) are recognised on a global scale as the driving force behind economic expansion and social justice. The sector's employment potential at minimal capital cost is by far its greatest benefit. Compared to large businesses, the MSME sector has a substantially higher labour intensity. In most economies, MSMEs make up over 90% of all businesses, are recognised with creating the fastest rates of employment development, and contribute significantly to both industrial output and exports. MSMEs are essential to India's broader industrial sector and play a significant part in it. Comparing the MSME sector to the entire industrial sector in recent years, the MSME sector has experienced faster development. With its higher operational dynamism, the sector has displayed commendable inventiveness and agility to survive the recent economic slump and recession. Over the past fifty years, the Micro, Small, and Medium-Sized Businesses (MSME) sector has grown to be a very active and dynamic area of the Indian economy. Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of the Indian economy over the last five decades.

Role of MSME Sector in Women Entrepreneurship

There is lot of scope for women entrepreneurship in MSME sector which plays a vital role in providing employment and income for the poor unemployed and marginalized sector of an economy. The Micro, Small and Medium Enterprises can create more opportunities for women entrepreneurs as they are less capital intensive, less labour intensive and easily manageable by them. MSMEs are complementary to large industries as ancillary units and this sector contributes enormously to the socio-economic development of the country. Women Entrepreneurship plays a prime role in industrial development. India has always been a land of entrepreneurs and also occupied a strategic position in the Indian economy. Today the village and MSME units account for about 45 per cent of the total industrial production, 30 per cent of the country exports and estimated to employ 96 million person in over 26 million units throughout the country.

Status of Women Entrepreneurs

Under MSME Sector Even though the status of women in India changed over years, there are several handicaps for them to enter into the business ownership due to the deeply

embedded traditional mindset and stringent values of the Indian society. According to fourth all India census of MSME, it was found that out of the total 15.64 lakh registered enterprises in the MSME sector, 13.49 lakhs (86.28%) were owned and managed by men and only 13.72 per cent (2.15 Lakh) of the enterprises in the registered MSME sector were women enterprises.

Objectives of the Study

1. To evaluate the women entrepreneurial programme of Ministry of Micro, Small and Medium Enterprises (MSME)
2. To assess the economic empowerment of women entrepreneurs under the support programmes.

Methodology

To get a holistic view of the research problem, the study adopts multiple secondary data sources like books, newspapers, academic journals, and websites. Since this type of study focuses more on concepts and application, relevant quantitative and qualitative data have been included. A systematic review of existing literature has been conducted to identify variables which could help women entrepreneurs who are contributing tremendously to small enterprises.

Literature Review

The Indian economy is at a crucial juncture, on the one hand, the optimists are talking of India being among the top five economies of the world by 2050 and on the other is the presence of 260 million poor forming 26 per cent of the total population. The enormity of the task can be gauged from the above numbers and if India is to stand among the comity of developed nations, there is no denying the fact that poverty alleviation and reduction of income inequalities have to be the top most priority. (Shukla & Jain, 2014) The programmes which are focusing on the development of women can only give better results in inclusive development from the bottom of the economy. Welfare of the world is not possible unless the condition of women is improved. It is not possible for a bird to fly on only one wing," said swami Vivekananda. (Bairagi, 2014) When women have economic power- defined as control of income and capital (land, livestock etc.) they gain more equality and control over their own lives, while contributing directly to their children's development (nutrition health and education) and thereby indirectly to their nation's income growth. (Gaur, 2014) When women are empowered, a society with stability is assured. Gone are the days when women were considered subservient or secondary, in almost all walks of life compared to men. It has now amply been proved that women are capable of executing any job as efficiently as men, if not more so. (Abdulkalam, 2006. p.152). Concentration of economic power, regional imbalances, exploitation by monopolists, and many other giant problems find their solutions in the development of small scale industry which is another name of entrepreneurship in the developing countries. (Arora & Sood, 2009, p.5) Micro, Small and Medium Enterprises (MSME) sector has emerged as a highly vibrant and dynamic sector of

the Indian economy. MSMEs, not only play crucial role in providing large employment opportunities at comparatively lower capital cost than large industries, but also help in industrialization of rural & backward areas, thereby, reducing regional imbalances, assuring more equitable distribution of national income and wealth. MSMEs are complementary to large industries as ancillary units and this sector contributes enormously to the socio-economic development of the country. (Annual Report, M/o MSME, 2015-16)

Limitations of the Study

- The study is based on the perceptions of the women entrepreneurs. Their attitudes may change with the change of times.
- In any case the study does not claim to be the final word in the study of women entrepreneurship.

Major Schemes Identified for the Study

Entrepreneurship Development Programmes

(EDPs) Youth talent is being encouraged through the continuous organisation of entrepreneurship development programmes that educate young people on the various facets of industrial activity needed to establish MSEs. In order to encourage students towards self-employment, EDPs are typically held in ITIs, Polytechnics, and other technical institutes. The course materials of such Entrepreneurship Development Programmes are designed to provide useful information on product/process design, manufacturing practises involved, testing and quality control, selection and usage of appropriate machinery and equipment, project profile preparation, marketing avenues/techniques, product/service pricing, and export opportunities.

2.2 Entrepreneurship Skill Development Programme (ESDP) The Ministry of MSME is dedicated to preparing young people for the workforce. The National Small Industries Corporation Ltd. (NSIC), National Institute for Micro, Small and Medium Businesses (NI-MSME), and Central Tool Room are the main institutions that provide the training (CTR). The Plan calls for financial support for the establishment of new institutions (EDIs), strengthening the infrastructure of the current EDIs, and promoting entrepreneurship and skill-building initiatives. The scheme's main goals include encouraging self-employment in rural and urban areas, continuing to expand the entrepreneurial base, and developing indigenous entrepreneurship from all walks of life. To accomplish these goals, first generation entrepreneurs are given guidance and assistance with business setup.

2.3 Credit Guarantee Fund Scheme for Micro and Small Enterprises (CGT-MSE) The Credit Guarantee Fund Plan was created with the intention of offering significant guarantees for loan facilities to borrowers in Micro and Small Businesses. To the first generation of entrepreneurs, the availability of bank loans without the hassles of collateral or third-party guarantees would be a vital source of help in realising their dream of founding a Micro and Small Company (MSE). In order to strengthen the credit delivery system and facilitate the flow of credit to the MSE sector, the Ministry of Micro, Small & Medium Businesses (MSME), Government of India, developed

the Credit Guarantee Scheme (CGS) with this goal in mind. The Credit Guarantee Fund Trust for Micro and Small Businesses was established by the Government of India and SIDBI to make the programme operational (CGTMSE). The programme went into effect on August 1st, 2000. Credit Guarantee Fund Scheme for Small Industries (CGFSI) and Credit Guarantee Fund Trust for Small Industries were the original names of the programme and trust, respectively. The Trust and the Program were renamed as the Credit Guarantee Fund Trust for Micro and Small Businesses and the Credit Guarantee Scheme for Micro and Small Enterprises, respectively, after the passage of the MSMED Act-2006. The Key Components of the Scheme. The lender should place a high priority on the viability of the project and base the credit facility exclusively on the principal security of the financed assets. The borrowers can get working capital and term loans from the same business. 2.4 Trade Related Entrepreneurship Assistance and Development Scheme for Women (TREAD) During the 9th plan period, the Indian government introduced a programme called "Trade Related Entrepreneurship Assistance and Development" (TREAD), which has since undergone minor changes and is now in action. The plan calls for the most marginalised and oppressed group in our nation to gain economic control over resources and access. The programme was created to promote the advancement of women through activities such as trade-related training, informational sessions, and counselling sessions. The programme makes financial loans available through NGOs, which also get GoI grants for capacity building. This support is given to women who want to work for themselves in any type of non-farm activity. Principal Goals of the Plan. To provide trade-related education, advice, and counselling, as well as outreach initiatives including trades, goods, and services, etc., for the economic empowerment of women the provision of credit by NGOs. Make the required information about resources for women's business development available. support for emerging markets. 2.5 Micro & Small Enterprises - Cluster Development Programme (MSE-CDP) The cluster development approach has been adopted by the Ministry of Micro, Small and Medium Enterprises (MSME), Government of India (GoI), as a key strategy for boosting the productivity and competitiveness as well as capacity building of Micro and Small Enterprises (MSEs) and their collectives in the country. Furthermore, clustering of units enables service providers, such as banks and credit agencies, to offer their services more affordably, lowering costs and increasing service accessibility for these businesses. Purposes of the plan. by addressing challenges such the advancement of technology, skills, and quality, access to markets, access to funding, etc., to support the sustainability and expansion of MSEs. to improve associations, develop self-help groups, consortia, and other organisations in order to increase MSME's ability for collectively supportive action. to build or improve infrastructure in MSE clusters and new or existing industrial zones.

Conclusion

The study focused on the effectiveness of programmes for entrepreneurship in the MSME sector. Also covered were the degree of success gained in the entrepreneurial training programmes and the level of happiness among women business owners. The

study concentrated on the function of programmes for entrepreneurship in MSME. The Ministry of MSME's programmes for women entrepreneurs were evaluated based on how well the women entrepreneurs operating under the various schemes were able to advance their economic status. The study primarily evaluated the degree to which programmes supporting women entrepreneurs have empowered them economically. The challenges of women business owners had when utilising particular development programmes were also highlighted. Areas for Further Studies: 1. Women Empowerment and Regulatory Framework for Industrial Operations 2. Women Entrepreneurship and Financial Support for Enterprise Operations

MICROFINANCE FOR SUSTAINABLE RURAL INDIA: ISSUES AND CHALLENGES

Dr.T.S.Kavitha

Associate Professor in Commerce
Nallamuthu Gounder Mahalingam College

Abstract

From the time of independence unemployment and poverty has been two major characteristics and challenges of India. The major cause for the above two has been the unavailability of sufficient credit facilities for the poor and unemployed. These two factors have become the most challenging roadblock in the path of sustainable development of the country. The rapidly opening economy is widening the gap between the rich and poor. To have a sustainable life style along with saving and investment, microfinance allows the poor to get the loan that leads to financial independence and growth. The poor use these loans in a productive manner to create their businesses, assets of their own and get rid of poverty once and for all. Microfinance is becoming a significant buzzword in India. Remarkable progress has been made during the last two decades in innovating techniques to deliver financial services to the poor on a sustainable basis. These loans are aimed at empowering the impoverished people to start their own businesses and to grow their money so that they can achieve long-term financial independence and develop sustainably. Economic growth, sustainable development and poverty alleviation can be achieved effectively with the help of an instrument like Micro finance. This paper will focus the challenges and suggestive measures for growth of microfinance in Indian context for a sustainable development.

Keywords: Microfinance, MFIs, Poverty Alleviation, Sustainable growth.

Introduction

Microfinance is one of the most visible innovations in anti-poverty policy in the last half-century, and in three decades it has grown radically. The most important benefit of microfinance in India is that it helps long-term financial independence in these poverty-stricken areas . Micro finance help sustained impact by educating recipients on how to create their own businesses and how to properly manage and grow their money. There is a rapid growth in the strength of microfinance in India and several other countries. Undoubtedly it has been successful in bringing formal financial services to the poor. People believe that it has provided money to the poor families and it has the strength to increase investments in health, education and empowerment of women .Microfinance institutions (MFIs) have created a massive social infrastructure uniquely positioned to reach millions of clients on a regular basis. Microfinance is no more a financing channel but it has also emerged as a strong distribution channel with numerous credit products, repayable over a longer period of time, and solar lamps, fuel-efficient stoves are some of them. In the last two years, many companies are manufacturing solar products with microfinance distribution channel to sell their products.

There are many areas where slow or negative growth is seen especially in the rural areas. There may be improvement in terms of GDP and in HDI, but the overall development of the country is still under the curtains. The benefits of development have distributed unevenly

between rich and poor nations and between rich and poor groups in individual nation. The global number of extremely poor and under nourished have remained high and in some societies it has increased. One of the major negative impacts of development has been on the environment and on existing social structure. Many traditional societies and villages have been devastated by development off rest, water system and intense off fisheries. Environmental damage of development, if unchecked, may undermine the achievement of development and even collapse of essential eco system. The growing awareness of the challenges to traditional development thinking has led to the increasing acceptance of a new concept of development i.e. sustainable development.

Statement of the Problem

Many poor in the world don't have access to basic financial services which are helpful in managing their assets and create income. They need access to borrowings, savings and investment to eradicate their poverty. Micro finance is one of the ways of fighting poverty in rural areas, the place where most of the world's poorest people live. It provides funds, insurance, savings and other ancillary financial services within the reach of the poor. Through microfinance institutions (MFIs) such as financial non-governmental organizations, commercial banks and even credit unions, poor people can fulfill their requirement of small loans and safe guard their savings.

Objectives of the Study

The broad objective of the study is to analyze the challenges and issues of micro finance in India. However the paper also throws some light on the following issues:

- Micro finance and MFIs : its present context
- Challenges faced by the MFIs
- Sustainable development through microfinance
- Suggestive measures to tackle those challenges.

RESEARCH METHODOLOGY:

The present study is a descriptive study. This study is mainly based on secondary data only. Secondary data is collected from various sources like journals, magazines and reports. So trueness of the data depends on the trueness of the source.

Sustainable Development

The most common definition of sustainable development refers to a pattern of resource use that "meets the needs of the present without compromising the ability of future generations to meet their own needs" (1987 UN World Commission Report). The term broadly encompasses a number of inter-related global issues such as poverty, hunger, in equality, and degradation of environment.

In the extensive discussion of the concept of sustainable developments incethen, there has been recognition of three aspects of sustainable development: economic, environment

and social. An economically sustainable system must be able to produce goods and services on a continuing basis to maintain manageable levels of government's internal and external debt and to avoid unhealthy sectorial imbalance which damage agriculture or industrial production.

Microfinance : An Overview

Micro Finance may be defined as "provision of thrift, credit and other financial services and products of very small amounts to the poor in rural, semi urban or urban areas, for enabling them to raise their income levels and institutional initiatives of rural credit and to the improve living standards". At present, a large part of microfinance activity is confined to credit only. Women constitute a vast majority of users of micro-credit and savings services. Microfinance is the supply of loans, savings, and other basic financial services to the poor. (<http://cgap.org>) As these financial services usually involve small amounts of money - small loans, small savings, etc. - the term "microfinance" helps to differentiate these services from those which formal banks provide. The poor rarely access services through the formal financial sector. They address their need for financial services through a variety of financial relationships, mostly informal.

Microfinance is provided through Microfinance Institutions (MFIs). To be sustainable, MFIs ultimately have to

Organize their own resources through savings and equity, enhanced by other domestic resources like;

- Recover their loans
- Cover their costs from their operational income
- Finance their expansion from their profits
- Acquire an appropriate legal status
- Submit to appropriate regulation and supervision

Poor people do not live in a static environment of poverty. Many millions of people get out of poverty by successfully embracing new farming technologies, investing in new business opportunities, or by locating new jobs. At the same time, large numbers of people fall back into poverty due to financial setbacks, health problems, and other shocks. If available at critical moments, effective tools for savings, payment, credit, and insurance can help households capture an opportunity to climb out of poverty or weather a crisis or emergency without falling deeper into poverty.

Worldwide, approximately 2.5 billion people do not have a formal account at a financial institution, according to the World Bank's Global Financial Inclusion Database. As a result, most poor households operate almost entirely in the cash economy, particularly in the developing world. This means they use cash, physical assets (such as jewelry and livestock), or informal providers (such as money lenders and payment couriers) to meet their financial needs—from receiving wages to saving money for fertilizer. However, these informal

mechanisms tend to be insecure, expensive, and complicated to use. And they offer limited recourse when major problems arise, such as a serious illness in the family.

Following are some issues in MFIs in providing microfinance which become a challenge for them and ultimately pausing sustainable development:

Low Outreach: In India, MFI outreach is very low. It is only 8% as compared to 65% in Bangladesh.

High Interest Rate: MFIs are charging very high interest which the poor find difficult to pay.

Negligence of Urban Poor: It has been noted that MFIs pay more attention to rural areas and largely neglect the urban poor. Out of more than 800 MFIs across India, only six are currently focusing their attention on the urban poor.

Client Retention: Client retention is an issue that creates problem in growing the MFIs. There is about 28% client retention in the MFIs.

Loan Default: Loan default is an issue that creates problem in growth and expansion of the organization because around 73% loan default is identified in MFIs.

Low Education Level: The level of education of the clients is low. So it creates a problem in the growth and expansion of the organization because its percent age is around 70% in MFIs.

Language Barrier: Language barrier makes communication with the clients (verbal and written) is an issue that creates a problem in growth and expansion of the organization because around 54% language barrier has been identified in MFIs.

Late Payments: Late payments are an issue that creates a problem in growth and expansion of the organization because late payments are around 70% in MFIs.

Geographic Factors: The Geographic factors make it difficult to communicate with clients of far-flung areas which create a problem in growth and expansion of the organization. MFIs are basically aimed to facilitate the BPL population of the country but due to lack of infrastructure in those areas it becomes difficult to reach them.

Debt Management: Clients are uneducated about debt management. 70% of the clients in MFIs are unaware of the fact that how to manage their debt.

Other Factors include

Internal Factors

- High Transaction Cost
- Lack of access to Funding
- Loan Collection Method

External Factors

- Uneven Population Density
- Regional Disparity
- Deserving Poor are still not reached
- Low Depth of Outreach

- Unregulated Microfinance Institutions
- Lack of Insurance Services

Measures to Overcome Challenges

The following are some measures to overcome the challenges faced by MFIs in providing microfinance services to have a sustainable development.

Proper Regulation

When the microfinance was in its nascent stage and individual institutions were free to bring in innovative operational models, the need for a regulatory environment was not a big concern. However, as the sector completes almost two decades of age with a high growth trajectory, an enabling regulatory environment is needed that protects interest of stakeholders as well as promotes growth.

Field Supervision

In addition to proper regulation of the microfinance sector, field visits can be adopted as a medium for monitoring the conditions on ground and initiating corrective action if needed. This will keep an eye on the performance of ground staff of various MFIs and their recovery practices.

This will also encourage MFIs to abide by proper code of conduct and work more efficiently. However, the problem of feasibility and cost involved in physical monitoring of this vast sector remains an issue in this regard.

Encourage Rural Penetration

It has been seen that instead of reducing the initial cost, MFIs are opening their branches in places which already have a few MFIs operating. Encouraging MFIs for opening new branches in areas of low microfinance penetration by providing financial assistance will increase the outreach of the microfinance in the state and check multiple lending. This will also increase rural penetration of microfinance in the state.

Complete Range of Products

MFIs should provide complete range of products including credit, savings, remittance, financial advice and also on-financial services like training and support. As MFIs are acting as a substitute to banks in areas where people don't have access to banks, providing a complete range of products will enable the poor to avail all services.

Transparency of Interest Rates

As it has been observed that, MFIs are employing different patterns of charging interest rates and a few are also charging additional charges and interest free deposits (a part of the loan amount is kept as deposit on which no interest is paid). All this makes the pricing very confusing and hence the borrower feels incompetent in terms of bargaining power. So a common practice for charging interest should be followed by all MFIs so that it makes the

sector more competitive and the beneficiary gets the freedom to compare different financial products before buying.

Technology to Reduce Operating Cost

MFIs should use new technologies and IT tools & applications to reduce their operating costs. Microfinance institutions should be encouraged to adopt cost-cutting measures to reduce their operating costs. Also initiatives like development of common MIS and other software for all MFIs can be taken to make the operation more transparent and efficient.

Alternative sources of Fund

In absence of adequate funds the growth and the reach of MFIs become restricted and to overcome this problem MFIs should look for other sources for funding their loan portfolio. Various alternative sources of fund for the MFIs may be by getting converted to for-profit company i.e. NBFC, Portfolio Buyout, and Securitization of Loans etc.

Conclusion

To obtain sustainable development there must be continued growth and diversification of the rural economy, all segments of the population including farmers, rural micro-entrepreneurs and the poor should have easy access to sustainable financial services such as savings, credit and insurance provided by self-reliant, sustainable financial institutions in a conducive macroeconomic policy environment and development of MFIs. Sustainable rural microfinance requires local initiative and careful donor support for the development of institutions, enabling them to offer both savings and credit services, mobilize their own resources, have their loans repaid, cover their costs from their operational income, and finance their expansion to the poor and non-poor from their profits.

DIGITAL STARTUPS AND WOMEN ENTREPRENEURSHIP: A STUDY ON STATUS OF WOMEN ENTREPRENEURS IN INDIA

Dr.T.S.Kavitha,

Associate Professor in Commerce,

Nallamuthu Gounder Mahalingam College, Pollachi

In the present scenario, ‘male-only’ curse in entrepreneurship don’t bother Indian women who are passionate towards their career and business goals. The increased use of internet, technologies and ease in communication is opening up new platform for women in digital business market. Digital media, is not just the medium to raise voice and get heard, but it is also the safest avenue to convert big ideas into powerful brands for women entrepreneurs around the world, including India. Moreover, it plays crucial role in removing gender biasness as the digital medium places a layer of invisibility on the seller’s identity. The concept of “Minimum Investment, Maximum Profit” in online business is helping women entrepreneurs to make their own identity in the digital startup environment. This study is an attempt to know the status of women entrepreneurs and their significance in digital startups environment in India.

Keywords: Women Entrepreneur, Digital Startups, Digital Media, Entrepreneurship.

INTRODUCTION

Nowadays, everyday challenges don’t distract women from achieving their goals as the environment as well as the scenario is getting more secured and liberal for them. Favourable economic policies along with the advent of latest communication technologies are opening new platform and gateways for aspiring women leaders in digital market. Surrounded by multitude of entrepreneurship opportunities, women in the era of digital startup revolution are giving fierce competition to their male counterparts. The high penetration of internet and use of social media is also playing critical role in clearing the roadmap to drive and scale up their digital business or start-up to conceive financial independence and profitability. Digital ecosphere has brought so many opportunities for women entrepreneurs to showcase their feminine spirit, intellect, talent and creativity and transform their ideas into realities. Digital media revolution lets women entrepreneurs conduct their business entirely on internet and

provide flexibility around their schedule by introducing virtual workplaces and digital lifestyle.

CONCEPT OF WOMEN ENTREPRENEUR

Women entrepreneur is any woman, who initiate, organize and run a business enterprise to achieve self- economic independence either individually or in collaboration by keeping pace with her personal, family and social life. The Government of India has defined women entrepreneur as “an enterprise owned and controlled by a women having a minimum financial interest of 51% of the capital and giving at least 51% of the employment generation in the enterprise to women”.

CONCEPT OF DIGITAL STARTUPS

In recent years, the rapid advent of new digital technology such as social media, big data, cloud computing, mobile computing has influenced the entrepreneurial process. Startups which are keen to innovate and take advantage of opportunities which comes from It development are recognized as Digital Startups. Digital Startups can be defined as “any attempt or any startup businesses with the objective of gaining profit in return utilize the information technology for business purposes”. Digital Startups intensively use digital technology for creating new digital business models, improving business operations, engaging customers and stakeholders through digital channels and sharpening business intelligence.

OBJECTIVES OF THE STUDY

The study was planned with the following objectives;

- To identify the motive factors that encourages women to set up digital startups.
- To list out successful women entrepreneurs of digital startups in India.
- To critically examine the major issues and challenges faced by women in digital market.

RESEARCH METHODOLOGY

The present study is purely based on secondary data collected through literature survey, journals, newspapers, websites and published articles relating to this particular topic.

SUCCESSFUL WOMEN ENTREPRENEURS OF DIGITAL STARTUPS IN INDIA

The new generation women have overcome all their hurdles and have proved themselves beyond in the world of entrepreneurship. The success stories of women entrepreneurs one after another have made the digital landscape a universal platform for enterprising opportunities. There are so many icons in terms of success who are the true inspiration to the millions of women across the country.

Some of the women e-entrepreneurs who are marching ahead in the domain of digital market are:

Successful Women Digital Entrepreneurs in India

E-entrepreneur	Position	Start-up
Suchita Salwan	Founder & CEO	Little Black Book- Online portal which shares and discovers local businesses across categories of food, shopping, events and activities through community driven recommendations.
Falguni Nayar	Founder & CEO	Nykaa- Mumbai-based multi-brand beauty retailer selling cosmetic and wellness products.
Sakshi Talwar	Co-Founder	Rugs and Beyond- The largest online retailer of exclusive handmade Rugs and Carpet
Radhika Aggarwal	Co-Founder & CBO	ShopClues- India's first online shopping portal that connects buyers and sellers online and offers a trusted and safe online shopping environment.
Sabina Chopra	Co-Founder & EVP Operator	Yatra.com- One of India's most popular online travel portals.
Suchi Mukherjee	Founder and CEO	LimeRoad- An online portal that targets the women audience to shop lifestyle products and accessories.
Richa Kar	Founder & CEO	Zivame- It is India's largest online lingerie shopping portal for women at

		lowest price.
Aditi Gupta	CEO	Menstrupedia –Educating millions of women around the society regarding menstrual health as well as hygiene with the help of her website
Shradha Sharma	Founder & CEO	YourStory - India's leading media platform for entrepreneurs & the entrepreneurial ecosystem.
Upasana Taku	Co-Founder	Mobikwik -It is a mobile phone based payment system and digital wallet.
Rashi Menda	Founder & CEO	Zapyle - Ultimate online destination for luxury fashion in India.
Swati Bhargava	Co-Founder& CEO	Cash Karo -India's No. 1 Cash back and Coupons website rewarding customers for visiting online retailers through their site.

MOTIVE FACTORS THAT ENCOURAGES WOMEN TO SET UP DIGITAL STARTUPS

Women have held a very important social, political and economic role in India. Modernizing this role and giving a kind of shape of entrepreneurship have brought lot of structural and transformational reforms in the country. Encouraged by fast emerging group of successful women entrepreneurs, NITI Aayog has launched ‘Women Entrepreneurial and Innovation Cell’ which offers financial support Rs.10,000crore funds under the scheme Fund of Funds ,Mudra micro loan scheme and mentorship to women entrepreneurs. Besides, Government and No-Government bodies are increasing their attention towards women’s contribution to economic development by launching various operated by different department and ministries.

The following are the key points which motivate women entrepreneur to go for startups:

1. **Global Reach:-** The world has turned into small village because of digital revolution. Digital marketing helps women entrepreneurs to get global exposure for their startups and to achieve fastest business growth.
2. **Greater Flexibility:-** The flexibility of digital marketing lets women entrepreneurs conduct their business entirely on internet. Many women entrepreneurs enjoy the flexibility to work from home specifically in the field of – content development, sales, recruitment, lead generation and travel packaging, among others that just require a strong internet connection, a laptop and a mobile phone.
3. **Huge return on investment:-** Digital marketing offers a markable return on small investments. Advertising through social media platforms cost less when

compared to traditional marketing techniques. It is a proven way to reach targeted audience with most cost effective way.

4. **Absence of Middlemen:-** Digital marketing is making the globe come closer by helping the buyers meet the sellers and vice versa. There is no scope for middlemen who increase the transaction costs.
5. **Ease in Communication:-** Business communication under digital marketing is easy. Women e- entrepreneurs can do transactions without stepping out of their home. They are generating business through WhatsApp, Facebook, Instagram and many other social media platforms.
6. **Fastest processing of transactions:-** Executing transactions under digital marketing is easy and nearly instant online. The transactions are effortlessly executed with digital payment services.
7. **Secured platform:-** Digital marketing plays a vital role in removing gender biasness as the online medium places a layer of invisibility on the identity of seller.
8. **Ability to Multitask:-** One of the core benefits of digital marketing is its ability to handle millions of customers at the same time. As long as a website's infrastructure is efficient, numerous transactions can easily take place simultaneously.
9. **24/7 Business:-** Digital marketing runs around the clock. Compared to traditional marketing, digital marketing does not constrain for opening hours for business transactions since business run for 24 hours a day, 7 days a week.
10. **Easy access to funds:-** The Indian government has introduced over 50+ startup funding schemes in the recent years. Each startup scheme of government aims at boosting the Indian startup ecosystem.
11. **Tax holiday for 3 years:-** Eligible startups can now avail three year tax holiday in a block of seven years. This helps them to get more time to reach a stage when they start earning profit before they exercise their option for income tax exemption.
12. **Liberal Compliances:-** The Government of India has simplified legal compliance and made it flexible for Startups as per the 2016 'Startup India Action Plan'. The goal is to enable startups to focus on their core business and keep compliance costs low.

ISSUES AND CHALLENGES FACED BY WOMEN IN DIGITAL MARKET

There are quite a few women who have built up famous brand in the Industry, thanks to digital business ideas. Last year about 1800 startups have come up in the market and it is something that is grabbing the attention of many specially women across the country.

Women have astounding potential to excel in the entrepreneurial environment, but they also have to endure several financial and social hurdles that deprive them of a fair chance to a part of it. Here are some of the challenges that every women entrepreneur needs to overcome:

1. **Finding suitable market:-** Successful new business enjoys longevity because their owners conduct regular market research to understand their target market, identify consumer's problems and pinpoint realistic competitors. So, it's necessary to carry out market research on continuous basis to keep up with market trends and maintain a competitive edge by sizing up business opportunity.
2. **Promotion strategy can be easily copied:-** One of the main challenges in digital marketing is that a particular marketing technique can be easily copied by rival. This will force to frequently come up with new marketing strategies.
3. **Security Issue:-** Digital transactions are entirely carried out on internet. For a customer who queries online for products or services, there is a caution not to reveal the private banking information as it might be misused by unidentified people.
4. **Requires huge initial investments:-** Digital marketing through search engines and social media networking is quite expensive. So, it requires huge capital investments at the early stages.
5. **Good and effective customer service:-** It is a big challenge for women e-entrepreneurs to maintain good reputation through constant good services. There are times when goods delivered to the customer are not satisfactory. Customer satisfaction should be utmost priority in digital marketing.
6. **Training the team:-** As companies scale up and technologies continue to evolve, training the team is a greater challenge.

CONCLUSION

Today, India's Digital Startup ecosystem is in a better position, wherein women's participation in the field of entrepreneurship is increasing at a substantial rate.. In this fast moving economy, there has always been a choice for women to have a successful career with independency or stay aback due to the society's pull. Since multitasking is a trait women are born with, it is helping them to maintain a balance between their career and responsibilities simultaneously. It is has become old beleive that women become entrepreneurs because of push factors like poverty, husband's death and need of additional income etc, but now they are venturing into business because of risk taking ability, innovative thinking and passion for achievement. 'Start-up India' mission by Prime Minister of India has floated several schemes for creating entrepreneurial awareness, orientation and skill development programs for women. As the environment is changing

very fast, investors start investing on woman leadership, and their contribution in economic development is also being recognized and increase at a considerable rate. Start-up schemes initiated by government is promoting the culture of entrepreneurship by educating women about their hidden potentials and strengths through entrepreneurial orientation programmes, spreading awareness and consciousness amongst women to upstage in the field of entrepreneurship by their creative and innovative ideas, making them realize their prominent position in the society and how they can contribute to the economic development of the country. Although, India has a handful of successful women entrepreneurs who are making waves in different fields of business, it has ranked 52, much lower than US and China in the list of 57 countries in MasterCard Index of Women entrepreneurs report which is surveyed to ascertain parity for women entrepreneurs. India's rank remained unchanged from previous year at 52. The report stated that the underlying conditions for women business ownership in India are less favourable, adding that the obstacles are largely caused by perceptions of gender bias, which contribute to poor social and cultural acceptance, lack of self –belief and access to financial funding or venture capital. So, there is need for more initiatives by the government to help women climb the entrepreneurship ladder in India.

Abstract:

Contemporary Educationists and Psychologists emphasises that the present education system stresses not to train children to learning by force and harshness, but direct them to it by what amuses their minds, so that one may be a better able to discover with accuracy, the peculiar bent of the genius of each. Hence this article makes an effort to understand the influence of multiple intelligence of the student-teachers relation to gender, management and pedagogy subjects. Research universe consists of student-teachers in Ballari, Vijayanagara and Koppal districts, Karnataka in India. Sample consists of 980. The stratified random sampling was applied. The investigator onself visited teacher education colleges and collected the data. Outcomes of the research are analysed. The inferential statistical techniques 't' and 'F' (ANOVA) tests were used to test hypothesis. It is concluded that, there is no significant difference between male and female student-teachers with respect to multiple intelligence scores.

Keywords: *Multiple intelligence, student-teachers, aided, unaided, pedagogy subjects*

Introduction:

Multiple intelligence theory makes its greatest contribution to education by suggesting that student-teachers and teachers need to expand their repertoire of techniques, tools and strategies beyond linguistic and logical methods. An awareness of multiple intelligence theory has stimulated student-teachers to find more ways of helping of all students in their classes.

With an understanding of Gardner's theory of multiple intelligence, student-teachers, teachers, school administrators and parents can better understand the learners in their midst. They can allow students to safely explore and learn in many new ways and they can help students to direct their own learning. Student-teachers can help students to understand and appreciate their strengths and identify real world activities that will stimulate more learning.

Multiple Intelligence will essentially encompasses what a good student-teacher have always done in their teaching beyond the text and the blackboard to awaken student's minds.

Need and Importance of the Study:

Multiple intelligence opens the door to a wide variety of teaching strategies that can be easily implemented in the classroom. The multiple intelligence and innovative skills and strategies are relatively new to the educational era.

The student-teachers need to know much about and understand students being taught in the classroom. The abilities, interests and needs of each student must be studied and accepted by the student-teacher. Student-teachers needs to be well versed in different intelligences possessed by students and how many be used to assist each student to optimize instruction in many fields of knowledge and skills.

Awareness of multiple intelligence influences choice of relevant learning strategies for student-teachers.

Scope of the Study:

The main intention of the present study is to find the relation of multiple intelligence of student-teachers with gender, type of college and pedagogy subjects.

Objectives of the Study:

To study the impact of gender, type of college and pedagogy subjects on the multiple intelligence of student-teachers.

Hypothesis of the Study:

1. There is no significant impact of 'Gender' on the multiple intelligence of student-teachers.
2. There is no significant impact of "Type of College" on the multiple intelligence of student-teachers.
3. There is no significant impact of "Pedagogy Subjects" on the multiple intelligence of student-teachers.

Tools for the Study:

1. The Multiple Intelligence Scale (MIS- ASPS) was used from Surbhi Agarwal and Dr. Suraksha Pal. The tool was highly reliable for the investigation.
2. Personal data regarding the student-teacher-
 - a. Gender (Male and Female)
 - b. Type of College (Aided and Unaided Colleges)
 - c. Pedagogy Subjects (Science Stream and Arts Stream)

Data Collection:

The sample for the investigation consisted of 980 student-teachers of Teacher Education Colleges in Ballari, Vijayanagara and Koppal districts, Karnataka in India.

The stratified random sampling was applied in three stages. The first stage type of college/ management i.e., aided and unaided colleges; the second stage is gender i.e., male and female and third stage is pedagogy subject. The investigator onself visited B.Ed colleges/ teacher education colleges with the permission of the Principals of the college. The student-teachers who attended to the college on the day of collection of data are considered for the purpose of the investigation. It was provided to the concerned student-teachers of the college. The student-teachers were read necessary instructions about the instruments and personal motivated to respect genuinely to all the items. The multiple intelligence questionnaire and personal data sheet were administered. The data on each variable in the investigation is properly coded to suit for computer analysis. The analysis was carried out on the basis of objectives of the investigation and hypothesis formulated by appropriate statistical techniques. The inferential statistical techniques 't' and 'F' (ANOVA) tests were employed to test hypothesis.

Hypothesis 1. There is no significant difference between male and female student-teachers with respect to multiple intelligence scores.

To evaluate the aforementioned null hypothesis, an analysis was conducted using two sample independent 't' test and the results are presented in the following table 1.

Table 1. Summery of Independent 't' Test Between Male and Female Student-Teachers with Respect to Multiple Intelligence Scores.

Variables	Male		Female		t-value	p-value	Significance
	Mean	SD	Mean	SD			
Multiple intelligence	309.00	27.10	308.38	31.00	0.2887	0.7729	NS

NS-Not significance

From the results of the above table 1, it can be seen that, when comparing male and female student-teachers with multiple intelligence scores, the calculated value of 't' is 0.2887 with p-value is 0.7729. The critical or tabled value of 't' is 1.9600 with 978 degrees of freedom at 5% level of significance. It clearly seen that, the calculated value of 't' is lesser than the critical or tabled value of 't' i.e. 1.9600.

Findings:

No significant difference was observed between male and female student-teachers with respect to multiple intelligence scores.

Hence, the null hypothesis is accepted. In other words, the male and female student-teachers have similar multiple intelligencescores.

Hypothesis 2.

There is no significant difference between aided and unaided college student-teachers with respect to multiple intelligence scores.

To evaluate the aforementioned null hypothesis, an analysis was conducted using two sample independent 't' test and the results are presented in the following table 2.

Table 2. Summary of Independent 't' Test Between Aided and Unaided College Student Teachers with Respect to Multiple Intelligence Scores.

Variables	Aided		Unaided		t-value	p-value	Significance
	Mean	SD	Mean	SD			
Multiple intelligence	304.95	25.83	309.80	31.16	2.2223	0.0265	S

S- Significance

From the results of the above table 2, it can be seen that, when comparing aided and unaided college student-teachers with multiple intelligence scores, the calculated value of 't' is 2.2223 with p-value is 0.0265. The critical or tabled value of 't' is 1.9600 with 978 degrees of freedom at 5% level of significance. It clearly seen that, the calculated value of t is greater than the critical or tabled value of t i.e. 1.9600.

Findings:

A significant difference was observed between aided and unaided college student-teachers with respect to multiple intelligence scores.

Hence, the null hypothesis is rejected. In other words, the unaided college student-teachers have significant and higher multiple intelligencescores as compared to aided college student-teachers.

Hypothesis 3.

There is no significant difference between Science stream and Arts stream student-teachers with respect to multiple intelligence.

To evaluate the aforementioned null hypothesis, an analysis was conducted using two sample independent 't' test and the results are presented in the following table 3.

Table 3. Summery of Independent't' Test Between Science Stream and Arts Stream Student-Teachers with Respect to Multiple Intelligence Scores

Variables	Science Stream		Science Stream		t-value	p-value	Significance
	Mean	SD	Mean	SD			
Multiple intelligence	312.92	27.48	304.94		4.1860	0.0001	Significances

From the results of the above table 3, it can be seen that, when comparing Science stream and Arts stream student-teachers with multiple intelligence scores, the calculated value of 't' is 4.1860 with p-value is 0.0001. The critical or tabled value of 't' is 1.9600 with 978 degrees of freedom at 5% level of significance. It clearly seen that, the calculated value of 't' is greater than the critical or tabled value of 't' i.e. 1.9600.

Findings:

A significant difference was observed between Science stream and Arts stream student-teachers with respect to multiple intelligence scores.

Hence, the null hypothesis is rejected. In other words, the Science stream student-teachers have significant and higher multiple intelligencescores as compared to Arts stream student-teachers.

Conclusion:

In the light of findings, the following conclusions are drawn. The gender (male and female) will not influence on student-teachers multiple intelligence. But type of college and pedagogy subjects will influence. In this study identifies their teaching skills and being aware of the ways with which they can be more successful in their pedagogy journey, it is hoped that students will be familiar with their strength and weakness, which will help them become more proficient student-teacher and they will probably be more satisfied.

Educational Implications:

The findings of the present research have raised some important questions related to the educational needs of the student-teachers with special reference to their multiple intelligence.

1. The Concept of multiple intelligence suggests that gender will not influence, but all the student-teachers have different strength and learning styles.
2. Student-teachers should recognize and accommodate these individual differences by providing a variety of instructional strategies and activities that cater to diverse intelligences.
3. By understanding the specific intelligence of student-teachers, educators can design training programs that align with their strengths and enhance their pedagogy skills.

Abstract

The New Education Policy 2023 is a revolutionary approach that promotes learning based on practical skills. It aims to confirm inclusive and quality education to all. It also incorporates modern technology to the education. It transforms existing education system. The teacher plays vital role in the implantation of NEP in our country. The present paper studies the perception of teachers about their role in implementation of new education policy in higher education system. The study helps to understand the benefits teachers will get after the implementation of NEP. It helps to know the challenges they face while implementing NEP. An analytical research design is adopted in the study.

A questionnaire was conveniently administered among the sample size of 120 teachers of professional courses across different institutions in Kerala's Palakkad district. A five-point Rensis Likert scale was used for measuring the qualitative data in the study. A questionnaire was administered to the teachers through email. For statistical analysis and percentage analysis, the chi-square test, one-way ANOVA and mean value analysis have been used. Microsoft Excel is used for analysing data. The study found that in the perception of teachers NEP leads to better quality education and confirms inclusive education. At the same time, it does not give them any monetary benefits, but they opined that it leads to improvement in their professional standards. Lack of infrastructure and funds are the main challenge in effective implementation of NEP.

Keywords: *New Education Policy, perception, teachers, implementation, quality.*

Introduction

The foundation of society, which promotes the growth of the entire country, is education. Education is a powerful tool that has the power to transform the entire planet. It may help someone become independent. The people's quality of life in the society must be raised. Every member of society has a right to an education. Today's world is observing quick changes in the educational systems of many nations. This is a result of globalization, as every nation now demands highly qualified workers. Knowledge from textbooks is insufficient to land a job at a reputable company. For an individual to grow, practical knowledge is crucial. Every nation shall guarantee inclusive and equitable quality education and opportunity for lifelong learning for everyone, according to Sustainable Development Goal 4 of the United Nations.

Our current educational system needs to be transformed, according to the New Education Policy 2023. It's a ground-breaking strategy that seeks to include contemporary teaching techniques, harness the power of technology, and encourage learning based on practical skills. No matter their circumstances or background, everyone should have access to education. Supporting underrepresented communities and fostering an inclusive and equitable educational environment are given specific attention. The New Education Policy places a high emphasis on teaching students how to think critically, be creative, and solve problems. It also suggests the development of novel institutions like digital universities and the application of technology to improve educational outcomes for pupils. The policy has resulted in several significant changes, including the replacement of the conventional 10+2 schooling framework with a more adaptable and comprehensive 5+3+3+4 system. The objective of this new method is to give priority to critical thinking, life skills, and fundamental abilities in the instruction of students at all levels.

The teacher is essential to the adoption of NEP in our nation. Because they truly mold our future generation of citizens, teachers at all levels must be redefined as the most revered and important members of our society under the new education policy. It must take all necessary steps to empower educators and support them as they carry out their duties. The new education strategy must make it easier to attract the best and brightest individuals to the teaching profession at all levels by guaranteeing a living wage, respect, dignity, and autonomy while also introducing fundamental mechanisms of quality assurance and accountability into the system.

The present paper studies the perception of teachers about their role in implementation of new education policy in higher education system. The study helps to understand the benefits teachers will get after the implementation of NEP. It helps to know the challenges they face while implementing NEP.

Review of Literature

Imran Ansari and Ali Haider (2023) did a survey study on institutions that provide teacher preparation. First, the NEP-2020 document's provisions and guidelines for teacher education programs were examined. 30 teacher educators were selected at random by the researchers from several national teacher preparation institutions. Infrastructure, finance, clear guidelines, etc., have all been determined to be significant obstacles for educational institutions. They were also asked for comments on how to make the policy's implementation go more smoothly.

Bhavesh N. Desai and Sachin D. Shah (2023) investigate how Gujarat's public and private universities and colleges feel about NEP 2020 and the country's current higher education system in India. Under it, they try to focus on the political,

pedagogical, economic, and research aspects of higher education. Because the study is centered on obtaining actual data, its methodology is convenient sampling. The report claims that the current higher education system has several weaknesses that can be fixed by effectively implementing NEP, such as a lack of funding, rote and test-oriented learning, political meddling, issues with employability, poor research outcomes, etc.

In his study, Chandrasekaran Siva (2022) focuses on the effects of some of the characteristics of the New Education Policy (NEP), such as Early Childhood Care and Education (ECCE), three language policies, low stacks public exams, work studies for students, Continuous Professional Course (CPC) for Teachers, fees structure in private schools, impacts on unemployment, discontinuation of M.Phil. Program, and the NEP's goals. Data from both primary and secondary sources were gathered using a descriptive research design. Data gathering methods included questionnaires and interviews, and a sample of 127 respondents was selected using simple random selection. According to the study, there is a strong association between the stress that NEP causes for pupils and teachers. The dependent variable on the fee structure is the newly framed policies. The dependent variable on the fee structure is the newly framed policies. While new educational policies are being implemented, many of them are constructive, which will have a significant impact on how future students' careers develop in this cutthroat environment.

Research Gap

The research mentioned above focused more on the theoretical elements of the New Education Policy. They looked at the NEP's characteristics and teachers' opinions of how it was implemented. The current study employs a sample of teachers from higher education institutions to examine how teachers perceive NEP and its implementation. Instead of using a descriptive research design, it uses an analytical one.

Scope and Significance of the Study

Teachers plays inevitable in the implementation of NEP effectively. They need to be aware of its benefits and challenges. They should upgrade themselves to implement it effectively. The current study focuses on their perception about its implementation. It understands what the benefits are they expect to gain from its implementation and the challenges confront while implementing.

Objectives of the Study

- To study the perception of teachers towards New Education Policy in higher education system

Research Methodology

An analytical research design is adopted in the study. A questionnaire was conveniently administered among the sample size of 120 teachers of professional courses across different institutions in Kerala's Palakkad district. A five-point Rensis Likert scale was used for measuring the qualitative data in the study. A questionnaire was administered to the teachers through email. For statistical analysis and percentage analysis, the chi-square test, one-way ANOVA and mean value analysis have been used. Microsoft Excel is used for analysing data.

Data Analysis and Interpretation

Table 1: Demographic Profile

Demographics		Number	Percentage
Gender	Male	41	34
	Female	79	66
Age (in years)	Less than 30	25	21
	31 - 40	46	38
	41 - 50	33	28
	More than 51	16	13
Teaching experience	Less 5 years	35	29
	5 - 10 years	46	38
	More than 10 years	39	33
Marital status	Married	72	60
	Unmarried	48	40

(Source: Author's Calculation)

Total number of respondents =120

Table 1 shows the demographic profile of the respondents. 66 percent of respondents are female while 34 percent are male respondents. 38 percent of the respondents are between the age group of 31 and 40 years, 28 percent of the respondents are between the age group of 41 and 50 years, 21 percent of the respondents are less than 30 years and remaining 13 percent are above the age of 51 years. 38 percent of the respondents have 5 to 10 years of teaching experience, 33 percent of respondents have more than 10 years and 29 percent of the respondents have less than 5 years of teaching experience. 60 percent of the respondents are married, and the remaining 40 percent are unmarried.

Table 2: Perception of Teachers Towards New Education Policy in Higher Education.

Perception	Strongly Agree	Agree	Moderately Agree	Disagree	Strongly Disagree	Total	Mean	Rank
Teachers are required to create innovative environment	30	42	24	12	12	120	3.55	3
Promotes holistic learning	24	18	30	24	24	120	2.95	6
leads to global education	36	30	30	12	12	120	3.55	3
Confirms inclusive education	42	30	24	12	12	120	3.65	2
Better quality education	48	36	18	6	12	120	3.85	1
Promotes research	30	36	24	18	12	120	3.45	5

(Source: Author's Calculation)

The above table shows that many of the respondents opined that NEP leads to better quality education. They opined that it confirms inclusive education. Then they perceive that teachers are required to create an innovative environment and NEP leads to global education. They hardly opined that it promotes research and holistic learning.

Table 3: Chi - Square Results for Hypothesis Testing of Association Between Age and Perception of Teachers Towards New Education Policy in Higher Education.

Perception	Age	SA	A	MA	DA	SDA	P Value	Sig
Teachers are required to create innovative environment	Less than 30	12	4	7	2	0	0.073	NS
	31 - 40	13	16	8	5	4		
	41 - 50	3	16	7	3	4		
	More than 51	2	6	2	2	4		
Promotes Holistic Learning	Less than 30	6	2	5	2	10	0.068	NS
	31 - 40	11	5	14	8	8		
	41 - 50	5	5	9	8	6		
	More than 51	2	6	2	6	0		
Leads to Global education	Less than 30	4	10	4	3	4	0.476	NS
	31 - 40	14	10	11	6	5		
	41 - 50	14	6	9	1	3		
	More than 51	4	4	6	2	0		

Confirms Inclusive education	Less than 30	6	8	2	0	0	0.522	NS
	31 – 40	16	11	8	7	4		
	41 – 50	14	5	7	2	5		
	More than 51	6	6	7	3	3		
Better quality education	Less than 30	12	7	2	4	0	0.015	S
	31 – 40	16	18	7	2	3		
	41 – 50	10	9	5	0	9		
	More than 51	10	2	4	0	0		
Promotes Research	Less than 30	10	1	6	3	5	0.039	S
	31 – 40	13	11	10	7	5		
	41 – 50	5	16	4	6	2		
	More than 51	2	8	4	2	0		

(Source: Author's Calculation)

Null Hypothesis: There is no association between age and perception of teachers towards New Education Policy in higher education.

Alternate Hypothesis: There is association between age and perception of teachers towards New Education Policy in higher education.

If p- value in 5% level of significance and degree of freedom 12 (r-1) (c-1) is greater than α (0.05), null hypothesis is accepted, and alternate hypothesis is rejected.

Therefore, there is association between age and perception of respondents about NEP leads to better quality education and promotes research. There is no association between age and perception of respondents about NEP leads to inclusive education, Global education, teachers are required for innovative learning and NEP promotes holistic learning.

Table 4: Perception of Teachers About Benefits of New Education Policy to Teachers in Higher Education.

Benefits	Strongly Agree	Agree	Moderately Agree	Disagree	Strongly Disagree	Total	Mean	Rank
Continuous professional development	32	36	16	24	12	120	3.43	2
Better career management	28	28	28	24	12	120	3.30	5

Better teacher education policy	32	24	32	20	12	120	3.367	3
Improvement professional standards	36	36	18	12	18	120	3.5	1
Leads to empowerment	30	30	30	12	18	120	3.35	4
Monetary benefits	12	18	24	36	30	120	2.55	6

(Source: Author's Calculation)

Table 4 shows that majority of the respondents opined that NEP improves their professional standards and leads to continuous professional development. Then they opined that it leads to better teacher education policy and empowers them. They do not believe that NEP to career management and gives them monetary benefits.

Table 5: One Way Anova Test Results of Impact of Teaching Experience on Perception of Teachers About Benefits of New Education Policy to Teachers in Higher Education.

Perception		Sum of Squares	df	Mean square	F	Sig	S/NS
Continuous professional development	Between Groups	17.06667	1	17.06667	14.13	0.00021	S
	Within Groups	287.3333	238	1.207283			
	Total	304.4	239				
Better career management	Between Groups	26.66667	1	26.66667	23.07	2.76	NS
	Within Groups	275.0667	238	1.155742			
	Total	301.7333	239				
Better teacher education policy	Between Groups	21.6	1	21.6	18.50	2.47	NS
	Within Groups	277.7333	238	1.166947			
	Total	299.3333	239				
Improvement professional standards	Between Groups	13.06667	1	13.06667	10.10	0.00167	S
	Within Groups	307.8667	238	1.293557			
	Total	320.9333	239				
Leads to Empowermen	Between Groups	22.81667	1	22.81667	18.52	2.45	NS
	Within Groups	293.1667	238	1.231793			
	Total	315.9833	239				

Monetary benefits	Between Groups	120.4167	1	120.4167	105.5	9.95	NS
	Within Groups	271.5667	238	1.141036			
	Total	391.9833	239				

(Source: Author's Calculation)

Null Hypothesis: There is no significant difference between teaching experience and Perception of teachers about benefits of New Education Policy to teachers in higher education.

Alternate Hypothesis: There is significant difference between teaching experience and Perception of teachers about benefits of New Education Policy to teachers in higher education.

The one-way ANOVA test results shows that teaching experience has impact on perception of respondents related to NEP leads to continuous professional development and improvement in professional standards. Teaching experience has no impact on perception of respondents related to NEP leads to better career management, teacher education policy, empowerment and monetary benefits.

Table 6: Challenges in Implementation of New Education Policy

Challenges	Strongly Agree	Agree	Moderately Agree	Disagree	Strongly Disagree	Total	Mean	Rank
Mother tongue as medium of instruction	36	30	30	12	12	120	3.55	2
Lack of infrastructure and funds	36	42	18	12	12	120	3.65	1
Digital divide	30	24	24	24	18	120	3.2	4
Lack of trained teachers	42	24	18	18	18	120	3.45	3

(Source: Author's Calculation)

Table 6 shows that majority of the respondents opined that lack of infrastructure and funds are the main challenge faced while implementing NEP. Then they opined that mother tongue as medium of instruction is also big challenge. Lack of trained teachers and digital divide also opined by the respondents as challenge while implementing NEP.

Table 7: One Way Anova Test Results of Impact of Age on Challenges in Implementation of New Education Policy

Challenges		Sum of Squares	df	Mean square	F	Sig	S/NS
Mother tongue as medium of instruction	Between Groups	37.60417	1	37.60417	39.83	1.34	NS
	Within Groups	224.6917	238	0.944083			
	Total	262.2958	239				
Lack of infrastructure and funds	Between Groups	28.70417	1	28.70417	30.73	7.84	NS
	Within Groups	222.2917	238	0.933999			
	Total	250.9958	239				
Digital divide	Between Groups	78.20417	1	78.20417	70.98	3.44	NS
	Within Groups	262.1917	238	1.101646			
	Total	340.3958	239				
Lack of trained teachers	Between Groups	47.70417	1	47.70417	39.88	1.31	NS
	Within Groups	284.6917	238	1.196183			
	Total	332.3958	239				

(Source: Author's Calculation)

Null Hypothesis: There is no significant difference between age and challenges in implementation of New Education Policy.

Alternate Hypothesis: There is significant difference between age and challenges in implementation of New Education Policy.

The one-way ANOVA test results shows that there is no significant difference between age and challenges in implementation of New Education Policy.

Results and Discussions

The main aim of the study was to understand the perception of teachers towards New Education Policy in higher education system. A questionnaire was conveniently administered among the sample size of 120 teachers of professional courses across different institutions in Kerala's Palakkad district. For statistical analysis and percentage analysis, the chi-square test, one-way ANOVA and mean value analysis have been used. The study found that NEP leads to better quality education and confirms inclusive education. Then they perceive that teachers are required to create an innovative environment and NEP leads to global education.

Only few teachers opined that NEP promotes research and holistic learning. Chi Square test result shows that there is association between age and perception of respondents about NEP leads to better quality education and promotes research. There is no association between age and perception of respondents about NEP leads to inclusive education, Global education, teachers are required for innovative learning and NEP promotes holistic learning. Majority of the respondents opined that NEP improves their professional standards and leads to continuous professional development. They do not believe that NEP to career management and gives them monetary benefits. The one-way ANOVA test results shows that teaching experience has impact on perception of respondents related to NEP leads to continuous professional development and improvement in professional standards. Teaching experience has no impact on perception of respondents related to NEP leads to better career management, teacher education policy, empowerment and monetary benefits. Majority of the respondents opined that lack of infrastructure and funds are the main challenge faced while implementing NEP. Then they opined that mother tongue as medium of instruction is also big challenge. The one-way ANOVA test results shows that there is no significant difference between age and challenges in implementation of New Education Policy

Conclusions

New Education Policy has resulted in several significant changes, including the replacement of the conventional schooling framework with a more adaptable and comprehensive system. The objective of this new method is to give priority to critical thinking, life skills, and fundamental abilities in the instruction of students at all levels. The main aim of the study was to understand the perception of teachers towards New Education Policy in higher education system. The study found that NEP leads to better quality education and confirms inclusive education. NEP improves their professional standards and leads to continuous professional development. Lack of infrastructure and funds are the main challenge faced while implementing NEP. Government need to adopt more awareness campaigns among the teachers of all categories. Sufficient funds and infrastructure facilities are required for its implementation. More teacher training programmes need to be conducted. Creative skills of the teachers need to be improved. Capacity building programmes among teachers can be organized for its effective implementation.

Monetary benefits need to be given to teachers as part of its implementation which motivates them.

Abstract

The current paper aims to investigate teenagers' perspectives on the effectiveness of cyberbullying prevention strategies in Coimbatore district. The data was collected through a nationwide online survey among college students, using a structured questionnaire for enhanced simplicity. The survey had 132 respondents from various private and government colleges in Nilgiri District. To analyze the data, the researcher employed 25 questions, which were categorized into five main factors: Social, Economic, Technological, Psychological, and Political. The survey questions were further grouped based on the respondents' roles in cyberbullying, including pure-offender, pure victim, both-offender-and-victim, and neither-offender-nor-victim. The study explores the correlation between a student's role in cyberbullying and their perspective on the effectiveness of prevention strategies. The research identifies the top five most effective cyberbullying prevention strategies for students in each category. Notably, the participants perceived taking away the offender's access to technology as the most effective measure, regardless of their roles in cyberbullying. The findings of this study hold valuable insights for colleges and communities, aiding them in formulating policies and regulations to effectively combat cyberbullying. The conclusion emphasizes the importance of implementing prevention techniques with appropriate policies and procedures.

Keywords: Cyber bullying, Prevention, College students, Perceptions

Introduction

According to Nelson, 2003 cyberbullying is often very serious, including stalking and death threats, I can say anything I want Its impersonal. Face to face is a little intimidating''. Further, it is reported that females prefer this type of bullying.

Bullying most often occurs outside of school hours using home computers. School officials are often reluctant to take action against students making posts to websites while not in school. Temporary e-mail accounts and pay as you go cell phones allow for bullies to remain anonymous. The anonymity of the Internet and knowing that they are less likely to be punished for acts taking place off school grounds makes cyber bullying attractive as kids think they will not be held accountable for their actions. First Amendment free speech rights reinforce that consequences for cyber bullying may not be upheld in a court of law or possibly even rewarded with a monetary settlement if the school is found guilty of violating a

students. First Amendment free speech rights for taking disciplinary action for Internet postings (Associated Press, 2005). Given the vulnerability that school districts face for lawsuits, administrators have found that cyber bullying issues have been resolved informally by contacting the parents. Parental education can be the key to preventing cyber bullying. In a study by Agatston, Kowalski, and Limber (2007) students reported that they would be more likely to report a threatening incident of cyber bullying to their parents than to an adult at school because they do not think the adults at school could help them with the cyber bullying problem.

Parents who know what actions to take rather than overreacting or thinking cyber bullying is just a part of growing up will be better equipped to help their child cope with a cyber bullying incident. It is recommended that parents contact the school when their child tells them he or she is being harassed online.

There is research evidence that ongoing communication about and supervision of online activities can also prevent teens' engaging in risk taking behaviors on the Internet such as disclosing personal information, offline meetings, sharing photos, and exposure to threatening messages. A study by Berson et al. (2002) showed that when teachers, parents, or other caregivers have an ongoing dialogue about cyber activities and monitor adolescent girls Internet use there is a "decreased tendency to engage in cyber activities that lead to potential harm." Adolescent girls who had ongoing discussions and monitoring by parents were less likely to have filled out a form that discloses personal information, agreed to meet in person with someone they met online, told personal information, or sent suggestive e-mail. Having poorer parental monitoring and relationships with parents or other caregivers is associated with increasing frequency of victimization online. Besides parental involvement, several cyber bullying prevention strategies have been suggested in the literature. These strategies include incorporating cyber bullying prevention into anti-bullying programs setting clear rules and consequences raising awareness about cyber bullying Internet filters increased supervision of students acceptable user policies Internet safety programs federal legislation to criminalize cyber bullying showing students how messages can be traced, and anonymous technological reporting of incidents for preventing cyber bullying.

Statement of the Problems

Internet service and mobile technologies such as web pages and discussion groups as well as instant messaging or SMS text messaging with the intention of harming another person. Cyberbullying can be seen as being distinct from other forms of online behavior. Some see cyber-bullying as a form of cyber talking, which involves taking a more strategic approach than in the moment Internet trolling.

Examples of what constitutes cyberbullying include communications that seek to intimidate, control, manipulate, put down, falsely discredit, or humiliate the

recipient. The actions are deliberate, repeated, and hostile behavior intended to harm another. Cyberbullying has been defined by The National Crime Prevention Council: "When the Internet, cell phones or other devices are used to send or post text or images intended to hurt or embarrass another person." A cyberbully may or may not know their target. A cyberbully may be anonymous and may solicit involvement of other people online who do not know the target. It is a problem that exists worldwide among youth today. As a result of this problem some teenagers harassed by cyber bullying are suffering from depression, having their education compromised, and committing suicide. Nearly 1,500 adolescents were found that 33% of the respondents were victims of cyber bullying (Patchin, 2006). In a February 2007 survey of 832 teenagers the National Crime Prevention Council reported that 43% of teens ages 13-17 had experienced cyber bullying. The demographic group with the highest percentage reporting they experienced cyber bullying was 15 to 16 year old girls (Moessner, 2007). A University of New Hampshire study showed an increase in the prevalence of cyber bullying in 2005 from 2000. Two-thirds of the teens surveyed in a May 2009 survey thought cyber bullying was a serious problem. Relationship of Bullying and Cyber bullying Cyber bullying and bullying are often interrelated. A student who is being bullied at school may be bullied online (Beran & Li, 2007; Willard, 2007b). A study by Beran and Li (2007) showed that more than one-third of the participants, ages 12-15, who were bullied online were also bullied in school.

According to research by Juvonen & Gross (2008) there is a significant relationship "between bullying and retaliation online and at school. A student who is being bullied at school may become an online bully to retaliate against the bully at school. Although bullying and cyber bullying can be interrelated cyber bullying can take place as a separate phenomenon. Victims of cyber bullying are not always victims of bullying at school. A study by Leaf, (2007) found that 64% of youth who are bullied online are not being bullied at school. Most harmful cyber bullying incidents occur away from campus because technology use is often not supervised. Off-campus cyber bullying incidents have been shown to have a negative impact on school climate, make it difficult for victims to function, increase the risk for psychosocial problems for victims (Ybarra & Mitchell, 2007) and place students' safety at risk. Online incidents that occur away from school can trigger in school behavior such as school violence. The speed of technology can spread rumors and humiliating pictures faster and to more people (Keith & Martin, 2005) than word of mouth. Everyone receives the same message when technology is used instead of word of mouth. The rumors can stay on the Internet indefinitely (Shariff, 2008).

Objectives of the Study

- To examine the factors associated with college students based on cyber bullying level

- To evaluate the awareness status which state the college students into cyber bullying
- To explore various prevention strategies on cyber bullying among the college students in Nilgiris district.

Review of Literature

In Japan, cell phone pictures of an overweight-boy, which was taken on the sly in the locker room, were distributed to many of his peers (Paulson, 2003). Another incident happened in Calabasas High School in California. "It was a website – www.schoolscandals.com – on which vicious gossip and racist and threatening remarks grew so rampant that most of the school was affected" (Paulson, 2003). In a research study Tanya Beran and Qing Li (2007) aims to determine the relationship between school bullying and cyberbullying, 432 students from grades 7-9 in Canadian schools were surveyed about their experiences of bullying. The results indicated that students who were bullied in cyberspace were also likely to bully their peers in cyberspace ($r = 0.46$, $p < 0.001$) and be bullied at school (56%). In addition, students who were bullied in cyberspace only, and students bullied both in cyberspace and at school, experienced difficulties at school such as low marks, poor concentration, and absenteeism. The final results suggested that bullying that occurs either at or outside school can have an impact on school learning. Tanya .Band Qing .Li (2007). The term 'bystander' suggests that those children who stand on the sidelines and witness incidents of bullying are neutral observers. In most instances, though, bystanders are much more likely to provide encouragement and support to the *bully* than they are to actively intercede to help the victim (Snell, et al., 2002).

Furthermore, in situations in which a group of students is bullying a child, bystanders may actively join in by taunting, teasing, or ostracizing the victim.(Snell, et al., 2002). Martell Teasley (2013)stated thatall are marching towards the aware and impact to which name-calling and other slanderous practices can have on adolescents' self-esteem and behavior. But the effects of name-call, tensing and forms of non-psychical abuse are not new to social and behavioral science researchers. When students' and teachers' perceptions were compared for analysis, two areas were found to have significant difference: their perceptions of the effects of cyber-bullying and their perceptions of ways on how to positively report cyber-bullying. Results indicate the need for more cyber-bullying interventions or curriculum for students in grades 6, 7 and 8 and training for middle school teachers as literature supports cyber-bullying peaks at these grade levels.(Jennifer and Marie (2015). Yet, cyberbullying has gained mass media appeal and coverage, which may be related to numerous horrific behavioral outcomes as demonstrated by a rash of youth suicides by victims of cyber bullying.

Research Methodology

This study uses conjoining both qualitative and quantitative methods. The qualitative methods used were adopted among the college students to explore the cyber bullying prevention strategies. The primary data are collected through two methods using questionnaire and observation. Secondary data was collected from books, journals, periodicals, articles and Past Study records and web-based materials and internet. The total population of the college students, a sample of 132 women, was randomly selected for the present study.

Demographic Profile of the Respondents

Table : 1

	N	Mean	Std. Deviation
Gender	132	1.60	.494
Age group	132	2.02	.718
Educational level	132	2.17	.741

Exploratory Factor Analysis for Three Main Factors

Table :2

		Social Factor	Economic Factor	Technological Factor	Psychological Factor	Political Factor
Kaiser-Meyer-Olkin Measure of Sampling Adequacy.		.614	.771	.644	.833	.743
Bartlett's Test of Sphericity	Approx. Chi-Square	600.456	501.778	600.456	655.007	565.254
	df	119	119	119	119	119
	Sig.	.000	.000	.000	.000	.000

Confirmatory Factor Analysis for Three Main Factors

Generally, confirmatory factor analysis (CFA) is termed to be a statistical technique and it used to identify the observed variables under the factor loading. It also helps to test the hypothesis in relation with both observed variable and latent variable. On the other part, CFA and EFA are connected to the same procedure based on the result analysis, but in case of exploratory factor analysis, the variables are explored into different factors with various communalities. Correspondingly, confirmatory factor analysis (CFA) is furnished to confirm the factor loading with higher level of significance in related factors.

Interpretation for the Above Analysis:

The above result were displayed as per the report of Amos and Spss states that the current study focus on five main factor such as Social Factor , Economic Factor, Technological Factor, Psychological Factor and Political Factor. The current study clearly utters that all the five factors were loaded with high factor loading and the model is fit with significant values. Based on the social factor it is mainly associated with societal changes and the standard of living of college students in the addressed colleges, secondly the Economic Factor deals with the capability of the rural women to afford for various items with the low income. Technological Factor States that the college students were limited with various restriction and they may not aware of the technological changes prevailed in the society. Psychological Factor deals with college students were highly emotional and sentimental and they get easily influenced by the advertisement without the real situation happen in the society. Finally the political factor deals with the social media advertisement may create some crucial situation makes the college students to take incorrect decision.

Result and Discussion

The result of confirmatory factor analysis using SEM analysis, the regression value of all the variables is positively associated with the main factor (job satisfaction). The researcher also stated that SEM analysis reveals the perfect model fit and it is delivered with high factor loadings. This study compares the perspectives of pure-victims, both-offenders-and-victims, pure-offenders, and neither-offenders-nor-victims, and explains correlations between a student's role in cyber bullying and his or her views of the effectiveness of various cyber bullying prevention strategies. Students are currently experiencing the majority of cyber bullying instances outside of the school day, with the possible exception of text messaging via cellular phone. It is possible that with greater ease of access to Myspace and to the Internet in general with increasingly sophisticated cellular phones, we may see an increase in cyber bullying during the school day through the use of such phones. It is recommended that all districts that allow cellular phones on campus prepare for this potential by ensuring that cellular phone policies are enforced with consistent consequences for students who use their phones during the college day. It is also recommended that parents and students read and sign the school districts' policies regarding acceptable use of technology, and accompany these policies with literature for parents on cyber bullying. The results of the data analyses presented in this section are organized into answers to the inquiries about cyber bullying prevention strategies that school administrators, researchers, and legislators may be concerned about.

Conclusions

Even though cyber bullying research is vigorous and has already achieved a lot, it faces some notable challenges. First, the category of students that prevention strategies must deter is the offenders. The data revealed that the specific strategy that offenders' viewed as effective was the penalty that restricted his or her Internet and technology use. In general, clear rules with enforced penalties and ongoing prevention programs were perceived as effective by the offenders. Secondly, teens perceived the theme of taking away the offender's access to technology as an effective prevention measure, regardless of their roles in cyber bullying. In particular, definitional and measurement issues need to be more fully resolved.

Issues that need to be addressed more clearly include when the incident should be regarded as cyber bullying (with repetition) or cyber-aggression (a one off act); and the notion of power imbalance. A more standardized approach to measurement in this area is now urgently needed. A complication here is that the rapid historical changes in ICTs means that researchers need to continually modify instruments and be aware of new developments. These developments may have an influence on a

variety of aspects such as gender and age differences or distribution processes of the bullying material. There is the potential to make more use of young people themselves, not only as participants in focus groups, but also by involving them as researchers themselves, in the design of the study, and gathering the relevant data. Parents, schools, and social networking sites all are important stakeholders in preventing cyber bullying. Hence their cooperation is needed to for that purpose. Policies need to be in place at school, and the school should involve parents when a cyber-bullying issue arises.

Student of I MA Economics
Loyola College
Chennai

Abstract

Education is fundamental for achieving full human potential, developing an equitable and just society, and promoting national development. New Education Policy aims to ensure inclusive and equitable quality education. It also promotes lifelong learning opportunities for all. The Samagra Shiksha scheme is an integrated scheme for school education covering the entire gamut from pre-school to class XII. The main objective is to study about Samagra Shiksha for Tamil Nadu aligned with the recommendations of New Education Policy. It also analyse the growth performance and trend of selected major components of Samagra Shiksha for Tamil Nadu. Tools like Percentage Analysis, Trend analysis, Annual Growth Rate (AGR) and Compound Annual Growth Rate (CAGR), were used for the analysis. Effective implementation of Samagra Shiksha in Tamil Nadu can transform the education system to a better standard and lead to the development of a skilled and knowledgeable workforce. The NEP recognizes the importance for school education through Samagra Shiksha which in turn leads to economic growth and development.

Keywords: New Education Policy, Samagra Shiksha, Budget Estimate, Expenditure

Introduction

In India, the Union Cabinet recently approved the National Education Policy, paving way for transformational reforms in the school and higher education sector in the country. With transformation of primary education, NEP would achieve targets that outline an agenda for early childhood development in SDG 2030. NEP aims to transform India into a vibrant knowledge society and global knowledge superpower by making both school and college education more holistic, flexible, multidisciplinary, inclusive and aimed at bringing out the unique capabilities of each student. NEP aims to create a knowledge economy and aspires to combine traditional knowledge with modern thinking. 'Student Readiness' has been prioritized as the foundation of learning.

Samagra Shiksha

The Samagra Shiksha scheme is an integrated scheme for school education covering the entire gamut from pre-school to class XII. The scheme treats school education as a continuum and is in accordance with Sustainable Development Goal

for Education (SDG-4). The scheme not only provides support for the implementation of the RTE Act but has also been aligned with the recommendations of NEP 2020 to ensure that all children have access to quality education with an equitable and inclusive classroom environment which should take care of their diverse background, multilingual needs, different academic abilities and make them active participants in the learning process. The Cabinet Committee on Economic Affairs has approved continuation of the Centrally Sponsored Scheme- Samagra Shiksha Scheme which is an integrated scheme for school education sector from 1st April 2021 to 31st March, 2026 with an estimated outlay of Rs. 294283.04 crore. The Scheme is in accordance with Sustainable Development Goal for Education (SDG-4) and has now been aligned with the National Education Policy (NEP) 2020 to ensure inclusive and equitable, quality and holistic school education. The Samagra Shiksha scheme will play an instrumental role in translating the vision of National Education Policy 2020 at grass root level and building a strong foundation for an equitable and just society. Following are the selected major components of Samagra Shiksha taken for the study.

Monitoring Evaluation and Research (MMER):

Monitoring Evaluation and Research is a continuous management function to assess if progress is made in achieving expected results, to spot bottlenecks in implementation and to highlight whether there are any unintended effects (positive or negative) from an investment plan, programme or project and its activities.

ICT and Digital Initiatives:

The National Mission on Education through ICT (NMEICT) is a major initiative by the Ministry of Education to infuse digital education solutions to improve access to quality content and also improve learning outcomes.

Cluster Resource Center (CRC) / Block Resource Centre (BRC):

CRCs and BRCs are both types of resource centers that support government schools in India, with the following key differences between the two: Size and Scope: CRCs are smaller in size as compared to BRCs. A CRC covers a cluster of five to ten schools, whereas a BRC covers 75 to 100 schools. Block Resource Centres (BRCs) and Cluster Resource Centre (CRC) were established in each block of every district under SSA to provide in-service teacher training and to give regular academic assistance to teachers and schools, as well as to assist in community mobilization initiatives.

Training for in- Service Teachers:

The In-service Training Courses are to be organized by Ministry of Education. The main objective of organizing these In-service Training Courses is to enhance the

levels of competence, commitment and performance of teachers. In-service Training Programme aim at enhancing the effectiveness of the teachers' ability, hence the expected outcomes are achieved.

Financial Support for Teachers:

Government provides offer financial grants for teachers for attending workshop, seminars and conferences. These funds come from the federal government to private companies and charities, and they focus on a wide range of topics. Teaching grants can fund professional development, classroom enrichment, school supplies, field trips and almost anything else that goes into bettering the quality of education.

Statement of the Problem

Children are pillars for the future nation. As per the United Nations Millennium Development Goals (MDG) the country achieved universal primary education which was the 2nd MDG goal. The final MGD report found that the primary school enrollment rate was 91 percent in the developing regions and more girls are in school as compared to 15 years ago. In order to achieve the 4th SDG goal, India takes initiative to introduce Samagra Shiksha for the development of education. Hence the researcher made an attempt to study "An Overview of the Implementation of NEP in Selected Major components of Samagra Shiksha in Tamil Nadu."

Objectives of the Study

1. To study about Samagra Shiksha for Tamil Nadu aligned with the recommendations of New Education Policy.
2. To analyse the growth performance of selected major components of Samagra Shiksha for Tamil Nadu during the study period
3. To analyze the trend of selected major components of Samagra Shiksha for Tamil Nadu.

Scope of the Study

The study intends to find out the effectiveness of selected major components of Samagra Shiksha for Tamil Nadu that contributes towards development of school education which is aligned with the objectives of New Education Policy and the study would be considered as a base for further related research works.

Limitations

The study is confined to the period of 5 years and is based on secondary data and hence has its own limitations.

Literature Review

Nayana S. Ratnaparkhi et.al., (2023) conducted a study on A Comparative Analysis of Existing National Education Policy 1986 with New Education Policy 2020. The study explains the advantages and disadvantages of New Education Policy of 2020. By implementing the New Education Policy 2020, the Education system of India is estimated to match the International standards.

Saroj Kumar Ranjan et.al., (2023) focused on Implementation of New Education Policy on the Higher Education and its Opportunities. The study attempts to state that the students of Engineering degree programme can study Arts and Humanities and vice versa. The study also suggests National Testing Agency (NTA) for common entrance exams. The study hence concludes that all degree programmes will include occupational and soft skill development.

Mitali Gupta et.al., (2022) made a study on New Education Policy-Challenges Opportunities in Higher Education. The study explains how the National Education Policy (NEP) affects Higher education (i.e) three-tiered education system. The researcher also stated that the significance, issues, merits and demerits of New Education Policy (NEP).

N. Rameshkumar et.al., (2022) emphasized on Issues and Challenges of New Education Policy. The study concentrates on lack of integration, spoken English for government school students, difference between knowledge and skill taught, institutional restrictions, large pool of trained teachers and a issue of monitoring and supervision. The challenges considered were the Covid-19 lockdown and even before the government tax collections are dreadfully low and the fiscal deficit were considered to be a major issue.

Ajay Kurien et.al., (2020) studied about the topic Impact of New Education Policy 2020 on Higher Education. The paper emphasized about the New Education Policy announced by Government of India (NEP 2020) which was a change amidst all the negativities surrounding the world due to the challenges posed by Covid-19 pandemic. The study also suggested National Testing Agency (NTA) for conducting common entrance examinations for all Higher education institutions. The study also reveals the salient features of studying undergraduate degree for a duration of three or four years in one or more colleges with or without taking a break.

Research Methodology

The study is both descriptive and analytical in nature as it sketches the selected major components of Samagra Shiksha for Tamil Nadu that contributes towards development of school education which is aligned with the objectives of New Education Policy and also analyzes their growth performance. Data were collected from the published sources of Annual Work Plan & Budget (AWP&B) 2023-24 of

Samagra Shiksha for the State of Tamil Nadu, Government of India and the study covers 5 years from 2018-19 to 2022-23. Tools like Percentage Analysis, Trend analysis, Annual Growth Rate (AGR) and Compound Annual Growth Rate (CAGR), were used for the analysis.

Data Analysis and Interpretation

Table 1 - Monitoring Evaluation and Research (MMER) Budget Estimate and Expenditure (Rupees in Crore)

Year	Estimate	Expenditure	AGR (in %)	Percentage Analysis (in %)
2018-19	119.74	92.86	-	77.55
2019-20	153.48	102.78	10.68	66.97
2020-21	152.99	68.54	-33.31	44.80
2021-22	93.69	91.93	34.13	98.12
2022-23	126.68	100.34	9.15	79.21
		CAGR (in %)	1.56	

Source: Annual Work Plan & Budget (AWP&B) 2023-24 of Samagra Shiksha for the State of Tamil Nadu, Government of India.

The above table 1 shows the Budget Estimate and Expenditure of Monitoring Evaluation and Research (MMER) in Samagra Shiksha of Tamil Nadu. The budget estimate was high during the 2019-2020 with 153.48 crores and low with 93.69 crores during the 2021-2022. The Expenditure of the allotted funds was high during the period 2019-2020 with 102.78 crores and low during the period 2020-2021 in with 68.54crores. The highest and lowest Annual Growth Rate (AGR) was recorded in the year 2021-2022 and 2020-2021 with 34.13% and -33.31% respectively. The Compound Annual Growth Rate (CAGR) was found to be 1.56%. The percentage analysis shows that the effective usage of the estimated budget has been maximum in the year 2021-2022 with 98.12%. The Trend line of Budget estimate has a negative slope and Budget expenditure has a positive slope.

**Table 2 - ICT and Digital Initiatives Budget Estimate and Expenditure
(Rupees in Crore)**

Year	Estimate	Expenditure	AGR (in %)	Percentage analysis (in %)
2018-19	311.79	244.39	-	78.38
2019-20	171.67	77.82	-68.18	45.33
2020-21	54.29	53.12	-31.74	97.84
2021-22	170.63	28.72	-45.93	16.83
2022-23	440.9	314.37	994.60	71.30
		CAGR (in %)	5.17	

Source: Annual Work Plan & Budget (AWP&B) 2023-24 of Samagra Shiksha for the State of Tamil Nadu, Government of India.

Table 2 depicts the ICT and Digital Initiatives Budget Estimate and Expenditure in Samagra Shiksha of Tamil Nadu. The budget estimate was high during the 2022-2023 with 440.9 crores and low with 54.29 crores during the 2020-2021. The Expenditure of the allotted funds was high during the period 2022-2023 with 314.37 crores and low during the period 2021-2022 with 28.72 crores. The highest and lowest Annual Growth Rate (AGR) was recorded in the year 2022-2023 and 2019-2020 with 994.60% and -68.16% respectively. The Compound Annual Growth Rate (CAGR) was found to be 5.16%. The percentage analysis shows that the effective usage of the estimated budget has been maximum in the year 2020-2021 with 97.84%. The Trend line of Budget estimate and expenditure has a positive slope.

Table 3 - Cluster Resource Center (CRC) / Block Resource Centre (BRC) Budget Estimate and Expenditure (Rupees in Crore)

Year	Estimate	Expenditure	AGR (in %)	Percentage Analysis (in %)
2018-19	422.21	335	-	79.34
2019-20	426.55	359.14	7.21	84.20
2020-21	426.52	366.37	2.01	85.90
2021-22	425.71	415.82	13.50	97.68
2022-23	428.94	424.14	2.00	98.88
		CAGR (in %)	4.83	

Source: Annual Work Plan & Budget (AWP&B) 2023-24 of SamagraShiksha for the State of Tamil Nadu, Government of India.

Table 3 displays Budget Estimate and Expenditure of Cluster Resource Center (CRC)/Block Resource Centre (BRC) in Samagra Shiksha of Tamil Nadu. The budget estimate was high during the 2022-2023 with 428.94 crores and low with 422.21 crores during the 2018-2019. The Expenditure of the allotted funds was high during the period 2022-2023 with 424.14 crores and low during the period 2018-2019 with 335 crores. The highest and lowest Annual Growth Rate (AGR) was recorded in the year 2021-2022 and 2022-2023 with 13.50% and -2% respectively. The Compound Annual Growth Rate (CAGR) was found to be 4.83%. The percentage analysis shows that the effective usage of the estimated budget has been maximum in the year 2022-2023 with 98.88%. The Trend line of Budget estimate and the expenditure has a positive trend.

Table 4 - Training for In-Service Teachers Budget Estimate and Expenditure (Rupees in Crore)

Year	Estimate	Expenditure	AGR (in %)	Percentage analysis (in %)
2018-19	41.78	23.82	-	57.01
2019-20	63.71	38.46	61.46	60.37
2020-21	2.69	0	-100	0
2021-22	10.84	10.84	0	100
2022-23	4.53	4.17	-61.53	92.05
		CAGR (in %)	-29.43	

Source: Annual Work Plan & Budget (AWP&B) 2023-24 of Samagra Shiksha for the State of Tamil Nadu, Government of India.

Table 4 displays the Budget Estimate and Expenditure of Training for In-service Teachers in Samagra Shiksha of Tamil Nadu. The budget estimate was high during the 2019-2020 with 63.71 crores and low with 2.69 crores during the 2020-2021. The Expenditure of the allotted funds was high during the period 2019-2020 with 38.46 crores and low during the period 2020-2021 with no expenditure. The highest and lowest Annual Growth Rate (AGR) was recorded in the year 2019-2020 and 2020-2021 with 61.46% and -100% respectively. The Compound Annual Growth Rate (CAGR) was found to be -29.43%. The percentage analysis shows that the effective usage of the estimated budget has been maximum in the year 2022-2023 with 92.05%. The Trend line of Budget estimate and the expenditure has a negative slope.

**Table 5 - Financial Support for Teachers Budget Estimate and Expenditure
(Rupees in Crore)**

Year	Estimate	Expenditure	AGR (in %)	Percentage analysis (in%)
2018-19	1119.22	1014.67		90.66
2019-20	1276.94	1259.74	24.15	98.65
2020-21	1121.03	1030.07	-18.23	91.89
2021-22	1178.21	1178.21	14.38	100
2022-23	1033.04	1015.21	-13.83	98.27
		CAGR (in %)	0.01	

Source: Annual Work Plan & Budget (AWP&B) 2023-24 of Samagra Shiksha for the State of Tamil Nadu, Government of India.

Table 5 displays the Budget Estimate and Expenditure of Financial Support for Teachers in Samagra Shiksha of Tamil Nadu. The budget estimate was high during the 2019-2020 with 1276.94 crores and low with 1119.22 crores during the 2018-2019.

The Expenditure of the allotted funds was high during the period 2019-2020 with 1259.74 crores and low during the period 2018-2019 with 1014.67 crores. The highest and lowest Annual Growth Rate (AGR) was recorded in the year 2019-2020 and 2020-2021 with 24.15% and -18.23% respectively. The Compound Annual Growth Rate (CAGR) was found to be 0.011%. The percentage analysis shows that the effective usage of the estimated budget has been maximum in the year 2021-2022 with 100%. The Trend line of Budget estimate shows a negative trend whereas Budget Expenditure shows a slight positive trend.

Findings

- The computation from AGR shows that all the selected major components of Samagra Shiksha of Tamil Nadu have shown both increasing and decreasing rate of expenditure of budget estimated during the study period.
- From the CAGR calculation, all the components show the positive rate except Training for In-service Teachers.
- The study shows that the budget estimated has been mostly increasing in selected major components whereas it is decreasing in Training for In-service Teachers during the study period which shows the decline in the concentration of giving quality education.
- The study also states that the effective utilization of budget estimated has been maximized during the recent years which show there is importance given to the all the components of the scheme.
- The Trend line has been positive for most of the selected major components whereas Training for In-service Teachers Budget Estimate and Expenditure and Financial Support for Teachers and MMER Budget Estimate shows a negative trend.

Conclusion

Recognizing the importance of education as the most effective way of social justice, NEP calls for an investment of about 6% of GDP by the Centre and the States. In this way, NEP marks a monumental development in the country's human resource transformation that aims to disrupt the existing Indian education system with ambitious and generational reforms to meet 21st century skill agenda. The NEP 2020 recognizes the importance for school education through Samagra Shiksha and has outlined strategies to integrate effectively into the education system in India. Effective implementation of Samagra Shikshain Tamil Nadu can transform the education system to a better standard and lead to the development of a skilled and knowledgeable workforce that can contribute India towards economic growth and development.

Abstract

The New Education Policy announced by Government of India (NEP 2020) was a drinking change and fresh news amidst all the negativities girding the world due to the challenges posed by Covid- 19 epidemic. The announcement of NEP 2020 was purely unexpected by multitudinous. The changes that NEP 2020 has recommended were something that multitudinous educationists no way saw coming. Though the education policy has impacted school and college education equally, this composition mainly focuses on NEP 2020 and its impact on Advanced Education. This paper also outlines the salient features of NEP and analyses how they affect the being education system.

Keywords: *New Education Policy, Higher Education, Covid- 19*

Introduction

The National Policy on Education (NPE) is a policy formulated by the Government of India to promote education amongst India's people. The policy covers abecedarian education to sodalities in both pastoral and collaborative India. The first NPE was blazoned by the Government of India by Prime Minister Indira Gandhi in 1968, the alternate by Prime Minister Rajiv Gandhi in 1986, and the third by Prime Minister Narendra Modi in 2020. The National Education Policy 2020(NEP 2020), which was approved by the Union Cabinet of India on 29 July 2020, outlines the vision of India's new education system. The new policy replaces the former National Policy on Education, 1986. The NEP 2020 enacts multitudinous changes in India's education policy. It aims to increase state expenditure on education from around 4 to 6 of the GDP as soon as possible.

Objectives of the Study

The primary ideal of this research is to study the impact of New Education Policy 2020 on advanced education. The study also outlines the salient features of NEP and analyses how they affect the being education system.

Research Methodology

This exploration is a descriptive study. The necessary secondary data was collected from varied websites including those of Government of India, magazines, journals, other publications, etc. This data was also anatomized and reviewed to arrive at the consequences and conclusions.

II. Salient Features of NEP Related to Advanced Education

The new NEP has been introduced with intent to formalize changes in the system from academe position to council/ university position. Some of the salient features are

- **Single Nonsupervisory Body for Advanced Education**

The NEP aims to establish Advanced Education Commission of India which will be the single nonsupervisory body except for legal and medical education.

- **Multiple Entry and Exit Programme**

There will be multiple entry and exit options for those who wish to leave the course in the middle. Their credits will be transferred through Academic Bank of Credits.

- **Tech- Rested Option for Adult Knowledge Through Apps, Television Channels**

Quality technology- rested options for adult knowledge similar as apps, online courses modules, satellite- rested television channels, online books, and ICT- equipped libraries and Adult Education Canters,etc. will be developed.

III. Detailed Analysis of Impact of NEP on Advanced Education

- **Regulatory System of Higher Education**

A significant change in NEP 2020 is the proffer to set up the Advanced Education Commission of India (HECI), as an marquee body for advanced education, banning medical and legal education. This will generally bring out a question that what will be to the present UGC and AICTE? HECI is aiming at reforming the advanced education sector; the Bill will separate the Academic and Funding aspects of the sector. According to the new Bill, HECI not have any fiscal powers.

- **Graded Accreditation and Graded Autonomy**

The generality of “commission and autonomy to introduce ” is one of the vital features in NEP 2020 which supports a “ phasing out ” strategy from Affiliated Colleges to Autonomous Institutions. The increased harshness offered to independent institutions also gives advisable in class enrichment. The high quality, range, and harshness of the NTA testing services will enable utmost universities to use these common entrance examinations rather than having hundreds of universities each contriving their own entrance examinations thereby drastically reducing the burden on scholars, universities and sodalities, and the entire education system.

- **Internationalisation At Home**

NEP 2020 also allows foreign universities and sodalities to come to India and this brings out a challenge for the native institutions to ameliorate the quality of education handed by them. India has one of the largest networks of advanced education systems in the world, with further than 900 universities and 40,000

sodalities. But GER(Gross Registration rate) of India in advanced education is 26.3, which is significantly low when compared to other BRICS countries like Brazil(50) or China(51), and truly much lower when compared with European and North American nations which would be further than 80.

- **Holistic and Multidisciplinary Education**

The NEP 2020 claims that, a holistic and multidisciplinary education would aim to develop all capacities of mortal beings intellectual, aesthetic, social, physical, emotional, and moral in an intertwined manner. Such an education will help develop well- rounded individualities that retain critical 21st century capacities in fields across the trades, humanities, languages, lore's, social lore's, and professional, specialized, and vocational fields; an heritage of social engagement; soft chops, similar as communication, discussion and debate; and rigorous specialization in a chosen field or fields.

- **The Structure and Lengths of Degree Programmers**

In the terrain of the National Education Policy 2020 scheme, any undergraduate degree in any institution will be of duration of three or four times. This will be helpful for those individualities that might have to leave the course mid- way. They can start the course latterly on from where they left off and not start from the morning formerly again. Indeed still NEP 2020 says that Advanced education institutions will be given the freedom to start PG courses there may be some difficulty in designing One Time PG Degree for scholars who have completed 4 Year UG Degree and a Two Time PG Degree for scholars who have completed 3 Year UG Degree.

Conclusion

The main problems faced by the Indian advanced education system includes enforced separation of qualifications, early specialization and pupil streaming into defined exploration areas, lower focus on exploration at most universities and seminaries, and lack of competitive peer- reviewed academic exploration backing and large related universities leading to low situations of undergraduate education. Holistic and multidisciplinary education should strive in an intertwined way to meliorate all mortal capacities-internal, artistic, social, physical, emotional, and moral. Overall, the NEP 2020 addresses the need to develop professionals in a variety of fields ranging from Agriculture to Artificial Intelligence. India needs to be ready for the future. And the NEP 2020 paves the way ahead for numerous immature pushing scholars to be equipped with the right skill set.

Abstract

In the middle of all the unfavourable news that the Covid-19 pandemic challenges have brought about, the Government of India's newly announced education policy was a welcome change and breath of fresh air. Many people were utterly shocked when NEP 2020 was revealed. Numerous educators were surprised by the modifications that NEP 2020 has suggested. Even while the education policy has had an equal impact on K-12 and postsecondary education, this article primarily focuses on NEP 2020 and its effects on higher education. In addition, the key NEP components are described, along with an analysis of how they impact the current educational system.

Introduction

A just and equal society, the advancement of national progress, and the realization of all human potential all depend on education. In terms of economic progress, social fairness and equality, scientific advancement, national integration, and cultural preservation, ensuring that everyone has access to high-quality education is essential to India's sustained rise and leadership on the international arena. The best strategy for advancing our nation's tremendous potential and resources for the benefit of the person, the society, the nation, and the world is to provide universal access to high-quality education. Over the following ten years, India will have the greatest percentage of young people in the entire world.

The Following Categories Can be used to Study the Effects of New National Education Policy:

Consolidation on a Large Scale will Benefit Reputable Schools and Universities:

By cutting the number of higher education institutions in the country by about one third, institutional restructuring and consolidation will have a substantial impact on their value volume. Although the policy seeks to establish higher education institutions with enrollments of 3000+, it is important to keep in mind that the average college enrollment in India now stands at 693 (AISHE 18-19, Ministry of Human Resource Development, KPMG in India Analysis). To encourage excellence, this new policy places a greater emphasis on autonomous colleges. Out of the almost 40000 colleges in India, less than 1000 are autonomous. This exhibits numerous mergers and partnerships.

Focus on Transdisciplinary Education:

The Indian higher education system is distinguished by single-disciplinary islands of excellence such as IIT, IIM, and AIIM. The new national education policy emphasises interdisciplinary education by aiming to establish big multidisciplinary universities known as multidisciplinary education and research universities (MERUs) similar to those found in the United States of America and the United Kingdom. MERUs will give access to quality education in a variety of fields for all segments of society, including all districts and rural areas across the country. Students will be able to choose from a variety of areas of interest as a result of this

Faculty Shortages and the Need for Faculty Quality Improvement:

The present faculty student ratio in our country after the Right to Education Act is 1:30, which should be improved to 1:20, which is considered a healthy ratio. This revision will result in the appointment of at least 500000 new academic members for the system. In addition to addressing faculty shortages, the quality of faculty must also be addressed. By 2022, a set of national professional standards for teachers (NPST) will be developed that will govern all areas of teacher career management, including tenure, continual professional development efforts, pay, promotions, and other recognitions. The strategy also mentions setting performance standards for instructors that clearly define the job of the teacher at various levels of experience and skills.

Activating Research

The National Research Foundation (NRF) proposed by the NEP is likely to create a dedicated focus on quality research, including lightening research funding by making it competitive and improving funding process efficiency to have a more targeted approach to funding research initiatives. Students will be introduced to research activities at a young age.

Improving Access and Equity with Odl and Online Programmes:

ODL enrolls approximately 40 lakh students, or 11% of all students enrolled in higher education in India. The pandemic issue also contributes to the improvement of the ODL system, which is expected to witness a large increase in the next years, allowing India's Gross Enrollment to double.

Impact on Students:

The NEP 2020 will provide students with additional learning options. Its greatest impact would be a shift in the learning environment and the learning process for

pupils. The new education policy will:

- Increase the emphasis on students' skill development and competency growth.

- Prepare pupils for the future by developing 21st-century skills.
- Encourage pupils to pursue both academic and nonacademic interests.
- Provide a variety of learning options for pre-primary, open, and distance-learning students.
- Make counselling and other services available to students.

As a result, this new national education strategy will provide several exit options for mid-term dropout students with 1 year of training or 2 years of Diploma. Students' curiosity and perplexity will develop as there are so many expanding opportunities. As a result, individuals are advised to seek the advice of experts and professionals when making career decisions.

The Teacher is the first expert the students encounter. As a result, the Indian government has something to give teachers as well.

Conclusion

Practical learning takes precedence over theoretical learning. There is no restriction on choosing any subjects/streams. Education for a new generation of learners must essentially deal with the increasing dematerialisation and digitization of economies, which necessitates an entirely new set of competences in order to keep up.. India must be prepared for the future. And the NEP 2020 provides the road for many young aspiring students to gain the necessary abilities. The new education policy has a commendable objective, but its strength will be determined by its ability to properly integrate with other government policy initiatives such as Digital India, Skill India, and the New Industrial Policy, to name a few structural transformation. As a result, policy links can ensure that education policy confronts and learns from Skill India's experience in interacting more dynamically with the corporate sector to build vocational education curriculum in order for it to be successful.

MODERN TRENDS IN EDUCATION: NEED OF NEW EDUCATION POLICY

Mangala Tomar

G.S. College of Commerce

Wardha, Maharashtra

India

Abstract

Education is a word derived from the Latin word educere, educatum, and educare which expresses the meaning of something to learn, to know, and to lead out. In today's world, education is seen from this point of view. The educational system has brought about a dramatic change in the world of modernization to technological advancement despite the modern education trends' pros and cons. This trend has influenced the educational community a lot in many ways both positively and negatively. The article below will discuss some thoughts on technologically improved modern education trends pros and cons.

Modern Trends in Education

Modern education is aimed at educating an individual academically and professionally with an overall personality development to cope with the global digital world. Next, the learning is focused on STEAM education which means science, technology, engineering, art, and mathematics are the key areas and are taught using different types of learning strategies. As digitalization has taken the lead role in education among the stakeholders like students, teachers, parents, and school managements some schools and universities have started formal digital curricula. Learning has become dependent on technology and on line, virtual learning are the trend of today's learning system. The modern education trends pros and cons are categorized in terms of their use in two ways, in the first part the advantages of using it are discussed below.

The world's education has been renovated to adapt to an ever-changing society. As a result of the Covid-19 pandemic, the educational scenario has changed unpredictably. To remain and adapt to the crisis, there are new things that take place in the world of educational trends. While some global trends keep their value, some are new trends and future trends. So, today's post will give you an overview of popular educational trends from 2023 to 2025, based on reliable resources. Understanding them benefits both teachers and learners. Since they can create suitable learning environments to convey and absorb knowledge along with skills in the most effective way.

Advantages of Modern Education

There has been a reformation in the field of teaching and learning for many decades and at present, style of learning has become completely student-oriented rather than a teacher-oriented and memorizing method of learning. Further accessibility and availability of education is seen to reach anyone living even in the remote corner of the world. This is a positive development and educators and education providers make the utmost use of this booming trend to benefit the educational community. Though the modern education trends pros and cons come with its own arguments, the following paragraphs in this article discuss the benefits of innovative trends in education in terms of teaching and learning.

Preparing Students with Practical Skills for Future

Firstly, the main advantage is that the educational curriculum is designed in a way to prepare the students to face any challenges and problems that they encounter in their day-to-day lives which means students are prepared to handle 21st century skills intelligently. In education more than theoretical, practical skills development are given more weightage. Students are trained to develop analytical, logical and problem solving skills. The skills and knowledge are developed right from the school in modern education due to the advancement of science and technology.

Easy Accessibility of Learning:

Learning is accessible to all due to the advancement of technology through virtual and online platforms. The other accessibility is about availability of information regarding the classes in the form of videos, ebooks, enotes, recorded classes, offline materials and so on. In the past it was not the situation because the learners were left with only option of attending class -room led classes and only people who were convenient and comfortable could enjoy the benefits of learning easily by attending live classes available in their nearest location. Today the accessibility of learning to all regardless of time and place has been made possible in spite of the modern education trends pros and cons.

Easy Availability of Information:

Students and teachers get access to a huge amount of information from the internet through particular websites, youtube channels and social media. There are wide platforms to share information through virtual/online classes from experts and to get one to one lessons for free there is a free online courses in MOOC - the massive open online courses. Information for learning is not confined within the particular place or teachers instead teachers, students from different institutions/universities/schools share their ideas all over the world.

Developing Global Skills

Modern education emphasizes over developing global skills technically and socially in an interconnected world of globalization. The whole world has shrunk to a global village where the people depend each other for study, work, business, life and so on. In the present scenario it is common that the people have to live and work using world technologies in the society of diverse culture and among multi nationalities. Therefore thinking, socialising, learning and working are the vital global key skills to be learned by the young learners.

Focus on Steam Education

The focus on STEAM education is to prepare for the global education workforce. The subjects in the STEAM educational ideas are not taught separately, instead they are taught through integrated lessons accompanied by the technology and coding is also a vital part of it. These subjects in real life are interlinked and so students after learning them from school can use them in their real life at a basic or fundamental level. The aim of STEAM education is to create the interest at an early age among the young learners to learn the focus subjects of STEAM education. To enhance it more they can choose the specified learning through higher studies options.

The most important benefits of STEAM education on learners are

- It develops critical thinking
- Fosters independent thinking
- Improves power of observation
- Hands on experience with real projects and collaborative learning approach

Learn to Solve Problems with their Knowledge of Learning

Adoption of Different Modern Methods of Teaching and Learning:

Compared to the past where teaching was based on teacher's interest and style, today the education sector is seen focusing the interest and curiosity of students. Education specialists plan and adopt more and more new methods of teaching and learning and customize them according to the convenient of learners. As evolution in education takes place, the education providers look forward to most trending and attractive way of teaching. To cope with the advancing technology it is important to blend the methods of teaching and learning with digital technical tools and services.

The following are the different student- centered modern methods used in teaching and learning;

E - Learning

Elearning has become the most popular trend in modern day education. This is the modern day's distance learning where students are left with many options to

learn variety of lessons, get information and select courses to learn according to their own pace. For education providers as well for learners, this has become the cheap and best option to connect to each other to deliver the classes and this trend seem developing day by day.

Hybrid Learning

This is about students learning half of their class at physical classroom and rest online classroom. Even Though it requires students' presence during a pandemic, the online classes provided were very helpful to reach out to the students living in any remote corner of the world.

Gamification

It is the method used in education with the help of gaming elements in a non-game context. To make learning more interesting and to get the desired output from students, gamification is used with the help of digital tools. This helps in increasing the interest of the subject and skills like social interaction/problem solving skills are developed. This has a positive impact on engagement and collaboration of students by making learning more efficient.

Disadvantages of Modern Education Trends

The modern education trends pros and cons are like both sides of the coin, the other side of it is about a few disadvantages of modern education.

Digital Learning is Expensive

The latest digital education trend is expensive to use for learning but it will be a great opportunity if it is provided free of cost. It becomes expensive when there is a need to set up the connection facilities and own devices to use it. And sometimes only paid versions of it to come with ample benefits in terms of information and certificates. Further, to do courses and access information outside of one's home country also seem to be expensive. There are many modern education trends pros and cons in terms of its expense because the cost of connectivity is high but it should be made affordable for maximum learners to get its benefit to the fullest.

Influence of Foreign Languages:

The new trends in education have a negative impact on regional languages. Schools/universities/institutions use the most commonly used foreign language English as the medium of instruction. Even the technologies come on the basis of English so it becomes necessary to use the English language in the teaching and learning process. Therefore, the students are not able to use their regional language effectively in speaking, reading, writing, and listening. They lack the proficiency to use it even at the basic level.

Lack of Social Interaction:

Modern education which is technology based has affected social interaction among students a lot. They feel less motivated and lack peer interaction and motivation. Sometimes they feel bored as there is not much communication between teachers and peers. Studies proved that overuse of mobiles, tabs, and laptops have reduced the span of attention of students.

In Equality in Education:

There are controversies in modern education trends pros and cons with regard to inequality in providing quality education in the present scenario. Education is a universal need and its transformation and benefits should be impartial but there arises an inequality among the high-income organizations of learning and low-income group. This can be tackled only with the help of funding from the government and sponsors. Since the infrastructure, upgradation, and maintenance require an estimation for long-term cost some education providers seem to discontinue their services so there comes a gap where students studying the same course have different updated and outdated information.

Over-Dependent on Technology Reduces Intellectual Skills:

Students if more dependent on technology will ruin their intellectual skills like cognitive, problem-solving, and critical thinking skills. For example, instead of using mathematical skill for calculation, they tend to use calculators from tabs, and mobiles and instead of recalling or using general knowledge about any topic they immediately use internet services like google, youtube, and other sources of information. This attitude of using technology will not have any positive impact on learning instead it will negatively affect the general capable skills so there should be restrictions on using the devices. The over-dependent on technology is viewed as both modern education trends pros and cons so sticking on to pros is the wise use of this blessing of science.

The Distraction of Students in and out of the Classroom:

After the prolonged use of online sources for learning, students will have a tendency to use social media and video games for entertainment and relaxation. When they spent more time on the device they get distracted from the environment they are and they do not feel to pay attention to anything around them. They do not feel anything so much interesting like spending time with dear ones, or doing physical activity and doing any active hobbies. This affects them physically and mentally so this should be controlled as screening modern education trends pros and cons is the most vital part before we adopt any new innovation.

Lack of Computer Literacy:

One of the arguments for modern education trends pros and cons is about the current trend in education which demands teachers to be efficient users of computers so as to teach their students which experts tend to feel as having merits and demerits. There are situations where teachers find it difficult to manage technical issues during course delivery. Regardless of computer teachers, all subject teachers are expected to be excelled in computers and keep updating with the new versions of their technological tools used for teaching. This means all teachers need to be IT experts otherwise it may affect the smooth flow of the class due to technical difficulties. It is beneficial to teachers to develop their updated knowledge but it is challenging for some teachers.

Difference Between Modern Education and Traditional Education

Modern education is based on science and technology and is student-centered while traditional education was rote learning and learning to just survive which is teacher-centered.

Importance of Modern Education

Modern education prepares students for real-life situations and is able to cope with the changing advanced world.

Modern Education More Effective

Learning all the subjects with inter connected lessons and using technology as the core for all learning makes it more effective.

Conclusion:

As any situation should be discussed from two points of view, the modern education trends' pros and cons both should be debated to know the weightage of each. This emerging trend is moving at a faster pace all over the world and it is time to realize the practical approach and feasibility and make learning more productive. To put it in a nutshell, after discussing the modern education trends' pros and cons, it is understood that the advantages outweigh the disadvantages because the shortcomings can be easily overcome with some restrictions and planning by understanding the effective use and importance of the innovations in academic development.

SIGNORA'S KNOWLEDGE ON GOVERNMENT SCHEMES FOR SCHOOL CHILDREN WITH SPECIAL REFERENCE TO GIRLS

Ms. R. Vishnupriya

Dr. J. Lily

*Professor
Department of Commerce with
Information Technology
Dr.NGP arts and Science College, Ciombatore*

Abstract

The National Education Policy-2020 (NEP 2020) is a significant initiative that aims to improve women's literacy and curb gender-based illiteracy. This study examines the awareness level of married women regarding government schemes for school children, specifically those benefiting girls. The analysis reveals a significant knowledge gap among married women, hindering their utilization of these schemes for their children's education. Factors such as social discrimination, gender inequality, domestic responsibilities, and limited facilities contribute to challenges in women's education in India. The National Education Policy-2020 addresses these issues, and the government has implemented schemes like Pradhan Mantri Awas Yojana and Samagra Shiksha. The study emphasizes the need for targeted outreach, information dissemination, and collaboration to improve awareness among married women. Enhanced awareness can lead to improved educational outcomes, gender equality, and overall societal development.

Keywords: Married-women, Gender, Government Scheme, discrimination, Development

Introduction:

Education is instrumental in bolstering the spirit of women to carry out their continual fight against exploitation and withstand social evils. The Indian nation is exasperated utterly to witness the appalling state of women education even after 75 years of Independence. For engaging women at all levels of public life and utilizing their talent for the nation and to protect them from all forms of injustice, the nation must first and foremost ensure hundred per cent quality education for women. Social discrimination, gender inequality, occupation of girl child in domestic chores, economic exploitation, and early-age marriage are some of the factors which have greatly affected women education in India. Other reasons that are commonly mentioned for girls' drop-out rates in the primary and middle school level are: lack of motivation, engagement in the family business or farm, engagement in household work. Apart from the above reasons, non-availability of educational centers in close proximity, unsafe means of travel, and lack of proper toilets are additional reasons for girls' drop-outs. In low income families the presence of younger siblings affects a

girl's education negatively, in terms of gross attendance, time spent on learning activities, learning performance, etc.

For addressing the issue we need a comprehensive, well-concerted and very pragmatic approach nationwide. Against such a backdrop the National Education Policy-2020 (NEP 2020) was approved by the Union Cabinet of India on 29 July 2020, which outlines the vision of new education system of India. The National Education Policy -2020 has been designed by the K Kasturirangan Committee to deal with various issues aggravating educational scenario across India and to curb the menace of women illiteracy. The policy envisions equitable and inclusive education for all, with special focus on children and youth, especially girls, from socially and economically disadvantaged groups. The policy, which has come to the fore recently, is expected to usher in a new era in women education. The policy is a comprehensive framework for elementary education to higher education as well as vocational training in both rural and urban India. It is pointed out that the policy does not pronounce much on the gender issues, yet certain proposals made in the policy may be expected to bring about remarkable changes into the bleak scenario.

The Government of India has taken various steps to ensure empowerment of women through their social, educational, economic and political uplifting through various schematic interventions. While the schemes implemented by the Government like Pradhan Mantri Awas Yojana (Urban & Rural), the National Social Assistance Programme (NSAP), the initiatives like Samagra Shiksha, Scheme of National Overseas Scholarship, Babu Jagjivan Ram Chhatrawas Yojna, Swacch Vidyalaya Mission, etc. ensure that schools are girl-friendly especially for vulnerable sections of society and have adequate facilities in place to fulfil their special requirements. Hence, the researcher is made an attempt to study the awareness of married women towards the various schemes provided by government schemes for girl children at their schools.

Statement of Problem

The level of knowledge among married women regarding government schemes for school children, with a particular emphasis on schemes benefiting girls, is not well understood. There is a lack of information regarding the extent to which married women are aware of these schemes and their ability to access and utilize the available benefits for their children, specifically daughters. This knowledge gap hinders the effective implementation and impact of government initiatives aimed at empowering girls in education. Therefore, there is a need to assess the awareness, understanding, and utilization of government schemes among married women, specifically focusing on their knowledge and engagement with schemes related to school children, particularly girls, in order to identify potential barriers, improve outreach efforts, and enhance the effectiveness of these initiatives.

Objectives of the Study

1. To study the socio demographic factors of the respondents
2. To identify the awareness level of the respondents on various schemes given by government.

Research Methodology

Sample Size: 50 Signora's (Married Women) were selected from the specified region

Sampling Technique: Snowball Sampling Technique has been used to select the samples.

Limitations:

- The geographical area is restricted to Coimbatore, hence the opinions may vary
- The number of the respondents are limited to 50

Review of Literature

Eknath-Mundhe(2021), in his study "The study on issues and Challenges of women empowerment in India", This paper aimed to analyze the state of women empowerment in India and shed light on its problems and challenges. Women's empowerment had become one of the most important concerns of the 21st century. Since the beginning of the twentieth century, their position had gradually and slowly changed. The study found that women in India were relatively underdeveloped and, despite many government efforts, were somewhat inferior to men. Gender gaps existed regarding access to education and employment. The power of decision-making at home and the freedom of movement of women varied greatly based on their age, education, and employment status. It was found that the acceptance of unequal gender norms by women still prevailed in society. Rural women were more likely to experience domestic violence compared to urban women. The gender gap was also significant in political participation. The study concluded that access to education and employment were the primary enabling factors, although the focus on goal attainment largely depended on people's attitudes towards gender equality.

Dillip Kumar Mallik (2021), in his research articles, "Women Empowerment and Gender Equality: A Study of Indian Constitution", The concept of women's empowerment was broadly understood as a process that increased women's "options, choices, control, and power" through their own agency. Women's empowerment was recognized as both a fundamental right and a transformative tool with far-reaching effects in achieving progress across social and economic development. It was well-established that women's empowerment played a pivotal role in realizing gender equality, reducing poverty, and attaining other

internationally agreed-upon development goals. Through women's empowerment, the underlying structural factors, social determinants, and unequal power relations that perpetuated widespread gender inequalities were transformed, leading to improved access to opportunities and resources for women in political, economic, social, and cultural spheres. Given that women's empowerment was a dynamic and context-specific process influenced by various intersecting variables, it remained a latent and unobservable phenomenon. The central focus of this paper was to examine how women were empowered within the framework of the Indian Constitution. Additionally, the paper highlighted the existence of gender equality in India. However, it also discussed several obstacles and challenges that hindered women's empowerment and the achievement of gender equality.

Table No : 1 Demographic Factors of Signora's of Coimbatore

Source	Factors	No. of Respondents	Percentage
Gender	Female	50	100
	Total	50	100
Age	15 yrs – 20 Yrs	15	30
	21 Yrs – 25 Yrs	15	30
	31 yrs -35 yrs	20	40
	Total	50	100
Marital Status	Married	50	100
	Unmarried	-	-
	Total	50	100
Qualification	No formal Education	5	10
	SSLC	10	20
	Higher Secondary	10	20
	Under Graduates	25	50
	Total	50	100
Annual Income	1 lakh- 2.5 lakh	25	50
	2.5 lakh- 5 lakh	15	30
	5 lakh & more	10	20
	Total	50	100

Source Primary Data

From the analysis the above table shows that 100% of the respondents are female, 40% of the respondents are between 31 years - 35 years, 100% respondents are married women, 50% of the respondents are under graduates, 50% of the respondents are earning between 1 – 2.5 lakh as the annual income.

Table No: 2 Awareness Level of Signora's Knowledge Towards the Following Ministry of Women and Child Development (MWCD) for Empowerment of Women and Girls

MWCD Schemes Available		Aware	Not Aware	Total	Average Score	Average Rank
POSHAN Abhiyaan	No	23	27	50	2.84	5
	Score	115	27	142		
One Stop Centre(OSC)	No	18	32	50	2.44	8
	Score	90	32	122		
Pradhan Mantri Matru Vandana Yojana (PMMVY)	No	24	26	50	2.92	4

	Score	75	35	110		
Schemes for Adolescent Girls(SAG)	No	21	29	50	2.68	6
	Score	105	29	134		
Swadhar Greh Scheme	No	19	31	50	2.52	7
	Score	95	31	126		
Ujjawala Scheme	No	13	37	50	2.1	10
	Score	65	37	102		

Source: Primary Data

It is found from the above table that, the young respondents have higher rank on “Beti Bachao Beti Padhao (BBBP) Scheme” Scheme followed by “Anganwadi Services Scheme” when compared to “Ujjawala Scheme” and “Child Protection Services Scheme”.

Conclusion

In conclusion, the awareness and understanding of government schemes for school children, with a specific emphasis on married women's knowledge, is a crucial area that requires attention. The analysis indicates that there is a significant gap in the knowledge and awareness of these schemes among married women, particularly regarding schemes targeted at girls' education and empowerment. This lack of awareness hinders the effective implementation and utilization of the available benefits for their children, specifically daughters.

DIGITAL IMPLICATIONS OF THE NATIONAL EDUCATION POLICY (NEP) IN THE CONTEXT OF HIGHER EDUCATIONAL INSTITUTIONS IN KERALA

Dr. M. Dhanabhakym

*Professor, Department of Commerce
Bharathiar University
Coimbatore*

K. P. Fahad

*PhD Research Scholar
Department of Commerce
Bharathiar University*

Abstract:

The Indian government's New Education Policy (NEP) 2020 aspires to transform the current educational system by integrating technology. This strategy promotes innovation in higher education institutions in Kerala, a state noted for being at the forefront of digitization, by emphasizing personalized and interactive learning experiences, virtual classrooms, and e-learning resources. However, overcoming obstacles like infrastructure, digital literacy, and cyber-security worries is crucial for digitalization to succeed, especially in rural areas. The study examines the digital implications of NEP in Kerala's higher education using a qualitative technique, theoretical insights, and existing literature. It makes use of four important theoretical frameworks: the Digital Divide and Digital Inclusion Framework, the Community of Inquiry Framework, the Diffusion of Innovations Theory, and Technological Pedagogical Content Knowledge (TPACK). In conclusion, the digital integration in NEP offers Kerala's higher education system hope for positive changes. To establish an effective digital learning experience, infrastructure issues, the digital divide, and issues with digital literacy must be addressed. The study's findings provide insightful information that will help educators and politicians create a successful digital learning experience.

Keywords: *Digital Integration, TPCAK Framework, COI Framework, Digital Divide and Digital Inclusion, Diffusion of Innovation theory*

Introduction:

The New Education Policy (NEP) 2020 is an approach by the Government of India in transforming the entire face of the traditional educational system in the country. The new policy highly emphasizes on the use and utilization of digital platforms with a view to make necessary reforms in the educational sector and also to overcome the challenges in the traditional educational system. The benefit will be high worth for the higher educational institutions in the state of Kerala, which is in forefront of digitalization in the country.

The digital integration in the policy is based on two key principles- personalized learning and interactive learning. It is expected that this integration would bring revolutionary changes in the form of virtual classrooms, e-learning materials and online learning platforms in the higher educational sector in the state of Kerala.

Incorporation of such changes help the higher educational institutions of the state in switching towards an innovative approach of learning.

The convergence of the New Educational Policy and digitalization nurture the thinking ability, problem-solving skills and creativity among the students as well as teachers. Ahead of imbibing these changes, it is important to consider the limitations in the digital facets in the higher institutions of the state. Key consideration should be addressed to the concerns like well developed infrastructure, equitable access to technology, digital literacy, cyber security and other related concerns in the state.

The current study entails on the digital implications of National Education Policy in the context of higher educational institutions in Kerala. The qualitative approach of the study, theoretical insights and existing literatures provide a clear-cut picture of the impact of digitalization in the state's higher education sector.

Review of Related Literature:

As discussed earlier, the integration of digitalization in NEP emphasizes on personalized learning and interactivity. The role of digital learning and online platforms in student engagement and self-directed learning is well highlighted (Rajan, 2020 & Kumar, 2021)^{1, 2}. However, it is important to note that the success of digitalization depends on the extent to which barriers to infrastructure and digital literacy are overcome, especially in rural Kerala (Gupta, 2020)³. Technological potential in transforming the educational system is highly considerable. Adoption of Learning Management System, virtual classrooms and multimedia resources pioneer towards 'Any Time Any Where Learning', which bridge the gap between traditional methods of teaching and modern methods of teaching (Menon et.al., 2019 & Nair and Pillai, 2021)^{4, 5}. Accessibility and Equity are the two key components in molding digitalized learning experience. The importance of equal opportunities for students from different socioeconomic backgrounds and equipment of digital literacy are crucial in digital equity (George et.al, 2020 & Thomas, 2021)^{6, 7}. On the other side, Change resistance and reluctance towards digital technology are considered obstacles for successful digital integration. While considering the evaluation aspect of digital learning experience, assessment methods and use of artificial intelligence ensure the valid implication of digitalized learning (Pillai and Kumar, 2020 & Menon and Nair, 2022)^{8, 9}. Innovative practices like gamification, virtual reality and augmented reality develop creativity, critical thinking and problem solving skills among students through better learning experiences (Abraham et.al., 2021 & Joseph and Thomas, 2022)^{10, 11}.

Theoretical Framework:

Technological Pedagogical Content Knowledge:

The dynamic interaction of technical knowledge (TK), pedagogical knowledge (PK), and content knowledge (CK) in the context of teaching and learning is

highlighted by the TPACK concept put forth by Mishra and Koehler (2006). This approach evaluates how educators effectively incorporate digital technology to improve pedagogy, modify content delivery, and meet the needs of various learners by applying TPACK to the digital implications of the NEP in higher education. This theoretical lens aids in identifying best practices and potential difficulties in using technology for educational aims by investigating the junction of several knowledge domains.

Diffusion of Innovations Theory:

The adoption and dissemination of novel concepts or technologies within a social system are examined by Rogers' (1962) Diffusion of Innovations hypothesis. This theory aids in comprehending the variables impacting the acceptance and spread of digital education practices in higher educational institutions in Kerala within the context of the NEP. It takes into account how important stakeholders, including educators, administrators, students, and lawmakers, can affect how digital technologies are embraced and integrated into society. This theory's analysis of the spread of digital education projects reveals information on adoption rates and potential implementation challenges.

Community of Inquiry (COI) Framework:

The Garrison, Anderson, and Archer (2000) framework for communities of inquiry looks at the factors that go into building a successful and relevant online learning community. This approach helps in evaluating the quality of digital learning experiences in higher educational institutions in Kerala in the light of the digital implications of the NEP. This theoretical lens assesses the level of engagement, cooperation, and learning outcomes in digital learning environments by examining the existence of cognitive presence, social presence, and teaching presence.

Digital Divide and Digital Inclusion:

The notion of the "Digital Divide" looks at how different socioeconomic and geographic groups access digital technologies and the internet differently. In addition to this idea, the idea of "digital inclusion" concentrates on measures and laws meant to lessen these discrepancies and provide fair access to online resources. Understanding the digital divide and digital inclusion within the context of the NEP aids in addressing issues with accessibility and digital equity in Kerala's higher education institutions.

Methodology of the Study:

The current research has adopted a qualitative research design. The implication of digitalization in the NEP in higher educational institutions of Kerala was studied qualitatively through direct interviews and case studies. Heads of Departments, faculties and students from university departments and affiliated colleges in Kerala were selected according to the convenience of the researcher. The study combines qualitative research design, theoretical insights and existing literatures thereby using a mixed methodology in drawing conclusion for the digital implication in the New Educational Policy.

Discussion:

This section comprises of the theoretical insights, existing literatures and qualitative analysis of the study. The theoretical insights of the study discussed about four important theoretical frameworks related to the digitalization in the higher education system. The key findings extracted from these frameworks in the context of NEP in higher educational institutions of Kerala are as follows:

- Application of Technological Pedagogical Content Knowledge (TPCAK) framework assesses the integration of digital technology in enhanced pedagogy, content delivery and ability to cater diverse learner needs.
- Diffusion of Innovations theory discusses about the factors influencing adoption and diffusion of digitalization in the academic institutions.
- Community of Inquiry Framework aids in assessment of quality of digital learning experiences in the academic institutions.
- Digital Divide and Digital Inclusion helps in overcoming the challenges like accessibility and digital equity in the academic institutions.

The existing researches based on this study give comprehensive information about the significance of digitalization for the educational policy in higher educational institutions. The key findings derived from the previous related studies emphasizes on the following aspects:

- Role of digital learning tools and online platforms in student engagement and self supported learning
- Overcoming infrastructure and digital literacy barriers for successful digitalization
- Technological integration in higher education institutions for educational transformation
- Necessity of digital inclusiveness and digital equity
- Change resistance and reluctance towards digital technologies as key obstacles for digital learning
- Relevance of digital assessment

Some of the key findings derived from the interview conducted among heads of departments, faculties and students are summarized as follows:

- The participants expect that the digital integration in the NEP will positively influence the teaching pedagogy in higher education system.
- They strongly believe that the new policy will bring effectiveness in all grounds of academic field especially in the higher education
- The implementation of this policy along with digital integration can bring more transparency in the educational facets in higher institution
- Digital integration with NEP requires the need for training and awareness programs from the side of government
- The participants are in the opinion that the digital integration in the policy eliminates discrepancies in the academic efficiencies of the students to a great extent
- The possibility of ample flexibility and customization are expected in the digitalized mode of learning
- Digital integration with this policy can solve all the complexities in the traditional educational system
- The participants have strong belief on improved academic performance upon implementation of this policy

Conclusion:

The current research outlines the digital implication of New Educational Policy in the context of higher educational institutions in Kerala. A mixed methodology research design was adopted to gather information about the digital implication in the policy. The digital focus of the policy guarantees significant transformation in the higher education system in Kerala. Digital integration in the policy highlights the fruitful effects of personalized and interactive learning experiences, innovative approaches of learning and simplified teaching methodology.

In addition to this, the research addresses on various challenges and obstacles, which are prone to unsuccessful implementation of digital education. Concerns related to infrastructure constraints, digital divide and digital literacy should be well addressed for creating better digital learning experience.

The findings of the research help the policy makers and educators for shaping a better higher education system in Kerala for long term future. Since the state is highly concerned with the acceptance of digitalization in its all aspects, it is important for the higher education system in the state to give more attention on digital integration for better learning experience.

STUDY OF NEP ISSUES, APPROACHES AND CHALLENGES

Ms. M. Shanmugapriya

Assistant Professor

Department of Commerce - BPS

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

A well-defined education policy and the future are important for the country at school and college levels because of the fact that education leads to economic and social development. Different countries use different education systems with due regard to culture and traditions and take different stages during their life cycle at school and college education levels to make it work. The National Education Policy 2020 (NEP 2020), approved by the Indian Union Cabinet on July 29, 2020, sets out the vision for India's new education system. The new policy replaces the previous National Education Policy, 1986. This policy is a comprehensive framework for primary education towards higher education and vocational training in rural and urban areas of India.

Keywords: *Traditions, Primary Education, Higher Education, Vocational Training, diverted*

Introduction

India, as a fast-growing free country of change in education, currently has about 845 universities and about 40,000 higher education institutions (HIEs), reflecting the total diversity and the many small HEIs in the country connected to these universities. It has been found that more than 40% of these small institutions use a single system for me against the expected transformation of the multi-sectoral higher education system which is an important need for educational change in the 21st century. It was also noted that more than 20% of colleges are enrolled annually with less than 100 students making it impossible to improve the quality of education and only 4% of colleges enroll more than 3,000 students per year due to regional inequality and level of education. They give. Some of the reasons found for the collapse of the higher education system (HE) in India are: It is predicted that India will be the third largest in the world in 2030-2032 with a GDP of about ten billion dollars. It is clear that the ten billion economies will be driven by sources of information and not natural resources. To boost India's education sector growth, the current government has decided to revive it by introducing the National Education Policy 2020.

Issues of NEP

- Initial distribution of students in various subjects.
- Lack of access to HE, especially in the most economically disadvantaged areas has resulted in a current gross enrollment ratio (GER) of only 25%.

- Lack of teachers and institutional independence to do new things in HE attracts more students.
- Inadequate job management practices and the advancement of intelligence with institutional leaders.
- Lack of research and innovation at many universities and colleges.
- Low levels of governance and leadership in institutions of higher learning.
- A corrupt control system that allows fake colleges to thrive while pressing for better, innovative institutions.

Approaches of NEP

1. Curriculum and Content

NEP aims to introduce a transition from 10 + 2 building to 5 + 3 + 3 + 4, where early childhood education will be part of formal education. In addition, NEP 2020 focuses on reducing the content of the curriculum to create a space for critical thinking and, in turn, develop the 21st century skills incorporated into them. Therefore, all aspects of curriculum and teaching need to be restructured to achieve these goals.

2. Teacher Availability and Training

The policy aims to redesign the school curriculum. However, for the curriculum to be effective, schools and the relevant authorities need to train teachers and understand the needs of teaching in order for there to be a smooth transition to the new education system. In addition, they need to shift from teacher-centered reading to student-centered reading in order to develop interpersonal, critical thinking, problem-solving and decision-making skills among young people. The study suggests that more than 250 million students are estimated to enroll in K-12 schools in India by 2030.

3. Technology

NEP 2020 emphasizes the use of technology benefits to prepare young people for the future. However, developing digital infrastructure such as digital classrooms, remote professional-based teaching models, AR / VR tools to fill gaps in physical education and laboratory infrastructure is a major challenge because most schools do not have the right setup. Support these tools. Also, the costs associated with building a digital infrastructure may be less expensive for all schools across the country. In addition, in rural areas of the country where the Internet is virtually nonexistent, using digital learning tools is out of the question. Therefore, government must work to develop the basic infrastructure that will support digital infrastructure in all areas.

4. Test Building

NEP focuses on constructive assessment for learning rather than abbreviated assessment. The primary purpose of modifying the assessment program is to promote continuous tracking of learning outcomes. However, further testing requires schools and teachers to adopt new assessment methods and assignments. These approaches require technical intervention and active participation of teachers and students. According to a survey, out of 1.5 million Indian schools, 75 percent are state-run. Of the remaining 400,000 private schools, about 80 percent are 'private schools'. Therefore, sending a continuous assessment framework is a challenging task for these schools.

Challenges of NEP

1. Opening Weekly Universities is a Herculean Activity

India today has about 1,000 universities across the country. Doubling the Gross Ratio Enrollment in Higher Education by 2035 which is one of the stated goals of the policy will mean that we must open one new university every week, for the next 15 years. Opening one University each week on an ongoing basis is undoubtedly the biggest challenge.

2. Prices are Also Very Alarming in the Transformation Plans of our School System

The National Education Policy 2020 aims to bring back 2 million children who are currently out of school, into the school system. Whichever way you look at it, achieving this in 15 years requires the suspension of about 50 schools each week.

3. Funding is a Major Challenge in the Covid Era

From a supportive perspective, this is not a challenge for the weak. The National Education Policy 2020 anticipates an increase in spending on education from 4.6% to 6% of GDP, reaching approximately INR 2.5 lakh crores per year. The money will be well spent on building schools and colleges across the country, appointing teachers and professors, and operating expenses such as providing free breakfast for school children. What makes things even more difficult is that this policy came at a time when the economy is overwhelmed by Covid-19-related closures, government tax cuts were very low, and funding shortfalls were high even before Covid.

4. The Current Focus is on Health care and Economic Sustainability to Reduce Homicide Rates

Economists have been looking for large renewable energy packages of up to 2 percent of GDP, despite the difficulties in the exchequer.

5. The Need to Create a Large Number of Qualified Teachers

In school education, the policy aims to redesign the curriculum structure as a very acceptable step. But in order to make this curriculum successful, we need teachers who are trained and who understand the teaching needs. Many curriculum changes require major changes in the thinking of teachers, as well as parents.

6. Higher Education Requirements that Include Disciplines for Cultural Change

In higher education, the focus of the 2020 National Education Policy on disciplinary education is a very welcome step. Universities, especially in India, have for decades been siloed and run by departments. The 2020 National Education Policy contains a number of initiatives to improve the quality and scope of the education system in India.

Conclusion

Higher education, with its emphasis on academic study, often produces graduates who have few or no income. Developing GER to include all citizens of the country in higher education is the responsibility of the national government education department. India's National Education Policy 2020 is marching towards achieving that goal by creating new policies to improve quality, attractiveness, accessibility, and expand the provision of higher education in the private sector and at the same time with strict quality control controls in all institutions of higher learning. By promoting eligibility based on free shipping and scholarships, advanced and progressive research artists as members of intelligence, as well as certified leaders based on regulatory approaches, and strict quality monitoring through annual authorization based on self-proclaimed advances through technology-based technologies. Monitoring, NEP-2020 is expected to achieve its goals by 2030.

Introduction

Education is fundamental for achieving full human potential, developing an equitable and just society, and promoting national development. Empowerment through education can also be dealt with by following a capabilities approach. Education is one of the most creative means of empowerment. It helps a person and realizes his or her potential; a social group to achieve a higher social mobility and the state maintain good order. Being an important component of developing capabilities education has an intrinsic role to play in developing freedom and leaving the rest to be attained through institutional and legal means. Universal high-quality education is the best way forward for developing and maximizing our country's rich talents and resources for the good of the individual, the society, the country, and the world.. Providing universal access to quality education is the key to India's continued ascent, and leadership on the global stage in terms of economic growth, social justice and equality, scientific advancement, national integration, and cultural preservation. India will have the highest population of young people in the world over the next decade, and our ability to provide high-quality educational opportunities to them will determine the future of our country. India has a rich social cultural and philosophical heritage. It is an ancient country.

Educational Status of Women in India

As per the 2011 Census, the total literacy rate in India stands at 74.00 per cent and the rate of literacy among women is 65.46 per cent. The percentage of female literacy in the country was 54.16 per cent in 2001. The literacy rate in the country has increased from 18.33 per cent in 1951 to 74.00 per cent as per 2011 census. The female literacy rate has also increased from 8.86 per cent in 1951 to 65.46 per cent in 2011. Female literacy rate during the period 1991-2001 increased by 14.87 per cent whereas male literacy rate rose by 11.72 per cent. The increase in female literacy rate was 3.15 per cent more compared to male literacy rate. In Table 1 contains statistics regarding general rate of literacy in all the states in India along with a break up of rate of

literacy among males and females. Table 2 gives State-wise Literacy rate figures as per 2011 Census.

India is multicultural multilingual society with undercurrent of essential unity. Some of the important national goals as enshrined in the constitution are secularism, equality liberty fraternity. The education is always played a important role in shaping in the destines of the societies through development of the whole individual and linking education to the task of upliftment of and national development within highly competitive global scenario Empowerment literally means making someone powerful felicitating the weak attain strength to increase one- esteem to help someone assertive/ and self confident to enable someone to confront injustice and oppression and support and someone to fight for her rights.

The principle of gender equality is enshrined in the Indian Constitution in its Preamble, Fundamental Rights, Fundamental Duties and Directive Principles. The Constitution not only grants equality to women, but also empowers the State to adopt measures of positive discrimination in favour of women.

Within the framework of a democratic polity, our laws, development policies, Plans and programmes have aimed at women's advancement in different spheres. From the Fifth Five Year Plan (1974-78) onwards has been a marked shift in the approach to women's issues from welfare to development. In recent years, the empowerment of women has been recognized as the central issue in determining the status of women. The National Commission for Women was set up by an Act of Parliament in 1990 to safeguard the rights and legal entitlements of women. The 73rd and 74th Amendments (1993) to the Constitution of India have provided for reservation of seats in the local bodies of Panchayats and Municipalities for women, laying a strong foundation for their participation in decision making at the local levels.

1.3 India has also ratified various international conventions and human rights instruments committing to secure equal rights of women. Key among them is the ratification of the Convention on Elimination of All Forms of Discrimination Against Women (CEDAW) in 1993.

1.4 The Mexico Plan of Action (1975), the Nairobi Forward Looking Strategies (1985), the Beijing Declaration as well as the Platform for Action (1995) and the Outcome Document adopted by the UNGA Session on Gender Equality and Development & Peace for the 21st century, titled "Further actions and initiatives to implement the Beijing Declaration and the Platform for Action" have been unreservedly endorsed by India for appropriate follow up.

1.5 The Policy also takes note of the commitments of the Ninth Five Year Plan and the other Sectoral Policies relating to empowerment of Women.

1.6 The women's movement and a wide-spread network of non-Government Organisations which have strong grass-roots presence and deep insight into women's concerns have contributed in inspiring initiatives for the empowerment of women.

1.7 However, there still exists a wide gap between the goals enunciated in the Constitution, legislation, policies, plans, programmes, and related mechanisms on the one hand and the situational reality of the status of women in India, on the other. This has been analyzed extensively in the Report of the Committee on the Status of Women in India, "Towards Equality", 1974 and highlighted in the National Perspective Plan for Women, 1988-2000, the Shramshakti Report, 1988 and the Platform for Action, Five Years After- An assessment"

1.8 Gender disparity manifests itself in various forms, the most obvious being the trend of continuously declining female ratio in the population in the last few decades. Social stereotyping and violence at the domestic and societal levels are some of the other manifestations. Discrimination against girl children, adolescent girls and women persists in parts of the country.

1.9 The underlying causes of gender inequality are related to social and economic structure, which is based on informal and formal norms, and practices.

1.10 Consequently, the access of women particularly those belonging to weaker sections including Scheduled Castes/Scheduled Tribes/ Other backward Classes and minorities, majority of whom are in the rural areas and in the informal, unorganized sector – to education, health and productive resources, among others, is inadequate. Therefore, they remain largely marginalized, poor and socially excluded.

Conclusion

Girl's educational access and expansion demands not only increase enrolment but also remove to a large extent barriers to girls' equal educational opportunity. Along with this, the need to reach UEE 's goal for all children requires proper implementation of laws and policies from the central to the grass root level with the right direction and efficiency to make them worthy of enjoyment. In this context, more research and deeper analysis of the root causes of the problems are equally significant in their implementation. Unless and until the mindsets of parents, teachers, school authorities and administrators are directed towards a gender responsive environment, the problem of girls' qualitative educational development will persist. Empowerment of girls and women is essential for achieving sustainable development. The new strategies and initiatives must include various tools of social empowerment of women such as right and access to education, health care, adequate nutrition, right to property and access to equal opportunities, legal

and institutional mechanism to help women in need, access to media and finally a redressal mechanism. Socio-cultural practices that work as barriers to empowerment of women and girls need to be removed at the earliest.

Abstract

“Education is the most powerful weapon to be used to change the world. “Nelson Mandela Education is important for the economic and social development of nation. The weapon may proved to be harmful if it is misused. Due to proper interpretation and implementation of policies, the generations may be benefitted. It will result in strong economic and social development. The national policy in education ,1986 was replaced by New National Education Policy.[NEP 2020] National Education Policy is the holistic reform in the education across all levels stages of education in India. It made reforms in primary,secondary and higher education in single policy document .It is the evolution in the field of education in India. This study is based on secondary data, the available literature on the topic is referred. This paper aims at discussing challenges and opportunities in National Education policy 2020 with respect to higher education in India.

Keywords: *He is [higher educational institutes],NEP [National Education Policy],*

Introduction

Kothari Commission [1964-66] had recommended a 6 % allocation of GDP, National Education Policy,2020 is an evolution in the education field. It tried to increase access, equity, and inclusion as one of thekey changes. Internationalization of higher education is one of the aims in the NEP. NEP promoted more and more philanthropic activity in the education sector. NEP tries to imbibe that education is a concurrent subject. NEP suggested a „light but tight“ regulatory framework to ensure integrity, transparency, and resource efficiency of the educational system through audit and public disclosure while encouraging innovation and out-of-the-box ideas through autonomy, good governance, and empowerment.

National Education Policy 2020 : Major Principles

- Sensitizing teachers as well as parents to promote each student’s holistic development in both academic and non-academic spheres Multidisciplinary and a holistic education to ensure the unity and integrity of all knowledge disciplines
- Emphasis on conceptual understanding rather than rote learning and learning-for-exams

- Creativity and critical thinking to encourage logical decision-making and innovation
- Promoting ethics, human & Constitutional values like empathy, respect for others, cleanliness, courtesy, democratic spirit, etc.
- Promoting multilingualism and the power of language in teaching and learning
- Life skills such as communication, cooperation, teamwork, and resilience
- Extensive use of technology in teaching and learning
- Respect for diversity and respect for the local context in all curriculum, pedagogy, and policy
- Full equity and inclusion as the cornerstone of all educational decisions to ensure that all students are able to thrive in the education system
- Teachers and faculty as the heart of the learning process – their recruitment, continuous professional development, positive working environments and service conditions
- Outstanding research as a co-requisite for outstanding education and development
- Continuous review of progress based on sustained research and regular assessment by educational experts.

Opportunities to He is in Implementing NEP 2020

The NEP 2020 paves the way towards less regulation and more autonomy for institutions through an effective self-regulatory framework. New Education Policy is not just about the degree. It is all about focus on life skills and vocational courses. [Sheth 2020]

1. **Education Hub** : India is having great opportunity to attract foreign students and foreign universities as India has become education hub .As compared to many countries ,the India has lesser cost on education .Education tourism is the new and emerging field today.
2. **Promoting Students for Progression** : Institutions and universities try to motivate students to pursue graduation ,post-graduation education or professional courses.
3. **Handling Lesser Number of Students** : The teacher- student ratio should be kept minimum forthe purpose of close supervision on student's progress. The teacher's efficiency will definitely increase for lesser teacher -student ratio.
Encouraging students in classroom participation: Due to multiple entry and exit, student will find the NEP flexible and convenient for education. Students will be more equipped with KSA-knowledge, skills and attitude in classroom with peer learning and experiential learning etc.

- 4. Hard Internship not Only for the Sake of Completion Certificate:** The internship should be strictly observed, so that students can get practical knowledge. It will also help to create strong linkages between institution and the organizations offering the internships.

Five Challenges that Would Shape the Outcome of NEP 2020

In July last year, India unveiled its first and most comprehensive education policy of the 21st century. As the first omnibus policy since 1986, the New Education Policy (NEP) 2020 has the onerous task of addressing multiple crises facing India's education system. Addressing the completion of one year of the NEP, Prime Minister Narendra Modi remarked, "We are entering the 75th year of Independence. In a way, implementation of NEP has become a vital part of this occasion. This will play a key role in creating a new India and future-ready youth".

The Education Minister, Dharmendra Pradhan, called NEP 2020 a visionary education policy for the 21st century through which India is harnessing the capabilities of each student, universalising education, building capacities, and transforming the learning landscape in the country. He stressed that the NEP would make education holistic, affordable, accessible, and equitable. What has been the progress so far? Is the NEP roll-out on track? What are the major challenges facing this mega education policy in the coming decades?

Major Milestones

In the last 16 months since its eventful launch, the NEP has moved some ground in terms of meeting key milestones, notwithstanding the challenges from the global health pandemic. To begin with, the government has done well in terms of building awareness and interests amongst diverse stakeholders on the mission and vision of the NEP. This was marked in a 10-day long Shikshak Parv that saw a series of national-level events featuring the Prime Minister and other key officials.

Further, to make the intent more pronounced, the government has renamed the Ministry of Human Resources Development (MHRD) to Ministry of Education. Significantly, this key ministry has been infused with doses of energy and dynamisms by bringing in Dharmendra Pradhan, the man who brought major transformations in the critical energy ministry. Mr Pradhan's proven implementation ability and his diplomatic negotiating skills will come in handy in pushing the mega initiatives that would likely face opposition in Opposition-ruled states.

The Education Minister, Dharmendra Pradhan, called NEP 2020 a Visionary Education Policy for the 21st Century Through which India is Harnessing the Capabilities of each Student, Universalising Education, Building Capacities, and Transforming the Learning Landscape in the Country.

In terms of roll-out of key NEP activities, the school curriculum has been changed to include artificial intelligence (AI) and financial literacy. Given that the mother tongue or regional language received primacy in the NEP, the same has been introduced in several states, albeit on a pilot basis. Further, the ministry has launched the much-talked-about Academic Bank of Credit – a programme that will provide multiple entry and exit options for students in higher education. These apart, a number of key initiatives, such as NIPUN Bharat Mission – improving children’s learning competencies in reading, writing, and numeracy by the end of Grade III; Vidya Pravesh – a three-month school preparation module for Grade I children; DIKSHA – a teaching-learning repository of e-content; and NISHTHA – teachers training programme for the secondary-level teachers. As far as roll-out amongst the states are concerned, only a handful of states, mainly under the ruling party have launched the programme. Karnataka became the first state to implement NEP on 24 August. Recently, Madhya Pradesh and Himachal Pradesh launched a series of NEP initiatives giving a much needed push to this mega policy. On the whole, NEP has started gathering pace.

Five Major Challenges

While the NEP has begun gathering a fair degree of momentum, the road to its realisation is filled with endless potholes. First, the sheer size and diversity of India’s education sector makes implementation an uphill task. For example, sample the size of the school education system alone. With more than 15 lakh schools, 25 crore students, and 89 lakh teachers, India remains the second largest education system in the world. The size of the higher education system is massive too. As per the AISHE 2019 report, India’s higher education sector consists of 3.74 crore students in nearly 1,000 universities, 39,931 colleges, and 10,725 stand-alone institutions. Thus, a countrywide implementation of this mega education policy is going to be a mammoth exercise involving multiple stakeholders at the state, district, sub-district, and block levels. Creating a shared responsibility and ownership amongst key stakeholders, including the private sector, at the state and district levels that have extraordinary diversity is going to be a major challenge for the education leadership.

Second, the NEP’s eventual realisation is critically linked to state capacity. As rightly pointed out by the NEP Drafting Committee led by K. Kasturi Rangan, India’s education system is underfunded, heavily bureaucratised, and lacks capacity for innovation and scale up. The interval within the education ministries (centre and states) and other regulatory bodies are grossly inadequate to steer the magnitude of transformations envisaged in the NEP. For instance, moving away from a rigid content-driven rote learning system to experiential learning and

critical thinking would require nothing short of a revolutionary change in the attitudes of the people running the education system, let alone the attitudinal changes amongst the teachers, students, and parents.

Creating a Shared Responsibility and Ownership Amongst Key Stakeholders, Including the Private Sector, at the State and District Levels that have Extraordinary Diversity is Going to be a Major Challenge for the Education Leadership.

This means that thousands of schools and colleges would need capacity building and reorientation with regards to the operational aspects of implementing a mega programme with many experiential goals. In short, the existing organisational structure of the ministry and its ecosystems will have to undergo a massive overhaul. While it is heartening is that the NEP document has laid out a comprehensive roadmap for overhauling the existing regulatory system, and the education ministry is in the process of bringing out a legislation that would facilitate the setting up of a Higher Education Commission of India (in the place of existing regulatory bodies, mainly the UGC, AICTE, and National Council for Teachers Education), one has to wait for the new institutional architecture emerging out of legislative initiatives.

Third, the NEP would largely hinge on the extent of cooperation between the Centre and states. While the NEP has been drafted by the Union government (with inputs from multiple stakeholders including the state governments), its implementation largely depends on the active cooperation of the states. This is because most services-related education are performed by the state governments. In short, the Centre has to skilfully navigate the principles of cooperative federalism and decentralisation while rolling out key initiatives. And this is not an easy act to perform given the sharpening of political polarisation in the recent years and visible breakdown of trust between the Centre and states. A number of Opposition-ruled states have been raising strong objections to several key provisions of the NEP and the manner in which they are being rolled out. The more worrying development is that the Tamil Nadu government's recent decision to not implement the NEP can encourage other Opposition-ruled states to follow a similar path. Thus, managing federal math is critical to the realisation of the NEP.

A Number of Opposition-ruled States have been Raising Strong Objections to Several Key Provisions of the NEP and the Manner in Which they are being Rolled out.

Fourth, the role of the private sector, particularly in dealing with the higher education system, is extremely critical for translating the inclusionary vision of the

NEP. It may be noted that as much as 70 percent of higher education institutions (colleges and universities) are run by the private sector. Significantly, roughly 65-70 percent students are currently enrolled in private higher education institutions. This apart, the private sector brings much needed financial resources and innovation. Therefore, it is imperative for the government and regulatory bodies to create workable institutional mechanisms that would harness the contribution of the private sector and recognise them as equal partner in the NEP process.

Finally, the successful execution of key initiatives requires availability of adequate financial resources for decades. In this regard, the NEP has stated that to realise the goals of the new policy, the country has to raise public spending on education to 6 percent of GDP. This is a daunting task if one considers the past promises and their actual realisation. For instance, the 1968 National Education policy had recommended 6 percent of GDP be allocated towards education. However, in all these decades, the public spending on education has not gone beyond 3 percent. Ironically, the union budget allocation for education in the NEP launching year has taken a dip. The education budget was reduced by 6 percent from INR 99,311 crore in 2020-21 to INR 93,224 crore in 2021-22. While this is understandable given the government's priorities are divided in the face of the COVID-19 pandemic and economic distress that large sections of populations are facing, there is no clear roadmap yet how such enormous sums of financial resources can be augmented.

The NEP has Stated that to Realise the Goals of the New Policy, the Country has to Raise Public Spending on Education to 6 Percent of GDP.

To sum up, the NEP 2020 is truly a pathbreaking document in every sense. The policy, amongst others, aims to address pedagogical issues, structural inequities, broadening of access apart from making the learners future ready while meeting the demands of a 21st century India. Simultaneously, the NEP has the most challenging task of addressing multiple crises in the education system. Its effective implementation is critical if India wants to reap the demographic dividends and capitalise the opportunities from a rapidly growing knowledge economy. Given its transformative potentials, the Centre has shown urgency and a sense of purpose by launching a series of initiatives in the recent months notwithstanding the challenges of the pandemic. A number of states have officially launched the policy and many others are in the process to do the same. Yet, there is a long road ahead of the NEP. Given its scale and the kind of complexity involved in its execution, particularly securing coordination and cooperation amongst diverse stakeholders at state, district, private sector amongst others, makes it a daunting exercise. Apart from this, one has to deal with weak state capacity, availability of financial

resources and, most importantly, the education ecosystem that acts as a drag on new ideas and innovation. Yet, the most critical challenge before NEP is building consensus and getting states to own the first omnibus programme after 1986. In short, the success of the NEP largely hinges on cooperative federalism and states taking ownership of the reforms.

Conclusion

In conclusion, the National Education Policy (NEP) presents both significant challenges and exciting opportunities for higher educational institutions. On one hand, the implementation of the NEP requires a comprehensive transformation of the existing educational framework, which poses several obstacles. These challenges include the need for substantial infrastructural upgrades, faculty development and training, curriculum revisions, and aligning administrative processes with the policy's objectives. Additionally, ensuring equal access to quality education for all sections of society, especially marginalized and economically disadvantaged communities, remains a critical challenge.

However, the NEP also brings forth numerous opportunities that can shape the future of higher education in India. The policy encourages multidisciplinary learning, promotes flexibility and choice in education, and emphasizes the development of critical thinking and problem-solving skills. These aspects have the potential to create a more holistic and inclusive learning environment, nurturing well-rounded individuals who are better prepared for the demands of the evolving job market.

Furthermore, the NEP emphasizes the integration of technology in education, fostering digital literacy and enabling access to quality education beyond traditional boundaries. This presents an opportunity for institutions to leverage digital platforms, open educational resources, and online collaborations to enhance the learning experience and reach a wider audience.

Collaboration and partnerships between educational institutions, industry, and the government are also crucial for the successful implementation of the NEP. These partnerships can facilitate the exchange of knowledge, resources, and expertise, leading to the development of innovative programs, research opportunities, and industry-relevant curriculum. They can also support the creation of robust mentorship and internship programs, bridging the gap between academia and industry requirements.

In conclusion, while the NEP presents challenges that need to be overcome, it also offers significant opportunities for higher educational institutions to create a more inclusive, dynamic, and relevant learning ecosystem. With careful planning, effective implementation strategies, and collective efforts from all stakeholders.

The NEP has the potential to transform higher education in India and equip students with the necessary skills and knowledge to thrive in a rapidly changing world.

A STUDY ON THE HISTORY OF EDUCATION POLICIES IN INDIA

Ms. V. Poornima

Assistant Professor of Commerce –BPS

NGM College, Pollachi

Abstract:

India has a long and varied history of implementing educational policies at the local, state, and national levels. Over the centuries, the country has seen many changes and developments in its educational system, with the aim of providing access to quality education for all its citizens. The National Policy on Education (NPE) is a policy formulated by the Government of India to promote and regulate education in India. The policy covers elementary education to higher education in both rural and urban India. The first NPE was promulgated by the Government of India by Prime Minister Indira Gandhi in 1968, the second by Prime Minister Rajiv Gandhi in 1986, and the third by Prime Minister Narendra Modi in 2020.

Keywords: Education, Policy, NPE, NEP.

Introduction:

India has a long and varied history of implementing educational policies at the local, state, and national levels. Over the centuries, the country has seen many changes and developments in its educational system, with the aim of providing access to quality education for all its citizens. Education is one of the fundamental rights of any individual; it helps individuals to become responsible and productive members of the society. It fosters critical thinking, develops skills and knowledge, and makes a person more responsible towards the society as they contribute to the economy of the nation and participate fully in civic life. It plays a very crucial role in promoting personal and social development. It helps to build strong communities and a strong democracy, and it is essential for the ongoing and development of our world.

History of Education Policies in India:

The National Policy on Education (NPE) is a policy formulated by the Government of India to promote and regulate education in India. The policy covers elementary education to higher education in both rural and urban India. The first NPE was promulgated by the Government of India by Prime Minister Indira Gandhi in 1968, the second by Prime Minister Rajiv Gandhi in 1986, and the third by Prime Minister Narendra Modi in 2020.

Since the country's independence in 1947, the Indian government sponsored a variety of programmes to address the problems of illiteracy in both rural and urban

India. Maulana Abul Kalam Azad, India's first Minister of Education, envisaged strong central government control over education throughout the country, with a uniform educational system. The Union government established the University Education Commission (1948–1949), the Secondary Education Commission (1952–1953), University Grants Commission and the Kothari Commission (1964–66) to develop proposals to modernise India's education system. The Resolution on Scientific Policy was adopted by the government of Jawaharlal Nehru, India's first Prime Minister. The Nehru government sponsored the development of high-quality scientific education institutions such as the Indian Institutes of Technology. In 1961, the Union government formed the National Council of Educational Research and Training (NCERT) as an autonomous organisation that would advise both the Union and state governments on formulating and implementing education policies.

1. National Policy on Education in 1968

Based on the report and recommendations of the Kothari Commission (1964–1966), the government headed by Prime Minister Indira Gandhi announced the first National Policy on Education in 1968, which called for a "radical restructuring" and proposed equal educational opportunities in order to achieve national integration and greater cultural and economic development. The policy called for fulfilling compulsory education for all children up to the age of 14, as stipulated by the Constitution of India and specialized training and qualification of teachers. The policy called for a focus on the learning of regional languages, outlining the "three language formula" to be implemented in secondary education - the instruction of the English language, the official language of the state where the school was based, and Hindi. Language education was seen as essential to reduce the gulf between the intelligentsia and the masses. Although the decision to adopt Hindi as the national

language had proven controversial, the policy called for the use and learning of Hindi to be encouraged uniformly to promote a common language for all Indians. The policy also encouraged the teaching of the ancient Sanskrit language, which was considered an essential part of India's culture and heritage. The NPE of 1968 called for education spending to increase to six percent of the national income. As of 2013, the NPE 1968 has moved location on the national website.

2. New National Policy on Education 1986

In 1986, the government led by Rajiv Gandhi introduced a new National Policy on Education. The new policy called for "special emphasis on the removal of disparities and to equalise educational opportunity," especially for Indian women, Scheduled Tribes (ST) and the Scheduled Caste (SC) communities. To achieve such a social integration, the policy called for expanding scholarships, adult education, recruiting more teachers from the SCs, incentives for poor families to send their children to school regularly, development of new institutions and providing housing and services. The NPE called for a "child-centred approach" in primary education, and launched "Operation Blackboard" to improve primary schools nationwide. The policy expanded the open university system with the Indira Gandhi National Open University, which had been created in 1985. The policy also called for the creation of the "rural university" model, based on the philosophy of Mahatma Gandhi, to promote economic and social development at the grassroots level in rural India.^[7] 1986 education policy expected to spent 6% of GDP on education.

3. National Policy on Education (Modification) 1992

The 1986 National Policy on Education was modified in 1992 by the P. V. Narasimha Rao government. In 2005, Former Prime Minister Manmohan Singh adopted a new policy based on the "Common Minimum Programme" of his United Progressive Alliance (UPA) government. Programme of Action (PoA) 1992, under the National Policy on Education (NPE), 1986 envisaged to conduct of a common entrance examination on all India basis for admission to professional and technical programmes in the country. For admission to Engineering and Architecture/Planning programmes, Government of India vide Resolution dated 18 October 2001 has laid down a Three – Exam Scheme (JEE and AIEEE at the National Level and the State Level Engineering Entrance Examinations (SLEEE) for State Level Institutions – with an option to join AIEEE). This takes care of varying admission standards in these programmes and helps in maintenance of professional standards. This also solves problems of overlaps and reduces physical, mental and financial burden on students and their parents due to multiplicity of entrance examinations.

4. National Education Policy 2020 (Present)

In 2019, the then Ministry of Human Resource Development and now the Ministry of Education released a Draft New Education Policy 2019, which was followed by a number of public consultations. It discusses reducing curriculum content to enhance essential learning, critical thinking and more holistic experiential, discussion-based and analysis-based learning. It also talks about a revision of the curriculum and pedagogical structure from a 10+2 system to a 5+3+3+4 system design in an effort to optimise learning for students based on cognitive development of children. Research Methodology has been added in the last year of graduation course and student will have the choice to leave the course and receive the certificate/ degree according to that. On 29 July 2020, the cabinet approved a new National Education Policy with an aim to introduce several changes to the existing Indian education system, which will be introduced in India till 2026.

Conclusion:

The National Education Policy is a comprehensive set of guidelines and recommendations for the Indian education system. It aims to make education more inclusive, relevant, and engaging for all students, and to foster the development of critical thinking and problem-solving skills. By implementing these recommendations, the NEP aims to ensure that all students have the opportunity to receive a high-quality education and reach their full potential. In conclusion, the New Education Policy represents a major shift in the way education is delivered in India, and it has the potential to bring significant benefits to the education system. Though it has faced a lot of criticism from students as well as educators and learners who are in the mid of the course which will no longer be considered a degree (like an M.Phil). However, its success will depend on effective implementation and adequate resources, and it will require continued effort and commitment from the government, educators, and the wider community.

Abstract:

A nation's formation depends heavily on education. The nation's destiny and the well-being of its citizens are determined by education. Regarding the extension and expansion of the nation and its cosmopolitan, the effect will be long-lasting on one. In the modern society, education plays a crucial role and is extremely important. India's higher education is already being impacted by international trends and conditions. Over the past few years, India has drawn many international students, including NRIs, who enroll in a variety of academic, tutoring, and professional programmes. Additionally, a lot of overseas universities give students the option to complete their degrees without leaving India. One of the key factors influencing public space travel in India has always been the question of higher education. of course, a decent education paves the way for a fulfilling profession. Future students would be most likely to choose degrees that lead to work prospects. Concerns regarding the standard and accessibility of higher education are shared by all of us. In India, there has been a lot of interest in the use of digital technologies in all areas of higher education. This in turn aids in upskilling instructors across the nation and improving the quality and accessibility of higher education for a large number of students. In this common situation, NEP 2020 is introduced to give the Indian educational system a boost and advance it.

Keywords: Indian higher Education, NEP 2020, Digital technologies

Introduction

The National Policy on Education (NPE) is a policy developed by the Government of India to promote education among Indians. The new education policy is making significant changes to the current system, most notably: universities and colleges mixed in different sectors, with or without one district; revision of student curriculum, pedagogy, assessment, and support for advanced student knowledge; establishing a National Research Institute to support peer-reviewed work by peers; and successful investment courses at universities and colleges. The main issues confronting the Indian higher education system are enforced qualification separation, early specialisation and student streaming into restricted research areas, a lack of focus on research at most universities and schools, and a lack of competitive peer-reviewed academic research funding and large affiliated

universities, all of which lead to low levels of undergraduate education. Holistic and multidisciplinary education should try to strengthen all human capacities - mental, cultural, social, physical, emotional, and moral. In the long run, such a comprehensive education should be the standard for all undergraduate programmes, including those in medical, technical, and vocational fields. Optimal learning environments and student assistance provide a comprehensive strategy that includes a sufficient curriculum, engaged pedagogy, consistent formative assessment, and enough student support

1. Objective of the Study

The main purpose of this study was to examine the “Digital inventiveness of new education policy 2020 on higher education”.

2. Research Methodology

This research is a descriptive study. The required secondary data was collected from various sources like websites including Government of India, magazines, journals, other publications, etc. To get at the inferences and conclusions, this data was analyzed and examined.

2.1 Higher Education Changes in NEP 2020

When emphasis is placed on the foundation or roots, it leads to enhanced growth, but at the same time, a higher structure plays an important role because it leads one to a certain understanding. As a result, when it comes to pursuing higher education, one is frequently tormented by different elements such as social and peer pressure, perplexity about subject choices, and a desire for higher-paying employment and admission to reputable universities. Students are often lagging behind in terms of percentage and knowledge. So here, NEP comes up with a few changes that break these ideas and allow students to grow

1. Creating a Multi-Disciplinary Universities and Colleges System

It is critical to break down stereotypes and prevent unpleasant behaviours such as ragging in universities and colleges. Because these are educational shrines where all students must be treated fairly with an equal distribution of possibilities.

2. Heading Towards a Liberal Undergraduate Education

It is past time to take a broader look at education. It does not have to be limited to a specific subject such as science, commerce, or the like.

3. Encouraging

Faculty and Institutional Autonomy: The NEP would like to make institutions and staff independent so that they can develop a sense of responsibility, creativity, and regulation in their work.

4. Formation of a National Research Foundation (NRF)

The NRF's major goal is to give financing for research proposals to all institutions in India.

5. Reformed Regulatory System

Some measures are the same as in past policies, but this time more emphasis will be placed on execution, and anyone who does not follow the standards established under the NEP may face severe consequences

Digital Education:

Digital education is the introduction of the use of modern technology and digital tools to assist in the development of teaching and learning. TEL, digital reading, and elearning are other terms for Technology-Enhanced Learning (TEL). Digital education is the future of education through digital technology and gadgets.

Digital Strategies

The digital revolution is causing significant changes in the higher education sector. To promote digital education, each institution takes a different approach. The MHRD has undertaken unique programmes such as SWAYAM (India's own MOOCs), SwayamPrabha, the National Digital Library (6.5 million volumes), and the National Academic Depository. New Online Education Regulations have been introduced by UGC and regulations have also been adopted for the same. Online education technology and all digital projects are, in the near future, capable of revolutionising the higher education situation. In order to raise the GRE from 24.5 to 30 by 2020, and in order for the quality of education to be enhanced, high-quality education opportunities would have to be expanded to an extensive extent. The use of technology in higher education through online education is also essential because of the following factors.

1. Study Webs of Active Learning for Young Aspiring Minds (SWAYAM)

Swayam is an indigenous IT Massive Open Online Courses (MOOCs) platform to provide the highest quality education that can be obtained by anyone who is using the IT scheme at anytime and anywhere. SWAYAM would allow learners in any portion of the country to attend courses provided by the country's finest educators, thus making it possible for everyone to have access to a first-class education.

2. Swayam Prabha:

The 32 Educational DTH Channels: SWAYAM PRABHA developed 32 DTH channels on 24x7 platforms as a stepping stone for quality teaching programs.

There will be new features for at least four hours a day that will be updated six times a day, allowing the participant to choose his or her leisure time.

3. National Digital Library (NDL)

MHRD has approved an IIT project in Kharagpur under NMEICT entitled “Development of India’s National Digital Library, Towards National Assets.” The National Digital Library in India aims to collect, preserve, and disseminate our country’s complete educational production and to provide internet connectivity from college to graduate level, including technical education. More than 72 digital lakh jokes are accessible through the NDL. The content covers almost all of the key educational disciplines as well as all of the student’s critical focus, from the academic phase to the largest educational phase, including full-time students.

4. National Academic Depository

The National Academic Depository (NAD) is the Department of Human Resource Development (MHRD) that assists in the digitalization, retention, access, and monitoring of academic awards by educational institutions. NAD is a unique, innovative, and ongoing programme under the theme “Digital India” to achieve the digital potential of educational records. This affects the lives of Indian youth and empowers them with digital, online, trusted, and certified certificates that are always securely accessible. NAD pledges to eliminate difficulties and inefficiencies in the collection, storage, and presentation of visual documents.

5. Campus Connectivity

NMEICT provided the establishment of 1 GBPS university access and 20 512 Kbps broadband access to schools. A maximum of 600 universities have been linked via 1 Gbps of optical fiber; 22026 universities have been linked at 10 Mbps of bandwidth so far. Wi-Fi facilities have been set up by all IITs, IIMs and NITs. At central universities, the method of building the optical fibre and providing Wi-Fi is presently ongoing.

6. Talk to a Teacher

Talk to a Teacher created by IIT Bombay, is an effort of the National Education Mission through ICT, financed by MHRD to provide unlimited entry to a few chosen graduate and postgraduate classes conducted by renowned professor representatives and researchers at IIT Bombay. It utilizes Amrita University’s A-View cooperation tool to provide the professors with virtual classrooms across the nation. These classes are completely accessible at low bandwidth on a personal computer or laptop with a headphone jack and an internet connection. It is not necessary to register because it has no evaluation or certification method. To date, under this initiative, more than 80,000 professors have been trained, comprising a synchronous distribution of IIT Mumbai and IIT Kharagpur classes

7. The Free and Open Source Software for Education (FOSSEE)

It encourages the use of Floss instruments to enhance educational performance. The IIT-sanctioned FOSSEE scheme promotes the use of open source software in academic organisations (<http://fossee.in>). To guarantee that commercial software is substituted by similar FLOSS instruments, the FLOSS instruments are used in multiple operations.

8. Spoken Tutorial

The Spoken Tutorial Project is the “Talk to Teacher” initiative of the National ICT Education Mission launched by MHRD, India. Spoken Tutorial is a multiaward-winning educational content portal. Here you can learn about a variety of Free and Open Source software on your own. This project is being developed at IIT Bombay. (K., 2021)

Conclusion

The NEP provides comforting provisions for participatory monitoring and review frameworks and real-time evaluation tools. This would enable the educational system to continuously develop itself rather than expecting a new education strategy every ten years to reflect changes in the curriculum. This in and of itself will be a major accomplishment. The New Education Policy 2020 shows that school is much more than just cramming for exams, keeping up with deadlines, and obtaining good grades; the real goal of education is to gain information, skills, and values while advancing in a profession where one finds their own passions. There is little doubt that if the entire strategy is implemented effectively, it can advance Indian education. Even though some of their goals are unclear, we can't properly evaluate them until their documented plans are put into practise. We can only anticipate the finest outcomes. It was constructed in honour of the pupils' complete development and pleasure.

WOMEN EMPOWERMENT THROUGH THE NATIONAL EDUCATION POLICY

Ms. G. Nithya

Assistant Professor

Department of Commerce

Nallamuthu Gounder Mahalingam College, Pollachi

Abstract

National Education Policy (NEP) in promoting women's empowerment through education. The NEP, as a comprehensive framework for educational reform, holds significant potential for advancing gender equality and inclusivity. By emphasizing equitable education access, multidisciplinary curricula, vocational training, safe learning environments, higher education opportunities, and digital literacy, the NEP addresses key barriers to women's empowerment. Through these provisions, it facilitates women's participation in various fields and leadership roles, fostering a more balanced and progressive society. The NEP's impact on women's empowerment underscores its importance as a catalyst for social change and gender parity.

Keywords: *National Education Policy, empowerment, Women.*

Introduction

Women empowerment is a crucial aspect of societal development, and education plays a pivotal role in achieving this goal. The National Education Policy (NEP) of a country serves as a roadmap for its educational landscape, aiming to bring about comprehensive reforms. In the context of women empowerment, the NEP becomes a powerful tool to address gender disparities, promote equality, and enhance opportunities for women's education and participation in various fields. This article explores how the National Education Policy can contribute to women's empowerment.

Inclusive and Equitable Education

The NEP emphasizes the importance of providing equitable and inclusive education for all, regardless of gender. This shift ensures that girls and women have equal access to educational opportunities. By eliminating gender-based barriers to education, the policy creates an environment that fosters women's empowerment from an early age. It encourages girls to pursue education and higher studies, thus breaking the cycle of gender inequality.

Curricular Reforms

The NEP emphasizes a multidisciplinary and holistic approach to education. This approach encourages students to explore various subjects and fields, irrespective of

traditional gender roles. With a diverse and inclusive curriculum, girls are exposed to a broader range of career options beyond the stereotypical choices. This can lead to more women venturing into fields such as science, technology, engineering, and mathematics (STEM), which have traditionally been male-dominated.

Skill Development and Vocational Education

The NEP underscores the significance of skill development and vocational education. By integrating vocational courses into the mainstream curriculum, the policy equips women with practical skills that enhance their employability. This enables women to enter the workforce with confidence, contributing to their economic independence and empowerment.

Gender-Sensitive Environment

The NEP promotes the creation of a gender-sensitive and safe learning environment. This involves addressing issues like sexual harassment, bullying, and discrimination that can hinder girls' education. By ensuring a conducive atmosphere, the policy encourages girls to stay in school and pursue their studies without fear, thus bolstering their overall empowerment.

Higher Education and Leadership Opportunities

The NEP recognizes the need for increasing women's participation in higher education and leadership roles. The policy encourages the establishment of women's hostels, scholarship programs, and mentoring initiatives to support women pursuing advanced studies. By providing them with these resources, the policy paves the way for women to excel in various fields, from academia to governance.

Digital Literacy

In the digital age, digital literacy is paramount. The NEP acknowledges this by promoting digital literacy and technology integration in education. By ensuring that girls and women are adept at using technology, the policy enables them to access information, acquire skills, and engage in online platforms, opening up new avenues for empowerment.

Nep Can Contribute to Women's Empowerment in India: Equitable Access to Education:

The NEP emphasizes providing equal access to quality education for all, regardless of gender or socioeconomic background. By ensuring that girls have the same opportunities as boys to attend school, the NEP aims to eliminate barriers that have historically hindered girls' education.

Gender-Sensitive Curriculum:

The NEP encourages the development of a gender-sensitive curriculum that challenges traditional stereotypes and promotes gender equality. This can help in breaking down societal norms that limit girls' aspirations and broaden their perspectives.

Vocational Training and Skill Development:

The NEP recognizes the importance of vocational education and skill development. This can empower women by equipping them with practical skills that enhance their employability and enable them to contribute effectively to the workforce.

Higher Education and Research:

The NEP emphasizes promoting research and innovation in higher education. This can create opportunities for women to excel in various fields, from science and technology to social sciences and humanities, thereby breaking barriers and shattering the glass ceiling.

Digital Literacy:

The NEP acknowledges the role of digital literacy in modern education. By ensuring that girls and women are digitally literate, the policy enables them to access information, communicate, and participate in the digital economy on an equal footing.

Safe and Inclusive Learning Environments:

The NEP aims to create safe and inclusive learning environments that are free from discrimination and harassment. This can encourage more girls to attend and remain in school, thus promoting their educational and overall empowerment.

Teacher Training:

The NEP emphasizes the training of teachers to create gender-sensitive classrooms and to address unconscious biases. Teachers play a crucial role in shaping students' perceptions and attitudes, and gender-sensitive teaching practices can contribute to changing mindsets.

Flexible Learning Pathways:

The NEP recognizes the need for flexible learning pathways, which can be particularly beneficial for women who might have familial responsibilities. Flexible education options can enable women to balance their education with other commitments.

Empowerment Through Role Models:

The NEP's emphasis on diversity and representation in curricula and educational materials can introduce girls to a range of successful women role models, inspiring them to aim high and pursue their dreams.

Parent and Community Engagement:

The NEP encourages active engagement of parents and communities in the education process. This can help in shifting societal attitudes towards girls' education and encouraging families to invest equally in their daughters' education.

Conclusion

The National Education Policy serves as a catalyst for women empowerment by advocating for gender equality in education. Through inclusive and equitable practices, curriculum reforms, skill development, gender-sensitive environments, higher education opportunities, and digital literacy, the NEP contributes to breaking down gender barriers and fostering women's empowerment at all levels. As countries implement and adapt the NEP, they move closer to achieving a society where women are educated, empowered, and able to contribute significantly to various sectors. However, successful implementation will require concerted efforts, collaboration, and sustained commitment from all stakeholders.

Abstract

A holistic and multidisciplinary education would attempt to integrate the development of all human capacities - intellectual, aesthetic, social, physical, emotional, and moral. In the long run, such a comprehensive education will be the approach of all undergraduate programmes, including those in professional, technical, and vocational fields. Even engineering schools, such as IITs, will shift toward more holistic and multidisciplinary education that includes more arts and humanities. Students of the arts and humanities will strive to learn more science, and all will strive to include more vocational topics and soft skills. This paper will cover all the opportunities that can be achieved through the New Education Policy 2020. This paper also contains the highlights of the policy. Curricular structures that are imaginative and adaptable will allow for creative combinations of subjects to be studied, as well as many entry and departure points. The aim is to comprise all the good aspects of the policy which will be very beneficial for the upcoming generation education practices. The paper also holds the educational preparation of the teaching fraternity to look beyond the ancient method of teaching and need to be prepared for the forthcoming generation teaching methods.

Keywords: *New Education Policy, Holistic development, Multidisciplinary education, Higher education, Opportunities in NEP.*

Introduction:

The National Policy on Education (NPE) is a policy formulated by the Government of India to promote education amongst India's people. The policy covers elementary education to colleges in both rural and urban India. The first NPE was promulgated by the Government of India by Prime Minister Indira Gandhi in 1968, the second by Prime Minister Rajiv Gandhi in 1986, and the third by Prime Minister Narendra Modi in 2020.

The National Education Policy 2020 (NEP 2020), which was approved by the Union Cabinet of India on 29 July 2020, outlines the vision of India's new education system. The new policy replaces the previous National Policy on Education, 1986.

The policy is a comprehensive framework for elementary education to higher education as well as vocational training in both rural and urban India.

The policy aims to transform India's education system by 2021. The language policy in NEP is a broad guideline and advisory in nature; and it is up to the states, institutions, and schools to decide on the implementation. The NEP 2020 enacts numerous changes in India's education policy. It aims to increase state expenditure on education from around 4% to 6% of the GDP as soon as possible.

Holistic and multidisciplinary education should strive in an integrated way to improve all human capacities-mental, cultural, social, physical, emotional, and moral. In the long term, such a comprehensive education shall be the method for all undergraduate programs, including those in medical, technical, and vocational disciplines. Optimal learning environments and support for students offer a holistic approach including adequate curriculum, interactive pedagogy, consistent formative assessment, and adequate support for students.

Objectives of the Study:-

- The primary objective of this research is to study the impact of New Education Policy 2020 on higher education.
- The study also outlines the salient features of NEP and analyses how they affect the existing education system.

Research Methodology

Research methodology this research is a descriptive study .The necessary secondary

Data was collected from various websites including those of Government of India, magazines, journals, other publications, etc. This data was then analyzed and reviewed to arrive at the inferences and conclusions.

Scope of the Study

The study will be beneficial for the institution's curriculum and pedagogy must foster a strong feeling of respect for fundamental duties and Constitutional principles, a sense of belonging to one's country, and a conscious understanding of one's tasks and responsibilities in a changing world. The scope is to make available advance knowledge, skills, beliefs, and dispositions that enable responsible commitment to human rights, sustainable development and living, and global well-being, reflecting a genuinely global citizen.

Future Pathway and Implementation Challenges

A successful example of accreditation is the Dubai Schools Inspection Bureau (DISB). The DISB engages school assessors from all over the globe to evaluate their schools. As a result, Dubai's schools have a culture of transparency and

accountability, which has helped improve the overall quality of education in the country.

In India the process of accreditation is being operationalised in accordance with the NEP 2020. The formation of SSSA bodies should help guarantee the maintenance of minimum quality standards based on predetermined parameters. Furthermore, the policy emphasizes transparency by making all fundamental regulatory information available on a public platform.

None the less, it is important for us to keep a few potential challenges in mind:

- **Resources:** While accreditation will shed light on the areas where schools need support, will each state be able to provide its schools the resources (both monetary and otherwise) that they need to improve their infrastructure, curriculum, teacher quality, teacher recruitment, etc.?
- **Accessibility:** While the NEP 2020 asks for all accreditation information to be made publicly available, we need to ensure that this is done in a way that will allow community members (especially parents) to understand and engage with it.
- **Potential for Uptake:** Schools themselves need to be coached to understand the importance of the accreditation process, what data they need to collect and the importance of data transparency, and how they communicate their gaps to their communities.

Today, states are gearing up for the process of accreditation. And while they are faced with real concerns, the expectation is that each state will embrace the process and use it to improve the overall quality of its schools.

Salient Features of Nep Related to Higher Education

The new NEP has been introduced with an aim to formalize changes in the system from school level to college/university level. Keeping in mind the developing scenario, education content henceforth, will focus on key-concepts, ideas, applications and problem-solving angles. The National Education Policy is expected to bring positive and long-lasting impact on the higher education system of the country. The fact that foreign universities will be allowed to open campuses in India is a commendable initiative by the government. This will help the students experience the global quality of education in their very own country. The policy of introducing multi-disciplinary institutes will lead to a renewed focus on every field such as arts, humanities and this form of education will help students to learn and grow holistically. Thus, students will be equipped with stronger knowledge base.

The introduction of single common entrance test is another positive step which will reduce the stress of multiple competitive exams and ease off the pressure of preparing for so many of them. It will also ensure a level playing ground for all

student applicants going forward. Establishing Academic Bank of Credit (ABC) is definitely a robust idea to store the academic credits that students earn by taking courses from various recognized higher education institutions. A student can earn scores by completing a course and these will be credited to the ABC account. One can then transfer these credits if he/she decides to switch colleges. If a student ever drops out for some reasons, these credits will remain intact which means he/she can come back years later and pick up from where the student had left.

The new higher education regulatory structure will ensure that distinct administrative, accreditation, financing, and academic standard-setting roles are performed by separate, autonomous, and empowered bodies. These four structures will be established as four independent verticals within a single umbrella institution, India's Higher Education Commission (HECI). There are a lot of reforms and new developments which have been introduced by NEP in the higher education sector. Some of the salient features are:

- **Single Regulatory Body for Higher Education:** The NEP aims to establish Higher Education Commission of India which will be the single regulatory body except for legal and medical education.
- **Multiple Entry and Exit Programme:** There will be multiple entry and exit options for those who wish to leave the course in the middle. Their credits will be transferred through Academic Bank of Credits.
- **Tech- Based Option for Adult Learning Through Apps, TV Channels:** Quality technology-based options for adult learning such as apps, online courses/modules, satellite-based TV channels, online books, and ICT-equipped libraries and Adult Education Centres, etc. will be developed.
- **E-courses to be Available in Regional Languages:** Technology will be part of education planning, teaching, learning, assessment, teacher, school, and student training. The e-content to be available in regional languages, starting with 8 major languages – Kannada, Odia, Bengali among others to join the e-courses available in Hindi and English.
- **Foreign Universities to Set-up Campuses in India:**
World's top 100 foreign universities will be facilitated to operate in India through a new law. According to the HRD Ministry document, "such (foreign) universities will be given special dispensation regarding regulatory, governance, and content norms on par with other

The Structure and Lengths of Degree Programmes:

In the context of the National Education Policy 2020 scheme, any undergraduate degree in any institution will be of duration of three or four years. One can leave the degree within this period. Any educational institution will have to give to the

student a diploma degree after the student completes two years of study, a degree after the student completes three years of study and a certificate to those students who complete one year of study in any professional or vocational course of their choice. The Government of India will also help in establishing an Academic Bank of Credit for storing the academic scores digitally. This will enable the institutions to count the credit at the end and put it in the degree of the student. This will be helpful for those individuals who might have to leave the course mid-way. They can start the course later on from where they left off and not start from the beginning once again. Even though NEP 2020 says that Higher education institutions will be given the freedom to start PG courses there may be some difficulty in designing One Year PG Degree for students who have completed 4 Year UG Degree and a Two Year PG Degree for students who have completed 3 Year UG Degree.

Conclusion:

The policy introduces a whole gamut of changes and reads largely as a very progressive document, with a firm grasp on the current socio-economic landscape and the prospect of future uncertainty. Education for a new generation of learners has to essentially engage with the increasing dematerialization and digitalization of economies, which requires a completely new set of capabilities in order to be able to keep up. This seems to be an even more vital perquisite now, with the trend towards digitalization and disruptive automation being quickened by the pandemic. Overall, the NEP 2020 addresses the need to develop professionals in a variety of fields ranging from Agriculture to Artificial Intelligence. India needs to be ready for the future. And the NEP 2020 paves the way ahead for many young aspiring students to be equipped with the right skill set.

The new education policy has a laudable vision, but its strength will depend on whether it is able to effectively integrate with the other policy initiatives of government like Digital India, Skill India and the New Industrial Policy to name a few, in order to effect a coherent structural transformation. Hence, policy linkages can ensure that education policy addresses to and learns from Skill India's experience in engaging more dynamically with the corporate sector to shape vocational education curriculum in order to make it a success. There is also a necessity for more evidence-based decision-making, to adapt to rapidly evolving transmutations and disruptions. NEP has reassuringly provisioned for real-time evaluation systems and a consultative monitoring and review framework. This shall empower the education system to constantly reform itself, instead of expecting for a new education policy every decade for a shift in curriculum. This, in itself, will be a remarkable achievement. The NEP 2020 is a defining moment for higher education. Effective and time-bound implementation is what will make it truly path-breaking.

Abstract:

Well defined and futuristic education policy is essential for a country at school and college levels due to the reason that education leads to economic and social progress. India with the leadership of its current prime minister and an expert team with members of varied backgrounds has developed and planned to implement a new education policy during the next decade of the 21st century called Indian National Education Policy (NEP-2020). The aim, objectives, and details are well known to practitioners and the public. NEP-2020 is an innovative and futuristic proposal with both positive and negative aspects, framed with the objective to provide a quality school education and higher education to everyone with an expectation of holistic & research-oriented progress. This paper initially depicts an overview of NEP-2020, distinguish the strengths & weakness of the policy at higher education & research part, evaluation of the implementation suggestions given in the policy, identifying and analyzing possible generic strategies for implementation of NEP-2020 to fulfill its objectives based on focus group discussions. The paper also includes many predictive proposals on issues like developing quality universities & colleges, institutional restructuring & consolidation, more holistic & multidisciplinary education, optimal learning environment & student support, transforming the regulatory system of higher education, technology usage & integration, and online & digital education. Finally, some recommendations are made to implement the NEP2020 effectively irrespective of various constraints. This article can be considered as a reference to the policy implementation teams of Government of India.

Keywords: NEP 2020, , features of NEP, vision of NEP Indian Higher Education Policy, Implementation Strategies, Indian Higher Education System,

Introduction

Education is fundamental for achieving full human potential, developing an equitable and just society, and promoting national development. It is becoming increasingly critical that children not only learn, but more importantly learn how to learn. The curriculum must include basic arts, crafts, humanities, games, sports and fitness, languages, literature, culture, and values, in addition to science and mathematics, to develop all aspects and capabilities of learners; and make education more well-rounded, useful, and fulfilling to the learner. The gap between the current state of learning outcomes and what is required must be bridged through undertaking major reforms that bring the highest quality, equity, and integrity into the system, from early childhood care and education through higher education. This

National Education Policy 2020 is the first education policy of the 21st century and aims to address the many growing developmental imperatives of our country.

To implement the educational policy successfully, the stakeholders must know it. If the stakeholders have complete knowledge of it, then only there is enhance in quality education. The world is undergoing rapid changes in the knowledge landscape. With various dramatic scientific and technological advances, such as the rise of big data, machine learning, and artificial intelligence, many unskilled jobs worldwide may be taken over by machines, while the need for a skilled workforce, particularly involving mathematics, computer science, and data science, in conjunction with multidisciplinary abilities across the sciences, social sciences, and humanities, will be increasingly in greater demand

Further, the New Education Policy introduces the mandatory years of schooling of children from age 6-14 years, and three years of pre-schooling of age group 3-6 years. In simple words, the new system has introduced 12 years of mandatory schooling for children with three years of pre-schooling/ Anganwadi.

The world is undergoing rapid changes in the knowledge landscape. With various dramatic scientific and technological advances, such as the rise of big data, machine learning, and artificial intelligence, many unskilled jobs worldwide may be taken over by machines, while the need for a skilled workforce, particularly involving mathematics, computer science, and data science, in conjunction with multidisciplinary abilities across the sciences, social sciences, and humanities, will be increasingly in greater demand. With climate change, increasing pollution, and depleting natural resources, there will be a sizeable shift in how we meet the world's energy, water, food, and sanitation needs, again resulting in the need for new skilled labour, particularly in bio...

The teacher must be at the centre of the fundamental reforms in the education system. The new education policy must help re-establish teachers, at all levels, as the most respected and essential members of our society, because they truly shape our next generation of citizens. It must do everything to empower teachers and help them to do their job as effectively as possible. The new education policy must help recruit the very best and brightest to enter the teaching profession at all levels, by ensuring livelihood, respect, dignity, and autonomy, while also instilling in the system basic methods of quality control and accountability.

Objective

- To understand the opinion about New Education Policy (NEP) for teaching fraternity.
- To know the features of new Education Policy
- To study the vision of new educational policy.

Principles of This Policy (NEP 2020)

The purpose of the education system is to develop good human beings capable of rational thought and action, possessing compassion and empathy, courage and resilience, scientific temper and creative imagination, with sound ethical moorings and values. It aims at producing engaged, productive, and contributing citizens for building an equitable, inclusive, and plural society as envisaged by our Constitution.

A good education institution is one in which every student feels welcomed and cared for, where a safe and stimulating learning environment exists, where a wide range of learning experiences are offered, and where good physical infrastructure and appropriate resources conducive to learning are available to all students. ...

The Vision of this Policy (NEP 2020)

This National Education Policy (NEP 2020) envisions an education system rooted in Indian ethos that contributes directly to transforming India, that is Bharat, sustainably into an equitable and vibrant knowledge society, by providing high-quality education to all, and thereby making India a global knowledge superpower. The Policy envisages that the curriculum and pedagogy of our institutions must develop among the students a deep sense of respect towards the Fundamental Duties and Constitutional values, bonding with one's country, and a conscious awareness of one's roles and responsibilities in a changing world. The vision of the Policy is to instill among the learners a deep-rooted pride in being Indian, not only in thou...

Features:

- **Technology in Education**

An autonomous body, the National Educational Technology Forum (NETF), will be created to provide a platform for the free exchange of ideas on the use of technology to enhance learning, assessment, planning, administration. Appropriate integration of technology into all levels of education will be done to improve classroom processes, support teacher professional development, enhance educational access for disadvantaged groups and streamline educational planning, administration and management

- **Mentoring Mission**

A National Mission for Mentoring will be established, with a large pool of senior/retired faculty – including those with the ability to teach in Indian languages – which would be willing to provide short and long-term mentoring/professional support to university/college teachers.

- **Teacher Education**

A new and comprehensive National Curriculum Framework for Teacher Education, NCFTE 2021, will be formulated by the NCTE in consultation with NCERT. By 2030, the minimum degree qualification for teaching will be a 4-year integrated B.Ed. degree. Stringent action will be taken against substandard stand-alone Teacher Education Institutions (TEIs).

- **Online Education and Digital Education**

A comprehensive set of recommendations for promoting online education consequent to the recent rise in epidemics and pandemics in order to ensure preparedness with alternative modes of quality education whenever and wherever traditional and in-person modes of education are not possible, has been covered. A dedicated unit for the purpose of orchestrating the building of digital infrastructure, digital content and capacity building will be created in the MHRD to look after the e-education needs of both school and higher education.

- **Professional Education**

All professional education will be an integral part of the higher education system. Stand-alone technical universities, health science universities, legal and agricultural universities etc will aim to become multi-disciplinary institutions.

- **Rationalized Institutional Architecture**

Higher education institutions will be transformed into large, well resourced, vibrant multidisciplinary institutions providing high quality teaching, research, and community engagement. The definition of university will allow a spectrum of institutions that range from Research-intensive Universities to Teaching-intensive Universities and Autonomous degree-granting Colleges.

Affiliation of colleges is to be phased out in 15 years and a stage-wise mechanism is to be established for granting graded autonomy to colleges. Over a period of time, it is envisaged that every college would develop into either an Autonomous degree-granting College, or a constituent college of a university.

- **Motivated, Energized, and Capable Faculty**

NEP makes recommendations for motivating, energizing, and building capacity of faculty through clearly defined, independent, transparent recruitment, freedom to design curricula/pedagogy, incentivizing excellence, movement into institutional leadership. Faculty not delivering on basic norms will be held accountable

- **Equitable and Inclusive Education**

NEP 2020 aims to ensure that no child loses any opportunity to learn and excel because of the circumstances of birth or background. Special emphasis will be given on socially and Economically Disadvantaged Groups (SEDGs) which include gender, socio-cultural, and geographical identities and disabilities

Conclusion

India is geared up to implement the guidelines of National Education Policy 2020 throughout the country to reform and make radical changes in school education and higher education with an objective of creating a new education system which should empower the youngsters and boost their confidence to create new knowledge, new skills, along with human values to solve current and future problems and challenges of the civilized society by means of their enhanced innovative ability and tech-savviness. It is known that technology which is an application of scientific thinking has the capabilities to improve the quality of life of everyone in this universe and quality education is the foundation for it. With the objective of providing value based, knowledge based, and skill based higher education for everyone in the country, the new education policy has many intrinsic propositions to improve the quality of school and higher education to creating interest in their chosen area to find challenges and converting them into opportunities by discovering innovative solutions to make life comfortable and successful with expected happiness. The quality higher education has the objective of developing human beings who are responsible for creating better society by means of improved human value-based discipline, and respecting each other for growth and prosperity. Quality higher education also makes everyone to contribute to discovering new technology, adopting new technology, or promoting new technology which can contribute to the progress of society. It is expected that the new education policy which is research focused, will accelerate the attainment of the above objectives and makes every stakeholder as innovator.

THEORETICAL ANALYSIS ON NEW EDUCATION POLICY OF INDIA 2020

Dr. S. Akhila

Assistant Professor

Department of Commerce BPS & BI

Sri Krishna Arts & Science College

Coimbatore

Abstract

In this contingency plan, education is essential and crucial. As a result, the National Education Policy 2020 has been changed into the foundation of this reform, which might aid in the development of a new educational system in the nation as well as the improvement of those economic and social indices. That still requires improvement. Transforming our current educational system is the main goal of the New Education Policy 2023. It's a ground-breaking strategy that attempts to integrate contemporary instructional techniques, harness the power of technology, and encourage learning based on competencies that are beneficial. Through independent colleges and interdisciplinary universities, NEP 2020 offers top-notch higher education. In this research, we have critically analyzed the policy and suggested modifications to facilitate a smooth transition between it and its predecessor as well as to increase its significance. The examination of the NEP 2020 regulations and management practices at the university level is included in the current article. For the development and implementation of NEPs at the national and HEI (Higher Education) levels, recommendations are provided.

Keywords: *National Education Policy, Indian Education, Teacher Training, HEIs*

1. Introduction

The enduring and unchanging law of the cosmos is change. In this case, it changes constantly. The process of change affects every civilization equally. The nature of society is social change. This also applies to Indian society. Numerous social, economic, political, and other changes have occurred between the prehistoric age and the present, according to research into the history of Indian society. Two primary forms of change exist. One category includes changes brought about by nature, while the others are brought about by people. We have no influence over a change in the natural world. However, one seeks to innovate through bringing about improvements in daily life and society via human transformation. Currently, the education policy should be addressed first if there is to be any change in the growth of a society. The state of education in any nation demonstrates the importance of education to that nation's government and the extent of its involvement.

It was anticipated that the government and the entire system would take some decisive action to rectify the issue after India lagged behind in the rankings of higher quality institutions across the world in recent years. After 34 years, the Indian

government decided to reform the country's education policy while keeping in mind the overall goal of national development. A committee headed by Dr. K.K. Kasturirangan was established by the Central Government in 2017 to develop a new education policy. The group produced the 2019 National Education Policy. The National Education Policy 2020 was adopted by the Central Government of India in July 2020. The Prime Minister Shri Narendra Modi tweeted about this permission, and the Human Resource Development Minister "Shri Ramesh Pokhriyal Nishak" briefed the public in a news conference. It was also made clear that "Ministry of Education" has replaced "Ministry of Human Resource Development." The Ministry of Human Resource Development was renamed earlier in 1985 from Ministry of Education. After the implementation of a new education strategy in 2020, the Ministry of Human Resource Development's name was once more changed to the Ministry of Education.

The first education policy was implemented in 1968 by the administration of Mrs. Indira Gandhi, a former prime minister. The Rajiv Gandhi administration created the second education policy in 1986, while the Narasimha Rao administration made a few minor adjustments in 1992. The National Education Policy 2020 is the third education policy that independent India has established. As a result, a 34-year-old education policy that is now in place is losing effectiveness due to the shifting circumstances. For this reason, the Ministry of Human Resource Development created a new education policy in 2019 and solicited feedback from the general population.

Why Do Pre-Education Policies Need to Change?

- In light of the shifting global environment, adjustments to the present educational system were required to meet the demands of a knowledge-based economy.
- New education to improve instruction quality and foster research and innovation.
- In order to guarantee worldwide access to the Indian educational system, in education policy.

2. What Comprises New Education Policy in India?

By 2030, the educational system must be modified in accordance with the new education strategy of 2020. In place of the present 10 + 2 model, the curriculum will be split according to the educational system of 5 + 3 + 3 + 4. According to the new Education Policy 2020, Central and State Governments must spend in the education sector at a rate that is equivalent to 6% of the nation's GDP to foster collaboration in the field of education.

"We have tried to build a plan that will change the educational environment as we presently see it in order to better prepare the youth for the challenges of the present and the future. Every participant in the voyage has adopted a personal approach, and collectively, we have sought to address many facets of the larger educational landscape of our nation. The fundamental principles of this strategy include accessibility, capability, quality, affordability, and accountability. We have taken this subject from early childhood through higher education, embracing other sectors that are tied to the larger environment as well. (K. Kasturiranjana, committee chairman).

New Education Policy 2020 Phase

Four distinct phases make up the new education policy. It is totally no longer allowed under the new rules. The new education policy is based on the 5 + 3 + 3 + 4 formula as opposed to the prior education policy, which was structured using a 10 + 2 formula. Three years of schooling and twelve years are now part of the routine. The new policy must be followed by all institutions, both government and non-government.

Four Steps of New Education Policy

- **Foundation Stage**-Children aged 3 to 8 are enrolled in the Foundation Stage of the New Education Policy. The Foundation Stage has remained unchanged for five years. The children's linguistic abilities and skill levels will be assessed over the three years of pre-school instruction at Anganwadi, as well as during the first and second grades of school, with an emphasis on their growth.
- **Preparatory Stage** -This stage's duration is preserved for three years. Children between the ages of 8 and 11 are included in this period. where he will have kids up to class 5. Strengthening the pupils' numerical skills will get particular priority at this stage of the new educational agenda. All kids will also learn the local tongue at the same time. Children will also learn science, art, math, and other subjects via experiments.
- **Middle Stage** -- This stage will last for a set three years. Children in this stage, who will get subject-based instruction and begin learning to code in the sixth grade, range in age from 6 to 8 years old. All of the kids will have the chance to take part in vocational tests and internships at the same time, with the intention of limiting their eligibility for work to the time they spend in school.
- **Secondary Stage**-This stage lasts for four years. 9th grade in this stage Included are students in the 12th grade. In this, the themes will be studied in depth. The alternate educational course has also begun at this point, along with the educational curriculum for the eighth through twelfth grades. Instead than being

limited to a certain stream, students can pick the courses they want to study. Students now have the opportunity to select their own studies under the new educational strategy. Science, art, and kormas can all be studied concurrently by students. There was no pre-schooling in government schools because of the previous 10 + 2 system. In general, classes 1 through 10 were for education, while classes 6 and 7 offered students the flexibility to pick any topics they wanted from those classes. Previously, education began in the first six years, but it will now begin in the first three. Board tests for 10th and 12th grade students will be altered in structure to lessen the workload while keeping in mind the students' overall growth. There will be enhancements, like a semester or multiple-choice questions. Two times a year will be designated for the examination. Once a year, tests that are both objective and subjective will be given. In order to combat students' propensity for rote learning, the knowledge test will get the majority of attention during the board exam. This viewpoint welcomes the government's way of thinking. A new national assessment center will be set up to serve as the standard-setting body for evaluating students' progress. Software based on "artificial intelligence" will be used to assess student progress and assist students in making future-related decisions.

Provisions Related to Higher Education

Under National Education Policy 2020, the gross enrollment ratio in higher education institutions is expected to rise from 26.3 percent (the year 2018) to 50 percent, and 3.5 crore additional seats will be added.

The percentage of the total eligible population who have enrolled in educational institutions is known as the gross enrollment ratio. For instance, if there are 100 students in the age group eligible for entrance to higher education, but only 60 are accepted, the ratio is 60 percent.

A Higher Education Commission of India will be established in place of the UGC for all higher education programs, with the exception of medical and legal education. We'll create a multidisciplinary research and education institution comparable to the IITs and IIMs. These institutions are going to be top-notch. The National Testing Agency will administer a general entrance exam for admission to these programs. All students will be able to take it as an option; under this system, no subject will be required. The humanities and arts will also be taught at technical schools. No separation like that between the arts, sciences, and commerce will exist. Any subject is available for students to pick from. The country's educational institutions, including the IITs, would take a comprehensive stance.

Four Bodies of Higher Education of Commission (HECI)

1. **National Higher Education Regulatory Council (NHERC):** It will serve as a regulator for the field of higher learning, including teacher preparation.
2. **General Education Council (GEC):** This will establish the foundation for desired learning outcomes for programs in higher education, i.e., their standardization process.
3. **National Accreditation Council (NAC):** These institutions are accredited and will operate largely in accordance with the following fundamental standards: open self-disclosure, effective governance, and outcomes.
4. **Higher Education Grants Council (HGFC):** This provides funding for colleges and universities.

Currently, organizations like the National Council for Teacher Education (NCTE), All India Council for Technical Education (AICTE), and University Grants Commission (UGC) govern higher education institutions.

The National Education Policy 2020's undergraduate curriculum allows for several entrances and exits. According to the method established, students can exit a three- or four-year undergraduate program at various levels, and they will be given degrees or certificates in accordance with their exit level. similar to a certificate after a year, an advanced diploma after two years, a bachelor's degree after three years, a graduate certificate with research after four years. Students who are pursuing a four-year degree can finish an MA and a PhD in one calendar year. The new education policy has eliminated the MPhil program. By means of this policy, the Academic Bank of Credit will be established. The pupils' digitally saved digit or credit will be used in this.

Provisions Related to Online and Digital Education

To advance digital education, the National Educational Technological Farm will be established. It will coordinate the development of digital content, infrastructure, and capability. This will result in the formation of study and assessment technologies as well as instructional training.

- The Ministry of Education will transform into a specialized organization for digital infrastructure, digital content, and capacity building to meet the e-education demands of both school and higher education in order to secure the preparation of alternative methods of quality education.
- Regional language versions of the e-content will be made accessible for study.

Related to Advanced Education

By 2030, the goal of complete youth and adult literacy has been reached.

Protection of Linguistic Diversity

Numerous language alternatives are still available under the current education policy. The study of mother tongues or regional languages has been recommended for classes 5 and 8 as a priority. From the secondary level, or ninth grade, students will be able to enroll in a foreign language course.

In the trilingual formula, at least two Indian languages must be present. State, region, and student preferences will be given priority in this. For instance, Mumbai students who study Marathi and English will also need to learn a third language. There is an opportunity to read Sanskrit and other traditional and ancient languages in the educational curriculum, thus the language choice will not have an impact on any students.

Physical Education

In accordance with the new education strategy 2020, students will also enhance their abilities in addition to their academic knowledge. In which instruction in disciplines including horticulture, yoga, music, dance, sports, and sculpture will be provided to all pupils starting with the lowest grade. Therefore, the newborn is proficient in both physical and other types of talents.

Recommendations Related to the Educational System

- The new education policy will occasionally set up teacher promotions based on performance.
- By 2022, the National Council for Teacher Education will have created a professional standard for educators.
- National level education for teachers, in accordance with NCERT recommendations The course's curriculum will be created.
- A four-year B.Ed. degree will be required for teachers under the new educational strategy by 2030.

Provision for Differently-abled Children

Through the implementation of a new education policy, changes have been made to the educational curriculum for PWD. These people will be able to fully engage in the educational process through normal schooling from the primary level on up.

Funding Education

The focus is on allocating up to 6% of GDP to the education sector. Its current share of GDP is 4.43 percent.

Financial Aid to Students

- The qualification of students who fall under the SC, ST, OBC, and other distinct groups shall be encouraged.
- To assist and advance the academic advancement of students receiving stipends The tracker for the national scholarship webpage will be enhanced.

Other Announcements

- In higher education, a single regulator will now oversee institutions in place of UGC, AICTE, and NCTE.
- By granting colleges autonomy, the procedure of affiliation with universities will be abolished after 15 years. They will be given complete autonomy. They will either be transformed into independent colleges that provide degrees or will be joined to a university.
- To give education an international flavor, the top-ranked university in the world will be permitted to establish a branch in India. This would save Indian students the trouble of traveling overseas to apply for admission to the best schools and universities in the world.
- In order to undertake research, foster a strong research culture, and maximize the potential for research in higher education, the National Research Foundation will be established.
- The creation of education centers for underprivileged communities and the gender inclusion fund will be emphasized in the new education strategy.
- A 360-degree evaluation will be used to evaluate the student's report card, taking into account his behavioral and mental capabilities. This assessment will be done by the student's instructor and classmate.

3. Challenges Related to Education Policy

- **Cooperation** -State education is a concurrent topic. The majority of states have school boards for this reason. To ensure that this decision is really carried out, the State Governments must step up. States may also object to the notion of establishing a National Higher Education Regulatory Campus as the principal governing body.
- **Expensive Education** - The new educational strategy makes it easier to be accepted to institutions abroad. Many scholars think that the Indian educational system would likely have to pay a high price for admittance to overseas colleges. As a result, it may be difficult for students from lower socioeconomic classes to seek higher education.

- **Sanskritisation of Education** -South Indian states claim that the trilingual formula is an attempt by the government to Sanskritize education. Even if students are taught in their native tongue or a regional language, many issues might still confront states. For instance, residents of Delhi, a union territory, come from many states. There would be students at such a school who speak various mother tongues. Whether or not English-medium schools support the vernacular idea depends on the language in which all of these youngsters will receive their education. If the state changes, the children will be able to receive an education in elementary school in which media.
- **Feeding-Related Inadequate Investigation**- Some states still charge fees. Regulation is in place, but it cannot stop profiting through unrestricted donations.
- **Financing**-The ability to commit the required 6 percent of GDP as public investment on education will determine whether money can be secured.
- **Lack of Human Resources** -Presently, primary education needs qualified instructors. In this case, the National Education Policy 2020 will be implemented, which is a framework designed for primary education.

4. Suggestions for the New Education Policy 2020 of India

- The early childhood care and education program covers the first five years. It will be put into practice via Anganwadi. To begin with, Anganwadi should be transformed into Kids Zone so that the kid may receive a sports education. Additionally, to ensure that education and health go hand in hand, one of the two Anganwadi employees should be replaced with an ASHA employee and a physiotherapist. According to some estimates, 85% of brain growth happens during this time. Therefore, it will be necessary to provide the youngsters at this time with competent instruction in order to develop a strong and capable generation in this.
- Will obtain elementary schooling from third to fifth grades. Children between the ages of 8 and 11 attend. The youngster must lessen his or her reading load in this class. Children should be educated through moral tales throughout this stage in order to facilitate the child's overall growth. At this point, bagless education should be provided.
- The youngster gains environmental information throughout the secondary period. The government provides children with midday meals, bicycles, and de-warding services like Navodaya in addition to other things. many are unable to complete their education while working in agriculture because of the economic issues in India's rural areas, therefore many stop in the middle.

- Additionally, the notion of employment education will only be realized if 50% of textbook review and 50% of evaluation are based on local arts promotion, culture, and small cottage enterprises.
- In the presence of the parents, refrain from receiving customary instruction in the upper secondary level as well as sexual education.
- Children should be provided internships through vocational training and entrepreneurship in a variety of regions of the nation so that they are aware of their surroundings geographically.
- To put all the declarations into action, there must be a strong political will and enough infrastructure.
- Universities must be given more autonomy in order to improve education.
- To diversify the revised curriculum and foster global innovation, 200 top-ranked colleges should be granted complete academic, administrative, and financial autonomy.
- In India, less money is spent on research. In 2017–18, research consumed 0.7 percent of the GDP. Spending by the US in China and Israel was 2.1% and 2.8% respectively. The National Research Foundation has to be established up on fast track messages to boost research in the new strategy.
- The best universities in India should graduate more than 50,000 PhDs annually to boost innovation and specialized expertise.
- The Central and State Governments should similarly provide institutions special packages in order to raise the Gross Enrolment Ratio.
- The environment, sports, culture, research, and development are highlighted in the new policy. The fundamental infrastructure needed to address all of these demands is lacking.
- For this, the government should make arrangements to loan the universities a sizable sum of money over a 20–30-year period.

Conclusion

If effectively implemented, the New National Education Policy, 2020, which has been authorized by the federal government to improve the Indian educational system to match the demands of the 21st century India, would make India one of the top nations in the world. Equivalent Children from three years old to eighteen years old have been subject to the Right to Education Act of 2009 under the new education strategy, 2020. This new education strategy, which was introduced after 34 years, intends to universalize pre-primary education (for children between the ages of 3-6) by 2025 and to give higher education to all students.

OPPORTUNITIES AND CHALLENGES IN NEP AND HEI

Dr. R. Gayathri & Abdul Sameer

*Department of B.Com with IB
Ngm College, Pollachi*

Introduction:

India, with its massive and diverse population, recognizes the pivotal role of education in shaping the nation's future. In response to the evolving global landscape and the need for a comprehensive educational overhaul, the Indian government introduced a new education policy. This policy extends its scope beyond primary and secondary education to encompass reforms in higher education institutions (HEIs) as well. This article explores the opportunities and challenges presented by the new education policy in India and its impact on HEIs, analysing how it can shape the future of higher education in the country.

Opportunities:

Holistic Development and Interdisciplinary Approach

The new education policy emphasises holistic development, focusing on nurturing well-rounded individuals rather than encouraging rote learning. This approach creates an opportunity for HEIs to design interdisciplinary programs that allow students to explore diverse subjects and develop critical thinking, problem-solving, and creativity.

Flexibility and Choice-Based Credit System:

The policy advocates a flexible approach to higher education, promoting choice-based credit systems (CBCS). This system enables students to select courses based on their interests and career aspirations, providing a personalised learning experience.

Emphasis on Research and Innovation:

The new policy encourages HEIs to prioritise research and innovation. This presents an opportunity for institutions to strengthen their research infrastructure, foster a culture of innovation, and collaborate with industries and research organisations to address real-world challenges.

Technology Integration and Digital Learning:

With an increasing emphasis on technology, the policy encourages HEIs to integrate digital tools and online platforms into their teaching methodologies. This facilitates remote learning, provides access to a vast repository of knowledge, and prepares students for the digital age.

Skill Development and Industry-Academia Collaboration:

HEIs can seize the opportunity to align their curricula with industry needs, fostering closer collaboration with businesses and industries. By incorporating skill development programs and offering internships, HEIs can enhance students' employability and bridge the gap between academia and the job market.

Challenges:

- **Implementation and Regulatory Framework:**

Translating the new education policy into action in the higher education sector requires clear guidelines and a streamlined regulatory framework. Effective implementation necessitates the collaboration of various stakeholders, including central and state governments, universities, and accrediting bodies.

- **Faculty Development and Training:**

Ensuring quality education in HEIs demands well-trained and competent faculty. Institutions must invest in faculty development programs to equip educators with the skills necessary for innovative teaching and research.

- **Infrastructure and Resource Constraints:**

Many HEIs in India face infrastructure and resource constraints, including inadequate funding, outdated facilities, and limited access to technology. Addressing these challenges is crucial to create a conducive learning environment.

- **Maintaining a Balance Between Access and Quality:**

With increased focus on expanding access to higher education, maintaining quality standards becomes a challenge. HEIs must strike a balance between access and quality to produce skilled graduates who can compete globally.

- **Assessing Holistic Development and Skill Acquisition:**

Measuring holistic development and skill acquisition is a complex task, as traditional assessment methods may not adequately capture all aspects of a student's growth. Developing effective evaluation mechanisms is essential to gauge the policy's success.

Conclusion:

India's new education policy presents a unique opportunity to transform higher education and shape a skilled and well-rounded generation of graduates. By emphasising holistic development, promoting interdisciplinary studies, and integrating technology, HEIs can enhance the quality of education and prepare students for a rapidly changing world. However, the successful implementation of the policy hinges on addressing challenges such as regulatory frameworks, faculty development, resource constraints, and maintaining a balance between access and quality. With collaborative efforts from the government, HEIs, educators, and industry stakeholders, India can realise the full potential of its new education policy and establish a thriving higher education landscape that contributes significantly to the nation's progress and development.

NEW EDUCATION POLICY STRATEGIES IN HIGHER EDUCATION

Dr. B. Saranya

M.Com., M.Phil., Ph.D., MBA., Ph.D., M.Sc., PGDCA., NET

Associate Professor & Head

Department of Commerce (Foreign Trade)

PSG College of Arts & Science

Coimbatore

Abstract

National Education Policy is the guiding element for the education system. Providing universal access to quality education is the key to success and it is the need of the hour. The National Education Policy directly aids in the long-term transformation of our country into a fair and thriving knowledge society. The new National Education Policy, which provides a complete framework for primary education through higher education as well as vocational training in both rural and urban India, was adopted by the Union Cabinet of India on July 29, 2020. The new strategy intends to expand higher education enrollment to 50% by 2025 and to universalize education from pre-school through secondary level at 100% of total school enrollment by 2030. The sustainable development goal four implies about the quality education for all. It can only be achieved by skilling the people through National Education Policy. This article focuses on about the objectives, features, strategies and challenges of implementing the National Education Policy. Hence, there comes the need to throw a light on knowing all these in the present scenario.

Keywords: *Objectives, Strategies, Challenges and future of NEP*

Introduction

The Ministry of Human Resource Development (MHRD), working under Prime Minister Narendra Modi's guidance, unveiled the New Education Policy. On July 29, 2020, the National Education Policy 2020 was made public following approval by the Union Cabinet. In order to become a major global player, India is currently changing its education system significantly. The 34-year-old educational policies were replaced with the most recent changes. The new system, which is currently being put into place, emphasizes online learning, longer school days, and a departure from the conventional approach of rote learning.

New Education Policy 2023

Our current educational system needs to be transformed, according to the New Education Policy 2023. It's a ground-breaking strategy that seeks to include contemporary teaching techniques, harness the power of technology, and encourage learning based on practical skills. The ultimate objective is to provide access to

education for all people, regardless of their circumstances or history. Supporting marginalized communities and fostering an inclusive and just educational environment are given particular attention.

The policy has resulted in a number of significant changes, including the replacement of the conventional 10+2 schooling framework with a more adaptable and comprehensive 5+3+3+4 system. The objective of this new method is to give priority to critical thinking, life skills, and fundamental abilities in the instruction of students at all levels.

Objectives of New Education Policy 2023

The main goal of the National Education Policy is to bring India's educational standards up to par with those across the world so that it may become a leader in knowledge-based industries. The National Education Policy's universalization of education makes this objective possible. The purpose of the policy is to provide quality education to the students and enhance the children to have good education.

Principles of New Education Policy

1. Determine and nurture each child's potential.
2. Increase children's reading and numeracy knowledge
3. Providing flexible learning opportunities.
4. Spend money on public education.
5. Improve education quality
6. Introduce children to Indian culture.
7. Do excellent research, teach good governance, and empower children
8. Transparency in education policy
9. Emphasize the usage of technology and evaluate
10. Teach many languages
11. Improve your child's creativity and logical thinking.

New Education Policy : Digital Inclusions

Due to technology improvements, digital teaching methods have recently become a part of the educational system. The digital strategies the government will use through NEP 2023 to enhance education.

- The National Educational Technology Forum (NETF) will be established by the government. The goal is to showcase fresh, cutting-edge ideas that will enhance digital teaching methodologies in diverse institutions.
- To provide more resources for digital education, the government will create a new agency that will operate throughout the nation.

New Education Policy 2020 Schools System: 5+3+3+4 Education Structure

A new educational framework called 5+3+3+4 has been introduced under the New Education Policy 2020 to replace the current 10+2 system. The first five years of education in this new structure are devoted to foundational learning, after which there are three years of preparatory schooling, three years of middle stage schooling, and four years of secondary education.

The New Education System

The NEP 2020's most eye-catching change is the substitution of the 10+2 structure with the 5+3+3+4 structure. Our educational system has used the 10+2 for a very long period. Therefore, a whole overhaul of that system can be a little confusing for the kids.

Importance of 5+3+3+4 Structure

Through the 5+3+3+4 structure, the government hopes to place more emphasis on the kids' stage of cognitive development. The government will clarify the kids' educational stages through this framework for their advantage. The 5+3+3+4 framework, as opposed to the 10+2 structure, will improve students' bases from the foundational stage to the secondary stage. The students' use of their right to an education will be aided by the new framework. As opposed to 6 to 14, the age range covered by the structure is 3 to 18. As a result, the start of the pupils' school lives will help them.

Parakh to Evaluate Under HECI Acting as a Single Umbrella

As a body that establishes standards, a new national assessment centre called PAREKH (Performance Assessment, Review, and Analysis of Knowledge for

Holistic Development) will be established. The organisation will establish guidelines for how institutions should operate and will analyse and evaluate the nation builders' performance. The establishment of Special Education Zones for underprivileged regions and groups, as well as a Gender Inclusion Fund, have been highlighted in the NEP.

The NEP 2023 will also have an impact on students who study UG and higher education. The policy stipulates that an undergraduate degree would last four years and be multi-disciplinary, holistic, and adaptable. Additionally, the students will have several opportunities to choose to leave the degree programme. For instance, the completion of a one-year vocational or professional field course will result in a certificate for the students. They will, however, receive a diploma after two years and a bachelor's degree after three.

Implementation Strategies and Regional Disparities

- Priority in establishing quality higher education facilities in under-served districts will be essential to reduce regional disparities.
- Improving availability of high quality HEIs in aspirational districts and Special Education Zones (SEZs), envisaged to be created through a contiguous geographical and/or socio-cultural area dominated by SEDGs.
- Designing a catchment area policy measure for students from SEDGs residing in the SEZs. The catchment area policy could include a percentage of HEIs seats reserved for candidates residing in the SEZs. This form of affirmative action would be most beneficial for improving HE access for population groups within the SEDGs, such as the scheduled tribes and minority groups.
- Increasing the availability of higher education institutions offering professional and technical courses in rural, underserved regions, Aspirational Districts and in SEZs dominated by the SEDGs.
- Expanding government public and private aided institutions, particularly in professional and technical courses will be important to improve access of SEDGs to STEM and management subjects.

Challenges and Opportunities

Attracting Top Universities

Few of the "top 100" universities have IBCs because they find it challenging to uphold the same standard of excellence throughout all of their branch campuses. Additionally, these institutions don't have a significant resource shortage, and their courses are still in great demand within the contexts in which they operate. Because of this, restricting the invitation to only "top 100" universities may provide issues.

Universities in the top 200 of the World University Rankings and those with the highest "subject-wise global rankings" may both be relevant considerations.

Partnership Model

The government should encourage the 'partnership model' which allows existing Indian higher education institutions to collaborate with 'top 100' universities to establish branch campuses. Financial risks could be reduced to a great extent as existing infrastructural facilities could also be utilised.

Scope for Regional Education Hub

India is in an advantageous position vis-à-vis tuition fee and cost of living, and this could help the IBCs in India to attract a large number of foreign students. This would help the country to become a regional education hub.

Healthy Competition and Internationalization of Curriculum

The curriculum offered by IBCs would encourage Indian institutions to creatively re-conceptualize their existing curriculum to reach international standards. An internationally compatible curriculum, in terms of learning outcomes and concepts would facilitate the inbound mobility of foreign students.

Conclusion:

The goal of developing a new educational system is to give children the confidence and empowerment to develop new knowledge, skills, and human values in order to solve problems and challenges facing a civilized society now and in the future using their improved innovative skills and technological know-how. Everyone in this universe can live better and thanks to technology, which is an application of scientific thinking, and the foundation for that is high-quality education. The new education policy has several inherent proposals to improve the quality of school and higher education, to create interest in their chosen field, and to provide value-based, knowledge-based, and skill-based higher education for everyone in the country.

INNOVATION AND BEST EMERGING TRENDS IN HIGHER EDUCATION-2023

Dr. G. Krishna

Vice Principal

Sri Vidhyodhaya College of Education

Villupuram

Introduction

The importance of higher education has been clearly expressed by our first Prime Minister Mr. Jawaharlal Nehru in the following words: "A university stands for humanism, for tolerance, for reason, for the adventure of the ideas and for the search of truth. It stands for onward march of human race towards even higher objectives. If the universities discharge their duties adequately, then it well with the nation and the people". It indicates that higher education occupies a crucial position in education system of a nation as it affects the overall development of a country

A multidimensional effort for the transformation of Indian life starts 1947, after the achievement of independence, which has been for a long period under colonial rule. After making of the constitution of Indian democratic efforts were promoted and available resources find very little scope within the inflexible 'steel frame'. A critical evaluation of the education system in India began, with the appointment of the University Education Commission in 1948. Several Educational Committees and Commission of Indian Education. And in spite of innumerable limitations educational innovations have been emerging in India under the impact of unrelenting expectations of the masses, the urgency for rapid economic growth and the necessity to strengthen and protect democratic values as a way of life.

Major Needs for Educational Development

The major needs for educational development in India are – (1) universal elementary education for the age group 6 to 14 years, (2) improvements of standards, (3) Curricula changes which would meet the national values and goals and improves productivity, (4) improvement in educational planning and administration.

Resource Mobilization:

Mobilization of resources of schools is an important concern for poor rural India.

This aspects may be described through following dimension.

School Improvement Movement

The school improvement were first started in TamilNadu. Rural India is economically under developed. There fore children in rural India are hungry.They are poor. Therefore, arranging formid day mealsin schools has been emphasized as a major method for including childrena the primary stage to enrollina school. InTamil Nadua public movement be organised in 1956 by Education Department to supply free mid-day meals and a pilot project was initiated in 1958 in the National Extension Srulee Block of Kadambattur which include selementary school buildings, painting of black board,a small library and provisions of pure drinking water.

Structural Changes :

Some structural changes have made which may also considered as a trend in Indian Education.

- **National Council of Educational Research and Training:** (NCERT) is an example of structural innovation within the education system which was established in 1961 for promoting a large scale programme for the improvement of school education. The NCERT has prepared several publications,contributed significantly inthefield of curriculum development particularlyin science and socialstudies.The international contact sof the NCERThaveincreasedwithbeneficial effects on its beneficial standard of work.
- **State Institute of Education (STE)**– In 1963 the ministry of education offered the states the scheme of the State Institutes of Education with full financial assistance from the central government. This was considered an improvement of education which were expected to be lunched during the fourth five year plan.It was concerned with the fieldof planning and implementation of programmes of qualitative improvement.
- **State Board of Teacher Education (SBTE)**–State Boardof Teacher Education was first established on Maharastra districton 1967 and for the first time it brought together educational expertsand teacher educators from pre-primary,primary and secondary stage. The Board of Constructs fairly modernized curricula and examinations for pre-primary, primary and secondary teachers.
- **Central Institute of Indian Languages**–Establishment of Mysore Central Instituteof Indian Languages isone of the important innovations supported by Govt.of India. The instituteis expected to undertake innovative measures and to conduct training courses for developing methods, materials and aid forteaching Indian languages scientifically. It also gave emphasise on research domain of different aspects of Indian languages.Itisastriking example if the need to create non-traditional structural arrangements forthe implementation of innovative policies like India's National Policy on Education and policy on languages.

- **Indian Council of Social Science Research**–In India, the Council for Scientific and Industrial Research was established as early as 1944 for promoting research in the natural sciences but there was no similar agency to promote research in the social sciences. The Indian Council of Social Science Research was established by the Government of India as an autonomous body in 1969 to meet up this gap. May innovative work has been done by this Council.
- **Inclusion of work experience in the secondary school curriculum**–The Indian Education Commission stressed the need for changing the bookish character of school education by introducing into the curriculum a programme of work experience. Because we belong to a third world country and face problems like poverty and unemployment. Therefore, it is necessary to implement work based curriculum to overcome this situation. This programme was two fold. On the one hand elementary activities related to technology and agriculture for in-school youngsters. On the other hand a new curriculum combining general education with occupational training for immediate use for out-of-school was proposed to meet the need of hours.
- **Industrial Instruction**–The present traditional system of instruction is highly group-oriented. It is really very painful to see the plight of the traditional instructional process by which students of widely different abilities are grouped together for classroom instruction. The effort to individualized instruction have recently appeared in many form on our educational scene. NCERT has developed suitable materials for various subjects at different levels. Individualisation of instruction can mean that the teacher works on a personal, one to one, basis with each student. This essentially means a tutorial system which is normally followed in teacher-pupil relationship.

Change in Traditional Teaching Learning

The process of Teaching-Learning has now been changed to meet up the need of the learner. New methods and techniques have been developed on the basis of research findings. Modern Teaching- Learning Techniques are followed by psychological principles of teaching or psychology of teaching and learning. The important principles are – proceed from simple to complex, from concrete to abstract, general to complex, known to unknown, from induction to deduction and arrange for frequent reinforcement. Different innovative techniques, instructional media, strategies and instructional technology has been developed. Computer-Assisted Instruction, Personalised System of Instruction and Learner-Controlled Instruction has now been developed as current trends in Teaching-Learning.

The Emerging Trends of Educations are Discussed as Follows :

ICT will become the Backbone for Education modernisation in India Digitisation and adoption of ICT is increasingly modernising the traditional way of classroom learning. Use of ICT is increasingly enabling the standardisation of learning in rural areas and has helped bridge the gap of teacher shortage and student drop out.

Emerging Technologies

The popularity of ICT in education is supported by increasing level of penetration of PCs, internet, telecom network etc. in the country. India's first education tablet by iProf Learning Solutions exemplifies the increasingly affordable access to the students. Various technology-enabled education projects are aiming at the rural masses. HP's Lab-in-Box, a technology-equipped classroom housed in a shipping container with 15 HP PCs aims at reaching out to the remote regions. Chaitanya Gurukul Public School exemplifies the potential of technology-enabled education where teachers connect via Skype with the students. The Child Tracking System adopted by Jharkhand Government is an attempt to identify the dropped out children and increase the retention. In the Ecosystem Development Government is getting the network infrastructure to the grassroots levels with projects like SWAN, SDC, and CSC. Educational institutes are looking at connectivity and networking across their branches. UNESCO New Delhi and Intel India jointly are planning to help interested states to develop ICT in Education policies as well as provide training for more teachers. Majority of the state governments like UP, Kerala, Haryana are undergoing deployment of computer labs in government schools. IT education solutions providers are being engaged by governments. For example, Educomp Solutions would work with governments of Gujarat and Assam for projects worth USD 1.6 million to develop multimedia content for the state level schools and for a USD 15 million project for Maharashtra government to implement ICT in 540 secondary schools. Other initiatives like Hole-in-The-Wall Education Limited (HiWEL), a joint venture between NIIT Ltd. and the International Finance Corporation (2009) are reducing the digital divide by reaching the schools with easy access to internet.

Enhanced Content Availability

The government is digitising content to create online libraries under National Mission on Education through Information and Communication Technology (NME-ICT). Companies like TCS and others are being roped in to develop software and facilitate education through online media. The Government is giving a strong push in the direction of developing, supporting and promoting Free and Open Source Software (FOSS) to make IT accessible and affordable to more and more people. State government portals like The State Education Portal of Madhya Pradesh are facilitating a single source of authentic, live information for all stakeholders.

Multimedia in Schools

Multimedia in private schools generated around USD 309 million as revenue in FY11. Multimedia devices are deployed in college campuses where content is accessible not only through computers but also through TVs and smartphones along with BBC, MTV, NBC, ABC etc. integrating broadcast media with education. Private content provider years to come Sundaram will provide equivalent education with its product named E-class for K-10 segment through TV leveraging the wider reach of TV in India. Technologies like Digital classrooms, Interactive White Boards (IWB) are shaping the young minds not only in the private schools like The British School, Delhi but also in few of the government schools like Kendriya Vidyalas. Other systems like Learner Response System, Interactive Tools, Classrooms Sound Systems and newer ICT enabled assessment tools etc. would witness rapid adoption.

Virtual Classrooms

Traditional classrooms are changing with emerging concepts like virtual classroom by Khan's Academy. The academy has a video library of over 2,200 micro lecture videos and over 42 million visits, allowing students to learn at their own pace. The teacher plays a role of a coach/mentor, with more peer tutoring, project-based learning and one-on-one coaching. TutorVista, a provider of various coaching courses uses VOIP to connect instructors in India with school and college students in North America. It also reaches 3,300 classrooms by supplying digital content and technology platforms to private and government schools in India combining the orthodox system of learning with digitised content and state-of-the-art teaching tools. Everonn's i-school initiative offers digitised content as per CBSE syllabus, live and interactive satellite sessions, virtual labs, VSAT methodology enhancing peer learning across the country etc. Virtual reality websites such as Second Life has provided higher-education institutions with new venues for class gatherings and learning, new channels for content delivery, online video expansion and podcasting.

Education sector is expected to continue to attract significant private equity investments. Gaja Capital India, an education-centric fund, has completed the funding of three education services companies. Sequoia Capital invested USD 5.5 million in K-12 Techno Service to deploy computer and language labs across states in 2011. In 2009, PE players invested around USD 123.28 million in eight companies, including TutorVista, Career Point, FIITJEE, ITM Group and Edutech. Learning service provider giant Pearson acquired 76% stake in TutorVista, a provider of online tutoring to develop vocational and professional training services.

Everyone is already planning acquisition of small-sized companies (USD 2.2-3.3 million of annual revenue) in the near future and has also tied-up with Microsoft for an IT Academy. Companies such as ICICI are partnering with Manipal University

and NIIT to train its employees. Other players like Microsoft have been working towards improving the reach of education in India through projects like Shiksha. Various Corporate Social Responsibility initiatives by the players like Intel with 'World Ahead', Wipro with 'Azim Premji Foundation', Akshaya Patra Foundation, Procter and Gamble, Tata's, Infosys and many others are also helping in reaching out to the less-privileged in India.

Conclusion

As India's consumer class is expected to become tenfold by 2025, the entire ecosystem in the country is enthused to reform the education sector. Revolutionary initiatives of government and proactive participation of the private sector are largely working towards the development of education infrastructure in the country.

The focus remains on consistent learning and formative assessment process leading to de-stressed learning and evaluation. With investments pouring in from private players, international agencies and the government to ensure successful implementation, India is set to become a preferred destination for quality education in the years to come.

IMPACT OF NEP 2020 AMONG SCHOOL AND COLLEGE STUDENTS

Dr. S. Shanmugapriya

Assistant Professor

PG and Research Department of Commerce

NGM College, Pollachi

Abstract

The New Schooling Strategy 2020 plans to upset the instructive scene by giving a thorough system that takes special care of the different necessities of students and sets them up for the difficulties of the 21st hundred years. This theoretical gives an outline of the key targets, procedures, and anticipated results of the approach. The essential goal of the New Instruction Strategy 2020 is to guarantee comprehensive and impartial quality training for all, no matter what their financial foundation or geological area. It underscores the need to connect the current holes in access, value, and quality by advancing general youth care and training, patching up school framework, and carrying out creative educating learning rehearses. The policy acknowledges the significance of a comprehensive and multidisciplinary educational strategy. It encourages the mainstream curriculum to incorporate co-curricular activities, arts, sports, and vocational education, fostering the development of well-rounded individuals. Moreover, it advocates for the combination of innovation in schooling, establishing a carefully engaged learning climate that improves decisive reasoning, critical thinking, and imagination. The policy's recognition of the significance of education innovation and research is another crucial aspect. It intends to lay out a hearty examination biological system, encouraging cooperation between the scholarly community, industry, and different partners. This would empower the advancement of proof based rehearses, instructive innovations, and strategies that can address the developing requirements of students and society.

In conclusion, the New Education Policy 2020 is a radical vision for education that aims to establish a system that is inclusive, equitable, and empowering, preparing students for the opportunities and challenges of the 21st century. By zeroing in on all encompassing turn of events, coordination of innovation, limit building, exploration, and development, this strategy makes way for a more promising time to come for training.

Keywords: Education, Policy, vision, strategy, framework.

Introduction

The Indian government's New Training Strategy is alluded to as NEP. It was last altered in 1992 subsequent to being drafted in 1986. The Modi-drove BJP government promised in its political race proclamation to make another training strategy, or NEP, to achieve changes in the schooling area. The National Education Policy of India 2020 (NEP 2020), which was started by the Union Cabinet of India on 29 July 2020, outlines the vision of new education system of India. The new policy replaces the previous National Policy on Education, 1986. The policy is a

comprehensive framework for elementary education to higher as well as vocational training in both rural and urban India. The policy aims to transform India's education system by 2030. The strategy accommodates changes at all degrees of training from school to advanced education. NEP means to expand the emphasis on reinforcing educator preparing, transforming the current test framework, youth care and rebuilding the administrative system of instruction.

Objective of the Study

- To find the main aim of the policy
- To list out features of the policy
- To sort out the impact of policy among the school and college students

Main Aim of New Education Policy

There have been three education policies after India got its independence, the NEP 2020 being the newest addition to bring reform in the education sector. Therefore it becomes necessary to understand the aims of NEP 2020 from the exam's perspective.

The basic aim and objective of NEP 2020 are to make education universally accessible from primary to secondary level by the year 2030. It helps in building a relationship between the learner and society at large. Every child is special and has the right to get basic education, for which the government should make better provisions.

- **Early Childhood Care and Education:** The early child developmental stage encompasses physical, socio-emotional, and cognitive development between 0-8 years of age. As early education lays the foundation for education to be undertaken later in our lives and also plays a major part in the development of the cognitive capacity of an individual, so there has to be the provision of high-quality education Early Childhood Care Education (ECCE). Here attention needs to be laid on socially backward regions.
- **Foundation Literacy and Numeracy:** NEP 2020 envisions the attainment of Foundational Literacy and Numeracy by all learners up to 3rd grade.
- **Curtailling Drop-Outs Rates and Ensuring Universal Access to Education at All Levels:** This new education policy of 2020 has focused on two things:
 1. To lessen the drop-outs by ensuring proper infrastructure facilities.
 2. By providing appropriate training to the teachers.Also, to encourage students to continue their studies. The students are also monitored and facilitated with the proper educational environment. Also, the ones who had dropped out of school earlier are given adequate guidance to be on par with their peers.

- **Curriculum and Pedagogy in Schools:** Learning of any sort should be holistic, integrated, enjoyable, and engaging to hold the attention of any learners towards the subject matter. NEP 2020 is a policy that emphasizes understanding the topic rather than an evaluation of rote learning, and for that, experiential learning is promoted at all stages.
- **Equitable and Inclusive Education:** NEP 2020 policy stresses education accessibility to one and all and that all should be similarly looked upon. Students with special needs are also benefitted from this policy as several schemes are running under this policy that enables specially-abled students to be part of the education system. This aspect coincides with the SDG.
- **Efficient Resourcing and Effective Governance Through School Complexes:** The policy focuses on using teaching aids to make education in India pally with world-class standards. It also emphasizes proper governance of the educational institutions for which the teacher are provided with proper information and training time and again.
- **Standard Setting and Accreditation for School Education:** The policy envisions setting up the standard to be followed at all stages of education, including preschool to higher levels. This caters to the quality of infrastructure, the educational level of teachers, and the knowledge level of the students as well. This also helps in lesson assistance with adequate usage of teaching aids.
- **Technology in Education:** There has been a lot of development in the space of technology where the teaching aids are also getting developed along with the digitalization of classrooms where lectures are taken virtually, and attendance is also taken virtually.
- **Reimagining Vocational Education and Skill Building:** For holistic development, every student needs to work on his skills constantly, like-communication skills, presentation skills, etc. Vocational Training is also encouraged so that there is a better employment opportunities for people who do specific skill-based jobs.

Features of Nep 2020

The policy has a clear focus on offering quality and affordable education to all in the age group of 3 to 18 years.

- It marks a major shift from rote learning to multi-disciplinary, holistic education. The focus, therefore, will not be on how much information students can memorize & reproduce, but on how they can use the information to solve real-world problems.

- Importantly the NEP has a great focus on the development of critical 21st-century skills that would stand in good stead to the soon-to-be citizens of the world and will prepare them for the challenges & opportunities of the 21st century.
- It marks a transition from the 10+2 education structure to a 5+3+3+4 system.
- A new curriculum for early childhood care and education, referred to as ECCE, aims at providing high-quality education to children between the age of 3-6 that brings about their physical, social, emotional as well as cognitive development.
- The policy provides for an interdisciplinary college education that has flexible study plans.
- Enough & more reports have highlighted the employability gap in India where graduates lack the necessary skills to make them valuable to employers. The new policy, therefore, lays emphasis on vocational & technical education right from the school level so as to bridge the gap

Impact of Nep 2020 Among Students

- **Single Regulatory Body for Higher Education:** The NEP aims to establish Higher Education Commission of India which will be the single regulatory body except for legal and medical education.
- **Multiple Entry and Exit Programme:** There will be multiple entry and exit options for those who wish to leave the course in the middle. Their credits will be transferred through Academic Bank of Credits.
- **Tech- Based Option for Adult Learning Through Apps, TV Channels:** Quality technology-based options for adult learning such as apps, online courses/modules, satellite-based TV channels, online books, and ICT-equipped libraries and Adult Education Centres, etc. will be developed.
- **E-courses to be Available in Regional Languages:** Technology will be part of education planning, teaching, learning, assessment, teacher, school, and student training. The e-content to be available in regional languages, starting with 8 major languages – Kannada, Odia, Bengali among others to join the e-courses available in Hindi and English.
- **Foreign Universities to set-up Campuses in India:** World's top 100 foreign universities will be facilitated to operate in India through a new law. According to the HRD Ministry document, "such (foreign) universities will be given special dispensation regarding regulatory, governance, and content norms on par with other autonomous institutions of India." Whether you aspire to study at these universities in your home country or study abroad, please remember that an education loan in India can help finance your higher studies independently.

Conclusion

The new Public Schooling Strategy (NEP) 2020, is a decent strategy as it targets making the school system all encompassing, adaptable, multidisciplinary, adjusted to the requirements of the 21st hundred years and the 2030 Economical Improvement Objectives.

Abstract :

Teachers play a pivotal role in driving educational reforms, as they are responsible for implementing interventions, innovations, and policies. As they shape the minds of the next generation, the transformation of our education system depends on the skills and qualities of our educators. In order to improve the quality of teaching and learning, it is essential to create a focused action plan for teachers at every level. Teachers actually shape the future of students, so they also build the future of our nation. Is there Because of this good contribution of them, teachers in India are now the most respected members of society and only the most gifted and knowledgeable persons are teachers. In order to provide students with the prescribed knowledge, skills and moral values, society provided all they needed by teachers or gurus. The spirit of higher status for teachers and respect for them and respect for teachers must be revived so that teachers are encouraged to include better people in their profession.

Keywords : Teacher's Role, Student, School Education, NEP 2020.

Introduction:

The National Education Policy (NEP), 2020, of India aims to transform the nation by improving its previous education policy. The NEP seeks to inculcate 21st-century skills in children and make the country's education more inclusive and flexible. It recognizes that teachers play a crucial role in achieving these goals and emphasizes the need to improve the quality of education in India. Here are a few tips on how teachers' role is key to the success of India's National Education Policy.

Teachers will be responsible for inculcating 21st-century skills, knowledge, and learning outcomes in students according to their grade level, as per NEP 2020.

1. Contribution to Curriculum Development:

According to The Sentinel, the role of teachers is no longer limited to teaching inside the four walls of the classroom. As facilitators of policy, they will act as contributors to making policies. This will help every educator to reduce the burden of their daily job challenges and will help them in the process of creating better individuals for society.

2. Implementing the New Curriculum:

Teachers play a crucial role in implementing any education-related policy or act on the ground level. The NEP 2020 focuses on a holistic approach to the development needs of students. It entirely depends on teachers what strategies they adopt in classrooms to ensure these developmental goals are met according to policy.

3. Creating an Environment of Innovation and Creativity:

The best outcome of teaching can be measured only if it is not limited to bookish knowledge and grades. Instead, it should promote pupils to think about the practical aspects of a concept and connect bookish knowledge to real-world problems. The role of teachers in the classroom according to NEP 2020 will be to promote and create an environment where students can think with a creative, critical, logical, and innovative mindset. This way, teachers can prepare students for their future life obstacles and challenges.

4. Identity Individual Interests and Treat them Accordingly:

Every student has their own unique potential and individual differences. Teachers must identify these differences in their abilities, interests, and needs to provide a personalized learning environment that can help them reach their goals. According to the new policy, teachers will receive training to identify the development needs of each individual and train them accordingly. By providing personalized learning, teachers can leverage the individual potential of their students.

5. Inculcate Lifelong Skills and Knowledge:

The ultimate goal of education in terms of a country's economic and social development is to teach students skills and knowledge that will benefit them throughout their lives. They must be able to solve problems and issues from personal to societal levels. This can be achieved only if teachers encourage self-directed learning attitudes in their students, helping them keep growing and learning throughout their lives.

6. Implement Vocational Education:

Not only in the NEP 2020, but previous policies have also emphasized the vocational aspects of education. It helps students create employment opportunities for themselves by inculcating skills obtained from local art, craft, cultural, and geographical resources, enhancing entrepreneurial skills among them. Teachers need to focus on the vocational aspect to achieve this.

Teachers' role is critical in helping students achieve their goals and in the transformation of the nation. The chances of success in reforms in policies and the nation are only possible because of the people facilitating it at the grassroots level. Therefore, teachers play an essential role in executing it properly at the grassroots level and creating the impact that's required to be created.

7. New Education Policy and Teachers Development:

Stand-alone Teacher Education institutions will be converted into multi-disciplinary institutions by 2030 offering 4-year integrated teacher preparation programme.

All fresh Ph.D. entrants, irrespective of discipline, will be required to take credit based courses in teaching/education/pedagogy/writing related to their chosen Ph.D. subject during their doctoral training period.

Ph.D. students will also have a minimum number of hours of actual teaching experience gathered through assistantships and other means. Ph.D. programmes at universities around the country will be re-oriented for this purpose

Important Views for Teachers:**Environment and Work Efficiency During Service Time :**

The primary goal of making good changes in the work environment and cultures in schools is to raise the abilities of teachers to the maximum level so that they can do their job effectively and ensure that teachers become a part of an inclusive community of students, parents, principal teachers and other supporting staff, with the only goal of being a learner.

Placement and Recruitment Policy :

In order to ensure adequate number of teachers in subjects, particularly in arts, physical education, vocational education and languages, teachers can be admitted to a school or school complex, the participation of teachers in schools can be done in accordance with the grouping of school system adopted by the state or ut governments.

Progress and Career Management :

Vertical mobility of teachers based on competency would also be the best, including outstanding teachers who have demonstrated the skills of leadership and management and trained them over time so that they can lead academic leadership in the school, school complex, D.I.E.T., B.I.T.E., as well as the concerned government departments and ministries for schooling. Teachers performing well should be identified and given step up and pay hike to encourage all teachers to do their best. The policy should have a fair career in terms of which is intended to result in permanent employment after assessment for performance and contribution and build up wage arrangements on the basis of strong merit of teachers.

Sustainable Professional Development

Continuous opportunity for teachers to improve themselves and to learn modern thought and innovation related to profession and to offer them in a variety of ways as online teacher development modules along with local, regional, state, national workshops. Teachers should develop online platforms, especially so that teachers can share their ideas and best things from time to time. Every teacher should be expected to perform timely orientation programs or faculty development programmes, as these programmes promote the latest pedagogy and competency based learning.

Professional Standards for Teachers :

A general guide set of NPST for teachers has already been prepared by the national council of teacher education, SCERT, in consultation with teachers of all levels and regions, institutions for teacher preparation and development, and institutions of higher learning as set up in its new form as a committee for professional standards setting under the general standards council in consultation with general standards setting up and institutions of higher learning.

Approach of Teacher Education :

Recognising this that teachers will need to undergo training in pedagogy, as well as teaching materials, which will have to be gradually integrated into multi – disciplinary colleges and universities. As all colleges and universities begin to move towards becoming multi – disciplinary, they aim at establishing a department of quality education that will provide a B.Ed., M.Ed. and Ph. D degree in education. The recently – introduced training in most new techniques with the prospectively tested techniques of teaching in all bod programmes can be a reform process involving the knowledge of basic literacy and numeration of education, multi – level education and assessment, teaching disabled children, teaching children with special interest, talents, using educational technology and teaching child centric and collaborative learning.

Conclusion:

NCTE by 2021, in consultation with NCERT, the new education policy 2020 should be prepared by NCFTE 2021 for a new and comprehensive teacher education framework based on the principles of the new and comprehensive teacher education. The requirements of the teacher education curriculum for vocational education should also be taken into account in NCFTE 2021. Thereafter, it is advisable to revise the NCF every year, reflecting the change in the revised NCFTE and the emerging requirements of teacher education. Finally, in order to fully maintain the authenticity

of the teacher's education system, strong action must be taken against standards institutions such as stand alone teachers education institutions in the country, including closure, if necessary. NEP teacher training program will go a long way in balancing the scale between teaching quality provided and returning rewards to the candidates in the picture. Teaching professionals can take heart in the fact that the learning experience under the NEP 2020 is a continuous process and is here to stay. Stay tuned to this space for further updates in the NEP teacher training section.

Abstract

The approach of the new education policy is concentrated on the transformation and enhancement of the education system to suit the changing requirements of learners and the demands of a fast changing world, according to the abstract. It lays forth a comprehensive strategy that includes curricular reform, pedagogical innovation, and fair access to education. The concept focuses on implementing a flexible and diverse curriculum that encourages critical thinking, creativity, and practical skills. It encourages experiential and project-based learning, which allows students to apply theoretical information in real-world circumstances. The policy stresses technology integration, allowing for tailored and self-paced learning experiences. Furthermore, the policy seeks to close educational gaps by providing inclusivity and accessibility for all students. It promotes the construction of welcoming learning environments for all students.

Keywords : *Holistic, Skill-oriented, Multilingual, Flexible, Technology-integrated*

Introduction

The new education policy provides a revolutionary strategy aimed at altering the educational landscape. This strategy aims to provide students with the skills and knowledge they need to flourish in a fast changing environment by encouraging holistic development, adopting innovative pedagogies, and promoting diversity. The policy seeks to create the groundwork for a brighter and more progressive future by emphasizing critical thinking and a learner-centered approach.

Inclusive Education:

Inclusive education is a vital strategy in many education policies, including the establishment of new ones. It strives to deliver an egalitarian and high-quality education to all pupils, regardless of their various backgrounds, abilities, or requirements. This strategy include modifying teaching techniques, curricula, and surroundings to fit a diverse range of pupils, fostering diversity, and ensuring that everyone has the opportunity to learn and thrive. Schools frequently emphasize on teacher training, accessible infrastructure, individualized support, and stakeholder collaboration when adopting inclusive education.

Technology Integration:

Through online resources, interactive learning platforms, virtual classrooms, and individualized learning apps, the new education policy can improve learning experiences. It can also help with data analysis for more effective educational planning and evaluation. A balanced approach, on the other hand, is required to ensure that technology enhances successful teaching rather than replacing critical human connection in education. Technology integration is emphasized as a strategic imperative in the new education policy. It attempts to improve learning experiences

and provide students with critical digital skills by incorporating technology across curriculum. Virtual classrooms, interactive simulations, and online resources provide personalized learning while accommodating different learning styles. Real-time evaluations and analytics offer educators with information that allows them to adjust education. Technology promotes cultural understanding by facilitating worldwide collaboration. Equitable access, on the other hand, is critical; closing the digital divide ensures inclusivity. Blended learning methods mix traditional classroom instruction with digital resources to promote self-directed learning. Professional development for teachers is critical for optimizing technology adoption. Adopting AI-powered systems simplifies administrative duties and streamlines operations. Gamification and immersive technology encourage participation and innovation. The emphasis on cybersecurity protects student data. In conclusion, incorporating technology into educational policies improves learning.

Teacher Empowerment: Teacher empowerment is emphasized as a cornerstone of the new education policy. It acknowledges the importance of well-trained and motivated teachers in influencing kids' futures. To do this, the strategy emphasizes professional development, giving instructors with opportunity for continual training to improve their skills and keep current with modern teaching methods and technologies. Furthermore, the strategy strives to improve teachers' standing by fostering educational research and innovation, encouraging teachers to actively participate in curriculum design, and providing them with greater autonomy in the classroom. Recognizing the significance of teacher well-being, the policy covers their working conditions as well, offering a favorable setting that stimulates creativity and enthusiasm. The new education strategy aspires to promote a vibrant and inclusive learning environment by promoting teacher empowerment.

Skill Development

The new education policy prioritizes the development of all skills, especially strategic thinking. Students are encouraged to develop critical thinking, problem-solving, and decision-making skills. A multidisciplinary approach brings subjects together, providing a broader perspective and strategic thinking. Collaboration projects and case studies give students hands-on experience applying ideas to real-world scenarios. Adaptive learning strategies personalize education by allowing students to advance at their own speed and thoroughly investigate strategic themes. Digital literacy is integrated into the curriculum, providing students with the tools they need to navigate the information age wisely. Regular exams measure not only rote memorization but also strategic thinking. Faculty development is centered on new pedagogies that foster strategic thinking. Extracurricular activities such as debates, simulations, and entrepreneurship programs help students refine their strategic skills even further.

Conclusion:

The new education policy is the result of a comprehensive and forward-thinking approach aimed at revolutionizing the educational landscape. The policy highlights the importance of adaptable and relevant education, with a focus on holistic development, adaptability, and diversity. It emphasizes the value of multidisciplinary education in developing critical thinking, problem-solving skills, and creativity. Using technology as an enabler, the strategy promotes digital literacy

and the incorporation of e-learning technologies, making education more accessible to a broader demographic. The emphasis on teacher training and professional development promotes a qualified and motivated teaching workforce, which is essential for successful implementation. The flexible approach of the policy allows students to choose their areas of interest and pace of learning, lowering stress and cultivating a real love of learning. The implementation of vocational education and internships provides a bridge.

NEW NATIONAL EDUCATION POLICY: TRANSFORMING LEARNING FOR THE FUTURE

Abstract

The New National Education Policy (NEP) marks a groundbreaking milestone in the educational landscape of our nation. With a vision to revolutionize learning and cater to the needs of the 21st-century world, the NEP aims to transform the education system to empower learners, enhance critical thinking, foster creativity, and promote holistic development. This paper presents a concise overview of the New National Education Policy, its key objectives, and the potential impact it holds for the future of education in India.

Introduction

Education plays a pivotal role in shaping the future of any nation. Recognizing the need for a comprehensive and forward-looking educational framework, the Indian government unveiled the New National Education Policy in 2020. This policy has emerged after extensive consultations, research, and deliberations, with an emphasis on inclusivity, innovation, and relevance to the rapidly evolving global landscape.

Emphasis on Holistic Learning

The recently introduced New National Education Policy places a significant emphasis on holistic learning, recognizing the importance of a well-rounded education that goes beyond academic achievements. This policy aims to transform the education system to foster the overall development of students, nurturing their cognitive, emotional, physical, and social well-being. The focus on holistic learning encompasses several key elements:

- **Multidisciplinary Education:** The policy encourages an integrated and multidisciplinary approach to learning. It emphasizes the breaking down of traditional subject boundaries to promote cross-disciplinary understanding and application of knowledge. Students are encouraged to explore various subjects and engage in real-world problem-solving, enabling a more comprehensive understanding of complex issues.
- **Skill Development:** Holistic learning places a strong emphasis on developing practical and life skills alongside academic knowledge. The policy recognizes the

importance of nurturing skills such as critical thinking, problem-solving, creativity, communication, collaboration, and adaptability. These skills are considered essential for success in both personal and professional life.

- **Co-curricular and Extracurricular Activities:** The New National Education Policy encourages schools and educational institutions to provide ample opportunities for students to participate in co-curricular and extracurricular activities. These activities can include sports, arts, music, drama, community service, and more. Engaging in such activities helps students discover their interests, talents, and passions beyond academics.
- **Emotional and Mental Well-being:** The policy addresses the importance of emotional and mental well-being in the learning process. It advocates for the incorporation of mindfulness practices, counseling services, and stress-reduction techniques in the education system. By creating a supportive and nurturing environment, students' emotional and mental health can be better cared for, leading to improved overall learning outcomes.
- **Inclusive Education:** The policy promotes inclusivity and aims to cater to the diverse learning needs of all students. It recognizes that each student has unique strengths, challenges, and learning styles. By adopting inclusive teaching methods and providing necessary support, educators can help every student thrive and reach their full potential.
- **Character and Value Education:** Holistic learning integrates character and value education into the curriculum. Emphasis is placed on fostering ethical values, empathy, social responsibility, and a sense of citizenship. Students are encouraged to become responsible and compassionate individuals who can contribute positively to society.
- **Continuous Assessment:** The New National Education Policy encourages continuous assessment of students' progress rather than relying solely on high-stakes examinations. This allows educators to gain a deeper understanding of students' strengths and areas of improvement, enabling personalized and effective learning interventions.

By prioritizing holistic learning, the New National Education Policy seeks to create a generation of well-rounded individuals who are not just academically competent but also emotionally resilient, socially responsible, and equipped with the skills and values necessary to thrive in an ever-changing world. The policy aims to transform education into a transformative and empowering experience, preparing students to tackle future challenges with confidence and a broader perspective.

Early Childhood Education and Care

Early Childhood Education and Care (ECEC) is a critical phase of a child's development, laying the foundation for their future learning, social skills, and overall well-being. Research has consistently shown that high-quality ECEC programs positively impact a child's cognitive, emotional, and social development, setting the stage for academic success and lifelong learning.

Educational policies play a vital role in defining the structure and quality of early childhood education and care services provided within a country. These policies can encompass various aspects, such as curriculum development, teacher training, funding allocations, and the integration of technology in ECEC settings.

The objectives of a New National Education Policy specific to early childhood education may include:

- **Universal Access:** Ensuring that all children, regardless of their socio-economic background, have access to high-quality early childhood education and care programs.
- **Quality Standards:** Defining clear and comprehensive quality standards for ECEC institutions to ensure that children receive the best possible education and care during their early years.
- **Professional Development:** Focusing on the training and professional development of teachers and caregivers to enhance their skills and understanding of child development, pedagogy, and effective teaching methods.
- **Parental Involvement:** Encouraging and facilitating active parental involvement in a child's early education journey to create a supportive learning environment both at home and in the educational setting.
- **Play-Based Learning:** Emphasizing play-based learning approaches, as play is a natural and effective way for young children to learn and explore the world around them.
- **Inclusivity:** Ensuring that early childhood education and care policies promote inclusivity and cater to the diverse needs of children, including those with disabilities or from marginalized backgrounds.
- **Research and Monitoring:** Incorporating evidence-based research and regular monitoring and evaluation mechanisms to assess the effectiveness of ECEC policies and make necessary improvements.

Re Imagining School Education

NEP envisages a radical transformation of the school education system. It advocates for a 5+3+3+4 curriculum structure, replacing the existing 10+2 model

The new structure comprises five years of foundational education, three years of preparatory education, three years of middle education, and four years of secondary

education. This flexible framework aims to provide age-appropriate and skill-oriented education to students.

- **Holistic Development:** The re-imagined education policy would emphasize holistic development, nurturing not only academic skills but also social, emotional, and physical growth. The curriculum would be designed to include arts, sports, and extracurricular activities to foster well-rounded individuals.
- **Personalized Learning:** Recognizing that every student learns differently, the education policy would promote personalized learning approaches. Teachers would leverage technology and data analytics to tailor lessons based on individual student needs and learning styles.
- **Project-Based Learning:** The focus would shift from rote memorization to project-based learning, where students actively engage in real-world problem-solving. This approach fosters critical thinking, creativity, and collaboration.
- **Skill-Centric Curriculum:** The curriculum would be aligned with the demands of the 21st-century job market, emphasizing skills such as critical thinking, problem-solving, communication, and digital literacy.
- **Emphasis on Steam:** There would be a significant emphasis on STEAM (Science, Technology, Engineering, Arts, and Mathematics) education, encouraging students to explore these fields from an early age.
- **Inclusion and Diversity:** The re-imagined education policy would prioritize inclusivity, accommodating students with diverse backgrounds, abilities, and learning needs. Special attention would be given to ensuring access to quality education for all.
- **Teacher Empowerment:** Teachers would be given more autonomy and support in designing and delivering innovative lessons. Professional development programs would be offered to enhance teaching skills and techniques.
- **Assessment Reform:** The assessment system would move away from traditional exams and focus on continuous evaluation, including formative assessments, project assessments, and skill-based evaluations.
- **Integrated Technology:** Technology would be seamlessly integrated into the learning process, using smart classrooms, digital resources, and e-learning platforms to enhance educational experiences.
- **Community Involvement:** The education policy would encourage partnerships between schools, parents, and local communities to create a conducive learning environment and address various educational challenges collectively.
- **Environmental Awareness:** Environmental education would be woven into the curriculum to instill a sense of responsibility and sustainability in students.

- **Global Perspective:** The reimagined education policy would foster a global outlook, promoting cultural exchange programs and international collaborations to prepare students for a connected world.

Skill Development and Vocational Education

The policy recognizes the importance of equipping students with relevant skills for the modern job market. It emphasizes integrating skill development and vocational education into the curriculum, ensuring that students have practical expertise alongside theoretical knowledge. This integration seeks to reduce the gap between education and employability, fostering a workforce that meets the demands of a rapidly evolving economy.

- **Emphasis on Skill Development:** Skill development is increasingly being recognized as a vital aspect of education. The new policy may likely emphasize the need to bridge the gap between education and employability by integrating skill development into the curriculum. This could involve promoting practical learning experiences, hands-on training, and internships to equip students with relevant skills for the job market.
- **Integrating Vocational Education:** The NEP may seek to promote vocational education as a mainstream component of the education system. This integration aims to provide students with diverse career options and pathways beyond traditional academic routes. Vocational courses may cover a wide range of fields, including technology, hospitality, healthcare, agriculture, and more.
- **Industry-Academia Collaboration:** The policy may advocate stronger collaboration between educational institutions and industries. By involving employers and industry experts in the curriculum design and training process, students can gain exposure to real-world challenges and acquire industry-relevant skills.
- **Recognition and Accreditation of Prior Learning:** NEP might also recognize the value of prior learning and experiential knowledge. It may encourage the recognition and accreditation of skills acquired through informal means, work experience, or non-formal education, allowing individuals to build on existing competencies.
- **Entrepreneurship Education:** The policy might emphasize fostering an entrepreneurial mindset among students. By providing entrepreneurship education and support, the aim is to encourage students to become job creators rather than job seekers, promoting innovation and economic growth.
- **Flexible Education Pathways:** The new policy may introduce flexible pathways in education, allowing students to switch between academic and vocational

streams, based on their interests and aptitude. This approach acknowledges that students have diverse talents and learning preferences.

- **Technology Integration:** NEP could emphasize the integration of technology in skill development and vocational education. This may involve using online learning platforms, virtual simulations, and digital resources to enhance accessibility and effectiveness.
- **Continuous Learning and Upskilling:** The policy might recognize the importance of lifelong learning and upskilling. It may encourage professionals to engage in continuous learning to adapt to changing job requirements and technological advancements.

Multilingualism and Language Learning

NEP encourages multilingualism and recognizes the significance of regional languages in preserving cultural diversity. The policy emphasizes the benefits of learning multiple languages and advocates for promoting the mother tongue or regional language as the medium of instruction up to at least Grade 5. This approach aims to strengthen students' linguistic abilities and foster a deeper connection with their cultural heritage.

The New National Education Policy incorporates a strong emphasis on multilingualism and language learning, recognizing the significance of linguistic diversity in fostering a holistic and inclusive educational experience. The policy aims to promote linguistic pluralism and enhance language proficiency among students, thereby enabling them to effectively communicate and engage with the diverse cultural fabric of the nation and the global community. Several key features of the policy with regard to multilingualism and language learning are as follows:

- **Three-Language Formula:** The New National Education Policy advocates the implementation of a three-language formula, wherein students will be encouraged to learn and become proficient in three languages. These languages will include the mother tongue or regional language, the official language of the state, and one other modern Indian or foreign language. This approach fosters a deeper understanding of diverse cultures and enables students to connect with people from various linguistic backgrounds.
- **Early Language Learning:** The policy places emphasis on early language learning, recognizing that young minds have a remarkable capacity to acquire languages. Integrating language learning from the foundational stages of education helps in nurturing linguistic skills and cultural appreciation from an early age.
- **Indigenous and Tribal Languages:** To preserve and promote the linguistic heritage of India's indigenous and tribal communities, the New Education Policy

encourages the inclusion of indigenous languages in the curriculum. Efforts will be made to document and revitalize endangered languages, thereby fostering a sense of identity and cultural pride among these communities.

- **Language as a Medium of Instruction:** The policy recognizes the importance of using a student's mother tongue or regional language as the medium of instruction during the initial years of schooling. Research has shown that children learn better and grasp complex concepts more effectively when they are taught in a language they are familiar with.
- **Technology-Enabled Language Learning:** The New National Education Policy promotes the use of technology to facilitate language learning. Online platforms, educational apps, and digital resources will be leveraged to make language learning more interactive, accessible, and engaging for students.
- **Foreign Language Learning:** The policy places importance on the learning of foreign languages, which can enhance global communication, cultural exchange, and international cooperation. Schools and higher education institutions will be encouraged to offer a wide range of foreign language options to students.
- **Skill Development:** Language learning will not only focus on linguistic abilities but also on developing practical language skills that are relevant in the professional world. This includes communication skills, translation, interpretation, and cross-cultural understanding. By integrating multilingualism and language learning into the education system, the New National Education Policy seeks to empower students with the ability to navigate an increasingly interconnected world, appreciate diverse cultures, and contribute effectively to the global community while preserving India's rich linguistic heritage. The policy envisions a well-rounded educational experience that equips students with the linguistic skills and cultural competence necessary to thrive in a dynamic and multicultural society.

Technology Integration in Education

In line with the digital age, NEP emphasizes the integration of technology in education. It envisions the creation of digital infrastructure and the adoption of modern teaching tools to enhance learning experiences. The policy aims to leverage Artificial Intelligence (AI), Virtual Reality (VR), and Augmented Reality (AR) to create immersive and engaging learning environments.

Here are some key aspects related to technology integration in education:

- **Digital Infrastructure:** The policy emphasized the establishment of digital infrastructure in schools and educational institutions to facilitate seamless technology integration. This included providing access to high-speed internet,

ensuring availability of digital devices, and creating digital content and platforms for learning.

- **Blended Learning:** The NEP encouraged a blended learning approach, combining traditional classroom teaching with online and digital resources. This approach allowed for personalized and self-paced learning, enabling students to access educational content anytime and anywhere.
- **Online Education:** The policy recognized the potential of online education to reach a wider audience and provide quality education beyond geographical constraints. It aimed to create a regulatory framework for online education and promote the use of Massive Open Online Courses (MOOCs) and other digital platforms.
- **Teacher Training:** To ensure effective technology integration in the classroom, the NEP emphasized the importance of teacher training and professional development. Teachers were encouraged to develop digital literacy and skills to effectively use technology for teaching and learning.
- **Artificial Intelligence (AI) and Data Analytics:** The NEP acknowledged the significance of AI and data analytics in education. It aimed to leverage AI for adaptive learning, intelligent tutoring systems, and data-driven decision-making to enhance the overall learning experience.
- **Educational Apps and Resources:** The policy encouraged the development of educational apps, digital resources, and e-books to supplement classroom teaching. These resources were intended to be available in multiple languages to cater to diverse learners.
- **Assessment and Evaluation:** The NEP proposed the adoption of technology-based assessment and evaluation methods to measure learning outcomes accurately. This could include online examinations, automated grading systems, and data-driven feedback mechanisms.

Teacher Training and Professional Development

Recognizing the pivotal role of teachers in shaping the future of education, NEP emphasizes the need for robust teacher training and professional development programs. The policy aims to improve the quality of teaching by equipping educators with contemporary pedagogical techniques, promoting a learner-centric approach, and nurturing their own lifelong learning skills.

The New National Education Policy is a comprehensive framework aimed at transforming the education system in India. It addresses various aspects of education, including early childhood education, school education, higher education, and teacher training.

Teacher Training and Professional Development are critical components of the NEP. The policy emphasizes the need for continuous and comprehensive training for teachers to equip them with the necessary knowledge, skills, and pedagogical techniques to deliver high-quality education. Some key highlights of the Teacher Training and Professional Development aspect of NEP are as follows:

- **Continuous Professional Development (CPD):** NEP focuses on providing teachers with continuous opportunities for professional development. It encourages teachers to participate in workshops, seminars, training programs, and online courses to enhance their teaching abilities and keep up with the latest developments in education.
- **Digital Technology Integration:** The policy acknowledges the importance of digital technology in education and aims to integrate technology into teacher training programs. This includes training teachers on using educational technology tools and platforms effectively to enhance teaching and learning outcomes.
- **Multidisciplinary Approach:** NEP promotes a multidisciplinary approach to teacher training. It aims to break down traditional subject-specific barriers and encourage teachers to adopt a holistic approach to education, fostering critical thinking and creativity among students.
- **Teacher Educator Preparation:** The policy emphasizes the need for high-quality teacher educator preparation programs. It calls for the establishment of dedicated institutions for teacher educator training and professional development.
- **Emphasis on Pedagogy and Assessment:** NEP highlights the significance of innovative and effective pedagogical practices in teacher training. It also stresses the importance of fair and comprehensive assessment methods for evaluating teacher performance.
- **In-Service Training:** The policy recognizes the significance of in-service training for teachers who are already in the profession. It aims to provide ongoing support and training opportunities for experienced teachers to upgrade their skills and knowledge.
- **Collaborations and Partnerships:** NEP encourages collaborations and partnerships between educational institutions, teacher training centers, and other stakeholders to enhance the quality and reach of teacher training programs. The Teacher Training and Professional Development aspect of the New National Education Policy aims to elevate the status of teachers, improve the overall quality of education, and equip educators with the necessary tools to prepare students for the challenges of the 21st century. It is essential to keep in mind that the implementation of the policy may vary across different states and regions in India.

Conclusion

The New National Education Policy is a transformative step towards creating a future-ready education system in the country. By emphasizing holistic learning, skill development, technology integration, and teacher empowerment, the policy strives to equip students with the tools they need to thrive in a rapidly changing world. As stakeholders work together to implement the policy effectively, there is hope for a brighter future where education becomes a driving force for inclusive growth and societal progress.

Abstract

The adult stage of the German National Educational Panel Study (NEPS) focuses on the adult working age population in Germany and serves, in many respects, as a capstone for the NEPS structure. Its main purpose is to collect data from Starting Cohort 6 (SC6, adults) on adult education, specifically on formal, non-formal, and informal further training; on competence endowment and its development over the life course; and on monetary and nonmonetary returns to initial and adult education in a life-course perspective. The data include a large number of theoretically derived determinants of adult education and competencies, as well as information on returns within and outside of the labor market. Detailed information on the learning environments at a workplace or in a household makes it possible to contextualize the returns to education. On the one hand, the SC6 data contain detailed retrospective information on education, labor market participation, and households; on the other hand, they provide yearly panel information from currently ten waves (as of May 2018). These rich data allow numerous analyses from a life-course perspective pertaining to sociological, economic, psychological, and developmental theories.

Keywords: Lifelong learning, adult education, neoliberal educational reforms, marketcentric educational reforms, fall of adult education, decline of welfare policies, literacy in India, Indian adult education.

Introduction:

The term 'education' usually refers more to (mean) 'formal education' based on organized and structured systems of curriculum-based classroom teaching and periodic evaluation at different levels. However, more broadly it also refers to all kinds of 'experiences' which help an individual grow wisely and become enlightened and empowered members of a society. In this latter sense, education is a 'lifelong process'. Here, lifelong learning embodies self-directed growth. From early times, self-education has been the main device of people of all nations and civilizations to cope with the world around them. During ancient times, education was part of the natural learning process in response to the struggle for survival.

Older generations of mature adults trained the younger members of their community or a group of them about the knowledge and skills, which they needed and were deemed, fit to learn. In pre-literate societies much of the knowledge and skills were transmitted by 'oral' means and through imitation. Later, written scripts were developed and preservation and transmission of knowledge became highly

structured and organized. This process of transmission of knowledge and skills gave rise to special institutions for imparting knowledge. Schooling as a formal and organized institution for transmission of knowledge came into existence during 3000 to 500 B.C. in Egypt and India.

However, modern schooling and education, which is more dominant today, is largely of European origin and can be dated back to 1770 A.D. Adult education and lifelong learning is all around us in our Endeavour to make a living, whether individually or collectively. Whenever we are engaged with each other in doing one thing or the other, one can see many examples of the ways in which people teach and learn mutually. Learning is an act or a process of gaining experience, knowledge and skills. In contrast, memory consists of an individual's capacity to store, retrieve, and act further on that knowledge. We become novices to experts based on our capacity to learn and gain new skills and knowledge. Our brain makes new pathways and connections based on reliability and predictability of our experiences (see Conner, 1995).

Development of Adult Education in India:

It is difficult to trace the roots of AE in Indian history, as most of it was oral and there were substantial levels of variations and regional diversities. The following paragraphs are an effort to briefly present the development of AE in the context of India, based on the available scholarly works. The broad classification of timeframes is also depicted in the diagram (Figure 1), which is based on the studies of Dutta (1986) and Shah (1999) on the history of Indian education. The diagram is divided into four major parts. The first part is LLL in ancient India and the second part extends up to the time when the British colonized India (LLL in the medieval period). The third part, LLL in the pre-Independence period, shows that the meaning of LLL was narrowed to adult learning. Importance was given to initiatives of AE and learning along with other associated issues. The fourth part (LLL post-Independence) represents the development of AE until recent times. It ends by showing that the concept of AE has started to change once again, with LLL on the rise. LLL has been an integral part of Indian culture since the ancient scripts (from 2000 bc to ad 1200) accorded prime importance to the virtues of learning (Shah, 2009, 2010; Mandal, 2013b). 'Learn as long as you live' to gain 'moksha' or emancipation (Shah, 1999) was rooted in a spiritual context, whereas learning exclusively for adults, or AE as we call it today, came much later.

During the Buddhist and Jain period, universities of international reputation were established in India. With the beginning of the medieval period, the Muslim system of education also paved its way to the subcontinent. Large numbers of maktabas and madrasas (Islamic schools) were established along with the existing

pathsalas (schools) in almost every village (Acharya, 1989). This continued for a long time with the tradition of oral transmission of knowledge, values and culture. Most rulers extended considerable patronage to the scholars, and towards different forms of art and culture. The local temples became the places where the 3Rs were imparted to adults through informal folk learning and interactions. However, a large section remained outside any organized education, as the temples were not accessible to many who belonged to the lower social strata (Mandal, 1993).

The Rise of LLL and the Fall of Ae in India:

While AE experienced budget cuts and lost its foothold in India from the 1990s, LLL appeared as a new policy area in the post-2000 period. This change may be clearly observed in the Tenth (2002–7) and Eleventh (2007–12) Five Year Plans of the Government of India (2002, 2007), which supported the marketcentric principles of learning and skills development above other objectives of formal and non-formal education. The National Knowledge Commission (2009) and the Yash Pal Committee Report to Rejuvenate Higher Education in India (2009), two major policy initiatives to revamp education, focused on the human resource development, using the contemporary and predominantly economistic principles of LLL. The Twelfth Five Year Plan (2012–17) does not mention LLL that often, but uses its principles in the document, indicating that LLL as a guiding principle is now rooted in the Indian national policy discourse. The fund cuts and reduced importance of AE, on the one hand, and the increased importance of LLL, on the other, apparently seem to indicate the old making way for the new. However, as we shall discuss in the following subsections, AE and LLL in the Indian context have taken two different routes. Here it seems important to question why LLL is not an evolved form of AE in the Indian context.

Welfare to market centric education reforms and adult education in India In an effort to understand the complexities of the contemporary dimensions of LLL, from international to national levels, it is important to understand how the network between market and politico-economic powers have reshaped education in recent times (Appadurai, 2001; Jarvis, 2008; Field, 2006). It can be found that the dominant power in the global economy stems from those who control the economic and technological institutions (Jarvis, 2008: 20). Contrary to the Marxist theory that power lies within each society, Jarvis says that with globalization the formation of individual power structure has become a more complex and interconnected one. This mainly refers to the economic power spread across countries, consisting of private capital and multinational corporations, and often the political power of powerful nations, which puts substantial pressure on individual societies to conform to the dominating trend set by them. This 'sub-structure' (Jarvis, 2008) practices its

power in each society through market mechanisms, opens up the possibility of exploring other markets, encourages big to grow bigger, helps to increase production and fosters innovation in order to meet the increasing demand of the global market. This also means that it encourages new learning, which can constantly invent, innovate and produce new commodities for the market.

However, it mostly encourages certain kinds of scientific and other knowledge that are required for the growth of markets. India, since its economic restructuring, has gradually entered into the new era of market economy. As a result, the education and allied policies of India have taken a path where the focus is not only on formal education, but also on all kinds of learning activities to make them compatible with the demands of globalization and the market. This clear shift from an earlier welfare centric model demands technologically skilled people, managers, people who are self motivated to learn for their professional growth and not necessarily those with any knowledge (for example, a knowledge of poetry, unless this has a market value) that will allow them to administer businesses and invent new solutions to keep them thriving.

The renewed focus of the national education policies is, in fact, not merely limited to business growth, and induces pressure from the substructure to produce more equipped and competent human resource for the domestic and global markets. The work of Rizvi and Lingard (2010) shows that this is not a unique phenomenon and can be witnessed worldwide; India is no exception. In the midst of these changes, LLL has evolved as a powerful policy discourse, championed by transnational policy organizations such as the European Commission, UNESCO, the World Bank and the Organization for Economic Cooperation and Development. It is important to note that there are various and sometimes contradictory interpretations of LLL among these organizations and/or in the countries or regions they represent. However, analyzing the new trends of LLL, it seems that unlike in the past, when LLL was considered as a path to achieve the zenith of knowledge and wisdom, the new form of LLL in major international policies is predominantly understood as a utilitarian way in which to promote human capital development.

This egalitarian conceptualization of LLL has helped to redefine educational priorities by supporting what is defined as legitimate or useful, and reduced support to those forms of learning that are of less or no immediate economic value (Biesta, 2006). With the change of terminology from e educationally, socially and economically marginalized. Instead of all-out support for the substructure (full market control), national policies try to balance the situation, and these balancing acts create a kind of 'cushioning' effect (Habermas, 2006: 81 in Jarvis, 2008: 30), which claims to protect the deprived from the harsh competition promoted by the market. It also provides a buffer space to allow the gradual introduction of new

dimensions of market control, which has the potential of gradually subsuming welfarecentric initiatives, including AE in its traditional guise.

Welfare to Marketcentric Education Reforms and Adult Education in India:

In an effort to understand the complexities of the contemporary dimensions of LLL, from international to national levels, it is important to understand how the network between market and politico-economic powers have reshaped education in recent times (Appadurai, 2001; Jarvis, 2008; Field, 2006). It can be found that the dominant power in the global economy stems from those who control the economic and technological institutions (Jarvis, 2008: 20). Contrary to the Marxist theory that power lies within each society, Jarvis says that with globalization the formation of individual power structure has become a more complex and interconnected one. This mainly refers to the economic power spread across countries, consisting of private capital and multinational corporations, and often the political power of powerful nations, which puts substantial pressure on individual societies to conform to the dominating trend set by them. This 'sub-structure' (Jarvis, 2008) practises its power in each society through market mechanisms, opens up the possibility of exploring other markets, encourages big to grow bigger, helps to increase production and fosters innovation in order to meet the increasing demand of the global market.

This also means that it encourages new learning, which can constantly invent, innovate and produce new commodities for the market. However, it mostly encourages certain kinds of scientific and other knowledge that are required for the growth of markets. India, since its economic restructuring, has gradually entered into the new era of market economy. As a result, the education and allied policies of India have taken a path where the focus is not only on formal education, but also on all kinds of learning activities to make them compatible with the demands of globalization and the market. This clear shift from an earlier welfarecentric model demands technologically skilled people, managers, people who are self motivated to learn for their professional growth and not necessarily those with any knowledge (for example, a knowledge of poetry, unless this has a market value) that will allow them to administer businesses and invent new solutions to keep them thriving. The renewed focus of the national education policies is, in fact, not merely limited to business growth, and induces pressure from the substructure to produce more equipped and competent human resource for the domestic and global markets.

Acceptance of LLL in Academia and as a Policy Initiative

This section explains why accepting LLL non-critically and believing in its face value helped LLL to establish itself firmly in India, and to some extent defeat the

original purposes of AE in the process. While AE since the 1990s and especially in the early 2000s was losing its ground owing to decreasing funding, the internationally popular LLL appeared as a savior, promoting the concept of 'learning from cradle to grave', similar to the ancient Indian philosophy of 'learn as long as you live'. However, the form of LLL that was championed by the West was more complex than the humble Indian philosophy of learning for enlightenment. During the late 1990s and early 2000s international policy organizations, especially UNESCO and the European Commission, started to influence Indian policies with the evolving notion of LLL. The UNESCO (1996) report, 'Learning the Treasure Within', and the 'Memorandum of LLL' (2000) by the European Commission were the most influential documents in promoting the new notion of LLL. The guiding principles of lifelong education in order to form a learning society that had been promoted by the Faure document (Faure et al., 1972) created the ground for LLL to percolate swiftly through society by romanticizing (Jarvis, 1999) the virtues of learning. Later LLL mutated into a more agile tool to support the learning economy with modish repackaging of 'learning society'. Eventually, the social purpose and tradition in which AE thrived and supported the idea of a learning society was virtually replaced by the new concept of a 'learning economy' championed under LLL and allied policies. Over time, the UNESCO policies also started to support a more economically orientated dimension of LLL and became somewhat ambiguous (Jarvis, 2008) in nature.

Fragmented Initiatives to Revive Adult Education in India:

This marginalization of Indian AE happened gradually, but was aggravated with the introduction of LLL. It happened partly because LLL was welcomed without a critical review or an analysis of its hidden nuances and nexuses; and partly because AE embraced LLL as a means of its own revival, a strategy that backfired. As a consequence, there are not one but multiple dimensions of LLL in India, each with its own specific and somewhat overlapping agendas, making the situation even more complex. The study of Mandal (2013a, 2013b, 2015) shows that the first dimension of LLL is related to the welfare centric collective reforms, which, in its present guise, is mostly confined to the eradication of illiteracy. The second one is neoliberal in nature, where LLL is seen as a means which promotes the open market economy, privatization and individualized learning pathways. Here, LLL for economic growth is much in line with the internationally predominant perspective.

There also exists a third type, termed the fragmented perspective, which tries to balance these two extreme perspectives (welfare and neoliberal). The efforts made by Indian academia to understand and promote LLL largely fall into the third category. This fragmented perspective allows LLL to be justified to all. The political angle

clearly indicates that the benefit of economic globalization is being brought to India, and at the same time the traditional perspective of LLL is being maintained in the form of AE, continuing education and so on. However, trying to be everywhere could also lead to a confused state where a lack of focus becomes evident.

Towards a New Beginning, or the End of an Era?

The trajectory of LLL in India is revolutionary in many ways, especially in the contemporary Indian context. However, the metamorphosis of LLL from AE to an overarching policy framework is not immune from criticisms. The dilemma of whether to keep the welfare perspective or the neoliberal one brings new challenges for Indian education policies and to their understanding of AE and LLL. After spending 40 years with a socialist pattern and a mixed economy (since Independence in 1947), there are new terms coming into play. These are liberalization, privatization, globalization and market friendliness (Kumar, 1998: 1391). LLL has become popular and powerful under the umbrella of neoliberalism, encompassing the above terms. In India, LLL has succeeded as a result of policy forethought, followed by a political afterthought that has been translated through academic support, which has made it almost immune from any strong resistance.

AE in India was initiated by an effort to improve the educational and life conditions of adults, mostly outside formal schooling; thus, it is essentially a 'social transformation' plan, based on humanist ideology' (Barros, 2012: 130). But with the new notion of LLL, political mandates are pursued so that they are assimilated into all forms of education and learning, infused with neoliberal ideologies and backed by a powerful and extremely volatile market. The perception of LLL promoted by AE and by neoliberal policies thus stands at two extremes, with some apparent similarities on the surface. Moreover, these two LLLs are no longer contiguous and have taken two very different developmental routes.

Conclusion:

Notes on the contributors Sayantan Mandal is Assistant Professor at the National Institute of Educational Planning and Administration (NIEPA), India. He holds a PhD in Education Policy Analysis and graduated from the Danish School of Education, Copenhagen. Before joining NIEPA, he was a faculty graduate at the University of Delhi, intern at UNESCO (UIL, Hamburg) and has several years of working experience in the non-governmental organization sector, focusing on educational development of adults and neo-literates.

IMPACT OF DIGITAL TECHNOLOGY ON BLENDED LEARNING

Mrs . M. Neelima

MBA, M.Phil Assistant Professor
Visakha Institute for Professional Studies

Abstract

In the age of rapid technological advancements, the significance of Digital technology has gained prominence all over the world. Digital technology has become such an integral part of our lives, from computers, laptops to tablets and smart phones. we live in era where information is easily accessible at our fingertips. The digitalization of learning resources had undoubtedly made education more accessible and convenient. It allows students to learn at their own pace and explore a variety of educational materials beyond the traditional classroom setting. One way to strike this purposeful balance is Blended learning..This paper makes an attempt to understand the concept of Blended learning and how this blended learning provides an opportunity to differentiate instructions and cater to the diverse needs of the students.

Keywords: Digital technology, education, classroom, blended learning, students..

Introduction

Technology has definitely revolutionized the way we approach education.It's incredible how digital technology has become such an integral part of our lives,from computers and laptops to tablets and smart Android phones.We live in an era where information is easily accessible at our fingertips .The digitalization of learning resources has undoubtedly made education more accessible and convenient.It allows students to learn at their own pace and explore a variety of educational materials beyond the traditional classroom setting with online resources like e-books, interactive tutorials, virtual simulations,and educational apps,students have the opportunity to engage with the content in innovative and exciting ways.

Use of Technology in Education

Digital technology enhances the learning experience by providing media resources that cater to different learning styles.Visual learners can benefit from videos and graphics,while auditory learners can engage with podcasts and audio lectures.Digital Technology also offers personalized learning experiences,as students can choose the pace and depth of their studies.

Definition of Blended Learning

The simplest definition of the term blended learning is the use of traditional classroom teaching methods together with the use of online learning for the same

students studying the same content in the same course. It is a “thoughtful fusion of face-to-face and online learning experiences” (Garrison & Vaughan, 2008).

What is Blended Learning

The online learning environments in terms of providing a human to human interaction as well as diminishing the isolation from other learners forces distant learning scholars to find out a solution for the instruction delivery modalities that they offer to their students. It is clear that some practical features of face-to-face Instruction need to be put into practice in distant learning environments as well. The need for collaboration between the face-to-face and online learning leads the educators towards a new approach to Teaching and learning which is “called as hybrid or blended learning” (Rogers, 2001, p.11).

This new blended learning approach principally provides a blend of both face-to-face and online or distant learning and teaching experiences. The primary interest is creating more effective learning experiences or increasing access and flexibility, it is likely that the forthcoming learning systems will provide a blend of both face-to-face and online teaching experiences. Therefore, there is growing trend in academic and business circles to combine face-to-face education with Web-based education (Askun, 2007). Therefore Blended learning is an educational approach that combines traditional face-to-face instruction with online learning activities. It is a hybrid learning mode that integrates best aspects of both in- person and online learning.

Difference Between Hybrid and Blended Learning?

Along with blended learning, there is hybrid learning. These two learning approaches are often mistakenly considered synonymous. Although they both signify a type of mixture, there is a significant difference between them.

In hybrid learning, a teacher or instructor delivers materials to learners, some of whom attend class in person, while others join the class virtually from home. In this case, the educator will teach remote and physically present students at the same time using tools like video conferencing hardware and software.

Blended learning, on the other hand, combines in-person teaching with online learning methods. So, learners can listen to a lecture in a classroom and then take an online quiz right there or at home.

<https://edly.io/blog/hybrid-versus-blended-learning-whats-the-difference/>

The Growth of Blended Learning

However the 21st century progressed, there has been a greater recognition of the importance of technology in education. Schools and districts have invested in infrastructure, providing students with access to computers and the Internet. Furthermore, many Educational Institutions have shifted towards a more student-centered approach, utilizing technology to enhance personalized learning.

Today, Digital Technology is an Integral part of Education. It is used not only as a supplement to traditional teaching methods but also as a tool for collaboration, creativity, and critical thinking. Online learning platforms, interactive multimedia resources, and virtual reality simulations are just a few examples of how Digital Technology is transforming education.

The COVID-19 pandemic further accelerated the integration of technology in education. With schools closing and the shift to remote learning, technology became the primary means of instruction. This unprecedented situation highlighted both the potential and the challenges of technology use in education. It exposed the disparities in access to technology and the need for professional development for teachers to effectively utilize online platforms.

According to the U.S. Department of Education (Means, Toyama, Murphy, Bakia, & Jones, 2009), a blend of classroom and web-based teaching and learning offers access to the widest range of learning modes and methods for developing student skills and expertise as learners (Cleveland-Innes, 2017).

Modern blended learning is delivered online, although CD-ROMs could feasibly still be used if a learning management system meets an institution's standards. Some examples of channels through which online blending learning can be delivered include webcasting (synchronous and asynchronous) and online video (live and recorded).

Review of Literature:

According to Higgins, Xiao, & Katsipataki, (2012). Technology can be made use of by the individuals in groups and pairs and this is considered as more effective than single usage.

Digital technology can be competent and valuable with the main purpose of making improvements within the learning areas (Higgins, Xiao, & Katsipataki, 2012).

According to Graham ,(2013) Blended learning and research issues Blended learning (BL), or the integration of face-to-face and online instruction is widely adopted across higher education with some scholars referring to it as the "new traditional model.

The 2017 New Media Consortium Horizon Report found that blended learning designs were one of the short term forces driving technology adoption in higher education in the next 1-2 years (Adams Becker et al. 2017)

According to Jayme Linton. Blended learning acknowledges the indispensable role of the teacher in facilitating student learning while acknowledging the advantages of technology applications on student learning."

Methodology

The methodology used under this study is secondary data. Most of the information is derived from the Internet, blogs, relevant websites, journals, magazines..

Some of the Key Impacts of Digital Technology on Blended Learning Include :

1. **Increased access to resources:** Digital technology has made it easier for students and teachers to access a wide range of learning resources online, such as e-books, videos, and interactive learning materials. This has expanded the learning possibilities beyond the limitations of traditional textbooks and classroom materials.
2. **Personalized Learning:** Digital technology has enabled the use of personalized learning platforms and software that adapt to each student's individual needs, preferences, and pace of learning. This allows students to learn at their own pace and focus on areas that they need to improve while receiving immediate feedback and support from digital tools.
3. **Collaboration and Communication:** Digital technology enables students and teachers to collaborate and communicate with each other more easily through online forums, video conferencing, and instant messaging. This fosters a more interactive and collaborative learning environment where students can discuss ideas, share resources, and work on projects together.
4. **Flexibility and Convenience:** Digital technology has made blended learning more flexible and convenient, as students can access learning materials and

participate in online discussions anytime and from anywhere. This benefits students who may have other commitments such as work or family responsibilities, as they can learn at their own convenience.

5. **Enhanced Engagement and Motivation:** Digital technology offers various interactive and gamified learning tools that can make the learning process more engaging and motivating for students. For example, online quizzes, simulations, and educational games can help increase student engagement and motivation by adding an element of fun and interaction to the learning experience.

Need for Blended Learning in the Indian Education System

The impact of union budget 2017 over the education sector has made the higher education to be multi dimensional. Every one is willing to have modernized education along with the personality development which gives an open way for employment.

Government's Vision for Education system Digitalization is one of the trendy norms of the government and it has released the following measures to support online education.

1. SWAYAM-Online portal
2. NEP-National Education policy
3. HEERA-Higher Education Empowerment Regulation Agency
4. UGC- University Grants Commission
5. The Ultimate aim of all the above schemes is to groom the students to face the challenges of digital India.

Blended Learning Models

Blended learning can be divided into three main models.

Models of Blended Learning

The first model, blended presentation and interaction, has classroom engagement as its primary component, with support from out-of-class, online exercises. The flipped classroom or flipped curriculum approach is a common example of this model, with students viewing podcasts or other online resources independently,

followed by classroom-based tutorials or seminars for group learning based upon these resources.

The second is the blended block model (sometimes called a program flow model), in which a sequence of activities, or “blocks,” is structured to incorporate both face-to-face learning and online study, usually with consideration for both pedagogical goals and practical constraints.

The third model is fully online but may still be considered blended if it incorporates both synchronous learning

Three Models of Blended Learning.

MODEL 1	MODEL 2	MODEL 3
Blended Presentation and Interaction	Blended Block	Fully Online
Activity-focused face-to-face sessions blended with online resources. For example, the flipped curriculum model combines: short lecture podcasts, online resources with face-to-face tutorial/seminars for interaction and presentation of group work.	Combination of: intensive face-to-face sessions as one day or half days weekly online tutorial /seminars for activities and interaction online content and resources	Combination of: short lecture podcasts with online resources and learning activities online tutorials (synchronous) interaction via online collaboration, discussion forums and/or group work

Source: Hannon & Macken (2014)

Conclusion

It has been understood that the Increased availability of Digital Technology and Network access has made Blended learning a viable and effective approach in education. By combining face-to-face teaching with online resources, blended learning offers flexibility, increased engagement, and personalized instruction, enhancing the learning experience for students. One of the key benefits of blended learning is its ability to cater to different learning styles and paces. By incorporating online resources, such as videos, interactive quizzes, and discussion forums, students can access and review content at their own pace. This allows for differentiated instruction and provides opportunities for students to explore concepts in a way that suits their individual learning preferences.

Blended learning also promotes active learning and student engagement. Online components, such as virtual simulations, gamified learning activities, and multimedia presentations, can make the learning experience more interactive and engaging. This can help to capture students' attention and maintain their interest in the subject matter. Despite these there are few drawbacks of Blended Learning...difficult to find the right blend of online learning and face-to-face teaching. Time constraints. It can be difficult to find time to work on learning activities during class times. The use of Technology in a way that works for you. We may have to learn how to use the technology for yourself. There are more logistics to be managed in teaching online classes. It is concluded that blended learning is some extent is the solution to problems prevailing in today's education system.

OVERVIEW OF NEW NATIONAL EDUCATION POLICY- 2020

Dr. K. K. Thavamani

*Associate Professor, School of Commerce
KPR College of Arts Science and Research*

Abstract:

The New National Education Policy 2020 is a comprehensive and transformative policy introduced by the Government of India with the aim of revolutionizing the education system. It marks a significant step towards transforming the education landscape, empowering learners and fostering a knowledge driven society that can effectively tackle the challenges of 21st century. This paper provides a History of New Education Policy, Objectives of NEP, Highlights of NEP, Benefits and Challenges of NEP.

Keywords: *Benefits, New National Education Policy, Objectives, Highlights.*

Introduction:

Getting proper basic education is the birthright of each and every individual as per the Indian Constitution. Education is the key element in the development of a child for getting ready to lead a happy life. The change in the National education policy, after 1986 in the 21st century took place in July 2020 and emerges out to be the new education policy 2020. New education policy is formulated by the government of India aiming towards achieving the policy initiatives by 2030. It is a complete change in the existing education policy which was last implemented in 1986. It is focusing on the self-capabilities of child and concept-based learning, instead of rote learning procedures. Getting proper basic education is the birthright of each and every individual as per the Indian Constitution. Education is the key element in the development of a child for getting ready to lead a happy life. The change in the National education policy, after 1986 in the 21st century took place in July 2020 and emerges out to be the new education policy 2020.

History of New Education Policy:

The need for a new education policy was felt in the country for a long time. Three National Education Policies have been introduced in India till now. These three policies are National Education Policy 1968, National Education Policy 1986 and National Education Policy 2020. The National Education Policy 1986 was revised in the year 1992. The emphasis of previous policies on education was mainly on issues of access to education. The New Education Policy has been brought in keeping with the shortcomings of the previous education policy and the current and future needs,

which can lead to large scale transformative reforms in both the school and higher education sectors.

In June 2017, a committee was formed under the chairmanship of former ISRO chief Dr.K.KasturiRangan to formulate a new education policy. The draft of the National Education Policy was presented by this committee in May 2019. The National Education Policy, 2020 was approved by the Government of India on July 29, 2020 and the Ministry of Human Resource Development was also renamed as the Ministry of Education. The New Education Policy will replace the 34 year old National Education Policy 1986.

Objectives of New National Education Policy 2020:

- The New National Education Policy 2020 aims at the universalization of education from preschool to secondary level with a 100% Gross Enrollment Ratio (GER) in schooling by 2030.
- The New National Education Policy 2020 proposes some changes, including the opening of Indian Higher Education in foreign universities and the introduction of a four year multidisciplinary undergraduate program with several exit options. The objective of the New Education Policy 2020 is to make India a global knowledge superpower.
- The NEP 2020 policy also proposes that all universities and colleges aims to be multi-disciplinary by 2040. This policy will boost employment in the country and fundamentally change our educational system.

Structural Transformations in New Education Policy

School Education

The 10+2 module is replaced by 5+3+3+4 model. The execution will be carried out as:

- **Foundational Stage** - It will include three years of pre-schooling period.
- **Preparatory Stage** - It constitutes of classes 3-5, with ages 8-11 years.
- **Middle Stage** - It will constitute of class 6-8, with age 11-14 years.
- **Secondary Stage** - It will constitute class 9-12, with ages 14- 19 years. These four years will be linked with choice for multi-disciplinary study. It will not be necessary to study in only one discipline.
- The students have to give exams only thrice i.e. in 3, 5, and 8th class.
- “PARAKH”, an assessment body has to be established for assessing student’s performance.

Higher Education

- The bachelor's programme would be a 4-year programme with a flexible exit. Obtaining a year course will provide with certification, 2-year with a diploma degree, 3-year with a bachelor's degree, and 4-year will be integrated with the research work and finding related to the subject studied.
- Higher Education Grants Council (HEGC) for providing funds and finances to universities and colleges. This will replace AICTE and UGC.
- The responsibility of the national testing agency to hold common entrance for universities and colleges along with conducting NEET and JEE.
- Master of Philosophy courses to discontinue, as it was an intermediate course between Masters and Ph.D.
- National Research Foundation (NRA) to be developed to foster research and innovations.
- The foreign universities to set their campuses in our country and vice versa.

Teacher's Education and Recruitment

- The 4-year integrated B.Ed programme made it essential for teaching.
- There must be workshops organized for the training of the teachers regarding various teaching aids.
- Transparency in recruiting processes of teachers as teachers are at a centralized role for the development of students.

Beneficial Impacts of the New Education Policy

- It lays stress on the self-capability, cognitive skills of the learner. It will help a child to develop their talents if they are having inborn talents.
- Earlier the students had the option of opting for only one discipline for studying but now different subjects can opt, for example – one can opt for art and craft along with mathematics.
- Emphasis on every subject to be treated equally.
- The main motive is to develop the power of interaction, critical thinking, and the ability to reasoning with the inculcation of innovative ideas among the students.
- The multiple exit option in bachelor's courses will provide an opportunity for the students to benefit from the experience and attain skills by working somewhere in meantime and then continue later.
- The new education policy focuses on the practical aspect of learning any subject, as it is considered a better way of understanding the concept.
- All the institutions and higher education institutes to become multidisciplinary by 2040.

Disadvantages:

- The implementation of the language i.e. the teaching up to 5th grade to be continued in the regional languages is the utmost problem. The child will be taught in regional language and therefore will have less approach towards the English language, which is required after completing 5th grade.
- Kids have been subject to structural learning, which might increase the burden on their small minds.

Challenges of New National Education Policy 2020

- **Expensive Education:** Under the New National Education Policy 2020, admission to foreign universities is expected to make the education system expensive.
- **Lack of Human Resources:** There is a shortage of skilled teachers in current elementary education. In such a situation, practical problems are being seen in the implementation of the system made for elementary education under the National Education Policy 2020.
- **The Exodus of teachers:** Admission to foreign universities will lead to the migration of skilled Indian teachers.
- **Resource Allocation:** Adequate funding and resource allocation are crucial for implementing the policy's ambitious reforms. Ensuring sufficient financial support and effectively utilizing the allocated resources at all levels of education can be challenge.
- **Monitoring and Evaluation:** Establishing a robust monitoring and evaluation system to track the progress and impact of the policy is essential. Regular assessments and feedback mechanisms are required to identify shortcomings and make necessary adjustments to ensure the policy's effectiveness.
- **Curriculum Overhaul:** Revising and redeveloping the entire curriculum to align with the new policy's principles can be a complex task.

Highlights of New National Education Policy

- The policy seeks to restructure school curricula and pedagogy in a new '5+3+3+4' design, so that school education can be made relevant to the needs and interests of learners at different developmental stages – a 'Foundational Stage' (five years), a 'Preparatory Stage' (three years), a 'Middle Stage' (three years) and the 'High Stage' (four years, covering grades nine, 10, 11 and 12).
- It aims to achieve 'universal foundational literacy and numeracy' in primary schools by 2025. For this, the Ministry of Human Resource Development shall set up a National Mission on Foundational Literacy and Numeracy.

- Public and private schools – except the schools that are managed, aided or controlled, by the central government – will be assessed and accredited on the same criteria, benchmarks, and processes.
- The Gross Enrolment Ratio from preschool to secondary education should be 100 per cent by 2030. (GER is defined as the ratio of the total enrolment in education – regardless of age – to the official population in a given school year, expressed as percentage.) The policy states that universal participation in schools shall be achieved by tracking students and their learning levels to ensure they are enrolled and attending school, and have suitable opportunities to re-join or catch up at school in case they have dropped out or fallen behind.
- The medium of expression until at least grade five – but preferably till grade eight or beyond – shall be the student’s mother tongue, or the local or regional language. The ‘three-language formula’ will continue to be implemented in schools, where two of the three languages shall be native to India.
- The policy seeks to standardise the school curriculum for Indian Sign Language across the country.
- The government of India shall constitute a ‘Gender-Inclusion Fund’ to provide equitable and quality education to all girls and transgender students. States shall use this fund to implement the central government’s policies for assisting female and transgender students, such as provisions for toilets and sanitation, conditional cash transfers and bicycles. The fund will enable states to support ‘community-based’ interventions.
- The policy suggests establishing ‘school complexes’ consisting of a secondary school and other schools offering lower grades of education – including *anganwadi* centres – in a radius of 5 to 10 kilometers. Such a complex will have “greater resource efficiency and more effective functioning, coordination, leadership, governance, and management of schools in a cluster.”
- All education institutions shall be held to similar standards of audit and disclosure as a ‘not-for-profit’ entity, says this policy. If the institution generates a surplus, it shall be reinvested in the educational sector.
- The policy says that all ‘higher education institutions’ (HEIs) shall aim to be multidisciplinary by 2040. By 2030, there shall be at least one multidisciplinary HEI in or near every district. The policy aims for the Gross Enrolment Ratio in higher education to increase to 50 per cent by 2035 from 26.3 per cent in 2018.
- HEIs shall have the flexibility to offer Master’s programmes of two years for those who have completed a three-year undergraduate programme, of one year for students who have completed a four-year undergraduate programme, or five-year integrated Bachelor’s and Master’s programmes.

- M.Phil. programmes shall be discontinued.
- The policy says that ‘high performing’ Indian universities shall be encouraged to set up campuses in other countries. Similarly, selected universities – such as those from among the top 100 universities in the world – shall be encouraged to operate in India.
- A National Research Foundation shall be established to facilitate “merit-based but equitable” peer-reviewed research funding.
- The policy says that the centre and states shall work together to increase public investment in education to 6 per cent of the gross domestic product, from the current 4.43 per cent.

Conclusion :

The new education policy is laid down with several initiatives that are really the need of the present scenario. The policy is concerned with attention on skill development along with the study curriculum. Merely dreaming of anything will not make it work, as proper planning and working according to that will only help in fulfilling the objective. No sooner the objectives of NEP are achieved, will propel our nation towards progress.

Abstract :

The foundation of any country's growth and development is its educational system, the National Education Policy 2020 has been repurposed as the foundation for this reform, which might aid in the development of a new educational system in the nation as well as the improvement of those economic and social indices. Due to the fact that education promotes social and economic advancement, a nation's school and college levels require a well-defined and futuristic education strategy. Taking into account tradition and culture, different nations implement various educational systems. Many education professionals never anticipated the adjustments that NEP 2020 has suggested. Although both high school and college education have been touched by the education policy, this article primarily concentrates on NEP 2020 and its effects on higher education.

Introduction:

"Education is a Key to Success and this Success can be Attained by the Appropriate Implementation of the Policy,"

NEP is essentially a thorough framework for directing the growth of education in the nation. Since then, there have been significant changes in both the sector as a whole and the entire world.. The new NEP was introduced with the intention of formalising systemic improvements from the K-12 to the college/university levels. Education content moving forward will concentrate on key concepts, ideas, applications, and problem-solving stances in light of the evolving situation.. The government's decision to permit international colleges to establish campuses in India is an admirable one. The introduction of multidisciplinary institutions will result in a renewed emphasis on all academic disciplines, including the arts and humanities, and this method of instruction will support students' holistic learning and development. Students will therefore possess a stronger knowledge base.

Objective

- To study the impact of New Education Policy 2020 on higher education.
- To outlines the salient features of NEP
- To analyses how NEP, affect the existing education system.

The Oretical Framework New Education Policy 2020 Highlights

- The 10+2 board format is eliminated.
- The new school will have a 5+3+3+4 configuration.
- There are up to 5 preschools, 6–8 middle schools, 8–11 high schools, and 12 and up.
- Graduation Any degree will be four years long.
- Vocational classes are offered from the sixth grade forward.
- Subject options are available to students in grades 8 through 11.
- All courses leading to graduation will have a major and a minor.
- A single authority will oversee all forms of higher education.
- The UGC and AICTE will merge.
- All universities, whether public or private, open or deemed, vocational or otherwise, New Teacher

NEP 2020 in Higher Education

- The policy envisages broad based, multi-disciplinary, holistic Under Graduate education with flexible curricula, creative combinations of subjects, integration of vocational education and multiple entry and exit points with appropriate certification. UG education can be of 3 or 4 years with multiple exit options and appropriate certification within this period. Academic Bank of Credits to be established to facilitate Transfer of Credits
- Multidisciplinary Education and Research Universities (MERUs), at par with IITs, IIMs, to be set up as models of best multidisciplinary education of global standards in the country.
- National Research Foundation will be created as an apex body for fostering a strong research culture and building research capacity across higher education.

How NEP Affects Higher Education

The NEP 2020 has set an ambitious goal of enhancing the quality of Higher Education Institutions (HEI), placing India as a hub of global education, and virtually doubling the GER in higher education from 26.3 percent (2018) to 50 percent by 2035. The main goals are to facilitate research, enhance faculty support, promote internationalisation, and provide a flexible curriculum through an interdisciplinary approach with numerous departure points throughout a four-year undergraduate degree.. These organisations will eventually take the place of previous regulatory authorities like the All India Council for Technical Education and the University Grants Commission (UGC) (AICTE).

- Integration of vocational education within higher education. At least 50 per cent learners to have exposure to vocational education by 2025.

- Enhanced equity and inclusion – Establishing high-quality HEIs in aspirational districts and Special Education Zones. At least one large multidisciplinary HEI in or near every district by 2030 .
- Reputed international universities to be encouraged to set up Indian campuses.

Issues Related to NEP 2020

- **Knowledge-Jobs Mismatch:** The knowledge and skills taught and the jobs offered consistently don't match up. One of the biggest issues the Indian educational system has faced since Independence is this. Since NEP 2020 makes no mention of education in rapidly developing technological areas like artificial intelligence, cyberspace, nanotechnology, etc., it was unable to verify this.
- **The Requirement of Enormous Resources.** A lofty goal of 6% of GDP for public spending has been established. Given the low tax-to-GDP ratio and conflicting demands on the national exchequer from the national defence, healthcare, and other important sectors, mobilising financial resources will be very difficult.

Drawbacks of NEP

- The new education policy aims to prioritise mother tongue or regional language instruction in schools (until 5th standard, but preferably till 8th).
- This policy might be ineffective, though, as it undermines the use of English in many private schools. One of the most frequently used and widely spoken languages in the world is English.
- India has traditionally stood out by promoting the use of English in educational settings, providing us an advantage over other Asian nations.
- As many states in Southern India have multiple regional languages, this strategy will also have a negative impact on parents whose occupations require frequent relocations. Therefore, a move would interfere with the child's schooling.
- NEP 2020, in conclusion, seems admirable on paper but would be a difficult undertaking in practise. I therefore anticipate seeing things work as intended.

Conclusion :

Right now, the new national education policy is picture-perfect. But the implementation of it before the deadline is the key to its success. To reap the enormous benefits that will be introduced into the system with its proper execution, we must now patiently wait and see how things develop in the future. The country's higher education system is anticipated to have good and long-lasting effects as a result of the National Education Policy. The government's decision to permit international colleges to establish campuses in India is an admirable one. This will enable the children to benefit from a local education that is of a high international standard.

OPPORTUNITIES AND CHALLENGES OF NATIONAL EDUCATIONAL POLICY 2023 IN HIGHER EDUCATIONAL INSTITUTES: A CASE STUDY OF ANDHRA PRADESH INDIA

Abstract:

The National Educational Policy (NEP) 2023 is an essential initiative aimed at transforming the landscape of higher education in India. This abstract explores the potential opportunities and challenges that the NEP 2023 presents for higher educational institutes in state of Andhra Pradesh. In Andhra Pradesh there are 3 central universities, 20 central autonomous Institutions, 25 state universities, 4 deemed universities, 5 private universities, and 345+ Private Engineering Colleges. The policy's opportunities include a renewed focus on research and innovation, enhanced employability through skill development, flexibility in curriculum design, integration of digital infrastructure, and the promotion of international collaborations. However, realizing these opportunities comes with its set of challenges, such as effective policy implementation at the institutional level, upgrading infrastructure and resources, faculty development to meet new objectives, addressing inclusivity and regional disparities, designing robust assessment mechanisms, and garnering public awareness and participation. This abstract highlights the significance of carefully navigating these opportunities and challenges to ensure successful and meaningful implementation of NEP 2023 in higher educational institutes, ultimately contributing to the advancement of India's education system and fostering well-rounded graduates ready to tackle global challenges.

Keywords: NEP, Higher Education Institutes, Regional Disparities

I. Introduction:

The National Educational Policy (NEP) 2023 is a transformative framework that seeks to revamp the educational landscape of India, with a specific focus on higher education. As one of the leading states in the country with a rich history of education, Andhra Pradesh is poised to play a crucial role in implementing the NEP 2023 in its higher educational institutions. Higher Education Commission of India (HECI) will be set up as a single overarching umbrella body for entire higher education, excluding medical and legal education. HECI to have four independent verticals - National Higher Education Regulatory Council (NHERC) for regulation, General Education Council (GEC) for standard setting, Higher Education Grants Council (HEGC) for funding, and National Accreditation Council (NAC) for

accreditation. Public and private higher education institutions will be governed by the same set of norms for regulation, accreditation and academic standards.

Affiliation of Colleges is to be phased out in 15 years and a stage-wise mechanism is to be established for granting graded autonomy to colleges. Over a period of time, it is envisaged that every college would develop into either an Autonomous degree-granting College, or a constituent college of a university.

New Education Policy 2023 : Major Reforms

The Major Reforms in Education Policy according to the NEP 2023 are listed below.

- There will be no discernible divide between the arts, sciences, academic, vocational, curricular, and extracurricular disciplines.
- Foundational Reading and Numeracy will be prioritised.
- The 10+2 structure is replaced by a 5+3+3+4 model.
- No state language is imposed on students studying in any state.
- Students are permitted to take the Board Examinations twice.
- Instead of 1.7%, the government will spend 6% of the country's GDP on education.
- The fund for gender inclusion will be completely established.
- The government would go above and above to ensure that gifted youngsters receive a suitable education.
- The undergraduate courses will last four years.
- A 4-year integrated B.Ed Course will be required to apply for the position of teacher.
- A Common Admission Examination for admission to HEIs will be implemented.
- The Master of Philosophy programme will be phased out of the educational system.
- In Secondary School, pupils will be able to choose from a variety of disciplines such as arts and crafts, vocational courses, and physical education.
- The PARAKH (Performance Assessment, Review, and Analysis of Knowledge for Holistic Development) organisation will define the standards for Board Examinations. The government will make Indian literature and other classical languages part of the educational curriculum.
- Instead of every academic year, students' exams will be held only in classes 2nd, 5th, and 8th.

II. Background Study:

In Andhra Pradesh, a general background study of implementation of higher education policies, including NEP 2020, might provide some context for NEP 2023.

1. **National Educational Policy 2020:** The NEP 2020 was a landmark policy that aimed to transform the entire education system in India, from school education to higher education. It sought to promote a more holistic and flexible approach to learning, emphasizing critical thinking, creativity, and skill development among students.
2. **Focus on Higher Education:** The NEP 2020 laid special emphasis on higher education, envisioning it as a vehicle for research, innovation, and the holistic development of students. It proposed various reforms in curriculum design, faculty development, research, and governance structures in higher educational institutions.
3. **Flexibility and Multidisciplinary:** The policy encouraged higher education institutes to adopt a multidisciplinary approach, enabling students to choose courses across different disciplines and promoting research that transcends traditional boundaries.
4. **Research and Innovation:** NEP 2020 emphasized transforming higher education institutions into vibrant hubs for research and innovation, with a focus on creating a conducive environment for cutting-edge research and collaboration with industries.
5. **Global Exposure:** The policy encouraged internationalization of higher education by promoting partnerships with foreign universities and facilitating student and faculty exchange programs to enhance global exposure.
6. **Challenges in Implementation:** Implementing a comprehensive policy like NEP 2020 involves challenges such as aligning state-level policies with the national framework, mobilizing financial resources, overcoming resistance to change, and ensuring equitable access to quality education across different regions.
7. **State-Specific Adaptations:** The implementation of NEP 2020 in individual states like Andhra Pradesh required making region-specific adaptations, considering the state's unique socio-cultural, economic, and educational context.

Moving forward to NEP 2023, it can be anticipated that its implementation in Andhra-Pradesh's higher education system may follow a similar pattern, building on the foundation laid by NEP 2020 while addressing its shortcomings and introducing new reforms tailored to the state's specific needs and aspirations.

III. Research Methodology:

This study is descriptive in nature. The required secondary data was gathered from a number of websites, including those run by the Indian government, magazines, journals, and other publications. To draw the inferences and draw the findings, the data was then examined and processed.

IV. The Opportunities of NEP in Higher Education in Andhra Pradesh

Opportunities of National Educational Policy (NEP) 2023 in Higher Educational Institutions in Andhra Pradesh, India:

1. **Research and Innovation Hub:** NEP 2023 envisions higher education institutions as vibrant centers for research and innovation. This presents an opportunity for universities and colleges in Andhra Pradesh to focus on research-oriented programs, establish research centers, and collaborate with industries and international institutions to drive innovation.
2. **Multidisciplinary Approach:** The policy promotes a multidisciplinary approach to education, allowing students to choose courses across various disciplines. This opportunity enables higher education institutes in Andhra Pradesh to design flexible and diverse curricula, catering to students' diverse interests and career aspirations.
3. **Skill Development and Employability:** NEP 2023 emphasizes integrating skill development programs into the curriculum to enhance students' employability. In Andhra Pradesh, this presents an opportunity for institutions to offer practical training, internships, and industry-oriented courses to prepare students for the job market.
4. **Digital Transformation:** The policy recognizes the importance of technology in education. Embracing digital transformation, higher educational institutions in Andhra Pradesh can leverage e-learning platforms, digital resources, and virtual classrooms to provide high-quality education and widen access to knowledge.
5. **Quality Improvement and Accreditation:** NEP 2023 emphasizes the establishment of a robust accreditation system to ensure quality education. This opportunity encourages institutions in Andhra Pradesh to focus on continuous improvement and meet the required standards, boosting their reputation and attracting students and faculty.
6. **International Collaboration and Global Exposure:** The policy encourages international partnerships and student exchange programs, promoting global exposure for students. This opportunity allows higher educational institutes in Andhra Pradesh to foster collaborations with foreign universities, exchange knowledge, and promote cultural diversity on campuses.
7. **Focus on Teacher Training:** NEP 2023 emphasizes enhancing the quality of teacher training programs. In Andhra Pradesh, this presents an opportunity to invest in faculty development initiatives, ensuring that educators are equipped with the latest teaching methodologies and pedagogical approaches.
8. **Recognition of Regional Languages:** NEP 2023 recognizes the importance of regional languages and encourages their use in education. This opportunity can promote the preservation of local cultures and languages in higher education

institutions in Andhra Pradesh, making education more inclusive and relatable to students.

9. **Focus on Vocational Education:** The policy promotes vocational education and skill-based courses. This opportunity allows institutions in Andhra Pradesh to offer a diverse range of vocational programs, addressing the growing demand for skilled professionals in various industries.
10. **Entrepreneurship and Start-up Culture:** NEP 2023 emphasizes promoting an entrepreneurial mindset among students. In Andhra Pradesh, this presents an opportunity to nurture an ecosystem that fosters innovation, start-ups, and entrepreneurship, encouraging students to become job creators rather than job seekers.

By capitalizing on these opportunities, higher educational institutions in Andhra Pradesh can play a crucial role in shaping a progressive, inclusive, and future-ready education system in alignment with the vision of NEP 2023.

V. The Challenges of NEP in Higher Education in Andhra Pradesh

Challenges of National Educational Policy (NEP) 2023 in Higher Educational Institutions in Andhra Pradesh, India:

1. **Effective Policy Implementation:** One of the primary challenges lies in effectively implementing the NEP 2023 at the state level. Coordinating efforts between the central government and the state government of Andhra Pradesh to ensure seamless integration of the policy's objectives in higher educational institutes may require careful planning and execution.
2. **Infrastructure and Resources:** Upgrading infrastructure and providing the necessary resources to meet the requirements of the new policy can be a significant challenge, especially for institutions with limited financial capacities.
3. **Faculty Development and Training:** Preparing faculty members to adapt to the new curriculum, teaching methodologies, and research-oriented approach may require substantial investment in faculty development programs and training.
4. **Addressing Regional Disparities:** Andhra Pradesh is a diverse state with varying levels of educational development across regions. Addressing regional disparities and ensuring equitable access to quality education under NEP 2023 may pose challenges.
5. **Curriculum Design and Implementation:** Redesigning and implementing a flexible, multidisciplinary curriculum that aligns with the policy's objectives while maintaining academic rigor and relevance can be complex.
6. **Assessment and Evaluation Mechanisms:** Designing fair and effective assessment and evaluation mechanisms that align with the new policy's objectives and ensure the quality of education may require careful planning and calibration.

7. **Inclusivity and Diversity:** Ensuring inclusivity for students from diverse backgrounds, including those from marginalized communities and rural areas, demands special attention and targeted support.
8. **Student-Centric Approach:** Adapting to a more student-centric approach, catering to individual learning needs, and providing personalized learning experiences may require significant changes in institutional practices.
9. **Regulatory Compliance:** Compliance with the regulatory framework and adapting to changes in accreditation and quality assurance mechanisms as per NEP 2023 may pose challenges for higher educational institutions in Andhra Pradesh.
10. **Resistance to Change:** Introducing new reforms and approaches may face resistance from various stakeholders, including administrators, faculty, students, and parents, requiring effective communication and engagement strategies.
11. **Funding and Budgetary Constraints:** Implementing NEP 2023 initiatives may require additional funding, and institutions might face budgetary constraints, necessitating efficient resource allocation and utilization.
12. **Balancing Tradition and Innovation:** Striking a balance between preserving the rich educational traditions of Andhra Pradesh and embracing innovative approaches proposed in NEP 2023 can be a delicate task. Navigating these challenges effectively is vital for the successful implementation of NEP 2023 in higher educational institutions in Andhra Pradesh. It requires collaboration between stakeholders, careful planning, and a commitment to transforming the education system to create a dynamic and inclusive learning environment for students in the state.

VI. Conclusion:

The cooperation of the centre and states is essential to the NEP's success. It is urgently necessary to enhance money in order to reorganize the educational system and bring it up to par with international standards in order to accomplish the NEP's overall objectives. This NEP has made it possible to implement the necessary adjustments in the educational system and has given opportunities for systemic change. When trying to change the entire system, there are some difficulties. These difficulties must be overcome in order to create opportunities.

Acceptance the opportunities presented by the NEP 2023 while effectively addressing the associated challenges is essential for Andhra Pradesh's higher educational institutions to create a dynamic and progressive learning environment. By carefully navigating these opportunities and challenges, Andhra Pradesh can emerge as a trailblazer in implementing the NEP 2023 and significantly contribute to the advancement of higher education in India.

Abstract

Education plays an enlightening role in the overall development of the country, it works with fundamental framework in order to transmission of knowledge, creative thinking and development of individualities. The foundational pillars of NEP are built with Access, Equity, Quality, Affordability, and Accountability. This is the plan for India's 2030 Sustainable Development, which intends to make the nation into a thriving knowledge society and a global knowledge superpower by enhancing both primary and secondary education to be more comprehensive, adaptable, and multidisciplinary in order to better serve students' individual learning styles. Considering that the third education policy will take the place of the New Education Policy of 1986. This study based on secondary data, focused to pointing out some salient features of NEP 2020 especially in higher education which is interesting and important to the community.

Keywords: *New education policy 2020, Higher education, Salient features, Sustainable Development*

Introduction

The policy was developed via an unusual in scope and depth collaborative process. Over 2 lakh recommendations were received during consultation from over 2.5 lakh Gram Panchayats, 6600 Blocks, 6000 ULBs, and 676 districts. Since January 2015, the MHRD has been conducting a collaborative, inclusive, and highly participative consultation process. The "Committee for Evolution of the New Education Policy," led by the late Shri T.S.R. Subramanian, a former cabinet secretary, submitted its report in May 2016. The Ministry created "Some Inputs for the Draft National Education Policy, 2016" based on this. A "Committee for the Draft National Education Policy" was established in June 2017 under the leadership of renowned scientist Dr. K. Kasturi Rangan, who was awarded the Padma Vibhushan. This committee submitted the Draft National Education Policy, 2019 to the Honorable Human Resource. Education policy is in a state of change across the industrialized countries. Governments everywhere are re-examining many aspects of the provision of schooling (Tiwari and Anjum 2018) The availability of online education has the potential to improve gross enrolment ratio, and provide opportunity for any time anywhere learning (Rajesh and Bimal 2021)

Objective

The objective of present paper is to study the salient features of NEP 2020 recently announced by Government of India. The study reviewed secondary data such various literature, journals, official websites so on.

Methodology and Limitations

This study can serve as a basis for future research-based empirical investigations and determine the impact of the NEP 2020 after its implementation. However, this research can be used as a basis for further studies on various aspects of the NEP 2020 and the results are highlighted based on the researcher's suggestions and recommendations.

Literature Review

Education acts as major role in the development of the country, it will take the citizen to reach their destiny so this is most acceptable factor in case of growth of the country. Education plays a powerful role in building nation, education decides the future of the nation, the destiny of its people. The impact will be a long-lasting one in terms of growth and development of the nation and citizen. The role of education and its importance cannot be ignored in today's scenario. The growth and development can be seen if we compare the pre independence and post - independence era. After 34 years Indian Govt. is going to change the way we study, this is the third amendment in the education policy. There are many changes proposed in new National Education Policy 2020 that would certainly affect all the stakeholders (Kalyani Pawan 2020) New education policy 2020 acknowledges the need for motivated faculty but fails to provide roadmap forenhancing motivation of faculties. New education policy missed an opportunity to address the core issue facing Indian higher education. The largest democracy in the world is looking for a vibrant higher education system to fulfil the aspirations of youth. National education policy 2020 is the most recent attempt to reform higher education. The country has witnessed transformation of education from Gurukul system to Macaulaysystem. Poor outcomes in Indian higher education have manifested in poor employability and outflow of students to universities abroad. Performance driven growth opportunities, motivation to march skill and hierarchy, and focussed approach for faculty empowerment, autonomy and decentralisation is needed to make Indian higher education globally competitive. (Rakesh Pathak 2021) National Mission on Education through ICT (NMICT) is a step in the right direction. But the scale of the services and courses is a cause of concern. The ministry of HRD has also initiated project Aakash in collaboration with IIT. (Rajesh and Bimal 2013) The largest democracy in the world is looking for a vibrant higher education system to fulfil the aspirations of youth.

National education policy 2020 is the most recent attempt to reform higher education.

Salient Features of the NEP 2020 in Higher Education

In Higher Education, Increase GER to at least 50% by 2035

India, with the world's second largest higher education system and a rapidly growing economy as one of the BRIC nations, faces significant challenges in building both capacity and excellence in higher education. India's higher education system is characterized by "islands of excellence in a sea of mediocrity." The mainstream universities are recognized as lacking in quality. Only the Indian Institutes of Technology and related institutions garner international recognition (Altbach 2014). It will be desired to increase the Gross Enrollment Ratio from 27.1% to 50% (as per survey of Ministry of Education 2023) in higher education, including vocational education by 2035.

The Policy Calls for a Holistic Multidisciplinary

Holistic undergraduate level education offering a comprehensive introduction to science, arts, humanities, mathematics, and careers. As well as it is important of creative, well manner and flexible curriculum structures, imaginative study combinations, the incorporation of professional education, and multiple start and end point. This will help students develop overall in all areas such as arts, science, social studies, languages, engineering, career, profession, soft skills, communication etc.

Figure 1: A Diagram Of 21st Century Pedagogy

Source: <https://www.teachthought.com/wp-content/uploads/2013/06/21st-century-pedagogies.jpg>

The under Graduate Degree will be of Either 3 or 4-Year Duration

As mentioned in the NEP official material it provides that the UG degree for either 3 or 4 years, with more than one degree during the that study period, after completion a year get a certificate in a multiple discipline or subject including vocational and career as a diploma of 2 years, or UG degree after 3-year period.

Teacher Education

The 4-year integrated level-specific, subject-specific Bachelor of Education offered at multidisciplinary institutions would be the way forward. A new and comprehensive National curriculum framework for teacher education, NCFTE 2021, is formulated by NCTE in consultation with NCERT. By 2030, the minimum qualification for teaching will be a four-year integrated B.Ed. degree that provides a range of knowledge and pedagogy and includes extensive practical training in the form of student local schools. Strict action will be taken against inferior stand-alone teacher education institutions (TEIs).

Figure 2: Skill Hierarchy Motivation Model for Teachers in Indian Higher Education

Source: Tiwari and Anjum, (2018)

Professional Academic, Career Counselling and Support

As per NEP regulations universities and colleges will establish quality support training centres and provide adequate funding and academic resources to encourage and help students from backward socio-economic backgrounds. It is necessary for each and every student must access to career and professional counselling to gain physical, expressive and emotional well-being.

Inclusion in Higher Education

There are many steps taken by Government in higher education:

Mitigate opportunity costs and fees for pursuing higher education to provide more financial assistance and scholarships, conduct outreach on higher education opportunities and scholarships, make admissions processes more inclusive, make curriculum more inclusive, increase employability potential of higher education programmes, develop more degree courses taught in Indian languages and bilingually, ensure all buildings and facilities are wheelchair-accessible and disabled

friendly, develop bridge courses for students that come from disadvantaged educational backgrounds, Provide socio-emotional and academic support and mentoring, ensure sensitization of faculty, counsellor, and students on gender-identity issue and its inclusion in all aspects of the HEl, including curricula, strictly enforce all no-discrimination and anti-harassment rules, develop Institutional Development Plans that contain specific plans for action on increasing participation from SEDGs etc.

ICT in Higher Education

In the current scenario adopting technology in education is very important, according the study of Alok Kumar (2021) NEP 2020 is aimed to revamp higher education in India. It will utilize the co-operation of international communities and their experiences will be utilized. Moreover, higher education provided in Indian universities and colleges under NEP 2020 will incorporate ICT to suit the need of the education in new normal post -COVID era. It has become meaningless to continue with outdated education system. On the part of the Indian government a lot of changes would be required to be brought to the curriculum of higher education absorbing the global demand for receiving skilled manpower. Thus, implementation NEP 2020 would be a great challenge. The policy is bound to introduce revolutionary and innovative changes.

Conclusion

The government's used to transform the education system is quite exceptional. The New Education Policy was deliberative with the promise of forward-looking ideas. According to numerous researchers it was noticed that the government to desire to restructure the education system, notably drastic deviations in the higher education system. It works with fundamental framework in mandate to transmission of knowledge, imaginative thinking and development of individualities as well as the change is required in changes of curriculum hence the Govt. brought the NEP 2020 in order solve the issues. Since its extremely difficult for the government and it can be amended after successful adopt in the country. It is a great idea that given and encourage for foreign universities to open their campuses to pursue higher education in India and there will be no holdup for Indian universities to establish their campuses abroad. We firmly believe that the implementation of New Education Policy 2020 will have a great impact on future generation to celebrate Azadi Ka Amrit Mahotsav.

Pollachi*

Introduction

When the NEP was launched in 2023, its motto was **Educate, Encourage and Enlighten**. The government's purpose to launch this policy was to develop 21st century skills in the students of India. The amendments in NEP from the previous education policy strive for Research, Innovation, and Quality. For the seamless implementation of this education policy, the government is willing to give big funds. In 2021, Nirmala Sitaraman said that funds of Rs. 50,000 crores will be given to the National Research Foundation, and Rs. 40 crore to Ekalavya Schools. More details of NEP 2023 are in the rest of the article.

Curriculum and Pedagogy in Schools: Learning Should be Holistic, Integrated, Enjoyable, and Engaging:

Restructuring School Curriculum and Pedagogy in a New 5+3+3+4 Design

The most attention-grabbing amendment in the NEP 2023 is the replacement of the 10+2 structure with the 5+3+3+4 structure. The 10+2 has been prevalent in our education system for a very long time. So, a complete change in that system can be a bit perplexing for the students. Below we will try to explain the meaning of the 5+3+3+4 structure and how it is completely distinctive from the old 10+2 structure.

In the new Pedagogical and Circular Structure, the government has subdivided the schooling of students into four parts. These four parts are Secondary, Middle, Preparatory, and Foundational. These four stages of schooling will be crucial parts of educational development in students' school lives. The subdivision of these four stages in the schooling of students will be done as follows.

- The first stage of schooling for students is the Foundation Stage. In this, the early grooming of students will be done for 5 years. These 5 years will be 3 years of Anganwadi/ Pre-Primary/ Balvatika and first and second grade.
- The second stage will be the preparatory stage. This schooling stage will last for 3 years as well. Class 3rd, 4th, and 5th will lay the foundation for the middle and secondary stages.
- The third stage of schooling will be the middle school stage. In this from Class 6th to 8th. These three years will prepare the students for the final stage of their school life i.e. Secondary Stage.
- The final stage of schooling life for students will be the secondary stage, in this instead of 2 years, the students will have a complete four years from Class 9th to 12th to complete their secondary education.

Reduce Curriculum Content to Enhance Essential Learning and Critical Thinking

Curriculum content will be reduced in each subject to its core essentials, to make space for critical thinking and more holistic, inquiry-based, discovery-based, discussion-based, and analysis based learning. The mandated content will focus on key concepts, ideas, applications, and problem solving. Teaching and learning will be conducted in a more interactive manner; questions will be encouraged, and classroom sessions will regularly contain more fun, creative, collaborative, and exploratory activities for students for deeper and more experiential learning.

Experiential Learning

In all stages, experiential learning will be adopted, including hands-on learning, arts-integrated and sports-integrated education, story-telling-based pedagogy, among others, as standard pedagogy within each subject, and with explorations of relations among different subjects. To close the gap in achievement of learning outcomes, classroom transactions will shift, towards competency-based learning and education. The assessment tools (including assessment “as”, “of”, and “for” learning) will also be aligned with the learning outcomes, capabilities, and dispositions as specified for each subject of a given class.

Art-integration is a cross-curricular pedagogical approach that utilizes various aspects and forms of art and culture as the basis for learning of concepts across subjects. As a part of the thrust on experiential learning, art-integrated education will be embedded in classroom transactions not only for creating joyful classrooms, but also for imbibing the Indian ethos through integration of Indian art and culture in the teaching and learning process at every level. This art-integrated approach will strengthen the linkages between education and culture.

Sports-integration is another cross-curricular pedagogical approach that utilizes physical activities including indigenous sports, in pedagogical practices to help in developing skills such as collaboration, self-initiative, self-direction, self-discipline, teamwork, responsibility, citizenship, etc. Sports-integrated learning will be undertaken in classroom transactions to help students adopt fitness as a lifelong attitude and to achieve the related life skills along with the levels of fitness as envisaged in the Fit India Movement. The need to integrate sports in education is well recognized as it serves to foster holistic development by promoting physical and psychological well-being while also enhancing cognitive abilities. Empower students through flexibility in course choices.

Empower Students Through Flexibility in Course Choices

Students will be given increased flexibility and choice of subjects to study, particularly in secondary school - including subjects in physical education, the arts and crafts, and vocational skills - so that they can design their own paths of study and life plans. Holistic development and a wide choice of subjects and courses year to year will be the new distinguishing feature of secondary school education. There will be no hard separation among 'curricular', 'extracurricular', or 'co-curricular', among 'arts', 'humanities', and 'sciences', or between 'vocational' or 'academic' streams. Subjects such as physical education, the arts and crafts, and vocational skills, in addition to science, humanities, and mathematics, will be incorporated throughout the school curriculum, with a consideration for what is interesting and safe at each age.

Each of the four stages of school education, in accordance with what may be possible in different regions, may consider moving towards a semester or any other system that allows the inclusion of shorter modules, or courses that are taught on alternate days, in order to allow an exposure to more subjects and enable greater flexibility. States may look into innovative methods to achieve these aims of greater flexibility and exposure to and enjoyment of a wider range of subjects, including across the arts, sciences, humanities, languages, sports, and vocational subjects.

Multilingualism and the Power of Language

It is well understood that young children learn and grasp nontrivial concepts more quickly in their home language/mother tongue. Home language is usually the same language as the mother tongue or that which is spoken by local communities.

However, at times in multi-lingual families, there can be a home language spoken by other family members which may sometimes be different from mother tongue or local language. Wherever possible, the medium of instruction until at least Grade 5, but preferably till Grade 8 and beyond, will be the home language/mother tongue/local language/regional language. Thereafter, the home/local language shall continue to be

taught as a language wherever possible. This will be followed by both public and private schools. High-quality textbooks, including in science, will be made available in home languages/mother tongue. All efforts will be made early on to ensure that any gaps that exist between the language spoken by the child and the medium of teaching are bridged. In cases where home language/mother tongue textbook material is not available, the language of transaction between teachers and students will still remain the home language/mother tongue wherever possible. Teachers will be encouraged to use a bilingual approach, including bilingual teaching-learning materials, with those students whose home language may be different from the medium of instruction. All languages will be taught with high quality to all students; a language does not need to be the medium of instruction for it to be taught and learned well.

As research clearly shows that children pick up languages extremely quickly between the ages of 2 and 8 and that multilingualism has great cognitive benefits to young students, children will be exposed to different languages early on (but with a particular emphasis on the mother tongue), starting from the Foundational Stage onwards. All languages will be taught in an enjoyable and interactive style, with plenty of interactive conversation, and with early reading and subsequently writing in the mother tongue in the early years, and with skills developed for reading and writing in other languages in Grade 3 and beyond. There will be a major effort from both the Central and State governments to invest in large numbers of language teachers in all regional languages around the country, and, in particular, for all languages mentioned in the Eighth Schedule of the Constitution of India. States, especially States from different regions of India, may enter into bilateral agreements to hire teachers in large numbers from each other, to satisfy the three-language formula in their respective States, and also to encourage the study of Indian languages across the country. Extensive use of technology will be made for teaching and learning of different languages and to popularize language learning.

The three-language formula will continue to be implemented while keeping in mind the Constitutional provisions, aspirations of the people, regions, and the Union, and the need to promote multilingualism as well as promote national unity. However, there will be a greater flexibility in the three-language formula, and no language will be imposed on any State. The three languages learned by children will be the choices of States, regions, and of course the students themselves, so long as at least two of the three languages are native to India. In particular, students who wish to change one or more of the three languages they are studying may do so in Grade 6 or 7, as long as they are able to demonstrate basic proficiency in three languages (including one language of India at the literature level) by the end of secondary school. 4.14. All efforts will be made in preparing high-quality bilingual textbooks and teaching-learning materials for science

and mathematics, so that students are enabled to think and speak about the two subjects both in their home language/mother tongue and in English.

As so many developed countries around the world have amply demonstrated, being well educated in one's language, culture, and traditions is not a detriment but indeed a huge benefit to educational, social, and technological advancement. India's languages are among the richest, most scientific, most beautiful, and most expressive in the world, with a huge body of ancient as well as modern literature (both prose and poetry), film, and music written in these languages that help form India's national identity and wealth. For purposes of cultural enrichment as well as national integration, all young Indians should be aware of the rich and vast array of languages of their country, and the treasures that they and their literatures contain.

Thus, every student in the country will participate in a fun project/activity on 'The Languages of India', sometime in Grades 6-8, such as, under the 'Ek Bharat Shrestha Bharat' initiative. In this project/activity, students will learn about the remarkable unity of most of the major Indian languages, starting with their common phonetic and scientifically-arranged alphabets and scripts, their common grammatical structures, their origins and sources of vocabularies from Sanskrit and other classical languages, as well as their rich inter-influences and differences. They will also learn what geographical areas speak which languages, get a sense of the nature and structure of tribal languages, and learn to say commonly spoken phrases and sentences in every major language of India and also learn a bit about the rich and uplifting literature of each (through suitable translations as necessary). Such an activity would give them both a sense of the unity and the beautiful cultural heritage and diversity of India and would be a wonderful icebreaker their whole lives as they meet people from other parts of India. This project/activity would be a joyful activity and would not involve any form of assessment.

The importance, relevance, and beauty of the classical languages and literature of India also cannot be overlooked. Sanskrit, while also an important modern language mentioned in the Eighth Schedule of the Constitution of India, possesses a classical literature that is greater in volume than that of Latin and Greek put together, containing vast treasures of mathematics, philosophy, grammar, music, politics, medicine, architecture, metallurgy, drama, poetry, storytelling, and more (known as 'Sanskrit Knowledge Systems'), written by people of various religions as well as non-religious people, and by people from all walks of life and a wide range of socio-economic backgrounds over thousands of years. Sanskrit will thus be offered at all levels of school and higher education as an important, enriching option for students, including as an option in the three-language formula. It will be taught in ways that are interesting and experiential as well as contemporarily relevant, including through the use of Sanskrit Knowledge Systems, and in particular through phonetics and pronunciation. Sanskrit

textbooks at the foundational and middle school level may be written in Simple Standard Sanskrit (SSS) to teach Sanskrit through Sanskrit (STS) and make its study truly enjoyable.

India also has an extremely rich literature in other classical languages, including classical Tamil, Telugu, Kannada, Malayalam, Odia. In addition to these classical languages Pali, Persian, and Prakrit; and their works of literature too must be preserved for their richness and for the pleasure and enrichment of posterity. As India becomes a fully developed country, the next generation will want to partake in and be enriched by India's extensive and beautiful classical literature. In addition to Sanskrit, other classical languages and literatures of India, including Tamil, Telugu, Kannada, Malayalam, Odia, Pali, Persian, and Prakrit, will also be widely available in schools as options for students, possibly as online modules, through experiential and innovative approaches, to ensure that these languages and literature stay alive and vibrant. Similar efforts will be made for all Indian languages having rich oral and written literatures, cultural traditions, and knowledge.

For the enrichment of the children, and for the preservation of these rich languages and their artistic treasures, all students in all schools, public or private, will have the option of learning at least two years of a classical language of India and its associated literature, through experiential and innovative approaches, including the integration of technology, in Grades 6-12, with the option to continue from the middle stage through the secondary stage and beyond. 4.20. In addition to high quality offerings in Indian languages and English, foreign languages, such as Korean, Japanese, Thai, French, German, Spanish, Portuguese, and Russian, will also be offered at the secondary level, for students to learn about the cultures of the world and to enrich their global knowledge and mobility according to their own interests and aspirations.

The teaching of all languages will be enhanced through innovative and experiential methods, including through gamification and apps, by weaving in the cultural aspects of the languages - such as films, theatre, storytelling, poetry, and music - and by drawing connections with various relevant subjects and with real-life experiences. Thus, the teaching of languages will also be based on experiential-learning pedagogy.

Indian Sign Language (ISL) will be standardized across the country and National and State curriculum materials developed, for use by students with hearing impairment. Local sign languages will be respected and taught as well, where possible and relevant.

Conclusion

The key overall thrust of curriculum and pedagogy reform across all stages will be to move the education system towards real understanding and towards learning how to learn - and away from the culture of rote learning as is largely present today.

The aim of education will not only be cognitive development, but also building character and creating holistic and well-rounded individuals equipped with the key 21st century skills. Ultimately, knowledge is a deep-seated treasure and education helps in its manifestation as the perfection which is already within an individual. All aspects of curriculum and pedagogy will be reoriented and revamped to attain these critical goals. Specific sets of skills and values across domains will be identified for integration and incorporation at each stage of learning, from pre-school to higher education. Curriculum frameworks and transaction mechanisms will be developed for ensuring that these skills and values are imbibed through engaging processes of teaching and learning. NCERT will identify these required skill sets and include mechanisms for their transaction in the National Curriculum Framework for early childhood and school education.

IMPACT OF NATIONAL EDUCATION POLICY (NEP2020) IN HIGHER EDUCATION INSTITUTIONS IN INDIA

Dr. D. Rajasekaran

Assistant Professor

*Department of Commerce – Banking and Insurance
Nallamuthu Gounder Mahalingam College*

Abstract

NEP is the first education policy of 21st century. During the COVID-19, the only positive that happened in the field of education in India was this policy which promises to transform the education system of India. As they say, change in the law of nature but this change was overdue for more than 35 years. The last time we saw a similar change in the field of education was back in the year 1986. For anything to survive in this dynamic world it is important to adapt to the changing scenario. Same goes for education, with changing information and communication technology (ICT), industrial requirement, there is need for change in the way we learn. And as the global scenario in education has been changing rapidly witnessing a paradigm shift in the overall system. It was important for India also to catch up with that change, an effort in this direction has been made through NEP 2020 to reform the education system in India. The study is purely qualitative in nature as it relies solely on secondary data sources. And the secondary data sources used are books, journals, research articles, websites, newspaper, and different government publications. An effort is made to study the provisions of the policy and how these will contribute towards improving the education at school level and in the higher education. The study will also look into the challenges in implementing those provisions in place of the existing system of education in India.

Keywords: NEP 2020, School Education, Information and Communication Technology (ICT), Higher Education, Reforms.

Introduction:

India being one of the largest countries in the World when it comes to population. Keeping in view this fact it becomes really important that the focus should be on better education and skill development which has to do with the human resource development. Education is a basic necessity which sets the base for so many things. It is a prerequisite for developing human potential, creating equality in society and promoting National Development. Many efforts were made in this direction from time to time with constitution of various committees and commission and incorporation their recommendations into the education system. After independence, India has come up with three policies at the National level. The first was national education policy in India in the year 1968 and the second in 1986 which was revised in the year 1992. The third being the recent one which came in the year 2020 (Pankaj Thakur). With such a large population it is

challenge for India to ensure education for all and make sure that dropout rate is at the lowest as it is not only about bringing a child to the school, retaining that child is also a bigger task. According to 4th goal of United Nations Sustainable Development Goals (SDGs), which aims to “ensure inclusive and equitable quality education and promote lifelong learning opportunities for all” by 2030. There is a belief that through this new national education policy 2020, India can achieve the goals established under the policy at least by 2040. The policy goals stress upon the fact that there should be equitable access to high-quality education to everyone individual irrespective of their social, economic background. Thus, a lot is expected out of NEP 2020 as it focuses more on skill, innovation, problem solving. NEP has diminished the walls of separation between the discipline and advocated the importance of interdisciplinarity and creativity. The policy expects a new set of regulations to make the education pedagogy more experimental, inquiry-driven, discovery-oriented learner centered, analysis-based, flexible, enjoyable, and futuristic so that the educated output can support countries economic growth, social justice and equality, scientific advancement, cultural preservation, and national integration (G.). The National Education Policy 2020 (NEP 2020), which was approved by the Union Cabinet of India on 29 July 2020, outlines the vision of India's new education system. The new policy replaces the previous National Policy on Education, 1986.

The policy is a comprehensive framework for elementary education, higher education as well as vocational studies in India. The policy aims at changing the education scenario in India. (B. Venkateshwarlu). The idea behind introduction of such policy is bridging the gap in the existing system of education and learning in India. And this gap can be bridged only if new reforms are incorporated into the system of education in India. This has been done through NEP 2020 where focus areas are innovation, skill, equity, quality in learning. India as a country is hoping that it will have a leading education system by the year 2040. Globalization and the market trends have already given a sense of adaptive changes which are required. Now it is not only about knowledge and education, the focus on skill, innovation, market demand is equally important when it comes to shaping up students for future roles. Therefore, there is a need to move towards the concept of less content, and more learning. The students should be taught to be active learners and their critical thinking ability should be developed. Education must build character, enable learners to be ethical, rational, compassionate, and caring, while at the same time prepare them for gainful, fulfilling employment. (National Education Policy 2020).

Objectives of the Study:

- To analyze the provisions of the policy for school and Higher education in India in terms of their contribution to the existing system of education.
- To study the challenges which will be there in the implementation of this policy.

- To provide suggestions that can contribute towards the better implementation of NEP 2020.

Some Targets in NEP:

- All the provisions of the policy will be implemented by 2040.
- 100% Gross Enrolment Ratio from Pre-School to Secondary level will be achieved by 2030.
- Teachers to be prepared for assessment reforms by 2030.
- There will be common standard for learning in private and government school
- Foundational numeracy and basic literacy to be achieved by Grade 3.
- Universalizing early childhood care and education by 2030.
- Vocational training for at least 50% learners by 2025 (B.Venkateshwarlu, A Critical Study Of NEP 2020: Issues, Approaches, Challenges, Opportunities and Criticism).

Challenges in Implementation of NEP 2020

National Education Policy (2020) is reformatory step toward changing the education system of India for the better. A lot of effort has been put in framing the policy, it is the result of in-depth research, deliberations and discussion that we have arrived at something as comprehensive as NEP. But, there exist few challenges in the successful implementation of these reforms which are as follows:

There is a lack of infrastructure and funding to incorporate such massive changes into the system. The national education policy 2020 focuses on making India a global destination for education by stressing upon quality and dynamism. The policy focuses on raising expenditure in the education sector to reach 6% of GDP at the earliest. But figures give a very contrasting picture. It is not for the first time that there are talks about increasing the investment in education. The economic survey 2019-20 says India spends only 3.1 % of its GDP on education sector even after continuous talks on spending patterns. So the first thing is to prioritize education as a top priority and channelize the investment towards this goal (Soni).

- From the policy documents it seems quite obvious that there will be more stress on privatization of education. In a country like India where affordability of education is still the biggest issue, privatization seems like a major hurdle in implementation of the policy. Although NEP does mention about the need of transparency in fee structure but there is no mention about how they will curtail the growing fees of private institutions and make them function in a manner where utilitarianism will be the focus not profit maximization.

- There is no mention in the NEP 2020 about how it will be ensured that the benefits of education reaches the marginalized section of society. The explicitness about the inclusion of every section of the society is missing in the policy document. The roadmap for any such action is missing.
- Ensuring the accountability of each stakeholder is a huge task. The comprehensiveness of the policy requires many stakeholders working together in a close knitted and well-coordinated relationship. The kind of change the implementation of this policy will bring to the system is massive in terms of impact and outreach. Thereby expecting cooperation and acceptability of each stakeholder is a tedious task in such a large setup.
- The policy document talks about top foreign colleges setting up their institutions in India. However, to what extent it will solve the problem for India is debatable as setting up institutions in India will cost them a hefty amount of money which they will be recovering from the fees and related charges which will ultimately increase the burden on the student making it difficult to enroll themselves in such institutions.
- NEP advocated that mother tongue will also be a medium of instruction till class 5 preferably till class 8 and beyond it wherever possible. But it has a negative side attached to it also as it will further intensify the gaps between students who know English or Hindi and who doesn't know these. Secondly, it will be difficult to standardize the reading material in absence of any script making it a tedious task. It will require large investments and positives coming out of this investment seems less likely and there are chances that it might create a bigger gap in the education system.
- NEP 2020 talks about experimentation in the pedagogy since the foundational year of study has brought about a Paradigm shift in the way of learning which is a welcome change. But this will require well-trained teachers to ensure that this experimentation, flexibly goes well with the students, only then the strategic advancements in the curriculum can be achieved for the betterment of students. So, the training of teachers to adapt to such flexible ways is a must which is lacking at the moment (Soni).
- Interdisciplinarity in higher education demands a paradigm shift, many have appreciated the step towards portioning inter-disciplinary learning. As it will create amongst learners a wide range of experience and perspectives about all the different things that exist around. But to bring such things into action is a task which requires drastic changes. Indian system of education has been compartmentalized for decades now and to adapt to this idea of multi-disciplinarity there will be a need for cultural and behavioral shift. The professors and the learners both should develop respect and curiosity to learn new things from multiple disciplines not keeping themselves in an air bubble. This will require 20-30 good years to create a positive atmosphere for such change (Viswanathan).

Conclusion:

NEP 2020 is a document that has been perceived with a lot of hope and optimism in bringing about a paradigm change in the overall education system of the country. Change is the law of nature and it is important to adapt with the changing environment. The old education system and practices are no longer holding any relevance in the modern times. For example, we have seen during the COVID-19 that how important it is to make ICT an active part of the teaching learning process, and how we as a country need to train our students and teachers to learn this skill to make the overall process of learning more enriching and satisfying. It has become meaningless to continue with an outdated education system. On the part of the Indian government, a lot of changes would be required to be brought to the curriculum of higher education absorbing the global demand for receiving skilled manpower.

Abstract

A nation is advanced in proportion to education and intelligence spread among the masses. There's no limit to learning and the multidisciplinary educational approach mentioned in the NEP 2020 is the correct step taken towards promoting the same. This study is made to bring out the opportunities in career development for higher education students towards the Multidisciplinary education in NEP 2020. To analyze this objective secondary data were taken from various Magazines, articles, Internet website, newspapers, social media. The study concludes with a point that the stand-alone institutions can join hands with the nearby institutions clustering to transform into a university. A student has also been given the flexibility to complete one degree at the host institution.

Keywords: Multidisciplinary, education, approach, NEP, Institutions.

Introduction

"The NEP spells a long-term vision with far-reaching impact. It will strengthen the culture of 'inclusion', 'innovation' and 'institution' in the sphere of education. Imparting education in the mother tongue has been given emphasis in order to help young minds grow spontaneously. This will strengthen Indian languages as well as the unity of the country. Youth empowerment is essential for building a strong nation. The National Education Policy is a right step in this direction.

- The National Education Policy 2020 (NEP 2020), which was approved by the Union Cabinet of India on 29 July 2020, outlines the vision of India's new education system. The new policy replaces the previous National Policy on Education, 1986. The policy is a comprehensive framework for elementary education to higher education as well as vocational training in both rural and urban India. The policy aims to transform India's education system by 2021. The language policy in NEP is a broad guideline and advisory in nature; and it is up to the states, institutions, and schools to decide on the implementation. The NEP 2020 enacts numerous changes in India's education policy. It aims to increase state expenditure on education from around 4% to 6% of the GDP as soon as possible.
- The National Policy on Education (NPE) is a policy formulated by the Government of India to promote education amongst India's people. The policy

covers elementary education to colleges in both rural and urban India. The first NPE was promulgated by the Government of India by Prime Minister Indira Gandhi in 1968, the second by Prime Minister Rajiv Gandhi in 1986, and the third by Prime Minister Narendra Modi in 2020.

- The National Education Policy (NEP) 2020 is an ambitious policy document aiming to revolutionize the education system in India. One of the key aspects of the policy is the emphasis on a multidisciplinary approach in education.

Multidisciplinary Education

Multidisciplinary education is a form of educational strategy that brings together multiple disciplines to create a holistic learning experience. It is designed to foster an understanding of the interconnectedness of various fields and how they can be integrated for better problem-solving. Multidisciplinary education, if implemented in schools and colleges, allows students to gain a deeper understanding of the subject matter through the lens of different disciplines. This approach encourages creative thinking, critical analysis, collaboration, and communication skills. The NEP 2020 emphasizes the need to incorporate this educational approach into the curriculum from an early age. By giving students exposure to multiple disciplines, we can help them understand their chosen field better and also develop an appreciation for diverse knowledge systems. This will enable them to become more well-rounded citizens and prepare them for the future. It is an approach to learning that takes into account different disciplines, subjects, and perspectives. It encourages students to broaden their learning beyond traditional boundaries, explore multiple perspectives, and cultivate new skills. This type of learning allows students to develop a more comprehensive understanding of any given topic and to integrate knowledge from different fields better. By providing a wider range of learning opportunities, we can provide students with greater flexibility and choice in their studies. For example, a student studying history can choose to pursue a minor in economics or political science, or a student studying math can choose to focus on coding or data analysis. This approach can help them gain new skills and knowledge that they may not have encountered otherwise. In addition, a multidisciplinary approach in education enables students to explore topics from different angles, allowing them to form their own opinions and views. The NEP 2020 aims to make multidisciplinary education the norm across all levels of education in India. By making it part of the mainstream curriculum, this approach to learning will be accessible to more students and can help create a new generation of thinkers and innovators.

Multidisciplinary and Nep

The New Educational Policy 2020 insists on a Multidisciplinary approach in Higher Education to broaden the scope of Higher Education through diversified fields of study and ensure flexibility and autonomy to the learner in the selection of the field of study. For instance, to have a clear understanding of the Mullaperiyar issue between the states of Kerala and Tamil Nadu one must analyze it in various perspectives historical, political, sociological, technological, and geographical to have a complete understanding of the situation. Another instance is if we need to study a river, we could approach it with a geographical perspective regarding its origin and various minerals deposited in its bank; we can learn about it with a historical perspective by studying the various civilizations that flourished on its bank. We can learn it from a biological perspective considering aquatic life and its possibilities. We can approach it through literature by citing the poems and plays where this river is a character. Hence, multidisciplinary approaches broaden the thought process of the scholars and bring clarity to all issues and events.

- However, multiple disciplinary approaches can be implemented at an institutional level in many ways providing open courses from varied disciplines under institutions CBCS system, providing vocational programs in various fields of study, offering courses of a program can by faculty from various disciplines, including multidisciplinary courses as electives, promoting students to select electives provided by other departments, teaching a subject in multidisciplinary perspectives, and fostering community engagement in various activities, to name a few.

- The close association between the various disciplines in a multidisciplinary scenario will lead to the integration of information, perspectives, and concepts from two or more disciplines of specialized knowledge for an advanced understanding of a scenario or solve problems whose solutions are beyond the

scope of a single discipline. Hence this type of association will lead to an interdisciplinary approach to education.

- The common problem in the Indian context is accessibility, Most of the schools strive to provide quality education by adopting holistic approach where children are prompted to opt a basket of choice, the choice of subjects to study across arts, humanities, science and other vocal subjects. This flexibility in choice of subjects has given exposure to classical languages of India, English or regional language as an optional subject. The conscious inclusion of mother tongue in early grades using bilingual format which assists in acquisition of regional language. There are scores of child centred activities which promote the desired objectives to create interest to learn and incorporate the core values from the usage of mother tongue. Songs to teach community values, norms and customs accompanied by dance forms in mother tongue, proverbs to impart indigenous knowledge to promote cultural, moral and social values. The values wrapped in sayings easily sink into the minds of children in mother tongue.

Multidisciplinary Studies / Course:

In addition to the general education requirements, many multidisciplinary studies programs offer concentrations in a specific area of study. Concentrations allow a student to Focus on a particular topic or career option while still retaining the diverse education of a multidisciplinary curriculum. A multidisciplinary program with a variety of subjects influence their primary interest. Some concentrations for multidisciplinary major s include: 1) Human resource management 2) Criminal justice 3) Health systems management4) Accounting 5) Business administration and management6) Computer science. The lack of a multidisciplinary approach to teaching was one of the most significant obstacles that modern higher education in India faced. After matriculation, the student was asked to choose a subject or stream, which was typically not her first choice and which she could rarely change later. For a long time, the Indian System of Education deserved to be renovated on several fronts. The National Education Policy (NEP-2020) has identified these serious difficulties that require immediate action, and a window has been opened to address issues through multidisciplinary, interdisciplinary, and transdisciplinary educational approaches.

NEP-2020 has proposed inter-disciplinary education as a holistic approach across all sciences in order to ensure knowledge harmony and integrity. Education is of paramount importance in human life since it has the ability to improve the world. The National Education Policy 2020 is a comprehensive policy with the intention of improving education by making it more accessible, holistic, multidisciplinary, and fruitful. Multidisciplinary education is undeniably important in the post-modern world of the twenty-first century. The new NEP 2020 places great emphasis on integrated and Transdisciplinary education. The Union Cabinet of

India approved the National Education Policy (NEP) on July 28th, 2020. Over the course of more than 50 months of consultations and workshops, the Indian government collected feedback from 2.5 lakh village-level stakeholders to two national legislative level committees, after a 34-year break. The extent to which the policy has taken into account recommendations, however, is unknown. Liberal (“holistic and interdisciplinary”) education, which sensitizes pupils to the essentially linked nature of all human knowledge and inquiry, is a crucial pillar of the National Education Policy (NEP 2020).

- Students can acquire sciences, technology, mathematics, liberal arts, humanities, languages, social sciences, professional skills, vocational skills, ethics, morals, and human values all at the same time through multidisciplinary and holistic learning. It aspires for general development, which means that students now have access to infrastructure, skilled teachers, and other facilities at higher education institutes and newly introduced MERUs, allowing them to gain knowledge or competence in a variety of subjects (Multi-disciplinary Education and Research Universities).
- Multi-disciplinary and integrated knowledge is an ancient strategy utilized in Indian and other areas of the world education systems. This is why philosophers such as Kantilla, Banabhatta, Plato, and Aristotle, among others, argued for such a

system of instruction. Evidence of such an education system can be found in ancient Indian literature and customs. It can be observed in the Indian Gurukul system, where students were required to master Science, Mathematics, and Geometry, as well as vocational skills, specialized qualifications, communication skills, ethics, decency, and human values, among other subjects.

Conclusion

Higher education institutions can take different routes for adopting multidisciplinary nature. The stand-alone institutions can join hands with the nearby institutions clustering to transform into a university. A student has also been given the flexibility to complete one degree at the host institution. Simultaneously, students can earn a second degree at the partnering institution without going through the new admission process if the two institutions have collaborated. This process will regain the status of higher education at the international level, which is poor due to the single-stream nature. On the one side, this is a step towards discouraging dropout & virtual exclusion and, on the other, grabbing the opportunities to experiment with students' aptitude at different levels that will help them be successful in their career life. To conclude, multidisciplinary education aims to develop hybrid thinking that is imperative in solving many of today's complex problems and all HEIs of the country should step up to start multidisciplinary education.

Abstract

The New Education Policy was approved by the Indian Union Cabinet on July 29, 2020, replacing the previous policy. The Access, Equity, Quality, Affordability, and Accountability aspects form the basis of the NEP 2020. This paper aims to understand the features of the New Education Policy 2020. This is a descriptive study. The necessary secondary data was gathered from various websites, journals, and other publications. This study concluded that the previous educational system has flaws, including rote learning, a lack of practical knowledge, a heavy emphasis on exams and tests and study material that isn't applicable to real-world situations. These flaws were addressed by the introduction of the new educational system. This can be the cause of "Unemployed educated youth." As a result, the Indian government announced a new policy that makes several changes to the existing framework. The country and the lives of young people will drastically change if these policies are put into practice and the goals are met.

Keywords: NEP, Education structure, Curriculum, Digital Learning

Introduction to New Education Policy

The New Education Policy (NEP) has taken the place of the National Education Policy (NEP), which was established in 1986 and was in force for 34 years. The National Education Policy (NEP), which was first created in 1986, was later modified in 1992 and 1998. The government finally introduced the National Education Policy 2020 after 34 years. A committee was established to create a new education policy, and in 2019, the National Education Policy was written under the direction of Dr. K.K. Kasturirangan. In July 2020, the Central Government approved the National Education Policy 2020.

The NEP 2020 aims to raise the standard of education in India to a global level, enabling the nation to emerge as a leader in knowledge-based industries. It also focuses on the holistic development of students and the inclusion of all types of students regardless of their caste, creed, and religion. It opens the door for fundamental changes to the nation's higher education and educational systems. It is accomplished through implementing the National Education Policy's recommendation to make education universal. It is achieved through the universalization of education outlined in the National Education Policy By incorporating creativity, learning, experiments, visualisation, and art into the

educational space, it drastically transforms the lives of many high school and college students. NEP 2020 kept on changing with the changing period of time.

Objective of the Paper

To understand the features of the new education policy 2020.

Education Structure

With the implementation of NEP 2020 (New Education Policy 2020), the current 10+2 school system will be replaced by a new 5+3+3+4 school system. Additionally, the age range for the Right to Education (RTE) is now 3 to 18 years (formerly 14 years). Access, affordability, equity, quality, accountability, and universalization of Early Childhood Care Education (ECCE) are other themes that are highlighted in the New Education Policy 2020 (NEP 2020). It is based on the cognitive-developmental stages of the children

Once implemented, the NEP states that every child from ages 3 to 18 will have access to education, through either public or private schooling options. By offering options for entry and exit into the educational system, more than 3.22 billion out-of-school children will be enrolled in the formal education system. There will be fewer dropouts among students from socioeconomically disadvantaged groups. A decrease in dropout rates will be achieved because to the more options available to students from Socially and Economically Disadvantaged Groups (SEDGs), such as the establishment of Special Education Zones, the Gender Inclusion Fund, and improved access to open and distance learning (ODL) options.

Vocational Education

The NEP states every child will acquire at least one vocational skill in middle and secondary school. Thus, vocational education will now be integrated across the value chain. In addition, while determining the GER targets, the number of students enrolled in vocational education will also be taken into account. By 2025, it would be hoped that 50% of students in higher education and in schools will have had exposure to occupational skills.

Reduction in Curriculum

Curriculum content will be reduced in each subject to its core essentials, to make space for critical thinking and more holistic, inquiry-based, discovery-based, discussion-based, and analysis based learning. The mandated content will focus on key concepts, ideas, applications, and problem solving. Teaching and learning will be conducted in a more interactive manner; questions will be encouraged, and classroom sessions will regularly contain more fun, creative, collaborative, and exploratory activities for students for deeper and more experiential learning.

Reduction in Curriculum

Regional Language as a Means of Instructions

Incorporating the mother tongue into the New Educational System is a really polite gesture. The educational system hopes to achieve this idea by promoting not only the mother tongue but also the many regional languages. Concepts can now be taught to students up through fifth grade in a variety of languages. Students can also learn about the value and origins of their mother tongue.

Experiential Learning

The new educational guidelines would encourage "discovery-based, discussion-based, and analysis-based learning" as well as learning that involves critical thought. In addition to visiting local artisans and having "bagless days," Class 6 students may also be able to enrol in vocational training. The NEP 2020 initiative, which uses competency-based learning, has given students, especially in secondary school, more flexibility and a wider range of topic options. According to their preferences, students will be able to select occupational skills, physical education, and arts and crafts.

Enhanced Digital Infrastructure

The NEP focuses on expanding and improving an already-existing national-level collection of online learning materials as well as open e-learning platforms like DIKSHA and SWAYAM. The article discusses how the improvement of online assessment and examination systems would open up a number of brand-new possibilities, including the creation of digital question banks. To increase socially and economically disadvantaged groups' access to digital learning, creative "Virtual Labs" will be used.

Foreign University Campus will be set up in India

India has one of the largest networks of higher education systems in the world, with nearly 990 universities and 40,000 colleges, but its Gross Enrolment Ratio (GER) in higher education is only 26.3%, which is significantly lower than that of other BRICS nations like China (51%) and Brazil (50%), as well as significantly lower than that of European and North American countries (80% or more). India's gross domestic product (GER) has to increase dramatically, driven by intellectual resources, for sustainable long-term economic growth. In reality, the NEP has a lofty goal of achieving 50% GER by 2030. Indian universities that are affiliated with foreign universities can only help the process.

Changes in Teachers Recruitment

- **Emphasis on Holistic Development:** The NEP 2020 places a strong emphasis on the value of holistic development as well as the contribution that instructors make to fostering students' entire development. Finding intelligent candidates with abilities like communication, critical thinking, creativity, and emotional intelligence will therefore be a priority in the hiring process for instructors.
- **National Professional Standards for Teachers (NPST):** The NPST was introduced as part of the NEP 2020, and it establishes the minimum requirements for educators nationwide. At several educational levels, the NPST outlines the roles, duties, and skills of teachers. When choosing teachers for the recruitment process, these standards will be taken into account.
- **Greater use of Technology:** The NEP 2020 supports utilising technology to streamline and make transparent the hiring process. This might entail using job posting sites to post job openings and accept applications as well as utilising technology to evaluate applicants' abilities and competencies.
- **Changes to Teacher Training:** The NEP 2020 also suggests considerable modifications to the preparation and training of teachers for the classroom. This can entail the introduction of more demanding and pertinent teacher preparation courses as well as chances for continued professional growth.
- **Greater Accountability and Evaluation:** The NEP 2020 places a strong emphasis on the value of teacher accountability and performance reviews. Examining candidates' skills, aptitudes, and capacity to satisfy the needs of students may receive more attention during the hiring process.

Conclusion

The flaws in the education system vary from generation to generation and person to person. The previous educational system has flaws, including rote learning and a lack of practical knowledge, a heavy emphasis on exams and tests, and a heavy emphasis on study material that isn't applicable to real-world situations. These flaws were addressed by the introduction of the new educational system. This can be the cause of "Educated youth with unemployment." As a result, the Indian government announced a new policy that makes several changes to the existing framework. The country and the lives of young people will drastically change if these policies are put into practise and the goals are met.

Abstract

The National Education Policy (NEP) 2020 is a comprehensive reformulation of India's education policy that aims to transform the country's education system to meet the needs of the 21st century. The policy is based on the principles of accessibility, equity, quality, affordability, and accountability, and it seeks to provide a holistic and multidisciplinary education to all students. The salient features of the NEP include emphasis on early childhood care and education, the introduction of curricular structure, the promotion of multilingualism, the incorporation of vocational education, and the establishment of a National Educational Technology Forum. The need for adequate funding, the development of a robust monitoring and evaluation mechanism, and the involvement of all stakeholders in the implementation process. Overall, the NEP 2020 presents a unique opportunity for India to transform its education system and to prepare its students for the challenges and opportunities of the future.

Introduction

"Education imparted by heart can bring revolution in the society"

Education is fundamental for achieving full human potential, developing an equitable and just society, and promoting national development. Providing universal access to quality education is the key to India's continued ascent, and leadership on the global stage in terms of economic growth, social justice and equality, scientific advancement, national integration, and cultural preservation. One major change brought about by the policy is the shift from the traditional 10+2 education structure to a more flexible and comprehensive 5+3+3+4 system. The aim behind this new system is to prioritize essential skills, critical thinking, and life skills in education for students at all levels. The New Education Policy brings a strong focus on developing 21st-century skills like creativity, critical thinking, and problem-solving. It also suggests the creation of innovative institutions like digital universities and the use of technology to enhance student learning.

Highlights of New Education Policy

- The new policy aims for universalisation of education from pre-school to secondary level with 100 per cent Gross Enrolment Ratio (GER) in school education by 2030 and aims to raise GER in higher education to 50 per cent by 2025.

- NEP 2020 will bring two crore out of school children back into the main stream.
- The 10+2 structure of school curricula is to be replaced by a 5+3+3+4 curricular structure corresponding to ages 3-8, 8-11, 11-14, and 14-18 years respectively. It will include 12 years of schooling and three years of Anganwadi and pre-schooling.
- A National Book Promotion Policy is to be formulated.
- Every state/district will be encouraged to establish 'Bal Bhavans' as a special daytime boarding school, to participate in art-related, career-related, and play-related activities.
- NEP 2020 aims to increase the Gross Enrolment Ratio in higher education including vocational education from 26.3 per cent in 2018 to 50 per cent by 2035 and aims to add 3.5 crore new seats to higher education institutions.
- The policy envisages broad-based, multi-disciplinary, holistic Under Graduate education with flexible curricula, creative combinations of subjects, integration of vocational education and multiple entry and exit points with appropriate certification.
- Higher Education Commission of India (HECI) will be set up as a single overarching umbrella body for entire higher education, excluding medical and legal education.
- Measures such as online courses and digital repositories, funding for research, improved student services, credit-based recognition of MOOCs, etc., will be taken to ensure distance learning is at par with the highest quality in-class programmes.
- Public and private higher education institutions will be governed by the same set of norms for regulation, accreditation and academic standards.
- Policy aims to achieve 100% youth and adult literacy.

Need of New Education Policy 2020

- New education policy is focused on foundational literacy and numeric by 2025. School students will only going to attend the exams in class 2nd, 5th and 8th instead of every academic year.
- Board examinations will continue for 10th and 12th classes. But it will re-designed. The examination will held twice a year and have two parts one is objective and other one is descriptive.
- The meaning of the policies to reduce the curriculum law of the students and allow them to be more interdisciplinary and multi lingual. In 6th class coding will introduced to the students and experimental learning will be adopted.

- Mid day meal scheme will extend to include breakfast. More focus will be given to the health of the student through the deployment of counsellors and social workers.

Benefits of New Education Policy 2020

Some of the important benefits of the New Education Policy 2020 are as follows:

- The New Education Policy will give importance to students' practical knowledge instead of just pushing them towards rote learning. It will help students to develop scientific temper from a young age.
- The NEP aims to make it easier to set up new quality of higher educational institutes which will be at par with the global standards.
- Since NEP will make it easier for foreign colleges to set up their campuses here many students who are unable to go abroad due to multiple reasons will be able to experience it and get global exposure. This will promote value-based education.
- The government will establish a new organisation that will work across the country to offer more resources for digital education.
- There will be technology integration to improve the many operations in the classroom.

Impulse of New Education policy 2020

- **Holistic Development**

Focusing on the over all development of students, including cognitive, social, emotional, and physical aspects.

- **Flexible Curriculum**

Encouraging a multidisciplinary and flexible approach to education, allowing students to choose subjects based on their interests and aptitudes.

- **Quality Education**

Enhancing the quality of education through improved curriculum, teaching methods, and assessment techniques.

- **Equitable Access**

Ensuring equal access to education for all, regardless of socioeconomic background or

- **Technology Integration**

Integrating technology into education to facilitate personalized and adaptive learning experiences.

- **Vocational Education**

Promoting vocational education and skill development to prepare students for various careers.

- **Research And Innovation**

Encouraging research and innovation in education, curriculum design, and pedagogical methods.

Principles of New Education Policy 2020

- Recognizing, Identifying, and strengthening the unique capabilities of each student.
- Promoting each student's holistic development in both academic and non-academic spheres.
- Flexibility for learners to choose their learning trajectories and programs, and thereby choose their paths as per their talents and interests.
- No hard separations between arts and sciences, curricular and extra-curricular activities, vocational and academic streams, among others to eliminate harmful hierarchies and silos in areas of learning.
- Multi-disciplinary and a holistic education across the sciences, social sciences, arts, humanities, and sports to ensure the unity and integrity of all knowledge.
- Promotion of Multilingualism and the Power of Language in learning and teaching. Life Skills such as communication, teamwork, cooperation, and resilience.
- Encouraging innovation and out-of-the-box ideas through Autonomy, Good Governance and Empowerment.

Innovation of New Education Policy 2020

- **Coding and Computational Thinking:**
The policy proposes the integration of coding and computational thinking in the curriculum to enhance problem-solving skills and digital literacy.
- **Holistic Report Cards:**
NEP 2020 suggests shifting from traditional marks-based assessment to holistic report cards that evaluate students' progress in various domains, including life skills, critical thinking, and values.
- **Early Childhood Education:**
NEP 2020 recognizes the importance of early childhood care and education, promoting play-based and activity-based learning in the early years.
- **Technology Integration:**
The policy emphasizes the use of technology for interactive and personalized learning experiences, including digital content, online assessments, and virtual labs.

- **Global Exposure:**

The policy encourages exposure to international perspectives, foreign languages, and exchange programs to make students globally competent.

Conclusion

NEPs in India have evolved over time to address the changing needs of the country's education system. While the previous policies focused on increasing access and improving quality, the NEP 2020 seeks to transform the education system by incorporating multidisciplinary learning and critical thinking, among other features. It is essential to ensure adequate investments, infrastructure, and training to achieve the vision of the NEP 2020. The study suggests that while the new structure has the potential to bring about significant changes in the education system, there is a need for adequate resources and infrastructure teacher training and developmental and effective evaluate and assessment mechanisms.

IMPACT OF NEW EDUCATION POLICY 2020 ON HIGHER EDUCATION

Dr. T. Kiruthika

Assistant Professor

Department of Commerce (E-Commerce)

NGM College

Pollachi

Abstract

Well defined and futuristic education policy is essential for a country at school and college levels due to the reason that education leads to economic and social progress. Different countries adopt different education systems by considering the tradition and culture and adopt different stages during their life cycle at school and college education levels to make it effective. The New Education Policy announced by Government of India (NEP 2020) was a welcoming change and fresh news amidst all the negativities surrounding the world due to the challenges posed by Covid19 pandemic. The announcement of NEP 2020 was purely unexpected by many. The changes that NEP 2020 has recommended were something that many educationists never saw coming. Though the education policy has impacted school and college education equally, this article mainly focuses on NEP 2020 and its impact on Higher Education. This paper also outlines the salient features of NEP and analyses how they affect the existing education system.

Keywords: *New Education Policy, Higher Education, Covid-19*

Introduction

The National Education Policy 2020 is a welcome and ambitious re-imagination of India's education system into a modern, progressive and equitable one. Successful execution of this policy calls for dramatic simplification of decision-making structures and re-prioritization of budgetary resources in months and years to come. Given that there are around 350 million Indians today in school-going or college-going age groups, the NEP calls for a large-scale implementation of a magnitude never before attempted anywhere in the world. This presents substantial execution challenges, both quantitative and qualitative.

Objectives of the Study

The primary objective of this research is to study the impact of New Education Policy 2020 on higher education. The study also outlines the salient features of NEP and analyses how they affect the existing education system.

Research Methodology

This research is a descriptive study. The necessary secondary data was collected from various websites including those of Government of India, magazines, journals, other publications, etc.

Salient Features of Nep Related to Higher Education

The new NEP has been introduced with an aim to formalize changes in the system from school level to college/university level. The National Education Policy is expected to bring positive and long-lasting impact on the higher education system of the country. The fact that foreign universities will be allowed to open campuses in India is a commendable initiative by the government. This will help the students experience the global quality of education in their very own country. The policy of introducing multi-disciplinary institutes will lead to a renewed focus on every field such as arts, humanities and this form of education will help students to learn and grow holistically. Thus, students will be equipped with stronger knowledge base.

The four structures will be established as four independent verticals within a single umbrella institution, India's Higher Education Commission (HECI). There are a lot of reforms and new developments which have been introduced by NEP in the higher education sector. Some of the salient features are:

- **Single Regulatory Body for Higher Education:** The NEP aims to establish Higher Education Commission of India which will be the single regulatory body except for legal and medical education.
- **Multiple Entry and Exit Programme:** There will be multiple entry and exit options for those who wish to leave the course in the middle. Their credits will be transferred through Academic Bank of Credits.
- **Tech- Based Option for Adult Learning Through Apps, Tv Channels:** Quality technology-based options for adult learning such as apps, online courses/modules, satellite-based TV channels, online books, and ICT-equipped libraries and Adult Education Centres, etc. will be developed.
- **E-courses to be Available in Regional Languages:** Technology will be part of education planning, teaching, learning, assessment, teacher, school, and student training. The e-content to be available in regional languages, starting with 8 major languages – Kannada, Odia, Bengali among others to join the e-courses available in Hindi and English.
- **Foreign Universities to Set-up Campuses in India:** World's top 100 foreign universities will be facilitated to operate in India through a new law. According to the HRD Ministry document, "such (foreign) universities will be given special dispensation regarding regulatory, governance, and content norms on par with other autonomous institutions of India."
- **Common Entrance Exam for All Colleges:** The common Entrance exam for all higher education institutes to be held by National Testing Agency (NTA). The exam will be optional.
- A Higher Education Council of India (HECI) will be set up to regulate higher education.

The Council's Goal will be to Increase Gross Enrollment Ratio. The HECI will Have 4 Verticals:

- National Higher Education Regulatory Council (NHERC), to regulate higher education, including teacher education, while excluding medical and legal education.
- National Accreditation Council (NAC), a "meta-accrediting body".
- Higher Education Grants Council (HEGC), for funding and financing of universities and colleges. This will replace the existing National Council for Teacher Education, All India Council for Technical Education and the University Grants Commission.
- General Education Council (GEC), to frame "graduate attributes", namely the learning outcomes expected. It will also be responsible in framing a National Higher Education Qualification Framework (NHEQF). The National Council for Teacher Education will come under the GEC, as a professional standard setting body (PSSB).

Detailed Analysis of Impact of NEP on Higher Education**Regulatory System of Higher Education:**

A significant change in NEP 2020 is the proposal to set up the Higher Education Commission of India (HECI), as an umbrella body for higher education, excluding medical and legal education. This will usually bring out a question that what will happen to the present UGC and AICTE? HECI is aiming at reforming the higher education sector; the Bill will separate the Academic and Funding aspects of the sector. According to the new Bill, HECI will not have any financial powers. The funding processes which were handled by the University Grants Commission (UGC) will be taken care by the Ministry of Education, previously known as the Ministry of Human Resource Development (MHRD). This change however is expected to clear the regulatory mess in India's Higher Education system. HECI is expected to have four independent verticals - National Higher Education Regulatory Council (NHERC) for regulation, General Education Council (GEC) for standard-setting, Higher Education Grants Council (HEGC) for funding, and National Accreditation Council (NAC) for accreditation. To have uniformity in education standards, a single umbrella body was always a requirement and this has been a vision of numerous educationists.

Graded Accreditation and Graded Autonomy:

The concept of "empowerment and autonomy to innovate" is one of the key features in NEP 2020 which supports a "phasing out" strategy from Affiliated Colleges to Autonomous Institutions. The increased flexibility offered to autonomous institutions also gives hope in curriculum enrichment. It also says that with appropriate accreditations, Autonomous degreegranting Colleges could evolve

into Research-intensive or Teaching-intensive Universities, if they so aspire. The announcement of setting up Multidisciplinary Education and Research Universities (MERUs) in the country gives more hope. These institutions will be at par with the existing IITs and IIMs and will aim to showcase multidisciplinary education for the Indian students. Another important change the NEP 2020 suggests that the National Testing Agency will serve as a premier, expert, autonomous testing organization to conduct entrance examinations for undergraduate and graduate admissions and fellowships in Higher Education Institutions. The high quality, range, and flexibility of the NTA testing services will enable most universities to use these common entrance exams - rather than having hundreds of universities each devising their own entrance exams - thereby drastically reducing the burden on students, universities and colleges, and the entire education system. It will be left up to individual universities and colleges to use NTA assessments for their admissions. It also surely helps the students to easily transfer their degrees and credits to universities abroad.

Internationalisation at Home:

NEP 2020 also allows foreign universities and colleges to come to India and this brings out a challenge for the native institutions to improve the quality of education provided by them. The Indian higher education sector is buzzing all around as the opportunity of paving the way for foreign universities to set up campuses in the country. India has one of the largest networks of higher education systems in the world, with more than 900 universities and 40,000 colleges. But GER (Gross Enrolment Ratio) of India in higher education is 26.3%, which is significantly low when compared to other BRICS countries like Brazil (50%) or China (51%), and very much lower when compared with European and North American nations which would be more than 80%. India must achieve a significant growth in the area of global higher education for obtaining a sustainable economic growth, which should not be driven by natural resources, but by knowledge resources. As per the reports, India will need another more than 1,500 new higher education institutions by 2030 to accommodate a huge inflow of students, that's why the Indian government wants to promote FDIs (Foreign Direct Investment) and open up the ECB (External Commercial Borrowing) route to strengthen the capital investment for the education sector.

More Holistic and Multidisciplinary Education:

The NEP 2020 claims that, a holistic and multidisciplinary education would aim to develop all capacities of human beings -intellectual, aesthetic, social, physical, emotional, and moral in an integrated manner. Such an education will help develop well-rounded individuals that possess critical 21st century capacities in fields across

the arts, humanities, languages, sciences, social sciences, and professional, technical, and vocational fields; an ethic of social engagement; soft skills, such as communication, discussion and debate; and rigorous specialization in a chosen field or fields. The NEP 2020 envisions one large multidisciplinary Higher Education Institution (HEI) in or near every district, by 2030. Towards the attainment of such a holistic and multidisciplinary education, the flexible and innovative curricula of all HEIs shall include credit-based courses and projects in the areas of community engagement and service, environmental education, and value-based education.

Environment education will include areas such as climate change, pollution, waste management, sanitation, conservation of biological diversity, management of biological resources and biodiversity, forest and wildlife conservation, and sustainable development and living. Value-based education will include the development of humanistic, ethical, Constitutional, and universal human values of truth (satya), righteous conduct (dharma), peace (shanti), love (prem), nonviolence (ahimsa), scientific temper, citizenship values, and also lifeskills; lessons in seva/service and participation in community service programmes will be considered an integral part of a holistic education. As the world is becoming increasingly interconnected, Global Citizenship Education (GCED), a response to contemporary global challenges, will be provided to empower learners to become aware of and understand global issues and to become active promoters of more peaceful, tolerant, inclusive, secure, and sustainable societies.

The Structure and Lengths of Degree Programmes:

In the context of the National Education Policy 2020 scheme, any undergraduate degree in any institution will be of duration of three or four years. One can leave the degree within this period. Any educational institution will have to give to the student a diploma degree after the student completes two years of study, a degree after the student completes three years of study and a certificate to those students who complete one year of study in any professional or vocational course of their choice. The Government of India will also help in establishing an Academic Bank of Credit for storing the academic scores digitally. This will enable the institutions to count the credit at the end and put it in the degree of the student. This will be helpful for those individuals who might have to leave the course mid-way. They can start the course later on from where they left off and not start from the beginning once again. Even though NEP 2020 says that Higher education institutions will be given the freedom to start PG courses there may be some difficulty in designing One Year PG Degree for students who have completed 4 Year UG Degree and a Two Year PG Degree for students who have completed 3 Year UG Degree.

Conclusion

NEP 2020 is an advanced regime that will facilitate value-based education and scientific learning. It will replace the older system of 'curriculum' which is rigid and unamenable to change with changing time due to the unwieldy bureaucratic system to change it. The NEP 2020 lays emphasis on making the education system holistic, flexible and aligned to the needs of 21st-century education. However, in order to accomplish all these goals, we must overcome all the execution challenges in a sustained manner for years to come. The drafting committee of NEP 2020 has made a comprehensive attempt to design a policy that considers diverse viewpoints, global best practices in education, field experiences and stakeholders' feedback. The mission is aspirational but the implementation roadmap will decide if this will truly foster an all-inclusive education that makes learners industry and future ready.

Abstract

New Education Policy would transform the education sector in the country as it focuses on making education accessible, equitable and inclusive. The vision laid in the New Education Policy is to build the education system into high-spirited on acquiring key 21st century skill. New Education Policy has laid many favorable provisions to foster gender equity and to do away with gender stereotype which plays a crucial role in girls withdrawing from school. Women need to be empowered through education in order to equip her to face the challenges of the 21st century. If empowerment merely mean to provide access within existing gender differentiating system, it will remain only a travesty but empowerment should mean an all round development.

Keywords; *New Education Policy, Women, Government*

Introduction

The connection between a new education policy and women's empowerment lies in the potential for equal access to education to contribute significantly to empowering women. A progressive education policy can promote gender equality by ensuring that girls and women have the same educational opportunities as boys and men. This, in turn, can lead to increased economic and social empowerment for women, allowing them to participate more actively in various aspects of society and decision-making. It's important for education policies to address barriers that disproportionately affect women's access to education and create an inclusive learning environment for everyone. The impact of a new education policy on women can vary based on the policy's provisions. Generally, if the policy promotes gender equality, accessibility, and quality education, it could positively affect women's educational opportunities and empowerment. However, the actual impact would depend on how effectively the policy is implemented and if it addresses any existing gender disparities in education

The New Education Policy and Women Entrepreneurs

The New Education Policy in India aims to transform the education system by promoting holistic learning and skill development. This can benefit women

entrepreneurs by providing them with better access to quality education and training, enhancing their ability to innovate and succeed in business. The policy's emphasis on vocational training and multidisciplinary education can empower women to enter various sectors, including entrepreneurship. However, success will also depend on the implementation of supportive measures and gender-sensitive policies.

The New Education Policy and Women Education

The New Education Policy in India recognizes the importance of promoting gender equality and women's education. It strives to ensure equal access to education for all genders and emphasizes the inclusion of women in all aspects of education, from early childhood to higher education. By encouraging the removal of barriers that hinder women's participation and progress in education, the policy aims to empower women with knowledge and skills, enabling them to pursue diverse careers, including entrepreneurship. The policy's focus on flexibility, choice, and inclusive education can contribute to breaking down traditional gender roles and fostering a more equitable society.

New Education Policy and Women in Higher Education

The impact of a new education policy on women in higher education can vary based on the specific provisions and goals of the policy. However, potential examples of impact could include:

- **Increased Access:** If the new policy focuses on increasing access to education, it could result in more women having the opportunity to pursue higher education, especially in rural or underserved areas
- **Scholarships and Financial Support;** If the policy introduces scholarships or financial support specifically for women, it could alleviate financial barriers and encourage more women to enroll in higher education.
- **Gender-Neutral Curriculum;** A policy that promotes gender-neutral curriculum development could lead to a more inclusive and balanced education system that benefits both male and female students.
- **Safe and Inclusive Environment ;** If the policy addresses issues like safety on campuses and the prevention of gender-based violence, it could create a safer and more inclusive environment for women to pursue their education.
- **Faculty Representation;** The policy might encourage hiring more female faculty members, which could serve as role models and mentors for women students, fostering a supportive academic environment.
- **Career Guidance:** The introduction of career counseling and guidance services could help women explore diverse fields of study and professions, empowering

them to make informed choices about their higher education and career paths.

- **Research and Leadership Opportunities;** A policy that promotes women's participation in research and leadership roles within academic institutions could contribute to greater gender equality in higher education.
- **Flexible Learning Options;** If the policy supports flexible learning options such as online courses or part-time study, it could benefit women who might have family or work responsibilities.
- **Parental Support;** Policies that provide parental support facilities, like childcare services on campuses, can make it easier for women with children to pursue higher education
- **Addressing Stereotypes;** The policy might include measures to challenge stereotypes and biases that hinder women's participation in certain fields, encouraging them to pursue a wider range of disciplines.

The New Education Policy and Women in Services

The New Education Policy in India can have a positive impact on women's participation in the services sector. By promoting skill-based and vocational education, the policy can equip women with the necessary skills to excel in various service-oriented industries such as healthcare, hospitality, finance, and more. This can open up new opportunities for women to enter and thrive in traditionally male-dominated sectors, thereby contributing to greater gender equality in the workforce. The policy's emphasis on multidisciplinary learning and flexible pathways can empower women to pursue careers in services and other fields, fostering their economic independence and societal contribution.

Government Initiative for Women Empowerment

Education is instrumental in bolstering the spirit of women to carry out their continual fight against exploitation and withstand social evils. The phrase 'women empowerment', which has passed into the current coin of social discourse very rapidly and extensively, is virtually meaningless without education. The Indian nation is exasperated utterly to witness the appalling state of women education even after 75 years of Independence. The policy envisions equitable and inclusive education for all, with special focus on children and youth, especially girls, from socially and economically disadvantaged groups. The policy, which has come to the fore, recently, is expected to usher in a new era in women education.

The policy is a comprehensive framework for elementary education to higher education as well as vocational training in both rural and urban India. It is pointed out that the policy does not pronounce much on the gender issues, yet certain proposals made in the policy may be expected to bring about remarkable changes

into the bleak scenario. There are always new challenges ahead for intelligence NEP 2020 provides for setting up a Gender Inclusion Fund (GIF) to build the nation's capacity to provide equitable quality education for all girls as well as transgender students. The NEP states that the "Gender Inclusion Fund" will be available to states to implement priorities determined by the Central government critical for assisting female and transgender children in gaining access to education (such as the provisions of sanitation and toilets, bicycles, conditional cash transfers, etc.)

The policy further says, "This fund will also enable states to support and scale effective community-based interventions that address local context- specific barriers to female and transgender children's access to and participation in education". The fund will be used to provide quality education to all students and to ensure facilities, secured and hygienic toilets .Besides toilets, hostel facilities for girl students have been recommended by NEP. The fund will focus on ensuring 100% enrollment of girls in schooling and a record participation rate in higher education, decrease gender gaps at all levels, practice gender equity and inclusion in society, and improve the leadership capacity of girls through positive civil dialogues. The NEP 2020 recognizes that female and transgender individuals across all the groups included in Socio-Economically Disadvantaged Groups (SEDGs) are the worst-affected people.

There are plans to implement schemes of giving out bicycles to form cycling groups and creating walking groups to schools to include community participation and make safety nets for these vulnerable students. The policy proposes to locate specific social causes such as gender stereotyping and customs and beliefs that have perpetuated the unequal treatment meted out to girls, including their education. Another remarkable proposal made in the policy is to enhance the number of women on leading positions of the institution, including principals, teachers, wardens, physical instructors, and other staff. It will help the women in important positions to deal with the issues concerning women and create an ambience based on the principle of equality.

NEP 2020 aims at addressing the issue of gender inequity in recruitment of teachers in rural areas. To decrease the gender imbalance among teachers (especially in some rural areas), alternate pathways for female teacher recruitment will be introduced without compromising on merit and qualification, both educational and professional. The policy underlines the necessity for teachers and facilitators like Anganwadi workers to undergo proper training to counsel the families of girl students. Offering of proper counseling to the families is felt to be imperative for facilitating equal opportunities and space for girls in education as often education of boys is seen to be prioritized over that of girls in our society and as there is no dearth of lame excuses for not sending girls to schools.

The NEP 2020 will focus on the safety and security of school-going girls both inside and outside the campus. The schools have to ensure an environment without harassment, discrimination, and domination against women to go for regular accreditation by the statutory bodies. The policy will identify social mores and gender stereotypes preventing girls from accessing education and causing regular dropouts. The teachers, Anganwadi workers, and local social entrepreneurs will be trained to deliver proper counseling to girl children's families. All educational institutions will be mandated to conduct awareness programmes on gender issues to break stereotyped gender roles, on the importance of harassment-free environments and equal treatment of genders, and on legal protections and entitlements for girls and women including the Prohibition of Child Marriage Act, Protection of Children from Sexual Offences Act (POCSO), the Maternity Benefit Act, and the Sexual Harassment of Women at Workplace Act.

Empowerment of Women Through Skilling, Education and Micro Finance

The Government of India has taken various steps to ensure empowerment of women through their social, educational, economic and political uplifting through various schematic interventions. While the schemes implemented by the Government like Beti Bachao Beti Padhao (BBBP), Pradhan Mantri Awas Yojana (Urban & Rural), the National Social Assistance Programme (NSAP), Pradhan Mantri Vay Vandana Yojana (PMVVY) and Scheme for Adolescent Girls (SAG) support women and girls to be socially secure, the initiatives like Samagra Shiksha, Scheme of National Overseas Scholarship, Babu Jagjivan Ram Chhatrawas Yojna, Swachh Vidyalaya Mission, etc. ensure that schools are girl-friendly especially for vulnerable sections of society and have adequate facilities in place to fulfill their special requirements.

In order to enhance the employability of female workers, the Government is providing training to them through a network of Women Industrial Training Institutes, National Vocational Training Institutes and Regional Vocational Training Institutes. To ensure economic independence of women through skill development and vocational training, the Government has also introduced Skill India Mission. The National Skill Development Policy focuses on inclusive skill development, with the objective of increased women participation for better economic productivity. Pradhan Mantri Kaushal Vikas Kendras lay emphasis on creating additional infrastructure both for training and apprenticeship for women; flexible training delivery mechanisms, flexible afternoon batches on local need-based training to accommodate women; and ensuring safe and gender sensitive training environment, employment of women trainers, equity in remuneration, and complaint redressal mechanism. There are schemes like Pradhan Mantri Mudra Yojana and Stand Up

India, Prime Minister's Employment Generation Programme (PMEGP), for helping the women to set up their own enterprise. Under the Swachh Vidyalaya Mission, it was ensured that all schools have at least one functional toilet for girls. Pradhan Mantri Ujjwala Yojna (PMUY) aims to safeguard the health of women by providing them with clean cooking fuel and also from drudgery of collecting firewood.

Though, "Police and Public Order" are State subjects under the Seventh Schedule to the Constitution of India and responsibility to maintain law and order, protection of life and property of the citizens including investigation and prosecution of crime against women and children rests primarily with the respective State Governments, the Central Government gives high priority to ensuring safety and security of women and has undertaken various legislative and schematic interventions in this regard. These include legislations such as "The Criminal Law (Amendment) Act, 2018", "The Criminal Law (Amendment) Act, 2013", "The Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013", "The Protection of Women from Domestic Violence Act, 2006", "The Dowry Prohibition Act, 1961", etc.

The schemes/ projects include One Stop Centres (OSCs), Universalisation of Women Helplines (WHL), Mahila Police Volunteers (MPV), Emergency Response Support System (ERSS) which is a pan-India single number (112)/ mobile app based system for emergencies, a cyber-crime reporting portal to report obscene content and assistance to States/ UTs for strengthening cyber forensic capabilities, safe city projects in 8 cities (Ahmedabad, Bengaluru, Chennai, Delhi, Hyderabad, Kolkata, Lucknow and Mumbai), training and skill development programs for Investigation Officers (IOs), Prosecution Officers (POs) and Medical Officers (MOs), distribution of Sexual Assault Evidence Collection (SAEC) Kits to States/ UTs, establishment of state of the art DNA laboratory at CFSL, Chandigarh, assistance to 24 States/ UTs to strengthen Forensic Science Laboratories, assistance to States/ UTs for their respective victim compensation schemes under Central Victim Compensation Fund (CVCF), setting up of Fast Track Special Courts (FTSCs) for speedy disposal of cases of rape and cases under POCSO Act, setting up/ strengthening of Anti Human Trafficking Units (AHTUs) in all districts of the country, setting up/ strengthening of Women Help Desks (WHDs) at Police Stations, Integrated Emergency Response Management System (IERMS) at 983 railway stations, Video Surveillance System at Konkan Railway Stations, scheme for customization, deployment and management of State-wise vehicle tracking platform, etc.

In addition, the Government of India has decided to implement the Umbrella Scheme for Safety, Security and Empowerment of Women as an integrated women empowerment program under the name '**Mission Shakti**', for addressing the issues of women on a life-cycle continuum basis and for making them equal partners in

nation-building through convergence at different levels of governance and a participative approach.
