| <b>Objectives</b>    | To provide knowledge about the candidate of the operating system and the functions perform by it.                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                           |
| <b>Units</b>         | <b>Content</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Hrs</b>                                |
| <b>Unit I</b>        | Introduction to OS – Early History – Hardware: Interrupts and Rooting, Buffering, Storage Protection, Online – Offline Operation-Cycle Stealing- Processing-Storage Hierarchy- Reduced Instruction Set Computing (RISC). Semaphores – Process Synchronization with Semaphores – Counting Semaphores. Storage Management: Real Storage – Storage Organization – Storage Management Storage Hierarchy – Swapping – Virtual Storage – Basic Concepts.                                                                                | 13                                        |
| <b>Unit II</b>       | PAGING: Basic Concepts – Segmentation. Dead Lock: Examples – Dead Lock Preventions – Dead Lock Avoidance – Bankers Algorithms Only – Dead Lock Detection – Dead Lock Recovery.<br><br>Processor Management: Job and Processor Scheduling – Introduction – Scheduling Levels – Scheduling Objectives – Preemptive Vs Non preemptive Scheduling – Priorities – FIFO Scheduling – Round Robin Scheduling – Quantum Size Shortest Job First Scheduling – Shortest Remaining Time Scheduling – Highest Response Ratio Next Scheduling. | 13                                        |
| <b>Unit III</b>      | Auxillary Storage Management: Disk Performance Optimization – Why Disk – Scheduling is Necessary – Desirable Characteristics of Disk Scheduling Policies – Seek Optimization – Disk Caching – RAM Disks. FILE Database System: Introduction – The File System – File System Functions – Blocking and Buffering – File Organization – Allocating and Freeing Space – File Description – Access Control Matrix – Access Control by User Classes – Backup Recovery.                                                                  | 13                                        |
| <b>Unit IV</b>       | Linux: Introduction – File structure of Linux – Directory hierarchy – Environmental variables –file access permissions –utility commands- files – print – login details. VI-editors - three modes. File splitting – pipes and filters – paginating files – head – tail – grep – process termination – timing process.                                                                                                                                                                                                             | 13                                        |

|                         |                                                                                                                                                                                                                                                                                          |           |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Unit V</b>           | Shell Programming: Creation and execution – command line arguments – logical operations – condition statements – System administration – Booting and shutting down – super user status – Disk management – security – user services – mount – unmount- installing and managing printers. | 13        |
|                         | <b>Total Contact Hrs</b>                                                                                                                                                                                                                                                                 | <b>65</b> |

#### **MS-WORD**

- 1.create a Resume in a neat format.
- 2.create the front page of a newspaper.
- 3.Create their class time table.
- 4.Mail merge an application letter.

#### **MS-EXCEL**

- 5.Create students's marksheet.
- 6.Draw chart and apply filter.

#### **MS-ACCESS**

- 7.Create a Table.
- 8.Create a Query.
- 9.Create a Form.
- 10.Generate a Report.

#### **MS-POWER**

- 11.Prepare a presentation with various slide transitions.
- 12.Prepare a presentation with various animations

| <b>Objectives</b>       | 1. To develop the knowledge in personality, perception, attitudes and motivation.<br>2. To learn about stress management, communication, leadership, organization structure and organization culture.                                                                                                                                                   |                                           |
| <b>Units</b>            | <b>Content</b>                                                                                                                                                                                                                                                                                                                                          | <b>Hrs</b>                                |
| <b>Unit I</b>           | Introduction: Elements of OB – Nature and Scope of OB - Contributing Disciplines to OB. Organisational Behaviour in Historical Perspective - Foundations of Individual Behaviour: Introduction – The Individual and Individual Differences – Human Behaviour and its Causation.                                                                         | 13                                        |
| <b>Unit II</b>          | Personality – Perception - Attitudes: Concept of Attitudes – Formation of Attitudes – Types of Attitudes – Measurement of Attitude – Change of Attitude. Values: Concept of Value – Types of Values – Formation of Values – Values and Behaviour. Job Satisfaction.                                                                                     | 13                                        |
| <b>Unit III</b>         | Learning: Meaning and Definition – Determinants of Learning – Learning Theories – Learning Principles – Reinforcement – Punishment – Learning and Behaviour. Motivation: Concepts – Meaning of Motivation – Nature of Motivation – Motivation Cycle or Process – Need for Motivation – Theories of Motivation – Motivation and morale. Group Behaviour. | 13                                        |
| <b>Unit IV</b>          | Organisational Conflicts: Definition of Conflict – Sources of Conflict – Types of Conflicts – Aspects of Conflicts – Functional Conflict – Dysfunctional Conflict – Conflict Process – Conflict Management. Job Frustration - Stress Management.                                                                                                        | 13                                        |
| <b>Unit V</b>           | Communication: Nature and Need for Communication – Communication Process – Communication Channel – Communication Networks – Communication Barriers – Effective Communication. Leadership - Organisational Structure - Organisational Culture.                                                                                                           | 13                                        |
|                         | <b>Total Contact Hrs</b>                                                                                                                                                                                                                                                                                                                                | <b>65</b>                                 |

### **Console Applications**

- Create a Program to implement the concepts of Object oriented programming techniques.
- Create a program to implement multiple inheritances using interface.
- Create a program to validate the data members in the class using property
- Create a program to catch the exceptions.
- Create a program to implement multithreading.
- Write a program to implement stack operations using array
- Write a program to implement Queue using array
- Write a program to perform file operations.

### **Windows Applications**

- Create a directory list using tree view control
- Create a calculator using basic controls
- Create a notepad editor using Context menu strip and menu controls
- Create an application to illustrate the use of dialog boxes.
- Create an application for students Proctorial report
- Create an application for library management system
- Create an application for Pay roll processing system
- Create a program To generate electricity Bill

## **Web Applications**

- Create a web page to generate a photo gallery
- Create an application for encryption and decryption
- Create an Alumni registration form
- Create a website for online Quiz
- Create your own portal which describes yourself and your skills.
- Create a portal for online purchasing system.
- Create a portal and validate the web page using validation controls
- Create a web page and validate that page using client side scripting
- Create a crystal report for Alumni registration portal.

1. Create a simple program to accept a set of inputs and calculate standard deviation.  
It has consciously been seeded with defects. If you were asked to perform white box testing on this program, identify some of the defects in the program. Also, list the methodology you used to identify these defects.
2. Create a C program for deleting an element from a linked list. Suggest a set of test data to cover each and every statement of this program.
3. In each of the following cases, identify the most appropriate black box testing technique that can be used to test the following requirements:
  - a) “The valid values for the gender code are ‘M’ or ‘F’”.
  - b) “The number of days of leave per year an employee is eligible is 10 for the first 3 years, 15 for the next two years, and 20 from then on.”
4. Create a C program for deleting an element from a linked list. What are the boundary value conditions for this program? Identify test data to test at around boundary values.
5. An input value for a product code in inventory system is expected to be present in a product master table. Identify situations where the equivalence classes can be obtained by partitioning the output classes.

| <b>Unit I</b>        | Introduction : MM presentation and production – Characteristics of MM presentation – h/w and s/w requirements- Uses of MM – Steps for creating MM presentation. Visual display systems: LCD, PDP. Text, Introduction: Types of text – Unicode standard – Font – Insertion of text – Text Compression – File formats.                                                                                                                                     | 3                                         |
| <b>Unit II</b>       | Image: Image types – Seeing color – Color models – Basic steps for image processing – Scanner– Digital Camera – Specification of Digital Images – Device independent Color Models – Image processing s/w – File formats.                                                                                                                                                                                                                                 | 3                                         |
| <b>Unit III</b>      | Audio: Acoustics – Fundamental characteristics of sound – Decibel – Audio mixer – Digital audio– Synthesiser – What is MIDI – Sound card. Audio transmission: Digital Data Storage. Audio File Formats: WMA, Real Audio. Software Audio Players: Window Media players, Real players, i- tunes. Audio Recording System: Dolby digital – Dolby stereo – Dolby prologic – Dolby prologic II – Dolby surround. DTS Audio and MM – Audio processing software. | 3                                         |
| <b>Unit IV</b>       | Video: Analog – Video Camera – Transmission of video signals – Video signal formats – Digital video – Standards – PC video – Video editing – Video editing software. Video format – Real video, DIVX.                                                                                                                                                                                                                                                    | 2                                         |
| <b>Unit V</b>        | Introduction – Uses of animation – Key frames and tweening – Types of animation – Creating movement – Principles of animation – Techniques of animation – Special effects Rendering Algorithms – Animation Software. 3D Animation - Introduction forms of virtual reality – VR Applications – s/w requirements – Peripheral – Devices – VRML.                                                                                                            | 2                                         |
