## **Abstract**

The major features of an investment are safety of principal amount, liquidity, income stability, appreciation and easy transferability. The present study is based on awareness and preference of women investors towards select investment avenues. A sample of 50 investors has been chosen using convenient sampling method and data has collected through a structured questionnaire. The data was analyzed using Simple Percentage and Friedman rank test. The study discloses that among the selected investment avenues Bank Deposits is given top priority followed by Post Office Deposits, Insurance Policies, Gold & Silver, Shares, Mutual Funds, National Saving Certificate/ Public Provident Fund/ Provident Fund, Chit Funds, Real Estates, Debentures, Government Securities, Indigenous Bankers.

Keywords: Investment Avenues, Investment Awareness and Preference

## Introduction

Investment means saving money for the purpose of earning profit in future. In other words investment is employing funds with the aim of achieving additional growth in value. Investment means parking of current funds to earn benefits or securing growth in future. Sacrifice of present certain value only can earn uncertain profit in future. Investment should be done to yield more return than rate of inflation. The current income of an individual can be put aside for two things either consumption or savings. Major element of any investment is time and risk. It purely depends upon individual capacity to give importance to either of the two elements, on the basis of one's need. There are plenty of areas where money can be invested like government bonds, equities, gold, real estate, stocks, fixed deposits, etc. A proper planning and analysis should be done in order to reach to a perfect decision of investment or portfolio management.

## **Women Investors**

Nowadays women have engaged in all the fields such as education, medical, engineering, technical, military and business and so on. Because they get liberty to work and also to take decision in the family. By the way they also entered in investing, some are investing by their own interest and knowledge and some are investing with the guidance or help of their spouse, family members, friends and relatives. So as well as men, women were started to shoulder their family. They are also investing for various reasons such as for earning returns, for their personal expenses, for supporting their family in future and in unexpected situations.

## Statement of the Problem

India savings market has been expanding over the period of time and there are various investment avenues available in the market for the investors to make investment. Investors had an option of choosing the investment avenues which suits their needs. The individuals may be equal in all aspects, but their behavior is different in same situation. Nowadays No doubt, women are more successful. But women investors are lagging in various aspects of investment such as awareness, preference level of investment. So an attempt has been made by the researcher to identify the various source of information available for making investment, to evaluate the level of awareness among women investors and to analyses the preference of . investors towards various investments outlets.

# Objectives of the Study

The present study aimed at assessing the awareness and preference level of women investors and also satisfaction towards investment avenues. So the following objectives have been framed.

- ✓ To identify the socio-economic profile of the women investors.
- ✓ To measure the level of awareness among the women investors towards select investment avenues.
- ✓ To identify the women investors preference in select investment avenues.

## **Review of Literature**

Brahmabhatt (2012) in their article titled "A Study of Investors Behavior on Investment Avenues in Mumbai Fenil". The study finds that people give more preference to savings which provided safety, high interest and low risk. Most women investors prefer to invest in gold than any other avenues of investment. PriyaVasagadekar (2014) underwent a study "A Research Paper on Investment Awareness among Indian Working Women with Reference to Pune Region". The researcher concluded that women are low in financial literacy, it becomes hard for them to manage their portfolio and also the risk bearing capacity is also low for Indian Working Women.

Deepak Sood and Naveen Kaur (2015) conducted a study on "A Study of Saving and Investment Pattern

of Salaried Class People with Special Reference to Chandigarh". It is evident from the study that most of the investors are saving their money for children education.

Thulasipriya (2015) conducted a study on "A Study of the Investment Preference of Government Employees on Various Investment Avenues". The study finds that the period of investment preferred by government employees is both long term and short term investment for their safe future. Shanthi and Murugesan (2016)A study entitled "Investment Preferences of Salaried Women Employees". The study concludes that women are less likely to take investment risks for whatever reason many women are less willing than man to take risk.

## METHODOLOGY

#### Data collection

To collect the data from the respondent's convenience sampling method is used, so the researcher has the liberty to choose their respondents whomever they find. Both primary and secondary data were collected. A well-structured and pre-tested questionnaire was issued to collect data from the respondents.

#### Sample size

A Sample of 250 respondents was taken for the study. And questionnaire was issued to all the 250 respondents and 227 filled questionnaires were returned back.

## Framework Of Analysis

The study is undertaken with the aim of understanding the level of awareness and preference of women investors in and around Pollachi Taluk. In this study statistical tool like Simple Percentage Analysis and Friedman Rank Test were used.

## Limitations Of The Study

- > Only women investors have been considered for the study.
- > The study area is limited only to in and around PollachiTaluk.
- > The sample size is restricted only to 227 investors.

# ANALYSIS AND INTERPRETATION

Table 1: SOCIO-ECONOMIC PROFILE

|                           | Number of Investors<br>(N=227) | Percentage |  |
|---------------------------|--------------------------------|------------|--|
| Age Group                 |                                |            |  |
| Up to 25 years            | 55                             | 24.23      |  |
