Title : DISCRETE MATHEMATICS		
Hrs/ Week	5	Credits : 5
Objectives	Discrete mathematics is the theoretical foundation for much of today's advanced technology. In this paper a set of topics that are of genuine use in computer science and elsewhere are identified and combined together in a logically coherent fashion, to enable the students to get a good training in these topics which will inevitably lead the students in the direction of clear thinking, sound reasoning and a proper attitude towards the applications of mathematics in computer science and other related fields.

Title	: OBJECT ORIENTED PROGRAMMING WITH C++	
Hrs/ Week	4	Credits : 3
Objectives	C++ is an extension of C language which is widely used all over the world. It is a powerful modern language that combines the power, elegance and flexibility of C and the features of object oriented programming. C++ offers significant software engineering benefits over C. This course content enables the students to know all needed about C++ and object oriented programming and also to meet the global requirements in software industries.
