Introduction

HTML, which stands for HyperText Markup Language, is the predominant markup language for web pages. HTML elements are the basic building-blocks of web pages. HTML is written in the form of HTML elements consisting of tags, enclosed in angle brackets, within the web page content. The purpose of a web browser is to read HTML documents and compose them into visible or audible web pages. The browser does not display the HTML tags, but uses the tags to interpret the content of the page.

Features of HTML

- HTML allows images and objects to be embedded and can be used to create interactive forms.
- It provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists, links, quotes and other items.
- It can embed scripts in languages such as JavaScript which affect the behaviour of HTML webpages.
- Web browsers can also refer to Cascading Style Sheets (CSS) to define the appearance and layout of text and other material.
- The W3C, maintainer of both the HTML and the CSS standards, encourages the use of CSS over explicitly presentational HTML markup.

Uses of HTML

To create:

- Static websites
- Web pages
- Web forms

TRINITY MIRROR

The PG and Research Department of Commerce of Pollachi Nallamuthu Gounder Mahalingam College jointly with Pollachi Chamber of Commerce and Industry organised a three-day 'Phygital Marketing Expo' at their campus showcasing new marketing strategies. Chamber and NGM college alumni association president G D Gopalakrishnan inaugurated in the presence of principal Dr R Muthukumaran and Commerce HoD Dr P Bruntha besides Associate Professor Dr R Manikandan.

NGM students showcase marketing the "Phygital" way

M Rafi Ahmed

Phygital is going to be the way of the future, said Hyderabad based Mahindra University Vice Chancellor Dr Yajulu Medury. This observation assumes significance in the wake of the three-day expo on phygital marketing jointly organised by Pollachi NGM college and Chamber of Commerce and Industry held recently at its campus. Kudos to the members of Association of Business Leaders and Entrepreneurs (ABLE), who were instrumental in this innovative initiative.

Aimed at creating an omnichannel experience for customers, the exposition witnessed over 2000 visitors including school and college students, who were wonderstruck to see the exhibits besides explanation given by the ABLE members (commerce faculty students) about the products and services. This, according to the dynamic principal, gave an insight into this novel concept and experience to the students.

All the more, the expo focuses on both physical and virtual presence of modern marketing techniques. Thanks to the faculty members for guiding the members of ABLE in making think in a different perspective and involving them in preparing the concepts for the expo which had about 40 stalls including the participation of local entrepreneurs. Sources pointed out that ABLE established 15 years ago is quite active till now.

Significantly, the expo gave visitors a chance to infer about both classic and contemporary marketing strategies which benefited students of all disciplines. Moreover, the students used charts, exhibits and LCD presentations to give details about the concept. No doubt, phygital aims to combine the best aspects of digital and physical commerce to create the ideal integrated experience for the consumer and new opportunities for retailers and marketers.

Infact, Phygital marketing and retail strategies is becoming the lifeline to save struggling brick-and-mortar stores, and some level of phygital implementation is likely necessary for the continuation of physical storefronts. It is learnt that phygital has a strong appeal with millennial and Generation Z consumers found to be digitally connected to a great extent.

The glimpses of expo brought to the fore modern marketing concepts which were exhibited with pertinent examples and the uses of three contemporary marketing via social media apps were also demonstrated by the commerce students while not to speak of illustration of agricultural marketing services that involved in the movement of an agriculture product from farm to the end consumer. Besides, a 360-degree selfie and video booth was set up for the students. Also, the students displayed the NGM model of "I love NGM" and 'My college, My pride".

According to a marketing expert, the phygital experience lets a customer make a phone call, then communicate on a social media platform and send an email, without the company losing the thread of communication or a sense of the customers' issues associated with it. This will add value by augmenting digital experiences with human connections and physical enhancements.

Again to the words of Dr Yajulu Medury, "this blended pedagogy mechanism, called phygital will definitely make inroads into the educational institutions as it allows flexible teaching and learning in the new world we are entering". Undoubtedly, Phygital is a journey and not a destination which involves evaluation, improvement and response to the market.

"QUANTITATIVE ANALYSIS OF NATURAL PRODUCTS BY TLC"

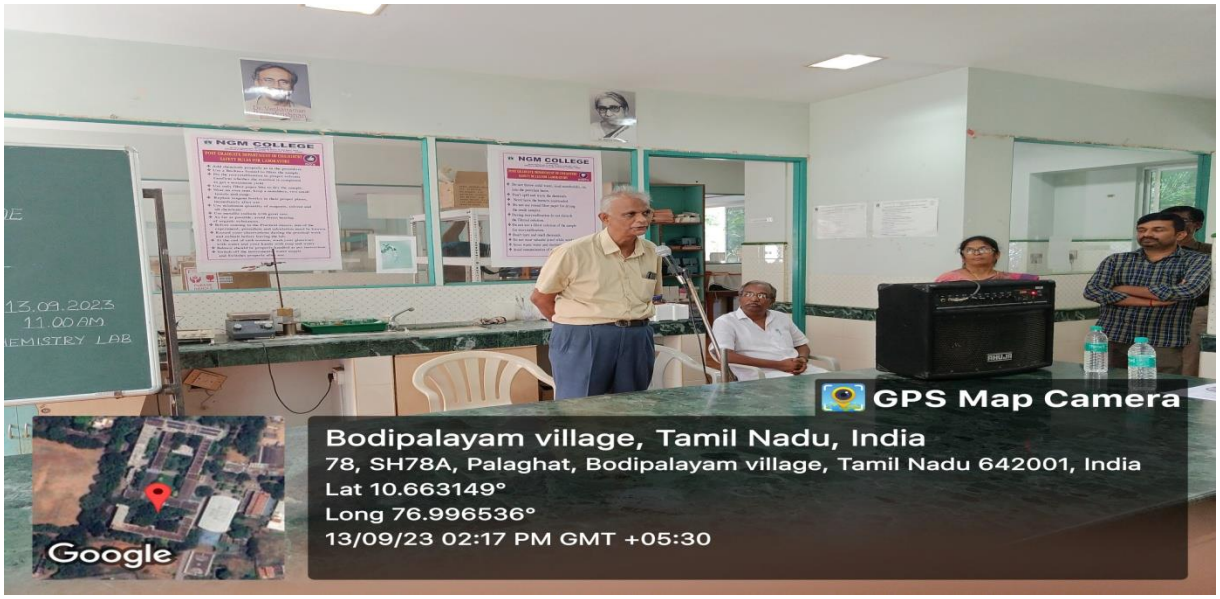

REPORT

Post Graduate Department of Chemistry, Nallamuthu Gounder Mahalingam College, Pollachi organized one day Skill Enhancement Program on **"QUANTITATIVE ANALYSIS OF NATURAL PRODUCTS BY TLC" on 13th September 2023** with a focus on quantitative and semi quantitative analysis of natural products by TLC. The session started with invocation by M.Sc students and lighting of lamp by dignitaries.

Dr. V.Prabhu, Assistant Professor welcomed the gathering **Dr. R. Muthukumaran, Principal** delivered Presidential address**. Dr. K. Poonkodi, Assistant Professor and Head**, Department of Chemistry, inaugurated the program. The technical session was handled by **Mr. S. Siva Shanmugam**, Chief Executive Officer, Erode.

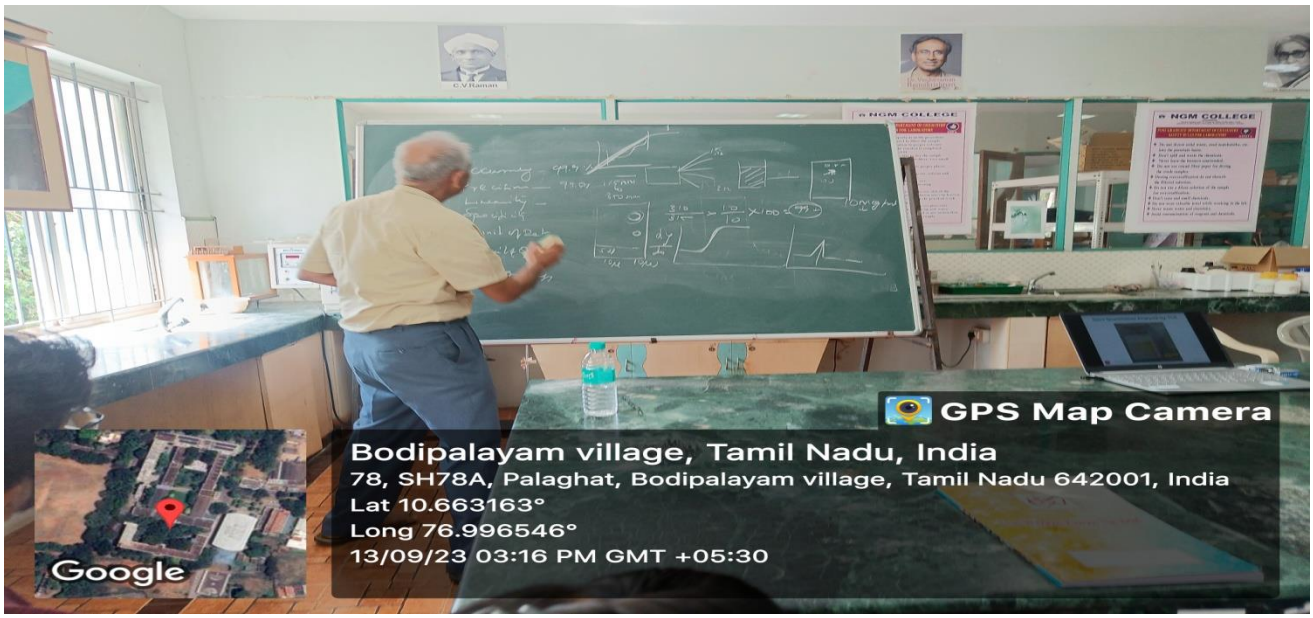

Resource person highlights the importance of quantitative analysis by Thin-Layer Chromatography (TLC), which is a powerful analytical technique used in chemistry to separate, identify, and quantify components of a mixture. It combines the principles of chromatography with quantitative measurement methods to provide valuable information about the composition of a sample. In this method, a stationary phase (thin layer of an inert material like silica gel or alumina) and a mobile phase (liquid solvent) are used to separate the components of a mixture based on their affinity for the stationary and mobile phases. Retention Factor (Rf) is a crucial parameter in TLC. It is a ratio representing the distance traveled by a compound (spot) on the TLC plate to the distance traveled by the solvent front. Rf values are specific to a given combination of stationary phase, mobile phase, and compound. The sample is dissolved in an appropriate solvent to create a solution that can be applied onto the TLC plate. This solution is then spotted onto a specific location on the TLC plate. The TLC plate is placed in a suitable chamber containing the mobile phase. Capillary action causes the solvent to rise up the plate, carrying the sample components with it. As the solvent moves, it interacts with the stationary phase, causing separation of the components. After the TLC plate is removed from the chamber, it needs to be dried. Then, the separated spots are visualized. This can be achieved using various techniques like UV light, staining reagents, or by chemical reactions specific to certain compounds. Once the spots are visible, their intensity or area can be measured. This can be done using specialized equipment or by manual methods. Quantitative analysis by TLC is a valuable tool in analytical chemistry, particularly for preliminary screening, quality control, and research purposes. It complements other analytical techniques and can provide valuable insights into the composition of complex mixtures. The end of the session questions were asked and clarified.

Mr. M. Vellayutham Pillai , **Assistant Professor** PG Department of Chemistry, NGM College, delivered vote of thanks to all the dignitaries.

OBJECTIVE OF THE PROGRAM

One Day Awareness Program on

"NATIONAL POLLUTION CONTROL DAY"

Pollution Control Day serves as a platform to address the urgent need for environmental consciousness and action. The primary objective is to increase public awareness about the severe consequences of pollution on ecosystems, biodiversity, and human health. It aims to educate student's community, and individuals about adopting sustainable practices that mitigate environmental degradation. The day emphasizes the significance of robust environmental policies, calling for their strict enforcement and continual improvement to curb pollution.

Through community engagement activities like clean-up drives and tree planting, Pollution Control Day seeks to inspire grassroots participation in environmental conservation. It encourages collaborative efforts among government bodies, non-governmental organizations, industries, and the public to collectively combat pollution. The main aims to promote research and innovation in pollution control technologies, encouraging the development of cleaner alternatives and sustainable solutions. By stressing the importance of monitoring pollution levels and reporting violations, it seeks to ensure a proactive approach to environmental protection.

Global cooperation is another crucial aspect, as Pollution Control Day underscores the interconnected nature of environmental challenges, urging nations to work together to address transboundary pollution issues. Overall, the day acts as a catalyst for positive change, motivating individuals and organizations to contribute actively to creating a cleaner, healthier, and more sustainable planet.
